RESOLUTION NO. 83-27

A RESOLUTION ESTABLISHING THE BOROUGH'S LEGISLATIVE DOCKET FOR FY 85.

THE BOROUGH OF BRISTOL BAY HEREBY RESOLVES:

WHEREAS, important items which affect the lives of citizens in Bristol Bay Borough are introduced and debated each year in the legislature, and

WHEREAS, the Borough's limited tax base makes it necessary to get assistance from the State of Alaska for the provision of basic governmental services.

NOW THEREFORE BE IT RESOLVED, that the Borough Assembly adopts the attached Legislative Docket as representing the needs and concerns of the citizens of Bristol Bay Borough.

Passed this 19th day of December, 1983.

Jim D. Clark
Mayor

ATTEST:

Betty L. Thompson
Borough Clerk

SCHOOL IMPROVEMENTS

SCHOOL IMPROVEMENTS

INTRODUCTION

Bristol Bay Borough High School is in need of immediate remodeling and reorganization of the school facility. Initially built in 1968 to accomodate a complete K-12 educational program, the building has since been modified to facilitate a comprehensive high school program. Throughout the modification the school has evolved from an "open-space" design to a "self-contained" classroom design. During the fifteen years since original construction, the facility needs have grown beyond the capacity of the initial structure. Therefore, the following remodeling/construction plan is jointly submitted by Bristol Bay Borough School District and Bristol Bay Borough to effectively resolve critical facility deficiencies in Bristol Bay High School.

DESCRIPTION OF NEEDS

A description of critical needs include but are not limited to the following:

1. Health and Life Safety Needs

    a. Unsanitary health conditions in locker-room areas.
    b. Home Economics area does not meet emergency codes as established by the state fire marshall's office.
    c. Inadequate storage areas force equipment storage in crowded hallways.
    d. Ventilation system does not adequately provide circulated air into academic areas.
    e. Plumbing system requires extensive repair and replacement due to increased use and severe mineral deposits in fresh water source.

2. Unhoused Students

    a. Due to increased enrollment the elementary school is one classroom short. This deficiency would be rectified with construction of additional classrooms to accommodate a 6-8 grade middle school program.
    b. Academic programs are restricted or eliminated due to lack of adequate space, e.g., computing, arts and electronics.

3. Protection of Structure

    a. Exterior walls are not adequately insulated and most interior walls are made of temporary non-sound proof and non-fire retardent material.

THE PLAN

This proposed remodeling/construction project is part of a long range facility master plan with previous capital projects funded via local bonding effort. The plan was developed to provide maximum benefit to students and residents served by the District. Significant effort has been made to provide a plan that meets educational needs while providing improved educational and community services to district residents.

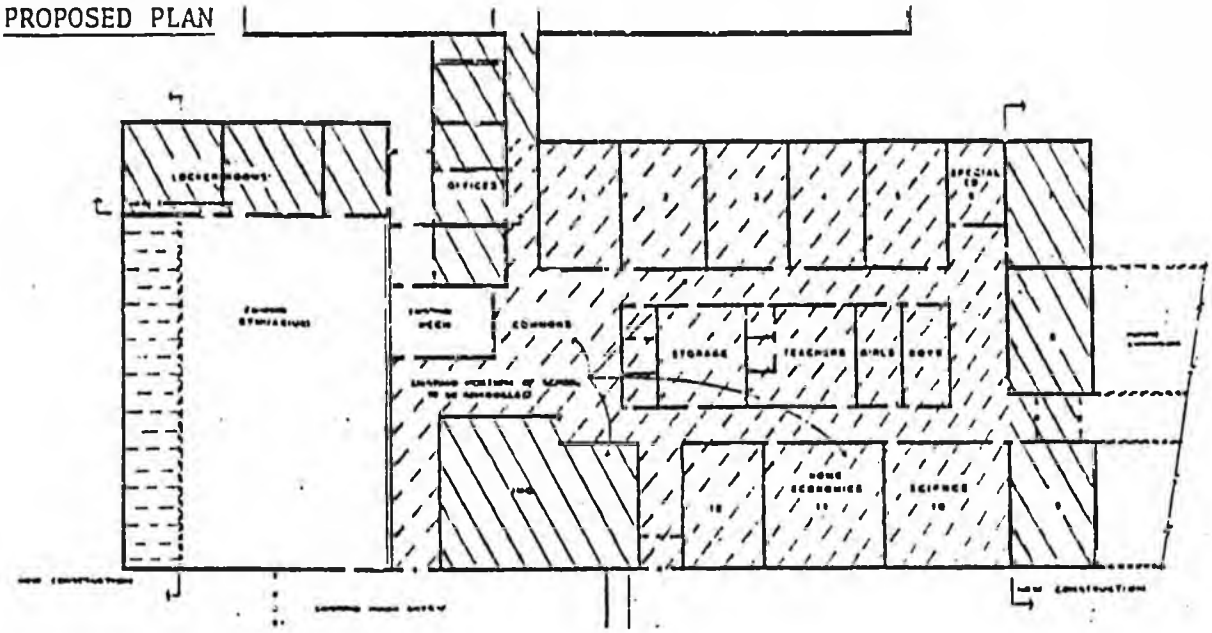
This entire capital project is supported by a recently completed feasibility study and estimated expense is $5,193,000 for the total project.

COST SUMMARY

PHASED PRIORITY AND ESTIMATED EXPENSE

1. Classroom addition, Instructional media center, Locker rooms and Offices.

Area - Estimated expense: $1,777,500 plus 10% for each year delayed.



2. Remodel academic area

Area - Estimated expense: $2,875,000 plus 10% for each year delayed.

3. Gymnasium extension

Area - Estimated expense: $ 540,500 plus 10% for each year delayed.

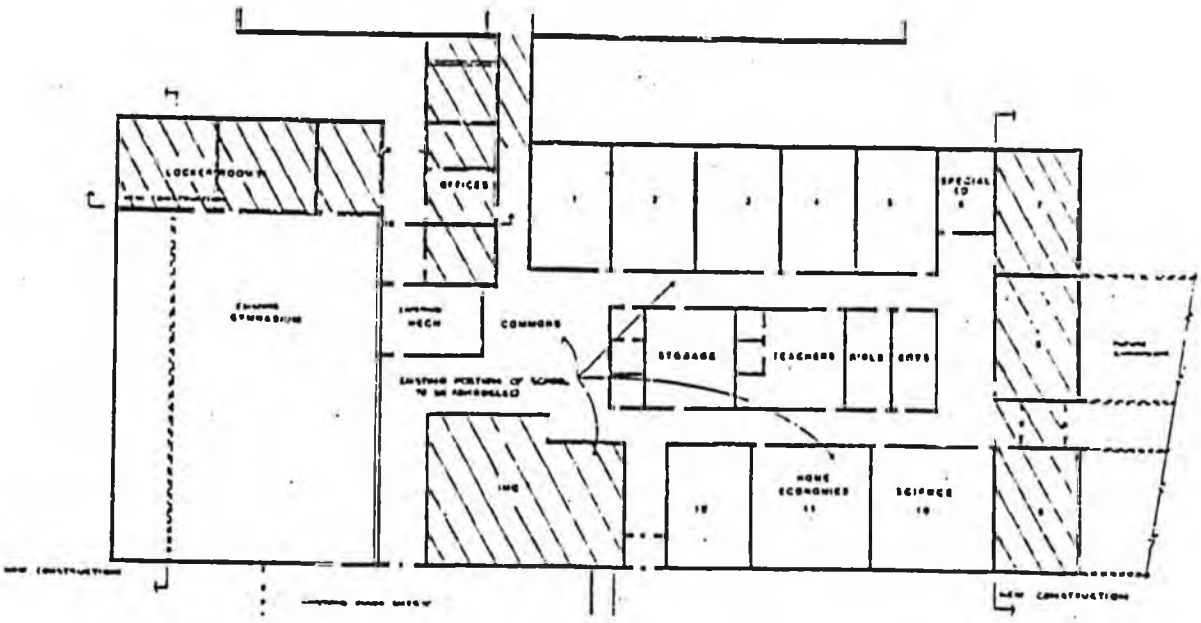
PROPOSED PLAN

PHASE BREAKDOWN

The following capital project is proposed jointly by Bristol Bay Borough School District and Bristol Bay Borough for remodeling the high school in Naknek, Alaska. Total estimated expense for the entire project, assuming total funds are available, is $5,193,000.

Even though this proposal is submitted as a total project, the plan is illustrated in a phased approach to resolve critical facility deficiencies while keeping estimated expenses at a reasonable level.

PHASE I



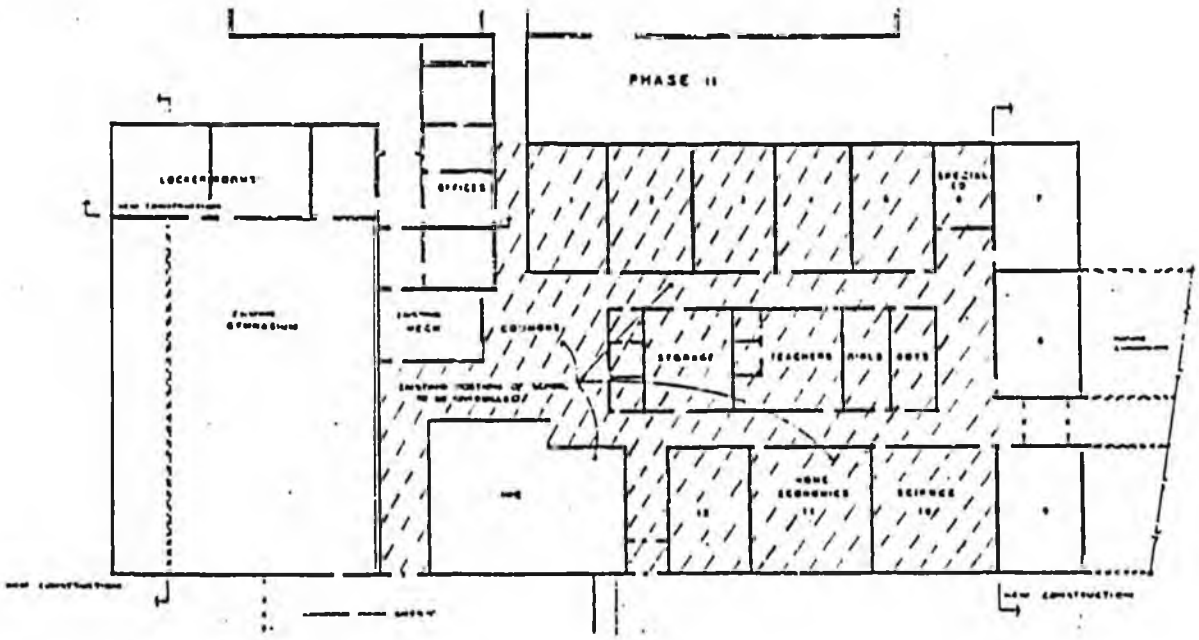
CLASSROOM ADDITION, IMC - LOCKER ROOM AREA AND OFFICES

This phase would result in the construction of three new classrooms, an Instructional Media Center (IMC), locker rooms with P.E. storage and an administrative office area. When completed this phase would: alleviate current shortage of appropriate classroom space; create an IMC that is appropriately designed for a learning and resource center; have a sanitary and efficiently maintained locker with appropriate equipment storage adjacent to the gymnasium; and an office area appropriate for district administrative functions.

All construction would include stub-outs, etc., necessary for future expansion with design and finish of each area to coincide with that proposed for the remodeled academic area.

TOTAL PHASE I ESTIMATED EXPENSE: $1,777,500

PROPOSED PLAN - PHASE I  AREA



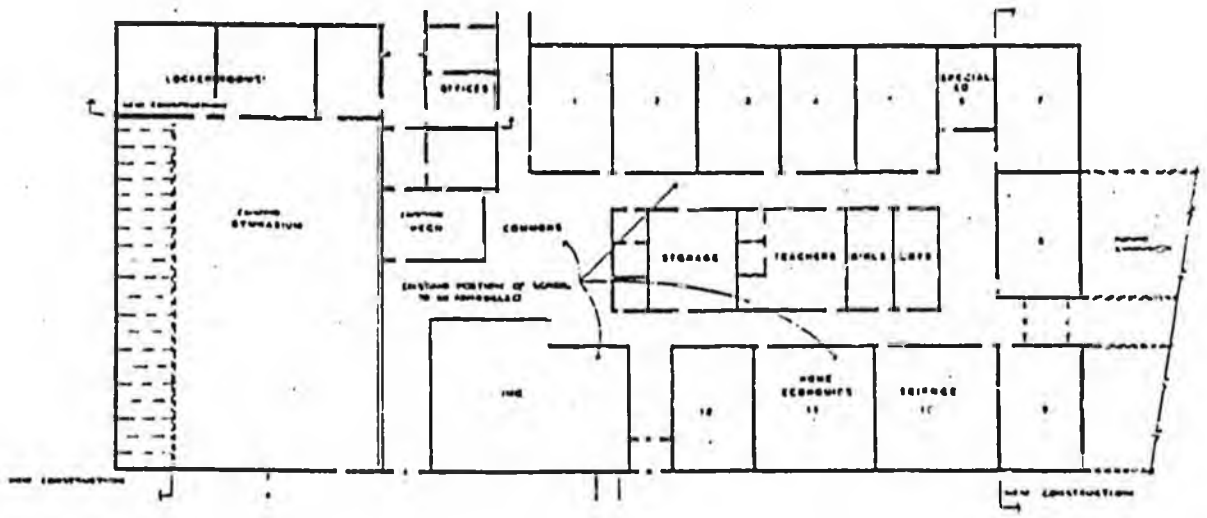
PHASE II

REMODEL ACADEMIC AREA

This phase would result in a completely remodeled academic area. When completed the remodeled area would: provide ample classroom space for a comprehensive secondary program; meet current fire and building codes; have efficient heating systems and insulation installed; and provide sufficient storage space for supplies and equipment. Completed design and finish of each area would coincide with that proposed in Phase I of this plan.

TOTAL PHASE II ESTIMATED EXPENSE: $2,875,000

PROPOSED PLAN - PHASE II ▨ AREA



PHASE III

GYMNASIUM EXTENSION

This phase would result in construction of a sixteen foot addition to the full length of the gymnasium. The gym floor would be resurfaced and remarked and new spectator seating would be installed. This phase would also allow for more effective use of the gymnasium area with two cross-court activities occurring simultaneously. For activities requiring full floor length, the activity would be a safe distance away from the seating area allowing safe spectator movement while the activity is in progress.

TOTAL PHASE III ESTIMATED EXPENSE: $540,500

PROPOSED PLAN - PHASE III  AREA

COST ANALYSIS

PHASE I - ESTIMATED EXPENSE

Classroom addition - $150 per sq. ft. $150 x 3,000 sq. ft.	$ $450,000
Locker room & P.E. storage - $250 per sq. ft. $250 x 2,060 sq. ft.	515,000
Remodel IMC area - $150 per sq. ft. $150 x 2,400 sq. ft.	360,000
District office area - $150 per sq. ft. $150 x 1,470 sq. ft.	220,500
Engineering, architectural, work of art and administration fees - 15% of construction costs	232,000
TOTAL PHASE I EXPENSES	$1,777,500

Estimated 10% annual increase for inflation and mobilization of material and personnel for each year project is delayed.

PHASE II - ESTIMATED EXPENSE

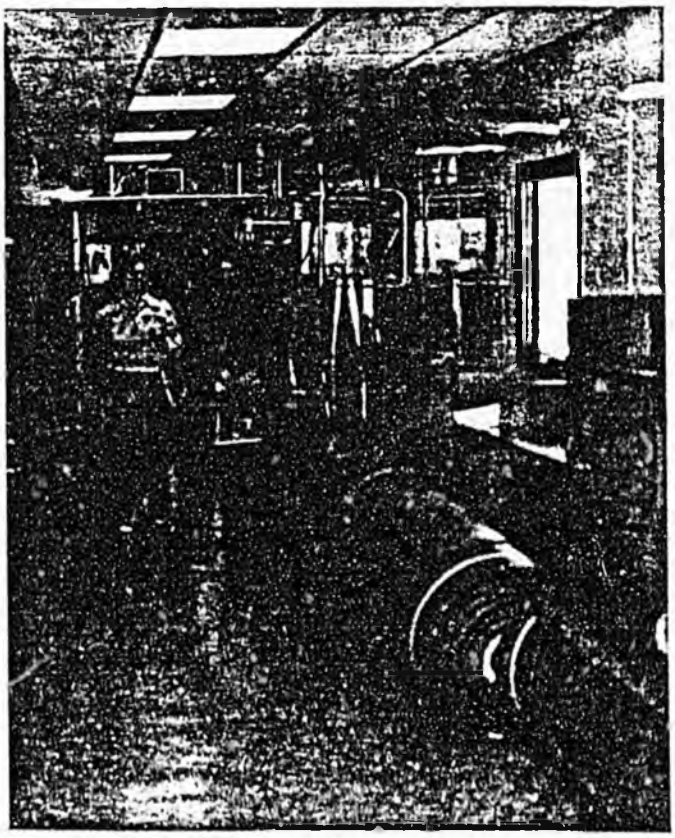
Academic area remodeling - $125 per sq. ft. $125 x 20,000 sq. ft.	$2,500,000
Engineering, architectural, work of art and administrative fees - 15% of construction costs	375,000
TOTAL PHASE II EXPENSES	$2,875,000

Estimated 10% annual increase for inflation and mobilization of material and personnel for each year project is delayed.

PHASE III - ESTIMATED EXPENSE

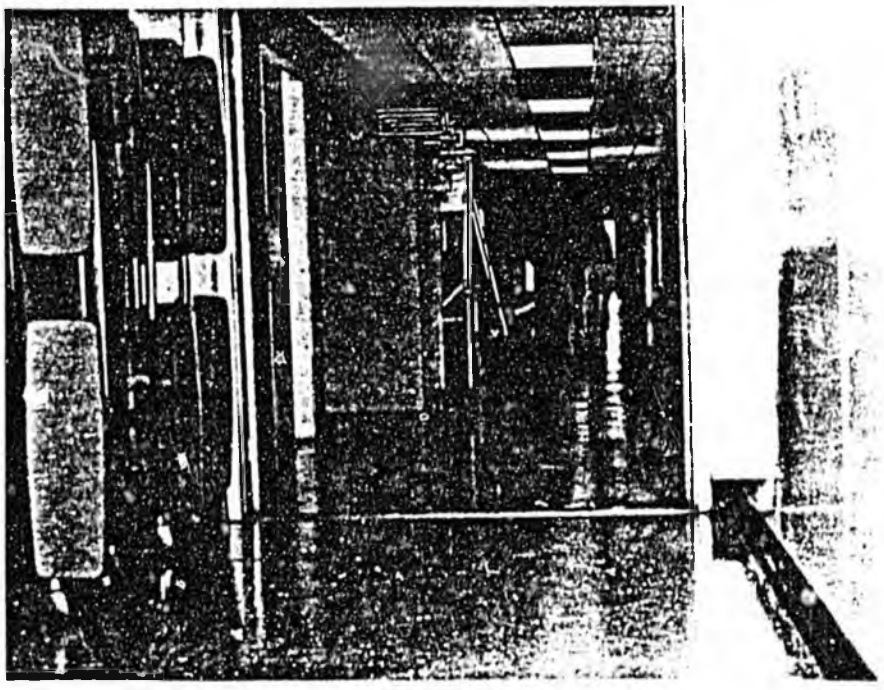
Gymnasium extension - $200 per sq. ft. $200 x 1,600 sq. ft.	$ 320,000
Resurfaced - remarked floor and seating	150,000
Engineering, architectural, work of art and administrative fees - 15% of construction costs	70,000
TOTAL PHASE III EXPENSES	$ 540,500

Estimated 10% annual increase for inflation and mobilization of material and personnel for each year project is delayed.

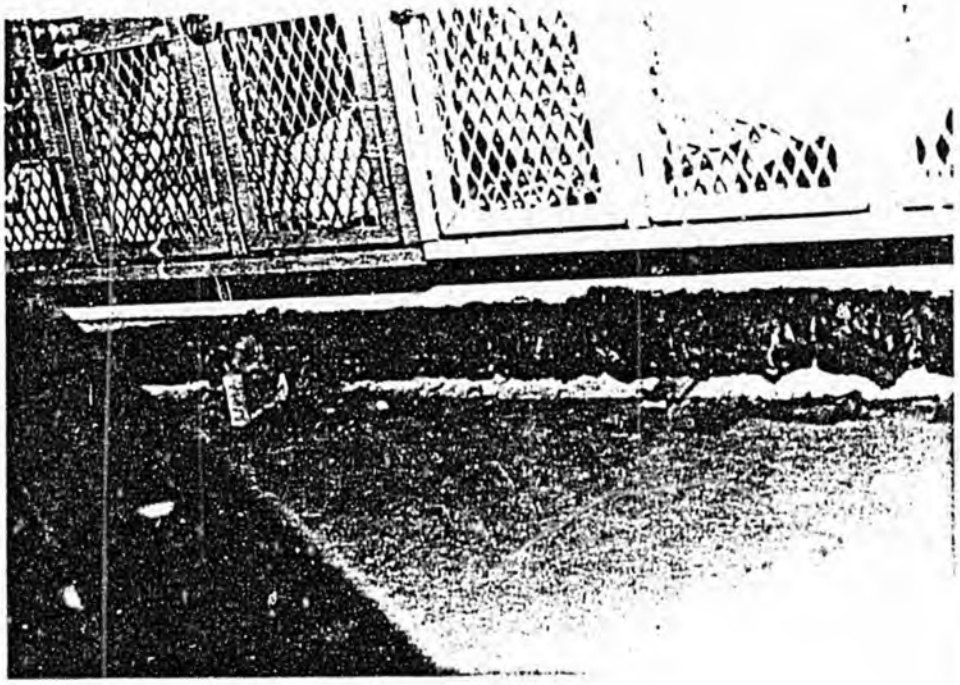


TOTAL PROJECT ESTIMATED EXPENSE	$5,193,000

DISTRICT CONTRIBUTION

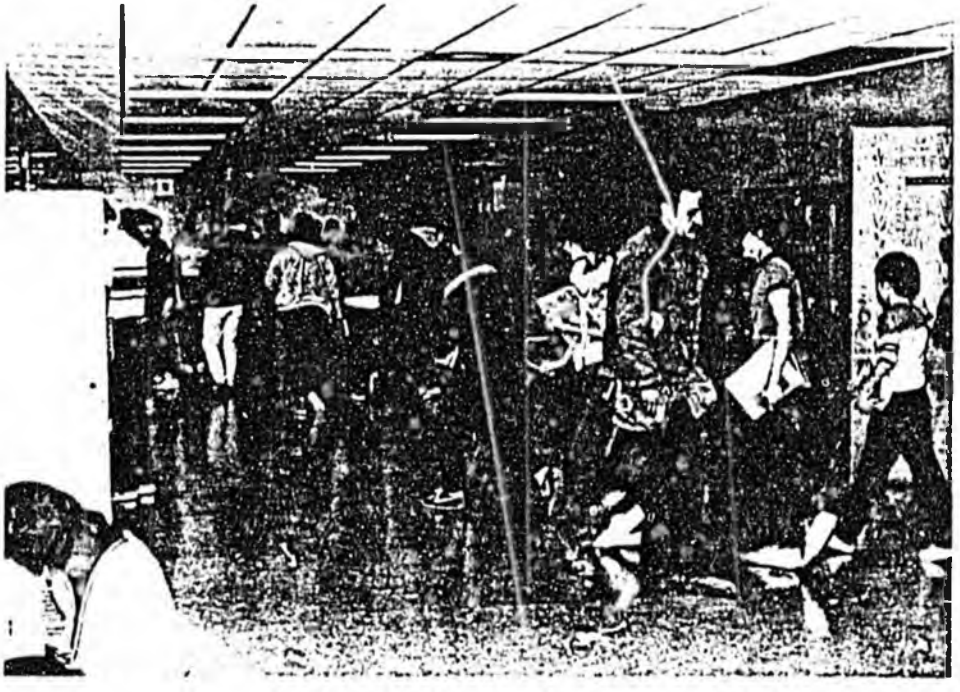


In an effort to expedite planning and organization of this capital project the school district can provide $200,000. These funds could be used to initiate immediate development of project specifications and start the architectural drawings and engineering plans.

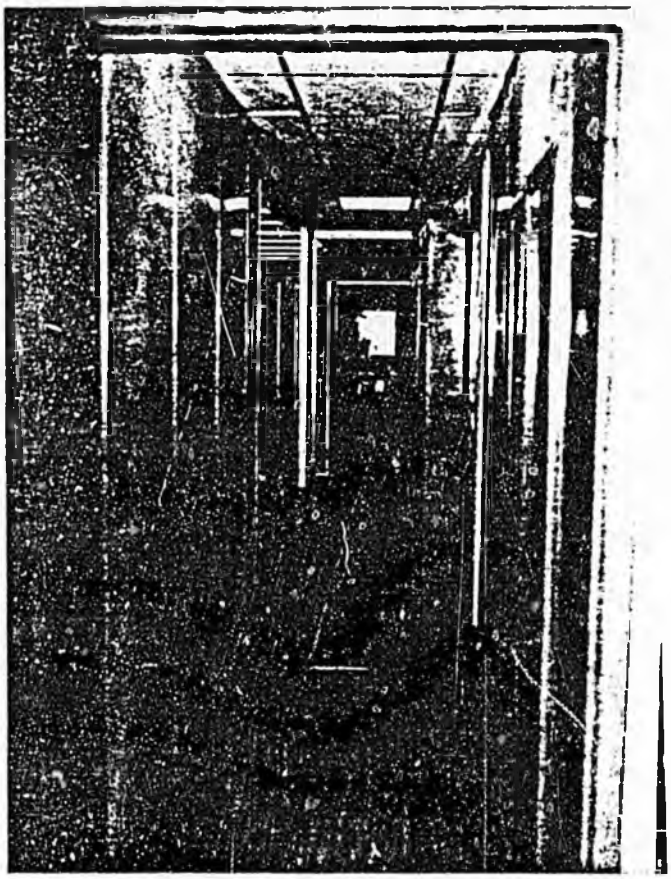


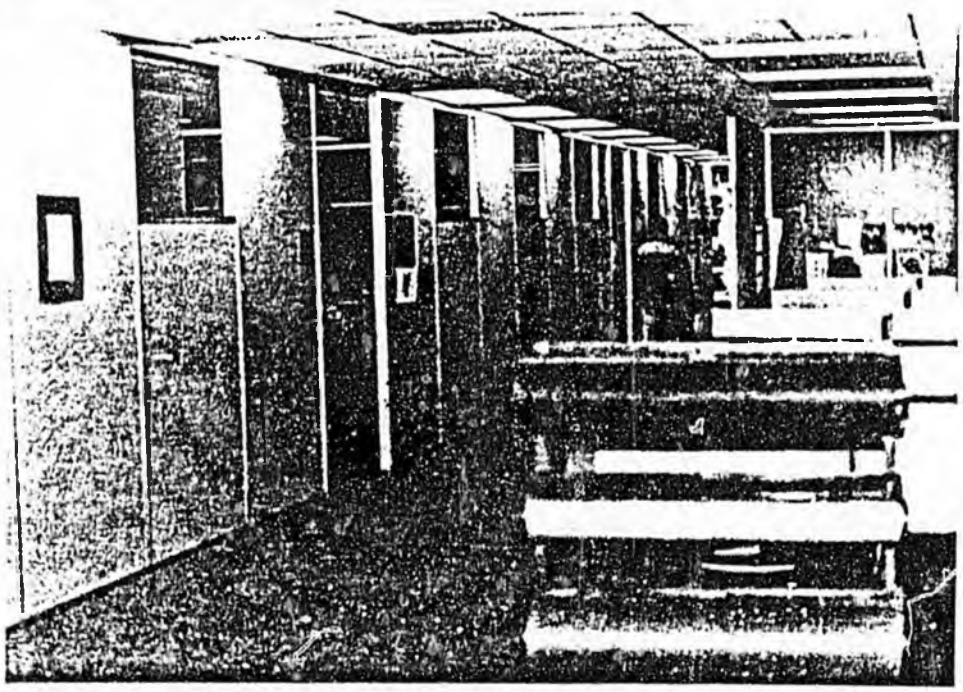
COST JUSTIFICATION

Expense estimates have been confirmed with John Kumin, architect of Kumin and Associates. Estimates are also supported by a recently completed feasibility study. Therefore, it is felt that estimated expenses are reasonable and rational for the plan as proposed.

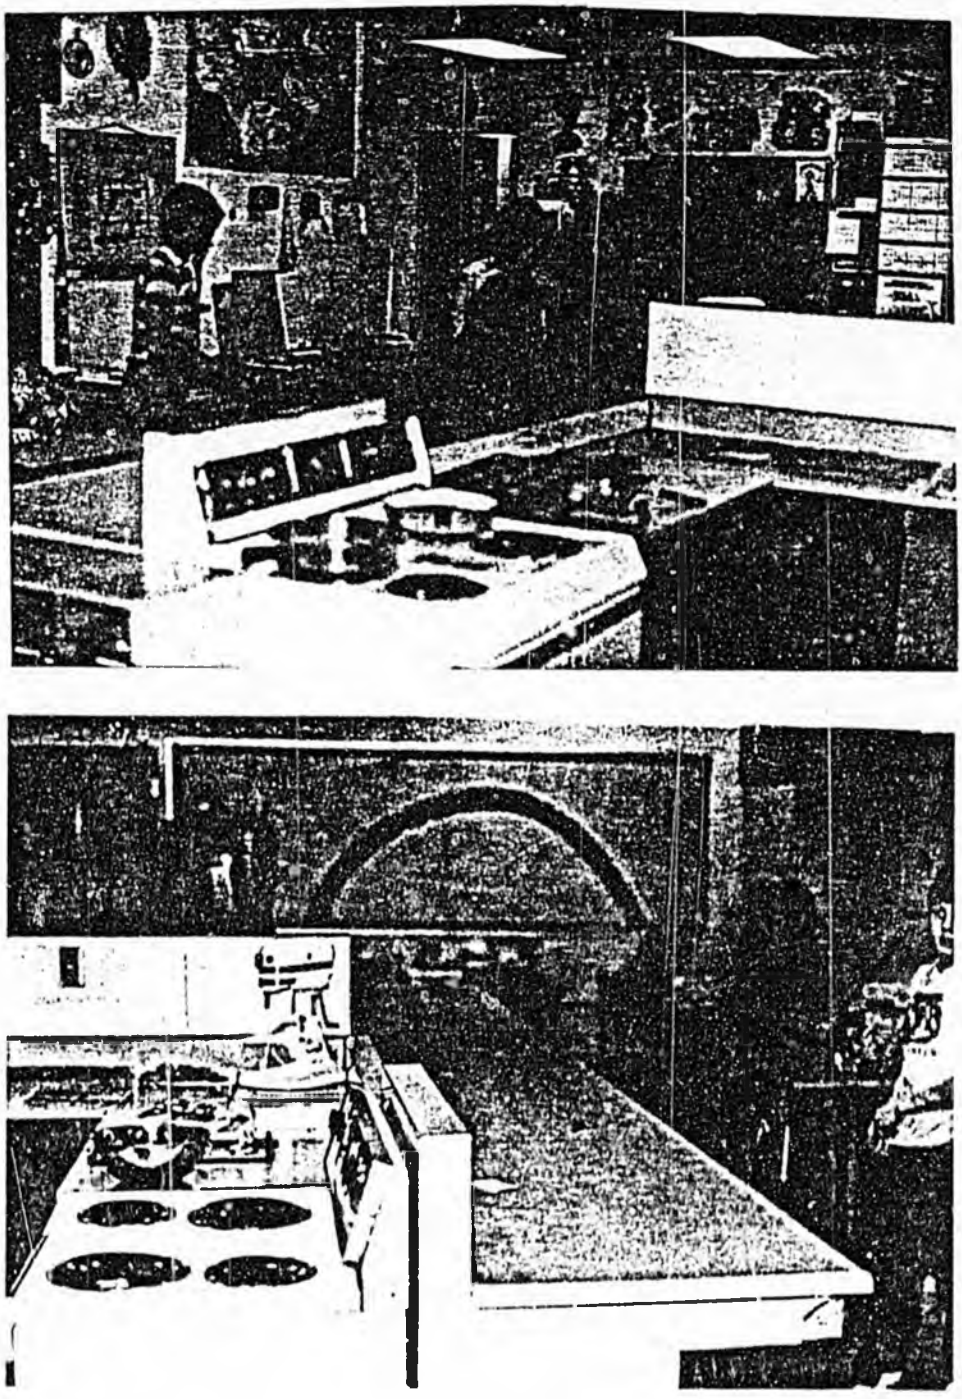


Major Hall referred to as "The Wind Tunnel". Serious heat loss area - extremely cold - storage in hall area presents emergency exit hazard.





Locker Room Heating Conductor: Poor plumbing and extremely poor heat conduction - 16 years old.



Main High School Hall - Built to be multi-purpose room - Huge expanse of wasted space - Needed as classroom or storage

Passage - Exit Hall: Very narrow - High danger due to congestion.

Fake Wall in Study Hall: Very cold - poor aesthetic appeal - Not conducive to reducing noise level.

Home Economics Room - Extreme congestion - No direct outdoor exit - Does not meet state fire code

Computer Lab: No direct outdoor exit - Area does not meet state fire code - extreme congestion

Science Lab: Extreme congestion - Plumbing corrosion - Very poorly insulated

Library: Extreme congestion - No study space - Poor lighting - Poor location - Difficult access from elementary area

NARRATIVE

PHASE I: VOCATIONAL EDUCATION FACILITY RENOVATION

Unalaska School District developed a comprehensive Facilities Master Plan in 1980. The study, identifying both short and long range needs, was the result of an intensive investigation of existing facilities, condition, current program operation, predicted enrollment, and future programmatic expansion (see Unalaska School District: Facility Survey and Analysis, Alaska Vocational Regional Resource Center, Anchorage Municipal Libraries, January, 1982).

The need for a site plan was identified as critical. Of particular concern were the constraints of the current site.

> To date there has been no planning for growth and the deleterious effects are obvious. The existing facility's relationship to its surroundings, its internal arrangement, and its capacity for expansion are all compromised. A future construction phase without proper planning would likely render the site useless for additional future phases. This would necessitate the building of a second school as the community's need for educational space increased.

Because the current site is inadequate for sensible, staged expansion, the School Board adopted the long-range (20 year) plan based on both new construction, renovation and re-arrangement of current spaces. The facility plan addresses most critical needs first and these have been submitted to the Department of Education for approval and prioritization.

Currently the District is at Step II of implementing the components of the master plan. The Alaska Legislature appropriated $300,000 for emergency gymnasium repairs in 1982. The greatest need now is to replace the vocational shop building. Replacement of the classroom [illegible] at $5,529,870 in the 1982 comprehensive plan. However, failure to gain funding [illegible]

have forced the District to divide the phase ... ore components and revise the cost.

The 1994 request is as follows:

Phase I: Vocational Shop Facility Replacement Design, planning and ... construction of 5700 square ... as a cost of $1,200,000

The requested funding would allow design of Phase I and Phase II of the needed facility, and construction of Phase I the shop spaces that must be replaced immediately due to health and life/safety hazards. (see drawing)

Educational spaces which will be gained in phase one are:

1. general shop classroom
2. diesel/automotive shop
3. metal shop
4. art classroom

Storage for the classrooms and a corridor are also included in the plan.

Other vocational spaces are currently located in another facility and are not a hazard to occupant safety. For this reason, the remaining 7,437 square foot of space have been postponed until Phase II (again, see drawing).

JUSTIFICATION

Unalaska School District requests prioritization for Phase I as

1: Health, Life/Safety

While this request is a ... the District feels that ...

application. Major revision has occurred [illegible] requested only for the replacement portion. [illegible] detailed description of current facility conditions [illegible] below:

The main vocational facility is housed [illegible] shed built during World War II. One portion [illegible] ing was destroyed by fire in 1980. The third [illegible] building must also be used for storage, leaving [illegible] for instruction. This building belongs to [illegible] and has been provided for interim use only. It was not considered worthy of survey and analysis by [illegible] their Statewide Survey due to its deplorable condition and inappropriateness for educational purposes. [illegible] photographs. It is type I construction, [illegible] wood with a sheet metal roof. Obviously, this facility supports only a minimal program, far below the standards set for the Department of Education:

> "The priority system must ensure that all schools within the state reach a comparable level of facilities necessary to meet minimum educational program requirements before providing for other desirable, but less critical needs."

Fire/Life Safety hazards exist because of:

1. Limited Space for Student Occupancy. Code requires 50 S.F. of instructional space per student. The current building allows 30 and nearly 1/3 of this amount is unusable leaving 17 feet per student for instruction.

2. Inadequate and dangerous heating system. It is a simple oil fired stove which is hazardous in any building and critically so in a woodshop area. It is not feasible to install another heat source.

3. Lack of fire rated walls, and doors creates a hazardous condition.

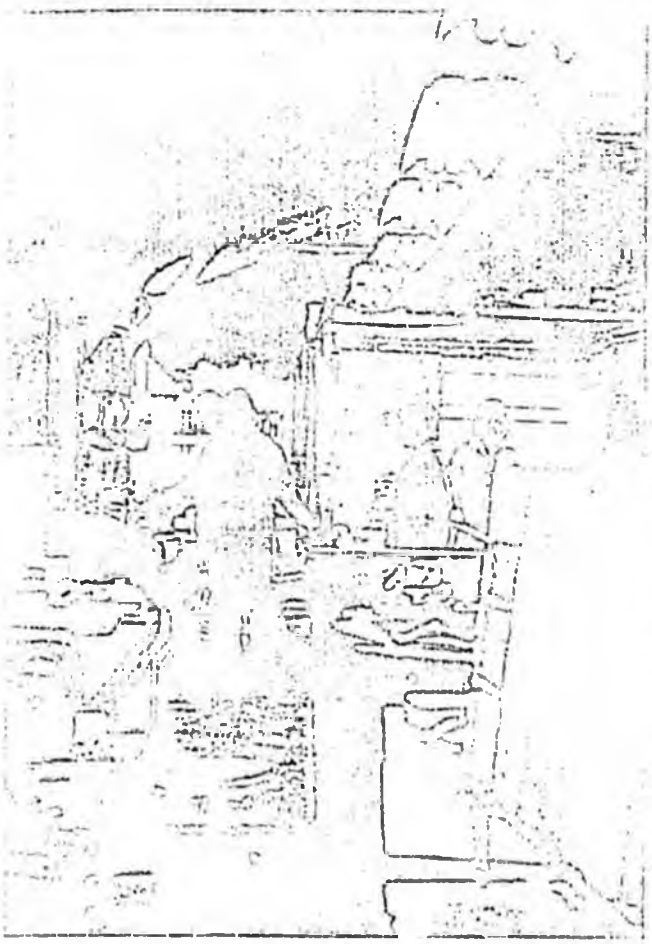
4. Lack of fire exits.

Assessed value of the building is $[illegible]

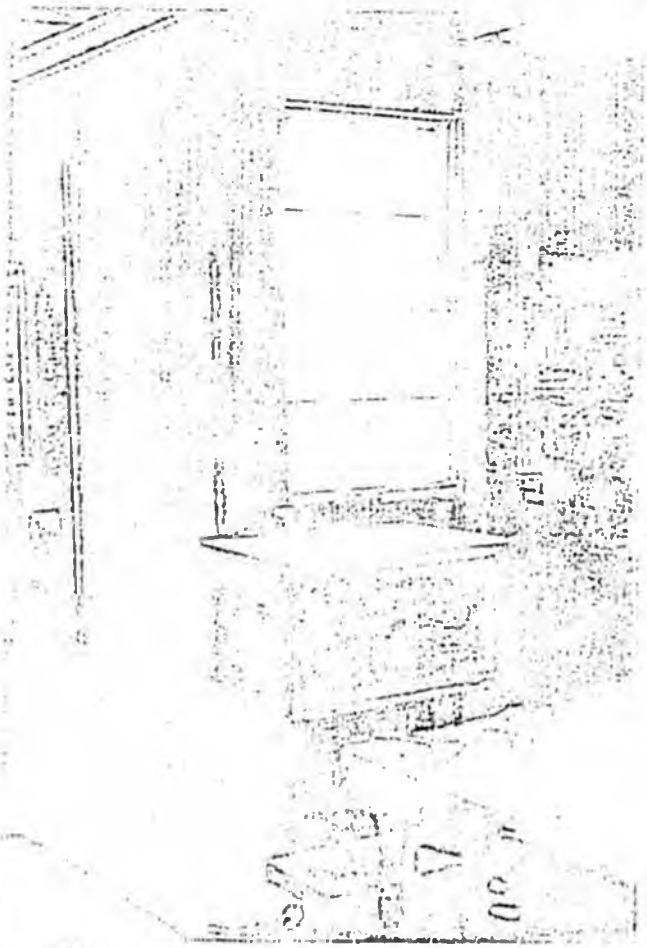
than the cost of upgradi[illegible] ...ve... the [illegible] standards. Occupancy [illegible] continue[illegible] ... in full operation and [illegible] the heaviest [illegible] in the discussion.

The Department of E[illegible]tion, Bureau [illegible] Unit has been active in the planning and [illegible] the Chalasha School's vocational educati[illegible] cording to the Comprehensive Program Depar[illegible] the DOE review team in [illegible] make the [illegible] mendation:

1. Build a new [illegible] Education [illegible]



The report discusses [illegible] strength of the p[illegible] "much still needs to be [illegible] SECURING A NEW FACILITY [illegible] pg. 11.



This recommendation is in support of the [illegible] feasibility study, letters from students, [illegible] and community leaders stressing the need to provide a facility to address basic vocational, rather than academic (in this case, college-prepatory) curricula. DOE evaluators again recommended the necessity of eliminating [illegible] concepts of vocational education versus college [illegible] students (tracking) which are damaging to [illegible] and total development of students".

COST INFORMATION AND ARCHITECTURAL PLANNING

UNALASKA

PHASE III

VOCATIONAL EDUCATION FACILITY: PHASE II

The second component of the Unalaska Master-Plan will be the final half of the vocational education complex. These spaces include classrooms for printing, computer training, graphics arts, bookkeeping and office practices, typing and business machines, home science and vocational education. Lavatories are also included in this phase. These spaces will house current vocational programs which are operating in cramped, overcrowded conditions within the existing grade school. (see drawing, previous section)

PRIORITIZATION

The District requests the following prioritization be considered:

PRIORITY #1: UNHOUSED STUDENTS

This request is based upon the need to provide unhoused students adequate space to participate in vocational programs. These include classrooms for home science, graphic arts, bookkeeping and office practice, typing, computer training, printing and vocational [illegible]. Cladding of the classrooms, along with [illegible] is provided within the Unalaska [illegible] feasibility study.

[illegible] and Local [illegible] alternative for [illegible] lunchroom [illegible] to the [illegible] and [illegible]. NARRATIVE

PHYSICAL EDUCATION COMPLEX

Recommendations of the 1982 planning study addressed the inadequacy of the gymnasium, which is really a multi-purpose room. Feasibility studies report "current facility serves too many students in too broad an age range, and are required to compete with other school programs including lunch, large class gatherings and community events."

An integral part of the master plan calls for inclusion of a 25,000 square foot physical education complex including gymnasium, locker rooms, weight room, handball court and storage.

Currently the request for the Unalaska District for prioritization is:

VI: Functional Upgrade

JUSTIFICATION

Current program requirements for K-12 cannot be met in the existing multi-purpose room. Slab Vinyl Flooring does not support basketball or other activities. There are few seats for spectator activities.

MODEL UPGRADE OF EXISTING FACILITY

The renovation and upgrade of the core facility housing the elementary classroom is scheduled for 1986. The main specific elementary need is for classroom enlargement. 600 square foot classrooms are three hundred square feet below recommended minimums. The District feasibility study supports the need for the increase in square footage. A plan has been developed to incorporate this major remodel within the existing structure (please see drawing). Adequate-sized classrooms, elementary music media center, multi-purpose room/cafeteria are included in the renovation. By this phase, a functional K-6 facility will have been developed, utilizing the current site and structure.

Office of the Superintendent

Senator Bob Mulcahy
Box 246
Kodiak, Alaska 99615

Dear ~~Senator Mulcahy~~ Representative Hermann:

Enclosed find the memorandum that was approved by the Southwest Region District Board of Education on May 14, 1983. Please note that at that time the District Board was assuming that Levelock and Clarks Point were going to be funded during this last legislative session. This was not the case as when the legislature finally adjourned in June we found out that Clarks Point was not funded.

Therefore, please place Clarks Point at the top of your list for funding during this next legislative session.

Also, find a copy of the first page of the Department of Education's REAA Capital Improvement Program Budget FY85 CIP Budget Request which lists Clarks Point as #9 priority.

I hope the enclosed is the material you requested. Please feel free to request more information as we believe that Clarks Point is very deserving of your attention and funding next year.

Sincerely,

Peter E. Plisock
Superintendent

MEMORANDUM SRS- 117

To: School Board Members

From: Office of the Superintendent (IP)

Date: May 3, 1983

Subject: Capital Improvement Plan FY 85-87

The Board is being asked to accept and approve the proposed Capital Improvement Plan as presented herein.

Extensive re-evaluation and study of the school district's projected needs and the resulting priority ranking of the proposed projects as listed; SRS is requesting the state legislature to provide funding for following Capital Improvement proposals.

0. Clarks Point #1 Priority was not funded in FY 84

2/. Manokotak - School Addition: FY-85

Classroom space is needed for basic education and music programs. The building requires remodeling upgrade and a lunch room/kitchen facility is urgently required.

Estimated Cost - $4,500.000

3/. Rehabilitation and Upgrade Teaching Facilities:(District Wide) FY-85

a) Painting and Repairs	150,000
b) Water and Sewer Systems	200,000
c) Life/Safety Fire Alarms	700.000
d) Voc. Educ. Facility - Ekwok	750,000
e) Bulk Fuel Oil Storage & Piping - Clarks Point	180,000
Estimated Cost	1,980,000

4/3. Portage Creek Multipurpose Addition and Remodel: FY-85

Space is required for a library, multipurpose facility and voc. educ. class room; an increased lunch room/kitchen area and a new heating plant is needed.

Estimated Cost 1,550,000

5/. Teacher Housing: FY-85

Teacher living quarters such as duplexes are urgently needed at the following locations:

a) Aleknagik HS	205,000
b) Levelock	275,000
c) New Stuyahok	285,000
Estimated Cost	765,000

5. Electrical Generator Rehabilitation and Upgrade: FY-85

Due to increased demands on power loads and because of larger curriculum programs and the power requirements for growing populations, the district's power generation capabilities must be upgraded; at Koliganek New Stuyahok, Clarks Point, Togiak, and Twin Hills.

Estimated Cost 1,100,000

6. Aleknagik - Additional Classroom Space: FY-86

Increased classroom space for basic education will be required to accommodate student enrollment growth at Aleknagik school. Projection needs indicate two additional classrooms and an increase in Voc Educ. facilities will be required.

Estimated Cost 1,500,000

7. Togiak -- Block Erosion Control Barrier: FY-85

Evidence indicates that some thirty five feet of the school playground property area that borders on the ocean beach, has severely erroded away; thus threatening the security of the school buildings. A soil retainer sea barrier, to retard further sea errosion intrusion must be provided before severe facility damage results.

Estimated Cost 1,500,000

8. District Office Rehabilitation: FY-86

To more efficiently serve the school district, the present facility is in need of re-building to provide work space, office room and curriculum materials storage space.

Estimated Cost 335,000

9. New Stuyahok - Secondary Classroom Addition: FY-86

An additional facility is required to provide teaching space for the basic education programs projected. Expected high school student population growth requires a minimum of two additional classrooms to house students and provide heating upgrade.

Estimated Cost 1,700,000

10. Facility Heating Retrofit and Upgrade: FY-87

The sites of Koliganek and New Stuyahok will require upgrading and retrofiting of complete heating systems in the older structures. Obsolesence and deterioration (wear & tear) on facility heating systems require replacement with a more fuel efficient system.

Estimated Cost 1,200.000

The estimated total projected funding costs for this six year Capital plan amounts to:

Total Estimated Cost $16,130,000

Date 5-5-83

No. 5-202-20

King Cove City Schools

Revised Request for High School Addition

PROJECT.

SITE AND FLOOR PLAN

February 2, 1984

REQUEST FOR CAPITAL PROJECT FUNDING
KING COVE CITY SCHOOL DISTRICT
FISCAL YEAR 1985

King Cove City School District, with full support of the Municipality, has revised the funding request for a high school addition to King Cove School.

Original facility analysis and planning called for a three-phase construction project, which would add a high school wing to the existing elementary school. Estimated cost was $9.6M. However, declining state revenues combined with increasing need within the district, has forced the consideration of a more realistic and affordable alternative. The result is a major reduction in the scope of the planned project, including elimination of certain spaces, omission of the remodel portion of the project and a decrease in overall square footage. The district feels that with proper design, the current facility can continue to house both elementary and secondary students. It is their intent to maximize joint usage of as many spaces as possible. The revised request is for a 17,000 square foot addition at an estimated cost of $4,576,600. Spaces to be included are science and business labs, history and language arts classrooms, gymnasium and auxillary facilities. The district has tentatively budgeted local funds in the amount of $1,000,000 toward the project. It is the remainder, $3,576,600, which is requested as a direct legislative appropriation.

The 17,000 square foot addition fits within the guidelines established by the Department of Education (see attached letter of approval January 23, 1984). The approval by DOE removes the concern of an average in square footage: Existing square footage in the school totals 24,000 square feet. With the additional 17,000, the total will be 41,000 square feet. This is well within the allowable 57,000 square foot allotment.

The district has worked with an architectural firm, facility planners and cost estimators to develop the following project budget:

Construction Cost

17,000 sq. ft. @ $228 psf **	$3,876,000
7% contingency, inflation, change orders	271,000
Total Construction Cost	$4,147,000

** Verified by Cost Estimators, HMS, Anchorage and current bid prices for the Aleutian Region.

Additional Project Costs

Design, including inspections (8.5%)	$ 330,200
Site/Survey/Soils	10,000
Art Work	21,000
Agency Approvals/Fire Marshall	2,000
Administration/Restricted Funds	66,400
Total Project Cost	$4,576,600

District Contribution (tenative)

Principal	$ 800,000
Projected Interest*	200,000
Total District Contri.	$1,000,000

* If money is allocated through Department of Education as requested by District.

REQUESTED 1985 LEGISLATIVE APPROPRIATION $3,576,600

King Cove City Schools
Box 6
King Cove, Alaska 99612

Dear Sir:

The documentation submitted concerning your student population projections has been received. As a result of this review, the Department of Education accepts your enrollment projection as valid. Based on this position, your CIP budget request is now consistent with the Department's space guidelines.

If you need additional information or have any questions concerning this position, please contact me at your convenience.

Sincerely,

James E. Tozer
Facilities Coordinator

January 20, 1984

James Tozer
Facilities Administrator
Pouch F
Alaska State Department of Education
Juneau, Alaska 99811

Dear Jim:

As I mentioned in our discussion yesterday, King Cove School District requests that another look be taken at their enrollment projection. As indicated in the CIP request, there was a severe drop in the number of students with a recent temporary decline in the fishing industry. However, the long range view continues to be optomistic. In fact, an increase of at least 9% is ensured by next year due to a large current pre-school group. While the District feels a 9% annual increase over the next years is a wee bit optomistic, they do feel a 6% increase per year is realistic for the next ten year period. Our revised enrollment projection, rising a 6% annual increase, follows:

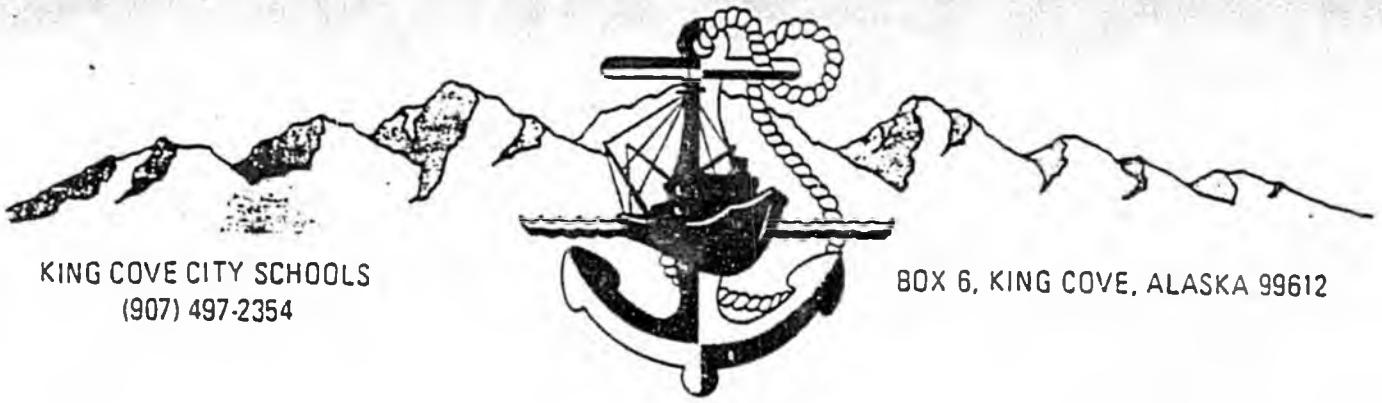
SCHOOL YEAR	ENROLLMENT PROJECTION
1983-4	111 (current enrollment)
1984-5	121 (a large preschool ensures this increase)
1985-6	128
1986-7	136
1987-8	144
1988-9	153
1989-90	162
1990-1	172
1991-2	182
1992-3	193
1993-4	205

Satellite Center 215 Main Street, Ketchikan, Alaska 99901

If you will accept these figures, the square footage estimates in the CIP are within the guidelines for 200-299 students. (maximum of 57,000 square feet) The square footage requested was based on actual architectural drawings done for the District's facilities feasibility study in 1982. As we are trying to add a high school addition which makes maximum use of the existing elementary structure, 43,600 square feet is needed, for the new and existing space.

Please advise as to the acceptability of the District's request. If you approve, would you please let us know via memo so local legislators will know the guidelines have not been exceeded.

Thanks for your assistance.



Sincerely,

Twyla

KING COVE CITY SCHOOLS
(907) 497-2354

BOX 6, KING COVE, ALASKA 99612

December 12, 1983

Dear Senator Mulcahy:

Presently in King Cove we have 45 students in grades 7-12. With the influx next year of a large seventh grade class, this will increase to 53. The City of King Cove and the King Cove Native Corporation have informed me that in the near future a new subdivision of 30 new homes will be constructed. As rendered in their letters, we can expect a substantial increase in our student population.

Sir, attached is a floor plan which the board and administration considers most important and of the barest minimum of square feet to meet this increase and still provide an excellent educational program.

If any other information is required, please call. Thank you for your kindness, understanding and cooperation.

Cordially,

Ben

Benjamin C. Kirker

December 9, 1983

Ben Kirker, Superintendant
King Cove City Schools
King Cove, Alaska 99612

Dear Ben:

The Aleutian Housing Aurhority is presently planning to develop thirty new homes in the Rams Creek Subdivision area, with construction slated to commence within one year.

The City and housing authority are working together on site and utility issues, and it is my opinion that site work will begin this spring, and occupancy of the new homes will occur a few months later. I believe this improvement in housing avalability in King Cove will have important implications for enrollment at the school, with an increase in students virtually certain.

I will keep you informed of developments on this front.

Sincerely,
CITY OF KING COVE

MANOKOTAK SCHOOL ADDITION:

STATUS:

WITH ONE OF THE LARGEST SCHOOL POPULATIONS DISTRICT WIDE, THE MANOKOTAK K-12 SCHOOL HAS TOO LITTLE CLASSROOM SPACE TO HOUSE THEIR STUDENTS AND OFFER FULL CURRICULUM. A GENERATOR ROOM HAS BECOME THE MUSIC CLASSROOM, A TINY KITCHEN SERVES LUNCHES TO BE EATEN IN THE CLASSROOMS BECAUSE NO LUNCHROOM EXISTS. A SEVERE LACK OF HEATED STORAGE SPACE FOR GYM EPQUIPMENT NECESSITATES STOCKING ITEMS IN HALLWAYS. THE TOO SMALL SHOP WITH ITS' WOOD FLOOR SEVERELY LIMITS ANY "HOT" METALS PROGRAM SUCH AS WELDING ETC.

SOLUTION:

PROVIDE FOR A SCHOOL ADDITION OF 3,000 SQUARE FEET AND UP-GRADE THE PRESENT FACILITY TO INCLUDE NEEDED BASIC EDUCATION CLASSROOM SPACE, ROOM FOR A MUSIC PROGRAM, KITCHEN/LUNCHROOM AREA, AND STORAGE AREAS.

ESTIMATED FUNDS PROJECTED TO MEET THE REQUIRED SPACE PROPOSED:

$6,100,000

ESTIMATING FORM

1.01 Project: School Addition

1.02 Location: Manokotak

1.03 Date: June 2, 1982

1.04 Category: Combined K-12
100 - 199

1.05 Outline Description:
Current facilities are undersized for present and projected enrollments. Various programs and classes are being held in an adapted storage/generator building and leased village buildings. Additional backup and funding breakdown will follow.

Naknek, Alaska 99633

Dear Representative Herrmann:

Thank you for your letter regarding our budget and legislative action concerning our needs. Because our operation and maintenance budget process requires its submission to the Commissioner of Education by May 30, I trust you are asking for the Capital Construction Budget Request which goes to the Department of Education in the summer of each year.

Senator Mulcahy had previously asked that a copy be mailed to him. We did this and I also sent copies of some related materials. You will find copies of these materials enclosed for your information and use.

Please do not hesitate to call upon me if you have any questions or need additional information.

Sincerely yours,

Dick H. Bower
Superintendent

Judy Bush
Alaska Legal Service
763 7th Avenue
Fairbanks, Alaska 99701

Dear Judy:

The following cost breakdown represents our best estimate of the required appropriation for meeting ONLY the Tobeluk Decree requirements at Akutan and False Pass.

Akutan

Construction Costs (1100 Sq. Ft. @ $225.00)	$247,000
Restrooms, Circulation, Mechanical, Storage (1000 Sq. Ft.)	295,000
Design and Administration (25%)	135.000
	$677,000

False Pass

Construction Cost (1100 Sq. Ft. @ $205,000)	$225,000
Utilities (Required at New Site)	130,000
Restrooms, Circulation, Storage, Mechanical (1000 Sq. Ft.)	270,000
Design and Administration (25%)	160.000
	$785,000

The figures cited above are consistent with our letter of November 25, 1983 to Steve Hole at the Department of Education. As previously indicated to you, Mr. Hole, and all others concerned, we are still very reluctant to look only at meeting the Tobeluk Decree requirements at these two sites. The facility needs of these communities and their students have suffered continued neglect from the legislative process.

We consider, under the specific circumstances previously oulined, a limited, piece meal approach to these projects, being to neither the financial nor educational best interests of the State of Alaska nor the communities involved.

We sincerely appreciate your contacting us on this matter and alerting us to impending action which would have seriously limited our ability to accomplish even the minimal Tobeluk requirements. Your advocacy of the needs of these students was both appropriate and handled in a positive and professional manner.

Please do not hesitate to contact us if we can provide additional information.

Sincerely yours,

Dick H. Boyer
Superintendent

Pouch V
Juneau, Alaska 99811 (MS 3100)

Dear Adelhide:

In order to have a complete and adequate high school in the Pribilofs, we need all the recommended new construction and renovation as described in our Capital Improvement Program Plan. I want you to know me well enough to know that if I ask you for something for the Pribilof School District, it is really needed--not just wanted.

I have mulled over the project for many hours, and have cut the request by eight million dollars for the first phase funding. If we receive funding in two phases, I want to rethink and redesign some of the renovation requests as shown on the original plan.

The major problem that I see in the phasing of our high school is that I had to remove, not only the multipurpose room, but four (4) classrooms as well. This will cause us a problem in curriculum design, as you are well aware, you plan curriculum and design a physical plant to your curriculum design, not vice versa.

If it must be phased, so be it! Please do your best. You are one person the children of the Pribilofs can count on for leadership.

A revision of the Pribilof School District's Capital Improvement Plan is enclosed with this letter. It reflects a major reduction in our original request. Please note that this reduction in the amount of funds requested by no means indicates any reduction from the physical needs originally requested. It only reflects the breaking of our original request into two funding phases.

I shall look forward to seeing you in Juneau during the week of the nineteenth.

With warmest personal regards, I am

Sincerely yours,

Leland L. Dishman
Superintendent

February 6, 1984

The Honorable Adelheid Herrmann
The House of Representatives
Pouch V
Juneau, Alaska 99811 (MS3100)

Dear Ms. Herrmann: Adelheide —

In the very near future, you will be discussing the Capital Project Funding for the fifty-three school districts in the State of Alaska. The purpose of this letter is to call to your attention the desperate need for adequate Capital Project Funding for the Pribilof School District.

The St. Paul School consists of an originally designed kindergarten through grade eight classroom cluster with a media center in the school and a multipurpose room constructed in 1971. Four classrooms were added in 1976 to accommodate grades nine and ten, and a small vocational area was added in 1978 to introduce occupational exploration. As you can easily see, the school was designed solely for an elementary school.

There now exists, and has existed for the past two years, a community demand for an adequate high school program on Saint Paul. With the present physical facilities, an adequate high school program is an impossibility.

We are attempting to teach general science, biology, chemistry, and marine biology in the same inadequate classroom. Our science room consists of a total of 672 square feet of space. The Alaska State Department of Education School Facilities minimum standards for a small high school science room is 1100 square feet.

We have no space available for guidance and counseling, art, small group instruction, teacher preparation, theater, choral or instrumental music, or psychological testing. Every available space is utilized for pupil instruction.

We recognize the importance of the computer in the future and, therefore, have purchased the necessary quantities to provide an adequate program in computer literacy. However, our inadequate facilities limit computer usage due to existing shortages in electrical outlets, power consumption, and available instructional space.

Another glaring problem is our home economics room, which has only 576 square feet of floor space. It is too small for food preparation, clothing design and construction, and display/ serving of student projects. State standards indicate that a home economics room should be a minimum of 800 square feet.

It is evident from visiting many schools and public buildings throughout the State of Alaska that Alaska places a great deal of emphasis on art. It must be noted that Saint Paul school does not have space available for art, painting, drawing, or ceramics.

The multipurpose room (gymnasium) is grossly inadequate. It has a playing surface of 75 feet in length and only 40 feet wide. It is a wonderful area for elementary and junior high physical education; however, with its limited seating (140 persons) and reduced floor area, it is not at all suitable for high school or community activities.

The Pribilof School District and the people of the Pribilofs made a commitment to the children of the District in 1982. They promised them a high school in which they could receive an adequate education; an education equal to, or better than, an education they might receive anywhere else in the state. Unless you, in your capacity as lawmakers and providers, take the responsibility to provide funds to construct an adequate high school on Saint Paul, the hopes and dreams of earning a high school diploma in our community will disappear.

We, as a School District and community, are doing all we can to provide the ingredients for a program of excellence within our schools. We have extended the school day by one hour; we have searched out and employed the finest, most dedicated teaching staff available; and upon every occasion, we recognize excellence in performance by our students and employees by the presentation of certificates of merit.

After each grading period, we hold an open house and invite the parents to school at 7:00 p.m. to pick-up their child's report cards, and visit their child's teachers. Would you believe that more than ninety (90) percent of the parents care enough to come to every open house. At eight p.m. an assembly is held and those students making the honor roll are honored by the school administration and Board of Education. During the 1982-83 school year, thirty-nine (39) percent of our students made the honor roll.

My closing statement will be an article clipped from the Anchorage Daily news on Wednesday, February 1, 1984. The one sentence states it all, you'll recognize the sentence. We desperately need and want a high school in Saint Paul, Alaska. We do not believe that we are asking too much. If you review the facts, you will discover that the Pribilofs have not received, for Capital Projects, their fair share of the funds. Many similar sized REAA's have received more than four times the amount of capital project funds for building construction. In my professional opinion, the Pribilof School District has been overlooked when the capital project funds were being distributed.

Please consider the impact of the Federal Government's phase-out on the Pribilofs, and the pressure being applied to the school system to provide a sensible method of educating or re-educating everyone to survive in the future.

It is with great deal of faith and hope that I send you this letter. Perhaps the letter will explain, to your satisfaction, the sincere needs of the people of the Pribilofs.

With personal regards, I am,

Sincerely,

Leland L. Dishman
Superintendent

LLD:ek

P.S. I sent copies of this letter to several members of the Legislature —

State proposes higher math, English requirements

The Associated Press

JUNEAU — Alaska's high schopl students would be required to go back to the basics under a curriculum proposal approved Tuesday by the state Board of Education.

The proposal must be aired at public hearings before it becomes final, according to Harry Gamble, a spokesman for the state Department of Education.

In December, the board raised from 19 to 21 the number of course credits required of high school students before they can graduate. That brought state policy into line with many Alaska school districts which required at least 21, Gamble said.

Of the state's 53 school districts, only two — Iditarod and North Slope — require 19 credits, officials said. Of the remainder, 13 require 20 credits, 20 require 21 credits, nine require 22 credits and eight require 23 or more credits. One district, The Pribilofs, doesn't have a four-year high school.

Tuesday's action boosts the number of credits needed for such basic subjects as math and English, Gamble said.

The state previously had mandated just five of the required 19 graduation credits: one credit each for social studies, math, science, English and physical education. Local school districts had set the other 14 units.

Under the new proposal, that would be changed to four credits required for English, three for social studies, two for math, two for science and one for health and physical education. The local school districts would set the remaining nine units under the 21-credit system, Gamble said.

The board, however, wants comments from educators and local school districts on just what subjects the core curriculums should contain.

"For example, if we asked high school students to complete three units of social studies, we'll ask educators just what those courses should cover," Gamble said. "That could include Alaska history, U.S. history, Western civilization, U.S. government or Alaska government.

"This places a lot more stress on the basic courses, requiring more time in the core curriculum," Gamble said. "It probably will cause some districts to change some priorities."

PRIBILOF ISLANDS SCHOOL DISTRICT

CAPITAL IMPROVEMENT PROGRAM

August 15, 1983

SUMMARY OF SCHOOL PROJECT COSTS FOR

PRIBILOF ISLANDS SCHOOL DISTRICT.

I. St. Paul School:	$ 8,082,340.00
II. St. George School:	$ 2,372,100.00
III. St. Paul Teacher Housing:	$ 2,388,750.00
IV. St. George Teacher Housing:	$ 840,000.00
TOTAL COSTS FOR PRIBILOF SCHOOL DISTRICT:	$13,683,190.00

PRIBILOF ISLAND BOARD OF EDUCATION

CAPITAL FUNDING REQUEST

&

PROJECT RATIONALE

The Pribilof Island Board of Education believes that innovation and change in education --both content and methods--are necessary for meeting the needs of our youth as they face life before them.

To accomplish that innovation and change, a District needs a dynamic staff, quality instructional materials for the students and staff to use, a well-defined curriculum adopted by the Board of Education, and an adequate learning environment in which staff and students are housed.

The District has accomplished all of the above with the exception of adequate facilities.

The Board of Education has been faced with a "Catch 22" situation. For many years, the Pribilof Islands have been controlled by the Federal Government, National Marine Fisheries, Pribilof Division, with the primary purpose of protecting the summer habitat and managing the Northern Fur Seal. As the Islands managers, the Federal government controlled all housing on the islands. Therefore, when the Board of Education desired to offer the same programs as other school districts, necessary for students to function well in a modern society, no housing was available for the teaching staff. Without staff, the programs could/can not be offered. Therefore, the District has no music program, for example, and the Board has been hesitant to expand high school programs at St. George, which has none and at St.Paul which recently added grade 11.

However, National Marine Fisheries will turn the operation of basic public services and control of the Pribilof Islands to its residents, September 30, 1983.

It is the declared intention of the Islands' residents to diversify the economy, improve community living including addressing the housing problem, and operate a school system which offers

to its citizens a quality educational program, housed in facilities equal to other school districts in the State.

As a beginning in that effort, the Board of Education voted in March, 1983, to establish a high school program at St.George in the 1986-87 school year after adequate planning has been completed; and expand through grade twelve at St. Paul beginning in the 1984-85 school year.

In addition, the District is in the process of developing a master plan for the rest of the decade of the 1980's and the 1990's. The master plan will identify the various economic scenarios which could occur on the Islands, project future student enrollments based on those scenarios, and identify the educational programs, staffing and facilities required to provide those students with a quality educational program.

ECONOMIC SCENARIOS

Various economic futures have been projected for the future of the Islands. Those identified as having potential are the following:

1. Shore-based support services for the fishing industry.
2. Staging area for off-shore oil exploration and drilling.
3. Continued management and harvest of the fur seal
4. Expanded summer tourism.

The most likely of the scenarios is shore-based support services for the fishing industry with the others ranging from not likely to highly unlikely.

Based on the most likely, shore-based support services for the fishing industry, the following projections are made.

PROJECTED STUDENT ENROLLMENTS

Factors influencing these projections are the expansion of the school program through grade twelve, projected housing needed for people employed in fisheries support and related services, existing student population, and birth rate trends.

Based on existing student populations (tables attached), the projected enrollments for the 1988-89 school year are anticipated at 1.2 students ages5-17(school age) per household.

The number of households projected are:

St. Paul	166
St. George	42

With the addition of complete high school programs on both islands, the anticipated student populations are

St. Paul, Grades K-12	199
St. George, Grades K-12	50
District Total	249

Since projection of student populations beyond five years become more risky, the educational program, staffing and facilities are based on the above projected student population.

PROJECTED EDUCATIONAL REQUIREMENTS

The Board of Education has identified instructional areas where program offerings need to be initiated and or expanded. These areas are music-band and choral-, business education-office practice and computer science, auto servcing, hotmetals and building trades. Specific course offerings would include marine science, vocational agriculture/horticulture, basic building construction, fisheries support services, computer statistics, word processing, and art.

PROJECTED STAFFING REQUIREMENTS

To carry on the desired program, additional staff will be needed at both island schools. Those requirements are as follows:

School	Existing Staff	Additional Staff Needed	Total
St. George	2	1	3
St. Paul	14	4	18
District Total	16	5	21

The addition of staff is contingent upon housing. Since the District has a housing shortage of five(5) units at St. Paul for the 1983-84 school year, and has only one (1) housing unit at St. George, housing projected as needed is as follows:*

St. George	1-2 Units
St. Paul	5-8 Units

*The range of housing units is given, for if the District cannot attract married teaching couples with training in needed subject areas, the higher number of housing units is needed.

PROJECTED SCHOOL FACILITIES NEEDED

To determine new facilities needed,an examination of each existing facility was accomplished and floor plans were reviewed to determine the educational adequacey.

ST. PAUL SCHOOL

The St. Paul School consists of an originally designed, kindergarten through grade eight classroom cluster with a media center in the middle and a multipurpose room constructed in 1971. Four classrooms to accommodate the ninth and tenth grades were added in 1976, and a third addition, a vocational area,where occupational exploration is conducted,was added in 1978.

The school is located on a filled site in a lagoon. Unfortunatel/, the facility was placed on the corner of the school site which prohibits expansion in two directions. Therefore, any future expansion will require substantial earthfill into the lagoon area.

No library workroom was provided for the librarian for processing library materials, storing of rare materials, or audio-visual equipment, therefore, an existing classroom has been converted to a library workroom.

No spaces were provided for testing, small group instruction, speech correction and other special education, therefore, two classrooms have been converted for special instruction

No space has been provided for clerical workers, teacher work/ preparation, or counseling service.

The media center is adequate for an <u>elementary</u> school population, inadequate for junior and senior high school.

No space is available for choral or instrumental music.

The existing science laboratory/classroom is totally inadequate for junior high school and high school science activities.

Originally designed as a science/art room for elementary students, total floor space is 672 sq. ft. Alaska State Department of Education School Facilities Standards recommend a small high school science room of 1100 sq. ft.

The multipurpose room consists of laminated beam construction. Seating is available for approximately 150 people. With 600 people in the community, seating is inadequate. Attempts to expand for seating would be futile, since the laminated beams interfere with spectator sight-lines.

Storage rooms for audio-visual equipment, instructional supplies, textbooks and custodial/maintenance supplies are inadequate or unsuitable.

The home economics room, 576 sq. ft. is too small for food preparation, clothing design and construction, and display/ serving of student projects. State standards indicate a home economics room should be at least 800 sq. ft.

No space is available for art, painting, drawing and ceramics.

A welding shop in the auto shop probably violates fire code.

The auto shop is too small (225 sq. ft.) for student safety.

A transformer/storage building is located in the area in which the school would logically expand.

ST. GEORGE SCHOOL

The St. George school was constructed during the 1950's with a multipurpose room added in 1976 and expanded in 1982. The school has five classrooms with one converted to special education/ library, a principal's office, boys/girls restrooms, a small storage area and a mechanical room.

The site has poor drainage with attempts to correct the problem not suitable. The surrounding area drains directly toward the front of the building creating a hazardous, unsanitary condition.

Fuel Oil storage is inadequate.

Classroom spaces are adequate to house kindergarten though grades twelve, however, quality of space is inadequate or minimal. There are no sinks in primary and pre-school room, or art room. Blackboards, tackboards are not sized to the children served.

There is no science area.

Library area (221) is inadequate.

No restrooms are provided for primary children.

No room darkening capability is provided.

No space is available for trades and industry, home economics, business education or other vocational areas.

Art is conducted in a classroom not designed for art activities. No sink is provided, nor tiled area for messy activities.

Storage throughout is inadequate.

No space is available for radio, teleconferencing.

RECOMMENDED IMPROVEMENTS AND ALTERATIONS

St. Paul

Remodel space for libary workroom, book, periodical and audio-visual storage.

Remodel space for special education activities- gifted/talented, speech correction, and reading and mathematics remediation.

Remodel existing gymnasium to provide a choral/instrumental music area with ensemble practice and music storage area. Leave balance of space for elementary physical education.

Provide space for teacher preparation area.

Provide space for extension of media center to serve high school students.

Provide adequate areas for student displays.

Improve the aesthetic environment of the school in terms of color schemes and interior decor.

Combine three existing storage areas into one larger, functional storage area.

Correct heating, ventilating deficiencies.

Size all tackboard, chalkboards, relocating to proper heights relative to the students served.

Provide space for hot metals

Provide auto servicing/repair area.

Provide science suite consisting of science laboratory/class room, experimental area (greenhouse) and marine related service area.

Provide multipurpose area with playing court,showers, lockers, and seating.

Provide a business education laboratory/classroom, suitable for office practice, and computer science.

Provide an art area for painting, drawing and print-making.

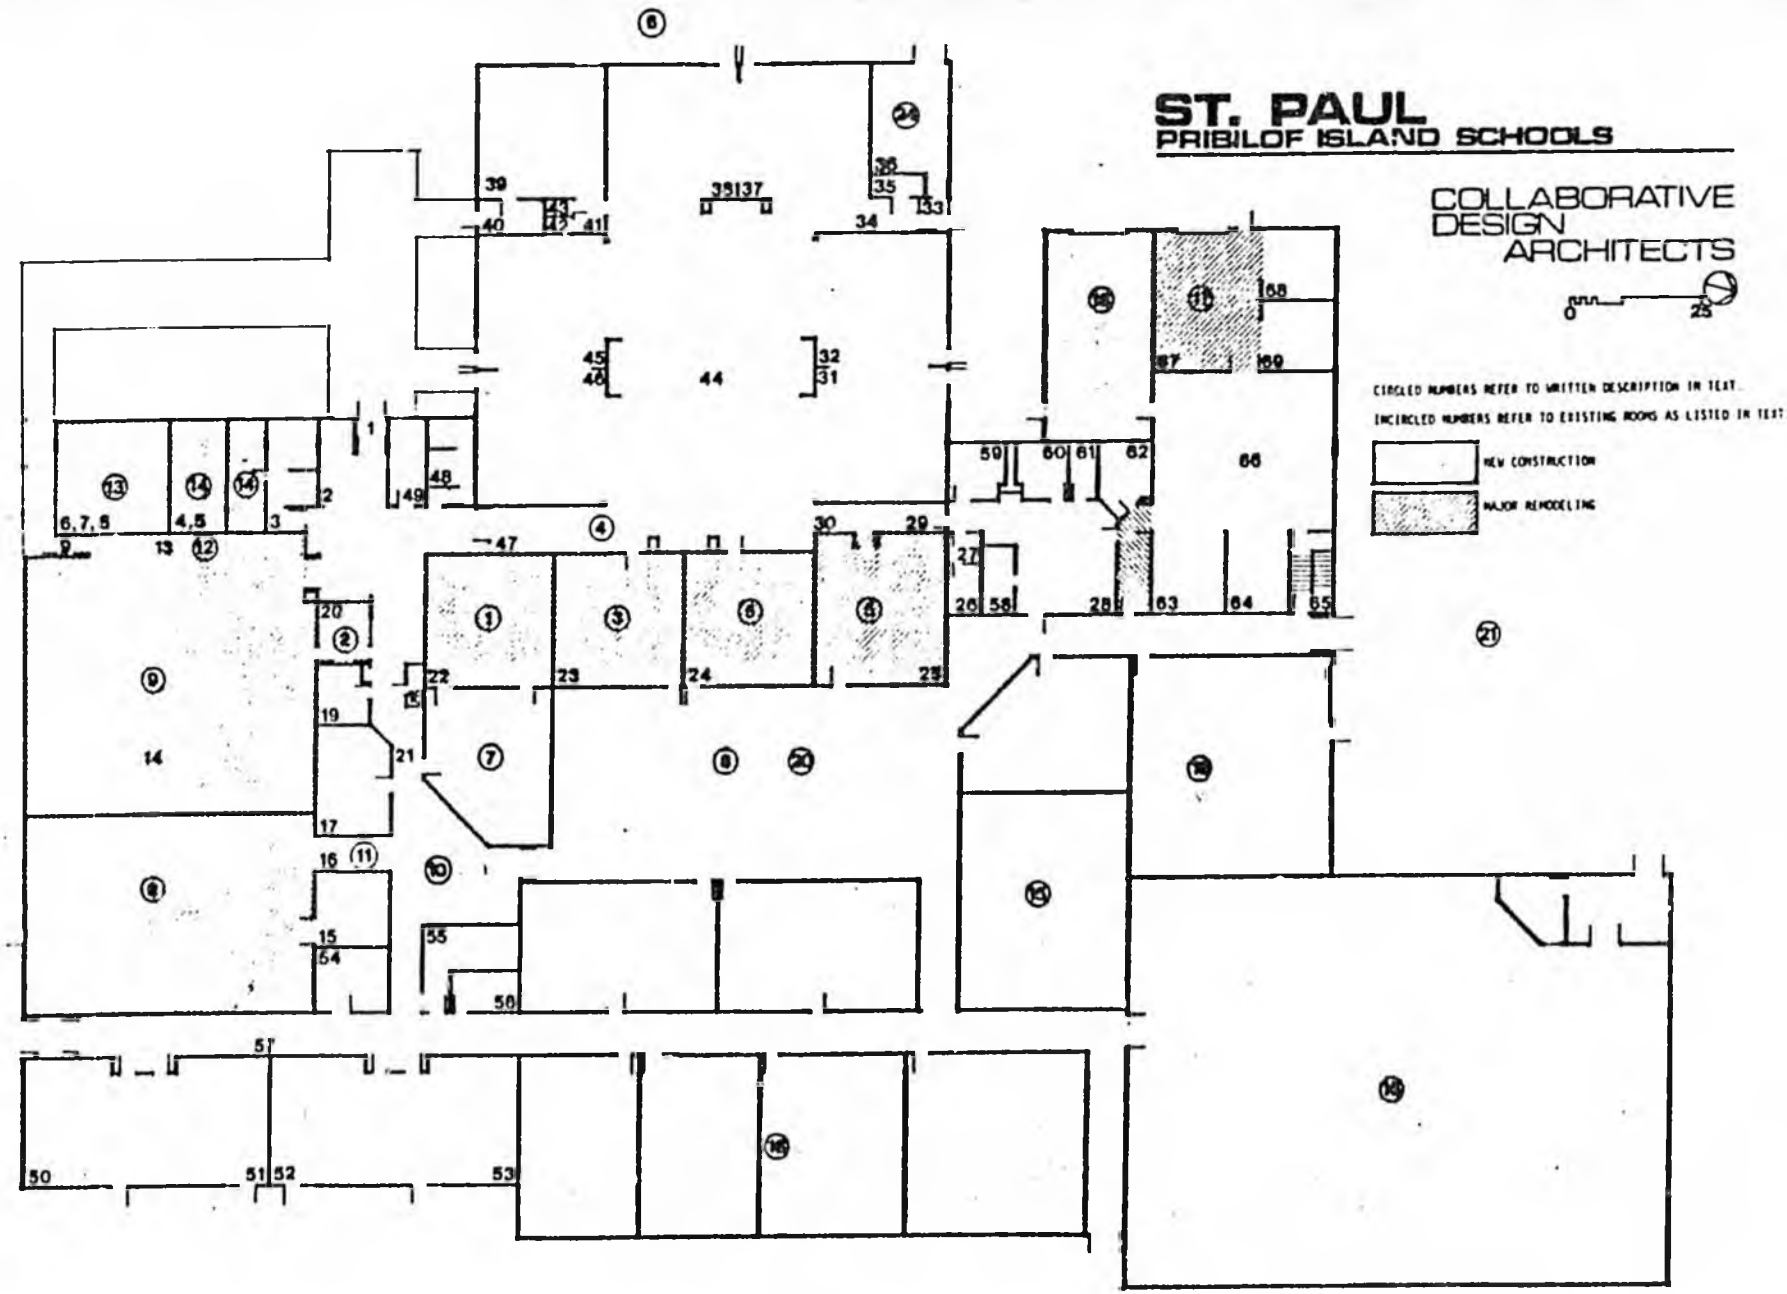
Provide a home economics laboratory/classroom suitable for food preparation, clothing construction and interior design.

St. George School

Provide vocational education area

Expand media/library area

Remodel existing school and reconfigure for more efficient use centered on programmatic uses, i.e. science, academic areas.



Remodel interior spaces and size blackboards, tackboards, restrooms, sinks, etc. for the size children served.

Provide adequate fuel storage.

Slope site to provide adequate drainage.

Space requirements, new construction and remodeling, are detailed in the Architectual Abstract.

NEW CONSTRUCTION
MAJOR REMODELING

ARCHITECTURAL PROGRAM FOR PRIBILOF ISLANDS SCHOOL DISTRICT
ST. PAUL, ALASKA

ST. PAUL SCHOOL

1. Convert existing Home Economics Room 22 to Administration and Counseling. Keeps Administration close to entrance and at junction between Elementary and Secondary.

2. Convert Principal Office Room 20 to Sick Room.

3. Use Classrooms 23 for Media Center Office, Work Room and Reference desk.

4. Close off access to Industrial Arts area via Media Center and Graphics Lab and hall 47 and 30.

   ...disrupts media center operation and open classroom functions around elementary media center.

   ...keep secondary separated from elementary.

5. Convert Classrooms 24 and 25 to Special Education and Gifted Students Centers.

   ...locates special students near special resources particularly needed for their education.

   ...provides accessibility to both Elementary and Secondary students.

6. Relocate childrens playground to west side adjacent to road between school and village. Provide protection from autos.

   ...get activities close to Kindergarten and if enclosed keeps wayward traffic away from school.

7. Construct new Teacher's Lounge and Prep Area east of Room 22 off Corridor 21.

   ...centralizes staff area between all grade levels.

8. Locate High School Media Center north of transformer surrounded by new classrooms.

   ...keeps both media centers centrally located and capable of being operated from one control point.

9. Convert existing Gymnasium to Elementary Gym and Music Center.

   ...provides non-existing facilities for music and separates the little folks from the big guys of the High School.

10. Provide High School Commons off Corridor 21.

   ...gets all lockers to one area and gives High students their own area.

11. Convert A.V. Storage 16 to Corridor.

   ...gives access to music area from high school commons and can provide access for elementary students if it's not feasible for them to enter via their gym.

12. Eliminate Hall 13.

   ...wasted space - can use in elementary gym.

13. Convert Girls Locker Room 6, 7 and 8 to Storage.

14. Convert Boys Locker Room 4 and 5 to Elementary Locker (change) rooms, using the existing Girls Restroom 3 for the Girl's toilet facilities.

   ...provide storage space without building new space, and still gives minimal facilities for gymnasium uses.

15. Build new Gymnasium for full-sized activities east of Industrial Arts wing. Locate parking north of building.

   ...provides access to all of community - both the old town and the east addition.

16. Extend new classrooms from north end of east classroom wing 53 to enclose Court Area.

   ...provides new Business Ed. Room, Marine Science Room, Science Room, Art Room and 2 other classrooms.

17. Convert the Auto Shop into Hot Metals Lab with proper venting and fire protection.

18. Add new Auto Bay to the south of the existing shop wing.

   ...keeps the facility close to other shop activities.

...eliminates the need for fill to accommodate its construction.

...still have access to basement storage on north side although this could be altered by new access to gymnasium for the public.

19. Cover encircled court area for use as High School Media Center.

...keeps all media resources centrally located, controlable by one director.

...effective energy control, by reducing exterior wall exposure.

20. Build new Greenhouse in upper spaces of New Media Center.

...gives southern exposure.

...close proximity to science rooms.

...give access to both Elementrary and Secondary students.

21. Relocate existing transformer vault.

...primary service probably has to be encapsulated to existing if we enclose it within the new addition.

...special requirements of National Electric Code for transformer vault.

22. Provide additional restroom facilities as follows:

Elementary:	WC:	11	urinals:	3	Existing
		3		3	Required
Secondary:	WC:	3	urinals:	2	Existing
		3		2	Required

None required except that location of existing are not very convenient - perhaps can use the facilities in the east wing (Jr. High) for High School as well as have students use new Gym facilities.

23. Relocate student lockers to new Commons Area.

...gets them out of media center and elementary students area.

ST. PAUL SCHOOL - PRIBILOF ISLAND

24. Improve, modernize, redesign, and reconstruct the existing mechanical system.

1. Improve existing heating system for open classroom space around media center 44.

...many diffusers and return air registers are blocked off by book shelves and other equipment.

...the existing distribution system short-circuits itself. Ductwork must be extended to distribute air at outside walls and return at core so can get a more laminar flow from the cool outside to the inside spaces.

...Coil sizes may require enlarging.

...a boiler may be required for conversion of old gym because new activities will be more sedentary and require more heating.

...more efficient boilers may be feasible.

...other methods such as base board heating, shut down of air handlers at night, improved filtration, change of shower temperature-controlled valves, etc., would contribute significantly to energy conservation.

2. Close up most of the exterior doors from the classrooms. They are not required as exits and contribute tremendously to heat loss.

...they are not used significantly, if at all.

...they, however, have been used as a means to have the structure classified as a 1-Hr. building, increasing allowable areas within fire enclosures.

...fire separation walls will be required to comply with code requirements for maximum area allowances or a fire sprinkler system may be installed in lieu of some separations. A fire sprinkler system would improve fire protection and insurance ratings.

3. The conversion of the existing gym to other uses will require different mechanical design for different activities.

ANALYSIS OF COSTS FOR ST. PAUL SCHOOL

...Construction project as per projected enrollments to 1988 and Grades K-12.

Construction Costs

I.	New		
	1. Project Area	23,800 S.F.	
	2. Construction Cost (1985 bidding):	$207.75/S.F.	
	3. Project Construction Cost:		$4,944,720.00
	4. Equipment and Furnishings:		$ 395,580.00
II.	Remodeling		
	1. Project Area (Remodeling):	8584 S.F.	
	Construction Cost (1985 bidding):	$78.40/S.F.	
	Project Construction Cost:		$ 672,960.00
	2. Mechanical/Electrical Modifications:		$ 539,680.00
	3. Equipment and Furnishings:		$ 53,840.00
III.	Total Construction Cost:		$6,606,780.00

Other Project Costs

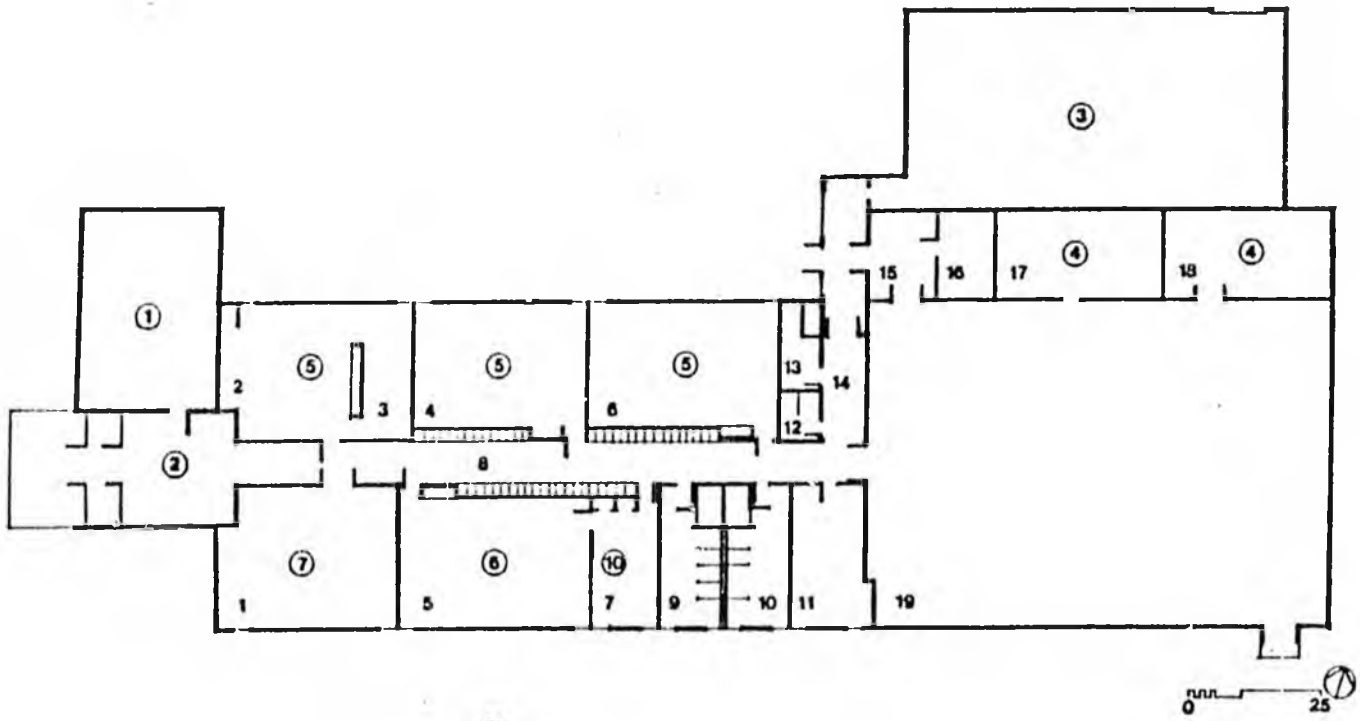
IV.	Contingency @ 8%	$ 528,550.00
V.	Architectural and Engineering Fees:	$ 713,530.00
VI.	Soils Survey and Testing:	$ 75,000.00
VII.	Administration:	$ 158,480.00

TOTAL PROJECT COST (ST. PAUL): $8,082,340.00

ST. PAUL SCHOOL - PRIBILOF ISLAND

ENERGY CONSERVATION COMMENTARY

In view of the severe winds on the Pribilofs, and the high costs of electrical generation and fuel costs for heating, an explicit and agressive energy conservation program must be explored in the School design process so that the facilities will be as conservative as possible. The following are several ideas that should be explored in the design process or prior to it by grants for special studies. Some are tried and true, others may be, in concept, very exotic but may prove feasible where costs are so high.



1. Earth berming.
2. Minimizing doors and operable windows to reduce infiltration.
3. Reinsulate, and super insulate new construction.
4. Daylight as much as possible to take advantage of natural lighting.
5. Wind power.
6. Passive solar principles where applicable.
7. Use the most modern state-of-the-art mechanical equipment.
8. Life-cycle cost evaluation of design, equipment, and systems.
9. Heat reclaim of exhausted air and process heating equipment.
10. Arctic entries.
11. Tidal mills for electrical generation.
12. Design building skin to reduce air infiltration.
13. Special considerations for alleviating or reducing specific requirements by governing Codes and Building Standards, where life safety is not jeoparoized.

ANALYSIS OF TEACHER HOUSING COSTS FOR ST. PAUL ISLAND

...Construction projected for 1984 season 8 units.

I.	Construction		
	1. Project Area:	11,000 S.F.	
	2. Construction Cost (1984 bidding): (Reflects 13% escalation factor for each year after 1983)	$169.50/S.F.	
	3. Project Construction Cost:		$1,864,500.00
II.	Furnishings		$ 280,500.00
III.	Total Construction Costs		$2,145,000.00
IV.	Project Contingency @ 3%:		$ 64,350.00
V.	Architectural and Engineering Fees @ 6%:		$ 132,560.00
VI.	Administration:		$ 46,840.00

PRIBILOF ISLAND SCHOOLS

COLLABORATIVE
DESIGN
ARCHITECTS

CIRCLED NUMBERS REFER TO WRITTEN DESCRIPTION IN TEXT.

ENCIRCLED NUMBERS REFER TO EXISTING ROOMS AS LISTED IN TEXT

NEW CONSTRUCTION

ST. GEORGE SCHOOL

GENERAL SPATIAL REQUIREMENTS

1. Construct new space for a Media Center at the west end of the building.

   .....New Area Requirements: 1000 s.f.

2. For foul weather protection construct an entry vestibule as a transition and waiting space and an arctic entry.

   .....New Area Requirements: 200 s.f.

3. Construct a Vocational/Industrial Arts facility.

   .....New Area Requirements: 2400 s.f.

4. Provide additional storage for the Media Center, Audio/Visual aids, and art supplies by utilizing the rooms adjacent to the Multi-Purpose Room 19.

   .....New Area Requirements: None

Most of the curriculum needs for St. George can be accommodated by renovating the existing facilities to furnish more special spaces for designated uses. No other new space will be required. In addition the general condition of the interior requires some remedial repair, especially at the entry doors, although it, like St. Paul has been well maintained. The wall surfaces, being glazed clay tile, are much more durable than the frame walls at St. Paul and require somewhat less care. This list continues with those modifications.

5. Remodel interior spaces to adequately accommodate Kindergarten through Grade 12, providing sinks, blackout means for A/V use, repositioning teaching aids as required, and changing interior finishes to accommodate specialized programs.

6. Remodel Room 5 to accommodate Home Economics and Home Skills.

7. Remodel to provide adequate Business Education facilities, including a Computer Center, Typing facilities, and space for other business equipment appropriate for educational purposes.

GENERAL SPATIAL REQUIREMENTS (Con't)

8. Regrade the entire site to alleviate poor drainage characteristics around the building and play area, especially on the south and west sides.

9. Replace and relocate oil storage facilities to provide adequate separation from the building.

10. Convert a portion of the Principal's Office, Room 7, to a Radio Communications Center.

GENERAL SUPPORT FACILITIES

11. Construct three units of Teacher Housing for the 1985 school year.

.....New Area Requirements: 3500 s.f.

ANALYSIS OF COSTS FOR ST. GEORGE SCHOOL

...Construction project as per projected enrollments to 1988, and Grades K-12 starting in 1986.

Construction Costs

I.	New		
	A. Project Area:	3600 S.F.	
	B. Construction Cost (1985 bidding): (Reflects 13% escalation factor for each year after 1983)	$216.00/S.F.	
	C. Project Construction Cost:		$ 777,600.00
	D. Equipment and Furnishings:		$ 77,800.00
II.	Remodeling		
	A. Project Area (Remodeling):	7344 S.F.	
	B. Construction Costs (1985 bidding):	118.00/S.F.	
	C. Project Construction Cost: *		$ 866,600.00
	D. Equipment and Furnishings:		$ 43,400.00
III.	Relocate Oil Storage Facilities:		$ 80,000.00
IV.	Site Grading		$ 50,000.00
V.	Total Construction Cost:		$1,895,400.00
VI.	Project Contingency @ 8%:		$ 151,600.00

Other Project Costs

VII.	Architectural and Engineering Fees:	$ 204,700.00
VIII.	Soils Survey and Testing:	$ 75,000.00
IX.	Administration:	$ 45,400.00

TOTAL PROJECT COSTS (ST. GEORGE): $2,372,100.00

* On-Site inspection must be made to confirm these Remodeling Costs.

ST. GEORGE SCHOOL - PRIBILOF ISLAND

ST. GEORGE ENERGY CONSIDERATIONS

The following recommendations are given to reduce the demands for energy for comfort control, in view of the severe weather conditions and the total dependence on shipped fuel for heating and power generation. The general comments in the St. Paul section apply here as well. Specifically, the following should be done or at least evaluated on a life-cycle cost basis to determine their effectiveness although generally, they are very effective under severe weather conditions.

1. Earth berming to reduce wind exposure and improve drainage. With masonry construction for the original building, this can be accomplished easily, although careful placement of soil is required.

2. Reinsulate and super-insulate the building shell.

3. Construct an arctic entry at the Gymnasium entry.

4. Insulate all heating piping and ductwork, preventing heat loss and protecting children from burns.

5. Provide a potable water supply with a distiller.

6. Replace entry door hardware with more durable styles, insuring positive latching and closure.

ANALYSIS OF TEACHER HOUSING COSTS FOR ST. GEORGE ISLAND

...Construction projected for 1985 season 3 units.

I.	Construction		
	1. Project Area:	3500 S.F.	
	2. Construction Cost (1985 bidding): (Reflects 13% inflation factor for each year after 1983).	$193.65/S.F.	
	3. Project Construction Cost:		$ 677,770.00
II.	Furnishings:		$ 76,500.00
III.	Total Construction Costs:		$ 754,270.00
IV.	Project Contingency @ 3%:		$ 22,630.00
V.	Architectural and Engineering Fees @ 6%:		$ 46,600.00
VI.	Administration:		$ 16,500.00
TOTAL PROJECT COSTS:			$ 840,000.00

CHAIRMAN

STAFF REPORT

HB 354 Relating to Physicians Staff Privileges
April 25, 1983

HB 354 requires hospitals to notify the State Medical Board when within seven days of the suspension or revocation of staff privieges in a hospital.

The purpose of this bill is to provide notice to the Medical Board that privileges have been altered, thereby alerting the Board that a problem of a professional nature may exist with a physician.

This bill follows the recommendation found on Page 4 of the performance audit of the Medical Board made July 30, 1982 (Audit No. 08-112-0082-R).

No position paper or fiscal note has been received as of the morning of hearing date.

FINDINGS AND RECOMMENDATIONS

Recommendation No. 1

Legislative consideration should be given to regulatory changes concerning the disciplinary process and the composition of the Board.

The 1978 audit recommended the establishment of regulations to ensure consumer complaints receive an impartial examination on the basis of merit. CSSB 237 delineated the grounds for imposition of disciplinary sanctions and disciplinary actions to be imposed. These grounds included unprofessional business practices as well as malpractice. This bill did not pass, and we recommend that it be reintroduced to the Legislature.

In addition, we believe statutory changes in the following areas would benefit the public:

A. Hospitals should be required to notify the State Medical Board when a practitioner's hospital privileges are refused or restricted because that person is a real or potential danger to the public. If hospitals were to report such actions, the Medical Board could initiate an investigation to determine if a questionable practioner should retain his or her license.

B. The Board should adequately represent those persons it regulates. The Board regulates 689 physicians, 73 physician assistants, 53 paramedics, and 10 podiatrists. The Board is currently composed of 5 physicians and 2 public members. Allowing participation of all occupations regulated by the Board would ensure that one occupational group does not promote its interests over the interests of an unrepresented occupational group.

Introduced: 4/13/83
Referred: Health, Education &
Social Services

Voted do not pass without amending

IN THE HOUSE BY KOPONEN AND FRITZ

HOUSE BILL NO. 354

IN THE LEGISLATURE OF THE STATE OF ALASKA -

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to physicians' staff privileges in hospitals."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 18.20 is amended by adding a new section to read:

Sec. 18.20.076. REPORTS OF SUSPENDED OR REVOKED STAFF PRIVILEGES. (a) Within seven days after suspending or revoking the staff privileges of a physician, a hospital shall notify the State Medical Board of the name of the physician and the circumstances involved in the suspension or revocation.

(b) The notice under (a) of this section is subject to the confidentiality provisions of AS 18.20.090 and AS 18.23.030.

355

northern alaska health resources association, inc.

February 6, 1984

The Honorable Mae Tischer
Alaska House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Tischer:

As you know, SB 334, "An act relating to health resources development," is now being considered by the Senate HESS and Finance Committees. There is also a companion to this bill in the House, HB 355. These bills would continue regional health resources planning and development throughout the state.

It is our understanding that many of the Senators and Representatives have been receiving mail from constituents in support of these bills. However, given the short time before committee hearings begin, the Board of Directors of the Northern Alaska Health Resources Association wanted you to have access to letters written last year on the same matter. The enclosed packet contains copies of letters sent to NAHRA last year; you may have others in your files of which we do not have copies.

Please consider these letters as evidence of support for health resources development organizations. We would be happy to provide any other information that you might need.

Thank you in advance for your support of SB 334/HB 355.

Sincerely,

Sherry E. McWhorter

The Honorable William Sheffield
Governor, State of Alaska
Office of the Governor
Pouch A
Juneau, AK 99811

Dear Governor Sheffield:

This is to express the support of the Tanana Chiefs Conference for continuation of an adequate level of state funding for the operation of Health Systems Agencies in the State.

The Tanana Chiefs Conference has participated actively in the Health Systems Agency for the northern region, the Northern Alaska Health Resources Association (NAHRA) since its formation in 1975. The Board of Directors meetings have provided a neutral meeting ground where health care providers and consumers can jointly establish specific objectives for health system development, negotiate conflicts at the local level, and provide the Department of Health and Social Services with a balanced perspective of state health affairs and issues in Northern Alaska.

The staff of NAHRA has maintained a reputable level of technical assistance to the Tanana Chiefs Conference and to various communities and health service organizations in Interior Alaska; health statistical information has been consistently compiled and analyzed in a manner beneficial to providers, the public, and to the State.

We recognize that this level of effort has also been maintained by the other two HSA's in the State, and that the variability of situations in the three regions is such that the continuation of these three entities is reasonable and desirable.

It is our recommendation that the State restore to the FY84 budget the funding level authorized for FY83; further we urge your administration to follow the lead of other states in enacting legislation and appropriating funds to continue the regional health systems development network initiated by the Federal government on a long term basis.

Such action would allow the State to establish a system designed to meet our continuing need for guidance in the development of our health resources.

5160

A resolution of support for continuation of this public service was endorsed by the 1983 meeting of the Board of Directors of the Tanana Chiefs Conference (enclosed).

Your attention to this significiant issue is appreciated. Please contact myself or Mr. Paul Sherry at 452-8251 for further information.

Sincerely,

William C. "Spud" Williams
President

TANANA CHIEFS CONFERENCE, INC.

Funding for Northern Alaska Health Resources Assn.

Resolution No. 83-60

WHEREAS: the health care needs of Alaska Natives have been shown to be serious and to require continuing, long-term attention; and

WHEREAS: the effective services to meet these needs must be based on professional planning, which in turn requires a continuity of the planning work; and

WHEREAS: the Tanana Chiefs Conference serves to advocate for the needs of Alaska Natives in the Interior;

THEREFORE BE IT RESOLVED that the Tanana Chiefs Conference Board of Directors requests the Alaska Legislature's attention to the need to continue funding for the Northern Alaska Health Resources Association at a level sufficient to enable them to fulfill their health planning function.

CERTIFICATION

I hereby certify that this resolution was duly passed by the Tanana Chiefs Conference, Inc. Board of Directors on March 17, 1983 at Fairbanks, Alaska.

Dr. Charles Kaltenback
Northern Alaska Health Resources Association
529 5th Avenue, Suite 8
Fairbanks, Alaska 99701

Dear Dr. Charles Kaltenback:

I am writing in support of the funding of our Northern Alaska Health Resources Association. As a board member of this committee, I feel it would be a catastrophe if our health system agencies are not re-instated into the budget after August 31, 1983.

Northern Alaska Health Resources Association (NAHRA) is the only group in our region who provides technical assistance to agencies and communities in grantshmanship, community organization, management, evaluation, program planning, needs assessments and implementation. We maintain a current data and information base which is inserted in the national presentation of health status problems and needs of our area. Our major areas of effort are community assistance, health promotion and regional advocacy. Without NAHRA none of these activities would continue.

I urge you to join me and our people in supporting this agency.

Let me know how you stand on this.

Keep up your good work for us and keep smiling.

Sincerely,

Nina K. Dahl

Eugene Brower, Mayor

February 2, 1983

The Honorable William Sheffield
Governor, State of Alaska
Office of the Governor
Pouch A
Juneau, Alaska 99811

Dear Governor Sheffield:

I am writing to express the North Slope Borough's support for the State of Alaska to continue to provide a sufficient level of funding for the Northern Alaska Health Resources Association (NAHRA), the Health Systems Agency (HSA) for northern Alaska..

Along with regional organizations and municipalities in the northern region, the Borough is actively represented on the NAHRA Board of Directors. This participation has afforded the Borough much benefit through technical assistance and direct involvement in planning our health care delivery to better meet local needs. NAHRA's assistance in effective regional planning has greatly improved the cost-effectiveness of our health service delivery, and has prevented unnecesary duplication of services. Furthermore, NAHRA provides constructive, realistic critiques of federal and state grant and contract proposals for health services. The organization also maintains very accurate and dependable health care statistics, and has achieved a high level of respect and notoriety as the clearinghouse for health care services provided in northern Alaska. Much of NAHRA's credibility is derived from the fact that its Board of Directors is composed of health care consumers and providers, with equal representation from the northern urban and rural areas. I believe it serves as a good example of unifying urban and rural support behind a common concern which you expressed a desire to accomplish during your successful campaign.

Before considering a reduction in State funding to NAHRA, I would suggest you first consider perhaps eliminating the

great number of consumer advisory boards which were established under previous State administrations. I feel these advisory boards cannot adequately and effectively address issues which are regional in nature. It appears very appropriate to fully utilize the expertise and experience of the regional Health Systems Agencies (HSA), such as NAHRA, as a review mechanism for all health services which require State grants or contract proposals.

I appreciate your favorable consideration of my comments and recommendations.

Sincerely,

Eugene Brower

(907) 852-3999
(907) 852-3065

10 February 1983

Governor William Sheffield
Office of the Governor
Pouch A
Juneau, AK 99811

Honorable Bill Sheffield;

Over the past decade, the idea of consumer/provider boards advising agencies that deliver a service has led to a fairly rapid and extensive proliferation of this type of group. While admitting to the basic soundness of the idea, one must question whether the multiplicity of board that it has generated is truly an effective way of bringing this idea to fruition.

It has been the experience of the North Slope Borough Department of Health and Social Services that multiple boards addressing the same issues create confusion and an added layer of bureaucratic red tape when applying for grant funding.

The one board that has consistently provided helpful, relevant evaluations and input into our service delivery programs has been the Northern Alaska Health Resources Association. Their combination of providers and consumers from the area to be impacted by the proposed service, creates a board with intimate knowledge of the problem to be addressed as well as knowledge of services already available to address the problem. Their input is valuable, because it is relevant to the specific region. Statewide boards cannot hope to have this amount of knowledge for any specific region.

The staff of the NAHRA have also proven to be valuable resources in the researching and writing of grant proposals. They have at hand the most recent statistical data available on the problem being addressed and can often save time and effort for the grant writing agency through the technical assistance they offer.

In a time of shrinking financial support of human service programs, it is critical to evaluate where present dollars are going. It is the position of my department that a regional board such as NAHRA provides a much more valuable service than a statewide board. This position is fully supported by the North Slope Borough Mayor, Eugene Brower. I therefore urge you to restore funding for the NAHRA in the state budget.

If only limited dollars are available, I suggest regional boards such as NAHRA receive priority over the myriad statewide boards whose value is of greater question. It is my department's view that a board such as NAHRA could easily assume the review process responsibilities of these state boards since that already is one of their functions. Doing that would also provide the agency writing the grant with the assurance that the review board would have enough knowledge of their area and its particular problems to issue a critique that was relevant and helpful.

Thank you for your time and attention.

Sincerely yours,

Elise Sereni Patkotak

March 4, 1983

The Honorable Bill Sheffield
Governor, State of Alaska
Pouch A
Juneau, Alaska 99811

Dear Governor Sheffield:

I would like to call your attention to the Northern Alaska Health Resources Association (NAHRA) and the valuable contributions that it makes to the North Star Borough.

As you know, the North Star Borough is a second-class borough and, as such, does not have health and social service powers. It is unlikely that we will assume those powers in the foreseeable future. Therefore, NAHRA provides the only forum for the public participation in the decision-making process about human service delivery for this community. NAHRA coordinates planning and community organization activities on a wide range of issues -- responsibilities which the Borough would have to assume, at increased cost, were NAHRA to cease operations.

There are numerous examples which I could cite showing NAHRA's services to the community; two activities are of particular importance at this moment. One is that NAHRA is assisting with our Borough-wide emergency medical services study; they are coordinating public awareness and community organization activities and have offered extensive planning and data assistance. Another is that NAHRA, as the prima founder and sponsor of the Arctic Alliance for People, is conducting a survey of the 71 human service agencies in the area and is spearheading the effort to develop goals, objectives, and action steps toward adoption of a comprehensive human services pain for the area. The Arctic Alliance, through NAHRA's expertise, is pursuing this planning process at my suggestion.

Recently, NAHRA provided major backing for the fourth annual Alcohol Awareness Week in the Borough area. They have also just completed needs assessments and program evaluations for the Fairbanks Rehabilitation Association, the Regional Center for Alcohol and Other Addictions, the Family Focus program, and the Fairbanks

Native community. They are currently leading behavioral health planning efforts for the Tanana Chiefs Conference and the North Slope Borough Health and Social Services Agency.

NAHRA also assists local non-profit organizations to tailor their grant applications closely to community needs. Within the last two months, NAHRA has worked with five child abuse/neglect and domestic violence-related service providers to ensure that grant applications submitted this year are non-duplicative and are consistent with objectives contained in the recently completed "Child Abuse and Neglect Needs Assessment" for the North Star Borough.

All of NAHRA's work is based on skilled planning processes conducted with extensive public involvement. Policies and decisions adopted by NAHRA's Board of Directors are founded in the long-range plans.

As mayor of the North Star Borough, I am responsible for appointing fifteen of NAHRA's thirty Board members. This linkage provides a significant avenue for the Borough government and NAHRA to interface, for the general good of the citizens.

I urge your support for NAHRA and the other two health systems agencies in Alaska at a level of $200,000 each. This is a small amount of funding for the returns which these agencies bring in terms of improved coordination, enhanced efficiency of service delivery, and cost-savings in individual service agencies because of the consolidated data and management services resources. Close-out of these agencies would mean significant economic and human services losses to this state.

Thank you.

Sincerely,

SIGNED

B. B. Allen
Borough Mayor

BBA:RWC:hs
cc: Interior Delegation

March 8, 1983

The Honorable Bill Sheffield
Governor, State of Alaska
Pouch A
Juneau, Alaska 99811

Dear Governor Sheffield:

As Mayor of the City of Fairbanks, I wish to lend my support to continuation of regional health planning and resources development activities as currently practiced by the three health systems agencies.

I am most familiar with the Northern Alaska Health Resources Association (NAHRA) and the services it has provided to the Fairbanks area. Many of my contacts with NAHRA over the last four years have centered around alcohol awareness/public education activities. NAHRA has been the primary sponsor for annual activities related to substance abuse and has led the community-based efforts to address the attendant problems of alcohol abuse and alcoholism. Recently NAHRA provided valuable testimony to the Blue Ribbon Commission on Alcoholism, which I established to examine solutions to alcohol-related problems in the core area of the city. NAHRA is the City's primary source of statistical information on this topic and is the only group in the community which has conducted long-range planning activities related to substance abuse.

NAHRA provides the only community planning and data resources in the area of health and human services for use by organizations, individuals, and local government. Through their services, non-profit organizations can obtain information and management consultation free of charge, thereby saving many program dollars which can then be directed into hands-on services. This function promotes the efficiency and effectiveness of human service delivery throughout northern Alaska.

Because the North Star Borough lacks social service powers and because the City exercises its powers only to limited degrees, NAHRA provides the only real means for the citizens to play active roles in health care decisionmaking. In areas where the City is involved, such as through the City Commission on Health and Social Services, NAHRA assists the City by providing information and helping to design project review criteria and a credible review process.

NAHRA helps the community of Fairbanks and the rest of northern Alaska in many other ways. However, I think their primary importance lies in the fact that they facilitate community decisionmaking at the regional and local levels. They assist Alaskans to retain control over their own lives.

Please retain the health systems agencies as viable entities in Alaska, and increase their funding levels to $200,000 per agency. We cannot do without their services.

Sincerely,

Bill Walley
Mayor

cc: Interior Delegation

FAIRBANKS CITY COMMISSION ON HEALTH AND SOCIAL SERVICES
410 Cushman Street
Fairbanks, Alaska 99701

March 1, 1983

The Honorable Bill Sheffield
Governor, State of Alaska
Pouch A
Juneau, Alaska 99811

Dear Governor Sheffield:

The Fairbanks City Commission on Health and Social Services endorses continued funding for Alaska's three health systems agencies (HSAs). It is our understanding that the Governor's proposed operating budget currently before the legislature does not contain an appropriation for HSAs.

Due to drastic cutbacks in support for HSAs by the Federal Government, it is essential that increased State support be provided to continue the important activities of these agencies. We recommend that their funding level be increased to $200,000 per agency ($600,000 total).

The Fairbanks City Commission has worked very closely with the Northern Alaska Health Resources Association (NAHRA), the HSA for northern Alaska, during the past two years. Not only has NAHRA assisted us by providing current, accurate health-related data and information for our use; but they were instrumental in helping us establish objective criteria for reviewing social service applications which we considered and recommended to the City Council for funding last year. In addition, they recently assisted us in developing a request for proposal (RFP) for various handicapped services in the North Star Borough.

NAHRA provides an objective forum for the urban and rural residents of northern Alaska to discuss health systems issues together. Because of the diversity of Alaska's people and the health services which attempt to serve them (e.g., State, Alaska Native Health, Military, private, Native Corporations, non-profits), it is important to recognize the coordinating function NAHRA provides.

Specifically within the Fairbanks area, NAHRA has been wholly or partially responsible for establishing and maintaining the activities of the Arctic Alliance for People (organization of health and social service providers); Alcohol Awareness, Inc. (an organization of concerned consumers and alcohol treatment providers); and Fairbanks United at Noon (a monthly noon-hour gathering of health and social service providers).

We are also aware of major studies they have recently completed for the Fairbanks Rehabilitation Association, the Regional Center for Alcohol and Other Addictions, the Family Focus Program, and the Fairbanks Native community which have assisted in identifying needs and

evaluating services. Furthermore, they are promoting a study which has been undertaken by the North Star Borough on delivery of emergency medical services within the Borough.

In summary, we believe that NAHRA is an important resource agency for Fairbanks and the northern region of the State. Because of their presence, many health services are being provided in a more coordinated, cost-effective manner. We recommend continued support for NAHRA and the other two HSAs.

Sincerely,

Linda Hulbert

Linda Hulbert
Chairperson

cc: Interior Delegation

RECEIVED MAR - 4 1983

Sent to local legislators 1/E-17

February 28, 1983

Dear

It is essential that the regional health planning agencies continue to be funded. I have come to this conclusion based on a working relationship with Northern Alaska Health Resources Association, Inc. (NAHRA), and as an 8 year Alaskan (Fairbanks) resident.

I am presently Nursing Manager of the Fairbanks Health Center. I am also a Childbirth Educator, mother of boys 9 and 12 years, wife of a civil engineer, established as an Alaskan resident and presently completing my work towards a Masters in Public Health from the University of Washington with majors in Health Services Delivery and Business Administration.

I feel it would be a step backward for the consumers of health care in this state if the regional planning agencies did not continue to function. As a public health nurse, I have the unique perspective of working in community health. I am in daily contact with consumers of health care who request clarification of their family's health concerns. They also request assistance in how to deal with the medical care system. They know how to shop for a car, but in general are uninformed of options and choices regarding health care. NAHRA has provided an opportunity for consumer participation in health-care decision making. It is a group whose interests are not tied to a hospital business or existing public health program. NAHRA consistently has organized a through and consistent process for consumer input. Other groups may say they listen to consumers, but the quality of the process is lacking and often a decision is made and the only objective is consumer approval of one particular option.

Regional advocacy is needed. Alaska is too diverse to expect a centralized agency close to political influences to plan comprehensively. Traveling consultants may come to an area for input. They hear from the organized articulate groups who have an interest and know how to participate in a dialogue with strangers.

For the average consumer, it is difficult to give input when you first have to describe your area and it's characteristics before you feel an atmosphere of rapport exists. NAHRA staff know the Interior. NAHRA is accessible and visible. (In fact, when data is needed for program planning, much time is saved by local agencies contacting NAHRA). The average health consumer needs an established and visible group to relate to.

In my experience as a community based health professional, I have working knowledge of at least three (3) projects in Fairbanks that the community has and will benefit from through NAHRA's work:

1. Improved Pregnancy Outcome
   -Grant money allocation in original proposal out of Juneau in 1980 bypassed Fairbanks completely. Anchorage area had funds tied up. Through NAHRA's format, the Childbirth Association pointed out the concern that our community be included. Result - Fairbanks High Risk Pregnancy Project - based at the Fairbanks Health Center, providing comprehensive follow-up and direct financial aid to women enrolled in the project - 1980-1983. (Information on model and statistics available on request)

2. Infant Car Seat Safety
   -NAHRA's leadership in coordinating and forming an association on this issue will make a car seat loan program a reality very soon. Many professionals and consumers have been concerned about this issue for years, yet no one has had the time or expertise to get people together and plan. The community will gain because NAHRA was available.

3. Needs assessment child abuse/neglect and related services

   NAHRA brought agencies together for this process. The process was a good example of how NAHRA facilitates communication among health providers and agencies. With more power given to NAHRA, duplication of service programs could decrease and gaps in service identified and filled.

   (Please feel free to contact me for more details)

NAHRA has an objective regarding Health Promotion. The educational formats sponsored by NAHRA raise the level of public knowledge regarding health and at the same time, the number of "informed consumers" of health care is increasing.

As a legislator, you have a responsibility to the majority of your constituents. This includes a concern for cost-effectiveness and setting priorities when limited funds are avaible. NAHRA provides a community based mechanism to assist you in decisions on priorities. Objective evaluations of existing programs can also be provided by this professional health planning group. Decisions regarding health care delivery influences the total quality of life in our community. Informed and educated consumers may help decrease medical costs through their own practices, in the long term.

At the present time, it is essential that NAHRA continue to analyze in an objective, organized and documented format the health needs of the community. Again, in my opinion NAHRA needs to continue to be supported as an independent, unbiased, regional health planning agency.

Sincerely,

Elaine McKenzie EM

Dear Senator Sackett,

I am writing in regard to the plight of the state's Health Systems Agencies, who are again this year facing an end to their existence. It is my understanding that all state funding for their operation has been eliminated from the govenor's budget.

In the past I have found involvement with Northern Alaska Health Resources Association, Inc., useful to our own regional planning. I believe that they have strongly supported efforts to develop realistic planning for our more rural areas. I would hate to see this strong advocacy resource lost in the state.

I hope you will support efforts to reinstate them in the budget for the coming Fiscal Year.

Sincerely,

Nettie Scott, M.S.W.
Clinical Director

RECEIVED FEB 2 2 1983

I am writing to strongly support restoration of funding for the Northern Alaska Health Resources Association, Inc. This organization provides a vital service for Interior Alaska which should not be curtailed or eliminated but expanded. Consumer participation in health planning and implementation is vital, not only for viability and relevance of programs/services, but to monitor its quality and stimulate its improvement. NAHRA needs the funding to continue what it has done very well, and needs additional power to require response and accountability from all would be health providers proposing to serve Interior Alaskans. A recent assessment of child abuse and neglect service needs demonstrated need for expansion of services such as NAHRA provides.

Please do what you can to provide adequate funding for NAHRA in the state budget.

Yours Sincerely

February 11, 1983

Senator John C. Sackett
Pouch V
Juneau, Alaska 99811

Dear Senator Sackett,

I was distressed to hear that Governor Sheffield has eliminated state funding from the budget for health systems agencies.

It is my observation that the assistance Northern Alaska Health Resources Association, Inc. has provided Catholic Community Resources, Inc. is typical of the help rendered other agencies across Northern Alaska. NAHRA has been a mainstay in providing technical advice to this agency, primarily through its subsidiary, Fairbanks Counseling and Adoption. NAHRA is also instrumental in assisting me evaluate proposed programs for the rural areas of the diocese. I trust the data I receive and rely extensively on the evaluation of grant proposals and service delivery designs by the NAHRA staff.

Arctic Alliance, a coalition of the human service agencies of Fairbanks, has been greatly assisted by donated staff time and advice. Because of the Child Abuse/Neglect Needs Assessment conducted by NAHRA in the community, Fairbanks Counseling and Adoption, Resource Center for Parents and Children, Family Focus and Fairbanks Crisis Line have recently entered a formal agreement of cooperation. These few examples are illustrative of how, as a non-aligned association, NAHRA has been instrumental in assisting service agencies to provide better services with less overlap, greater efficiency of delivery, and the facilitation of greater cooperation between those same agencies, all of which means savings to the tax payer.

Health planning is important! It is also cost effective! I urge you to support the $600,000 figure which would allow the continuation of the regional health resource organizations across the state during the coming year.

Thank you!

Sincerely,

Carolyn Winters

February 9, 1983

Honorable John C. Sackett
Pouch V
Juneau, Alaska 99811

Dear Senator Sackett:

I am writing this letter to all the Northern Regional Legislators, asking for your support specifically for Northern Alaska Health Resources Association, Inc., and for health planning in Alaska.

If health planning agencies are not allowed to continue to be responsible for identifying and addressing health care issues, who will be?

My experience in working in the Social Services field, which includes issues of health, has shown me the importance of planning, community assistance, and evaluation. I am sure you are aware that NAHRA does all these, and much more.

An example of their work has been submitted to you for your use, compliments of the Family Focus program, entitled Child Abuse and Neglect: A Community-Wide Needs Assessment.

In my opinion, without NAHRA's assistance, restructuring community and health services to better meet the needs of Alaskans would be slower and ultimately more costly. I understand that planning is everybody's business, but when its everybody's business, in reality will it get done?

Enclosed is a little story that I'm sure you can relate to.

Please do what you can do to reinstate in the budget $600,000 statewide (200,000 per agency) so that health planning agencies can continue in Alaska.

Planning is the first step to problem solving.

Respectfully,

William S Hardy

William S. Hardy, Family Focus Director

The Honorable Frank R. Ferguson
Pouch V
Juneau, Alaska 99811

Dear Senator Ferguson:

I am writing to urge your support to continue funding for all Health System Agencies in the State. Our funding was completely eliminated from the Governors budget. If we do not receive substantial amount of funding, we will cease to exist.

Our HSA, for the Northern Region, Northern Alaska Health Resources Association, has provided a means for which Residents of the Northern Region can participate in health care decision making, and assist with local and Regional health concerns. NAHRA has also provided technical assistance to agencies, provided community assistance, health promotion and Regional advocacy. Without NAHRA, these activities would not continue. Residents would lose there means for self-determination in health services for the Northern Region.

I urge you to assist us with funding for the coming year with Reinstatement in the budget. Thank you for your assistance.

Sincerely,
Sonya Leavitt

Juneau, Alaska 99811

Dear Senators Bennett and Sackett:

We have just learned there is a possibility that Governor Sheffield will exclude from the budget funding for the current maintenance of the Alaska health planning agencies. We of the Northern Region are particularly concerned and seek your assistance in not allowing this deletion to take place.

Our region has come to rely heavily on the information, resources provided by the Northern Alaska Health Resources Association, Inc., and the closure of this association would cause the people of the northern region to lose their primary means for self-determination in health services.

NAHRA is the only non-aligned group in this region which provides technical assistance to agencies and communities in grantsmanship, management, community organization, evaluation, program planning, needs assessments and implementation. We depend heavily on the information in their continually updated files as relating to health problems and needs in this area. To not have the services of NAHRA available to us would require extra funding for our agency as well as those in other areas to maintain a resource of data collection and analysis.

Therefore, the Board of Directors, staff and participating Seniors in our program services earnestly seek your support and endorsement for the continuance of the health systems agencies statewide. We will greatly appreciate your efforts in behalf of NAHRA as well as the other statewide systems for health planning.

Sincerely,

Genevieve Reininger
Executive Director

CC: Senators Bettye Fahrenkamp, Frank R. Ferguson and Pappy Moss

March 9, 1983

Representative Al Adams, Chairman
House Finance Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Adams:

On behalf of the three Health Systems Agencies in the state, the Alaska Dental Society asks reinstatement of monies in the budget to fund the continuance of their organizations.

The HSA's are a mechanism through which local and regional health-related concerns are identified and addressed, and through which citizen perspectives are presented to the state. HSA's provide technical assistance to agencies, boards and communities, community organization, management, evaluation, program planning, needs assessments and implementation. All maintain a current data and information base - essential in the presentation of health status problems and needs of the area.

The alternative to the HSA's would be individual organizations and special interest agencies doing autonomous health planning. This would not only be economically wasteful, but incredibly lacking in expertise and review thoroughness - now provided cost-effectively by the HSA organizations.

We understand federal funds are earmarked for the Alaska HSA organizations and further ask for your committee's approval of budget reinstatement. Suggested amounts are $200,000 per agency - NAHRA (Northern Alaska Health Resources Association), SCHPD (South Central Health Planning and Development), and SEHSA (Southeast Alaska Health Systems Agency).

Thank you for your consideration.

Sincerely,

Edward G. Wilkinson

Milo Fritz, M.D.
Pouch V
Juneau, AK 99811

Dear Dr. Fritz:

I am writing to request support of financing for Health Planning Agencies. I know that consideration is being given to reducing or cancelling their funding. My request comes from my observation as Chairman of the Governor's Review Board on Alcoholism. These agencies have evaluated the alcohol treatment programs in place throughout the State at the request of the Board, and we have found this independent appraisal very useful as a check on the State office which admittedly has a vested interest. They serve as a check and balance on other State health organizations as well. To lose them would, in effect, create a monoply.

I think it extremely important that their function particularly in the appraisal capacity be ported.

Sincerely,

R. Holmes Johnson, M.D.

Dear Representative Adams:

Please accept this letter in support of reinstatement of the Health Systems Agencies within the State budget at $200,000 per agency ($600,000 statewide).

Having worked as a Health Educator in Alaska for over six years, I am well aware of the positive effect the Agencies have had on the Health of the citizens of Alaska. Through their early efforts to provide a forum for discussion and action,

a. School Health Education has advanced,
b. TTH-NED was established,
c. Health Promotion at the Workplace Began Networking, and
d. Risk Reduction areas for Health Improvement were established.

The Health Systems Agencies have provided a continual unbiased expertise in planning for the Health of all Alaskans and to that aim their staff has given unselfishly of their time in technical assistance.

Now, we need your help in continuing this effort to realize optimal Health for the citizens of Alaska. I urge your support, and look forward to knowing your position on this matter.

Sincerely,

Brenda Rodgers

Dear Senator Sackett:

It is my understanding that State funding for the Northern Alaska Health Resources Association (NAHRA) has been eliminated from the Governor's budget. I would like to elicit your support in reinstating these funds. It is through organizations such as NAHRA that the following has been, and will continue to be, accomplished:

1. Health services planning with input from both citizens and provider groups.

2. Collection and analysis of data in an objective manner in order to assist in the decision-making process concerning health care needs in the region.

3. Organization of a system that can assist rural communities in needs assessment, keeping in mind regional needs and capabilities.

4. By feeding information from the Northern region to the State, it has been possible to develop health plans for the State with effective regional input.

Sincerely yours,

Philip C. Nice, M.D.
Professor of Medical Science

February 17, 1983

Dear

I am writing to urge you to re-instate the $600,000 funding for regional health planning in the State budget.

I feel that in this period of escalating health costs, it is imparative to have a neutral organization to assist communities in developing and evaluating the most cost-effective services needed in their area.

The Northern Alaska Health Resource Association has been instrumental in objectively assessing needs in the northern region and avoiding any duplication in service. They have been active in health promotion areas which in the long run, reduces health costs. They have encouraged community and individual citizen input and participation.

I feel strongly that State funding of regional health planning is the most practical-cost-effective means to continue to develop comprehensive health care in Alaska.

Sincerely,

Bonnie Johnson

Senator John C. Sackett
Alaska State Senate
Pouch V
Juneau, Alaska 99811

Dear Senator Sackett:

I am writing on behalf of the Northern Alaska Health Resource Association, Inc., one of the three HSA's in the State. I have been informed that funding for the HSA's have been eliminated from the Governor's budget. In order for the HSA's to continue operations, they have requested $600,000.00 from the State. If they do not receive this funding they will be out of existence after August 31, 1983.

NAHRA, Inc. has been very helpful in providing technical assistance and most importantly health planning. This has alleviated a lot of unnecessary spending and duplication of services. As you are aware, small health centers such as ours cannot afford to purchase consulting services. We are firm believers in self-determination as far as local health planning is concerned. NAHRA, Inc. has provided us with much data and information over the years. As a result of this, we have planned the services that we have today that are cost effective, but most importantly are meeting the needs of people.

Therefore, I would like to request that you support their efforts to secure funding in order for them to continue operating.

Sincerely,

Flora Sweetsir
Health Administrator

Dear Representative Adams,

I am writing to urge your support of regional health planning and the subsequent reinstatement in the state budget of $200,000.00 per agency.

I have served on the Board of Directors of the Northern Alaska Health Resources Association for approximately two years and have first hand knowledge of the public education, community assistance and health promotion that has occurred during that time. I personally feel that consumer participation in health care decision making is essential in a young and growing state. However, before the consumer can participate effectively, there must be a mechanism for data collection and analysis that provides an information base from which citizens and providers can evaluate needs. Regional health resource organizations are that mechanism.

Thank you for your consideration.

Dear Senator,

I am writing in support of the Northern Alaskan Health Resources Agency (NAHRA) and to request reinstatement of $200,000 in the budget for this agency. They perform a necessary service to the Northern region in the form of planning and health promotion. Recently they conducted a survey of child abuse and neglect services inwhich WICCA participated. The work they performed was excellent and very thorough. I believe that all agencies and thus the services we provide benefit from the kind of work performed by NAHRA.

Pouch V (Mail Stop 3100)
Juneau, Alaska 99811

Dear John,

I'm writing you as a Board Member of Northern Alaska Health Resources Association, the Regional Health Planning Group for Northern Alaska.

NAHRA is one of three Regional "Health Service Orgainizations" allowing consumer/provider input into several areas of Health Care Delivery:

1) Public education
2) New or expanded facilities review
3) New or expanded services review
4) Data gathering and distribution
5) Planning for future Health Care Delivery.
6) Assistance in applications for funding for Northern Region Health Care Delivery groups.

The Governor's budget carries a $-0- line item for HSA's such as NAHRA.

I request that funding, in the amount of $600,000 ($200,000 for each region) be re-inserted into the new budget because:

1) There are the only orgainizations allowing local consumer input into health care issues.

2) The shut-down of the Regional groups will allow the Governor (through the Commissioner of DHSS) far too much power concerning Health Care Delivery in the North--decisions made far away from our area without local input and control will, I believe, negatively affect Health Care Delivery in local communities for years to come.

Thank you for your consideration of this matter.

Sincerely,

Norm MacPhee

Re: Northern Alaska Health Resources Assn., Inc.

In the 60's we saw many well intended ~~programs~~ programs go sour because those provided for were not consulted & were told they participate in the planning. NAHRA allows for both, thus preventing the waste of money and human resources.

Don't let NAHRA die. Let their funding be reinstated in the budget.

RECEIVED FEB 7 8 1983

February 16, 1983

Rep. Niilo Koponen
Pouch V
Juneau, AK 99811

Dear Niilo:

I am writing to express my concern about state funding and the mandate for health systems agencies, and, in particular, for the future of the Northern Alaska Health Resources Association.

I am aware that the HESS Committee is presently considering testimony about the appropriate rike for HSAs and the possibility of instituting a state certificate of need statute. I am also aware that the Alaska Hospital Association (not surprisingly) opposes the institution of a state-level certificate of need process and would just as soon that HSAs and SHPDA disappear entirely.

I want you to know from where I sit as a trained hospital administrator and as a planner with over 10 years of experience in trying to get human services to be responsive to local needs and yet accountable to the public trust that Alaska desperately needs to develop a legitimate local planning and development infrastructure. I would recommend that HSAs not only be empowered to conduct a state-level certificate of needs process (simplified, if that is the beef of the providers) but also that HSAs should have their role expanded to perform legitimate local broad-range human services planning.

Let me give you my reasoning for this recommendation:

- Currently the "unsystem" for distribution of state funds for human services has resulted in a myriad of twisted, well-intentioned, but uncordinated programs which may meet specific individual needs of a small group of people but which not not assure the consumer that he/she will get the service needed. Local service providers know the game all too well and, unfortunately, legislators respond to individual pleas for well-intentioned projects. What is not happening is rational growth of human services according to a well-designed local planning process. The result is inconsistent and unequitable availability of various services across the state. The result is legislators being hounded by endless parades of needy agencies wanting money for specific purposes. The result is a proliferation of services with very little accountability, evaluation of effectiveness, or coordination with each other. The result is local governments becoming increasingly unwilling to even entertain the thought of human services planning because "the state will take care of it" and "under Title 29, the voters have to tell us 2nd class boroughs that they want us to be concerned about human services".

- I hear a lot of talk about "local control" of services and

the rationale that we need "local control" because of "regional differences" in this state. I agree! But I say, let's legitimize local control and protect the state's interest in accountability by designating an entity for a region with the responsibility to "map out" needs and ways to meet those needs. It seems that the state has been so busy providing direct services and issuing contracts and grants that the important elements of setting parameters for considering needs and evaluating the effectiveness of what is being done currently are not being paid the attention that they need. If there were a "human services game plan" worked out by a thoughtful and responsive local planning and development process, maybe we could all see where we are going and why. Maybe the legislators wouldn't be hounded so much. Maybe state agencies would spend more time offering technical help and evaluation of services. Maybe there would be developed patterns of services and ways of providing services which would meet local needs. Maybe consumers wouldn't be shuffled from agency to agency because "their need doesn't meet my program".

- You might ask - why turn the responsibility for local/regional human services planning over to HSAs (or whatever their successors are named)? I can't think of a better way for the legislature to ensure some type of statewide consistent planning structure. We can't ask the boroughs to do this because of their non-existence in 75% of the state and because of their limitations under Title 29; we can't ask the Native non-profits to do this because of problems with their mandate for provision of services.

- I would further recommend that the HESS Committee consider introducing legislation that would have the HSAs, in their new role, accountable to the Department of Community of Regional Affairs, rather than H&SS. It's time to legitimize human services planning in this state (over 50% of the F84 proposed operating budget is committed to human services). C&RA seems to have the best track record of any state agency in assisting local communities with planning of all types - economic, physical, lands, etc. Human services is a big business in this state and the same planning and development processes used which are used for physical development planning are applicable to human services. Besides, planners need each other to stay fresh and challenged.

Thanks much for listening to these ideas. I have seen and worked with state legislation in Minnesota which has set up local planning processes for health services and it is working well, both politically and progammatically. I am really hopeful that the Legislature will not disband HSAs. They provide a valuable, hidden as sometimes it is, service to the local area.

I would be happy to share with you materials that I have from Minnesota which describe the legislation and regulation used to

set up the "Community Health Services System". Please let me know if you would like to see these materials or get in touch with some people in Minnesota who have built that system.

My phone number is 479-6507 (days) or 452-7782 (evenings). Thanks again, Niilo.

HEALTH & SOCIAL SERVICES FINANCE SUB COMMITTEE

FROM: THE ASSOCIATION OF REGIONAL HEALTH DIRECTORS

DATE: 2 MARCH 1983.

AS CHAIRPERSON OF THE ASSOCIATION OF REGIONAL HEALTH DIRECTORS, I HAVE BEEN REQUESTED TO CONVEY TO YOU OUR CONSENSUS ON THE FOLLOWING TWO ISSUES:

1. HEALTH SYSTEM AGENCIES (H.S.A.s) - THIS ASSOCIATION SUPPORTS THE CONCEPT OF UTILIZING SOME FORM OF THE PRESENT HSAs AS REGIONAL PLANNING AND REVIEW BODIES FOR STATE FUNDED HUMAN SERVICE PROGRAMS. THIS APPROACH WOULD HAVE TWO ADVANTAGES:

   A. ELIMINATION OF MULTIPLE STATE BOARDS CURRENTLY OPERATING AND FUNNELING THEIR FUNCTIONS INTO 3 REGIONAL BOARDS WOULD PRODUCE SUBSTANTIAL COST SAVINGS.

   B. USE OF REGIONAL ENTITIES WOULD ASSURE COMPETENT QUALITY REVIEW OF STATE GRANT PROPOSALS BECAUSE THEY WOULD BE DONE BY A LOCAL GROUP WITH KNOWLEDGE OF UNMET NEEDS AND CURRENTLY AVAILABLE SERVICES WITHIN THEIR REGION.

2. THE MAJORITY OF STATE SERVICES CURRENTLY REACHING THE RURAL/BUSH POPULATION ARE FUNDED THROUGH GRANTS AND CONTRACTS TO REGIONAL, NON-PROFIT CORPORATIONS. DESPITE THEIR NATIVE STATUS, THEY OFFER STATE SERVICES ON A NON-DISCRIMINATORY BASIS. THE ASSOCIATION IS CONCERNED THAT AS BUDGET CUTBACKS

OCCUR, THESE SERVICE PROGRAMS DO NOT SUFFER INEQUITABLE CUTS IN ORDER TO MAINTAIN CENTRAL ADMINISTRATIVE SERVICES. IF THE PURPOSE OF HUMAN SERVICE PROGRAMS IS TO CARE FOR A POPULATION IN NEED, THEN ALL STEPS POSSIBLE MUST BE TAKEN TO INSURE THE FUNDING INTEGRITY OF THOSE ORGANIZATIONS ACTUALLY DELIVERING THE SERVICE.

THANK YOU FOR YOUR TIME AND ATTENTION. PLEASE FEEL FREE TO CONTACT ME OR ANY REGIONAL HEALTH DIRECTOR IF YOU HAVE ANY QUESTIONS.

Rep. Mike Davis
Pouch V
Juneau, AK 99811

Dear Mike:

I'm writing as a constituent and supporter to express my concerns about state funding and mandate for health systems agencies, and, in particular, for the future of the Northern Alaska Health Resources Association.

I am aware that the HESS Committee is presently considering testimony about the approriate role for health systems agencies and the possibility of instituting a certificate of need statute. I am also aware that the Alaska Hospital Association opposes the institution of a state-level certificate of need process and would just as soon that health systems agencies disappear.

I want you to know that from where I sit as a trained hospital administrator and as a planner with over 10 years in working on issues leading to the quality development of human services, that the HESS Committee should seriously consider not only empowering the health systems agencies with state-mandated certificate of need authority but also should consider expanding their role as a viable, non-political, unbiased, and professional local-regional human ser- planning and development shop.

Let me give you my reasoning for this recommendation:

- Currently the "unsystem" for distribution of state funds for human services has resulted in a myriad of twisted, well-intentioned projects which do not interface on the local level. Service providers will tell you that there is "good informal coordination" of services, but I can tell you from real evaluation experiences that there is alot of "good informal miscommunication and assumptions" instead. We desperately need an entity with NAHRA which would have the capability of bringing together service providers to work on real coordination of services which will result in people not getting lost in being shuffled from agency to agency.

- I hear a lot of talk about "local control" of services and rationale that we need "local control" because of "regional differences" in our state. I agree! But I say, let's legitimize local planning and designate an entity to have the responsibility for calling together local consumers, politicians, and agency representatives who have the job to map out a future course of needed action in the development of responsive local human services.

- You might ask - why turn this responsibility for local/ regional human services planning over to HSAs? I can't think of a better way for the legislature to ensure some type of statewide, consistent planning infrastructure. We can't ask the boroughs to do this because of problems with Title 29; we can't ask the Native non-profits to do this because of problems with their mandate for services.

- I would further recommend that the HESS Committee consider writing legislation that would have the HSAs, in their new role, be accountable to the Department of Community and Regional Affairs, rather than DHSS. It's time to legitimize local human services planning in this state and C&RA seems to have the best track-record of assisting local communities with planning of all types - economic, physical, lands, etc. Human services is a big business in this state and the same type of planning techniques and tools that are applicable to physical development planning are also applicable to human services planning. Besides, planners need each other to stay fresh and challenged!

Thanks much for listening to these ideas. I really am hopeful that the HESS Committee (and the legislature as a whole) will not disband the HSAs. They provide a valuable service, hidden as it sometimes is, to the local community. The lack of their presence in the past few years would have netted us losses - like the lack of a hospice here in Fairbanks, and perhaps 100 new beds in Anchorage that we probably don't need and which would cost each of us needing medical services over the next thirty years a bundle.

Please call/write if you have questions or if I can be of further assistance. My daytime phone is - 479-6507; home phone - 452-7782.

Juneau, Alaska 99811

Dear Mr. Adams:

I am writing this letter encouraging you to support the continued funding of the Southeast Alaska Health Systems Agency (SEAHSA). Although this organization does not provide direct health care services to specific clients, the organization has served as a catalyst for improving the quality of services in Southeast Alaska, as well as identifying service area gaps and working toward their fulfillment.

I have found the staff of the SEAHSA to be a viable resource of information in planning the future activities of the Ketchikan Comprehensive Alcoholism Program (KCAP). If they did not have the specific information requested, they knew where to acquire it and frequently assisted in the acquisition.

It has been my observation that through the SEAHSA, the local Health Planning Council has remained an ongoing group. Several times the functions of the Council had become unclear and was about to dissipate. Each time the SEAHSA assisted the Council in renewing its focus and continue to provide community health planning needs. Specific services provided by the Health Planning Council through assistance of the SEAHSA Staff have been an Annual Health Fair; development of a means to incorporate a K-12 health curriculum in the local school system; annual reviews of local health delivery agency grant/funding proposals; and planning future health needs due to projected significant population increases (i.e. Borax Quartz Hill Project, Ferry Maintenance Terminal, increased Forestry activities on Prince of Wales Island, etc.). All of these activities are important for the continued development of health programs in our community, and without SEAHSA they probably would be non-existant or at a greatly reduced level.

MAR 21 1983
SOUTHEAST ALASKA
HEALTH SYSTEMS AGENCY

I have observed that frequently direct health care providers become so involved with the provision of services that they loose site of future community needs or develop a skewed perception of what the real needs are. A non-direct service provider having health care interest can in many cases more objectively evaluate area wide health care needs.

In summary, I see SEAHSA as a viable resource for the continued development of health care programs to meet community needs in Southeast Alaska. The amount of funds requested are not excessive in light of the gains realized by the community.

If I can be of any assistance reference the Southeast Alaska Health Systems Agency, do not hesitate to call me at 225-4154.

Sincerely,

Charlie G. Laub

March 18, 1983

Senator Richard Eliason
Pouch V
Juneau, Alaska 99811

Dear Senator Eliason:

I understand that the budget introduced by Govenor Sheffield last month did not include money for Health Systems Agency grants. Federal support of Health Systems agencies has also been reduced, leaving them operating "on a shoestring" with resultant deprivation of services for health care consumers. In this region the Southeast Alaska Health Systems Agency would be greatly handicapped, if able to function at all. The Southeast Alaska Health Systems Agency (SEAHSA) performs a dual role in our region: both as Planner/Coordinator and Provider of direct support to Health programs.

Since 1978 SEAHSA has been insuing Health Systems Plans (HSP) along with Implementation Plans (IP) which have served to coordinate the several health systems- public (Federal and State) and private- which operate in Southeast Alaska. The HSP reviews the regional profile including geographic, demographic, and social data; lists the health systems currently operating in the region, and then establishes goals and objectives for the achievement of desired levels of health status and performance of health systems. The IP details explicit milestones for measuring the progress of HSP: who should do what in a given time frame.

These plans are valuable to health care providers in the region because they clearly state the problems and who might best deal with it. This at once addresses the problem, its solution, and avoids duplication of services, saving time and money for providers and consumers of health care. A much needed plan for the region, that of Mental Health services, is intended to be insued shortly. The lack of services or fragmentation thereof in this area is well recognized by health care providers in the region. An overall plan is an important first step in improving Mental Health services for Southeast Alaska.

Dear [illegible],

I am writing to support the Nine Health Septet's request for $200,000 each for Regional Health Planning. Although the [illegible] budget deficit worries me, I'm still convinced that this could be included in the Health and Social Services budget.

[illegible] volunteer, [illegible] health [illegible] the mid 1970's, [illegible] Health Systems [illegible] was [illegible] work [illegible] initial [illegible] and [illegible] tion, [illegible] bus

working on projects, which we feel will improve the quality of life in our communities.

In a day when everyone is talking about saving money and President Reagan is frequently heard promoting the use of volunteers, perhaps more attention should be given to funding organizations that have been utilizing volunteers.

The effective use of volunteers insures that health planning will reflect the needs and concerns of a community at a minimum of cost. Funding a relatively small budget for HSA's should be a good investment toward achieving optimum levels of health for all Alabama. I urge you to give this matter serious consideration. I thank you for your attention.

Sincerely,

Jon F. Hinkle

March 8, 1983

The Honorable John C. Sackett
Alaska State Senate
Pouch V
Juneau, Alaska 99811

Dear Senator Sackett:

May I call it to your attention that the Governor's Budget for Fiscal Year 84, as introduced, includes no money for Health Systems Agency grants. Inasmuch as the HSAs are the primary health planning agency assisting communities in evaluating health programs and the need for new health programs, this strikes me as being a most unfortunate occurrence, and it would be hoped that such funds could be restored.

The Southeast Alaska Health Systems Agency, a HSA, has requested $200,000 from the State for continued funding. Additionally, it is my understanding, a funding request totaling $600,000 is requested to fund the entire program state-wide.

As chairperson during the organizational stages of the Southwestern Washington HSA (1975 and 1976), I firmly believe that they play a vital role in the health delivery systems of the Country and that, if they are not funded, it will be a real loss to all of the people of the State of Alaska.

I trust that you will give this matter your much needed attention.

Very truly yours,

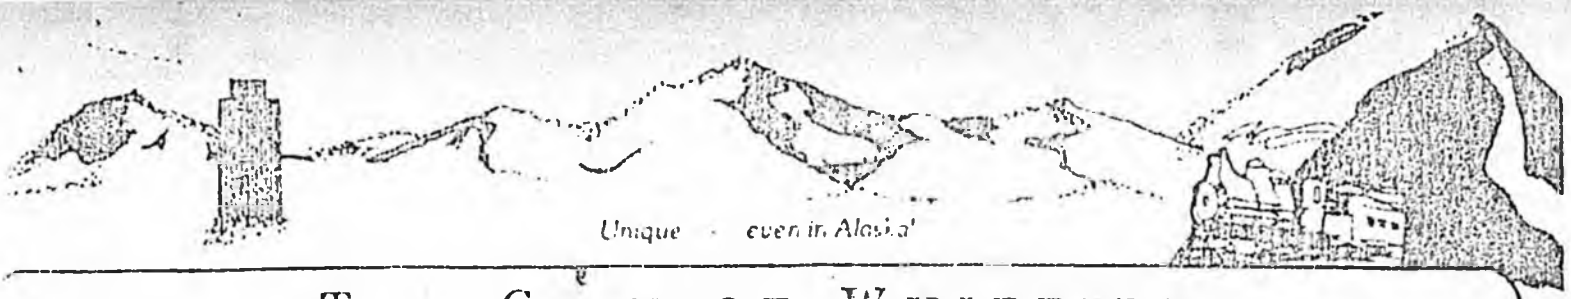
E. Louis Keller

cc: John Manning, Program Director, SE Alaska Health Systems Agency

The Honorable William Sheffield

12-27-82

Governor
State of Alaska
Dear Governor Sheffield,



I am the President of the Southeast Alaska Regional Agency. We are presently funded by a state grant.

During your campaign you told us how you supported regional and local health planning. This local effort is in jeopardy since no appropriation has been included in the FY-84 State HSS budget.

Your support in retaining the budget for these local agencies is needed in order to continue this local voice.

Sincerely,

Debra C. Brien
POB 4-110

THE CITY OF WHITTIER

February 20, 1983

Senator Don Gilman
Pouch V
Juneau, Alaska 99811

Dear Senator Gilman,

The Whittier Health and Human Services Committee is concerned that the State's three Health Services Agencies, (HSA's(have been eliminated from the State budget.

It has come to our attention that a misunderstanding of the Federal budget cuts has eliminated the State's matching funds for it's HSA's which includes the South Central Health Planning and Development, Inc., (SCHPD). We are an isolated community which is rapidly growing and becoming the hub of increased activity as the gateway to Prince William Sound. The information base and the expertise with current data available at SCHPD has been invaluable to us the past two years in our efforts of comprehensive community health planning.

We strongly urge you to consider the reinstatement of the HSA's in the State budget for without them small communities, the consumer and other non-profit groups will again be left without the resources for intelligent, wise, and above all money and man power saving health planning.

Sincerely,

Lucille McGarvin RN,BSN

P.O. BOX 204 - MOUNTAIN VILLAGE, ALASKA 99632 - (907) 365-8001

Honorable John C, Sackett
State Senator
Pouch V
Juneau, Alaska 99811

February 23, 1983

The City of Mountain Village wants to go on record and strongly recommend, and consider reinstatement of State funding for the three Alaska Health Systems Agencies to the level of $200,000.00 per agency. It is my understanding funds are available from the Federal Goverment to match with the State funds. The state wide organization such as South Central Health planning and Development, Inc. is vital to help us in our newly opened Area Clinic, here in Mountain Village along with ten other villages that will be served by Area Clinic for the following reasons; Community Organization, Management, evaluation, program planning, needs assessments and implementation.

Senator Sackett if you recall during the 1975 legislative session you was the one who appropiated $500,000.00 for the Area Clinic here in Mountain Village, and I trust you that you will do the same again, considering keeping a very worth while group of agencies aline to help Alaskans as we strive to improve peoples health in this area.

Thank you very much for your time and attention.

Sincerely yours,

Andrew Brown Sr.,
Mayor

February 23, 1983

Representative Al Adams, Chairman
House Finance Committee
State Capitol
Pouch Y
Juneau, Alaska 99811

Dear Representative Adams:

This is a letter in strong support of the continuation of the three Health Planning Agencies in the State. I have been a physician in practice in Alaska since 1972. During that time I have had opportunity to work with many rural communities in helping devise both local clinics and health care programs to improve medical services. As you know, this takes a lot of planning, a tremendous local effort, and good and sensitive technical assistance from people outside the local community.

Our health planning agencies have had an excellent track record for providing technical work per se, and data that can be used to develop these programs. If they disappear, I see no other group filling the role that they have played. Each of the other groups that have been involved in local health projects have vested interests. They have not necessarily served the local communities well.

I'm personally acquainted with many of the staff in the health planning agencies and find them of the highest caliber. They could easily match anyone in health planning whom I have met in the lower '48. Given the increasing costs of health care and the limited resources, health planning is necessary. If these agencies meet their demise we will have to recreate them. I would strongly support their continued existence.

Sincerely yours,

Thomas S. Highsmith, M.D., M.P.H.

Kenaitze Indian Tribe

P. O. BOX 988

KENAI, ALASKA 99611

(907) 283-3633

February 24, 1983

Representative Hugh Malone
State House of Representatives
Pouch "V"
Juneau, Alaska 99811

Dear Representative Malone:

The Kenaitze Indian Tribe is asking your support for the reinstatement of State funding in the amount of $600,000 for the three Health Systems Agencies (HSA's) at Juneau, Anchorage and Fairbanks, with each of the three agencies receiving $200,000 of the requested allocation.

It is our understanding that adequate State funds were not included in the proposed FY-84 State budget, on the assumption that federal FY-83 monies were being made available for covering the HSA operational costs. Unfortunately, this assumption is incorrect insofar as very insufficient federal funding currently is being allocated to the HSA's.

It is the opinion of the Tribe that the demise of the HSA's, especially the Southcentral Health Planning and Development (SCHPD) HSA at Anchorage, would be a serious loss to all health care agencies or entities with health care programs -- such as the Kenaitze Indian Tribe -- on the Kenai Peninsula. The cost of invaluable technical assistance in health planning and development which is provided by the SCHPD is minimal in comparison to what these costs would be if local, State funded health agencies had to secure grant funds to pay private consultants for such necessary services. Moreover, it is doubtful if the Tribe could have reopened the Kenaitze Health Clinic this past December without the planning, development and advocacy services which were provided to the Tribe by SCHPD staff.

Additionally, the extinction of the SCHPD would result in the elimination on a regional level of the only real forum for the participation in health care decision making by the Southcentral region. The SCHPD is the normal mechanism and the structure through which local health care organizations and their clients on the Kenai Peninsula voice their health-related concerns before a larger tribunal and have a voice in influencing health care [illegible] outside Anchorage.

In recognition of [illegible] effective and necessary health care [illegible] provide, [illegible] should be continued [illegible]. We urge you support [illegible]

upcoming State fiscal year in which tribal services and services might perdure.

Sincerely,

Clare Swan

Juneau, AK 99811

Dear Representative Adams:

I am writing to you to urge you to consider the reinstatement of State funding for the three Alaska Health Systems Agencies (HSA's). These HSA's provide high quality health planners-who are meeting the needs of various corporations, agencies and groups around the State.

Nutrition and health are important to all the citizens of this State, and the HSA's consistently have demonstrated awareness and concern for these matters.

The three HSA's need funding to the level of $200,000 per agency. Again, I would urge you to consider the reinstatement of State funding for these very worthwhile and necessary agencies.

Sincerely,

Cyclia A. Kirkus

PLANNING DEPARTMENT

February 25, 1982

Honorable Ron Larson
Pouch V
Juneau, Alaska 99811

Dear Mr. Larson,

I would like to support the inclusion of funding for the State's regional health systems agencies generally, and South Central Health Planning and Development, Inc., specifically, in the FY 1984 budget for the Department of Health and Social Services. I understand the amount needed is $200,000 per agency or $600,000 statewide.

I have dealt with South Central Health Planning and Development, Inc. (SCHPD) over the past five years and have found them to be a very competent and responsive public agency. They - and presumably the other regional agencies - make very significant contributions to the area they serve.

First of all they are governed by a board of directors to which the Borough appoints two members - therefore gaining us regional representation on matters of concern to the health and wellbeing of our residents.

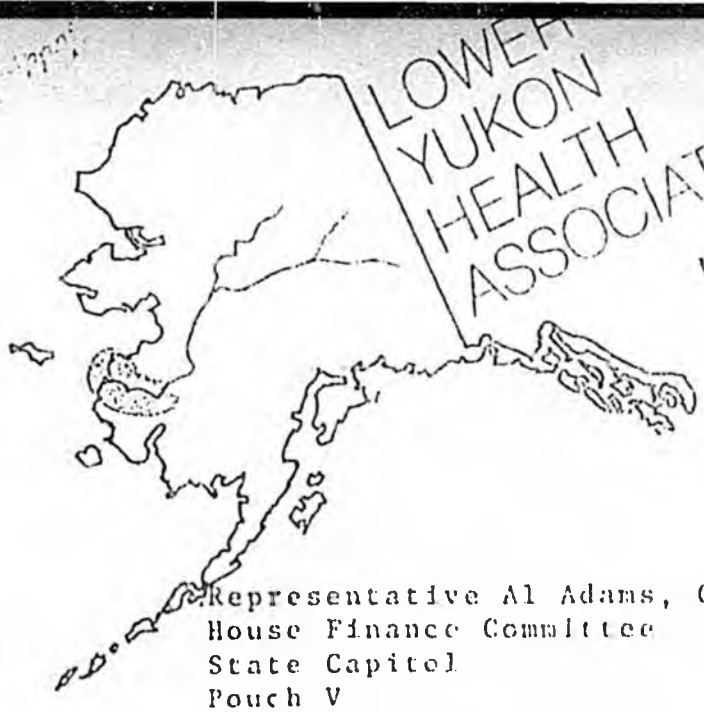
They readily provide technical assistance to the Borough through their staff of professional health planners - a specialized skill which local governments would ordinarily not be able to include on their own staffs.

They play a key role in the planning and development/provision of health facilities/services within the region. Without this role, I feel costs of health care and equitable distribution of health services would be adversely affected.

Specifically, SCHPD has greatly aided the development of a Boroughwide health plan by providing us with the services of a student intern who developed very complete inventory, analysis and recommendation sections for such a plan. SCHPD staff also have provided technical assistance in this effort.

And they have produced and currently maintain, by mandate, a regional health systems plan for Western and Southcentral Alaska.

They are a most worthwhile provider of services to and coordinator of health related activities within our region. I urge your support for their funding in FY 1984 and beyond.



Thank you for your consideration.

Rodney

Dear Representative Barnes

I would like to urge your support for reinstating $680,000 in the budget for the continuation of the three Health Systems Agencies in Alaska.

I am most familiar with South Central Health Planning and Development, Inc. They have been responsive and effective in providing planning assistance to groups with whom I work.

There is a need for an independent body to assess, identify, and promote necessary health services and measures which the existing agencies should then address, whether it be the expansion of hospital beds or the identification of new avenues to promote better health for Alaskans.

Thank you for your consideration. I will be happy to offer additional thoughts on this matter if you wish. Please feel free to contact me.

Sincerely,

Governor Bill Sheffield
Office of the Governor
Pouch A
Juneau, AK 99811

Dear Governor Sheffield,

We are very concerned about the elimination of the State Health Planning and Development function in your F.Y. 84 proposed budget, especially since it would eliminate funding to the Health Systems Agencies (HSA's). They have been very helpful to us as we cannot afford our own professional planners, also they are the most knowledgeable single agencies on whats happening in the health areas (rural and urban) in our State. As such, they eliminate millions of dollars in waste and provide alot of useful help.

We understand you propose a new program "Health Facility Development which includes Development as well as Certification and Licensing components" says Al Adams, Chairman of the House of Representatives Committee on Finance. Since this will be a substantive change, we would like to review your proposal and provide a "users" pros and cons on it. We feel all recipients should be afforded a chance to comment via the legislative hearing (teleconference) process.

Many changes are happening to the way the Federal Government deals with the State, non-profit Corporations, municipalities, boroughs, Native Corporations and individual receipients i.e. Medicare/Medicaid etc.. We need adequate deliberations on your proposed change so as not to cut something out without due consideration. Thank you for your thoughtfulness in an area that affects all of us.

Sincerely,

Anchorage, AK 99504

Pouch 5
Juneau, AK 99811

Dear

This is to urge you to reinstate State financing for the continuation of Alaska Health System Agencies (HSA's) in the State budget. The three (3) agencies would require $200,000 per agency for a total of $600,000 statewide.

I am requesting this because of the strong role the Health System Agencies play in promoting health and encouraging consumer participation in health care. HSA's develop comprehensive action plans for health and maintain an accurate data base for health assessment and policy decisions. They also provide technical assistance to community groups, especially rural areas, in the area of community organization, needs assessments, planning, and implementation.

The HSA board meetings are a unique and excellent means for both providers and consumers of health care to exchange information on health issues and generate ideas for improvements in the health system and health status of Alaskans. In other words, it is a good communications network.

I have personally found the board meetings and HSA data base very useful to me as a health professional. Once again, I urge your support for the continuation of HSA's.

Sincerely yours,

Diane Muri

Leo C. Kaye, *Executive Director*

Representative Albert Adams
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Adams,

This letter is in support of reinstating $200,000 in the Governor's budget for the continuation of South Central Health Planning and Development (SCHPD). The Alaska Lung Association has taken part in the public hearing process made possible by SCHPD. We have also received information from them regarding legislation or programs affecting our agency. SCHPD has provided technical assistance, conference planning and statistics to the Alaska Council on Smoking or Health, a volunteer organization supported by the Alaska Lung Association.

SCHPD offers services available from no other agency. Without the HSA there will be a duplication of services and and an additional expense for the collection and analysis of data.

I urge you to support the continuation of their services.

Sincerely,

Leo Kaye

March 9, 1983

Senator Jan Faiks
Pouch V
Juneau, Ak 99811

Dear Senator Faiks:

It has come to my attention that funding for the three regional health planning agencies has been eliminated from the Governor's budget. Our regional agency, South Central Health Planning and Development, Inc. (SCHPD) is the only non-aligned group in the region through which health concerns are identified and addressed. The agency stresses health planning, community assistance, and health promotion through the use of its technical staff, and many volunteers including both consumers and providers in the health field.

The health agency also maintains a current data and information base which is essential to the health planning process. Without SCHPD, other agencies and communities would have to expand their own funding to meet their data collection, community organization, management, and public education needs.

As a health consumer and constituent in your district, I urge you to consider reinstating the health planning agencies in the budget. $200,000 is needed per agency or $600,000 statewide. Your support will be appreciated.

Sincerely,

Ronni L. Kinneen

Representative Tischner
House of Representatives
State of Alaska
Pouch V
Juneau, AK 99811

Dear Representative Tischner:

We understand funding for South Central Health Planning & Development, Inc. and for other health planning agencies has been eliminated from the budget.

Without the funding, these organizations would cease to exist. This would be a loss to the people of South Central area and the State, as well as to us.

South Central Health Planning & Development has been a most valued source of technical assistance. They helped us during our formative stages to develop a rounded community approach to health planning including input from the consumer and the provider. As we began developing a health plan they provided a data base not only locally but with regard to our plan as it related to the region and State.

We need continued access to this information, technical assistance and support. Other areas of the region and the State must have similar needs.

It seems more cost effective to continue an organization who has met their goal of cost containment of health care and whose services are available to all phases of health planners throughout various regions of the State. Even the loss of the data base collected and maintained would be detrimental. Planning is a basic and fundamental activity. Please assist in reinstating the necessary funding.

Sincerely,

Myrtle Bass, Chairman
Health Planning Council

March 21, 1983

Milo Fritz, M.D.
Pouch V
Juneau, AK 99811

Dear Dr. Fritz:

I am writing to request support of financing for Health Planning Agencies. I know that consideration is being given to reducing or cancelling their funding. My request comes from my observation as Chairman of the Governor's Review Board on Alcoholism. These agencies have evaluated the alcohol treatment programs in place throughout the State at the request of the Board, and we have found this independent appraisal very useful as a check on the State office which admittedly has a vested interest. They serve as a check and balance on other State health organizations as well. To lose them would, in effect, create a monoply.

I think it extremely important that their function particularly in the appraisal capacity be ported.

Sincerely,

R. Holmes Johnson, M.D.

Court won't protect school from tax action

Washington — The Supreme Court today refused to suspend a ruling that could deny a small Bap ist school in Mississippi its federal tax exemption because it has failed to recruit blacks. The court turned down an emergency request by Clarksdale Baptist Church, which is seeking to prevent the Internal Revenue Service from proceeding to revoke its tax exempt status. Critics say the Clarksdale Baptist school was founded in 1963 to provide a place for whites trying to avoid attending public schools under orders to integrate. Other new private schools in Mississippi were founded around the same time. The Clarksdale Baptist Church denies that it has ever practiced racial discrimination, and says it would accept black students or teachers if any ever applied.

Courier Times 10/3/83

11 states lose Indian rights case

Washington — The Supreme Court today left intact a ruling that 11 states say effectively prevents them from suing Indian leaders in federal court to stop alleged tribal violations of federal law. The court, without comment, turned down an appeal by California, which is seeking a share of the power to regulate fishing and hunting by non-Indians on Indian reservations. Ten other states joined California in pressing for Supreme Court review of the case. They said federal court rulings against California have placed "Indian tribes above the law, in that no remedy is available to restrain them from committing unlawful acts." The Supreme Court has ruled that Indian tribes generally enjoy the same "sovereign immunity" as state governments, meaning that they are shielded from most lawsuits challenging official tribal policies.

GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

July 28, 1983

The Honorable Joe L. Hayes
Speaker of the House
Alaska State Legislature
Pouch V
Juneau, AK 99811

Re: SCS CS HB No. 357 (Rls) am S -- Relating to the Regulation of ~~private~~ schools.

Dear Mr. Speaker:

I have today vetoed Senate Committee Substitute for Committee Substitute for House Bill No. 357 (Rls) am S.

I have taken this action despite substantial pressure from several organized religious groups, on the grounds that enacting this legislation serves no discernible public purpose, and will only benefit select, private interests.

The State of Alaska presently regulates private religious schools only to a limited degree, primarily in the areas of health and safety. I have no plans to do more.

Given that early childhood development programs, daycare and preschool, have become a rapidly growing industry in the state, I am reluctant to create an exemption for any group of service providers, without greater justification for the exemption. Further, the distinction between religious and non-religious private educational programs created by this bill moves us perilously close to constitutional challenge for violation of equal protection provisions of both the state and federal constitutions.

Sincerely,

Bill Sheffield
Governor

And so, CSHB 357(Rls) passed the House on reconsideration of the vote.

Representative Tischer moved and asked unanimous consent that the following letter of intent be adopted:

"May 24, 1983 offered by
Representative Mae Tischer

LETTER OF INTENT

HB 357 "An Act relating to the regulation of religious schools."

The House of Representatives recognizes that operating a church school is an integral part of the free expression of religion and that schools operated by religious bodies are quite different from other private schools. Therefore, the purpose of HB 357 is to prevent possible church-state constitutional conflicts by protecting the fundamental rights of religious freedom of parents, children, and church schools in Alaska and, at the same time, to balance the state's interest in assuring that each child receives a good education. The House specifically intends to exempt pre-elementary and nursery programs operated by religious organizations from the general supervision of the Departments of Education and of Health and Social Services.

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF EDUCATION

OFFICE OF THE COMMISSIONER

GOLDBELT PLACE
801 WEST 10th STREET
POUCH F
JUNEAU, ALASKA 99811

OCT 1983
RECEIVED

October 19, 1983

The Honorable Mae Tischer, Chair
Health, Education and Social
Services Committee
500 "L" Street, Suite 310-G
Anchorage, AK 99501

Dear Mae:

Thank you for your various communications on matters related to preschool regulations. In our conversations nearly two months ago, I recall saying that the Department of Education (DOE) would not propose regulations for action by the State Board but that we would proceed with the process and wait for action to clarify the laws and the intent of the Legislature during the forthcoming session. We proceeded on that basis and requested further public comment. We have certainly had that.

The important responsibility for the Legislature in the matter is a clear determination of a public policy for preschool programs, public and private. I know you understand that the Department of Education and the State Board have no interest in developing regulations unless there is a legal basis for such regulations contained in the statutes.

Ernestine Griffin, President of the State Board, and the Department are ready to work with the Legislature at your forthcoming session to define the State responsibility for public and private preschool programs. If your committee has direction or data for us to prepare, we are ready to go to work. There is important work to be done to resolve these matters.

I regret that I was unable to reach you even from Chena Hot Springs by radio telephone. Your staff members were most helpful in our efforts to communicate.

Sincerely,

Harold Raynolds, Jr.
Commissioner

cc: Ernestine Griffin, State Board President
Members of the State Board
Richard Luther
Annie Calkins

(8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries as defined in AS 47.35.080(4); pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

(9) provide accredited elementary and secondary correspondence study programs available to any Alaskan through a centralized office of correspondence study;

(10) accredit private elementary and secondary schools which request accreditation and which meet accreditation standards prescribed by regulation by the department;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction project begun after July 1, 1978; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, basic education, and fire-service training to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11.020. (§ 1 ch 98 SLA 1966; am § 2 ch 69 SLA 1971; am § 6 ch 104 SLA 1971; am § 1 ch 190 SLA 1975; am § 6 ch 50 SLA 1977; am §§ 1-3 ch 126 SLA 1978; am § 10 ch 147 SLA 1978; am § 1 ch 86 SLA 1979; am § 24 ch 59 SLA 1982; §§ 1, 2 ch 92 SLA 1982)

Revisor's notes. — A reference to AS 14.11.020 was substituted for a reference to AS 14.07.190 in paragraph (13) by the revisor of statutes under AS 01.05.031 to conform to the renumbering of that section.

Effect of amendments. — The first 1978 amendment deleted "private, and denominational" preceding "schools" near the beginning of paragraph (6), inserted "and private" preceding "schools" in paragraph (7), added the language beginning "the standards for private schools" to the end of paragraph (7), and added paragraph (10).

The second 1978 amendment added paragraph (11).

The 1979 amendment added paragraph (12).

The first 1982 amendment substituted "of" for "and" preceding "new public elementary" in paragraph (11).

The second 1982 amendment substituted "'plans' include" for "a 'plan' includes" in paragraph (11), inserted "and approve" and "the" preceding "purposes of this paragraph" in that same paragraph, and added paragraph (13).

ARTICLE 1.

Section

4 AAC 60.009. APPLICABILITY. The provisions of 4 AAC 60.009 - 4 AAC 60.101, apply to pre-elementary schools as defined in 4 AAC 60.199. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.010. REQUIREMENTS. Repealed

Authority: AS 14.07.020

4 AAC 60.019. CERTIFICATE REQUIRED. (a) A person who does not have a certificate issued under 4 AAC 60.009 - 4 AAC 60.191
may not:

(1) operate a pre-elementary school; or

(2) advertise or represent that the person offers pre-elementary educational services to children. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.020 is amended to read: EXEMPTIONS. (a) The following programs are exempt from the requirements of 4 AAC 60.009 - 4 AAC 60.199.

(1) schools operated by the federal government

(2) programs licensed as day care facilities under 7 AAC 50.120 - 7 AAC 50.275 (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.030, is amended to read APPLICATION FOR A CERTIFICATE OF APPROVAL. (a) An applicant must apply for a certificate on a form provided by the department, and submit all required attachments with the application.

(b) Within 60 days after receipt of a completed application and all required attachments, a department representative will

(1) review the application, confer with the applicant if necessary, and schedule an inspection of the pre-elementary school; and

(2) if the department considers it necessary, request appropriate authorities to verify compliance with applicable fire safety regulations, environmental health regulations, building codes, zoning ordinances, and other state and municipal laws.

(c) If the results of the application review and inspection indicate that the pre-elementary school meets the requirements of 4 AAC 60.009 - 4 AAC 60.199, the department will issue a certificate to the applicant.

(d) If the department finds that the program does not comply with the requirements of 4 AAC 60.009 - 4 AAC 60.199, the department will deny a certificate, and provide the applicant with reasons in writing for the denial, and notify the Department of Health and Social Services, Division of Family Services of the status of the program. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.031. IMPLEMENTATION. (a) All currently certified pre-elementary schools in existence in Alaska upon the effective date of 4 AAC 60.009 - 4 AAC 60.199 must complete an application for a certificate and submit it to the department no later than 12 months after the effective date of 4 AAC 60.009 - 4 AAC 60.199. (Eff. / / , Reg.)

Montessori !

(b) All currently operating, non-certified pre-elementary schools must complete an application, with required attachments, and submit it to the department within 120 days of the effective date of 4 AAC 60.009 - 4 AAC 60.199.

Authority: AS 14.07.020

4 AAC 60.032. PROVISIONS OF CERTIFICATE. (a) A certificate issued in accordance with 4 AAC 60.009 - 4 AAC 60.191 will state

(1) the period for which it is in effect;

(2) the name of the person, board, or school district certified to operate the pre-elementary school;

6

(3) the address of the person, board, or school district certified to operate the pre-elementary school;

(4) the maximum number of children who attend the program at any one time;

(5) ages of children who may enroll in the program;

(b) The certificate must be displayed in the pre-elementary school in plain view of the public. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.039. PROVISIONAL CERTIFICATE. (a) The department will, in its discretion, issue a provisional certificate to a pre-elementary school whose completed application of certification has been approved by the department and whose final certification is dependent upon the on-site review of the program. The pre-elementary school may operate with a provisional certificate while department representative completes the on-site review and a certificate is granted or denied. A provisional certificate may not be issued if the department has reasonable cause to believe there is a standard not met which may mean substantial threat to life or safety of the children enrolled. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.040. DENIAL OF APPROVAL; HEARING. Repealed.

4 AAC 60.049. SPECIAL CHANGES AFFECTING CERTIFICATION. (a) The certificate holder shall report an anticipated change in any of the following to the department as early as possible but not more than 90 days before the change occurs.

(1) a change in the administrator of the program;

(2) a change in the name of the person certified to operate the facility;

(3) a change of the location of the facility;

(4) a change in the name of the pre-elementary school;

(5) a substantial change in the program offered; or

(6) a substantial change in the building housing the pre-elementary school.

(b) A certificate may not be transferred to a different location or owner.

Authority: AS 14.07.020

4 AAC 60.050. is amended to read DURATION OF APPROVAL. (a) A certificate issued under 4 AAC 60.009 - 4 AAC 60.191 is valid for a period of two years from the date of issuance.

(b) A certificate may be modified, revoked, or suspended for failure to comply with the requirements of 4 AAC 60.009 4 AAC 60.199 or other statutes and regulations covering the health, safety and welfare of students and staff.

(c) If the department finds that the holder of a certificate does not meet the requirements of 4 AAC 60.09 - 4 AAC 60.119, the department may revoke, modify or suspend the certificate subject to 4 AAC 60.039. The holder of the certificate may request a hearing before the division director or the division director's designee within 15 days after receipt of the accusation or statement of issues in accordance with AS 44.62.360 and AS 44.62.370.

(d) Following the hearing, the hearing officer shall prepare the findings and recommend appropriate action to the commissioner. The commissioner shall review the hearing officer's recommendations and determine what action shall be taken. The decision of the commissioner is subject to review in the manner provided by AS 44.62.560. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.051. CERTIFICATE RENEWAL. (a) Upon request, the department will provide the certificate holder with a renewal application form at least 60 days before the expiration of the certificate holder's existing certificate.

(b) The certificate holder shall submit the completed renewal application to the department at least 30 days before the expiration of the existing certificate; however, the department will, in its discretion, waive the requirements of this subsection if it determines there is good cause for the waiver.

(c) The department will, in its discretion, conduct a review and take appropriate action within ten days before expiration of the existing certificate.

(d) If the department cannot complete the review within the period set out in (c) of this section, it will issue the applicant a provisional certificate effective until completion of the department's review. (Eff. / / , Reg.)

(e) THe department will not renew a certificate if there is a revocation action pending.

Authority: AS 14.07.020

4 AAC 60.059. WAIVER OF REQUIREMENTS. (a) An applicant for a waiver must apply in writing to the department. The application must include

(1) a statement of the requirement for which the waiver is requested;

(2) an explanation of the reasons why the requirement cannot be satisfied; and

(3) a description of the alternative method proposed to satisfy the purpose of the requirement for which the waiver is requested.

(b) The department will, in its discretion, waive a requirement of 4 AAC 60.009 - 4 AAC 60.199 if an alternative method of satisfying the purpose of the requirement is established.

(c) The department will not grant a waiver, until the appropriate municipal or state authority have reviewed a request for a waiver involving fire safety, environmental health, or other municipal or state requirements within their jurisdiction.

(d) A waiver granted under this section is effective for the time specified on the certificate. The commissioner will review a waiver upon the termination of the waiver and will, in his discretion, renew the waiver.

(e) The department will answer a request for a waiver in writing within 30 days. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.060. DISPLAY OF CERTIFICATE. Repealed.

4 AAC 60.061 VOLUNTARY CERTIFICATE. (a) A pre-elementary school for which a certificate is not required under 4 AAC 60.009 - 4 AAC 60.199 may apply for a certificate. The department will, in its discretions, issue a certificate if it determines that the pre-elementary school satisfies the requirements of 4 AAC 60.009 - 4 AAC 60.199. (Eff. / / , Reg.)

(b) A licensed day care facility applying for certification as a pre-elementary school may submit in writing to the department a copy of its current day care license, and the following:

1) Philosophy of education;
2) Program educational goals and objectives;
3) Samples of daily schedules or lesson plans;
4) Provisions for parental involvement in program;
5) Child progress records.

The department will review the information and if appropriate, issue a voluntary certificate to the applicant.

Authority: AS 14.07.020

4 AAC 60.065 INSPECTION. (a) The department shall schedule and conduct on-site inspections to determine compliance with regulations in 4 AAC 60.009 - 4 AAC 60.199.

(b) If a program which the department suspects is a pre- elementary school has not applied for a certificate and refuses to permit an inspection, the department may seek an administrative search warrent. (Eff. / / , Reg.)

(c) An applicant or certificate holder shall permit certification representatives to inspect the pre-elementary school at any time during the facility's hours of operation. In carrying out these visits, certification representatives will call upon governmental agencies for appropriate assistance. Applicants or certificate holders shall cooperate in these visits by providing access to their facilities, records, children and staff. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.069. ORGANIZATION AND ADMINISTRATION. (a) The name, address and telephone number of the person or organization with the legal responsibility and the administrative authority for operating the pre-elementary school must be provided to the department and, if the facility is operated by an association, corporation or other entity, the name, address, and telephone number of each member of its board or governing body must also be provided to the department

(b) The individual or governing body with the legal responsibility for the pre-elementary school must designate an administrator also exercises responsibilities for the daily management of the program.

(c) Specific responsibilities and duties of the governing body must be written and communicated to the administrator of the pre-elementary school and staff when applicable.

(d) A pre-elementary school shall:

(1) provide an educational program and facility which meets the requirements of 4 AAC 60.009 - 4 AAC 60.191.

(2) provide the department with a description and the name of the owner of the land and building in which the pre-elementary school is located.

Why?!?

(3) ensure the confidentiality of records and information pertaining to an individual child or the parents, except as required by program staff in working with the child and the family, or when a release of information form is signed by the parents.

(4) maintain current individual records including but not limited to

(A) individual child emergency information records, maintained on forms provided by the department unless prior department approval is given to use alternate forms.

you can find red-tape almost anywhere -

(B) staff employment and health records;

(C) child attendance records.

(D) child progress records;

11

(5) maintain bodily liability insurance (including transportation coverage if applicable) in an amount not less than $100,000 per child, $300,000 per accident with a company authorized to write insurance policies and must contain the following endorsement:

"In the event of cancellation or non-renewal of this policy, the company agrees to give 30 days prior notice to the Department of Education, Pouch "F", Juneau, Alaska 99811."

(6) have written materials covering, admission policy, nondiscrimination, provisions which can be made for the special needs of individual children, program philosophy, program goals and objectives, samples of daily schedules or lesson plans, behavior management policies, provisions for parental involvement, enrollment requirements and procedures, fees and payment arrangement plans, insurance coverage, transportation arrangements, parental permission for trips and related activities outside the classroom, cold weather outdoor play policies, cold weather closure, child abuse reporting, illness or accident policies, disclosure of information, and notifications of changes in program; these materials must be presented and explained to parents at the time of enrollment or at the time of the change, and a copy filed with the department. (Eff. / / , Reg.)

Hog-wash!

Authority: AS 14.07.020

4 AAC 60.070. CERTIFICATE OF APPROVAL. Repealed.

4 AAC 60.079. ENSURING CARE IN EMERGENCY. (a) A pre-elementary school must have a plan for the complete evacuation of all children including the handicapped in case of fire or other disaster. The plan must include provisions for accountability for each child until released to an appropriate authority. The plan must be written and posted. Staff must be aware of the plan, and the staff must hold evacuation drills at least once every month.

(b) Provision must be made in all pre-elementary school facilities for emergency electrical lighting by generator or battery power for use in case of power failure.

$$$

(c) Pre-elementary school facilities shall have a telephone or radio-phone if that service is locally available. Emergency telephone numbers must include fire, police, physician, poison control, and must be conspicuously posted on or adjacent to the telephone.

12

(d) In all pre-elementary school facilities, first aid supplies appropriate to the size of the facility must be maintained and readily available for use at all times.

(e) A facility must have at least one staff member with a current first aid certificate on duty at all times unless first aid courses are not regularly available in the community in which the facility is located. If courses are not regularly available, the pre-elementary school must enroll one or more employees in the first available first aid course offered in the community to meet this requirement.

(f) A staff member, who, in the performance of duties, has cause to believe that a child has suffered harm as a result of abuse or neglect shall immediately report the harm to the nearest office of the Department of Health and Social Services. If the staff cannot reasonably contact the nearest office of the Division of Family and Youth Services of the Department of Health and Social Services, and immediate action is necessary for the well-being of the child, the administrator shall make the report to a peace officer.

(g) A pre-elementary school must have a written emergency back-up staffing plan for periods when only one staff member is on duty.

(h) When a child is left in the pre-elementary school after the closing of the program without contacting the staff, or making alternative arrangements for the care of the child, the administrator s[redacted] the nearest office of [redacted] Department of Health and Social Services. (Eff. / / , Reg.)

Changed for the better

Authority: AS 14.07.020
AS 47.17.

4 AAC 60.080. INSURANCE. Repealed.

4 AAC 60.089. ADMINISTRATOR QUALIFICATIONS. (a) The administrator of a pre-elementary school is responsible for the screening, scheduling and supervising of all staff, volunteers and others who provide services in the pre-elementary school, and for designating a staff member to be in charge of the facility in the administrator's absence.

(b) The administrator of a pre-elementary school must be at least 19 years of age.

(c) The administrator shall furnish the names, addresses, and telephone numbers of three persons unrelated to the administrator, who could provide character references to the department with the certificate application; the references, one of which must be from a supervisor in previous work experience, shall attest to the character and reputation of the administrator and to the management and interpersonal skills which enable the administrator to work successfully with children, staff, and parents.

???

(d) An individual may not be the administrator of a pre-elementary school if the individual is under indictment or has been convicted of a felony or has had a child adjudicated as a child in need of aid within the last five years. The department will require a release to review law enforcement records for each administrator. In this subsection, "child in need of aid" means a child who has been adjudicated a dependent child under AS 47.10.010 or under a similar statute in another state or jurisdiction.

(e) The administrator must also meet the staff qualifications in 4 AAC 60.099. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.090. RECORDS. Repealed.

4 AAC 60.099. STAFF QUALIFICATIONS. (a) A staff member shall possess tuberculin clearance before contact with children in a facility.

(b) A staff member, excluding parent classroom volunteers, must furnish the names, addresses, and telephone numbers of three positive references unrelated to the staff member, who will attest to the ability of the applicant to meet the qualifications of this section.

(c) A staff member must have reached the age of 18 to be counted toward meeting the staff-to-child ratio requirements. However, persons aged 14 and older may be employed as staff members and counted toward staff-to-child ratio requirements if he or she:

(1) works under the close supervision of an adult staff member;

(2) constitute no more than one third of the total staff; and

(3) is not placed in sole charge of a group of children in a classroom;

(4) is enrolled in or has completed a training program in early childhood education or another related field, or have demonstrated competence to an administrator.

(d) A staff member must be able to

(1) provide children with a variety of learning and social experiences appropriate to their ages;

(2) recognize and act against hazards to health and physical safety.

(e) The administrator shall provide an orientation for a new employee within the first month of employment, including:

(1) administrative procedures, program goals and objectives and description of state regulations;

(2) specific written personnel policies including written job responsibilities;

(3) crisis management, duties to be carried out in an emergency, and emergency and safety procedures;

(4) acceptable behavior management techniques, outlined in the pre-elementary school's discipline policy;

appropriate resources to carry out the assigned responsibi.. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.100. PHYSICAL EXAMINATIONS FOR CHILDREN. Repealed.

4 AAC 60.110. Repealed.

4 AAC 60.115. is amended to read STAFF. (a) A facility must have sufficient personnel to ensure that the children are never left without supervision by a responsible staff member.

(1) there must be one staff member for every ten children between three and five years of age;

Montessori is presently 1 to 20

(2) there must be one staff member for every fifteen children between five and six years of age;

(b) In a facility where there are more than ten children present, there must be a minimum of two staff members on the premises.

(c) In a pre-elementary school, only a staff member who spends at least 75 percent of his or her working time in direct contact with children will be counted in meeting staff-to-child ratios. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.119. ENVIRONMENT REQUIREMENTS. (a) A pre-elementary school facility must have sufficient indoor and outdoor space in relation to the number and ages of children to accommodate the physical safety and the developmental needs of children served. Satisfactory compliance with this subsection requires that:

(1) there be a minimum of 35 square feet of indoor space per child capacity used for the care of children, exclusive of hallways, bathrooms, lockers, closets, laundry and furnace rooms, and the kitchen;

(2) there be at least 75 square feet per child of outdoor play space for the maximum number of children on the playground at any one time. Where outdoor play space is not available at the facility, parks or other outdoor facilities that are easily accessible may be used.

(b) A pre-elementary school must have appropriate storage and work space for children and staff, convenient to the areas of use, to accommodate the following functions:

(1) record storage and administrative functions;

(2) food preparation and serving, if applicable;

(3) meeting space for staff;

(4) storage of program materials and resources for staff and parents;

16

(5) storage of repair and maintenance supplies.
(Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.120. RECOGNITION OF SPECIAL NEEDS. Repealed.

4 AAC 60.129. FIRE SAFETY. (a) The building housing a pre-elementary school must meet the standards for buildings and life safety contained in 13 AAC 50.010 - 13 AAC 50.030 and 13 AAC 55.010-13 AAC 55.150. Copies of documents indicating satisfactory compliance with standards must be filed with the department before the issuance of a certificate.

(b) When the department receives a certification application from a pre-elementary school and when any new construction or remodeling is completed, a fire inspection of the premises must be made by the fire marshal or his or her local designee to determine conformity with existing safety standards. Subsequent annual fire inspections may be required by the department. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.130. DISASTER PLAN. Repealed.

4 AAC 60.139. SANITATION AND ENVIRONMENTAL PROTECTION. (a) Pre-elementary school facilities must meet applicable standards for sanitation and environmental protection set out in 18 AAC 30.800 - 18 AAC 30.890.

(b) When the department receives a certification application from a pre-elementary school or when any new construction or remodeling is completed, an environmental health inspection by the Department of Environmental Conservation or its local designee to determine conformity with existing standards must be made. Copies of documents indicating satisfactory compliance with standards must be filed with the department before the issuance of a certificate. Subsequent annual inspections shall be required by the department. (Eff. / / , Reg.)

Duplicates local inspections

Authority: AS 14.07.020

4 AAC 60.140. FACILITY INSPECTIONS. Repealed.

4 AAC 60.149. HEALTH PROGRAM. (a) Pre-elementary school staff shall not administer medicines or drugs to a child except with written permission of the child's parent and physician or other medical authority. In the case of prescription medicine, a prescription label with the medical authority's name, the child's name, and a recent date may be accepted as showing that the drug may be administered to the child. Medicines or drugs kept at the pre-elementary school for a child must be clearly marked with the child's name and the dosage, and must be inaccessible to children.

(b) A pre-elementary school must provide a place where a tired, ill, injured, or upset child may rest or play quietly, apart from other children, yet under adult observation. Ill children need not be sent home as a routine policy, but may be cared for at the pre-elementary school at the administrator's discretion and with the concurrence of the parents.

(c) If a child appears to be more than moderately ill or a communicable disease other than a cold is indicated, the child must not be allowed to expose other children to the illness and must be isolated in a separate room under adult observation until appropriate arrangements are made. Staff members shall inform parents when their children have been exposed to illness or communicable disease.

(d) Children under age six, who attend a pre-elementary school for periods longer than four hours must have a time and place to lie down and sleep, or rest quietly. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.150. CHANGES IN MAJOR WRITTEN POLICIES, PLANS, PROGRAMS. Repealed.

4 AAC 60.159. IMMUNIZATIONS REQUIRED. (a) The administrator of a pre-elementary school shall maintain evidence of current immunization, or the exemption permitted by subsection (b)(1), for each child in attendance. This evidence must be obtained from the child's parent or guardian upon admission, and show that the child has received or has begun and is continuing to receive immunizations appropriate to age as prescribed in the Alaska Division of Public Health's schedule for active immunization or that the child is exempt from immunization under (b) of this section. Satisfactory compliance requires that each child's health record contain evidence of immunization or evidence of exemption. Evidence of immunization must include

(1) the name of the health service provider, and the date of immunization against diphtheria, tetanus, polio, measles, rubella, and, if the child is less than six years of age, pertussis; and

(2) valid immunization certificates, which are limited to

(A) an international immunization certificate; or

(B) a statement by a physician listing the date each required immunization was given; or

(C) a copy of a clinic or health center record listing the date each required immunization was given.

(b) Evidence of exemption of immunization must include

(1) a signed affidavit by a doctor (M.D.) or osteopathy (P.O.) licensed in Alaska, attesting that immunizations would, in his or her professional opinion, be injurious to the health of the child or members of the child's family or household; or

(c) A pre-elementary school in a community where regular medical services are not available on at least a weekly basis may provisionally admit a child who does not have the required immunizations for a reasonable period of time , but for no longer than 90 days. Provisional admissions must be reported to the communicable disease control section of the Division of Public Health of the Department of Health and Social Services, which shall then determine that the required immunizations are completed during the provisional period if the child is to be admitted for full time attendance.

(d) A pre-elementary schools may not admit a child who does not comply with the requirements of this section. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.160. NONDISCRIMINATION. Repealed.

4 AAC 60.169. NUTRITION. (a) To ensure adequate nutrition and promote good eating habits and attitudes, a pre-elementary school must ensure that

(1) at least one nutritious meal is offered to each child in the program for five hours per day or more; meals may be provide by the program or the parents or guardians;

(2) a snack is offered between breakfast and lunch and between lunch and dinner;

(3) with all snacks and meals offered, the National Academy of Science's Recommended Dietary Allowances, 9th Ed. 1980*, is met.

(b) Vitamins and mineral supplements may be provided to a child only with written parental permission, and only in dosage indicated by.

(c) Children may be encouraged but may not be forced to eat. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.170. is amended to read PROGRAMMATIC REQUIREMENTS OF THE PRE- ELEMENTARY SCHOOLS. (a)The educational program conducted in a pre-elementary school must provide pre-planned experiences which promote the individual child's physical, emotional, social and intellectual growth. Satisfactory compliance of this section requires that:

Who says what is satisfactory: the school?, the child?, the Department?

(1) staff members generally follow a written schedule of daily activities based on program's philosophy, goals and objectives. The program must provide a balance of quiet and active, group and individual, indoor and outdoor, teacher-directed, and child-initiated activities, as well as adequate time for meals, snacks, sleep, and toileting according to individual needs, as appropriate. The daily schedule must include:

(A) opportunities for individual self-expression in conversation, imaginative play, art, and creative expression;

(B) vigorous physical activities and gross motor activities, both indoors and outdoors, weather permitting.

*EDITOR'S NOTE: This document is available from book stores or the division of family and youth services, Department of Health and Social Services.

2C

(C) opportunities for intellectual and social development through use of a variety of books, games, toys, crafts, puzzles, blocks, and other activities and materials.

(2) the amount and variety of materials and equipment available, and its arrangements and use, must be appropriate to the developmental needs of the children and

(A) the quantity of materials and equipment is sufficient to avoid excessive competition and long waits by children;

(B) individual storage areas must be accessible to each child for storage of his own belongings;

(C) furniture and equipment must be durable and safe and developmentally appropriate;

(3) staff members may not use any form of corporal punishment unless approved in writing by the parent or guardian of the child and they may not use any other technique which is humiliating, cruel, shaming, or otherwise damaging to the child. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.175. is amended to read TRANSPORTATION. (a) A pre-elementary school must provide means for transporting children in case of emergency.

(b) A vehicle used in transporting children must be licensed in accordance with state law.

(c) A staff member of the pre-elementary school or other person acting on behalf of the program operating a vehicle for the purpose of transporting children shall be properly licensed to operate that class of vehicle according to state law.

(d) A pre-elementary school must ensure that there is prudent supervision in a vehicle used by the program to transport children, including but not limited to, use of seat belts, and prohibit riding in the back of open pickup trucks and other similar open vehicles. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.180. DEFINITIONS. Repealed.

4 AAC 60.191. EXCEPTIONAL CHILDREN. In accordance with AS 14.30.180-350, pre-elementary schools shall cooperate with school districts in identifying exceptional children between the ages of three and five. (Eff. / / , Reg.)

Authority: AS 14.07.020

4 AAC 60.199. DEFINITIONS. In AAC 60.009 - AAC 60.191, unless the context requires otherwise

(1) "administrator" means the person 19 years of age or older, delegated the responsibility for the daily management of the pre-elementary school;

(2) "board" means the governing body of the program;

(3) "certificate" means a certificate of approval issued to the pre-elementary school from the Department of Education;

(4) "certification representative" means a representative employee of the Department of Education given the responsibility to conduct reviews and on-site inspections of pre-elementary schools to determine compliance with this chapter;

(5) "commissioner" means the Commissioner of Education;

(6) "department" means the Department of Education;

(7) "division director" means the director of the Division of Educational Program Support;

(8) "exceptional children" means children who are handicapped or gifted;

(9) "facility" means the administration, program and physical plant of a program calling itself a pre-elementary school.

(10) "gifted" means exhibiting outstanding intellect, ability or creative talent within the meanding of 4 AAC 52.130;

(11) "guardian" means an individual who is appointed by a court to manage the affairs of another person;

October 19, 1983

The Honorable Rae Tischer, Chair
Health, Education and Social
Services Committee
500 "L" Street, Suite 310-G
Anchorage, AK 99501

Dear Rae:

Thank you for your various communications on matters related to preschool regulations. In our conversations nearly two months ago, I recall saying that the Department of Education (DOE) would not propose regulations for action by the State Board but that we would proceed with the process and wait for action to clarify the laws and the intent of the Legislature during the forthcoming session. We proceeded on that basis and requested further public comment. We have certainly had that.

The important responsibility for the Legislature in the matter is a clear determination of a public policy for preschool programs, public and private. I know you understand that the Department of Education and the State Board have no interest in developing regulations unless there is a legal basis for such regulations contained in the statutes.

Ernestine Griffin, President of the State Board, and the Department are ready to work with the Legislature at your forthcoming session to define the State responsibility for public and private preschool programs. If your committee has direction or data for us to prepare, we are ready to go to work. There is important work to be done to resolve these matters.

I regret that I was unable to reach you even from Chena Hot Springs by radio telephone. Your staff members were most helpful in our efforts to communicate.

Sincerely,

Harold Reynolds, Jr.
Commissioner

Alaska State Legislature

House

JUNEAU ALASKA

October 21, 1983

FOR IMMEDIATE RELEASE
Contact: Rep. Mae Tischer
277-2486

ANCHORAGE - A public hearing scheduled for October 24 concerning proposed regulations of pre-school education was postponed indefinitely by Rep. Mae Tischer.

Tischer, chairman of the House Health, Education, and Social Service Committee, said she is postponing the meeting because the proposed regulations have been "pulled back" by Harold Raynolds, commissioner of the Department of Education.

Tischer said she has been assured that Raynolds will not present the proposed regulations to the state education commission at its upcoming meeting in Anchorage on October 31 and November 1.

But Tischer stressed, "I'm not cancelling the hearings, just postponing them. The commissioner has decided to pull back these regulations, but I don't know for how long."

The Anchorage Republican credited a large public outcry against the regulations for helping force Raynolds to reconsider his stance on the regulations.

"The public outcry against the regulations has been overwhelming," Tischer said. "I've been told that the governor, commissioner Raynolds, and the state board of education have received over 5,000 letters of protest. And I don't know how many telephone calls they've received.

"It seems very clear to me that the people have spoken," Tischer added.

More than 700 people attended a committee meeting in Anchorage on October, with most of those protesting against the proposed regulations.

However, Tischer spoke with Gov. Sheffield on Friday, October 21, and was told that the governor was also concerned about the proposed regulations.

"The governor said that sometimes in the bowels of government this happens," Tischer said.

Tischer said she and Sen. Jan Faiks, R-Anchorage, are scheduled to meet with Sheffield within the next week in an attempt to permanently resolve the problem.

Last session, House Bill 357 was overwhelmingly approved by both the House and Senate, but was then vetoed by Sheffield. House Bill 357 would have allowed the Department of Education to have sole authority to supervise pre-elementary schools, but would have prohibited the state licensing and supervis;ion over the educational component of religious pre-schools that are non-profit and do not receive state or federal funding.

After the veto, Commissioner Raynolds proposed additional regulations for religious pre-schools.

"The public is now calling for a veto override," Tischer said. "The House passed it by a 28-9 vote and the Senate voted 18-2 in favor of the legislation. It was a very non-partisan issue.

"Yet, Raynolds says he now wants to wait for a message next session to see how the legislature deals with this issue. That's what the department of education told us last session. These response to that was passage of House Bill 357.

"What type of response does he want, a 20-0 and 40-0 vote? I think the legislature - and the pub'ic - have made their feelings very clear."

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF EDUCATION

OFFICE OF THE COMMISSIONER

GOLDBELT PLACE
801 WEST 10th STREET
POUCH F
JUNEAU, ALASKA 99811

October 12, 1983

The Honorable Joe L. Hayes
Speaker of the House
1024 West 6th, Room 201 C/E
Anchorage, Alaska 99501

Dear Mr. Speaker:

Thank you for your letter inquiring about the promulgation of regulations for preschools. The questions concerning preschool regulations arise because of the veto of House Bill 357 by Governor Sheffield. The matter of legislative action and intent will remain unclear until a resolution of the issues can be worked out during the next legislative session.

Ernestine Griffin, President of the State Board of Education, and members of the Board plan to work closely with the Legislature and the Department of Education to clarify the intent of the Legislature and the Governor on matters related to preschools, both public and private.

No regulations concerning preschools will be enacted until statutes and legislative intent are clarified. You may be sure that ample opportunities will be provided for public input, if and when preschool regulations are developed pursuant to statutes.

Sincerely,

Ron Raynolds

Harold Raynolds, Jr.
Commissioner

ACSI students score higher than the National Average!

1981-82 School Year

Year after year testing shows that ACSI students score higher than the National Average at every grade taught.

1st graders are 11 months *above* the National Average

2nd graders are 9 months *above* the National Average

3rd graders are 9 months *above* the National Average

4th graders are 9 months *above* the National Average

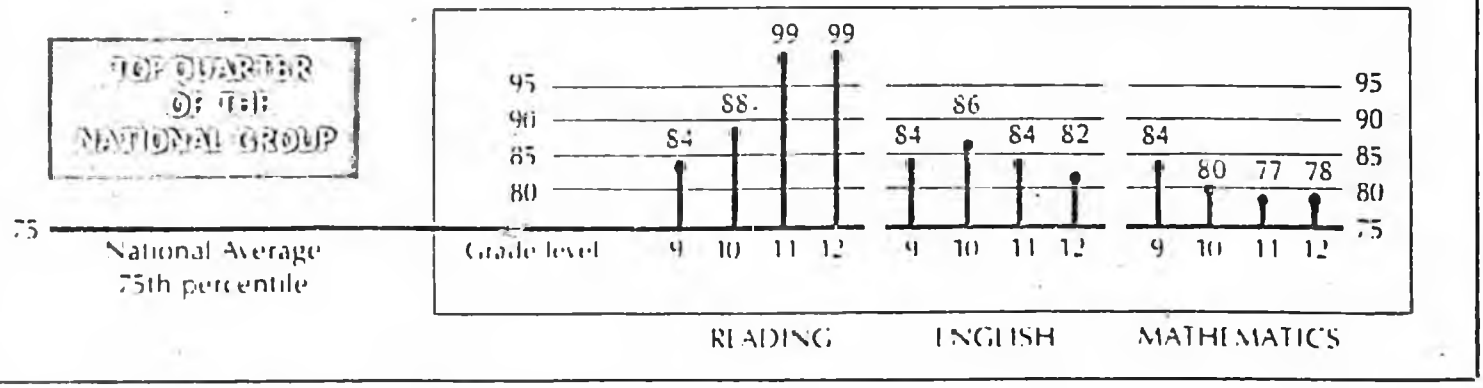
5th graders are 12 months *above* the National Average

6th graders are 12 months *above* the National Average

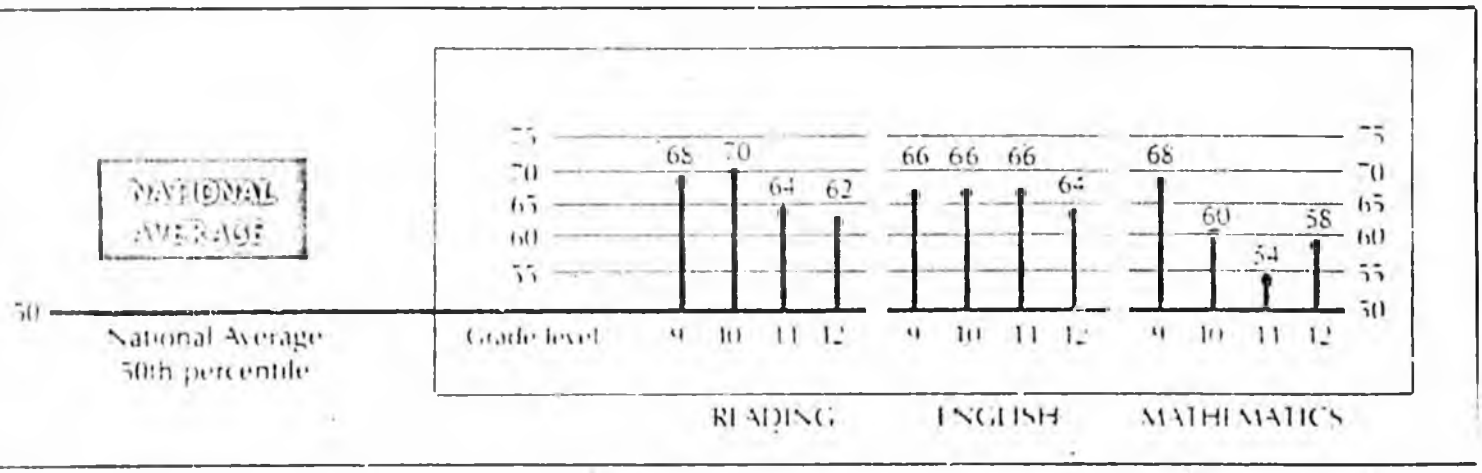
7th graders are 11 months *above* the National Average

8th graders are 12 months *above* the National Average

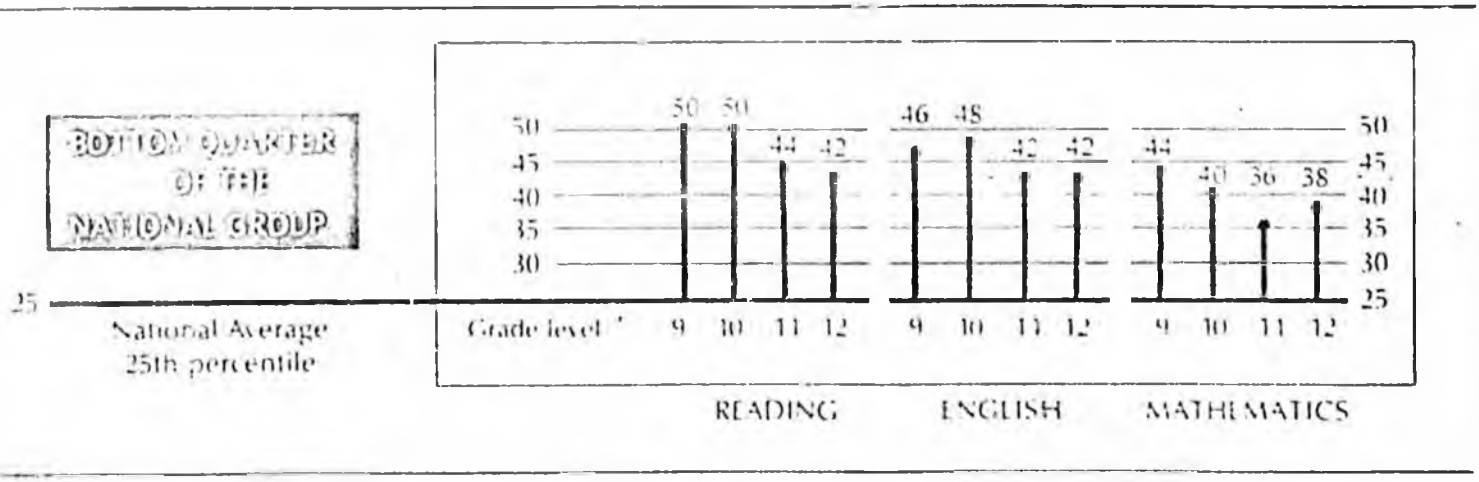
ACSI students are compared to some 225,000 students that were carefully selected to represent average students across the United States (1973). The figures represent the average (median) of all tests at each grade level. The test used was the 1973 Stanford Achievement Test, Form A.



\+ TOTAL TEST INCLUDES:



vocabulary	math	social science
reading	spelling	science
word study skills	language	listening



What about ACSI HIGH SCHOOL students? 1981-82 School Year

How do they compare?

ACSI PERCENTILE RANKS *

* This indicates the relative standing of ACSI students in comparison with students of the same grade status in the National Norm Group. For example, a score of 70 means the ACSI students equaled or exceeded 70% of the National Group that took the test.

Scores are based on the 1977 Stanford Test of Academic Skills, Level H, Form A

HOUSE HESS
COMMITTEE MEETING
AGENDA

DATE: May 13, 1983

TIME: 1:00 p.m.

I. Call Meeting to Order

A. Note Committee Members Present

B. Welcome Those Observing

C. Remind those wishing to testify to sign up, and those giving testimony to speak up and state their names.

II. Announce Legislation Under Consideration:

HB 357 An act relating to the regulation of religious schools. STATEWIDE TELECONFERENCE

Other notes or reminders:

FULL CALENDAR NEXT WEEK

HB 357/SB 261: Legislation relating to the regulation of private, non-profit, religious schools which are exempt from federal tax and do not receive state or federal funding.

Sec. 1: Such schools will self-regulate the educational component (curriculum, text books, class schedules, kinds of toys, quantities of materials etc.) of their pre-elementary programs.

Sec. 2: Legislation relating to such schools is deleted from present statutes and reintroduced under new statutes.

Sec. 3: A policy statement declaring the right to freedom of religion guaranteed by the constitution of the United States and the state of Alaska.

Sec. 4: Repealing the statute which authorizes the state to grant diplomas to 8th grade graduates.

Sec. 5: Such schools will, at least once a year, submit to a nationally standardized test for students attending grades one, three, six and nine.

Sec. 6: Such schools will make available regular monthly attendance reports and annual reports. Such schools will operate on a regular schedule at least nine calendar months of the year.

Sec. 7: Such schools who comply with this chapter are not subject to any other provision of law relating to education except requirements of law respecting fire, safety, sanitation, immunization and physical exams.

Sec. 8: Such schools will administer their own program of education at the elementary, secondary and adult levels.

NOTE: Statues governing health requirements are not affected in this bill. (See attached copy).

Article 2. Physical Examinations.

Section
60. Repealed
65. Supervision
70. Physical examination required
80. Repealed
110. Repealed
120. Certificate of physical examination
125. Immunization
130. Repealed
170. Repealed

Sec. 14.30.060. Repealed. (Sec. 59 ch 98 SLA 1966)

Sec. 14.30.065. Supervision. The program of physical examination and immunizations prescribed by sections 65—125 of this chapter shall be under the general supervision and in accordance with regulations of the Department of Health and Social Services. (Sec. 42 ch 98 SLA 1966; am Sec. 1 ch 131 SLA 1957; am Sec. 6 ch 104 SLA 1971)

Sec. 14.30.070. Physical examination required. (a) The governing body of each school district shall provide for and require a physical examination of every child attending school in the district. The examination shall be made when the child enters school or, in areas where no physician resides, as soon thereafter as is practicable, and thereafter at regular intervals considered advisable by the governing body of the district.

(b) The Department of Health and Social Services may require the district to conduct additional physical examinations which it considers necessary, and may reimburse the district for the additional examinations on the basis and to the extent the commissioner of health and social services prescribes by regulation.

(c) Examinations shall be made by a competent physician, except that if the services of a physician cannot be obtained or if authorized by the commissioner of health and social services examinations may be made by a nurse. (Sec. 37-7-11 ACLA 1949; am Sec. 10 ch 118 SLA 1949; am Sec. 1 ch 72 SLA 1953; am Sec. 43 ch 98 SLA 1966; am Sec. 6 ch 104 SLA 1971)

Sec. 14.30.080 — Sec. 14.30.110. Repealed. (Sec. 59 ch 98 SLA 1966)

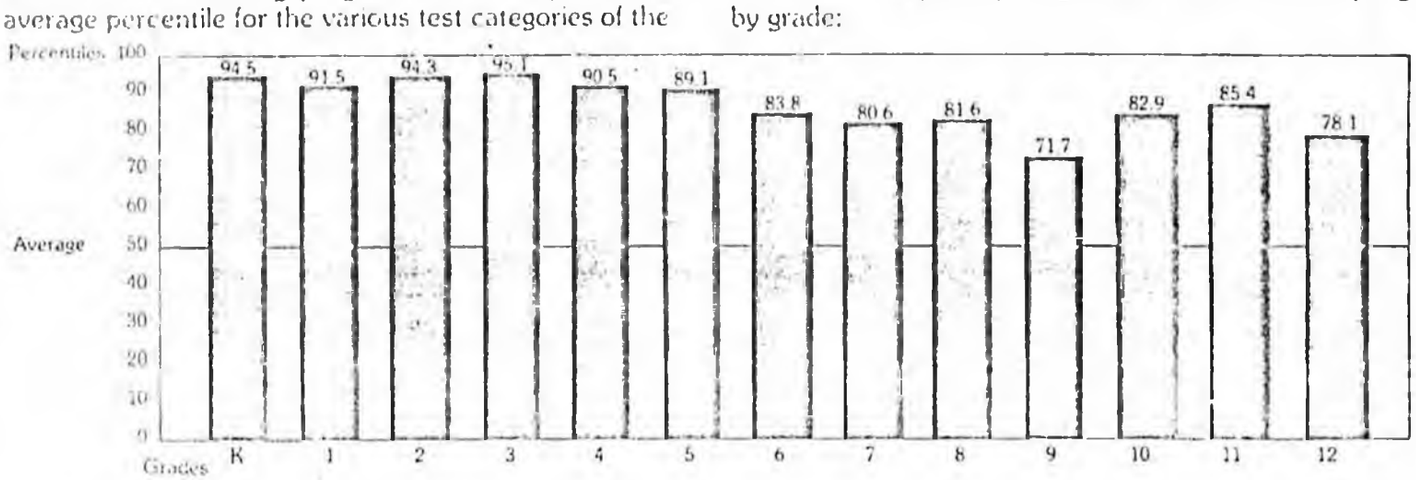
Sec. 14.30.120. Certificate of physical examination. The school board, when physical examinations are made, shall deliver to the parent, guardian, or other person having the responsibility for or control of the child a report signed by the physician or nurse making the examination, specifying the findings with respect to the health and physical well-being of the child. (Sec. 37-7-13 ACLA 1949; am Sec. 12 ch 118 SLA 1949; am Sec. 44 ch 98 SLA 1966)

Sec. 14.30.125. Immunization. If in the judgment of the commissioner of health and social services it is necessary for the welfare of the children or the general public in an area, the governing body of the school district shall require the children attending school in that area to be immunized against the diseases the commissioner of health and social services may specify. (Sec. 45 ch 98 SLA 1966; am Sec. 2 ch 131 SLA 1957; am Sec. 6 ch 104 SLA 1971)

Sec. 14.30.130—14.30.170. Repealed. (Sec. 59 ch 98 SLA 1966)

CHRISTIAN SCHOOL COMMUNICATOR

Vol. 3 The Christian School and the Home — Partners In Education! No. 8



AACS NATIONWIDE STUDENT ACHIEVEMENT TESTING PROGRAM

By Dr. Bruce Jackson, Educational Director
American Association of Christian Schools

What can be said about the academic achievement of Christian schools? Are students learning anything besides Bible? How do Christian schools compare with other schools across the country?

Perhaps the new testing program of the American Association of Christian Schools will help to answer some of these questions. AACS has been working with the publisher of the Stanford Achievement Tests and the Otis-Lennon School Ability Test (I.Q. Test) to develop a testing program for AACS member schools. Besides the national norms that are typically given on scoring sheets, the Christian school also receives a set of scores that reflect the norms of AACS schools only. These additional scores allow a school the opportunity to observe how the academic achievement of its students compares to the achievement of all of the students in schools involved in the testing program. For example, if the average percentile for the various test categories of the fourth grade of a particular school were the 60th percentile, that school would know that its four grade program was above average as compared to the other Christian schools. A score at the 60th percentile simply means that 60% of the students' scores ranked below that point and 40% ranked above. A program that was average compared to the other Christian schools would receive a score of approximately the 50th percentile.

The first AACS testing was scheduled for this past November (1982). Schools received scores as described above which allowed that school to compare the achievement of its students with those in other Christian schools. In addition, each school also received scores based upon national norms which included public, private, and parochial schools across the country. The following chart illustrates the average achievement of AACS schools participating in this initial test sampling by grade:

Looking over the chart, one can see that the Christian schools demonstrated outstanding achievement as compared to national norms. Ninth-graders had the lowest average of all the grades, yet that was almost 22 points above the national average (50th percentile).

Some cautions need to be noted with regard to the use of these scores. These scores indicate the achievement of those schools involved in the November testing and thus, are not necessarily representative of all Christian schools. An individual school should advertise its own scores rather than the averages of Christian schools in general.

Why do Christian schools do so well? There are several reasons why Christian schools are able to demonstrate such superior achievement:

1. The student learns in a disciplined environment where the teacher maintains firm, but loving control over the classroom. Students are taught how to properly develop self-government so that they are able to recognize and fulfill their God-given responsibilities.
2. A Christian philosophy of education demands an emphasis on the basics. Thus, the curriculum is designed so as to offer such basic instruction as phonetic instruction in reading beginning in Kindergarten. Much time is spent on basic reading and arithmetic skills in the lower grades.
3. The Christian teacher is definitely a key to the success of the Christian school. A Christian school teacher is one who has been led by the Lord into the ministry of Christian schools. The teacher is not looking for personal gain, but rather for an opportunity to give of oneself.
4. Parents of Christian school students tend to be vitally concerned about their children's education. Part of their parental responsibility to their children is to spend time at home reinforcing the work of the school.

Thus, one who thoroughly understands the Christian school movement is not surprised at such achievement. Parents and schools should properly use the testing results so as to continually improve the achievement of students. After all, it is part of one's Christian testimony to always do one's best.

Additional copies can be obtained from:

SB 261 AND HB 357

Summary of the Legislation

SB 261 and HB 357 deal exclusively with private church schools and schools operated by religious organizations and, as amended, are modeled after the legislation adopted by North Carolina in 1979 and by West Virginia in 1982 to remedy church-state constitutional conflicts. These laws, if enacted by the Legislature, would establish requirements that must be met by private religious schools in order for parents whose children attend them to satisfy the compulsory education law. They would also exempt pre-elementary and nursery programs operated by religious organizations from the supervision of the Departments of Education and of Health and Social Services. The purpose of these bills is to remedy existing church-state constitutional conflicts by protecting the guaranteed religious freedom of church schools in Alaska and, at the same time, to balance the state's interest in assuring that each child receives a good education.

This legislation only covers schools, pre-elementary programs or nursery programs operated by a church or other nonprofit religious organization exempt from federal taxation and not receiving state or federal funding. These are constitutionally protected groups and activities.

More specifically, church schools (or denominational schools as defined in the proposed legislation) would be required to maintain attendance and immunization records. Since current compulsory education laws make parents liable for their children's failure to attend school, these bills, as amended, would require the parents to file statements with the public school authorities to establish their children's attendance at a church sponsored private school. By placing the requirement on the parent, the bills avoid the constitutional problems created by the state's excessive entanglement in religious activities. The school would also be required to operate on a regular schedule, at least nine calendar months per year, and to be subject to reasonable fire, health, and safety regulations.

To ensure that children attain certain minimum standards, each religious school would be required to administer a nationally standardized test to students in the first, third, sixth and ninth grades and to make the school results available for the Department of Education. This would satisfy the state's interest in compulsory education and still avoid the constitutional problem of excessive state entanglement in religion.

Any church school that satisfied all the requirements of AS 14.45 would be exempt from any additional provision of law relating to education except those requirements of law relating to fire, health, and safety.

Constitutional Requirements

The changes set out in SB 261 and HB 357, as amended, are required to correct existing Alaskan laws which run afoul of the constitutional mandate requiring the states to avoid excessive entanglement in religious activities. The state's right to impose minimum requirements on private religious schools is very limited, because these religious activities are protected by the First Amendment of the United States Constitution and its identical counterpart in the Alaska Constitution, Art. I, sec. 4.[1]

Schools operated by churches or by nonprofit religious organizations are quite different from other private schools. They enjoy a constitutionally protected status.

> "Church operated schools are generally integral parts of their sponsoring churches. Their superintendents are generally pastors or assistant pastors of the sponsoring churches; their teachers are generally members; and their doctrinal stances are generally set by the sponsoring churches."[2]

Federal and state courts recognize that operating a church school is an integral part of the free exercise of religion.[3] For many churches, it is in fact the ministry of the church. Because church operated schools clearly come within the First Amendment free-exercise clause, their activities are constitutionally

[1] E.g., Kentucky State Bd. for Elem. & Secondary Education v. Rudasill, 589 S.W.2d 877 (Ky. 1979), cert. den., 446 U.S. 938 (1980); Wisconsin v. Yoder, 406 U.S. 205 (1972); Lemon v. Kurtzman, 403 U.S. 602 (1970); Pierce v. Society of Sisters, 268 U.S. 510 (1925).

[2] "State Regulation of Private Religious Schools in North Carolina -- A Model Approach," 16 Wake Forest Law Review 405, 431-32 (1980).

[3] See, e.g., NLRB v. Catholic Bishop, 99 S. Ct. 1313 (1979) (Catholic parochial schools are founded for religious reasons and religious doctrine is pervasive); Surinach v. Pesquera de Busquets, 604 F.2d 73 (1st Cir. 1979) (private Catholic schools are an integral part of the Catholic Church and as such "involve substantial religious activity and purpose"); Hunt v. McNair, 413 U.S. 734, 743 (1973) ("[R]eligion is so pervasive that a substantial portion of [religious school] functions are subsumed in the religious mission."); Lemon v. Kurtzman, 403 U.S. 602, 616 (1971) ("[T]he parochial schools constituted 'an integral part of the religious mission of the Catholic Church'. . . In short, parochial schools involve substantial religious activity and purpose.").

protected as fundamental rights.[4]

In the area of First Amendment individual liberties, any state legislation that burdens parents', childrens', or a church's free exercise of religious beliefs is unconstitutional unless, the state can demonstrate "a compelling state interest in the regulation of a subject within the state's constitutional power to regulate." Sherbert v. Verner, 374 U.S. 398, 403 (1963).

To establish the existance of a compelling state interest, it is not enough for the state to merely show that a rational relationship exists between a colorable state interest and the proposed regulation. According to Sherbert, "[o]nly the gravest abuses, endangering paramount interests, give occasion for permissible limitation."

More importantly, the state must demonstrate that it is using the least burdensome method for addressing the compelling state interest. The current law violates this mandate, because the legislative goals can be achieved with less burdensome methods. SB 261 and HB 357, as amended, use North Carolina and West Virginia laws as models and are less burdensome while still accomplishing legislative goals.

Eventhough SB 261 and HB 357, as amended, would create two classes of private schools and treat them differently, these bills would not violate the Equal Protection clause of the Fourteenth Amendment. According to established legal principles[5], the equal protection guarantee of the Fourteenth Amendment does not take from the state legislatures all power to classify persons or objects. The state may classify persons for the purpose of legislation. Classification is an inherent right and power of the legislature.

The important issue for these proposed bills is whether the distinction between private schools operated for profit and private schools operated by churches is based on a real and substantial difference between the two classes. Clearly, there is a substantial difference. The decision of the legislature to recognize its limited ability to regulate church schools is based on a constitutional distinction between the two classes. Church schools are in a protected class, enjoying the protection of the First Amendment. Private schools are not.[6]

[4] Ibid.

[5] 16A Am Jur 2d, Constitutional Law, §746, et. seq.

[6] In addition, it must noted that the motivations for operating a private school for profit and a school operated by a church are entirely different.

In the area of religious freedom and expression, the Constitution demands neutrality. The government cannot demonstrate a hostility toward religion or religious activity. The mere fact that the government specifically exempts religious groups from complying with certain laws does not violate the Constitution. For example, federal law clearly creates two classes when it exempts the property and income of religious organizations from federal taxation. These two classes parallel the two classes which would be created by SB 261 and HB 357, as amended. The Supreme Court held this was proper legislation in Walz v. Tax Commission, 397 U.S. 664,669 (1970). The Supreme Court found that neither the purpose nor the effect of such exemption was to advance or inhibit religion. It was "benevolently neutral."

The distinction between private schools operated for profit and those operated by churches is real and parallels distinctions created by the federal tax laws. Therefore, there is no violation of equal protection guarantees.

In summary, the present law violates both the United States Constitution and the Alaska Constitution. SB 261 and HB 357, as amended, balance the state's interest in ensuring that each child receives a good education with the fundamental right to religious freedom and should be adopted.

HB 357

* Section 1. AS 14.07.020 (8) is amended to read:

(8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries as defined in AS 47.35.080 (4) excluding pre-elementary schools and nurseries operated by a church or other nonprofit religious organization that is exempt from federal taxation provided the program does not receive state or federal funding; pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

* Section 2. AS 14.30.010 (b)(1) is amended to read:

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; [OR]

(C) except as provided in (D) of this paragraph, attendance at a private school in which the average student proficiency is not less than the average proficiency found in the public schools in the area as measured by national achievement tests; the department with assistance from representatives of the private schools shall promulgate regulations defining the subject areas to be tested and the minimum average scores to be achieved; or

(D) attendance in an educational program operated by a church or other nonprofit religious organization that is exempt from federal taxation provided the program does not receive state or federal funding and provided that the church or other nonprofit religious organization elects to comply with the provisions of AS 14.45;

* Section 3. AS 14.45.015 is added to read:

Sec. 14.45.015. POLICY. In conformity with the fundamental right to freedom of religion guaranteed by the constitutions of the United States and of Alaska, it is the public policy of the State in the matters of education by religious organizations that the state shall not control or interfere with the rights of conscience or with religious liberty. The State further finds that there is no compelling reason to interfere with this fundamental right.

* Section 4. AS 14.45.020 is repealed.

* Section 5. AS 14.45.025 is added to read:

AS 14.45.025. STANDARDIZED TESTING REQUIREMENTS. Each school operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding and that has elected to comply with this chapter shall administer, at least once in each school year, a nationally standardized test or other nationally standardized equivalent measurement selected by the chief administrative officer of such school, to all students enrolled or regularly attending grades one, three, six and nine. The nationally standardized test or other equivalent measurement selected must measure achievement in the areas of English grammar, reading, spelling and mathematics. Each school shall make and maintain records of the results achieved by its students. For one year after testing, all records shall be made available to the parents at the principal's office, and the school composite test results shall be made available at all reasonble times for annual inspection by a duly authorized representative of the State of Alaska.

* Section 6. AS 14.45.030. is amended to read:

Sec. 14.45.030. ATTENDANCE AND ANNUAL REPORTS REQUIRED. (a) Teachers and others in charge of private [OR DENOMINATIONAL] schools not operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding and that has elected to comply with AS 14.45 shall make regular monthly attendance reports and annual reports to the commissioner in the same manner as teachers and superintendents in the public schools.

(b) The enrollment and attendance of a child in a school operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding shall be filed with the local public school superintendent by the parent, guardian or other person in charge or control of the child on a form provided by the superintendent which shall be countersigned by the administrator of the church school and returned to the public school superintendent by the parent. Should said child cease attendance at a church school, the parent, guardian, or other person in charge or control of the child shall by prior consent at the time of enrollment direct the church school to notify the local public school superintendent that said child no longer is in attendance at a church school.

(c) Each school operated by a church or other nonprofit religious organization exempt from federal taxation and which does not receive state or federal funding shall make and maintain monthly attendence records for each student enrolled and regularly attending classes. Such school shall operate on a regular schedule, excluding reasonable holidays and vacations, during at least nine calendar months of the year.

* Section 7. AS 14.45.035 is added to read:

AS 14.45.035. REQUIREMENTS EXCLUSIVE. No school operated by any church or other nonprofit religious organization exempt from federal taxation which does not receive state or federal funding and which has complied with this chapter shall be subject to any other provision of law relating to education except requirements of law respecting fire, safety, sanitation, physical examination and immunization.

* Section 8. AS 44.27.020(1) is amended to read:

(1) administer the state's program of education at the elementary, secondary, and adult levels, including, but not limited to, programs of vocational education and training, vocational rehabilitation, library services, correspondance courses, adult basic education, and fire-service training, but not including degree programs of postsecondary education or an educational program operated by a church or other nonprofit religious organization that is exempt from federal taxation if the program does not receive state or federal funding and if that school has elected to comply with the requirements of AS 14.45;

* Section 1. AS 14.07.020 (8) is amended to read:

(8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries as defined in AS 47.35.080 (4) excluding pre-elementary schools and nurseries operated by a church or other nonprofit religious organization that is exempt from federal taxation provided the program does not receive state or federal funding; pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

Section 2. AS 14.30.010 (b)(1) is amended to read:

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; [OR]

(C) except as provided in (D) of this paragraph, attendance at a private school in which the average student proficiency is not less than the average proficiency found in the public schools in the area as measured by national achievement tests; the department with assistance from representatives of the private schools shall promulgate regulations defining the subject areas to be tested and the minimum average scores to be achieved; or

(D) attendance in an educational program operated by a church or other nonprofit religious organization that is exempt from federal taxation provided the program does not receive state or federal funding and provided that the church or other nonprofit religious organization elects to comply with the provisions of AS 14.45;

* Section 3. AS 14.45.015 is added to read:

Sec. 14.45.015. POLICY. In conformity with the fundamental right to freedom of religion guaranteed by the constitutions of the United States and of Alaska, it is the public policy of the State in the matters of education by religious organizations that the state shall not control or interfere with the rights of conscience or with religious liberty. The State further finds that there is no compelling reason to interfere with this fundamental right.

* Section 4. AS 14.45.020 is repealed.

* Section 5. AS 14.45.025 is added to read:

AS 14.45.025. STANDARDIZED TESTING REQUIREMENTS. SUBJECT: Regulation of religious schools (HB 357)

TO: Representative Milo Fritz

FROM: Keith B. Levy KBL
Legislative Counsel

You have requested a sectional analysis of HB 357, an Act relating to the regulation of religious schools. In general, the bill amends certain sections of Title 14 of the Alaska Statutes to remove state control of schools operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding for its educational program.

Section 1 of the bill amends AS 14.07.020(8) to remove pre-elementary schools and the educational component of nurseries operated by these religious groups from the supervision of the Department of Education. The law currently requires the Department of Education to supervise these programs.

Section 2 of the bill amends AS 14.30.010(b)(1) to exempt children attending a school operated by one of the religious organizations described above from the requirement that children between seven and 16 years of age attend public school. It also makes clear that these schools need not have an average student proficiency that is at least equal to the average proficiency found in public schools in the same area. AS 14.30.010(b)(1) currently requires such proficiency of all private schools.

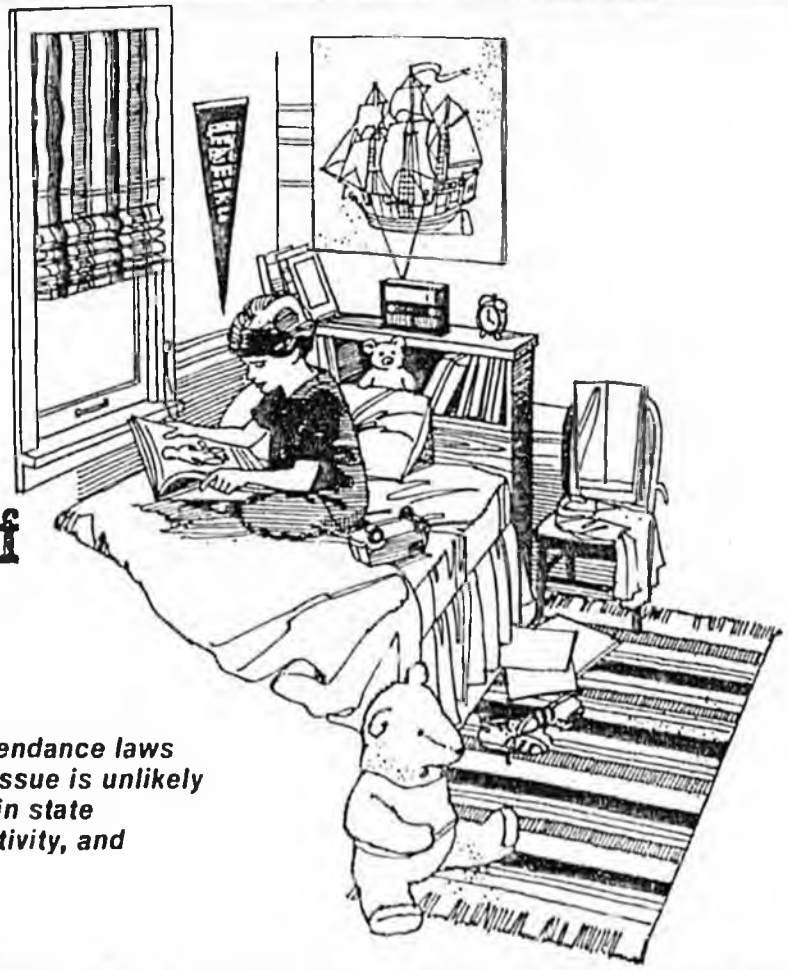
Section 3 excludes the schools described above from the provisions of AS 14.45.020. As presently written, AS 14.45.020 allows the commissioner of education to furnish final examination questions and grant diplomas for eighth graders in private schools.

Section 4 amends AS 14.45.030 to exempt the schools described above from monthly attendance and other reporting requirements currently applied to public and private schools.

Section 5 amends AS 44.27.020(1) to exclude the schools described above from the general duty of the Department of Education to administer the state's program of education.

You should be aware that HB 357, as currently written, presents a constitutional problem with respect to the equal protection clauses of the state and federal constitutions. The bill exempts certain private schools from requirements that apply to all other private schools. The factors that distinguish the exempt schools from the nonexempt schools are their federal taxation exemption status, that the educational programs involved do not receive state or federal funding, and that they are operated by a church or other nonprofit religious organization.

The equal protection clause of the Constitution of the State of Alaska (Article I, section 1) has been interpreted to mean that legislative classifications



> ...must be reasonable, not arbitrary, and must rest upon some ground of difference having a fair and substantial relation to the object of the legislation, so that all persons similarly circumstanced shall be treated alike.

Isakson v. Rickey, 550 P.2d 359, 363 (Alaska 1976). Accordingly, the distinguishing factors mentioned above must meet this test if HB 357 is to survive a constitutional attack. Although some of the distinguishing factors do meet the test, at least one probably does not.

Singling out schools which do not receive state or federal funds for exemption from certain state requirements probably has a fair and substantial relationship to the goals of the legislation in the sense that the state has less of an interest in controlling such schools. The same may be true of schools with nonprofit status under federal taxation laws. However, a provision which singles out a school merely because it is operated by a church or other religious organization is subject to greater scrutiny. The legislature may be called upon to justify treating a private, nonprofit school which does not receive state or

federal funding in a different manner than a private, nonprofit school which does not receive federal funding and is operated by a church or other religious organization. The only difference between the two classes of schools is that one is run by a religious group and the other is not. To justify such a distinction, the legislature would have to show a very substantial relationship between the distinction and the goals of the legislation. Moreover, the goals of the legislation must be constitutionally legitimate. In my opinion, the classifications created by HB 357 lack this level of justification to the extent that they are based solely on religion. For this reason, the bill is probably unconstitutional.

State Regulation of Private Education

by Patricia M. Lines

Violations of state compulsory school attendance laws appear to be rising dramatically, and the issue is unlikely to go away. Ms. Lines details the trends in state regulation, the current wave of judicial activity, and the implications for public policy.

Although a good education is generally considered crucial to a child's future economic success and personal happiness, a growing number of people believe that traditional schooling is neither indispensable to education nor "right" for every child. Thus some parents are enrolling their children in unaccredited private schools or teaching them at home, whether or not such choices are acceptable under compulsory school attendance laws.

Parents who violate such laws risk criminal charges, fines, jail sentences, and other forms of legal compulsion. Under most state laws, a child who is declared a truant may be institutionalized. Resisting school attendance requirements takes its toll in other ways as well, the judicial process is rarely easy on the participants.[1] But despite the serious personal consequences for parents and for children, violations of state compulsory school attendance laws appear to be rising dramatically, presenting policy makers with one of the most serious issues facing them today.

Nontraditional Schooling

Parents who place their children in unauthorized educational programs have a variety of reasons. Those who choose home schooling often see public schools or publicly approved private schools as too traditional or too conservative. By contrast, the growing number of parents who send their children to fundamentalist Christian schools tend to feel that the public schools are too liberal or devoid of the moral and religious instruction that they see as crucial to children's education. These disparate groups have two things in common: a rejection of the ideal of the U.S. public school as melting pot and a willingness to defy the law in the interests of their children.

The public education system is caught in the middle, unable to please everyone but responsible for enforcing compulsory attendance laws against those who disagree with the values that underlie the public school program.[2] Some state and local officials wonder whether compulsory attendance is important enough to be treated as a criminal offense, with stiff penalties imposed on parents for seeking what they believe to be the best education for their children. Others worry that children in unaccredited programs may not be acquiring the essential skills for good citizenship and self-sufficiency; they are also concerned about the long-range implications of allowing large segments of the population to insulate themselves from the mainstream of society. Still others fear that private schools provide havens for those who seek to avoid racial integration.[3] One state official expressed a private suspicion that hucksters, interested only in tuition payments, were running one particular fundamentalist Christian school. Meanwhile, a few state officials have recognized the financial implications for public schools of the trend toward nontraditional schooling, which is siphoning off students and thus enrollment-based state aid.

This issue is unlikely to go away. In fact, the number of families choosing nontraditional educational options seems to be increasing. The Census Bureau estimates that enrollments in non-Catholic private schools increased from 615,548 in 1965 to 1,433,000 in 1975.[4] These figures probably cover only established, accredited schools, however.[5] Families choosing unaccredited schools neither seek nor want state approval, and they probably do not want to be counted by the Census Bureau. Many of the unau-

PATRICIA M. LINES is director of the Law and Education Center, Education Commission of the States (ECS), Denver. Copies of the complete report from which this article comes ("Private Education Alternatives and State Regulation," Pub. No. LEC-82-3) are available at $4.50 each from the Law and Education Center, ECS, 1860 Lincoln St., Denver, CO 80295. *The research for this article was supported by ECS state fees and by grants from the Carnegie Corporation, the Spencer Foundation, and the Ford Foundation. The conclusions are the author's own and do not necessarily reflect the views or policies of these agencies.*

thorized schools are fundamentalist Christian schools, which reject state authority over their operations as a matter of faith. Some refuse even to provide information on themselves. Using techniques designed to locate all hard-to-find schools in a sample of 22 counties, Bruce Cooper and Donald McLaughlin estimate that there are 15,000 non-Catholic private schools in the U.S., serving two million children; they also estimate that enrollments in these schools are increasing at a rate of 100,000 per year.[6] It seems likely that the largest growth in attendance has occurred among small, unaccredited schools.

Some states have consciously deregulated private schools. These states expressly limit state authority to promulgate regulations.

Many other children in the underground education movement are taught at home. John Holt, an educator and author whose Boston-based organization, Holt Associates, provides support services for home instruction, estimates that there are more than 10,000 families educating their children at home in defiance of compulsory education laws. Others believe the number to be much higher.

If enrollment figures are hard to come by, data on the quality and goals of unaccredited education programs are even more elusive. Virginia Nordin and William Turner have attempted to locate and evaluate fundamentalist Christian schools in Wisconsin and Tennessee. From their own observations and the scant available data, they have concluded that supporters of these schools are motivated by strong religious beliefs, not by segregationist attitudes.[7]

The scant amount of available evidence from standardized tests suggests that these unaccredited alternatives are educationally adequate. Test scores introduced as evidence in a few lawsuits suggest that children's performances improve after they are enrolled in unauthorized educational programs.[8] Test data from a home tutorial network in Los Angeles showed children in the tutorial program scoring higher than children in the public schools. However, the researchers did not control for parents' socioeconomic status, and pretest data were not available.[9]

Trends in State Regulation

Traditionally, compulsory school attendance laws have served as the mechanism for enforcement of minimum standards for private education. Punishment for breaking those laws has been directed at parents and children, not at those who offer private instruction. Typically, the basic requirement of these laws is school *attendance*, although some states require *education* of the child. These laws almost always mandate fines and jail sentences for parents who fail to comply; frequently they make children subject to truancy charges and possible institutionalization. In nearly every state, the local superintendent or school board and the local prosecuting attorney are responsible for identifying truants, i.e., children who are not enrolled in an approved educational program. In most states, local officials also have primary responsibility for approving home instructional programs, if such programs are allowed by state law. Local boards may also have responsibility for approving private schools, but the state often assumes this task. The criminal sanctions in compulsory attendance laws appear to have been designed for parents who are guilty of neglecting their children's education.

Acceptable ways of complying with a compulsory education requirement vary widely among the states. Some states demand certification of teachers and schools, some require that only the schools be approved, and some merely require minimal evidence that schooling takes place. At one end of the spectrum, such states as Alabama, Iowa, Nebraska, North Dakota, West Virginia, and Wisconsin have obtained state court approval for at least some aspects of the regulation of private educational alternatives. Those states with more flexible requirements will probably experience less litigation, unless the state boards exercise their broad statutory authority to impose more stringent standards. Connecticut, for example, provides a broad exception to the school attendance requirement; parents who do not send their child to public school must educate the child themselves or "show that the child is elsewhere receiving equivalent instruction in the studies taught in the public schools."[10] Other states that follow this model include Delaware, Idaho, New Jersey, South Dakota, and Vermont. The laws in these states typically do not specify who the teacher must be or where instruction is to take place.[11]

Some states have consciously deregulated private schools. These states expressly limit state administrative authority to promulgate regulations. Tennessee, for example, prohibits the state board and local boards from regulating faculties, textbooks, or curricula in church-affiliated schools.[12] Prior to the passage of a new law in North Carolina, the state board had gradually expanded its regulations governing private schools to the point of requiring that teachers' qualifications, courses of study, and textbooks be substantially the same as those in the public schools. Now North Carolina requires only that private schools keep records on pupil attendance and disease immunization and that they select and administer a nationally standardized test to students each year. The schools keep the tests on

file and make them available to state inspectors. They must also meet fire, health, and safety standards established by other laws.[13]

State law in Washington prevents state agencies from expanding on statutory provisions, but these provisions set minimum standards as to length of a school year, length of day, subjects to be taught, and teacher qualifications. Teacher certification is required, except for courses in religion and other subjects not taught in the public schools.[14] This requirement is a stumbling block for many private educational alternatives. However, state law in Washington allows persons of "unusual competence" to teach, if they are supervised by certified teachers. In practice, Washington may allow private educators more flexibility than the state law would suggest.

Laws in about half of the states permit instruction at home by a parent.[15] Other states permit instruction at home by a certified teacher (who may also be the parent). Of course, home instruction is permissible in any state if it meets all the requirements of a private school.[16] It would not be easy for most homes to meet these requirements.

State legislators and board members, torn between strong lobbies for both public and private education, are having a difficult time dealing with the issue of regulation of private education. In states that have little regulation, such as Oregon and Idaho, bills to establish even minimal reporting requirements are failing to pass. By contrast, efforts in the state of Washington to permit instruction by a parent are also foundering in the legislature. Large numbers of state legislatures are being asked — usually by fundamentalist Christian schools — to deregulate private schools, but to date only Alabama has responded to such requests. The topic appears to be so controversial that any kind of legislative change will be very difficult.

Legislative change is not impossible, however. Both Arizona and Vermont recently modified their laws to reduce the friction between public and private education sectors. Clearly, legislative change is more desirable than change through the courts. It is less polarizing, and it minimizes personal costs for the individuals involved.

Supreme Court Guidance

In the 1920s the U.S. Supreme Court outlined in part the limits to state regulation of private education. In *Pierce* v. *Society of Sisters* the Court struck down an Oregon law that required attendance at *public schools only*. The Court held that the law "unreasonably interferes with the liberty of parents and guardians to direct the upbringing of children under their control."[17] The Court recognized as legitimate the interests of the state in compelling some form of schooling, but in this case the state had gone too far.

The Supreme Court also dealt in the Twenties with laws in Nebraska and Hawaii that were less restrictive but that still unreasonably burdened the right of parents to rear their children as they deem fit. In *Meyer* v. *Nebraska*,[18] the Court struck down a state law forbidding the teaching of foreign languages to younger children. The Court found that this law was not rationally related to the stated goal in Nebraska of cultivating good citizenship. Meanwhile, in *Farrington* v. *Tokushige*, the Court struck down a law regulating foreign language schools in Hawaii. These schools, which were predominantly Japanese, were required to pay fees, to submit numerous reports, to establish their commitment to the "ideals of democracy," to adhere to strict rules regarding when and how long the schools could operate each day, and to follow detailed regulations on textbooks and other matters. The Court observed that enforcement of the act "would probably destroy most, if not all," of the affected schools.[19]

Clearly, legislative change is more desirable than change through the courts.

More recent Supreme Court decisions have provided some additional guidance on the extent of state authority to regulate private education. In 1979 the Court observed in *NLRB* v. *Catholic Bishop of Chicago* that enforcement of federal labor laws against religious schools touches on First Amendment rights. The Court decided the issue on statutory grounds, however, holding that the National Labor Relations Act does not apply to church schools.[20] In 1981 the Court ruled similarly in *St. Martin Evangelical Lutheran Church* v. *South Dakota*, a case involving federal and state unemployment taxes.[21] Both cases follow a Supreme Court rule that requires lower courts to construe statutes in ways that enhance their constitutionality. The Supreme Court might have upheld the statutes involved in these two cases, had the statutes expressly included church schools. But the Court avoided a decision on the issue. These two cases suggest only that state regulation of private education may sometimes go too far, but the Court's decisions provide no detailed guidance.

Finally, in a very different kind of case, the Court ruled in 1972, in *Wisconsin* v. *Yoder*, that Amish families with strong religious objections to public schooling are exempt from educational programs beyond the eighth grade.[22] Although the plaintiffs objected to the absence of Amish values in the public school program, they accepted compulsory school attendance in the lower grades because they believed that their children should acquire basic skills. The Court held that, *as applied to the Amish*, the compulsory attendance law in Wisconsin is unconstitutional. This ruling does not affect state compulsory attendance laws in general, even in Wisconsin.[23] *Yoder* holds only that a state cannot compel a child to attend public school in the face of strong religious objections and when the state's interest in the education of the child is adequately served by an alternative program. The Court was careful to distinguish between philosophical and religious objections to formal schooling, and it took into consideration the long tradition of the Amish.

Despite the Court's limiting language, the *Yoder* decision can be extended at several points. First, it clearly applies to religions other than the Old Order Amish, if plaintiffs demonstrate a comparable sincerity of belief and if the record shows that the states' interests are being met by adequate alternatives. To restrict the exemption granted in *Yoder* to a single religion would be unconstitutional. The *Yoder* decision may also apply to nontheistic, nontraditional religious beliefs, if the standards in *Yoder* are otherwise met.[24] To date the Supreme Court has not had occasion to consider extensions of *Yoder*.

Current Judicial Activity

Lower courts have followed *Yoder* only when dealing with traditional, theistic beliefs.[25] In other cases, despite obviously sincere religious objections to approved school programs, the courts have refused to extend *Yoder*. Some of these cases have involved fundamentalist religious schools using the self-paced Accelerated Christian Education (ACE) curriculum.

In the celebrated case of *State* v. *Faith Baptist Church*,[26] a Nebraska court examined these curricular materials and found them generally adequate. Faith Baptist Church indicated that it would not request approval of the ACE program, even though church officials had been informed informally that the state board would grant such approval. The school run by Faith Baptist Church employed no

certified teachers, and school officials refused to furnish names and addresses of students to local and state education agencies, as required by state law. The defendants, citing *Yoder*, argued that the state has no authority whatsoever over the operation of a religious school. They offered evidence, including passages from the Bible, supporting their view that religion must be integrated into teaching and that the public schools are inadequate to this task. Finally, the defendants asserted that public schools have secular humanism as their basic philosophy.

The Nebraska High Court rejected these arguments and upheld the state regulations. The U.S. Supreme Court dismissed an appeal by the school for want of a substantial federal question.[27] To enforce court orders to close the school, a lower Nebraska court for a time had the church door padlocked during school hours. The children transferred to an unapproved fundamentalist religious school in Iowa. The case seems far from ended, however. The local prosecutor is now seeking enforcement of the Nebraska compulsory attendance law against the parents and school officials, and the minister who operated the school was jailed for contempt of court.

Nebraska officials are now proceeding against other fundamentalist schools. One, the Park West Christian School in Lincoln, is operated by the Rev. Carl Godwin, the pastor of Bible Baptist Church. Godwin, although clearly embarrassed by the publicity, is articulate and active. He has organized the Nebraskans for Religious Freedom and has retained the legal services of William Ball, the defense attorney in the *Yoder* case. Ball has a reputation for winning cases of this kind, and Godwin is willing to report enrollment data and similar matters. Thus Godwin's case may force the courts to focus more sharply on the constitutional issues. Godwin spoke before a conference of more than 100 leaders of public and private education, sponsored by the U.S. Education Department in early May, and he seems capable of winning support from the traditional private education sector. Such support could help to bring about legislative change before court action becomes necessary.

A flurry of judicial activity involving religious schools is now in progress, with mixed results.[28] Most court opinions are grounded in state constitutions or statutes. Although the case law can be transferred from state to state (as guidance, not as precedent), the disparity in state constitutions and statutes does not permit broad generalizations. Of course, general rules for federal cases may emerge, but this has not yet occurred.

Home instruction is in a somewhat different category than instruction in an unapproved school, although the line between them is unclear. Home instruction may be entitled to even more constitutional protection, because the child/parent relationship may be entitled to constitutional protection under a right to privacy. But this idea has not been tested, and judicial reactions to it have been mixed.[29]

Of course, judicial opinions to date on home instruction represent only the tip of the iceberg. Additional cases have been or will soon be filed in Iowa, New Hampshire, Maine, Michigan, and many other states. Given the accelerating growth of the fundamentalist Christian schools, other nontraditional private schools, and home instruction, strict state requirements for compulsory attendance in approved schools will probably continue to be challenged. As I have already noted, litigation of this type carries with it high personal costs for the individuals involved. Such litigation also has the potential to polarize supporters of public and private education.

Implications for Public Policy

Thus legislative reform seems preferable to judicial reform. Unlike the courts, legislatures are not limited to accepting or rejecting existing statutes. Their wider range of options allows for greater flexibility.

States that wish to reform the regulation of private education through legislative action might consider a shift in focus from compulsory school *attendance* to compulsory *education*. The available evidence, though scant, suggests that periodic testing of children enrolled in nontraditional educational programs may be a viable alternative to compulsory school attendance. States that move in the direction of compulsory education should probably establish minimal requirements for nontraditional programs with regard to the subjects to be taught, the amount of time per day and year to be devoted to instruction, and the reporting of enrollment and attendance figures and similar data to state officials. If a child shows unsatisfactory academic progress on standardized achievement tests, state law might require remedial instruction in an accredited or approved school.

In the interest of consumer protection, a state may wish to establish regulations that guarantee honest and fair promotion of private schools, including full disclosure of the teachers' qualifications and of the schools' educational philosophies. However, existing laws may already protect consumers adequately.

States that are concerned about the operation of schools in private homes could amend their statutes to permit home instruction only by a child's parent(s). Statutes in such states could define "school" as instruction of children from one or more families by an unrelated teacher. (Some states may wish to emulate California, which has established separate rules for instruction at home by a tutor.)

North Carolina, Washington, and Oregon have established flexible regulations for private education that could serve as models elsewhere. In Oregon and North Carolina, test scores help to provide assurance that children enrolled in nontraditional programs are being educated. Washington relies on teacher certification for such assurance, although this gives private educational alternatives less leeway in staffing and precludes instruction by a parent in most cases. Such legislation would not be necessary, if state law did not give the state board of education or other state administrative officials broad regulatory power over private education in the first place. But such legislation is called for when a state board has gradually increased the requirements for nontraditional educational programs and the state legislature wishes to make clear its intent that statutory minimum standards are to remain *minimum* standards, not subject to expansion by administrative action.

Administrative action is probably the most peaceful means for resolving issues related to the regulation of private education. And flexible state laws make such action possible. In New Hampshire, for example, state officials have reached a somewhat fragile agreement with the fundamentalists: The state will accept school records submitted on church stationery instead of on standard state forms. Thus the state receives the information it must have to approve fundamentalist educational programs, and the fundamentalists do not feel that they are submitting to the state regulatory system. In Iowa, the state has agreed to accept reports from parents rather than from fundamentalist schools. Iowa fundamentalists see parental reports on children's schooling as analogous to the annual reports these parents file with the Internal Revenue Service. But they deem it inappropriate for the state to request such information directly from the church.

Because they are staunch supporters of public education and because they may see nontraditional educational programs as a threat to their membership, teacher unions seem likely to oppose the relaxation of state laws requiring attendance at approved schools staffed by certified teachers. These unions may argue that testing instruments are not yet sufficiently sophisticated to assure the public that adequate education is taking place. This is

probably true, but it could be argued that teacher certification is no better. Teacher certification is usually dependent on completion of a degree, which in turn is dependent on passing final examinations in college courses. (In some states, certification is also dependent on passing a competency test.) Ultimately, state legislators must decide whether testing a child, testing his or her teacher, or testing both would best provide adequate assurance that education is taking place.

Local school officials are also likely to oppose the relaxation of existing state laws regulating private education. As supporters of public education, such officials will probably be wary of the academic and social implications of nontraditional alternatives. They may also be concerned about the loss of state aid to public schools (which is based on enrollments) should more flexible regulations encourage families to choose private alternatives.

States that are sensitive to these problems could publish test data from nontraditional programs, if these data are available. They could also stand ready to revise their policies, if children in nontraditional programs fail to perform as well as they should. States should also recognize and deal with the problems caused by the loss of per-pupil aid to local school districts. For example, states might explore constitutional ways of providing partial state aid to local districts that make their school libraries, physical education facilities, art facilities, testing and guidance services, and other resources available to pupils in alternative educational programs. Such cooperation requires new laws and regulations. It also demands new relationships between state and local education officials and between public and private educational systems.

---

1. As an example of the extreme emotionalism that surrounds these cases, John Singer was involved in a shoot-out with law enforcement officers and was killed outside his Utah home three years ago. The officers were investigating a charge that Singer had failed to abide by his obligations under the Utah compulsory school attendance law.

2. Educators generally agree that it is nearly impossible to provide education without also imparting values. See, for example, William J. Bennett and Edwin J. Delattre, "Moral Education in the Schools," *The Public Interest*, Winter 1978, pp. 81-98; and Andrew Oldenquist, "Moral Education Without Moral Education," *Harvard Educational Review*, May 1979, p. 247.

3. There is some support for this point of view. On the heels of the school desegregation order in Mississippi, for example, that state repealed its compulsory education law, apparently to avoid requiring parents to send their children to integrated schools. Following a desegregation order in Los Angeles, an organization of parents opposed to busing formed a home instruction network that served approximately 1,000 children (see Roy A. Weaver, Anton Negri, and Barbara Wallace, "Home Tutorials vs. the Public Schools in Los Angeles," *Phi Delta Kappan*, December 1980, pp. 251-55).

4. Department of Health, Education, and Welfare, *Statistics of Public Elementary and Secondary Day Schools* (Washington, D.C.: National Center for Education Statistics, 1976), p. 6.

5. Census Bureau officials are unable to estimate the number of children enrolled in unapproved educational alternatives, according to a 10 February 1982 memorandum to the director from Paul M. Siegel, chief of the Education and Social Stratification Branch (copy on file at the Education Commission of the States).

6. Bruce S. Cooper and Donald H. McLaughlin, "The Latest Word on Private School Growth," paper presented at the annual convention of the American Educational Research Association, New York, March 1982. By contrast, public school enrollments have declined from approximately 45.9 million in 1970 to 42.6 million in 1978, according to *Statistics of Public Schools, Fall 1970* (Washington, D.C.: National Center for Education Statistics, 1971); and *Statistics of Public Elementary and Secondary Day Schools, Fall 1978* (Washington, D.C.: NCES, 1979).

NOTES

Preliminary Findings

Religious and Secular Schools: Differences in State Control
Research Request 83-159
Leslie Longenbaugh, Research Staff
May 4, 1983

I. Which states allow religious schools to operate free of state control?

A. Primary and Secondary Schools

1) Five states exempt religious schools from some requirement(s) to which other private schools are subject.*

a. Maryland
b. Nevada
c. Pennsylvania
d. Tennessee
e. Washington

2) Eight states do not require accreditation, approval, or licensure of any nonpublic school.*

a. California
b. Delaware
c. Florida
d. Massachusetts
e. Minnesota
f. New Mexico
g. North Carolina
h. Wisconsin

3) One state, South Dakota, has removed all state standards from all nonpublic schools. Students in the nonpublic schools must take competency tests periodically to ensure that they are receiving adequate instruction.**

4) Twenty-one states have voluntary, rather than mandatory, reporting by all nonpublic schools.*

a. Alabama
b. Arizona
c. Colorado
d. Georgia
e. Idaho
f. Illinois
g. Indiana
h. Iowa
i. Kansas
j. Louisiana
k. Mississippi
l. Montana
m. New Jersey
n. North Carolina
o. Oklahoma
p. Oregon
q. Tennessee
r. Texas
s. Utah
t. Virginia
u. Wyoming

5) At least two states other than Alaska have legislation pending that would affect state control of religious schools.***

a. Colorado
   i. The bill would exempt both religious and secular private schools from state control.
b. Montana
   ii. The bill would make mandatory some of the requirements that are now voluntary.

B. Pre-schools

1) Three states now have laws exempting religious pre-schools from all state certification and inspection except for conformity with health and fire codes.****

a. Arkansas; enacted 1981
   i. A lawsuit has been filed challenging the constitutionality of the Arkansas law on the grounds that it denies the children who would attend such schools equal protection of the law.*****
      a) A copy of the plaintiffs' brief in this lawsuit has been sent to us.
b. Illinois
c. Virginia

2) Legislatures in two states other than Alaska are now considering legislation that is similar to HB 357 in regard to pre-schools.****

a. Arizona
b. California

II. How do such states distinguish between religious and secular nonpublic schools for the purposes of the exemption?

A. Religious schools for the purposes of these exemptions usually are those that are sponsored and funded entirely by a church or religious organization rather than through the state or federal government.

B. The language used often includes a phrase such as "church-sponsored schools or schools with religious charters."

12. Compulsory Schooling and Nontraditional Education

The Issue

Some parents today believe that traditional schooling (public or private) is not necessarily equivalent to "education" nor "right" for every child. They are placing their children in nontraditional schools (not necessarily accredited) or educating them at home. Their reasons vary. Some have overriding religious concerns; others are dissatisfied with or mistrust the public school system. Occasionally they seek only to escape the effects of public desegregation policies.

Some private options may violate state compulsory attendance laws. In some states, parents and individuals operating unaccredited private schools have received or are faced with jail sentences. One fundamentalist Christian clergyman in Nebraska has refused to comply with court orders directing him to either obtain state approval for his school or cease operating, and he has been jailed twice. A church has been padlocked to enforce laws requiring private schools to obtain state approval and comply with state rules for operating a school.

The Choice Before State Education Policy Makers

In states that require compulsory school attendance (rather than compulsory education) and require certified teachers in private schools, policy makers are being asked to change the laws. Private school people seek fewer requirements for private schools, exemption of church schools, provision for home instructions, removal of teacher certification requirements or other policies that would make it easier for individuals to choose nontraditional education options free of state accreditation or approval.

How Many Children are in Unapproved Education Options?

While most children in nonpublic schools are enrolled in Roman Catholic institutions, the U.S. Bureau of Census estimated that (as of 1975) there were close to 1.4 million children in non-Catholic, private schools. Most likely the census bureau counted only traditional and accredited schools. A more careful study for the National Center for Statistics suggests there are about 15,000 non-Catholic private schools serving approximately 2 million students, and that this population is increasing by 100,000 students per year. One might speculate that the difference of some 500,000 to 600,000 children between the official census and this study represents the number of children in unapproved schools.

By contrast, public school enrollments declined from approximately 45.9 million in 1970 to 42.6 million in 1978.

Estimates of the numbers of children being taught at home vary from 10,000 to 50,000.

Education In An Unapproved Setting

When available, testing data shows that children in these schools are performing above national standards. The data do not show whether this is due to socioeconomic status, other individual characteristics, or the education program. With this caveat, the data show children in a Los Angeles home tutorial program (approved by the state) scored higher than children in public schools on nationally standardized tests.. Experimental work done about ten years ago showed no significant difference in students' test scores whether they were taught by an experienced teacher or by a lay person knowledgeable in the subject taught. Finally, in three court cases, attorneys introduced evidence of test scores showing

improvement as children moved from a public school to a private, unapproved education option.

State Education Requirements

Traditionally, states enforce minimum standards for private education through compulsory school attendance laws, which provide for punitive action for noncomplying parents and children, but not for those who offer private instruction. Although these laws vary, they contain the following features:

- All states have some kind of compulsory law requiring school attendance or education of children.

- States that require education of the child rather than attendance include Connecticut, Delaware, Idaho, New Jersey, South Dakota and Vermont. Most states require school attendance, although many of these provide exceptions for home instruction.

- Almost every state provides for jail sentences and fines for parents who fail to comply with the state's compulsory attendance law.

- Without exception, compulsory requirements can be fulfilled by attendance at a nonpublic school that is properly approved or accredited. A number of states require the teachers to be certified, or require approval of the curriculum and similar matters.

- Some states have recently "deregulated" private schools, and have restricted the authority of the state board of education to regulate them. These include Alabama, Arizona, Louisiana, North Carolina, and Tennessee. Washington restricts state board authority but contains a number of important statutory requirements, such as a teacher certification requirement.

- Laws in about half the states permit home instruction by a parent whether the parent has a teaching certificate or not.

- In some states, courts or attorneys general have ruled that if the home meets the standards for private school (generally, where a parent is a certified teacher), home instruction is allowed even if state law does not expressly so provide.

Court Challenges

The United States Supreme Court has indicated that regulation of nonpublic education can go too far. In a landmark case, Yoder v. Wisconsin, the high court narrowly ruled that Wisconsin's compulsory attendance law could not be enforced against the Amish (a religious community). The Court held that the state cannot compel attendance of children in the face of strong religious objections, so long as the children are adequately educated in an alternative setting. Lower courts have extended Yoder only when traditional religious beliefs are involved. Decisions outside of this narrow realm have been mixed, with most cases turning on state constitutional or statutory grounds.

Litigation over the status of private education has culminated in court rulings in a number of states, among them Florida, Hawaii, Iowa, Kentucky, Michigan, Nebraska, North Dakota, Ohio, Washington, and West Virginia. Generally states undergoing litigation require school attendance and certification of private school teachers. In a few states the central issue is approval of curriculum or facilities, or zoning rules. Additional cases have been or will soon be filed in many states, including Iowa, Maine, Michigan, New Hampshire, North Dakota, and Virginia, Given the growth of fundamentalist Christian schools, other nontraditional private schools and home instruction, states that require compulsory school attendance and set standards for the school will probably be challenged in the near future.

The litigation receiving the most attention from the media appears to be State v. Faith Baptist Church, dealing with the refusal of Reverend Everett Silevan to obtain approval from Nebraska for any aspect of his church-run school. The school uses a series of booklets called the Packet of Accelerated Christian Education (PACE), including instructional information and self administered tests. The school does not use state-certified teachers, a requirement under Nebraska's compulsory school attendance law. The Nebraska high court found the materials adequate, but upheld the state's requirement for certified teachers. On appeal to the United States Supreme Court, the case was summarily dismissed because, based on the papers filed before it, the high court could not identify an important constitutional issue.

Somewhat similar opinions (not going to the U.S. Supreme Court) have been handed down by state courts in Florida, North Dakota, and Wisconsin. In some of these cases, parents refused to provide any evidence about the child's schooling.

In other cases, state courts have ruled in favor of parents. In Ohio, in State v. Whisner, the state supreme court struck down a system of state regulation that, by its literal terms, left no time for religious instruction in a private school. A Michigan court was reluctant to find a mother teaching a child at home guilty under the state's compulsory attendance law, as she met the requirements for teacher certification but refused to obtain a certificate for religious reasons. (Michigan allows home instruction only by certified teachers.) In a Kentucky case, the state court applied a state constitutional provision (found only in a handful of state constitutions) that prohibits requiring a child to attend a school which parents find objectionable for conscientious reasons.

Policy Alternatives

Where statutory requirements are flexible, imaginative administrative solutions to the issue become possible. In New Hampshire, for example, state officials reached a somewhat fragile agreement with fundamentalists that required information to be submitted on church stationery rather than on official state forms. This fulfills the state's need for certain information, but recognizes the fundamentalists' tenet that they should not submit to state regulatory systems. In Iowa, the state accepts reports from parents instead of the fundamentalist school. The fundamentalists involved felt individual reporting was no different than filing an income tax form, while a church report was tantamount to church submission to state regulation.

A state considering a change in its policy can look to sister states for models. In the past five years several states have deregulated private education.

- Tennessee, for example, prohibits the state board and local boards from regulating faculties, textbooks, or curricula in church affiliated schools.

- North Carolina requires only that private schools keep records on pupil attendance and disease immunization and that they select and administer a nationally standardized test to students each year. The schools keep the tests on file and make them available to state inspectors. They must also meet fire, health, and safety standards established by other laws.

- Washington prevents state agencies from expanding on statutory provisions, but these provisions set minimum

standards as to length of school year, length of day, subjects to be taught, and teacher qualifications. Teacher certification is required, except for courses in religion and other subjects not taught in the public schools. State law in Washington allows persons of "unusual competence" to teach, if they are supervised by certified teachers.

- The Vermont legislature, following efforts by its state board to require teachers certification, made it clear it could not do so, and also strengthened its child abuse laws in order to narrowly focus on actual problems, rather than to sweepingly subject all private educators to regulation.

- In mid-1982 the Arizona legislature determined to permit home instruction, so long as the child shows academic progress, as indicated by test scores or an impartial professional evaluation.

- Louisiana exempted schools which receive no local, state or federal funds from most reporting requirements.

- Arizona, Oregon, and North Carolina require testing of the children, to help provide assurance that they are being educated.

- Teacher certification is the mechanism used in Washington, although it reduces flexibility for private education alternatives and precludes instruction by a parent in most cases.

Policy Questions

Policy makers contemplating a change in state compulsory education laws need to ask the following questions before deciding on a course of action.

- Should compulsory attendance laws carry criminal sanctions against parents honestly acting in the best interests of their children?

- Are the children educated in unapproved settings acquiring what they need for good citizenship and self-sufficiency?

- What are the long-range implications of large segments of the population insulating themselves from the mainstream of society -- in this case, by avoiding state-approved education for their children?

- Are private schools havens for those wishing to avoid integration?

- Do existing consumer protection laws assure that parents are evaluating small nontraditional schools on the basis of adequate and correct information?

- What are the political implications of the growing exodus from public schools, when local school districts depend on state aid based on enrollment or attendance?

Policy Implications

Organizations and individuals urging more flexible compulsory education laws argue that this is required to preserve the free exercise of religion. These groups argue that parents know what is best for the child. They include those participating in nontraditional options, fundamentalist Christians, more traditional private schools and, to some extent, organizations and individuals concerned with civil liberties. The national ACLU, for example, in its Policy #71A, states: "We believe that, in the interest of parental right to choose an alternative to public education, [home instruction with safeguards, such as approval of curriculum or testing of the child] . . . should be extended to all jurisdictions because the state's interest in assuring minimum levels of education does not extend to control of the means by which that interest is realized."

Organizations and individuals urging retention or adoption of stricter requirements for private education generally argue that these regulations are needed to assure the best interests of the child, and to prevent balkanization of society. These groups include teachers' organizations and public school administrators.

COMMENTS ON
HOUSE BILL #357
and
SENATE BILL #361

The subject at hand has to do with House Bill #357, currently before the Legislature, and a Senate Bill with identical language for which I have no number at the present time.

This is an act relating to the regulation of religious schools.

The First Amendment to the U.S. Constitution says, "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof;" With these words, the First Amendment guarantees a separate church and state. Historically, this has meant that the church was not subject to the state, nor was the state subject to the church.

The First Amendment also guarantees "free exercise of religion." Our nation has repeatedly recognized the value of this most important clause and has resisted infringement of First Amendment rights of the citizenry.

It is also true that the language of the Constitution of the State of Alaska provides similar liberties to those spoken to in the Constitution of the United States.

At the outset of these remarks, it should be noted that it is the responsibility of the church to provide buildings and equipment that meet reasonable regulations for fire, life safety, health, and sanitation when they are equally and fairly applied to all.

One of the reasons for the presentation of the proposed legislation has to do with some language found in the Constitution of the State of Alaska. That language reads as follows:

> ARTICLE VII. HEALTH, EDUCATION, AND WELFARE.
> Section 1. The Legislature shall by general law establish and maintain a system of public schools open to all children of the State, and may provide for other public educational institutions. Schools and institutions so established shall be free from sectarian control. No money shall be paid from public funds for the direct benefit of any religious or other private educational institution.

We have no quarrel with the language set forth in the paragraph above excerpted from the Constitution of the State of Alaska. However, since the provision is made that the public school system of the State of Alaska shall be free from sectarian control, we believe it follows reason and logic that the church-operated schools of the State of Alaska should be free from state control.

For this reason, we have addressed the importance of certain changes that need to be made in the present structure of the Alaska Statutes that would bring present law into line with the provision of the Federal and State Constitutions.

Our special concern has to do with the impact of present law and the resultant regulations that could be written under the umbrella of the existing language.

While we have stated above that we have no quarrel with the right of the State to require reasonable fire, life safety, health, and sanitation standards, we would never submit to the inspection of personnel, programs, finances, records, curricula, etc., since this is clearly a violation of the First Amendment, and cannot be permitted by the local church.

For these and other reasons, we have proposed an Amendment to Section 1. A.S. 14.07.020(8).

In this Amendment, we have addressed the fact that it is our sincere conviction that neither the Department of Education nor the Department of Health and Social Services has the constitutional right to general supervision over our pre-elementary schools, nor over the educational component of our nurseries.

We have also offered an Amendment to Section 2. A.S. 14.30.010(b)(1).

One of the reasons why we have suggested the addition of paragraph (D) has to do with the requirements set forth in paragraph (C). You see, it is our policy to regularly measure the progress of our students in our church-operated schools through the use of national achievement tests, and we would have no problem with making that information available to anybody on a request basis. However, since the Constitution says that no law shall be made concerning the establishment of religion, we simply believe that the State has no right to REQUIRE that information. So, we have proposed paragraph (D) as an amendment to that section.

One of the questions that has been raised with regard to paragraph (D) is as follows: "If paragraph (D) should become law, what assurance do we have that some 'fly-by-night' type church such as the Jim Jones syndrome or the Moonies won't pop up and start what they would call a church-operated school?"

Quite honestly, we don't have any assurance that that wouldn't happen. However, there are some reasons why I believe it would not happen. One of the reasons why I would question that a "Jim Jones" church or a "Moonies" church would start a school is simply that it is not as lucrative an operation as that which generally interests them. They are usually looking for ways to get their hands on large amounts of money as quickly as they can with a minimum of work involved.

The operation of a school involves a great deal of hard work, dedication, consecration, and plain, old-fashioned elbow grease!

Church-operated schools must function in a free-market society, and they simply must produce what they claim to produce, or the parents will take their children elsewhere.

My second response to the original question would be as follows: It is our understanding that laws should be made for the benefit of and the protection of the majority of the people. While it is true that there is the possibility that some church like the Jim Jones, Moonies, or Universal Life Church people might start a school under the provision of paragraph (D), why would the Legislature of the State of Alaska wish to continue to impose an unconstitutional burden on the many churches in the State of Alaska who are doing a great job in the field of private education because it was afraid a possible small minority might start an educational program that would be undesirable?

Why would the Legislature want to take away the liberties of the many because it feared the abuses of a few?

Section 3 has been amended by the Department of Law as a housekeeping measure to bring it into line with the rest of the proposed legislation in this bill.

The next item under consideration is Section 14.45.030. Once again, this is a matter where we believe constitutional liberties are being abrogated. While it is a fact that we would have no problem providing this information on a request basis in cooperation with the State Department of Education, we are convinced that it should not be required by law in order to maintain the true separation of church and state.

The last amendment proposed in this bill is found in A.S. 44.27.020(1).

This amendment is proposed in order to maintain the separation of church and state. Present law says that the Department of Education shall administer the State's program of education at the elementary, secondary, and adult levels. What we are

saying in our proposed amendment is simply that the State Department of Education does not have the right to administer the church's programs of education, since the State neither founded nor funded our church educational programs.

Respectfully submitted,

_____

CHRISTIAN SCHOOL COMMENT ©

Vol. 13 | *More than 140,000 Copies Sold Monthly* | No. 8

WHAT EVERY PARENT SHOULD KNOW ABOUT THE ASSOCIATION OF CHRISTIAN SCHOOLS INTERNATIONAL

by Dr. Paul A. Kienel, Executive Director
Association of Christian Schools International

The Association of Christian Schools International (ACSI) is a non-profit service organization serving Bible-centered Christian schools and colleges. It is the largest association of Christian schools in the world with a membership of 1,933 schools and a combined student enrollment of 337,554. Over the past five years, ACSI membership has nearly doubled in size. The annual cost of school membership is $3.00 per student payable on October 1. Most schools include this small amount in their annual student registration fee. As a parent, you need to know about the wide variety of services offered by ACSI that directly benefit your Christian school and ultimately your child or children in the school.

LEGAL/LEGISLATIVE SERVICES

Over the past five years, ACSI has raised and spent more than $400,000 to preserve your school's religious freedom. We have had major struggles with the U.S. Department of Labor and the IRS. There have been several important victories but the struggle continues. Last week, for example, I met with U.S. Department of Education leaders in Washington, D.C. to discuss guidelines on how state departments of education can work cooperatively with Christian schools instead of attempting to control them. Next week I fly to Washington, D.C. again to meet with U.S. Department of Labor officials. We will attempt to reverse a decision made by the previous U.S. Secretary of Labor under the Carter Administration that claimed Christian school teachers are secular employees subject to government agency control. In the past ACSI has organized parent and teacher letter-writing campaigns to the White House and members of Congress on various issues. The results have been important to your school and your children.

CONVENTIONS AND CONFERENCES

Another service of ACSI is to encourage the spiritual and professional growth of your school's staff through ACSI conventions and conferences. Your child's teacher comes away from these meetings with fresh insight and inspiration for his or her ministry in the classroom. The ACSI staff of 42 people work year-round preparing for these meetings. More than 20,000 teachers, administrators and board members will attend the seventeen ACSI conventions held in the United States and Canada this year. ACSI also conducts similar programs in other countries.

ACCREDITATION AND CERTIFICATION

Under the capable leadership of ACSI's president, Dr. Roy B. Lowrie, Jr., the association offers a quality program of school accreditation and teacher and administrator certification. These professional services are designed to raise the spiritual and academic levels of our schools and to provide testimony to all, including government agencies, that the Christian school community has its own forms of professional recognition. Dr. Lowrie is also the editor of *Christian School*, a professional journal for Christian school teachers and board members. It is provided free of charge to teachers in ACSI member schools.

STUDENT ACTIVITIES

Approximately 25,000 Christian school students participate annually in ACSI student activities. I am referring to speech meets, spelling bees, choir festivals, science fairs, art festivals, sporting events, piano festivals, academic meets, band festivals, cheerleader camps and student leadership conferences. Each of these events is designed to inspire leadership qualities and communication skills so that students will be effective in sharing Jesus Christ with others.

PROFESSIONAL COUNSEL

ACSI personnel are located in twelve offices throughout the country. They are available to offer counsel and information to Christian schools in the United States and Canada. The ACSI regional directors are competent leaders in the Christian school movement. Pray for them as they travel thousands of miles each year on behalf of ACSI member schools.

PROFESSIONAL BOOKS

ACSI publishes many books and manuals for parents, administrators, board members, teachers, school secretaries and students. The association also publishes a monthly teacher placement list, an annual directory of member schools and colleges, regional newsletters and our professional journal, *Christian School*. This flow of vital information is important to the quality of education in your child's Christian school. Without the strong flow of written communication provided by ACSI, the Christian school movement would soon lose its cohesive thrust.

REDUCED INSURANCE RATES

ACSI insurance programs return more than one million dollars a year to its member schools and colleges via savings in premiums and worker's compensation rebates. Many schools more than offset the annual cost of ACSI membership with savings from the group insurances offered through ACSI.

Finally, the most important thing parents should know about ACSI is that everyone who is a part of the association is vitally concerned about children and young people. The 42 staff members, the 26 people who serve on the ACSI Board and scores of others who assist with ACSI programs are all born-again believers in Jesus Christ. We are strongly committed to quality Christ-centered education. Along with the staff of your fine Christian school, we have devoted our lives to the task of inspiring the next generation to be followers of Jesus Christ. □

ANCHORAGE, ALASKA 99504

SB 261 AND HB 357

Summary of the Legislation

SB 261 and HB 357 deal exclusively with private church schools and schools operated by religious organizations and, as amended, are modeled after the legislation adopted by North Carolina in 1979 and by West Virginia in 1982 to remedy church-state constitutional conflicts. These laws, if enacted by the Legislature, would establish requirements that must be met by private religious schools in order for parents whose children attend them to satisfy the compulsory education law. They would also exempt pre-elementary and nursery programs operated by religious organizations from the supervision of the Departments of Education and of Health and Social Services. The purpose of these bills is to remedy existing church-state constitutional conflicts by protecting the guaranteed religious freedom of church schools in Alaska and, at the same time, to balance the state's interest in assuring that each child receives a good education.

This legislation only covers schools, pre-elementary programs or nursery programs operated by a church or other nonprofit religious organization exempt from federal taxation and not receiving state or federal funding. These are constitutionally protected groups and activities.

More specifically, church schools (or denominational schools as defined in the proposed legislation) would be required to maintain attendance and immunization records. Since current compulsory education laws make parents liable for their children's failure to attend school, these bills, as amended, would require the parents to file statements with the public school authorities to establish their children's attendance at a church sponsored private school. By placing the requirement on the parent, the bills avoid the constitutional problems created by the state's excessive entanglement in religious activities. The school would also be required to operate on a regular schedule, at least nine calendar months per year, and to be subject to reasonable fire, health, and safety regulations.

To ensure that children attain certain minimum educational standards, each religious school would be required to administer a nationally standardized test to students in the first, third, sixth and ninth grades and to make the school results available for the Department of Education. This would satisfy the state's interest in compulsory education and still avoid the constitutional problem of excessive state entanglement in religion.

Any church school that satisfied all the requirements of AS 14.45 would be exempt from any additional provision of law

relating to education except those requirements of law relating to fire, health, and safety.

Constitutional Requirements

The changes set out in SB 261 and HB 357, as amended, are required to correct existing Alaskan laws which run afoul of the constitutional mandate requiring the states to avoid excessive entanglement in religious activities. The state's right to impose minimum requirements on private religious schools is very limited, because these religious activities are protected by the First Amendment of the United States Constitution and its identical counterpart in the Alaska Constitution, Art. I, sec. 4.[1]

Schools operated by churches or by nonprofit religious organizations are quite different from other private schools. They enjoy a constitutionally protected status.

> "Church operated schools are generally integral parts of their sponsoring churches. Their superintendents are generally pastors or assistant pastors of the sponsoring churches; their teachers are generally members; and their doctrinal stances are generally set by the sponsoring churches."[2]

Federal and state courts recognize that operating a church school is an integral part of the free exercise of religion.[3] For many churches, it is in fact the ministry of the church. Because

[1] E.g., Kentucky State Bd. for Elem. & Secondary Education v. Rudasill, 589 S.W.2d 877 (Ky. 1979), cert. den., 446 U.S. 938 (1980); Wisconsin v. Yoder, 406 U.S. 205 (1972); Lemon v. Kurtzman, 403 U.S. 602 (1970); Pierce v. Society of Sisters, 268 U.S. 510 (1925).

[2] "State Regulation of Private Religious Schools in North Carolina -- A Model Approach," 16 Wake Forest Law Review 405, 431-32 (1980).

[3] See, e.g., NLRB v. Catholic Bishop, 99 S. Ct. 1313 (1979) (Catholic parochial schools are founded for religious reasons and religious doctrine is pervasive); Surinach v. Pesquera de Busquets, 604 F.2d 73 (1st Cir. 1979) (private Catholic schools are an integral part of the Catholic Church and as such "involve substantial religious activity and purpose"); Hunt v. McNair, 413 U.S. 734, 743 (1973) ("[R]eligion is so pervasive that a substantial portion of [religious school] functions are subsumed in the religious mission."); Lemon v. Kurtzman, 403 U.S. 602, 616 (1971) ("[T]he parochial schools constituted 'an integral part of the religious mission of the Catholic Church'. . . In short, parochial schools involve substantial religious activity and purpose.").

church operated schools clearly come within the First Amendment free-exercise clause, their activities are constitutionally protected as fundamental rights.[4]

In the area of First Amendment individual liberties, any state legislation that burdens parents', childrens', or a church's free exercise of religious beliefs is unconstitutional unless, the state can demonstrate "a compelling state interest in the regulation of a subject within the state's constitutional power to regulate." Sherbert v. Verner, 374 U.S. 398, 403 (1963).

To establish the existance of a compelling state interest, it is not enough for the state to merely show that a rational relationship exists between a colorable state interest and the proposed regulation. According to Sherbert, "[o]nly the gravest abuses, endangering paramount interests, give occasion for permissible limitation."

More importantly, the state must demonstrate that it is using the least burdensome method for addressing the compelling state interest. The current law violates this mandate, because the legislative goals can be achieved with less burdensome methods. SB 261 and HB 357, as amended, use North Carolina and West Virginia laws as models and are less burdensome while still accomplishing legislative goals.

Eventhough SB 261 and HB 357, as amended, would create two classes of private schools and treat them differently, these bills would not violate the Equal Protection clause of the Fourteenth Amendment. According to established legal principles[5], the equal protection guarantee of the Fourteenth Amendment does not take from the state legislatures all power to classify persons or objects. The state may classify persons for the purpose of legislation. Classification is an inherent right and power of the legislature.

The important issue for these proposed bills is whether the distinction between private schools operated for profit and private schools operated by churches is based on a real and substantial difference between the two classes. Clearly, there is a substantial difference. The decision of the legislature to recognize its limited ability to regulate church schools is based on a constitutional distinction between the two classes. Church schools are in a protected class, enjoying the protection of the First Amendment. Private schools are not.[6]

4 Ibid.

5 16A Am Jur 2d, Constitutional Law, §746, et. seq.

6 In addition, it must noted that the motivations for operating

In the area of religious freedom and expression, the Constitution demands neutrality. The government cannot demonstrate a hostility toward religion or religious activity. The mere fact that the government specifically exempts religious groups from complying with certain laws does not violate the Constitution. For example, federal law clearly creates two classes when it exempts the property and income of religious organizations from federal taxation. These two classes parallel the two classes which would be created by SB 261 and HB 357, as amended. The Supreme Court held this was proper legislation in Walz v. Tax Commission, 397 U.S. 664,669 (1970). The Supreme Court found that neither the purpose nor the effect of such exemption was to advance or inhibit religion. It was "benevolently neutral."

The distinction between private schools operated for profit and those operated by churches is real and parallels distinctions created by the federal tax laws. Therefore, there is no violation of equal protection guarantees.

In summary, the present law violates both the United States Constitution and the Alaska Constitution. SB 261 and HB 357, as amended, balance the state's interest in ensuring that each child receives a good education with the fundamental right to religious freedom and should be adopted.

a private school for profit and a school operated by a church are entirely different.

* Section 1. AS 14.07.020 (8) is amended to read:

(8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries as defined in AS 47.35.080 (4) excluding pre-elementary schools and nurseries operated by a church or other nonprofit religious organization that is exempt from federal taxation provided the program does not receive state or federal funding; pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

* Section 2. AS 14.30.010 (b)(1) is amended to read:

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; [OR]

(C) except as provided in (D) of this paragraph, attendance at a private school in which the average student proficiency is not less than the average proficiency found in the public schools in the area as measured by national achievement tests; the department with assistance from representatives of the private schools shall promulgate regulations defining the subject areas to be tested and the minimum average scores to be achieved; or

(D) attendance in an educational program operated by a church or other nonprofit religious organization that is exempt from federal taxation provided the program does not receive state or federal funding and provided that the church or other nonprofit religious organization elects to comply with the provisions of AS 14.45;

* Section 3. AS 14.45.015 is added to read:

Sec. 14.45.015. POLICY. In conformity with the fundamental right to freedom of religion guaranteed by the constitutions of the United States and of Alaska, it is the public policy of the State in the matters of education by religious organizations that the state shall not control or interfere with the rights of conscience or with religious liberty. The State further finds that there is no compelling reason to interfere with this fundamental right.

* Section 4. AS 14.45.020 is repealed.

* Section 5. AS 14.45.025 is added to read:

AS 14.45.025. STANDARDIZED TESTING REQUIREMENTS. Each school operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding and that has elected to comply with this chapter shall administer, at least once in each school year, a nationally standardized test or other nationally standardized equivalent measurement selected by the chief administrative officer of such school, to all students enrolled or regularly attending grades one, three, six and nine. The nationally standardized test or other equivalent measurement selected must measure achievement in the areas of English grammar, reading, spelling and mathematics. Each school shall make and maintain records of the results achieved by its students. For one year after testing, all records shall be made available to the parents at the principal's office, and the school composite test results shall be made available at all reasonble times for annual inspection by a duly authorized representative of the State of Alaska.

* Section 6. AS 14.45.030. is amended to read:

Sec. 14.45.030. ATTENDANCE AND ANNUAL REPORTS REQUIRED. (a) Teachers and others in charge of private [OR DENOMINATIONAL] schools not operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding and that has elected to comply with AS 14.45 shall make regular monthly attendance reports and annual reports to the commissioner in the same manner as teachers and superintendents in the public schools.

(b) The enrollment and attendance of a child in a school operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding shall be filed with the local public school superintendent by the parent, guardian or other person in charge or control of the child on a form provided by the superintendent which shall be countersigned by the administrator of the church school and returned to the public school superintendent by the parent. Should said child cease attendance at a church school, the parent, guardian, or other person in charge or control of the child shall by prior consent at the time of enrollment direct the church school to notify the local public school superintendent that said child no longer is in attendance at a church school.

(c) Each school operated by a church or other nonprofit religious organization exempt from federal taxation and which does not receive state or federal funding shall make and maintain monthly attendence records for each student enrolled and regularly attending classes. Such school shall operate on a regular schedule, excluding reasonable holidays and vacations, during at least nine calendar months of the year.

* Section 7. AS 14.45.035 is added to read:

AS 14.45.035. REQUIREMENTS EXCLUSIVE. No school operated by any church or other nonprofit religious organization exempt from federal taxation which does not receive state or federal funding and which has complied with this chapter shall be subject to any other provision of law relating to education except requirements of law respecting fire, safety, sanitation, physical examination and immunization.

* Section 8. AS 44.27.020(1) is amended to read:

(1) administer the state's program of education at the elementary, secondary, and adult levels, including, but not limited to, programs of vocational education and training, vocational rehabilitation, library services, correspondance courses, adult basic education, and fire-service training, but not including degree programs of postsecondary education or an educational program operated by a church or other nonprofit religious organization that is exempt from federal taxation if the program does not receive state or federal funding and if that school has elected to comply with the requirements of AS 14.45;

Chapter 07. Administration of Public Schools.

Article
1. Department of Education (Sec. 14.07.010—14.07.070)
2. State Board of Education and Commissioner of Education (Sec. 14.07.075—14.07.170)

Article 1. Department of Education

Section
10. Department of Education
20. Duties of the department
30. Powers of the department
40. Repealed
50. Selection of textbooks
52. Repealed
53. Alaska School Activities Association
54. Alaska School Activities Fund
55. Repealed
57. Transmittal selections
60. Promulgation of regulations
70. Withholding state funds

Sec. 14.07.010. Department of Education. The Department of Education includes the commissioner of education, the State Board of Education, and the staff necessary to carry out the functions of the department. (Sec. 1 ch 98 SLA 1966)

Sec. 14.07.020. Duties of the department. The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state and adopt or recommend plans for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public schools;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools which meet accreditation standards prescribed by regulation by the department; these shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house; (am Sec. 1 ch 126 SLA 1978)

(7) prescribe by regulation, after consultation with the Department of Health and Social Services, standards that will assure healthful and safe conditions in the public and private schools of the state; the standards for private schools may not be more stringent than those for public schools; (am Sec. 2 ch 126 SLA 1978)

Sect 1 → (8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private preelementary schools and over the educational component of nurseries as defined in AS 47.35.080(4); preelementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational.

(9) provide accredited elementary and secondary correspondence study programs available to any Alaskan through a centralized office of correspondence study.

(Sec. 1 ch 98 SLA 1966; am Sec. 2 ch 69 SLA 1971; am Sec. 6 ch 104 SLA 1971; am Sec. 1 ch 190 SLA 1975; am Sec. 6 ch 50 SLA 1977)

(10) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine the extent of eligibility for state aid of a school construction project begun after the effective date of this act; for purposes of this paragraph, a "plan" includes educational specifications, schematic designs, and final contract documents.

(11) accredit private elementary and secondary schools which request accreditation and which meet accreditation standards prescribed by regulation by the department.

(am Sec. 3 ch 126 SLA 1978)

(12) provide educational opportunities in the areas of vocational education and training, basic education, and fire-service training to individuals over 16 years of age who are no longer attending school. (am Sec. 1 ch 86 SLA 1979)

Sec. 14.07.030. Powers of the department. The department may

(1) establish, maintain, govern, operate, discontinue, and combine area, regional, and special schools;

(2), (3) and (4) Repealed Sec. 1 ch 205 SLA 1970.

(5) enter into contractual agreements with the Bureau of Indian Affairs or with a school district to share boarding costs of secondary school students;

(6) provide for citizenship night schools when and where expedient;

(7) provide for the sale or other disposition of abandoned or obsolete buildings and other state-owned school property;

(8) prescribe a classification for items of expense of school districts;

(9) acquire and transfer personal property, acquire real property, and transfer real property to federal agencies, state agencies, or to political subdivisions;

(10) enter into contractual agreements with school districts to provide more efficient or economical educational services;

(11) provide for the issuance of elementary and secondary diplomas to persons not in school who have completed the equivalent of an eighth or twelfth grade education, respectively, in accordance with standards established by the department;

(12) exercise disapproval power under AS 14.08.100. (Sec 1 ch 98 SLA 1966; am Sec 1 ch 66 SLA 1968; am Sec 2, 3, 4 ch 46 SLA 1970; am Sec 1 ch 161 SLA 1975)

Sec. 14.07.040. Repealed. (Sec 34 ch 46 SLA 1970)

Sec. 14.07.050. Selection of textbooks.

(a) Textbooks for use in the public schools of the state shall be selected by district boards for district schools . . J by a State Schools Textbook Committee appointed by the director for state schools. Selections of the State Schools Textbook Committee shall be submitted to the Board of Directors for State-Operated Schools for approval or rejection.

(b) However, a district may elect to adopt the selection of the State Schools Textbook Committee. (Sec 1 ch 98 SLA 1966; am Sec 1 ch 96 SLA 1970; am Sec 2 ch 205 SLA 1970)

Sec. 14.07.052. Repealed. (Sec 2 ch 96 SLA 1970)

Sec. 14.07.053. Alaska School Activities Association.

(a) There is created within the Department of Education the Alaska School Activities Association.

(b) The purposes of the association are to provide for the efficient governing of interscholastic activities through the promotion of those activities and other inter-school contests or programs sanctioned by the association and to assist in the promotion of those other activites and interests as it may from time to time elect.

(c) A public or private school or school district in the state may become a member of the association if it applies for membership. The Department of Education shall make applications available to all public or private schools or school districts in the state.

(d) The governing body of the association shall be the board of control with at least one member from each judicial district on the board of control. A member of the board shall be elected from each regional activities association by the members of that region. The term of office for each member is two years, except that one-half of the members elected to the first elected board shall be elected for one-year terms under regulations prescribed by the commissioner of education.

(e) The board in consultation with the Department of Education shall appoint an executive secretary, prescribe his duties and fix his compensation. He shall serve at the pleasure of the board.

(f) The board of control of the existing Alaska High School Activities Association in office on the effective date of this Act shall serve as the initial board of control for no longer than six months.

(g) The Department of Education shall approve the association's constitution and bylaws to ensure that all regions of the state are treated on a equitable basis and in the best interests of the state. (Sec 1 ch 128 SLA 1976)

Sec. 14.07.054. Alaska School Activities Fund.

(a) The Alaska school activities fund is established within the Department of Education.

(b) The commissioner of education shall review the budget request of the Alaska School Activities Association and request a sum he approves that is equitable to all regions of the state.

(c) School districts and member schools of the Alaska School Activities Association may appropriate money to the fund. (Sec 1 of 123 SLA 1976)

Chapter 30. Pupils

Article
1. Compulsory Education (Sec. 14.30.010 — 14.30.050)
2. Physical Examinations (Sec. 14.30.060 — 14.30.170)
3. Education for Exceptional Children (Sec. 14.30.180—14.30.350)
4. Bilingual-Bicultural Education (Sec. 14.30.400 — 14.30.410)

Article 1. Compulsory Education

Section
10. When attendance compulsory
20. Violation
30. Report of violations and procedures
40. Repealed
45. Grounds for suspension or denial of admission
47. Admission or readmission, when cause no longer exists
50. Truant officers

Sec 2

Sec. 14.30.010. When attendance compulsory. (a) Every child between seven and 16 years of age shall attend school at the public school in the district in which the child resides during each school term. Every parent, guardian or other person having the responsibility for or control of a child between seven and 16 years of age shall insure that the child is not absent from attendance.

(b) This section does not apply if a child

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; or

(C) attendance at a private school in which the average student proficiency is not less than the average proficiency found in the public schools in the area as measured by national achievement tests; the Department of Education with assistance from representatives of the private schools shall promulgate regulations defining the subject areas to be tested and the minimum average scores to be achieved;

(am Sec. 4 ch 126 SLA 1978)

(2) attends a school operated by the federal government;

(3) has a physical or mental condition which a competent medical authority determines will make attendance impractical;

(4) is in the custody of a court or law enforcement authorities;

(5) is temporarily ill or injured;

(6) has been suspended or denied admittance according to sec. 45 of this chapter;

(7) resides more than two miles from either a public school or a route on which transportation is provided by the school authorities, except that this subsection does not apply if the pupil resides within two miles of a federal or private school which he is eligible and able to attend;

(8) is excused by action of the school board of the district at a regular meeting or by the district superintendent subject to approval by the school board of the district at the next regular meeting; (am Sec. 1 ch 10 SLA 1977)

(9) has completed the 12th grade;

(10) is enrolled in a full-time program of correspondence study approved by the department; in those school districts providing an approved correspondence study program, a student may be enrolled either in the district correspondence program or in the centralized correspondence study program;

(11) is equally well-served by an educational experience approved by the school board as serving his educational interests despite an absence from school, the request for excuse is made in writing by his parents or guardian, and approved by the principal or administrator of the school he attends. (am Sec. 1 ch 30 SLA 1976)

(Sec. 37-7-1 ACLA 1949; am Sec. 36 ch 98 SLA 1966; am Sec. 5 ch 71 SLA 1972; am Sec. 5 ch 190 SLA 1975)

(B) a person eligible to be admitted to an accredited postsecondary educational institution; and

(3) establishes financial need in accordance with standards for determining financial need adopted by the committee under 20 USC sec.1070c-2.

(b) The committee shall, by regulation, establish a system of priority in the selection of recipients of grants under sections 930—960 of this chapter under which students from "low income" families or whose incomes are considered "low income" shall be given preference in the award of the educational incentive grants.

Sec. 14.40.950. Limitation on grants. (a) No grant made under sections 930—960 of this chapter may be in an amount less than $100 nor more than $1,500 for each academic year.

(b) A grant awarded under sections 930—960 of this chapter may be used by a student only at an accredited postsecondary educational institution.

Sec. 14.40.955. Confidentiality of certain information. All information submitted in support of a determination of financial need as provided in this chapter is confidential. However, an applicant may inspect or copy information from his own application, or records relating to his own application, or authorize release of the application or records to designated individuals or organizations.

Sec. 14.40.960. Definitions. In sections 930—960 of this chapter

(1) "resident" means a person who, except for brief intervals, military service, attendance at an educational or training institution, or for absences for good cause shown, has resided in Alaska and who has maintained his domicile in Alaska; domicile is the true and permanent home of a person from which he has no present intention of moving and to which he intends to return whenever he is away;

(2) "undergraduate" means a student who has not completed a baccalaureate, graduate or professional degree.

(am Sec. 1 ch 51 SLA 1978)

Chapter 45. Private and Denominational Schools

Section
10. Repealed
20. Commissioner may furnish examination questions for and grant diplomas to eighth grade pupils
30. Attendance and annual reports required

Sec. 14.45.010. Repealed. (Sec. 59 ch 98 SLA 1966)

Sec 3

Sec. 14.45.020. Commissioner may furnish examination questions for and grant diplomas to eighth grade pupils. The commissioner may furnish final examination questions for the eighth grade pupils in private and denominational schools and grant eighth grade diplomas in the same manner as in public schools. (Sec. 37-11-2 ACLA 1949)

Sec 4

Sec. 14.45.030. Attendance and annual reports required. Teachers and others in charge of private or denominational schools shall make regular monthly attendance reports and annual reports to the commissioner of education in the same manner as teachers and superintendents in the public schools. (Sec. 37-11-3 ACLA 1949)

Chapter 47. Regulation of Educational Institutions. Repealed. (Sec. 5 ch 25 SLA 1976)

Legislative history report. — For report on ch. 190, SLA 1972 (CSHB 409 am), see 1972 House Journal, p. 744.

Sec. 44.25.036. Repayment of loans. Repayment of loans under AS 44.25.030 — 44.25.038 shall be on an annual basis with repayment commencing no later than 90 days after receipt of funds authorized to be appropriated from the Alaska Native Fund to the regional corporation under § 6(a) (1) (A), P.L. 92-203. (§ 1 ch 190 SLA 1972)

Sec. 44.25.038. Expiration of loan program. Because the purposes for which the loan program is created are limited, no loan may be made after five years from October 4, 1972. The program shall be inoperative 10 years from October 4, 1972. (§ 1 ch 190 SLA 1972)

Chapter 27. Department of Education.

Article
1. Board and Department of Education (§§ 44.27.010 — 44.27.020)
2. Alaska State Council on the Arts (§§ 44.27.040 — 44.27.060)
3. Alaska Historical Commission (§§ 44.27.061 — 44.27.076)

Article 1. Board and Department of Education.

Section
10. Board and commissioner of education
20. Duties of department

Sec. 44.27.010. Board and commissioner of education. There is at the head of the Department of Education a Board of Education. The commissioner of education is the principal executive officer of the department. (§ 11 ch 64 SLA 1959; am § 12 ch 96 SLA 1967)

Am. Jur. 2d references. — 63 Am. Jur. 2d, Public Officers and Employees, § 371; 68 Am. Jur. 2d, Schools, §§ 37 — 55; 72 Am. Jur. 2d, States, Territories and Dependencies, § 62.

Sec. 5

Sec. 44.27.020. Duties of department. The Department of Education shall

(1) administer the state's program of education at the elementary, secondary, and adult levels, including, but not limited to, programs of vocational education and training, vocational rehabilitation, library services, correspondence courses, adult basic education, and fire-service training, but not including degree programs of postsecondary education;

(2) administer the historical library;

(3) plan, finance and operate related school and educational activities and facilities. (§ 11 ch 64 SLA 1959; am § 77 ch 69 SLA 1970 am § 5 ch 86 SLA 1979)

CHAPTER 60. PRE-ELEMENTARY (EARLY CHILDHOOD) SCHOOL

Section

10. Requirements
20. Exemption
30. Application for a certificate of approval
40. Denial of approval; hearing
50. Duration of approval
60. Display of certificate
70. Certificate of approval
80. Insurance
90. Records
100. Physical examination for children
110. (Repealed)
115. Staff
120. Recognition of special needs
130. Disaster plan
140. Facility inspections
150. Changes in major written policies, plans, programs
160. Nondiscrimination
170. Programmatic requirements of the pre-elementary schools
175. Transportation
180. Definitions

4 AAC 60.010. REQUIREMENTS. (a) Every person, institution or agency operating a school for children ages three through five years, when the school's primary function is educational, shall apply to the department for a certificate of approval.

(b) The educational component of all pre-elementary programs is under the general supervision of the department in cooperation with the Department of Health and Social Services. Those programs not approved by the Department of Education are supervised by the Department of Health and Social Services.

(c) Before admitting a child whose school expenses could be the responsibility of departments of state government, authorization of eligibility should be requested from the appropriate department by the school. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060
AS 14.35.080(4)

4 AAC 60.020. EXEMPTIONS. The following are exempt from 4 AAC 60.010:

(1) schools maintained by the United States or funded entirely with federal funds;

(2) courses of instruction on religious subjects given under the auspices of a religious organization, such as church schools, vacation Bible schools, or similar denominational programs;

(3) schools that enroll six children or less. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.030. APPLICATION FOR A CERTIFICATE OF APPROVAL. (a) Application for a certificate of approval must be submitted on a form prescribed by the department.

(b) No pre-elementary school may represent that its program has a sponsorship, approval, characteristics, affiliation, or accreditation which it does not have, nor may any school cause a likelihood of confusion or misunderstanding as to any of these matters.

(c) Before issuing a certificate of approval, the department shall conduct an investigation of the applicant, including the proposed plan for the education and supervision of children and the mode of operation of the pre-elementary school. If the results of the investigation reveal that the primary purpose of the school is educational and that applicable regulations adopted by the department are satisfied, a regular certificate of approval shall be issued.

(d) The department may grant a conditional certificate of approval for programs with minor deficiencies correctable within a time specified on the permit, but not exceeding six months. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.040. DENIAL OF APPROVAL; HEARING. (a) A school or program denied a certificate of approval by the department is entitled to a hearing before the state Board of Education at a regular meeting of the board if a written appeal is received by the commissioner within 15 days of the date of denial of certification.

(b) The decision of the board on the appeal is final. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.050. DURATION OF APPROVAL. (a) A certificate of approval remains in effect for a period of no more than five years from date of issuance.

(b) A certificate may be revoked or suspended for failure to comply with the requirements of this chapter or other statutes and regulations governing the health, safety and welfare of students and employees.

(c) If the department has reasonable cause to believe that the holder of a certificate has failed to comply with this chapter or other applicable statutes and regulations, it may notify the holder of the basis for its belief and schedule a hearing on the matter to determine whether the certificate should be revoked or suspended. The commissioner shall appoint a hearing officer to preside over the hearing and to control its proceedings. The hearing shall be public, and all interested persons who have information relevant to the inquiry shall be permitted to be heard or to submit written statements and arguments, or both. A record shall be kept of the hearing.

(d) Following the hearing, the hearing officer shall prepare his findings and conclusions and recommend appropriate action to the commissioner. The commissioner shall review the hearing officer's recommendations and decide what, if any, action should be taken.

(e) A certificate holder whose certificate has been revoked or suspended by the commissioner may request, in writing and within 15 days of receiving notification of the commissioner's decision, that the board review that decision. A review will be made by the board or a committee of the board in the same manner as that provided in 4 AAC 60.040. The decision of the board is final. (Eff. 4/20/73,

Reg. 45; am 5/20/77, Reg. 62)
Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.060. DISPLAY OF CERTIFICATE. The certificate of approval must be displayed in a prominent place in the pre-elementary school. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)
Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.070. CERTIFICATE OF APPROVAL. The certificate of approval must include

(1) name of pre-elementary school;

(2) address of pre-elementary school;

(3) maximum allowable number of children;

(4) effective dates of certificate;

(5) ages of children to be enrolled;

(6) minimum number of staff members required to be in attendance while children are present. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)
Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.080. INSURANCE. (a) Each nonpublic, pre-elementary school must have bodily injury liability insurance in an amount not less than $100,000 per child, $300,000 per accident, with a company authorized to do business in the State of Alaska. Policies must contain the following endorsement:

"In the event of cancellation of this policy, the company agrees to give 30 days' advance notice to the Department of Education, Pouch F, Juneau, Alaska 99811."

(b) If the insurance required under (a) of this section is allowed to lapse more than once in a 12-month period, the second policy lapse is grounds for termination of approval. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)
Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.090. RECORDS. The pre-elementary school shall maintain an individual record for each pupil enrolled which must contain not less than the following:

(1) child's full name, birth date, and current address;

(2) name and address of parents or legal guardians;

(3) telephone numbers and instructions how the parents may be reached during school hours;

(4) names and addresses of persons authorized to take the child from school;

(5) a record indicating the immunization status of the child;

(6) a Cumulative Health Record Form. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)
Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.100. PHYSICAL EXAMINATION FOR CHILDREN. (a) Not more than three months before first entering school, each child must have a tuberculosis skin test which meets the requirements of 7 AAC 27.213.

(b) Before first entering school, each child must have received the immunizations required by 4 AAC 06.055. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62; am 8/17/78, Reg. 67; am 9/24/82, Reg. 83)
Authority: AS 14.07.020(7) and (8)
AS 14.07.060
AS 14.30.070

4 AAC 60.110. PHYSICAL EXAMINATIONS FOR EMPLOYEES AND VOLUNTEERS. Repealed 5/20/77.

4 AAC 60.115. STAFF. (a) All staff members must have a physical examination annually and not more than three months before initial employment in the pre-elementary school. This

physical examination must include proof of negative Tine test. It is the responsibility of the operator to maintain a personnel file for each employee in which the results of the current physical examination are kept. This file is subject to inspection by the department.

(b) All volunteers who work in the classroom or who provide direct services to children must present to the operator proof of a negative Tine test taken not more than three months before initial service. This test must be repeated annually.

(c) Schools subject to the provisions of this chapter shall comply with all applicable statutes and regulations concerning labor and employment practices. (Eff. 5/20/77, Reg. 62)

Authority: AS 14.07.020(7) and (8)
AS 14.07.060

4 AAC 60.120. RECOGNITION OF SPECIAL NEEDS. At the age of three years, an exceptional child may receive special assistance as a part of the local school district's annual plan of services for special education. Any pre-elementary school which provides services for an exceptional child and receives state funds for providing those services must adhere to state guidelines for special education programs. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060
AS 14.30.180

4 AAC 60.130. DISASTER PLAN. Each pre-elementary school shall develop a disaster plan which must include provisions for accountability for each child in the school until he is released to an appropriate authority. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(7) and (8)
AS 14.07.060

4 AAC 60.140. FACILITY INSPECTIONS. (a) Each pre-elementary school shall request an inspection by public safety and health agencies and shall conform to standards established by those agencies.

(b) Copies of documents indicating satisfactory compliance with health and safety standards must be filed with the department before the issuance of a certificate of approval. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(7) and (8)
AS 14.07.060

4 AAC 60.150. CHANGES IN MAJOR WRITTEN POLICIES, PLANS, PROGRAMS. Major changes in written policies, plans, programs and other information included in the initial application must be transmitted to the department within 30 days following implementation of the change. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.160. NONDISCRIMINATION. No pre-elementary school will be approved unless it adopts a policy of nondiscrimination in respect to race, sex, creed, color or religion with the following exceptions:

(1) a pre-elementary school established for an identified group (e.g., physical-mental handicaps) may serve that group only but otherwise may not discriminate;

(2) a religious group may elect to serve children that adhere to its religious beliefs but otherwise may not discriminate. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.170. PROGRAMMATIC REQUIREMENTS OF THE PRE-ELEMENTARY SCHOOLS. (a) The pre-elementary school shall provide the following information, in writing, to the department: the philosophy of education; the goals and objectives of the school; the program model and teaching techniques used in achieving the stated goals and objectives; daily educational activities schedule including provisions for individual activities, small group activities and large group activities; the number and ages of the children to be served along with the number of staff members working with the children; provisions for parental involvement; a copy of all public advertisements regarding the school; a copy of the personnel and administrative rules of the school; and a copy of all administrative forms used by the school.

(b) A pre-elementary school must have

sufficient staff to provide for each child's physical care and to offer individual attention to children as it may be needed as well as time to interact with children for the benefit of their conceptual and language growth. The number of staff and their utilization should reflect programmatic requirements, differences in the needs of the children served and should permit flexible groupings.

(c) There must be at least two staff members, one of whom may be a teacher-aide, present in each building. They must be stationed in sufficient proximity to be of aid in emergency situations.

(d) The operator shall provide a written training plan for each staff member who serves in the capacity of teacher, teacher-aide or assistant teacher. This plan must include provisions for preservice and inservice training and must indicate frequency as well as content. All such training is subject to the approval of the department.

(e) The department shall investigate to determine whether the programmatic objectives of the school are being met. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.175. TRANSPORTATION. An adult must be designated to accompany the driver and provide for pupil safety when more than six pupils are transported in a vehicle. (Eff. 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.180. DEFINITIONS. Unless the context indicates otherwise, in this chapter

(1) "department" means the Department of Education;

(2) "board" means the state Board of Education;

(3) "commissioner" means the Commissioner of Education;

(4) "pre-elementary school" means a school for children ages three through five years whose primary function is educational;

(5) "certificate of approval" means a regular certificate issued to an operator of a pre-elementary school who has met the minimum requirements of this chapter;

(6) "operator" means the person legally responsible for the pre-elementary school;

(7) repealed (Eff. 5/20/77, Reg. 62);

(8) "staff member" means anyone who provides direct services to children in the classroom and may be any of the following:

(A) a person 19 years or over who is salaried;

(B) classroom volunteers who are at least 19 years of age;

(C) student aides who are enrolled in a training program who are at least 16 years of age;

(9) repealed (Eff. 5/20/77, Reg. 62). (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

FROM: Keith B. Levy KBL
Legislative Counsel

Enclosed is a copy of CSHB 357 (HESS), relating to the regulation of religious schools. The bill raises a number of constitutional questions. Because these constitutional requirements must be balanced against one another, there is virtually no way to guarantee that the bill is valid. In my opinion, however, the bill does a good job of balancing the constitutional requirements and is probably not unconstitutional.

In regulating religious schools, the state must consider the "free exercise" and "establishment" clauses of the state and federal constitutions. These provisions essentially prohibit the state from unduly burdening the free exercise of religion and from becoming so involved in the regulation of religious schools as to encourage or inhibit religious activity. On the other hand, the "equal protection" clauses of the state and federal constitutions require the state to justify treating religious schools differently from other private schools. Moreover, while the state may not excessively regulate religious schools, it also has an obligation to provide a reasonable education to school age children. Reconciling these different interests with one another is no easy task and it is difficult to predict which of these will take precedence in the courts.

CSHB 357 (HESS) exempts certain religious schools from all state laws and regulations relating to education except laws concerned with health, fire safety, sanitation, immunization, and physical examinations if the schools agree to comply

with certain minimal statutory requirements. The schools affected by the bill are those that are operated by a church or other religious organization that is exempt from federal taxation and do not receive state or federal funding (AS 14.45.040). Children attending these schools are exempt from the state's compulsory attendance law (AS 14.30.010). The schools that opt to comply with the minimal statutory requirements must maintain attendance and enrollment records (AS 14.45.030(b)), notify the public school superintendent if a child is no longer enrolled or attending (AS 14.45.-030(b)), administer a nationally standardized test to be selected by the individual schools that measures English grammar, reading, spelling, and mathematics (AS 14.45.035), and operate on a regular nine month schedule (AS 14.45.-030(c)). Parents of children attending these schools must file enrollment and attendance records with the local public school superintendent (AS 14.45.030(b)). Religious schools that choose not to comply with these standards remain subject to the same regulations as all other private schools.

The First Amendment to the United States Constitution and Article I, section 4 of the Constitution of the State of Alaska provide

> No law shall be made respecting an establishment of religion, or prohibiting the free exercise thereof.

The free exercise clause has been interpreted to mean that the state may not unduly burden the right of a parent, child, or church to freely exercise a particular religion, unless the state can show a compelling state interest. Sherbert v. Verner, 374 U.S. 398 (1968). Even when the state can show a compelling interest in regulating religious schools, it must also show that the regulation is by the least burdensome means.

CSHB 357 (HESS) allows the state to regulate health and safety standards, to require certain standardized tests, and to assure regular attendance by the children. None of these requirements appears to be unduly burdensome on the free exercise of religion. The state clearly has a compelling interest in maintaining health and safety standards and these standards, if reasonable, generally have no connection to the exercise of religion. The interest justifying the standardized test requirement is the state's obligation to provide an education for children. The requirement is not unduly burdensome because the individual schools are

permitted to select the test of their choice provided that the test measures achievement in certain basic areas. Beyond that, the bill does not regulate curriculum in the religious schools. Finally, the bill requires certain attendance reports from the schools and the parents of children attending them. Again, the reporting requirements are minimal and are justified by the state's interest in assuring that the children are receiving an education. Accordingly, the bill probably does not infringe on the right to the free exercise of religion.

The analysis of the bill under the establishment clause is similar to that under the free exercise clause. Legislation must be substantially neutral toward religion. Epperson v. Arkansas, 393 U.S. 97 (1968). Excessive entanglement in the regulation of religious organizations is not permitted. Lemon v. Kurtzman, 403 U.S. 602 (1971).

The bill minimizes the state's involvement in regulating religious schools by exempting them from the state's general education regulations if the schools agree to comply with certain minimal standards. Of these standards, the only one that might present a problem by excessively involving the state in the regulation of religion is the attendance reporting requirement. In Surinach v. Pesquera de Busquets, 604 F.2d 73 (1st Cir. 1979), the court found state requirements that religious schools release extensive financial and other data unconstitutional. The statute challenged in that case can be distinguished from CSHB 357 (HESS), however, because the bill only requires attendance reports, the reports must be released by the parents, and they can be justified by the state's obligation to ensure that children receive an education. The attendance reports are probably not an excessive entanglement by the state in the regulation of religious schools.

The equal protection clauses of the Fourteenth Amendment of the United States Constitution and Article I, section 1 of the Constitution of the State of Alaska require the state to justify the statutory creation of a class based on religion. The classification

> . . . must be reasonable, not arbitrary, and must rest upon some ground of difference having a fair and substantial relation to the object of the legislation, so that all persons similarly circumstanced shall be treated alike.

Isakson v. Rickey, 550 P.2d 359, 363 (Alaska 1976). CSHB 357 (HESS) creates a class of religious schools which are exempt from most state regulations that apply to other private schools. Since the exemptions are substantially tied to the free exercise of religion, however, they can be justified on the basis that there is a substantial relationship between the exemptions and the goal of the legislation. Only if the exemptions were not tied to the exercise of religion or some other valid governmental purpose would the bill violate the equal protection clause.

The bill's deregulation of religious schools may raise a problem with respect to the state's obligation to provide an education to all children in the state. It is not clear, however, that this obligation is mandated by the constitution. Article VII, section 1 of the Constitution of the State of Alaska provides, in part,

> The legislature shall by general law establish and maintain a system of public schools open to all children of the State, and may provide for other public educational institutions.

It is not clear whether this provision merely obliges the state to provide the opportunity for an education to all children of the state, or if it includes the obligation to ensure that they actually receive an education. If the latter is true, then the state would be restricted in the degree to which it may deregulate religious schools. Even if that is the case, however, CSHB 357 (HESS) probably does impose sufficient requirements on the religious schools to ensure a minimal level of quality of education. Thus, the bill probably does not violate any obligation the state has to provide an education to children in the state.

In conclusion, CSHB 357 (HESS) is probably constitutional although the necessary balancing of constitutional requirements makes it difficult to be certain of this. Ideally, legislation regulating religious schools will place minimal burdens on the schools and require minimal state involvement while requiring the schools to meet minimal educational requirements to ensure that the children are receiving an education. In my opinion, the bill successfully strikes this balance.

RE: Other States' Regulation of Religious Schools
Research Request 83-159

Ed Essa of your staff asked that we provide information about states that regulate religious and other nonpublic schools differently. My preliminary work, provided to you on May 4, revealed five states that exempt religious schools from some state regulation to which other nonpublic schools are subject. Upon further investigation, I found significant differences in regulation in only three states: Maryland, North Carolina and Tennessee. Below is a brief description of the statutory distinctions made by each state; I have attached copies of the pertinent state statutes.

Maryland

Maryland requires that private "noncollegiate" schools obtain a state certificate of approval before they may operate in the state. The issuance of such a certificate of approval is contingent upon the state board of education's finding that the "facilities, conditions of entrance and scholarship, and educational qualifications and standards are adequate and appropriate" for the type of school.[1]

Specifically exempted from the requirement of a certificate of approval are all institutions "operated by a bona fide church organization..."[2] Schools that come under this exemption may not receive any state funds other than funds for the state food service program.

All private noncollegiate schools in Maryland, including the religious schools that are exempt from the certificate of approval, must make annual reports of their enrollment and courses of study.[3] In addition,

RE: HB 357

NEA-Alaska members wanted to participate in this teleconference for HB 357; but, because of the timing of the teleconference to fall during the peak hours of the school day, in every region of Alaska, they find themselves unable to testify. Therefore, on behalf of over 6,000 teachers NEA-Alaska submits this written testimony in opposition to HB 357 "An Act relating to the regulation of religious schools".

Our opposition is premised both on constitutional and educational grounds.

The State of Alaska is not and cannot be concerned with instruction in sectarian, religious matters; but in non-sectarian disciplines such as mathematic , science, English, history, civics, physical and vocational education, etc. the state is and must be concerned. The Alaska State Constitution in Article I, Section I, "Inherent Rights", states:

> "SECTION 1. This constitution is dedicated to the principles that all persons have a natural right to life, liberty, the pursuit of happiness, and the enjoyment of the rewards of their own industry; that all persons are equal and entitled to equal rights, opportunities, and protection under the law; and that all persons have corresponding obligations to the people and to the State."

HB 357 removes all oversight and regulation by the State for those educational programs offered by religious institutions who do not receive federal or state funds. In doing so, HB 357 forces the State to abdicate its responsibility in the education, health and social services of youngsters enrolled in religious schools. The State of Alaska will not be able to ensure that religious school students are enjoying equal rights, opportunities and protections under the law:

> Section 14.45.030 as amended denies the State the power to receive and examine reports about the educational programs offered in religious schools;

Section 6. AS 14.45.030 Sentence addition to paragraph (c).

Such schools shall report annually the number of students enrolled in each grade and provide a copy of the school calendar to the department.

Such schools shall maintain adequate student records, including all information regarding public schools for immunizations, physical examinations, testing and courses taken while in attendance at the religious school. (Same as public school)

-Obvious difference- attendance & enrollment only -

This - adequate information if the youngster withdraws from the religious school must be available for public schools.

Mike & Mac — 5/18/ 10am

Just had a call from Ed Essa of Pestinger's Office. He wanted you to know that Bert Carney is not very happy with the amendment made to Sec 1 of the religious school bill:

The Hess Committee inserted the exclusion of "educational component of pre-elementary schools and ~~xxxx~~ nurseries operated by a church..."

He (Carney) is going to attempt to amend this out on the House floor & wants your support.

He feels that this defeats the purpose of the bill. ~~xxxxxx~~

Linda.

RE: Summary/ HB 357 "An Act relating to the regulation of religious schools"

Enclosed is material that has been gathered in an attempt to more clearly understand the issue of 'de-regulation' of church schools while maintaining some monitoring of the constitutional mandate to provide for public education. A sectional analysis of the bill has been provided by Legislative Counsel. He suggests that HB 357, as written, is probably unconstitutional with respect to the equal protection clauses of the State & Federal Constitutions.

> "The bill exempts certain private schools from requirements that apply to all other private schools..."

With the understanding of the desire and need to resolve this issue legislatively, staff has contacted Ms. Patricia Lines, Director of Law & Educations Center of the Education Commission of the States (ECS), Denver, Colorado. Ms. Lines has been working on this issue nation-wide and is extremely well versed in the objectives it encompasses. Her article, State Regulation of Private Education is enclosed for your review. Ms. Lines has been very helpful and has emphasized the need for legislative resolve through investigation of current regulation as well as the interest and need for religious school de-regulation and how best the two goals can work together. Ms. Lines also suggested that it would be in the best interest of expeditious and sound legislation for the issue to be dealt with away from the political arena; allowing each interest room for rational communication and resolution.

This issue is not easily addressed as it actually raises three constitutional issues:

1). Seperation of Church & State - First Amendment, U.S. Constitution
2). Equal Protection Clause - Fourteenth Amendment, U.S. Const. & Art. 1, Sec. 1, Ak. Const.
3). Providing Public Education - Art 7, Sec 1, Ak. Const. & U.S. Const.

With the adivce of our Legislative Counsel, in approaching the Alaska Statutes for revision, these three issues must be carefully meshed in order to be effectively implemented. A proposed Committee Substitute will be forthcoming.

Dear Ms. Lines:

In appreciation for the information you were able to extend to me in our telephone conversation earlier today, I would like to thank you for your time and efforts in forwarding any further background in regard to the issue concerning the exempting of religious schools from State government.

The enclosed bill has been proposed to the Alaska State Legislature and is currently being reviewed by the Health, Education and Social Services Committee. This language, however, has been declared unconstitutional through a legal opinion from our Legal Services Division attorney, Keith Levy (attached).

Any further assistance you are able to offer will be appreciated. We will be scheduling the legislation for hearings in the very near future.

Respectfully,

MEMORANDUM April 18, 1983

RECEIVED
MILO H. FRITZ, M.D.
MAR 10 5 11 PM '83

SUBJECT: Regulation of religious schools (HB 357)

TO: Representative Milo Fritz

FROM: Keith B. Levy
Legislative Counsel

You have requested a sectional analysis of HB 357, an Act relating to the regulation of religious schools. In general, the bill amends certain sections of Title 14 of the Alaska Statutes to remove state control of schools operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding for its educational program.

Section 1 of the bill amends AS 14.07.020(8) to remove pre-elementary schools and the educational component of nurseries operated by these religious groups from the supervision of the Department of Education. The law currently requires the Department of Education to supervise these programs.

Section 2 of the bill amends AS 14.30.010(b)(1) to exempt children attending a school operated by one of the religious organizations described above from the requirement that children between seven and 16 years of age attend public school. It also makes clear that these schools need not have an average student proficiency that is at least equal to the average proficiency found in public schools in the same area. AS 14.30.010(b)(1) currently requires such proficiency of all private schools.

Section 3 excludes the schools described above from the provisions of AS 14.45.020. As presently written, AS 14.45.020 allows the commissioner of education to furnish final examination questions and grant diplomas for eighth graders in private schools.

Section 4 amends AS 14.45.030 to exempt the schools described above from monthly attendance and other reporting requirements currently applied to public and private schools.

Section 5 amends AS 44.27.020(1) to exclude the schools described above from the general duty of the Department of Education to administer the state's program of education.

You should be aware that HB 357, as currently written, presents a constitutional problem with respect to the equal protection clauses of the state and federal constitutions. The bill exempts certain private schools from requirements that apply to all other private schools. The factors that distinguish the exempt schools from the nonexempt schools are their federal taxation exemption status, that the educational programs involved do not receive state or federal funding, and that they are operated by a church or other nonprofit religious organization.

The equal protection clause of the Constitution of the State of Alaska (Article I, section 1) has been interpreted to mean that legislative classifications

> ...must be reasonable, not arbitrary, and must rest upon some ground of difference having a fair and substantial relation to the object of the legislation, so that all persons similarly circumstanced shall be treated alike.

Isakson v. Rickey, 550 P.2d 359, 363 (Alaska 1976). Accordingly, the distinguishing factors mentioned above must meet this test if HB 357 is to survive a constitutional attack. Although some of the distinguishing factors do meet the test, at least one probably does not.

Singling out schools which do not receive state or federal funds for exemption from certain state requirements probably has a fair and substantial relationship to the goals of the legislation in the sense that the state has less of an interest in controlling such schools. The same may be true of schools with nonprofit status under federal taxation laws. However, a provision which singles out a school merely because it is operated by a church or other religious organization is subject to greater scrutiny. The legislature may be called upon to justify treating a private, nonprofit school which does not receive state or

federal funding in a different manner than a private, nonprofit school which does not receive federal funding and is operated by a church or other religious organization. The only difference between the two classes of schools is that one is run by a religious group and the other is not. To justify such a distinction, the legislature would have to show a very substantial relationship between the distinction and the goals of the legislation. Moreover, the goals of the legislation must be constitutionally legitimate. In my opinion, the classifications created by HB 357 lack this level of justification to the extent that they are based solely on religion. For this reason, the bill is probably unconstitutional.

MEMORANDUM

TO: Senator Joe Josephson
Chairman, Senate HESS Committee

FROM: Representative Randy Phillips R.E.P.

DATE: May 25, 1983

RE: CS HB 357 (RLS)

During the House floor debate on the captioned bill, Representative Koponen and I offered the attached amendments for consideration. These amendments failed the House.

The amendments were offered so that this bill would apply equally to all nonprofit private schools (to include religious schools). I have some real concern that the bill as is presently drafted could open the door to some lawsuits concerning the constitutionality of singling out religious schools for special treatment. It was my feeling that by extending the provisions to all nonprofit private schools, this problem could be avoided.

I would appreciate it if you and your committee would take the attached amendments into consideration when you review this legislation.

If you have any questions, please do not hesitate to contact me.

Dear Pastor Glover:

Enclosed is a copy of a legal opinion regarding HB 357, the religious school legislation. The opinion has been concluded based on the legislation as written in its original form.

We are in the process of researching the relationship of religious, non-profit and private schools to other states and how best to draft legislation keeping with the intent and, at the same time, standing the test of constitutionality.

I will be happy to keep you informed as to the status of the legislation.

Sincerely,

Linda Otey

Testimony of Burton Carney

Associate Pastor and Principal of
Harvester Christian Church and Academy
Anchorage, Alaska

November 29, 1982

Regarding
New Regulations Being Proposed By
Alaska Department of Education
For

Pre-Elementary School Programs

1). Remarks regarding the Task Force that prepared this proposal.

Dr. Marshall Lind's Response to the Draft Report dated February 2, 1982, specifically states, "The Task Force will be made up of persons from the state who are knowledgeable in the area of preschool education and who represent the various groups who will be impacted by the plan for managing preschool programs."

Although churches have a sizeable number of the pre-elementary programs in this state, no individuals were chosen from this impacted group to serve on the Task Force that wrote this proposal. Some of the major flaws of this proposal can be traced to the absence of these people from the Task Force.

2). 4 AAC 60.019 (Draft page 3) CERTIFICATE REQUIRED

The first amendment to the U. S. Constitution plainly says, "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof;" It is a clear violation of the principle of the separation of church and state for DOE regulations to require that a ministry of our church be LICENSED by the government. This interferes with the "free exercise" of our religion.

This proposal must be rewritten. No licensure or regulations that interfere with the "free exercise of religion" can be accepted or obeyed.

Some say that this proposal is for the "protection" of young children. I would point out that it is the conviction of our church that our buildings and equipment meet reasonable regulations for fire, life safety, health, and sanitation when they are equally and fairly applied to all. Regulations already exist that protect the health and safety of children without requring that a church's ministry be licensed.

Portions of the proposal to which I strongly object as violations of the First Amendment include the need for a certificate (LICENSE), inspection of church personnel, finances, records, and church program/curriculum.

3). 4 AAC 60.019 (Draft p. 3) EXEMPTIONS

This section needs additional exemptions added.

Add a #3 that reads, "SCHOOLS WITH ELEMENTARY PROGRAMS."

Telephone conversations with the DOE have indicated that this new proposal would not be applied to schools such as Harvester or Tom Thumb Montessori, etc. because they already have a school program for children age six and up. When asked where this exemption was in the code in writing, we were told that it was an "understanding within the department." This is NOT good enough. Exempting "schools with elementary programs" would mean that those schools would not have to try to comply with two sets of different regulations within the same facility. Why should children of age five be regulated in a markedly different manner than children of age six? (Teacher/pupil ratios, square footage per child, hot lunch, etc.)

Add a #4 that reads, "SCHOOLS OPERATED BY LOCAL CHURCHES UNDER THEIR OWN BOARD."

This wording would give proper recognition to the exemption from licensure already granted by the constitution. The DOE must not interfere with the ministries of churches. Jesus Christ never said, "Suffer (allow) the little children to come unto me after you have a government license on the wall." God, not state government, calls and ordains these ministries to serve the community!

I wish to publicly state that as the Associate Pastor of Harvester Christian Church and Academy and as the Principal of our Christian school ministry, that I will NOT apply for a license from the DOE. It would be a violation of my religious convictions to do so!

Examples of discrimination against our church if this proposal is adopted in its present form include:

A. Requiring Christian pre-elementary programs to get a license to minister to the needs of children. 4 AAC 60.019 (Draft page 3)

B. Threatening to close down a sacred ministry if we as a church do not bow to governmental control and interference. 4 AAC 60.041 (Draft page 4)

C. Government agencies should not be allowed to have total access to church and Christian school records. This violates the privacy of the church and of the parents. 4 AAC 60.049 (b) which refers to "records" should be modified to say "medical records," etc. to properly limit government intrustion. (Draft page 5).

D. The government has no right nor authority to dictate to churches the staff qualifications for their Christian pre-elementary programs. 4 AAC 60.089 & 4 AAC 60.099 (Draft pages 9 and 10)

E. The state must not be permitted to review, change, or dictate curriculum and program to churches. As presently worded, this proposal intrudes into the internal affairs of a church. 4 AAC 60.189 (Draft pages 16 and 17)

4). A number of the provisions of this proposal would INCREASE the cost of tuition for schooling. This would effectively DENY nursery school and kindergarten to the children less able to afford these beneficial programs.

Examples of MINIMUM standards that are not realistic for non-subsidized programs include:

A. Unrealistic space requirements of 35 sq. ft./child. Minimum requirements for children in grades 1-12 are 20 sq. ft./child. Why almost double the space for a five year old child when compared to the space required for a six year old child? 4 AAC 60.119 (Draft page 12)

B. Staff/student ratio of 1/8 for three and four year olds and a 1/10 ratio for five year olds. This certainly does not represent the MINIMUM standards for reasonable supervision and instruction. 4 AAC 60.109 (Draft p. 11)

C. Schools should not be required to supply hot lunches to pre-elementary students. Parents should have the right to decide what they want done about lunches. Many church school programs have no hot lunch program now. To begin one would cost a great deal of money for some groups. 4 AAC 60.169 (Draft page 15)

Some may be tempted to say at this point, "You should be able to meet these requirements because day care centers already do." Yes, but the parents don't have to pay for a lot of the overhead costs because of government money that subsidizes the center.

Examples:

A. Any day-care center can apply for a $50,000 government loan at 7% interest to improve their center or help their center meet regulations or revised regulations.

B. A lady at the local Day-care Assistance Office estimated that between 50 to 65% of the children in Anchorage day-care centers had subsidized tuitions. If a family has take-home pay of $1,075 or less, the entire tuition ($12/day) is paid for by the government. An individual or family can earn up to $1,975 p/m. before the subsidies quit. This would amount up to $240.00 for the month of November for 100% subsidy.

C. Day-care centers receive surplus food products or cash to help with their snacks and noon meal. The amount per child can be as high as 52¢ for snacks and $1.86 for their noon meal. This adds up to another $50.00 per month to the center.

With all this government money, it's easy to see how day-care centers can make ends "meet" and still abide by so-called MINIMUM standards. Already they are planning to ask this next legislature for increased subsidies.

What's the point? Many of the groups that are opposed to this DOE proposal are non-profit organizations and by conviction do NOT receive government funds. We simply cannot operate like most day-care centers operate. The government will not help us meet these MINIMUM standards, our parents will have to help us by paying HIGHER tuitions. The sad part is that a number of children will end up being denied service because their families can't afford a tuition increase. I think that it is time for the Task Force to think about how families are going to pay for Utopian standards!

5). Some provisions of this proposal invade privacy and parental rights.

Examples:

A. The requirement that the school report a parent to the Department of Health and Social Services if the parent is over one hour late to pick up his child is unwarranted. No parent wants to be listed in some social worker's case file! 4 AAC 60.079 (h) (Draft page 9)

B. Why did the ANCHORAGE TIMES on Friday, Nov. 26th. headline an article in favor of the proposal, "CORPORAL PUNISHMENT OUTLAWED"? Because some of those writing this proposal really believe that it is wrong to paddle a child. They call that child abuse. Oh, it was later qualified in the article and is in this proposal that written authorization for spanking is permitted. But what about this wording?

Re: discipline - "...and that they not use any other technique which is humiliating, cruel, shaming, frightening, or otherwise damaging to the child." I ask, BY WHOSE STANDARDS? 4 AAC 60.189 (7) (Draft page 17)

6). This proposal neglects to include an important sentence in the DISCRIMINATION section -- 4 AAC 60.069 (3) (Draft page 7).

Present regulations contain the sentence,

"A religious group may elect to serve children that adhere to its religious beliefs but otherwise may not discriminate."

This recognizes the right of a church to serve those that are supportive of its programs. This deleted sentence MUST BE ADDED to the rewrite of this proposal.

IN SUMMARY. The most dangerous part of this proposal is the licensure of Christian church programs to young children. This must be changed to be acceptable. Cost factors have not been considered in light of what people are going to have to pay to meet these requirements. Some gross violations of privacy and parental rights need to be remedied.

Thank you. Burton Carney

Burton Carney

YOUR CHURCH'S DEFENSE: Free Exercise and/or Entanglement

by Earl Little

TO WHAT DEGREE SHOULD THE GOVERNMENT CONTROL A CHURCH MINISTRY? DOES THE STATE HAVE THE RIGHT TO ENTANGLE ITSELF WITH THE EDUCATIONAL MINISTRY OF A CHURCH?

Churches across America are coming under attack . . . yet as they go to the courtroom, many understand little about the deep meanings behind their choice of a defense. Pastors must not allow attorneys to put words in their mouths . . . present more easily defended arguments that compromise only a small part of their faith . . . place the priority of winning above the command to stand . . . twist the faith ever so slightly so as to appear more reasonable before the court . . . abandon five percent of their convictions to increase the chances of a courtroom victory by seventy-five percent . . . dip the colors with the justification that "half a loaf is better than no loaf at all" . . . cut the lines and allow the loser to sink, even though he is right, rather than risking his pulling them under . . . replace absolute Biblical truth as the basis for their position with the expediency of conformity to U.S. Supreme Court decisions.

Miller Road Baptist Church stood sued . . . as pastor, I was sued — two counts against the church and me, operating a school and day care without a license since November of 1979. The minimum fine was $100 per day, with a maximum fine of $2,000 per day. I could have gone to jail charged with violating the same Texas law that has put Brother Lester Roloff in jail three times. Such charges brought me no small amount of soul searching. I knew we had a much better chance to win by arguing not only "free exercise," but also "entanglement," yet my faith would not permit me to allow the lawyers to argue "entanglement." This decision involved principles from God's Word. I would rather lose than violate those principles. Many other pastors share my convictions on these matters and refuse to allow the Christian Law Association attorneys or any attorneys to violate their faith by arguing contrary to what they believe, even though it is more likely to win.

CLA carefully explains to churches which it represents in lawsuits the possible avenues of defense. When fundamentalist pastors fully understand the basis of arguing "entanglement," many respond that to so argue would violate their faith in such areas as licensure, taxation, compulsory attendance, minimum standards for church school education, and zoning.

The basis of arguing "entanglement" is one of **degree**. In order to argue that the government is "entangled" with

Earl Little, Pastor, Miller Road Baptist Church, Garland, Texas

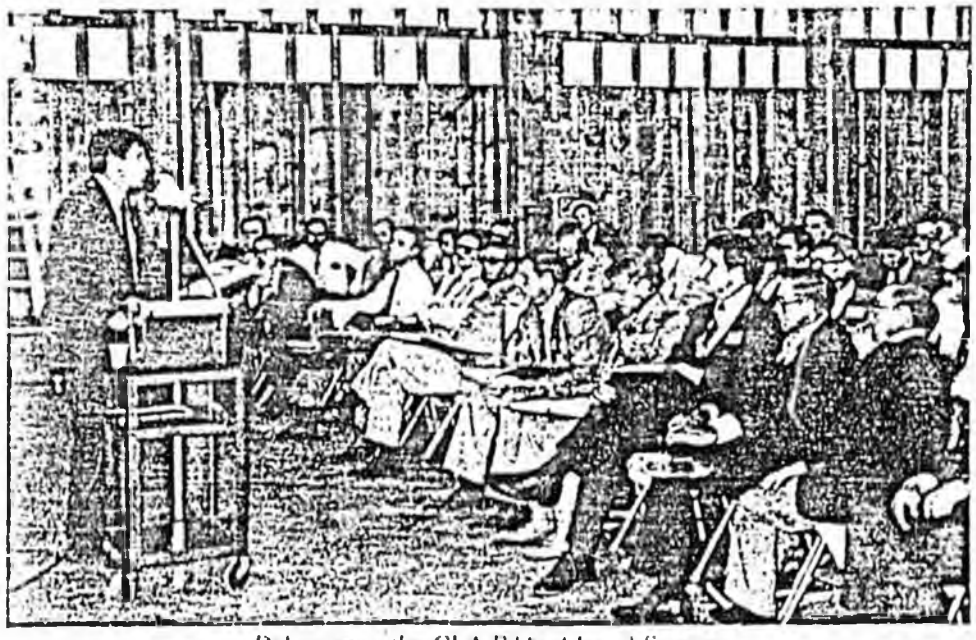
your religion (too great of a degree), one has to admit that the government has a right to come in a little but has come in too far. In other words, the camel has a right to put his head in the tent, but has no right to come any further into the tent.

A good illustration would be-how far is too far to go with my wife. Someone reasons, "I promise you that I'll go no farther than holding her hand." My immediate reply would be a clinched fist. "Hands off!" This matter is not open to negotiation or discussion. Even to talk about such a thing makes adrenaline shoot through my body with muscles tightening. Our church is the Bride of Jesus Christ. Matters of faith are not negotiable. Compromise is not considered. "Absolutely, keep your hands off her!" is my watchword to the government. I will not consider for a moment how far is too far. In such matters I am a purist — a Biblicist.

A classic example of a compulsory attendance case argued from the standpoint of entanglement is **State of Ohio v. Whisner**. Brother Levi Whisner is one of my heroes. As a pastor, he saw this thing sooner and stood straighter than perhaps any other pastor. He exercised amazing God-given wisdom when practically no one saw the issue clearly. Levi's faith was the turning point of Attorney David Gibbs' life. While Levi Whisner faced the lions, most of us cowered in the corner displaying our licenses. For years I spoke of the **Whisner** decision as a great victory. Recently I read the Ohio Supreme Court decision and realized the victory we received was in Brother Whisner's life, not in the Court's decision. God has used his life to change so many of us, but the case has set terrible precedent and will lead to a new series of lawsuits in Ohio.

The Biblical position regarding compulsory attendance laws is that the responsibility to train children rests entirely with the parents (Deuteronomy 6:4-6; Proverbs 22:6; Galatians 6:4; Malachi 4:6; Psalms 78:4-7). The Apostle Paul alludes to this uncontested principle in Galatians 4:1, 2 referring to children being under tutors and governors until the time appointed by the father. A father should determine at what age the pedagogy of his child has reached fruition. Nowhere in Scripture is education a responsibility of the State.

In **Whisner**, this Biblical principle is avoided under the compromising banner of "entaglement," which is far more reasonable to the State as well as to many judges. In **Ohio v. Whisner** (1 Ohio Opinions 3d - No. 75-746, decided July 28, 1976), an expert witness for the church, Professor Donald Erickson of the University of Chicago, testified that he is "of the firm position that the



state has some far-reaching fundamental educational responsibilities . . . " He further testified, "I don't think the state has any compelling interest at all in requiring schools to live up to the minimum standards in this book **as a whole** " (Page 111)

On August 15, 1974, the trial court in its opinion said: " . . . counsel for the defendants do not attack the well established law of this state and nation . . . that the natural rights of a parent to the custody and control of an infant child are subordinate to the power of the state; that a parent has an obligation to educate not only to the child but to the state; that the state has the power and duty to promulgate minimum standards for the education of its children and that compulsory education laws have been universally upheld as constitutional . . . the defense rests solely upon the contention that the minimum standards are vague, that they admit to several interpretations; that they are not rational . . . The court was not impressed by the testimony of the defendants' two expert witnesses . . . Mr. Erickson agrees that the state has far reaching fundamental educational responsibilities and that it must regulate education . . . the basic thrust of the defense appears to be that there should be two sets of standards, one for tax supported schools and another of lesser requirements for Church or private schools." The conviction by the trial court was affirmed by the Court of Appeals which noted "But as stated in **Wisconsin v. Yoder**, 'there is no doubt as to the power of a state . . . to impose reasonable regulations for the control and duration of a basic education.'"

The Ohio Supreme Court reversed the lower courts in favor of the church, noting that the church did not maintain that the state is devoid of all power to promulgate and enforce reasonable regulations affecting non-public schools. They mention minimum hours, employment of teachers with specified training and covering prescribed subjects. The decision said, as applied to this church, the minimum standards taken as a whole unduly burden the free exercise of religion and overstep the boundary of reasonable regulation. A separate opinion by Justice Stern stated: "Under a more reasonable construction of those provisions, the constitutional issues raised by the majority need not, and, therefore, should not even be considered.

The Ohio Department of Education realized the way to overcome this decision (that their standards merely went too far, thus being entangling) was to write new, less entangling standards. These new standards were finalized and published on December 12, 1980. The **Whisner** decision rematerialized in the language of the Olin decision, rendered by the Ohio Supreme Court on December 30, 1980, wherein the court once again said if new, less-entangling standards were considered, its decision would go the other way.

"Entaglement" is clearly defined and demonstrated in the area of taxation of churches in **Walz v. Tax Commission**. The U.S. Supreme Court's majority opinion said churches were tax exempt, but not on the grounds of total separation of church and state. The court found "room for play," as long as there is not excessive entanglement, noting prior rulings allowing government to provide textbooks and busing for religious schools. The dangerous implication is that the state can aid church functions outside the worship of God. This comes close to saying that some educational functions are not sacred and God mandated. The court further states that church tax exemption is the same as that afforded hospitals, libraries, patriotic groups, etc. Exemption is granted because the groups are "useful and desirable" to the state. Tax exemption would be lost if those groups (including a church) are considered no longer within this classification. Churches are exempt according to the court, because taxation would involve more entanglement than exemption. The court states that church tax exemption is an indirect economic benefit, but not sponsorship. State legislatures, according to the court, can tax certain property at a lower rate wholly at the legislature's discretion. Tax exemption is thus viewed not as a right the church has, but a privilege granted by the state based on being less entangling than taxation. Justice Brennan's second reason for tax exemption for churches is that churches fit into the "pluralism" of American society thus helping to make society diversified. The church is viewed as only another organization that "is organized exclusively for the moral and mental improvement of men and women." He notes that the granting of the exemption may be wholly secular in nature. However, he agrees the secular is so intertwined with the sacred that to separate them for tax exemption would be too entangling.

Delegates at the CLA Biblical Legal Seminar

Justice Harlan carried the trend even further by saying that the same exemption could be given to atheist groups because the exemption is based on charitable activities which would otherwise by borne by the state. He states that if the church is not involved in "secular" charitable community projects, tax exemption would be improper. He continues by saying that subsidy of the church through state tax exemption is a matter of degree to be determined by the U.S. Supreme Court.

The Word of God says to render unto

The latest trend is most disturbing, some of the people who argue against entanglement are proposing laws that entangle church with the state.

Caesar the things that are Caesar's, but to render unto God the things that are God's. The tithe is the Lord's (Malachi 3:8-10)...God will not allow his tithe to go to Caesar, - especially to support wicked programs such as abortions. As a matter of free exercise of religion our church can pay no tax. This would not apply to assessments. It is faulty reasoning to contend that our church tax exemption is not a matter of right, but abstention by the state in not exercising its right to tax because taxation would be too entangling. To me some churches who pay taxes (such as unemployment compensation) under protest are sacrificing their conviction against paying taxes in order to argue that taxation is going too far and entangling. Some cases concerning licensure are being argued from the standpoint of "entanglement." In one case I attended not argued by CLA, this was so clear to me. It was plainly brought out that the pastor was not opposed to all licensing of the church. A copy of a cafeteria permit was shown as an example of the church accepting a license. An expert witness testified to a certain point, then abruptly stopped. What he did not testify in this particular case, that he usually testified in other trials when I have heard him, is that historically the church has rejected all licensure because a license speaks of Lordship, only a higher can license a lower, a license is the permission to exist, and no one can replace the Lord Jesus as Head of the Church. It seems to me that higher courts will reason that if this church can take one license on their cafeteria, why can't they take another license on their childrens' ministry as long as the minimum standards are not too "entangling?" Why not take the license on the childrens' ministry and accept a variance on every standard the church finds objectionable? A recent case on zoning illustrates the pitfall of arguing establishment/entanglement. In **Damascus Community Church v. Clackamas County**, a church was issued a Conditional Use Permit allowing them to use their property for a "church" in 1967. In 1975 the county became aware of a church school that had operated for some time. The school was ordered closed by the zoning board. Upon advise from counsel (**not** a CLA case) the church applied for a second Conditional Use Permit to operate a "school." This admitted the school was not the same as the church. The Oregon Supreme Court ruled: "By applying for a Conditional Use Permit for its school, the petitioner in effect concedes, that, for the purpose of this proceeding, its proposed use was not permitted by the original permit." On February 23, 1981, the U.S. Supreme Court refused the appeal, thus allowing the lower court's decision to stand.

Charles Craze teaching the separation of church and state

The Bible plainly teaches a geographical will of God. This church contends God led them to this property and through faith provided for the church to begin. God also led them to begin a church school (102 students on six acres located in a sparsely populated agricultural and residential area). One can understand a compelling government interest if a pastor said God told him to build a church on another man's property without permission. However, in this case there is no compelling interest, no question of safety or criminal law. A careful reading of the case suggests the church would have won had a pure stand based on free exercise been taken without the compromise, especially of seeking a second Conditional Use Permit.

The latest trend is the most disturbing. Some of the same people who argue against entanglement are proposing laws that unbelievably entangle church and state. A proposed law in Washington state forces church schools to "make and maintain daily attendance records. . . . provide minimum total program (hour) offerings required of public schools . . . provide instruction in mathematics, reading, science, social studies, spelling and writing . . . administer at least once a year, a nationally standardized test . . . make records of the test available to a duly authorized representative of the state superintendent of public instruction . . . maintain on file health certificates for each teacher . . . make attendance and health certificates available for a representative of the superintendent of public instruction . . . maintain permanent student records and forward such . . . in event the church school should close, forward all student records to the nearest local school district office . . . have a policy which prohibits racial segregation . . . require students to provide proof of immunization . . . send a notification letter to the superintendent of public instruction by November 15th of each year, giving name and address of school, name or principal, statement that as a matter of conscience and or religious beliefs it qualifies as an exempt school, grades which it operates, enrollment both in total and by grade . . ." other states are passing similar laws. These unscriptural, compromise laws will effectively divide the fundamentalist churches. A few "hardliners" will refuse to submit. They will be sued. Fundamentalist pastors who submit will be subpoened as adverse witnesses and forced under oath to testify against their brother pastors. Their testimony will be effectively used to show the unreasonableness of the few purists.

A similar law is proposed in North Dakota. A watered down version was passed in North Carolina. A Washington State Senator summed up the situation rather well as he commented about a state department of education representative coming to him, urging his support of the bill (described above). The bureaucrat commented, "We need this piece of legislation. They are contesting laws in other states and proving the laws are unconstitutional. With this law, we can still keep the church schools under our control." The bureaucrace plainly sees they must push to the very limit of "entanglement" and maintain control, while they wait for the right moment to move in for the kill. ■

REASONS WHY WE CANNOT ACCEPT
L I C E N S U R E
OF OUR CHURCH MINISTRIES

The subject at hand has to do with the licensure or certification of pre-elementary programs in the State of Alaska by the Department of Education.

Our special concern has to do with the impact of these proposed regulations on our Church ministries.

THE U.S. CONSTITUTION EXEMPTS CHURCHES FROM STATE CONTROL.

The First Amendment to the U.S. Constitution plainly says, "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof;" It should be crystal clear from this simple statement that the Church is constitutionally exempt from licensure.

At the same time, it should be noted that it is the responsibility of the Church to provide buildings and equipment that meet reasonable regulations for fire, life safety, health, and sanitation when they are equally and fairly applied to all alike.

On the other hand, inspection of personnel, programs, finances, records, curricula, etc., is clearly a violation of the First Amendment, and cannot be permitted by the local Church.

The First Amendment to the Constitution guarantees a separate Church and State. Historically, this has meant that the Church was not subject to the State, nor was the State subject to the Church.

The First Amendment also guarantees "free exercise of religion." Our nation has repeatedly recognized the value of this most important clause, and has resisted infringement of First Amendment rights of the citizenry.

In 1925 the State of Oregon passed a law requiring all students to attend public schools. Catholics argued that this violated their First Amendment rights because their children could no longer attend parochial schools. The U.S. Supreme Court ruled in favor of the Catholics in a case known as Pierce v. Society of Sisters.

WHO IS RESPONSIBLE FOR THE EDUCATION OF THE CHILDREN?

Here we must consult the words of Jesus Christ as recorded in Matthew 22:21. ". . . Then saith He unto them, 'Render therefore unto Caesar the things which are Caesar's, and unto God the things that are God's.'"

On this Biblical basis we declare that neither the family nor the children belong to Caesar. In this view we contend that the Church is not to be controlled by the State. Furthermore, the Scriptures do not declare that the State has a compelling interest in the education of a child, or that it is responsible to guarantee his education.

Constitutional issue - State's obligation for education

Deuteronomy 6:3-7, Psalm 78:4-8, Proverbs 22:6, Galatians 4:1&2, and Ephesians 6:4 set forth the Biblical mandate that parents, especially fathers, have the primary responsibility for the education of their children, and that the local Church has the secondary responsibility.

One of the ministries of the Church is education. The Great Commission commands the Church to teach. Matthew 28:19 is a commandment to the Church. In I Timothy 3 15, the Church is called "the pillar and ground of the Truth."

At this point, it should be stated that fathers may delegate areas of their responsibility, but they can never be rid of the responsibility itself. It should be remembered that a person who delegates his responsibility to another is still responsible to see to it that the task is accomplished.

All education is inherently religious. Because this is true, it is impossible to teach without setting forth a philosophy of life. It is impossible to teach facts, whether they be historical, mathematical, psychological, or any other kind, without arriving at a conclusion to which those facts ultimately point. Facts cannot be isolated; they are a part of the whole.

In teaching, we convey our own values, or the lack of them, whichever the case may be. Our habits of life inevitably come through.

Christian parents have the distinct responsibility to train their children in God's way, since education is a religious function. A person simply cannot teach without instilling values and philosophies into the students in the classroom.

Christian schools customarily achieve academic excellence through a disciplined subject-centered teaching methodology which employs a completely different approach from that of the child-centered programs used by State and government schools.

LICENSURE IS ABSOLUTELY UNACCEPTABLE.

If our Churches accepted a State license for their educational programs, there is a very real possibility that the same objectional programs which have already failed in the public sector would be forced upon the Christian schools. Even a cursory inspection of State licensing rules, as proposed in the considered document, quickly reveals a philosophy of education diverse from that of the Christian Church sector.

Sex education classes in the public sector are often required to display graphic illustrations of sexual activity before elementary school students. Perversion is treated as normal. The sin of sodomy is called "sexual preference" or a "lifestyle." The use of such euphemisms to classify sin is diametrically opposed to the Biblical philosophy and teaching of the Christian schools.

State licensure of Christian schools would establish de facto State schools, since the Christian schools would be at the mercy of State agencies for their existence. For these and other reasons which we shall cite, the Church cannot accept State licensure for its ministries.

When the State seeks to compel a Church to be licensed by the State, and thereby be controlled by the State, the State is in violation of the First Amendment to the Constitution. We simply cannot render to the State what belongs to God, because we are loyal to the Sovereign Head of the Church--The Lord Jesus Christ. All educational programs offered by the local Church are off limits to the State.

ADMINISTRATIVE RESPONSIBILITIES.

Administratively, it is imperative that we reserve the right to make the decisions with regard to personnel, textbooks, disciplinary practices, curriculum, and all other areas which affect the quality of our teaching ministry. Our Christian Churches and schools must be able to preach and teach without interference from the State into their ministries.

Advocates of State licensure use the specious argument that it is necessary for the "protection" and "welfare" of the children enrolled in Christian pre-elementary programs. The case simply has not been made that licensure "protects" the children.

Astute observation of these efforts at licensure of Church ministries in other states has revealed that the so-called

need for licensure is but a guise for concealing the motives for the enhancement of power by a self-serving bureaucracy.

Advocates for licensure of the local Church seem to think that unless a Church provides pre-elementary and pre-school services free of charge, it is operating a business rather than a ministry. Biblical history and common sense dictate a completely different view. The Bible plainly teaches that "the laborer is worthy of his hire," and each employee of full-time Church ministries deserves an appropriate remuneration for his labors just as much as do the pastor, associate pastor, and full-time teachers in the Christian ministry.

There is another question to be addressed as we conclude our considerations. Should a ministry be limited only to its Church members in order to escape the allegation that the Church is operating a business? I think the answer is quite obvious: No other ministry is so limited in its outreach. No church limits its attendance to its membership. Once again, the First Amendment is violated if government and private businesses are allowed to determine that a Church's pre-elementary educational ministry has in fact become a business because its outreach goes beyond its immediate membership.

WHAT ABOUT CIVIL DISOBEDIENCE?

Since we have taken the position set forth in the previous paragraphs of this document, we are faced with the responsibility of stating when it is Biblically correct to disobey civil authority. WE MUST DISOBEY CIVIL AUTHORITY ONLY WHEN IT WOULD REQUIRE US TO ACT CONTRARY TO GOD'S COMMANDS. If the State Department of Education should endeavor to force a local Church to apply for a D.O.E. certificate in order to keep its pre-elementary educational ministry open, we would have no choice but to disobey the requirement. This is due to the fact that Jesus Christ is Lord of the Church, not the State Department of Education.

Licensure is an activity which proceeds from the superior to the subordinate. The U.S. Constitution calls for the Church and the State to exist alongside one another. We would never agree that the State Department of Education or the State of Alaska itself is superior to the local Church.

Furthermore, if the State should proceed to license a Church's pre-elementary education program, it would be violating the Constitution by "establishing" a school of religion by the State!

FINAL ANALYSIS.

The ultimate responsibility for the education of children lies within the home, not the State. Biblically and historically, the family is God's first and basic institution. The authority and love which God has ordained for the family must not be violated by any action of the State.

Much of the blame for the frighteningly large number of broken homes today lies with the failure of other institutions to honor the sanctity of the family.

Since there is a considerable body of evidence which supports the idea that more than three-fourths of a child's personality and character is formed by the time he is six years old, the Church must not abdicate its responsibility in providing a suitable Christian education for these children in their tender years. By the grace of God, we will fulfill our commitment by meeting the demands of the Great Commission and provide a Biblical education for the children of parents who have enrolled their most precious treasures in our Christian schools.

Respectfully submitted,

Paul E. Glover

Our Opinions

Functional Illiterates

Twenty-three million adult Americans — a staggering 20 percent — are considered functional illiterates because they can neither read a restaurant menu nor fill out a job application form.

These people aren't to be confused with "conventional illiterates" — individuals over the age of 14 who lack a sixth-grade education. To the contrary many functional illiterates have high school diplomas, yet they cannot perform basic tasks that most people take for granted.

According to a University of Texas study, 11 percent of American high school graduates can't read well enough to interpret a bus schedule or address an envelope.

The latest group to declare war on educational failure is the Coalition for Literacy, an alliance of volunteer groups, businesses, and public service organizations that has announced a campaign to reduce the number of functional illiterates in American society.

Notwithstanding the coalition's good intentions, it must be noted that there have been many other volunteer groups devoted to assisting undereducated adults. The federal government also began funding adult basic education 18 years ago, and in 1969 launched the "Right to Read" campaign. Yet, according to a 1979 Ford Foundation report, "only 2 to 4 percent of (the illiterates) ever enter the programs."

It appears these efforts are little more than ineffectual, albeit sincere, stopgap measures.

The cause of functional illiteracy is an institutional unwillingness to either accept past failures, or do something about present problems.

We refer, of course, to those public school systems that stubbornly refuse to require minimum-competency standards of their students. So long as schools fail to insist that their students meet fundamental educational objectives, the number of failures will continue to increase.

And all the well-intentioned programs for the victims will do nothing for the root cause of illiteracy — our defective public schools.

11-82

Are schools really better than ever?

By Arthur E. Hippler

VIEWING THE PAST in reseate hues is usually an exercise in selective retrospection. Much in the "good old days" was really terrible, as anyone who was there can easily point out.

An exception to that view might be made for education. This was brought home to me with some force as I mentally attempted to compare the education being received by my eldest son and that which I received some 35 or more years ago.

By the time I'd left parochial elementary school, I had a good working knowledge of the major sequences of historical events from the Hellenic period of Greece to the first World War, a broad geographic perspective of the world and it's countries, and a capacity to read at what would now be considered the 12th grade level (standards of reading achievement have been substantially "democratized" since then).

IN PAROCHIAL high school, history and geography were expanded upon and one could take both Latin and a contemporary foreign language, physics, chemistry and math (not including calculus). Social science, as such, was (fortunately) in short supply; no sociology or anthropology or psychology were offered.

Perhaps most importantly, we were provided a purpose for learning and a sense of right and wrong. About half my fellow students and myself were from very tough neighborhoods, and while fighting may have been common away from school, it was nearly unheard of within its boundaries.

Assaults on teachers would have been inconceivable as would incidents involving weapons, drugs or alcohol. Interracial conflicts were few in number.

Presently in the Anchorage school system, which I am told is one of the best in the U.S. and which seems to be staffed by people whose paper qualifications may be superior to those of the teachers of my childhood, it seems possible to get through without really learning much history or geography, and to have "value free" (which really means value hidden) social science courses substitute a mushy kind of internationalist freebootery for serious substantive information about government.

Much more math is offered in the Anchorage school system than in those of my youth; it may be the outcome is greater mathematical sophistication.

SCIENCE COURSES, which offer the possibility for the learning of substantial content in the presence of intellectual discipline, are on the surface far better than those I was offered.

Unfortunately since children in this system do not learn to read or write either well or critically, the offerings must almost always be watered down. I understand they are presently in the process of further dilution locally.

MOST APPARENT of all is the breakdown of personal discipline. Minimal homework, minimal demands and "prepping" of students for the Iowa Basic Skills Test by teachers (so the school district will compare well) teach a lesson whose outcome is anti-social behavior within the very school.

Of equal importance is the uphill struggle to find teachers able and willing to communicate the powerful positive message of the cultural contribution of capitalist democracy. In any society the schools must communicate their basic values. Ours do so poorly because in large part schools are dominated by liberals who are very fuzzy about what our society's values are, but who are perfectly willing to substitute their own.

On the one hand, I can sympathize with them. How can schools supported by public funds formally teach values alien to any segment of the supporting society? But such teachers are rarely consistent, and often define their own vague leftism as "progressive" and everything else as vaguely "reactionary." Thus they wind up teaching the contradictory idiosyncratic values of nihilism and collectivism. Liberals who learned their ideas about society from left-wing professors are not prone to teach the importance to human freedom of capitalist democracy.

The core of the difficulty is the decline of private education, a reality forced upon us by the massive tax support of public schools and the imposition of curriculum control by state education departments and the ubiquitous self-serving teachers unions.

VARIETY in the educational experience, and hence useful competition of approaches, cannot be accomplished by smorgasbord offerings in the public system, since within that system the ethos and ideology remain fixed. If we wish to offer our children an education with vitality, we must remove barriers to private education, so that our high school grads will be able to read Horace, will know what happened at Thermopylae and why, and will understand just what the contributions of democratic capitalism have been.

Absent that kind of change, you'd better continue to expect your children to get less than you did, in the guise of getting more.

MEMORANDUM

TO: Representative Sam Pestinger

FROM: Leslie Longenbaugh LL
Research Staff

RE: Other States' Regulation of Religious Schools
Research Request 83-159

Ed Essa of your staff asked that we provide information about states that regulate religious and other nonpublic schools differently. My preliminary work, provided to you on May 4, revealed five states that exempt religious schools from some state regulation to which other nonpublic schools are subject. Upon further investigation, I found significant differences in regulation in only three states: Maryland, North Carolina and Tennessee. Below is a brief description of the statutory distinctions made by each state; I have attached copies of the pertinent state statutes.

Maryland

Maryland requires that private "noncollegiate" schools obtain a state certificate of approval before they may operate in the state. The issuance of such a certificate of approval is contingent upon the state board of education's finding that the "facilities, conditions of entrance and scholarship, and educational qualifications and standards are adequate and appropriate" for the type of school.[1]

Specifically exempted from the requirement of a certificate of approval are all institutions "operated by a bona fide church organization..."[2] Schools that come under this exemption may not receive any state funds other than funds for the state food service program.

All private noncollegiate schools in Maryland, including the religious schools that are exempt from the certificate of approval, must make annual reports of their enrollment and courses of study.[3] In addition,

---

1 Annotated Code of Maryland, Education § 2-206 (e)(2).

2 ACN § 2-206 (3)(4).

3 ACN § 2-205.

they must conform to a state law that requires private schools that are ending operation to furnish to the state the academic records of all past and present students.

North Carolina

North Carolina in 1979 enacted a statute which has served as a compromise between the competing interests of religious schools and states.[4] For the purposes of state regulation, the law creates three types of legal nonpublic schools: 1) religious schools, defined as "private church schools or schools of religious charter"; 2) "qualified nonpublic schools" -- these institutions are either accredited by the state or an association or receive no state funds; and 3) "proprietary schools," or nonpublic schools that are operated for profit.

Schools in the first and second classifications above (religious institutions and other nonpublic schools) share the following requirements:

a) notice to the state of the intent to begin or cease operation;

b) maintainance of annual attendance and disease immunization records for all students (there is no requirement that these records be submitted to the state);

c) operation on a regular schedule during at least nine months of the year;

d) subjection to reasonable fire, health and safety inspections as required by law;

e) administration of nationally standardized tests for all students in the first, second, third, sixth and ninth grades;

f) administration of nationally standardized tests for all students in the eleventh grade and establishment of minimum standards for achievement on the test before graduation.

In addition, schools of these two types may choose to participate in any state-operated or -sponsored program which is available to other nonpublic schools. The statute adds that no other state laws, except health, fire and safety laws, are applicable to these schools.

Apparently, North Carolina is one of only three states that require standardized testing for students of religious schools (New York and

---

[4] General Statutes of North Carolina, § 115C-547 through § 115C-554.

South Dakota are the other states). In North Carolina, the chief administrator of the religious school may choose the test, rather than having the state select the tests to be given. The tests need cover only the basic secular skills -- grammar, reading, spelling and mathematics. Records of the test scores must be available for state inspection for one year following the test.

Nonpublic schools that are operated for profit must obtain a license from the state annually. The state board of education is charged with promulgating and enforcing regulations and standards governing approval and licensure. By law, the reports solicited must include detailed information regarding curricula, costs, and instructional space. In addition, the schools must post a bond of $1,000.[5]

Another difference in the requirements for licensed and exempt nonpublic schools in North Carolina is the certification of their staff. While North Carolina is one of the few states that require nonpublic-school teachers to be certified, teachers in religious schools are exempt from this provision.

Tennessee

The Tennessee Department of Education, by regulation, requires that all nonpublic schools report the name, age and address of all students to the local public school superintendent for the purposes of ensuring compliance with attendance laws.[6] Otherwise, state law requires only that the department of education inspect, approve and classify those primary, secondary and pre-elementary nonpublic schools that request such services. The approval is to be according to the standards that are used for the state's public schools.[7]

In 1976, the Tennessee legislature enacted legislation which prohibits the state and local boards of education from regulating the selection of faculty, textbooks or curricula of "church-related schools." The law requires that these schools meet the standards of accreditation of at least one of four nonpublic school associations. The law does require that the terms of church-related schools be as long as the public schools'.[8]

[7] Tennessee Code Annotated, 49-105 § 19.

[8] TCA 49-5201.

The statute adds that children who attend church-related schools may transfer into the state's public school system; however, the public schools may test such students and place them at a grade level that is indicated by the results of the test.

Like other nonpublic schools in Tennessee, church-related schools may apply for state approval, and many do. Of approximately 440 nonpublic schools in the state, roughly 160, both religious and secular, have received state approval.[9]

Case Law

Mr. Essa mentioned an interest in the case law about the regulation of religious nonpublic schools. I have enclosed a copy of a law review article written about North Carolina's regulation of religious schools; this article contains a concise overview of the findings of the United States Supreme Court and state courts of last resort.

MEMORANDUM May 11, 1983

SUBJECT: Chief school administrators (CSHB 384 (HESS))

TO: Representative Mae Tischer
Chairman, Health, Education, and Social Services Committee

FROM: Keith B. Levy KBL
Legislative Counsel

Enclosed is a draft of a Committee Substitute for HB 384 (HESS). The bill may present a constitutional problem which you should be aware of. In addition, this draft differs in certain respects from the request I received from your office.

The committee substitute sets out certain limits on what a chief school administrator for a regional educational attendance area may do and the compensation he or she may receive. To go outside of these limits, the chief school administrator must obtain the approval of the school board and the legislative budget and audit committee. It may be a violation of the separation of powers doctrine for the legislature to require an employee of the executive branch to obtain legislative approval since that approval may be an executive function.

However, the state constitution does allow the legislature to exercise certain executive powers with respect to the unorganized borough. Article X, section 6 of the state constitution provides:

> The legislature shall provide for the performance of services it deems necessary or advisable in unorganized boroughs, allowing for maximum local participation and responsibility. It may exercise any power or function in an unorganized borough which the assembly may exercise in an organized borough.

Accordingly, CSHB 384 (HESS) may be a valid exercise of executive power by the legislature since the bill only applies to chief school administrators in the regional educational attendance areas. Since the extent of the legislature's power to perform executive functions in the unorganized borough has not been fully defined by the courts, however, the bill merits a discussion of the separation of powers issue.

The Constitution of the State of Alaska implicitly recognizes the separation of powers doctrine. Public Defender Agency v. Superior Court, 534 P.2d 947 (Alaska 1975). Article III, section 1 of the state constitution provides

> The executive power of the state is invested in the governor.

Accordingly, the legislature may not reserve to itself an executive power unless the constitution specifically provides for such a retention of power. Citing the United States Supreme Court, the Alaska Supreme Court noted that

> Legislative power, as distinguished from executive power, is the authority to make laws, but not to enforce them or appoint the agents charged with the duty of such enforcement. The latter are executive functions.

Bradner v. Hammond, 553 P.2d 1, 6, n. 17 (Alaska 1976), citing Springer v. Philippine Islands, 277 U.S. 189, 202, 72 L.Ed. 845, 849 (1927).

If the approval required in the bill is construed as a legislative rather than an executive function, there is no constitutional problem. This interpretation is feasible with respect to AS 14.14.130(d) in the sense that fiscal control is at least in part a legislative function and that subsection allows the legislature to ensure fiscal integrity by retaining the power to disapprove budget excesses by chief school administrators. On the other hand, a court could also construe this power as executive in the sense that it is the power to enforce the law, i.e., the power to ensure that a chief school administrator does not violate AS 14.14.130. At the very least, that subsection is open to constitutional attack. Some of the remaining subsections, however, do not even have the fiscal justification found in subsection (d). Subsection (f) requires legislative approval

of military and sick leave exceeding six days by chief school administrators and subsection (g) requires legislative approval for sabbatical leave. These duties are clearly administrative and would require the legislature to make executive decisions. In my opinion, such a usurping of executive power would be unconstitutional without express constitutional justification. As noted above, however, Article X, section 6 of the state constitution may provide that justification.

Moreover, there is some precedent in the Alaska Statutes for requiring legislative approval of executive acts. AS 38.06.055(a) provides

> (a) In addition to the recommendation by the board required under AS 38.06.050, the commissioner of natural resources may not enter into a sale, exchange, or other disposition of oil or gas or of the rights or waiver of the rights to receive future production of royalty oil or gas under AS 38.05.183 without the prior approval of the legislature. The legislature may approve a sale, exchange, or other disposition of oil or gas or of the rights or of a waiver of the rights to receive future production of royalty oil or gas only by enacting legislation.

This section has not been challenged in the courts. However, in an opinion addressed to Senator Ziegler regarding other aspects of AS 38.06.055, former Attorney General Avrum Gross said

> It is no secret that the statute authorizing legislative approval of these contracts creates some rather serious questions concerning separation of powers. There is no need to reach the constitutional question in this case, since whatever the legal merits of the issue, the Governor has submitted these contracts to the legislature for its approval and will be bound by its decision.

Op. Att'y Gen. February 23, 1977. In other words, although the attorney general felt that the requirement of legislative approval might be unconstitutional, he chose not to address the issue since the governor had agreed not to challenge the statute. If the present administration were to challenge the provisions of CSHB 384 (HESS), the same constitutional issues would arise. In my opinion, such a challenge could fail because of the legislature's unique

power to govern in the unorganized borough. I would caution, however, that the exact meaning of Article X, section 6 is not clear and the question is still an open one.

You should also be aware that the provisions in this draft of the committee substitute relating to tenure of chief school administrators differ from your draft request slightly. My understanding is that you wish to provide that a chief school administrator may not acquire tenure and a teacher must forfeit tenure if appointed to the position of chief school administrator. Your draft request did not cover the possibility of a teacher who has already acquired tenure before being appointed chief school administrator. Accordingly, the enclosed draft amends two sections of Title 14 to provide that a chief school administrator forfeits tenure upon appointment and may not acquire tenure after appointment.

KBL:ljb
19/001

Section 6. AS 14.45.030 Sentance addition to paragraph (c).

Such schools shall report annually the number of students enrolled in each grade and provide a copy of the school calendar to the department.

Such schools shall maintain adequate student records, including all information required of public schools for immunization, physical examinations, testing and illness taken while in attendance at the religious school.

BY THE HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

IN THE HOUSE

CS FOR HOUSE BILL NO. 357 (HESS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the regulation of religious schools."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.07.020(8) is amended to read:

(8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries as defined in AS 47.35.080(4) excluding educational component of pre-elementary schools and nurseries operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding; pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

* Sec. 2. AS 14.30.010(b)(1) is amended to read:

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; [OR]

(C) except as provided in (D) of this paragraph, attendance at a private school in which the average student proficiency is not less than the average proficiency found in the public schools in the area as measured by national achievement

tests; the [department] with assistance from representatives of the private schools shall adopt [PROMULGATE] regulations defining the subject areas to be tested and the minimum average scores to be achieved; or

(D) attendance in an educational program operated in compliance with AS 14.45 by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding;

* Sec. 3. AS 14.45 is amended by adding a new section to read:

Sec. 14.45.025. EXEMPTION FROM EDUCATION LAWS. A religious school that complies with this chapter is exempt from other provisions of state law and regulations relating to education except laws and regulations relating to health, fire safety, sanitation, immunization, and physical examinations.

* Sec. 4. AS 14.45.030 is amended to read:

Sec. 14.45.030. ATTENDANCE AND ANNUAL REPORTS REQUIRED. (a) Except as provided in (b) and (c) of this section, teachers [TEACHERS] and others in charge of private or denominational schools shall make regular monthly attendance reports and annual reports to the commissioner in the same manner as teachers and superintendents in the public schools.

* Sec. 5. As 14.45.030 is amended by adding new subsections to read:

(b) The parent or guardian of a child enrolled in a religious school that complies with this chapter shall file annual enrollment [and attendance records] for the child with the public school superintendent for the area in which the child resides on a form provided by the public school superintendent. The form shall be signed by the parent and the chief administrative officer of the religious school and returned to the public school superintendent by the parent. The

religious school
parent shall notify the public school superintendent immediately if the child is no longer enrolled in or attending the religious school.

(c) A religious school that elects to comply with this chapter shall maintain monthly attendance records for each student enrolled in the school and shall operate on a regular schedule, excluding reasonable holidays and vacations, during at least nine calendar months 180 days of the year.

* Sec. 6. AS 14.45 is amended by adding new sections to read:

Sec. 14.45.035. STANDARDIZED TESTING REQUIREMENTS. (a) A religious school that elects to comply with this chapter shall administer a nationally standardized test selected by the chief administrative officer of the religious school to all students enrolled in grades one, three, six, and nine at least once each school year.

(b) The nationally standardized test must measure achievement in English grammar, reading, spelling, and mathematics.

(c) A religious school shall maintain records of the results of the nationally standardized tests and the records shall be made available to the parent or guardian of the student and to authorized representatives of the state. Word written amendment by Hale

Sec. 14.45.040. DEFINITION. In this chapter, "religious school" means a school operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding.

* Sec. 7. AS 44.27.020(1) is amended to read:

(1) administer the state's program of education at the elementary, secondary, and adult levels, including, but not limited to, programs of vocational education and training, vocational rehabilitation, library services, correspondence courses, adult basic education, and fire-service training, but not including degree

programs of postsecondary education or an educational program operated in compliance with AS 14.45 by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding;

* Sec. 8. AS 14.45.020 is repealed.

LETTER OF INTENT

HB 357 "An Act relating to the regulation of religious schools."

The Rules Committee recognizes that operating a church school is an integral part of the free expression of religion and that schools operated by religious bodies are quite different from other private schools. Therefore, the committee's purpose in sending HB 357 to the floor and in urging its passage is to prevent possible church-state constitutional conflicts by protecting the fundamental rights of religious freedom of parents, children, and church schools in Alaska and, at the same time, to balance the state's interest in assuring that each child receives a good education. The committee specifically intends to exempt pre-elementary and nursery programs operated by religious organizations from the general supervision of the Departments of Education and of Health and Social Services.

The committee only intends to exclude from the purview of this bill those church schools that receive direct federal or state funds. This would not affect those schools that receive incidental benefits from government, such as fire or police protection, health care or other benefits to which all citizens are entitled.

Any church school that satisfies all the requirements of AS 14.45 would be exempt from any additional provision of law relating to education except those requirements of law relating to fire, health, and safety. While each church school would be subject to reasonable fire, health, and safety regulation, the Rules Committee intends to specifically limit health regulation to that regulation that is reasonably related to the state's interest in preventing and curing physical diseases. For example, the committee does not intend for the state to regulate minimum space requirements (except as it directly relates to the fire code), hours of attendance, or reasonable methods of discipline.

In summary, the Rules Committee Substitute for HB 357 balances the state's interest in ensuring that each child receives a good education with the constitutional right to religious freedom.

Respectfully submitted,

Rep. Jack Fuller
Rules Committee chairman

MEMORANDUM State of Alaska

TO: Steve Hole
Administrator
Department of Education

DATE: June 10, 1983

FILE NO: 366-657-83

TELEPHONE NO: 465-3603

SUBJECT: CSHB 357 (Rules)

FROM: Norman C. Gorsuch
Attorney General

By: Thomas H. Robertson
Assistant Attorney General
Human Services-Juneau

This memorandum is written in response to our recent telephone conversation in which you asked whether language in CSHB 357 (Rules) which would exempt certain pre-elementary schools from supervision by your agency raises a question of equal protection under the law.

A substantial question exists as to whether this and other provisions of CSHB 357 (Rules) violate the equal protection clauses of the state and federal constitutions.

Section 1 of CSHB 357 (Rules) would exclude pre-elementary schools and nurseries operated by "a church or other nonprofit religious organization that is exempt from federal taxation and does not receive direct state or federal funding" from supervision by your agency under AS 14.07.020(8). Other sections of the bill would amend AS 14.30.010 which governs compulsory attendance and would exclude other educational programs operated by these organizations from regulation by the state. In effect, this bill would establish two categories of private schools, church related and not church related, and would provide for disparate treatment of each.

To the extent CSHB 357 (Rules) is intended to assure that your agency does not infringe first amendment protections, it is unnecessary. 1/ Your agency has no power to violate the

---

1/ The first amendment to the United States Constitution provides, in part, that Congress shall make no law "respecting an establishment of religion, or prohibiting the free exercise thereof". Similar language is contained in Article 1, sec. 4, of the Alaska Constitution.

constitutional rights. To the extent CSHB 357 (Rules) would go beyond first amendment protections, it raises a serious question of equal protection under the state and federal constitutions.

Equal protection analysis under either the state or federal constitutions requires an evaluation of the purpose of the legislation at issue. CSHB 357 (Rules) does not contain a statement of purpose and none, other than that of accommodating first amendment rights, is readily apparent. If as a factual matter sufficient reasons cannot be articulated to support a distinction between these categories of private schools, then a court would probably find this legislation to deny equal protection. 2/

In an opinion dated January 24, 1983, the Attorney General for the State of Arkansas addressed the constitutionality of a similar bill under consideration in that state. That opinion, a copy of which is attached, concludes that the bill unlawfully discriminates against children in religious child care facilities and the owners and operators of non-religious facilities. In addition, it concludes that the bill may impermissably benefit religious organizations in violation of the First Amendment. Unless circumstances in this state require a different result, we would probably reach a similar conclusion if asked to undertake a more comprehensive analysis of this legislation.

2/ Generally speaking, the Fourteenth Amendment to the United States Constitution requires that disparate treatment be supported by a rational basis unless a suspect classification (race, creed, etc.) or a fundamental right is involved, in which case it must be supported by a compelling state interest. In State v. Erickson, 574 P.2d 1 (Alaska 1978), the Alaska Supreme Court established a single standard for equal protection analysis under the Alaska Constitution. This standard, which is more demanding than the federal rational basis test, requires an evaluation of the purpose of the statute and, if the purpose is legitimate, a determination whether it is substantially furthered by the means chosen. Finally, the means must be balanced against the nature of any constitutional right which may be infringed.

If you have additional questions, or desire further research in this area, please do not hesitate to contact this office.

STATE OF ARKANSAS
OFFICE OF THE ATTORNEY GENERAL
JUSTICE BUILDING, LITTLE ROCK 72201

STEVE CLARK
ATTORNEY GENERAL

(501) 371-2007

January 24, 1983

OPINION NO. 83-15

The Honorable Joseph K. Mahony
The Honorable Robert L. McGinnis
State Representatives
1983 General Assembly
State Capitol
Little Rock, AR 72201

RE: House Bill 54

Gentlemen:

I am writing in response to your request for an opinion regarding the constitutionality of House Bill 54. An examination of the bill reveals an obvious concern that House Bill 54 is legally invalid as a violation of the equal protection provisions of the Fourteenth Amendment to the United States Constitution and Article 2, Section 3 of the Arkansas Constitution.

The Fourteenth Amendment states, in pertinent part, as follows:

> No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws. [Emphasis supplied]

These constitutional provisions have consistently been interpreted to strike down statutes which discriminate between different groups of citizens or businesses which are regulated by the same legislation.

That is to say, when the law attempts to regulate a business, industry or practice, it must do so on an equal basis to all the members of the regulated class unless there is a significant difference in the way the exempted class operates its business, industry or practice and the exemption is reasonably related to the purpose of the original legislation. Jacks v. State, 219 Ark. 392, 242 S.W.2d 704; Wometco Services, Inc. v. Gaddy, 272 Ark. 452, 616 S.W.2d 466, Rayco Construction Co., Inc. v. Vorsanger, 397 F.Supp. 1105; Milnot Co. v. Douglas, 452 F.Supp. 505. See also Milnot v. Arkansas State Board of Health, 388 F.Supp. 901 and Dicks v. Nall, Mayor, 255 Ark. 357.

In the Rayco case the Court stated:

> A state may validly differentiate between people or corporations on the basis of classifications providing that the state has legitimate and significant (in some contexts a "compelling") interest in the differentiation and provided that the classification is based on some reasonable and rational criterion or criteria; however, absent an appropriate state interest or absent rational and relevant standards of classification, state-imposed differentiation amounts to unconstitutional discrimination. [Emphasis supplied]

The exemption which H.B. 54 creates is the type of "classification" which these cases address.

Therefore unless the exemption can be justified because of differences in the operation of religious child care facilities as opposed to non-religious facilities this bill appears to discriminate, unlawfully, against not one but two classes of citizens; the children the Child Care Facility Review Board Act was intended to protect and the owners and operators of non-religious facilities.

Since there is no language in the bill indicating that children in these religious facilities are fed, supervised, etc. any differently from children in secular facilities and since there is no language in the bill indicating that children in the religious facilities are any less likely to be neglected, abused or left in hazardous circumstances than children in secular facilities there is no justification for denying to the children in these centers the protection of the state and forcing the owners of secular facilities to compete with unlicensed facilities who are operating the identical kind of business.

It is important to remember in this regard that the intent of the original act, as stated at Ark. Stat. Ann. §83-904(b), is the protection of children:

> (B) In establishing requirements and standards for the granting, revoking, refusing, and suspending of a license for a Child Care Facility the Welfare Department [Child Care Facility Review Board] shall adopt such rules and regulations as will: promote the health, safety and welfare of children attending a Child Care Facility; promote safe, comfortable, and healthy physical facilities for the children who attend the Child Care Facility; insure adequate supervision of the children who attend the Child Care Facility, insure adequate supervision of the children by capable, qualified and healthy individuals; insure appropriate educational programs and activities within each Child Care Facility; and insure adequate and healthy food service where food service is offered by the Child Care Facility.

With this in mind H.B. 54 demonstrates no rational, much less compelling state interest, in exempting facilities from licensure simply because they happen to receive no state or federal money and are associated with a religious organization.

The source of the facilities' funds and its association with a religious association simply does not appear to be connected in any way with whether or not these children deserve the same protection from abuse, neglect or hazardous circumstances as children in secular centers.

Likewise the source of the facilities' money and association with a religious organization does not appear to justify compelling a secular facility to spend the money and resources necessary to comply with the original act when the religious facilities operate the identical type of business enterprise.

Since there is no language in the original act which appears to authorize the Child Care Board to interfere with the religious beliefs of any church, this exemption seems irrelevant to any need to protect the First Amendment rights of religious groups.

However, if a religion's beliefs are manifested in practices which may threaten the safety and well being of children, then the state through its police power and the doctrine of parens patriae can and should lawfully discover and prevent such dangers. See Cude v. State, 237 Ark. 927, 377 S.W.2d 816.

In the Cude case the Arkansas Supreme Court overruled parents' religious objections to having children vaccinated, saying that the state's police power superceded the dangerous beliefs of parents which threaten the well being of the children. The Court quoting the United States Supreme Court in Prince v. Massachusetts, 321 U.S. 158, said:

> The right to practice religion freely does not include liberty to expose the community or the child to communicable diseases or the latter to ill health or death.
>
> . . . Parents may be free to become martyrs themselves. But it does not follow they are free, in identical circumstances to make martyrs of their children before they have reached the age of full and legal discretion when they can make that choice for themselves.

Again however, it is important to note that the intent of the original legislation has nothing whatsoever to do with parents' religious rights or the rights of a religious association but simply with the

protection of all children, religious or not, in facilities which are religious or secular.

Therefore any argument that this exemption is necessary to protect the First Amendment rights of the prospectively exempt facilities is without support from any language in H.B.54.

In fact the bill itself appears that it may violate the doctrine of church/state separation by awarding an unjustifiable benefit to religious organizations not enjoyed by private facilities which operate identical enterprises.

Without a justifiable secular legislative purpose which neither advances or inhibits religion, the bill is, in fact also suspect from the point of view of the First Amendment. Roemer v. Maryland, 426 U.S. 736, 96 S.Ct. 2337, 49 L.Ed.2d 179

Again, it is difficult to see, from the bill itself, a secular and neutral legislative purpose for exemption of only the religious facilities. Rather it appears that this legislation is clearly intended to further the alleged religious interests of certain denominations since there is no rational justification for the exemption in view of the legislative purpose quoted above.

The courts, in reviewing a challenge to this bill, can look behind the legislation into the history of the bill, something that has been done recently in McLean v. Board of Education, 529 F.Supp. 1255 (E.D. Ark. 1982), and Epperson v. Arkansas, 363 U.S. 97, 89 S.Ct. 260, 21 L.Ed. 2d 228 (1968).

Since the burden is on those defending a discrimination to make out a claim for justification (Wengler v. Druggist Mutual Insurance Co., 446 U.S. 142, 100 S.Ct. 1540, 64 L.Ed.2d 107) I can advise you that this bill presents no such justification and the state could therefore not carry that burden in a court action.

It is important to remember that:

1. Many children in the so-called religious centers are not members, nor are their parents, of the religious facility seeking exemption. So again the particular beliefs of the religious association are irrelevent to protecting the children at the facility. Circle H and Faith Christian homes recruit children from all over Arkansas regardless of the children's religion at the time of their arriving at these facilities. The Alamo foundation solicits new born babies from all over the nation totally disregarding any beliefs of the child.

There is simply no rational justification for denying these children protection of state law because the institution they end up in, through no choice of their own, has a religious objection to licensure.

2. This exemption would not have protected Circle H Ranch because records at social services reflect it received well over $100,000 in state and federal aid.

3. Many of these children come from broken homes, and have learning disabilities which require expert counseling and often special education which, as Judge Barrier found in the Circle H case, are not available at some of these facilities. These are children who need society's protection and assistance.

4. Health department inspections are inadequate to insure the safety of children because they do not have specific day care rules and regulations to address vital areas of the operation of a child care center such as playground safety, etc. The same is true with the Fire Marshal. Such problems were observed at the Alamo Foundation where an unfenced swimming pool and unfenced fishing pond were less than 100 feet from a playground serving 70 children.

5. Current criminal laws against child abuse are not adequate to protect children in these centers because: (1) These laws cannot operate without a report of abuse by a witness. At some facilities absolute loyalty is the rule and therefore it is unlikely that employees will file such a complaint; (2) Employees at other centers are not likely to report abuse because it may cost them their job; (3) Criminal statutes don't authorize closing the facility where abuse or neglect is practiced. They only allow prosecution of individuals. And if the only witnesses are children who are too young to testify, there is no case to take to a prosecutor although the abuse, unreported, is nonetheless occuring.

In conclusion, House Bill 54 is constitutionally suspect as being without rational justification and thus discriminates both against a large class of children and the owners and operators of secular facilities.

I am informed of the likely prospect of an immediate court challenge if the bill is enacted. In that eventuality, it is my judgment that the bill would be struck down as a violation of the constitutional provisions I have mentioned.

If I may be of assistance in providing additional information on this or other proposed legislation, please do not hesitate to contact this office.

Sincerely,

STAV. CLARK
Attorney General

IN THE HOUSE BY THE RULES COMMITTEE

CS FOR HOUSE BILL NO. 357 (Rules)

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the regulation of religious schools."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.07.020(8) is amended to read:

(8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries as defined in AS 47.35.080(4) excluding pre-elementary schools and nurseries operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive direct state or federal funding; pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

CS deletes "the educational component of"

* Sec. 2. AS 14.30.010(b)(1) is amended to read:

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; [OR]

(C) except as provided in (D) of this paragraph, attendance at a private school in which the average student proficiency is not less than the average proficiency found in the public schools in the area as measured by national achievem-

tests; the board of education [DEPARTMENT] with assistance from representatives of the private schools shall adopt [PROMULGATE] regulations defining the subject areas to be tested and the minimum average scores to be achieved; or

(D) attendance in an educational program operated in compliance with AS 14.45 by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive direct state or federal funding;

* Sec. 3. AS 14.45 is amended by adding a new section to read:

Sec. 14.45.025. EXEMPTION FROM EDUCATION LAWS. A religious school that complies with this chapter is exempt from other provisions of state law and regulations relating to education except laws and regulations relating to health, fire safety, sanitation, immunization, and physical examinations.

* Sec. 4. AS 14.45.030 is amended to read:

Sec. 14.45.030. ATTENDANCE AND ANNUAL REPORTS REQUIRED. (a) Except as provided in (b) and (c) of this section, teachers [TEACHERS] and others in charge of private or denominational schools shall make regular monthly attendance reports and annual reports to the commissioner in the same manner as teachers and superintendents in the public schools.

* Sec. 5. AS 14.45.030 is amended by adding new subsections to read:

(b) The parent or guardian of a child enrolled in a religious school that complies with this chapter shall file an annual notice of enrollment in the religious school for the child with the public school superintendent for the area in which the child resides on a form provided by the public school superintendent. The form shall be signed by the parent and the chief administrative officer of the religious school and returned to the public school superintendent by

the parent. The religious school shall notify the public school superintendent immediately if the child is no longer enrolled in or attending the religious school.

(c) A religious school that elects to comply with this chapter shall maintain monthly attendance records for each student enrolled in the school, shall operate on a regular schedule, excluding reasonable holidays and vacations, during at least 180 days of the year, and shall make an annual report to the commissioner of the number of students in each grade and the school calendar.

* Sec. 6. AS 14.45 is amended by adding new sections to read:

Sec. 14.45.035. STANDARDIZED TESTING REQUIREMENTS. (a) A religious school that elects to comply with this chapter shall administer a nationally standardized test selected by the chief administrative officer of the religious school to all students enrolled in grades one, three, six, and nine at least once each school year.

(b) The nationally standardized test must measure achievement in English grammar, reading, spelling, and mathematics.

(c) A religious school that elects to comply with this chapter shall maintain records of the results of the nationally standardized tests and the records shall be made available to the parent or guardian of the student and to authorized representatives of the state.

Sec. 14.45.040. RECORDS. A religious school that elects to comply with this chapter shall maintain adequate student records, including records of immunizations, physical examinations, testing, and courses taken at the religious school.

Sec. 14.45.045. DEFINITION. In this chapter, "religious school" means a school operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive direct state or federal funding.

* Sec. 7. AS 44.27.020(1) is amended to read:

(1) administer the state's program of education at the elementary, secondary, and adult levels, including, but not limited to, programs of vocational education and training, vocational rehabilitation, library services, correspondence courses, adult basic education, and fire-service training, but not including degree programs of postsecondary education <u>or an educational program operated in compliance with AS 14.45 by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive direct state or federal funding</u>;

* Sec. 8. AS 14.45.020 is repealed.

RE: Summary/ HB 357 "An Act relating to the regulation of religious schools"

Enclosed is material that has been gathered in an attempt to more clearly understand the issue of 'de-regulation' of church schools while maintaining some monitoring of the constitutional mandate to provide for public education. A sectional analysis of the bill has been provided by Legislative Counsel. He suggests that HB 357, as written, is probably unconstitutional with respect to the equal protection clauses of the State & Federal Constitutions.

> "The bill exempts certain private schools from requirements that apply to all other private schools..."

With the understanding of the desire and need to resolve this issue legislatively, staff has contacted Ms. Patricia Lines, Director of Law & Educations Center of the Education Commission of the States (ECS), Denver, Colorado. Ms. Lines has been working on this issue nation-wide and is extremely well versed in the objectives it encompasses. Her article, State Regulation of Private Education is enclosed for your review. Ms. Lines has been very helpful and has emphasized the need for legislative resolve through investigation of current regulation as well as the interest and need for religious school de-regulation and how best the two goals can work together. Ms. Lines also suggested that it would be in the best interest of expeditious and sound legislation for the issue to be dealt with away from the political arena; allowing each interest room for rational communication and resolution.

This issue is not easily addressed as it actually raises three constitutional issues:

1). Seperation of Church & State - First Amendment, U.S. Constitution
2). Equal Protection Clause - Fourteenth Amendment, U.S. Const. & Art. 1, Sec. 1, Ak. Const.
3). Providing Public Education - Art 7, Sec 1, Ak. Const. & U.S. Const.

With the adivce of our Legislative Counsel, in approaching the Alaska Statutes for revision, these three issues must be carefully meshed in order to be effectively implemented. A proposed Committee Substitute will be forthcoming.

PUBLICATION NOTICE -Tuesday Calendar-

Honoring - Melissa Chaney by Representative Herrmann and Senator Mulcahy

Honoring - Eugenie Williams by Representative Gruesendorf and Senator Eliason

Honoring - Kotzebue Civil Air Patrol by Representative Adams and Senator Ferguson

In Memoriam - Gordon MacDonald by Representatives Davis, Koponen, M. W. Miller, Bettisworth and Senators Fahrenkamp, Bennett and Moss

* HONORING - ROBERT AND DONNA BLAIR *

The members of the 13th Alaska Legislature wish to honor two truly amazing Alaskans who have, through an abundance of generosity and humanity, taken on the task of raising a family of 18 children!

Parents of eight children of their own, the Blair's have, through the years, opened their home and their hearts to children from other lands who are without parents. Children from Korea and India have now found a warm, loving environment here in Alaska through the totally selfless efforts of these fine Alaskans. Young people who might otherwise lead dismally bleak futures are now being educated and raised in a healthy and wholesome family setting.

Much of the news that makes the headlines today has to do with the selfish and uncaring acts of people with no interest other than their own comfort and pleasure. For that reason, and many, many others, it gives each of us genuine pleasure to be able to recognize the exceptional efforts of Robert and Donna Blair.

On behalf of all of the citizens of our State we wish to extend to them, and to the children, our fondest warm wishes and commendations. Bless you for your humanity. You have our highest respect and admiration.

SPEAKER OF THE HOUSE

PRESIDENT OF THE SENATE

Date:

Requested by: Representative Zharoff

In Memoriam

* KEVIN KOHLS *

The members of the Legislature were deeply saddened to learn of the tragic and untimely death of a valiant young Alaskan, Kevin Kohls of Juneau.

The son of Frederick and Shirley Kohls, Kevin, an enthusiastic, vital and active young man, succumbed to cancer after a lengthy battle with the disease. Kevin was born in Juneau in 1967 and attended school here. He played the piano and the trombone, was a member of the Civil Air Patrol, an active skiing enthusiast and was universally admired and respected.

We are deeply grieved that so fine and promising a young man has been taken from us and our hearts go out to Fred and Shirley and other members of the family. Many friends are equally stricken at this loss since many of them had personal knowledge of the courageous and silent battle Kevin waged against the disease.

We mourn Kevin's death. We share the grief and sense of loss experienced by Fred and Shirley Kohls. We pause for a moment to reflect on the sadly short, promising life of this fine young man and do so with total admiration for his cheerfulness and strength. The example he set will long be remembered.

CS FOR HOUSE BILL NO. 357 (HESS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the regulation of religious schools."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.07.020(8) is amended to read:

(8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries as defined in AS 47.35.080(4) excluding pre-elementary schools and nurseries operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive direct financial state or federal funding; pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

* Sec. 2. AS 14.30.010(b)(1) is amended to read:

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; [OR]

(C) except as provided in (D) of this paragraph, attendance at a private school in which the average student proficiency is not less than the average proficiency found in the public schools in the area as measured by national achievement

tests; the department with assistance from representatives of the private schools shall adopt [PROMULGATE] regulations defining the subject areas to be tested and the minimum average scores to be achieved; or

(D) attendance in an educational program operated in compliance with AS 14.45 by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding;

* Sec. 3. AS 14.45 is amended by adding a new section to read:

Sec. 14.45.025. EXEMPTION FROM EDUCATION LAWS. A religious school that complies with this chapter is exempt from other provisions of state law and regulations relating to education except laws and regulations relating to health, fire safety, sanitation, immunization, and physical examinations.

* Sec. 4. AS 14.45.030 is amended to read:

Sec. 14.45.030. ATTENDANCE AND ANNUAL REPORTS REQUIRED. (a) Except as provided in (b) and (c) of this section, teachers [TEACHERS] and others in charge of private or denominational schools shall make regular monthly attendance reports and annual reports to the commissioner in the same manner as teachers and superintendents in the public schools.

* Sec. 5. As 14.45.030 is amended by adding new subsections to read:

(b) The parent or guardian of a child enrolled in a religious school that complies with this chapter shall file annual enrollment and attendance records for the child with the public school superintendent for the area in which the child resides on a form provided by the public school superintendent. The form shall be signed by the parent and the chief administrative officer of the religious school and returned to the public school superintendent by the parent. The

parent shall notify the public school superintendent immediately if the child is no longer enrolled in or attending the religious school.

(c) A religious school that elects to comply with this chapter shall maintain monthly attendance records for each student enrolled in the school and shall operate on a regular schedule, excluding reasonable holidays and vacations, during at least nine calendar months of the year.

* Sec. 6. AS 14.45 is amended by adding new sections to read:

Sec. 14.45.035. STANDARDIZED TESTING REQUIREMENTS. (a) A religious school that elects to comply with this chapter shall administer a nationally standardized test selected by the chief administrative officer of the religious school to all students enrolled in grades one, three, six, and nine at least once each school year.

(b) The nationally standardized test must measure achievement in English grammar, reading, spelling, and mathematics.

(c) A religious school shall maintain records of the results of the nationally standardized tests and the records shall be made available to the parent or guardian of the student and to authorized representatives of the state.

Sec. 14.45.040. DEFINITION. In this chapter, "religious school" means a school operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding.

* Sec. 7. AS 44.27.020(1) is amended to read:

(1) administer the state's program of education at the elementary, secondary, and adult levels, including, but not limited to, programs of vocational education and training, vocational rehabilitation, library services, correspondence courses, adult basic education, and fire-service training, but not including degree

programs of postsecondary education or an educational program operated in compliance with AS 14.45 by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding;

* Sec. 8. AS 14.45.020 is repealed.

Representative Mae Tischer
State Capitol
Pouch V
Juneau, Alaska 99811

Dear Representative Tischer:

I enclose an article taken from the book, Rebirth of Our Nation, by Donald R. Howard, P.H.D. which explains why Eagle Forum members across our state cannot ever support licensing of private schools.

Basically the reasons include:
Licensing paves the way for loss of freedom of religion, it entangles the State with the Church and it violates parental rights, which is recognized by nature, history, the state, and law.

Farrington v.Takushige, 1927
Meyer v. Nebraska , 1923
Pierce v. Society of Sisters, 1925
Wisconsin v. Yoder, 1972

Let's work together to end atrocities constitutionally, while protecting the unalienable rights built into the foundation of our great nation."

Please support HB 357 and SB 261.

Sincerely,
Sue Miller
Sue Miller
Pres.Eagle Forum
Juneau/Douglas Chp.

V. PRACTICALLY

We agree that there are atrocities. We disagree about how to eliminate them.

1. Licensure is ineffective. Never has there been more licensure, certification, accreditation, registration, and approval, but never have there been more atrocities. Children are kept in cages; one child dies. Where? In a licensed facility. Jim Jones types stand first in line to receive their licenses. They need such to make their "ministries" appear legitimate to the public and acceptable to receive thousands of dollars in government funds.
2. Licensure is duplicative. Why do we need two bureaucrats to check the same thing? Fire marshals and welfare workers check the same things, sometimes with conflicting requirements. Why couldn't churches be checked by local fire marshals, health officers, and building inspectors who point out compelling interest areas, regulation by regulation, but without licensure? If conflict arose concerning a particular regulation, the recourse would be the court which could decide compelling interest.
3. Licensure is subjective. Someone said OSHA's new building in Washington violates over 1,700 of its own regulations. Everyone under administrative standards realizes the standards mean one thing to one representative, and another thing to a different representative. With the 1,600 minimum standards for schools in Ohio, you could close any school (government or private) in the state. Under oath, one of the heads of the Ohio education department admitted he did not know of even one school in the whole state which met the standards. This licensure can be a vicious weapon in the hands of a discriminating representative. Would some "Baptist" inspector tend to overpower a "Mormon" day care?
4. Licensure is inconsistent. Again and again the State is saying a certain standard is necessary to make the building safe on Monday but unnecessary on Sunday. A room is considered safe for 130 children on Sunday but unsafe for 25 children on Monday. Compelling interest would require consistent protection on every day. If it is right to license the Christian Monday school, it is right to license the Sunday school. If the State must license the day care, the State must also license the nursery on Sunday morning. There is no difference. Children are on the church premises on Sunday without the parents being present. Academics are taught in the Sunday school. Child care takes place on Sunday. Money is given on Sunday. What's the difference?
5. Licensure is hypocritical. "The worst place a teenager can be today is in the public school system," said Joseph Califano (Secretary of H.E.W.) The National Institute of Education reports $600 million in vandalism, 5,000 teachers assaulted, 1 out of 80 children attacked on school property, etc. Rapes, narcotics, and murder have brought guards into the hallways — all in licensed state-run facilities. Yet the same things are nonexistent in the better than 10,000 Christian schools. Why would the Christian ministries need the advice, approval, and licensure of the State? Better, the State should learn from the church. Why would parents pay $60 or more per month in addition to their school taxes for the privilege of placing their child in an institution inferior to the one just down the street where the child could enter free?

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M May 14, 1983

SUBJECT: Regulation of religious schools (CSHB 357 (HESS))

TO: Representative Milo Fritz
Chairman, Health, Education, and Social Services Committee

FROM: Keith B. Levy KBL
Legislative Counsel

Enclosed is a copy of CSHB 357 (HESS), relating to the regulation of religious schools. The bill raises a number of constitutional questions. Because these constitutional requirements must be balanced against one another, there is virtually no way to guarantee that the bill is valid. In my opinion, however, the bill does a good job of balancing the constitutional requirements and is probably not unconstitutional.

In regulating religious schools, the state must consider the "free exercise" and "establishment" clauses of the state and federal constitutions. These provisions essentially prohibit the state from unduly burdening the free exercise of religion and from becoming so involved in the regulation of religious schools as to encourage or inhibit religious activity. On the other hand, the "equal protection" clauses of the state and federal constitutions require the state to justify treating religious schools differently from other private schools. Moreover, while the state may not excessively regulate religious schools, it also has an obligation to provide a reasonable education to school age children. Reconciling these different interests with one another is no easy task and it is difficult to predict which of these will take precedence in the courts.

CSHB 357 (HESS) exempts certain religious schools from all state laws and regulations relating to education except laws concerned with health, fire safety, sanitation, immunization, and physical examinations if the schools agree to comply

with certain minimal statutory requirements. The schools affected by the bill are those that are operated by a church or other religious organization that is exempt from federal taxation and do not receive state or federal funding (AS 14.45.040). Children attending these schools are exempt from the state's compulsory attendance law (AS 14.30.010). The schools that opt to comply with the minimal statutory requirements must maintain attendance and enrollment records (AS 14.45.030(b)), notify the public school superintendent if a child is no longer enrolled or attending (AS 14.45.030(b)), administer a nationally standardized test to be selected by the individual schools that measures English grammar, reading, spelling, and mathematics (AS 14.45.035), and operate on a regular nine month schedule (AS 14.45.030(c)). Parents of children attending these schools must file enrollment and attendance records with the local public school superintendent (AS 14.45.030(b)). Religious schools that choose not to comply with these standards remain subject to the same regulations as all other private schools.

The First Amendment to the United States Constitution and Article I, section 4 of the Constitution of the State of Alaska provide

> No law shall be made respecting an establishment of religion, or prohibiting the free exercise thereof.

The free exercise clause has been interpreted to mean that the state may not unduly burden the right of a parent, child, or church to freely exercise a particular religion, unless the state can show a compelling state interest. Sherbert v. Verner, 374 U.S. 398 (1968). Even when the state can show a compelling interest in regulating religious schools, it must also show that the regulation is by the least burdensome means.

CSHB 357 (HESS) allows the state to regulate health and safety standards, to require certain standardized tests, and to assure regular attendance by the children. None of these requirements appears to be unduly burdensome on the free exercise of religion. The state clearly has a compelling interest in maintaining health and safety standards and these standards, if reasonable, generally have no connection to the exercise of religion. The interest justifying the standardized test requirement is the state's obligation to provide an education for children. The requirement is not unduly burdensome because the individual schools are

permitted to select the test of their choice provided that the test measures achievement in certain basic areas. Beyond that, the bill does not regulate curriculum in the religious schools. Finally, the bill requires certain attendance reports from the schools and the parents of children attending them. Again, the reporting requirements are minimal and are justified by the state's interest in assuring that the children are receiving an education. Accordingly, the bill probably does not infringe on the right to the free exercise of religion.

The analysis of the bill under the establishment clause is similar to that under the free exercise clause. Legislation must be substantially neutral toward religion. Epperson v. Arkansas, 393 U.S. 97 (1968). Excessive entanglement in the regulation of religious organizations is not permitted. Lemon v. Kurtzman, 403 U.S. 602 (1971).

The bill minimizes the state's involvement in regulating religious schools by exempting them from the state's general education regulations if the schools agree to comply with certain minimal standards. Of these standards, the only one that might present a problem by excessively involving the state in the regulation of religion is the attendance reporting requirement. In Surinach v. Pesquera de Busquets, 604 F.2d 73 (1st Cir. 1979), the court found state requirements that religious schools release extensive financial and other data unconstitutional. The statute challenged in that case can be distinguished from CSHB 357 (HESS), however, because the bill only requires attendance reports, the reports must be released by the parents, and they can be justified by the state's obligation to ensure that children receive an education. The attendance reports are probably not an excessive entanglement by the state in the regulation of religious schools.

The equal protection clauses of the Fourteenth Amendment of the United States Constitution and Article I, section 1 of the Constitution of the State of Alaska require the state to justify the statutory creation of a class based on religion. The classification

> . . . must be reasonable, not arbitrary, and must rest upon some ground of difference having a fair and substantial relation to the object of the legislation, so that all persons similarly circumstanced shall be treated alike.

Isakson v. Rickey, 550 P.2d 359, 363 (Alaska 1976). CSHB 357 (HESS) creates a class of religious schools which are exempt from most state regulations that apply to other private schools. Since the exemptions are substantially tied to the free exercise of religion, however, they can be justified on the basis that there is a substantial relationship between the exemptions and the goal of the legislation. Only if the exemptions were not tied to the exercise of religion or some other valid governmental purpose would the bill violate the equal protection clause.

The bill's deregulation of religious schools may raise a problem with respect to the state's obligation to provide an education to all children in the state. It is not clear, however, that this obligation is mandated by the constitution. Article VII, section 1 of the Constitution of the State of Alaska provides, in part,

> The legislature shall by general law establish and maintain a system of public schools open to all children of the State, and may provide for other public educational institutions.

It is not clear whether this provision merely obliges the state to provide the opportunity for an education to all children of the state, or if it includes the obligation to ensure that they actually receive an education. If the latter is true, then the state would be restricted in the degree to which it may deregulate religious schools. Even if that is the case, however, CSHB 357 (HESS) probably does impose sufficient requirements on the religious schools to ensure a minimal level of quality of education. Thus, the bill probably does not violate any obligation the state has to provide an education to children in the state.

In conclusion, CSHB 357 (HESS) is probably constitutional although the necessary balancing of constitutional requirements makes it difficult to be certain of this. Ideally, legislation regulating religious schools will place minimal burdens on the schools and require minimal state involvement while requiring the schools to meet minimal educational requirements to ensure that the children are receiving an education. In my opinion, the bill successfully strikes this balance.

HOUSE BILL NO. 357

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the regulation of religious schools."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.07.020(8) is amended to read:

(8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries as defined in AS 47.35.080(4) excluding pre-elementary schools and nurseries operated by a church or other nonprofit religious organization that is exempt from federal taxation if the program does not receive direct financial state or federal funding; pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

* Sec. 2. AS 14.30.010(b)(1) is amended to read:

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; [OR]

(C) except as provided in (D) of this paragraph, attendance at a private school in which the average student proficiency is not less than the average proficiency found in the public schools in the area as measured by national achievement

tests; the department with assistance from representatives of the private schools shall adopt [PROMULGATE] regulations defining the subject areas to be tested and the minimum average scores to be achieved; or

(D) attendance in an educational program operated by a church or other nonprofit religious organization that is exempt from federal taxation if the program does not receive state or federal funding;

* Sec. 3. AS 14.45.020 is amended to read:

Sec. 14.45.020. COMMISSIONER MAY FURNISH EXAMINATION QUESTIONS FOR AND GRANT DIPLOMAS TO EIGHTH GRADE PUPILS. The commissioner may furnish final examination questions for the eighth grade pupils in private [AND DENOMINATIONAL] schools not operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding and grant eighth grade diplomas in the same manner as in the public schools.

* Sec. 4. AS 14.45.030 is amended to read:

Sec. 14.45.030. ATTENDANCE AND ANNUAL REPORTS REQUIRED. Teachers and others in charge of private [OR DENOMINATIONAL] schools not operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding shall make regular monthly attendance reports and annual reports to the commissioner in the same manner as teachers and superintendents in the public schools.

* Sec. 5. AS 44.27.020(1) is amended to read:

(1) administer the state's program of education at the elementary, secondary, and adult levels, including, but not limited to, programs of vocational education and training, vocational rehabilitation, library services, correspondence courses, adult basic

education, and fire-service training, but not including degree programs of postsecondary education or an educational program operated by a church or other nonprofit religious organization that is exempt from federal taxation if the program does not receive state or federal funding;

Chapter 07. Administration of Public Schools.

Sec. 14.07.010. Department of Education. The Department of Education includes the commissioner of education, the State Board of Education, and the staff necessary to carry out the functions of the department. (Sec. 1 ch 98 SLA 1966)

Sec. 14.07.020. Duties of the department. The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state and adopt or recommend plans for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public schools;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools which meet accreditation standards prescribed by regulation by the department; these shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house; (am Sec. 1 ch 126 SLA 1978)

(7) prescribe by regulation, after consultation with the Department of Health and Social Services, standards that will assure healthful and safe conditions in the public and private schools of the state; the standards for private schools may not be more stringent than those for public schools; (am Sec. 2 ch 126 SLA 1978)

(8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private preelementary schools and over the educational component of nurseries as defined in AS 47.35.080(4); preelementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational.

(9) provide accredited elementary and secondary correspondence study programs available to any Alaskan through a centralized office of correspondence study.

(Sec. 1 ch 98 SLA 1966; am Sec. 2 ch 69 SLA 1971; am Sec. 6 ch 104 SLA 1971; am Sec. 1 ch 190 SLA 1975; am Sec. 6 ch 50 SLA 1977)

(10) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine the extent of eligibility for state aid of a school construction project begun after the effective date of this act; for purposes of this paragraph, a "plan" includes educational specifications, schematic designs, and final contract documents.

(11) accredit private elementary and secondary schools which request accreditation and which meet accreditation standards prescribed by regulation by the department.

(am Sec. 3 ch 126 SLA 1978)

(12) provide educational opportunities in the areas of vocational education and training, basic education, and fire-service training to individuals over 16 years of age who are no longer attending school. (am Sec. 1 ch 86 SLA 1979)

Sec. 14.07.030. Powers of the department. The department may

(1) establish, maintain, govern, operate, discontinue, and combine area, regional, and special schools;

(2), (3) and (4) Repealed Sec. 1 ch 205 SLA 1970.

(5) enter into contractual agreements with the Bureau of Indian Affairs or with a school district to share boarding costs of secondary school students;

(6) provide for citizenship night schools when and where expedient;

(7) provide for the sale or other disposition of abandoned or obsolete buildings and other state-owned school property;

(8) prescribe a classification for items of expense of school districts;

(9) acquire and transfer personal property, acquire real property, and transfer real property to federal agencies, state agencies, or to political subdivisions;

(10) enter into contractual agreements with school districts to provide more efficient or economical educational services;

(11) provide for the issuance of elementary and secondary diplomas to persons not in school who have completed the equivalent of an eighth or twelfth grade education, respectively, in accordance with standards established by the department;

(12) exercise disapproval power under AS 14.08.100. (Sec 1 ch 98 SLA 1966; am Sec 1 ch 66 SLA 1968; am Sec 2, 3, 4 ch 46 SLA 1970; am Sec 1 ch 161 SLA 1975)

Sec. 14.07.040. Repealed. (Sec 34 ch 46 SLA 1970)

Sec. 14.07.050. Selection of textbooks.

(a) Textbooks for use in the public schools of the state shall be selected by district boards for district schools . . by a State Schools Textbook Committee appointed by the director for state schools. Selections of the State Schools Textbook Committee shall be submitted to the Board of Directors for State-Operated Schools for approval or rejection.

(b) However, a district may elect to adopt the selection of the State Schools Textbook Committee. (Sec 1 ch 98 SLA 1966; am Sec 1 ch 96 SLA 1970; am Sec 2 ch 205 SLA 1970)

Sec. 14.07.052. Repealed. (Sec 2 ch 96 SLA 1970)

Sec. 14.07.053. Alaska School Activities Association.

(a) There is created within the Department of Education the Alaska School Activities Association.

(b) The purposes of the association are to provide for the efficient governing of interscholastic activities through the promotion of those activities and other inter-school contests or programs sanctioned by the association and to assist in the promotion of those other activites and interests as may from time to time elect.

(c) A public or private school or school district in the state may become a member of the association if it applies for membership. The Department of Education shall make applications available to all public or private schools or school districts in the state.

(d) The governing body of the association shall be the board of control with at least one member from each judicial district on the board of control. A member of the board shall be elected from each regional activities association by the members of that region. The term of office for each member is two years, except that one-half of the members elected to the first elected board shall be elected for one-year terms under regulations prescribed by the commissioner of education.

(e) The board in consultation with the Department of Education shall appoint an executive secretary, prescribe his duties and fix his compensation. He shall serve at the pleasure of the board.

(f) The board of control of the existing Alaska High School Activities Association in office on the effective date of this Act shall serve as the initial board of control for no longer than six months.

(g) The Department of Education shall approve the association's constitution and bylaws to ensure that all regions of the state are treated on a equitable basis and in the best interests of the state. (Sec 1 ch 128 SLA 1976)

Sec. 14.07.054. Alaska School Activities Fund.

(a) The Alaska school activities fund is established within the Department of Education.

(b) The commissioner of education shall review the budget request of the Alaska School Activities Association and request a sum he approves that is equitable to all regions of the state.

(c) School districts and member schools of the Alaska School Activities Association may appropriate money to the fund. (Sec 1 of 128 SLA 1976)

10. When attendance compulsory
20. Violation
30. Report of violations and procedures
40. Repealed
45. Grounds for suspension or denial of admission
47. Admission or readmission, when cause no longer exists
50. Truant officers

Sec 2 →

Sec. 14.30.010 When attendance compulsory. (a) Every child between seven and 16 years of age shall attend school at the public school in the district in which the child resides during each school term. Every parent, guardian or other person having the responsibility for or control of a child between seven and 16 years of age shall insure that the child is not absent from attendance.

(b) This section does not apply if a child

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; or

(C) attendance at a private school in which the average student proficiency is not less than the average proficiency found in the public schools in the area as measured by national achievement tests; the Department of Education with assistance from representatives of the private schools shall promulgate regulations defining the subject areas to be tested and the minimum average scores to be achieved;

(am Sec. 4 ch 126 SLA 1978)

(2) attends a school operated by the federal government;

(3) has a physical or mental condition which a competent medical authority determines will make attendance impractical;

(4) is in the custody of a court or law enforcement authorities;

(5) is temporarily ill or injured;

(6) has been suspended or denied admittance according to sec. 45 of this chapter;

(7) resides more than two miles from either a public school or a route on which transportation is provided by the school authorities, except that this subsection does not apply if the pupil resides within two miles of a federal or private school which he is eligible and able to attend;

(8) is excused by action of the school board of the district at a regular meeting or by the district superintendent subject to approval by the school board of the district at the next regular meeting; (am Sec. 1 ch 10 SLA 1977)

(9) has completed the 12th grade;

(10) is enrolled in a full-time program of correspondence study approved by the department; in those school districts providing an approved correspondence study program, a student may be enrolled either in the district correspondence program or in the centralized correspondence study program;

(11) is equally well-served by an educational experience approved by the school board as serving his educational interests despite an absence from school, the request for excuse is made in writing by his parents or guardian, and approved by the principal or administrator of the school he attends. (am Sec. 1 ch 30 SLA 1976)

(Sec. 37-7-1 ACLA 1949; am Sec. 36 ch 98 SLA 1966; am Sec. 5 ch 71 SLA 1972; am Sec. 5 ch 190 SLA 1975)

(B) a person eligible to be admitted to an accredited postsecondary educational institution; and

(3) establishes financial need in accordance with standards for determining financial need adopted by the committee under 20 USC sec.1070c-2.

(b) The committee shall, by regulation, establish a system of priority in the selection of recipients of grants under sections 930—960 of this chapter under which students from "low income" families or whose incomes are considered "low income" shall be given preference in the award of the educational incentive grants.

Sec. 14.40.950. Limitation on grants. (a) No grant made under sections 930—960 of this chapter may be in an amount less than $100 nor more than $1,500 for each academic year.

(b) A grant awarded under sections 930—960 of this chapter may be used by a student only at an accredited postsecondary educational institution.

Sec. 14.40.955. Confidentiality of certain information. All information submitted in support of a determination of financial need as provided in this chapter is confidential. However, an applicant may inspect or copy information from his own application, or records relating to his own application, or authorize release of the application or records to designated individuals or organizations.

Sec. 14.40.960. Definitions. In sections 930—960 of this chapter

(1) "resident" means a person who, except for brief intervals, military service, attendance at an educational or training institution, or for absences for good cause shown, has resided in Alaska and who has maintained his domicile in Alaska; domicile is the true and permanent home of a person from which he has no present intention of moving and to which he intends to return whenever he is away;

(2) "undergraduate" means a student who has not completed a baccalaureate, graduate or professional degree.

(am Sec. 1 ch 51 SLA 1978)

Chapter 45. Private and Denominational Schools

Section
10. Repealed
20. Commissioner may furnish examination questions for and grant diplomas to eighth grade pupils
30. Attendance and annual reports required

Sec. 14.45.010. Repealed. (Sec. 59 ch 98 SLA 1966)

Sec 3

Sec. 14.45.020. Commissioner may furnish examination questions for and grant diplomas to eighth grade pupils. The commissioner may furnish final examination questions for the eighth grade pupils in private and denominational schools and grant eighth grade diplomas in the same manner as in public schools. (Sec. 37-11-2 ACLA 1949)

Sec 4

Sec. 14.45.030. Attendance and annual reports required. Teachers and others in charge of private or denominational schools shall make regular monthly attendance reports and annual reports to the commissioner of education in the same manner as teachers and superintendents in the public schools. (Sec. 37-11-3 ACLA 1949)

Chapter 47. Regulation of Educational Institutions. Repealed. (Sec. 5 ch 25 SLA 1976)

Legislative history report. — For report on ch. 190, SLA 1972 (CSHB 499 am), see 1972 House Journal, p. 744.

Sec. 44.25.036. Repayment of loans. Repayment of loans under AS 44.25.030 — 44.25.038 shall be on an annual basis with repayment commencing no later than 90 days after receipt of funds authorized to be appropriated from the Alaska Native Fund to the regional corporation under § 6(a) (1) (A), P.L. 92-203. (§ 1 ch 190 SLA 1972)

Sec. 44.25.038. Expiration of loan program. Because the purposes for which the loan program is created are limited, no loan may be made after five years from October 4, 1972. The program shall be inoperative 10 years from October 4, 1972. (§ 1 ch 190 SLA 1972)

Article 1. Board and Department of Education.

Section
10. Board and commissioner of education
20. Duties of department

Sec. 44.27.010. Board and commissioner of education. There is at the head of the Department of Education a Board of Education. The commissioner of education is the principal executive officer of the department. (§ 11 ch 64 SLA 1959; am § 12 ch 96 SLA 1967)

Am. Jur. 2d references. — 63 Am. Jur. 2d, Public Officers and Employees, § 371; 68 Am. Jur. 2d, Schools, §§ 37 — 55; 72 Am. Jur. 2d, States, Territories and Dependencies, § 62.

Sec. 44.27.020. Duties of department. The Department of Education shall

(1) administer the state's program of education at the elementary, secondary, and adult levels, including, but not limited to, programs of vocational education and training, vocational rehabilitation, library services, correspondence courses, adult basic education, and fire-service training, but not including degree programs of postsecondary education;

(2) administer the historical library;

(3) plan, finance and operate related school and educational activities and facilities. (§ 11 ch 64 SLA 1959; am § 77 ch 69 SLA 1970; am § 5 ch 86 SLA 1979)

CHAPTER 60. PRE-ELEMENTARY (EARLY CHILDHOOD) SCHOOL

Section

10. Requirements
20. Exemption
30. Application for a certificate of approval
40. Denial of approval; hearing
50. Duration of approval
60. Display of certificate
70. Certificate of approval

150. Changes in major written policies, plans, programs
160. Nondiscrimination
170. Programmatic requirements of the pre-elementary schools
175. Transportation
180. Definitions

4 AAC 60.010. REQUIREMENTS. (a) Every person, institution or agency operating a school for children ages three through five years, when the school's primary function is educational, shall apply to the department for a certificate of approval.

(b) The educational component of all pre-elementary programs is under the general supervision of the department in cooperation with the Department of Health and Social Services. Those programs not approved by the Department of Education are supervised by the Department of Health and Social Services.

(c) Before admitting a child whose school expenses could be the responsibility of departments of state government, authorization of eligibility should be requested from the appropriate department by the school. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060
AS 14.35.080(4)

4 AAC 60.020. EXEMPTIONS. The following are exempt from 4 AAC 60.010:

(1) schools maintained by the United States or funded entirely with federal funds;

(2) courses of instruction on religious subjects given under the auspices of a religious organization, such as church schools, vacation Bible schools, or similar denominational programs;

(3) schools that enroll six children or less. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.030. APPLICATION FOR A CERTIFICATE OF APPROVAL. (a) Application for a certificate of approval must be submitted on a form prescribed by the department.

(b) No pre-elementary school may represent that its program has a sponsorship, approval, characteristics, affiliation, or accreditation which it does not have, nor may any school cause a likelihood of confusion or misunderstanding as to any of these matters.

(c) Before issuing a certificate of approval, the department shall conduct an investigation of the applicant, including the proposed plan for the education and supervision of children and the mode of operation of the pre-elementary school. If the results of the investigation reveal that the primary purpose of the school is educational and that applicable regulations adopted by the department are satisfied, a regular certificate of approval shall be issued.

(d) The department may grant a conditional certificate of approval for programs with minor deficiencies correctable within a time specified on the permit, but not exceeding six months. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.040. DENIAL OF APPROVAL; HEARING. (a) A school or program denied a certificate of approval by the department is entitled to a hearing before the state Board of Education at a regular meeting of the board if a written appeal is received by the commissioner within 15 days of the date of denial of certification.

(b) The decision of the board on the appeal is final. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.050. DURATION OF APPROVAL. (a) A certificate of approval remains in effect for a period of no more than five years from date of issuance.

(b) A certificate may be revoked or suspended for failure to comply with the requirements of this chapter or other statutes and regulations governing the health, safety and welfare of students and employees.

(c) If the department has reasonable cause to believe that the holder of a certificate has failed to comply with this chapter or other applicable statutes and regulations, it may notify the holder of the basis for its belief and schedule a hearing on the matter to determine whether the certificate should be revoked or suspended. The commissioner shall appoint a hearing officer to preside over the hearing and to control its proceedings. The hearing shall be public, and all interested persons who have information relevant to the inquiry shall be permitted to be heard or to submit written statements and arguments, or both. A record shall be kept of the hearing.

(d) Following the hearing, the hearing officer shall prepare his findings and conclusions and recommend appropriate action to the commissioner. The commissioner shall review the hearing officer's recommendations and decide what, if any, action should be taken.

(e) A certificate holder whose certificate has been revoked or suspended by the commissioner may request, in writing and within 15 days of receiving notification of the commissioner's decision, that the board review that decision. A review will be made by the board or a committee of the board in the same manner as that provided in 4 AAC 60.040. The decision of the board is final. (Eff. 4/20/73,

Reg. 45; am 5/20/77, Reg. 62)
Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.060. DISPLAY OF CERTIFICATE. The certificate of approval must be displayed in a prominent place in the pre-elementary school. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)
Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.070. CERTIFICATE OF APPROVAL. The certificate of approval must include

(1) name of pre-elementary school;

(2) address of pre-elementary school;

(3) maximum allowable number of children;

(4) effective dates of certificate;

(5) ages of children to be enrolled;

(6) minimum number of staff members required to be in attendance while children are present. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)
Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.080. INSURANCE. (a) Each nonpublic, pre-elementary school must have bodily injury liability insurance in an amount not less than $100,000 per child, $300,000 per accident, with a company authorized to do business in the State of Alaska. Policies must contain the following endorsement:

"In the event of cancellation of this policy, the company agrees to give 30 days' advance notice to the Department of Education, Pouch F, Juneau, Alaska 99811."

(b) If the insurance required under (a) of this section is allowed to lapse more than once in a 12-month period, the second policy lapse is grounds for termination of approval. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)
Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.090. RECORDS. The pre-elementary school shall maintain an individual record for each pupil enrolled which must contain not less than the following:

(1) child's full name, birth date, and current address;

(2) name and address of parents or legal guardians;

(3) telephone numbers and instructions how the parents may be reached during school hours;

(4) names and addresses of persons authorized to take the child from school;

(5) a record indicating the immunization status of the child;

(6) a Cumulative Health Record Form. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)
Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.100. PHYSICAL EXAMINATION FOR CHILDREN. (a) Not more than three months before first entering school, each child must have a tuberculosis skin test which meets the requirements of 7 AAC 27.213.

(b) Before first entering school, each child must have received the immunizations required by 4 AAC 06.055. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62; am 8/17/78, Reg. 67; am 9/24/82, Reg. 83)
Authority: AS 14.07.020(7) and (8)
AS 14.07.060
AS 14.30.070

4 AAC 60.110. PHYSICAL EXAMINATIONS FOR EMPLOYEES AND VOLUNTEERS. Repealed 5/20/77.

4 AAC 60.115. STAFF. (a) All staff members must have a physical examination annually and not more than three months before initial employment in the pre-elementary school. This

physical examination must include proof of negative Tine test. It is the responsibility of the operator to maintain a personnel file for each employee in which the results of the current physical examination are kept. This file is subject to inspection by the department.

(b) All volunteers who work in the classroom or who provide direct services to children must present to the operator proof of a negative Tine test taken not more than three months before initial service. This test must be repeated annually.

(c) Schools subject to the provisions of this chapter shall comply with all applicable statutes and regulations concerning labor and employment practices. (Eff. 5/20/77, Reg. 62)

Authority: AS 14.07.020(7) and (8)
AS 14.07.060

4 AAC 60.1[illegible]. RECOGNITION OF SPECIAL NEEDS. At the age of three years, an exceptional child may receive special assistance as a part of the local school district's annual plan of services for special education. Any pre-elementary school which provides services for an exceptional child and receives state funds for providing those services must adhere to state guidelines for special education programs. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060
AS 14.30.180

4 AAC 60.130. DISASTER PLAN. Each pre-elementary school shall develop a disaster plan which must include provisions for accountability for each child in the school until he is released to an appropriate authority. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(7) and (8)
AS 14.07.060

4 AAC 60.140. FACILITY INSPECTIONS. (a) Each pre-elementary school shall request an inspection by public safety and health agencies and shall conform to standards established by those agencies.

(b) Copies of documents indicating satisfactory compliance with health and safety standards must be filed with the department before the issuance of a certificate of approval. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(7) and (8)
AS 14.07.060

4 AAC 60.150. CHANGES IN MAJOR WRITTEN POLICIES, PLANS, PROGRAMS. Major changes in written policies, plans, programs and other information included in the initial application must be transmitted to the department within 30 days following implementation of the change. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.160. NONDISCRIMINATION. No pre-elementary school will be approved unless it adopts a policy of nondiscrimination in respect to race, sex, creed, color or religion with the following exceptions:

(1) a pre-elementary school established for an identified group (e.g., physical-mental handicaps) may serve that group only but otherwise may not discriminate;

(2) a religious group may elect to serve children that adhere to its religious beliefs but otherwise may not discriminate. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.170. PROGRAMMATIC REQUIREMENTS OF THE PRE-ELEMENTARY SCHOOLS. (a) The pre-elementary school shall provide the following information, in writing, to the department: the philosophy of education; the goals and objectives of the school; the program model and teaching techniques used in achieving the stat[illegible]d goals and objectives; daily educational activities schedule including provisions for individual activities, small group activities and large group activities; the number and ages of the children to be served along with the number of staff members working with the children; provisions for parental involvement; a copy of all public advertisements regarding the school; a copy of the personnel and administrative rules of the school; and a copy of all administrative forms used by the school.

(b) A pre-elementary school must have

sufficient staff to provide for each child's physical care and to offer individual attention to children as it may be needed as well as time to interact with children for the benefit of their conceptual and language growth. The number of staff and their utilization should reflect programmatic requirements, differences in the needs of the children served and should permit flexible groupings.

(c) There must be at least two staff members, one of whom may be a teacher-aide, present in each building. They must be stationed in sufficient proximity to be of aid in emergency situations.

(d) The operator shall provide a written training plan for each staff member who serves in the capacity of teacher, teacher-aide or assistant teacher. This plan must include provisions for preservice and inservice training and must indicate frequency as well as content. All such training is subject to the approval of the department.

(e) The department shall investigate to determine whether the programmatic objectives of the school are being met. (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.175. TRANSPORTATION. An adult must be designated to accompany the driver and provide for pupil safety when more than six pupils are transported in a vehicle. (Eff. 5/20/77, Reg. 62)

Authority: AS 14.07.020(8)
AS 14.07.060

4 AAC 60.180. DEFINITIONS. Unless the context indicates otherwise, in this chapter

(1) "department" means the Department of Education;

(2) "board" means the state Board of Education;

(3) "commissioner" means the Commissioner of Education;

(4) "pre-elementary school" means a school for children ages three through five years whose primary function is educational;

(5) "certificate of approval" means a regular certificate issued to an operator of a pre-elementary school who has met the minimum requirements of this chapter;

(6) "operator" means the person legally responsible for the pre-elementary school;

(7) repealed (Eff. 5/20/77, Reg. 62);

(8) "staff member" means anyone who provides direct services to children in the classroom and may be any of the following:

(A) a person 19 years or over who is salaried;

(B) classroom volunteers who are at least 19 years of age;

(C) student aides who are enrolled in a training program who are at least 16 years of age;

(9) repealed (Eff. 5/20/77, Reg. 62). (Eff. 4/20/73, Reg. 45; am 5/20/77, Reg. 62)

MEMORANDUM

TO: Representative Sam Pestinger

FROM: Leslie Longenbaugh LL
Research Staff

RE: Other States' Regulation of Religious Schools
Research Request 83-159

Ed Essa of your staff asked that we provide information about states that regulate religious and other nonpublic schools differently. My preliminary work, provided to you on May 4, revealed five states that exempt religious schools from some state regulation to which other nonpublic schools are subject. Upon further investigation, I found significant differences in regulation in only three states: Maryland, North Carolina and Tennessee. Below is a brief description of the statutory distinctions made by each state; I have attached copies of the pertinent state statutes.

Maryland

Maryland requires that private "noncollegiate" schools obtain a state certificate of approval before they may operate in the state. The issuance of such a certificate of approval is contingent upon the state board of education's finding that the "facilities, conditions of entrance and scholarship, and educational qualifications and standards are adequate and appropriate" for the type of school.[1]

Specifically exempted from the requirement of a certificate of approval are all institutions "operated by a bona fide church organization..."[2] Schools that come under this exemption may not receive any state funds other than funds for the state food service program.

All private noncollegiate schools in Maryland, including the religious schools that are exempt from the certificate of approval, must make annual reports of their enrollment and courses of study.[3] In addition,

---

1 Annotated Code of Maryland, Education § 2-206 (e)(2).

2 ACN § 2-206 (3)(4).

3 ACN § 2-205.

they must conform to a state law that requires private schools that are ending operation to furnish to the state the academic records of all past and present students.

North Carolina

North Carolina in 1979 enacted a statute which has served as a compromise between the competing interests of religious schools and states.[4] For the purposes of state regulation, the law creates three types of legal nonpublic schools: 1) religious schools, defined as "private church schools or schools of religious charter"; 2) "qualified nonpublic schools" -- these institutions are either accredited by the state or an association or receive no state funds; and 3) "proprietary schools," or nonpublic schools that are operated for profit.

Schools in the first and second classifications above (religious institutions and other nonpublic schools) share the following requirements:

a) notice to the state of the intent to begin or cease operation;

b) maintainance of annual attendance and disease immunization records for all students (there is no requirement that these records be submitted to the state);

c) operation on a regular schedule during at least nine months of the year;

d) subjection to reasonable fire, health and safety inspections as required by law;

e) administration of nationally standardized tests for all students in the first, second, third, sixth and ninth grades;

f) administration of nationally standardized tests for all students in the eleventh grade and establishment of minimum standards for achievement on the test before graduation.

In addition, schools of these two types may choose to participate in any state-operated or -sponsored program which is available to other nonpublic schools. The statute adds that no other state laws, except health, fire and safety laws, are applicable to these schools.

Apparently, North Carolina is one of only three states that require standardized testing for students of religious schools (New York and

---

[4] General Statutes of North Carolina, § 115C-547 through § 115C-554.

South Dakota are the other states). In North Carolina, the chief administrator of the religious school may choose the test, rather than having the state select the tests to be given. The tests need cover only the basic secular skills -- grammar, reading, spelling and mathematics. Records of the test scores must be available for state inspection for one year following the test.

Nonpublic schools that are operated for profit must obtain a license from the state annually. The state board of education is charged with promulgating and enforcing regulations and standards governing approval and licensure. By law, the reports solicited must include detailed information regarding curricula, costs, and instructional space. In addition, the schools must post a bond of $1.000.[5]

Another difference in the requirements for licensed and exempt nonpublic schools in North Carolina is the certification of their staff. While North Carolina is one of the few states that require nonpublic-school teachers to be certified, teachers in religious schools are exempt from this provision.

Tennessee

The Tennessee Department of Education, by regulation, requires that all nonpublic schools report the name, age and address of all students to the local public school superintendent for the purposes of ensuring compliance with attendance laws.[6] Otherwise, state law requires only that the department of education inspect, approve and classify those primary, secondary and pre-elementary nonpublic schools that request such services. The approval is to be according to the standards that are used for the state's public schools.[7]

In 1976, the Tennessee legislature enacted legislation which prohibits the state and local boards of education from regulating the selection of faculty, textbooks or curricula of "church-related schools." The law requires that these schools meet the standards of accreditation of at least one of four nonpublic school associations. The law does require that the terms of church-related schools be as long as the public schools'.[8]

[7] Tennessee Code Annotated, 49-105 § 19.

[8] TCA 49-5201.

The statute adds that children who attend church-related schools may transfer into the state's public school system; however, the public schools may test such students and place them at a grade level that is indicated by the results of the test.

Like other nonpublic schools in Tennessee, church-related schools may apply for state approval, and many do. Of approximately 440 nonpublic schools in the state, roughly 160, both religious and secular, have received state approval.[9]

Case Law

Mr. Essa mentioned an interest in the case law about the regulation of religious nonpublic schools. I have enclosed a copy of a law review article written about North Carolina's regulation of religious schools; this article contains a concise overview of the findings of the United States Supreme Court and state courts of last resort.

SB 261 AND HB 357

Summary of the Legislation

SB 261 and HB 357 deal exclusively with private church schools and schools operated by religious organizations and, as amended, are modeled after the legislation adopted by North Carolina in 1979 and by West Virginia in 1982 to remedy church-state constitutional conflicts. These laws, if enacted by the Legislature, would establish requirements that must be met by private religious schools in order for parents whose children attend them to satisfy the compulsory education law. They would also exempt pre-elementary and nursery programs operated by religious organizations from the supervision of the Departments of Education and of Health and Social Services. The purpose of these bills is to remedy existing church-state constitutional conflicts by protecting the guaranteed religious freedom of church schools in Alaska and, at the same time, to balance the state's interest in assuring that each child receives a good education.

This legislation only covers schools, pre-elementary programs or nursery programs operated by a church or other nonprofit religious organization exempt from federal taxation and not receiving state or federal funding. These are constitutionally protected groups and activities.

More specifically, church schools (or denominational schools as defined in the proposed legislation) would be required to maintain attendance and immunization records. Since current compulsory education laws make parents liable for their children's failure to attend school, these bills, as amended, would require the parents to file statements with the public school authorities to establish their children's attendance at a church sponsored private school. By placing the requirement on the parent, the bills avoid the constitutional problems created by the state's excessive entanglement in religious activities. The school would also be required to operate on a regular schedule, at least nine calendar months per year, and to be subject to reasonable fire, health, and safety regulations.

To ensure that children attain certain minimum educational standards, each religious school would be required to administer a nationally standardized test to students in the first, third, sixth and ninth grades and to make the school results available for the Department of Education. This would satisfy the state's interest in compulsory education and still avoid the constitutional problem of excessive state entanglement in religion.

Any church school that satisfied all the requirements of AS 14.45 would be exempt from any additional provision of law

relating to education except those requirements of law relating to fire, health, and safety.

Constitutional Requirements

The changes set out in SB 261 and HB 357, as amended, are required to correct existing Alaskan laws which run afoul of the constitutional mandate requiring the states to avoid excessive entanglement in religious activities. The state's right to impose minimum requirements on private religious schools is very limited, because these religious activities are protected by the First Amendment of the United States Constitution and its identical counterpart in the Alaska Constitution, Art. I, sec. 4.[1]

Schools operated by churches or by nonprofit religious organizations are quite different from other private schools. They enjoy a constitutionally protected status.

> "Church operated schools are generally integral parts of their sponsoring churches. Their superintendents are generally pastors or assistant pastors of the sponsoring churches; their teachers are generally members; and their doctrinal stances are generally set by the sponsoring churches."[2]

Federal and state courts recognize that operating a church school is an integral part of the free exercise of religion.[3] For many churches, it is in fact the ministry of the church. Because

[1] E.g., Kentucky State Bd. for Elem. & Secondary Education v. Rudasill, 589 S.W.2d 877 (Ky. 1979), cert. den., 446 U.S. 938 (1980); Wisconsin v. Yoder, 406 U.S. 205 (1972); Lemon v. Kurtzman, 403 U.S. 602 (1970); Pierce v. Society of Sisters, 268 U.S. 510 (1925).

[2] "State Regulation of Private Religious Schools in North Carolina -- A Model Approach," 16 Wake Forest Law Review 405, 431-32 (1980).

[3] See, e.g., NLRB v. Catholic Bishop, 99 S. Ct. 1313 (1979) (Catholic parochial schools are founded for religious reasons and religious doctrine is pervasive); Surinach v. Pesquera de Busquets, 604 F.2d 73 (1st Cir. 1979) (private Catholic schools are an integral part of the Catholic Church and as such "involve substantial religious activity and purpose"); Hunt v. McNair, 413 U.S. 734, 743 (1973) ("[R]eligion is so pervasive that a substantial portion of [religious school] functions are subsumed in the religious mission."); Lemon v. Kurtzman, 403 U.S. 602, 616 (1971) ("[T]he parochial schools constituted 'an integral part of the religious mission of the Catholic Church'. . . In short, parochial schools involve substantial religious activity and purpose.").

church operated schools clearly come within the First Amendment free-exercise clause, their activities are constitutionally protected as fundamental rights.[4]

In the area of First Amendment individual liberties, any state legislation that burdens parents', childrens', or a church's free exercise of religious beliefs is unconstitutional unless, the state can demonstrate "a compelling state interest in the regulation of a subject within the state's constitutional power to regulate." Sherbert v. Verner, 374 U.S. 398, 403 (1963).

To establish the existance of a compelling state interest, it is not enough for the state to merely show that a rational relationship exists between a colorable state interest and the proposed regulation. According to Sherbert, "[o]nly the gravest abuses, endangering paramount interests, give occasion for permissible limitation."

More importantly, the state must demonstrate that it is using the least burdensome method for addressing the compelling state interest. The current law violates this mandate, because the legislative goals can be achieved with less burdensome methods. SB 261 and HB 357, as amended, use North Carolina and West Virginia laws as models and are less burdensome while still accomplishing legislative goals.

Eventhough SB 261 and HB 357, as amended, would create two classes of private schools and treat them differently, these bills would not violate the Equal Protection clause of the Fourteenth Amendment. According to established legal principles[5], the equal protection guarantee of the Fourteenth Amendment does not take from the state legislatures all power to classify persons or objects. The state may classify persons for the purpose of legislation. Classification is an inherent right and power of the legislature.

The important issue for these proposed bills is whether the distinction between private schools operated for profit and private schools operated by churches is based on a real and substantial difference between the two classes. Clearly, there is a substantial difference. The decision of the legislature to recognize its limited ability to regulate church schools is based on a constitutional distinction between the two classes. Church schools are in a protected class, enjoying the protection of the First Amendment. Private schools are not.[6]

[4] Ibid.

[5] 16A Am Jur 2d, Constitutional Law, §746, et. seq.

[6] In addition, it must noted that the motivations for operating

In the area of religious freedom and expression, the Constitution demands neutrality. The government cannot demonstrate a hostility toward religion or religious activity. The mere fact that the government specifically exempts religious groups from complying with certain laws does not violate the Constitution. For example, federal law clearly creates two classes when it exempts the property and income of religious organizations from federal taxation. These two classes parallel the two classes which would be created by SB 261 and HB 357, as amended. The Supreme Court held this was proper legislation in Walz v. Tax Commission, 397 U.S. 664,669 (1970). The Supreme Court found that neither the purpose nor the effect of such exemption was to advance or inhibit religion. It was "benevolently neutral."

The distinction between private schools operated for profit and those operated by churches is real and parallels distinctions created by the federal tax laws. Therefore, there is no violation of equal protection guarantees.

In summary, the present law violates both the United States Constitution and the Alaska Constitution. SB 261 and HB 357, as amended, balance the state's interest in ensuring that each child receives a good education with the fundamental right to religious freedom and should be adopted.

a private school for profit and a school operated by a church are entirely different.

RE: Summary/ HB 357 "An Act relating to the regulation of religious schools"

Enclosed is material that has been gathered in an attempt to more clearly understand the issue of 'de-regulation' of church schools while maintaining some monitoring of the constitutional mandate to provide for public education. A sectional analysis of the bill has been provided by Legislative Counsel. He suggests that HB 357, as written, is probably unconstitutional with respect to the equal protection clauses of the State & Federal Constitutions.

> "The bill exempts certain private schools from requirements that apply to all other private schools..."

With the understanding of the desire and need to resolve this issue legislatively, staff has contacted Ms. Patricia Lines, Director of Law & Educations Center of the Education Commission of the States (ECS), Denver, Colorado. Ms. Lines has been working on this issue nation-wide and is extremely well versed in the objectives it encompasses. Her article, State Regulation of Private Education is enclosed for your review. Ms. Lines has been very helpful and has emphasized the need for legislative resolve through investigation of current regulation as well as the interest and need for religious school de-regulation and how best the two goals can work together. Ms. Lines also suggested that it would be in the best interest of expeditious and sound legislation for the issue to be dealt with away from the political arena; allowing each interest room for rational communication and resolution.

This issue is not easily addressed as it actually raises three constitutional issues:

1). Seperation of Church & State - First Amendment, U.S. Constitution
2). Equal Protection Clause - Fourteenth Amendment, U.S. Const. & Art. 1, Sec. 1, Ak. Const.
3). Providing Public Education - Art 7, Sec 1, Ak. Const. & U.S. Const.

With the adivce of our Legislative Counsel, in approaching the Alaska Statutes for revision, these three issues must be carefully meshed in order to be effectively implemented. A proposed Committee Substitute will be forthcoming.

SUBJECT: Regulation of religious schools (HB 357)

TO: Representative Milo Fritz

FROM: Keith B. Levy
Legislative Counsel

You have requested a sectional analysis of HB 357, an Act relating to the regulation of religious schools. In general, the bill amends certain sections of Title 14 of the Alaska Statutes to remove state control of schools operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding for its educational program.

Section 1 of the bill amends AS 14.07.020(8) to remove pre-elementary schools and the educational component of nurseries operated by these religious groups from the supervision of the Department of Education. The law currently requires the Department of Education to supervise these programs.

Section 2 of the bill amends AS 14.30.010(b)(1) to exempt children attending a school operated by one of the religious organizations described above from the requirement that children between seven and 16 years of age attend public school. It also makes clear that these schools need not have an average student proficiency that is at least equal to the average proficiency found in public schools in the same area. AS 14.30.010(b)(1) currently requires such proficiency of all private schools.

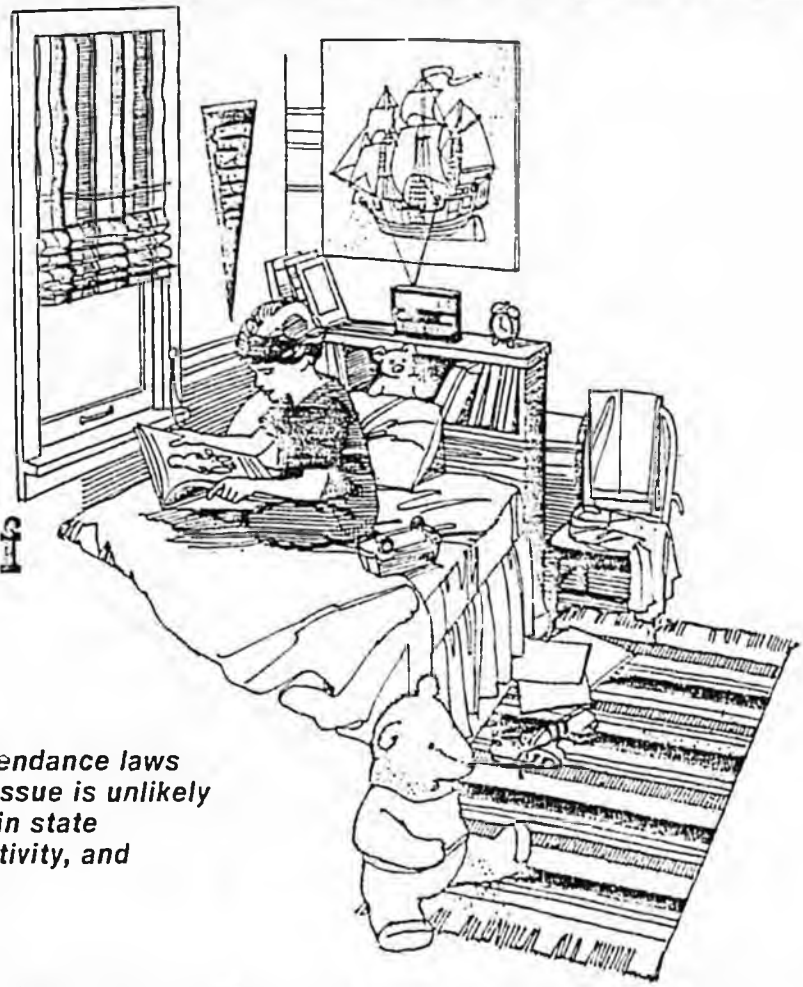
Section 3 excludes the schools described above from the provisions of AS 14.45.020. As presently written, AS 14.45.020 allows the commissioner of education to furnish final examination questions and grant diplomas for eighth graders in private schools.

Section 4 amends AS 14.45.030 to exempt the schools described above from monthly attendance and other reporting requirements currently applied to public and private schools.

Section 5 amends AS 44.27.020(1) to exclude the schools described above from the general duty of the Department of Education to administer the state's program of education.

You should be aware that HB 357, as currently written, presents a constitutional problem with respect to the equal protection clauses of the state and federal constitutions. The bill exempts certain private schools from requirements that apply to all other private schools. The factors that distinguish the exempt schools from the nonexempt schools are their federal taxation exemption status, that the educational programs involved do not receive state or federal funding, and that they are operated by a church or other nonprofit religious organization.

The equal protection clause of the Constitution of the State of Alaska (Article I, section 1) has been interpreted to mean that legislative classifications



> ...must be reasonable, not arbitrary, and must rest upon some ground of difference having a fair and substantial relation to the object of the legislation, so that all persons similarly circumstanced shall be treated alike.

Isakson v. Rickey, 550 P.2d 359, 363 (Alaska 1976). Accordingly, the distinguishing factors mentioned above must meet this test if HB 357 is to survive a constitutional attack. Although some of the distinguishing factors do meet the test, at least one probably does not.

Singling out schools which do not receive state or federal funds for exemption from certain state requirements probably has a fair and substantial relationship to the goals of the legislation in the sense that the state has less of an interest in controlling such schools. The same may be true of schools with nonprofit status under federal taxation laws. However, a provision which singles out a school merely because it is operated by a church or other religious organization is subject to greater scrutiny. The legislature may be called upon to justify treating a private, nonprofit school which does not receive state or

federal funding in a different manner than a private, nonprofit school which does not receive federal funding and is operated by a church or other religious organization. The only difference between the two classes of schools is that one is run by a religious group and the other is not. To justify such a distinction, the legislature would have to show a very substantial relationship between the distinction and the goals of the legislation. Moreover, the goals of the legislation must be constitutionally legitimate. In my opinion, the classifications created by HB 357 lack this level of justification to the extent that they are based solely on religion. For this reason, the bill is probably unconstitutional.

State Regulation of Private Education

by Patricia M. Lines

Violations of state compulsory school attendance laws appear to be rising dramatically, and the issue is unlikely to go away. Ms. Lines details the trends in state regulation, the current wave of judicial activity, and the implications for public policy.

Although a good education is generally considered crucial to a child's future economic success and personal happiness, a growing number of people believe that traditional schooling is neither indispensable to education nor "right" for every child. Thus some parents are enrolling their children in unaccredited private schools or teaching them at home, whether or not such choices are acceptable under compulsory school attendance laws.

Parents who violate such laws risk criminal charges, fines, jail sentences, and other forms of legal compulsion. Under most state laws, a child who is declared a truant may be institutionalized. Resisting school attendance requirements takes its toll in other ways as well; the judicial process is rarely easy on the participants.[1] But despite the serious personal consequences for parents and for children, violations of state compulsory school attendance laws appear to be rising dramatically, presenting policy makers with one of the most serious issues facing them today.

Nontraditional Schooling

Parents who place their children in unauthorized educational programs have a variety of reasons. Those who choose home schooling often see public schools or publicly approved private schools as too traditional or too conservative. By contrast, the growing number of parents who send their children to fundamentalist Christian schools tend to feel that the public schools are too liberal or devoid of the moral and religious instruction that they see as crucial to children's education. These disparate groups have two things in common: a rejection of the ideal of the U.S. public school as melting pot and a willingness to defy the law in the interests of their children.

The public education system is caught in the middle, unable to please everyone but responsible for enforcing compulsory attendance laws against those who disagree with the values that undergird the public school program.[2] Some state and local officials wonder whether compulsory attendance is important enough to be treated as a criminal offense, with stiff penalties imposed on parents for seeking what they believe to be the best education for their children. Others worry that children in unaccredited programs may not be acquiring the essential skills for good citizenship and self-sufficiency; they are also concerned about the long-range implications of allowing large segments of the population to insulate themselves from the mainstream of society. Still others fear that private schools provide havens for those who seek to avoid racial integration.[3] One state official expressed a private suspicion that hucksters, interested only in tuition payments, were running one particular fundamentalist Christian school. Meanwhile, a few state officials have recognized the financial implications for public schools of the trend toward nontraditional schooling, which is siphoning off students and thus enrollment-based state aid.

This issue is unlikely to go away. In fact, the number of families choosing nontraditional educational options seems to be increasing. The Census Bureau estimates that enrollments in non-Catholic private schools increased from 615,548 in 1965 to 1,433,000 in 1975.[4] These figures probably cover only established, accredited schools, however.[5] Families choosing unaccredited schools neither seek nor want state approval, and they probably do not want to be counted by the Census Bureau. Many of the unau-

---

PATRICIA M. LINES is director of the Law and Education Center, Education Commission of the States (ECS), Denver. *Copies of the complete report from which this article comes ("Private Education Alternatives and State Regulation," Pub. No. LEC-82-3) are available at $4.50 each from the Law and Education Center, ECS, 1860 Lincoln St., Denver, CO 80295.* *The research for this article was supported by ECS state fees and by grants from the Carnegie Corporation, the Spencer Foundation, and the Ford Foundation. The conclusions are the author's own and do not necessarily reflect the views or policies of these agencies.*

thorized schools are fundamentalist Christian schools, which reject state authority over their operations as a matter of faith. Some refuse even to provide information on themselves. Using techniques designed to locate all hard-to-find schools in a sample of 22 counties, Bruce Cooper and Donald McLaughlin estimate that there are 15,000 non-Catholic private schools in the U.S., serving two million children; they also estimate that enrollments in these schools are increasing at a rate of 100,000 per year.[6] It seems likely that the largest growth in attendance has occurred among small, unaccredited schools.

Some states have consciously deregulated private schools. These states expressly limit state authority to promulgate regulations.

Many other children in the underground education movement are taught at home. John Holt, an educator and author whose Boston-based organization, Holt Associates, provides support services for home instruction, estimates that there are more than 10,000 families educating their children at home in defiance of compulsory education laws. Others believe the number to be much higher.

If enrollment figures are hard to come by, data on the quality and goals of unaccredited education programs are even more elusive. Virginia Nordin and William Turner have attempted to locate and evaluate fundamentalist Christian schools in Wisconsin and Tennessee. From their own observations and the scant available data, they have concluded that supporters of these schools are motivated by strong religious beliefs, not by segregationist attitudes.[7]

The scant amount of available evidence from standardized tests suggests that these unaccredited alternatives are educationally adequate. Test scores introduced as evidence in a few lawsuits suggest that children's performances improve after they are enrolled in unauthorized educational programs.[8] Test data from a home tutorial network in Los Angeles showed children in the tutorial program scoring higher than children in the public schools. However, the researchers did not control for parents' socioeconomic status, and pretest data were not available.[9]

Trends in State Regulation

Traditionally, compulsory school attendance laws have served as the mechanism for enforcement of minimum standards for private education. Punishment for breaking those laws has been directed at parents and children, not at those who offer private instruction. Typically, the basic requirement of these laws is school *attendance*, although some states require *education* of the child. These laws almost always mandate fines and jail sentences for parents who fail to comply; frequently they make children subject to truancy charges and possible institutionalization. In nearly every state, the local superintendent or school board and the local prosecuting attorney are responsible for identifying truants, i.e., children who are not enrolled in an approved educational program. In most states, local officials also have primary responsibility for approving home instructional programs, if such programs are allowed by state law. Local boards may also have responsibility for approving private schools, but the state often assumes this task. The criminal sanctions in compulsory attendance laws appear to have been designed for parents who are guilty of neglecting their children's education.

Acceptable ways of complying with a compulsory education requirement vary widely among the states. Some states demand certification of teachers and schools, some require that only the schools be approved, and some merely require minimal evidence that schooling takes place. At one end of the spectrum, such states as Alabama, Iowa, Nebraska, North Dakota, West Virginia, and Wisconsin have obtained state court approval for at least some aspects of the regulation of private educational alternatives. Those states with more flexible requirements will probably experience less litigation, unless the state boards exercise their broad statutory authority to impose more stringent standards. Connecticut, for example, provides a broad exception to the school attendance requirement; parents who do not send their child to public school must educate the child themselves or "show that the child is elsewhere receiving equivalent instruction in the studies taught in the public schools."[10] Other states that follow this model include Delaware, Idaho, New Jersey, South Dakota, and Vermont. The laws in these states typically do not specify who the teacher must be or where instruction is to take place.[11]

Some states have consciously deregulated private schools. These states expressly limit state administrative authority to promulgate regulations. Tennessee, for example, prohibits the state board and local boards from regulating faculties, textbooks, or curricula in church-affiliated schools.[12] Prior to the passage of a new law in North Carolina, the state board had gradually expanded its regulations governing private schools to the point of requiring that teachers' qualifications, courses of study, and textbooks be substantially the same as those in the public schools. Now North Carolina requires only that private schools keep records on pupil attendance and disease immunization and that they select and administer a nationally standardized test to students each year. The schools keep the tests on

file and make them available to state inspectors. They must also meet fire, health, and safety standards established by other laws.[13]

State law in Washington prevents state agencies from expanding on statutory provisions, but these provisions set minimum standards as to length of a school year, length of day, subjects to be taught, and teacher qualifications. Teacher certification is required, except for courses in religion and other subjects not taught in the public schools.[14] This requirement is a stumbling block for many private educational alternatives. However, state law in Washington allows persons of "unusual competence" to teach, if they are supervised by certified teachers. In practice, Washington may allow private educators more flexibility than the state law would suggest.

Laws in about half of the states permit instruction at home by a parent.[15] Other states permit instruction at home by a certified teacher (who may also be the parent). Of course, home instruction is permissible in any state if it meets all the requirements of a private school.[16] It would not be easy for most homes to meet these requirements.

State legislators and board members, torn between strong lobbies for both public and private education, are having a difficult time dealing with the issue of regulation of private education. In states that have little regulation, such as Oregon and Idaho, bills to establish even minimal reporting requirements are failing to pass. By contrast, efforts in the state of Washington to permit instruction by a parent are also foundering in the legislature. Large numbers of state legislatures are being asked — usually by fundamentalist Christian schools — to deregulate private schools, but to date only Alabama has responded to such requests. The topic appears to be so controversial that any kind of legislative change will be very difficult.

Legislative change is not impossible, however. Both Arizona and Vermont recently modified their laws to reduce the friction between public and private education sectors. Clearly, legislative change is more desirable than change through the courts. It is less polarizing, and it minimizes personal costs for the individuals involved.

Supreme Court Guidance

In the 1920s the U.S. Supreme Court outlined in part the limits to state regulation of private education. In *Pierce* v. *Society of Sisters* the Court struck down an Oregon law that required attendance at *public schools only*. The Court held that the law "unreasonably interferes with the liberty of parents and guardians to direct the upbringing of children under their control."[17] The Court recognized as legitimate the interests of the state in compelling some form of schooling, but in this case the state had gone too far.

The Supreme Court also dealt in the Twenties with laws in Nebraska and Hawaii that were less restrictive but that still unreasonably burdened the right of parents to rear their children as they deem fit. In *Meyer* v. *Nebraska*,[18] the Court struck down a state law forbidding the teaching of foreign languages to younger children. The Court found that this law was not rationally related to the stated goal in Nebraska of cultivating good citizenship. Meanwhile, in *Farrington* v. *Tokushige*, the Court struck down a law regulating foreign language schools in Hawaii. These schools, which were predominantly Japanese, were required to pay fees, to submit numerous reports, to establish their commitment to the "ideals of democracy," to adhere to strict rules regarding when and how long the schools could operate each day, and to follow detailed regulations on textbooks and other matters. The Court observed that enforcement of the act "would probably destroy most, if not all," of the affected schools.[19]

Clearly, legislative change is more desirable than change through the courts.

More recent Supreme Court decisions have provided some additional guidance on the extent of state authority to regulate private education. In 1979 the Court observed in *NLRB* v. *Catholic Bishop of Chicago* that enforcement of federal labor laws against religious schools touches on First Amendment rights. The Court decided the issue on statutory grounds, however, holding that the National Labor Relations Act does not apply to church schools.[20] In 1981 the Court ruled similarly in *St. Martin Evangelical Lutheran Church* v. *South Dakota*, a case involving federal and state unemployment taxes.[21] Both cases follow a Supreme Court rule that requires lower courts to construe statutes in ways that enhance their constitutionality. The Supreme Court might have upheld the statutes involved in these two cases, had the statutes expressly included church schools. But the Court avoided a decision on the issue. These two cases suggest only that state regulation of private education may sometimes go too far, but the Court's decisions provide no detailed guidance.

Finally, in a very different kind of case, the Court ruled in 1972, in *Wisconsin* v. *Yoder*, that Amish families with strong religious objections to public schooling are exempt from educational programs beyond the eighth grade.[22] Although the plaintiffs objected to the absence of Amish values in the public school program, they accepted compulsory school attendance in the lower grades because they believed that their children should acquire basic skills. The Court held that, *as applied to the Amish*, the compulsory attendance law in Wisconsin is unconstitutional. This ruling does not affect state compulsory attendance laws in general, even in Wisconsin.[23] *Yoder* holds only that a state cannot compel a child to attend public school in the face of strong religious objections and when the state's interest in the education of the child is adequately served by an alternative program. The Court was careful to distinguish between philosophical and religious objections to formal schooling, and it took into consideration the long tradition of the Amish.

Despite the Court's limiting language, the *Yoder* decision can be extended at several points. First, it clearly applies to religions other than the Old Order Amish, if plaintiffs demonstrate a comparable sincerity of belief and if the record shows that the states' interests are being met by adequate alternatives. To restrict the exemption granted in *Yoder* to a single religion would be unconstitutional. The *Yoder* decision may also apply to nontheistic, nontraditional religious beliefs, if the standards in *Yoder* are otherwise met.[24] To date the Supreme Court has not had occasion to consider extensions of *Yoder*.

Current Judicial Activity

Lower courts have followed *Yoder* only when dealing with traditional, theistic beliefs.[25] In other cases, despite obviously sincere religious objections to approved school programs, the courts have refused to extend *Yoder*. Some of these cases have involved fundamentalist religious schools using the self-paced Accelerated Christian Education (ACE) curriculum.

In the celebrated case of *State* v. *Faith Baptist Church*,[26] a Nebraska court examined these curricular materials and found them generally adequate. Faith Baptist Church indicated that it would not request approval of the ACE program, even though church officials had been informed informally that the state board would grant such approval. The school run by Faith Baptist Church employed no

certified teachers, and school officials refused to furnish names and addresses of students to local and state education agencies, as required by state law. The defendants, citing *Yoder*, argued that the state has no authority whatsoever over the operation of a religious school. They offered evidence, including passages from the Bible, supporting their view that religion must be integrated into teaching and that the public schools are inadequate to this task. Finally, the defendants asserted that public schools have secular humanism as their basic philosophy.

The Nebraska High Court rejected these arguments and upheld the state regulations. The U.S. Supreme Court dismissed an appeal by the school for want of a substantial federal question.[27] To enforce court orders to close the school, a lower Nebraska court for a time had the church door padlocked during school hours. The children transferred to an unapproved fundamentalist religious school in Iowa. The case seems far from ended, however. The local prosecutor is now seeking enforcement of the Nebraska compulsory attendance law against the parents and school officials, and the minister who operated the school was jailed for contempt of court.

Nebraska officials are now proceeding against other fundamentalist schools. One, the Park West Christian School in Lincoln, is operated by the Rev. Carl Godwin, the pastor of Bible Baptist Church. Godwin, although clearly embarrassed by the publicity, is articulate and active. He has organized the Nebraskans for Religious Freedom and has retained the legal services of William Ball, the defense attorney in the *Yoder* case. Ball has a reputation for winning cases of this kind, and Godwin is willing to report enrollment data and similar matters. Thus Godwin's case may force the courts to focus more sharply on the constitutional issues. Godwin spoke before a conference of more than 100 leaders of public and private education, sponsored by the U.S. Education Department in early May, and he seems capable of winning support from the traditional private education sector. Such support could help to bring about legislative change before court action becomes necessary.

A flurry of judicial activity involving religious schools is now in progress, with mixed results.[28] Most court opinions are grounded in state constitutions or statutes. Although the case law can be transferred from state to state (as guidance, not as precedent), the disparity in state constitutions and statutes does not permit broad generalizations. Of course, general rules for federal cases may emerge, but this has not yet occurred.

Home instruction is in a somewhat different category than instruction in an unapproved school, although the line between them is unclear. Home instruction may be entitled to even more constitutional protection, because the child/parent relationship may be entitled to constitutional protection under a right to privacy. But this idea has not been tested, and judicial reactions to it have been mixed.[29]

Of course, judicial opinions to date on home instruction represent only the tip of the iceberg. Additional cases have been or will soon be filed in Iowa, New Hampshire, Maine, Michigan, and many other states. Given the accelerating growth of the fundamentalist Christian schools, other nontraditional private schools, and home instruction, strict state requirements for compulsory attendance in approved schools will probably continue to be challenged. As I have already noted, litigation of this type carries with it high personal costs for the individuals involved. Such litigation also has the potential to polarize supporters of public and private education.

Implications for Public Policy

Thus legislative reform seems preferable to judicial reform. Unlike the courts, legislatures are not limited to accepting or rejecting existing statutes. Their wider range of options allows for greater flexibility.

States that wish to reform the regulation of private education through legislative action might consider a shift in focus from compulsory school *attendance* to compulsory *education*. The available evidence, though scant, suggests that periodic testing of children enrolled in nontraditional educational programs may be a viable alternative to compulsory school attendance. States that move in the direction of compulsory education should probably establish minimal requirements for nontraditional programs with regard to the subjects to be taught, the amount of time per day and year to be devoted to instruction, and the reporting of enrollment and attendance figures and similar data to state officials. If a child shows unsatisfactory academic progress on standardized achievement tests, state law might require remedial instruction in an accredited or approved school.

In the interest of consumer protection, a state may wish to establish regulations that guarantee honest and fair promotion of private schools, including full disclosure of the teachers' qualifications and of the schools' educational philosophies. However, existing laws may already protect consumers adequately.

States that are concerned about the operation of schools in private homes could amend their statutes to permit home instruction only by a child's parent(s). Statutes in such states could define "school" as instruction of children from one or more families by an unrelated teacher. (Some states may wish to emulate California, which has established separate rules for instruction at home by a tutor.)

North Carolina, Washington, and Oregon have established flexible regulations for private education that could serve as models elsewhere. In Oregon and North Carolina, test scores help to provide assurance that children enrolled in nontraditional programs are being educated. Washington relies on teacher certification for such assurance, although this gives private educational alternatives less leeway in staffing and precludes instruction by a parent in most cases. Such legislation would not be necessary, if state law did not give the state board of education or other state administrative officials broad regulatory power over private education in the first place. But such legislation is called for when a state board has gradually increased the requirements for nontraditional educational programs and the state legislature wishes to make clear its intent that statutory minimum standards are to remain *minimum* standards, not subject to expansion by administrative action.

Administrative action is probably the most peaceful means for resolving issues related to the regulation of private education. And flexible state laws make such action possible. In New Hampshire, for example, state officials have reached a somewhat fragile agreement with the fundamentalists: The state will accept school records submitted on church stationery instead of on standard state forms. Thus the state receives the information it must have to approve fundamentalist educational programs, and the fundamentalists do not feel that they are submitting to the state regulatory system. In Iowa, the state has agreed to accept reports from parents rather than from fundamentalist schools. Iowa fundamentalists see parental reports on children's schooling as analogous to the annual reports these parents file with the Internal Revenue Service. But they deem it inappropriate for the state to request such information directly from the church.

Because they are staunch supporters of public education and because they may see nontraditional educational programs as a threat to their membership, teacher unions seem likely to oppose the relaxation of state laws requiring attendance at approved schools staffed by certified teachers. These unions may argue that testing instruments are not yet sufficiently sophisticated to assure the public that adequate education is taking place. This is

probably true, but it could be argued that teacher certification is no better. Teacher certification is usually dependent on completion of a degree, which in turn is dependent on passing final examinations in college courses. (In some states, certification is also dependent on passing a competency test.) Ultimately, state legislators must decide whether testing a child, testing his or her teacher, or testing both would best provide adequate assurance that education is taking place.

Local school officials are also likely to oppose the relaxation of existing state laws regulating private education. As supporters of public education, such officials will probably be wary of the academic and social implications of nontraditional alternatives. They may also be concerned about the loss of state aid to public schools (which is based on enrollments), should more flexible regulations encourage families to choose private alternatives.

States that are sensitive to these problems could publish test data from nontraditional programs, if these data are available. They could also stand ready to revise their policies, if children in nontraditional programs fail to perform as well as they should. States should also recognize and deal with the problems caused by the loss of per-pupil aid to local school districts. For example, states might explore constitutional ways of providing partial state aid to local districts that make their school libraries, physical education facilities, art facilities, testing and guidance services, and other resources available to pupils in alternative educational programs. Such cooperation requires new laws and regulations. It also demands new relationships between state and local education officials and between public and private educational systems.

---

1. As an example of the extreme emotionalism that surrounds these cases, John Singer was involved in a shoot-out with law enforcement officers and was killed outside his Utah home three years ago. The officers were investigating a charge that Singer had failed to abide by his obligations under the Utah compulsory school attendance law.

2. Educators generally agree that it is nearly impossible to provide education without also imparting values. See, for example, William J. Bennett and Edwin J. Delattre, "Moral Education in the Schools," *The Public Interest*, Winter 1978, pp. 81-98; and Andrew Oldenquist, "Moral Education Without Moral Education," *Harvard Educational Review*, May 1979, p. 247.

3. There is some support for this point of view. On the heels of the school desegregation order in Mississippi, for example, that state repealed its compulsory education law, apparently to avoid requiring parents to send their children to integrated schools. Following a desegregation order in Los Angeles, an organization of parents opposed to busing formed a home instruction network that served approximately 1,000 children (see Roy A. Weaver, Anton Negri, and Barbara Wallace, "Home Tutorials vs. the Public Schools in Los Angeles," *Phi Delta Kappan*, December 1980, pp. 251-55).

4. Department of Health, Education, and Welfare, *Statistics of Public Elementary and Secondary Day Schools* (Washington, D.C.: National Center for Education Statistics, 1976), p. 6.

5. Census Bureau officials are unable to estimate the number of children enrolled in unapproved educational alternatives, according to a 10 February 1982 memorandum to the director from Paul M. Siegel, chief of the Education and Social Stratification Branch (copy on file at the Education Commission of the States).

6. Bruce S. Cooper and Donald H. McLaughlin, "The Latest Word on Private School Growth," paper presented at the annual convention of the American Educational Research Association, New York, March 1982. By contrast, public school enrollments have declined from approximately 45.9 million in 1970 to 42.6 million in 1978, according to *Statistics of Public Schools, Fall 1970* (Washington, D.C.: National Center for Education Statistics, 1971); and *Statistics of Public Elementary and Secondary Day Schools, Fall 1978* (Washington, D.C.: NCES, 1979).

19. 273 U.S. 284 (1927), 295.

20. 99 S.Ct. 1313 (1979).

21. 101 S.Ct. 2142 (1981).

22. 406 U.S. 205 (1972).

23. See, for example, *Meyerkorth* v. *State*, 173 Neb. 889, 115 N.W.2d 585 (1962); *Parr* v. *State*, 117 Ohio St. 23, 157 N.E. 555 (1927); *Stephens* v. *Bongart*, 15 N.J. Misc. 80, 189 A. 131 (1937); *State* v. *Hoyt*, 84 N.H. 38, 146 A. 170 (1929); *State* v. *Williams*, 56 S.D. 370, 228 N.W. 470 (1929); *State* v. *Freudenberg*, 166 Wis. 35, 163 N.W. 184 (1917); and *State* v. *Bailey*, 61 N.E. 730 (Ind. 1901).

24. See, for example, *United States* v. *Seeger*, 380 U.S. 163 (1965), in which the Court adopted a broad interpretation of the selective service law to avoid favoritism to individuals with more traditional theistic beliefs -- a favoritism that would clearly violate the establishment clause.

25. See, for example, *Nagle* v. *Olin*, 64 Ohio St.2d 341, 415 N.E.2d 279 (1980), which dealt with a non-Amish parent sending a child to an unapproved Amish school; and *State* v. *Nobel*, Nos. S 791-0114-A and S 791-0115-A (Mich. Dist. Ct., Allegan County, 9 January 1980), which dealt with a mother who was teaching a child at home but who refused for religious reasons to obtain a teacher's certificate, although she met the requirements.

26. 107 Neb. 802, 301 N.W.2d 571 (1981).

27. 102 S.Ct. 75 (1981). Members of the congregation of Faith Baptist Church subsequently brought suit in federal court, seeking an injunction against the state to permit continuation of the school. The court dismissed the suit, relying primarily on the Supreme Court's decision to dismiss the appeal (*Prettyman* v. *Nebraska*, Civ. No. 82-0-154, D. Neb., 16 April 1982).

NOTES

Preliminary Findings

Religious and Secular Schools: Differences in State Control
Research Request 83-159
Leslie Longenbaugh, Research Staff
May 4, 1983

I. Which states allow religious schools to operate free of state control?

A. Primary and Secondary Schools

1) Five states exempt religious schools from some requirement(s) to which other private schools are subject.*

a. Maryland
b. Nevada
c. Pennsylvania
d. Tennessee
e. Washington

2) Eight states do not require accreditation, approval, or licensure of any nonpublic school.*

a. California
b. Delaware
c. Florida
d. Massachusetts
e. Minnesota
f. New Mexico
g. North Carolina
h. Wisconsin

3) One state, South Dakota, has removed all state standards from all nonpublic schools. Students in the nonpublic schools must take competency tests periodically to ensure that they are receiving adequate instruction.**

4) Twenty-one states have voluntary, rather than mandatory, reporting by all nonpublic schools.*

a. Alabama
b. Arizona
c. Colorado
d. Georgia
e. Idaho
f. Illinois
g. Indiana
h. Iowa
i. Kansas
j. Louisiana
k. Mississippi
l. Montana
m. New Jersey
n. North Carolina
o. Oklahoma
p. Oregon
q. Tennessee
r. Texas
s. Utah
t. Virginia
u. Wyoming

5) At least two states other than Alaska have legislation pending that would affect state control of religious schools.***

a. Colorado
   i. The bill would exempt both religious and secular private schools from state control.
b. Montana
   ii. The bill would make mandatory some of the requirements that are now voluntary.

B. Pre-schools

1) Three states now have laws exempting religious pre-schools from all state certification and inspection except for conformity with health and fire codes.****

a. Arkansas; enacted 1981
   i. A lawsuit has been filed challenging the constitutionality of the Arkansas law on the grounds that it denies the children who would attend such schools equal protection of the law.*****
      a) A copy of the plaintiffs' brief in this lawsuit has been sent to us.
b. Illinois
c. Virginia

2) Legislatures in two states other than Alaska are now considering legislation that is similar to HB 357 in regard to pre-schools.****

a. Arizona
b. California

II. How do such states distinguish between religious and secular nonpublic schools for the purposes of the exemption?

A. Religious schools for the purposes of these exemptions usually are those that are sponsored and funded entirely by a church or religious organization rather than through the state or federal government.

B. The language used often includes a phrase such as "church-sponsored schools or schools with religious charters."

12. Compulsory Schooling and Nontraditional Education

The Issue

Some parents today believe that traditional schooling (public or private) is not necessarily equivalent to "education" nor "right" for every child. They are placing their children in nontraditional schools (not necessarily accredited) or educating them at home. Their reasons vary. Some have overriding religious concerns; others are dissatisfied with or mistrust the public school system. Occasionally they seek only to escape the effects of public desegregation policies.

Some private options may violate state compulsory attendance laws. In some states, parents and individuals operating unaccredited private schools have received or are faced with jail sentences. One fundamentalist Christian clergyman in Nebraska has refused to comply with court orders directing him to either obtain state approval for his school or cease operating, and he has been jailed twice. A church has been padlocked to enforce laws requiring private schools to obtain state approval and comply with state rules for operating a school.

The Choice Before State Education Policy Makers

In states that require compulsory school attendance (rather than compulsory education) and require certified teachers in private schools, policy makers are being asked to change the laws. Private school people seek fewer requirements for private schools, exemption of church schools, provision for home instructions, removal of teacher certification requirements or other policies that would make it easier for individuals to choose nontraditional education options free of state accreditation or approval.

How Many Children are in Unapproved Education Options?

While most children in nonpublic schools are enrolled in Roman Catholic institutions, the U.S. Bureau of Census estimated that (as of 1975) there were close to 1.4 million children in non-Catholic, private schools. Most likely the census bureau counted only traditional and accredited schools. A more careful study for the National Center for Statistics suggests there are about 15,000 non-Catholic private schools serving approximately 2 million students, and that this population is increasing by 100,000 students per year. One might speculate that the difference of some 500,000 to 600,000 children between the official census and this study represents the number of children in unapproved schools.

By contrast, public school enrollments declined from approximately 45.9 million in 1970 to 42.6 million in 1978.

Estimates of the numbers of children being taught at home vary from 10,000 to 50,000.

Education In An Unapproved Setting

When available, testing data shows that children in these schools are performing above national standards. The data do not show whether this is due to socioeconomic status, other individual characteristics, or the education program. With this caveat, the data show children in a Los Angeles home tutorial program (approved by the state) scored higher than children in public schools on nationally standardized tests.. Experimental work done about ten years ago showed no significant difference in students' test scores whether they were taught by an experienced teacher or by a lay person knowledgeable in the subject taught. Finally, in three court cases, attorneys introduced evidence of test scores showing

improvement as children moved from a public school to a private, unapproved education option.

State Education Requirements

Traditionally, states enforce minimum standards for private education through compulsory school attendance laws, which provide for punitive action for noncomplying parents and children, but not for those who offer private instruction. Although these laws vary, they contain the following features:

- All states have some kind of compulsory law requiring school attendance or education of children.

- States that require education of the child rather than attendance include Connecticut, Delaware, Idaho, New Jersey, South Dakota and Vermont. Most states require school attendance, although many of these provide exceptions for home instruction.

- Almost every state provides for jail sentences and fines for parents who fail to comply with the state's compulsory attendance law.

- Without exception, compulsory requirements can be fulfilled by attendance at a nonpublic school that is properly approved or accredited. A number of states require the teachers to be certified, or require approval of the curriculum and similar matters.

- Some states have recently "deregulated" private schools, and have restricted the authority of the state board of education to regulate them. These include Alabama, Arizona, Louisiana, North Carolina, and Tennessee. Washington restricts state board authority but contains a number of important statutory requirements, such as a teacher certification requirement.

- Laws in about half the states permit home instruction by a parent whether the parent has a teaching certificate or not.

- In some states, courts or attorneys general have ruled that if the home meets the standards for private school (generally, where a parent is a certified teacher), home instruction is allowed even if state law does not expressly so provide.

Court Challenges

The United States Supreme Court has indicated that regulation of nonpublic education can go too far. In a landmark case, Yoder v. Wisconsin, the high court narrowly ruled that Wisconsin's compulsory attendance law could not be enforced against the Amish (a religious community). The Court held that the state cannot compel attendance of children in the face of strong religious objections, so long as the children are adequately educated in an alternative setting. Lower courts have extended Yoder only when traditional religious beliefs are involved. Decisions outside of this narrow realm have been mixed, with most cases turning on state constitutional or statutory grounds.

Litigation over the status of private education has culminated in court rulings in a number of states, among them Florida, Hawaii, Iowa, Kentucky, Michigan, Nebraska, North Dakota, Ohio, Washington, and West Virginia. Generally, states undergoing litigation require school attendance and certification of private school teachers. In a few states the central issue is approval of curriculum or facilities, or zoning rules. Additional cases have been or will soon be filed in many states, including Iowa, Maine, Michigan, New Hampshire, North Dakota, and Virginia. Given the growth of fundamentalist Christian schools, other nontraditional private schools and home instruction, states that require compulsory school attendance and set standards for the school will probably be challenged in the near future.

The litigation receiving the most attention from the media appears to be State v. Faith Baptist Church, dealing with the refusal of Reverend Everett Sileven to obtain approval from Nebraska for any aspect of his church-run school. The school uses a series of booklets called the Packet of Accelerated Christian Education (PACE), including instructional information and self administered tests. The school does not use state-certified teachers, a requirement under Nebraska's compulsory school attendance law. The Nebraska high court found the materials adequate, but upheld the state's requirement for certified teachers. On appeal to the United States Supreme Court, the case was summarily dismissed because, based on the papers filed before it, the high court could not identify an important constitutional issue.

Somewhat similar opinions (not going to the U.S. Supreme Court) have been handed down by state courts in Florida, North Dakota, and Wisconsin. In some of these cases, parents refused to provide any evidence about the child's schooling.

In other cases, state courts have ruled in favor of parents. In Ohio, in State v. Whisner, the state supreme court struck down a system of state regulation that, by its literal terms, left no time for religious instruction in a private school. A Michigan court was reluctant to find a mother teaching a child at home guilty under the state's compulsory attendance law, as she met the requirements for teacher certification but refused to obtain a certificate for religious reasons. (Michigan allows home instruction only by certified teachers.) In a Kentucky case, the state court applied a state constitutional provision (found only in a handful of state constitutions) that prohibits requiring a child to attend a school which parents find objectionable for conscientious reasons.

Policy Alternatives

Where statutory requirements are flexible, imaginative administrative solutions to the issue become possible. In New Hampshire, for example, state officials reached a somewhat fragile agreement with fundamentalists that required information to be submitted on church stationery rather than on official state forms. This fulfills the state's need for certain information, but recognizes the fundamentalists' tenet that they should not submit to state regulatory systems. In Iowa, the state accepts reports from parents instead of the fundamentalist school. The fundamentalists involved felt individual reporting was no different than filing an income tax form, while a church report was tantamount to church submission to state regulation.

A state considering a change in its policy can look to sister states for models. In the past five years several states have deregulated private education.

- Tennessee, for example, prohibits the state board and local boards from regulating faculties, textbooks, or curricula in church affiliated schools.

- North Carolina requires only that private schools keep records on pupil attendance and disease immunization and that they select and administer a nationally standardized test to students each year. The schools keep the tests on file and make them available to state inspectors. They must also meet fire, health, and safety standards established by other laws.

- Washington prevents state agencies from expanding on statutory provisions, but these provisions set minimum

standards as to length of school year, length of day, subjects to be taught, and teacher qualifications. Teacher certification is required, except for courses in religion and other subjects not taught in the public schools. State law in Washington allows persons of "unusual competence" to teach, if they are supervised by certified teachers.

- The Vermont legislature, following efforts by its state board to require teachers certification, made it clear it could not do so, and also strengthened its child abuse laws in order to narrowly focus on actual problems, rather than to sweepingly subject all private educators to regulation.

- In mid-1982 the Arizona legislature determined to permit home instruction, so long as the child shows academic progress, as indicated by test scores or an impartial professional evaluation.

- Louisiana exempted schools which receive no local, state or federal funds from most reporting requirements.

- Arizona, Oregon, and North Carolina require testing of the children, to help provide assurance that they are being educated.

- Teacher certification is the mechanism used in Washington, although it reduces flexibility for private education alternatives and precludes instruction by a parent in most cases.

Policy Questions

Policy makers contemplating a change in state compulsory education laws need to ask the following questions before deciding on a course of action.

- Should compulsory attendance laws carry criminal sanctions against parents honestly acting in the best interests of their children?

- Are the children educated in unapproved settings acquiring what they need for good citizenship and self-sufficiency?

- What are the long-range implications of large segments of the population insulating themselves from the mainstream of society -- in this case, by avoiding state-approved education for their children?

- Are private schools havens for those wishing to avoid integration?

- Do existing consumer protection laws assure that parents are evaluating small nontraditional schools on the basis of adequate and correct information?

- What are the political implications of the growing exodus from public schools, when local school districts depend on state aid based on enrollment or attendance?

Policy Implications

Organizations and individuals urging more flexible compulsory education laws argue that this is required to preserve the free exercise of religion. These groups argue that parents know what is best for the child. They include those participating in nontraditional options, fundamentalist Christians, more traditional private schools and, to some extent, organizations and individuals concerned with civil liberties. The national ACLU, for example, in its Policy #71A, states: "We believe that, in the interest of parental right to choose an alternative to public education, [home instruction with safeguards, such as approval of curriculum or testing of the child] . . . should be extended to all jurisdictions because the state's interest in assuring minimum levels of education does not extend to control of the means by which that interest is realized."

Organizations and individuals urging retention or adoption of stricter requirements for private education generally argue that these regulations are needed to assure the best interests of the child, and to prevent balkanization of society. These groups include teachers' organizations and public school administrators.

COMMENTS ON
HOUSE BILL #357
and
SENATE BILL #[illegible]

The subject at hand has to do with House Bill #357, currently before the Legislature, and a Senate Bill with identical language for which I have no number at the present time.

This is an act relating to the regulation of religious schools.

The First Amendment to the U.S. Constitution says, "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof;" With these words, the First Amendment guarantees a separate church and state. Historically, this has meant that the church was not subject to the state, nor was the state subject to the church.

The First Amendment also guarantees "free exercise of religion." Our nation has repeatedly recognized the value of this most important clause and has resisted infringement of First Amendment rights of the citizenry.

It is also true that the language of the Constitution of the State of Alaska provides similar liberties to those spoken to in the Constitution of the United States.

At the outset of these remarks, it should be noted that it is the responsibility of the church to provide buildings and equipment that meet reasonable regulations for fire, life safety, health, and sanitation when they are equally and fairly applied to all.

One of the reasons for the presentation of the proposed legislation has to do with some language found in the Constitution of the State of Alaska. That language reads as follows:

> ARTICLE VII. HEALTH, EDUCATION, AND WELFARE.
> Section 1. The Legislature shall by general law establish and maintain a system of public schools open to all children of the State, and may provide for other public educational institutions. Schools and institutions so established shall be free from sectarian control. No money shall be paid from public funds for the direct benefit of any religious or other private educational institution.

We have no quarrel with the language set forth in the paragraph above excerpted from the Constitution of the State of Alaska. However, since the provision is made that the public school system of the State of Alaska shall be free from sectarian control, we believe it follows reason and logic that the church-operated schools of the State of Alaska should be free from state control.

For this reason, we have addressed the importance of certain changes that need to be made in the present structure of the Alaska Statutes that would bring present law into line with the provision of the Federal and State Constitutions.

Our special concern has to do with the impact of present law and the resultant regulations that could be written under the umbrella of the existing language.

While we have stated above that we have no quarrel with the right of the State to require reasonable fire, life safety, health, and sanitation standards, we would never submit to the inspection of personnel, programs, finances, records, curricula, etc., since this is clearly a violation of the First Amendment, and cannot be permitted by the local church.

For these and other reasons, we have proposed an Amendment to Section 1. A.S. 14.07.020(8).

In this Amendment, we have addressed the fact that it is our sincere conviction that neither the Department of Education nor the Department of Health and Social Services has the constitutional right to general supervision over our pre-elementary schools, nor over the educational component of our nurseries.

We have also offered an Amendment to Section 2. A.S. 14.30.010(b)(1).

One of the reasons why we have suggested the addition of paragraph (D) has to do with the requirements set forth in paragraph (C). You see, it is our policy to regularly measure the progress of our students in our church-operated schools through the use of national achievement tests, and we would have no problem with making that information available to anybody on a request basis. However, since the Constitution says that no law shall be made concerning the establishment of religion, we simply believe that the State has no right to REQUIRE that information. So, we have proposed paragraph (D) as an amendment to that section.

One of the questions that has been raised with regard to paragraph (D) is as follows: "If paragraph (D) should become law, what assurance do we have that some 'fly-by-night' type church such as the Jim Jones syndrome or the Moonies won't pop up and start what they would call a church-operated school?"

Quite honestly, we don't have any assurance that that wouldn't happen. However, there are some reasons why I believe it would not happen. One of the reasons why I would question that a "Jim Jones" church or a "Moonies" church would start a school is simply that it is not as lucrative an operation as that which generally interests them. They are usually looking for ways to get their hands on large amounts of money as quickly as they can with a minimum of work involved.

The operation of a school involves a great deal of hard work, dedication, consecration, and plain, old-fashioned elbow grease!

Church-operated schools must function in a free-market society, and they simply must produce what they claim to produce, or the parents will take their children elsewhere.

My second response to the original question would be as follows: It is our understanding that laws should be made for the benefit of and the protection of the majority of the people. While it is true that there is the possibility that some church like the Jim Jones, Moonies, or Universal Life Church people might start a school under the provision of paragraph (D), why would the Legislature of the State of Alaska wish to continue to impose an unconstitutional burden on the many churches in the State of Alaska who are doing a great job in the field of private education because it was afraid a possible small minority might start an educational program that would be undesirable?

Why would the Legislature want to take away the liberties of the many because it feared the abuses of a few?

Section 3 has been amended by the Department of Law as a housekeeping measure to bring it into line with the rest of the proposed legislation in this bill.

The next item under consideration is Section 14.45.030. Once again, this is a matter where we believe constitutional liberties are being abrogated. While it is a fact that we would have no problem providing this information on a request basis in cooperation with the State Department of Education, we are convinced that it should not be required by law in order to maintain the true eparation of church and state.

The last amendment proposed in this bill is found in A.S. 44.27.020(1).

This amendment is proposed in order to maintain the separation of church and state. Present law says that the Department of Education shall administer the State's program of education at the elementary, secondary, and adult levels. What we are

saying in our proposed amendment is simply that the State Department of Education does not have the right to administer the church's programs of education, since the State neither founded nor funded our church educational programs.

Respectfully submitted,

_____

CHRISTIAN SCHOOL COMMENT

Vol. 13 | More than 140,000 Copies Sold Monthly | No. 8

WHAT EVERY PARENT SHOULD KNOW ABOUT THE ASSOCIATION OF CHRISTIAN SCHOOLS INTERNATIONAL

by Dr. Paul A. Kienel, Executive Director
Association of Christian Schools International

The Association of Christian Schools International (ACSI) is a non-profit service organization serving Bible-centered Christian schools and colleges. It is the largest association of Christian schools in the world with a membership of 1,933 schools and a combined student enrollment of 337,554. Over the past five years, ACSI membership has nearly doubled in size. The annual cost of school membership is $3.00 per student payable on October 1. Most schools include this small amount in their annual student registration fee. As a parent, you need to know about the wide variety of services offered by ACSI that directly benefit your Christian school and ultimately your child or children in the school.

LEGAL/LEGISLATIVE SERVICES

Over the past five years, ACSI has raised and spent more than $400,000 to preserve your school's religious freedom. We have had major struggles with the U.S. Department of Labor and the IRS. There have been several important victories but the struggle continues. Last week, for example, I met with U.S. Department of Education leaders in Washington, D.C. to discuss guidelines on how state departments of education can work cooperatively with Christian schools instead of attempting to control them. Next week I fly to Washington, D.C. again to meet with U.S. Department of Labor officials. We will attempt to reverse a decision made by the previous U.S. Secretary of Labor under the Carter Administration that claimed Christian school teachers are secular employees subject to government agency control. In the past ACSI has organized parent and teacher letter-writing campaigns to the White House and members of Congress on various issues. The results have been important to your school and your children.

CONVENTIONS AND CONFERENCES

Another service of ACSI is to encourage the spiritual and professional growth of your school's staff through ACSI conventions and conferences. Your child's teacher comes away from these meetings with fresh insight and inspiration for his or her ministry in the classroom. The ACSI staff of 42 people work year-round preparing for these meetings. More than 20,000 teachers, administrators and board members will attend the seventeen ACSI conventions held in the United States and Canada this year. ACSI also conducts similar programs in other countries.

ACCREDITATION AND CERTIFICATION

Under the capable leadership of ACSI's president, Dr. Roy W. Lowrie, Jr., the association offers a quality program of school accreditation and teacher and administrator certification. These professional services are designed to raise the spiritual and academic levels of our schools and to provide testimony to all, including government agencies, that the Christian school community has its own forms of professional recognition. Dr. Lowrie is also the editor of *Christian School*, a professional journal for Christian school teachers and board members. It is provided free of charge to teachers in ACSI member schools.

STUDENT ACTIVITIES

Approximately 25,000 Christian school students participate annually in ACSI student activities. I am referring to speech meets, spelling bees, choir festivals, science fairs, art festivals, sporting events, piano festivals, academic meets, band festivals, cheerleader camps and student leadership conferences. Each of these events is designed to inspire leadership qualities and communication skills so that students will be effective in sharing Jesus Christ with others.

PROFESSIONAL COUNSEL

ACSI personnel are located in twelve offices throughout the country. They are available to offer counsel and information to Christian schools in the United States and Canada. The ACSI regional directors are competent leaders in the Christian school movement. Pray for them as they travel thousands of miles each year on behalf of ACSI member schools.

PROFESSIONAL BOOKS

ACSI publishes many books and manuals for parents, administrators, board members, teachers, school secretaries and students. The association also publishes a monthly teacher placement list, an annual directory of member schools and colleges, regional newsletters and our professional journal, *Christian School*. This flow of vital information is important to the quality of education in your child's Christian school. Without the strong flow of written communication provided by ACSI, the Christian school movement would soon lose its cohesive thrust.

REDUCED INSURANCE RATES

ACSI insurance programs return more than one million dollars a year to its member schools and colleges via savings in premiums and worker's compensation rebates. Many schools more than offset the annual cost of ACSI membership with savings from the group insurances offered through ACSI.

Finally, the most important thing parents should know about ACSI is that everyone who is a part of the association is vitally concerned about children and young people. The 42 staff members, the 26 people who serve on the ACSI Board and scores of others who assist with ACSI programs are all born-again believers in Jesus Christ. We are strongly committed to quality Christ-centered education. Along with the staff of your fine Christian school, we have devoted our lives to the task of inspiring the next generation to be followers of Jesus Christ. □

SB 261 AND HB 357

Summary of the Legislation

SB 261 and HB 357 deal exclusively with private church schools and schools operated by religious organizations and, as amended, are modeled after the legislation adopted by North Carolina in 1979 and by West Virginia in 1982 to remedy church-state constitutional conflicts. These laws, if enacted by the Legislature, would establish requirements that must be met by private religious schools in order for parents whose children attend them to satisfy the compulsory education law. They would also exempt pre-elementary and nursery programs operated by religious organizations from the supervision of the Departments of Education and of Health and Social Services. The purpose of these bills is to remedy existing church-state constitutional conflicts by protecting the guaranteed religious freedom of church schools in Alaska and, at the same time, to balance the state's interest in assuring that each child receives a good education.

This legislation only covers schools, pre-elementary programs or nursery programs operated by a church or other nonprofit religious organization exempt from federal taxation and not receiving state or federal funding. These are constitutionally protected groups and activities.

More specifically, church schools (or denominational schools as defined in the proposed legislation) would be required to maintain attendance and immunization records. Since current compulsory education laws make parents liable for their children's failure to attend school, these bills, as amended, would require the parents to file statements with the public school authorities to establish their children's attendance at a church sponsored private school. By placing the requirement on the parent, the bills avoid the constitutional problems created by the state's excessive entanglement in religious activities. The school would also be required to operate on a regular schedule, at least nine calendar months per year, and to be subject to reasonable fire, health, and safety regulations.

To ensure that children attain certain minimum educational standards, each religious school would be required to administer a nationally standardized test to students in the first, third, sixth and ninth grades and to make the school results available for the Department of Education. This would satisfy the state's interest in compulsory education and still avoid the constitutional problem of excessive state entanglement in religion.

Any church school that satisfied all the requirements of AS 14.45 would be exempt from any additional provision of law

relating to education except those requirements of law relating to fire, health, and safety.

Constitutional Requirements

The changes set out in SB 261 and HB 357, as amended, are required to correct existing Alaskan laws which run afoul of the constitutional mandate requiring the states to avoid excessive entanglement in religious activities. The state's right to impose minimum requirements on private religious schools is very limited, because these religious activities are protected by the First Amendment of the United States Constitution and its identical counterpart in the Alaska Constitution, Art. I, sec. 4.[1]

Schools operated by churches or by nonprofit religious organizations are quite different from other private schools. They enjoy a constitutionally protected status.

> "Church operated schools are generally integral parts of their sponsoring churches. Their superintendents are generally pastors or assistant pastors of the sponsoring churches; their teachers are generally members; and their doctrinal stances are generally set by the sponsoring churches."[2]

Federal and state courts recognize that operating a church school is an integral part of the free exercise of religion.[3] For many churches, it is in fact the ministry of the church. Because

[1] E.g., Kentucky State Bd. for Elem. & Secondary Education v. Rudasill, 589 S.W.2d 877 (Ky. 1979), cert. den., 446 U.S. 938 (1980); Wisconsin v. Yoder, 406 U.S. 205 (1972); Lemon v. Kurtzman, 403 U.S. 602 (1970); Pierce v. Society of Sisters, 268 U.S. 510 (1925).

[2] "State Regulation of Private Religious Schools in North Carolina -- A Model Approach," 16 Wake Forest Law Review 405, 431-32 (1980).

[3] See, e.g., NLRB v. Catholic Bishop, 99 S. Ct. 1313 (1979) (Catholic parochial schools are founded for religious reasons and religious doctrine is pervasive); Surinach v. Pesquera de Busquets, 604 F.2d 73 (1st Cir. 1979) (private Catholic schools are an integral part of the Catholic Church and as such "involve substantial religious activity and purpose"); Hunt v. McNair, 413 U.S. 734, 743 (1973) ("[R]eligion is so pervasive that a substantial portion of [religious school] functions are subsumed in the religious mission."); Lemon v. Kurtzman, 403 U.S. 602, 616 (1971) ("[T]he parochial schools constituted 'an integral part of the religious mission of the Catholic Church'. . . In short, parochial schools involve substantial religious activity and purpose.").

church operated schools clearly come within the First Amendment free-exercise clause, their activities are constitutionally protected as fundamental rights.[4]

In the area of First Amendment individual liberties, any state legislation that burdens parents', childrens', or a church's free exercise of religious beliefs is unconstitutional unless, the state can demonstrate "a compelling state interest in the regulation of a subject within the state's constitutional power to regulate." Sherbert v. Verner, 374 U.S. 398, 403 (1963).

To establish the existance of a compelling state interest, it is not enough for the state to merely show that a rational relationship exists between a colorable state interest and the proposed regulation. According to Sherbert, "[o]nly the gravest abuses, endangering paramount interests, give occasion for permissible limitation."

More importantly, the state must demonstrate that it is using the least burdensome method for addressing the compelling state interest. The current law violates this mandate, because the legislative goals can be achieved with less burdensome methods. SB 261 and HB 357, as amended, use North Carolina and West Virginia laws as models and are less burdensome while still accomplishing legislative goals.

Eventhough SB 261 and HB 357, as amended, would create two classes of private schools and treat them differently, these bills would not violate the Equal Protection clause of the Fourteenth Amendment. According to established legal principles[5], the equal protection guarantee of the Fourteenth Amendment does not take from the state legislatures all power to classify persons or objects. The state may classify persons for the purpose of legislation. Classification is an inherent right and power of the legislature.

The important issue for these proposed bills is whether the distinction between private schools operated for profit and private schools operated by churches is based on a real and substantial difference between the two classes. Clearly, there is a substantial difference. The decision of the legislature to recognize its limited ability to regulate church schools is based on a constitutional distinction between the two classes. Church schools are in a protected class, enjoying the protection of the First Amendment. Private schools are not.[6]

[4] Ibid.

[5] 16A Am Jur 2d, Constitutional Law, §746, et. seq.

[6] In addition, it must noted that the motivations for operating

In the area of religious freedom and expression, the Constitution demands neutrality. The government cannot demonstrate a hostility toward religion or religious activity. The mere fact that the government specifically exempts religious groups from complying with certain laws does not violate the Constitution. For example, federal law clearly creates two classes when it exempts the property and income of religious organizations from federal taxation. These two classes parallel the two classes which would be created by SB 261 and HB 357, as amended. The Supreme Court held this was proper legislation in Walz v. Tax Commission, 397 U.S. 664,669 (1970). The Supreme Court found that neither the purpose nor the effect of such exemption was to advance or inhibit religion. It was "benevolently neutral."

The distinction between private schools operated for profit and those operated by churches is real and parallels distinctions created by the federal tax laws. Therefore, there is no violation of equal protection guarantees.

In summary, the present law violates both the United States Constitution and the Alaska Constitution. SB 261 and HB 357, as amended, balance the state's interest in ensuring that each child receives a good education with the fundamental right to religious freedom and should be adopted.

a private school for profit and a school operated by a church are entirely different.

* Section 1. AS 14.07.020 (8) is amended to read:

(8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries as defined in AS 47.35.080 (4) excluding pre-elementary schools and nurseries operated by a church or other nonprofit religious organization that is exempt from federal taxation provided the program does not receive state or federal funding; pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

* Section 2. AS 14.30.010 (b)(1) is amended to read:

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; [OR]

(C) except as provided in (D) of this paragraph, attendance at a private school in which the average student proficiency is not less than the average proficiency found in the public schools in the area as measured by national achievement tests; the department with assistance from representatives of the private schools shall promulgate regulations defining the subject areas to be tested and the minimum average scores to be achieved; or

(D) attendance in an educational program operated by a church or other nonprofit religious organization that is exempt from federal taxation provided the program does not receive state or federal funding and provided that the church or other nonprofit religious organization elects to comply with the provisions of AS 14.45;

* Section 3. AS 14.45.015 is added to read:

Sec. 14.45.015. POLICY. In conformity with the fundamental right to freedom of religion guaranteed by the constitutions of the United States and of Alaska, it is the public policy of the State in the matters of education by religious organizations that the state shall not control or interfere with the rights of conscience or with religious liberty. The State further finds that there is no compelling reason to interfere with this fundamental right.

* Section 4. AS 14.45.020 is repealed.

* Section 5. AS 14.45.025 is added to read:

AS 14.45.025. STANDARDIZED TESTING REQUIREMENTS. Each school operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding and that has elected to comply with this chapter shall administer, at least once in each school year, a nationally standardized test or other nationally standardized equivalent measurement selected by the chief administrative officer of such school, to all students enrolled or regularly attending grades one, three, six and nine. The nationally standardized test or other equivalent measurement selected must measure achievement in the areas of English grammar, reading, spelling and mathematics. Each school shall make and maintain records of the results achieved by its students. For one year after testing, all records shall be made available to the parents at the principal's office, and the school composite test results shall be made available at all reasonble times for annual inspection by a duly authorized representative of the State of Alaska.

* Section 6. AS 14.45.030. is amended to read:

Sec. 14.45.030. ATTENDANCE AND ANNUAL REPORTS REQUIRED. (a) Teachers and others in charge of private [OR DENOMINATIONAL] schools not operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding and that has elected to comply with AS 14.45 shall make regular monthly attendance reports and annual reports to the commissioner in the same manner as teachers and superintendents in the public schools.

(b) The enrollment and attendance of a child in a school operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding shall be filed with the local public school superintendent by the parent, guardian or other person in charge or control of the child on a form provided by the superintendent which shall be countersigned by the administrator of the church school and returned to the public school superintendent by the parent. Should said child cease attendance at a church school, the parent, guardian, or other person in charge or control of the child shall by prior consent at the time of enrollment direct the church school to notify the local public school superintendent that said child no longer is in attendance at a church school.

(c) Each school operated by a church or other nonprofit religious organization exempt from federal taxation and which does not receive state or federal funding shall make and maintain monthly attendence records for each student enrolled and regularly attending classes. Such school shall operate on a regular schedule, excluding reasonable holidays and vacations, during at least nine calendar months of the year.

* Section 7. AS 14.45.035 is added to read:

AS 14.45.035. REQUIREMENTS EXCLUSIVE. No school operated by any church or other nonprofit religious organization exempt from federal taxation which does not receive state or federal funding and which has complied with this chapter shall be subject to any other provision of law relating to education except requirements of law respecting fire, safety, sanitation, physical examination and immunization.

* Section 8. AS 44.27.020(1) is amended to read:

(1) administer the state's program of education at the elementary, secondary, and adult levels, including, but not limited to, programs of vocational education and training, vocational rehabilitation, library services, correspondance courses, adult basic education, and fire-service training, but not including degree programs of postsecondary education or an educational program operated by a church or other nonprofit religious organization that is exempt from federal taxation if the program does not receive state or federal funding and if that school has elected to comply with the requirements of AS 14.45;

Re: HB 357 -- Regulation of Religious Schools

Dear Representative Pestinger:

Thank-you for your support and for the excellent help provided to Burt Carney and to me by Ed Essa during our recent trip to Juneau to work for the passage of HB 357. As we discussed, this legislation is extremely important if the state is to avoid the church-state conflicts that have occurred in other states. While the results are generally pleasing, in reviewing the final Health, Education and Social Services committee substitute, one problem is apparent in the language added to Section 1. The section as amended reads as follows:

> (8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries as defined in AS 47.35.080(4) **excluding the educational component of pre-elementary schools and nurseries operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive state or federal funding;** pre-elementary schools in this paragraph means schools for children ages three through five years when the school's primary function is educational; (the added language is in bold type)

While the phrase "the educational component" may seem innocuous, it really defeats the purpose of this legislation. The change in the language is improper on three grounds. First, it violates the Equal Protection clause of the U. S. Constitution by apparently delegating to the Department of Education more supervision over church schools than it has over public schools. Second, it is unclear what non-educational general supervisory powers the legislature intends to grant to the Department of Education over church schools and, therefore, this broad grant is an unconstitutional delegation of legislative power to the executive branch of government. Third, if by this grant of power, the department through regulation can unduly burden religious exercise, it is unconstitutional as a violation

of the First Amendment.

If the legislation excludes only "the educational component" of church schools, there is a clear implication that the church school may be regulated in other ways under the "general supervision" language. Not even the public schools are subject to "general supervision," but the department's duties regarding them are specifically set forth. The existing statute includes: providing consulting and advisory services to the public schools, prescribing a minimum course of study for the public schools, establishing educational programs for children in detention, accrediting public schools, prescribing standards to assure healthful and safe conditions in public and private schools, providing correspondence courses, accrediting private schools that request accreditation, reviewing construction plans of public schools, and providing vocational education to those persons older than sixteen. These specific powers are generally not relevant or applicable to church schools.

Unless church schools are totally exempt from "general supervision," and not exempt only with respect to the educational component, there would be a denial of equal protection under the Constitution, because the department would have more authority over religious schools than it has over public schools.

Because the words, "general supervision," are not defined it is not clear what the legislature intends by them. By leaving it up to the department to decide what is meant by these words, the legislature would be violating a basic principle of our form of government. The legislature writes the laws and sets policy and the executive branch implements that policy. The separation of power is essential to effective government and where a delegation is too vague, the courts generally strike the law down.

Finally, the state cannot do indirectly what it is prohibited from doing directly. As we have discussed, the state's right to impose minimum requirements on private religious schools is very limited, because those religious activities are protected by the First Amendment of the U. S. Constitution and its identical counterpart in the Alaska State Constitution, Art. I, sec. 4. Any legislation that directly or indirectly burdens parents', childrens', or a church's free exercise of religious beliefs is unconstitutional unless, the state can demonstrate that it has a compelling state interest in the regulation and that it has chosen the least burdensome method for protecting that interest.

In this case, since the legislature has not even identified the compelling state interest in granting to the department "general supervision" of church pre-elementary and nursery programs and has left the definition of the term, as well as the method, up to the department, this would clearly violate the First Amendment.

Again, I appreciate the time and the support you and your staff have provided to me. Please delete the phrase "the educational component of" added by the HESS Committee to HB 357.

Sincerely,

Cheri C. Jacobus

M E M O R A N D U M May 18, 1983

SUBJECT: Regulation of religious schools (CSHB 357 (HESS))

TO: Representative Mae Tischer
Chairman, House Health, Education and Social Services Committee

FROM: Keith B. Levy KBL
Legislative Counsel

You have asked for an opinion as to the effect of the amendment made to sec. 1 of CSHB 357 (HESS) at the Health, Education and Social Services Committee meeting of May 17, 1983. Before the committee amendment, sec. 1 amended AS 14.07.020(8) to provide that certain religious schools are excluded from the general supervision of the Department of Education and the Department of Health and Social Services. The committee amendment makes it clear that only the educational component of those schools is exempt from departmental supervision.

More specifically, before the committee amendment, sec. 1 provided that the departments would exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries, excluding pre-elementary schools and nurseries run by religious organizations. In other words, religious pre-elementary schools would be exempt from any supervision whereas religious nurseries would only be exempt from supervision of their educational component. This would leave the religious nurseries open to regulation as to such matters as health and safety, but not curriculum. The amendment made in the committee meeting added the words "educational component" to the exemption from departmental supervision. The effect of the amendment is to make it clear that the departments can regulate both religious pre-elementary schools and nurseries only in regard to matters other than education, e.g., health and safety.

Re: Draft Letter of Intent for CSHB 357 -- Regulation of Religious Schools

Dear Dr. Fritz:

Attached is a draft Letter of Intent to accompany CSHB 357. I have attempted to cover all the issues which might arise in the state's later interpretation of this legislation. If you or your staff have any questions or think that it can be clarified, please feel free to call me. I especially enjoyed our short meeting together.

In carefully reviewing the draft CSHB 357 a few minor problems came to my attention. The Legislative Affairs Assistant Counsel added some language and left out other language which would have made the committee substitute more clear, without changing its meaning.

Pursuant to discussions with the representative of the Department of Education, Steve Hole, the following sentence should be added to page 2, line 21 to make it clear that religious schools are treated in the sub-sections that follow:

> This sub-section does not apply to religious schools as defined in AS 14.45.040 which comply with this chapter.

Since it is clearly not practical for the parents to provide daily attendance records, that requirement should be deleted from the committee substitute. Section 5 found on page 2, beginning on line 23, would then read:

> (b) The parent or guardian of a child enrolled in a religious school that complies with this chapter shall file annual enrollment [and attendance records] for the child with the public school superintendent for the area in which the child resides on a form provided by the public school superintendent. . . (bracketed part is deleted.)

As I testified in the teleconference, the last sentence of that section should also read differently to protect the state's interest in assuring compliance with the state's compulsory education law. Since this is more practical, the change would require the church school to notify authorities if a child leaves the church school. Line 29 on page 2 and lines 1 and 2 on page 3 should read as follows:

> The <u>religious school</u> [parent] shall notifiy

the public school superintendent immediately if the child is no longer in or attending the religious school.

As I was leaving Juneau, it came to my attention that the Administration was considering lengthening the school year. Therefore, with that in mind, the following language change is suggested to ensure that religious schools operate for similar lengths of time. Line 6 on page 3 should read:

> . . . [during at least nine calendar months of the year] for at least the same number of days that the public schools operate.

Finally, to avoid an interpretation that would require intrusive regulations, it is suggested that the following language be added to Section 6, beginning at line 19. That subsection would then read:

> (c) A religious school shall maintain records of the results of the nationally standardized tests and the records shall be made available to the parent or guardian of the student and to authorized representatives of the state <u>in the school office.</u>

Thank-you for all your help on this important issue. If Alaska can avoid all the problems that have occurred in the lower 48 states, it will be worth the effort. I look forward to working with you again.

Sincerely yours,

Cheri C. Jacobus

LETTER OF INTENT
HB 357

The House Health, Education and Social Services Committee recognizes that operating a church school is an integral part of the free expression of religion and that schools operated by religious bodies are quite different from other private schools. Therefore, the Committee's purpose in referring HB 357 to the floor and in urging its passage is to prevent possible church-state constitutional conflicts by protecting the fundamental rights of religious freedom of parents, children, and church schools in Alaska and, at the same time, to balance the state's interest in assuring that each child receives a good education. The Committee specifically intends to exempt pre-elementary and nursery programs operated by religious organizations from the general supervision of the Departments of Education and of Health and Social Services.

The Committee only intends to exclude from the purview of this bill those church schools that receive direct federal or state funds. This would not affect those schools that receive incidental benefits from government, such as fire or police protection, health care or other benefits to which all citizens are entitled.

Any church school that satisfies all the requirements of AS 14.45 would be exempt from any additional provision of law relating to education except those requirements of law relating to fire, health, and safety. While each church school would be subject to reasonable fire, health, and safety regulation, the House Health, Education and Social Services Committee intends to specifically limit health regulation to that regulation that is reasonably related to the state's interest in preventing and curing physical diseases. For example, the Committee does not intend for the state to regulate minimum space requirements (except as it directly relates to the fire code), hours of attendence, or reasonable methods of discipline.

In summary, the House Health, Education and Social Services Committee Substitute for HB 357 balances the state's interest in ensuring that each child receives a good education with the constitutional right to religious freedom.

Respectfully submitted,
/s/

IN THE HOUSE BY THE RULES COMMITTEE

CS FOR HOUSE BILL NO. 357 (Rules)

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the regulation of religious schools."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.07.020(8) is amended to read:

(8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries as defined in AS 47.35.080(4) excluding pre-elementary schools and nurseries operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive direct state or federal funding; pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

CS deletes "the educational component of"

* Sec. 2. AS 14.30.010(b)(1) is amended to read:

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; [OR]

(C) except as provided in (D) of this paragraph, attendance at a private school in which the average student proficiency is not less than the average proficiency found in the public schools in the area as measured by national achievement

tests; the board of education [DEPARTMENT] with assistance from representatives of the private schools shall adopt [PROMULGATE] regulations defining the subject areas to be tested and the minimum average scores to be achieved; or

(D) attendance in an educational program operated in compliance with AS 14.45 by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive direct state or federal funding;

* Sec. 3. AS 14.45 is amended by adding a new section to read:

Sec. 14.45.025. EXEMPTION FROM EDUCATION LAWS. A religious school that complies with this chapter is exempt from other provisions of state law and regulations relating to education except laws and regulations relating to health, fire safety, sanitation, immunization, and physical examinations.

* Sec. 4. AS 14.45.030 is amended to read:

Sec. 14.45.030. ATTENDANCE AND ANNUAL REPORTS REQUIRED. (a) Except as provided in (b) and (c) of this section, teachers [TEACHERS] and others in charge of private or denominational schools shall make regular monthly attendance reports and annual reports to the commissioner in the same manner as teachers and superintendents in the public schools.

* Sec. 5. AS 14.45.030 is amended by adding new subsections to read:

(b) The parent or guardian of a child enrolled in a religious school that complies with this chapter shall file an annual notice of enrollment in the religious school for the child with the public school superintendent for the area in which the child resides on a form provided by the public school superintendent. The form shall be signed by the parent and the chief administrative officer of the religious school and returned to the public school superintendent by

the parent. The religious school shall notify the public school superintendent immediately if the child is no longer enrolled in or attending the religious school.

(c) A religious school that elects to comply with this chapter shall maintain monthly attendance records for each student enrolled in the school, shall operate on a regular schedule, excluding reasonable holidays and vacations, during at least 180 days of the year, and shall make an annual report to the commissioner of the number of students in each grade and the school calendar.

* Sec. 6. AS 14.45 is amended by adding new sections to read:

Sec. 14.45.035. STANDARDIZED TESTING REQUIREMENTS. (a) A religious school that elects to comply with this chapter shall administer a nationally standardized test selected by the chief administrative officer of the religious school to all students enrolled in grades one, three, six, and nine at least once each school year.

(b) The nationally standardized test must measure achievement in English grammar, reading, spelling, and mathematics.

(c) A religious school that elects to comply with this chapter shall maintain records of the results of the nationally standardized tests and the records shall be made available to the parent or guardian of the student and to authorized representatives of the state.

Sec. 14.45.040. RECORDS. A religious school that elects to comply with this chapter shall maintain adequate student records, including records of immunizations, physical examinations, testing, and courses taken at the religious school.

Sec. 14.45.045. DEFINITION. In this chapter, "religious school" means a school operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive direct state or federal funding.

* Sec. 7. AS 44.27.020(1) is amended to read:

(1) administer the state's program of education at the elementary, secondary, and adult levels, including, but not limited to, programs of vocational education and training, vocational rehabilitation, library services, correspondence courses, adult basic education, and fire-service training, but not including degree programs of postsecondary education or an educational program operated in compliance with AS 14.45 by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive direct state or federal funding;

* Sec. 8. AS 14.45.020 is repealed.

POSITION PAPER/Department of Health & Social Services

POSITION PAPER

Sponsor Substitute for House Bill No. 374

"An Act relating to the establishment of maximum security prison facilities at Anderson and Palmer/Sutton."

House Bill No. 374 modifies AS 33.30.020 by making that section subject to the provisions of AS 33.30.025 which is entitled Location of Facilities. AS 33.30.025 requires that after July 1, 1983, the Commissioner shall locate all newly constructed maximum security prison facilities that contain 200 or more beds within the vicinity of Anderson and Palmer/Sutton.

The Department of Health and Social Services and the Division of Adult Corrections totally opposes the concept of predetermined building sites for prison facilities. It is imperative that such decisions be made by professional correctional practitioners and based on sound criminal justice criteria for site location to ensure that the prison facilities meet standards for programming, security, and safety.

IV. ANALYSIS

No specific additional costs can be identified related to the requirement to locate all new maximum security prison facilities within the vicinity of Anderson and Palmer/Sutton.

TO: HESS Committee Members

FROM: Heidi H. Borson

RE: Staff Report - HB 347 - An act relating to the establishment of maximum security prison facilities at Anderson and Palmer/Sutton.

HB 347 mandates that all newly constructed maximum security prisons with 200 or more beds be located within the vicinity of Anderson and Palmer/Sutton. The fiscal note for HB 374 is zero due to a lack of information, and the next committee of referral is Judiciary.

The Department of Health & Social Services totally opposes the concept of predetermined building sites for prison facilities; and thus opposes HB 374, as well as HB 217 and HB 275.

The language in Section 33.30.025 of HB 374 differs from HB 217 and HB 275 in two respects:

1. the name of the designated location
2. the added stipulation that the prison facilities contain 200 or more beds

Note that in previous deliberations over HB 217 and HB 275, the committee voted to adopt committee substitutes for the bills which changed the wording in Section 33.30.025 from locating "all newly constructed maximum security prison facilities" within the vicinity of X to locating "the next maximum security prison facility" within the vicinity of X.

Backup material from the sponsor of HB 374 is attached to this report.

EXECUTIVE SUMMARY
FOR THE LEGISLATURE

The Anderson Case
for a
Maximum Security Prison
April 26, 1983

We'd like to be taken seriously.

Now that the attention-getting phase of our program has concluded, we'd like to firmly establish our position on maximum security prisons by briefly re-stating it:

1. The Legislature should decide on the location of any correctional facility such as this one. The impacts on a community are enormous and of long-term economic and social importance. It is the kind of decision that determines which part of the State will or will not grow. This is the kind of decision Legislatures should be making. Legislatures prevail, over time. Commissioners come and go, and policies with them. It is obvious that you and your colleagues must make this decision. It is just as obvious that the management decisions belong to the professionals.

2. It is decision time. Information we have developed during our research tells us that the State of Alaska is at peril if a decision is not reached during this Session of the Thirteenth! We have mentioned this to no one up to now, but, we'll appreciate being able to fill you in during the coming week. Please let us have a couple of minutes to do so. Thank you.

3. Two small prisons, not one large one. Our research among Alaska prison managers, those in the Lesser-48, and throughout the professional literature support the validity of this concept, and it may actually cost less to operate two smaller, than one large. Costs to construct two will be only about 22% more than to build the single larger unit, we have been told by prison architects.

4. Palmer and Anderson are appropriate locations to serve the north and south of the State since about 46% of all inmates resided in the Greater Anchorage area and about 41% came from Fairbanks and the Bush before their placement in institutions.

5. And finally, Anderson has the same kind of locational advantages as any other site, except one -- and that's where we have it all over everybody -- our citizens voted for it in a legal Referendum. To this time, no other city has done that!

THE CITY OF ANDERSON

G. W. Mueller
Mayor

White Paper

A Consideration For Location of Maximum Security Prison In Anderson

Developed In Cooperation With
GARY COPUS, Ph.D
Criminal Justice Division
University of Alaska
Fairbanks

Credentials Brief

GARY COPUS, PH.D

Currently serving the Thirteenth Alaska Legislature as a consultant in Corrections, Dr. Copus has also assisted the Mayor and Council of the City of Anderson in determining its viability for siting a Maximum Security Prison.

He received his Doctorate in Sociology at the University of Missouri-Columbia.

From 1970 until 1979, he was instructor in Criminal Justice in the graduate school at Sam Houston University, Huntsville, Texas.

From 1980 to the present he served in the Criminal Justice program in which he has published and lectured in all areas of corrections and its alternates.

We are very proud to have the assistance of Dr. Copus in developing our position.

White Paper

+ + + + +

A Consideration For Location of Maximum Security Prison In Anderson

CONSIDERATIONS ABOUT ANDERSON AND MAXIMUM SECURITY PRISONS

- o Purpose of maximum facilities is LESS REHABILATATION AND MORE WAREHOUSING. Lessens the necessity to establish facilities in urban, or near urban, areas.

- o Availability of the Anderson Site for VISITATION is enhanced by the TRAIN STOP and HIGHWAY connecting Alaska's two largest cities.

- o There is no other prison system in Anderson. The modern trend is to keep prison facilities: less than 500 bed capacity, and GEOGRAPHICALLY SEPARATE, so as NOT TO CREATE A "PRISON MEGALOPOLIS." This latter characteristic allows for 1) distribution of the economic advantages and 2) the flexability for prison management to have access to a variety of resources from the land and the community.

- o Anderson is in the middle of a growth/development corridor of Alaska. Remembering that given the prison facility will last many generations to come the Anderson site makes an excellent choice given the emerging DEVELOPMENT PATTERNS ALONG THE RAIL-BELT.

- o The facility, if a 400 bed one as currently proposed, will employ between 175 and 250 persons. The City of Anderson looks forward to the advantages new citizens afford and to the opportunity for current and future citizens to obtain correctional employment.

- o With OVERWHELMING COMMUNITY SUPPORT any deficit Anderson may have will be overcome or lessened. No matter where a site is located, there will be positive and negative factors to be dealt with. It is emphasized that where Anderson differs is the community spirit so necessary for what successes prisons can achieve.

- o IN SUMMARY, Prisons need four things to operate: a physical facility, personnel to staff and administer, offenders to be located there, and supplies. Anderson can provide a location whereby the state can satisfy these needs efficiently, economically, and continually.

COMMUNITY SUPPORT

- Referendum on February 29, 1983 supported prison by 2-to-1.
- 61% voter turnout
- Five public meetings informed citizens
- Reasons Anderson wants prison are community expansion and employment opportunities in future generations.

LAND AVAILABILITY

- Multiple sites for selection
- Sites are available by State Land Selection Process from Cook Inlet Region, Incorporated; or, Federal Lands

ELEMENTS OF PHYSICAL ENVIRONMENT

- Water - pure, unlimited, and without fee via prison's own wells and distribution facilities.
- Sewage - Cost saving from construction/operation of on-site treatment system.
- Power - Optional excess power available from Clear AFB or, Golden Valley Electric Association and potential Anchorage-Fairbanks intertie.
- Heating - Coal from Usibelli Mines 50 miles away, and/or fuel from North Pole Refinery 100 miles away.
- Transportation available by highway, rail, and air.

ELEMENTS OF HUMAN ENVIRONMENT

- Recreational areas and activities plentiful in Anderson area.
- Modern elementary and high school expandable to accomodate increased student body.
- Medical facilities currently 80 miles north in Fairbanks via highway, but, with increased population expect Anderson facility.
- Fire protection supported by Anderson and Clear AFB.
- The prison will attract quality personnel to work there and live in Anderson. Precedent in support is Clear AFB personnel educational level and technical skill level in Anderson for 20+ years. AFB also offers supply of potential quality employees from those retired or wishing a job change.

White Paper

+ + + + +

A Consideration For Location of Maximum Security Prison In Anderson

MODERN PRISONS DESCRIBED

1. In modern penal systems the purpose of maximum security units has changed little since the inception of the first prison in our nation. The purpose is simply to provide for the safe keeping of those individual offenders who have shown themselves incapable of co-existing with others, or are deemed a danger to themselves or others, or are in danger from others.

Individuals are assigned to maximum units via a thorough process called classification and end up "max-rated" only as a last resort. Given these considerations, experts argue that "max units" are simply warehousing units, with less emphasis on rehabilitation.

Less Rehabilitation

Rehabilitation is attempted in minimum or medium security units -- an assignment available to max inmates through re-classification. Thus

> FOR SITE SELECTION OF A MAXIMUM SECURITY UNIT THE AVAILABILITY OF REHABILITATION SERVICES SHOULD NOT BE A MAJOR FACTOR OF CONSIDERATION.

EASY TRAVEL

2. An Anderson site would be ideal for friends and relatives wishing to visit inmates because of its accessibility by highway and rail. The train is a particularly good asset for families not having access to automobile transportation and during most of the year the frequency of the local runs is such that persons visiting the prison could make convienient connections. Additionally, for persons visiting from Fairbanks, Anderson is a short, scenic drive.

NO PLACE PERFECT

3. With the numerous points to consider, no matter which site the State selects, all points will not be positive relative to other sites, For example, one might argue that Haines would have been more positively effected economically than a Palmer area site, but Palmer is nearest the largest city. Anderson may have transportation and utility advantages over Palmer. Given that no one site will score relatively higher than other sites on all points, what becomes important is how to handle the deficits and then the community becomes an indispensable part of site consideration.

Positive Community Attitude

A positive community outlook supports the goals of the prison in many direct and subtle ways. For example, a positive community attitude attracts, in part, quality personnel to staff the prison; assists those families moving to the area because a friend or relative is incarcerated and thus eliminates worry on part of the inmate; works with the prison administration to provide for staff housing, supplies, and emergency labor needs thus resulting in an efficient institution with a high morale.

ANDERSON IS A CITY WHICH HAS PUBLICLY ANNOUNCED, ON THE BASIS OF INFORMED DECISION MAKING, THAT IT WILLINGLY ACCEPTS THE COMMUNITY RESPONSIBILITY.

LONG USEFUL LIFE

4. Prisons last for many years, a conservative estimate being a useful life of between 60 to 90 years. A good many prisons operating today are "centenarians". Thus when considering a site, the future of the area must be carefully taken into account. Any points negative with respect to Anderson should be assessed with the question, "What will the Anderson area be like 5, 10, 20, 50 years from now?" The current projections are that Anderson will be part of a rapidly developing area along the rail belt which could make it a center point of population in the next 20 years. This, accompanied by projected increases in transportation facilities demotes any current concerns about "out-of-the-wayness" to only temporal concerns at best.

MAJOR PRISON PROBLEMS

5. Many of the major problems in prisons today are in part related to their mere magnitude in terms of numbers of persons locked up under one roof. Recent national recommendations stress the importance of keeping newly constructed units less than 500 bed capacity, and the physical separation of units. In other words, the recommendations could be interpreted as "do not build a prison megalopolis" be it under one roof or by building multiple adjacent structures. Separation of facilities, geographically, has several advantages.

Physical Separation

First from the standpoint of the state the economic advantages are spread as well as any disadvantages which communities might accrue. For example, suppose the presence of a facility attracts inmate families which have children who in turn have learning problems, behavior problems in school, and relatively high delinquency rates. Why concentrate these traits versus spreading them out and subject them to strong positive community influence (like Anderson can provide)?

Second building a facility geographically separate from other current institutions makes good sense from a management point of view. Take the hopefully unlikely and extreme case of a major earthquake in the vicinity of a prison creating the need for evacuation. Would it not be better to evacuate only one facility than several too closely juxtaposed? Further, physical separation enhances identification by staff with "their" facility and increases pride, morale, and dedication as opposed to "working in a large network of prisons." Management also has a variety of land and community resources, the variety offering the opportunity to install new programs and ideas which may not be acceptable in just any one location. <u>These are only a few of the reasons not to build prisons in the same geographical locale</u>.

Other Advantages

Gary Copus, Ph.D

INTRODUCTION TO ANDERSON

Anderson, Alaska thinks it would be a good place for a Maximum Security Prison--But only a Maximum Security Prison! The people of Anderson are pretty outspoken on that point. They have talked it over.

You say you've never heard of Anderson-- and haven't the foggiest notion of where it is?

Touche!

No convention mecca, is Anderson. It is not on the tourist highways and by-ways or the slick travel maps. But, it is well connected--very well connected, to an all-weather highway, an airport and ocean-going barges via the Alaska Railroad, right in the middle of nowhere! Between Anchorage and Fairbanks.

Now you've heard of Anderson! a town of 550 people which comes of age on its 21st birthday in June.

The reasons for putting forth Anderson's name stem from a package of advantages no where else available in quite the same magnitude or combination, as they are available in Anderson.

..... READ ON! .....

COMMUNITY SUPPORT

The City of Anderson has made a pointed and energetic effort to inform the citizens of all aspects, both negative and positive, of having a maximum security prison within close proximity of the town. The idea was first publicly presented on February 8 at a City Council meeting where the decision was made to continue by informing the public and assessing the general opinion. During further public hearings and Town Hall meetings occurring on February 17, 18, 25, 26, and March 18, 26 it is estimated that over 60% of all citizens in Anderson were personally involved in acquiring knowledge and asking questions. Undoubtably, 100% became informed through informal discussion.

During the meetings, material used to guide informative discussion was used from the American Correctional Association, The Federal Bureau of Prisons and the Criminal Justice Institute at Hemlock Hill, New York. In addition, at the March 18th Town Hall meeting, professionals in the correctional area were invited to address the citizentry. Invited and accepting were Captains Douglas Nowak and Lawrence Jackson of the U.S. Air Force, and Dr. Gary Copus.

Dr. Copus, with academic and practical expertise in community impact by prisons, was very careful to point out what to some communities might be undesirable impacts. No area was left unexamined and the result was--

> BASED ON SOUND AND TOTAL INFORMATION THE CITIZENS OF ANDERSON VOTED ON FEBRUARY 29TH TO DIRECT THE CITY COUNCIL TO PURSUE WITH VIGOR THE ATTRACTION OF THE MAXIMUM SECURITY PRISON TO ANDERSON.

The resulting 2-to-1 vote was based on 61% of the registered voters. Voting was done in an official manner in all precincts, locked ballot boxes and election judges. Noteworthy is that the prison issue was the only item on the ballot so that the largest turnout in Anderson's voting history was due to the community interest which was overwhelmingly positive.

An informal assessment was made as to the reasons the community obviously wanted a maximum security prison.

First the community sees the prison as an employment opportunity for its future generations. Correctional employment was seen as not only an opportunity for young adults to have the alternative of remaining in Anderson as productive citizens, but the community also recognized modern corrections as providing a desirable career opportunity. Present employment was of lesser concern. Anderson is not currently impacted by any economic crisis which might sway a community's opinion to be only temporally positive. Anderson is in a reasonably good economic and employment status.

Second the community saw many positive aspects of development and growth. Among those mentioned were cultural and social growth, economic growth through cirricula expansion and attraction of additional qualified teachers, and the establishment of social and health services. The community looks at the prison as offering a challenge to develop and manage a "new Anderson."

ECONOMIC ADVANTAGES OF ANDERSON

The economical advantages of an Anderson site could vastly outweigh those of many other potential sites if life cycle economics is considered.

Life cycle economics center upon options available for essential operating utilities, such as:

heating/air conditioning
electric power
water
sewage treatment
transportation

HEATING Healy coal, transported by the Alaska Railroad, powers the generators and boilers at the Anderson-located Clear Air Force Station. Three Anderson sites are located immediately adjacent to the Alaska Railroad. Options for heating and power generation include both coal and/or diesel transported by the Alaska Railroad:

- o Coal: Usibelli Mines, Inc.
  Healy, Alaska
  50 miles South

- o Diesel: North Pole Refinery Co.
  North Pole, Alaska
  100 miles North

ELECTRIC POWER An option available only at an Anderson site includes the potential of purchasing the stable excess power generated at Clear Air Force Station, as many other Alaskan communities do from nearby U.S. Government facilities. The City of Anderson itself purchases power from the Golden Valley Electric Association, soon to be served by the Anchorage-Fairbanks Power Intertie, providing still another option for sub-station service at about the same time the Maximum Security Prison is expected to be operational.

WATER Anderson does not offer city-treated or supplied water to the Clear Air Force Station which consumes in excess of <u>One Hundred Fifty Million Gallons per Month</u>, or to the 117

domestic users inside the Municipality. The prison facility would drill its own wells and provide its own water from the uniquely-abundant natural supply of superior quality potable water available in Anderson--one of its priceless natural resources. Thus the prison would not now, or later, be in the position of having to purchase water supplies from a Municipality. And, the water in Anderson is hygienically pure without treatment. The prison would, of course, have established water rights, thereby protecting its call upon the natural resource forever.

A comprehensive water study, funded by the Alaska State Legislature, was completed on February 7, 1983 by URS Engineers, an internationally-connected firm of engineers and scientists with an Anchorage operations base. The final Draft Report, accepted by the Anderson City Council on February 15, 1983, found the water to be not only pure, but plentiful for domestic needs for generations into the future in the built-up residential area, and, of unlimited industrial supply nearly everywhere else in the Municipality.

In further testimony of the purity and abundance of water for large-demand-users such as the prison might be considered, the State-owned/operated Clear Fish Hatchery draws water from it's complex of wells directly into its propagation system, using 60 million gallons per month. Brewing and soft drink industries are looking at Anderson not only because of its abundance of pure water, but also because of its logistical advantages.

SEWAGE TREATMENT — Another cost saving advantage of an Anderson site is that the prison would construct and operate its own small, self-contained treatment system, just as does the Clear Air Force Station for its 500+ military and civilian personnel forces. The State may wish to acquire slightly more than the proposed 100-acre-reservation for these purposes. Everywhere at all Anderson sites, land is available to the State for its purposes and needs.

TRANSPORTATION — The advantages of prisoner transfer transportation has been earlier addressed. In this section, logistical transportation is discussed.

The locational advantage of an inter-modal transportation network must not be under-estimated, either for the construction phase or the ultimate operational life of the prison.

Construction materials can be boarded on rail cars at any point in the Lower-48 or the Orient and off-loaded near any of the potential Anderson sites. This same transportation system will greatly reduce costs of consumable supplies for the operation phases through use of the rail-barge-rail-truck-road inter-modal matrix available only at Anderson, while utilizing the state-owned Alaska Railroad utility. The air link to Anderson sites has been prior addressed.

CULTURAL-SOCIAL-RECREATIONAL ADVANTAGES OF ANDERSON

Since Anderson is just 90 minutes driving time from the main campus of the University of Alaska/Fairbanks, and the university's Nenana Valley Rural Education Center presents credit-courses at Anderson and throughout the region, opportunities to take or teach graduate and under-graduate courses are readily available, as are symphony, drama, music and art, sports and popular music. The Fairbanks Regional Medical Center is only 30 air minutes from Anderson and provides a wide range of modern medical procedures.

In Anderson itself, there is an opportunity to participate in social and fraternal clubs and organizations as well as sports and educational activities. Anderson's new and modern elementary and High School can absorb a hundred or more students with only the addition of a few staff positions. By adding new rooms to the architecturally expandable complex, up to 250 additional students could be responsibly accommodated.

A new gun club and indoor shooting range will be completed next year in Anderson and, cross-country ski, snowmachine and ATV trails criss-cross the area and sport fishing and hunting are very nearby. Youth and large all-family parks are popular and in use. All roads and water removal ditching will have been completed prior to commencement of major construction.

Anderson is a Second Class City with an experienced, stable government and Council. There is no property tax. Except for educators and government employees, most adults work at Anderson's Clear Air Force Station as technical or management personnel. While Anderson has obvious employment stability, second and eventually third generation citizens face chronic unemployment and welcome the opportunity to train and to qualify for positions at the prison, now, and into its future life cycle.

LAND AVAILABILITY
IN ANDERSON

Anderson is surrounded on both sides by land available to the State through the State land selection process. Most specifically, from removal from the Cook Inlet Region, Incorporated selection pool, or from other federally owned land from which it may select. The State itself owns land which should be considered, and will soon receive numerous Sections of land in Township 7 South, Range 7 West, F.M. which affords a number of site potentials. The City of Anderson recommend sites in Sections 15, 14, 10, 11 of T7S, R7W FM be studied; then, section 8 or 4 of T7S, R7W FM; finally sections 13, 23, 26, 27 and 34 T7S, R7W FM.

POINTS TO CONSIDER FOR LOCATING PRISON IN ANDERSON

1. Prison would be close enough to Fairbanks to benefit that area's labor, logistics and transportation.

2. All supplies for the prison would probably come through Fairbanks.

3. Prison would not have the annual expense of paying a city for water and sewage treatment. The community of Clear, adjacent to the proposed prison site, has ample supply of water and the ground percolates well for sewage treatment.

4. Fairbanks Bar Association has advised that they are for this location and will process any services that are needed at the prison.

5. Population of Anderson voted on a regular ballot (not straw vote - as did Haines) to locate the prison there and by a vote of two to one. Haines citizens are against locating prison in Haines.

6. City of Anderson has hired Dr. Copus to assist them in setting up, administering and supporting the prison efforts there. He is an expert on prisons, having written many books on the subject.

(Above information supplied by Vern McCorkle and Jerry Mueller)

ALASKA miner 4/6

Anderson says yes to high security jail

If residents in the City of Anderson have their way, the state will build Alaska's first maximum security prison in their small Railbelt community.

Anderson residents voted nearly 2-1 last week in favor of offering their community as a site for a maximum security prison, jumping into competition with Palmer for the $49 million facility.

Division of Corrections Director Roger Endell has told the Anderson city council he is not interested in Anderson as a site, but city officials are hoping the vote will change his mind.

"We know Endell has always said he'd never build the prison in a town where the people were not solidly behind the project, and we intend to hold him to that," said Anderson Mayor G.W. Mueller.

Mueller said the first thing the Anderson city council did was schedule public hearings and a "town hall" meeting to get information to residents and an indication of their sentiments.

"Now that the people are behind us, we are hoping for some support from Juneau, and we'll be there to make our case," Mueller said.

"We know that Endell has already selected the Palmer area, but Anderson has some definite advantages no other site can offer, including Palmer."

Mueller said one of the main advantages is the local support in the 550-resident community.

Mueller also said Anderson is only an hour south of Fairbanks and three hours north of Anchorage, a statement that might be disputed by highway drivers who maintain the 55-mph speed limit.

However, Mueller said Anderson also sits in the middle of the heart of Alaska's new growth corridor, and offers rail and air service.

Mueller said the town has already made wide contact with legislators and that Anderson is the most logical site for the prison.

ALASKA

Anderson ready for tough fight to get prison

By DAVID RAMSEUR
News-Miner Bureau

JUNEAU—City Manager Vern McCorkle likens it to David and Goliath. Others say it's more like the impossible dream.

The tiny town of Anderson, about 75 miles south of Fairbanks on the Parks Highway, has tossed its hat in the ring for a new maximum security state prison.

Even though state officials have all but narrowed the prison site to two other locations, Anderson is not giving up. In fact, Anderson officials say they've just now begun to fight.

"It's definately uphill," city Manager McCorkle admitted Wednesday between appointments with legislators. "We just know it's not going to be an easy fight."

He and Mayor Gerald Mueller are here for the week trying to convince enough lawmakers that their community of 550 is the best spot to house 300 hardened criminals.

"Our position is it's all well and good for the president of the Senate to want the prison in his backyard but we'd like equal consideration," McCorkle said.

Politicizing the issue with statements like that is part of Anderson's strategy. City officials are carefully counting noses in case selection of the prison site falls to the Legislature.

They hope to recruit the co-chairmen of the powerful Senate Finance Committee and on the surface appear to stand a good chance. Sen. Don Bennett is from nearby Fairbanks and Sen. John Sackett once represented Anderson.

But state officials have different ideas. Three areas—Seward, Haines and the Matanuska Susitna Valley, probably Sutton—are still in the running for the prison estimated to cost $45 million, according to state Corrections Director Roger Endell.

Sutton is near Palmer, the hometown of Senate President Jay Kerttula.

Endell told a legislative panel this week that despite heavy lobbying, Haines stands little chance. Endell said he'll probably wait until the Legislature approves funding for the prison before selecting a site.

According to McCorkle, Endell also has told Anderson officials they're out of luck and that he even refused to visit their town to check out the proposed sites.

The smooth-talking McCorkle however, looks on the bright side.

Following four public hearings, Anderson voted 102-59 on March 29 to support location of the prison in their town.

The community is a transportation hub, McCorkle says, with the Alaska Railroad and Parks Highway within a stone's throw and support services such as a hospital and court system nearby in Fairbanks.

Healy coal or North Pole-produced fuel oil could heat the prison. It could probably be located on land soon to be owned by the Cook Inlet Native Corp., which would increase the value of the firm's other land in the area, McCorkle said.

Unlike other areas in the running, McCorkle said Anderson doesn't need the prison to bail it out of tough economic times.

"We're looking beyond the immediate job seekers in the area," he said. "We're looking to the next 100 years."

The prison is expected to provide up to 175 jobs when in operation and many more during its construction.

McCorkle said he hopes the prison will attract small businesses which will help provide an incentive for Anderson area youth to remain in their community.

Re: Location of Maximum Security Prison Facility

Dear Representative Shultz:

I am pleased to inform you that at a recent special meeting, the Board of Directors of the Greater Fairbanks Chamber of Commerce unanimously endorsed the concept of locating a maximum security prison facility in the community of Anderson. We feel that location is well suited for a maximum security facility, as it has a good location, access, adequate support servcies, and strong community support.

The location of such a facility at Anderson would have a positive economic effect on the Fairbanks community as well. For goods and services, the community of Anderson, in many cases, relies on Fairbanks suppliers. An enhancement of Anderson's economic base would have an equivilent enhancing effect on the economy of the entire Interior.

I realize that it's late in the game for making a decision on this facility. However, we are convinced that the Anderson proposal warrants serious consideration as an option that will serve the best interest of all Alaskans.

Thank you very much for your consideration.

Sincerely,

Buki Wright
President

Dr. Gary Copus, Prof of Criminal Justice, UAF

HB 374 has 2 issues - 1.) size - 2.) location

1.) size - used to consider 1 400 bed facility
people in Anderson cognizant of trend
towards smaller prisons

2.) have a variety of locations to offer

+ of smaller institutions - more humane
greater control
managerial flexibility

200 or more - reflects the intent to keep
prisons small

role of the legislature re: site selection

1.) do nothing - leave it to Dept of Corrections
2.) jelly bean option - give several alternatives
to pick from
3.) make a recommendation for a specific site
advocated the 3rd option

Should consider 2 factors:

functional - water, land, power, transportation - all
available

political - prisons affect those inside & outside
wealth distributed through prison

positive community attitude 61% turnout
2 to 1 in support

Anderson is as viable as the other sites.

Legislatures resp to locate site for the benefit of the state, look at site, don't tell how to run the prison.

Make decision quickly - state under the Cleary Decision

face material - commissioner doesn't support any profound summation

Anderson Palmer/Sutton

facility to serve both Northern + Southern axis of the State

my personal observation, feeling and philosophy is ...

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the establishment of maximum security prison facilities at Anderson and Palmer/-Sutton."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 33.30.020 is amended to read:

Sec. 33.30.020. COMMISSIONER TO ESTABLISH AND ADMINISTER PRISON FACILITIES. Subject to the provisions of AS 33.30.025, the [THE] commissioner shall establish prison facilities and classify the prisoners in prison facilities. The commissioner shall provide for the safety, subsistence, proper government, and discipline of prisoners. The commissioner shall establish programs for the treatment, care, rehabilitation and reformation of prisoners.

* Sec. 2. AS 33.30 is amended by adding a new section to read:

Sec. 33.30.025. LOCATION OF FACILITIES. After July 1, 1983, the commissioner shall locate within the vicinity of Anderson and Palmer/-Sutton ~~all newly constructed~~ the next maximum security prison facilities that contain 200 or more beds.

Committee Report by the

Senate Health, Education and Social Services Committee

May 3, 1983

SITE SELECTION FOR A MAXIMUM SECURITY PRISON

The Senate Health, Education and Social Services Committee, in considering SB 224 and SB 267 relating to the location of maximum security prison facilities, recommends that the new facility be constructed in the Palmer area within the vicinity of Sutton.

The Committee also considered the testimony and presentation by Anderson, Alaska, and wishes to commend its citizens for their enthusiasm and support for the prison site.

In future planning for regionalization of prison sites, the Committee would recommend that the Commissioner of the new Department of Corrections grant serious consideration to Anderson as a possible prison location.

Anticipated development in the Railbelt Corridor coupled with transportation, utility and land availability make Anderson an attractive site.

The Committee is aware that Haines, Seward, Valdez and Whittier may have an interest in being chosen as the site for the proposed facility, but no testimony was received on their behalf.

Findings of the Committee in selecting the Sutton site were:

1. Construction and operating costs are lower than other areas of the state under consideration for the prison site.

2. State-owned land in the area is readily available allowing sufficient capacity for development and the recommended "buffer zone" between the facility and the community.

CSSB 224

1.) a maximum security prison will be built in the Sutton area

2.) the commissioner shall consider Anderson as a future site

3.) no date stipulation

3. Road access is available through the Glenn Highway, with the proximity to Anchorage offering reasonable access to a large percentage of the anticipated prison population for supportive contact with families and friends, as well as members of the parole board.

4. Support services are locally available through the court system, the hospital and health centers, the mental health centers, and public transportation. (There is a new Superior Court at Palmer, and in FY 1984, a public defender.)

5. Utilities can be made available at the site through the Palmer Correctional Facility, which also presents the possibility of sharing prison ancillary services between facilities.

6. The Mat-Su Borough offers a large potential labor force and commuter access to the state's largest population area, with housing and land locally existing.

7. Public support for the prison facility is widespread.

The above mentioned facets of the Sutton site appear to fulfill the siting criteria outlined by the Criminal Justice Planning Agency. Combined with the economic savings that would be realized in the selection of Sutton, and the urgent need to commence the project to meet the 1987 deadline for returning Alaska felons to the state, the Senate Hess Committee respectfully recommends that Sutton be selected for the new maximum security prison.

To this end, the Committee is forwarding the Committee Substitute for SB 224 to the Finance Committee.

Senator Joe P. Josephson, Chair
Senate Health, Education and Social Services Committee

POSITION PAPER/Department of Health & Social Services

POSITION PAPER

HOUSE BILL NO. 383
PAGE 1

"An Act relating to payments authorized for residential child care services; and providing for an effective date."

House Bill No. 383 amends Section 3, Chapter 138, SLA 1982 by increasing by 5% the rates for all residential child care facilities which are paid under AS 47.40. Each of the facilities currently being paid under AS 47.40 is listed in this Bill. A few facilities which are being paid under contract are not included in this legislation.

1. Services Provided by Facilities

Residential child care facilities provide a needed service to dependent and delinquent children who need specialized treatment services. The majority of the children the Division of Family and Youth Services serves live in their own homes (67.1%). Most of the children the Division places away from their homes can stay with relatives (6.9%), with non-relatives (6.9%), or in foster homes (10.1%). Nine percent (9%) of the children are placed in residential child care facilities because they have such severe behavioral or emotional problems that they cannot be served in less restrictive settings. These children require structured treatment programs run by trained staff. This specialized care is much more expensive. Some of the facilities provide receiving home services, taking adolescents who need short term supervised care until court disposition occurs or until a treatment plan can be developed.

Residential child care facilities need to be available throughout the State so that children can be served as near to their homes and families as possible. They also need to be available when the need for placement arises, which the Department cannot control.

2. Budget Projections

Current projections in the institutional care budget indicate that there will be a balance of $552,762. This does not take into account the following expenditures which are expected to come out of the budget:

A. The Maniilaq Human Services program will receive a contract amendment of $107,600 because their budget was not fully funded last year.

B. Legislation to cover a supplemental to the Bethel Receiving Home amounts to $65,000.

C. The Bethel Group Home needs to hire paid staff in order to serve the Division's needs in the Lower Kuskokwim area and to be in compliance with licensing regulations. Legislation has been introduced to cover this need.

D. There is a possibility that $35,000 which is currently owed to Presbyterian Hospitality House for a prior year due to an auditing report should be reappropriated from this year's funds to cover the prior year Bill.

Subtracting these costs, there will be a projected balance of $273,000. It is assumed that the rate increase would come out of this budget line. This balance would only permit a 2.5% increase to each facility, not the 5% proposed by this Bill.

3. Cost Study

The 1982 legislature froze the rates at the 1981 rate level and ordered the Department to conduct a study of costs to residential child care facilities. A committee was appointed, as ordered by the legislation, and has held meetings to consider AS 47.40 and the problems in the current method of payment to facilities. The committee will be recommending changes to AS 47.40, as well as to the regulations. In addition, a study to analyze existing costs to facilities will be made to determine new base rates.

4. Conclusions

The 1982 Legislature froze the rates at the 1981 level. It has now become apparent that the rate freeze combined with a placement utilization decrease has created hardship for a number of facilities. This Bill seeks to alleviate these hardships for facilities under this legislation. Should the Legislature wish to increase the rates, current projections indicate that the most that will be permitted out of this budget is a 2.5% increase. However, the projections are based on placement patterns to date, and these could change during the remainder of the calendar year. Therefore, the

POSITION PAPER

HOUSE BILL NO. 383
PAGE 3

Department recommends that if this Bill is favorably considered, there be a clause added to the Bill permitting the increase to be determined on a prorated basis once the actual placement pattern for the year is known.

IV. ANALYSIS

A. Assumptions

Enactment of this bill would result in a 5% increase in the cost of residential child care for the Fiscal Year 1983.

B. Program Summary

No new positions would be necessary if the Bill were enacted. There would be an increase of $440,422 in the Benefits to Individuals costs for FY83.

C. Computations

Facility	Total Units Projected FY83	5% Rate Increase	Total Cost
ACS Receiving Home	4,277	$7.49	$ 32,035
ACS Jesse Lee	12,915	8.27	106,807
ACS Rabbit Creek	3,695	8.32	30,742
ACS North Star	1,588	5.17	8,210

SUBJECT: Payments authorized for residental child care services (HB 383)

TO: Representative Milo Fritz
Chairman, House Health, Education and Social Services Committee

FROM: Edward H. Hein
Legislative Counsel

Section 1 of the bill amends sec. 3, Chapter 138, SLA 1982, by adding five percent to the FY 1983 payment rate authorized per day for each child placed by the Department of Health and Social Services in named residential care facilities.

Section 2 of the bill makes the rate increase retroactive to the beginning of the current fiscal year.

Section 3 provides for an immediate effective date. Note that under sec. 4, Chapter 138, SLA 1982, the rates for fiscal year 1984 will be another five percent higher than the rates provided in this bill.

JUN 3 1983

The Honorable Mae Tischer
Alaska State Legislature
Pouch V (MS 3100)
Juneau, Alaska 99811

RE: CSHB 383 - A BILL THAT WOULD AUTHORIZE DHSS TO INCREASE RESIDENTIAL CHILD CARE RATES BY 2 1/2% RETROACTIVE TO JULY 1, 1982, USING UNEXPENDED FUNDS FROM FY '83 APPROPRIATION.

Dear Representative Tischer:

Alaska Children's Services (ACS) provides residential care and treatment for emotionally disturbed, neglected, abused and troubled children and youth placed in custody of the State by the court system. Our agency in partnership with the State is committed to providing quality services.

Due to 1982 legislative action, cost-of-care rates for FY '83 were frozen at the FY '82 level. Also, during the first half of the FY, there was a 7% reduction in placements. As a result, ACS had a $180,000 deficit (8% of the operating budget) the first half of FY '83. We desperately need at least the 2 1/2% increase proposed by CSHB 383 in order to continue to provide professional care and treatment to the children referred by the State.

At a recent ACS Board of Directors meeting a resolution endorsing this bill was passed unanimously. I am enclosing a copy for your information.

Your wholehearted support of this legislation is urged and will be greatly appreciated.

Sincerely yours,

J. Helen Gamble

J. Helen Gamble, Secretary
Alaska Children's Services' Board of Directors

___ Executive Committee		___ _____ Program Director	
___ _____ Committee		___ Staff _____	

Submitted by: Thelma Langdon
Director Family and Child Advocacy Project

Resolution: Whereas, Alaska Children's Services provides residential care and treatment for emotionally disturbed, neglected, abused and troubled children and youth placed in custody of the State by the court system, and

Whereas, due to 1982 Legislative action, cost of care rates for FY 83 were frozen at FY 82 level, and

Whereas, during the first half of the FY there was a 7% reduction in placements, and

Whereas, this has resulted in a deficit of $180,000 which is approximately 8% of the operating budget, and

Whereas, Alaska Children's Services desperately needs at least 2½% rate increase proposed by Committee Substitute for House Bill 383 in order to provide professional care and treatment to the children referred by the State,

Be It Resolved That the ACS Board of Directors supports CSHB 383 and urges its passage.

Note: This bill would authorize the Department of Health and Social Services to increase residential child care rates by 2½% retroactive to July 1, 1982. The money would come from a projected fund balance and would require no new money.

Title 47. Welfare, Social Services and Institutions.

Chapter
30. Mentally Ill and Insane Persons (§§ 47.30.655 — 47.30.915)
65. Service Programs for Older Alaskans (§§ 47.65.010 — 47.65.060)
90. Displaced Homemakers (§§ 47.90.010 — 47.90.070)

Chapter 05. Administration of Welfare, Social Services and Institutions.

Section
10. Duties of department
15. Contracts
50. Policy

Sec. 47.05.010. Duties of department. The Department of Health and Social Services shall

(1) administer adult public assistance, aid to families with dependent children, and all other assistance programs, and receive and spend funds made available to it;

(2) adopt regulations necessary for the conduct of its business and for carrying out federal and state laws granting adult public assistance, aid to families with dependent children, and other assistance;

(3) establish minimum standards for personnel employed by the department and make necessary rules and regulations to maintain those standards;

(4) require those bonds and undertakings from persons employed by it which in its judgment are necessary, and pay the premiums on them;

(5) cooperate with the federal government in matters of mutual concern pertaining to adult public assistance, aid to families with dependent children, and other forms of public assistance;

(6) make the reports, in the form and containing the information, which the federal government from time to time requires;

(7) cooperate with the federal government, its agencies or instrumentalities in establishing, extending and strengthening services for the protection and care of homeless, dependent and neglected children in danger of becoming delinquent, and receive and expend funds available to the department by the federal government, the state or its political subdivisions for that purpose;

(8) cooperate with the federal government in adopting state plans to make the state eligible for federal matching in appropriate categories of assistance, and in all matters of mutual concern, including adoption of the methods of administration which are found by the federal government to be necessary for the efficient operation of welfare programs;

(9) adopt regulations, not inconsistent with law, defining need, prescribing the conditions of eligibility for assistance, and establishing standards for determining the amount of assistance which an eligible person is entitled to receive; the amount of the assistance is sufficient when, added to all other income and resources available to an individual, it provides the individual with a reasonable subsistence compatible with health and well-being; an individual who meets the requirements for eligibility for assistance shall be granted the assistance promptly upon application for it;

(10) grant to a person claiming or receiving assistance and who is aggrieved because of the department's action or failure to act, reasonable notice and an opportunity for a fair hearing by the department, and the department shall establish regulations relative to this;

(11) enter into reciprocal agreements with other states relative to public assistance, welfare services, and institutional care which are considered advisable;

(12) establish the requirements of residence for public assistance, welfare services and institutional care which are considered advisable, subject to the limitations of other laws of the state, or law or regulation imposed as conditions for federal financial participation;

(13) establish the divisions and local offices which are considered necessary or expedient to carry out a duty or authority assigned to it and appoint and employ the assistants and personnel which are necessary to carry on the work of the divisions and offices, and fix the compensation of the assistants or employees except that no person engaged in business as a retail vendor of general merchandise, nor a member of the immediate family of a person who is so engaged, may serve as an acting, temporary or permanent local agent of the department, unless the commissioner of health and social services certifies in writing to the governor, with relation to a particular community, that no other qualified person is available in the community to serve as local welfare agent; for the purposes of this subsection, a "member of the immediate family" includes a spouse, child, parent, brother, sister, parent-in-law, brother-in-law or sister-in-law;

(14) each February hold public meetings to review, study, and propose, the necessary levels of care and the rates it will pay to anyone for the services required during the succeeding year; before final adoption by the department the proposed levels of care and the rates of payment shall be reviewed by the legislature annually while in session. (§ 51-1-3(a) — (m) ACLA 1949; am § 1 ch 88 SLA 1951; am § 1 ch 63 SLA 1959; am § 1 ch 175 SLA 1968, am § 2 ch 136 SLA 1970;

Chapter 40. Purchase of Services.

Editor's notes. — For legislative findings that the present method for establishing payment rates under this chapter for residential child care services is inadequate and that the rates established under this chapter should be suspended from June 30, 1982 to July 1, 1984, see § 1, ch. 138, SLA 1982, in the 1982 Temporary and Special Acts and Resolves.

Section 2, ch. 138, SLA 1982, provides: "The operation of AS 47.05.010(14), AS 47.40.010, 47.40.040, and 47.40.050 is suspended from July 1, 1982 through June 30, 1984. During the period of suspension, payment for services provided by residential child care facilities shall be made solely in accordance with the provisions of secs. 3 and 4 of this Act."

For payments authorized per day for each child placed by the Department of Health and Social Services in an existing residential care facility for fiscal year 1983, see § 3, ch. 138 SLA 1982 in the 1982 Temporary and Special Acts and Resolves.

For payment rates for residential child care services for fiscal year 1984, see § 4, ch. 138, SLA 1982, in the 1982 Temporary and Special Acts and Resolves.

Section 5, ch. 138, SLA 1982, provides: "For fiscal years 1983 and 1984 the Department of Health and Social Services may contract for residential child care services with a facility not listed in sec. 3 of this Act at a rate to be determined by the department."

Sec. 47.40.010. Purchase of services.

Cross references. — For provisions suspending the operation of this section, see § 2, ch. 138, SLA 1982, quoted in the editor's notes following the chapter analysis.

NOTES TO DECISIONS

Subsection (a)(3) of this section and AS 47.40.040(a) are in pari materia and should be construed so as to be consistent with one another and in such a manner as to give maximum effect to each. Alaska Children's Servs., Inc. v. Williamson, Sup. Ct. Op. No. 2014 (File No. 4155), 606 P.2d 786 (1980).

The legislature did not intend retroactive cost settling under this section and AS 47.40.040. Alaska Children's Servs., Inc. v. Williamson, Sup. Ct. Op. No. 2014 (File No. 4155), 606 P.2d 786 (1980).

Subsection (a)(3) of this section states that when the Department of Health and Social Services purchases services for persons for whom the state has assumed responsibility, it shall "pay all expenses related directly to the full cost of services at the levels of care required," since AS 47.40.040(a) specifically provides that the "'full cost' of services shall be determined by the per person, per day cost in the preceding fiscal year plus a proportionate share of anticipated cost of living and staff salary increment increase" for the upcoming fiscal year, the Department of Health and Social Services is bound to authorize payments only for those amounts predicted at the beginning of each fiscal year. Alaska Children's Servs., Inc. v. Williamson, Sup. Ct. Op. No. 2014 (File No. 4155), 606 P.2d 786 (1980).

Sec. 47.40.040. Determination of full cost of services.

Cross references. — For provisions suspending the operation of this section, see § 2, ch. 138, SLA 1982, quoted in the editor's notes following the chapter analysis.

NOTES TO DECISIONS

Alaska Statutes 47.40.010(a)(3) and subsection (a) of this section are in pari materia and should be construed so as to be consistent with one another and in such a manner as to give maximum effect to each. Alaska Children's Servs., Inc. v. Williamson, Sup. Ct. Op. No. 2014 (File No. 4155), 606 P.2d 786 (1980).

The legislature did not intend retroactive cost settling under AS 47.40.010 and this section. Alaska Children's Servs., Inc. v. Williamson, Sup. Ct. Op. No. 2014 (File No. 4155), 606 P.2d 786 (1980).

Although AS 47.40.010(a)(3) states that when the Department of Health and Social Services purchases services for persons for whom the state has assumed responsibility, it shall "pay all expenses related directly to the full cost of services at the levels of care required," since subsection (a) of this section specifically provides that the "'full cost' of services shall be determined by the per person, per day cost in the preceding fiscal year plus a proportionate share of anticipated cost of living and staff salary increment increase" for the upcoming fiscal year, the Department of Health and Social Services is bound to authorize payments only for those amounts predicted at the beginning of each fiscal year. Alaska Children's Servs., Inc. v. Williamson, Sup. Ct. Op. No. 2014 (File No. 4155), 606 P.2d 786 (1980).

Sec. 47.40.050. Services.

Cross references. — For provisions suspending the operation of this section, see § 2, ch. 138, SLA 1982, quoted in the editor's notes following the chapter analysis.

Chapter 45. Alaska Longevity Bonus.

Section		Section	
10.	Persons who may qualify for longevity bonus	120.	Exemption from taxation and process

Sec. 47.45.010. Persons who may qualify for longevity bonus. (a) A person who is 65 years of age or over, who was domiciled in the territory on or before January 3, 1959 and who has maintained a continuous domicile in the territory or state for 25 years may apply to the commissioner of administration for qualification to receive a monthly bonus of $250.

(b) When the commissioner of administration determines that an applicant qualifies under AS 47.45.010 — 47.45.170 he shall immediately begin payment of the bonus.

(c) A person who otherwise qualifies to receive a bonus provided for in AS 47.45.010 — 47.45.170 may continue to do so only as long as he continuously retains a domicile in the state. (§ 1 ch 205 SLA 1972; am § 1 ch 33 SLA 1976; am § 1 ch 89 SLA 1978; am § 1 ch 147 SLA 1980; am § 1 ch 13 SLA 1981)

Effect of amendments. — The 1980 amendment substituted "$200" for "$150" at the end of subsection (a).

The 1981 amendment, in subsection (a), substituted "$250" for "$200" at the end of the subsection.

SLA 82

AN ACT

Relating to vision and hearing screening examinations, public assistance, and other assistance provided by the state; and providing for an effective date.

---

* Section 1. FINDINGS. The legislature finds that the present method for establishing payment rates under AS 47.40 for residential child care services is inadequate. The Department of Health and Social Services shall conduct a study of alternatives to the method of establishing payment rates under AS 47.40. The study shall be conducted by a committee of five members appointed by the commissioner of the Department of Health and Social Services. Three members of the committee shall be employees of the Department of Health and Social Services and two members shall be providers of residential child care services. The study shall contain, among other matters determined by the department, a suggested redefinition of the manner in which rates for residential child care services are calculated, a consideration of the method and amount of reimbursement for capital costs of residential child care facilities, and the availability and use of other sources of money to finance residential child care services and to finance the construction of residential child care facilities. The committee shall report its findings to the legislature on or before the 30th day of the Second Session of the Thirteenth Legislature. The legislature further finds that the rates established under AS 47.40 should be suspended from June 30, 1982 to July 1, 1984.

* Sec. 2. The operation of AS 47.05.010(14), AS 47.40.010, 47.40.040, and 47.40.050 is suspended from July 1, 1982 through June 30, 1984. During the

* Sec. 4. For fiscal year 1984 the payment rates for residential child care services shall be the amounts set out in sec. 3 of this Act increased by five percent.

* Sec. 5. For fiscal years 1983 and 1984 the Department of Health and Social Services may contract for residential child care services with a facility not listed in sec. 3 of this Act at a rate to be determined by the department.

* Sec. 6. AS 14.30 is amended by adding a new section to read:

Sec. 14.30.075. VISION AND HEARING SCREENING EXAMINATIONS. (a) A vision and hearing screening examination shall be given to each child attending school in the state. The examination shall be made when the child enters school or as soon thereafter as is practicable, and at regular intervals specified by regulation by the governing body of the district.

(b) The Department of Health and Social Services shall

(1) set standards for the performance of vision and hearing screening;

(2) train and certify public health nurses and school district employees to conduct hearing and vision screening tests;

(3) assist with referral and follow-up of children needing professional examination or treatment; and

(4) assist with maintenance and repair of screening equipment.

* Sec. 7. AS 44.29.020 is amended to read:

Sec. 44.29.020. DUTIES OF DEPARTMENT. The Department of Health and Social Services shall administer the state programs of public health and social services, including: (1) maternal and child health services;

Alaska Statutes

Title 47. Welfare, Social Services and Institutions.

Chapter
30. Mentally Ill and Insane Persons (§§ 47.30.655 — 47.30.915)
65. Service Programs for Older Alaskans (§§ 47.65.010 — 47.65.060)
90. Displaced Homemakers (§§ 47.90.010 — 47.90.070)

Chapter 05. Administration of Welfare, Social Services and Institutions.

Section
10. Duties of department
15. Contracts
50. Policy

Sec. 47.05.010. Duties of department. The Department of Health and Social Services shall

(1) administer adult public assistance, aid to families with dependent children, and all other assistance programs, and receive and spend funds made available to it;

(2) adopt regulations necessary for the conduct of its business and for carrying out federal and state laws granting adult public assistance, aid to families with dependent children, and other assistance;

(3) establish minimum standards for personnel employed by the department and make necessary rules and regulations to maintain those standards;

(4) require those bonds and undertakings from persons employed by it which in its judgment are necessary, and pay the premiums on them;

(5) cooperate with the federal government in matters of mutual concern pertaining to adult public assistance, aid to families with dependent children, and other forms of public assistance;

(6) make the reports, in the form and containing the information, which the federal government from time to time requires;

(7) cooperate with the federal government, its agencies or instrumentalities in establishing, extending and strengthening services for the protection and care of homeless, dependent and neglected children in danger of becoming delinquent, and receive and expend funds available to the department by the federal government, the state or its political subdivisions for that purpose;

(8) cooperate with the federal government in adopting state plans to make the state eligible for federal matching in appropriate categories of assistance, and in all matters of mutual concern, including adoption of the methods of administration which are found by the federal government to be necessary for the efficient operation of welfare programs;

(9) adopt regulations, not inconsistent with law, defining need, prescribing the conditions of eligibility for assistance, and establishing standards for determining the amount of assistance which an eligible person is entitled to receive; the amount of the assistance is sufficient when, added to all other income and resources available to an individual, it provides the individual with a reasonable subsistence compatible with health and well-being; an individual who meets the requirements for eligibility for assistance shall be granted the assistance promptly upon application for it;

(10) grant to a person claiming or receiving assistance and who is aggrieved because of the department's action or failure to act, reasonable notice and an opportunity for a fair hearing by the department, and the department shall establish regulations relative to this;

(11) enter into reciprocal agreements with other states relative to public assistance, welfare services, and institutional care which are considered advisable;

(12) establish the requirements of residence for public assistance, welfare services and institutional care which are considered advisable, subject to the limitations of other laws of the state, or law or regulation imposed as conditions for federal financial participation;

(13) establish the divisions and local offices which are considered necessary or expedient to carry out a duty or authority assigned to it and appoint and employ the assistants and personnel which are necessary to carry on the work of the divisions and offices, and fix the compensation of the assistants or employees except that no person engaged in business as a retail vendor of general merchandise, nor a member of the immediate family of a person who is so engaged, may serve as an acting, temporary or permanent local agent of the department, unless the commissioner of health and social services certifies in writing to the governor, with relation to a particular community, that no other qualified person is available in the community to serve as local welfare agent; for the purposes of this subsection, a "member of the immediate family" includes a spouse, child, parent, brother, sister, parent-in-law, brother-in-law or sister-in-law;

(14) each February hold public meetings to review, study, and propose, the necessary levels of care and the rates it will pay to anyone for the services required during the succeeding year; before final adoption by the department the proposed levels of care and the rates of payment shall be reviewed by the legislature annually while in session. (§ 51-1-3(a) — (m) ACLA 1949; am § 1 ch 88 SLA 1951; am § 1 ch 63 SLA 1959; am § 1 ch 175 SLA 1968, am § 2 ch 136 SLA 1970·

Chapter 40. Purchase of Services.

Editor's notes. — For legislative findings that the present method for establishing payment rates under this chapter for residential child care services is inadequate and that the rates established under this chapter should be suspended from June 30, 1982 to July 1, 1984, see § 1, ch. 138, SLA 1982, in the 1982 Temporary and Special Acts and Resolves.

Section 2, ch. 138, SLA 1982, provides: "The operation of AS 47.05.010(14), AS 47.40.010, 47.40.040, and 47.40.050 is suspended from July 1, 1982 through June 30, 1984. During the period of suspension, payment for services provided by residential child care facilities shall be made solely in accordance with the provisions of secs. 3 and 4 of this Act."

For payments authorized per day for each child placed by the Department of Health and Social Services in an existing residential care facility for fiscal year 1983, see § 3, ch. 138 SLA 1982 in the 1982 Temporary and Special Acts and Resolves.

For payment rates for residential child care services for fiscal year 1984, see § 4, ch. 138, SLA 1982, in the 1982 Temporary and Special Acts and Resolves.

Section 5, ch. 138, SLA 1982, provides: "For fiscal years 1983 and 1984 the Department of Health and Social Services may contract for residential child care services with a facility not listed in sec. 3 of this Act at a rate to be determined by the department."

Sec. 47.40.010. Purchase of services.

Cross references. — For provisions suspending the operation of this section, see § 2, ch. 138, SLA 1982, quoted in the editor's notes following the chapter analysis.

NOTES TO DECISIONS

Subsection (a)(3) of this section and AS 47.40.040(a) are in pari materia and should be construed so as to be consistent with one another and in such a manner as to give maximum effect to each. Alaska Children's Servs., Inc. v. Williamson, Sup. Ct. Op. No. 2014 (File No. 4155), 606 P.2d 786 (1980).

The legislature did not intend retroactive cost settling under this section and AS 47.40.040. Alaska Children's Servs., Inc. v. Williamson, Sup. Ct. Op. No. 2014 (File No. 4155), 606 P.2d 786 (1980).

Subsection (a)(3) of this section states that when the Department of Health and Social Services purchases services for persons for whom the state has assumed responsibility, it shall "pay all expenses related directly to the full cost of services at the levels of care required," since AS 47.40.040(a) specifically provides that the "'full cost' of services shall be determined by the per person, per day cost in the preceding fiscal year plus a proportionate share of anticipated cost of living and staff salary increment increase" for the upcoming fiscal year, the Department of Health and Social Services is bound to authorize payments only for those amounts predicted at the beginning of each fiscal year. Alaska Children's Servs., Inc. v. Williamson, Sup. Ct. Op. No. 2014 (File No. 4155), 606 P.2d 786 (1980).

Sec. 47.40.040. Determination of full cost of services.

Cross references. — For provisions suspending the operation of this section, see § 2, ch. 138, SLA 1982, quoted in the editor's notes following the chapter analysis.

NOTES TO DECISIONS

Alaska Statutes 47.40.010(a)(3) and subsection (a) of this section are in pari materia and should be construed so as to be consistent with one another and in such a manner as to give maximum effect to each. Alaska Children's Servs., Inc. v. Williamson, Sup. Ct. Op. No. 2014 (File No. 4155), 606 P.2d 786 (1980).

The legislature did not intend retroactive cost settling under AS 47.40.010 and this section. Alaska Children's Servs., Inc. v. Williamson, Sup. Ct. Op. No. 2014 (File No. 4155), 606 P.2d 786 (1980).

Although AS 47.40.010(a)(3) states that when the Department of Health and Social Services purchases services for persons for whom the state has assumed responsibility, it shall "pay all expenses related directly to the full cost of services at the levels of care required," since subsection (a) of this section specifically provides that the "'full cost' of services shall be determined by the per person, per day cost in the preceding fiscal year plus a proportionate share of anticipated cost of living and staff salary increment increase" for the upcoming fiscal year, the Department of Health and Social Services is bound to authorize payments only for those amounts predicted at the beginning of each fiscal year. Alaska Children's Servs., Inc. v. Williamson, Sup. Ct. Op. No. 2014 (File No. 4155), 606 P.2d 786 (1980).

Sec. 47.40.050. Services.

Cross references. — For provisions suspending the operation of this section, see § 2, ch. 138, SLA 1982, quoted in the editor's notes following the chapter analysis.

Chapter 45. Alaska Longevity Bonus.

Section
10. Persons who may qualify for longevity bonus
120. Exemption from taxation and process

Sec. 47.45.010. Persons who may qualify for longevity bonus.

(a) A person who is 65 years of age or over, who was domiciled in the territory on or before January 3, 1959 and who has maintained a continuous domicile in the territory or state for 25 years may apply to the commissioner of administration for qualification to receive a monthly bonus of $250.

(b) When the commissioner of administration determines that an applicant qualifies under AS 47.45.010 — 47.45.170 he shall immediately begin payment of the bonus.

(c) A person who otherwise qualifies to receive a bonus provided for in AS 47.45.010 — 47.45.170 may continue to do so only as long as he continuously retains a domicile in the state. (§ 1 ch 205 SLA 1972; am § 1 ch 33 SLA 1976; am § 1 ch 89 SLA 1978; am § 1 ch 147 SLA 1980; am § 1 ch 13 SLA 1981)

Effect of amendments. — The 1980 amendment substituted "$200" for "$150" at the end of subsection (a).

The 1981 amendment, in subsection (a), substituted "$250" for "$200" at the end of the subsection.

AN ACT

Relating to vision and hearing screening examinations, public assistance, and other assistance provided by the state; and providing for an effective date.

---

* Section 1. FINDINGS. The legislature finds that the present method for establishing payment rates under AS 47.40 for residential child care services is inadequate. The Department of Health and Social Services shall conduct a study of alternatives to the method of establishing payment rates under AS 47.40. The study shall be conducted by a committee of five members appointed by the commissioner of the Department of Health and Social Services. Three members of the committee shall be employees of the Department of Health and Social Services and two members shall be providers of residential child care services. The study shall contain, among other matters determined by the department, a suggested redefinition of the manner in which rates for residential child care services are calculated, a consideration of the method and amount of reimbursement for capital costs of residential child care facilities, and the availability and use of other sources of money to finance residential child care services and to finance the construction of residential child care facilities. The committee shall report its findings to the legislature on or before the 30th day of the Second Session of the Thirteenth Legislature. The legislature further finds that the rates established under AS 47.40 should be suspended from June 30, 1982 to July 1, 1984.

* Sec. 2. The operation of AS 47.05.010(14), AS 47.40.010, 47.40.040, and 47.40.050 is suspended from July 1, 1982 through June 30, 1984. During the

Manilaq Group Home (Kotzebue)	167.00
North Slope Borough Children's Receiving Home (Barrow)	168.35
Ketchikan Teen Home I (Ketchikan)	74.26
Ketchikan Teen Home II (Ketchikan)	81.61
Ketchikan Children's Home Intensive Treatment Unit (Ketchikan)	152.56
Sitka Receiving Home (Sitka)	40.66

Bethel Receiving Home (Bethel)	75.52
Bethel Group Home (Bethel)	59.06
Covenant High School (Unalakleet)	51.16

* Sec. 4. For fiscal year 1984 the payment rates for residential child care services shall be the amounts set out in sec. 3 of this Act increased by five percent.

* Sec. 5. For fiscal years 1983 and 1984 the Department of Health and Social Services may contract for residential child care services with a facility not listed in sec. 3 of this Act at a rate to be determined by the department.

* Sec. 6. AS 14.30 is amended by adding a new section to read:

Sec. 14.30.075. VISION AND HEARING SCREENING EXAMINATIONS. (a) A vision and hearing screening examination shall be given to each child attending school in the state. The examination shall be made when the child enters school or as soon thereafter as is practicable, and at regular intervals specified by regulation by the governing body of the district.

(b) The Department of Health and Social Services shall

(1) set standards for the performance of vision and hearing screening;

(2) train and certify public health nurses and school district employees to conduct hearing and vision screening tests;

(3) assist with referral and follow-up of children needing professional examination or treatment; and

(4) assist with maintenance and repair of screening equipment.

* Sec. 7. AS 44.29.020 is amended to read:

Sec. 44.29.020. DUTIES OF DEPARTMENT. The Department of Health and Social Services shall administer the state programs of public health and social services, including: (1) maternal and child health services;

JUN 6 1983

May 27, 1983

The Honorable Mae Tischer
Alaska House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Tischer:

Thank you for your letter of May 17. We were pleased to learn that the HESS Committee recommended Do Pass on House Bill 383 allowing for a 2.5 percent retroactive payment for private child care facilities. It will be particularly helpful since we were granted no rate increase during FY 1982-83.

We agree with your preference to deinstitutionalize children and move them to less restrictive programs such as community based group homes and foster care. Many youth need the treatment available in group homes before they are able to function with foster families. It is unfair to foster parents and youth to make placements before the youth have developed enough social skills to make it a success.

We trust that this information will be helpful to you in the future decisions you must make on behalf of Alaska's troubled youth.

Sincerely,

John Douglas, Chairman of the Board

Summary

May 2, 1983

TO; House HESS Committee

FROM: Staff

RE: HB 383 "An Act relating to payments authorized for residential child care services; and providing for an effective date".

Section 1 of the bill amends sec. 3, Chapter 138 SLA '82 (attached) by adding five percent to the FY 83 payment rate authorized per day for each child placed by the Dept. of H&SS in named residential care facilities.

Section 2 of the bill makes the rate increases retroactive to the beginning of the current fiscal year.

Section 3 provides for an immeidate effecitve date. Note that under sec. 4, Chpater 138, SLA 82, the rates for fiscal year 1984 mandates another 5% increase over FY 83.

Explanation

Historically the Division of Family & Youth Services required annual supplemental appropriations. In recent years, Legislative Intent has been to stop this procedure. Consequently, the Dept. of H&SS has received additional funds with lapse dates for unexpended amounts.

This year, the unexpended portion that will be required to lapse is approximately $553,000. (see attached).

The intent of this legislation is to re-appropriate the balance of these funds to allow these facilities to spend money which has already been appropriated. Consequently, there is no need for a supplemental appropriation to accompany this legislation.

MEMORANDUM

TO: HESS Committee Members

FROM: Linda Utey, HESS aide

DATE: May 4, 1983

RE: Presbyterian Hospitality House Appropriation

The Presbyterian Hospitality House is currently owed the sum of $35,200. This is the result of a 1981 audit which affected the 1982 rates. Note: The payment is for 1982 costs.

There were insufficient fund balances left in the 1982 budget to pay the added amount. There is question as to whether the department can legally pay the debt with 1983 moneys. The consensus is that there is no authority. Therefore, the authorization of a payment of $35,200 to the Presbyterian Hospitality House would alleviate this problem.

Proposed amendment: The authorization to pay a FY82 obligation of $35,200 to the Presbyterian Hospitality House of Fairbanks.

dss

DRAFT

POSITION PAPER

HOUSE BILL NO. 383
PAGE 1

"An Act relating to payments authorized for residential child care services; and providing for an effective date."

House Bill No. 383 amends Section 3, Chapter 138, SLA 1982 by increasing by 5% the rates for all residential child care facilities which are paid under AS 47.40. Each of the facilities currently being paid under AS 47.40 is listed in this Bill. A few facilities which are being paid under contract are not included in this legislation.

1. Services Provided by Facilities

Residential child care facilities provide a needed service to dependent and delinquent children who need specialized treatment services. The majority of the children the Division of Family and Youth Services serves live in their own homes (67.1%). Most of the children the Division places away from their homes can stay with relatives (6.9%), with non-relatives (6.9%), or in foster homes (10.1%). Nine percent (9%) of the children are placed in residential child care facilities because they have such severe behavioral or emotional problems that they cannot be served in less restrictive settings. These children require structured treatment programs run by trained staff. This specialized care is much more expensive. Some of the facilities provide receiving home services, taking adolescents who need short term supervised care until court disposition occurs or until a treatment plan can be developed.

Residential child care facilities need to be available throughout the State so that children can be served as near to their homes and families as possible. They also need to be available when the need for placement arises, which the Department cannot control.

2. Budget Projections

Current projections in the institutional care budget indicate that there will be a balance of $552,762. This does not take into account the following expenditures which are expected to come out of the budget:

A. The Maniilaq Human Services program will receive a contract amendment of $107,600 because their budget was not fully funded last year.

B. Legislation to cover a supplemental to the Bethel Receiving Home amounts to $65,000.

C. The Bethel Group Home needs to hire paid staff in order to serve the Division's needs in the Lower Kuskokwim area and to be in compliance with licensing regulations. Legislation has been introduced to cover this need.

D. There is a possibility that $35,000 which is currently owed to Presbyterian Hospitality House due to an auditing report may need to come out of this year's funds.

Subtracting these costs, there will be a projected balance of $273,000. It is assumed that the rate increase would come out of this budget line. This balance would only permit a 2.5% increase to each facility, not the 5% proposed by this Bill.

3. Cost Study

The 1982 legislature froze the rates at the 1981 rate level and ordered the Department to conduct a study of costs to residential child care facilities. A committee was appointed, as ordered by the legislation, and has held meetings to consider AS 47.40 and the problems in the current method of payment to facilities. The committee will be recommending changes to AS 47.40, as well as to the regulations. In addition, a study to analyze existing costs to facilities will be made to determine new base rates.

4. Conclusions

The 1982 Legislature froze the rates at the 1981 level. It has now become apparent that the rate freeze combined with a placement utilization decrease has created hardship for a number of facilities. This Bill seeks to alleviate these hardships for facilities under this legislation. Should the Legislature wish to increase the rates, current projections indicate that the most that will be permitted out of this budget is a 2.5% increase. However, the projections are based on placement patterns to date, and these could change during the remainder of the calendar year. Therefore, the

Department recommends that if this Bill is favorably considered, there be a clause added to the Bill permitting the increase to be determined on a prorated basis once the actual placement pattern for the year is known.

increase funds for current needs. 2.5% would prorate remainder funds

IV. ANALYSIS

A. Assumptions

Enactment of this bill would result in a 5% increase in the cost of residential child care for the Fiscal Year 1983.

B. Program Summary

No new positions would be necessary if the Bill were enacted. There would be an increase of $440,422 in the Benefits to Individuals costs for FY83.

C. Computations

Facility	Total Units Projected FY83	5% Rate Increase	Total Cost
ACS Receiving Home	4,277	$7.49	$ 32,035
ACS Jesse Lee	12,915	8.27	106,807
ACS Rabbit Creek	3,695	8.32	30,742
ACS North Star	1,588	5.17	8,210
ACS Aquarius	1,601	5.38	8,613

Re: HB 383

HB 383 regarding the cost of care rates for youth facilities has been introduced and referred to your committees.

It is my understanding this bill will allow these facilities to spend money which has already been appropriated and that a supplemental appropriation is not required by this bill. These organization are in need of this legislation to allow them to spend the money already appropriated.

I request that you give this bill immediate attention so that it may quickly pass to the Senate for consideration as action on this matter is needed this session.

Thanks.

Re: HB 383

As administrator of the Booth Home, I strongly support House Bill 383. This past year has been a financial dilema due to lack of state funding. Needless to say, with a 5% retroactive cost of care payment we would be able to meet some financial demands placed on us at this present time.

If I can be of any other assistance in this crucial matter, please call upon me.

Sincerely,

Gene Ragan jw

HISTORY

- ***founded*** in 1970 as a merger of the Jesse Lee Home (United Methodist), the Lutheran Youth Center (American Lutheran) and the Anchorage Children's Christian Home (American Baptist) to meet the growing child care needs of Alaska. In 1981, ACS became an affiliate member of the National Benevolent Association, the Division of Social and Health Services of the Christian Church (Disciples of Christ).
- ***represents*** the combined experience of 125 years of church-related child care in Alaska.

PROGRAM

- ***serves*** up to 1,000 children each year ranging from abused infants to older teenagers—one third are Aleut, Indian and Eskimo.
- ***operates*** three emergency shelters, four community-based group homes, a residential treatment center, and an adventure-based program for delinquent youth.

PERFORMANCE

- ***grown*** to become the state's largest private child and family service agency.
- ***recognized*** as a leading advocate for good child care—the only agency in Alaska to have earned full membership to the Child Welfare League of America.

SPIRITUAL LIFE

- ***committed*** to assist children in their search for a meaningful faith.
- ***employs*** a full-time, clinically trained Chaplain.
- ***provides*** a program of pastoral care and religious education opportunities.

SUPPORT

- ***depends*** on gifts from churches and individuals to provide the "margin of excellence" in its program of care.
- ***eligible*** to receive mission gifts through:
  - the Benevolence Program of the North Pacific District of the American Lutheran Church
  - Institutional support gifts in all areas and associations of American Baptist Churches
  - Advance special gifts from all United Methodist churches
  - The National Benevolent Association of the Christian Church (Disciples of Christ)

ALASKA CHILDRENS SERVICES PROVIDES RESIDENTIAL CARE AND TREATMENT FOR EMOTIONALLY DISTURBED, NEGLECTED, ABUSED AND TROUBLED CHILDREN AND YOUTH PLACED IN CUSTODY OF THE STATE BY THE COURT SYSTEM.

DUE TO 1982 LEGISLATIVE ACTION, COST OF CARE RATES FOR FISCAL YEAR 83 WERE FROZEN AT FISCAL YEAR 82 LEVEL. ALSO, DURING THE FIRST HALF OF THE FISCAL YEAR THERE WAS A 7 PERCENT REDUCTION IN PLACEMENT. THE RESULTING DEFICIT AMOUNTS TO DLRS180,000 WHICH IS APPROXIMATELY 8 PERCENT OF OUR OPERATING BUDGET.

ALASKA CHILDREN SERVICES DESPERATELY NEEDS THE 5 PERCENT RATE INCREASE PROPOSED BY HB383 IN ORDER TO PROVIDE PROFESSIONAL CARE AND TREATMENT TO THE CHILDREN REFERRED BY THE STATE. YOUR WHOLE HEARTED SUPPORT OF THIS LEGISLATION IS URGED AND WILL BE GREATLY APPRECIATED.

THOMAS M. DAHL

SUBJECT: Sectional Analysis of CS for HB 412

TO: Representative Mae Tischer
Chairman, House HESS

FROM: Richard C. Folta
Legislative Counsel

Section 1 adds a new article on adoption information in Chapter 50 of Title 18 concerning vital statistics.

Access to available nonidentifying information on previous medical conditions and treatment, immunization records and other medical information relevant to the health care of a genetically-related person would be permitted adoptive parents and adopted persons begining January 1, 1985. The department, child adoption agency or a person authorized by law, such as a guardian appointed by a court, to place a person for adoption would be required to maintain and furnish the state register the above information on a standardized form prepared by the Department of Health and Social Services. Finally, certain key words are defined in a definition section.

Section 2 would require the clerk of the Superior Court, the above department, or a person placing a person for adoption, to obtain the above information directly from each known biological parent for the state register.

The privacy of biological parents of an adopted person would not be violated by release of "medical history" under this bill to adoptive parents for the health purposes of an adopted person.

RCF:ojb
J3/076

POSITION PAPER/Department of Health & Social Service

POSITION PAPER

HOUSE BILL NO. 412

Page 1

"An Act relating to adoption medical records"

House Bill No. 412 amends the Vital Statistics Act and the adoption statute to require collection of nonidentifying information on the health history of each biological parent, adopted person, and blood relatives of each biological parent, if available. The Department agrees that this information could be useful and would support the enactment of such legislation. However, there are some changes we propose, as follows:

Page 1, line 11: "If the information is available" be changed to "whatever information is available, the state registrar shall, upon request,..." This change is suggested because in all cases, after January 1, 1984, there will be some information available, even if it is on only the biological mother. The words "upon request" should be added because without it the meaning indicates that the information would be automatically provided. The information should be provided only if the adoptive parents or the adoptee want it. Many adoptions are by a step-parent so the information is already known.

Page 1, line 17: Change "prepared by the commissioner" to "prescribed and furnished by the bureau" to be consistent with similar provisions of AS 18.50.

Page 1, line 19: Change "commissioner" to "department"

Page 1, line 20: Change "or a person authorized by law or regulation to place a person for adoption" to "or the person placing a child for adoption." This change is suggested because not all persons are required to be authorized by law or regulation to place a person for adoption. An example would be an attorney who handles only one adoption a year. This change is consistent with the wording on page 2, line 22.

(?) Page 1, line 27: Delete the words "request the commissioner to" since it is the Department's position that this function should lie with the state registrar.

Page 1, line 29: Change "records of the commissioner" to "records of the department"

POSITION PAPER/Department of Health & Social Services

Page 2, line 1: Change as indicated for page 1, line 20.
Page 2, line 3: Change as indicated for page 1, line 20.
Page 2, line 6: Change as indicated for page 1, line 20.

Finally, it is suggested that number 4 be deleted from page 2, line 16 because commissioner is defined under Sec. 18.50.030 and number 5 be deleted from page 2, line 18 because state registrar is defined under Sec. 18.50.370 (11) and that the definitions for Chapter 50 which appear under Sec. 18.50.370 be combined with those under Sec. 18.50.520.

With these changes the Department of Health and Social Services would support passage of House Bill No. 412.

(b) An owner of a restaurant or tavern shall provide and maintain sanitary toilet accommodations for public use. (§ 1 ch 58 SLA 1974; am § 1 ch 175 SLA 1975; am § 1 ch 78 SLA 1976; § 45 ch 59 SLA 1982)

Effect of amendments. — The 1982 amendment, effective May 28, 1982, repealed former subsection (a) which read "An owner of a restaurant or tavern in operation on August 15, 1976 shall provide and maintain no less than one sanitary toilet accommodation for public use, and shall comply with this requirement within 180 days after August 15, 1976."

Article 3. Facilities and Special Events Open to General Public.

Section
200. Toilet facilities required

Sec. 18.35.200. Toilet facilities required. An owner of public facilities or sponsor of special events open to the general public shall where practical provide and maintain at the facilities or events sanitary toilet accommodations for public use whether the facilities or events are permanent or temporary. No charge may be required for use of a toilet facility in any public place. (§ 1 ch 58 SLA 1974; am § 46 ch 59 SLA 1982)

Effect of amendments. — The 1982 amendment, effective May 28, 1982, deleted the former second sentence which read "an owner of a permanent facility in operation on August 1, 1974 has two years from that date to comply with the requirement of this section."

Chapter 50. Vital Statistics Act.

Article
3. Registration Requirements, Procedures and Certificates (§§ 18.50.210, 18.50.211)
4. Records (§ 18.50.290)

Article 3. Registration Requirements, Procedures and Certificates.

Section
210. Court reports of adoption
211. Certificate of birth for foreign-born adopted person

Sec. 18.50.210. Court reports of adoption. (a) For each adoption decreed by a court in the state, the court shall require the preparation of a report of adoption on a form prescribed and furnished by the bureau. The report shall include the facts necessary to locate and identify the original certificate of birth, if any, of the person adopted. If the person being adopted was born in the state, the report shall provide information necessary to establish a new certificate of birth. If the person being adopted was born outside the United States, the report

shall provide findings, if requested by the adoptive parents, or other information necessary to establish a certificate of birth. The report shall identify the order of adoption, and be certified by the court or the clerk.

(b) The petitioner or his attorney shall furnish with the petition for adoption information in the possession of the petitioner necessary to prepare the adoption report. The social, welfare agency or other person concerned shall supply the court with additional information in his possession necessary to complete the report. The furnishing of the information is a prerequisite to the issuance of a final decree in the matter.

(c) Whenever an adoption decree is amended or vacated, the court shall prepare a report on a form prescribed and furnished by the bureau. The report shall include the facts necessary to identify the original adoption report and the facts amended in the adoption decree necessary to properly amend the original report, or the new certificate of birth if already established.

(d) Before the 11th day of each calendar month, the court shall forward to the bureau reports of decrees of adoption, including those vacated or amended, which were entered in the preceding month, together with the related reports the bureau requires.

(e) When the bureau receives a report of an adoption, or vacation or amendment of an adoption from a court for a person born in the United States but outside the state, a copy shall be made for the bureau's files and the original shall be forwarded to the appropriate registration authority in the state of birth. (§ 17 ch 118 SLA 1960; am §§ 1, 2 ch 76 SLA 1982)

Effect of amendments. — The 1982 amendment, in subsection (a), divided the former second sentence into the present second, third and fifth sentences, inserted "if any" in the present second sentence, added "If the person being adopted was born in the state, the report" to the beginning of the present third sentence, deleted "of the person adopted" from the end of the present third sentence, added the present fourth sentence, and substituted "The report" for "and" at the beginning of the present fifth sentence. The amendment also inserted "in the United States but" near the middle of subsection (e).

Sec. 18.50.211. Certificate of birth for foreign-born adopted person. (a) Subject to the limitation in (b) of this section, the state registrar shall issue a certificate of birth for a person born outside the United States whose adoptive parents are residents of the state at the time of the adoption, upon request by the adopted person, or by the adopted person's adoptive parent or guardian that the certificate be made, and upon receipt of an adoption report as provided in AS 18.50.210 together with

(1) the information necessary to identify the original certificate of birth; or

(2) if there is no original certificate of birth, the findings of the court under AS 20.15.170(b), unless the adoption proceeding is commenced before August 31, 1982, in which case an affidavit of an adoptive parent setting out the true or probable date and place of birth and parentage of the adopted person must accompany the adoption report.

(b) The state registrar may not issue a certificate of birth under this section if the adopted person for whom the certificate is intended is 18 or more years of age at the time the request for the certificate is made.

(c) A certificate of birth issued under this section shall be in a form prescribed by the state registrar and shall state that it is not evidence of United States citizenship.

(d) Upon proof of naturalization an amended certificate of birth shall be issued under this section that deletes the statement that the certificate is not evidence of United States citizenship. (§ 3 ch 76 SLA 1982)

Article 4. Records.

Section

290. Corrections and amendments

Sec. 18.50.290. Corrections and amendments. (a) A certificate or record registered by the bureau may be amended only in accordance with this chapter and the regulations the department adopts to protect the integrity and accuracy of vital statistics records.

(b) A certificate that is amended under this section shall be marked "amended," with the date of amendment. A summary description of the evidence submitted in support of the amendment shall be endorsed on or made a part of the record. The department shall prescribe by regulation the conditions under which additions or minor corrections may be made to vital statistics records without the certificate being considered amended.

(c) Upon receipt of a certified copy of a court order changing the name of a person born in the state or a person born outside the United States whose adoptive parents are residents of the state at the time of the adoption and upon request of the person or the person's parent, guardian, or legal representative, the state registrar shall amend the certificate of birth to reflect the new name.

(d) When a certificate is corrected or amended under this section, the state registrar shall instruct the local custodian of the copy of the certificate to make the changes in the copy. (§ 25 ch 118 SLA 1960; am § 4 ch 76 SLA 1982)

Effect of amendments. — The 1982 amendment inserted "or a person born outside the United States whose adoptive parents are residents of the state at the time of the adoption" and substituted "the person's" for "his" in subsection (c).

The report shall include the facts necessary to identify the original adoption report and the facts amended in the adoption decree necessary to properly amend the original report, or the new certificate of birth if already established.

(d) Before the 11th day of each calendar month, the court shall forward to the bureau reports of decrees of adoption, including those vacated or amended, which were entered in the preceding month, together with the related reports the bureau requires.

(e) When the bureau receives a report of an adoption, or vacation or amendment of an adoption from a court for a person born outside the state, a copy shall be made for the bureau's files and the original shall be forwarded to the appropriate registration authority in the state of birth. (§ 17 ch 118 SLA 1960)

Sec. 18.50.220. New certificate of birth. (a) The state registrar shall establish a new certificate of birth for a person born in the state, upon proper request that the certificate be made, and upon receipt of

(1) an adoption report as provided in AS 18.50.210, or a certified copy of the decree of adoption from a court of competent jurisdiction in another state, together with the information necessary to identify the original certificate of birth and to establish the new certificate of birth; however, a new certificate of birth may not be established if so requested by the court decreeing the adoption, the adoptive parents, or the adopted person if he is of legal age; or

(2) the evidence required by law and regulation proving that the person has been legitimated.

(b) When a new certificate of birth is established, the actual place and date of birth shall be shown. The new certificate shall be substituted for the original certificate of birth, and

TO: House HESS Committee

FROM: Representative Mike Szymanski

SUBJECT: HB 412 - relating to adoption medical records.

DATE: May 24, 1983

Under present statute, there is no provision which makes it mandatory that an adopted child's medical history and records be made available to the adopted child and the adoptive parents.

A constituent of mine, Ms. Janice Griffith, contacted me because her adopted child had developed an illness which was "predictable" had the child's medical history/records been available.

It is the intent of this legislation to do several things:

1. It would require that information relating to the medical history of an adopted child be collected and recorded on a form and attached to the adoption records at the time of adoption. This would be for all adoptions, private, agency, or State.

2. For those adoptions which have occurred prior to the effective date of this legislation where the medical history was not mandatorily required to be included in the records, the Department of Health & Social Services would now be required to obtain this information if it is available and if requested by the child or the adoptive parents.

3. This legislation would now make the information available upon request to the adoptive parents and to the adopted child.

4. The information which will be included will all be nonidentifying information.

M E M O R A N D U M

TO: House HESS Committee

FROM: Linda Otey, Committee Aide

RE: HB 412 Summary/ "An Act relating to adoption medical records; and providing for an effective date."

This legislation would direct the state Registrar, if the information is available, to provide the adoptive parents of a person adopted after Jan. 1, 1984, and an adopted person who has been adopted after that date, with nonidentifying information on the health history of each biological parent, adopted person, and blood relatives of each biological parent.

For all adoptions after Jan. 1, 1984, the state, child adoption agencies, or a person authorized to place a child for adoption must furnish the state Registrar the nonidentifying information required above. If the information is requested but not available for adoptions that occurred before Jan. 1, 1984, the Registrar must request the Commissioner of H&SS to attempt to obtain the required information. Adoption agencies and persons authorized to place a person for adoption would be required to maintain records of the information.

Effective date, January 1, 1984.

POSITION PAPER/Department of Health & Social Service

POSITION PAPER

HOUSE BILL NO. 418

"An Act relating to the rights of physically disabled persons."

The effect of the act: As 18.06.020(b) entitles a visually and otherwise physically disabled person full and equal accommodations, advantages, facilities and privileges on all common carriers, airplanes, motor vehicles, trains, buses, street cars, boats or any other public conveyance, hotels, lodging, places of public accommodation, amusement, or resort and other places to which the general public is invited.

Section (c) of AS 18.06.020 provides that a blind person has a right to be accompanied by a guide dog in places listed in Section (b).

HB 418 expands Section (c) to include a service dog in the same way as a guide dog is now allowed to accompany a physically disabled person in places listed in (b) of AS 18.06.020.

The existing law and the amendment proposed by HB 418 each provide that the guide or service dog shall be allowed to accompany the person at no extra charge and that the person with the dog shall be liable for any damage done by the dog.

Discussion:

Guide dogs have for a long period of time, been provided by law with sanctions which allowed them to accompany their master as he conducted his normal living routine. More recently dogs have been trained beyond the seeing eye skill and are being utilized as "hearing dogs" to aid the deaf as well as to retrieve and facilitate for the immobile person. This expanded use of the trained service dog to aid the physically handicapped has presented a legal and financial problem to the owner who must deal with a system which limits itself to the single class of guide dog as a recognized exception and treats all other service dogs as pets.

HB 418 includes services dogs as equal to guide dogs and elevates these animals from the category of being only a pet.

Recommendation:

The Department of Health and Social Services supports HB 418.

TELEPHONE NO:

FROM: Michael C. Morgan
Director
Division of Vocational
Rehabilitation

SUBJECT: HB 418

Please find attached a fiscal note from the Department of Education on HB 418, An Act relating to the rights of physically disabled persons."

While the division has not had the opportunity to discuss the content of this bill with the State Board of Education, I can see no reason why the Board would object.

The bill simply includes some provision of rights for the physically disabled in an existing statute.

There will be no cost to the Department of Education.

MAY 04 1983

April 29, 1983

Barbara Lacher, State Representative
Pouch V
Juneau, 99811

Dear Representative Lacher:

I would first like to commend you for the outstanding legislative job you have done to date for the Matanuska-Susitna Valley residents. Your tenacious ability to work hard and represent all of your constituents fairly is a tribute to your office and your personal abilities.

Enclosed you will find a House Bill recently passed in North Dakota to admit handicapped persons accompanied by a service dog to public places. I am not familiar with the Alaska State law regarding this subject but assume it speaks only to guide dogs for the blind. Could you please research the existing legislation and inform me as to the possibilities of amending the law to include service dogs for the handicapped. I plan to be in Juneau May 20, 1983, and would like to meet with you to discuss this matter in depth.

As the Coordinator for Project ACTIVE, a developmental and adapted physical education program in the Mat-Su Schools, I am pleased to state that our District is in compliance with PL-94 142 with regard to physical education for the handicapped child. It disturbs me greatly to know that this is not true in other school districts in our State. Hence, handicapped children, Statewide, are being short changed and indeed their school districts may be in violation of the Federal Law, PL - 94 142. I plan to meet with William Mulnix, Director of the - Office for Exceptional Children, in the Department of Education in Juneau. I would appreciate your assistance in scheduling a meeting with Mr. Mulnix on May 20,1983.

Representing the Alaska Association of Health, Physical Education, Recreation and Dance (AAHPERD), I plan to meet with Darby Anderson, Office of School Improvement, Dept. of Ed., to determine the role AAHPERD can take to insure quality health and physical education programs through the Effective Schooling Plan.

I plan to write the aforementioned persons to set up meeting times on May 20. However, your accessibility to local phone calls in Juneau will be of great service to me in verification of these meetings.

Thank you for your time and efforts in the above matters. I will be awaiting your confirmation of our possible meeting.

Respectfully yours,

Barbara Cadden

Barbara Cadden

Forty-eighth
Legislative Assembly
of North Dakota

HOUSE BILL NO. 1469

Introduced by

Representative Eagles

A BILL for an Act to amend and reenact section 25-13-02 of the North Dakota Century Code, relating to the admittance to public places of blind and physically handicapped persons who are accompanied by a guide or service dog.

BE IT ENACTED BY THE LEGISLATIVE ASSEMBLY OF THE STATE OF NORTH DAKOTA:

SECTION 1. AMENDMENT. Section 25-13-02 of the North Dakota Century Code is hereby amended and reenacted to read as follows:

25-13-02. Blind person or physically handicapped persons accompanied by guide or service dog to be admitted to public places. Every totally or partially blind person shall have the right to be ~~handicapped~~ accompanied by a guide dog and every physically disabled person shall have the right to be accompanied by a service dog, especially trained for the purpose those purposes, in places of public accommodations, common carriers, and all places in which the public is generally invited, without being required to pay an extra charge for the guide or service dog; provided that he such persons shall be liable for any damage done by the dog or facilities by such dog the dogs.

Amended

Sec. 18.05.061. Penalty for violation. A person who violates a provision of this chapter or a regulation adopted under this chapter is guilty of a misdemeanor and, upon conviction, is punishable by a fine of not more than $500, or by imprisonment for not more than one year. Each day that a person continues a violation is a separate offense. (§ 40-1-6(c) ACLA 1949)

Revisor's notes. — The words "rule or" were deleted preceding "regulation" and the word "adopted" was substituted for "promulgated" following "regulation" by the revisor of statutes pursuant to AS 01.05.031.

Sec. 18.05.070. Definitions generally. In this chapter

(1) "department" means the Department of Health and Social Services;

(2) "commissioner" means the commissioner of health and social services. (§ 40-1-1 ACLA 1949; am § 2 ch 149 SLA 1968; am § 6 ch 104 SLA 1971)

Revisor's notes. — The text of a former subsection (b), defining "impairment" as used in AS 18.05.044 and 18.05.046, was relocated to those sections by the revisor of statutes under authority of AS 01.05.031.

Legislative history reports. — For report on ch. 149 SLA 168 (CSHB 358 am S), see 1968 House Journal, p. 475.

Businesses or establishments falling within state civil rights statute provisions prohibiting discrimination. 87 ALR3d 120.

Municipal corporation's power to enact civil rights ordinance. 93 ALR3d 1028.

Recovery of damages as remedy for wrongful discrimination under state or local civil rights provisions. 85 ALR3d 381.

Construction and effect of state legislation forbidding job discrimination on account of physical handicap. 90 ALR3d 393.

Sec. 18.06.010. State policy. It is the policy of this state to encourage and enable the blind, the visually handicapped, and the otherwise physically disabled to participate fully in the social and economic life of the state and to engage in remunerative employment. (§ 2 ch 19 SLA 1972)

Sec. 18.06.020. Rights. (a) The blind, the visually handicapped, and the otherwise physically disabled have the same right as the able-bodied to the full and free pedestrian use of the streets, highways, sidewalks, walkways, public buildings, public facilities, and other public places.

(b) The blind, the visually handicapped, and the otherwise physically disabled are entitled to full and equal accommodations, advantages, facilities, and privileges of all common carriers, airplanes, motor vehicles, railroad trains, motor buses, street cars, boats or any other public conveyances or modes of transportation, hotels, lodging places, places of public accommodation, amusement or resort, and other places to which the general public is invited, subject only to the conditions and limitations established by law and applicable alike to all persons.

(c) Totally or partially blind persons have the right to be accompanied by a guide dog, especially trained for the purpose, in any of the places listed in (b) of this section without being required to pay an extra charge for the guide dog; however, the person with the guide dog is liable for any damage done to the premises or facilities by the dog. (§ 2 ch 19 SLA 1972)

Sec. 18.06.030. Rights as pedestrians. The driver of a motor vehicle approaching a totally or partially blind pedestrian who is carrying a cane predominantly white or metallic in color, with or without a red tip, or using a guide dog shall take all necessary precautions to avoid injury to the pedestrian, and a driver who fails to take all necessary precautions and causes injury to the pedestrian is liable in damages for the injury caused. A totally blind or partially blind pedestrian not carrying a cane as described in this section or using a guide dog in any of the places, accommodations or conveyances set out under AS 18.06.020 has all of the rights and privileges conferred by law upon other persons, and the failure of a totally or partially blind pedestrian to carry a cane as described in this section or to use a guide dog is not by itself evidence of contributory negligence. (§ 2 ch 19 SLA 1972)

Sec. 18.06.040. Penalty for denying rights. A person who denies or interferes with admittance to or enjoyment of the public facilities set out in AS 18.06.020 or otherwise interferes with the rights of a totally or partially blind or otherwise disabled person is guilty of a misdemeanor and upon conviction is punishable by a fine of not more than $1,000, or by imprisonment for not more than 60 days, or by both. 125. Conditions of state aid
130. Construction and implementation
135. Definitions

Sec. 43.18.100. State aid for retirement of school construction debt. (a) During each fiscal year, the state shall allocate to a municipality that is a school district, the following sums:

(1) payments made by the municipality during the fiscal year two years earlier for the retirement of principal and interest on outstanding bonds, notes or other indebtedness incurred before July 1, 1977 to pay costs of school construction;

(2) 90 percent of

(A) payments made by the municipality during the fiscal year two years earlier for the retirement of principal and interest on outstanding bonds, notes or other indebtedness incurred after June 30, 1977 and before July 1, 1978 to pay costs of school construction;

(B) cash payments made after June 30, 1976 and before July 1, 1978 by the municipality during the fiscal year two years earlier to pay costs of school construction;

(3) 90 percent of

(A) payments made by the municipality during the fiscal year two years earlier for the retirement of principal and interest on outstanding bonds, notes or other indebtedness incurred after June 30, 1978 and before January 1, 1982 to pay costs of school construction projects approved under AS 14.07.020(11);

(B) cash payments made after June 30, 1978 and before July 1, 1982 by the municipality during the fiscal year two years earlier to pay costs of school construction projects approved under AS 14.07.020(11);

(4) subject to (h) and (i) of this section 90 percent of

(A) payments made by the municipality during the current fiscal year for the retirement of principal and interest on outstanding bonds, notes or other indebtedness incurred after December 31, 1981 to pay costs of school construction, additions to schools, and major rehabilitation projects that exceed $25,000 and are approved under AS 14.07.020(11); and

(B) cash payments made after June 30, 1982 by the municipality during the fiscal year two years earlier to pay costs of school construction, additions to schools, and major rehabilitation projects that exceed $25,000 and are approved under AS 14.07.020(11).

(b) The commissioner shall administer the program of reimbursement authorized under this section and shall provide by regulation for the filing of applications for reimbursement, the form of proof of costs for which application for reimbursement is made, and other regulations necessary to administer the program. The commissioner shall exclude from the total school construction cost of the local district all state and federal funds included in these costs except funds provided under this section and AS 43.50.140. In approving applications for reimbursement, the commissioner shall

(1) offset against the amount of reimbursement authorized the amount of any funds distributed to the borough or city in the second preceding fiscal year from the school fund provided for in AS 43.50.140;

(2) Repealed by § 10 ch 92 SLA 1982.

(c) The school construction account is established. Funds to carry out the provisions of this section may be appropriated annually by the legislature to the account. If amounts in the account are insufficient for the purpose of providing the share to which a borough or city is entitled under this section, those funds that are available shall be distributed pro rata among the eligible local governments.

(d) Money in the school construction account which, at the end of the fiscal year for which the money is appropriated, exceeds the amount required for the allocations authorized in this section reverts to the general fund.

(e) The commissioner shall annually provide a report to the legislature on allocations of state aid made under this section, including but not limited to, the amount of state aid paid on a per capita and per student basis and the resultant effect on the rate of levy of taxes by the municipality for educational purposes.

(f) Repealed by § 17 ch 147 SLA 1978.

(g) In this section, unless the context requires otherwise,

(1) "commissioner" means the commissioner of education;

(2) "costs of school construction" means the cost of acquiring, constructing, enlarging, repairing, remodeling, equipping or furnishing of public elementary and secondary school buildings and includes the sum total of all costs of financing and carrying out the project; these include, but are not limited to, the costs of all necessary studies, surveys, plans and specifications, architectural, engineering or other special services, acquisition of real property, site preparation and development, purchase, construction, reconstruction and improvement of real property and the acquisition of machinery and equipment as may be necessary in connection with the project; an allocable portion of the administrative and operating expenses of the grantee; the cost of financing the project, including interest on bonds issued to finance the project; and the cost of other items, including any indemnity and surety bonds and premiums on insurance, legal fees, fees and expenses of trustees, depositaries, financial advisors, and paying agents for the bonds issued as the issuer considers necessary.

(h) An allocation under (a)(4) of this section for school construction begun after July 1, 1982, shall be reduced by the amount of money used for the construction of residential space, hockey rinks, planetariums, saunas, and other facilities for single purpose sporting or recreational uses that are not suitable for other activities. An allocation under (a)(4) of this section may not be reduced by the amount of money used for construction of a small swimming pool, tank, or water storage facility used for water sports. However, an allocation shall be reduced by the difference between the amount of money used to construct a swimming pool that is competition size or larger and the amount of money that would have been used to construct a small swimming pool, tank, or water storage facility, as determined by the commissioner.

(i) For the purposes of (a)(4) of this section

(1) an indebtedness for bonds is incurred after the bonds are sold;

(2) reimbursement for a cash payment may only be made after the payment is made to a vendor; and

(3) payments may not be made for costs that are incurred under a contract after the contract has been released. (§ 1 ch 249 SLA 1970; am § 1 ch 93 SLA 1971; am § 2 ch 137 SLA 1972; am § 1 ch 28 SLA 1973; am § 47 ch 127 SLA 1974; am §§ 1 — 3 ch 120 SLA 1977; am §§ 12, 17 ch 147 SLA 1978; am § 25 ch 168 SLA 1978; am §§ 8 — 10 ch 92 SLA 1982)

Effect of amendments. — The 1977 amendment rewrote subsection (a), inserted the paragraph (1) designation and added paragraph (2) in the third sentence of subsection (b), and added the language beginning "including but not limited to" to the end of subsection (e).

The first 1978 amendment, in subsection (a), deleted "and cash payments made by the borough or city before July 1, 1976

to pay the cost of

to pay the cost of school construction" from the end of paragraph (1), substituted "80 per cent" for "50 per cent" at the beginning of paragraph (2), substituted "June 30, 1976 and before June 30, 1978" for "July 1, 1977" in subparagraphs (A) and (B) of paragraph (2), and added paragraph (3). The amendment also repealed subsection (f), which read "The provisions of (a)(2) of this section apply only to payments made before July 1, 1971. The provisions of (a)(3) of this section apply to payments made after June 30, 1971."

The second 1978 amendment, in paragraph (2) of subsection (g), substituted "the sum total of all costs of financing and carrying out the project" for "but is not limited to the costs of acquisition of sites, legal, engineering, fiscal, architectural and other fees of specialists or consultants, costs of labor, materials, equipment and supplies, costs of authorization, issuance and sale of bonds, notes, or other evidences of debt" at the end of the first sentence and added the second sentence.

The 1982 amendment, effective July 1, 1982, substituted "a municipality that" for "an organized borough or a city which" in the introductory language of subsection (a), substituted "the municipality" for "the borough or city" in paragraphs (1), (2)(A) and (B), and (3)(A) and (B), substituted "90 percent" for "80 percent" in the introductory language of paragraphs (2) and (3), inserted "and before January 1, 1982" in paragraph (3)(A) and (B), and added paragraph (4). The amendment also repealed paragraph (2) of subsection (b), which read "required the borough or city to provide, with its application, a certified copy of the notice to taxpayers required by AS 43.18.030," and added subsections (h) and (i).

Editor's notes. — AS 43.18.030, referred to in paragraph (2) of subsection (b), was repealed by § 11, ch. 155, SLA 1980. For programs of municipal assistance, see AS 29.88.010 — 29.95.030.

Sec. 43.18.105. Public school facilities construction advance account. The public school facilities construction advance account is established. The account consists of appropriations for distribution under AS 43.18.105 — 43.18.135 to boroughs and cities which are school districts to assist in paying the costs of public school facilities projects approved under AS 14.07.020(10) for which construction is commenced after June 30, 1978 and for which no bonding, notes, or other indebtedness was incurred before July 1, 1978. (§ 13 ch 147 SLA 1978)

Sec. 43.18.110. Eligibility. Eligibility of a proposed construction project for funding assistance under AS 43.18.105 — 43.18.135 shall be determined by the department based on standards and criteria established by regulation. The standards and criteria to be considered in determining eligibility include the following:

(1) emergency requirements;

(2) number of unhoused students;

(3) new elementary or secondary programs;

(4) existing community and school facilities and their condition; and

(5) economic and social stability of the community. (§ 13 ch 147 SLA 1978)

Sec. 43.18.115. State aid. (a) The amount of state aid payable in advance under AS 43.18.105 — 43.18.135 is the amount by which the cost of construction of the approved school construction project would cause the debt-to-valuation ratio of the municipality to exceed 12 per cent.

House H&S Comm
Davis / Gall / Tischer / Fritz

HB 423 –

Ralph Bennett - approx 31 mill. shortfall. Because of the current statute - cannot approp 60 mil in Budget – HB 105 and be legally safe in re/ to 90% of current entitlement

Some Munis have authorized but unissued debt.

Davis - Approp will just take care of this year. future years?

Bennett - Same as intent of HB 251 - HB 420 reduces to 50% - indebtedness payback.

Tischer – Betts propose to do ~~away~~ w/ unorganized school districts! Philosph to treat everyone equally. REA's Rsecure fund funding – & imbalanced funding situation. If there's a change in statutes - consider rural areas - wont oppose to establish a top base.

Chitwood – Ak M L – Supports & urges passage. REA's do get 100% - & fund is a direct approp so the Legis always has control over what is, when it is spent. Munis present the bill "after the fact"

Suggest - CS HB 251 - which pledges to fund exist entitlement but reduces entitlement to 50% ? also increasing the amount of approval authority.

Chitwood - 1 suggestion - perhaps matching grants to ~~for~~ sale of bonds

Bill Zybach - Asst to Mayor Bill Allan - Flks NSB —
Critical to Flks. Borough / 30 mile - part of piped cost. Completing 3 schools w/new hi school next year. HB 105 = 65% of entitlement. Moon important Thom' cap projects on supplemental passed earlier.
Supports cap for future years per AML & monitor on future debt.
- Herman here -

Tischer - Flks - new schools? School enrollment - passed 4 years

Zybach - 3 Elem & 1 jr-sr high school - Project 600 new stdt. next year

Steve Hole - Fiscal Note —

Tischer - Jump from 1977-78 from 9 mile to 30 mile increase

Hole - '78 went from 50% to 80% - also substantial shift in funds from town to urban areas - FY82 - Chp 82 - 90% Reimbursements.
Molly Hooten - Cap expenditure Cost State: Related $150 million - Several are comb. elem/sec. schools - Hootch only deals w/ Secondary Programs.

Tischer - Wasilla has HB 423 w/ Int Rec.

Re: HB 423 - - School Debt Appropriation

Alaska Municipal League urges your approval of HB 423, appropriating $30,916,706 to the Department of Education for school construction debt retirement. This amount represents the difference between the $59,887,800 currently proposed in the FY 84 operating budget and the $90,804,506 that the Department estimates as the local entitlement.

Several years ago, the Legislature developed this program to reduce the inequities between the REAA's, where the state pays 100% of school construction costs and the municipal school districts, where the local taxpayers were footing the bill. The original program provided for a 50% reimbursement on a two-year time delay, and later the percentage was increased to 80%. Over the years, changes have been made, including giving the Department of Education plan approval authority and raising the percentage of reimbursement to 100% for payments on debt issued before July 1, 1977.

Last session, two other changes were made to the program. In order to partially alleviate the cash flow problems in rapidly growing areas that were caused by the two-year time delay in reimbursements, the program was modified to phase in a current year reimbursement of payments on debt issued after December 31, 1981. The other changes made last year raised the percentage of reimbursement from 80% to 90% for payments on debt issued after July 1, 1977.

School boards, councils, and assemblies relied on the word of the legislature and took school projects to the voters for approval. The voters were told that the state would reimburse 90% of the payments. As an example, in the Anchorage school bond election, a letter signed by 21 Anchorage legislators was circulated to that effect.

Now, after the fact, there is talk of changing the ground rules. We realize that the program has ballooned beyond anyone's expectations and that there needs to be a change to ensure administrative and legislative control in the future, but believe that the existing obligations should be funded.

Enclosed is a list showing estimated FY 84 entitlements, projected shortfall without HB 423, and the mill levy equivalent of that shortfall. Also attached is a brief summary of this program of reimbursements for school construction debt retirement.

SCHOOL DEBT RETIREMENT

Impact of $59,887,800 Appropriation for FY 84

	Total FY 84 Entitlement	Projected Shortfall 66% Proration	Mill Levy Equivalent of Shortfall
Anchorage	$18,740,404	$6,371,737	0.612 mills

STATE AID FOR RETIREMENT OF SCHOOL CONSTRUCTION DEBT (AS 43.18.100)

More than 10 years ago, the Legislature established this program of reimbursing municipalities for a portion of their school construction debt. The program started as a 50% reimbursement with a two year lag in payments, and over the years was changed to provide for a larger percentage of reimbursement (100% for payments on debt issued before 7/1/77 and 80% for the rest) and some oversight by the Department of Education. Last session, other changes were made to the program: the percentage of reimbursement was raised from 80% to 90% for payments on debt issued after 7/1/77 and current year reimbursements were authorized for payments on debt issued after 12/31/81, in order to phase out the two year lag.

In summary, the current program provides:

1. 100% of payments made two years earlier on school debt issued before July 1, 1977. (Payments made by the municipality in FY 82 are reimbursed by the State in FY 84.)

2. 90% of payments made two years earlier on school debt issued between July 1, 1977 and December 31, 1981. (Payments made by the municipality in FY 82 are partially reimbursed by the State in FY 84.)

3. 90% of cash payments made two years earlier for school construction costs. (Payments made by the municipality in FY 82 are partially reimbursed by the State in FY 84.)

4. 90% of payments made in the current year on school debt issued after December 31, 1981. (Payments to be made by the municipality in FY 84 are partially reimbursed in FY 84.)

5. Each municipality's entitlement is determined by adding the four categories listed above and then subtracting the amount of tobacco tax the district received two years earlier. (The amount of tobacco tax received in FY 82 is deducted from the FY 84 payment.)

The other factors of the program relate to the oversight and approval authority granted to the Department of Education and limits to the types of facilities that are eligible for reimbursement.

M E M O R A N D U M

To: Representatives Fritz and Tischer, Co-Chairs, and members of the House HESS Committee

From: Representative Bob Bettisworth RHB

Subject: HB423, "An Act making an appropriation to the Department of Education for school construction debt retirement; and providing for an effective date."

As you are no doubt aware, there is a growing concensus among legislators that a reduction in state aid for retirement of school construction debt under AS 43.18.100 is warranted. HB423 seeks to alleviate potential negative impact of any immediate and substantial reduction that might result during this legislative session.

The attached data for each school district outlines the most current projections of composite eligibility bearing in mind the uncertainty of such data. There are certain school districts that plan to authorize new issues or have authorized but unissued debt on the books that may affect the accuracy of the numbers.

I feel that the current statutory language contained in AS 43.18.100 where the words "shall allocate to a municipality that is a school district" appear is very clear and until and unless the legislature affects a statute change, we are legally bound to the composite formula now on the books. I have also introduced HB420 that would change the formula from 90% to 50%. Several legislators have indicated that such a change is necessary before funding the 1983 shortfall is addressed.

Again, I wish to reiterate that this bill seeks to bring the various school districts up to the level of construction debt compensation required by current law and until the statute is changed no less reimbursement is acceptable.

RHB/rob

STATE AID FOR RETIREMENT OF SCHOOL CONSTRUCTION DEBT (AS 43.18.100)

More than 10 years ago, the Legislature established this program of reimbursing municipalities for a portion of their school construction debt. The program started as a 50% reimbursement with a two year lag in payments, and over the years was changed to provide for a larger percentage of reimbursement (100% for payments on debt issued before 7/1/77 and 80% for the rest) and some oversight by the Department of Education. Last session, other changes were made to the program: the percentage of reimbursement was raised from 80% to 90% for payments on debt issued after 7/1/77 and current year reimbursements were authorized for payments on debt issued after 12/31/81, in order to phase out the two year lag.

In summary, the current program provides:

1. 100% of payments made two years earlier on school debt issued before July 1, 1977. (Payments made by the municipality in FY 82 are reimbursed by the State in FY 84.)

2. 90% of payments made two years earlier on school debt issued between July 1, 1977 and December 31, 1981. (Payments made by the municipality in FY 82 are partially reimbursed by the State in FY 84.)

3. 90% of cash payments made two years earlier for school construction costs. (Payments made by the municipality in FY 82 are partially reimbursed by the State in FY 84.)

4. 90% of payments made in the current year on school debt issued after December 31, 1981. (Payments to be made by the municipality in FY 84 are partially reimbursed in FY 84.)

5. Each municipality's entitlement is determined by adding the four categories listed above and then subtracting the amount of tobacco tax the district received two years earlier. (The amount of tobacco tax received in FY 82 is deducted from the FY 84 payment.)

The other factors of the program relate to the oversight and approval authority granted to the Department of Education and limits to the types of facilities that are eligible for reimbursement.

REPRESENTATIVE WALT FURNACE

To: Representative Mae Tischer, Chairman
House Health and Social Services Committee

RE: HB 463, Whittier Prison

Date: January 24, 1983

In addition to this memo, attached please find select documents for your file.

As you know, at the present time there is a statewide search underway for a reasonable site for a state prison at an reasonable price. HB 463 proposes the establishment of a state prison in Whittier for a price tag of $25 million. (Attached please find several estimates for remodeling and conversion of the current structure into a turnkey operation which will clearly show that the Buckner Building can be renovated and converted for the cost indicated -- despite the estimate of the State of Alaska, Department of Transportation and Public Facilities.)

Further, allow me state that Whittier should be favorably considered because it is close enough to Anchorage to encourage guards and other prison personnel to reside in Anchorage yet far enough to be considered isolated. And, the establishment of a prison in Whittier will encourage other critical development in the Whittier area such as a port facility as well as additional usage of the Alaska Railroad.

Thank you for your consideration of HB 463.

REFERENCE: Buckner Building - Whittier, AK

SUBJECT: Preliminary Project Review - Cost Estimate

Gentlemen:

At your request, per the commisson given us, we have made a complete review, on a preliminary basis, of the above reference structure.

Our commission, as we understand it, is to provide you with cost figures in two parts, as follow:

1. Remodeling and conversion of the exsisting building, to be used as a correctional facility.

2. A remodeling of the exsisting facility, including new ventilation and heating systems and electrical systems. In addition, new elevators, new roofing, new flooring, new ceiling systems and a number of new partitions. Additionally,, per your instructions, we have included costs for restoration of the building exterior, as well as, additions for a six lane bowling alley and bakery, a sixteen bed hospital and a new dining area/kitchen facility.

Our review anticipates that any and all work which would be done would meet exsisting state and local codes.

The figures we have arrived at, are based upon the preliminary sketches, pictures and numerous meetings with your company.

Due to the fact that we did not have definitive, exact drawings from which to work, our price must be considered preliminary and in this regard, we are providing you a cost range for each item. Our estimates are as follows:

1. For remodel and conversion to a correctional facility, our cost estimate range is $23,725,000 to $25,100,000.

2. For remodeling and additions as noted above, our cost estimate range is $18,650,000 to $19,800,000.

If we can be of further assistance or should you wish a more exact cost estimate after development of drawings, we would be pleased to provide them for you.

Attached is our billing, which we forward with this report, for payment.

Thank you for using our services.

Very truly yours,

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES
Deputy Commissioner - Standard and Statewide Programs

Pouch Z
Juneau, Alaska 99811
(907)465-3900

March 21, 1983.

The Honorable Walt Furnace
Representative
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Furnace:

A request from Steve Levi, of your office, was received asking the Department of Transportation and Public Facilities (DOT/PF) information about converting the Buchner Building in Whittier to a corrections facility.

The following information is provided:

Background

The Buchner Building is a multi-story reinforced concrete structure which was built by the military in the early 1950's as a composite facility for up to approximately 2500 enlisted men. There are few individual rooms in the facility and mostly large dormitory areas as well as a large area that was used as a dining hall.

The facilities have been left abandoned since 1965--open to both weather and extreme vandalism.

The concrete structure is intact; however, all the finishes and systems would have to be replaced and complete security added to make it suitable for a prison facility. Most partitioning is wood-frame and not adequate for prison security, nor building code standards.

Prior to a final decision on remodeling the existing facility, consideration should be given to demolition and a complete new building

Assumptions/Basis of Estimate

- Conversion would be for a long-term, maximum security prison to house approximately 300 prisoners.

- Estimate is based on available information. No funds have been provided for a detailed on-site survey by DOT/PF.

- Operational costs are excluded.
- Land costs are excluded.
- No earthquake damage has been sustained.
- 273,660 square feet is the gross square footage.
- 1983 construction dollars.
- All mechanical, communication, security, electrical, and fire/life safety systems and elevators would have to be added or replaced. (Note: In many cases extensive demolition would be required where original systems were imbedded in the reinforced concrete structure).
- All finishes, windows, walls, and roof would need replacement and/or repair.
- Corridors meet current code requirements.
- Interior partitions must be Type II (Fireproof) construction.
- The building would be upgraded to meet both the current code and barrier free requirements as well as those of the American Correctional Association.

Estimated Costs

Square Footage	273,660
Cost/square foot for Rehabilitation	$228
Estimated cost to reconstruct for correctional facility use (1)	$62,394,480

(1) Department of Health and Social Services functional facility needs versus physical/transportation/locational constraints as well as socio-economic factors have not been addressed at this time. More detailed analysis will require a comprehensive study.

MEMORANDUM

To: House HESS Committee

From: Representative Terry Martin

Date: January 24, 1984

Subject: HB 466

"An Act relating to appropriations to and fiscal procedures of the University of Alaska; and providing for an effective date."

This bill will enable the University to legally invest state general funds and federal funds, and to place income derived from these investments directly into the working capital reserve fund without a specific appropriation by the legislature. Although the University has been making such investments, there is no clear legal authority for it to do so.

This legislation has been recommended by the Commission on Postsecondary Education, and is strongly endorsed by the University. It will enable the University to receive and expend funds, such as tuition receipts, without waiting weeks for legislative approval. Some good examples of the problems this causes are set out on page 2 of the attached letter from Dr. Jay Barton to Don Abel, President of the Board of Regents, and in Dr. Carter's letter to Representative Goll.

Your positive action on this bill will greatly relieve the operational problems experienced by the University administration. I urge you to pass HB 466.

DATE: November 4, 1983

SUBJ: University of Alaska bill drafts 13-1543 and 13-1587

Enclosed are the two bill drafts you requested. The following is a sectional analysis of each bill.

" An Act relating to appropriations to and fiscal procedures of the University of Alaska; and providing for an effective date."

Section 1. This section allows the University of Alaska to invest general funds and federal funds in addition to other funds.

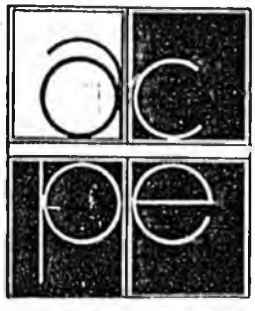
Section 2. This section allows the University to place income derived from the investments allowed under AS 14.40.250 (see section 1 above) into the Working Capital Reserve Fund without an appropriation to the fund by the legislature. This conforms with the current practice of the University although in the opinion of legislative counsel it does raise the question of a dedicated fund (see attached memo from Keith Levy, Legislative Counsel).

Section 3. This section allows the University to make transfers between objects of expenditures, e.g., personal services, travel, etc., and transfers between allocations without the approval of the Office of Management & Budget. This is similar to the legislative intent contained in the FY 84 General Appropriations Act.

Section 4. This section allows the University to receive and expend additional federal or program receipts during the course of a fiscal year without the approval of the Office of Management & Budget and the Legislative Budget & Audit Committee. This is similar to the legislative intent contained in the FY 84 General Appropriations Act.

Section 5. This section allows the University to carry forward all non-general funds and those general funds designated by the legislature for "organized research" from one fiscal year to another.

"An Act making special appropriations to the University of Alaska working capital reserve fund and to the University of Alaska to pay obligations from past fiscal years; and providing for an effective date."



Section 1. At the present time AS 14.40.296 states that the Working Capital Reserve Fund consists of money appropriated by the legislature. To date the legislature has appropriated $5,000.000 to the fund. The fund balance, however, is $7,564,522. The difference consists of investment income deposited in the fund without a legislative appropriation. This section appropriates the interest income to the fund.

Section 2. This section appropriates $3,799,754 from the Working Capital Reserve Fund to the University in order to remove from the University's books the liability that exists from over expenditures in FY 77 and FY 79.

Alaska Commission on Postsecondary Education

Review of the University of Alaska FY 1984 Operating and Capital Budgets

Submitted to the
Governor
and the
Thirteenth Alaska State Legislature

December 10, 1982

Recommendation 2: THE UNIVERSITY SHOULD BE ABLE TO ACCEPT GRANTS AND CONTRACTS DURING THE COURSE OF A FISCAL YEAR WITHOUT WAITING TO CLEAR SUCH ACCEPTANCE THROUGH THE GOVERNOR'S OFFICE AND THE LEGISLATIVE BUDGET AND AUDIT COMMITTEE.

Hearings held throughout the state revealed that there was a great deal of criticism raised regarding the inability of the University to respond quickly to requests for special courses, workshops, seminars, and even research projects when the requesting group or agency was willing to pay for the service. By the time all required approvals had been obtained, need may have passed, the funds may have been lost, or the interest may have waned.

For the university system to be able to meet these demands and thereby provide services to the state, more flexibility must be allowed. One of the detriments to this flexibility is the requirement which states that the University must go through the same Revised Program (RP) process as all the other state agencies when contracts exceed their budgetary authority. This is an extremely time-consuming process and is one which was not required of the university system until the last few years.

There was a time when fiscal accountability of the university system was justifiably called into question. That time has now passed, and the University has demonstrated sound fiscal practice to the satisfaction of nearly all observers. The Commission would like to see some flexibility returned to the University budgeting

procedure; this could be brought about by adding a section to the appropriation bill.? In the 1978 appropriation bill (FCCSSCSCSHB 627), the following language was included:

> "Federal or other program receipts available to the University of Alaska which exceed the amounts appropriated in this Act are appropriated and available for expenditure under procedures established by the Board of Regents."

The Commission recommends that such flexibility be returned to the Board of Regents.

This would require an amendment to AS 37.07

November 29, 1983

The Honorable Terry Martin

Anchorage, AK 99504

SUBJECT: Proposed Legislation

Dear Terry,

Please be advised that the UAA Executive Council has reviewed and expressed enthusiastic support for your proposed legislation redefining the fiduciary rights of the University of Alaska. I concur with their recommendation. Enactment of the proposed legislation would be an important benefit to the University of Alaska. Thank you for your continued interest and support.

Sincerely,

David L. Outcalt
Chancellor

Executive Vice President

SUBJECT: Possible Changes in Legislation Affecting Fiscal Administration of the University

Several provisions in existing legislation impede efficient fiscal administration of the University of Alaska.

For example, as you know, the university has a need during the course of a fiscal year to be able to receive program receipts, such as tuition, in amounts greater than what was initially budgeted without waiting weeks for prior approval to be able to do that.

During the last legislative session, an attempt was made to correct this problem by an expression of legislative intent as follows:

> "Notwithstanding the provisions of AS 37.07.080(h), federal or other program receipts available to the University of Alaska which exceed the amounts appropriated in this act are appropriated and available for expenditure under procedures established by the Board of Regents and the Office of Management and Budget. The university shall provide the Legislative Budget and Audit Committee with quarterly reports detailing additional federal or program receipts accepted under this provision."

However, subsequently I was told that a provision such as the above could not properly be handled by an intent statement -- that legislation to make this change was required. Also, it would be far more advantageous to get things such as this corrected in continuing legislation rather than to hope each year that such needed provisions are included in appropriation bills, since sometimes they get included and sometimes, inadvertently, they do not.

There are several other problems which the university has perennially, unnecessarily, which keep us from doing a more efficient job for the state, for example, current provisions in law providing that the university may invest program receipts but not general fund money. This is not sensible in that the university draws money from the state monthly and pays its employees every two weeks. Consequently, the university does have temporary cash in excess to its needs from time to time and should not simply leave that in banks without earning interest. There is a need to change legislation so that the fact that the university may also invest general fund money is permissible. Now we simply do this anyway, and occasionally the state tells us that legally we may not. Meanwhile, the interest we are earning in temporary, secure cash investments permits us this fiscal year to decrease our request for general fund money in the amount of $1.8 million. Obviously, the present law prohibiting the university from investing state and federal money is absurd and needs to be changed, in the state's own best interest.

Another problem has to do with organized research. Various research projects continue past the end of a fiscal year and state money for them, which along with federal money which does not lapse, finances such research and should not need to be lapsed precisely at the end of a fiscal year any more than capital funds for a building project, which will take several years, need to lapse at the end of each fiscal year. Right now, this is on a hit and miss basis; that is, sometimes legislation appropriating money for organized research provides for a lapse of such money at the end of the calendar rather than the fiscal year and sometimes legislation making funds available for organized research does not.

Another problem the university has relates to the lapsing of program receips. Unspent general fund money may continue to be lapsed. However, various classes of program receipts should not lapse. As one illustration, consider university bookstores. They try to break even, but they can never do that exactly. Some years they may come out slightly ahead or slightly behind a break even point, depending upon sales, losses and all kinds of factors. If bookstores are required to lapse money when they end up in the black and then incur uncovered, illegal deficits when they end up in the red, this is obviously an unfair problem, like expecting them to go to bat with two strikes against them to begin with. The university can and will provide full disclosure to the executive and legislative branches on its holdings of program receipts.

Several weeks ago, Representative Terry Martin indicated to me that he wanted to propose certain legislative changes to correct problems as noted above. He asked me for information concerning them and my suggestions, which information and suggestions I provided to him. In answer to a letter I received from him yesterday, asking for my comments on his proposed bill, I have sent to him the attachment. Today I am having a copy of it taken to Gene Dusek, the associate director in the Office of Management and Budget in Juneau. I also plan to provide this information to other legislators.

University of Alaska
Fairbanks, Alaska 99701

January 5, 1984

The Honorable Peter Goll
State of Alaska
House of Representatives
Pouch V
Juneau, AK 99811

Dear Peter:

This is to answer your letter, a copy of which is attached for convenient reference. Regarding your points which I have marked --

1. Any reasonable limitation would cause no problem. What we are talking about is strictly temporary, secure investments of cash. All such investments to date have been made in or through Alaskan banks or savings and loan associations and have been 100 percent collateralized, so that there is no possibility whatsoever of principal being lost. We are not talking about investing in equities or in other ways. All investments of any state general funds and federal funds held by the university will continue to be limited by the university with or without legislation specifically requiring that.

   If legislation were going to specify the types of investments which could be made with state general funds and federal funds, I would like it to be broad enough to make clear the fact that investments in such things as treasury bills are permissible and that such investments may be made through brokers if the university should elect to do so. If a limitation on the type of investments to be made must go into the legislation, I would suggest the limitation include the following types of investments, if this is not too cumbersome. Right now we have no need to invest in some of these, but some time in the future, such investments may be advisable, being completely prudent and offering higher yields than such things as collateralized CDs.

   - Certificates of deposit in Alaska banking organizations
   - Obligations of the U.S. Government
   - Federal funds bank repurchase agreements
   - Deposits in savings or other accounts in commercial banks, savings and loan associations, and federal credit unions in the state of Alaska
   - Commercial paper, of prime or equivalent grade

2. This point of yours is also an excellent one. We here at the university are extremely careful about the use of non-budgeted program receipts. When we receive such things as tuition or interest income, beyond what was initially budgeted, this is invariably spent for one-time projects that do not continue any obligation whatsoever beyond the current fiscal year, and often

in ways to decrease appropriation requests from the state in future years. I can conceive of increased program receipts carrying obligations beyond a current fiscal year. For example, a federal grant or contract could be signed which would involve expenditures into the next year. But, again, we take special care to ensure that the financing of any such continuing expenditures is absolutely assured.

We have never caused the state any problem in these respects. Our difficulty with handling non-budgeted program receipts is that decisions must be made promptly. In granting the university authority to accept non-budgeted program receipts as is proposed in the draft legislation I sent to you, the state is not giving up any control that it now actually has. That might not seem to be true but is really the case. Units may expeditiously clear virtually any amount of program receipts by placing those into a budget request initially and having those "appropriated." In fact, this is a continuing problem. It is easy for units to overbudget their program receipts and avoid later delays in getting increased receipts approved. This encourages bad management, because we then need continually to decrease appropriation and spending authority already allocated in line with money actually being received. The university must have the authority to accept non-budgeted program receipts promptly and needs to be entrusted with the responsibility for assuring that no such receipts require uncovered obligations into future fiscal years.

The acceptance and expenditure of program receipts above those initially budgeted invariably results in a net financial gain to the university. With respect to your request that I document that point, one illustration is the fact that the university submitted a request to the state on October 4, 1983 for authority to expend $100,000 of excess program receipts to do emergency repair work on the Seward Marine Center. There is a problem there with land eroding away into the ocean and the university needs to build a gabion wall and place armor rock along Armstrong Road for a distance of about 30 feet. Delay in performing this construction will eventually result in demolition of the docking facility needed for research vessels. I am still awaiting authority from the state to make the expenditure from money which the university has in hand. This same request to the state, awaiting action, asked for authority to cover other pressing needs, such as roof repairs which will cost about $60,000. These things will all eventually get done and will end up costing more than would have been the case without the delay.

One other example of the fact that program receipts result in a gain to the university is a case which I may or may not have previously mentioned to you. A few years ago, the university had an opportunity to accept about one-half million dollars of federal money to provide student financial aid. The money had to be accepted and expended promptly. Accordingly, I did that and then reported to the state what I had done. However, proceeding in that way was not in accordance with instructions from the state as to how we here should have proceeded. If I had done it the correct way, students would have lost about one-half million dollars which got accepted and spent in Alaska without costing the state one dime. I could document case after case of the fact that program receipts in addition to those initially budgeted result in a gain to the university and to the state. Indeed, I cannot now think of one single example of the university's use of such receipts when that has not been the case.

I have enjoyed our talks and exchange of correspondence, and I thank you again for your continuing confidence and for what you do to help the University of Alaska. To keep other people who are interested informed about these matters, I am taking the liberty to send copies of these papers to persons listed below.

Sincerely,

Sherman Carter

STATE OF ALASKA
HOUSE OF REPRESENTATIVES

December 30, 1983

Mr. Sherman Carter
Executive Vice President
University of Alaska
Fairbanks, Alaska 99701

Dear Sherman:

Thank you for your thoughtful letter of December 22.

I am in full support of the principles outlined therein.

Thank you too for the information to support efforts in behalf of university research. I will try to put it to good use. Keep in touch as needed.

(1) Terry Martin's bill draft seems very good. Should there be resistance to its passage, possibly a limit on the sort of investments which can be made with general funds would allay concern.

(2) Regarding your point number one on accepting of non-budgeted program receipts, can you advise me on the actual impact of this policy? That is: If you accept program receipts which are not in the budget, and hire extra staff as a result, will you generally expect a net financial gain or loss to the university? If a gain, can you document this? In any case, if you have the funds to hire the extra personnel, I would certainly support your serving the additional students. I am reminded of the Cordova situation.

Incidentally, thank you very much for your support in that matter. John Devons has handled himself quite well, and I believe the matter is resolved. I am working to help the citizens of Cordova coordinate their efforts in support of funding with John in order to insure that those efforts benefit the FY85 budget development.

Should you be in Juneau, I would enjoy meeting with you.

Best regards,

Peter Goll

MEMORANDUM

To: House HESS Committee

From: Representative Terry Martin TM

Date: January 24, 1984

Subject: HB 467

"An Act making special appropriations to the University of Alaska working capital reserve fund and to the University of Alaska to pay obligations from past fiscal years; and providing for an effective date."

This bill will clear up a discrepancy on the University's books resulting from under-appropriations to the working capital reserve fund in the fiscal years 1977 and 1979. I will quote from a letter I received from Dr. Sherman Carter dated October 26, 1983, which explains what the bill will accomplish:

> Peat, Marwick, Mitchell & Co., the university's external auditors, have recommended that the university propose a bill designed to improve the university's financial position as reflected in its financial statements. The recommendation is being included in the auditor's annual management letter to the Board of Regents. (NOTE: Dr. Carter is expected to bring a copy of this letter with him to the HESS hearing.--T.M.) The management letter has not yet been formally issued, but the auditors have discussed the recommendation and shown me a draft of it....
>
> In FY77 and again in FY79, the university incurred deficits. In all other years, the university has lapsed funds back to the state. The deficits in FY77 and FY79 resulted from the university then not being able to control its finances. Since that time, the university installed a new financial accounting system and did regain control of its finances.
>
> The deficits incurred in the late '79s ($3,767,040 for FY77 and $32,714 for FY79) continue to be reflected as a negative fund balance in the university's audited financial statements. The notes to the financial statements also have a comment that the accumulated deficits are included in the

DATE: November 4, 1983

SUBJ: University of Alaska Bill drafts 13-1543 and 13-1587

Enclosed are the two bill drafts you requested. The following is a sectional analysis of each bill.

" An Act relating to appropriations to and fiscal procedures of the University of Alaska; and providing for an effective date."

Section 1. This section allows the University of Alaska to invest general funds and federal funds in addition to other funds.

Section 2. This section allows the University to place income derived from the investments allowed under AS 14.40.250 (see section 1 above) into the Working Capital Reserve Fund without an appropriation to the fund by the legislature. This conforms with the current practice of the University although in the opinion of legislative counsel it does raise the question of a dedicated fund (see attached memo from Keith Levy, Legislative Counsel).

Section 3. This section allows the University to make transfers between objects of expenditures, e.g., personal services, travel, etc., and transfers between allocations without the approval of the Office of Management & Budget. This is similar to the legislative intent contained in the FY 84 General Appropriations Act.

Section 4. This section allows the University to receive and expend additional federal or program receipts during the course of a fiscal year without the approval of the Office of Management & Budget and the Legislative Budget & Audit Committee. This is similar to the legislative intent contained in the FY 84 General Appropriations Act.

Section 5. This section allows the University to carry forward all non-general funds and those general funds designated by the legislature for "organized research" from one fiscal year to another.

"An Act making special appropriations to the University of Alaska working capital reserve fund and to the University of Alaska to pay obligations from past fiscal years; and providing for an effective date."

Section 1. At the present time AS 14.40.296 states that the Working Capital Reserve Fund consists of money appropriated by the legislature. To date the legislature has appropriated $5,000.000 to the fund. The fund balance, however, is $7,564,522. The difference consists of investment income deposited in the fund without a legislative appropriation. This section appropriates the interest income to the fund.

Section 2. This section appropriates $3,799,754 from the Working Capital Reserve Fund to the University in order to remove from the University's books the liability that exists from over expenditures in FY 77 and FY 79.

MEMORANDUM

February 14, 1984

TO: Representative Mae Tischer, Chairman House HESS

FROM: Representative Milo H. Fritz, M.D. MHF

SUBJECT: HB 470

HB 470 is an appropriation bill for the making of a Documentary Film History of WWII in Alaska. Originally, there were two bills HB 484 and HB 470. HB 484 was a bill to form a Commission for this special task. The bills went to State Affairs where we were asked to redraft HB 484. After hearing testimony from Carol Derfner, Special Assistant of the Governor in charge of Boards and Commissions my aide went to speak with her and Keith Levy, a legislative affairs lawyer. I learned there is an ALaska Historical Commission already formed by A.S. Title 44 Article 3 that has the power under statute section (4), (5), & (6) to make the documentary film. With the bill you will find a letter of Intent we would like to see passed out with the Bill.

Would you please schedule this bill as soon as Possible? I would like to testify for this bill. If you have any questions regarding this bill my researcher, Jan, will give you any backup material needed.

MEMORANDUM

State of Alaska

TO:
The Honorable Milo Fritz
Alaska House of Representatives
Attn: Jan Harmon

DATE: March 5, 1984

FILE NO:

TELEPHONE NO: 465-2910

FROM:
Richard B. Engen, Director
Division of State Libraries & Museums

SUBJECT: Comments on HB 484

I am sorry I will be in Sitka and cannot be present at the hearing on March 7th dealing with the proposed documentary film on the Aleutian Campaign of World War II.

We have two film centers, Juneau and Anchorage, which provide services to libraries and individuals statewide. We have the largest film library selection in the state. One of our concerns, based on previous experience, is to assure that the State Library has an adequate number of copies for use statewide and full video duplication rights. As the film is being done at state expense, we recommend that the state hold the copyright and that production copies (internegatives) be placed with the State Library depository at Alpha Cine in Seattle. This will assure future access to the film.

Based on estimated use we recommend that 6 copies of the film and 2 video 3/4" masters be placed with the State Library.

We could also offer assistance in locating other footage dealing with the Aleutian Campaign; i.e. U.S. Army Signal Corps film presently in storage.

If we can offer other information or assistance please contact me.

Representative Milo Fritz
Pouch V
Juneau, Alaska 99811

Dear Milo:

On the assumption that the Letter of Intent referred to in your letter of February 6, 1984 has been prepared and is attached to the bill now in process of legislative consideration, there is enclosed a draft of a document in support of this legislation. In any event, a note of suggested matters which should be covered in such a letter of intent is enclosed.

It would be appreciated if you would reproduce and distribute a copy of the supportive memorandum to each member of the legislature and to other individuals and agencies who can assist in getting the appropriation bill through the legislature.

I admit playing blind man's bluff with this, for I haven't seen a copy of the bill to which it refers.

Sincerely,

BBTalley

B. B. Talley

02/15/84

SUGGESTED MATTERS TO BE COVERED BY LETTER OF INTENT

It is the intent of the legislature that funds provided by HB _____ be used by the Alaska Historical Commission to prepare, or to authorize and coordinate preparation and production by others of, a comprehensive documentary film of World War II in Alaska.

In carrying out this mandate, the Commission may give financial support and otherwise participate and cooperate with personnel, both active and retired, of the Armed Forces of the United States, Canada and Japan, and with others, in preparation of the film, using material available from existing sources as well as additional visual components, as may be found appropriate.

02/15/84
Draft prepared by B. B. Talley
with contribution by
Col. Evan J. Griffith, USAF

BACKGROUND MATERIAL IN SUPPORT OF HB _____
APPROPRIATING FUNDS FOR A COMPREHENSIVE DOCUMENTARY FILM
OF WWII IN ALASKA

There exist several books and papers, some official, which purport to document the history of WWII in Alaska. In addition, the military services have extensive motion pictures of their operations in Alaska. In recent years there has been a rebirth of interest on the part of individuals and organizations, particularly veterans organizations, in this part of Alaska's history. These individuals and groups have many important visual records which can be obtained for a comprehensive documentary film of WWII in Alaska.

In 1980, on the 40th anniversary of its arrival in Alaska, the veterans of the 11th US AF held a reunion in Alaska. It included a visit to the Aleutians as far out as Shemya. Weather prohibited their going to Attu. Extensive motion pictures and video tapes were made of this celebration, including interviews and oral history from many of the veterans present.

In 1982 extensive motion pictures and video tapes were made by individuals, organizations and by TV stations of the ceremony in dedication of a memorial on Unalaska Island to all those who lost their lives in the Aleutians during WWII. This included the Armed Forces of the United States and Canada, the Aleuts, and the Japanese Armed Forces. The two Japanese officers, now retired, who led the first and second waves of bombers in the attack on Dutch Harbor on 4 June 1942 participated in this dedication. The dedication was preceded by a flight from Unalaska Island to the Umnak Air Base, and to the position of the Japanese carrier from which the attack was launched, thence following the course of the planes to the rendezvous point and returning to Dutch Harbor. The plane was piloted by the Japanese officer who led the attack, flying

in reverse the course flown in the attack. From the rendezvous point, the plane flew the course at the same altitude flown in the actual attack. In the plane were Admiral James S. Russell, USN-Ret. who commanded the US Navy Catalinas in Alaska during WWII, BG B. B. Talley, Corps of Engineers, retired, who was responsible for building the secret air base on Umnak Island from which the US AF P-40s broke up the Japanese aerial attack on Dutch Harbor, and Admiral Hiroichi Samejima, JMSDF (Ret.) who led the first wave of Japanese bombers, and Colonel Zenji Abe, JMSDF (Ret.) who led the second wave which consisted of dive bombers. (Then Lieutenant Commander Abe later transferred to the army, as the reconstituted Naval defense force did not have dive bombers.) Also in the plane were Mr. Ted Spencer who arranged the dedication ceremony and the aerial flight here described. There was also a motion picture camera crew aboard who recorded the flight on film.

In view of the advancing age of the still living participants in WWII in Alaska, delay in the production of this visual history might preclude their participation in this important chapter in Alaska's history.

Inasmuch as the State of Alaska would be the primary beneficiary, the State should be the primary sponsor of the project. Such a project is within the purview of the Alaska Historical Commission of the Department of Education.

The project would include, but not necessarily be limited to, bringing together into a single compilation the best of the existing film, editing it into a single comprehensive historical document. There should be included in this compilation such additional footage as may be appropriate, with commentary by selected veterans who took part in the action.

Upon being instructed to carry out this project and being provided with the necessary funds for its accomplishment, the Alaska Historical Commission formed by AS Title 44, Article 3,

would have power to prepare or to authorize and coordinate the preparation and production by others of a documentary film covering this important portion of Alaska's history. Such a history should include but not be limited to the stills and motion pictures already in existance, but should include additional visual components as may be appropriate. Such a project should be completed by June 30, 1986.

A conceptual organization structure for executing this projcct is shown in Figure 1.

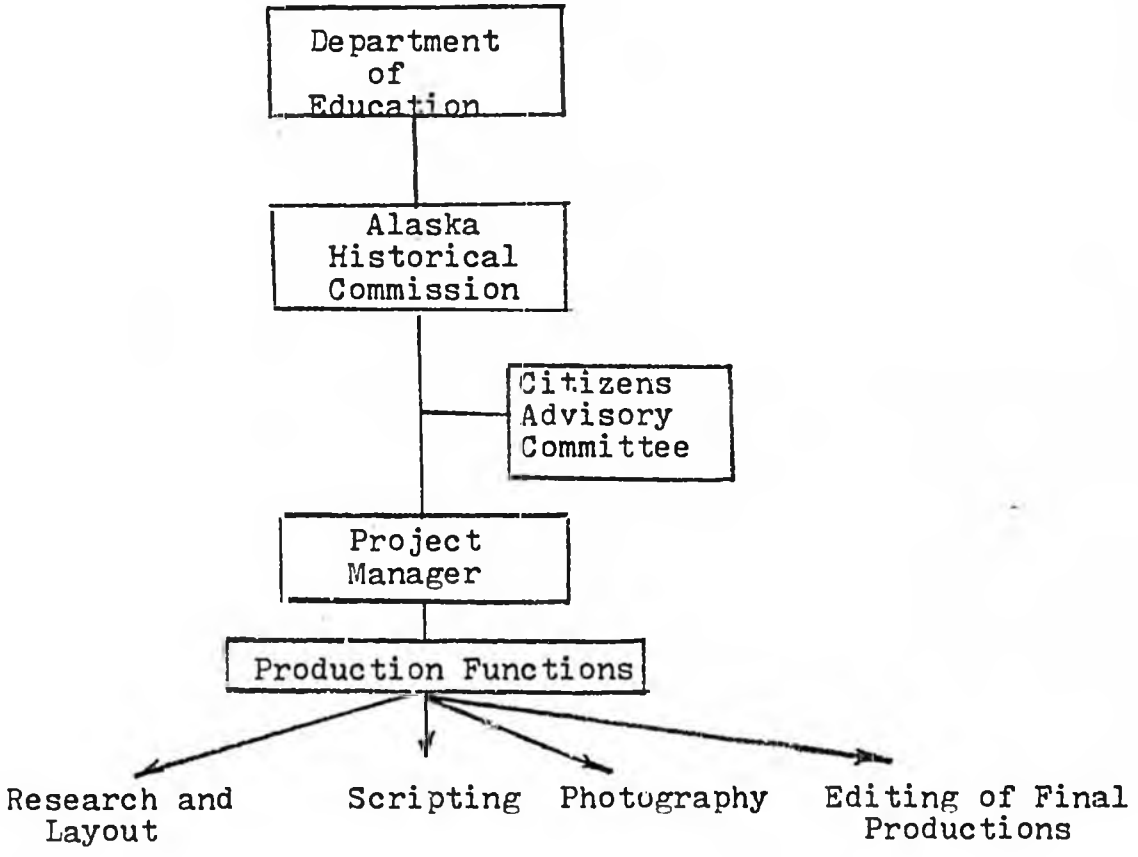

Figure 1. Conceptual Organizational Structure. Production of a Comprehensive Visual History of WWII in Alaska

LETTER OF INTENT SSHB 470

February 22, 1984

On behalf of WWII veterans appropriation SSHB 470 is being introduced. It is the intent of this legislation that funds provided by SSHB 470 be used by the Alaska Historical Commission to prepare, or to authorize and coordinate preparation and production by others of, a comprehensive documentary film of World War II in Alaska.

In carrying out this mandate the Commission may give financial support and otherwise participate and cooperate with personnel, both active and retired, of the Armed Forces of the United States, Canada and Japan, and with others, in preparation of the film, using material available from existing sources as well as additional visual components, as may be found appropriate.

Today, Alaska still suffers from some of the same lack of appreciation that it received at the time of it's purchase in 1867. The Aleutian Campaign of WWII, once referred to as "the Forgotten Front," could well become just that---forgotten. It is important to increase the little knowledge and understanding the public has concerning conditions in Alaska during WWII.

Adoption of SSHB 470 by the Alaska Legislature would exemplify the important role that Alaska played during 1940-1945. It would strengthen an understanding and respect for our great 49th state. It also is an educational tool for our present generation on the folly and danger of being physically, morally and militarily unprepared to protect our country and way of life.

STATE OF ALASKA 1984 LEGISLATIVE SESSION
FISCAL NOTE

Revision Date:

REQUEST
Bill/Resolution No.: HB 484
Title: WW II History Commission

FISCAL DETAIL
Agency Affected: Office of the Governor
Program Category Affected: General Government

Sponsor: State Affairs

Fiscal Note on HB 484

The fiscal impact on the Office of the Governor is as follows:

Personal Services: 62,205.00

	Mo. Sal.	Yearly	25% Bene	Total
Administrative Assist., Range 16	2,586.00	31,032.00	7,758.00	38,790.00
Clerk Typist, Range 8	1,561.00	18,732.00	4,683.00	23,415.00
				62,205.00

Administrative personnel are required to gather information and documents from public & private agencies concerning the participation of Alaska in WW II. Also to preserve and index materials gathered in order to make them readily available to the public. In addition, support positions are required to ensure minutes of the meetings are taken and the preparation of the annual report is compiled for the Legislature and Governor.

Travel: 12,344

Travel consists of four meetings annually, to be conducted in Anchorage, Fairbanks, Juneau and Kotzebue. This would entail travel costs for airline tickets for each member of the Commission plus the appropriate per diem rate. Meetings are estimated to be approximately two days in length in each location.

5 Member Commission
$80. per day Per Diem
2 Day Meetings

Meetings Held	Transp	Per/ Diem	Minimum Total
Anchorage	1,422	1,200	2,622
Juneau	1,618	1,200	2,818
Fairbanks	1,634	1,520	3,154
Kotzebue	2,230	1,520	3,750
	6,904	5,440	12,344

Contractual Services: $10,427.00

Office Space	4,170.00
Conference Room Space	4,500.00
Phone (rental)	1,096.00/yr.
Work Station (30 x 60)	250.00
Stationery	90.00
Office Supplies (approx.)	300.00
Business Cards	21.00
	$10,427.00

Equipment: $13,122.00

Displaywriter, diskette & printer	9,296.00
Typewriter, Sel. III	789.00
Calculator	190.00
2 file cabinets (4 drawer, ltr) 203. ea.	406.00
1 desk - double pedestal	397.50
1 desk - sec. w/return	505.00
1 chair - exec.	306.00
1 chair - sec.	250.00
2 chairs - side	300.00
1 bookcase - 4 shelf	150.00
2 partitions - 4 x 5 266. ea.	532.00
	$13,122.00

TOTAL: 98,098.00

A COMPREHENSIVE VISUAL DOCUMENTARY
OF
WORLD WAR II IN ALASKA

A joint production by the Alaska Veterans of World War II, assisted by contributions by the US Army, Navy and Air Force, together with the State of Alaska, the Air Force Association, et al.

Draft of Suggested Format
Prepared by B. B. Talley

Background music.

Title and accreditation (Producer, Narrators, Contributors, etc.)

PROLOGUE with voice off camera. On the screen flashes of motion pictures and projected stills, changing every 3 to 5 seconds.

Voice off camera:

"ALASKA. A land of inestimable beauty...Its Mountains (McKinley)..Its Rivers...Forests...Lakes: _____ of them...Farms in the Matanuska Valley...A Coastline of _____ miles...The Sea with its abundance of seafood: 35 million salmon alone caught in 1983...The Inside Passage (map) from Seattle to Skagway and to Haines...Its Cities (flash of Fairbanks, Anchorage, and perhaps Juneau)...Its vast natural resources: Oil...Coal... Timber...Gold and other rare metals...Its Industry: Mining.., Forestry...Fishing...Construction...Its People (Indians... Eskimos...Aleuts...Sourdoughs...Business Men and Women. Truly a Great Land." (Total time from 3 to 5 minutes.)

On the screen: A map of Alaska superimposed on a map to the same scale, of the South 48 States, with Ketchikan over Jacksonville, FL, and Attu over (vicinity of) San Diego.

As the map is projected, a veteran walks on stage and speaks:

"When the United States purchased Russia's interests in Alaska in 1867, the American people called it 'Seward's Ice Box' or

'Seward's Folly'. The natives called it 'Denali'--the Great Land. A land so vast that if Ketchikan (turns and points) were at Jacksonville, Florida, Attu--one of the Near Islands--would be at San Diego, and the oil fields at Prudhoe Bay would be in North Dakota and Minnesota.

"The Near Islands?" Near to what? _____ miles to Soviet Komandorskiye Islands, _____ miles from the Kamchatka Peninsula in Asia.

"Further north, Soviet Big Diomede Island is 5 miles from American Little Diomede. Until recently the Eskimos on these islands visited back and forth, but no more. The inhabitants of Russia's Big Diomede have been evacuated.

"But this is not a history of Alaska, which was governed as a Military District under the Department of California until it attained Territorial status in 1912, or until it became our 49th state in 1958.

"Rather, we present to you the story of World War II in Alaska as experienced by veterans of that war. Too often it is called 'The Forgotten War' or 'The Thousand Mile War'. A war that few Americans knew much about even while it was taking place; and fewer know now that during that war American territory was seized by the Japanese armed forces and occupied for 15 months before we were able to again bring it under the American flag.

"This is a story told by men who took part in that war and by natives who suffered because of it. It is a story the American people ought to know, to see for themselves pictures made at the time the action took place. They should see for themselves the tremendous effort required to build the bases from which our airmen, our soldiers and our navy operated in the defense of Alaska. They should see what those bases look like more than 40 years after the action took place.

"It is important that we do this. History not only tells us what has already happened, but if we are attentive, it will indicate what could occur in the future."

# # #

Here continue with a brief statement of the situation in Alaska just before we entered the war, including an account of Captain Streit's visit, General Arnold's photographic mission, an account of the passage of the Around the World Flyers in 1924, the statement of Billy Mitchell regarding the strategic importance of Alaska, etc.

This situation is partially covered in my talk at the EAFB on 17 September. Data covering the other items mentioned are readily available.

For the production, we must review the motion pictures and selected stills made by the three services, and by the Japanese as may be appropriate, and as can be obtained.

The foregoing material should be assembled at the EAFB for review by carefully selected personnel of the three services, and from these select what is needed for the documentary. At the same time we should determine what additional photographic coverage is needed both of the bases on the mainland and in the Aleutians. When this is done, we are well on our way to having the documentary we want.

Hopefully, we can assemble these data before the end of the year. As a starter, I spoke to the Chief of Engineers about the Corps film at the National Archives, and of our plans for this documentary. His reaction was expressed in a few words: "What can I do to help?" Action is being taken to get this film.

MILO FRITZ

MEMORANDUM

February 14, 1984

TO: Representative Mae Tischer, Chairman House HESS

FROM: Representative Milo H. Fritz, M.D. MHF

SUBJECT: HB 470

HB 470 is an appropriation bill for the making of a Documentary Film History of WWII in Alaska. Originally, there were two bills HB 484 and HB 470. HB 484 was a bill to form a Commission for this special task. The bills went to State Affairs where we were asked to redraft HB 484. After hearing testimony from Carol Derfner, Special Assistant of the Governor in charge of Boards and Commissions my aide went to speak with her and Keith Levy, a legislative affairs lawyer. I learned there is an ALaska Historical Commission already formed by A.S. Title 44 Article 3 that has the power under statute section (4), (5), & (6) to make the documentary film. With the bill you will find a letter of Intent we would like to see passed out with the Bill.

Would you please schedule this bill as soon as Possible? I would like to testify for this bill. If you have any questions regarding this bill my researcher, Jan, will give you any backup material needed.

Milo H. Fritz, M.D.
Alaska State Legislature
Pouch V (MS 3100)
Juneau, AK 99811

Dear Doctor:

The Pearl Harbor Survivors has been involved in the preservation, through film of what often has been titled, "The Forgotten War" - the World War II campaign in the Aleutians. For the past two years we have, with the aid of many others, researched the areas, the people, the survivors and the locations.

In order to comply with governmental regulations, we have contacted the Village Corporation Leaders and received their permission to visit and film those localities that played such a dominant role in Alaska's involvement in World War II.

Our goal is to do documentary film of the Aleutians to be used in the public school system in Alaska and in the Lower 48 and for public television. This filming of the Aleutian Campaign is a follow-up to our film on Pearl Harbor, "There Are Some Days You Can't Forget." Our records indicate that effective December 20, 1983, that film has been viewed by over 4,300 Anchorage school children and about 130,000 Alaskans.

A total of fourteen men will assist in the production including the film crew, Aleutian Survivors and support personnel.

Our history and war efforts in the Aleutians are rapidly being lost. Through your cooperation, your position can start the wheel rolling to help our country preserve what is left of our heritage and war effort.

PAUL FAULKNER, President

THE FORGOTTEN WAR

PEARL HARBOR SURVIVORS ASSOCIATION
Founded 1958

ALEUTIAN ISLANDS

VOL. XCI..No. 30,812. NEW YORK, THURSDAY, JUNE 4, 1942. THREE CENTS

JAPANESE BOMB DUTCH HARBOR, ALASKA, TWICE;

World War II Period (1940-1945)

This brief period was the most catastrophic, from almost any perspective, since first Russian contact. Just as the Aleutian Archipelago was the first area occupied by eastward-expanding Russian fur traders, so the islands were vulnerable for occupation by expanding Japanese military units during World War II. Naturally the Aleuts and their island homeland received the brunt of this international conflict.

Outline of Military Occupation

Prior to the war, the only military installation in the Aleutians-lower Alaska Peninsula was the Naval Radio Station and Coast Guard Station, Unalaska. With the increased possibility of a Pacific and European war, plans were made in 1939 to increase the defensive and strategic capability of Alaska Territory. Besides mainland (Ladd Field and Fort Richardson) and Kodiak military bases, which were operational by the attack on Pearl Harbor (December 7, 1941), construction was extended to the Aleutians proper with the expansion of Dutch Harbor by the Army and Navy (1940) and the construction of the secret air base at northeastern Umnak (December, 1941-January, 1942). The latter field played an important part in repulsing the Japanese bombing attack on Dutch Harbor, June 3-4, 1942.

As a result of Alaskan vulnerability demonstrated by the Dutch Harbor attack and the Japanese occupation of Attu-Kiska on June 7-8, it was clear that a massive buildup was required to halt expansion of, and eventually remove, the Japanese garrison. Army and Navy installations, therefore, continued to be built westward along the chain; these include (with garrison activation dates indicated) Cold Bay (Fort Randall; January, 1942), Dutch Harbor (Fort Mears; May, 1941; and Dutch Harbor Naval Operating Base), Umnak-Chernovski (Fort Glenn; January, 1942), Atka (September, 1942), Adak (c. September-October, 1942), Amchitka (January, 1943), Shemya (May, 1943), and St. Paul (September, 1942). After the Battle of Attu (May, 1943) and the invasion of Kiska (August, 1943), those former Japanese bases were enlarged and defended. Many other minor fueling, repair, radio, and weather stations were established on other islands.

By the fall of 1943, the Aleutians were no longer a battleground, but they became a jumping-off point for bombing flights against the Japanese-held Kurile Islands, north of Japan. During the Attu and Kiska campaigns, over 200,000 troops were stationed in the chain, but this number was cut after the Japanese defeat. However, the military bases were operational or on caretaker status through 1945. Adak and Shemya have been in continuous service as major Navy and Air Force installations respectively since World War II.

(Continued)

The Aleutian-Alaskan theater had a number of "unique" characteristics within American military history. The Japanese attack on Dutch Harbor was the only air bombing attack on Alaska and American soil; by diluting their carrier force, the Japanese attack was central to the Japanese defeat in the Battle of Midway, the turning point in the Pacific war; a Japanese Zero which crashed intact at the Dutch Harbor attack was the first captured during the Pacific war and was studied intensively for flying characteristics; the Japanese occupation and subsequent battle for Attu and Kiska was the only foreign occupation of American soil since the War of 1812 and the only World War II military campaign to win back American land; the successful evacuation of over 5,000 Japanese troops from Kiska under fog was one of the greatest military achievements in recent military history; the loss of life and material due to weather was probably the highest of any World War II campaign; the Aleutian war was one of the most closely censored or "secret" wars fought during World War II; and the tremendous Alaska defense, caused by the Japanese attack in the Aleutians, including the Alaska Highway construction, building of air fields and bases, introduction of large numbers of southern U.S. residents to the territory, etc., was responsible for the postwar "opening up" of the territoty and eventual statehood.

Milo H. Fritz, M.D.
Alaska State Legislature
Pouch V (MS 3100)
Juneau, AK 99811

Dear Doctor:

The Pearl Harbor Survivors has been involved in the preservation, through film of what often has been titled, "The Forgotten War" - the World War II campaign in the Aleutians. For the past two years we have, with the aid of many others, researched the areas, the people, the survivors and the locations.

In order to comply with governmental regulations, we have contacted the Village Corporation Leaders and received their permission to visit and film those localities that played such a dominant role in Alaska's involvement in World War II.

Our goal is to do documentary film of the Aleutians to be used in the public school system in Alaska and in the Lower 48 and for public television. This filming of the Aleutian Campaign is a follow-up to our film on Pearl Harbor, "There Are Some Days You Can't Forget." Our records indicate that effective December 20, 1983, that film has been viewed by over 4,300 Anchorage school children and about 130,000 Alaskans.

A total of fourteen men will assist in the production including the film crew, Aleutian Survivors and support personnel.

Our history and war efforts in the Aleutians are rapidly being lost. Through your cooperation, your position can start the wheel rolling to help our country preserve what is left of our heritage and war effort.

PAUL FAULKNER, President

HOUSE BILL NO. 470

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the Office of the Governor for the expenses of the World War II History Commission; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $250,000 is appropriated from the general fund to the Office of the Governor, World War II History Commission for fiscal year 1984 operating expenses of the commission.

* Sec. 2. The unexpended and unobligated portion of the appropriation made by this Act lapses into the general fund June 30, 1986.

* Sec. 3. This Act takes effect on the effective date of an Act entitled "An Act relating to the creation of the World War II History Commission."

Proposal would block dredging firm

Associated Press

Juneau — Here is a list of bills and resolutions introduced in the state Senate and House on Wednesday, the 31st day of the second session of the 13th Alaska Legislature:

Senate:

— SJR 37; requests that U.S. Army Corps of Engineers deny a permit to Northland Gold Dredging Co. for operations in the Tuluksak River-Granite Creek area; sponsored by Sen. John Sackett, R-Ruby.

— SB 418; would change date that Legislative sessions convene from second Monday in January to fourth Monday; sponsored by Sens. Fritz Pettyjohn, R-Anchorage, and Frank Ferguson, D-Kotzebue.

— SB 419; would prevent maintenance, repair, remodeling or "similar activity" at governor's mansion without prior approval from state historical architect; introduced by Sens. Jan Faiks, R-Anchorage; Pappy Moss, D-Delta Junction, Don Gilman, R-Kenai, and Paul Fischer, R-Soldotna.

— SB 420; makes special appropriation to Department of Environmental Conservation for water and sewer grants; introduced by Senate Finance Committee.

— SB 421; would change the manner in which claims for bid preparation costs are handled; introduced by the Senate Rules Committee by request of the governor.

— SB 422; would amend the Limited Entry Act dealing with subsequent transfer, and would make net family income fall within federal guidelines; introduced by the Senate Rules Committee by request of the governor.

— SB 423; would allow APA to change power rates for electricity generated by four-dam pool, and would remove "Susitna clause" by deleting obligation that state would have to pay at least $5 billion to the fund; introduced by the Senate Rules Committee by request of the governor.

— SB 424; relates to recovery of medical assistance expenses; introduced by the Senate Rules Committee by request of the governor.

— SB 425; would require political candidates to report campaign contributions over $250; introduced by the Senate Rules Committee by request of the governor.

House:

— HCR 50; calling on the governor and the City-Borough of Juneau to "cease and desist" with plans to build a legislative hall in Juneau; introduced by Rep. Sam Pestinger, R-Anchorage.

— SSHB 143; stipulating that the state cannot dispose of land reserved for a capitol at Willow until Jan. 1, 1986; sponsored by Rep. Ron Larson, D-Palmer.

— SSHB 478; a special appropriation for a documentary film about Alaska's participation in World War II; sponsored by Rep. Milo Fritz, R-Anchor Point, by request.

— HB 585; relating to an inmate education advisory council; sponsored by Rep. Mike Miller, D-Juneau.

— HB 586; relating to public employee benefits; sponsored by Rep. Fred Zharoff, D-Kodiak.

— HB 587; amending state law so the head of a state agency making a transfer shall report the transfer to the Legislature; introduced by the Transportation Committee.

— HB 588; providing for the award of attorney fees to people who prevail in certain state administrative proceedings; sponsored by Rep. Mae Tischer, R-Anchorage.

— HB 589; relating to sale of power by APA to customers of "four-dam pool"; introduced by the House Rules Committee at the request of the governor.

— HB 590; relating to state aid for Indians on federal reservations; sponsored by Rep. Jack McBride, D-Ketchikan.

Memo To: Major General Edward G. Pagano
Adjutant General of Alaska Air National Guard

From: North Star Chapter of the Pearl Harbor Survivors Association

Subject: The use of C-130 Hercules (cargo airplane) Aug. 22 to Sept. 5, 1983 and a helicopter from August 25 to September 5, 1983

Date: August 5, 1983

This is a request that your office provide us with an air support through the use of a C-130 Hercules (cargo airplane) from August 22 through Sept. 5 (15 days) and a helicopter from August 25 thru September 5, 1983 (12 days).

Our purpose is to do documentary film of the Aleutians (The Forgotten War) to be used in the public school system in Alaska and the Lower 48 and for public television. This filming of the Aleutian Campaign is a follow-up to our main message to school children, "Remember Pearl Harbor and don't let it happen to you." A total of fourteen (14) men will be on board these aircraft which will consist of Pearl Harbor Survivors Members, film crew, and Aleutian Campaign Survivors and Pilots.

Attached are our itinerary plans, a list of the 17 military installations, and the map showing the main points of interest.

Our history and war efforts in the Aleutians are rapidly being lost everyday. Our country can preserve what is left of our heritage and war efforts beginning with your cooperation and the Pearl Harbor Survivors' goal of documentary filming. We look forward to working with you.

North Star Chapter of the Pearl Harbor
Survivors Association
P.O. Box 6813
Anchorage, Alaska 99502

Dear Mr. Fox:

This is in reply to your request for Alaska National Guard fixed and rotary wing airlift support for your Aleutian Campaign Documentary Film Team.

Shortly after your letter came in, we carried the request for assistance to the National Guard Bureau in Washington, D.C. and asked for approval. In response, officials there cited several conditions that would first have to be met. First, the government cannot assume costs. The $197,000 required to support your project would require reimbursement to the U.S. Treasury. Secondly, the film script would require approval by Department of Defense.

I regret that the response from Washington, D.C. was not more favorable. However, if I can be of any further assistance please let me know.

Sincerely,

Edward G. Pagano

Memo To: Fred Ziellemaker
Refuge Manager
Aleutian Islands Unit Alaska Meridian Natl. Wildlife Refuge

From: North Star Chapter of the Pearl Harbor Survivors Assn.

Subject: Temporary Use Permit on Fish & Wildlife Refuge
and Aleutian Island National Wildlife Refuge
From August 22, 1983 through October 31, 1983

Date: August 15, 1983

Please issue us the temporary use permit on the Fish & Wildlife Refuge and the Aleutian Island National Wildlife Refuge from August 22 through October 31, 1983 so that we may be able to make documentary filming on the places listed in the attached pages 1 and 2 within the time frame of 15 days.

We are awaiting for the final permission from the Alaska Air National Guard in selecting a favorable weather condition before we advance to our 15 days film expedition. It is vital that you grant us the permit for such dates to give us the opportunity for any readjustment of plans due to the unpredictable changes of weather condition in the Aleutians.

Attached are our itinerary plans, a list of the 17 military installations, and the map showing the main points of interest.

Our goal is to do documentary film of the Aleutians (The Forgotten War) to be used in the public school system in Alaska and the Lower 48 and for public television. This filming of the Aleutian Campaign is a follow-up to our main message to school children, "Remember Pearl Harbor and don't let it happen to you." A total of fourteen (14) men will be on board those aircraft which will consist of Pearl Harbor Survivors Members, film crew, and Aleutian Campaign Survivors and Pilots.

Our history and war efforts in the Aleutians are rapidly being lost everyday. Through your cooperation, your office can start the wheel rolling to help our country preserve what is left of our heritage and war efforts. The Pearl Harbor Survivors (PSSN) depends on people like you to fulfill its goal of documentary filming.

August 23, 1983

Mr. Paul Fox, Curator
U.S. Historical Aircraft Preservation Museum
P.O. Box 6813
Anchorage, AK 99502

Dear Mr. Fox:

We have reviewed your August 15, 1983 letter requesting a Special Use Permit to visit the Aleutian Islands Unit of the Alaska Maritime National Wildlife Refuge to make documentary films of the places and aircraft wreckage associated with the Aleutian Campaign.

Prior to our issuing the Special Use Permit we will need written evidence that you do have flight time and aircraft available from the Alaska Air National Guard. We will also need copies of Letters of Non-Objection from the Aleut Corporation and each village corporation, for you to visit lands under their control. Information regarding corporation lands can be obtained from the Aleut Corporation, 2550 Denali, Suite 900, Anchorage, AK 99503.

The majority of the Aleutian Islands received Wilderness Status when the U.S. Congress passed the 1980 Alaska National Interest Lands Conservation Act. There is one provision in the Wilderness Act that prohibits the use of motorized vehicles or landing of aircraft on lands under Wilderness Status.

With the above in mind, we are furnishing the attached list to assist you in formalizing your plans. If we can provide additional assistance, feel free to contact us.

Sincerely,

C. Fred Zeillemaker

C. Fred Zeillemaker

Memo To: Senator Ted Stevens

From: North Star Chapter of the Pearl Harbor Survivors Association

Subject: Additional Flying Hours for the Alaska Air National Guard To Provide Air Support to Pearl Harbor Survivors Association's Documentary Filming of the Aleutian Campaign

Date: August 5, 1983

The Alaska Air National Guard has used up its quota of flying hours. In order for them to give us air support in our documentary filming of the Aleutians (The Forgotten War), it is necessary that they receive an authorization directly from the Air National Guard in Washington, DC giving their office in Anchorage the additional flying hours.

Because of the predicted good weather conditions in the Aleutians from August 22 through September 5, it is important that we do our filming there within that time frame.

Your assisting us in getting this authorization is critically needed in order for us to accomplish our goal in the efficient and timely manner. Attached is a copy of our correspondence to Major General Pagano.

SENATOR STEVENS, YOU ARE OUR ONLY HOPE.

Dear Paul:

I have your correspondence concerning the North Star Chapter of the Pearl Harbor Survivors Association's desire to document the Aleutian campaign. My office has been in contact with the National Guard locally about this.

According to what I've been told, there appears to be a price tag of some $190,000 for the Guard to assist. The Guard has been told from their headquarters that this expenditure by them would have to be reimbursed.

It appears to me that your organization might have to consider attempting to obtain a grant of some type - and I have forwarded the paperwork on to my D.C. office to see if this matter might be researched for you.

We will be back in touch with you - and I hope you will keep in contact with my office as you proceed with this project.

With best wishes,

Cordially,

TED STEVENS

Dear Paul:

Greg Chapados of my staff brought your memorandum concerning a Special Use Permit to visit the Aleutian Islands National Wildlife Refuge to my attention recently.

Enclosed is a copy of the letter I received from Keith Schreiner, Regional Director of the U.S. Fish and Wildlife Service, in response to my inquiry on your behalf. I hope this explains why the Service was unable to process your application as quickly as you would have liked.

If you have any further problems once you've provided the Fish and Wildlife Service with the information they need to proceed with your application, let me know, and I'll do what I can to speed things along.

With best wishes,

Cordially,

Ted Stevens

UNITED STATES HISTORICAL
AIRCRAFT PRESERVATION MUSEUM
P. O. BOX 5813
ANCHORAGE, ALASKA 99502

Memo To: President Ronald Reagan Date: Februrary 1,1984

From : Curator Paul A. Fox Phone: 907-243-0914

Subject: Request Written Permission for an Exception to the Wilderness Act to Do Documentary Filming of the Aleutian Campaign

Your help is desperately needed. There is a provision in the Wilderness Act (1980 Alaska National Interest Lands Conservation Act) which prohibits the use of motorized vehicles or landing of aircraft on lands under Wilderness Status. Since majority of the Aleutian Islands received Wilderness Status, we are asking that an exception be made in this law for a period of one month in 1984.

For the past two years, the North Star Chapter of the Pearl Harbor Survivors has been involved in the preservation, through film of what often has been titled, "The Forgotten War" - the WW II Campaign in the Aleutians. With the aid of many others, the group had researched the areas, the people, the survivors and the locations.

Our goal is to do documentary film of the Aleutians to be used in the public school system in Alaska and in the Lower 48 and for public television. This filming of the Aleutian Campaign is a follow-up to the chapter's film on Pearl Harbor, "There Are Some Days You Can't Forget" The North Star Chapter's records indicate that effective December 20, 1983 the film has been viewed by over 4,300 Anchorage school children and about 130,000 Alaskans.

The filming of the Aleutians is also a follow-up to our main message to school children, "Remember Pearl Harbor and don't let it happen [illegible]." A total of 14 men will assist in the production including the film crew, Aleutian Campaign Survivors, and Pearl Harbor Survivors. Depending on good weather coordination in the Aleutians, a one-month time span (from May through October) is projected to accomplish this historical filming.

The Aleutian Campaign is the only war in which the enemy occupied a U. S. territory in the North American Continent. There were numerous American, Alaskan Native, and Japanese lives lost in this Forgotten War. Our history and war efforts in the Aleutian Campaign are being lost so rapidly everyday by deterioration because of harsh weather conditions, the cleanup drives in some of the areas, illegal salvagings on some of the equipment and artifacts, and vandalisms by unconcerned individuals as well souvenier hunters.

As curator of our museum, I am acting as the project coordinator for the Pearl Harbor Survivors in this filming of the Aleutian Campaign. One of my duties is to work on all the necessary papers and permits to make it legal for the filming. The attached letter of August 23, 1983 from the U. S. Dept. of Interior, Fish and Wildlife Service states that we may not use a helicopter in the area that we want to film which includes the military installations and battlefields during the Aleutian Campaign.

Without the use of a helicopter to get into the wilderness areas, there is no way our museum, the Pearl Harbor Survivors, or any group can capture in film the remaining scenes of the Forgotten War to be a living memento to our future generations. For us not to use a helicopter, all areas will be covered by foot only in good weather condition. Such ideal weather is unpredictable and hard to come by, and not to mention the months of filming through perilous and tedious hiking on rugged terrain in the Aleutians. There is no way an effective filming could ever be done without a helicopter. We plan to land the helicopter on airplane wrecks, World War II U. S. and Japanese military installations and battlefields.

We have obtained permissions from the Aleut Corporation and individual village corporations to use helicopter to film on their lands. Under Base Commander Col. Evan Griffith, Jr., the Elmendorf AFB personnel support and will help us in any way they can. We wrote to Secretary Casper Weinberger asking for a written permission to do the documentary filming in Kodiak, Adak, Shemya and Attu.

Under Maj. Gen. Edward Pagano, Adjutant General of Alaska Air National Guard, a helicopter will be also used in the project. The Alaska Air National Guard is in support of our goal and will provide us with a C-130 cargo airplane. We have the support of the Governor and the State Legislature in the filming. Our two bills in Juneau, House Bill Nos. 484 and 470, were introduced in the 1984 Legislative Session to obtain the sum of $250,000 for the filming.

The major factor that is stopping us to make the documentary film is the prohibited use of a helicopter in the Aleutian Wilderness. We are pleading to you, Mr. President, that you make an exception in the Wilderness Act for one month for us to use a helicopter in the Aleutian Wilderness.

The helicopter will not damage the terrain or water fowl because once we obtain your permission for the exemption, we will notify the Fish and Wildlife for such authorization. Their office in turn will give us the information of the wilderness areas where we may and may not go.

The project should had been done many years ago. If we wait any longer or if we are not allowed to use a helicopter in those wilderness areas for the filming, our generations will not have a testimonial film of the Forgotten War that so many lives were lost in preserving our freedom from foreign aggression.

Through your cooperation, your position can start and keep the wheel rolling to help our country preserve what is left of our heritage and war effort.

Paul A. Fox

Memo To: Aleut Village Corporations

From : North Star Chapter, Pearl Harbor Survivors Assn.

Subject: Request for Permission to Visit Lands Under Each Aleut Village Corporation's Control

Date : September 13, 1983

Mr. Allan Aksell, director of Lands and Mineral Resources of the Aleut Corporation in Anchorage, had verbally granted us permission to visit the Aleut lands for our documentary filming. A follow-up letter will confirm his statement. He informed us that we still have to obtain similar authorization from each Aleut Village Corporation.

Explanation: Our goal is to do documentary film of the Aleutians (The Forgotten War) to be used in the public school system in Alaska and the Lower 48 and for public television. This filming of the Aleutian Campaign is a follow-up to our main message to school children, "Remember Pearl Harbor and don't let it happen to you." A total of fourteen (14) men will be on board the two aircraft which will consist of Pearl Harbor Survivors Members, film crew, and Aleutian Campaign Survivors and Pilots.

The U.S. Fish and Wildlife Service, Aleutian Islands Unit, requires us to submit copies of letters of non-objection from the Aleut Corporation and each Aleut Village Corporation, for us to visit lands under their control.

Attached are our itinerary plans, a list of the 17 military installations, and the map showing the main points of interest. Please go over these materials and determine if any of the places that are scheduled to be visited are under your jurisdictions. If there are any, we urgently request that you send us written permissions that we may visit such lands. Copies of the letters will be in our possession when we visit the Aleut lands for any future querries by anyone in the villages.

We are awaiting for the final permission from the Alaska Air National Guard in selecting a favorable weather condition before we advance to our 15-day film expedition. Because of the unpredictable changes of weather condition between September 15 through October 31, time is the essence in securing all the proper authorization.

It is vital that we obtain your letters of non-objection soon. Our history and war efforts in the Aleutians are rapidly being lost everyday. The Aleuts' sacrifices and sufferings to win back our freedom can be more meaningful as we all stand together to help our country preserve what is left of our heritage and war efforts. We can start the wheel rolling with the Pearl Harbor Survivors' documentary filming with your cooperation.

Please call us collect at 243-0914 for your verbal approvals and for any additional information you need.

Memo to: Allan Aksell
Director of Lands & Mineral Resources, Aleut Corp.

From : North Star Chapter, Pearl Harbor Survivors Assn.

Subject: Request for Written Permission to Visit Lands Under Each Aleut Village Corporation's Control for Documentary Filming of the Aleutians

Date : February 10, 1984

This is a request that your office issue us a written permission to do filming in the Aleutian lands owned by different Aleut village corporations.

Out of the 13 village corporations we wrote to, only three replied to our request. Enclosed are copies of our letter and their responses. Also enclosed is a copy of the Fish and Wildlife Service letter requiring us to submit written permissions from the Aleut Corporation and the village corporations. Will you help us obtain the written permissions from the ten village corporations.

Time is running short. Our history and war efforts in the Aleutians are rapidly being lost. Our country can preserve what is left of our heritage and war efforts with your cooperation in the Pearl Harbor Survivors' goal of documentary filming. We look forward to working with you and for your immediate reply.

If you need additional information or have any questions, please do not hesitate to contact me. You can reach me at 243-0914.

ANCHORAGE, ALASKA 99502

Memo To: Hon. Caspar W. Weinberger, Secretary of Defense
From : North Star Chapter of the Pearl Harbor Survivors Assn.
Subject: Authorization to Do Documentary Filming in the Aleutians
Date : February 1, 1984

As required by the U.S. Fish and Wildlife Service, Dept. of Interior, we are requesting your office to grant us a written permission to do a documentary filming of Attu, Kodiak, Adak USN Base, Shemya AFB, and all abandoned WW II military installations in the Aleutians within the time frame of 15 to 30 days.

We would like to do the filming any time in June till October 1984 depending on the favorable weather condition and when the funds are received from the state of Alaska. Your office and the proper authorities will be notified promptly of the specific dates.

The Alaska Air National Guard has given us the permission to use a C130 and a helicopter for the filming. Col. Evan Griffith of Elmendorf AFB also supports the project.

Our goal is to do documentary film of the Aleutians (The Forgotten War) to be used in the public school system in Alaska and the Lower 48 and for public television. This filming of the Aleutian Campaign is a follow-up to our main message to school children, "Remember Pearl Harbor and don't let it happen to you." A total of fouteen (14) men will assist in the production including Pearl Harbor Survivors, film crew, and Aleutian Campaign Survivors and Pilots.

Enclosed are some information to support our request. If you need additional info or have any questions, please call me at 907-243-0914. It is important that we receive your permission in writing immediately so we can submit all the necessary documents to the U.S. Fish and Wildlife Service to get a special use permit.

Our history and war efforts in the Aleutians are rapidly being lost. Through your cooperation, your office can start the wheel rolling to help our country preserve what is left of our heritage and war efforts.

Date : Feb. 1, 1984

Memo To: State and Federal Agencies
Native Corporations

From : North Chapter, Pearl Harbor Survivors Assn.
U. S. Historical Aircraft Preservation Museum

Subject: Documentary Filming of the Aleutian Campaign

Under the leadership of Ted Divis, the North Star Chapter has been involved for the past three years in the preservation, through film of what often has been titled, "The Forgotten War" - the WW II Campaign in the Aleutians. With the aid of many others, the group had researched the areas, the people, the survivors and the locations.

Sometime this year 1984 the chapter's goal is to do a documentary film of the Aleutians to be used in the public school system in Alaska and in the Lower 48 and for public television. This filming of the Aleutian Campaign is a follow-up to the chapter's film on Pearl Harbor, "There Are Some Days You Can't Forget." The North Star Chapter's records indicate that effective December 20, 1983 the film has been viewed by over 4,300 Anchorage school children and about 130,000 Alaskans.

The filming of the Aleutians is also a follow-up to our main message to school children, "Remember Pearl Harbor and don't let it happen to you." The Aleutian Campaign is the only war in which the enemy occupied a U. S. territory in the North American Continent. There were numerous American, Alaskan Native, and Japanese lives lost in this Forgotten War.

Our history and war efforts in the Aleutian Campaign are being lost so rapidly everyday by deterioration because of harsh weather conditions, the cleanup drives in some of the areas, cannibalsim for needed parts, illegal salvagings on some of the equipment and artifacts, and vandalisms by unconcerned individuals as well as souvenir hunters. Our survivors are not getting any younger.

The United States Historical Aircraft Preservation Museum has three major duties in this documentary expedition:

1. Project coordinator for the documentary filming of the Aleutian Campaign

   A. Work all details to obtain the permits from Fish and Wildlife, Native Corporation, and private landowners.

   B. Work with Dept. of Defense for access and ground transport support on active military installations.

   C. Work details with the Alaska Air National Guard for the use of a helicopter and a C-130 airplane.

1. D. Plot maps and charts for all known WW II downed aircraft, gun implacements, artifacts, military installations, battlefields.

   E. Compile history of the Aleutian Campaign (before, during and after WW II) for the film crew and others who will be taking active part in the filming.

   F. Contact veterans of the Aleutian Campaign to participate in the filming.

   G. Provide the pilots, who will be flying the helicopter, and ground transport staff with list of significant areas of WW II in the Aleutians including battlefields.

   H. Compile copies of all WW II documentary films that were filmed in the Aleutians to integrate with the present filming of the Aleutians through the assistance of the Air Force, Navy, Coast Guard, Corps of Engineers, state-federal agencies as well as groups or individuals.

   I. Compile photographs through state-federal agencies, individuals, organizations and archives to have still shots of the Aleutian Campaign.

2. Archaeological survey on the WW II military installations, equipment, aircraft and artifacts.

   A. Two means of documenting the artifacts and remains of WW II:

      (1) The film crew, who will doing the documentary filming, will record on the film and on tape.

      (2) Using 35 mm camera, our museum will photograph in BW, color & slides. Our museum will have access to all the films of the individuals who will be taking their own personal cameras to this documentary filming, thus providing the museum with a more complete record of the remains of the Aleutian Campaign.

   B. Through photographs and tape recording of the artifacts, we (as experienced WW II archaeologists) will determine the historical value of the remains, list them by priority of saving and retrieving them, with the explanations for the urgency of removing them from the sites which in the coming months or years the chances of their being destroyed through weather conditions, vandalism, cannabalism, cleanups or just pure neglect, and so forth.

   C. Our museum will seek a second opinion by other WW II archaeologists and expert people including other museums to determine the historical significance of the remains of the Aleutian Campaign.

   D. Once all photographs are gathered up and tapes are transcribed, a report will be compiled showing the list of artifacts and remains with their corresponding historical significance as well as their priorities for removal for restoration and preservation.

   E. As the funds become available, this report will eventually be put into a book form for archives.

2. F. State and federal agencies may obtain copies of this report by written request to our museum. A minimal feel will be required to cover the expenses for the report.

3. Photograph and document WW II waste disposal dump or anything that is considered as hazardous wastes in streams, rivers, or lakes along the areas where the filming is being done. This will be compiled into a report to be turned over to the Air Force Installation Program or the Environmental Protection Agency in Washington, DC.

Any individual, corporation, state or federal agency that can provide us with additional information as to the Aleutian Campaign History (before, during, and after WW II) and the whereabouts of WW II artifacts, aircraft, and remains in the Aleutians are urged to contact us immediately by phone or letter. When we do the documentary filming, we will have more additional information regarding the artifacts (such as their progress of deterioration). Information that were gathered up by word of mouth or records of items will be also verified if they are still in the same sites.

Without the complete documentary film, photographs, records of events, artifacts and remains, to the majority of our generations, the Aleutian Campaign will completely become a Forgotten War where so many lives were lost in preserving our freedom from foreign aggression.

Alaska State Legislature

REP. MAE TISCHER
CHAIRMAN

POUCH V
STATE CAPITAL
JUNEAU, ALASKA 99811
(907) 465-3777

March 7, 1984

House of Representatives
HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

LETTER OF INTENT FOR SPONSOR SUBSTITUTE FOR HOUSE BILL 470

Sponsor Substitute for House Bill 470, "An Act making a special appropriation to the Department of Education, Alaska Historical Commission to produce a documentary film relating to the participation of Alaska in World War II; and providing for an effective date," has been introduced on behalf of the veterans of World War II.

In adopting this legislation, the Legislature intends that the funds provided by SSHB 470 be used by the Department of Education, Alaska Historical Commission to prepare, or to authorize and coordinate preparation by others of, a comprehensive documentary film on Alaska's role in World War II; that the Alaska Historical Commission create an advisory committee of veterans and other interested persons to assist in the planning and production of the film; that the Commission shall provide at least six copies of the film to the state historical library for permanent record; and that the state should retain all copyright interests in the film. In carrying out this mandate, the Alaska Historical Commission may give financial support to, and otherwise cooperate with, active and retired members of the Armed Forces of the United States, Canada and Japan, and with others, in the production of the film, using materials available from existing sources as well as additional visual material as may be found appropriate.

The Legislature recognizes that today Alaska continues to suffer from the same lack of appreciation and understanding as was the case when the state was purchased in 1867. The Aleutian Campaign of World War II, once referred to as the "forgotten front," could well become just that -- forgotten. It is therefore important for the state to increase the public's awareness of Alaska's role in the war.

Dear Legislator,

Re: Your House bill # 470

This a request asking for your support of this bill. It is presumptuous for me, from the lower 48, to address you.

However I did serve in the Aleutian Campaign. After two trips to your great State I feel that I am "an Alaskan at large". Then too, Seward who arranged the pruchase of Alaska was born and lived in a little village about 15 miles from here.

I served a short time on somber Umnak. Troops still carried weapons awaiting an enemy who never came, enduring curfews, sullen skies and the monotony of a rear base.

Then to Adak, weapons aside, lights, activity. I remember ravens strutting on the graceful wings of the P 38s. I was with the B 24s, the rugged bearer of bombs.

Thence to Shemya, where the sun shone occasionally. Shemya, the dagger aimed at the heart of the Japanese Empire. It was being sharpened by a 10,000 foot runway for the B 29s; and the construction of a big hospital for the casualties from the invasion of Paramushiro.

Neither came to be.

The dagger was sheated. Why? Perhaps Stalin was not ready for a quick end to the Pacific war. It would prevent his later grab of territory and Japanese army of some 250,000.

Because my experience was so short and uneventful I can better plead the cause of the men who bore the burden of alerting America to the importance of Alaska; the men who stubbornly fought for money and equipment; and the army, air, and navy personnel who battled under adverse conditions.

For these,and for posterity, the passage of your bill # 470 will insure a true records of the men and the events. A source not subject to distortions of later day historians.

You, as one who has military experience, know the soldier is a hero in war -- and a bore in peace.

Alaska can correct that for its part in World War 2.

Respectfully,

Lawrence Reineke

MEMORANDUM

To: Representative Mae Tischer, Chairman
House Health, Education and Social Services Committee

From: Representative Terry Martin

Date: February 16, 1984

Subject: HB 477

"An Act relating to repayment of state aid for hospital and health facility construction."

Over the years, the state has provided millions of dollars toward construction and expansion of non-profit hospital facilities. Under current law, if the non-profit hospital is sold to a private, profit-making entity, these dollars are unrecoverable by the state.

This bill provides that, if a non-profit hospital which received state construction funds is sold to a private entity, the state will be repaid. The formula in the bill provides for recovery of the state's investment, plus a proportionate amount of the profit received from the sale.

The question is raised as to whether the state can go back and amend existing contracts. Ed Hein, LAA legal counsel, contends that this would probably be upheld in court if the amendment were to a contract between the state and a non-profit or municipal agency, but would not be legal if the state were trying to amend a contract made with a private entity.

This bill is an important protection of the state's investment in public health care, ensuring that dollars invested remain in public use, and do not become a subsidy of private, for-profit enterprise.

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M October 21, 1983

SUBJECT: Repayment of state aid for hospital and health facility construction (Work Order No. 13-1519)

TO: Representative Terry Martin

FROM: Edward H. Hein EHH
Legislative Counsel

Enclosed is the bill draft we discussed over the telephone regarding repayment of state aid given under former AS 29.-90.010 - 29.90.030. I have used the formula that appears in 19 AAC 30.061(b) for repayment of state aid if the hospital ceases to be a hospital within 20 years. This formula provides for repayment of the original amount granted, plus or minus the proportionate share of any profit made or loss incurred from the transfer of the hospital or health facility to a for-profit entity.

You should be aware that the bill is not immune from legal challenge, although a court in that event is likely to uphold it. A for-profit corporation that wished to buy a hospital subject to the terms of the bill could raise the argument that it (the for-profit corporation) was eligible for direct aid under the terms of former AS 29.90.030(2) and, therefore, a penalty cannot now be attached to transferring the aid to it indirectly through a sale or lease of the hospital. Under the state aid program, a hospital sponsor did not have to be a municipality or other nonprofit entity, as did the sponsor of a health facility. Compare AS 29.90.030(2) with AS 29.90.030(4). In fact, state aid under the program was granted only to nonprofit sponsors, in part because of the Department of Community and Regional Affairs' possibly erroneous interpretation of the law.

It is our opinion that such a challenge is not likely to cause the bill, should it become law, to be overturned in court. However, the argument might receive serious consideration by the court if raised.

If you have any questions or comments, feel free to contact me at your convenience.

Private corporations buying up public hospitals

By WILLIAM C. REMPEL
and ALAN GOLDSTEIN
The Los Angeles Times

CRAWFORDSVILLE, Ind. — Culver Memorial, a 1920s-vintage public hospital, is so antiquated and crowded that patients are prepared for surgery in hallways outside the operating rooms. Expectant fathers share a common waiting room with families of dying patients, and visitors and patients often have to share the same elevators.

A chronic plumbing problem periodically causes sewage to drain into a basement corridor, and for years the hospital has lived with potentially hazardous fire code violations. When an engineering survey detailed many structural deficiencies, administrators began searching for money to make major improvements.

But Montgomery County officials would not subsidize replacement of the tax-supported hospital or major renovations. Advised that the hospital was a poor credit risk, they also refused to underwrite a bond issue.

Out of financial desperation, Culver Memorial did what an increasing number of hospitals are doing — it turned to private industry. The county sold its hospital to a profit-making medical chain, American Medical International, based in Beverly Hills, Calif.

The sale was another example of a strategy for survival that critics warn will impair poor persons' access to health care and raise the cost of medical treatment for everyone.

"The public hospital is the closest thing to national health insurance we have," said Deborah L. Bauer, administrator of the National Association of Public Hospitals. "There's a tremendous need for it, especially in this economy. We're seeing the greatest increases in public hospital use today in areas of high unemployment. The care of indigents isn't just for the winos off the streets. It's for the guy next door who's been laid off, too."

But public hospitals — particularly small ones — are in trouble. A generation of public hospitals built and expanded with federal funds in the years after World War II has reached old age with outdated equipment, crumbling bricks and little or no cash, credit or operating surpluses for repair and replacement. Repeatedly, voters have rejected bond issues aimed at improving the situation.

At the same time, economic pressures on hospitals in general are increasing. Government funding and charitable contributions have declined, and hospitals everywhere are competing for paying patients.

Increasing the pressure to affiliate with private, money-rich chains.

For example, at York General, a 216-bed public hospital in Rock Hill, S.C., two bond issues that would have financed improvements failed when submitted to voters. Meanwhile, rain occasionally leaked into labs, heavily used X-ray equipment frequently broke down and the maternity ward had no private labor rooms. For a time, the physician staff dwindled, and a survey showed that half of those in the rural area needing treatment checked into hospitals outside the county — until the hospital sold out to American Medical.

> *"Socialized medicine is dead and buried. Public access to health care is very desirable, but it can't be achieved without economically viable hospitals."*
> — Walter Weisman, president, American Medical International

The same chain bought Collin Memorial, a 168-bed public hospital in McKinney, Texas, after voters rejected a bond issue to raise taxes. Collin was chronically short of everything from intravenous equipment to thermometers. The hospital had to ask its staff to bring in pens and staplers from home.

Public hospitals are "floating on borrowed time," said Gary Rowe, executive director at Culver Memorial for nearly 10 years. "This country is in for a serious shock. Public hospitals have been operating out of a shoestring box, setting nothing aside for a rainy day. They are going to be closing like flies."

Some — such as 750-bed Philadelphia General Hospital, which [illegible] million in renovation costs seven years ago — already have closed. Others have put out "For Sale" signs when funding for vital improvements was not available.

Riding to the rescue with healthy bank accounts and robust credit ratings, the chains of for-profit hospitals are increasingly eager to purchase struggling public facilities. They have the financial strength to build new, state-of-the-art medical centers, buy expensive high-tech equipment and attract some of the best-qualified physicians.

To critics, some of whom object to the very presence of the profit motive in health care, the trend could turn hospitals into cash registers.

"My health . . . has become a potential profit opportunity," complained Doug Cassel, an attorney with the Health and Medicine Policy Research Group in Chicago. "Before long, patients' kidneys may be listed on the commodities exchange."

But the acquisition trend that began slowly through the Sun Belt in the late 1960s has increased most rapidly during the last two years, industry sources say. The investor-owned chains now control about 80 former public health facilities.

This industry generates more than $16 billion in annual revenue from more than 900 for-profit hospitals in the United States and abroad.

"Our principal advantage is capital — we can find the financing while local hospitals, in the main, cannot," said Charles Martin, a senior vice president with Hospital Corp. of America, the leading buyer of public hospitals among the investor-owned hospital chains. "Charity is no longer a major source of funding for hospitals, and bond issues aren't popular."

Executives at American Medical International see the trend as part of the move away from government-provided health care.

"What we're seeing now is deregulation and an entrusting of that field to private health care firms," said Walter Weisman, president of American Medical International. "Socialized medicine is dead and buried. Public access to health care is very desirable, but it can't be achieved without economically viable hospitals."

What worries public interest groups is that "economically viable hospitals" will be achieved by raising fees and denying quality treatment to persons unable to pay for it.

"Profit-making hospitals might not be as motivated to care for people who can't pay for treatment," warned Quentin Young, former administrator of the public Cook County Hospital in Illinois, [illegible]

Some for-profit hospitals have even been accused of threatening or refusing to treat those who cannot afford to pay.

In Somerset, Ky., for instance, a 27-year-old woman signed an affidavit alleging that an official of the Humana Hospital — another large for-profit chain — said she could not take her newborn baby home until an $8,000 bill was paid. The same hospital was accused of pressuring a 30-year-old man, admitted for neurological testing, to sign a check for $1,100 even though it exceeded his bank balance. He was told that he should apply for a loan to cover the check, according to an affidavit.

Although Humana insisted that the allegations were "fiction," it settled litigation with its former patients by signing a consent decree, agreeing never to engage in the alleged conduct.

More alarming to critics is the prospect of needy patients being denied access to former public hospitals — or being "dumped" on distant public hospitals — because of their inability to pay.

In rural Georgia, for instance, several women complained to an Atlanta newspaper that they were denied admission for maternity care at a former public hospital because they could not afford to pay a deposit. Each delivered a child at the public hospital in a neighboring county.

Damon King, administrator of the Medical Center of Central Georgia, a public hospital outside Macon, said his hospital is resisting patient transfers from the for-profit hospitals.

"Their capability for handling a patient does not decrease simply because that patient cannot pay," King said.

But Rowe of Culver Memorial countered, "No one says food stores shouldn't make a profit — and they're more important than health care. Society seems to be saying that government has a responsibility to provide health care. I don't believe that."

Furthermore, Weisman of American Medical International added, "Private hospitals have to generate profit — and so do public hospitals. We call it profit. They call it surplus. But it's the same animal."

In its last year as a public hospital, Rowe said, Culver Memorial realized an operating surplus of $300,000 — equivalent to about $2,500 per bed. By contrast, Weisman's firm, the new owners of Culver Memorial, showed a systemwide profit of $17,200 per bed.

"It costs money to deliver health care," Weisman said. "If no money is reinvested in the plant, equipment and personnel, you can charge lower fees, but you also deliver much less service. That alternative is clearly unacceptable."

And the cost of health care is higher at investor-owned, for-profit medical centers than at public hospitals. According to a survey published in August by the New England Journal of Medicine, investor-owned facilities also charge more than nonprofit hospitals such as church-run medical centers.

Indiana Health Commissioner Ronald G. Blankenbaker predicted that hospital costs probably will double within a year after the new Crawfordsville hospital opens, perhaps in 1984.

Culver Memorial's Rowe acknowledged that rates at for-profit hospitals "are always going to be higher" because the private chain invests heavily in the acquisition and replacement of the old facilities.

For example, American Medical International is building a new $17 million hospital here. Hospital Corp. of America is spending $20 million to replace the public hospital in Tarboro, N.C. Humana Inc. moved into Somerset, Ky., in 1976 and built a replacement for the old city hospital, which was converted to a nursing home as soon as the new investor-owned facility opened.

Executives at the hospital chains contend that taxpayers benefit from converting public hospitals to private ownership, partly because the new corporate owners pay property taxes.

"When a private company buys a public hospital, it creates a taxpaying entity where a tax drain used to be," Weisman said.

Sales of public hospitals are often accompanied by assurances that indigent care will not be a burden to taxpayers because its cost will be offset by new tax revenues. But, in addition, American Medical has recently negotiated with county officials to provide an indigent-care trust fund. In Crawfordsville, for instance, they agreed to set aside $3.8 million from the proceeds of the sale.

Robert Irvine, a spokesman for Humana Inc. — the Kentucky-based chain that recently took over Louisville's new $73 million public hospital — said a community suffers if its public hospital is forced to close.

"We still need public hospitals," he said. "We've just got to figure out how these public hospitals can be run more efficiently, so they can stay open and stay viable."

Humana seeks expansion sites

by Cary Virtue
Times Writer

Humana Inc., the second largest hospital chain in the country, is interested in seeing if there are other communities in Alaska where it may operate a new hospital, the company's chairman said Monday.

Anchorage residents also can expect health care competition to stiffen as Humana steps up efforts to woo patients away from Providence Hospital, partly by providing people with special care they can't find elsewhere.

"Our pattern is that once we have a foothold in a state we start looking around (for other acquisitions)," said Dave Jones, co-founder, chairman and chief executive officer of Humana, Inc. "We'd like to expand."

But any decision to expand into other Alaskan communities will depend on market studies, said Jones. He was in town to tour Humana Alaska Hospital and speak to the chamber of commerce noon luncheon Monday.

Meanwhile, Jones said the company is busy establishing itself in Anchorage. He was referring to its plans to build a $21.5 million five-story addition at Humana Alaska Hospital by 1985. The expansion would add another 93 licensed beds, for a total of 292 licensed beds at the hospital.

Providence Hospital also will build a five-story, 186,000-square-foot hospital tower by 1986, boosting its total bed capacity from 250 licensed beds to 410 licensed beds.

Anchorage, Jones said, is large enough to support two major private hospitals, but he said Hummana's mission is to provide the best health care in town.

"We made a big commitment to Anchorage to put ourselves in a position of being a competitor to Providence," Jones said. "Our concept is to have the best hospital in town. (And) I think that in the long run we will become the hospital of choice."

Jones said he welcomes more competition in the health field, saying it would help reduce overall costs by forcing a hospital to "trim its own fat."

Humana, a chain with 93 hospitals, last year was able to provide health care services that averaged about 17 percent lower than its competitors, Jones said. He said he's trying to lower Humana's overall operating costs by another three percent this year.

National policies that attempt to shield the consumer by artificially keeping a lid on health care costs also should be repealed, Jones said. And, he said there should be more public debate on health care issues.

In other areas, Jones said he supported:

- Diagnostic related groupings, a new federal approach to establishing standard health care prices for more than 496 medical procedures based on a community's cost of living index. The new law starts going into effect this fall.
- Allowing hospitals to bid to provide all government-funded health care for a region. This experiment already is being tested in California.
- Public discussion about how private health care organizations can provide health care to those people who can't afford the care and who do not have medical insurance.
- Repealing the certificate of need process that forces hospitals to win state approval before expanding or purchasing expensive new equipment. The state legislature is reviewing a repeal bill currently.

Humana's Dave Jones pledges to woo patients away from the competition

POSITION PAPER/Department of Health & Social Services

POSITION PAPER

on

House Bill No. 477

For an Act entitled: "An Act relating to repayment of state aid for hospital and health facility construction."

Financial assistance for hospital and health facility construction has until recently been available from the Department of Community and Regional Affairs under AS 29.90. Numerous hospitals and health facilities have received funding for construction under this program. The program has recently been amended to limit reimbursement to those facilities constructed prior to July 1, 1980.

This bill proposes a means for recovery of state funds for non-profit or community owned hospital or health facility construction in the event that the facility constructed becomes controlled by a for-profit institution within 20 years following receipt of the state funds. The Department of Health and Social Services supports this bill as consistent with the objectives of the department. However, the department questions the usefulness of the bill in that the statute has been revised to limit payment to facilities constructed prior to July 1, 1980. Facilities now receiving funding or those which have received funding in the past may have unspecified "grandfather" rights under the present statute that prevent recovery of funds already granted.

One example of the purpose of this bill is evidenced by the recent sale of the Alaska Hospital and Medical Center (AHMC) to Humana, Inc. AHMC was constructed to operate as a non-profit community hospital. The state provided approximately $16,200,000 under AS 29.90 to offset approximately 25% of the total project cost for construction. Upon notice of the proposed sale of AHMC to Humana, Inc. (a for-profit corporation) the Department of Law researched the possibility of recovery of state funding. The Department of Law, in two separate opinions indicated that there did not exist a statutory basis for recovery of the funding upon sale of the constructed facility to a for-profit institution. (Ref. May 4, 1982 memorandum to Commissioner Lee McAnerney, file no. 366-629-82 and November 12, 1981 response letter to Senator Arliss Sturgulewski.)

Passage of H.B. 477 will provide a statutory basis for recovery of grants for hospital and health facility construction provided under AS 29.90; however, the recovery of funds may be limited to a time when and if the statute is revised to provide funds for new construction.

POSITION PAPER

RE: HB 477
SPONSOR: Representative Martin

PROGRAM EFFECTS:

This bill establishes a method for the State to be reimbursed in the event that a nonprofit or municipal health facility or hospital which received State Revenue Sharing support is sold to a for-profit owner. Sale to a for-profit owner must occur within 20 years after State Revenue Sharing aid is provided for the State to receive reimbursement.

COMMENTS:

The question of public purpose in the expenditure of State aid for hospital construction is the central issue raised by this bill. State aid diminishes the amount of debt or liability held by a municipality or nonprofit in a hospital or health facility and this factor could be essential in the sale of this facility to a for-profit entity. The equity earned by the nonprofit or municipality as a result of State reimbursement for a hospital or health facility either accrues as a benefit to the nonprofit which, by sale of health facility, is reducing or totally divesting itself from health care responsibilities or translates as a benefit to the for-profit buyer by way of a reduced sale price or acquisition of an undervalued asset. Under either scenario, the State's interest is not served.

This department supports this bill because it protects the State's investment in nonprofit and municipal health care facilities and assures that State funds do indeed serve a public purpose.

CITY OF HOMER

1984 CAPITAL IMPROVEMENTS LEGISLATIVE REQUEST SUMMARY

THE FOLLOWING SUMMARY IS COMPOSED OF THREE CATEGORIES; LOCAL PROJECTS, REGIONAL PROJECTS, AND STATE PROJECTS WHICH THE CITY OF HOMER SUPPORTS. THE LOCAL AND REGIONAL PROJECTS ARE PRIORITIZED.

LOCAL PROJECTS	COST
1. UPGRADE AND TRANSFER STATE ROADS TO CITY MAINTENANCE	
a. Pioneer Avenue	$ 2,300,000
b. Bartlett Steet/Fairview/Hohe	$ 1,230,000
c. Lower Main Street - South of Pioneer Avenue	$ 700,000
2. PAVE UPPER MAIN STREET	$ 320,000
3. PAVE KACHEMAK WAY	$ 530,000
4. HOMER COMMUNITY CENTER	$ 2,500,000
5. UPGRADE UPPER LAKE STREET	$ 1,200,000

REGIONAL PROJECTS	
1. HILLSIDE PARK COMPLETION	$ 100,000
2. PRATT MUSEUM	$ 1,085,700
3. MENTAL HEALTH BUILDING	$ 306,500
4. PARKS AND RECREATION FACILITIES	$ 1,100,000
5. HOMER SPIT CAMPGROUND	$ 6,000,000

STATE PROJECTS WHICH THE CITY OF HOMER SUPPORTS

HOMER SPIT ROAD IMPROVEMENT

BRADLEY LAKE HYDROELECTRIC PROJECT

EAST HILL ROAD RECONSTRUCTION

KACHEMAK BAY DRIVE

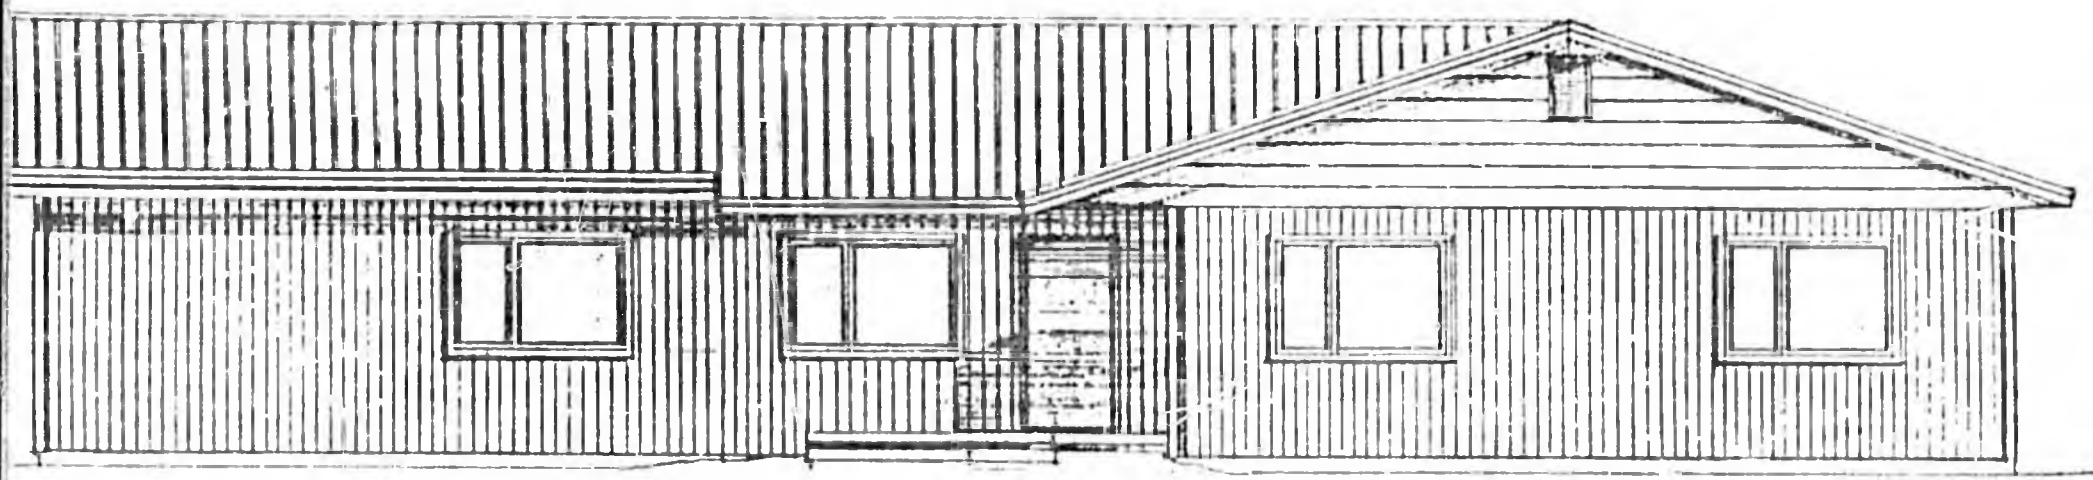
STERLING HIGHWAY - HOMER/ANCHOR POINT

KACHEMAK BAY FERRY SHUTTLE

ADEC GRANT PROGRAM

TOTAL $17,372,200

3. MENTAL HEALTH CENTER



The City of Homer supports the Community Mental Health Center's efforts to expand its facilities and programs. The Mental Health Center has been operating for seven years offering a wide variety of counseling, education and referral services to the entire lower Peninsula area.

The participation in these programs has risen at an increasing rate over the last several years. For example, in a report filed in February 1983, the Center had a caseload history of 800 cases. In November 1983, that load had increased to 960 cases. An increase of 20% in less than a year. In fact, over 50% of the existing caseload has been admitted in the last two years. This is a phenomenal growth rate that will continue as the Homer and outlying area populations continue to grow.

The Mental Health Center currently spends $24,000 per year for their existing rented facilities. They estimated that the new proposed facility will be paid for in rent savings alone. This is a significant point because of the gradually declining State revenues and ability to fund these programs. The Center, like all non-profit organizations dependent on State aid, has felt the burden of decreasing budgets. This new building will allow the Center to make more effective use of the money available.

In addition to the Mental Health Center, the Cook Inlet Council on Alcoholism plans to use this new facility. This will reduce their operating costs for rent and allow more effective use of this agency's money too.

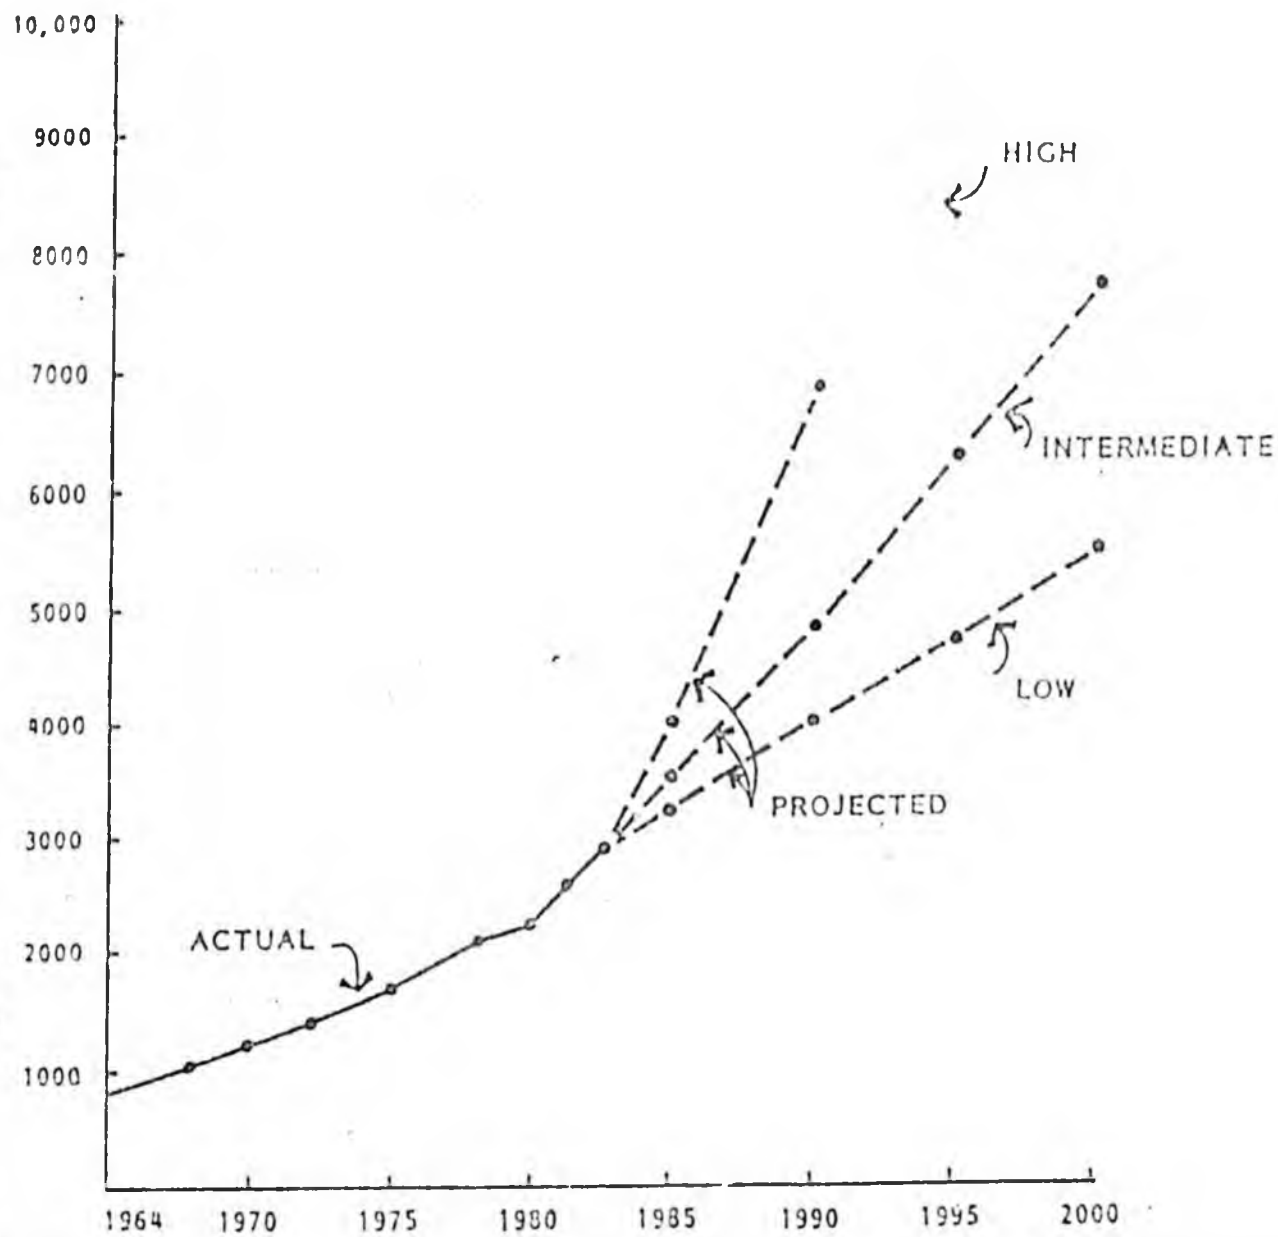
The Center has already, using existing State aid, City funds, and its own revenues, purchased property, conducted soils tests and designed the facility. They now request assistance to bring the project to fruition with construction.

COMMUNITY MENTAL HEALTH CENTER

FACILITY PROPOSAL

South Peninsula Mental Health Association, Inc.

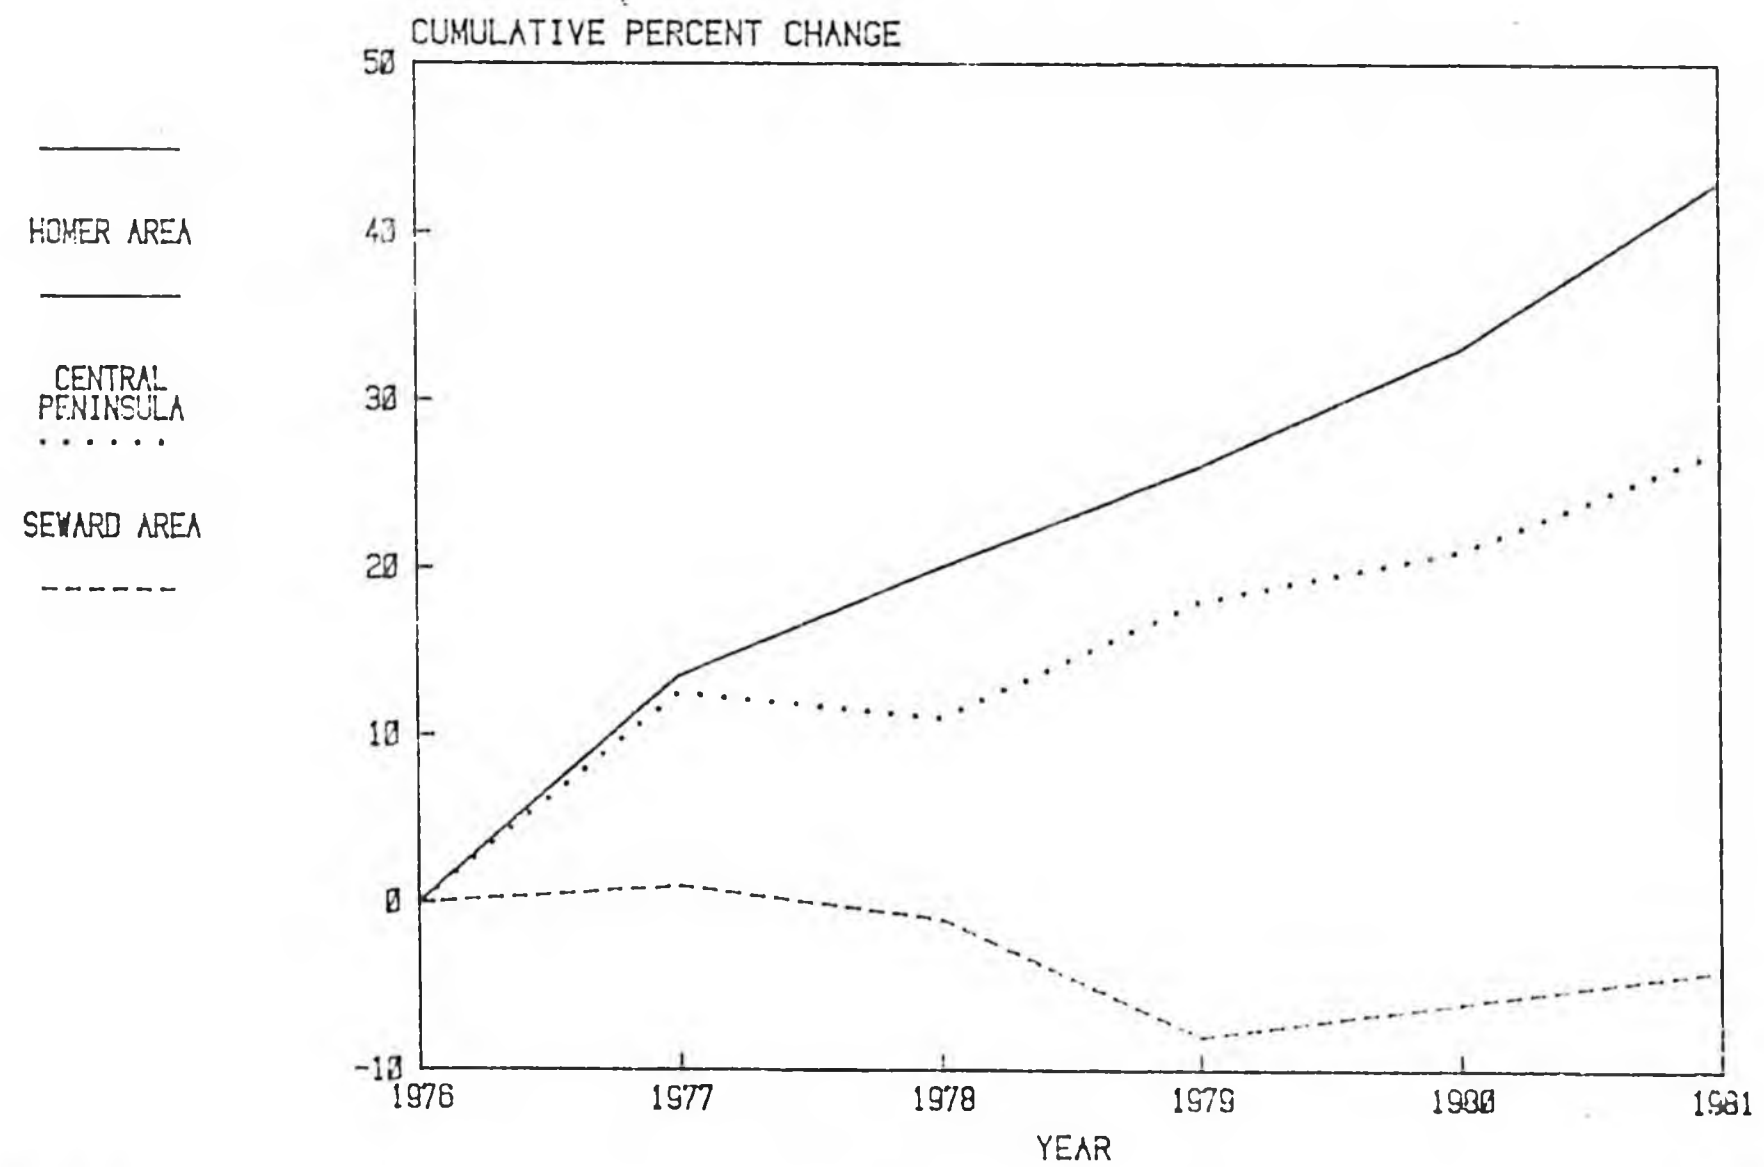
The Community Mental Health Center serving Homer and the surrounding region is sponsored by the South Peninsula Mental Health Association, Inc. The Center has provided comprehensive outpatient community mental health services to the residents of Homer, Ninilchik, Anchor Point, Nikolaevsk, Kachemak City, Seldovia, Halibut Cove, Port Graham, and English Bay during the past seven years. Recently, the Community Mental Health Center has gained a remarkable increase in community acceptance as reflected by the increased use of services provided. As of November 3, 1983 the Community Mental Health Center has provided direct services to 955 individuals since it open its doors seven years ago. Of these 955 clients, 400 have begun receiving services during the past two years. In addition to these direct service recipients, numerous residents of Homer and the surrounding communities have benefited from community mental health services through participation in workshops and classes provided by professional staff of the Community Mental Health Center.



During the past two years, the Community Mental Health Center has expanded with regard to the programs which are offered to the residents of the area. This expansion is contributing to our goal of better meeting human service needs of the residents of the South Kenai Peninsula based upon needs assessments conducted by the South Peninsula Mental Health Association, Inc. In addition to a LICENSED CLINICAL PSYCHOLOGIST functioning as a direct service provider and program administrator, the Community Mental Health Center has developed a VOCATIONAL COUNSELING PROGRAM (funded in part by the Alaska Division of Vocational Rehabilitation), an INFANT LEARNING PROGRAM (funded by the Alaska Division of Family and Youth Services), a FAMILY SERVICES PROGRAM serving Port Graham and English Bay twice monthly (funded by the North Pacific Rim Native Corporation), and a CHILD ABUSE/CHILD NEGLECT PREVENTION PROGRAM (funded by the Alaska Division of Family and Youth Services). The Community Mental Health Center has upgraded its PSYCHIATRIC SERVICES through a contract for weekly consulation provided by a local psychiatrist, Hal Sexton, M.D. The Association is also proud to have established a collaborative training relationship with the University of Washington School of Medicine, Division of Community Psychiatry. Specifically, a POST-DOCTORAL PSYCHOLOGY FELLOWSHIP in rural community mental health was cooperatively arranged whereby the fellow would spend three months in Seattle at the University of Washington and nine months on location in the South Kenai Peninsula area. he first post-doctoral fellow, Mark Soelling, Ph.D., began this program this year and has proven to be an outstanding and stimulating addition to the professional staff. All of these services have been extremely well received as evidenced by our current caseload and the percentage of time spent by staff delivering direct clinical services (average of 70 to 75 percent direct service time). In addition to the grant support for the services offered through the Community Mental Health Center, a significant amount of program funding is derived from local contributions and fees for services. During the pas fiscal year, the Center successfully raised $59,122.00 to fund the services

offered through the program. In addition, the City of Homer allocated $35,000.00 during the past fiscal year toward a capital improvement fund for the Center in support of the Association's effort to secure appropriate office accomodations to meet the service delivery needs of the residents of the community.

The expansion of services and the increased usage of services at the Community Mental Health Center serving Homer and the surrounding area is in response to existing human needs as well as the dramatic increase in population currently impacting the South Peninsula Region. In Homer alone, a recent Borough census indicated that the population has grown by at least 30 percent during the past 24 months with projections that this rate of increase may accelerate. The birth rate has nearly doubled at the South Peninsula Hospital during the past two years and the public schools are overflowing with students. In response, two new schools are being built in Homer not to mention the school expansion projects in other communities served by the Center. In addition, the South Peninsula Community Hospital is currently being expanded in order to double its bed capacity. According to a recent Homer News article, more than $100 million worth of construction projects have been undertaken during 1983 in Homer alone. If work at the Bradley Lake hydroelectric dam begins in 1985 as projected by the Homer Electric Association, yet another dramatic influx of workers and associated support personnel will impact the region. In addition to the economic incentive to move to the Homer area, many individuals are chosing to relocate to Homer in order to benefit from the awesome beauty of the surroundings and the high quality of life offered by this pastoral community. Clearly, the South Kenai Peninsula is being severely impacted by a dramatic increase in population. Concommitant with this influx of people is an increasing demand for human services which the Community Mental Health Center is attempting to meet in a comprehensive and cost-effective manner such that the services are available to one and all independent of ability to pay or other individual differences.



The following 13 pages include graphic and pictoral representations of the current boom being experienced in Homer and the surrounding area. Clearly, the residents of the South Kenai Peninsula live in a boom town atmosphere.

HOMER ELECTRIC ASSOCIATION

ORGANIZATIONAL STRUCTURE

The Community Mental Health Center is sponsored by the South Peninsula Mental Health Association, Inc., a private non-profit corporation registered in the State of Alaska. The Association is comprised of members from the communities served by the Community Mental Health Center who are concerned about human service needs in the region. The membership elects a group of seven members to comprise the Board of Directors which governs the day-to-day functioning of the Center and provids oversight to the Center's program administrator. Current members of the Board serving three-year terms each include:

President:	Jeanne K. Calkins P.O. Box 2020 Homer AK 99603 907-235-7248
Vice-President:	Bill Bell, M.D. P.O. Box 194 Homer AK 99603 907-235-8586
Secretary/Treasurer:	Darlene Crawford Drawer M Seldovia AK 99663 907-234-7625
	Bob Moore P.O. Box 84 Anchor Point AK 99556 907-235-8972

ORGANIZATIONAL CHART

OFFICE SPACE PROBLEM

Since the community mental health program was established in the South Kenai Peninsula region, adequate office space has been a perennial problem. The first offices used for the program were located within a residential four-plex building directly east of the hospital in Homer. These offices were grossly inadequate with regard to size and soundproofing therefore being in violation of the regulations for community mental health programs in Alaska. In 1980, the Center relocated to a 1100 square foot space in the Katamar Building on the Sterling Highway entering Homer. The space appeared pleasant and clean but again proved to be grossly inadequate for the services which the Center delivered. In particular, the five offices used for counseling services were seven and one-half feet by nine feet with no ventilation, no windows, and again, inadequate soundproofing. Individuals in the waiting area were able to listen to clients speaking with the professional staff in the therapy rooms. Additionally, when a family was squeezed into one of these cubicles with a therapist, the experience was similar to a sauna with little oxygen left in the air at the end of each session. However, no other office space was available to house the Community Mental Health Center programs until August, 1983. At that time, the Community Mental Health Center moved to the basement of the Alaska Commercial Fishing and Agriculture Bank building located on Ocean Drive in Homer. The facility is quite adequate for the present needs of the program with the exception of limited and somewhat inaccessible parking during the winter months. However, the office space is extremely expensive resulting in a significant amount of program resources dedicated toward maintenance of an appropriate facility rather than supporting client services directly. The current office space includes 2,183 square feet rented at the rate of $1.00 per square foot per month for a total expense of $26,196.00 annually for rent alone. Through a $10,000.00 payment from locally generated revenues to pay some of the building renovation which was necessary to convert the basement to office space, the Association was able to negotiate a proportionally lower rental fee for 24 months. On August 1, 1985, the lease agreement can be renewed at a rate of $1.00 per square foot per month plus an annual increase equal to the rise in the consumer price index during the prior 24 months. Given the limited financial resources available to support public sector human services, it appears that the Community Mental Health Center will be priced out of this office space at that time.

FACILTIY PROPOSAL

In light of the perennial problem described above, the South Peninsula Mental Health Association, Inc. solicited funds from the City of Homer to initiate a building program to construct adequate office accomodations. Following extensive public hearings, the City of Homer allocated $35,000.00 toward this effort in November, 1982, and supported the Association in their endeavor to secure additional funding for the project (see attached resolution from the City of Homer). With the generous contribution from the City of Homer as well as some funds raised by the South Peninsula Mental Health Association, Inc. within the community, the Board of Directors solicited available land centrally located in Homer having access to city water and sewer. This land (Lots 12 and 13, Block 3, Lakeside Village Subdivision, Homer, Alaska) was purchased in full from the National Bank of Alaska on November 2, 1983. In addition, architectural drawings, soils tests, and building specifications have been accomplished. Hence, the Association is prepared to go to bid at such time that sufficient funding became available to construct the facility.

As displayed in the attached architectural drawings, a facility that would be adequate for at least the next two decades would include 3,420 square feet. The building is designed to meet the need for confidentiality and other service requirements. The building is designed according to standard construction techniques utilizing cost-effective residential type design with the interior arranged to accomodate outpatient services. This approach was selected in order to blend with the neighborhood selected for the building and to be as cost-efficient as possible. As can be noted from the plot plan, adequate parking space has been designed. Additionally, the building has been designed tc accomodate expansion if this becomes a necessity at some point in the future.

FACILITY BENEFITS

Construction of an office building to house the programs offered through the Community Mental Health Center would benefit the local community by helping to guarantee that these essential human services will have adequate housing in order to continue to meet community needs in perpetuity. From an economic perspective, the building would be a benefit to the local community insofar as limited financial resources could be dedicated entirely to client services rather than spending an ever-increasing portion of program revenues for facility rental. Assuming the State of Alaska intends to continue to support community mental health services in the South Kenai Peninsula region, this building program will prove to be cost-effective. At the current rate of rental an equivalent amount of money will be expended from out State grant award toward rent at the end of 7.47 years as the State will spend to construct a building now. ($1.00 per square foot for 3,420 square feet would equal $41,040 per year, or a total cost of $306,500 at the end of 7.47 years.) These calculations are based upon 1983 dollars and do not take into consideration the ever-increasing cost associated with rental due to inflation. Another immediate benefit of this building would be that the South Peninsula Mental Health Association intends to share the office space with the Cook Inlet Council on Alcohol and Drug Abuse upon completion of construction. Negotiations to this effect have already been established with support from the Cook Inlet Council on Alcohol and Drug Abuse. (See CICADA Resolution.) This would provide the State of Alaska with further cost savings of approximately $7,200.00 per year in rental payments currently being made by the Cook Inlet Council. Including the building expense figures from CICADA, the pay off on the proposed building will be only 6.35 years. This space sharing agreement would make effective use of all of the office space immediately and will be viable for several years to come insofar as there is no projected growth in the staffing pattern at the Community Mental Health Center during the next several years.

BUILDING BUDGET

SITE PREPARATION	$ 25,000.00
CONSTRUCTION COST (3,420 Sq. Ft.x $75.00 per sq. ft). . . .	$256,500.00
DEEP PILINGS To prevent settling	$ 25,000.00
TOTAL REQUESTED:	$306,500.00

BUILDING MAINTENANCE COSTS

TAXES (Private, non-profit organization) . .	$ 0.00
CITY WATER & SEWER	$ 900.00
ELECTRICITY	$ 3,300.00
JANITORIAL FEES	$ 2,700.00
INSURANCE	$ 1,500.00
PARKING MAINTENANCE	$ 500.00
ROUTINE BUILDING MAINTENANCE	$ 1,000.00
TOTAL ANNUAL MAINTENANCE COST:	$9,900.00

These maintenance expenses will be shared by the building tenants and would be within the Association's financial ability to pay on an annual basis, derived from operating expenses.

LETTERS OF SUPPORT FOR SERVICES

PROVIDED THROUGH THE

COMMUNITY MENTAL HEALTH CENTER

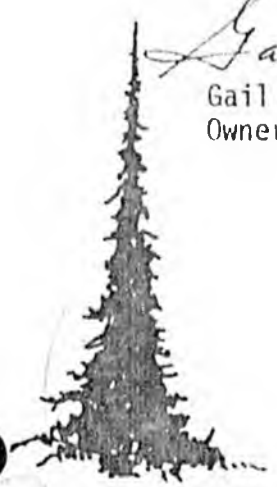
February 15, 1983

Dr. Paul L. Craig
Director
Homer Community Mental Health Center
P.O. Box 2274
Homer, Alaska 99603

Dear Dr. Craig:

It is with a great deal of pleasure that I have been requested to submit a letter of support for the Community Mental Health Center, and am able, in good faith, to offer this support.

I feel that you and your staff are providing a vital service to the overall good health of the Homer community and surrounding area, and I will do all possible to help in your efforts to secure funding for the continuation of the Mental Health program for our area.



As a Councilperson, we are often called upon to lend support for various projects in our community, and many times I find that I have a personal conflict in giving support. Not so, however, in your case. I personally feel that your organization is not only above board, ethically and financially, but that you also are providing a desparately needed service in the community.

Please let me know if I can be of further assistance.

Sincerely,

Gail Phillips

Box 2274
Homer, AK 99603

Gentlemen:

This letter is to indicate my support for continuing funding of the Community Mental Health Center which serves the residence of the South Kenai Peninsula. I would also note a significant improvement in the Mental Health Center after Dr. Paul Craig became the director.

My office has been involved in emergency placement of disturbed individuals, evaluation of persons suspected of being sucidial and in counseling on family disputes.

The local Mental Health Center is well respected by the legal community including the court system. Dr. Craig and his staff have shown their involvement in the community by discussing their services with the Chamber of Commerce and other interested groups in the Homer area.

Sincerely,

C. MICHAEL HOUGH
Attorney at Law

To Whom It May Concern:

Re: Community Mental Health Center, Homer, Alaska

I am writing in support of the Community Mental Health Center, which I believe has served this community well. As a lawyer, I can assure you that the judicial system is definitely inadequate to deal with problems of mental health. The Center has provided a source of local counseling, which the court system has used to provide sensible dispositions directed at long-term rehabilitation of criminal offenders. It has also served to identify and resolve mental problems before they become a burden on the court system. The Center also provides an invaluable service in counseling young people who are having problems with the school administration or with their families.

I believe that the entire Homer community will appreciate your attention to the needs of the Community Mental Health Center.

Sincerely,

John Rate

Dr. Paul L. Craig, Director
Community Mental Health Center
Box 2274
Homer, Alaska 99603

Dear Dr. Craig:

One of the best supplementary services that our students can take advantage of is that offered by your Center. Not only do individual students benefit from the services offered; the school and homes are beneficiaries in many instances where students are helped.

In the last three years I have seen excellent cooperation between the individual school, the district school office, and the Community Mental Health Center. This has been of great value to students who have had the opportunity of learning skills in communication and self-awareness through the sessions that have been offered by Center staff members.

I certainly do hope that the program will be continued, with perhaps some additional sessions to work with teachers for better understanding of pupil needs.

We do appreciate the fact that we can call on you and know that you will respond.

Sincerely yours,

Wade Jackinsky

wj

Ninilchik Community Clinic
February 2, 1983

Paul Craig, Phd.
Director
Community Mental Health Center
Homer, Alaska

I am happy to write this letter in support of the Community Mental Health Center of Homer, Alaska.

Individuals in the Ninilchik area contacted the Ninilchik Community Clinic asking for some type of help in dealing with stress. September 29 th. Paul Craig and Eilleen Littrell from the Mental Health Center met with me to discuss some of the needs of Ninilchik's peoples.

In October Eileen Littrell, M.A., COunselor began conducting morning workshops three times a month open to the general public at a $2.00 registration fee. The themes alternate between stress management in the home and basics for couples living happily ever after.

Private counseling is provided to individuals by appointments prior to the workshops. This service because of its availability has been sought out by a young couple with problems.

A communications skill class is held in the afternoons with high school students. Just having Eileen in the school is valueable. Students see her and can seek her out.

Numbers are hard to count in the mental health area. The people actually seen are just the visible tip of the iceberg that is recieving the benefits.

We have a need in Ninilchikfor the services of the Mental Health Center of Homer. If these services are denied us our needs go unanswered. If the program remains and is a steady source of aid more and more people will use it.

I personally value the increased knowledge and skills these workshops have given me. Others have voiced the same opinions. Thank you Community Mental Health Center of Homer.

Sincerely,
Pat Oskolkoff CHR.

Dear Paul:

The Anchor Point Community School Council and I would like to submit this letter of support for the programs at the Community Mental Health Center. We feel that the services that have been offered in Homer and Anchor Point are of great value to the community, and we especially appreciate the workshops that have been offered here in Anchor Point for the benefit of our local people. We have been extremely impressed by the quality of the personnel who present the services, and the Community School Council and I sincerely hope that the program can continue to offer such fine workshops and services for the southern Kenai Peninsula communities. Thank you very much.

Community Mental Health Center
Box 2274
Homer, Alaska 99603

Dear Paul:

This is in support of the Community Mental Health Center in Homer.

The mental health center in Homer greatly meets the needs of the local community from my perspective as well as the residents of the Homer area. They provide this office with psychological assessments on my clients, excellent guidance to my clients as well as assisting me in my contacts with employers and educational personnel.. They have a broad based mental health program that works with walk ins, referrals from other agencies as well as other physicians and hospitals.

From my viewpoint they are doing an excellant job. The staff of the Community Mental Health Center appear to be highly competant, well trained, knowledgeable of problems in a rural area and very insightful of the needs of the community. Their parent/child educational program seems to be functioning quite well and appears to be meeting an obvious need. The same can be said for the Infant Learning Program which is relatively new.

I am very impressed by all of the programs that fall under this office and am highly pleased with the helpfullness of the staff.

Thank you for this opportunity to voice my opinion. I highly recommend continuation of the funding support for their current programs or any other programs they deem appropriate in the future.

Sincerely,

John B. Osborne

John B. Osborne, VRC I

JBO/PM

Cook Inlet Council On Alcohol And Drug Abuse

February 15,1983

Dear Paul,

I would like to lend my support of the Community Mental Health programs and services offered to the residents of the South Kenai Peninsula.

I was especially pleased when you added the Parent-Child Education and Training program and the Infant Learning Program. There has been a need to address the issue of parenting being one of the most difficult jobs for which there is the least amount of training. You are addressing this need through your educational programs that prepare and support parents.

I am also very pleased with the "team" approach that has been developing in which Mental Health,Homer Junior and Senior High School,and Cook Inlet Council are working closely to establish appropriate programs and services for "high risk" students and their families. This agency and school "team" approach with the students and their families will increase the chances of teens receiving appropriate services which I believe will increase the chances of the students receiving an education.I believe it will also help provide support and services to the family.

I'm looking forward to our continued work together.

Sincerely,

YOUTH OPTIONS Coordinator

Dear Paul:

This is my letter of support for the Community Mental Health Center. It is my professional opinion that your office provides a much needed, high quality service to your community.

In working with recovering persons, the Parent-Child Education and Training Program can serve as an important adjuct to a healthy, sober family. In working with individuals and families, mental health needs must be addressed in many cases for a person to return to or begin a quality sobriety. It is important we work together. I know through your efforts with the Human Service Provider's Network working together is an important goal to your agency. This is also the goal of CICADA and will benefit the community.

If I can be of further assistance, please feel free to call me at 283-3658.

Sincerely,

Kevin Murphy

January 27, 1983

Mr. Paul Craig, PhD
Community Mental Health Center
P.O. Box 2274
Homer, Alaska 99603-2274

Dear Dr. Craig:

I am the supervising attorney for the Kenai Office of the Alaska Public Defender Agency. Our office is assigned to represent indigent criminal defendants in the Homer area. I understand that the Homer Community Health Center has submitted a grant proposal for the coming fiscal year and I am writing this letter in support of that grant proposal.

As you know, we frequently request the Community Mental Health Center to prepare evaluations for our clients for use in aid of sentencing. The evaluations that have been provided are frequently useful to the court in fashioning the appropriate sentence for the individual offender. In addition, it is not uncommon for the court to order mental health counseling through a Community Mental Health Center as part of an individual's sentence. I am of the opinion that this resource is a significant asset to the Homer Community.

Accordingly, I am hopeful that your grant proposal will be accepted.

Sincerely,

KEVIN F. McCOY
Assistant Public Defender

Psychologist, Director
Community Mental Health Center
P.O. Box 2274
Homer, Alaska 99603

Dear Dr. Craig,

Thank you for the opportunity to express my appreciation and continuing support for the efforts of the Community Mental Health Program. For those it may concern, I might explain that through the contract between our agencies, counseling and consultative services are provided to emotionally handicapped school children, their teachers and parents. Without your activities in the south peninsula area, services to these residents would be significantly reduced, if not eliminated altogether in many cases.

Personally, I am absolutely delighted with both the responsiveness and flexibility you and your staff have displayed in meeting difficult and at times, protracted situations. That your agency functions in a responsible fashion is obvious from the measurable improvements seen in the students you have worked with.

I expect to make heavy demands on your time in the coming year with similarly positive results.

Sincerely,

Arlo Morgenweck

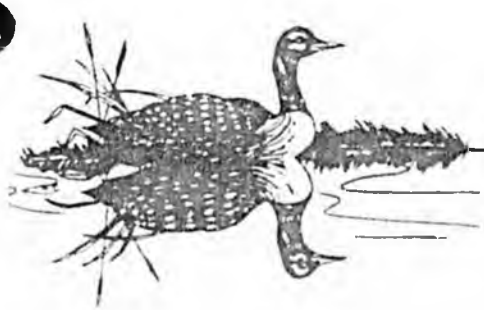
Re: Letter of Recommendation - Homer Community Mental Health Center



To Whom It May Concern:

It is my feeling that the Homer Community Mental Health Center continues to provide an extremely valuable resource in this community. The support that they have given to me and to my patients in the last year has been consistently of extremely high quality and entirely professional. My only area of contact with this program, however, has been in the realm of people who required counselling over a period of time, usually for a transient situational problem. As stated, the support in this area has been excellent. I have had no real contact with other areas of the program, such as the parent/child education and training program or the infant learning program.

I would certainly endorse the need for continuing support of the Community Mental Health program in Homer and recommend a favorable response on the current grant proposals.

Very truly yours,

Laurance A. Marshburn, M. D.

Homer, Alaska 99603

Dear Dr. Craig;

I would like to take this opportunity to commend you and the staff of the Community Mental Health Center for the positive influence you have been on the surrounding community specifically during the past year. The consistancy of your excellent service as director has established the center as constantly available, highly competent, and completely professional.

Although new, the Parent/Child Education and Training Program and the Infant Learning Program show tremendous potential for far reaching service and influence for the South Peninsula. The combination of the abilities and talents of Chris Laing and Judith Rothstein into the one DVR position was innovative and by all appearances very successful. The organization and efforts of Mary Barnett are also to be complimented. Your efforts as administrator re reflected in the winning combination you have in your staff and the professionalism demonstrated there.

Personnally, I want to thank you for your efforts in meeting needs identified here at Nikolaevsk School and your availability for advice when needed. I see our service opportunities increasing here as the two new programs gain greater visibility and as we continue to work with established programs such as Donna Fenske, PHN, and Ingrid Avril, Alaska Department of Health and Social Services.

If I can be of help anytime, please contact me.

Respectfully,

Bob

Bob Moore,
Head Teacher

To Whom it May Concern;

It is with great pleasure that I submit this letter of support for the services rendered by our local Community Mental Health Center. When funding for this valuable local serice was threatened last year, I viewed that trend with alarm. The good to the community at large so far outweighs the dollars spent, every dollar spent represents a valuable investment.

I would like to cite my own personal experience with the Mental Health Center first. That concerns the services rendered to my mother, who through no fault of her own, has been a patient of mental institutions and clinics for the better part of her 75 years. If it were not for the existence of this clinic and the excellent service she receives here (and I rate it the best she has ever received), she would now be a ward of an institution. It is my hope that she may remain in the comfortable surroundings of her own home for as long as possible. Due to her financial situation, that can only be accomplished through this clinic.

As a school board member and parent I am also very much concerned with and about the services rendered to our schools by the Community Mental Health Center. Here in Homer Dr. Craig works with identified emotionally handicapped children, at the moment serving ten such children in our Homer schools. The service area for Dr. Craig extends from Ninilchik south and includes Anchor Point, Homer, English Bay, Port Graham, and Seldovia (as well as Ninilchik). It is a very large area that obviously requires a lot of energy and time. Population wise, it is also a very fast growing area, increasing at the rate of 15 to 20 percent per year. The services that Dr. Craig provides to our schools are those that are beyond that what we, the school, can provide. We are therefore very dependent upon him.

I am particularly pleased with the Parent-Child Education and Training Program, a parent effectiveness program and one that I consider vital. Any time we can reach out to parents and assist them in thier every day dealings with children, we are helping to create a healthy environment for those children. These communications skills provide a foundation and among the many benefits enable a child to perform better at school. The Parent-Child Education and Training program has been well received in the community.

Overall I find the services rendered by the Community Mental Health Center to be invaluable to the Lower Kenai Peninsula. The continuation and expansion of these services is of utmost importance. I strongly urge your financial support of the Community Mental Health Center.

Sincerely,

Mildred M. Martin, member
Kenai Peninsula Borough School Board

Dear Dr. Craig:

This letter is written in support of the continuing programs of the Community Mental Health Center. Programs put on by the Center include but are not necessarily limited to the overall Community Health Program, Parent Child Education and Training Program, and Infant Learning Program. It is also my understanding that your organization is providing service to several villages in the area.

We appreciate your efforts and hope that they will continue and expand.

Thank you.

Very truly yours,

TO Whom it May Concern:

The Community Mental Health Center in Homer, Alaska provides many necessary and unduplicated services to the Lower Kenai Peninsula.

The Center has been successful in helping people to become productive and successful citizens. I have found the staff at the Community Mental Health Center to be professional in every sense of the word and I am looking forward to continuing our work with them in the future.

Kenai Peninsula Community College Homer Campus pledges its support to Community Mental Health Center of Homer and I urge you to also support the efforts of this important and vital organization. Our community needs their services.

Homer, AK 99603

Dear Paul:

This letter is in regards to your request for support from the North Pacific Rim Native Corporation for further funding of Community Mental Health Center programs which impact the Native villages in the South Katchemak area.

During the past 2 years, the North Pacific Rim and the community MHC have operated with a cooperative agreement to provide services to English Bay and Port Graham on a consistent basis.

We believe that timing and sensitivity to community needs are paramount to providing useful services to Alaska Native villages and we have appreciated the fact that the Community Mental Health Center has been ready and willing to provide services on an "as needed" basis as opposed to forcing programs on a community that is not ready for them.

Our Family Services Worker reports that the Community Mental Health Center has followed his lead and provided services in a timely and highly professional manner. He further states that the Infant Learning Program and the Parent Education classes are valuable components to the services provides and good mental health program serves as an excellent back-up and resource for him as a professional.

We would like to offer our continued support for your program.

Sincerely,

Richard A. Rolland

Community Mental Health Center
Box 2274
Homer, Alaska 99603

Dear Dr. Craig:

Thank you for contacting the PreSchool Program for our input regarding South Kenai Peninsula community health and child-parent related services.

Since I have only resided in Homer since September, quite frankly, I don't feel competent to assess the quality and quantity of services offered; but since I am extremely interested in pre-school parent and child education I would like to pass a few observations along to you, especially if some money might be funded in this area.

The Community School's Preschool is the only preschool of its type in Homer. There are a few other organizations that offer "preschool" education; however these fall mainly under the category of daycare and do not foster positive parent-child inter-relationships as the parent is usually working and not present.

I see a great need in this community for a type of program that involves parent and child. Many children in this area live in isolated areas, missing much early socialization, and many of the mothers, in particular are spouseless for a length of time and need contact and communication with a skilled teacher and other parents just to see that Johnny really isn't as awful as she thinks and he can cooperate without that whack on the bottom she needs to give him all the time!

Our preschool program last year served as many as 110 children. Our equipment is sub-substandard or non-existent. We only have $20.00 per month for supplies. Community Schools picks up all the bills and many people can't or don't pay and we won't exclude any child for financial reasons.

If there would be my way PreSchool could be included in any grant requests we would be overjoyed. Please feel free to visit us as we welcome your interest and support and I will be contact-you or your staff to make myself acquainted with your services especially in the area of early child education.

Thank you,

Pat Springer

To Whom It May Concern:

As a local clergyman at St. Augustines' Episcopal Church and a local dentist, I meet many people in the Homer and surrounding areas; some of them with problems which the Community Mental Health Center has been able to greatly assist with...

I utilize the expertise of the counselors at The Community Mental Health Center, by refering people to them from time to time. I would be disappointed, to say the least, without their valuable contribution to the well being of our community.

Please give them every consideration in their grant proposals.

Sincerely,

Dear Paul:

Please accept this letter in support of the continuing services of the Community Mental Health Center, Parent Education, and Infant Learning programs provided by the Community Mental Health Center to residents of the South Kenai Peninsula.

South Peninsula Women's Services and Community Mental Health Center has a most viable, cooperative relationship that positively benefits both individual and mutual clients. S.P.W.S. has made a multitude of referrals to the Center's various program components. These referrals have been received and acted upon in a most professional manner. Moreover, we have received appropriate referrals from the Community Mental Health Center. Mutual program planning has also been very effective.

We feel the Community Mental Health Center is an integral part of the community. The services that the three program components provide are of an utmost importance. We at South Peninsula Women's Services are in full support of the effective and needed programs offered by the Community Mental Health Center and receommend their continued funding.

Sincerely,

Homer, AK 99603

Dear Paul:

This letter is in continued support of your program at the Community Mental Health Center. Over the past year many of my clients have received assistance and care from the Community Mental Health Center in a variety of ways by taking advantage of the well-established programs and, especially, since the introduction of the Infant Learning Program. I continue to be impressed with the service provided, with the attention to follow-up, and feel more strongly than ever that the Community Mental Health Center serves a vital function in our community. To consider referring my clients to Kenai or Anchorage for counseling and evaluation would be as limiting as not having a hospital available in which to practice.

I look forward to another year of excellent service.

Warmly,

D White

RE: LETTER OF SUPPORT

As Principal of Homer High School, I totally support the Community Mental Health Center under the direction of Paul L. Craig, Ph.D. Through his guidance, our community and school continue to be provided a very valuable resource as to their needs. At no time has Dr. Craig and his staff been unwilling to work with our problems or our schedule.

It has been my personal observation that Dr. Craig has spent additional time providing input and direction to help improve our school "effectiveness" for the student. His expertise and guidance continue to provide our teachers with new options and techniques.

The community of Homer would be drastically affected without the services of Community Mental Health Center. As a school administrator and community member, I whole heartily solicit your support.

If I can provide any additional information, please feel free to contact me.

Dear Paul:

Thank you for informing me of your intention to submit a grant proposal again for funding of your programs. Your center has done a remarkable job this past year with the Infant Learning Program, the Parent-Child Education and Traning Program, and all aspects of the Community Mental Health Program. I certainly hope funding will be available to continue the good work in these areas.

Through my work with children and their families I see a definite need of resources for parents and children alike who have special needs, problems coping with stress, or simply wish to improve their parenting skills. Your center is helping to fill this need with your various programs. I have referred parents to you for counselling and training, feeling comfortable that you could provide the needed help. The parents I hear back from have been both grateful and enthusiastic about your programs. I in turn am very grateful for your help.

I wish you continued success for another year of strong community involvement. Thanks for providing such quality programs for the people of Homer.

Sincerely,

Jane Wingquist

To Whom It May Concern:

This letter is in support of the Community Mental Health Center in Homer, Alaska. We have worked closely with the center for the past several years and have found them to offer a much needed support in the mental health area.

As I reflect on their program, I see one of their biggest strengths is their responsiveness. They are able to consult with us, or provide family counseling for students, or individual counseling. We use them as a local resource for classes in careers, mental health, or testing. I feel they have done a very good job of responding to our requests.

I would shudder to think of not having them as part of our community.

Sincerely,

James Ballentine

Dear Mr. Craig:

I would like to take this opportunity to commend you and your staff on the professional handling of referred cases by our department. The feedback I am receiving is very positive. In my opinion, your service is a necessity in our area and a much needed resource.

Your Parent-Child Education and Training program could, in time, have a v .y positive impact in our community. The communication betwee parents and children would greatly reduce the number of problems involving the Police. Parents as well as the children need the training and, I'm certain, it will draw families closer together.

The Infant Learning program is also an excellant outreach and to train the children at such an early age is the answer to assuring healthy, productive persons in the years to come.

Your willingness to help and your professional attitude as well as that of your staff will insure your valuble and needed services to remain in our area. Keep up the good work.

Sincerely,

A.W. Anderson

To Whom It May Concern:

I have been asked to write a letter in support of the Community Mental Health Center and Paul Craig here in Homer, Alaska.

Paul has been able to provide excellent counselling and psychological help to students in severe need here at Paul Banks Elementary School. Without Paul's assistance the students here would not be able to receive any direct counselling or psychological benefits due to the logistical distances involved between our school and Central Office and the other support teams that work with the school.

In the last year and half the Community Mental Health Center has not just become a small office somewhere down in town, but has become an arm that is extending out into the community and helping not only the school, the children, the parents, but all members of the society in which we live here in Homer.

I greatly support Paul's efforts and solicit your support in funding the Mental Health Center and the programs in which Paul Craig has initiated in the community.

Sincerely yours,

Lewis McLin

February 23, 1983

To Whom It May Concern:

Please accept this letter of appreciation and support for the services of the Community Mental Health Center in Homer. Through my involvement with the Homer Community Schools Program I have had an opportunity to work with the staff of the Mental Health Center in several areas of community need or benefit.

The staff of the Center have consistently offered classes and workshops in a broad variety of areas helpful to our community--most recently, career changing, parenting skills, parent-child education and suicide prevention. The Infant Learning program aids in targeting infants and toddlers who are handicapped or developmentally delayed, smoothing their way into preschool or elementary school programs. In addition the staff has demonstrated a willingness, personally and professionally, to help in identifying community, family and individual concerns and possible ways to address them. The Community Mental Health Center has also been a motivating force behind the formation of a Human Services Network, a group of human service providers in the area, and the publication of the first Human Services Guide to Homer Area Resources.

My experiences with the Community Mental Health Center in Homer have made it evident that the staff is caring, professional and responsive to the needs of our community. I urge your continued funding of the Homer Community Mental Health Center and it's programs.

Sincerely,

Bev Cronen

Homer, AK 99603-2274

Dear Dr. Craig:

It is with pleasure that I submit this letter of support for inclusion in the grant application proposals for the Homer Community Mental Health Center.

As Mayor of Homer, and from a personal prospective, I am aware of the worth of the programs provided and administered by the organization you direct. It is clear that programs are selected on the basis of community need and are carried forth in a sincere effort to assist participants in developing comprehensive skills which are life support systems. Specifically, the Parent-Child Education and Training program, and Infant Learning program are identified as beneficial to the young people of our community. Because of the mild climate and easy road accessibility, many young, new families settle here yearly. Both of these programs assist with adjustments for these families, and provide a resource for assisting in new starts.

It is my feeling that programs such as those administered by the Community Mental Health Center are supportive of family development; therefore, a continuing asset to this community. Be confident of the support of the City of Homer in your grant application pursuits.

Sincerely,

Erle Cooper
Mayor

February 14, 1983

Paul Craig, Ph.D.
Community Mental Health Center
P.O. Box 2274
Homer AK 99603

To Whom It May Concern:

Greetings from the beautiful City of Homer. A recent survey poll indicates that the population growth on the Kenai Peninsula and specifically the Homer area is on a very high increase. And as you know, a population increase brings many varied problems.

As for myself, I am not particularly fond of this high-powered population explosion; however I do face the reality and the fact that change in this area is taking place, and we need the excellent services that are provided here in Homer to meet these drastic changes. The Community Mental Health center under the direction of Dr. Paul Craig provides an excellent service to take care of the citizens that encounter problems on an emotional and mental level.

There is no question in my mind that the Homer Community Mental Health Center has one of the best Boards of Directors in the state of Alaska. They attend meetings and they give high-powered interest and attention to the needs of the Center and the community. They are definitely a group of dedicated people.

I have had the opportunity and privilege as a member of the Governor's Review Board on Alcohol and Drug Abuse to visit a number of the mental health centers throughout the State of Alaska, and I am pleased to report that the services offered by the Homer Community Mental Center are efficient, excellent, and meet the needs of the people who request assistance.

We are very fortunate to have Dr. Paul Craig and his staff and the good work that our mental health center makes available to the people. My recommendation would be to continue funding the program, and if funds are available to make an increase in the grant, so this work may expand to meet the needs of our growing community.

Thank you for giving your attention to the content of this letter, and may great joy and bliss fill your beautiful hearts to overflowing as we move on down through the corridors of time to meet the demands that the wheel of life places upon our minds and hearts.

Thank you very much,

Asaiah

Dear Paul:

As City Manager for the City of Homer I would like to lend my support to the services of the Community Mental Health Center and to verify that I have personal knowledge of its service to this community.

The services the center provides are an essential part of the community infra-structure; and I urge the continuance of the various programs so long as the services are provided in a prompt and professional manner.

Thank you for your services and the opportunity to express my support.

Very truly yours,

Larry C. Farnen
City Manager

To Whom It May Concern:

As a practicing attorney in the Homer community for the past twelve years, I have encountered every possible type of family and personal trauma in one or more of its aspects.

The Community Mental Health Center has been providing services essential to the residents of the Homer community for many years. The individual and family counseling program and the parent child education training program both have been of great help, support and assistance to those in need.

Along with the development of services of the Community Mental Health Center has been an awareness in the people of the community that these problems, which have existed in the past no longer have to be suffered and hidden. The Community Mental Health Center provides services to resolve these problems thereby contributing to the over-all mental health of the South Kenai Peninsula residents.

In my opinion, the Community Mental Health Center has been and continues to be, in all of its programs, an essential and well functioning resource to the residents of this area.

Sincerely

Mart Friedman

MARTIN FRIEDMAN

Dr. Paul L. Craig
Director
Community Mental Health Center
Box 2274
Homer, AK. 99603

Dear Dr. Craig:

By vote of the Board of Directors of the Homer Chamber of Commerce, this letter is to voice our wholehearted support for the Community Mental Health Center and the programs you have initiated and offered Homer over the past year.

We hope that grant funding for the continuation of these programs will be forthcoming. The services provided to families and individuals by the Mental Health Center indirectly effect each of us in the community and we feel that they more than adequately augment and complement the programs and services offered by other medical and social organizations in the area.

Our best wishes for your continued success and please let the Chamber Board know if there's anything we can do to assist you in any of your operations.

Sincerely,

HOMER CHAMBER OF COMMERCE

Mary A. Henry
Vice President

February 4,1983

Dr. Paul Craig
Community Mental Health Center
P.O.Box 2274
Homer, Alaska 99603

Dear Dr. Craig,

We would like to express our support and appreciation for the Community Mental Health Center and the opportunities you are making available.

We are hearing excellent reports on the Parent-Child Education and Training classes. They are getting good response here in Seldovia and we also got a very positive reaction from our board members in Port Graham, toward the classes held in that village.

Having a "baby boom" here in town bears out the necessity for the Infant Learning program. This is an area of need in our communities and we support your effort to meet that need.

We are seeing increasing acceptance and use of the Mental Health program over here. Knowing there will be a regular and accessible care provider has created a very positive climate to recommend and ask for help in our community. In your position, Dr. Craig, you have established a level of trust and professionalism that is changing attitudes throughtout our community.

Cooperation between our programs has been invaluable for SKIAP. We continually benfit from your consultations and the resources we can now suggest to our clients.

You have our whole-hearted support.

Sincerely,

Edith-Helen Hilts
Director

Community Mental Health Center
Box 2274
Homer, Ak. 99603

Dear Staff,

I am personally involved with junior high (7-9) guidance and students with serious personal problems. There are many cases I cannot deal with because of my lack of expertise. For these special problems, I am both relieved and grateful to be able to turn to the Community Mental Health Service in Homer.

Mrs. Irene Littrell, from the Homer Office, has been traveling to Ninilchik to provide communication workshops for students and adults. She has also been dealing with some of these very serious cases. It is a real relief to have someone with her experience and background to provide counseling to these students and their parents.

One eighth grade boy was failing in all his classes. Mrs. Littrell began counseling with the entire family. The young man's attitude is greatly improved and he passed several of his courses for the quarter.

This kind of achievement is very important and worthwhile in an area that has so many problems. We need this service and appreciate it immensely. Please keep us on your agenda.

Sincerely,

Shawnie Holdermann

January 27, 1982

Dr. Paul Craig, Director
Community Mental Health Center
P. O. Box 2274
Homer, Alaska 99603

Dear Dr. Craig:

We are pleased to offer our support of the services that are being provided by the Community Mental Health Center to the residents of the South Kenai Peninsula.

Those of us who have been involved with the Little People Can Read Research Project are acutely aware of the importance of high quality stimulation in the earliest years of a child's life in promoting good social, emotional, and intellectual development. We are, therefore, particularly enthusiastic about the Parent-Child Education and Training Program and the Infant Learning Program now being offered at the Mental Health Center.

Because we have observed the dedication shown by the clinic's staff and the need within the local community for these services, we urge that these programs be continued.

Cordially,

Mary + Mike

Dear Paul:

This letter is evidence of my support and belief in the work you are doing in the lower Kenai Peninsula. You have such a large area to cover. I marvel at the work you have accomplished.

Until your organization came to Homer I was not aware of the tremendous need people in our community have for your services. I didn't realize that a small city such as Homer could harbor so many different kinds of mental disturbances and psychological needs.

I hope that my support will help you in your effort to find adequate funding.

Sincerely,

Hazel Heath

Looking for professional assistance in any of the following areas?

- Relationships
- Behaviors that you would like to change
- Emotions
- Employment or educational planning
- Stress
- Your child's development or behavior
- Family relations
- Developing positive parenting skills
- Or even Cabin Fever!

WE CAN HELP!!!

Our professional staff is available to serve you.

The Community Mental Health Center sponsors the following services:

Mental Health

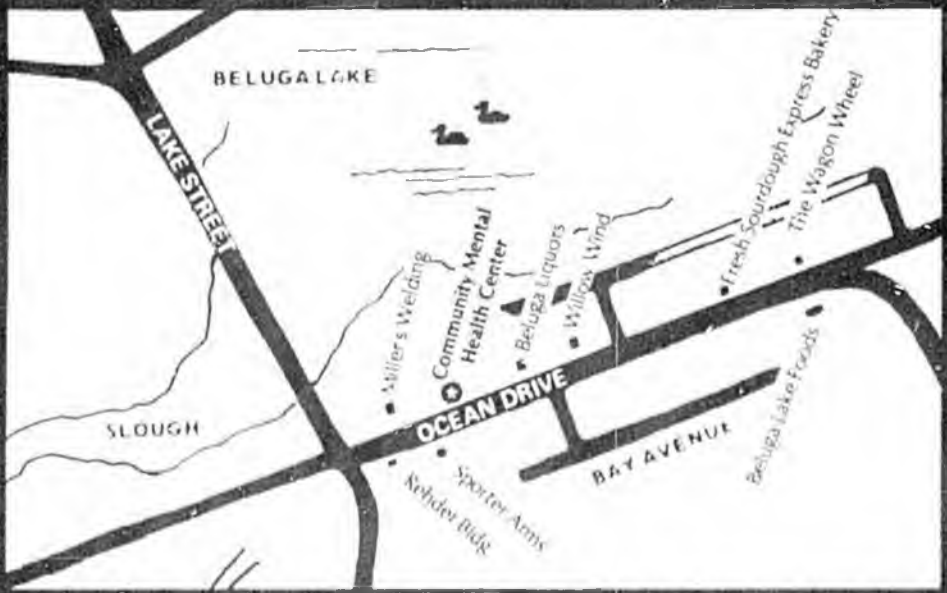
Counseling, evaluation, consultation and crisis mental health services for adults and children.

Vocational Counseling

Career exploration, guidance and training services coordinated with Alaska Division of Vocational Rehabilitation.

Parenting Skills Educational Program

Workshops, classes and counseling for families and individuals regarding effective positive parenting.



Infant Learning Program

Home-based program assisting parents of developmentally delayed infants (0-3 years) providing activities to enhance development.

Some services are free and others are on a sliding fee scale.

The center is located in the lower level of the office building on Ocean Drive between Miller's Welding and the Willow Wind. Outreach services are provided to Homer and outlying communities.

The Community Mental Health Center is sponsored by the South Peninsula Mental Health Association, a private non-profit corporation. If you are interested in becoming a member of the Association, give us a call.

COMMUNITY MENTAL HEALTH CENTER
P.O. Box 2274
Homer, Alaska 99603
(907) 235-7701

THE PROGRAM

The Infant Learning Program (ILP) is an early intervention program for infants and toddlers from birth to three years who are developmentally delayed, have a physical handicap or are at risk of developing a problem.

The Infant Learning Instructor will visit the parents and child in the home to do a formal assessment of all developmental areas. Where developmental delays are found, an Individualized Education Plan (IEP) will be established with the parents. The Instructor will visit the home on a weekly basis or as needed, for about an hour each visit, to share with parents some activities and techniques they can use daily to stimulate their child's development.

For more information, contact the INFANT LEARNING INSTRUCTOR through the Community Mental Health Center in Homer, 235-7701.

SERVICE AREAS

The Infant Learning Instructor will provide home services in the communities of Homer, Anchor Point, Ninilchik, Nikolaevsk, Seldovia, Port Graham, English Bay and outlying areas.

ELIGIBILITY

Any child under age three who has a handicap (such as Cerebral Palsy, Down's Syndrome, Mental Retardation, Blindness, Deafness) or who is suspected of having a developmental delay is eligible for the program.

COST

There is no cost to the parents. The program is funded by the Department of Health and Social Services, Family Services Section.

INTRODUCTIONS

Most of us spend considerable time and energy at different points in our lives wondering which jobs would fit our needs and desires. Exploring the rnage of choices of employment is a difficult task. Often, the beginning step of knowing who to ask for sepcific information about a field of work is a bogging-down place. The Vocational Counseling Program in Homer is designed to assist people in clarifying career goals, barriers to successful employment, and strategies for seeking new employment.

FOR WHOM ARE THESE SERVICES DESIGNED?

- Any person in the process of rethinking his/her career, or how s/he is utilizing time;

* The average American worker changes careers 4 times in his/her lifetime;

- Any disabled Alaskan who seeks assistance through Division of Vocational Rehabilitation and resides in the Southern Kenai Peninsula.

* We serve people in the following communities:

Ninilchik
Nikolaevsk
Anchor Point
Homer
Kachemak City
Seldovia
Port Graham
English Bay

SERVICES AVAILABLE...

Career exploration and guidance: (in groups or individually), utilizing the Alaska Career Information System and interest inventories.

Information and referral services: from type of training required for a job to where such is offered, including employment forecasts for various job fields.

Special needs planning: such as in the case of physical, mental or emotional disabling conditions.

Assistance with sharpening job-readiness skills: resume writing, interviewing tips, etc .

Coordination with other agencies: state, federal, and private agency contacts.

Job development: working with area employers in developing on-the-job training opportunities.

Job supervision: assisting employers in monitoring employee progress and upgrading skills.

Individual counseling: available to clients wishing to work on issues of self esteem, assertiveness, and other issues affecting job production.

Community education: periodic classes and workshops are offered to the public covering various aspects of the job search.

Employee Assistance Program: a confidential information and referral service available to employees and their family members. Available as a benefit to employees whose employers have contracted for services.

...AND NOW FOR A WORD ABOUT VOCATIONAL REHABILITATION

The Homer Vocational Counseling program is an extension of the Alaska Division of Vocational Rehabilitation (DVR), whose nearest office is in Kenai.

In an effort to provide the most comprehensive outreach services possible to the Southern Kenai Peninsula, we serve as liason with the Kenai office, and work closely with the DVR counselor who visits Homer once each month. In order to be eligible for DVR services, an individual must:

1) Have a disability (emotional, mental, physical, or learning) that can be verified by a licensed physician and/or psychologist.

2) This disability must be a substantial handicap to employment.

3) DVR services will enable the individual to get and hold a job.

Applications for DVR services are available through the Homer Vocational Counselor.

Services are available through the Community Mental Health Center sliding fee scale until such time as the person may become a DVR client, at which time no fee would be charged. The sliding fee scale is based upon ability to pay; however, no one will be refused services due to a lack of funds.

Service Areas:

The Parent-Child Educator/Family Counselor will provide educational counseling services in a variety of settings, including but not limited to: Your home, the Community Mental Health Center, the school, or other common facilities. We serve parents in the following communities: Ninilchik, Anchor Point, Seldovia, Port Graham, English Bay, Nikolaevesk and Homer.

ELIGIBILITY:

All parents of children ages 0-18 in the service area are eligible for one or more of the services offered.

COST:

Fees are established based on ability to pay by using a sliding fee scale. As a result, services are available to one and all without regard to financial resources. Some of the groups and classes are provided without charge.

Give Your Family a Boost!

PARENTING IS A TOUGH JOB!

"Parenting is a Tough Job, yet we can make it the choicest time in human life! Let us become inspired with brilliant motives so we can more effectively enrich and enhance the quality of our daily family living."

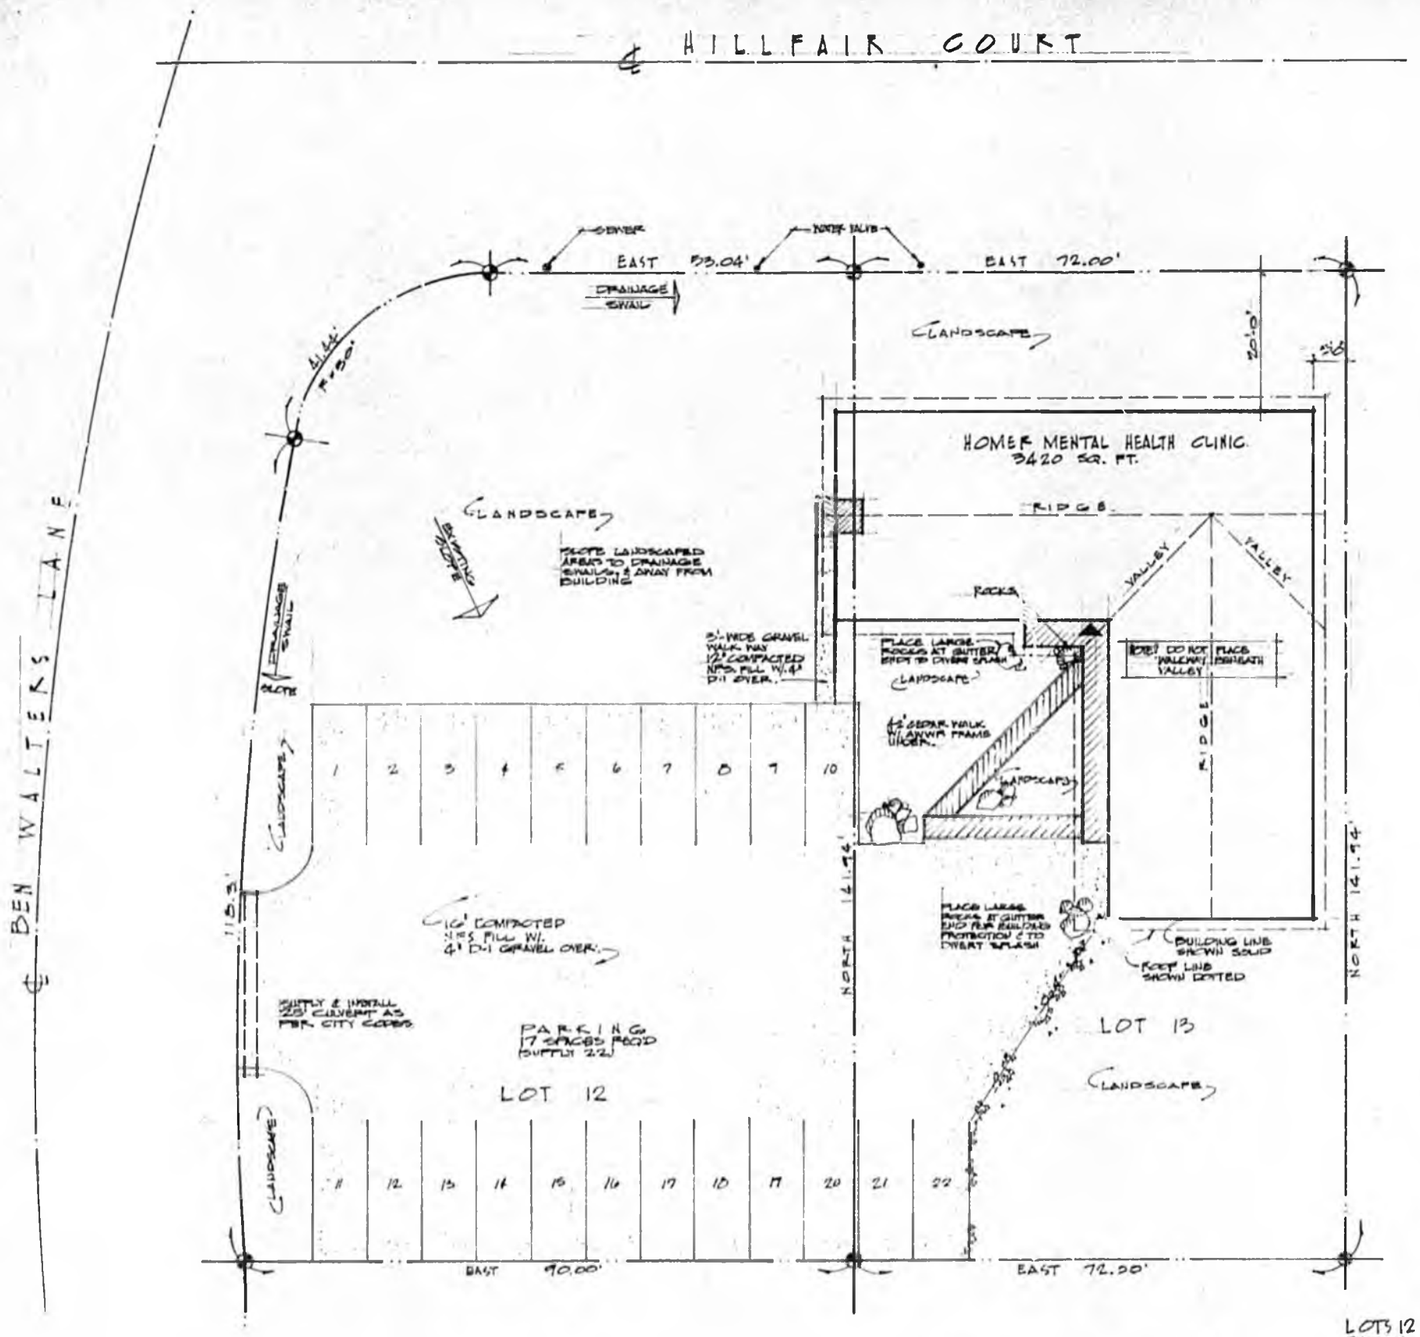
—Eileen Littrell, M.A.
Parent Educator

THIS PROGRAM PROVIDES:

★ Parenting Skills Classes
★ Support Groups for Parents
★ Individual & Family Counseling

Common Child Problems Addressed:

- Short attention span
- Non-compliant behavior
- Temper tantrums
- Hitting others
- Verbal abuse
- Eating problems
- Disobedience
- Toilet training
- Whining



Pa enting Skills

are
discussed within small group settings with a
practical "How To" approach

How to:

—Defuse anger
—Reduce stress
—Agree to disagree
—Be cordial yet frank in sending "I" messages
—Set training priorities
—Generate unconditional positive regard
—Detect and prevent double messages,
i.e., teach honesty
—Prevent power plays & manipulating behaviors
—Speak with moderation
—Be firm but kind
—Calm tempers
—Effectively ignore to reduce undesirable behaviors
—Extinguish undesirable behaviors
—Set appropriate limits on your child's behavior
—Appreciate normal stages of child development
—Enjoy your children
—Effectively encourage to shape desirable behavior
—Win your child's respect and cooperation

Subject: Homer Mental Health Center - New Building Construction

Dear Ms. Calkins and Board Members:

Our estimate of the additional cost involved for a deep foundation (i.e. piles under the footers) would be approximately $25,000.00.

We submit this information to you so that provisions can be made in the budget for this type of foundation. A deep foundation may be required for this site to keep the settlement within tolerable limits.

Please call us if you have any further questions.

Thank you.

Sincerely,

Dennis M. Gier, P.E.
D.M. Gier & Company

Dear Ms. Calkins and Board Members:

Enclosed is the Revised Soils Reconnaissance Report for the new Homer Mental Health Center.

This revision is a result of further discussion with Soils Engineers from Woodward-Clyde concerning the soft silt and peat layers found on the proposed building site. We want to emphasize that the foundation design for this site may require the use of deep foundations (i.e. piles under the footers) to keep settlement within tolerable limits.

We submit this additional information to you so that provisions can be made in the foundation design to accommodate the on-site soil conditions.

Please call us if you have any further questions. Thank you.

Sincerely,

Dennis M. Gier, P.E.

SUBJECT: Revised soils reconnaissance report for the proposed Homer Mental Health Clinic located on Lot 12 & 13, Lakeside Subdivision, Homer Recording District.

Dear Mr. Gier:

In accordance with your request, we have performed a limited soils reconnaissance on the subject property. In general we have found the site may be suitable for the proposed development provided the recommendations presented herein are incorporated into the project.

General Site Description

The site consists of two undeveloped residential lots bounded on the northerly and westerly sides by gravel surfaced roads. Vegetation consists of medium density spruce to 15-inch diameter. Undergrowth consists of tall grasses, some devils club and some alders. To the east of the properties is a small semi-defined drainage system. A utility corridor exists on the southerly boundary, where free standing water was noted during the site visit.

It is our understanding the proposed development will consist of a one story wood frame structure founded on concrete footing and block stem wall. Parking is to be provided on a gravel surfaced pad.

General Soils Conditions

Four backhoe trenches were excavated on the site on September 14, 1983 to a maximum depth of 11½ ft. Approximate locations of the trenches are shown on Figure 1. Soils encountered consisted primarily of soft clayey silts, fine sands and peat. A distinct layer of un-decomposed trees and branches was encountered in trenches 2, 3 and 4 at depths ranging from 3½ to 6 ft. Logs of the trenches are shown on Figures 2 - 5.

Water flowed into all four trenches during excavation. Flow rates were low enough to allow continued excavation and inspection of the trench walls. The highest observed flowing water is indicated for each trench on the logs. Water levels may vary considerably, depending on several factors including rainfall. Water levels on site can be expected to rise to near or on the current ground surface.

Two in-place density tests were performed on the site in representative soils near the foundation bearing level. In addition, two samples were obtained for moisture contents. Results of all the tests performed are presented in Table 1 The soils were saturated and loose.

Recommendations

Three conditions warrant special attention during the development of the site 1) high water, 2) the buried un-decomposed organic layer, and 3) the lower soft silt and peat layers. Each condition will be discussed and alternatives presented.

High water table conditions on the building site can lead to foundation troubles. Problems include water seepage into the crawl space and hydrostatic pressure on the footing stem wall. Design of

waterproofing and a perimeter drain for the foundation to eliminate water seepage should be incorporated into the plans. The stem walls for the foundation should also be designed to resist hydrostatic pressure. Because of the high water conditions footings should also be designed for buoyant conditions.

The buried un-decomposed organic layer could cause excessive settlements if footings are founded just above the layer. It appears that the organic layer extends over most of the site, but not at uniform depth. The footings should extend below the upper organic layers and the footings should be designed to accommodate the differential settlement that may result from the compression of the lower organics and soft silt layers. It may be necessary to use deep foundations, i.e. piles to keep settlements within tolerable limits.

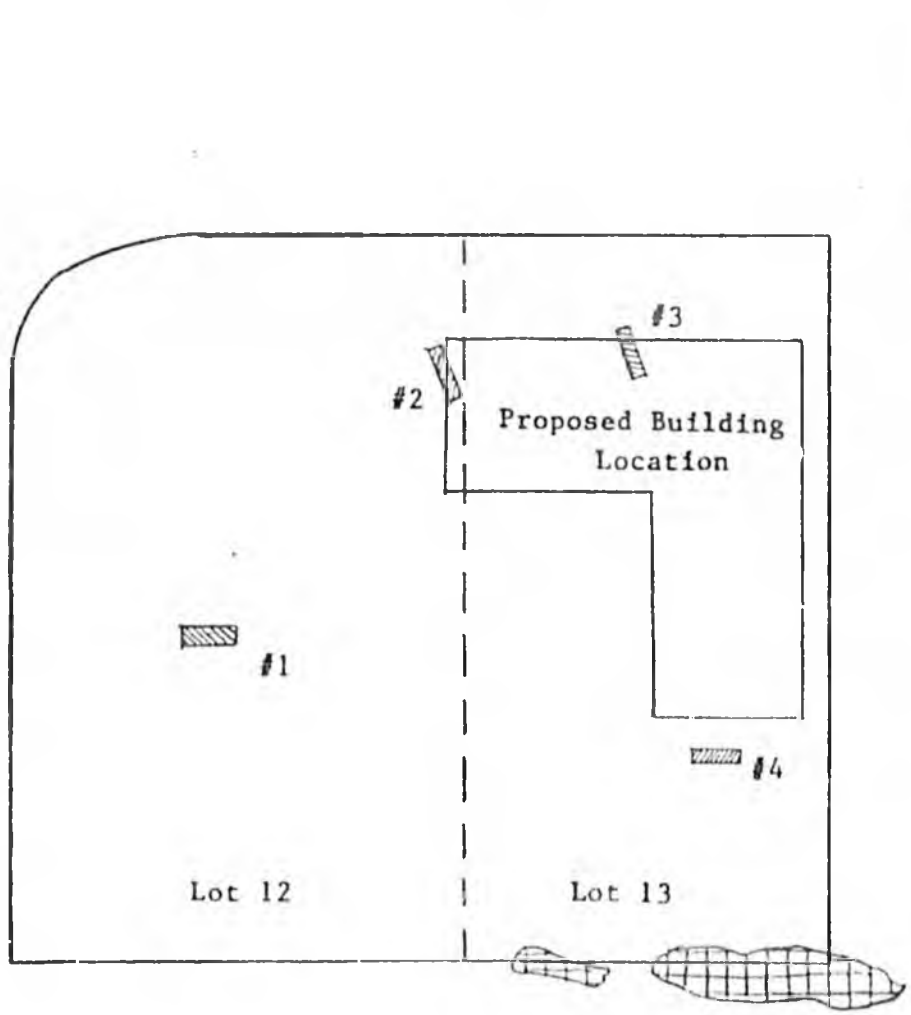
Due to the limited nature of the reconnaissance predictions of water conditions and settlement cannot be estimated. Residential development on neighboring property was observed and noted that no special considerations were taken beyond waterproofing and the possibility that a drain system was going to be installed. This observation does not mean those residences 1) have identical soils conditions especially with the un-decomposed organic layer or 2) that they will provide trouble free conditions over the life of the structure. Free standing water was observed at about 1 foot below the ground surface.

Also due to the limited nature of our study no considerations were given to a seismic response of the site. In general wood frame structures behave well, however, loose saturated sands, of which pockets were observed may experience extreme loss of strength and large settlements. If seismic design is desired, additional site work and laboratory testing will be required. We will be glad to assist you in putting together an additional program to meet your needs, if desired or required.

If large settlements are a concern, additional work should include consolidation testing of selected samples and analyses to determine an appropriate foundation system to limit settlements.

We understand your current budget limitations and hope you understand the limitations that has placed on us. If there are any questions regarding this report, please do not hesitate to contact us at your convenience.

Sincerely,



Keith Mobley
Sr. Staff Engineer

I. EXCAVATION

A. GENERAL

1. The contractor is to familiarize himself with the existing site conditions and information from the soils survey.
2. The owner will provide soil inspection service during earthwork operation.

B. TYPES OF FILL

1. Well-graded, non-frost susceptible material consisting of sand, gravel, or broken stone containing less than four percent of grains less than 0.02 mm. Materials shall not exceed four inches on any dimensions - except in the top six inches under footings, no size greater than one and one-half inch. All materials to be free of frozen lumps, rubbish, and organic matter.

2. Material noted as D-1 to meet the gradation and fraction specifications for Alaska Highways D-1 base course.

C. EXCAVATION.

1. Finish floor elevation to be determined in the field upon examination of existing site conditions and drainage considerations. Provide drainage for footers and run drain tile to daylight.

2. All footings shall bear on compacted backfill or in-place material at minimum depths called for on drawings.

3. Keep foundation bearing areas dry and free from frost. In the event bearing surfaces are softened by water of frost, re-excavate to approved bearing material and backfill to correct elevation with compacted backfill as specified.

4. Where excavations are carried below required depths, backfill to designated elevations with compacted backfill as specified at no charge to the contract sum.

5. Shore banks of excavations sufficiently to prevent caving. Remove all shoring before backfilling. All excavation shall be done in a manner which will create a minimum hazard and in accordance with applicable safety rules.

D. DEWATERING

1. Prevent surface and subsurface water from flowing into excavations. Do not allow water to accumulate in excavations. Remove water using methods which will prevent softening of foundation bottoms.

2. Provide and maintain pumps, sumps, discharge lines, and other components to carry water away from the excavations.

E. COLD WEATHER PROTECTION

1. Protect excavation and fill material against freezing. Do not place frozen fill material.

F. BACKFILL

1. Backfilling may be done with existing material if available and in accordance with plans.
2. Place backfill in accordance with soils report.
3. Place backfill so as not to damage structure, drain tile or utilities.
4. Provide foundation drainage system as shown on drawings.

G. COMPACTION

1. Compact all backfill with an approved vibratory compactor, and as recommended in soils report.

H. GRADING

1. Uniformly grade, form to smooth transition lines.
2. Grade areas adjacent to building lines to drain away from structure.
3. Protect newly graded areas from traffic and erosion. Keep free of trash and debris.

II. FOUNDATION

A. GENERAL

1. The contractor must examine the substrata and the conditions under which the concrete reinforcement is to be placed. Do not proceed with work until unsatisfactory conditions have been corrected.
2. Comply with requirements of the Uniform Building Code and Concrete Reinforcing Steel Institute's "Manual of Standard Practice."
3. Store concrete reinforcement materials at the site to prevent damage and accumulation of dirt or excessive rust.
4. All reinforcing for concrete to be in any one day must be placed, tied, inspected and approved by owner before any concrete is cast. Notify at least 24 hours prior to concrete placement.
5. Cast no concrete when temperature is below 40 degrees F. or can be expected to fall below 40 degrees F. in the next 24 hours, unless approved special provisions have been made for maintaining heat around pour.

B. FOOTINGS

1. Place two #5 rebar as shown on drawings.

C. CEMENT

1. 3,000 psi compressive strength.
2. Five and one-half sacks cement per cubic yard, minimum.
3. Six gallons of water per sack, maximum.
4. Three inch slump, maximum.
5. Three-quarter inch maximum aggregate.

D. Place anchor bolts as indicated on drawings and as required to secure each end of plate at corners. Place vertical bond steel.

E. Use mechanical vibrating equipment for consolidating concrete.

F. CONCRETE MASONRY UNITS
1. Use 8"x8"x16" concrete block.
2. Cement - Standard brand of Portland cement.
3. Sand - Clean, sharp, fresh water.
4. Water - clean, potable.
5. Lime - "Slick" or "Miracle" brand, or equal.
6. Reinforcement, as shown on drawings.
7. Place anchor bolts as shown on drawings and as required by codes, and to catch both ends of plate at corners and within 12 inches of each end of plates at end joints.

G. MORTER MIXING
1. Measure each batch accurately and mix with machine:
One cubic foot of Portland cement,
One-quarter to one-half cubic foot of lime,
Two and one-half cubic feet of sand.

H. LAYING UNITS
1. Lay all units with full bed of morter, common running bond. Shove into place. All horizontal joints to be level on each course. Bond all right angle connections. Internal angles bonded.

I. Foundation wall to be smooth and free of morter on exterior surfaces to accept moisture seal treatment.

J. Seal block with Conklin "Wall-up" as recommended by manufacturer.

K. Protect masonry work and moisture barrier treatment from freezing during curing period.

III. ROUGH CARPENTRY

A. QUALITY CONTROL
1. Grading rules: Standard grading and dressing rules of the West Coast Lumberman's Associations latest edition. Each piece of yard and structural lumber shall bear official grade mark of appropriate bureau or association.
2. Protect lumber and plywood from damage by weather.
3. Do not allow splash from eaves to stain unfinished siding.
4. Workmanship: Plumb, level, and true to lines, close-fits with nailing as shown or minimum as specified in sections 2517 and 2518 of 1979 Uniform Building Code.

B. MATERIALS

1. Framing lumber: Douglas Fir, Coast region or Hem-Fir, Standard grade or better.
2. Plywood: Plywood sheathing shall be APA Exterior Grade "D-D" Douglas Fir Plywood of thickness and type indicated on the drawings.
3. Plates: Plates and studs anchored to masonry with one-half inch galvanized anchor bolts 48 inches on-center maximum or four power driven stud fasteners at three inch on-center maximum. Single plate at floor, double at ceiling. Plates adjoining masonry bust be AWWF.
4. Joists and rafters: set crown side up. Double headers and trimmers.
5. Bridging: Solid blocking on 1"x4" cross bridging (or pre-fab metal) no more than eight feet on center.
6. Fasteners: Bolts, washers, lags, nails or other fasteners shall be hot-dip galvanized when exposed to weather or moisture. All fasteners into concrete or masonry to be galvanized. Use only galvanized nails on exterior siding. All fasteners used in preserving treated wood to be stainless steel.

C. INSTALLATION

1. Execute rough carpentry using best industry practices. All lines to be straight and true.
2. Install framing at spacing shown on drawings or as required. Block or back for plumbing fixtures and other equipment secured at walls and ceilings. Double studs at all openings, triple at corners. Provide solid backing for all door stops.
3. Headers shall bear on at least one cripple stud for space up to six feet, not less than two cripple studs for space greater than six feet. Place one full height stud adjacent to each end of header next to cripple studs.
4. Joists and beams to be laid crown up.
5. Do not notch or drill in the middle one-third of span on joists or bearing studs.
6. Tolerances:
   Top of bearing plates - ± one-quarter inch in ten feet.
   Wall divisions and openings: ± one-quarter inch.
   Wall bowing or warping: ± one-quarter inch in ten feet.
   Stud alignment: 1/8th inch from two adjacent studs.

IV. WOOD TRUSSES

A. All trusses shall be Gang Nail wood trusses, factory built using stress graded lumber bearing the proper grade mark stamp of a recognized grading association. Connectors shall be galvanized Gang Nail connectors, and shall be stamped "Gang Nails." The trusses shall be inspected by the contractor during installation to see that all connector plates are pressed fully into the wood. Trusses to be designed by manufacturer to support minimum fifteen pounds dead load plus thirty pounds live load per square foot.

B. INSTALLATION

1. Truss shall be handled and stored in a manner which they are not subject to damage. Sufficient bearing points and/or bracing shall be provided to prevent excessive lateral bending or tipping over.
2. Framing anchors shall be provided by the contractor in accordance with the plans.
3. The truss system shall be braced during erection to prevent toppling or dominoing of trusses, and permanently braced to form complete structural truss system.
4. During the entire construction period, all contractors shall adequately distribute loads so that the carrying capacity of any one truss or member is not exceeded.
5. All erections and permanent bracing shall be installed and all components permanently fastened before the application of any loads.

V. FINISH CARPENTRY

A. MATERIALS

1. Doors: Pre-hung, tan oak, solid or hollow core as indicated on drawings. Oak veneer jambs.
2. Door casing: Solid oak.
3. Window trim: Oak veneer.
4. Paneling: one-quarter inch real wood - Champion "Woodland Ash."
5. Storage shelving: three-quarter inch AC plywood, 1"x3" pine face and supports.
6. Book shelves: Solid oak frame, 1"x12: fir shelves, three-quarter inch oak veneer sides.
7. Exterior trim: Cedar.

B. INSTALLATION

1. All work to be true, plumb, level unless otherwise shown. Scribe fits, hairline joints, scarfed and mitered running joints, neat and accurate.
2. Nailing: finish nails for mill work; blind nail work if possible; set surfaces nails; paneling nails to match.
3. Glue joints with permanent synthetic glue. Moldings mitered at corners, coped at angles.
4. Exposed surfaces to be sanded to smooth, even surfaces, ready to finish. All nails set one-sixteenth inch deep. Ease all edges one-sixteenth inch radius. Fill all nail holes.
5. Set exterior trim in waterproof caulking as necessary for waterproof installation. Use silicon caulk.

VI. DOORS AND WINDOWS

A. EXTERIOR METAL DOORS

1. To be equal to Pease Ever Straight door system. Size and type as scheduled on drawings. Provide complete door system, including frame, threshold, and all hardware. Weatherstripping to be magnetic type. Provide exit sign. Front entrance: Pease crossbuck with glass. Other entrances: Pease E-1.

B. INTERIOR DOORS

1. See door schedule. See painting and wood finish schedule.
2. All interior hollow core and solid core doors shall be Tan Oak with oak veneer jambs and solid oak casing. All doors adjacent to hallway and reception area shall have smoke seal and twenty minimum U.L. label.

C. DOOR INSTALLATION

1. Install all doors and hardware as specified, provide level and free swinging operation. Doors to fit tightly without binding or excessive play.

D. WINDOWS

1. All windows to be "Hurd" aluminum clad wood windows with "Heat Mirror" film. Casement type and as shown on drawings. Provide fiberglass screens.
2. Exterior fixed glass to be seven-eighths inch double pane, three-sixteenths inch glass.
3. Interior fixed glass to be one-way type one-quarter inch plate.

E. WINDOW INSTALLATION

1. Install in rough openings, shim for alignment and tight fit, level and straight. Use standard factory nailing flanges where required. Caulk all around for weather tight installation. Stuff spaces with fiberglass insulation before application of vapor seal and sheetrock. Set exterior trim in bed of silicon caulk to insure weathertight installation.

VIII. HARDWARE

A. MATERIALS

1. Lawrence, Stanley, or McKinney butts.
   Sizes: 1-3/4" exterior for 5"x4-1/2".
   1-3/4" interior doors 4-1/2"x4-1/2".
   To obtain maximum degree on openings, butts shall be as required to clear projecting trim or structural conditions.
2. Quantity: One and one-half pair butts each exterior door, each solid core interior door, and each hollow core door.
3. Locksets: Sargent six line. Bronze finish. Provide keyed locks at each exterior door and janitorial. Passage locks elsewhere. Provide dead bolt at rear and front doors.

4. Door Closures: Provide door closers as indicated on door schedule. Closure to be Sargent 1250 Series. Verify for type of installation. Furnish cold weather fluid.
5. Mop and kick plates to be Sargent eight inches high stainless steel. All plates shall be furnished with width as required to provide one-quarter inch of clearance at sides of door on stops or weatherstripping.
6. Door stops: provide door stops at all doors. Sargent, Johnson, Quality, Builders Brass, or Ives. Where wall stops are not applicable, furnish floor stops. Install proper backing at all stop locations.
7. Keying: System by owner. All locks to be master keyed. Furnish two keys per lock or cylinder, and four construction master keys. Return all master keys.

B. INSTALLATION

1. Provide solid blocking for all stops.
2. Fasteners: Check all conditions and use fastening devices as needed to securely anchor all hardware as per manufacturers published templates. Self tapping sheet metal screws are not acceptable. All closures on wood doors shall be through-bolted.
3. Mounting heights: Mount units at height recommended in "Recommended Locations for Builders' Hardware" by NBHA, except as otherwise indicated.
4. Install each hardware item in compliance with the manufacturers instructions. Wherever cutting and fitting are required to install hardware surfaces which will be painted or finished a a later time, install each item completely and then remove and store in a secure place. After completion of the finish, reinstall each item. Do not install surface mounted items until finishes have been completed on the substrate.
5. Adjust and check each operating item of hardware and each door to insure proper operation or function of every unit. Replace units which cannot be adjusted to operate freely and smoothly or which are warped or damaged.
6. Coordinate all boring, backset, tapping information with door suppliers or others applicable.
7. Wherever hardware installation is made more than one month prior to acceptance or occupancy, make a final check and adjustment of all hardware items during the week prior to acceptance or occupancy. Clean and lubricate operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment.
8. All hardware to be installed by experienced tradesmen using top quality techniques. All finish hardware shall be guaranteed against defects in workmanship and materials and operation for a period of one year, backed by a factory guarantee of the hardware manufacturer, except the door closures shall be so guaranteed for five years. No liability shall be assumed by the hardware supplier where faulty operation is due to improper installation or failure to exercise normal maintenance.

VIII. GYPSUM WALLBOARD

A. MATERIALS

1. Wallboard: See details and floor plan for thickness. Apply behind panelling locations. In all wet areas such as toilets, custodial, and kitchen, use moisture resistant type board throughout. All exposed gypsum wallboard to have paper face suitable for painting.
2. Trim: Provide metal beads and trim as required for finish corners and edges as shown on drawings and as follows: finish edges and edges abutting other materials, USG #200A; at outside corners, USG "Dur-A-Bead."
3. Joint system: "Pref-A-Tape" System by U.S. Gypsum Company, or equal.

B. INSTALLATION

1. When outdoor temperature requires, heat shall be maintained in the building continuously and uniformly at not less than 55 degrees F. from one week prior to installation until wallboard application and joint treatment is completed. Installation shall not be started until windows are glazed and exterior doors installed, unless openings are temporarily closed. Provide ventilation, either natural or forced to remove excess moisture during joint treatment.
2. Review work prior to sheetrocking to insure that all framing, blocking, insulating, plumbing, electrical, and plumbing & electrical protective plates have been finished and installed properly.
3. Comply with manufacturers requirements for fire resistance ratings.
4. Use wallboard of maximum practical lengths horizontally or vertically. Bring boards into contact, but do not force into place. Where ends or edges abutt, fit neatly. Ends of all wallboard shall meet over nailing members. Joints on opposite sides of wall shall meet on different studs. Attach wallboard with one inch Hi-Lo screws, USG Type S and/or one and one-quarter inch USG brand screw type W, or one and three-eighths inch annular ring nails, spaced not more than 12 inches on center for framing 24 inch on center, and 16 inches on center for framing spaced 16 inches on center.
5. Space fasteners at least three-eighths inches from edges and ends of wallboard. Fasteners on all framing members shall be spaced and driven as recommended for specified fastening method. While driving fasteners, hold wallboard in firm contact with underlying support. Attachment shall proceed from central portion of wallboard towards ends and edges.
6. Install corner beads on all exterior corners, attach with suitable fasteners at nine inches on center, on both sides. Use single lengths.
7. Install metal trim over wallboard, at all locations where board terminates with exposed edge or a abutts other materials. Attach with suitable fasteners nine inches on center, in single lengths.
8. Fasten all metal using drywall screws, or nails as recommended by manufacturer.

9. Upon review, installed drywall should look clean, neat, with close cuts around boxes and windows, etc., small gaps at corners. All broken edges etc. should be peeled back and ready for repair by taper. In general, it should have a professionally applied appearance.
10. Scrap out building and clean for taping contractor.

C. JOINT TREATMENT

1. Mix joint treatment compounds according to manufacturer's directions.
2. Apply thin, uniform layer of taping compound to all joints and angles to be reinforced. Apply reinforcing tape immediately, centered over joint, seated into compound. Follow with skim coat immediately, but not as a fill or second coat. Fold tape properly and embed in all angles.
3. After taping compound has hardened, apply taping compound, filling board taper flush with surface. Fill coat shall cover tape and feather out slightly beyond taper. On joints with no taper, fill coat shall cover tape and feather out at least four inches on either side of tape. No fill coat is necessary at interior angles.
4. After taping compound is dry, spread finishing coat of taping compound evenly over and extending slightly beyond fill coat on all joints and feathered to a smooth, uniform finish. All taped angles shall receive a finish coat to cover tape and taping compound, and provide a true angle. Sand between coats and after final application of compound to provide a smooth surface ready for decoration.
5. Apply taping compound to all fastener depressions followed, when hardened, by at least two coats of taping compound leaving all depressions level with plane of surface.
6. Apply taping compound to all bead and trim feathered out from ground to plane of surface. When hardened, follow by two coats of taping compound applied separately and allowed to dry between coats. Feather finish coat from ground to plane of surface and sand to provide a flat smooth surface ready for decoration.
7. All gypsum wallboard to be taped and finished unless concealed. Concealed gypsum board to be fire taped.
8. All gypsum board to receive light orange peel knock down type texture, except restrooms, janitorial and storage which will receive smooth surface.

IX. CERAMIC TILE

A. Provide and install ceramic tile as shown on drawings.
1. Comply with applicable requirements of American National Standard Institute (ANSI) A108.1, A108.4 and A108.5, and recommendations of the Tile Council of America, Inc. (TCA) "Handbook for Ceramic Tile Installation." Comply with the manufacturer's instructions for the installation of each material.
2. Two inch square ceramic mosaic porcelain tile at shower.
3. Build up shower floor with mortar bed to provide slope, include shrinkage mesh, allow for final setting bed.
4. Provide for soap dish.
5. Ceramic tile shower walls, ceiling, floor, returns, etc. as shown on drawings. Use trim pieces as necessary for finished installation."

X. FLOOR COVERING

A. RESILIENT FLOORING AND CARPET

1. Vinyl: Mannington Aristocon - color by owner.
2. Carpet: Columbia Innovation and Classic Stripe - 100 percent Oliphin.
3. Pad: Five-eighths inch FHA pad.
4. Adhesives: As per manufacturer's recommendations.
5. Rubber base: Use premolded corners and end stop units; smooth finish; four inch high, set on cove type; light brown color.

B. INSTALLATION

1. Provide reducing strips at exposed edges of resilient flooring and at change from resilient to other floor finish. Anchor strips solidly as per manufacturer's recommendations.
2. Extend resilient flooring into closets and offsets and under movable equipment scheduled to receive resilient flooring. Extend unexposed edges of flooring under set-on bases and similar trim work.
3. Thoroughly clean all floor covering not more than four days before acceptance or occupancy by the owner.
4. Protect floor coverings from damage and from normal wear and tear throughout construction period so that it will be without indications of use or damage at the time of acceptance by the owner.
5. Carpet and resilient flooring to be installed by a professional installer. Invisible, sealed, tight, hairline seams. Carpet to be stretched with power stretcher where applicable.

XI PAINTING AND FINISHING

A. GENERAL

1. It is the intent of this section to provide finish for all materials factory pinned or unfinished unless specifically stated as not requiring finish. Omission of specific surfaces from "Room finish" schedule is not to be interpreted to mean that finish is not required.
2. Contractor is responsible for finished appearance and satisfactory completion of this work. Do not commence any painting until surface to be painted is in proper condition in every respect. If for any reason surface cannot be properly prepared by customary cleaning, sanding, or puttying operations, report condition to the owner. Proceeding with the work constitutes acceptance of the surface by the subcontractor.
3. Do not paint when the air is dust laden nor when weather and temperature conditions are unsuitable. Maintain temperatures within the building at a minimum of 60 degrees F. during the painting and drying periods. Do not paint exterior surfaces in damp or rainy weather, nor when the temperature is below 50 degrees F. Comply with the manufacturer's recommendations when they are more stringent with respect to application temperatures.

B. PROTECTION

1. Place paint or solvent soaked rags, waste, or other materials which might constitute a fire hazard in metal containers and remove from premises at the close of each day's work. Take every precaution to avoid damage by fire.
2. Provide suitable coverings to protect work, the work or others, and adjacent surfaces and objects.
3. Remove or protect items such as hardware, hardware accessories, lighting fixtures and similar items placed prior to painting. Reposition or remove protection upon completion of each space. Disconnect equipment adjacent to walls by workmen skilled in these trades to permit painting of wall surfaces, replace and reconnect after completion of painting.

C. MATERIALS AND APPLICATION - EXTERIOR

1. Exterior body: Olympic Transparent Stain #718 to be roller or brush applied. Stain may be spray applied if followed with wet roller or brush to work stain into wood surface. Application by airless sprayer alone will not be allowed. Apply two coats.
2. Exterior trim and cedar: Behi "Liquid Rawhide". Apply with brush. One coat tinted, two coats clear.
3. Metal doors: Two coats Fuller O'Brien Enamel - color by owner (Coco Brown).
4. Wood deck: oil preservative.

D. MATERIALS AND APPLICATION - INTERIOR

1. Gypsum wallboard surfaces: one coat acrylic latex sealer, two coats Fuller O'Brien semigloss enamel. Apply sealer after taping, before texture is applied. Let dry, apply texture, let dry, finish with paint: (P-2) one coat acrylic latex sealer, two coats Fuller O'Brien gloss enamel.
2. Transparent stain on wood surfaces:
   Oak and other hardwoods - sand smooth and stain with "Daly's" penetrating stain. Brush on and wet sand with #400 wet or dry paper. Let soak at least five minutes, or as required for desired effect. Let dry, then apply two coats Daly's Den-Matt clear Danish oil. Apply each coat in liberal amounts, let soak and wipe off excess.

   Fir and other softwoods - sand smooth, then apply "Daly's" clear Penelac Sealer. Let dry. Apply stain as above (no sanding). Wipe after stain has soaked for color. Apply tow coats oil as above.

   Storage shelving - one coat primer, two coats Fuller O'Brien high gloss enamel.

XII TOILET AND BATH ACCESSORIES

A. DESCRIPTION - ACCESSORIES

1. Cabinets and mirrors:
   Men's and women's - one-quarter inch plate mirror, 24 inch x 36 inch.

   Staff bath - one-quarter inch plate mirror, 24 inch x 36 inch. Medicine cabinet - 14 inch x 24 inch recesses with mirror; model #P1510-OA-P, as manufactured by Perma Bilt.
2. Towel bar: all towel bars to meet standards of grab bar. Conform to DBC, Section 1711b. One and one-quarter inch outside diameter pipe, stainless steel type 304, #4 satin finish. Location shown on drawings. Supply solid backing.
3. Toilet paper holders: all baths, recess mounted double roll holder as manufactured by Bobrick.
4. Towel dispensers: all baths, as manufactured by Bobrick.
5. Grab bar: see floor plan and interior elevations. Two each, men's and women's, #352-24inch straight grab bars as manufactured by Bobrick.
6. Shower door: 24 inch wide aluminum =/obscure glass shower door.

B. GENERAL

1. Assumes that all required backing and/or concealed anchors are in place, that all surfaces to receive accessories are suitable for quality installation.
2. Install all accessories in exact compliance with manufacturer's printed directions, where shown on drawings and securely fastened to solid backing.

XIII CABINETS

A. KITCHEN cabinets and bath cabinets by Pacific Cabinet Corporation. Solid oak doors and rails, raised panel doors. No pulls. Nutmeg color.

B. LAMINATED plastic countertops. Preformed with factory end caps and splash as required. Formica or Wilson Art, color by owner.

C. INSTALLATION

1. Verify that interface surfaces are plumb, straight, and true; solid, rigid, and in all ways acceptable to install as a base for quality cabinet work installation. Verify field dimensions.
2. Assemble cabinets according to printed directions.
3. Secure cabinets in place, plumb, level, square and true without distortion. Level with concealed shims if required.
4. Scribe face plates, backsplash, filler strips and trim strips to adjacent walls.
5. Secure top in place.
6. Insure that doors, drawers, and other moving parts operate freely and correctly.

IXV PLUMBING

A. GENERAL

1. Install all plumbing in conformance with the Uniform Plumbing Code, Uniform Mechanical Code and all ammendments by local authority.

B. DOMESTIC HOT WATER AND COLD WATER PIPING

1. Rigid copper tubing type "L" with copper or bronze sweat fittings, and copper to IPS adapters.
2. Provide unions adjacent to each valve, where connected to equipment. Use isolation unions between dissimilar materials.
3. Use soft drawn type "K" copper with compression fittings or silver soldered joints below grade.
4. Grade all plumbing towards a low spot in the system, if possible, and provide with one-half inch hose and drain valve, with removable key.
5. Test all water piping hydrostatically at one and one-half times the pressure found at the site or 80 psi minimum, for four hours. It is the responsibility of the plumbing contractor to see that the system is tight. Any damage to the building caused by a faulty plumbing system shall be the responsibility of the plumbing contractor. Do not cover piping until test requirements are satisfied. Install metal plumbing protectors where plumbing comes within 3/4" of framing surfaces where sheetrock is to be installed.

C. SANITARY DRAIN, WASTE AND VENT PIPING

1. All underground pipe and fittings shall be cast iron "No Hub" service weight with "No Hub" fittings and joints.
2. Inside building - Pipes 2" and less shall be ABS. Over 2" shall be "No Hub" cast iron with "No Hub" fittings and joints.
3. Support all stacks at base.
4. Cleanouts - Where shown, required by code or necessary for maintenance.
5. Test in accordance to Uniform Plumbing Code. Do not cover until requirements are satisfied.
6. Horizontal Drain lines shall have a uniform slope of 1/4" per foot toward point of disposal.
7. Provide vents for all traps. Vents maybe joined 6" above flood rim of fixtures they serve, and collected for the run up to the roof. Observe vent signing per UPC when collected. Vents above heated spaces must be insulated with 1" fiberglass.
8. Extend vents 24" above roof. Increase vent two pipe sizes, 24" below roof penetration. Support vent with clamp to structural member within 6" of roof penetration.
9. Cleaning of domestic water supply: All fixtures and piping using potable water shall be flushed with clean water. Fill entire system with liquid chlorine solution so that the resulting solution in the piping, etc. is at least 50 PPM chlorine. All valves in the system shall be operated three times. Leave solution in contact with systems for 24 hours. Flush thoroughly with clean water, operating valves until no more than one PPM chlorine is obtained.

10. Install all fixtures per Manufacturer's written instructions. Observe clearances required by Code and for Maintenance.
11. All fixtures with water service shall have an 18" air cushion in line and near stop or valve.

D. FIXTURES TO BE KOHLER OR AMERICAN STANDARD
1. Toilets - Flush tank, white, Kohler-Wellworth Waterguard. Seatcover - Olsanite 30 TM. 50°F tempering valve.
2. Men's and Women's wall-hung lavatory - K-2731-B Tuanton - 16 X 14" with K8040-T faucet.
3. Staff bath - Round, countertop white lavatory - Kohler K2910. Faucet - K-8040-T.
4. Stops - Speedflex at all fixtures.
5. Drinking fountain - Kohler K5293A
6. Water heater - Electric 50 gallon.
7. Service sink - Swan-MFS 1-W - Single wall mount fiberglass laundry tub - Faucet - Bradley H6621

XV INSULATION AND MOISTURE BARRIERS

I. MATERIALS

A. Foundation walls - 2" thick blue styrofoam S.H. Board, installed outside.

B. Walls - $3\frac{1}{2}$", 2lb. urethane foam for R25 - Foam to be sprayed in place.

C. Floors - Owens Corning 9" Batts - support with wire insulation supports.

D. Ceiling to be cellulose insulation blown in 12" thick - R-38.

E. Sound insulation to be $3\frac{1}{2}$" Owens Corning Fiberglass. "Noise Barrier Batts". Install in corridors, toilet rooms, and as scheduled on drawings for sound rated walls.

F. Vapor barriers to be "Visqueen" six mill polyethlene sheet.

II. INSTALLATION

A. Install thermal insulation at locations shown on drawings and as required. Fluff insulation as necessary, leave no voids or pockets. Chink small areas full. Provide complete thermal envelope. Support as required.

B. Install vapor barriers on warm side of framing. Staple to studs, overlap joints 4" minimum. Cut neatly around penetrations, tape with duct-tape to maintain tight seal. Provide complete envelope of vapor barriers.

XVI. FLASHING AND SHEET METAL ROOF

A. THE EXTENT OF FLASHING ON OTHER METAL WORK IS SHOWN ON DRAWINGS

B. Metal Roof by Gifford Hill - Pro Pand II 29GA - brown color.
   1. Install as per Manufacturer's specifications, providing all necessary trim. Including - formed ridge and bottom and top closure strips.

C. Flashing @ sill - Special order from Gifford Hill - 2¢ quage galvanized steel, color - brown to match roof.

D. Gutters - Northwest Metal Products Co. Stylek Galvanized Gutters 26 gallon - brown color.
   1. Install as per Manufacturer's specifications.
   2. Ferrells and nails @ 2¢ O/C.
   3. Supply all connections, ferrells, nails, straps, caulk, etc. necessary to assure tight, durable, no leak gutter system with straight lines and quality appearance.
   4. Supply downspouts and splash blocks or rocks as shown drawings.

XVII. APPLIANCES

A. KICHENETTE - Norcold 30" wide "Patrician" MOAES/5 - Almond color.
   1. Install as per Manufacturer's specifications.

XVIII. BLINDS

A. LEVELOR - Inside mounted - dimensions in field. Color by owner.

Specifications: Homer Mental Health Clinic

XIX Electrical

A. GENERAL REQUIREMENTS

Applicable provisions of the Agreement and General Requirements of the specifications govern the work of this section.

B. WORK INCLUDED

Furnish and install a complete electrical system including all labor materials, equipment, lighting fixtures with lamps, switches, dimmers, receptacles, outlet boxes, motor wiring, wiring, and everything else necessary and/or required to produce a complete, safe, legal, and properly operating electrical system as herein specified.

C. MATERIALS

1. Provide a 200A, 120/240V, single-phase, 3-wire service with main breaker in accordance with utility company's requirements.
2. Load center: Shall be 200 amp MLO with snap-in circuit-breaker-type, breaker sizes as required.
3. Single pole, three-way switches; silent action type. Color to be ivory.
4. Receptacles: duplex 15A, 125V, grounded type. Provice GFI protection where required by code. To be ivory.
5. All devices and plates to be ivory Approved manufacturers: AH&H, Hubbell, P&S or equal.

D. WIRING

Branch circuit wiring shall be type NM with ground. Min. size wiring to be #12. Lighting: A maximum of 1,600 watts per 20A circuit is permitted for lighting. Receptacles: Install on separate circuit (20A) with maximum of eight devices.

E. LIGHTING FIXTURES

Install fixtures where indicated on drawings. Generally fixtures are either ceiling mounted two tube 40W fluorescent fixtures or recessed incandescent fixtures.

SEE FIXTURE SCHEDULE on working drawings for type and model No.

XX Heating

A. GENERAL REQUIREMENTS

Applicable provisions of the Agreement and General Requirements of the specifications govern the work of this section.

B. WORK INCLUDED

Furnish and install electric baseboard heating system for all spaces shown on working drawings. Each heater to be individually controlled by thermostat as shown on drawings. Equipment to be of sufficient capacity to insure 65 degree farenheit inside temperature. Provide mechanical exhaust of no more than 2 air changes per hour for toilets, showers, and kitchenette unit.

C. MATERIALS

Heating elements shall be standard 240V 1500 Watt wall mounted baseboard heaters unless smaller size is shown on working drawings. Units shall be as manufactured by Cadet Manufacturing Company, Trim Ray Models with thermostats, or equivalent.

Plan Review: 83A-560
Type Construction: V-N
Occupancy: B-2

Dear Doctor Craig:

Plans for the subject project have been reviewed by this office for conformity with the state fire safety regulations, however, prior to approval, the following items require clarification and/or implementation into the final documents. Following, please find our comments:

* SEE COMMENTS SHEET

A letter certifying the above listed items will be incorporated in the plans shall constitute final approval.

Approval of submitted plans is not approval of omissions or oversights by this office; nor is it approval of noncompliance with any applicable regulations of municipal government.

If we can be of any further assistance, please feel free to contact us at the above address or call 272-2404.

Sincerely,

Sylvester (Sam) Neal
State Fire Marshal

COMMENTS Community Mental Health Center P.R 83A-560

(1)

① Per our phone conversation on 12-1-83 dealing with the location of your building. If you move the building 15 Ft to the west, then there will be not one hour requirement for the east wall. If the building isn't moved, you will need to make the east wall one hour construction and remove all windows from that wall. Also, that one hour wall will need a one hour parapet as per Sec. 1709, Uniform Building Code, 1979.

② Every door opening into the corridor shall be protected by a tight-fitting smoke and draft control assembly having a fire-protection rating of 20 minutes. Doors shall be self-closing or shall be automatic closing. Per UBC Sec 3304 (b).

③ Per our phone conversation on 12-1-83 dealing with the corridor and conference. a exit corridor can not pass through the conference room. Recommend you change your floor plan to allow the corridor to exit directly to the outside. If you are not clear on what is required please call us to help you.

④ a draft stop for the attic area is required, per U.B.C. Sec 3205.(6).

COMMENTS 3

(5) Rooms 1 & 2, Reception & WAITING area will be required to be the ONE hour CONSTRUCTION as required for CORRIDORS. SINCE they are CONSIDERED as part of the CORRIDOR and not as INTERVENING ROOMS.

December 15, 1983

Jack R. McGary
Fire Protection Engineer
Division of Fire Prevention
Pouch 6313
Anchorage AK 99502

Dear Mr. McGary:

Thank you for your letter of December 6, 1983 regarding plan review: 83A-560.

Relative to each of the Division's recommendations, we would like to submit the following changes which are being integrated into our architectural drawings:

1- The plot plan will be altered to move the building 15 feet to the west in order to provide a 20 foot clearance from the property line;

2- All corridor doors shall have smoke and draft control assemblies with fire protection rating of 20 minutes and shall be constructed to meet UBC Section 3304(h);

3- The conference room will be rotated 90 degrees and placed on one side of the corridor with offices occupying the other side of the corridor so that the exit at the end of the corridor will open to the outside rather that into the conference room;

4- An attic draft stop will be integrated into the plans; and,

5- Rooms 1 and 2, the reception and waiting areas will be built to meet the one hour construction requirement for corridors.

Thank you for your review of our plans. Your comments were most helpful as we plan for the safety of the building and its occupants.

Sincerely,

Paul L. Craig, Ph.D.

RESOLUTIONS

Cook Inlet Council on Alcoholism and Drug Abuse
City of Homer

CITY OF HOMER

HOMER, ALASKA

RESOLUTION 83 - 12 A

A RESOLUTION OF THE CITY OF HOMER ENDORSING THE EFFORTS OF THE SOUTH PENINSULA MENTAL HEALTH ASSOCIATION, INC., TO SECURE MATCHING FUNDS FROM THE STATE OF ALASKA FOR A BUILDING.

WHEREAS, the City of Homer recognizes the value of the various services provided through the Community Mental Health Center including the Infant Learning Program, the Parent Training Program, Vocational Counseling, and Outpatient Mental Health Services;

WHEREAS, the City of Homer is aware of the gross inadequacies in the current facility rented by the Community Mental Health Center including inadequate office size, lack of ventilation, and inadequate provisions for confidentiality;

WHEREAS, adequate office space to house the programs offered through the Community Mental Health Center is not currently available in Homer; and

WHEREAS, the City of Homer expressed support for a building program by allocating $35,000 during November 1982 to the Community Mental Health Center as seed money to initiate land acquisition and building planning;

NOW BE IT THEREFORE RESOLVED that the City of Homer endorses the efforts of the South Peninsula Mental Health Association, Inc., (a private, non-profit organization) to secure matching funds from the State of Alaska to complete the proposed building project.

DATED at Homer, Alaska, this 28th day of February, 1983.

February 8, 1984

Representative Mae Tischer, Chairman
Health, Education, and Social Services Committee
Pouch V
Juneau AK 99811

Dear Chairman Tischer:

It has come to my attention that House Bill 482 concerning funding for the construction of a mental health facility in Homer is currently under consideration by the House of Representatives Health, Education and Social Services Committee.

An information packet describing the proposed facility, utilization, and cost-effectiveness is enclosed for your review. As you will note, the facility is being constructed for utilization by a variety of programs managed under the Community Mental Health Center including COMMUNITY MENTAL HEALTH services, CHILD ABUSE/CHILD NEGLECT PREVENTION services, INFANT LEARNING services, and VOCATIONAL COUNSELING. The building also will be utilized by the Cook Inlet Council on Alcohol and Drug Abuse for their Homer satelite office. The local need for such a facility is well demonstrated as documented in the enclosed facility proposal. The City of Homer has already allocated $35,000.00 toward this project, recognizing the need for an adequate facility to house these essential services. This $35,000.00 grant provided the financing for the purchase of the building site as well as the architectural drawings.

As President of the Board of Directors for the South Peninsula Mental Health Association, Inc., I urge you to consider House Bill 482 as soon as possible and to refer same to the House Finance Committee. Thank you for your consideration. Please keep me posted. If you have any questions, or if I can be of any help, please call me any time at 235-7248.

Respectfully,

Jeanne K. Calkins, President
South Peninsula Mental Health Association, Inc.

JAN 1984
RECEIVED

January 9, 1984

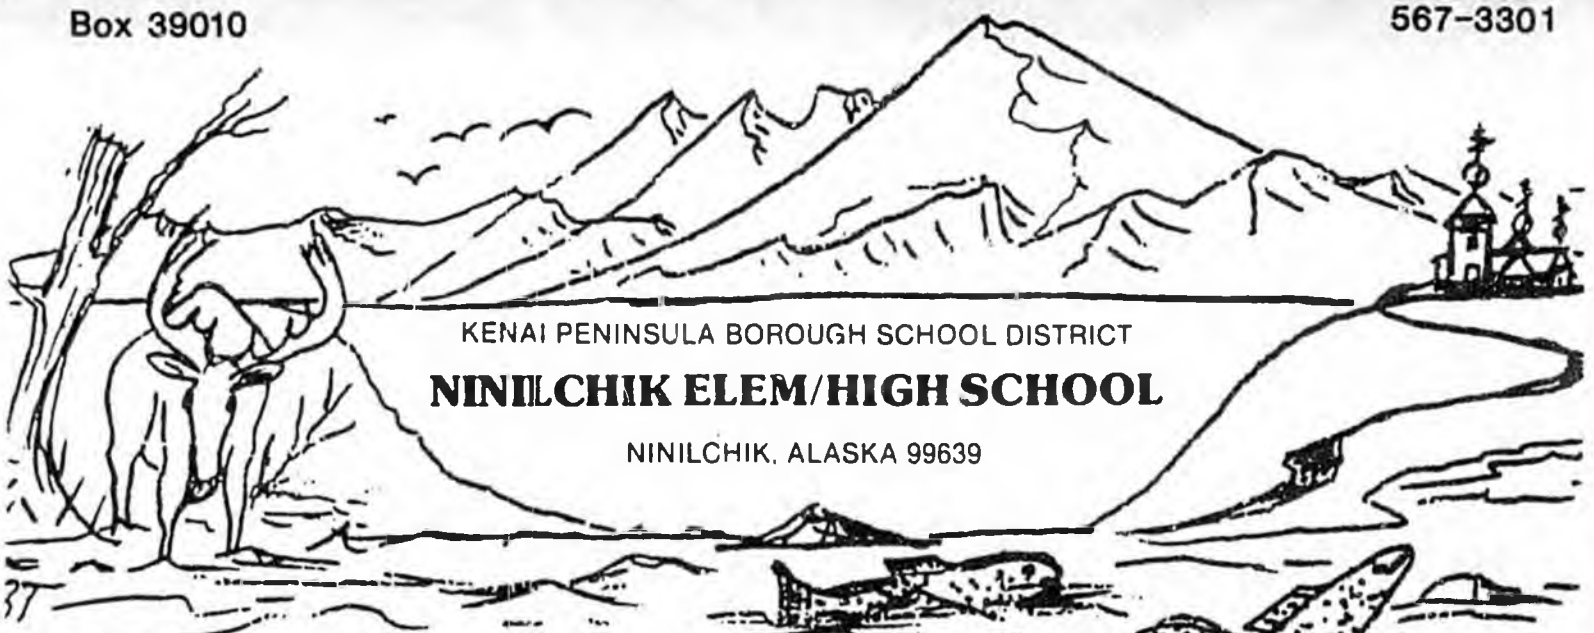
Rep. Mae Tischer, Co-Chairperson
House HESS Committee
Alaska State Legislature
Pouch V
Juneau AK 99811

Dear Representative Tischer:

I am writing this letter in my capacity as Chairperson of the Alaska Mental Health Program Director's Association, Inc. As an Association, we are concerned with the provision of community-based mental health services available to all residents of Alaska.

Several members of the Association as well as other concerned citizens in our state have approached me as Chairperson of the Alaska Mental Health Program Director's Association regarding the possibility of providing informational testimony to appropriate Committees of the Alaska Legislature regarding community mental health services. Hence, I would like to ask whether such an informational hearing could be scheduled for the House HESS Committee during the current Legislative session. The intent of the hearing would be informational with input from the Association as well as concerned citizens who may wish to testify. It is our hope that this testimony would prove useful to the Committee as it endeavors to make critical decisions regarding health and social services programs for the coming year.

The Governor's Mental Health Advisory Council will be meeting in Juneau on Sunday and Monday, March 4 & 5, 1984. Several members of the Alaska Mental Health Program Director's Association as well as concerned citizens will be attending this Council meeting. If an informational hearing could be held concurrent with the Council meeting, this would be ideal. Specifically, Monday, March 5, 1984 would be most suitable. It would be possible to consider alternative dates. Teleconference testimony could be arranged if the beginning of March proves to be an untenable time to arrange an informational hearing.



In any case, your consideration is appreciated. As an Association, we wish you the best as you enter another Legislative session.

Respectfully,

Paul L. Craig, Ph.D., Chairperson
Alaska Mental Health Program Director's Association

Dear Representative Tischer:

This is a letter of support for House Bill 482, which provides funding for construction of a mental health facility in Homer. This is an urgently needed facility that serves the southern portion of the Kenai Peninsula.

Please give it your attention as soon as possible so that it may move to the floor and Senate.

Our school has been the recipient of many services from the Mental Health Center in Homer and we do appreciate having the professional assistance for our students and the community.

Thank you for any attention this letter receives.

Very sincerely yours,

Wade C. Jackinsky

MEMORANDUM

To: Representative Mae Tischer, Chairman
House HESS Committee

Date: February 14, 1984

Subject: HB489

From: Representative Jack McBride Jack

Attached please find a copy of a letter I received from Mary Beth Faikas and Joanne Therp, both from Anchorage, regarding HB 489, "An Act relating to Child Abuse".

Although HB 489 has not been scheduled for review in the HESS committee as of this date, I would appreciate it if you could include these letters in your file and also let them know when the bill will be up in committee. I would be happy to answer any questions you may have or to assist you in gathering any additional information you may need.

RE: HOUSE BILL 489

MR. MCBRIDE,

I OPPOSE THE PASSAGE OF HOUSE BILL 489 AS IT IS WRITTEN. WHILE I FULLY SUPPORT LEGISLATION OF THIS TYPE, I FEEL THAT HOUSE BILL 489 WILL ① DELAY TREATMENT OF BOTH VICTIM AND OFFENDER ② REDUCE REPORTING OF THESE CRIMES ③ AND BE MISINTERPRETED AS IT IS QUITE VAGUE.

THANK YOU FOR YOUR TIME,

Mary Beth Fowlkes
1606 ATKINSON
ANCH AK 99504

Jack-

I read in todays Daily News about the Child-Abuse Bill (HB 489) you filed in the House. I am strongly in favor of this and am very happy to hear of this bill -

As a registered nurse and as a former victim of child abuse I know how much damage can result in child abuse/neglect and have seen the mental anguish that lasts for years from such acts on children -

Any support I can give to aid you in this endeavor please call/write.

Please keep me updated.

HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

MEMORANDUM April 18, 1984

TO: Representative Mae Tischer
FROM: Bill Lovell, Staff, House HESS Committee

RE: Sectional Analysis of CSHB 492 (HESS)

I have prepared the following sectional analysis of the House HESS Committee Substitute for House Bill 492, "An Act relating to state aid for school construction; and providing for an effective date."

Sections 1, 3, and 4 simply amend existing sections of law that refer to the existing aid program so that they now refer to the new program.

Section 2 establishes the new program of state grants for school construction (AS 14.11.200). Under the new program, the Department of Education is authorized to grant municipal school districts 90 percent of the cost of school construction projects approved by the department (AS 14.-11.200(a)). The school construction grant account is established consisting of funds appropriated to the account and interest earned on those funds; any portion of a grant that is not used to carry out the purposes of this section is also credited back into the account (AS 14.11.200(b)). The bill sets out a list of priorities to be used by the department in determining which projects are eligible for the grants (AS 14.11.200(c)). To be eligible for a grant a municipality must agree to pay at least 10 percent of the construction costs with cash or bonds issued through the municipal bond bank authority. The project must also be approved by the voters of the municipality (AS 14.11.200-(d)).

"Cost" is defined as the cost of acquiring, constructing, enlarging, repairing, remodeling, equipping, or furnishing of public, elementary and secondary school buildings, including the costs of all necessary studies, surveys, plans and specifications, architectural, engineering or other special services, acquisition of real property, site preparation and development, purchase, construction,

reconstruction and improvement of real property and the acquisition of machinery and equipment as may be necessary in connection with the project; an allocable portion of the administrative and operating expenses of the grantee; and the cost of financing the project, including premiums on insurance and legal fees (AS 14.11.200(e)).

Allocations under this program for school construction projects begun after July 1, 1984, are reduced by the amount of money used for the construction of residential space, hockey rinks, planetariums, saunas, and other facilities for single-purpose sporting or recreational uses that are not suitable for other activities. Allocations under this section may not be reduced by the amount of money used for construction of a small swimming pool, tank, or water storage facility used for water sports. However, allocations under this section of the law are to be reduced by the difference between the amount of money used to construct a swimming pool that is competition size or larger and the amount of money that would have been used to construct a small swimming pool, tank, or water storage facility, as determined by the Commissioner of Education (AS 14.11.200 (f)).

The Commissioner of Education is required to provide an annual report to the Legislature to include information about the balance remaining in the school construction account at the end of each fiscal year, and the use of the funds in the account for the fiscal year (AS 14.11.210). The Commissioner is required to prescribe by regulation the necessary requirements, forms, and procedures to be used in applying for construction grants under this program (AS 14.11.220(a)). Applications from municipalities seeking a construction grant are due by October 15 of the previous fiscal year (AS 14.11.220(b)). The Commissioner of Education must review all applications for construction grants and make a recommendation to the governor as to the amount of funds to be appropriated to the construction grant account (AS 14.11.220(c)).

The way the program is set up, the department would not distribute available funds to all potentially eligible school construction projects so that some projects would receive less than 90 percent funding. Rather, eligibility will be determined in part by the amount of funds available each year. Consequently, eligible projects will receive 90

percent funding and other projects will receive nothing.

Sections 5 and 6 repeal the existing school construction debt retirement program except that the program remains in effect with respect to a project if construction on the project began before July 1, 1984, or if the the bonds for the project are authorized after June 30, 1983, and before July 1, 1984.

Section 7 provides that the Act takes effect July 1, 1984.

Sec. 14.07.010. Department of Education. The Department of Education includes the commissioner of education, the state Board of Education, and the staff necessary to carry out the functions of the department. (§ 1 ch 98 SLA 1966)

NOTES TO DECISIONS

Quoted in Begich v. Jefferson, Sup. Ct. Op. No. 481 (File No. 894), 441 P.2d 27 (1968).

Cited in Tunley v. Municipality of Anchorage School Dist., Sup. Ct. Op. No. 2160 (File Nos. 4796, 4797, 4826), 617 P.2d 490 (1980).

Sec. 14.07.020. Duties of the department. The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state and adopt or recommend plans for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public schools;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools which meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the Department of Health and Social Services, standards that will assure healthful and safe conditions in the public and private schools of the state; the standards for private schools may not be more stringent than those for public schools;

(8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries as defined in AS 47.35.080(4); pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

(9) provide accredited elementary and secondary correspondence study programs available to any Alaskan through a centralized office of correspondence study;

(10) accredit private elementary and secondary schools which request accreditation and which meet accreditation standards prescribed by regulation by the department;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction project begun after July 1, 1978; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, basic education, and fire-service training to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11.020. (§ 1 ch 93 SLA 1966; am § 2 ch 69 SLA 1971; am § 6 ch 104 SLA 1971; am § 1 ch 190 SLA 1975; am § 6 ch 50 SLA 1977; am §§ 1-3 ch 126 SLA 1978; am § 10 ch 147 SLA 1978; am § 1 ch 36 SLA 1979; am § 24 ch 59 SLA 1982; §§ 1, 2 ch 92 SLA 1982)

Revisor's notes. — A reference to AS 14.11.020 was substituted for a reference to AS 14.07.190 in paragraph (13) by the revisor of statutes under AS 01.05.031 to conform to the renumbering of that section.

Effect of amendments. — The first 1978 amendment deleted "private, and denominational" preceding "schools" near the beginning of paragraph (6), inserted "and private" preceding "schools" in paragraph (7), added the language beginning "the standards for private schools" to the end of paragraph (7), and added paragraph (10).

The second 1978 amendment added paragraph (11).

The 1979 amendment added paragraph (12).

The first 1982 amendment substituted "of" for "and" preceding "new public elementary" in paragraph (11).

The second 1982 amendment substituted "'plans' include" for "a 'plan' includes" in paragraph (11), inserted "and approve" and "the" preceding "purposes of this paragraph" in that same paragraph, and added paragraph (13).

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF REVENUE

TREASURY DIVISION

ELEVENTH FLOOR
STATE OFFICE BUILDING
POUCH SB
JUNEAU, ALASKA 99811
PHONE:

February 27, 1984

The Honorable Mae Tischer
Chairperson
House Health, Education,
& Social Services Committee
Pouch V
Juneau, AK 99811

Dear Representative Tischer:

At the request of your staff, I offer the following comments on HB 492 and draft CS HB 492:

1. The substitution of a program which provides state grants for school construction in place of state reimbursement for debt service and delayed reimbursement for cash expenditures has several attractive features:

   a) such a substitution seems generally propitious at a time of high municipal bonded indebtedness and large amounts of state cash available for expenditure;

   b) by undoubtedly eliminating most municipal bonding for schools--which currently makes up roughly 50% of all municipal indebtedness--the legislation would free up municipal debt capacity and reduce interest costs for other types of municipal capital projects;

   c) the state would avoid paying interest at rates higher than it would incur by borrowing itself to pay for school construction;

   d) provision of grants rather than reimbursement should usually result in state commitment for project funding prior to construction commitments; this would allow for budgeting with greater certainty as to requirements for school construction funding and also the possibility for consideration in the budget process of relative merits and needs for particular projects; a grant program will also reduce municipalities' needs for and costs of interim funding prior to reimbursement.

2. The replacement of a 50% cost-sharing program with a 90% program raises anew the problem of state cost sharing at such a high level as to eliminate many municipal incentives to appropriately size and design facilities and control project costs. Of course, this problem is mitigated to a certain extent by the requirement for Department of Education approval of projects and the statutory definition of project costs.

3. The Department of Revenue would like to suggest that interest on the grant account not be dedicated to the account. Even if it would be arguably legal to do so, there seems to be no pressing need which would require the legislature and governor to give up their budgetary discretion with respect to this income.

Sincerely,

Milt Barker

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M February 22, 1984

SUBJECT: Dedication of interest earned on special fund accounts (CSHB 492 (HESS))

TO: Representative Mae Tischer
Chairman, Health, Education, and Social Services Committee

FROM: Keith B. Levy KBL
Legislative Counsel

Enclosed is a Committee Substitute for HB 492, relating to state aid for school construction. At your request, I have included in section two of this draft a provision allowing interest earned on the school construction grant account to be deposited directly into the account without an appropriation from the legislature. You should be aware that this provision may be in violation of the prohibition against dedicated funds in the Constitution of the State of Alaska.

Article IX, section 7 of the state constitution provides:

> The proceeds of any state tax or license shall not be dedicated to any special purpose, except as provided in section 15 of this article [the Alaska Permanent Fund] or when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of this section by the people of Alaska.

Thus, the state constitution prohibits the dedication of certain state revenues to any special purpose except for three specific exceptions: the Alaska Permanent Fund, participation in federal programs, and funds grandfathered in at the time the constitution was adopted. It seems clear that the provision in your bill requiring the dedication of

interest income does not fall into any of the exceptions expressly provided for in the dedicated funds clause.

Two questions are presented by your bill with respect to the dedicated funds clause. First, is interest income a "state tax or license" within the meaning of article IX, section 7 of the state constitution such that the dedicated funds clause applies at all? Second, does placing that interest income into the school construction grant account so that it may be used without an appropriation by the legislature amount to a dedication to a special purpose?

The meaning of "state tax or license":

In a recent decision, the Supreme of Alaska had occasion to consider whether certain mandatory tax assessments to be paid directly to private aquaculture associations amounted to a "state tax or license" that would invoke the dedicated funds clause. State v. Alex, 646 P.2d 203 (Alaska 1982). Concluding that the assessment did come within the ambit of the dedicated funds provision, the court cited 1975 Alaska Op. Atty. Gen. No. 9 with approval:

> ...it is our conclusion that the dedication of any source of public revenue: tax, license, rental, sale, bonus-royalty, royalty, or whatever is limited by the state Constitution to those existing when the Constitution was ratified or required for participation in federal programs. (Emphasis added.)

Alex, supra, at 210. This language indicates that the Supreme Court takes a very broad view of the kinds of revenue that amount to a state tax or license within the meaning of the dedicated funds provision. Accordingly, there is a strong possibility that the Court would consider interest income a state tax or license that may not be dedicated to a special purpose. Since the issue has not been placed squarely before the Court, however, it remains an open question.

The dedication of interest income to a special fund:

Last year, the Attorney General released an opinion providing a thorough discussion of the dedicated funds clause. 1982 Alaska Op. Atty. Gen. (November 30). That opinion specifically discusses the second question raised by your bill: the applicability of the dedicated funds clause to interest income that is returned to a special fund. The

opinion acknowledges that an argument could be made that placing interest generated by a fund back into the fund without an appropriation by the legislature does not violate the purpose of the dedicated funds clause: to allow the legislature to retain control of state revenues. However, the Attorney General reached the following conclusion:

> A difficulty that arises from the view that the dedicated funds prohibition is not applicable to interest or investment income on separate funds is that it permits steadily increasing amounts of money to be received and used by state departments and agencies without legislative control through the annual budget process. This is precisely the problem posed by the dedication of revenue sources which the drafters [of the state constitution] sought to avoid. For this reason, while we are not certain about the likely outcome, we doubt that a blanket exception for derivative income would be approved by the courts.

1982 Alaska Op. Atty. Gen., at 16 (November 30). Thus, in light of the significant amounts of interest generated by various state funds and the broad view of the dedicated funds clause taken by the Supreme Court, the dedication of interest income to the school construction grant account is at least open to constitutional attack.

In conclusion, while the applicability of the dedicated funds clause to interest income remains undecided, there are strong indications that such a dedication of funds may be unconstitutional. As an alternative, the legislature might consider including a provision in the annual budget bill appropriating the interest income earned on the school construction grant account into the account. This would not guarantee that the interest would be appropriated to the account in future years, but it would provide that money to the account on an annual basis and thereby circumvent the constitutional problem.

KBL:ojb
J3/117

(e)"costs of school construction" means the cost of acquiring, constructing, enlarging, repairing, remodeling, equipping or furnishing of public elementary and secondary school buildings and includes the sum total of all costs of financing and carrying out the project: these include, but are not limited to, the costs of all necessary studies, surveys, plans and specifications, architectural, engineering or other special services, aquisition of real property, site preparation and development, purchase, construction, reconstruction and improvement of real property and the acquisition of machinery and equipment as may be necessary in connection with the project; an allocable portion of the administrative and operating expenses of the grantee; the cost of financing the project, premiums on insurance and legal fees.

(f) An allocation under 'a) of this section for school construction begun after July 1, 1984, shall be reduced by the amount of money used for the construction of residential space, nockey rinks, planetariums, saunas, and other facilities for single purpose sporting or recreational uses that are not suitable for other activities. An allocation under (a) of this section may not be reduced by the amount of money used for construction of a small swimming pool, tank, or water storage facility used for water sports. However, an allocation shall be reduced by the difference between the amount of money used to construct a swimming pool that is competition size or larger and the amount of money that would have been used to construct a small swimming pool, tank or water storage facility, as determined by the commissioner.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM February 3, 1984

SUBJECT: Sectional analysis of HB 492

TO: Representative Walt Furnace

FROM: Keith B. Levy KBL
Legislative Counsel

At your request, I have prepared a sectional analysis of HB 492, "An Act relating to state aid for school construction; and providing for an effective date." The central function of the bill is to repeal the existing program of state aid for the retirement of school construction debt and replace it with a grant program.

Sections 1, 3, and 4 simply amend existing sections of law that refer to the existing aid program so that they now refer to the new program.

Section 2 establishes the new program of state grants for school construction (AS 14.11.200). Under the new program, the Department of Education is authorized to grant municipal school districts 90 percent of the cost of school construction projects approved by the department (AS 14.11.200(a)). The bill sets out a list of priorities to be used by the department in determining which projects are eligible for the grants (AS 14.11.200(c)). A school construction grant account is created consisting of funds to make the grants (AS 14.11.200(b)). To be eligible for a grant, a municipality must agree to pay at least 10 percent of the construction costs with cash or bonds issued through the municipal bond bank authority. The project must also be approved by the voters of the municipality (AS 14.11.200(d)). "Cost of a school construction project" is defined as all the costs of planning, financing, and carrying out the project, excluding costs for single purpose sporting facilities.

The way the program is set up, the department would not distribute available funds to all potentially eligible school

construction projects so that some projects would receive less than 90 percent funding. Rather, eligibility will be determined in part by the amount of funds available each year. Consequently, eligible projects will receive 90 percent funding and other projects will receive nothing.

Sections 5 and 6 repeal the existing school construction debt retirement program except that the program remains in effect with respect to a project if construction on the project began before July 1, 1984, of if the bonds for the project are authorized after June 30, 1983, and before July 1, 1984.

Section 7 provides that the Act takes effect July 1, 1984.

Gleaners fight hunger, salvage food in 11 states

In produce fields and fruit groves scattered across America, hard-pressed Americans are increasingly using a concept as old as the Bible to fight hunger. It is gleaning, the salvaging of food that otherwise would rot in the fields, whether inadvertently left behind or discarded because of blemishes, bruises, or low prices.

Gleaners are gathering some of that food through privately organized efforts in at least 11 states: Arizona, California, Colorado, Florida, Kansas, Maryland, Michigan, Missouri, Oregon, Texas, and Washington. They help fill what Congress' General Accounting Office calls "an unmet need" for food assistance among those not qualifying for government food programs, and GAO says states can help increase the amount of gleaned food.

California and Oregon, for example, give state tax deductions to farmers for the value of food gleaned from their fields. First passed in 1977, California's A.B. 120 this year was extended through 1984.

"It's an incentive for churches and other groups to go out and get the produce and say to a store or grower that he can get a tax deduction," says California Assemblyman David Kelly, who sponsored the renewal. Stores and growers can claim a charitable deduction — in addition to the business expense — for the value of gleaned or discarded food. A study is underway to determine the amount of lost taxes on such food.

In addition, the Food Marketing Institute says that 34 states have passed "Good Samaritan" laws limiting the liability of food donors. Ohio's is illustrative: "No person who in good faith donates perishable food to an agency is liable in civil damages for injury, death, or loss to persons or property that arises because that perishable food . . . is not fit for human consumption," if the food was reasonably considered safe at the time it was donated.

Tax deductions and Good Samaritan laws, the GAO said, are "positively affecting the amount of food being donated."

Gleaning takes its cue from Leviticus 19:9-10: "When you harvest the produce of your field, do not completely mow the edge of your field or gather the gleanings of your harvest . . . leave them for the poor." Today food is also gleaned from supermarket waste.

Gleaners are the needy or volunteers gathering food for others. The needy keep what they can use with the excess going to such places as food banks. "It's not a freebie program — you work for what you get," says Judi Amos, of Everett, Wash., who has labored as a gleaner among potatoes and peaches.

"The program's really helped out my budget," adds Rachel Brown, who supports three children on welfare and food stamps. After years of dependence on others, she says with pride, "I'm helping myself and helping others."

—Bill Curry

Los Angeles Times photo by Bob Grieser

GLEANING HARVEST — Rachel Brown and her nephew, Anthony Miller, stand next to boxes of pears and vegetables that were her share for a day's work of gleaning in Washington state.

In-state preference laws enacted to govern public contract awards

One sidelight of the recent recession is that several legislatures are worried about state and local government contracts being awarded to out-of-state firms. As a consequence, at least 21 legislatures have enacted in-state preference laws.

The "Buy Minnesota" law passed last May, for example, has received nationwide publicity reflecting the generic pros and cons of implementing such protectionist legislation. (These laws differ from "Buy American" laws requiring the purchase of American-made goods and services over those from foreign countries — which don't specify whether they must come from in-state firms.)

According to the author of the Minnesota legislation, State Representative Pat Beard, the law was intended to improve in-state employment and thus increase state tax revenues.

Beard found that 13 other states exercise in-state preference laws that include a 2-15 percent break in bidding on public works jobs against out-of-state contractors. States exercising preference are Alaska, Arizona, Arkansas, Hawaii, Louisiana, Maine, Montana, New Mexico Oklahoma, South Carolina, Washington, West Virginia, and Wyoming. Among them, the preference law may apply only to state agencies or extend also to municipalities and school districts.

The Minnesota law includes a provision that says any contract awarded by a state agency for engineering services, erection, construction, alteration or repair of any public building or structure, or for any public work improvement, when competitive bidding is not required, must be awarded to a Minnesota resident.

"If competitive bidding is required by law," the statute continues, "the contract must be

Juneau, Ak 99811

Dear Representative Tischer,

I was present on Monday for the teleconference on ~~H~~HB 496 "relating to food banks" and HESS Committee hearing. Time ran out for us to testify and has been rescheduled for Saturday a.m. Unfortunately I have a conflict on Saturday and will not be able to make that teleconference.

I hope HESS will vote passage of this bill for consideration by the House. I, and those of us involved with food banks and non-profit organizations that depend on donated food feel that this will encourage those in the food industry to continue and increase donations to our organizations.

Because of the safeguards in the bill for inspection by food donor and food bank. I would ask that the bill be amended not to exclude those in the food industry who are manufacturers, packers, processors, bottlers or similar commercial entities from the protection of this bill - and thus encouraging their donations of surplus unmarketable food items.

The inspection of donated items by the donee at the time of the donation, plus inspection by the receiving food bank and its recipient agency provide needed safeguards for the individual receiving the donated food.

To date, similar legislation has been passed in 47 states. Alaska, Vermont, and New Hampshire are the last three to recognize the care given by the food industry and non profit organizations for the safe

redistribution of donated food items.

Again we hope this bill will have a speedy progress through committee and House and Senate to the Governor's desk - and with the above mentioned amendment.

Families and organizations that depend on charitable donations of food will be the benefactors of this legislation -

Sincerely,
Mary Jane Sandstrom
Volunteer and an organizing

DEPARTMENT OF LAW

OFFICE OF THE ATTORNEY GENERAL

January 26, 1984

The Honorable Mae Tischer
Alaska State House
Pouch V
Juneau, AK 99811

Dear Representative Tischer:

This office has reviewed HB 496 as you requested in your January 24, 1984, letter to the Attorney General. You have asked that this office concentrate on the legal questions raised in 1980 when Governor Hammond vetoed SCS CSHB 686 ams (limiting liability of donors of food). For your information I have included a copy of a letter drafted by the Department of Law which was sent to Governor Hammond regarding the 1980 bill. You will note that the "fatal flaw" was the fact that manufacturers, bottlers, and packers of food were included in the definition of donors thereby excluding them from a well established principle of law that they are liable for damages resulting from a failure to exercise that degree of care required to insure that the product that they produce is fit for use and is free from taint.

HB 496 excludes manufacturers, processors, bottlers or other similar entities from the definition of donor. In that respect this bill is different from the 1980 bill. However, HB 496 does not appear to change the law as it now exists.

Under HB 496 a donor of food will not be subject to civil or criminal liability arising from an injury or death attributable to the condition of the donated food if

1. the donor inspects the food and finds it apparently fit for human consumption;

2. the donor has no actual or constructive knowledge that there is anything wrong with the food or that it is harmful to health; and,

3. the injury or death is not a result of the negligence, recklessness, or intentional misconduct of the donor.

3-C5LH

In essence the donor will be liable if he or she is negligent. Such would be the case without this bill. This office assumes that HB 496 is an attempt to encourage food donations by limiting the liability of food donors. In fact, however, the bill does not limit liability but merely provides that if a food donor is negligent, he or she will be liable. If he or she is not negligent, he or she will not be liable. The same analysis would hold true for the second part of the bill regarding a food bank.

If you have any further questions regarding this bill, please feel free to let me know.

Sincerely yours,

NORMAN C. GORSUCH
ATTORNEY GENERAL

Re: SCS CSHB 686 am S
(limiting liability of
donors of food)
Our File: J-88-146-80

Dear Governor Hammond:

This office has reviewed SCS CSHB 686 am S, the principal thrust of which relieves a person donating food to a nonprofit organization of any civil or criminal liability flowing from any adulteration or misbranding of the food, unless the alteration is the result of intentional or grossly negligent conduct on the part of the donor.

"Grossly negligent conduct" is defined as "the intentional failure to perform a duty with reckless disregard of consequences that affect the life or property of another." (The legislature forgot the comma after "duty," thus changing the literal meaning, but we assume that we know what was intended.) A donee may ask the commissioner of health and social services to inspect the food to determine if it is adulterated or misbranded.

The commissioner may delegate this inspection duty, and a broad range of other enforcement and inspection duties, to the Department of Environmental Conservation.

This bill is apparently well intentioned; it is designed to encourage the donation of food to nonprofit

organizations for their use or distribution--presumably to needy persons. However, it exacts too great a price from prospective donees as a reward for the eleemosynary conduct.

The bill's failure to distinguish between donors who are manufacturers, packers, or bottlers and those who are not is, we think, a fatal flaw. It is a well-established principle of law that manufacturers, bottlers, and packers are liable for damages resulting from a failure to exercise that degree of care required to insure that the product is fit for use and is free from taint. See 32A C.J.S. Food, sections 59-60. This bill would relieve those manufacturers from liability for negligence for illness caused by unfit food when they give away rather than sell their products. While it is admirable to encourage the donation of food to needy causes, it is unwise to eliminate the ordinary standard of care and its attendant liability. We can, for example, imagine a manufacturer whose warehouse is laden with food of marginal fitness who would like to donate it for a tax deduction. We do not think it proper to eliminate this person's liability for negligence should one of the donees become ill from adulterated or unfit food. Poor people receiving donated food should have no less protection than people who buy food from the donor.

The class of persons who manufacture food should be held to a uniform standard of care regardless of whether the food is sold or given away. To do otherwise would be to encourage socially irresponsible conduct disguised as beneficent bounty. We would suggest that you veto this bill.

Sincerely,

Wilson L. Condon
Attorney General

Rep. Mike Davis

GARY C. NEWMAN
S.R. BOX 51233
FAIRBANKS, ALASKA 99701

January 23, 1984

House HESS Committee

I am in support of House Bill 496, relating to food banks.

This bill would remove the impediment of liability from the donation by food vendors of surplus or waste food. By doing so, it would allow the use of tons of food for human or animal consumption that is presently being destroyed by the vendors.

For one who has had animals such as pigs, chickens and cows, this bill would allow them to have the waste that is presently thrown away by food vendors. At present, the vendors won't give away food which is waste by their standards even for animal use because there is the chance that the food would really be used for human consumption and they are concerned about the liability question, as I stated earlier.

While this issue may affect only a small proportion of our state's population, it would allow the use of tons of resources that are expensively imported into our state for use for something other than landfill.

I do have one suggested change to this bill. I would like to see the definition on page 2 from line 27 to page 3 line 1 deleted or tightened up to not be so inclusive. For example, a meat packer, who might have a substantial amount of waste available for animal or human consumption, will still have a liability problem. If there are concerns related to a particular industry or type of processor, please be more specific in their exclusion.

I urge your support of this bill.

MEMORANDUM

TO: Representative Niilo Koponen

FROM: Deborah Niedermeyer, Legislative Aide DMN

DATE: 6 February, 1984

RE: Foodstamp Program

The foodstamp program does not adequately cover the needs of Alaska's poor. An income low enough to meet foodstamp eligibility standards only barely meets other basic monthly costs. Applicants with no income at all must wait at least 5 days before receiving assistance. This memorandum details foodstamp waiting periods and eligibility requirements which force many Alaskans to turn to foodbanks for help.

Eligibility

In December, 1983 5% of Alaskans (22,000 people) were using the foodstamp program.

To be eligible for benefits, a person who lives alone must make less than $659.00 per month. At that income level, a person receives $10.00 per month in foodstamps. A single person with no income receives the maximum assistance level of $112.00 in foodstamps per month.

A household of four must make no more than $1,342 per month to receive receive the minimum of $30.00 in foodstamp assistance. At zero monthly income, the four person household receives $374 per month in foodstamps.

Waiting Period

There is a maximum waiting period of 30 days between application for foodstamps and determination of eligibility. The Division of Public Assistance says, however, that due to the caseload, the thirty day legal maximum waiting period is also the minimum. Public Assistance admits that in some cases applicants wait even longer to find out if they will be eligible. Foodstamps must be in the mail to an applicant within 10 days of having been found eligible. Thus, the total waiting period is at least 40 days.

Households of any size which demonstrate that the household income for the previous month was less than $150.00 and that the household has less than $100.00 in liquid resources, qualify for "expedited determination". A quarter of Alaska's foodstamps applicants do qualify. In this case the foodstamps must be in the mail within 5 days of application. All those who are eligible for expedited determination are supposed to get the service automatically, however the Fairbanks office of the Alaska Legal Services Corporation routinely deals with cases where this has not happened.

The Honorable Mae Tischer
Alaska State House
Pouch V
Juneau, AK 99811

Dear Representative Tischer:

On February 2, 1984, I met with Representative Niilo Koponen; Deborah Neidermeyer, Administrative Assistant; and Russ Josephson, Legislative Affairs Attorney. We discussed HB 496. We focused on the concern which this office had that the legislation did not change the law but merely restated law as it stands now.

Although I have not seen the wording of a sponsor substitute for this house bill, I believe that language will be offered which will limit the liability on donors of food. The care standard for food donors will be gross negligence. The care standard for food banks, however, will be negligence.

I would like to note that included among donors are retailers which would include food markets. It is also our understanding that there will be language changes which will allow slaughter houses which are inspected by the state to be included as food donors. Also a change may be made in the wording of proposed AS 17.20.347(1)(B) which will state that certain persons that work in commercial capacities will be excluded from the definition of donor only if their primary activity is being a manufacturer, packer, processor, or bottler. These language changes bring the definition closer and closer to the problem identified in the legislation in 1980 ... that commercial business will be treated the same as non-business donors.

If you have any further questions regarding this bill, please feel free to let me know.

Sincerely yours,

NORMAN C. GORSUCH
ATTORNEY GENERAL

907 465 3800

MEMORANDUM January 24, 1984

SUBJECT: Food Banks
Sectional analysis on HB 496

TO: Representative Mae Tischer
Chairman, House HESS Committee

FROM: Russ Josephson
Legislative Counsel

You have requested a sectional analysis of HB 496. This bill contains three sections of new law. The first concerns the immunity of a food donor from civil and criminal liability, the second concerns the immunity of a food bank, and the third is a definitions section. The provisions of this bill are very straightforward. Essentially, immunity will be granted to donors and food banks if they meet requirements listed in the bill.

Liability of Donors. A donor of food to a food bank that will distribute the food for free must meet the following requirements:

1. The donor must inspect the food reasonably when it is donated and must find the food to be apparently fit for consumption at that time.

2. The donor must not have actual or constructive knowledge that the food is adulterated, tainted, or contam...ted, or that it would be harmful to the health or well-being of a person eating it. By "constructive knowledge" we mean that the donor should have known those things even if the donor denies actual knowledge is denied.

3. If an injury or death occurs, it must not be the direct result of the negligence, recklessness, or intentional misconduct of the donor.

If any of the requirements listed above is not met, the donor will not be immune from liability.

Liability of Food Banks. To be immune from civil and criminal liability for an injury or death attributable to the condition of food that it bank distributes, a food bank must meet the following requirements:

1. The food bank must make a reasonable inspection of the food it receives and must find the food apparently fit for human consumption at the time of distribution.

2. The food bank must have no actual or constructive knowledge that the food it distributes is adulterated, tainted, or contaminated, or that it would be harmful to the health or well-being of a person eating it.

3. An injury or death that occurs must not be the direct result of the negligence, recklessness, or intentional misconduct of the food bank.

If all of the above requirements are not met, the food bank will not be immune from liability.

This section of the proposed statute also addresses the problems of food that is misbranded, missing the label, or is not readily marketable. (Food may be misbranded in several ways detailed in AS 17.20.040.) This section specifically allows a food bank to distribute food that is misbranded, missing the label, or that is not readily marketable because of its appearance or grade or because it is surplus.

Definitions. "Donor" is defined to include certain persons and entities and to exclude others. The lists in this definition should be read carefully. Essentially, the definition excludes those who commercially produce or prepare food. This prevents the "dumping" of food by those who produce or prepare food that could not be sold commercially. (This was the primary concern of Governor Hammond when he vetoed prior legislation. He did not want the producers or preparers of food to be able to dump the food they could not sell and then be able to take a tax credit for the loss.) As "donor" is defined, individuals, retailers, and others would be able to donate food with immunity from liability if they meet the requirements detailed above. Those excluded from the definition of "donor" would of course be able to

donate food, but they would not enjoy the immunity of those defined as donors.

"Food bank" is defined as an organization recognized as a nonprofit organization that principally operates to collect, inspect, and salvage donated food for free distribution to needy persons. This definition by implication excludes the occasional collector and distributor of food. The idea here was to limit the granting of immunity to those organizations that handle food often enough to inspect food knowledgeably and to have good judgement about the quality of the food being distributed.

Sec. 17.20.310. Penalties. A person who violates the provisions of AS 17.20.290, upon conviction, is punishable by imprisonment for not more than six months, or by a fine of not more than $500, or by both. If the violation is committed after a conviction under this section has become final, the person is punishable by imprisonment for not more than one year, or by a fine of not more than $500, or by both. (§ 5(a) ch 129 SLA 1949)

Sec. 17.20.320. Effect of written guaranty. A person is not subject to the penalties of AS 17.20.310 for having violated AS 17.20.290(1) or (3) if that person establishes a guaranty or undertaking signed by and containing the name and address of the person residing in the state from whom the article was received in good faith, to the effect that it is not adulterated or misbranded within the meaning of this chapter. (§ 5(b) ch 129 SLA 1949)

Sec. 17.20.330. Liability for dissemination of false advertising. No publisher, radio-broadcast licensee, or agency or medium for the dissemination of an advertisement, except the manufacturer, packer, distributor, or seller of the article to which a false advertisement relates, is liable under AS 17.20.310 for the dissemination of the false advertisement, unless the publisher, licensee, agency or medium has refused the request of the commissioner of health and social services to furnish the name and post office address of the manufacturer, packer, distributor, seller, or advertising agency, residing in the state who caused dissemination of the advertisement. (§ 5(c) ch 129 SLA 1949; am Executive Order No. 51, § 31 (1981))

Sec. 17.20.080. Adulterated drugs and devices. (a) A drug or device is adulterated if

(1) it consists in whole or in part of a filthy, putrid, or decomposed substance;

(2) it has been produced, prepared, packed or held under insanitary conditions in which it may have been contaminated with filth, or in which it may have been rendered injurious to health;

(3) it is a drug and its container is composed, in whole or in part, of poisonous or deleterious substance which may render the contents injurious to health; or

(4) it is a drug and it bears or contains, for purposes of coloring only, a coal tar other than one from a batch certified under the authority of the federal act.

(b) A drug is adulterated if it purports to be or is represented as a drug the name of which is recognized in an official compendium, and its strength differs from, or its quality or purity falls below the standard set forth in the compendium. The determination as to strength, quality, or purity shall be made in accordance with the tests or methods of assay set forth in the compendium, or in the absence or inadequacy of tests or methods of assay, those prescribed under authority of the federal act. A drug defined in an official compendium is not adulterated under this subsection because it differs from the standard of strength, quality, or purity set forth in the compendium, if its difference in strength, quality, or purity is plainly stated on its label. When a drug is recognized in both the United States Pharmacopoeia and the Homeopathic Pharmacopoeia of the United States it is subject to the requirements of the United States Pharmacopoeia unless it is labeled and offered for sale as a homeopathic drug, in which case it is subject to the provisions of the Homeopathic Pharmacopoeia of the United States and not to those of the United States Pharmacopoeia.

(c) A drug is adulterated if it is not subject to the provisions of (b) of this section and its strength differs from, or its purity or quality falls below, that which it purports or is represented to possess.

(d) A drug is adulterated if a substance has been

(1) mixed or packed with it to reduce its quality or strength; or

(2) substituted wholly or in part for it. (§ 14 ch 129 SLA 1949)

Sec. 17.20.090. Misbranded drugs and devices. A drug or device is misbranded

(1) if its labeling is false or misleading in any particular;

(2) if it is in package form unless it bears a label containing (A) the name and place of business of the manufacturer, packer, or distributor; and (B) an accurate statement of the quantity of the contents in terms

House of Representatives
HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

MEMORANDUM

TO: Representative Mae Tischer
FROM: Bill Lovell
DATE: February 8, 1984

RE: Analysis of Proposed CSHB 496 (HESS)

For your convenience I have analyzed the proposed House HESS Committee Substitute for House Bill 496, "[a]n Act relating to food banks."

The proposed Committee Substitute amends AS 17.20 (Alaska Food, Drug and Cosmetic Act) by adding new sections, the effects of which are described below.

Sec. 17.20.345 provides that donors to food banks are not liable for damages resulting from the consumption of goods they donate unless such damages are the result of extreme negligence or misconduct by the donor. This provision subjects food bank donors to a more stringent test than food bank operators when determining negligence or misconduct. In other words, gross negligence or misconduct must be proven before a food bank donor is held liable for damages.

The bill specifically states that nothing in the section prohibits the donation of apparently suitable goods solely because of missing labels; or lower grade or marketability.

Sec. 17.20.346 provides that food banks are not liable for damages resulting from the consumption of goods received from individual donors if such damages are not the result of negligence or misconduct by the operators of the food bank. This provision subjects food bank operators to a less stringent test than donors when determining negligence. In other words, simple negligence must be proven before a food bank operator is held liable for damages.

The bill specifically states that nothing in this section prohibits a food bank from distributing apparently suitable goods solely because of missing labels; or lower grade or marketability.

Sec. 17.20.347 defines "donor," as used in AS 17.20.345 or 17.20.346, as including "a person, farmer, retailer, slaughter-house under state supervision, freight company, distributor, wholesaler, or similar entity." This provision specifically permits operators of state supervised slaughter-houses to donate suitable meats to food banks.

The section specifically excludes from the definition of "donor" a "person who acts in a commercial capacity as a manufacturer, packer, processor, bottler, or similar entity, if that activity is the persons primary activity."

This section further provides that "food bank" means "an organization recognized by the state or federal government as a nonprofit organization and that operates principally to collect, inspect, and salvage donated food for free distribution to needy persons."

House HESS Committee

I am in support of House Bill 496, relating to food banks.

This bill would remove the impediment of liability from the donation by food vendors of surplus or waste food. By doing so, it would allow the use of tons of food for human or animal consumption that is presently being destroyed by the vendors.

For one who has had animals such as pigs, chickens and cows, this bill would allow them to have the waste that is presently thrown away by food vendors. At present, the vendors won't give away food which is waste by their standards even for animal use because there is the chance that the food would really be used for human consumption and they are concerned about the liability question, as I stated earlier.

While this issue may affect only a small proportion of our state's population, it would allow the use of tons of resources that are expensively imported into our state for use for something other than landfill.

I urge your support of this bill.

Gary C. Newman

Waste not, want not

WASHINGTON, DC

How are America's poor to eat when their unemployment pay runs out, or when they can no longer make do on food stamps and welfare? The recession has provided an answer: a jerry-built, bat enviably efficient, system of emergency food centres. This network stretches across the nation, using food that would otherwise go to waste, and shunts it quickly and in large quantities from grower or manufacturer to the various centres that feed the hungry. It is a charitable operation which employs only a few hundred people and is completely decentralised. It has grown with such speed that it has already left the agriculture department's much criticised surplus commodity programme, ensnarled in red tape, far behind.

The emergency food system has its origins in the soup kitchens of the depression and before, but its growth in the past few years has been startling. Although all involved would like to consider it a temporary institution, there is a growing belief that it is here to stay and, if anything, will grow much larger.

Sixty-one regional food banks are the system's backbone. Each consists of a large warehouse equipped with freezers and usually manned by a small, paid staff supplemented by volunteers. These food banks are connected through Second Harvest, a non-profit-seeking organisation, which acts as a food broker. From its base in Phoenix, Arizona, Second Harvest approaches farmers and food manufacturers for donations and then shunts this food through three regional offices out to its members. The member food banks, either individually or through pools, pay the cost of transport, which is also sometimes donated. Once the food reaches a food bank, it is then given out to hundreds of the bank's members: churches, day centres for infants and the elderly, soup kitchens and various other organisations.

The member groups, which would previously have bought food on the open market, now support their food bank by paying a tax of between five and 12.5 cents a pound for the food they take. In this way the budget of the food bank, usually running anywhere from $100,000-250,000 a year, is covered. In some instances food banks are paid for by small donations. In Oklahoma, 600 people send in cheques of from $5 to $25 a month to keep the major local food banks going.

The entire system is private and non-profit seeking. To make sure it stays that way for tax purposes, Second Harvest certifies its member banks, inspects their operations, ensures that they charge no more than 12.5 cents a pound in taxes, and satisfies itself that the bank members in turn are charitable organisations as defined under the tax laws.

No shortage of takers

Second Harvest began as an experimental arm of the now defunct Community Services Administration in the Carter era. Last year it handled 60m lb of food. This year the volume is expected to exceed 100m lb. Much of the food consists of products that would otherwise be thrown out by the manufacturer, not because they are bad, but because they cannot be sold for other reasons: for example, discolouration or misspelled labels. When a Middle Eastern food broker went out of business, a trailer of macaroni with Arabic labelling was given to a food bank in New Jersey. Second Harvest dispensed 32 train carloads of a cereal which its manufacturer thought too oddly-flavoured to sell. The companies can deduct cost and half the unrealised profit from their taxes when they make such donations.

Some food banks rely heavily on farm surpluses. In northern California, where there are five large food banks, the banks collaborate to find out what crops are in surplus and to carry out exchanges between different areas. The bank in Watsonville, for example, supplies tons of artichokes and lettuce and gets, in exchange, peaches from the bank in Santa Clara and tomatoes from the bank in Sacramento. Farmers give food that would otherwise go to waste. What is left in the fields after harvest is also, in many cases, gathered in by teams of volunteer gleaners who take their pickings to the banks for sorting, cleaning and packing.

A report by a research group in Washington noted a dramatic increase in people coming to programmes served by the food banks. More than half the 181 programmes surveyed said that provision of free meals or food baskets had increased by more than half between February, 1982, and February, 1983. The Community Food Bank of New Jersey in Newark provides a good indication of the trend. Last autumn the bank was handling 10,000 lb of food a month. Now it distributes 200,000 lb a month across the state to 300 different groups which provide food to 30,000 people every day.

Some food banks in the Second Harvest system also distribute federal surplus foods under the government's programme. For the most part these consist of butter, cheese and non-fat dry milk from the government's huge surplus. But some food banks refuse to handle federal foods on the ground that it involves too much paper work. In certain states food banks say they have been deliberately denied federal food shipments, which instead have been handed out through local politicians as patronage.

MEMORANDUM

TO: Representative Niilo Koponen

FROM: Deborah Niedermeyer, Legislative Aide DMN

DATE: 6 February, 1984

RE: Foodstamp Program

The foodstamp program does not adequately cover the needs of Alaska's poor. An income low enough to meet foodstamp eligibility standards only barely meets other basic monthly costs. Applicants with no income at all must wait at least 5 days before receiving assistance. This memorandum details foodstamp waiting periods and eligibility requirements which force many Alaskans to turn to foodbanks for help.

Eligibility

In December, 1983 5% of Alaskans (22,000 people) were using the foodstamp program.

To be eligible for benefits, a person who lives alone must make less than $659.00 per month. At that income level, a person receives $10.00 per month in foodstamps. A single person with no income receives the maximum assistance level of $112.00 in foodstamps per month.

A household of four must make no more than $1,342 per month to receive receive the minimum of $30.00 in foodstamp assistance. At zero monthly income, the four person household receives $374 per month in foodstamps.

Waiting Period

There is a maximum waiting period of 30 days between application for foodstamps and determination of eligibility. The Division of Public Assistance says, however, that due to the caseload, the thirty day legal maximum waiting period is also the minimum. Public Assistance admits that in some cases applicants wait even longer to find out if they will be eligible. Foodstamps must be in the mail to an applicant within 10 days of having been found eligible. Thus, the total waiting period is at least 40 days.

Households of any size which demonstrate that the household income for the previous month was less than $150.00 and that the household has less than $100.00 in liquid resources, qualify for "expedited determination". A quarter of Alaska's foodstamps applicants do qualify. In this case the foodstamps must be in the mail within 5 days of application. All those who are eligible for expedited determination are supposed to get the service automatically, however the Fairbanks office of the Alaska Legal Services Corporation routinely deals with cases where this has not happened.

House of Representatives
HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

January 24, 1984

The Honorable Norman Gorsuch
Attorney General of the State of Alaska
State Capitol Building
Juneau, Alaska

Dear Mr. Attorney General:

I request that the Department of Law review House Bill 496, "An Act relating to food banks."

While a general overview is appropriate, I specifically request that the department concentrate on the legal questions raised in 1980 when Governor Hammond vetoed a similar bill because of serious legal questions regarding manufacturer liability for contaminated goods transferred directly to a food bank (See attached veto message).

The House Health, Education and Social Services Committee will be taking testimony on the bill on Saturday, January 28, 1984 in Anchorage. I ask that the completed review be available to my office by Friday, January 27, at 12:00.

Please contact me immediately if you need further clarification of my request or if you foresee some problem in meeting my requested deadline.

Thank you for your cooperation in this matter.

Cordially,

Mae Tischer

House of Representatives
HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

MEMORANDUM

TO: Representative Mae Tischer
FROM: Bill Lovell
DATE: February 8, 1984

RE: Analysis of Proposed CSHB 496 (HESS)

For your convenience I have analyzed the proposed House HESS Committee Substitute for House Bill 496, "[a]n Act relating to food banks."

The proposed Committee Substitute amends AS 17.20 (Alaska Food, Drug and Cosmetic Act) by adding new sections, the effects of which are described below.

Sec. 17.20.345 provides that donors to food banks are not liable for damages resulting from the consumption of goods they donate unless such damages are the result of extreme negligence or misconduct by the donor. This provision subjects food bank donors to a more stringent test than food bank operators when determining negligence or misconduct. In other words, gross negligence or misconduct must be proven before a food bank donor is held liable for damages.

The bill specifically states that nothing in the section prohibits the donation of apparently suitable goods solely because of missing labels; or lower grade or marketability.

Sec. 17.20.346 provides that food banks are not liable for damages resulting from the consumption of goods received from individual donors if such damages are not the result of negligence or misconduct by the operators of the food bank. This provision subjects food bank operators to a less stringent test than donors when determining negligence. In other words, simple negligence must be proven before a food bank operator is held liable for damages.

The bill specifically states that nothing in this section prohibits a food bank from distributing apparently suitable goods solely because of missing labels; or lower grade or marketability.

Sec. 17.20.347 defines "donor," as used in AS 17.20.345 or 17.20.346, as including "a person, farmer, retailer, slaughter-house under state supervision, freight company, distributor, wholesaler, or similar entity." This provision specifically permits operators of state supervised slaughter-houses to donate suitable meats to food banks.

The section specifically excludes from the definition of "donor" a "person who acts in a commercial capacity as a manufacturer, packer, processor, bottler, or similar entity, if that activity is the persons primary activity."

This section further provides that "food bank" means "an organization recognized by the state or federal government as a nonprofit organization and that operates principally to collect, inspect, and salvage donated food for free distribution to needy persons."

IN THE HOUSE

HOUSE BILL NO. 504

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act establishing the teacher scholarship loan program."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43 is amended by adding new sections to read:

ARTICLE 7. TEACHER SCHOLARSHIP LOAN PROGRAM.

Sec. 14.43.600. FINDINGS AND INTENT. (a) The legislature finds that there is a wide and unacceptable disparity between the ~~ethnic~~ distribution of teachers and the ethnic distribution of students in the state public schools. Particularly in rural areas, many schools have virtually no Native teachers and no non-Native students. The undesirable effects of this disparity include the following:

(1) there is a serious weakness in the ability of teaching staffs, particularly in rural schools, to foster a sense of ethnic traditions and cultures in the students;

(2) many rural students are forced to exist in two entirely separate situations: the essentially traditional atmosphere of many Native homes, and the essentially modern atmosphere of the classroom;

(3) almost no students among the state's ethnic minorities return to rural schools to teach, continuing the ethnic imbalance and exacerbating its effects; and

(4) there is an annual turnover of 40 percent among teachers in rural educational attendance areas in the state.

(b) The legislature further finds that existing programs have failed to increase the proportion of members of ethnic minorities

teaching in rural schools. Therefore, it is the intent of the legislature to establish the teacher scholarship loan program to encourage members of ethnic minorities to return to rural schools as teachers and relieve the conditions described in this section.

Sec. 14.43.610. PROGRAM ESTABLISHED. There is established the teacher scholarship loan program to provide an incentive for graduates of Alaska high schools who are from ethnic minorities to pursue teaching careers in Alaska schools.

Sec. 14.43.620. TEACHER SCHOLARSHIP REVOLVING LOAN FUND. There is created a teacher scholarship revolving loan fund. The fund shall be used to make scholarship loans to students selected under AS 14.43.600 - 14.43.650. All repayments of principal and interest on teacher scholarship loans shall be paid into the teacher scholarship revolving fund and shall be used to make new teacher scholarship loans. If estimated funds available from teacher scholarship loan repayments are inadequate to fully fund estimated teacher scholarship loans for any fiscal year, additional funding from the general fund may be requested and appropriated for that year.

Sec. 14.43.630. ADMINISTRATION. The teacher scholarship loan program shall be administered by the student financial aid committee (AS 14.43.095) in accordance with regulations adopted by the committee. The committee shall distribute the funds available for teacher scholarship loans annually to local school boards giving a preference to school districts with a high percentage of students in ethnic minorities and a low percentage of teachers in ethnic minorities. The local school boards shall select the recipients of the teacher scholarship loans.

Sec. 14.43.640. CONDITIONS OF LOANS. Each school district shall award teacher scholarship loans subject to the following conditions:

(A) the conditions provided in AS 14.43.120 apply except that no loans may be made to graduate students (and the state shall repay a portion of a teacher scholarship loan under AS 14.43.120(j) only if, in addition to the other criteria, the borrower is also employed as a public school teacher in the state during the period for which the loan is forgiven;)

(B) if a borrower meets the conditions provided in paragraph (1) of this section and is employed as a public school teacher in the district from which the borrower graduated, the portion of the loan that shall be paid by the state is the following percentages of the total loan received plus interest up to a total of 100 percent of the total loan:

(A) one year employment, 15 percent;

(B) two years employment, an additional 15 percent;

(C) three years employment, an additional 15 percent;

(D) four years employment, an additional 25 percent;

(E) over four years employment, an additional 30 percent; and

(3) a loan may not exceed $10,000 in a school year.

Sec. 14.43.650. SELECTION CRITERIA. (a) To be eligible for a teacher scholarship loan, a student must

(1) be a graduate of, or scheduled for graduation within six months from, a state public high school, with sufficient credits to be admitted to an accredited college or university;

(2) be enrolled in or show evidence of intent to enroll in a degree program directed at a teaching career at the elementary or secondary school level; and

(3) meet the conditions set by the student's local school district with respect to the district's requirements for teachers in

particular subject areas.

(b) Each school district shall award teacher scholarship loans in direct proportion to the distribution of ethnic groups among the students eligible for graduation from the school district each year.

(c) A student may not be awarded a scholarship loan under AS 14.43.090 - 14.43.160 and a teacher scholarship loan under AS 14.-43.600 - 14.43.650 for the same school year.

HB 504 "An Act establishing the teacher scholarship loan program."

WITNESS REGISTER

Rep. Hayes
Pouch V
State Capitol Building
Juneau, Alaska 99811
465-1965
Position Statement: Sponsor of HB 504; reviewed reasons for writing the bill.

Russell Jones
Special Assistant to the President
Legislative Affairs
University of Alaska
Position Statement: Generally supported HB 504, saying that the number of Native teachers is far too few, but he had several questions which detracted from his complete support.

Evellyn Conwell
Member
Regional School Board
Kotzebue, Alaska

Position Statement: Supports the intent of HB 504.

Nita Towarok
Teacher
Kotzebue Middle School
Kotzebue, Alaska
Position Statement: Supports HB 504.

Jackie Hill
Supervisor
Northwest Arctic School District
Kotzebue, Alaska
Position Statement: HB 504 is excellent incentive for rural students to get higher education.

Helen Chamberlain
Counselor
Kotzebue Technical Center
Kotzebue, Alaska
Position Statement: Supports intent of bill but had several qualms which abrogated support for the bill as written.

Kerry Romesburg
Executive Director
Postsecondary Education Commission
Pouch F
Juneau, Alaska 99811
465-2854
Position Statement: If a person with a Bachelor's degree returned to school to get an MA in teaching, the MA would be considered an extension of his BA, thus, he could get this loan for that purpose.

Susy Ehrlich
Advisory School Board
Kotzebue, Alaska
Position Statement: Very strongly supports the intent of this bill.

Wesley Goodwin
Student
Kotzebue High School
Kotzebue, Alaska
Position Statement: Strongly supports HB 504.

Calvin Baker
Principal
Kotzebue Middle School
Kotzebue, Alaska
Position Statement: Strongly supports intent of HB 504.

James Elliot

Superintendent
Northwest Arctic School District
Kotzebue, Alaska
Position Statement: Supports intent of HB 504, cited several short comings.

Marie Schwind
President
Maniilaq Association
Kotzebue, Alaska
442-3311
Position Statement: Maniilaq supports without qualifications the language and intent of bill.

Nina Bradfield
Director
Instructional Support
Chukchi Community College
Kotzebue, Alaska
442-3400
Position Statement: Applauds intent of HB 504, but did have concerns.

Jean Robb
NEA Alaska
Box 193
Kotzebue, Alaska
442-3510
Position Statement: Observer.

Rita Ryder
Box 792
Kotzebue, Alaska
442-3400
Position Statement: Fully supports HB 504.

Dennis Trepelman
Former President
Maniilaq Association
President
Kotzebue Village Corporation
Box 279
Kotzebue, Alaska
442-3460
Position Statement: Supports HB 504.

Beverly Grogin
Teacher
Chukchi Community College
Kotzebue, Alaska
442-3400
Position Statement: Getting people to return to rural regions very important; supports HB 504.

Reggie Jewel
NANA
Box 49
Kotzebue, Alaska
442-3301
Position Statement: Supports HB 504.

Eric Madsen
X-CED
Box 297
Kotzebue, Alaska
442-3819
Position Statement: Agrees with Dennis Trepelman.

Sharon Oyoumick
Graduate
Seattle Pacific University
Kotzebue, Alaska
Position Statement: Fully supports bill.

Sharon Moore
NANA Museum
Box 45
Kotzebue, Alaska
442-3301
Position Statement: Supports prior testimony.

PREVIOUS ACTION

HB 504	1/10/84 - First Reading.
	Committee Referrals - HESS, Loans and Finance Committees.
	No previous action in HESS Committee.

ACTION NARRATIVE

TAPE#1, Side A Recording Number 0006	Chairman Tischer called the House Health, Education & Social Services Committee to order at 1:05 at the Kotzebue Technical Center. Members present in Juneau via teleconference were Representatives Uehling, Davis, Martin and Pestinger. Also present were Russell Jones and Rep. Hayes.
Number 0058	Rep. Koponen is now in attendance in Juneau.
Number 0084	Chairman Tischer called Rep. Hayes to testify.

Number 0089 — Rep. Hayes, sponsor of HB 504 comes to the stand. He said there is too much disparity between rural and urban education experience.

Number 0125 — Rep. Hayes continues. In at least 13 districts there are no Native teachers and the annual turnover is 50%.

Number 0131 — Rep. Hayes; $4 million in 1980 for teacher training.

Number 0153 — He said the intent of HB 504 is to place more Native teachers in rural Alaska. HB 504 makes forgiveness easier and encourages teaching profession, said Rep. Hayes.

Number 0170 — Rep. Hayes continues testimony. It will reduce turnover rate and preserve Native cultural heritage and all Alaskans will benefit.

Number 0208 — Russell Jones, Special Assistant, Legislative Office for University of Alaska comes to the stand to testify on HB 504. He said the number of Native teachers is too low. He questions Page 3, Lines 7 - 11, "forgiveness". Asks if one must return to his exact village, even if recommended for scholarship from another village.

Number 0248 — He asked for age requirements; must be immediate last year's graduate or could it be a 20-25 year old who could become a great teacher?

Number 0268 — Rep. Koponen questions Mr. Jones; suggest any changes to current wording?

Number 0274 — Mr. Jones; broader bill - so candidate must not go back to exact district; but any comparable district, and still get forgiveness.

Number 0286 — Rep. Koponen said language is the problem.

Number 0293 — Rep. Davis agrees with Rep. Koponen and Russell Jones, put in a language requirement.

Number 0300 — Rep. Martin in Anchorage: Agrees with Mr. Jones. When there is an overload of students from one area they should be

eligible to teach in a comparable regional area. We should be more flexible, said Rep. Martin.

Number 0318 — Chairman Tischer suggested members look at map of rural area. School districts are very large. Bill sponsor interested in preserving the ethnic cohesion.

Number 0340 — Evellyn Conwell, Regional School Board Member in Kotzebue welcomes people and said she supports HB 504. Ethnic minorities are needed and is aware of the need for programs like this which compliments the EXCEED Program. As board member, they will make personal commitment to hire more Native teachers, however, only qualified teachers.

Number 0396 — Rep. Martin in Anchorage: What about marriage during college? What about forgiveness when students move to others' home town?

Number 0417 — Nita Towarok, Teacher, Kotzebue Middle School; supports bill, but concerned with language on page 3, line 1; no loans to graduate students. It excludes students who want to return to learn to teach.

Tape 1, Side B
Recording
Number 0001 — Nita Towarok continues testimony.

Number 0010 — Chairman Tischer said regular Alaska Student Loan is not restrictive in this way. They still have that option.

Number 0036 — Nita Towarok said loan should apply to all rural students.

Number 0048 — Rep. Koponen asked about success of the loan program, and how many students are interested in teaching?

Number 0075 — Jackie Hill, Supervisor, Northwest Arctic School District; HB 504 is excellent incentive for rural students to go into education. Asked why it wasn't applicable to private schools?

Number 0099 — Chairman Tischer agreed to make suggestion to sponsor of bill and include all schools.

Number 0113 — Helen Chamberlain, Kotzebue Technical

Center, had the following questions and concerns:

1. restricted to public schools and what about those with GED?

2. concerned about elimination of graduate students.

3. why not be able to apply for both Alaska Student Loan and this at the same time?

Just applying does not ensure the full amount.

Number 0182 — Kerry Romesburg said a person with a Baccalaureat degree could return to get MA in teaching, and that part would be considered as extension of his BA.

Number 0201 — Susy Ehrlich, Local Advisory School Board; very strongly in support for this effort. It will enhance student if we have successful Native role models.

Ms. Ehrlich: Cultural empathy; when educators from different culture dominate, some of the value of the culture is lost.

Number 0262 — Chairman Tisher asks Ms. Ehrlich, why haven't we ever seen flood of Native students to return as teachers? They have the original loan.

Number 0274 — Susy Ehrlich said they see no opportunity, it's invisible to them.

Number 0293 — Rep. Koponen asked definition of district to which student must return. Could we broaden the bill to include a language requirement instead of strictly district.

Number 0310 — Rep. Pestinger referred to Page 3; add - "return to region of same or similar ethnic and linguistic origin."

Number 0322 — Calvin Baker, Principal, Kotzebue Middle and High School; strongly supports for intent of bill. He said when Native teachers are on staff, its much easier to meet the needs of community and students.

Number 0362 — Rep. Goll is now present.

Rep. Goll questions the constitutionality of the bill.

Number 0371 — Mr. Baker said the bill is an excellent vehicle for attacking the problem; expressed concern about language of bill.

Number 0414 — Rep. Goll asks Mr. Baker; what about expanding existing student loan to have additional incentives and not create a new HB 504.

Tape 2, Side A
Recording
Number 0001 — Mr. Baker continues; just expand original bill. Intimated at question not constitutionality of the racial qualifications of HB 504.

Number 0050 — Chairman Tischer stated that the Attorney General is drafting a legal statement.

Number 0062 — Wesley Goodwin, Student, Kotzebue High School; reassuring to know that people care about students in these regions.

Number 0095 — James Elliot, Superintendent, Northwest Arctic School District; supports concept of this bill. We have 8 (of 107) Native teachers in this district, 98% native students and the turnover is 11.6% said Mr. Elliot. We have strong commitment to hire district graduates and glad that HB 504 gives discretion to choose school boards. He cited shortcomings of the bill and the value of Natives teaching Natives.

Number 0200 — Mr. Elliot passed copy of marked bill to Chairman Tischer.

Number 0202 — Rep. Koponen: How many of Arctic Villages have 4-year high schools?

Mr. Elliot: All, but one.

Number 0220 — Rep. Goll asks Mr. Elliot the same questions he asked Mr. Baker. Also, what about modifying existing student loan program?

Number 0266 — Marie Schwind, President, Maniilaq Association said she was happy to have Chairman Tischer and staff in Kotzebue. She said Maniilaq Association supports without qualifications the language and intent of HB

504.

Ms. Schwind cited percentages concerning ratio of Native teachers to Native students.

Number 0357 — Nina Bradfield, Director, Instructional Support; applaud intent of HB 504, concerned that this bill may penalize students who fail in college - they both fail in college and have a debt. What about those who can't find work in their home districts? They have a debt and no job.

Number 0380 — Rep. Goll asks Ms. Bradfield the same question about modifying existing bill.

Number 0387 — Ms. Bradfield; would like to modify the bill.

Number 0410 — Camille Z.; supports intent of bill, but does bill exclude non-high school students? She said she graduated long ago, but wants to return.

Tape 2, Side B
Recording
Number 0001 — Rep. Goll said there are other loan programs.

Number 0065 — Rep. Pestinger restated language change suggested before.

Number 0085 — Rita Ryder, Administrative Record Clerk at Chukchi College; fully supports HB 504, it will help bridge cultural gap.

Number 0126 — Dennis Trepelman, former Maniilaq President, President of Kotzebue Village Corporation; encouraged HB 504, percentage of Native teachers far too low. He said the turnover is sometimes higher than 40%.

Number 0203 — Dennis Trepelman continues. He agrees with language on Page 2, Lines 20-26.

Number 0238 — Mr. Trepelman considers requirement of demonstration, first semester of first year. Money is lost often by drop-outs. We should have U of A aware of rural issues, said Mr. Trepelman. He encourages passage of HB 504.

Number 0275 — Dennis Trepelman; NANA scholarships derived from contributions from other business or

corporations. We take and look at all applications, what is written well, and promises to benefit both corporation and village, and them, we view highly.

Number 0306 — Chairman Tischer said some selection criteria leans toward what applicant can do for NANA later? (Yes).

Number 0327 — Beverly Grogin, Chukchi Community College; getting people to return to these regions for all jobs is very important.

Number 0352 — Ms. Grogin; I'd like to see district encouraged to hire Natives if possible or people who love the area.

Number 0361 — Reggie Jewel, Board Director, NANA Regional Corporation; supports HB 504. It is needed and agrees with Camille Z., that this bill should be broadened to include those already out of high school or who have already done some college.

Number 0391 — Reggie Jewel; really need positive role models for Natives, and agrees with Dennis Trepelman's testimony.

Number 0404 — Rep. Koponen: Might not this loan be supplemented by direct scholarship?

Number 0410 — Mr. Jewel; agree with Dennis Trepelman's suggestion that perhaps a student go to school for a year or semester to help weed those who would not make it.

Tape 3, Side A
Recording
Number 0001 — Eric Madsen agrees with Mr. Trepelman's statement and would like the language change as suggested.

Number 0051 — Chairman Tischer; how do you feel about opening bill to extent that it might be short funded?

Number 0109 — Rachel O.: fully supports HB 504. She said, do not exclude private school graduates from this loan, and was concerned that other majors such as administration be included as eligible for this bill.

Number 0169 — Chairman Tischer; was your adjustment difficult?

Number 0182 — Rachel O.; yes quite, I almost quit, but I did adjust.

Number 0189 — Chairman Tischer; if the college experience were the first contact with metropolitan life, could that have a lot to do with failure?

Rachel O.: Yes.

Number 0215 — Rep. Koponen: are there incentives built in programs for areas where problem is just the opposite?

Number 0250 — Sharon Moore, NANA Museum for Arctic: Supports prior testimony, concerned with public high school restriction, and on Page 3, Line 9, support change of language.

Number 0301 — Chairman Tischer thanks witnesses of Kotzebue for testifying and calls for recess at 3:12 p.m.

PREVIOUS ACTION

HB 504	1/10/84 - First Reading. Committee Referrals - HESS, Loans and Finance Committees. See HESS minutes of February 3, 1984.

ACTION NARRATIVE

TAPE#1, Side A Recording Number 0001	Chairman Tischer welcomes all witnesses in Kotzebue. Members present in Juneau; Representatives Davis, Martin, Goll, Koponen and Uehling. Representatives Hayes and Hurlbert are observing.
Number 0003	Nancy Mendenhall; involved in teaching education for four years, she said there

were 15 students in the teacher education program, and 8 students in the EXEED Program.

Number 0022 — Ms. Mendenhall likes the bill; it's well stated. She said they have a very serious problem in their region with the lack of Native children.

Number 0032 — The EXCEED Program is not working as it takes too long, these people need to become full-time student. HB 504 would help correct that problem, said Nancy Mendenhall.

Number 0064 — Ms. Mendenhall: Natives with BA degree are in great demand. This bill will be a great incentive for them to return to their community and that they are very important role models.

Number 0086 — Nancy Mendenhall stated HB 504 is an outstanding bill.

Number 0092 — Rep. Hayes, sponsor of HB 504 comes to the stand. He said the student loan program is aimed at getting students who graduated to return to their villages. Rep. Hayes said there is too much disparity between rural and urban education experience. In at least 13 districts there are no Native teachers and the annual turnover is 50%. The intent of HB 504 is to place more Native teachers in rural Alaska; the bill makes forgiveness easier and encourages teaching profession. It will reduce turnover rate and preserve Native cultural heritage and all Alaskans will benefit, said Rep. Hayes.

Number 0139 — Rep. Hayes further stated that this bill will create a larger pool of qualified Native teachers and a stronger sense of the values of the rural cultures.

Number 0164 — Alfred White, Principle, Unalakleet High School: Thanks for the opportunity to speak, pleased particularly with this bill. But, public school graduates only - not acceptable. He read the testimony to be sent to Juneau, and he recognized the need since 1959. Mr. White stated that private school students are being discriminated against.

Number 0195 — Mr. White continues his testimony. The

success of private schools is widely accepted, and that some areas have only one high school and what if it is private? He encouraged to increase the bill's scope.

Number 0240 — Rep. Koponen: Speaker made a good statement, we'll be working with you, Chairman Tischer when you return.

Number 0255 — Ken Kristenson, NEA Alaska: There is a great lack of role models for students, and the increasing number of students wish to go on in school. He said, this bill will give us something to show them it's special for them to get educated and return. Ken Kristenson said NEA supports HB 504.

Number 0306 — Helga Eakon from Unalakleet: She read a written testimony.

Number 0324 — Helga Eakon: Happy to testify in support of HB 504, the findings and intent are accurate. She said, we need teachers who understand our culture.

Number 0350 — Group other than Alaska School Board should not choose students, said Ms. Eakon.

Number 0361 — Eligibility should not depend upon graduating from public school. This is unconstitutional, said Helga Eakon.

Number 0390 — Ike Wowakok: Native pride is a stepping stone to realize we have something unique and important. In our rapidly changing culture, education helps to make adjustments easier. Private school graduates not allowed, is unfair and discriminating.

Number 0441 — Rep. Davis: We are going to work on that point in the legislation, that complaint was brought up yesterday, it's a very good observation.

Number 0487 — Jenny Alowa: Originally from Sevonga.

Tape 1, Side B
Recording
Number 0001 — Jenny Alowa continues testimony. Working toward MA degree, thank you for the chance to speak. Sometimes it takes the top level to change things or motivate. The bill is very positive; it has already made an

impact. Our children do need successful role models. EXCEED teachers are over-worked and under paid. They must work too hard too long.

Number 0035 — Jenny Alowa: Local school districts very slow in moving people up any career ladder. Curriculum also a problem, it limits people sometimes.

Jenny Alowa: This is a conflict between the various cultures, but our children are very adaptable, and fewer and fewer are being lured to urban areas.

Number 0062 — Jenny Alowa: Local Community Colleges have been a great advantage to the villages. So has state wide satellite, Channel 13.

Number 0072 — Chairman Tischer: How would it affect your thinking to that offer borrowing $40,000. You might change your decision and not teach, or you might marry and go without your mate to another area?

Number 0100 — Jenny Alowa: This is limiting. If one returns to any area within the state, they should have forgiveness.

Number 0128 — Lawrence Olson, Executive Director; fully supports the bill, and restated, should not be restricted to public school graduates. He added, our high school has students from all over Western Alaska, please include private schools.

Number 0170 — Ralph Gabrielli, Education Teacher for (4) years, Northwest Community College: Probably 30 students in this area are moving toward AA or BA degrees. These are very fine motivated students who sacrificed greatly for only 9 credits per semester. Thus, it takes 7 years to get BA.

Number 0206 — Ralph Gabrielli continues, strongly support HB 504. The money will provide options not currently available.

Number 0217 — Mr. Gabrielli: Students who take this loan will be risking a great deal. They may not finish their college, there may be no jobs available.

Number 0234 — Mr. Gabrielli continues: Committee should consider forgiveness for returning to any rural area in Alaska.

Number 0248 — Ralph Gabrielli: Addressing the spirit behind the bill; in Alaska, 35 Natives who care called Aides, but who take great responsibility for classroom. Perhaps some special legislation could make them full-time teachers, because that is what they are doing now.

Number 0291 — Willie Willoya, former school teacher; as this bill stands, I am against it. It's a political football - the administration clause may work against ethnic community.

number 0314 — Mr. Willoya: The things not firmly established in bill will work against the Natives in the area.

Number 0345 — Mr. Willoya continues testimony. In 5 years, Sec. 14.43.360 will work against villages. I suggest that if legislators really want Native teachers, they establish a two year grant program to any Native who wants it. No politics, no time consuming things besides teaching courses.

Number 0374 — Willie Willoya: The people who really want to make it, they can, if they don't have families to feed.

Number 0405 — Mr. Willoya refers to Sec. 14.43.650. SELECTION CRITERIA. His concern was, most people don't know until their second year if they want to be a teacher.

Number 0431 — You could have A and B students teach C and D students to help pinpoint the best and help them decide if they want to spend a life teaching, said Mr. Willoya.

Number 0484 — Mr. Willoya said HB 504 does not define philosophies.

Tape 2, Side A
Recording
Number 0001 — Mr. Willoya continues his testimony: If those who will choose students for scholarships.

Number 0012 — Chairman Tischer: How did you get MA's?

Mr. Willoya: Kuskokwim Community College and Barrow. I have close to 7 other Masters degree if I want to finish them. Extension programs.

Number 0050 — Herbert Ivanhoff, City Administrator, Unalakleet: This bill is long over due. He noted on Page 3, Sec. 14.43.650. SELECTION CRITERIA. Private schools should not be left out.

Number 0072 — Mr. Ivanoff: Should be able to teach in a private school, too.

Number 0081 — Student should be able to return anywhere in rural Alaska, said Herbert Ivanhoff.

Number 0090 — Mr. Ivanoff refers to Sec. 3 and asks for explanation.

Number 0095 — Chairman Tischer explained the section.

Number 0116 — Susie Silook, Administrative Assistant, Community College: Voices her support. I sympathize with students who try to feed a family and get a degree. Outside teachers cannot always adopt their teaching to Native culture. We need Native teachers who can adapt knowledge to the culture.

Number 0148 — Chairman Tischer: Clarified that if one could not get this loan, there is still the Alaska Student Loan.

Helga Eakon: Refers to Sec. 14.43.650. SELECTION CRITERIA: Clarity of first clause - 6 months period, could a several year graduate also seek loan?

Number 0221 — Chairman Tischer: Clarification.

Number 0270 — Alfred White: Refers to Sec. 14.43.640. CONDITIONS OF LOANS and the next paragraph. He feels that it is too restrictive.

Number 0313 — Mr. White: School Board select recipients regarding a quota? Then if there are no qualified candidates, they would still have to pick someone, which would lower the overall quality of students.

Number 0384 — Edna Apatiki from Gamble: She is pursuing a teaching certificate and is in support of HB 504.

Number 0481 Chairman Tischer called for a recess until noon on Sunday, February 5, 1984.

ACTION NARRATIVE

TAPE#1, Side A

Recording Number 0001	Chairman Tischer called the meeting to order at 2:04 p.m., recognized the members present and announced the committee will have a work session on HB 504.
Number 0048	Chairman Tischer reviewed the suggestions and concerns of the weekend hearings. She said she intended to change the language in the bill concerning "private schools."
Number 0131	Rep. Koponen asked who decides admission to a University? He said, we can't force University to accept credits from any high school.
Number 0150	Rep. Uehling asks Rep. Pestinger· Can we put Alaska high school or State high school?
Number 0161	Chairman Tischer said, we've got to be consistent. We will ask the legal drafter for exact language. Page 3, Subsection 2. Condition of Loan. The village dweller who went outside village to high school, or those students from different districts who marry and go to one spouse's home village, the other gets penalized.
Number 0234	Rep. Pestinger: Amendment, "of same or similar ethnic and linguistic origin". Rep. Pestinger suggested that this change was consistent with testimony, and did not interfere with the intent of the bill. This seem a good change.
Number 0259	Representatives Goll and Davis arrived at 2:25 p.m.
Number 0266	Jeff Day; to help with the intent of the bill. Intent; they can return to a culturally linguistically similar area.

Number 0278 — Rep. Uehling; would this apply to any urban areas? We don't want to open it up this much.

Number 0296 — Rep. Koponen: Some testimony stated support for bill because of the role model idea, this would be as viable for an urban Native as a rural one.

Number 0300 — Chairman Tischer: Exactly. How do you not discriminate and still account? There is a large black population in Anchorage, for example.

Number 0315 — Rep. Davis: What if one moves to city at 16 years? Is he not eligible for the loan?

Number 0331 — Chairman Tischer: There is always the Alaska Student Loan program available.

Number 0346 — Rep. Pestinger: I'm trying to look toward the policy of bill, not legal matters. How broad should our meddling be? Do you want me to look at the constitutionality of it? As Chairman, I need your discretion.

Number 0356 — Chairman Tischer: Answer for sponsor, the intent of the bill is to keep handle on loan. We want to encourage kids who are thinking about college to become teachers and go back to their rural area.

Number 0368 — Rep. Pestinger: Attorney General's legal opinion you had drafted, any red flags?

Number 0375 — Chairman Tischer gave the committee five minutes to review the legal document.

Number 0376 — Rep. Davis: Perhaps we should ask Mr. Romesburg to add his testimony. He's worked on the legal

Number 0379 — Mr. Romesburg: The Attorney General raised several questions about equal protection, and most of those can be addressed by dealing with preference rather than proportion. Preference in an area of unbalance will get you around quotas. She also addressed the public/private high school part. She (Assistant Attorney General) said about forgiveness, don't restrict to school district. Intent is cultural similarity. School district and cultural similarity may not be the same

thing. Looking for ethnic balance. She liked going with each rural Alaska as returning point.

Number 0410 — Rep. Goll asked to clarify the federal incentive loans, the forgiveness.

Number 0417 — Rep. Goll; what's your recommendation for defining minority rural areas.

Number 0426 — Rep. Goll said the intent of the bill is fine, but statistics show that people do return to rural Alaska. These constitutional problems would be overcome. Take Section 640, line 28 - exclude part 3, $10,000.

Rep. Goll; include this part in the existing loan program. Rather than create a new program, just amend this Alaska State Loan Program with the same forgiveness for returning to rural areas.

Tape 1, Side B
Recording
Number 0001 — Kerry Romesburg: Doesn't address the problem of mal-distribution of teachers.

Number 0020 — Rep. Davis: I must leave soon, but could Mr. Romesburg provide us with some written recommendations.

Number 0057 — Rep. Uehling: Re; Rep. Goll's suggestion to change this but expand Alaska Student Loan Program.

Number 0073 — Kerry Romesburg: If purpose is to recruit for specific occupation, then fine.

Number 0083 — Rep. Goll: Do you want to make a dollar incentive?

Number 0085 — Rep. Uehling: I want to make sure we put this bill together without constitutional problems, and still keep the $10,000 in the loan.

Number 0092 — Representatives Goll and Uehling: What happens to the junior who changes his mind about becoming a teacher?

Number 0095 — Chairman Tischer: He'll suffer the consequences.

Number 0110 — Mr. Romesburg: As written, I don't know why

any student would take this loan. Because this program demands 100% payback if you don't do exactly what the loan demands - gamble that you'll graduate with a teacher's degree and get a job in Alaska. Too many gambles.

Number 0137 — Rep. Hurlbert: At first we had a provision that you got 50% forgiveness if you taught anywhere in the state. Others clarified that provision still exists.

Number 0170 — Rep. Davis agrees with Mr. Romesburg.

Number 0191 — Rep. Hurlbert asks Mr. Romesburg: What does loan cover? Books, tuition, room and board? No travel. Rep. Hurlbert suggested to add travel as an expense covered by loan.

Number 0204 — Chairman Tischer to Mr. Romesburg: With more forgiveness, what impact on idea that program will eventually be a revolving fund?

Number 0209 — Kerry Romesburg: This loan will become a revolving fund, about 1 of 5 students ever gets forgiveness.

Number 0217 — Chairman Tischer: Rural folks concerned about paying back that money.

Number 0226 — Mr. Romesburg: Same as anyone else, 10 year pay back. Then you could extend that 5 years under the Hardship Rule.

Number 0238 — Rep. Goll: Do we have a fiscal note here? Why such a low fiscal note?

Number 0240 — Mr. Romesburg: So low, because this fund comes from the same fund as the Alaska Student Loan fund.

Number 0257 — Chairman Tischer: Another questions the folks brought up, I'm going to take this loan and go to U of A,A. Second year, switch majors. I suggested they should then switch to original Alaska State Loan Program, then I advised them to start out with the Alaska State Loan anyway because no matter what you graduate in, it's forgiven.

Number 0289 — Rep. Uehling: Concerned about potential liability of $80,000 loan.

Number 0302 — Rep. Hurlbert: What about leaving some of

this to the discretion of the post-secondary board. We can't foresee all circumstances.

Number 317

Chairman Tischer adjourned the meeting.

House HESS Committee
Members of the Committee

DATE: February 21, 1984

RE: HB 504; "An Act establishing the teacher scholarship loan program."

NEA-Alaska strongly supports and encourages favorable consideration of the concept of scholarship incentives as a method of encouraging Alaska Natives to pursue careers in teaching in the public schools in Alaska. This particular issue was established as one of the six major legislative priorities of the Delegate Assembly, meeting in Anchorage in January.

It may be appropriate for the Committee to seek data relative to the previous implementation of AS 14.43.050 -.090 for purposes addressing specifically identified needs. SB 426 expands upon the provisions of the above referenced statute.

We would further encourage that the Committee, either on its own initiative or through the Department of Education, consider the feasibility of conducting an annual survey of all Alaska Native High School sophomores, juniors, and seniors and, perhaps even a supplemental survey of their parents and guardians as well, in an effort to build a data base which could be used to bring even more focus to this kind of legislation on a long term basis. Specifically, it seems appropriate to have more information on:

- career aspirations, expectations, needs
- current deterrents, barriers, problems
- extent and nature of counseling and adequacy of curriculum

A recent survey published by Texas Christian University on "Factors Related to High School Students' Interest in Teaching as a Profession" strongly suggest that a decline in parental interest in encouraging their children toward teaching is a major factor. It may be appropriate to ascertain the validity of this conclusion for Alaska.

With an increasing number of Native students in the urban areas perhaps it is worthy of some emphasis to encourage, through incentives, more Native teachers in these areas as well.

It also seems appropriate to consider making this loan program an adjunct of the regular student loan program, but utilizing an expanded and separate sub-committee of the Post Secondary Education Commission which would also include practicing teachers and parents among its membership.

We feel that it is appropriate to raise some caution relative to geographic restrictions upon where a recipient may chose to teach. Reduction in the teaching force, non-retention and/or desire to voluntary job changes may have some effect on mobility of the recipients.

Finally, it may also be appropriate to clarify the legislative intent of HB 504 as it pertains to the term "teacher." AS 14.20.207 currently provides that the term teacher is also intended to cover administration. It is our recommendation that the primary focus be toward those who are actually in a classroom teaching circumstance.

Respectfully Submitted,

Bob Manners
Executive Secretary
NEA-Alaska

RESEARCH SUMMARY

Institute of Social and Economic Research, University of Alaska January 1984, R.S. No. 13

Effective Schooling in Rural Alaska

INTRODUCTION

Rural teachers are not satisfied with their students' academic progress, according to a new University of Alaska report, and they tend to blame the problem on a lack of motivation. On the other hand, the teachers are satisfied with their relationships with both the students and the community.

The report was prepared by the College of Human and Rural Development and the Institute of Social and Economic Research for the Alaska Department of Education. It was based on a survey of 304 rural teachers, representing every school outside Alaska's urban areas (such as Anchorage, Fairbanks, and Juneau). The teachers identified several educational areas that needed attention. They also described the instructional practices that they found effective in a rural Alaska context. Ninety-six percent of the teachers returned their surveys, an unusually high proportion.

FINDINGS

Satisfaction with Educational and Other Conditions

Most rural teachers, whether they taught in majority Native or non-Native schools, are satisfied with the quality of their relationships with students (92 percent), with discipline in their schools (84 percent), and with school/community relations (73 percent).

Ironically, what frustrates rural teachers, particularly in Native majority communities, is not relationships with people of a different culture, but relationships with the district center. Fewer than half the teachers in Native majority communities are satisfied with the support they receive from the central office (43 percent), with the superintendent's management (46 percent), and with the district board's action (46 percent). According to teachers, many district staff do not appreciate the local situation. (We did not survey district staff; their perspective may very well be different.)

Most rural teachers (80 percent) are pleased with their salary and benefits. To our surprise, only about a third voiced dissatisfaction with their housing.

Almost half of the rural teachers want more opportunities for professional growth. One wrote:

> I am in a tiny school—one other teacher who is not my husband. I have no one to ask questions of. My class of primary grade children includes an incredible range of students (skill, intelligence, behavior, motivation). I have an unworkable curriculum guide. My district has offered me one training session, one week. I am alone!

Student Achievement: What Teachers Expect

Rural teachers' views of their students' performance are ambivalent. On the one hand, over half the teachers in Native majority schools (52 percent) say they are not satisfied with their students' academic progress. Even more (60 percent) say they cannot expect average or above-average achievement from their students.

Rural teachers expect virtually all their students to graduate from high school. But most teachers in Native majority schools (90 percent) expect less than half their students to attend college.

Despite their pessimistic view of students' academic performance and potential, most teachers in Native majority schools (63 percent) say they are satisfied with the quality of education at the school.

Rural teachers in non-Native majority schools are significantly more satisfied with their students' academic progress. They feel that achievement levels *above* national norms can be expected from their students. Finally, they are much more likely to expect students to attend college.

These differences between teachers' views in Native and non-Native majority schools are troubling. We are not sure what they mean. Several teachers wrote on the margins of their surveys that we should be careful *not* to interpret their attitudes as "low expectations." In their view, they are simply being realistic when they say that they do not expect many students to achieve at national norms and that they do not expect many students to attend college.

JAN 16 1984

Indeed, 49 percent of the teachers in Native majority communities say that none of the parents expected students to complete college. "Parents are reluctant to see their children leave home and become indoctrinated in a foreign culture," one teacher explained on the survey.

But teachers also point out that the rural context unjustifiably lowers academic expectations. One said:

> My own personal level of expectation has gone down since I arrived here. When I started as an English teacher my expectations were too high. Very quickly my expectations became more realistic. The big problem is that we overcompensate and come to expect too little.

Effective Teaching Practices in Rural Alaska Schools

Rural teachers say their schools do not emphasize many of the practices that are related to high achievement test scores in schools outside Alaska. Most teachers, for example, say their schools do not pay much attention to standardized test scores as a basis for setting academic goals.

Less than half (48 percent) of rural teachers assign homework regularly. Many say they avoid homework because students do not have the needed lighting, space, or opportunity at home.

A large proportion of teachers (40 percent), however, do hold study sessions before or after school once a week or more. These study sessions are advantageous, they say, because the school setting helps students settle down to work and teachers are right there to help.

When asked to describe briefly the instructional practices they personally found effective, rural teachers emphasized some of the practices stressed in national studies of effective schooling and some practices related to the village cultural context. These include:

1. Use of diverse instructional materials and especially projects where students actively do things.
2. Self-paced instruction, especially where the teacher sets standards for the amount of work to be done.
3. Cooperative student learning situations, such as group projects and peer tutoring.
4. Opportunities for parents and community people to participate in schooling, such as sending home nightly study guides.

CONCLUSIONS

We have asked many different people—school superintendents, rural and urban teachers, representatives of professional education organizations—to comment on these findings. Most raise the same issue: How can so many rural teachers say they are satisfied with the quality of education at their schools and then turn around and say they don't expect students to reach national achievement norms or attend college or complete college if they do attend?

Possibly the answer is straightforward: most rural teachers may feel they are working in a difficult situation, with students whose cultural traditions do not necessarily support academic achievement or college attendance, and whose parents are not often oriented toward these goals. They may feel that under these circumstances, they and their schools are doing a fine job. But the disturbing issues remain: do teachers expect too little of village students? And what should count as "educational success" in rural Alaska? Such questions as these must be answered before we can reasonably expect to improve the effectiveness of rural schooling in Alaska.

This report, entitled *Effective Schooling in Rural Alaska* (27 pages), was prepared by Judith Kleinfeld and G. Williamson McDiarmid under the auspices of the College of Human and Rural Development and the Institute of Social and Economic Research, University of Alaska. The teacher survey on which the report was based was part of a study of school governance in rural Alaska, conducted by Dr. Gerald McBeath at the University of Alaska with the assistance of the authors and others. The report is available from the Institute of Social and Economic Research, 204 Chapman Building, University of Alaska, Fairbanks, AK 99701, or from ISER in Anchorage, 707 A St., Suite 206, Anchorage, AK 99501, telephone 278-4621. For more information on this report, call Judith Kleinfeld, ISER-Fairbanks, 474-7435.

JUNEAU, AK

FEB. 15, 1984

DEAR REP. Vern Hulbert

THIS IS A LETTER CONCERNING HOUSE BILL NO. 504 IN SUPPORT OF STUDENT LOANS TO AKASKAN STUDENTS. I AM IN FULL SUPORT OF THIS BILL. I CAN HONESTLY SPEAK ON THIS ISSUE. WHEN I ATTENED THE X-CED PROGRAM THERE WHERE MANY DISCOMFORTS I HAD TO ENCOUNTER IN APPLYING FOR FUNDING AS AN OFF CAMPUS STUDENT. THE EXISTING LOANS WERE NOT ENOUGH TO MET THE NEEDS OF ANYONE WITH A FAMILY. WE ALL UNDERSTOOD THAT IT COSTED MONEY TO GO TO SCHOOL BUT THE HARDSHIP WAS AT TIMES VERY DEMANDING ON OUR SLIM BUDGETS.

THE BILL HAS INSIGHT FOR OUR NON-CERTIFIED TEACHERS WHO HAVE BEEN VERY DEDICATED TO THEIR JOBS. THAY HAVE WORKED VERY SILENTLY WITHOUT RETIREMENT BENIFITS ON PART TIME BASES. I CAN FORESEE THEM GOING ON TO SCHOOL NOW IF THIS BILL IS PASSED IN BOTH HOUSES. THE COMMUICATION WHICH LINKS THE VILLAGE LIFE AND THE SCHOOLS ARE THE NON-CERTIFIED AIDES. PERHAPS, IN THE FURTURE WITH MORE CERTIFIED TEACHERS WHO ARE ALASKAN NATIVES A BETTER DELIVERY OF EDUCATION WILL BE A REALITY HERE IN RURAL ALASKA.

I ALSO CAN SEE ANOTHER BARRIER WHAT WILL BE DONE FOR THE NATIVE CERTIFIED TEACHERS WHO MUST WAIT FOR THE TENURE TEACHERS TO MOVE ON I MYSELF SIT IN THAT POSITION AND HAVE BROUGHT IT TO THE ATTENTION OF THE REAA BOARD THE REPLY WAS THE TENURE TEACHER OR AN OPENING WITHIN THE DISTRICT WHEN EVERY THE WAS ONE WHERE I CAN FIT THE SLOT.

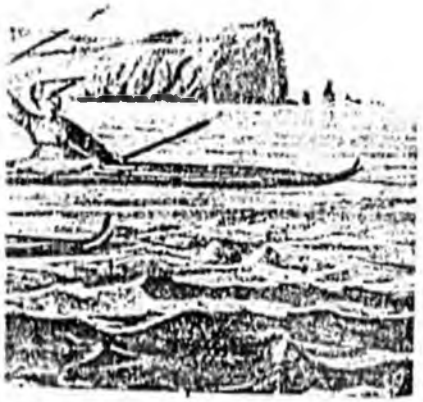
SINCERELY

MARIE T. [WALKER] HAILEY

Alaska Native Land Managers Association

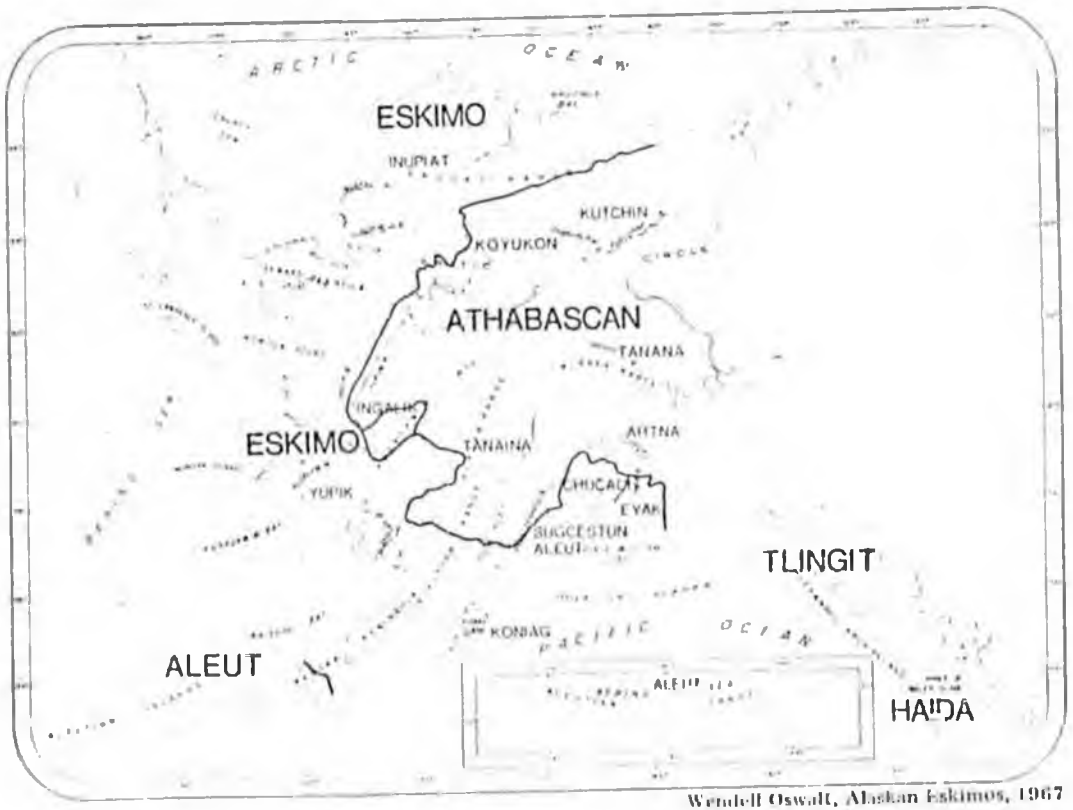
WHEREAS, the preservation and continuation of Native culture in Alaska is of paramount importance; and

WHEREAS, Native teachers are needed to foster a sense of ethnic traditions and cultures in Alaska Native students; and



WHEREAS, existing programs have failed to increase the number of Alaska Native teachers; and

WHEREAS, the number of Alaska Native teachers returning to teach Alaska Native students is inadequate.



THEREFORE BE IT RESOLVED that the Alaska Native Land Managers Association, meeting in Anchorage, Alaska, this 19th day of January, 1984, does hereby support and urge the immediate passage of House Bill 504.

MAP 2 GENERALIZED GEOGRAPHIC DISTRIBUTION OF ESKIMOS, INDIANS AND ALEUTS IN ALASKA

Aleuts

Most Aleuts lived in coastal villages on islands named after them stretching 1,000 miles across the North Pacific. Some few lived at the lower end of the Alaska Peninsula.

The population of about 15,000 Aleuts lived in numerous small villages, most of which were located on the Bering Sea side of the islands. One island, Umnak, once had 16 villages. A typical village was made up of six or seven houses; each household consisted of 20 to 30 people who were related to one another. Their houses were half underground and covered with a warm dome of sod.

Every village with its cluster of houses had its own sea hunting areas, which had to be respected by other villages. Use of these areas without permission meant war.

Adult men hunted seals, sea lions, and whales in the open sea from kayaks, perhaps the most seaworthy of watercraft. Roots, berries, birds, and eggs were available on the land. The food resources of the Aleuts were so abundant that anyone [illegible] by gathering

Dear Mr. Willoya,

Thank you for forwarding your comments on HB 504. I found them enlightening and thoughtful. They will be an important contribution to what we are attempting to make a thorough and complete review on the subject of rural education in Alaska, as it affects the proposed program.

I have forwarded your comments to the HESS Committee for its final work sessions on the bill, and it will become a part of the permanent bill file.

I appreciate your taking the time to attend the hearing and to type and send your comments. When I may be of further assistance or information, please feel free to contact me.

Sincerely,

Joe L. Hayes

FEB 1 0 1984

Teleconference opinions of William Willoya on

House Bill no. 504 at Nome Alaska, Feb.4,1984.

As per your request for written words here is a brief, concise recap of my oral testimony. I am a bachelor of Arts certified, graduate of Alaska Pacific University, class of 1974. Prior to that I was a student of "Arctic" teacher training program, class of 1969.

The experiences I have had in the Arctic as a working person and Principal Teacher number 30 years, approximately 9½ in k-12 schoolteaching. I arrived thru the back door into education,(which is one of many careers I have pursued). Hence I have the objectivity to look at any stratum of Arctic Society with a relatively unprejudiced, experienced eye. With this in mind let me remind you the Arctic, now "x-ced" program is a visible bureaucracy, created by the Alaska people to using your "words." 'Therefore, it is the intent of the legislature to establish the teacher scholarship loan program to encourage members of ethnic minorities to return to rural schools as teachers and relieve the conditions described in this section".

As per my testimony as living proof that Arctic X-ced is a viable program. Except the Super insulated bureaucratic intelligentsia administered the program. I am totally opposed to programs that are statistical "miracles" and real life failures. This is true with any program that involves several layers of accountability, in which native people are the constituents, technicians and professionals work for and are accountable to. In all cases the legislature hears the professionals and not the village spokesman when programs are called into account.

Sec. 14.43.630 I Object: Local school boards should be the "total" process. Selection,administration,Identification of Awardee, Guardianship of the funds, etc.etc.

Reason: Professional Educators know there finest students, know there local school board, know the familys, know whether or not the student -is sincere in purpose, Pure in motivation, and hard working enough to stick out 4 years in college. School Districts statewide are in political and administrative chaos. Most of the elected school boards leave every type possible work To the administration. Hence, if this provision is left in infighting, quota politicking,promoting, and other common tactics will be employed to insure the "right" student is awarded.

As per the testimony on Article 7 I reiterate the goals. Rural students are the aristocracy of the Arctic kingdom. All life goals, plans, efforts, and societal measures are planned with the idea in mind of insuring the student child will be awarded the highest degree of status. Hence, when jobs take children away enmasse the subsistence villagiers revolt by sabotageing the take away our children,program. Right now there is not enough sophistication to keep the talented in remote villages. I can name you the survivors of "Arctic X-ced" left in villages if you wish, on my fingers and toes. Arctic Attrition will kill this bill as surely as a firing squad. A subsistence person is Arctic Royalty. A child, spoiled, self sufficient, aristocratically upbred, secure, in full control of that society does not necessarily find education a progressive entity. Hence, I suggest that this bill be redrafted so that earlier identification of client students, and school boards be finally called on to correct the deficiencies of this bill and the Village Local school boards in conjunction with Local teachers keep this bill out of the hands of bureaucracys.

Finally, let me congratulate you for your universality, progressive mindedness, and fairness to all Alaskans, especially the future ones now in school.

William Willoya

IN THE HOUSE

HOUSE BILL NO. 504

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act establishing the teacher scholarship loan program."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43 is amended by adding new sections to read:

ARTICLE 7. TEACHER SCHOLARSHIP LOAN PROGRAM.

Sec. 14.43.600. FINDINGS AND INTENT. (a) The legislature finds that there is a wide and unacceptable disparity between the ethnic distribution of teachers and the ethnic distribution of students in the state public schools. Particularly in rural areas, many schools have virtually no Native teachers and no non-Native students. The undesirable effects of this disparity include the following:

(1) there is a serious weakness in the ability of teaching staffs, particularly in rural schools, to foster a sense of ethnic traditions and cultures in the students;

(2) many rural students are forced to exist in two entirely separate situations: the essentially traditional atmosphere of many Native homes and the essentially modern atmosphere of the classroom;

(3) almost no students among the state's ethnic minorities return to rural schools to teach continuing the ethnic imbalance and exacerbating its effects; and

(4) there is an annual turnover of 40 percent among teachers in rural educational attendance areas in the state.

(b) The legislature further finds that existing programs have failed to increase the proportion of members of ethnic minorities

teaching in rural schools. Therefore, it is the intent of the legislature to establish the teacher scholarship loan program to encourage members of ethnic minorities to return to rural schools as teachers and relieve the conditions described in this section.

Sec. 14.43.610. PROGRAM ESTABLISHED. There is established the teacher scholarship loan program to provide an incentive for graduates of Alaska high schools who are from ethnic minorities to pursue teaching careers in Alaska schools.

Sec. 14.43.620. TEACHER SCHOLARSHIP REVOLVING LOAN FUND. There is created a teacher scholarship revolving loan fund. The fund shall be used to make scholarship loans to students selected under AS 14.43.600 - 14.43.650. All repayments of principal and interest on teacher scholarship loans shall be paid into the teacher scholarship revolving fund and shall be used to make new teacher scholarship loans. If estimated funds available from teacher scholarship loan repayments are inadequate to fully fund estimated teacher scholarship loans for any fiscal year, additional funding from the general fund may be requested and appropriated for that year.

Sec. 14.43.630. ADMINISTRATION. The teacher scholarship loan program shall be administered by the student financial aid committee (AS 14.43.095) in accordance with regulations adopted by the committee. The committee shall distribute the funds available for teacher scholarship loans annually to local school boards giving a preference to school districts with a high percentage of students in ethnic minorities and a low percentage of teachers in ethnic minorities. The local school boards shall select the recipients of the teacher scholarship loans.

Sec. 14.43.640. CONDITIONS OF LOANS. Each school district shall award teacher scholarship loans subject to the following conditions:

do they stop and be perfect teachers?

(1) the conditions provided in AS 14.43.120 apply except that no loans may be made to graduate students and the state shall repay a portion of a teacher scholarship loan under AS 14.43.120(j) only if, in addition to the other criteria, the borrower is also employed as a public school teacher in the state during the period for which the loan is forgiven;

(2) if a borrower meets the conditions provided in paragraph (1) of this section and is employed as a public school teacher in the ~~district~~ LV School from which the borrower graduated, the portion of the loan that shall be paid by the state is the following percentages of the total loan received plus interest up to a total of 100 percent of the total loan:

(A) one year employment, 15 percent;

(B) two years employment, an additional 15 percent;

(C) three years employment, an additional 15 percent;

(D) four years employment, an additional 25 percent;

(E) over four years employment, an additional 30 percent; and

(3) a loan may not exceed $10,000 in a school year.

Sec. 14.43.650. SELECTION CRITERIA. (a) To be eligible for a teacher scholarship loan, a student must

(1) be a graduate of, or scheduled for graduation within six months from, a state public high school, with sufficient credits to be admitted to an accredited college or university;

(2) be enrolled in or show evidence of intent to enroll in a degree program directed at a teaching career at the elementary or secondary school level; and

(3) meet the conditions set by the student's local school district with respect to the district's requirements for teachers in

Too vague

particular subject areas.

(b) Each school district shall award teacher scholarship loans in direct proportion to the distribution of ethnic groups among the students eligible for graduation from the school district each year.

(c) A student may not be awarded a scholarship loan under AS 14.43.090 - 14.43.160 and a teacher scholarship loan under AS 14.-43.600 - 14.43.650 for the same school year.

Juneau, Alaska 99811

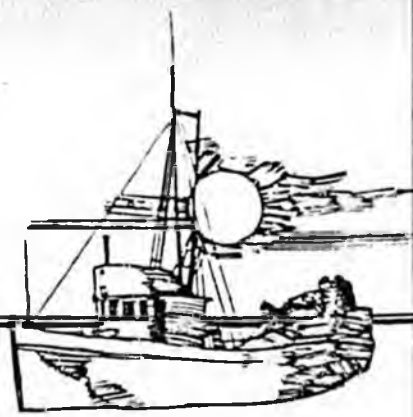
Re: HB 504

Dear Representative Tischer:

At a recent meeting of the Alaska Native Land Managers Association, the membership passed the enclosed resolution urging passage of HB 504, dealing with establishing the teacher scholarship loan program.

We feel that this bill satisfies an important need in rural Alaska. For too long, young people have left the villages to attend college, never to return. Additionally, we have watched a parade of non-native teachers through the village schools. We feel that it is important to have a stable staff of teachers in rural schools. We also feel that it is preferable to have native teachers teaching in predominantly native schools in order to understand and preserve the unique culture and history of Alaska Native peoples. It is our feeling that native teachers will provide a valuable role model for students in rural Alaska. The students need to see that they can be a success and that they can be leaders in today's world.

We feel strongly that the passage of HB 504 will be another step along the path towards improving rural education and the lives of rural Alaskans.



Very truly yours,

Daniel Alex

Honorable Joseph Hayes, Speaker of the House
Alaska State Legislature
Pouch V
Juneau, AK 99811

RE: House Bill #504

Dear Mr. Speaker:

I wish to speak in support of House Bill #504 related to a teacher scholarship fund for native students. Having spent the last eight years in Alaska bush and rural school systems, I know that our native students do need the relationships that native teachers can give to them.

We need positive counseling efforts to lead our future native teachers into the profession and give them support while they develop their teaching skills.

I thank you for the introduction of this bill and wish you and Representative Hurlbert success in its passage.

Sincerely,

Nyal D. Worsham, Supt.

Dear Mr. Lovell:

Thank you for this opportunity to submit written comments on House Bill No. 504. I admire the legislators insight into the problems of Rural Alaska and I applaud them for their inventiveness. Keep up the good work!!

Once again thank you for this opportunity.

Sincerely,

Fred Wemark
Special Assistant

enclosure: 1

Mauneluk Manpower
Testamony on HB 504

Thank you for this opportunity to comment on HB 504. My name is Fred Wemark, Special Assistant with Mauneluk Manpower. I manage a program that brings career awareness into the villages. The main thrust for the program is to get the students and adults within the villages to think about what they would like to do in the village or region in the way of an occupation. We explore all the potential possibilities of work and try to give as accurate a picture of employment as possible in the future.

Your Bill reaches right to the heart of employment that will always be present regardless of the amount of development the rural parts of our great state may or may not enjoy. As long as there is a rural population there will be teaching jobs available. It is only fitting that these positions be taken by those that will live in the community and raise their families and keep the money within the community. This not only makes sense from an economic standpoint but from a social standpoint also.

There are many students in our University system that are studying for a career in Education. But those people are to few. Your bill will increase that number dramatically. More and more the high school students are realizing the importance of a higher education. With the rural economy in the shape it is in those hopes for a higher education fades with the lack of money to send them to school. Hope is now on the horizon. I urge that you pass this important piece of legislation as soon as possible with the appropiate funding.

Thank you.

Alaska House of Representative
Pouch V
Juneau, Alaska 99811

Dear Speaker Hayes:

I am writing to you in support of House Bill no. 504, which uou introduced recently in the second session of the 13th legislature. This bill if passed, will greatly encourage and enhance our native people to come back and teach among their own people and will improve the quality of education which is vital in this area. Representative Vern Hurlbert is avare of this and it is his concern for his constituents in District 24 of which he represents.

Mr. Speaker, I advice your integrity and is some what surprise to me that you are concerned for us natives, therefore, I believe that is the kind of leadership we need in Juneau. Thank you very much!

Sincerely,

Andrew Brown, Vice-Mayor

Mr. Joe Hayes
Speaker of the House
Pouch V
Capitol Building
Juneau, Alaska 99811

Dear Speaker Hayes:

I am in receipt of a letter from Vern Hurlbert and a copy of HB 504. The idea seems a propitious one and has my enthusiastic support. I have noticed the problem you described with village schools in this area, wherein the bulk of the students are native and the teachers non-native. The teacher turnover rate is also sometimes rather appalling. I am sure the problem is even more marked in the northern sections of the state.

The only question I have is a legal one; namely, what is the advice of the AG's office on the constitutionality of Sec. 14.43.630 wherein preference is given to certain districts. I understand the intent, applaud it as morally correct and a practical necessity (if you are to accomplish the stated goal and not end up giving the bulk of the scholarships to non-natives from non-native majority school districts) but wonder if it runs afoul of due process clauses. It is worth getting an opinion on beforehand to make sure the bill is couched in terms that are proof against later litigation.

Sincerely,

Thomas L. Conley, M.D.
Secretary
Ketchikan Gateway Borough School District
Board of Education

MS. MATILDA GAMBLE
MRS. ANN MACKOVJAK
DR. JACK LESH

Representative Vern Hurlbert
State Capital
Pouch V
Juneau, Alaska 99811

Dear Representative Hurlbert:

I would like to respond to House Bill NO. 504 which was recently introduced in an effort to encourage Alaska Native high school graduates to return to their home village to teach.

Prior to my tenure here in Chatham School District, I spent nine years on the Sheldon Jackson campus encouraging and developing a teachers education program. I am very interested in presenting role models for the village; however, I think your approach is wrong.

In our school district I would be in favor of hiring a student to return to the area, but not the same village. Experience from Bible times to the present will demonstrate that people returning to their home village are unduly criticized or subjected to demands not common to other candidates.

I also think the loan is discriminatory. This fact on the surface may not seem like an important clause; however, minorities like to know they made it on their own merits. I also think people are more inclined to succeed at something they invest time and money in.

Finally, I think many native graduates do something other than teach simply because they can demand more money as a college graduate in another occupation.

Many of our Sheldon Jackson graduates were either offered employment and terminated or never started due to the high wages they were able to attain through private enterprise or the native corporations. I do not think this program will change this fact and may in the long run do a disservice.

Please write or call me if I can be of further service or add clarification

Sincerely,

Darrell G. Moore

Darrell G. Moore, Supt. of Schools

cc: Joe Hayes, Speaker of the House
Reading File

Native teacher fund envisioned

(Continued from Page One)

tive students among the state's ethnic minorities return to the rural schools which continues the ethnic imbalance.

A high turnover of as much as 40 percent of teachers in rural education attendance areas in the state.

The bill states that current programs such as the X-CED program at the University of Alaska has failed to rectify the problem.

The loan program would appropriate money to be loaned to high school graduates or students within six months of graduation from a state public high school who have sufficient credits to be admitted to an accredited college. Those students also must be enrolled in or show intent to enroll in a university program which aims at a teaching degree for elementary or secondary school. The student also must meet criteria established by the local school board.

If the student is awarded the scholarship and completes his education and returns to the village, a percentage of his loan will be "forgiven" by the state at a rate of 15 percent each year for the first three years of teaching; 25 percent of the total loan for the fourth year completed and the final 30 percent for the fifth year.

The bill is given good change for success on the House side of the legislature because it is supported by the House Majority coalition of urban Republicans and Bush Democrats and because Hayes, the powerful House Speaker, is backing it. It isn't often that a bill sponsored by the Speaker is defeated.

On the Senate side, it is given fair chance for passage by Sen. Frank Ferguson, D-Kotzebue, who said that it will probably pass in a refined form after some things are ironed out.

One possible problem the bill may have is surviving a legal challenge on the basis that it discriminates in favor of one specific ethnic group. The bill directs that the scholarships be awarded on a level proportionate to the percentage of ethnic representation.

Therefore, if 80 percent of the students are Native, 80 percent of the scholarship money must go to Native students.

Recent laws directing money at a specific group, such as the Longevity Bonus program which gives money to Alaska residents older than 65 years who have lived in the state since statehood has been ruled unconstitutional on the grounds that it discriminates against a person who moved to the state after statehood.

Tony Vaska of Bethel, who is a member of the Bush Caucus but not a member of the House Majority, said he thinks it will not survive a constitutionality test.

Hayes said he has had the Legislature's lawyers review the bill and they found it all right. He said the state attorney general has yet to review the bill.

Veteran observers of the Legislature found the key sponsor of the bill – Hayes – to be of particular interest because of his urban background. One commented that "if there ever was any doubt that Hayes is running for governor, this kills it."

Hayes responds to such skepticism by saying "I suppose it would look (like he is trying to gain a rural support) but I just know the problems of ru people. I fly a lot and get into the villages more than ot urban legislators. I also h worked with the Bush Cau for the past two years an know of their concerns."

He said that Hurlbert was strumental in pushing the and is second sponsor on document.

Gov. Bill Sheffield had comment on the bill other th to point out that programs exist in the state to draw ru students into teaching.

And as for Hayes drawing a bernatorial constituency, Sh field said, "I told him, I'll o campaign him 125 to one an have more staying power."

Child abuse bill introduced

The Associated Press

Juneau – Certain kinds of child neglect and abuse unpunishable under existing law would be classified as felonies by a bill introduced in the Alaska House of Representatives.

The legislation is aimed at adults who use force against children or who "... cause or permit a child to be placed in circumstances resulting in serious physical injury."

The measure (HB 489) is sponsored by House Democrats Jack McBride of Ketchikan, Niilo Koponen of Fairbanks and Mike Szymanski of An-

THE LAKE AND PENINSULA SCHOOL BOARD

SARA HORNBERGER, [illegible] Member
[illegible]
P.O. Box 69, Iliamna, AK. 99606
February 3, 1984

The Honorable Vern Hurlbert
Alaska State Representative
Pouch V - Capital Building
Juneau, Alaska 99811

Dear Vern:

Thank you for yourletter of January 20, 1983, in reference to House Bill No. 504. I appreciate the opportunity to comment on it. In realization of how very busy you folks are down there, I still hope that you will find time to read my letter of reply in addition to the reading by an administrative assistant. (I have no objections to this system - I know it is necessary if you elected officials are to be able to accomplish anything.)

I believe that my comments are made from a position of great strength. We have in our school district an administrative assistant, Frank Hill; two principal teachers, Norm Auberg and Pete Hill; and three teachers, Pauline Hobson, Larry Hill, and Gwen Nielsen; and one teacher on leave, Emma Hill, who are Native. In addition, we recently inaugurated a minority administrative apprenticeship and Frank Hill is the first person to participate. Whenever possible we hire local people to do school district jobs as for example, Alex Wassilie our North Area Maintenance Person.

Going from there, I want to ask if anyone had done any research at all to see if this bill will do what it proposes to do? Three of our Native teachers got their degrees through the ARCTIC program (later called X-Ced); Several refused all financial help of any sort preferring the joy of being able to say, "I did it all by myself." Several used the regular state loan program and BIA assistance.

In our district at least there has been no lack of assistance for village persons interested in higher education of any sort in obtaining any possible loan, grant, or scholarship. Persons who work as aides who show promise are encouraged - urged - to go on and get their degrees. Some few have attended the university sporadically. The members of the school board and the local teachers association have joined together for five years to grant two scholarships a year to district high school seniors in the name of one of our members who was killed in a snowmachine accident shortly after she enrolled in a teacher preparation program in Anchorage. She was a Native from Newhalen. We have youngsters from our district in college under the regular state loan program; but, so far as I know, my daughter is the only one in a teacher training program.

The Hon able Vern Hurlbert

I should add that oneof our current board members, Jeannie Ihly, a Native from Chignik Lake, has enrolled in college in Anchorage with the intention of becoming a primary teacher.

Where does this leave us? I believe that this bill will not do what you hope it will. All the money in the world will not prompt a person to attend college unless that person has the sincere desire, the personal drive to go. Secondly, that person, if he/she is to become a teacher must be willing to face a five-day-a week, nine-month-ayear job; a job that is very intense and demanding. How many of our village people really want that sort of job? So we are talking about motivation. What is going to motivate a youngster from a village who enjoys the freedom of a life of trapping, fishing, hunting, etc., without the demands of a time clock, to take on the other sort of life? There are two things that cause a person to become a teacher: for some it is a calling; they cannot imagine doing anything else; it is their life; for other it is a job, a way to make a living and have three months a year off, etc. If a youngster from a village doesn't have an intense desire to become a teacher, I can't imagine that this loan program will inspire him/her to spend four years away from home in school to become a teacher. That child is going to get a trade that will enable him/her to go out and earn money when it is needed and then go home and enjoy life, and I don't blame that person one bit. Who wouldn't prefer that sort of life! So, we have a motivation problem.

We have one more problem. The fact that a person is a Native does not mean that he/she will make a good teacher, anymore than membership in any other race guarantees skill in any profession. This bill has no criteria set up at any place to evaluate participants. Today our children must have the very best possible teachers for the basics. We have many fine people in our villages who can and do work in the schools assisting with local culture programs, bi-lingual programs, who are not college graduates. Many of them have not finished eighth grade. They cannot teach math or reading or other subjects the certificated teachers handle; rather, the two work as a team complimenting each other when the program is handled properly.

One last point I'd like to speak to is teacher turnover. Years ago when Bristol Bay Borough was formed and took over the schools one of our main concerns was teacher turnover. However, that is not all bad. Teachers like preachers maybe need to move around. I'm not going to dwell on this, but the question is a very debatable one. Furthermore, we have discovered that not all residents of a village are pleased when a local person comes home as a teacher. Was it not Christ who said something to the effect that a prophet is not without honor except in his own country.

This letter, of course, contains my opinions only and most certainly does not speak for the other members of the board either individually or as a legal group.

Most sincerely,

Sara Hornberger

Sara Hornberger (Mrs.)

February 1, 1984

Hon. Joe Hayes
Speaker of the House of Representatives
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representatives Hayes:

On behalf of the Association of Village Council Presidents, regional non-profit Native corporation for the 56 Yupik Native communities of the Yukon-Kuskokwim delta region, I wish to commend you and the 27 co-sponsors for your introduction of House Bill 504, providing for a teacher scholarship loan program.

We concur with the legislative findings as stated in the bill. In particular, incentive has not be provided for Alaska Natives to pursue teaching careers in rural Alaska. Throughout the State (REAA) schools and remaining federal (BIA) schools, there are almost no Native teachers available for the almost totally Native student bodies. We sincerely appreciate your sponsorship of H.B. 504 and encourage your aggressive efforts for the enactment of this very beneficial legislation.

There is one small group of rural school districts which has overcome many of the difficulties which H.B. 504 seeks to correct. In the examination of rural education issues by you and your colleagues, we wish to encourage you to consider the future of five locally-controlled community schools in the AVCP-Calista Region. The Native communities of Akiachak, Akiak, Chefornak, Chevak and Tuluksak manage the only village-operated community schools in Alaska.

Beginning in 1977, these village council chose to operate their own community schools, apart from the federally-operated BIA schools and the State REAA systems. The federal government provides funds through the BIA appropriations, however management of the education programs and school districts is completely controlled at the community level.

Local community, Native involvement is provided in every aspect of the education program of these "contract" schools. The largest school, for example, has eight certified Alaska Native teachers in its teaching staff. Community school boards at these schools completely determine, within the village, all administrative, curriculla, fiscal and policy decisions concerning school district operations.

Unfortunately, these schools are scheduled to be closed at the end of the 1984-85 school year.

The schools are community-operated and controlled, while funds are provided by the federal government under contracting provisions of the "Indian Self-Determination and Education Assistance Act." The communities wish to continue to locally manage their education programs, however federal funds will not be available beyond federal FY-85.

These schools have requested financial assistance from the State to continue to operate their districts. Under present policies, the state will not provide education funds to the contract schools because they are operated by Native community councils (village councils), which were organized prior to statehood. The councils are recognized as "tribal governing bodies" by the federal government.

Although the village council "contract" schools have agreed to admit all student village residents to the schools, regardless of race, the present state policy regards them as "private" schools because they are operated by Native community councils.

Despite their desire the maintain community control over the village education programs, the contract schools' only other option is to join the REAA education systems. They are very reluctant to do so because of the loss of community control over the education program, and because of the successes which they have achieved through the systems which have been established by them and which are now in place. If, for example, a Native community school becomes part of an REAA, they will be absorbed by a school district which encompasses up to 35 or more other communities, and will no longer have effective control over education at the community level.

The history, circumstances, and legal and policy issues are perhaps more complicated than I describe in this letter, however the basic aim of the village contract schools is simple. They wish to maintain effective local control and community operation of their schools. This goal is becoming destroyed by pressures of state and federal policies over which they have no effective control. We hope that you will consider the fate of these school districts among other rural education issues under review by the legislature.

By alerting you to the matter of Native community schools, we in no way wish to diminish the importance of your continued support for H.B. 504. Your interest in rural and Native education needs, as evidenced by H.B. 504, is genuinely appreciated.

Sincerely,

Dear Mr. White:

Thank you for your letter regarding HB 504 - "An Act establishing the teacher scholarship loan program."

HB 504 was introduced 1/10/84 and referred to the Health & Social Services Committee, which is chaired by Representative Mae Tischer. The bill has further referrals to the House Committee on Loans, chaired by Representative Rick Uehling and the Finance Committee, chaired by Representative Al Adams. Any further correspondence you may have should be addressed to these Committees.

I have forwarded your letter to the Health, Education and Social Services Committee. Thank you for your interest in the Legislative process.

Sincerely,

Representative Jack Fuller
Alaska State Legislature
Pouch V (MS 3100)
Juneau, Alaska 99811

Dear Representative Fuller:

Enclosed is a letter which we submitted at the hearing recently on HB 504. We feel that this bill could serve an excellent purpose in the bush but feel strongly that private school graduates should not be restricted from participation. Our letter expresses our viewpoint.

The method of payment might need to be altered in order to avoid channeling funds through a private school to the recipients, but I am sure that this could be done without altering the intent of the bill. I am inclined to believe that it would be preferable, at any rate, to have recipients receive grants directly from the state on nomination from the districts. This method would largely parallel the present Student Loan program while giving the districts input on promising candidates.

Other items in the bill which might be given additional consideration are the following:

Sec. 14.43.640 Conditions of loan. Paragraph 2 requires that the borrower must teach in the district from which he/she graduated in order to be eligible for loan forgiveness. I believe that this is entirely too restrictive. In small districts such as Nome or Dillingham, an opening may not be available upon graduation. Also, marriage often requires a graduate to re-locate. It has been our experience that most Alaska Native graduates do return to the bush, and the value of others in the major city school systems is significant in its impact on Native students in those areas as well.

It seems unfortunate also that a returning student would be restricted from teaching in a private school in order to receive credit toward forgiveness. Federal teacher loans have not made this distinction. If the school is classified as having a high percentage of minority students, the borrower may apply for a percentage of forgiveness regardless of the public or private status of the school.

I am personally inclined to think that the loan should be supplemental rather than set at $10,000 maximum without restrictions. BIA loans, for example, require that the applicant "show financial need after other sources of funding have been considered." Some such requirement would serve the double purpose of weeding out the less serious applicants and would increase the numbers of students who could be served.

I think that there should be close state monitorship of the loan recipients through the four years. This might require more than the present regulations for the Student Loan program.

Again, we want to indicate our strong support for this bill and will appreciate your consideration of the items we have discussed.

cc. Rep. Joe Hayes

Sincerely,

Alfred S. White, Principal

Alaska House of Representatives
Health, Education and Social Services
House Special Committee on State Loans and Finance
Juneau, Alaska 99801

Dear Committee Members:

We are taking this opportunity to comment on House Bill No. 504 which has recently come to our attention. We certainly applaud the intent of the bill to enlarge the number and strengthen the training of ethnic minorities, particular Alaska Natives, in the teaching profession by offering teacher scholarship loans. We have recognized this need since 1954 when Covenant High School was opened and have encourage both public and private support of teacher training.

We are surprised, however, to discover that Native graduates of private schools are discriminated against in receiving this assistance. Since the intent of the bill is "to encourage members of ethnic minorities to return to rural schools as teachers," and since "almost no students among the state's ethnic minorities return to rural schools to teach," it would seem that every able condidate would be encouraged to participate.

The success of such schools as St. Mary's High School and Covenant High School in providing graduates with college skills has been widly recognized and documented by studies such as those of Judith Kleinfeld at the University of Alaska. A quick survey of Covenant High School's alumni list indicates at least 10 people, all but three of whom are Alaska Natives, who have teaching degrees. One, Sam Towarak, is president of Chuchi Community College in Kotzebue. Probably at least another 10 have education minors or are presently working on education degrees. It is entirely possible that the incentive of a bill like HB 504 would have encouraged other such private school graduates with college skills to enter education. It might also have led some of these young people who showed an interest in education, but entered other fields, to find a place in education.

We see no problem in administering this legislation with graduates of private schools as recipients. Funds would be made available to eligible Alaskans without discrimination in the same way Alaska Student Loans are made available. No payments would be made to private or denominational schools. The Bureau of Indian Affairs Scholarship Grant Program, federal Pell Grants, etc. are all administered on this basis. Students receiving teacher scholarship loans may very well attend private colleges. It seems unreasonable that they would be restricted from attending a private high school to become eligible.

It would seem that the same formula for awarding scholarships by public schools could be used in such schools as Covenant High School. In communities where there is a single high school in the district, such as Nome or Dillingham, the process of awarding scholarships would be identical to the situation at Covenant High School. We would simply be considered as a district, as we are now with the Alaska High School Activities Association.

Again, we wish to offer our strong support for this legislation which shows promise of dealing with a serious deficiency in our rural communities - the lack of Native educators. We hope that the committee will increase the bill's scope to include what we believe is a strong source of eligible candidates for the program - the private and denominational schools.

Sincerely,

Hon. Joe Hayes
Speaker of the House of Representatives
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representatives Hayes:

On behalf of the Association of Village Council Presidents, regional non-profit Native corporation for the 56 Yupik Native communities of the Yukon-Kuskokwim delta region, I wish to commend you and the 27 co-sponsors for your introduction of House Bill 504, providing for a teacher scholarship loan program.

We concur with the legislative findings as stated in the bill. In particular, incentive has not be provided for Alaska Natives to pursue teaching careers in rural Alaska. Throughout the State (REAA) schools and remaining federal (BIA) schools, there are almost no Native teachers available for the almost totally Native student bodies. We sincerely appreciate your sponsorship of H.B. 504 and encourage your aggressive efforts for the enactment of this very beneficial legislation.

There is one small group of rural school districts which has overcome many of the difficulcies which H.B. 504 seeks to correct. In the examination of rural education issues by you and your colleagues, we wish to encourage you to consider the future of five locally-controlled community schools in the AVCP-Calista Region. The Native communities of Akiachak, Akiak, Chefornak, Chevak and Tuluksak manage the only village-operated community schools in Alaska.

Beginning in 1977, these village council chose to operate their own community schools, apart from the federally-operated BIA schools and the State REAA systems. The federal government provides funds through the BIA appropriations, however management of the education programs and school districts is completely controlled at the community level.

Local community, Native involvement is provided in every aspect of the education program of these "contract" schools. The largest school, for example, has eight certified Alaska Native teachers in its teaching staff. Community school boards at these schools completely determine, within the village, all administrative, curriculla, fiscal and policy decisions concerning school district operations.

Unfortunately, these schools are scheduled to be closed at the end of the 1984-85 school year.

The Honorable Joe L. Hayes, Speaker
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Mr Hayes:

House Bill No. 504, creating a teacher scholarship loan program for Alaska Native high school graduates who would earn a teaching degree and return to their district to teach, would give incentive for our Native students to enter into a field which would allow them to return to their villages or districts to teach.

Often, students are reluctant to enter this sector because upon conclusion, they are forced to move out of their environment to seek employment opportunities. House Bill No. 504 would alleviate this hurdle.

Sincerely,

Treton Angasan, Jr.
Director, Shareholder Relations

IN THE HOUSE

HOUSE BILL NO. 504

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act establishing the ~~teacher~~ educator scholarship loan program."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43 is amended by adding new sections to read:

ARTICLE 7. ~~TEACHER~~ EDUCATOR SCHOLARSHIP LOAN PROGRAM.

Sec. 14.43.600. FINDINGS AND INTENT. (a) The legislature finds that there is a wide and unacceptable disparity between the ethnic distribution of ~~teachers~~ educators and the ethnic distribution of students in the state public schools. Particularly in rural areas, many schools have virtually no Native teachers, no Native administrators, and no non-Native students. The undesirable effects of this disparity include the following:

(1) there is a serious weakness in the ability of ~~teaching~~ educators, ~~staffs~~ particularly in rural schools, to foster a sense of ethnic traditions and cultures in the students;

(2) many rural students are forced to exist in two entirely separate situations: the essentially traditional atmosphere of many Native homes, and the essentially modern atmosphere of the classroom;

(3) almost no students among the state's ethnic minorities return to rural schools to ~~teach~~ work as educators, continuing the ethnic imbalance and exacerbating its effects; and

(4) there is an annual turnover of 40 percent among teachers in rural educational attendance areas in the state.

(b) The legislature further finds that existing programs have failed to increase the proportion of members of ethnic minorities

working as educators
~~teaching~~ in rural schools. Therefore, it is the intent of the legislature to establish the ~~teacher~~ educator scholarship loan program to encourage members of ethnic minorities to return to rural schools as ~~teachers~~ educators and relieve the conditions described in this section.

Sec. 14.43.610. PROGRAM ESTABLISHED. There is established the teacher scholarship loan program to provide an incentive for ~~graduates of Alaska high schools~~ individuals who are from ethnic minorities to pursue teaching careers in Alaska schools.

Sec. 14.43.620. ~~TEACHER~~ EDUCATOR SCHOLARSHIP REVOLVING LOAN FUND. There is created a ~~teacher~~ educator scholarship revolving loan fund. The fund shall be used to make scholarship loans to students selected under AS 14.43.600 - 14.43.650. All repayments of principal and interest on ~~teacher~~ educator scholarship loans shall be paid into the ~~teacher~~ educator scholarship revolving fund and shall be used to make new ~~teacher~~ educator scholarship loans. If estimated funds available from ~~teacher~~ educator scholarship loan repayments are inadequate to fully fund estimated ~~teacher~~ educator scholarship loans for any fiscal year, additional funding from the general fund may be requested and appropriated for that year.

Sec. 14.43.630. ADMINISTRATION. The ~~teacher~~ educator scholarship loan program shall be administered by the student financial aid committee (AS 14.43.095) in accordance with regulations adopted by the committee. The committee shall distribute the funds available for teacher scholarship loans annually to local school boards giving a preference to school districts with a high percentage of students in ethnic minorities and a low percentage of ~~teachers~~ educators in ethnic minorities. The local school boards shall select the recipients of the ~~teacher~~ educator scholarship loans.

Sec. 14.43.640. CONDITIONS OF LOANS. Each school district shall award ~~teacher~~ educator scholarship loans subject to the following conditions:

(1) the conditions provided in AS 14.43.120 apply ~~except that no loans may be made to graduate students~~ and the state shall repay a portion of a ~~teacher~~ educator scholarship loan under AS 14.43.120(j) only if, in addition to the other criteria, the borrower is also employed as a public school ~~teacher~~ educator in the state during the period for which the loan is forgiven;

(2) if a borrower meets the conditions provided in paragraph (1) of this section and is employed as a public school ~~teacher~~ educator in ~~the district from which the borrower graduated~~ rural Alaska, the portion of the loan that shall be paid by the state is the following percentages of the total loan received plus interest up to a total of 100 percent of the total loan:

(A) one year employment, 15 percent;

(B) two years employment, an additional 15 percent;

(C) three years employment, an additional 15 percent;

(D) four years employment, an additional 25 percent;

(E) over four years employment, an additional 30 percent; and

(3) a loan may not exceed $10,000 in a school year.

Sec. 14.43.650. SELECTION CRITERIA. (a) To be eligible for a ~~teacher~~ educator scholarship loan, a student must

(1) be a graduate of, or scheduled for graduation within six months from, a ~~state public~~ high school or its equivalent (G.E.D.), with sufficient credits to be admitted to an accredited college or university;

(2) be enrolled in or show evidence of intent to enroll in a degree program directed at a teaching or administrative career at the elementary or secondary school level; and

(3) meet the conditions set by the student's local school district with respect to the district's requirements for ~~teachers~~ educators in

particular subject areas.

(b) Each school district shall award ~~teacher~~ educator scholarship loans in direct proportion to the distribution of ethnic groups among the students eligible for graduation from the school district each year.

(c) A student may not be awarded a scholarship loan under AS 14.43.090 - 14.43.160 and a ~~teacher~~ educator scholarship loan under AS 14.-43.600 - 14.43.650 for the same school year.

The Honorable Mae Tischer
Alaska State House
Pouch V
Juneau, AK 99811

Dear Representative Tischer:

You have asked us to review HB 504, "[a]n Act establishing the teacher scholarship loan program." This bill raises several constitutional and legal questions which we briefly address below.

Several provisions of this proposed legislation are subject to challenge under the equal protection clauses of the United States or Alaska Constitutions. These concern (1) the establishment of racial quotas in loan distribution; (2) the exclusion of graduates of private high schools, and (3) the limitation of total forgiveness to teachers who teach in the district from which they graduated. Another constitutional issue raised by this bill concerns the prohibition against dedicated funds.

The United States Supreme Court has adopted a "two-tiered" analysis for evaluating most legislative classifications challenged under the federal equal protection clause. A classification which is "suspect" or impinges upon a "fundamental right" is subject to "strict scrutiny." A law that makes a classification based on race or ethnicity is "suspect" and, consequently, will be closely examined by the court to determine whether (1) it is supported by a compelling state interest, and (2) whether the racial or ethnic classification is necessary to promote that state interest. The first equal protection issue identified above would be analyzed under this test. The second and third do not involve suspect classifications or fundamental rights and, therefore, under federal law would be subjected to the less demanding standard of whether (1) the classification promotes a legitimate state interest, and (2) whether the means chosen to achieve that interest is rational.

The Alaska Supreme Court has adopted a single standard of review for equal protection questions arising under the Alaska Constitution which is more rigorous than the federal "rational basis" test and, in areas involving suspect classifications and fundamental rights, is comparable to the federal standard. The Alaska Supreme Court would inquire as to the purposes of the statute and the circumstances surrounding it to determine whether those purposes are legitimate and fall within the police power of the state. Then the court would determine whether the means chosen "substantially furthers the goals of the enactment." Finally, the court would balance the state interest in the chosen means against the nature of the constitutional right involved. State v. Erickson, 574 P.2d 1, 12 (Alaska 1978); Isakson v. Rickey, 550 P.2d 359 (Alaska 1976).

Under section 650(b), the award of loans is to be "in direct proportion to the distribution of ethnic groups" among eligible students. This provision establishes a racial quota and would be subject to close examination under both federal and state law.

We have serious reservations regarding the ability of the bill to survive an equal protection challenge, under either the federal or state analyses described above, to the ethnic classification of § 650(b). Even if the court were to find the purposes of the bill, as expressed in sections 600 and 610 to be compelling ones, which cannot be assumed, the court would closely scrutinize the means chosen to achieve those ends. Since the means employ ethnic criteria, the bill would fall if the court were to find that the ends could be achieved by less discriminatory means. An example may be helpful. In a school district with 90 percent Alaska Natives, and 10 percent non-Natives, if there were 10 loans to be awarded, nine would be available for distribution to Alaska Native students and one for a non-Native student. If only eight Alaska Natives and two non-Natives applied for loans, the bill would require that only one non-Native get a loan, despite the shortage of Alaska Native applicants. The quota in § 650(b) is not expressed as simply a preference, but as an inflexible mandate, which may not be necessary to accomplish the stated objectives. 1/ Of course, if it could be shown that the means employed in this legislation are

---

1/ This example is for illustrative purposes only and is not meant to suggest that substituting a preference for the existing quota would necessarily render it constitutionally permissible.

essential to remedy problems identified in § 600 and 610, or problems that could be identified, 2/ the provisions of § 650(b) could be upheld.

The second equal protection issue arises with respect to the restriction of this program to graduates of public high schools. Although § 610 states that the purpose of the bill is to provide an incentive "for graduates of Alaskan high schools ...", and § 600 identifies problems found in rural schools, § 640 and 650 restrict participation to graduates of public schools, and the forgiveness benefits are only available to those who teach in public high schools. If the preservation and pedagogical use of cultural heritage and traditions, through inducement of rural students to return and teach in rural areas, is the main objective of the bill, the restriction to graduates of and teachers in public high schools would not seem to further that goal. Consequently, this provision may also be subject to challenge under state, if not federal, law.

The forgiveness provision in § 640(2) also raises equal protection concerns. Under § 640(2), total forgiveness is available only to students who return to teach in the school districts from which they graduate. Assuming the main purpose of the bill is that stated above, it would seem that a return to the general area or culture in which the student was raised would suffice to achieve it. 3/ It appears unlikely that each school district is so culturally distinct as to justify such a restriction.

2/ In a recent case the United States Supreme Court upheld a law that employed racial and ethnic criteria. The case involved a federal law giving a 10 percent preference for minority businesses in the award of certain contracts, with the intent of remedying the present effects of past discrimination. Before a legislative body can predicate a race-conscious remedy on redressing past discrimination, however, findings of past discrimination sufficient to justify that remedy must be made. Valentine v. Smith, 654 F.2d 503 (8th Cir 1981). Our brief review has uncovered no cases which sanction the use of a racial or ethnic quota where there are not factual findings that the racial imbalance sought to be remedied is due to past discrimination.

3/ Additionally, it should be considered that many rural school districts will have a limited capacity to absorb new teachers,
(Footnote Continued)

A constitutional problem of a different nature arises with respect to administration of the loan program under § 620. That section establishes the program as a revolving loan fund in which all repayments of principal and interest are put back into the fund and used to make new loans. This may contravene the constitutional prohibition against dedicated funds. Alaska Const., art IX, sec. 7. However, this department has indicated that it will defend such legislation until this issue is definitively resolved. 13 Op. Atty. Gen. Nov. 30, 1982.

We suggest, finally, that the term "ethnic minority" be defined to obviate questions of statutory interpretation that might arise as this program is implemented. For example, it is unclear whether each group in a community composed of Tlingits, Haidas, and Tsimpshians would be considered members of a single "Alaska Native" ethnic group, or whether each would be considered a distinct ethnic group.

If you have any other questions about this bill, please do not hesitate to contact us.

Sincerely yours,

NORMAN C. GORSUCH

HB504: Teacher Scholarship Program

A. Comments

1. Borrower must be a graduate from an Alaskan public high school. There are a number of private high schools which would have no students eligible (Covenant High School - Unalakleet, Monroe High School - Fairbanks, St. Mary's Catholic High School - St. Mary's, for example).

2. Borrower is eligible to borrow up to the total cost of room and board, tuition and fees, and books and supplies, or $10,000, whichever is lower. Hence, only twenty or thirty students per year would borrow more than the normal $6,000 student loan maximum.

3. Borrower must maintain good standing to continue receiving loans. ("C" average, enroll and complete 12 hours per term.)

4. Loans may not be awarded for more than 5 years of study.

5. Interest is 5% - repayment is 10 years.

6. Section 14.43.630 requires the commission to actually transfer funds to the school districts. We feel that fund transfer to the district is an unnecessary step and should be eliminated. The funds should go to the student (actually to the school in which the student enrolls) and not to the district and then to the student.

7. Section 14.43.640 (b)(1) means that if a borrower does not teach

public school in Alaska, no loan forgiveness is possible - not even the normal 50% for which other loan borrowers are eligible.

B. Possible Amendments

1. Section 14.43.630 amended to read:

Sec. 14.43.630. ADMINISTRATION. The teacher scholarship loan program shall be administered by the student financial aid committee (AS 14.43.095) in accordance with regulations adopted by the committee. The committee shall allocate [DISTRIBUTE] the loan awards [FUNDS] available for teacher scholarship loans annually to local school boards giving a preference to school districts with a high percentage of students in ethnic minorities and a low percentage of teachers in ethnic minorities. The local school boards shall select the recipients of the teacher scholarship loans.

2. Section 14.43.640 amended to read

Sec. 14.43.640. CONDITIONS OF LOANS. Each school district shall award teacher scholarship loans subject to the following conditions:

(1) the conditions provided in AS 14.43.120 apply except that no loans may be made to graduate students [AND THE STATE SHALL REPAY A PORTION OF A TEACHER SCHOLARSHIP LOAN UNDER AS 14.43.120 (j) ONLY IF, IN ADDITION TO THE OTHER CRITERIA, THE BORROWER IS ALSO EMPLOYED AS A PUBLIC SCHOOL TEACHER IN THE STATE DURING THE PERIOD FOR WHICH THE LOAN IS FORGIVEN];

(2) if a borrower meets the conditions provided in paragraph (1) of this section and is employed as a public school teacher in the district from which the borrower graduated, AS 14.43.120 (j) does not apply, but rather, the portion of the loan that shall be paid by the state is the following percentages of the total loan received plus interest up to a total of 100 percent of the total loan:

(A) one year employment, 15 percent;

(B) two years employment, an additional 15 percent;

(C) three years employment, an additional 15 percent;

(D) four years employment, an additional 25 percent;

(E) over four years employment, an additional 30 percent; and

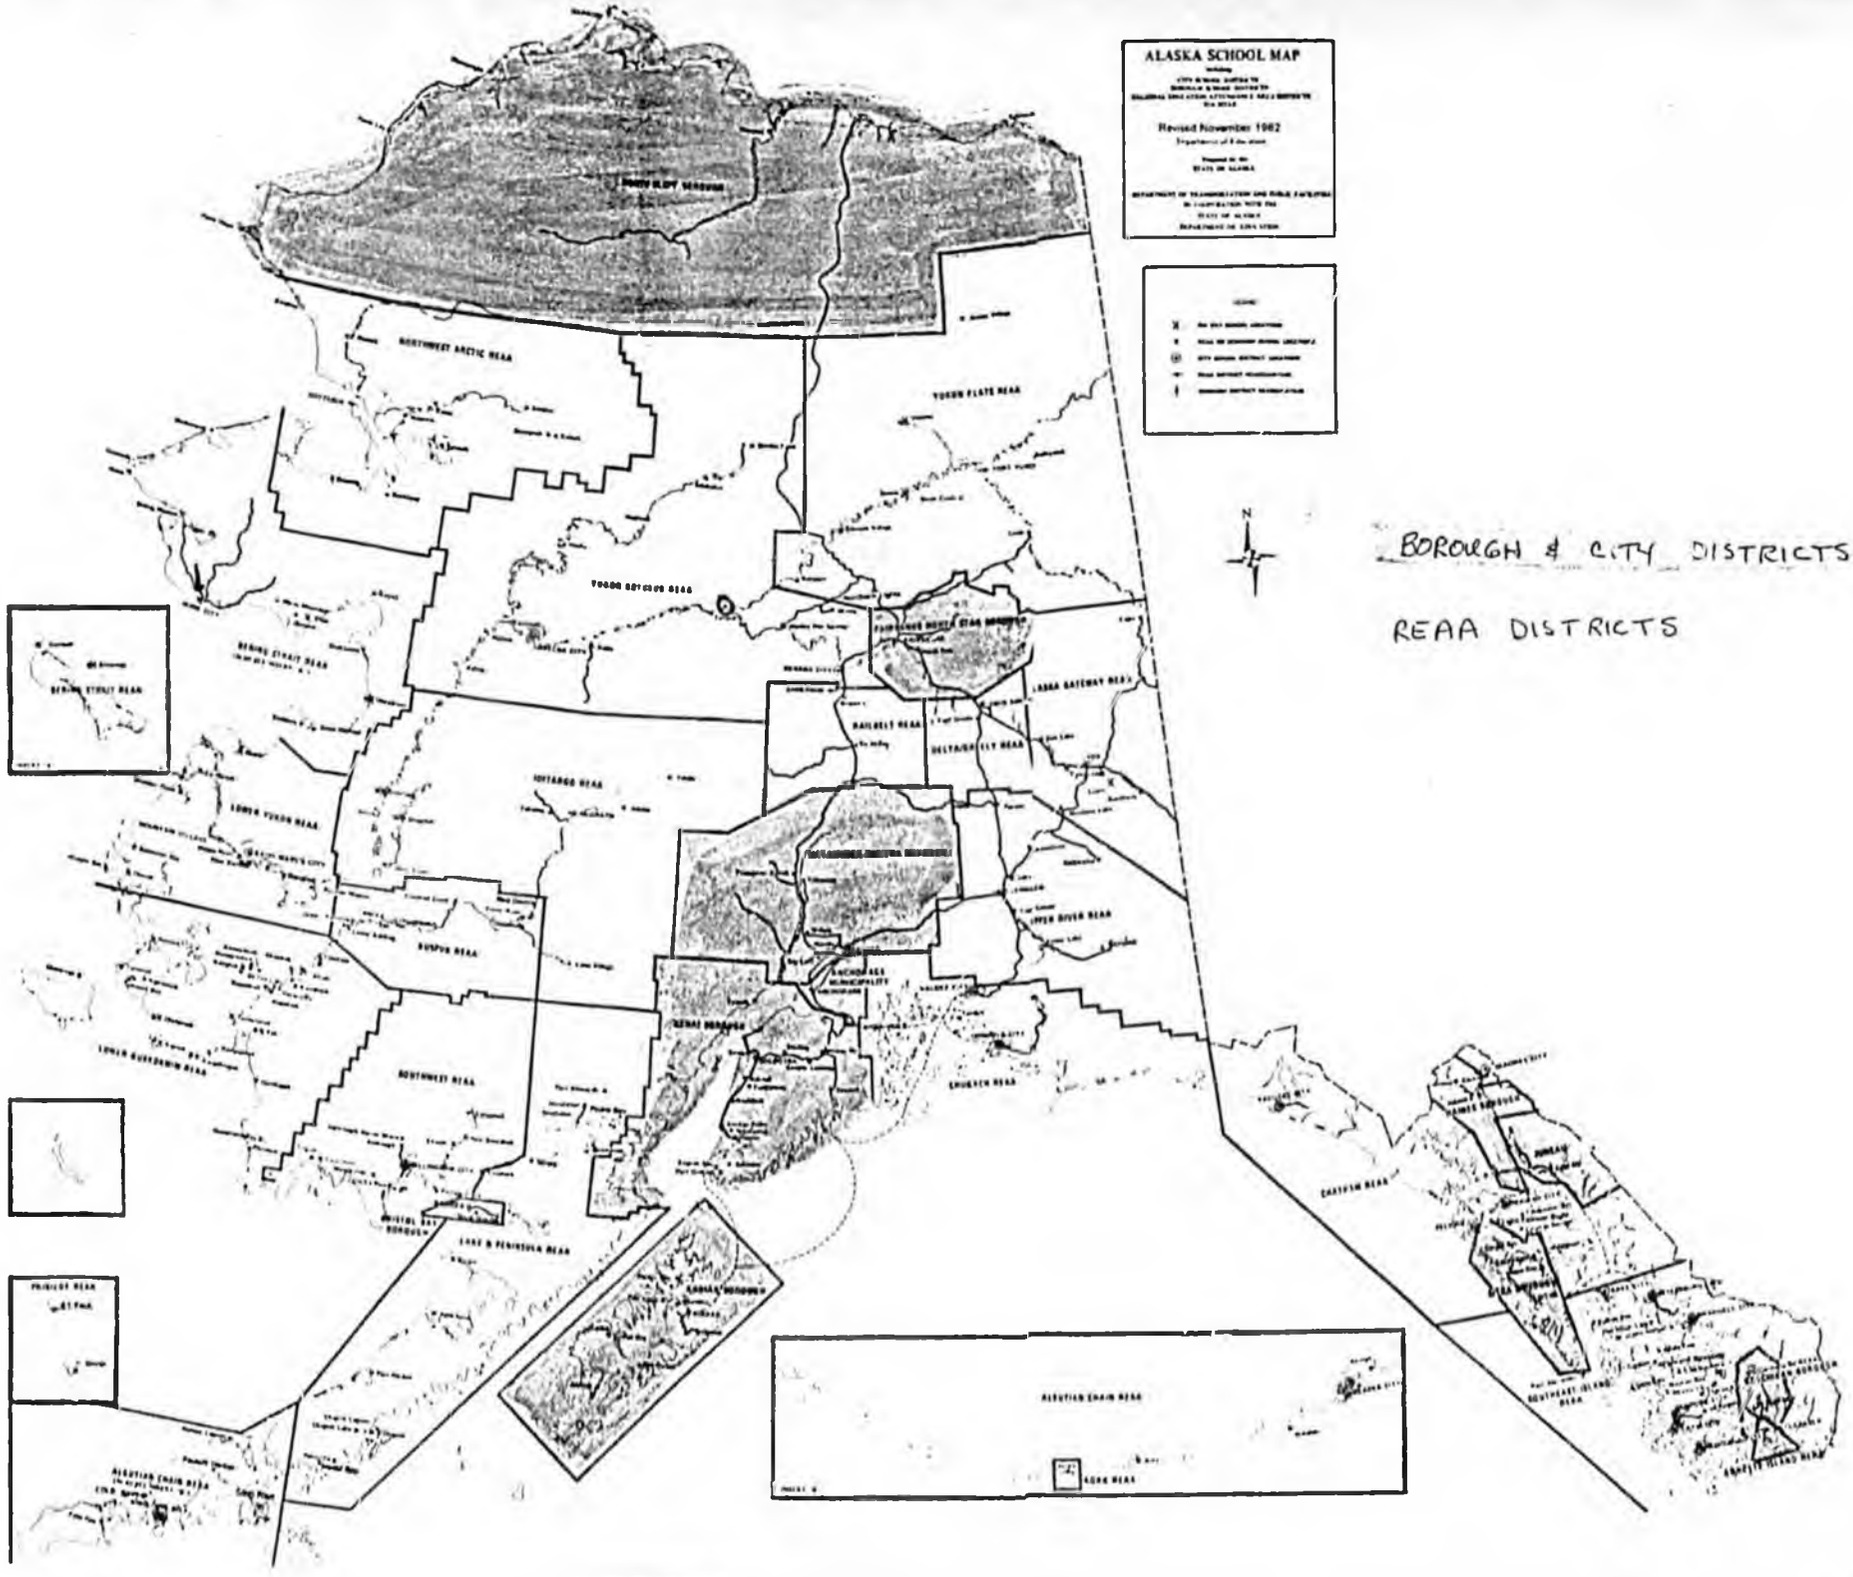
(3) a loan may not exceed $10,000 in a school year.

3. Section 14.43.650 amended to read:

Sec. 14.43.650. SELECTION CRITERIA. (a) To be eligible for a teacher scholarship loan, a student must

(1) be a graduate of, or scheduled for graduation within six months from, an Alaskan [A STATE PUBLIC] high school, with sufficient credits to be admitted to an accredited college or university;

(2) be enrolled in or show evidence of intent to enroll in a degree program directed at a teaching career at the elementary or secondary school level; and



(3) meet the conditions set by the student's local school district with respect to the district's requirements for teachers in particular subject areas.

C. Fiscal Analysis

1. Estimated number of teacher scholarship loans available

FY85	80
FY86	160
FY87	240
FY88	320
FY89	320

2. Since a student may not borrow both a teacher loan and a standard student loan, much of the cost would be off-set. The only add-on would be for those eligible costs exceeding $6,000. This is estimated to be $2,500 for 25 students in FY85, and then carried forward with a 6% inflation in future years.

FUND STUDENTS, NOT PROFESSORS -- THE HAYES SCHOLARSHIP BILL

Rural Native American students may soon receive $10,000 per year scholarships towards teaching degrees if the bill recently introduced by Alaska State Representative Joe Hayes is successful. Many voters may see this as too much money lavished on a favored ethnic minority. They may see this bill as both an example of government waste and of government reverse discrimination. But, I have good evidence to show that this bill is neither wasteful nor discriminatory. The reality is quite the opposite.

My evidence comes from inside information, information that is common knowledge among rural college professors and administrators but is almost never released to the general public. I can divulge this information because I was willing to risk my career in Alaska rather than cover up the waste that I found in rural higher education. For any that care to investigate this evidence, I have quite extensive, specific information. In 1981 and 1982 I worked as a University of Alaska professor among Native American villages along the Yukon River. Then, in the spring of 1983, I worked as the director of a "non-profit" Native teacher education program among the villages of the Bering Sea. The following are just as few of my experiences as a rural educator.

When I arrived at my job on the Bering Sea, I was responsible for directing an on-going $346,000 Federal program that was coordinated with two University of Alaska programs that cost about $252,000. In all, we were spending about $600,000 per year. All the publicly released documents -- grant requests, appeals for more state funding, etc. -- advertised that we had over 40 students, all rapidly progressing towards their teaching degrees. But, after I had been on the job for a month, nothing seemed to be happening. Four or five students seemed to be doing some of their assignments, but that was about all. This program had been running for a year and a half before I arrived. Had the students done any work during that year and a half? It was hard to say. No credit hour totals had ever been compiled. What was the total cost of this program? Again, no total cost figures had ever been kept. I asked the university officials for their totals, but they said that they didn't have any.

In attempting to determine the success rate of my program, I began to piece together the facts. If the program really was not working, perhaps something could be done to improve it. But, first I had to determine what was accually happening. So, I began to assemble complex charts on my office walls -- charts showing student progress during the current semester and charts showing student progress during the previous semesters.

At first it was difficult to determine just what I should consider as a "student." After all, I had over 40 people signed up, and all were claiming to be "students." Yet, little work was being done. But, then I found a clear solution. If, for example, those in my program completed a total of 1000 courses (3 credit hours each) during the school year, and if each full time student was theoretically expected to complete 10 courses per year, then I could justifiablly speak of having 100 "students." This would be true no matter how many people were actually on my rolls. Further, if the total cost of my program was, for example, $1,000,000 per year, then I could say that the efficiency of this program was $10,000 per student per year.

Such cost effectiveness is so easy to calculate that it could be demanded by the State Legislature and even published in the newpapers. In this way alternative programs could openly compete with each other for public funds. At present, university administrators hide such statistics as though they were nuclear secrets.

For example, one day two officials from a rural community college came by and noticed the charts on my wall.

"Better not display information like that," said one.

"Best not to collect such information in the first place," said the other.

These well intentioned men simply wanted to give me good survival advice. Nevertheless, I kept on with my chart work. Soon my charts clearly showed that over the last year and a half this program had not 40 students but only 5 students. I was generously calculating that one "student" would complete about seven courses per year -- which is only a part-time load anywhere else. Further, we were spending not $10,000 but $120,000 for each student each year. At this rate, the price of just one teaching degree was going to be well over $700,000.

I went to a high administrator of the local community college that formed part of this program.

"Look at these charts," I said. "This program clearly isn't working."

"I know," said the administrator, "but we have tried almost everything."

I had been giving some thought to another, quite obvious approach. It seemed to me that most Native American college graduates that I met in rural Alaska earned their degrees at major campuses. Scholarships large enough to allow our average student, who often had dependent children, to venture onto a large campus, might be the way to go.

"What about setting up a large scholarship fund to send our best students to major campuses?" I asked. "It might be worth a try."

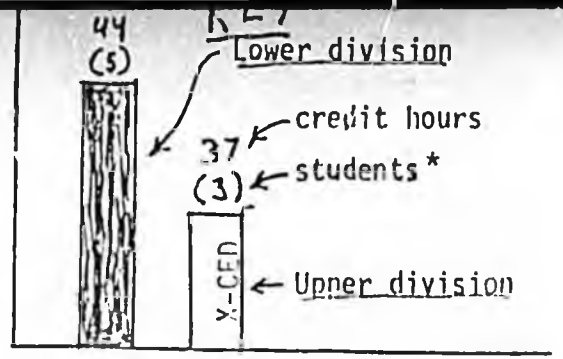
"No way!" He said.

At this point, I should give the reader some background information. Why was this administrator so upset over my suggestion? The answer is that if these scholarships were granted, his college would not only be losing student tuition money, but it would also be faced with decreasing enrollment statistics. His total student enrollment was a major factor in his own funding and was a major factor by which his bureaucratic superiors measured his effectiveness as an administrator. He didn't want to send away promising students -- even if it was to their advantage.

Why don't other rural professors protest over the waste within their own programs? After all, don't professors have the freedom and desire to "profess" the truth? The answer to this is, again, "No way!" Almost two hundred Ph.D's applied for the position that I was selected for at the University of Alaska. Most of these were unemployed. Even if they could find jobs in the Lower Forty-Eight, their average pay would only be about $18,000. The Alaskan bush is often their last chance to make up for all those years at the poverty level. My Alaskan job paid about $50,000 per year, plus a long vacation, junkets to southern

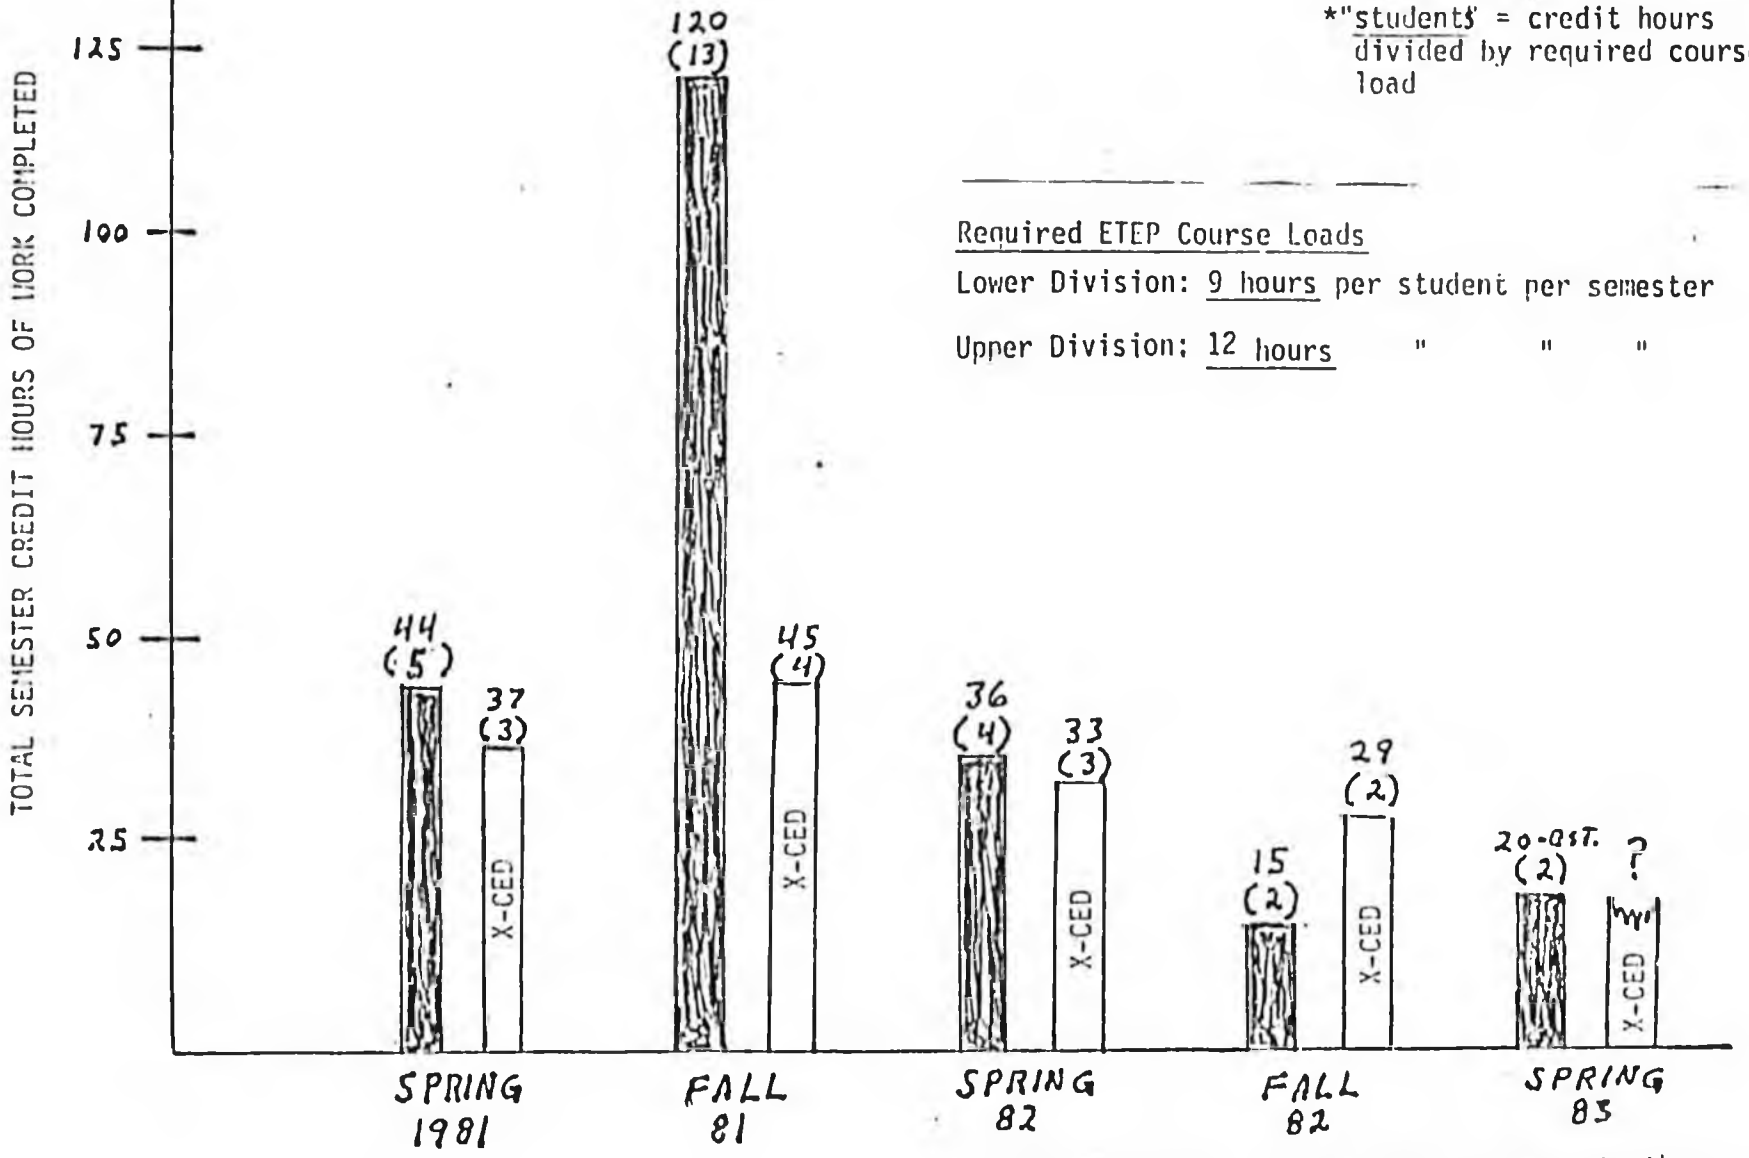
California, and other benefits. With these wages and with 200 Ph.D's waiting in line to replace you, are you going to rock the boat? Probably not.

If you are a boat rocker, you are very quickly replaced. Through a process of natural selection, all boat rockers are soon jettisoned, and only those with a stomach for this kind of excursion survive. I now run my own construction company in New Mexico.



So, would this $10,000 scholarship be wasteful? Not at all. In fact, quite the opposite. If my program is typical, and I believe it is, the taxpayer is already spending up to $120,000 a year for each rural student. How much better would it be for this money to fund twelve students directly, instead of one student indirectly. As it is, most of this $120,000 per student never benefits the student, but instead benefits the bank account of some professional educator. The case is similar if the efficiency of the main rural teacher education program of the University of Alaska at Fairbanks, the X-CED Program, is put to the test. X-CED spends in excess of $1,130,000 per year to field eight professors, some with as little as two or three actual students. This money alone would fund 113 $10,000 scholarships -- perhaps far more scholarships than rural Alaska could presently absorb. Figured this way, the direct benefits become tremendous, and this scholarship program is already funded. It is just a matter of switching the money around.

Would this scholarship constitute reverse discrimination? I think not. The point of this scholarship is not to reward someone for having a particular kind of genes, but for having a particular kind of knowledge. Someone with, for example, Inupiaq ancestory who was raised in Ireland would not be a fitting candidate for these scholarships. On the other hand, an Irish child adopted by an Inupiaq family presumably could become a scholarship candidate. Further, these scholarships would not be designed to reward a student simply because he is a product of Alaskan Native culture. If, for example, the proposed scholarship were for a degree in electrical engineering, then the student's cultural knowledge would have no relevance. But, the point here is that such cultural knowledge is directly relevant to the student's future duties as a teacher of his own children. As has been amply demonstrated, teachers from the American mainstream rarely remain in a Native American village long enough to understand their new culture or to understand their students. Due to this lack of cultural and linguistic knowledge, effective education suffers.



To conclude, from direct experience I know that much of rural higher education is extremely wasteful. For every $100,000 the state pours into rural programs, over $90,000 gets drained away by a vast bureaucracy of professional educators. How much better would it be to give the students money directly and to cut out all of these expensive middlemen. These educators will certainly scream over such a proposal. But, they can easily be silenced by auditing their programs and calculating the total cost per actual student. At present this ratio is never made public.

Secondly, It seems only fair that rural Alaskan communities be given the opportunity to educate their own children. These scholarships should not be seen as discriminating against those who are not Native Americans, but as rewarding those who have a specialized and valuable kind of knowledge.

BAR GRAPH of ETEP PROGRESS

*"students" = credit hours divided by required course load

Required ETEP Course Loads

Lower Division: 9 hours per student per semester

Upper Division: 12 hours " " "

Totals do not include work by 2 non-Native students who are not funded by ETEP.

Presented by Jim Greig, ETEP Director, to the Kawerak Board of Directors, April 20, 1983.

Prepared by Jim Greig, ETEP Director (2)

ANALYSIS OF ETEP PERFORMANCE -- APRIL 20, 1983
(With some revisions for more precise data & corrections on 4/24)

TOTAL PROGRAM COST (Both X-CED & Lower Division, Spring Sem. '81 -- Sp. Sem. '83)	
ETEP Budget for Entire Program (11/1/80 to 6/30/83)	$848,296
Cost of X-CED for 2½ years *	382,380
Cost of NWCC for 2½ years *	247,430
Total Program Cost (X-CED & Lower Division)	1,478,606
Total Credit Hours Produced (X-CED & Lower Division) *	517
Cost per Credit Hour	$2860
Cost for One 130 hour Teaching Degree (B.Ed.):	$371,800
Average number of students per semester (Calculated using "required course loads" -- see bar graph) *	8

COSTS FOR 1982 - 1983 SCHOOL YEAR (Both X-CED & Lower Division)	
Total Program Cost	$598,762
Total Credit Hours Produced (est.)	88
Cost per Credit Hour	$6804
Cost for 130 hr Teaching Degree (B.Ed.):	$884,520
Average numbers of students per semester (Calculated using "required course loads" -- see bar graph)	4

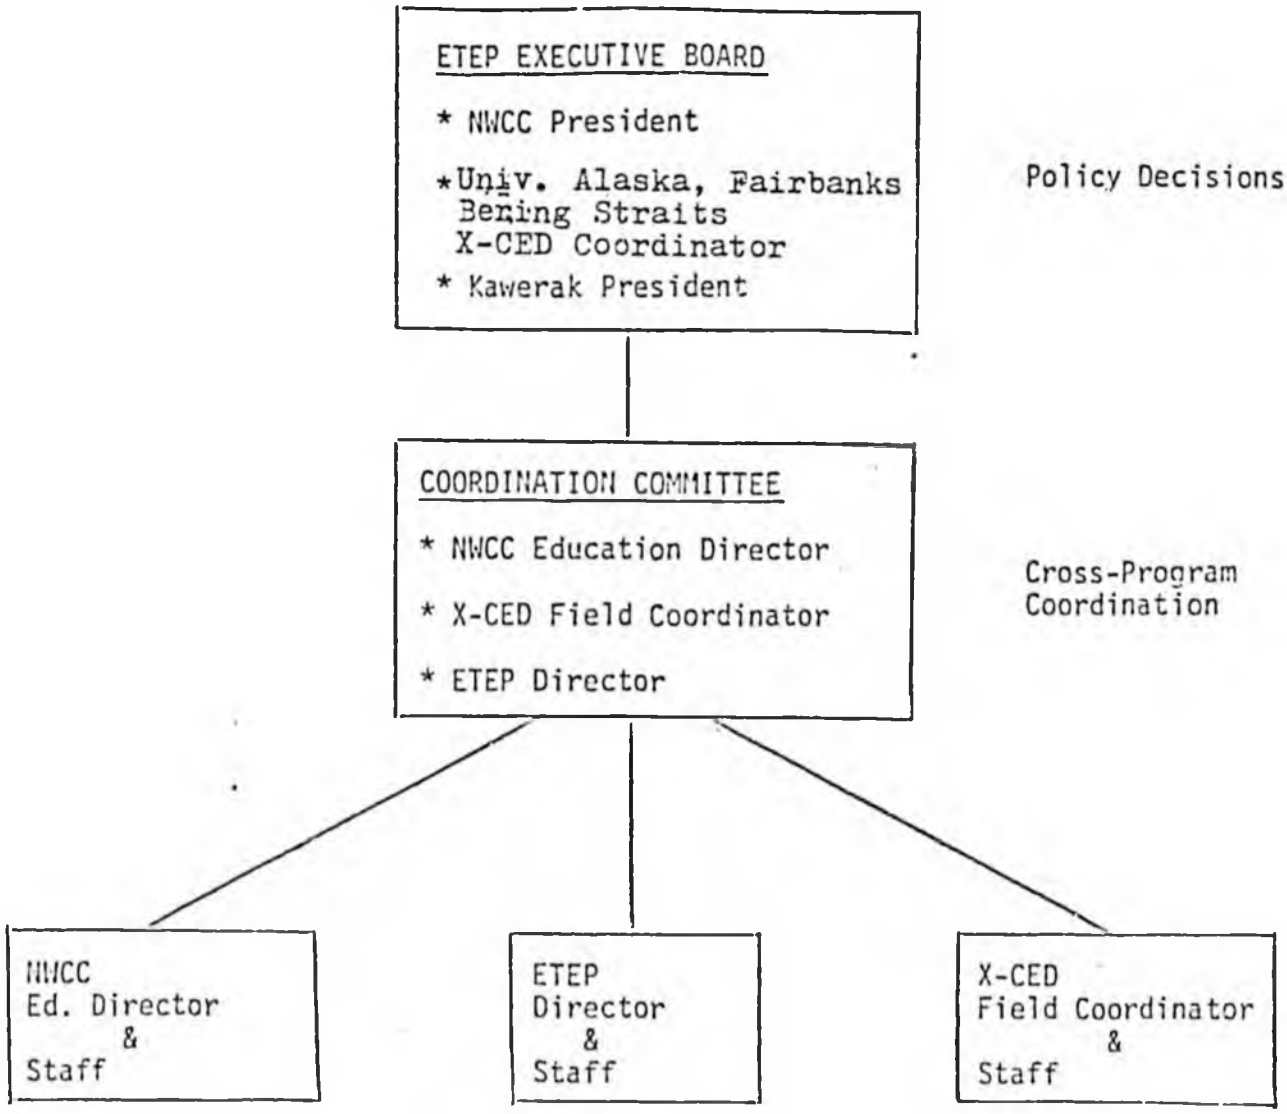
ANALYSIS OF BERING STRAITS REGION X-CED PERFORMANCE -- Prepared April 22, 83

TOTAL X-CED PROGRAM COST, SPRING SEMESTER '81 THROUGH SPRING SEMESTER '83	
Total X-CED Budget (est., extrapolating from '82-'83) *	$382,380
Total Semester Credit Hours Produced (est.) *	173
Cost per Credit Hour	$2,213
Cost for 130 hour teaching degree (B.Ed.)	$287,690
Average number of students per semester * (Total cdt. hrs., divided by 5 semesters, divided by 12 hr. normal course load)	2.9

*Separate sheets of paper contain information explaining these calculations

PREPARED BY JIM GREIG, ETEP DIRECTOR

REVISED COSTS 4/20/83



CORRECTED NWCC COSTS 4/24/83

ETEP, X-CED, & NWCC ANNUAL COSTS FOR ETEP PROGRAM (UPPER & LOWER DIVISIONS)

ETEP	1982-83 Budget	$346,638
X-CED	Total X-CED Budget 1982-83 $1,130,966 Total number of X-CED student statewide: 96 Number of X-CED students in Bering Straits Region: 13 Therefore costs: 13/96 x $1,130,966 =	$153,152
NWCC	NWCC Affiliated Staff Salaries: $73,150 (from ETEP Title VII grant request p.7-14 Travel (not, as in ETEP, 25% of salaries but, approximately 10%) $7,315 Indirect charges (as in ETEP, 23%) $18,507 Total for NWCC	$98,972
TOTAL FOR ALL OF THE ABOVE (i.e. for school year 1982-83)		$598,762

NOTE: These two information sheets on ETEP organization, although prepared for a Title VII grant proposal, generally show the de facto ETEP organizational plan.

ETEP ORGANIZATION CHART (Administrative)

Ousted director raps rural teacher program

By MARTHA ELIASSEN
Daily News reporter

The former director of a Nome-based Eskimo teacher training program claims he was fired because he has said publicly that the program costs too much and it is not working.

Dr. Jim Greig, a philosophy professor who has taught in universities around the world and was hired in January to oversee the Eskimo Teacher Education Program in northwest Alaska, claims hundreds of thousands of dollars are going into the program but only a handful of students are benefiting.

The program was developed two years ago by Kawerak Inc., a non-profit Native corporation, to provide teacher training in individual villages. It is coordinated by Kawerak, the Northwest Community College in Nome and a cross-cultural education program based at the University of Alaska-Fairbanks.

University and Kawerak officials say Greig was not on the job long enough to make an accurate judgment. They say he misunderstood the nature of the training program.

In the past year and a half, Greig said, about $598,000 a year has been used to educate five students. Although 27 students are registered this semester, Greig said, the majority are students "in name only." They do not attend classes or complete assignments regularly and have collectively earned only 16 credit hours this semester, he said.

Greig estimates the cost of one teaching degree earned through the program at $800,000.

"Everybody realizes it isn't working and they don't know what to do," Greig said.

After he was hired in January, Greig said he spent the first month or so writing grants for the program because funds run out this summer. But after praising the program to the government and oil companies, Greig said he began investigating its success in producing Eskimo

Continued from Page A-1

teachers for village schools.

"A lot of money has been spent since the ETEP program began with very little produced," Greig said in an initial memo to Caleb Pungowiyi, Kawerak president.

Greig said he gave a presentation to the Kewarak board of directors April 21 outlining what he says are the shortcomings of the program. He received a memo from Pungowiyi April 25 telling him he had been fired for unsatisfactory performance.

"Obviously, I am being fired for telling the truth," Greig said. Facts about the success rate of the program have been deliberately hidden to make sure it continues, he said.

"There are a few people out there who understand how the system works and are milking it for all it's worth," Greig said.

"My firing is made even more repugnant by being described as 'in the interests of students,'" Greig said in a protest letter to Pungowiyi. "Eight-hundred-thousand dollar degrees are not in the interest of the students — their interests lie in the efficient use of the $598,000 poured into ETEP each year."

Pungowiyi said Greig does not understand what the program is meant to accomplish and made judgments about rural Alaska he did not have the background to make.

"What Jim does not understand is the need for Eskimo teachers and the cost of education in rural Alaska," Pungowiyi said.

The aim of the program is to prepare Eskimos for teacher certification in their own villages, at their own pace, he said.

Though Greig had proposed that it would be much cheaper to give Eskimo students university scholarships, Eskimos who enroll in urban colleges have a high dropout rate, Pungowiyi said.

"There is no doubt that the program is expensive," Pungowyi said. The pay-off will be in 10 or more years rather than within the next two years, he said.

Mike Metty, Northwest Community College president, said Greig made his judgments with only "a couple of months of observation." The goal of the teacher training program is to develop a pool of young people who could one day become certified teachers, he said.

Metty acknowledged enrollment in the program fluctuates. "Right now, we know we're going to lose students on St. Lawrence Island because whaling has started," he said. Education in rural Alaska is unlike education anywhere else because of the demanding way of life, he said.

Furthermore, college is a relatively new idea in the Eskimo culture, Metty said.

"There was no premise that the program was going to produce 40 teachers in four years," Metty said. "We hope to get 30 or 40 teachers over a decade."

But Dr. Gene Adam, former field coordinator for the university cross-cultural program, said some of the original grant applications had more optimistic projections.

Adam, who now teaches English at Fairbanks Community College, supports Greig's view and said the spending bears investigation by taxpayers.

"I think he (Greig) is saying, 'Here is the cost, here is the product,'" Adam said.

Rural education is expensive and it is difficult to coordinate, Adam said. "I have the greatest respect for those students. They have to catch fish, they have to work, they have to take care of their kids and they have to mail in their homework," he said.

"The idea of bringing education into every little valley is a noble one but it's not very practical," Adam said.

Rep. Terry Martin, R-Anchorage, said Greig's concerns about the Nome-based programs are similar to his own about the high cost of rural education in general.

"When you compare it to some of the other programs I've been bickering about, it is not out of line," Martin said.

"The concept has been around for a long time to get Native people to work with Native people," Martin said, but the cost of present methods is too high.

In addition to the letter to Pungowiyi protesting his firing, Greig flew to Fairbanks from Anchorage Tuesday to discuss the situation with university officials.

He said he plans on returning to New Mexico in a week or so to resume a lucrative adobe construction business.

DATE: February 21, 1984

RE: HB 504; "An Act establishing the teacher scholarship loan program."

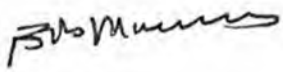
NEA-Alaska strongly supports and encourages favorable consideration of the concept of scholarship incentives as a method of encouraging Alaska Natives to pursue careers in teaching in the public schools in Alaska. This particular issue was established as one of the six major legislative priorities of the Delegate Assembly, meeting in Anchorage in January.

It may be appropriate for the Committee to seek data relative to the previous implementation of AS 14.43.050 -.090 for purposes addressing specifically identified needs. SB 426 expands upon the provisions of the above referenced statute.

We would further encourage that the Committee, either on its own initiative or through the Department of Education, consider the feasibility of conducting an annual survey of all Alaska Native High School sophomores, juniors, and seniors and, perhaps even a supplemental survey of their parents and guardians as well, in an effort to build a data base which could be used to bring even more focus to this kind of legislation on a long term basis. Specifically, it seems appropriate to have more information on:

- career aspirations, expectations, needs
- current deterrents, barriers, problems
- extent and nature of counseling and adequacy of curriculum

A recent survey published by Texas Christian University on "Factors Related to High School Students' Interest in Teaching as a Profession" strongly suggest that a decline in parental interest in encouraging their children toward teaching is a major factor. It may be appropriate to ascertain the validity of this conclusion for Alaska.



With an increasing number of Native students in the urban areas perhaps it is worthy of some emphasis to encourage, through incentives, more Native teachers in these areas as well.

It also seems appropriate to consider making this loan program an adjunct of the regular student loan program, but utilizing an expanded and separate sub-committee of the Post Secondary Education Commission which would also include practicing teachers and parents among its membership.

We feel that it is appropriate to raise some caution relative to geographic restrictions upon where a recipient may chose to teach. Reduction in the teaching force, non-retention and/or desire to voluntary job changes may have some effect on mobility of the recipients.

Finally, it may also be appropriate to clarify the legislative intent of HB 504 as it pertains to the term "teacher." AS 14.20.207 currently provides that the term teacher is also intended to cover administration. It is our recommendation that the primary focus be toward those who are actually in a classroom teaching circumstance.

Respectfully Submitted,

Bob Manners
Executive Secretary
NEA-Alaska

Juneau, Alaska 99811

Dear Representative Hurlbert:

Thank you for your letter soliciting support for HB 504. At the most recent meeting of the State Board of Education, Board Members voted to support this Bill in concept, but following considerable discussion, they recommended that the Legislature consider some additional amendments to the proposal. These have been communicated to you in the February 2, 1984, memorandum from Commissioner Raynolds.

We appreciate your continued interest and support of education in Alaska.

Sincerely,

Ernestine Griffin

MEMORANDUM

TO: ~~Representative Mae Fischer~~ Bill
FROM: Tuckerman Babcock, staff

DATE: February 17, 1984

RE: HB 504 and conference with former educators and school board Presidents.

Randy Briggs, President of the Lake and Peninsula School District (Lake Clark, Naknek etc.), former educator, and Sarah Hornberger, former President of the Lake and Peninsula School District and former educator, stopped by to give their views on HB 504 and the issue of Mt. Edgecumbe.

COMMENTS ON HB 504:

1- State loans already very generous, and Bureau of Indian Affairs might lend money.
2- All districts have counselors to encourage stundets to seek higher education.
3- Does not address problem of MOTIVATION, which they viewed as the single greatest handicap to native students wanting to teach school. Most simply prefer other activities to teaching.
4- There is a legitimate need for teachers with a cosmopolitan background to balance the heavy emphasis on rural, local issues.
5- To ease the culture shock between home and school continue to hire locals as assistants.
6- Their district always gives locals first crack at teaching job.
7- Provision for three years teaching before loan is forgiven will cause several problems:
    A- Tenure is granted in the third contract, making it impossible (virtually) to fire someone.
    B- Boards will be in position of forcing someone to assume large debt or keep an unqualified teacher on.
    C- Will be likely to create tension in the community if the teacher is not very good by dividing neighbor against neighbor as parents advocate removal while friends and family argue for retention.
8- Bad practice to completely forgive any loan.
9- Just because someone takes fours years of teacher education courses does not mean they will be educated in their subject matter or be comparitively cognizant of the larger "world out there".

MEMORANDUM REGARDING HB 504

Randy Briggs and Sarah Hornberger's comments on Mt. Edgecumbe:

1- Not really a viable alternative.

2- Those that emerged from Mt. Edgecumbe as leaders would have been leaders anywhere.

3- Drain off money better used to maintain programs of quality closer to home.

MY COMMENT:
I suspect they are most unpset because of the possibility that their best students would opt to attend Mt. Edgecumbe.

MEMORANDUM State of Alaska

TO: The Honorable Mae Tischer
Alaska State Representative
Chairman, House Health
& Social Services

DATE: February 2, 1984

FILE NO:

TELEPHONE NO: 465-2800

FROM: Harold Raynolds
Commissioner
Department of Education

SUBJECT: HB 504: Teacher Scholarship Loan Program

The State Board of Education addressed HB 504 during the State Board meeting in Juneau, January 31, 1984. The Board voted approval of the concept of a loan program to encourage Alaskan ethnic minorities to enter the teaching profession. There were several areas which they felt needed further clarification in consideration of the legislation:

1. The findings and intent focus on problems experienced in rural Alaska, but the bill would allow any ethnic minority student to be eligible, including those from the urban Alaskan districts, with forgiveness tied to that teacher returning to the district from which he came. The State Board expressed some confusion as to whether this is what was intended by the sponsors, or if the intent was to limit the loan program to just rural ethnic minority students. If it is to be limited to rural students a definition of rural students should be included in the legislation.

2. The State Board of Education felt the criteria for forgiveness was too restrictive by requiring that a student return to teach in the district from which he graduated, The district from which he graduated may have no openings when the teacher is ready to return to teach. If that student returns to teach in another Alaskan school district, other than the district from which he graduated, the State still receives the benefit of the ethnic minority in the teaching role. If it is the intent of the legislation to assure that students return to teach in rural Alaska, this might also be accomplished by expanding Sec. 14.43.640(2) to include "employed as a public school teacher in the district from which he graduated or another rural Alaskan school district." This amendment would also require that rural school district be defined in a definitions section.

3. The State Board of Education felt that the loan should be available to a student who, after completing an academic major (i.e. history, English, science), decides to return to college for a fifth year of study for the purpose of teacher training. As the legislation is currently drafted, it prohibits loans for graduate study.

4. The State Board of Education felt that the loan program should also be available to Alaskan ethnic minority students

attending high school outside the State who desire to enter the teaching profession and return to the State to teach.

The legislation appears to be an excellent step towards encouraging Alaskan ethnic minorities into the teaching profession and providing incentives to return Native Alaskans to rural areas to teach. Your consideration of the State Board of Education's recommendations is appreciated.

Program Proposal for the Design of: A Program for the Recruitment, Training, and Retention of Local Personnel on Bush School District Staffs.

Rep. Vern Hurlbert
Pouch V
Juneau, Alaska 99811

March 8, 1983

Synopsis:

This report proposes a design process to structure a coordinated educational program. The paper is divided thusly-

-Statement of problem: not enough local persons on professional bush school district staffs.

-Analysis of components of problem: inadequate educational preparation to allow succesful postsecondary training; problems caused by bush/urban transition necessary for postsecondary education; lack of field-based postsecondary educational program that integrates instead of separating the individual from the rural community.

-Guidelines for designing a comprehensive program with the objective of developing a workable, coordinated program with the primary focus being a marked increase in local persons who are educationally prepared to fill professional staff positions in rural Alaskan school districts.

-Final note.

-Footnotes & Appendix

INTRODUCTION:

Anyone who has lived in bush Alaska understands the importance of the school to the community. Not only does it provide the most stable source of employment, but in most places the school also serves, ideally, as the center of community activity. Recreation, social gatherings, and educational events all are coordinated through the school. Most importantly, the social and intellectual development of young bush residents takes place under the guidance and influence of those staffing the local schools.

The herein proposed program aims to facilitate in producing more local persons who are educationally prepared to fill professional positions within bush school systems. As it now stands, most bush school systems are predominantly staffed at the certified level by transient (non-local) persons. A major problem facing rural Alaskan schools is not a lack of positions to be filled, but the scarcity of well trained local persons to fill those positions that do open.

The program design being proposed here would address this lack of qualified personnel by breaking the problem into three component parts that, taken together, it is felt, are the root cause of the shortage. Attention would then be focussed on each of the three separate areas:

1. Inadequate educational preparation for post-secondary education.

2. The difficulties that bush persons experience when moving to more structured urban environments.

3. The lack of an adequate post-secondary educational program focussing on bringing the bush student back into the local school and community (integrating the education with the needs and perceptions of the local community).

DEFINITION of PROBLEM:

The program proposed here is in answer to the problem of not enough local persons to staff bush schools. The definition of problem results from, first and most importantly, living in the bush and experiencing the schism of school personnel/community. Rural Alaska, although well supplied in terms of educational materials, is not fully participating in the implemetation of its educational programs.

In a formal sense, the problem was defined by members of the Alaska Pacific University staff in a paper Developing and maintaining teacher competence for rural Alaska. The paper concludes that "It seems evident that teacher turnover can be reduced by recruiting teachers who are more favorably inclined -

to the rural Alaskan lifestyle." This we view as part of the problem, but, -because we aren't limiting our focus to teachers alone-rather our interest includes all personnel involved in staffing rural schools, it served as only the beginning point. The key being recruiting those who are favorably disposed to the rural Alaskan lifestyle.

The Alaska Department of Education, in the Comprehensive Plan for the Coordination of Federal and State Funds for Training Educational Personnel[1] discussing perservice educational needs, states that: "The two most important changes have to do with the need to prepare educators for the rural, cross-cultural, small school context, and to provide more pre-graduate field experience."[2] It is the belief of this office that a program can be designed that, through expanded pre-graduate field service, will prepare rural Alaskan students to fill the need for more (cross-culturally) prepared educators.

"The matter of an increased level of field experience for teacher candidates drew considerable discussion. Basically the problem was seen to have two dimensions. The first dimension was one of 'too little-to late.' The second dimension evolves around the problem of relevant early field experience in the area of the rural small school portion of preservice curriculum. The problem of content training and relevant field experience are exacerbated by the issues involved. There appears to be some confusion and ambiguity in rural schools. There are no unique Alaskan requirements in terms of preservice or pre-employment experiences. The traditional institutional requirements for the teacher education program in IHE (Institutes of Higher Education) do not speak to Alaskan cross-cultural and/or small school issues."[3]

A study of the H.U.D./Internship program[4] run through the Univercity fo Alaska, Juneau concluded that not only does such an interactive approach to education better prepare the student for real-life situations, but, at the same time, creates a method for the sponsoring agency to appraise potenial employees, and for participating students to cultivate employment opportunities-both problem areas that would benefit from the herein proposed program.

The above mentioned studies emphasize the value of a more interactive, internship-style of educational program for adequately preparing rural school personnel-recognized by this office to be an integral part of the solution to redressing the current shortage of local persons on rural school staffs.

Another area of concern: inadequate preparation for post-secondary education, has been documented in numerous studies (see Appendix A). The most recent Alaska Statewide Assesment Program[5] report shows rural students's scores averaging only 81% those of middle-sized schools in incorporated areas of the state. A January 1982 report put out by the Institute of Social and Economic Reseach[6] at the Universcity of Alaska, Anchorage shows-

a marked decrease in the ACT (American College Test) scores for native freshmen entering the University of Alaska, Fairbanks between the years 1963 and the period 1975-78 (appendix). In the most recent statewide Assesment Program, ample evidence is presented identifying educational defficiencies as a handicap impeding rural Alaskans in their attempts to obtain the postsecondary education necessary to qualify for certified staff level positions with the local school districts.

The third concern of the proposed program-difficulties that bush persons experience in making the transition from the bush to more urban communities-though not well documented as a major problem, is often cited as a problem needing to be dealt with if rural students are to be succesful in completing postsecondary educational programs. In its proposal for continued funding of the Summer Enrichment Program, 1983, the Alaska Native Foundation-a leader in the field of educational programs for rural Alaska-lists its goal as facilitating a student's transition from a small rural high school to a postsecondary institution. It goes on to say that as drop-out rates document, this change from school to college is frequently devastating.

In the course of exploring the possibilities for putting together this type of program, a large and varied cross section of persons associated with one or more aspect of the proposal were contacted. Whether they were originally sought out for the technical knowledge, historical perspective or an assesment of their present educational activities, there was a discussion of the multifocal nature of what is here being proposed. A result of these discussions was that the direction of the program was modified with a more clear understanding of what the practicalities, and objectives could be. All seemed to agree on one thing, putting such a program together will-to be succesful-require the broadest level of participation in planning. Attatched to this report (appendix) is an article taken from the Anchorage Times, February 24,1983 that identifies some of the special problems of rural Alaskan schools. A recognition of these unique problems, coupled with an understanding of the important role the local school plays in bush communities, mandates that in any planning process addresing the local school system, the community be consulted at all stages of development.

1. Program Design:

As more stones were overturned in search of the right components to make up the whole program, it became increasingly clear that only those who would eventually make it work-including those who will be served-are in a knowledgeable enough position to define a structure and method. The areas of focus have either wholly or in part been addressed. Therefore, the major task at hand is to eclectically draw upon the existing resources and structure them in an operable manner.

2. Administration of Program Design Process:

Because of this office's concern that the need for more local persons on rural school system staffs is very important, and that the here proposed program can-if put togehter with the highest regard for a broad-based level of input-succeed in greatly facilitating a solution to the shortage, potential administrators for program design were examined. As the concept of a comprehensive program integrating the array of concerns noted (in this paper) developed, and information concerning other educational programs dealing with rural Alaska was gathered, it bacame clear that those most functional are those closest to the public being served. In this particular instance that could be one of any number of regional administrative units, but-for the crterion of experience and acceptability-the Alaska Native Foundation (ANF) appears to be best able to preside over the program's design. This is a program for rural Alaskans, and the ANF's focus has always been rural Alaska.

3. Design Process Participants:

Representatives from postsecondary Alaskan educational institutions, Kuspuk and Yukon Flats school districts (administrations, boards, staff and citizens), the concerned regional and local corporations,and any group or person involved with rural or educational issues.

4. Guiding Principles.

Eclecticism (choosing the best approach fro those existing), fiscal prudence, broad participation in design, commitment to making the program work (good faith effort).

5. STATEMENT OF OBJECTIVE:

The objective of this design process is to develope a workable, coordinated program with the primary focus being a marked increase in local persons who are educationally prepared to fill professional staff positions in rural school districts.

Time Schedule for Program Design

July 1, 1983	Projected funding for design available; begin identification of participants, submission of planning schedule within 30 days of funding.
September 1,1983	Submit draft outline of possibilities for structuring program (put together from research of existing possibilities) along with proposals to deal with portions of the program previously undealt with (e.g. postsecondary field-based curriculum).

January 16, 1983	Submission of final program design, complete with identification of participants, budget, and extended program requiremnts (5 year outline for operation).
Spring 1984	Begin operation of program.

Summary:

What has been outlined in this paper is that in rural Alaska there is a shortage of local persons in meaningful positions in the staffing structure of local school districts, and a proposed method of designing a program to recitfy the problem. A number of guiding principles as to who should be a part of the design process, a call for a pragmatic and utilitarian approach, and a rough time schedule for completing certain aspects of the design are also layed out.

A final note to this report, and a firm belief of this office, is that what is being sought in this program offers to all who participate very real and positive benefits that will multiply as more local rural Alaskans become part of their educational process. Bush schools are annually plagued by cultural wars involving bush vs. non-bush interpretations of often non-complex questions. Communities are split, administrations and staffs are forced to 'choose up sides', and inevitably the real losers are the kids who suffer the life-long effects of poor education. This program proposal is no quick-fix solution, but it does offer an opportunity to begin addressing a problem that is so often dealt with only cosmetically by replacing one problem with another.

Effective Schooling in Rural Alaska

INTRODUCTION

Rural teachers are not satisfied with their students' academic progress, according to a new University of Alaska report, and they tend to blame the problem on a lack of motivation. On the other hand, the teachers are satisfied with their relationships with both the students and the community.

The report was prepared by the College of Human and Rural Development and the Institute of Social and Economic Research for the Alaska Department of Education. It was based on a survey of 304 rural teachers, representing every school outside Alaska's urban areas (such as Anchorage, Fairbanks, and Juneau). The teachers identified several educational areas that needed attention. They also described the instructional practices that they found effective in a rural Alaska context. Ninety-six percent of the teachers returned their surveys, an unusually high proportion.

FINDINGS

Satisfaction with Educational and Other Conditions

Most rural teachers, whether they taught in majority Native or non-Native schools, are satisfied with the quality of their relationships with students (92 percent), with discipline in their schools (84 percent), and with school/community relations (73 percent).

Ironically, what frustrates rural teachers, particularly in Native majority communities, is not relationships with people of a different culture, but relationships with the district center. Fewer than half the teachers in Native majority communities are satisfied with the support they receive from the central office (43 percent), with the superintendent's management (46 percent), and with the district board's action (46 percent). According to teachers, many district staff do not appreciate the local situation. (We did not survey district staff; their perspective may very well be different.)

Most rural teachers (80 percent) are pleased with their salary and benefits. To our surprise, only about a third voiced dissatisfaction with their housing.

Almost half of the rural teachers want more opportunities for professional growth. One wrote:

> I am in a tiny school—one other teacher who is not my husband. I have no one to ask questions of. My class of primary grade children includes an incredible range of students (skill, intelligence, behavior, motivation). I have an unworkable curriculum guide. My district has offered me one training session, one week. I am alone!

Student Achievement: What Teachers Expect

Rural teachers' views of their students' performance are ambivalent. On the one hand, over half the teachers in Native majority schools (52 percent) say they are not satisfied with their students' academic progress. Even more (60 percent) say they cannot expect average or above-average achievement from their students.

Rural teachers expect virtually all their students to graduate from high school. But most teachers in Native majority schools (90 percent) expect less than half their students to attend college.

Despite their pessimistic view of students' academic performance and potential, most teachers in Native majority schools (63 percent) say they are satisfied with the quality of education at the school.

Rural teachers in non-Native majority schools are significantly more satisfied with their students' academic progress. They feel that achievement levels *above* national norms can be expected from their students. Finally, they are much more likely to expect students to attend college.

These differences between teachers' views in Native and non-Native majority schools are troubling. We are not sure what they mean. Several teachers wrote on the margins of their surveys that we should be careful *not* to interpret their attitudes as "low expectations." In their view, they are simply being realistic when they say that they do not expect many students to achieve at national norms and that they do not expect many students to attend college.

JAN 16 1984

Indeed, 49 percent of the teachers in Native majority communities say that none of the parents expected students to complete college. "Parents are reluctant to see their children leave home and become indoctrinated in a foreign culture," one teacher explained on the survey.

But teachers also point out that the rural context unjustifiably lowers academic expectations. One said:

> My own personal level of expectation has gone down since I arrived here. When I started as an English teacher my expectations were too high. Very quickly my expectations became more realistic. The big problem is that we overcompensate and come to expect too little.

Effective Teaching Practices in Rural Alaska Schools

Rural teachers say their schools do not emphasize many of the practices that are related to high achievement test scores in schools outside Alaska. Most teachers, for example, say their schools do not pay much attention to standardized test scores as a basis for setting academic goals.

Less than half (48 percent) of rural teachers assign homework regularly. Many say they avoid homework because students do not have the needed lighting, space, or opportunity at home.

A large proportion of teachers (40 percent), however, do hold study sessions before or after school once a week or more. These study sessions are advantageous, they say, because the school setting helps students settle down to work and teachers are right there to help.

When asked to describe briefly the instructional practices they personally found effective, rural teachers emphasized some of the practices stressed in national studies of effective schooling and some practices related to the village cultural context. They include:

1. Use of diverse instructional materials and especially projects where students actively do things.
2. Self-paced instruction, especially where the teacher sets standards for the amount of work to be done.
3. Cooperative student learning situations, such as group projects and peer tutoring.
4. Opportunities for parents and community people to participate in schooling, such as sending home nightly study guides.

CONCLUSIONS

We have asked many different people—school superintendents, rural and urban teachers, representatives of professional education organizations—to comment on these findings. Most raise the same issue: How can so many rural teachers say they are satisfied with the quality of education at their schools and then turn around and say they don't expect students to reach national achievement norms or attend college or complete college if they do attend?

Possibly the answer is straightforward: most rural teachers may feel they are working in a difficult situation, with students whose cultural traditions do not necessarily support academic achievement or college attendance, and whose parents are not often oriented toward these goals. They may feel that under these circumstances, they and their schools are doing a fine job. But the disturbing issues remain: do teachers expect too little of village students? And what should count as "educational success" in rural Alaska? Such questions as these must be answered before we can reasonably expect to improve the effectiveness of rural schooling in Alaska.

This report, entitled *Effective Schooling in Rural Alaska* (27 pages), was prepared by Judith Kleinfeld and G. Williamson McDiarmid under the auspices of the College of Human and Rural Development and the Institute of Social and Economic Research, University of Alaska. The teacher survey on which the report was based was part of a study of school governance in rural Alaska, conducted by Dr. Gerald McBeath at the University of Alaska with the assistance of the authors and others. The report is available from the Institute of Social and Economic Research, 204 Chapman Building, University of Alaska, Fairbanks, AK 99701, or from ISER in Anchorage, 707 A St., Suite 206, Anchorage, AK 99501, telephone 278-4621. For more information on this report, call Judith Kleinfeld, ISER-Fairbanks, 474-7435.

The Honorable Mae Tischer
Alaska State House
Pouch V
Juneau, AK 99811

Dear Representative Tischer:

You have asked us to review HB 504, "[a]n Act establishing the teacher scholarship loan program." This bill raises several constitutional and legal questions which we briefly address below.

Several provisions of this proposed legislation are subject to challenge under the equal protection clauses of the United States or Alaska Constitutions. These concern (1) the establishment of racial quotas in loan distribution; (2) the exclusion of graduates of private high schools, and (3) the limitation of total forgiveness to teachers who teach in the district from which they graduated. Another constitutional issue raised by this bill concerns the prohibition against dedicated funds.

The United States Supreme Court has adopted a "two-tiered" analysis for evaluating most legislative classifications challenged under the federal equal protection clause. A classification which is "suspect" or impinges upon a "fundamental right" is subject to "strict scrutiny." A law that makes a classification based on race or ethnicity is "suspect" and, consequently, will be closely examined by the court to determine whether (1) it is supported by a compelling state interest, and (2) whether the racial or ethnic classification is necessary to promote that state interest. The first equal protection issue identified above would be analyzed under this test. The second and third do not involve suspect classifications or fundamental rights and, therefore, under federal law would be subjected to the less demanding standard of whether (1) the classification promotes a legitimate state interest, and (2) whether the means chosen to achieve that interest is rational.

The Alaska Supreme Court has adopted a single standard of review for equal protection questions arising under the Alaska Constitution which is more rigorous than the federal "rational basis" test and, in areas involving suspect classifications and fundamental rights, is comparable to the federal standard. The Alaska Supreme Court would inquire as to the purposes of the statute and the circumstances surrounding it to determine whether those purposes are legitimate and fall within the police power of the state. Then the court would determine whether the means chosen "substantially furthers the goals of the enactment." Finally, the court would balance the state interest in the chosen means against the nature of the constitutional right involved. State v. Erickson, 574 P.2d 1, 12 (Alaska 1978); Isakson v. Rickey, 550 P.2d 359 (Alaska 1976).

Under section 650(b), the award of loans is to be "in direct proportion to the distribution of ethnic groups" among eligible students. This provision establishes a racial quota and would be subject to close examination under both federal and state law.

We have serious reservations regarding the ability of the bill to survive an equal protection challenge, under either the federal or state analyses described above, to the ethnic classification of § 650(b). Even if the court were to find the purposes of the bill, as expressed in sections 600 and 610 to be compelling ones, which cannot be assumed, the court would closely scrutinize the means chosen to achieve those ends. Since the means employ ethnic criteria, the bill would fall if the court were to find that the ends could be achieved by less discriminatory means. An example may be helpful. In a school district with 90 percent Alaska Natives, and 10 percent non-Natives, if there were 10 loans to be awarded, nine would be available for distribution to Alaska Native students and one for a non-Native student. If only eight Alaska Natives and two non-Natives applied for loans, the bill would require that only one non-Native get a loan, despite the shortage of Alaska Native applicants. The quota in § 650(b) is not expressed as simply a preference, but as an inflexible mandate, which may not be necessary to accomplish the stated objectives. 1/ Of course, if it could be shown that the means employed in this legislation are

---

1/ This example is for illustrative purposes only and is not meant to suggest that substituting a preference for the existing quota would necessarily render it constitutionally permissible.

essential to remedy problems identified in § 600 and 610, or problems that could be identified, 2/ the provisions of § 650(b) could be upheld.

The second equal protection issue arises with respect to the restriction of this program to graduates of public high schools. Although § 610 states that the purpose of the bill is to provide an incentive "for graduates of Alaskan high schools ...", and § 600 identifies problems found in rural schools, § 640 and 650 restrict participation to graduates of public schools, and the forgiveness benefits are only available to those who teach in public high schools. If the preservation and pedagogical use of cultural heritage and traditions, through inducement of rural students to return and teach in rural areas, is the main objective of the bill, the restriction to graduates of and teachers in public high schools would not seem to further that goal. Consequently, this provision may also be subject to challenge under state, if not federal, law.

The forgiveness provision in § 640(2) also raises equal protection concerns. Under § 640(2), total forgiveness is available only to students who return to teach in the school districts from which they graduate. Assuming the main purpose of the bill is that stated above, it would seem that a return to the general area or culture in which the student was raised would suffice to achieve it. 3/ It appears unlikely that each school district is so culturally distinct as to justify such a restriction.

2/ In a recent case the United States Supreme Court upheld a law that employed racial and ethnic criteria. The case involved a federal law giving a 10 percent preference for minority businesses in the award of certain contracts, with the intent of remedying the present effects of past discrimination. Before a legislative body can predicate a race-conscious remedy on redressing past discrimination, however, findings of past discrimination sufficient to justify that remedy must be made. Valentine v. Smith, 654 F.2d 503 (8th Cir 1981). Our brief review has uncovered no cases which sanction the use of a racial or ethnic quota where there are not factual findings that the racial imbalance sought to be remedied is due to past discrimination.

3/ Additionally, it should be considered that many rural school districts will have a limited capacity to absorb new teachers,
(Footnote Continued)

A constitutional problem of a different nature arises with respect to administration of the loan program under § 620. That section establishes the program as a revolving loan fund in which all repayments of principal and interest are put back into the fund and used to make new loans. This may contravene the constitutional prohibition against dedicated funds. Alaska Const., art IX, sec. 7. However, this department has indicated that it will defend such legislation until this issue is definitively resolved. 13 Op. Atty. Gen. Nov. 30, 1982.

We suggest, finally, that the term "ethnic minority" be defined to obviate questions of statutory interpretation that might arise as this program is implemented. For example, it is unclear whether each group in a community composed of Tlingits, Haidas, and Tsimpshians would be considered members of a single "Alaska Native" ethnic group, or whether each would be considered a distinct ethnic group.

If you have any other questions about this bill, please do not hesitate to contact us.

Sincerely yours,

NORMAN C. GORSUCH
ATTORNEY GENERAL

(Footnote Continued)
and a teacher who is unable to get a job in his or her school district of origin may be in effect penalized as a result, by being ineligble for forgiveness under § 640(b).

Dear Rep. Hayes:

Here is an article on your Native teacher scholarship bill. Perhaps you will find it useful — perhaps you can even induce some newspaper to print it after nine months of controversy, the University of Alaska has never contradicted my facts — they have only attacked my character.

If you have any questions, please phone.

Yours truly,

Jim Gre

FUND STUDENTS, NOT PROFESSORS -- THE HAYES SCHOLARSHIP BILL

Rural Native American students may soon receive $10,000 per year scholarships towards teaching degrees if the bill recently introduced by Alaska State Representative Joe Hayes is successful. Many voters may see this as too much money lavished on a favored ethnic minority. They may see this bill as both an example of government waste and of government reverse discrimination. But, I have good evidence to show that this bill is neither wasteful nor discriminatory. The reality is quite the opposite.

My evidence comes from inside information, information that is common knowledge among rural college professors and administrators but is almost never released to the general public. I can divulge this information because I was willing to risk my career in Alaska rather than cover up the waste that I found in rural higher education. For any that care to investigate this evidence, I have quite extensive, specific information. In 1981 and 1982 I worked as a University of Alaska professor among Native American villages along the Yukon River. Then, in the spring of 1983, I worked as the director of a "non-profit" Native teacher education program among the villages of the Bering Sea. The following are just as few of my experiences as a rural educator.

When I arrived at my job on the Bering Sea, I was responsible for directing an on-going $346,000 Federal program that was coordinated with two University of Alaska programs that cost about $252,000. In all, we were spending about $600,000 per year. All the publicly released documents -- grant requests, appeals for more state funding, etc. -- advertised that we had over 40 students, all rapidly progressing towards their teaching degrees. But, after I had been on the job for a month, nothing seemed to be happening. Four or five students seemed to be doing some of their assignments, but that was about all. This program had been running for a year and a half before I arrived. Had the students done any work during that year and a half? It was hard to say. No credit hour totals had ever been compiled. What was the total cost of this program? Again, no total cost figures had ever been kept. I asked the university officials for their totals, but they said that they didn't have any.

In attempting to determine the success rate of my program, I began to piece together the facts. If the program really was not working, perhaps something could be done to improve it. But, first I had to determine what was actually happening. So, I began to assemble complex charts on my office walls -- charts showing student progress during the current semester and charts showing student progress during the previous semesters.

At first it was difficult to determine just what I should consider as a "student." After all, I had over 40 people signed up, and all were claiming to be "students." Yet, little work was being done. But, then I found a clear solution. If, for example, those in my program completed a total of 1000 courses (3 credit hours each) during the school year, and if each full time student was theoretically expected to complete 10 courses per year, then I could justifiablly speak of having 100 "students." This would be true no matter how many people were actually on my rolls. Further, if the total cost of my program was, for example, $1,000,000 per year, then I could say that the efficiency of this program was $10,000 per student per year.

Such cost effectiveness is so easy to calculate that it could be demanded by the State Legislature and even published in the newpapers. In this way alternative programs could openly compete with each other for public funds. At present, university administratcrs hide such statistics as though they were nuclear secrets.

For example, one day two officials from a rural community college came by and noticed the charts on my wall.

"Better not display information like that," said one.

"Best not to collect such information in the first place," said the other.

These well intentioned men simply wanted to give me good survival advice. Nevertheless, I kept on with my chart work. Soon my charts clearly showed that over the last year and a half this program had not 40 students but only 5 students. I was generously calculating that one "student" would complete about seven courses per year -- which is only a part-time load anywhere else. Further, we were spending not $10,000 but $120,000 for each student each year. At this rate, the price of just one teaching degree was going to be well over $700,000.

I went to a high administrator of the local community college that formed part of this program.

"Look at these charts," I said. "This program clearly isn't working."

"I know," said the administrator, "but we have tried almost everything."

I had been giving some thought to another, quite obvious approach. It seemed to me that most Native American college graduates that I met in rural Alaska earned their degrees at major campuses. Scholarships large enough to allow our average student, who often had dependent children, to venture onto a large campus, might be the way to go.

"What about setting up a large scholarship fund to send our best students to major campuses?" I asked. "It might be worth a try."

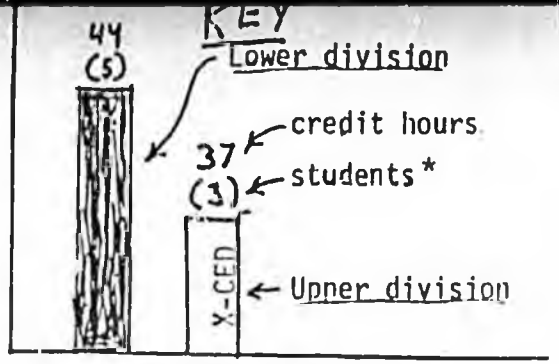
"No way!" He said.

At this point, I should give the reader some background information. Why was this administrator so upset over my suggestion? The answer is that if these scholarships were granted, his college would not only be losing student tuition money, but it would also be faced with decreasing enrollment statistics. His total student enrollment was a major factor in his own funding and was a major factor by which his bureaucratic superiors measured his effectiveness as an administrator. He didn't want to send away promising students -- even if it was to their advantage.

Why don't other rural professors protest over the waste within their own programs? After all, don't professors have the freedom and desire to "profess" the truth? The answer to this is, again, "No way!" Almost two hundred Ph.D's applied for the position that I was selected for at the University of Alaska. Most of these were unemployed. Even if they could find jobs in the Lower Forty-Eight, their average pay would only be about $18,000. The Alaskan bush is often their last chance to make up for all those years at the poverty level. My Alaskan job paid about $50,000 per year, plus a long vacation, junkets to southern

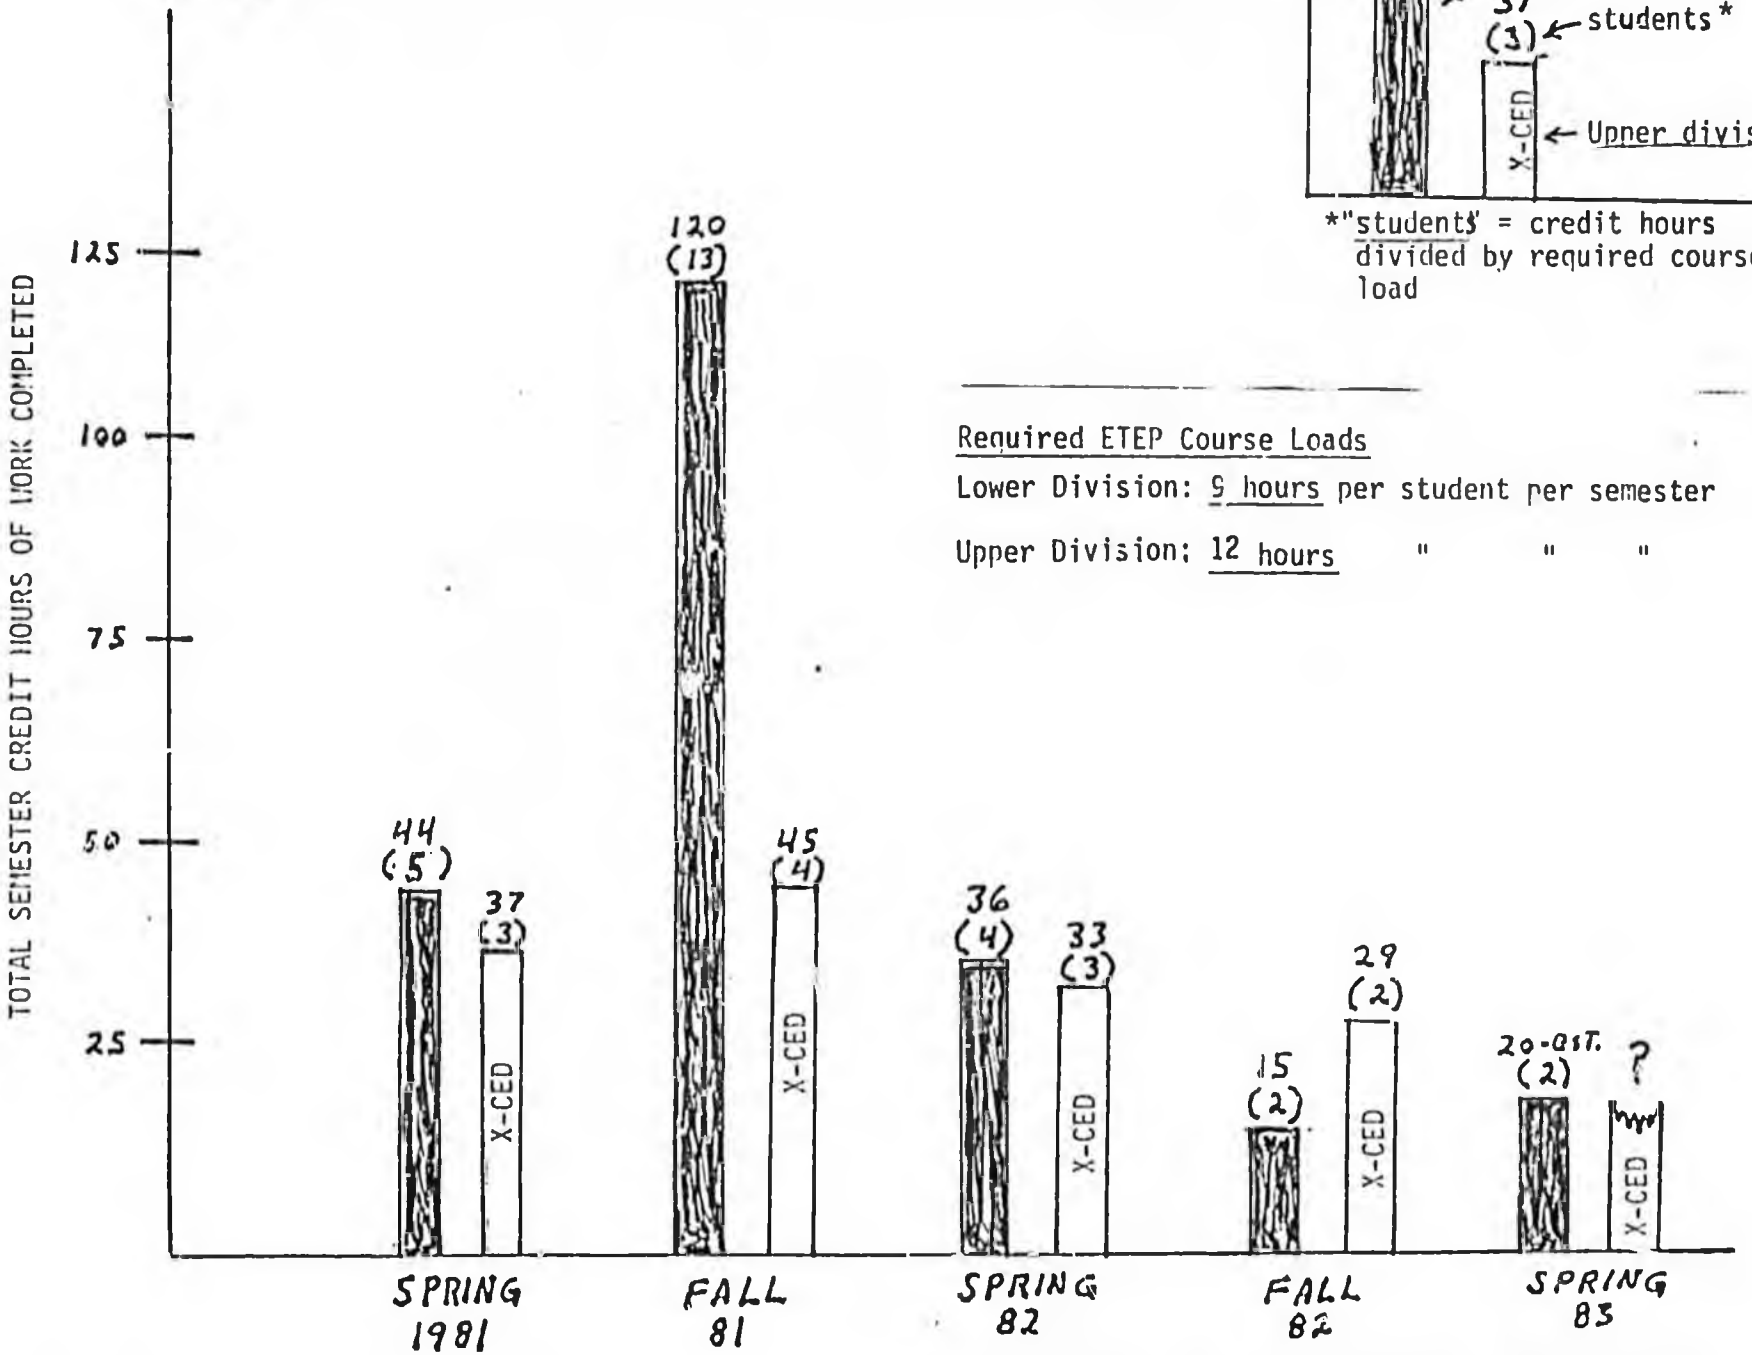
California, and other benefits. With these wages and with 200 Ph.D's waiting in line to replace you, are you going to rock the boat? Probably not.

If you are a boat rocker, you are very quickly replaced. Through a process of natural selection, all boat rockers are soon jettisoned, and only those with a stomach for this kind of excursion survive. I now run my own construction company in New Mexico.



So, would this $10,000 scholarship be wasteful? Not at all. In fact, quite the opposite. If my program is typical, and I believe it is, the taxpayer is already spending up to $120,000 a year for each rural student. How much better would it be for this money to fund twelve students directly, instead of one student indirectly. As it is, most of this $120,000 per student never benefits the student, but instead benefits the bank account of some professional educator. The case is similar if the efficiency of the main rural teacher education program of the University of Alaska at Fairbanks, the X-CED Program, is put to the test. X-CED spends in excess of $1,130,000 per year to field eight professors, some with as little as two or three actual students. This money alone would fund 113 $10,000 scholarships -- perhaps far more scholarships than rural Alaska could presently absorb. Figured this way, the direct benefits become tremendous, and this scholarship program is already funded. It is just a matter of switching the money around.

Would this scholarship constitute reverse discrimination? I think not. The point of this scholarship is not to reward someone for having a particular kind of genes, but for having a particular kind of knowledge. Someone with, for example, Inupiaq ancestory who was raised in Ireland would not be a fitting candidate for these scholarships. On the other hand, an Irish child adopted by an Inupiaq family presumably could become a scholarship candidate. Further, these scholarships would not be designed to reward a student simply because he is a product of Alaskan Native culture. If, for example, the proposed scholarship were for a degree in electrical engineering, then the student's cultural knowledge would have no relevance. But, the point here is that such cultural knowledge is directly relevant to the student's future duties as a teacher of his own children. As has been amply demonstrated, teachers from the American mainstream rarely remain in a Native American village long enough to understand their new culture or to understand their students. Due to this lack of cultural and linguistic knowledge, effective education suffers.



To conclude, from direct experience I know that much of rural higher education is extremely wasteful. For every $100,000 the state pours into rural programs, over $90,000 gets drained away by a vast bureaucracy of professional educators. How much better would it be to give the students money directly and to cut out all of these expensive middlemen. These educators will certainly scream over such a proposal. But, they can easily be silenced by auditing their programs and calculating the total cost per actual student. At present this ratio is never made public.

Secondly, It seems only fair that rural Alaskan communities be given the opportunity to educate their own children. These scholarships should not be seen as discriminating against those who are not Native Americans, but as rewarding those who have a specialized and valuable kind of knowledge.

BAR GRAPH of ETEP PROGRESS

*"students" = credit hours divided by required course load

Required ETEP Course Loads

Lower Division: 9 hours per student per semester

Upper Division: 12 hours " " "

Totals do not include work by 2 non-Native students who are not funded by ETEP.

Presented by Jim Greig, ETEP Director, to the Kawerak Board of Directors, April 20, 1983.

Prepared by Jim Greig, ETEP Director (2)

ANALYSIS OF ETEP PERFORMANCE -- APRIL 20, 1983
(With some revisions for more precise data & corrections on 4/24)

TOTAL PROGRAM COST (Both X-CED & Lower Division, Spring Sem. '81 -- Sp. Sem. '83)	
ETEP Budget for Entire Program (11/1/80 to 6/30/83)	$848,296
Cost of X-CED for 2½ years *	382,880
Cost of NWCC for 2½ years *	247,430
Total Program Cost (X-CED & Lower Division)	1,478,606
Total Credit Hours Produced (X-CED & Lower Division) *	517
Cost per Credit Hour	$2860
Cost for One 130 hour Teaching Degree (B.Ed.):	$371,800
Average number of students per semester (Calculated using "required course loads" -- see bar graph) *	8

COSTS FOR 1982 - 1983 SCHOOL YEAR (Both X-CED & Lower Division)	
Total Program Cost	$598,762
Total Credit Hours Produced (est.)	88
Cost per Credit Hour	$6804
Cost for 130 hr Teaching Degree (B.Ed.):	$884,520
Average numbers of students per semester (Calculated using "required course loads" -- see bar graph)	4

ANALYSIS OF BERING STRAITS REGION X-CED PERFORMANCE -- Prepared April 22, 83

TOTAL X-CED PROGRAM COST, SPRING SEMESTER '81 THROUGH SPRING SEMESTER '83	
Total X-CED Budget (est., extrapolating from '82-'83) *	$382,880
Total Semester Credit Hours Produced (est.) *	173
Cost per Credit Hour	$2,213
Cost for 130 hour teaching degree (B.Ed.)	$287,690
Average number of students per semester * (Total cdt. hrs., divided by 5 semesters, divided by 12 hr. normal course load)	2.9

*Separate sheets of paper contain information explaining these calculations

PREPARED BY JIM GREIG, ETEP DIRECTOR

REVISED COSTS 4/20/83

CORRECTED NWCC COSTS 4/24/83

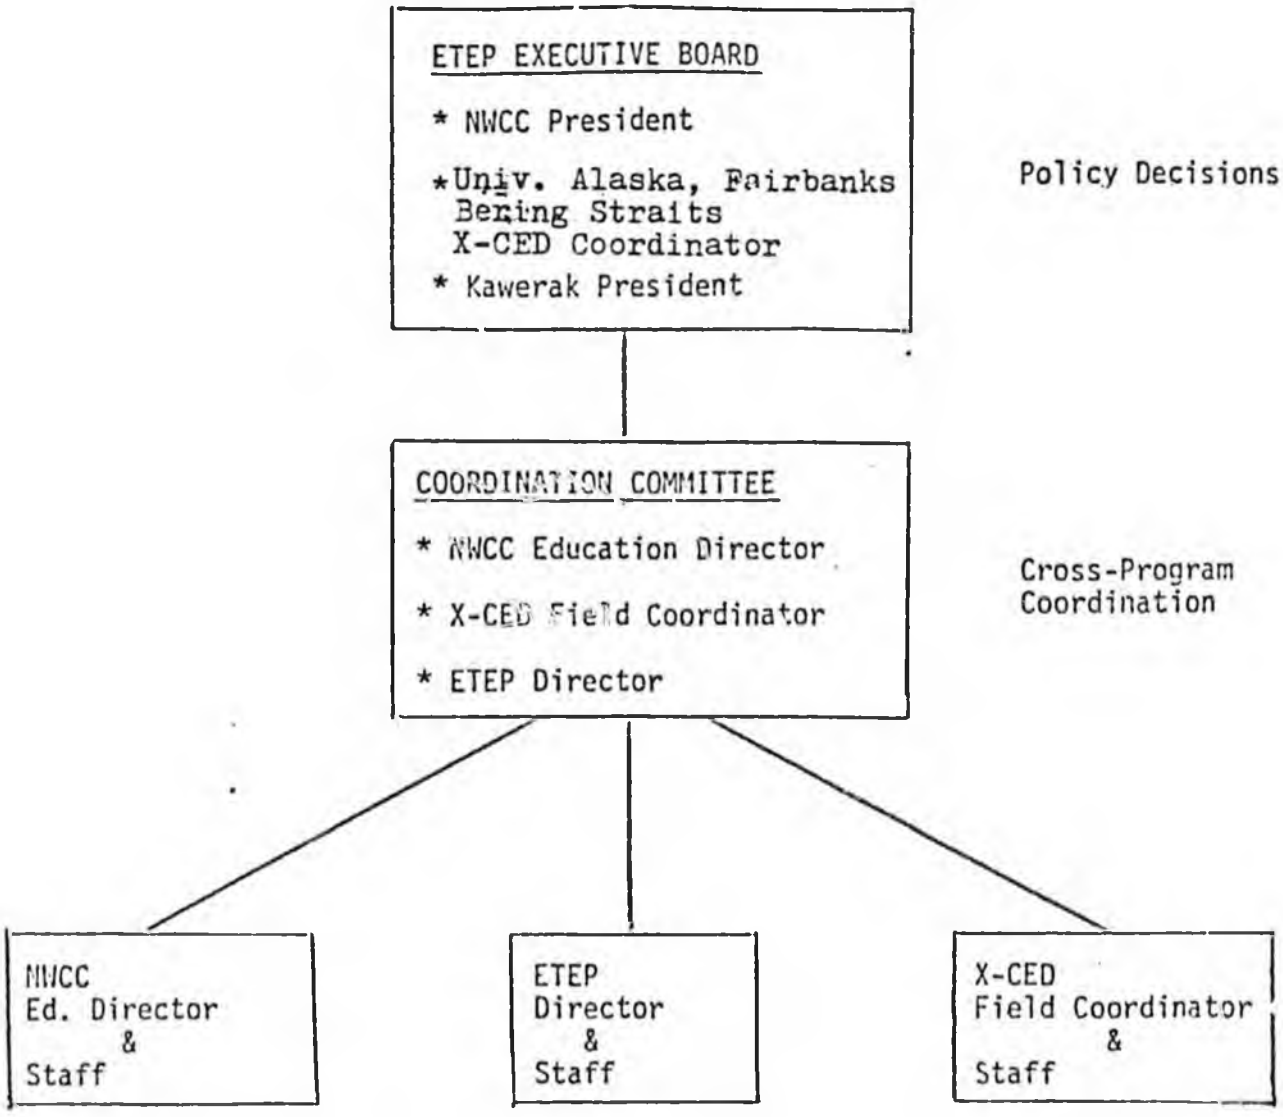
ETEP, X-CED, & NWCC ANNUAL COSTS FOR ETEP PROGRAM (UPPER & LOWER DIVISIONS)

ETEP	1982-83 Budget	$346,630

X-CED

Total X-CED Budget 1982-83
$1,130,966
Total number of X-CED student statewide: 96
Number of X-CED students in Bering Straits Region: 13
Therefore costs: 13/96 x $1,130,966 = $153,152

NWCC



NWCC Affiliated Staff Salaries: $73,150
(From ETEP Title VII grant request p.7-14
Travel (not, as in ETEP, 25% of salaries but, approximately 10%) $7,315
Indirect charges (as in ETEP, 23%) $18,507

Total for NWCC $98,972

TOTAL FOR ALL OF THE ABOVE (i.e. for school year 1982-83) $598,762

NOTE: These two information sheets on ETEP organization, although prepared for a Title VII grant proposal, generally show the de facto ETEP organizational plan.

ETEP ORGANIZATION CHART (Administrative)

Ousted director raps rural teacher program

By MARTHA ELIASSEN
Daily News reporter

The former director of a Nome-based Eskimo teacher training program claims he was fired because he has said publicly that the program costs too much and it is not working.

Dr. Jim Greig, a philosophy professor who has taught in universities around the world and was hired in January to oversee the Eskimo Teacher Education Program in northwest Alaska, claims hundreds of thousands of dollars are going into the program but only a handful of students are benefiting.

The program was developed two years ago by Kawerak Inc., a non-profit Native corporation, to provide teacher training in individual villages. It is coordinated by Kawerak, the Northwest Community College in Nome and a cross-cultural education program based at the University of Alaska Fairbanks.

University and Kawerak officials say Greig was not on the job long enough to make an accurate judgment. They say he misunderstood the nature of the training program.

In the past year and a half, Greig said, about $598,000 a year has been used to educate five students. Although 27 students are registered this semester, Greig said, the majority are students "in name only." They do not attend classes or complete assignments regularly and have collectively earned only 16 credit hours this semester, he said.

Greig estimates the cost of one teaching degree earned through the program at $800,000.

"Everybody realizes it isn't working and they don't know what to do," Greig said.

After he was hired in January, Greig said he spent the first month or so writing grants for the program because funds run out this summer. But after praising the program to the government and oil companies, Greig said he began investigating its success in producing Eskimo

Continued from Page A-1

teachers for village schools.

"A lot of money has been spent since the ETEP program began with very little produced," Greig said in an initial memo to Caleb Pungowiyi, Kawerak president.

Greig said he gave a presentation to the Kewarak board of directors April 21 outlining what he says are the shortcomings of the program. He received a memo from Pungowiyi April 25 telling him he had been fired for unsatisfactory performance.

"Obviously, I am being fired for telling the truth," Greig said. Facts about the success rate of the program have been deliberately hidden to make sure it continues, he said.

"There are a few people out there who understand how the system works and are milking it for all it's worth," Greig said.

"My firing is made even more repugnant by being described as 'in the interests of students,'" Greig said in a protest letter to Pungowiyi. "Eight-hundred-thousand dollar degrees are not in the interest of the students — their interests lie in the efficient use of the $598,000 poured into ETEP each year."

Pungowiyi said Greig does not understand what the program is meant to accomplish and made judgments about rural Alaska he did not have the background to make.

"What Jim does not understand is the need for Eskimo teachers and the cost of education in rural Alaska," Pungowiyi said.

The aim of the program is to prepare Eskimos for teacher certification in their own villages, at their own pace, he said.

Though Greig had proposed that it would be much cheaper to give Eskimo students university scholarships, Eskimos who enroll in urban colleges have a high dropout rate, Pungowiyi said.

"There is no doubt that the program is expensive," Pungowyi said. The pay-off will be in 10 or more years rather than within the next two years, he said.

Mike Metty, Northwest Community College president, said Greig made his judgments with only "a couple of months of observation." The goal of the teacher training program is to develop a pool of young people who could one day become certified teachers, he said.

Metty acknowledged enrollment in the program fluctuates. "Right now, we know we're going to lose students on St. Lawrence Island because whaling has started," he said. Education in rural Alaska is unlike education anywhere else because of the demanding way of life, he said.

Furthermore, college is a relatively new idea in the Eskimo culture, Metty said.

"There was no premise that the program was going to produce 40 teachers in four years," Metty said. "We hope to get 30 or 40 teachers over a decade."

But Dr. Gene Adam, former field coordinator for the university cross-cultural program, said some of the original grant applications had more optimistic projections.

Adam, who now teaches English at Fairbanks Community College, supports Greig's view and said the spending bears investigation by taxpayers.

"I think he (Greig) is saying, 'Here is the cost, here is the product,'" Adam said.

Rural education is expensive and it is difficult to coordinate, Adam said. "I have the greatest respect for those students. They have to catch fish, they have to work, they have to take care of their kids and they have to mail in their homework," he said.

"The idea of bringing education into every little valley is a noble one but it's not very practical," Adam said.

Rep. Terry Martin, R-Anchorage, said Greig's concerns about the Nome-based programs are similar to his own about the high cost of rural education in general.

"When you compare it to some of the other programs I've been bickering about, it's not out of line," Martin said.

"The concept has been around for a long time to get Native people to work with Native people," Martin said, but the cost of present methods is too high.

In addition to the letter to Pungowiyi protesting his firing, Greig flew to Fairbanks from Anchorage Tuesday to discuss the situation with university officials.

He said he plans on returning to New Mexico in a week or so to resume a lucrative adobe construction business.

EDUCATION

UNIVERSITY OF COLORADO, Boulder. B.A. 1964, M.A. 1969. Philosophy major, English minor.
UNIVERSITY OF NEW MEXICO, Albuquerque. Ph.D. 1978. Philosophy major, English minor. Dissertation:"The Overman & the Unity Of Nietzsche's Phil."

AREAS OF SPECIALIZATION: Cross-cultural Ed., Interdisciplinary Ed., Humanities, Philosophy, English.

TEACHING EXPERIENCE

1969 LATIN AMERICAN INSTITUTE, NY, NY. Instructor of English as a Second Language.

1969-70 SOPHIA UNIV., Tokyo. Instructor of Philosophy & English.

1971-74 UNIV. OF NEW MEXICO, Albuquerque. Instructor of Philosophy.

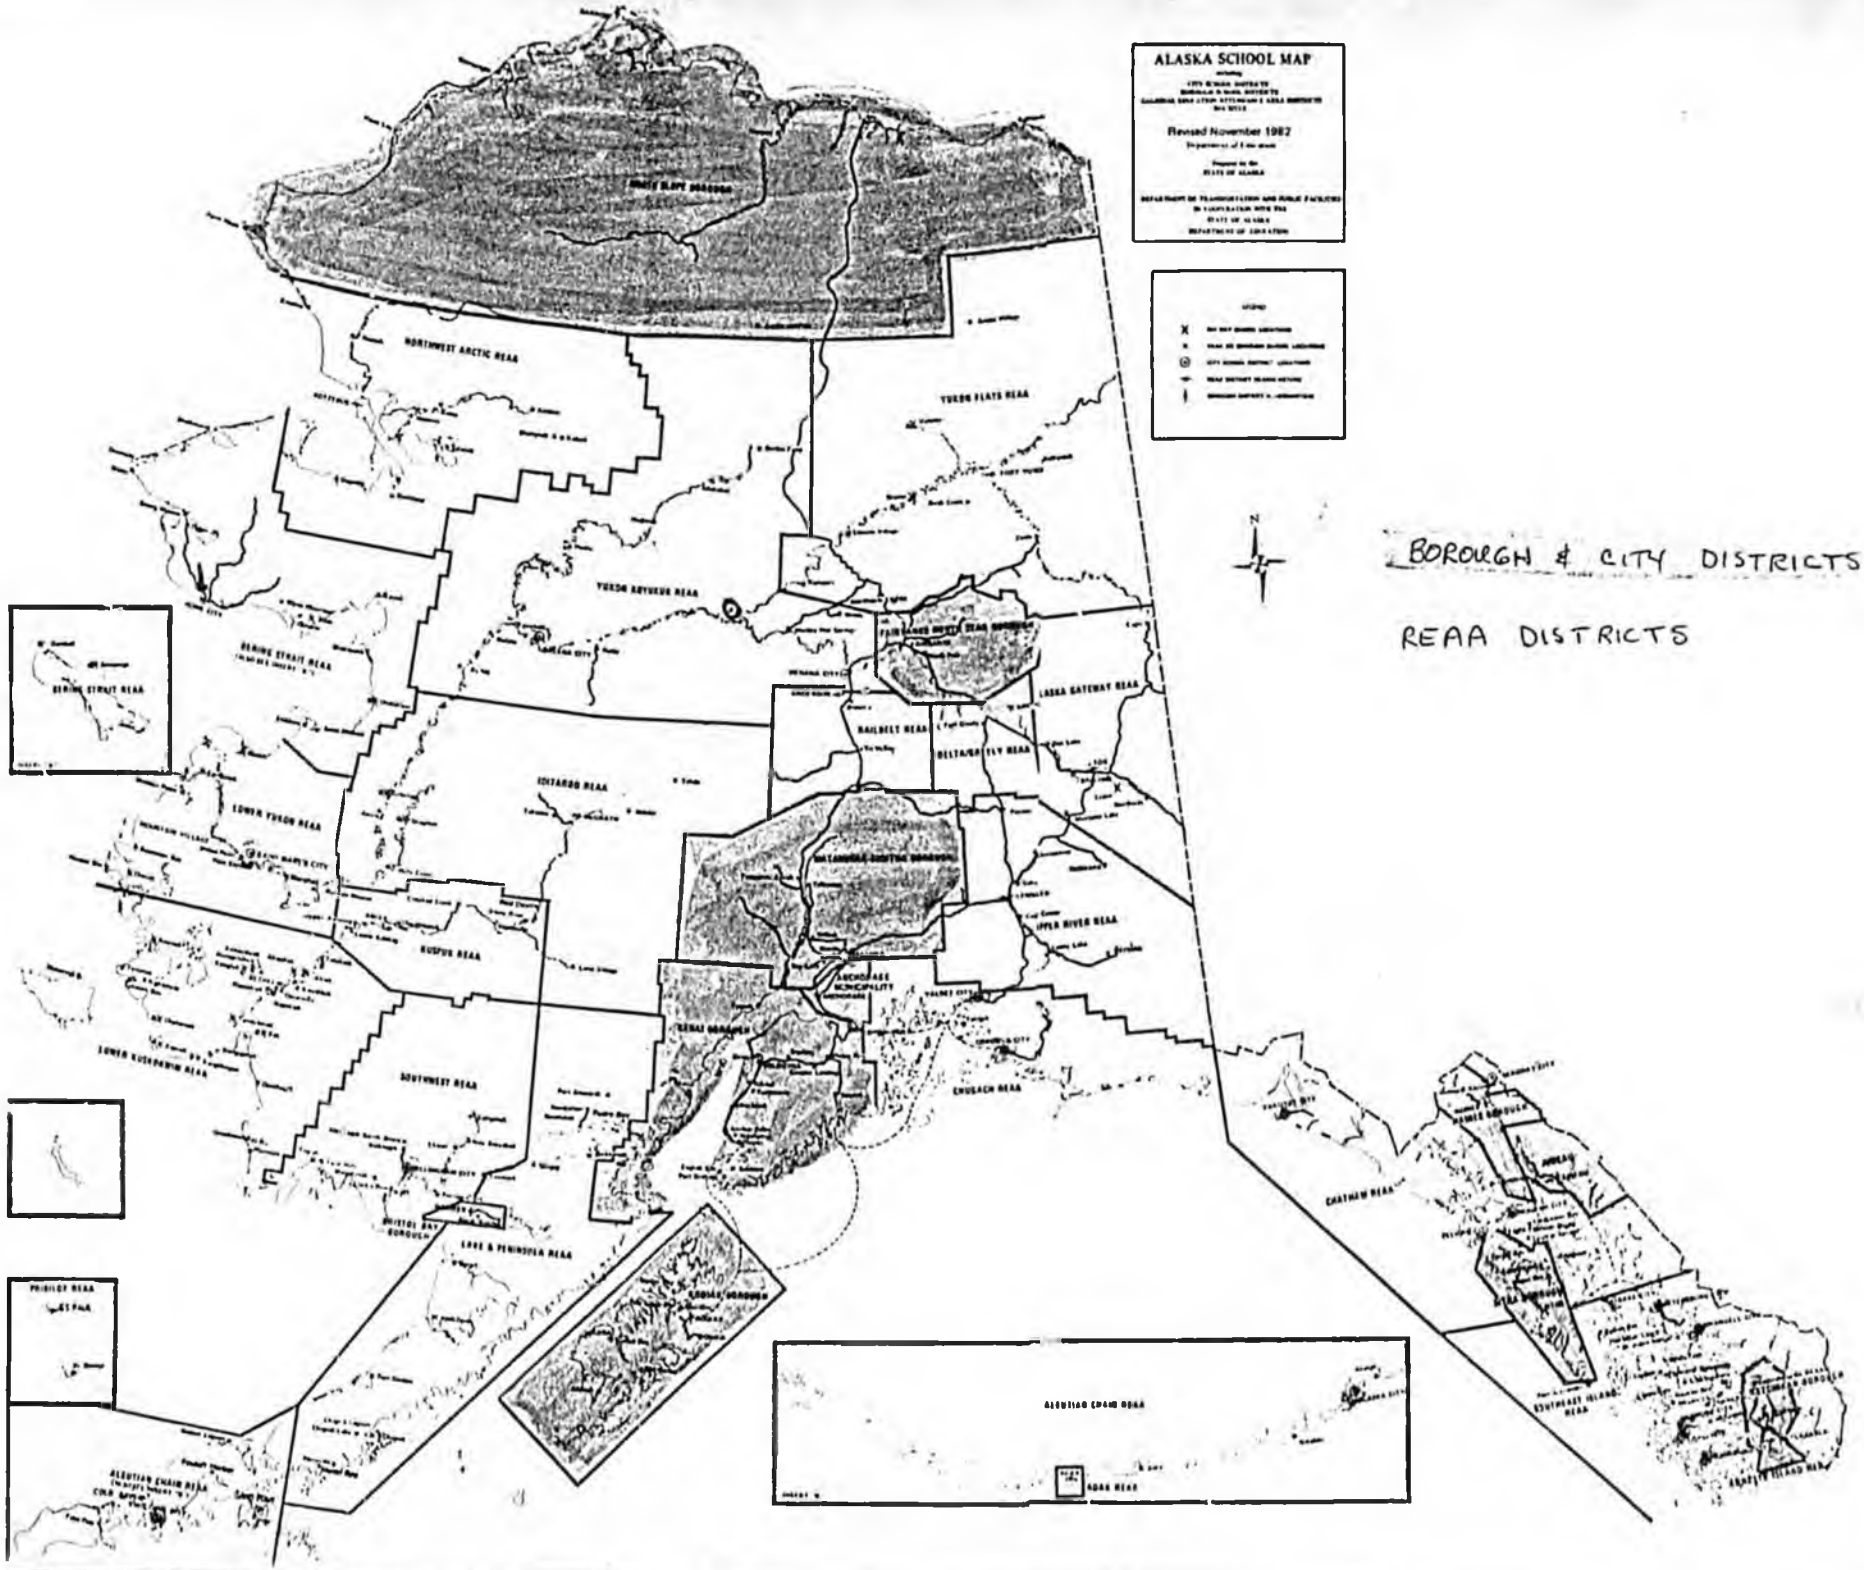
1974-75 UNIV. OF GUAM, Agana. Instructor of Philosophy & English.

1976 TEXAS TECH UNIV., Lubbock. Assist. Prof. of Philosophy.

1981-82 UNIV. OF ALASKA, Fairbanks. Assist. Prof. X-CED Program (Cross-Cultural Education Development Program, Sch. of Ed.). Duties: Interdisciplinary humanities"specialist" in a Native teacher education program. Administered B.Ed. program over a 200,000 sq. mile area. Flew between and resided in remote Athabascan Native American villages in the interior of Alaska.

1982 UNIV. OF ALASKA, Fairbanks. Assist. Prof. of Philosophy.

1983 ESKIMO TEACHER EDUCATION PROGRAM (ETEP), Nome, Alaska. Director. Duties: Administer a $346,000/yr. Title IV program, write grant requests, coordinate program planning with the University of Alaska and the Northwest Community College, develop curriculum, supervise bi-lingual student teachers, teach B.Ed. related courses. Constant flights into Eskimo villages in Bering Straits.



COURSES TAUGHT

Humanities
English Literature
Philosophy & Mythology
English Grammar & Composition
American Philosophy
English as a Second Language
Logic
Introduction to Philosophy
History of Philosophy & Science
Contemporary Philosophy

(Note: These are courses I developed & taught, I tutored a range of others

TEACHER SUPPLY/DEMAND 1984

A Report Based Upon an Opinion Survey
of Teacher Placement Officers

Survey and Report by:

James N. Aki.
Career Planning and Placement Center
Kansas State University
Manhattan, Kansas 66506
913 532-6508

copyright 1984 Association for School, College and University Staffing (ASCUS)

1984 ASCUS TEACHER SUPPLY/DEMAND REPORT
Survey of October, 1983

BACKGROUND

In 1976 the Executive Committee of the Association for School, College and University Staffing (ASCUS) directed then President, Jim Akin, to develop teacher supply/demand information for dissemination to the ASCUS membership and to the public. A survey of the entire institutional and associate membership was conducted at that time and became the prototype for the current annual teacher supply/demand survey and report. Comparisons in this report include new data, as well as those from previous reports dating back to 1976.

The three-page survey instrument has been modified only slightly from previous years for the 1983 survey (1984 report). Copies of the instrument were forwarded to basically the same placement officers who participated in recent surveys. The report deals with nine continental United States regions, plus Alaska and Hawaii. The chart of the regions is shown below. Of the 67 instruments mailed, 61 were received from Teacher Placement Officers in time for utilization in this report.

The survey requested supply/demand comparisons for different years for elementary and secondary teachers by field. In addition, it asked for average beginning salaries for graduates in special education, elementary and secondary education for recent placement years.

MAP OF REGIONS

AK=Alaska, HI=Hawaii, 1=North West, 2=West, 3=Rocky Mountain, 4=Great Plains/Midwest, 5=South Central, 6=South East, 7=Great Lakes, 8=Middle Atlantic, 9=North East

TEACHER SUPPLY/DEMAND REPORT

- After three years of decreasing optimism among reporting placement officers, it appears that the job market for teachers has bottomed and that the job market, generally, will be the same or better for new teachers for the 1984-85 school year.

- For the third consecutive year, education placement officers in the South Central region (#5) expressed higher levels of optimism about teacher employment than did their counterparts in other regions.

- For the third consecutive year, placement officers in the New England region (#9) expressed less optimism for teacher employment than did their counterparts in other regions.

- Compared to reports from their own regions one year earlier, increased optimism for the teacher job market was reflected by teacher placement officers from the following regions: Alaska, Northwest (#1), Middle Atlantic (#8), Southeast (#7), Northeast (#9), Great Lakes (#6), and West (#2).

- Compared to reports from their own regions one year earlier, decreased optimism for the teacher job market was reflected by teacher placement officers in the following regions: Hawaii, Great Plains/Midwest (#4), and Rocky Mountain (#3).

- Only in the fields of mathematics, physics, computer programming and chemistry is there a considerable teacher shortage, nationwide.

- Only in physical education is there a considerable surplus of teachers, nationwide.

- Sixteen subject areas were identified as having a slight or a considerable teacher shortage.

- Ten subject areas were reported as having either a slight or considerable surplus of teachers.

- Fifteen teaching fields were identified as having a balanced supply/demand.

- The identification of those fields having considerable shortage or considerable surplus was consistent throughout most regions of the United States.

MAP 2 GENERALIZED GEOGRAPHIC DISTRIBUTION OF ESKIMOS, INDIANS AND ALEUTS IN ALASKA

Aleuts

Most Aleuts lived in coastal villages on islands named after them stretching 1,000 miles across the North Pacific. Some few lived at the lower end of the Alaska Peninsula.

The population of about 15,000 Aleuts lived in numerous small villages, most of which were located on the Bering Sea side of the islands. One island, Umnak, once had 16 villages. A typical village was made up of six or seven houses; each household consisted of 20 to 30 people who were related to one another. Their houses were half underground and covered with a warm dome of sod.

Every village with its cluster of houses had its own sea hunting areas, which had to be respected by other villages. Use of these areas without permission meant war.

Adult men hunted seals, sea lions, and whales in the open sea from kayaks, perhaps the most seaworthy of watercraft. Roots, berries, birds, and eggs were available on the land. The food resources of the Aleuts were so abundant that anyone [illegible] could survive by gathering

HB504: Teacher Scholarship Program

A. Comments

1. Borrower must be a graduate from an Alaskan public high school. There are a number of private high schools which would have no students eligible (Covenant High School - Unalakleet, Monroe High School - Fairbanks, St. Mary's Catholic High School - St. Mary's, for example).

2. Borrower is eligible to borrow up to the total cost of room and board, tuition and fees, and books and supplies, or $10,000, whichever is lower. Hence, only twenty or thirty students per year would borrow more than the normal $6,000 student loan maximum.

3. Borrower must maintain good standing to continue receiving loans. ("C" average, enroll and complete 12 hours per term.)

4. Loans may not be awarded for more than 5 years of study.

5. Interest is 5% - repayment is 10 years.

6. Section 14.43.630 requires the commission to actually transfer funds to the school districts. We feel that fund transfer to the district is an unnecessary step and should be eliminated. The funds should go to the student (actually to the school in which the student enrolls) and not to the district and then to the student.

7. Section 14.43.640 (b)(1) means that if a borrower does not teach

public school in Alaska, no loan forgiveness is possible - not even the normal 50% for which other loan borrowers are eligible.

B. Possible Amendments

1. Section 14.43.630 amended to read:

Sec. 14.43.630. ADMINISTRATION. The teacher scholarship loan program shall be administered by the student financial aid committee (AS 14.43.095) in accordance with regulations adopted by the committee. The committee shall allocate [DISTRIBUTE] the loan awards [FUNDS] available for teacher scholarship loans annually to local school boards giving a preference to school districts with a high percentage of students in ethnic minorities and a low percentage of teachers in ethnic minorities. The local school boards shall select the recipients of the teacher scholarship loans.

2. Section 14.43.640 amended to read:

Sec. 14.43.640. CONDITIONS OF LOANS. Each school district shall award teacher scholarship loans subject to the following conditions:

(1) the conditions provided in AS 14.43.120 apply except that no loans may be made to graduate students [AND THE STATE SHALL REPAY A PORTION OF A TEACHER SCHOLARSHIP LOAN UNDER AS 14.43.120 (j) ONLY IF, IN ADDITION TO THE OTHER CRITERIA, THE BORROWER IS ALSO EMPLOYED AS A PUBLIC SCHOOL TEACHER IN THE STATE DURING THE PERIOD FOR WHICH THE LOAN IS FORGIVEN];

(C) if a borrower meets the conditions provided in paragraph (1) of this section and is employed as a public school teacher in the district from which the borrower graduated, AS 14.43.120 (j) does not apply, but rather, the portion of the loan that shall be paid by the state is the following percentages of the total loan received plus interest up to a total of 100 percent of the total loan:

(A) one year employment, 15 percent;

(B) two years employment, an additional 15 percent;

(C) three years employment, an additional 15 percent;

(D) four years employment, an additional 25 percent;

(E) over four years employment, an additional 30 percent; and

(3) a loan may not exceed $10,000 in a school year.

3. Section 14.43.650 amended to read:

Sec. 14.43.650. SELECTION CRITERIA. (a) To be eligible for a teacher scholarship loan, a student must

(1) be a graduate of, or scheduled for graduation within six months from, an Alaskan [A STATE PUBLIC] high school, with sufficient credits to be admitted to an accredited college or university;

(2) be enrolled in or show evidence of intent to enroll in a degree program directed at a teaching career at the elementary or secondary school level; and

(3) meet the conditions set by the student's local school district with respect to the district's requirements for teachers in particular subject areas.

C. Fiscal Analysis

1. Estimated number of teacher scholarship loans available

FY85	80
FY86	160
FY87	240
FY88	320
FY89	320

2. Since a student may not borrow both a teacher loan and a standard student loan, much of the cost would be off-set. The only add-on would be for those eligible costs exceeding $5,000. This is estimated to be $2,500 for 25 students in FY85, and then carried forward with a 6% inflation in future years.

SUBJECT: Affirmative action--teacher scholarship loan program (CSHB 504 (HESS))

TO: Representative Rick Uehling

FROM: Keith B. Levy KBL
Legislative Counsel

You have requested an opinion on the constitutional issues raised by CSHB 504 (HESS). As you are aware, any legislation which creates classifications based on race or ethnic background will be subject to close judicial scrutiny if challenged in the courts. In establishing the teacher scholarship loan program, the bill creates a racial classification and could therefore be subject to challenge. Although I believe that the bill could withstand a constitutional challenge, it does raise a number of significant constitutional issues.

In University of California Regents v. Bakke, 438 U.S. 265, 57 L.Ed.2d 750 (1978) the United States Supreme Court issued a divided opinion on the subject of "affirmative action". While no five justices could agree on a single opinion, the opinion of the Court lends some guidance to future treatment of affirmative action programs.

Bakke, a white male, was denied admission to a medical school run by the state and he challenged the state's admission procedures as violative of the Equal Protection clause of the Fourteenth Amendment to the United States Constitution. The school accepted a quota of a certain percentage of minority students. Bakke claimed that this constituted unfair racial discrimination in violation of the federal constitution. The Court ruled that racial and ethnic distinctions are subject to strict scrutiny, but a preferential classification using race as a factor would not be unconstitutional. However, a preferential classification establishing a racial quota would be unconstitutional unless it is

precisely tailored to serve a compelling governmental interest. Moreover, the burden is on the state to prove that the quota meets this criterion.

Under this test, the Court struck down the school's admission procedure saying that the state had failed to establish a compelling interest on which to justify the racial quota. In doing so, the Court rejected several of the state's justifications for the program. Specifically, the medical school's racial quota could not be justified: (1) solely to insure that the school contained a certain percentage of racial minorities; (2) to increase the number of physicians practicing in underserved areas, since the state couldn't prove that the program was likely to have that result; or (3) to counter the effects of "social discrimination" generally. The only justification for such an affirmative action program would be to counter the effects of specific identified discrimination, the Court said.

In a more recent case, Fullilove v. Klutznick, 448 U.S. 448, 65 L.ED.2d 902 (1980), the United States Supreme Court upheld a racial quota in the Federal Public Works Employment Act of 1977. The "minority business enterprise" provision of the Act required a minimum of 10 percent of federal funds granted for local public works projects to be used to contract with businesses owned by "minority group members." As in Bakke, no five members of the Court in Fullilove could agree on a single opinion. But the opinion of the Court stated that Congress could use a racial quota to avoid perpetuation of the effects of prior discrimination. The decision indicates that the court is leaning toward approval of affirmative action programs aimed at relieving the effects of past discrimination.

There are two provisions in the teacher scholarship loan program which raise the "affirmative action" problem. AS 14.43.630, added by section 1 of the bill, provides that the funds available for the loans shall be distributed to the local school boards by "giving a preference to school districts with a high percentage of Native students and a low percentage of Native teachers.

AS 14.43.650(b), also added by the bill, requires the local school boards to award teacher scholarship loans "giving a preference to Native students that meet the qualifications for a loan." Since both of these provisions merely give a preference to Native students, rather than establishing a

quota, they stand a good chance of surviving a constitutional attack under the Bakke decision.

However, even the Native preference provisions will be given strict scrutiny by the Court if challenged. To withstand the challenge, the legislature will have the burden of showing that the provisions are aimed at a compelling state interest, e.g., remedying past racial discrimination. The state would also have to prove that the provisions are precisely tailored to do this.

Under the apparent rationale of the Bakke decision, the legislature would have to show that the Native preference is aimed at relieving actual past discrimination in the hiring of Native teachers and that it would actually have the effect of relieving the results of that discrimination. Moreover, the court would probably not accept the legislature's mere claims of past discrimination; the state would have to show evidence of such discrimination. Assuming that the state can make this showing, however, the teacher scholarship loan program would probably survive judicial scrutiny.

If the legislature wishes to circumvent the potential constitutional problems altogether, I would recommend removing the Native preference and substituting a preference for rural areas, or something to that effect. Removing the racial classification would have the effect of changing the test the Court would use if the provisions were challenged. If the classification were rural rather than racial, the Court would only require that the classification have a "rational basis", rather than a "compelling state interest", required under the strict scrutiny test. The rational basis test requires only that the state show that the legislation is rationally related to some legitimate end. It is a very easy burden for the state to meet, as opposed to the compelling interest standard which is very difficult to satisfy.

In conclusion, CSHB 504 (HESS) presents some significant constitutional problems, which may or may not survive a legal challenge. To remove the constitutional issues altogether, the legislature could use some classification other than the present preference for Natives, such as a rural classification.

HOUSE BILL NO. 504

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act establishing the teacher scholarship loan program."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43 is amended by adding new sections to read:

ARTICLE 7. TEACHER SCHOLARSHIP LOAN PROGRAM.

Sec. 14.43.600. FINDINGS AND INTENT. (a) The legislature finds that there is a wide and unacceptable disparity between the [ethnic] NATIVE distribution of teachers and ~~the ethnic distribution of~~ NATIVE students in the state public schools. Particularly in rural areas, many schools have virtually no Native teachers and no non-Native students. The undesirable effects of this disparity include the following:

(1) there is a serious weakness in the ability of teaching staffs, particularly in rural schools, to foster a sense of ethnic traditions and cultures in the NATIVE students;

(2) many rural students are forced to exist in two entirely separate situations: the essentially traditional atmosphere of many Native homes, and the essentially modern atmosphere of the classroom;

(3) almost no students among the state's ethnic minorities return to rural schools to teach, continuing the ethnic imbalance and exacerbating its effects; and

(4) there is an annual turnover of 40 percent among teachers in rural educational attendance areas in the state.

(b) The legislature further finds that existing programs have failed to increase the proportion of members of ethnic minorities

teaching in rural schools. Therefore, it is the intent of the legislature to establish the teacher scholarship loan program to encourage members of ethnic minorities to return to rural schools as teachers and relieve the conditions described in this section.

Sec. 14.43.610. PROGRAM ESTABLISHED. There is established the teacher scholarship loan program to provide an incentive for graduates of Alaska high schools who are from ethnic minorities to pursue teaching careers in Alaska schools.

Sec. 14.43.620. TEACHER SCHOLARSHIP REVOLVING LOAN FUND. There is created a teacher scholarship revolving loan fund. The fund shall be used to make scholarship loans to students selected under AS 14.43.600 - 14.43.650. All repayments of principal and interest on teacher scholarship loans shall be paid into the teacher scholarship revolving fund and shall be used to make new teacher scholarship loans. If estimated funds available from teacher scholarship loan repayments are inadequate to fully fund estimated teacher scholarship loans for any fiscal year, additional funding from the general fund may be requested and appropriated for that year.

Sec. 14.43.630. ADMINISTRATION. The teacher scholarship loan program shall be administered by the student financial aid committee (AS 14.43.095) in accordance with regulations adopted by the committee. The committee shall distribute the funds available for teacher scholarship loans annually to local school boards giving a preference to school districts with a high percentage of students in ethnic minorities and a low percentage of teachers in ethnic minorities. The local school boards shall select the recipients of the teacher scholarship loans.

Sec. 14.43.640. CONDITIONS OF LOANS. Each school district shall award teacher scholarship loans subject to the following conditions:

(1) the conditions provided in AS 14.43.120 apply except that no loans may be made to graduate students and the state shall repay a portion of a teacher scholarship loan under AS 14.43.120(j) only if, in addition to the other criteria, the borrower is also employed as a public school teacher in the state during the period for which the loan is forgiven;

(2) if a borrower meets the conditions provided in paragraph (1) of this section and is employed as a public school teacher in the district from which the borrower graduated, the portion of the loan that shall be paid by the state is the following percentages of the total loan received plus interest up to a total of 100 percent of the total loan:

(A) one year employment, 15 percent;

(B) two years employment, an additional 15 percent;

(C) three years employment, an additional 15 percent;

(D) four years employment, an additional 25 percent;

(E) over four years employment, an additional 30 percent; and

(3) a loan may not exceed $10,000 in a school year.

Sec. 14.43.650. SELECTION CRITERIA. (a) To be eligible for a teacher scholarship loan, a student must

(1) be a graduate of, or scheduled for graduation within six months from, a state public high school, with sufficient credits to be admitted to an accredited college or university;

(2) be enrolled in or show evidence of intent to enroll in a degree program directed at a teaching career at the elementary or secondary school level; and

(3) meet the conditions set by the student's local school district with respect to the district's requirements for teachers in

particular subject areas.

(b) Each school district shall award teacher scholarship loans in direct proportion to the distribution of ethnic groups among the students eligible for graduation from the school district each year.

(c) A student may not be awarded a scholarship loan under AS 14.43.090 - 14.43.160 and a teacher scholarship loan under AS 14.43.600 - 14.43.650 for the same school year.

The local school board ~~Teacher Selection~~ Shall ~~include~~ consider ~~Students~~ applicants from both public and private schools for the teacher Scholarship Loan.

(4) Complete an application

The ~~Committee~~ School Shall make its selections without prejudice

ARTICLE 7. TEACHER SCHOLARSHIP LOAN PROGRAM.

Sec. 14.43.600. FINDINGS AND INTENT. (a) The legislature finds that there is a wide and unacceptable disparity between the distribution of Native teachers and Native students in elementary and secondary schools in the state. Particularly in rural areas, many schools have virtually no Native teachers and no non-Native students. The undesirable effects of this disparity include the following:

(1) there is a serious weakness in the ability of teaching staffs, particularly in rural schools, to foster a sense of Native traditions and cultures in the Native students;

(2) many rural students are forced to exist in two entirely separate situations: the essentially traditional atmosphere of many Native homes, and the essentially modern atmosphere of the classroom;

(3) almost no Native students return to rural schools to teach, continuing the imbalance and exacerbating its effects; and

(4) there is an annual turnover of 40 percent among teachers in rural educational attendance areas in the state.

(b) The legislature further finds that existing programs have failed to increase the proportion of Natives teaching in rural schools. Therefore, it is the intent of the legislature to establish

the teacher scholarship loan program to encourage Natives to return to rural schools as teachers and relieve the conditions described in this section.

Sec. 14.43.610. PROGRAM ESTABLISHED. There is established the teacher scholarship loan program to provide an incentive for Native high school graduates to pursue teaching careers in elementary and secondary schools in the state.

Sec. 14.43.620. TEACHER SCHOLARSHIP REVOLVING LOAN FUND. There is created a teacher scholarship revolving loan fund. The fund shall be used to make scholarship loans to students selected under AS 14.-43.600 - 14.43.700. All repayments of principal and interest on teacher scholarship loans shall be paid into the teacher scholarship revolving loan fund and shall be used to make new teacher scholarship loans. If estimated funds available from teacher scholarship loan repayments are inadequate to fully fund estimated teacher scholarship loans for any fiscal year, additional funding from the general fund may be requested and appropriated for that year.

Sec. 14.43.630. ADMINISTRATION. The teacher scholarship loan program shall be administered by the student financial aid committee (AS 14.43.095) in accordance with regulations adopted by the committee. The committee shall allocate the loan awards available for teacher scholarship loans annually to local school boards giving a preference to school districts with a high percentage of Native students and a low percentage of Native teachers. The local school boards shall select the recipients of the teacher scholarship loans.

For the purposes of 14.43.640 the Committee shall annually designate those ~~districts~~ schools with a high percentage of native students.

Sec. 14.43.640. CONDITIONS OF LOANS. (a) The conditions provided in AS 14.43.120 apply to teacher scholarship loans except that no loans may be made to graduate students.

(b) If a borrower meets the conditions provided in (a) of this

section and is employed as a teacher in a ~~school~~ designated by the student financial aid committee as having a high percentage of Native students, notwithstanding AS 14.43.120(j), the portion of the loan that shall be paid by the state is the following percentages of the total loan received plus interest up to a total of 100 percent of the total loan:

(1) one year employment, 15 percent;

(2) two years employment, an additional 15 percent;

(3) three years employment, an additional 15 percent;

(4) four years employment, an additional 25 percent;

(5) over four years employment, an additional 30 percent.

(c) A loan may not exceed $10,000 in a school year.

Sec. 14.43.650. SELECTION CRITERIA. (a) To be eligible for a teacher scholarship loan, a student must

(1) be a graduate of, or scheduled for graduation within six months from, a high school in the state, with sufficient credits to be admitted to an accredited college or university;

(2) be enrolled in or show evidence of intent to enroll in a degree program directed at a teaching career at the elementary or secondary school level; and

(3) meet the conditions set by the student's local school district with respect to the district's requirements for teachers in particular subject areas.

(b) Each school district shall award teacher scholarship loans giving a preference to Native students that meet the qualifications for a loan.

(c) A student may not be awarded a scholarship loan under AS 14.43.090 - 14.43.160 and a teacher scholarship loan under AS 14.43.600 - 14.43.700 for the same school year.

Sec. 14.43.700. DEFINITION. In AS 14.43.600 - 14.43.700, "Native" means any person who is a descendant of a member of the aboriginal races inhabiting the state when annexed to the United States, or who is a descendant of an Indian or Eskimo who, since the year 1867 and prior to June 30, 1952, migrated into the state from Canada, and who is a descendant having at least one-quarter blood derived from these ancestors.

INTRODUCTION

Historically, large numbers of Alaska's high school seniors have looked "outside" for pursuit of postsecondary education. In an effort to document this pattern and to try to understand the underlying motivations, this annual survey of Alaska's seniors has developed. The first survey report was published for the 1977-78 academic year; this report represents the sixth in the series.

During the fall of the 1982-83 school year, Alaska high school seniors were asked their opinions of their overall high school experience, their need for additional assistance in selected academic and career planning areas, and general demographic information, as well as what they planned to do after high school graduation. Survey results can be used for administrative and academic planning within the state and for improving student counseling and advisement.

METHODOLOGY

A written questionnaire, consisting of eighteen questions, was sent to all 215 Alaska public and private schools identified as having a twelfth grade.

For 1982-83, it was estimated that there were 5,830 students enrolled in the twelfth grade in Alaska. Of these 5,830 seniors, 3,505, or 60 percent, responded to this survey. Slightly more than a third (1,306, or 37 percent) were seniors enrolled in Anchorage area schools. Students from Fairbanks accounted for 6 percent, Juneau for 3 percent, and the remainder of the students in the state accounted for 54 percent.

Four general groupings of questions were included in the questionnaire. These were:

1. those describing demographic characteristics of the student (sex, race, primary home language, income, etc.);
2. those describing the high school experiences of the student (evaluation of school experiences, and identification of possible areas of weakness);
3. those describing the postsecondary plans of the respondent (occupational choices, choice of college, post-high school plans, etc.); and
4. those describing the more detailed plans of that group of respondents planning to pursue some type of postsecondary education.

RESULTS AND ANALYSIS

A. Demographic Data

The demographic data indicate that the students who responded are a highly representative sample of the general senior population. This conclusion is based upon previous senior surveys and current year estimates and projections. Approximately half the respondents were male (52 percent) and half were female (48 percent); 67 percent were Caucasian, 22 percent were Alaska Native, 3 percent were Black, and small percentages were Oriental, Hispanic, or other; 72 percent indicated annual family incomes of $15,000 or more; 56 percent indicated annual family incomes of $25,000 or more; and 93 percent were from homes where English is the primary language spoken. (Details of these results are presented in Appendix B, Tables 22 to 30).

B. High School Experience

Ranking of High School Experiences. Respondents were requested to evaluate various aspects of their high school experiences using the following descriptors: outstanding, average, poor, or not provided. Those characteristics receiving the highest number of "outstanding" responses were: Counseling and Guidance Services, Athletic and Recreational Facilities, Library and Learning Center Facilities, and Vocational Training, as indicated in Table 1. This response is very similar to the responses of recent years. Also consistent with responses from past years were those characteristics receiving the least number of "outstanding" responses.

They were Grades, Marks, or Promotion Policy, School Rules and Discipline, and Variety of Courses. It is interesting to note that Laboratory Facilities was separated out for the first time this year and it received the lowest number of "outstanding" responses.

TABLE 1
DISTRIBUTION OF "OUTSTANDING" RESPONSES
FOR HIGH SCHOOL CHARACTERISTICS

CHARACTERISTICS	"OUTSTANDING" RESPONSES	
	Number	Percent
Counseling and Guidance Services	1,212	34.6
Athletic & Recreation Facilities	1,206	34.4
Library, Learning Center Facilities	1,001	28.6
Vocational Training	981	28.0
Quality of Instruction	830	23.7
Special Help for Students	794	22.7
Variety of Courses	744	21.2
School Rules, Regulations, & Discipline	685	19.5
Grades, Marks, Promotion Policy	529	15.1
Laboratory Facilities	436	12.4
Overall High School Experience	1,066	30.4

Table 2 presents the "poor" responses to the high school characteristics. As was true for the past two years, Quality of Instruction, Vocational Training, and Grades, Marks, or Promotion Policy received the fewest "poor" ratings. School Rules, Regulations, and Discipline, Laboratory Facilities, Counseling and Guidance Services, and Athletic and Recreation Facilities received the highest number of "poor" ratings.

TABLE 2
DISTRIBUTION OF "POOR" RESPONSES
FOR HIGH SCHOOL CHARACTERISTICS

CHARACTERISTICS	"POOR" RESPONSES	
	Number	Percent
School Rules, Regulations, & Discipline	849	24.2
Laboratory Facilities	809	23.1
Counseling and Guidance Services	501	14.3
Athletic & Recreation Facilities	475	13.6
Library, Learning Center Facilities	473	13.5
Variety of Courses	466	13.3
Special Help for Students	446	12.7
Grades, Marks, Promotion Policy	286	8.2
Vocational Training	285	8.1
Quality of Instruction	228	6.5
Overall High School Experience	344	9.8

Although 83.4 percent of the seniors rated their overall high school experiences as "average" or "outstanding", this represents a decrease from last year when nearly 90 percent of the seniors did so. While it is encouraging that a substantial number of seniors indicated general satisfaction with their high school experiences, the Commission will pay special attention to this response in subsequent surveys to see if the downward trend continues. A more complete listing of responses to high school experiences and characteristics may be found in Table 27 of Appendix B.

A comparison of Tables 1 and 2 shows that Counseling and Guidance Services again evoked strong responses from the seniors. It ranked highest in "outstanding" ratings and third highest in "poor" ratings. Even so, 80 percent of the seniors rated Counseling and Guidance Services as "average" or "outstanding". It is also apparent that Laboratory Facilities evoked strong negative responses; it ranked lowest in "outstanding" ratings and second highest in "poor" ratings.

Further analysis of seniors' evaluation of their high school experiences was conducted by comparing the assessment of respondents from small and large schools. Small schools were identified as schools with 200 students or fewer; large schools had more than 200 students. Table 3 shows the percentages of "outstanding" responses for small and large schools. In almost every case, seniors from large schools had greater percentages than those from small schools. In particular, there were considerable differences in the categories of Library, Learning Center Facilities and Variety of Courses.

TABLE 3
PERCENTAGES OF "OUTSTANDING" RESPONSES FOR
HIGH SCHOOL CHARACTERISTICS FOR LARGE AND SMALL SCHOOLS

CHARACTERISTICS	PERCENTAGE OF "OUTSTANDING" RESPONSES	
	Large School	Small School
Counseling and Guidance Services	37.7	23.9
Athletic & Recreation Facilities	36.9	28.5
Vocational Training	28.6	24.5
Library, Learning Center Facilities	33.4	12.8
Special Help for Students	23.8	18.7
Quality of Instruction	23.9	20.6
Variety of Courses	24.7	9.1
School Rules, Regulations, & Discipline	18.6	22.6
Grades, Marks, Promotion Policy	14.8	14.8
Laboratory Facilities	13.6	9.1
Overall High School Experience	32.2	25.8

Areas of Improvement. Seniors were asked if they felt a need for additional assistance in the four areas of writing, reading, mathematics, and career planning. Table 4 shows that over half of the seniors felt a need for more assistance in mathematics and career planning and approximately 40 percent indicated a need for assistance in the areas of writing and reading. It should be noted that, in relation to last year's responses, a higher percentage of seniors expressed a need for additional assistance in all four areas. In writing, the percentages increased over 5 points from 34.6 percent to 39.8 percent, and in math the percentage change was from 46.8 to 50.9.

TABLE 4
SENIOR EXPRESSED NEED FOR FURTHER
ASSISTANCE IN SELECTED AREAS

TYPE OF ASSISTANCE	NEEDED		NOT NEEDED		TOTAL
	No.	%	No.	%	
Expressing ideas in writing	1,362	39.8	058	60.2	3,420
Improving reading skills	1,443	42.1	981	57.9	3,424
Improving math skills	1,755	50.9	691	49.1	3,446
Deciding on Career/Education	1,738	50.6	700	49.4	3,438

Those seniors planning to attend a postsecondary educational institution (technical, business, two- or four-year college) after high school indicated less of a need for assistance in all areas than did those planning to work full-time or those who were undecided about post-graduation plans. These data are presented in Table 5 and also reflect the opinion that the greatest need for those seniors planning to work was for additional assistance in career planning. Moreover, there was a substantial percentage increase of those seniors planning to work and needing assistance when compared to last year's survey. In particular, the percentage of seniors planning to work and needing assistance in writing increased from 37.4 to 46.7. For those seniors planning schooling beyond high school, the greatest need areas were for improved math skills and additional assistance in career and/or educational planning.

TABLE 5
SENIOR EXPRESSED NEED FOR FURTHER ASSISTANCE IN SELECTED AREAS BY INDICATED POST-HIGH SCHOOL PLANS

POST-HIGH SCHOOL PLAN: FURTHER SCHOOLING					
	NEEDED		NOT NEEDED		
TYPE OF ASSISTANCE	No.	%	No.	%	TOTAL
Expressing ideas in writing	757	35.8	1,357	64.2	2,114
Improving reading skills	817	38.6	1,300	61.4	2,117
Improving math skills	1,049	49.3	1,080	50.7	2,129
Deciding on Career/Education	1,006	47.4	1,117	52.6	2,123
POST-HIGH SCHOOL PLAN: FULL-TIME JOB OR DON'T KNOW					
	NEEDED		NOT NEEDED		
TYPE OF ASSISTANCE	No.	%	No.	%	TOTAL
Expressing ideas in writing	515	46.7	587	53.3	1,102
Improving reading skills	534	48.4	569	51.6	1,103
Improving math skills	595	53.6	516	46.4	1,111
Deciding on Career/Education	628	56.7	480	43.3	1,108

As a student's yearly household income increased, the need for assistance in all areas decreased. More than half of those seniors whose annual yearly household income was less than $25,000 indicated that they needed assistance in improving math skills and deciding on career or continuing education. There is little difference between the students whose yearly household income was between $25,000 and $40,000 and those students who came from a household whose income was over $40,000. These data are presented in Table 6. It should be noted, however, that the need for help in improving math skills and deciding on future career or educational plans is evident for a significant percentage of students, irrespective of family income.

TABLE 6
SENIOR EXPRESSED NEED FOR FURTHER ASSISTANCE
IN SELECTED AREAS BY HOUSEHOLD INCOME

EXPRESSED NEED FOR ASSISTANCE IN:	ANNUAL HOUSEHOLD INCOME					
	UNDER $25,000		$25,000 TO $40,000		OVER $40,000	
	No.	%	No.	%	No.	%
Expressing ideas in writing	535	45.3	294	36.5	388	33.2
Improving reading skills	566	48.0	317	39.4	416	35.6
Improving math skills	677	57.4	380	47.2	516	44.1
Deciding on Career/Education	658	55.8	383	47.6	537	45.9

More detail on need for assistance by varied levels of annual household income is presented in Appendix B, Table 28.

C. Postsecondary Plans

A number of questions regarding postsecondary plans were posed for the seniors, and based upon the responses, the seniors were divided into two groups, those planning educational pursuits and those not. Those planning some form of education were then asked to respond to additional questions which will be discussed later in this report.

The responses to the question concerning the post-high school plans of seniors are contained in Table 7. The percentage of those planning to continue with some form of postsecondary education has increased steadily the past several years, from 56.5 in 1980 to 61.6 this year.

The number of seniors not planning any postsecondary education was 1,348, or 38.4 percent of the total respondents. However, it should be noted that this number includes 377 students who did not know what they were going to do, so the number of students actually involved in postsecondary education could increase.

TABLE 7
DISTRIBUTION OF SENIORS BY
MOST LIKELY ACTIVITY AFTER HIGH SCHOOL

ACTIVITY	NUMBER	PERCENT
Attend a 4-Year College	1,400	40.0
Attend a 2-Year College	408	11.6

Don't Know Yet	377	10.8
Other	215	6.1
Total	3,505	100.0

D. Similarities and Differences Between Those Seniors Planning Postsecondary Education and Those Who Are Not

Sex. In examining the plans of the seniors and differentiating by sex, as presented in Table 8, one can see that certain activities are more likely for one sex than the other. For instance, 65.2 percent of female seniors intend to enroll in some form of postsecondary education, while 58.3 percent of male seniors have the same intention. A larger difference can be seen when focusing upon two- or four-year postsecondary institutions. 57.8 percent of female seniors intend to enroll in either a two-year or four-year college, while only 46.0 percent of the male seniors express the same desire.

TABLE 8
DISTRIBUTION OF SENIORS BY MOST LIKELY
ACTIVITY AFTER HIGH SCHOOL AND BY SEX OF RESPONDENT

ACTIVITY	MALE		FEMALE	
	No.	%	No.	%
Attend a 4-Year College	656	35.7	732	44.6

Subtotal	765	41.7	572	34.8
Total	1,836	100.0	1,642	100.0

Race. The race of the senior respondents was a significant factor in determining postsecondary plans. As illustrated in Table 9, almost 49 percent of Alaska Natives intend to pursue some type of postsecondary education, while 60 percent and 66 percent of Black and Caucasian seniors, respectively, indicated the same desire. A slightly different picture emerges when this year's seniors are compared to last year's. The percentage of Alaska Natives intending to pursue some type of post-secondary education increased from 42 to 49 percent. On the other hand, the percentage of Black seniors with that intent decreased significantly, from 73 to 60 percent. Native seniors, however, continue to have a much higher percentage of undecided responses than any other group, and they also had a higher percentage of those planning to enter into apprentice training.

TABLE 9
DISTRIBUTION OF SENIORS BY MOST LIKELY
ACTIVITY AFTER HIGH SCHOOL AND BY RACE OF RESPONDENT

Total	787	100.0	105	100.0	2,345	100.0	268	100.0

School Size. There is a striking difference between those seniors planning to attend a four-year college and those seniors undecided about their future when differentiating by size of school they attend. Table 10 shows that only 26.2 percent of seniors from small schools plan to attend a four-year college compared to 43.6 percent of seniors from large schools. Moreover, 21.4 percent of seniors from small schools do not know what they plan to do after graduation compared to only 8.1 percent from large schools.

TABLE 10
DISTRIBUTION OF SENIORS BY MOST LIKELY ACTIVITY AFTER HIGH SCHOOL AND BY SIZE OF SCHOOL IN WHICH THE SENIOR IS ENROLLED

Subtotal	940	34.9	374	51.4
Total	2,691	100.0	727	100.0

Household Income. Annual household income has continued to relate strongly to specific postsecondary plans of the seniors over the past four years. A comparison was made of the responses of those seniors from

households with annual incomes of less than $25,000, $25,000 to $40,000, and more than $40,000. The results of this comparison are presented in Table 11. As household income increases, so does the tendency of seniors to pursue postsecondary activities at a four-year college. This, however, does not hold true for attendance at two-year colleges or vocational/technical schools. In fact, the higher the household income, the less likely it is for seniors to attend vocational/technical schools. Also, as household income increases, uncertainty about postsecondary plans decreases. Almost 17 percent of those seniors whose household incomes were less than $25,000 indicated that they did not know what they intended to do after graduation, while considerably less than 10 percent of those students from households in higher income brackets expressed the same uncertainty.

TABLE 11

Grades Earned. The seniors were asked to indicate what their grades had been in high school, whether they had earned mostly A's, mostly B's, mostly C's, or mostly below C's.

As one might suspect, and consistent with surveys from the past two years, those seniors who earned mostly A's and B's indicated their intention to pursue postsecondary education far more frequently than those earning lower grades. As Table 12 indicates, nearly 84 percent of those seniors earning mostly A's planned to go on for more schooling, while considerably smaller percentages are evident for seniors with lower grades. There is, however, a slight but steady upward trend of seniors with lower grades planning to attend postsecondary institutions. For seniors earning mostly B's, the percentage planning to go on for more schooling increased from 64.3 to 66.6 from 1981 to 1983. For seniors earning mostly C's, the percentage change was from 42.3 to 48.2, and for seniors earning grades below C, the percentage change was from 21.2 to 23.9.

Other	17	3.1	87	5.3	88	7.3	20	18.3
Subtotal	89	16.3	545	33.4	621	51.8	83	76.1
Total	546	100.0	1,633	100.0	1,199	100.0	109	100.0

Occupational Choice. Seniors were asked to choose a first and second occupational preference from a list of 58 technical and professional occupations. Business Management and Computer Programming are solidly the most popular choices by the seniors. Aviation Careers was also very popular. The top four choices in descending order of popularity, were:

First Preference	Second Preference
Business Management	Computer Programming
Computer Programming	Business Management
Education	Aviation Careers
Aviation Careers	Social Sciences

The occupational preferences varied quite markedly between the sexes, with the exception of Business Management. The male seniors preferred the more technical and trade occupations while Elementary/Secondary education is clearly the choice of female seniors. The top four choices, in descending order of popularity, for male and female seniors were:

Male Seniors	Female Seniors
Computer Programming	Elementary/Secondary Education
Business Management	Business Management
Automotive Repair	Office Occupations
Heavy Equipment Operations	Accounting

A further analysis was conducted to relate occupational preference to race of respondent. As in the past, there seemed to be no particular patterns of occupational preference based upon race. Indeed, for Black, Hispanic, and Oriental students, no clear preference for occupational choices were evident. The top choices for Alaska Native and Caucasian seniors were:

Alaska Native	Caucasian
Business Management	Business Management
Commercial Fishing	Computer Programming
Accounting	Elementary/Secondary Education
Elementary/Secondary Education	Business & Commerce, General

E. Seniors Planning Postsecondary Education.

A separate portion of the survey was devoted to obtaining more information about those seniors planning to pursue postsecondary education. Although the number of seniors indicating plans to attend school immediately after graduation was fairly consistent at about 2,150 in response to a number of cross-check items (such as income levels, sex, and race), the total number of seniors responding to specific questions on schooling increased to 2,786. This increased figure is assumed to include not only those seniors with firm post-high school plans, but also a number who were undecided and were responding in a suppositional manner. That is, suppose I were to attend, then how would I answer?

State of Attendance. Seniors were asked to indicate the state in which they planned to pursue their postsecondary education. The evidence is clear that Alaska has increasingly become a more popular choice the past four years. In 1979-80, 31 percent of the high school seniors indicated that they planned to pursue their postsecondary education in Alaska. That percentage increased to 36.5 percent in 1980-81, 40.6 percent in 1981-82, and this year the percentage is 42.7 percent. Table 13 provides detailed information regarding where the students intend to pursue their postsecondary education activities. As in previous years, Washington, California, Oregon, and Colorado are the most popular states for those seniors who intend to enroll in institutions out-of-state.

TABLE 13
DISTRIBUTION OF SENIORS BY
INTENDED STATE OF POSTSECONDARY ATTENDANCE

STATE	NUMBER	PERCENT
Alaska	1,190	42.7
Washington	300	10.8
California	296	10.6
Oregon	152	5.5
Hawaii	112	4.0
Colorado	110	3.9
Arizona	78	2.8
Texas	54	1.9
Montana	42	1.5
Idaho	41	1.5
Utah	35	1.3
Other*	376	13.5
Total	2,786	100.0

*Including foreign.

When the intended state of attendance was cross-referenced with the seniors' grades in high school, no single state seemed to draw heavily from any particular grade group.

The distribution for a few selected states is presented on a percentage basis in Table 14. It appears that those seniors electing attendance in Alaska are heavily represented by those earning mostly B's and C's while in high school, but this distribution is largely due to the normal distribution of all seniors (also presented in Table 14). It should be noted, however, that the percentage of seniors planning to attend school in Alaska, and who earned mostly A's, is steadily increasing. In 1980-81 the percentage was 8.8, in 1981-82, 12.6 percent, and this year it is 14.3 percent.

TABLE 14
PERCENTAGE DISTRIBUTION OF SENIORS BY SELECTED STATES OF PLANNED ATTENDANCE AND BY GRADES EARNED IN HIGH SCHOOL

SENIORS' GRADES	ALASKA	WASHINGTON	OREGON	CALIFORNIA	COLORADO	ALL SENIORS
Mostly A's	14.3	23.5	18.4	24.0	19.1	15.7
Mostly B's	50.3	50.2	59.9	46.0	39.1	46.8
Mostly C's	33.8	23.9	20.4	27.7	39.1	34.4
Below C's	1.6	2.4	1.3	2.3	2.7	3.1
Total	100.0	100.0	100.0	100.0	100.0	100.0

Another way of examining these same data is to compare Alaska's drawing power, within the grade distribution of seniors, to the drawing power of "outside". This is presented in Table 15 and differs from Table 14 in that the question addressed in Table 15 is: of those seniors earning mostly A's (or B's, C's, etc.), how many plan schooling in Alaska; while the question in Table 14 is: of those seniors planning schooling in Alaska, how many earned mostly A's (or B's, C's, etc.)? In the analysis which led to Table 15, it was discovered that 66.5 percent of the seniors earning mostly A's in high school who planned postsecondary attendance, planned it for "outside" of Alaska. It is very significant that this

percentage has declined sharply over the past three years; in 1980-81, 83.7 percent of the seniors earning mostly A's planned postsecondary education "outside" of Alaska.

TABLE 15
PERCENTAGE DISTRIBUTION OF SENIORS BY
GRADES EARNED IN HIGH SCHOOL AND BY
PLANNED POSTSECONDARY ATTENDANCE IN OR OUT OF ALASKA

SENIORS' GRADES	ALASKA	OUT-OF-STATE	TOTAL
Mostly A's	33.5	66.5	100.0
Mostly B's	43.1	56.9	100.0
Mostly C's	48.3	51.7	100.0
Below C's	34.6	65.4	100.0

It is important to try to understand why those seniors earning mostly A's plan to attend postsecondary institutions outside of the state. Although a more detailed presentation is found later in this report, the survey contained a question which asked the seniors to indicate which factors were important in their decisions about institutions. Of those seniors who earned mostly A's and intend to enroll in an institution of Alaska, the most important reason was the "availability of program" followed closely by "reputation or prestige of the school". This finding parallels very closely the research regarding "brain drain" in other states. As noted in last year's report, Maryland provides a good example of that research. The Maryland State Board for Higher Education conducts an annual survey of high school seniors who were semi-finalists in the National Merit and National Achievement competition. They find that the most important factor in college choice cited by students going out of state is "institutional reputation". Having a quality program in the student's major is the second most important reason.

For those Alaskan students who intend to enroll in institutions within the state, the most important reason was "low tuition and expenses" and the second most important reason was "program availability".

When addressing the question of "brain drain" then, we find that a higher percentage of Alaska's higher-grade-earning seniors are indeed looking "outside" for their postsecondary schooling. This is, however, not unlike the experiences of other states.

Alaska Attendance. When asked which institution in Alaska they planned to attend, 36 percent of the responding seniors indicated the University of Alaska-Fairbanks, followed by the University of Alaska-Anchorage, with 17 percent. The responses to this question are presented in Table 16.

It is interesting to note that the fourth and sixth most popular institutional choices of the seniors were the Alaska Vocational Technical Center at Seward and the Alaska Business College in Anchorage, respectively. This pattern is consistent over several years and the survey continues to show that these two institutions, which are dedicated to preparing persons for employment in selected occupational and career fields, have strong drawing power.

TABLE 16

Total	1,190	100.0

Reasons for Institutional Choice. Why a senior chooses to attend a particular institution is a question of great interest to those persons involved in postsecondary education. The seniors were asked to indicate, from a list of 16 possible reasons, which factors were important in their decisions about institutions. The seniors were to pick the two most important reasons and also the least important reason affecting the choice of the postsecondary institution they planned to attend.

The most important reasons for institutional choice were "availability of program", "closeness to home", and "reputation or prestige of school". This was followed closely by "low tuition and living expenses" and "geographic location". "Availability of program" stands out because of the large number of seniors indicating it as the most important reason for attending school. (See Table 17.) Also, it has continued to be the top choice since 1978. The least important determinants of college selection for the seniors were "friends will be there," "religious atmosphere," "close to home," and sorority/fraternity/student organizations on campus".

TABLE 17
REASONS FOR SELECTING A
POSTSECONDARY EDUCATIONAL INSTITUTION

REASON	MOST IMPORTANT		SECOND MOST IMPORTANT		LEAST IMPORTANT	
	Number	Percent	Number	Percent	Number	Percent
Availability of Program	611	24.0	246	9.4	58	2.3

Sororities/Fraternities	14	0.5	45	1.7	200	7.9
Total	2,56.	100.0	2,611	100.0	2,543	100.0

As was shown earlier in this report, more seniors intend to enroll in in-state institutions than in past years. A major reason for the increase of in-state attendance is the availability of low tuition and living expenses. To explain further the reasons why students attend in-state or out-of-state institutions, institutional choice was cross-referenced with the state of planned attendance, the results of which are presented in Table 18. Also, those factors affecting choice were further analyzed on an in-state basis. A cross-tabulation was run between reasons for institutional choice and Alaskan institution indicated. The results of those data for selected institutions are shown in Table 19.

A very consistent pattern exists among those seniors who intend to enroll out-of-state. In all cases except Hawaii the principal reason for institutional choice was "availability of program".

For those students attending institutions within the state, the principal factors affecting institutional selection were "low tuition", "closeness to home", and "availability of program".

TABLE 18
REASONS FOR SELECTING A POSTSECONDARY
EDUCATIONAL INSTITUTION DISTRIBUTED BY STATE

STATE	PRIMARY REASON	SECONDARY REASON
Alaska	Close to Home	Close to Home

Sheldon Jackson	Encouragement from Parents/Relatives	Friends Will Be There
Alaska Business College	Availability of Program	Availability of Jobs
Alaska Vocational-Technical Center	Availability of Program	Close to Home

Familiarity with Financial Aid. The seniors were asked about their familiarity with, and intent to use, various types of financial aid available for postsecondary education. As one can see in Table 20, the program with which the seniors were most familiar (when combining familiarity with intent to use) is the Alaska State Student Loan Program. Four out of five of the students responding to this survey are aware of the program.

TABLE 20
SENIORS' FAMILIARITY WITH AND INTENDED
USE OF SELECTED FINANCIAL ASSISTANCE PROGRAMS

PROGRAMS	FAMILIAR WITH		INTEND TO USE		Total Percentage
	Number	Percent	Number	Percent	
Pell Grant	389	11.1	152	4.3	15.4

ROTC	1,708	48.7	104	3.0	51.7
SEIG (State Educational Incentive Grant)	539	15.4	121	3.5	18.9

Plans to Return to Alaska. Those seniors planning postsecondary education of Alaska were asked if they planned to return to the state after completing their schooling. In 1980-81, 72.2 percent indicated that they did plan to return to Alaska. That percentage decreased slightly to 69.1 percent in 1981-82 but increased almost 10 points to 77.6 percent this year. There remains, however, a strong relationship between the distance one intends to go away from the state and the intention to return after schooling. A regional distribution is presented in Table 21 which indicates that, in general, the propensity to return decreases as the student attends school farther away from Alaska.

TABLE 21
DISTRIBUTION OF SENIORS PLANNING ATTENDANCE
"OUTSIDE" BY REGION OF ATTENDANCE* AND BY
INTENTION TO RETURN TO ALASKA AFTER SCHOOLING

REGION OF PLANNED ATTENDANCE	PERCENT PLANNING TO RETURN TO ALASKA
Northwest	75.3
West	68.8
Southwest	63.5
Midwest	63.0
South	54.3
Southeast	40.6
East	71.4
Northeast	54.1

* REGIONS: Northwest: WA, OR, ID, MT; West: CA, HI, NV, UT, CO, WY; Southwest: AZ, NM, TX, OK; Midwest: ND, SD, NE, KS, MN, WI, MI, IA, MO, IL, IN, OH; South: FL, GA, AL, MS, LA, AR; Southeast: VA, NC, SC, TN, KY; East: PA, NJ, MD, DE, WV, DC; Northeast: ME, VT, NH, NY, MA, CT, RI.

SUMMARY

Alaska's high school seniors have now responded to six consecutive annual surveys. Responses have been generally consistent over the six-year period, and support the following conclusions.

1. Most seniors are generally quite satisfied with their high school experiences. Those particular areas which have received the highest number of "outstanding" marks are counseling and guidance services and athletic and recreational facilities. Compared to last year, there was a decline in the percentage of seniors expressing satisfaction with their overall high school experience, from 90 to 83 percent. It remains to be seen if this represents a trend.

2. Seniors from small schools are not as satisfied with their high school experience as seniors from large schools. This is particularly evident when considering variety of courses and library and learning center facilities.

3. Regardless of whether they plan to pursue further schooling, many seniors feel that they need assistance in improving mathematics skills and in developing career or educational plans.

4. Those seniors who have higher household incomes and who earn higher grades are more likely to plan schooling beyond high school than are other seniors.

5. Proportionately, considerably fewer seniors from small schools plan to attend four-year colleges than seniors from large schools. Also, a much larger percentage of seniors from small schools are undecided about what they plan to do after graduation than seniors from large schools.

6. The percentage of students who choose to remain in Alaska for postsecondary education has increased in the past three years. Another way to look at this statistic is to say that, although a majority of seniors still go "outside" for their schooling, the percentage of students leaving the state is continuing to diminish.

7. There does not seem to be a direct correlation between grades earned in high school and geographic choice. Although many students in all grade categories are drawn "outside", the tendency to plan out-of-state attendance is highest among those seniors who earned mostly A's in high school. Institutional reputation and availability of programs are the reasons that "A" students cite for choosing their schools. Other states have reported similar propensities among their higher-grade-earning seniors.

8. Regardless of the grades they earned in high school, seniors choose particular out-of-state educational institutions primarily because of the availability of certain programs. Students choose particular Alaskan institutions because of availability of programs and proximity.

9. The University of Alaska's Fairbanks and Anchorage campuses continue to be the top choices for those students who remain in Alaska for further schooling; again this year over 50 percent of in-state students indicated that they plan to attend one of these institutions.

10. Approximately 16 percent of students remaining in Alaska plan to attend vocational-technical and private proprietary schools. Those institutions with the greatest drawing power are Alaska Business College and Alaska Vocational Technical Center at Seward.

11. A high proportion of the seniors planning to attend school out-of-state also plan to return to Alaska after completing their schooling. This proportion has increased dramatically over last year. Future surveys will ascertain if this upward trend will continue.

The information from this survey is compiled on an individual high school basis and returned to each participating school. This feedback enables the secondary officials to better plan or respond to and for the high school students' needs. The information and results are also used on a statewide basis for planning and analysis of postsecondary resources for Alaskans.

APPENDIX A

1982-83 ALASKA HIGH SCHOOL SENIOR SURVEY

Alaska High School Senior Survey
1982-83

This survey is an attempt to find out what you intend to do with your life the first year after graduation. The results of this survey will be used to plan for the growth and development of postsecondary education* in Alaska, to coordinate and plan for better financial aid services for Alaskan postsecondary students and to provide for the educational needs of Alaskan high school graduates.

Please answer questions 1 through 14 regardless of what you plan to do after graduation. Students continuing a postsecondary education should also complete questions 15 through 18.

Individual responses will be kept confidential. Please do not identify yourself on the survey. PLACE THE NUMBER OF YOUR RESPONSE IN THE SPACE PROVIDED AT THE RIGHT. Your cooperation is appreciated.

RESPONSE

1. What is your sex? 1. Male 2. Female ..... _____

2. How do you describe yourself? (Choose only one) ..... _____

   1. Alaskan Native
   2. Black
   3. Caucasian
   4. Hispanic
   5. Oriental
   6. Other

3. What category best describes your total family income? ..... _____

   1. Under $8,000
   2. Between $8,000 and $15,000
   3. Between $15,000 and $25,000
   4. Between $25,000 and $40,000
   5. Over $40,000

4. What category best describes your parents' level of education?

RESPONSE (Enter 1, 2, 3, or 4)

   1. did not finish high school .....
   2. graduated from high school or attained the GED .....
   3. attended college .....
   4. graduated from college with at least a bachelor's degree .....

   Father ..... _____
   Mother ..... _____

5. There are a number of financial aid programs offered to Alaskans. Please indicate your familiarity with each program by using the following code.

RESPONSE (Enter 1, 2, or 3)

   1. I am not aware of this financial assistance program.
   2. I am aware of this financial assistance program.
   3. I am aware of this program and plan to use it.

   A. Pell Grant Program (BEOG) ..... _____
   B. GSL (Guaranteed Student Loan Program) ..... _____
   C. Alaska State Student Loan Program ..... _____
   D. Native Corporation Student Financial Aid ..... _____
   E. CETA (Comprehensive Employment Training Act) ..... _____
   F. BIA (Bureau of Indian Affairs) Financial Assistance ..... _____
   G. ROTC (Reserve Officer Training Corps) Financial Assistance ..... _____
   H. SEIG (State Educational Incentive Grant Program) ..... _____
   I. Other Financial Aid Program (Specify) ..... _____

*NOTE: Postsecondary education is defined as any organized education, learning or training experience beyond high school.

PLACE 1 IN THE RESPONSE SPACE FOR "YES" AND 2 FOR "NO" for questions 6 through 10.

RESPONSE (Enter 1 or 2)

6. English is the language most frequently spoken in my home..... _____

7. I have had the following employment experiences:
   - A. held a regular part-time job while in school..... _____
   - B. held a full-time job during the summer..... _____
   - C. participated in work-study or distributive education while in school..... _____
   - D. supervised the work of others..... _____
   - E. never worked..... _____

8. I need assistance in the following educational areas:
   - A. expressing my ideas in writing..... _____
   - B. improving reading speed or comprehension..... _____
   - C. improving math skills..... _____
   - D. deciding on a career, occupation or educational plans..... _____

9. I plan to take or have already taken the ACT (American College Testing Program)..... _____

10. I plan to take or have taken the SAT (Scholastic Aptitude Test)..... _____

RESPONSE (Enter 1, 2, 3 or 4)

11. Please indicate what grades you received in high school:
    (Place the appropriate number in the space provided.)..... _____

    1. Mostly A's
    2. Mostly B's
    3. Mostly C's
    4. Mostly below C's

12. Listed below are a number of characteristics of your high school. You are asked to rank each one on how beneficial it has been to you. That is, how well did it contribute to your experience as a student? Please use the following ranking scale and use your own experience for the ranking, not what you have heard from others.

    1. Outstanding
    2. Average
    3. Poor
    4. Not provided/Not applicable

RESPONSE (Enter 1, 2, 3 or 4)

   - A. Variety of courses..... _____
   - B. Quality of instruction..... _____
   - C. Counseling or guidance service..... _____
   - D. Special help or programs for students needing it..... _____
   - E. School rules, regulations and discipline..... _____
   - F. Assignment of grades or marks..... _____
   - G. Athletic or recreational facilities..... _____
   - H. Library and learning centers..... _____
   - I. Laboratory facilities..... _____
   - J. Vocational training (industrial, business, home economics, etc.)..... _____
   - K. Satisfaction with your high school experience overall..... _____

RESPONSE (Enter 1-9)

13. What are you most likely to be doing this time next year? ..... _____
Use the following list to indicate your response. (Choose only one answer.)

1. Don't know yet.
2. Join the military.
3. Get a full-time job.
4. Become a full-time homemaker.
5. Enter into apprentice training.
6. Attend a vocational-technical school.
7. Attend a four-year college.
8. Attend a two-year college.
9. Other:_____ _____(Please specify).

14. Please indicate by number your first and second occupational choice, choosing from the list in Table A, located on page 4 of this survey.

RESPONSE (Enter 10-99)

A. My first occupational choice is ..... _____
B. My second occupational choice is ..... _____

IF YOU **DO NOT** PLAN TO GO ON FOR MORE SCHOOLING, SKIP THE REST OF THE SURVEY.

RESPONSE (Enter 1-52)

15. Using the code found in Table B on page 4 of the survey, indicate by number the state in which you plan to attend a postsecondary institution ..... _____

RESPONSE (enter 1-22)

16. If your answer was Alaska in question 15, indicate which Alaskan institution you plan to attend by using the list in Table C on page 4 of the survey. (If you are not going to school in Alaska, skip this question).. _____

RESPONSE (enter 1-17)

17. Regardless of where you are going to school, why have you made that choice? Use the number codes below to select the two most important reasons and the one **least** important reason for your choice.

A. Most important reason for my selection ..... _____
B. Second most important reason for my selection ..... _____
C. **Least** important reason for my selection ..... _____

1. Intramural athletics/recreational activities
2. Sororities/fraternities/student organizations on campus
3. Geographic location/weather/climate
4. Encouragement from parents/relatives
5. Encouragement from teachers/principal/counselor
6. Encouragement from college representative
7. Availability of jobs while in school
8. Low tuition and living expenses
9. Reputation or prestige of school
10. Availability of program
11. Availability of financial aid
12. Close to home
13. Religious atmosphere
14. My friends will be there
15. Availability of campus housing
16. Intercollegiate athletic program
17. Other (please specify)

_____

RESPONSE (enter 1 or 2)

18. Do you plan to live in Alaska upon completion of your chosen program? ..... _____

1. Yes 2. No

TABLE A
LIST OF OCCUPATIONAL CHOICES

PLEASE CHOOSE THE NUMBER OF YOUR FIRST AND SECOND OCCUPATIONAL CHOICE FROM THE LIST BELOW. SELECT THE OCCUPATIONAL AREA THAT BEST FITS YOUR GOALS, AND FILL IN THE RESPONSE BLANKS ON PAGE 3 OF THE SURVEY WITH THE NUMBERS YOU HAVE SELECTED.

EFFECTIVE SCHOOLING IN RURAL ALASKA:

INFORMATION FOR THE RURAL EFFECTIVE SCHOOLS PROJECT

Judith Kleinfeld and G. Williamson McDiarmid
Institute of Social and Economic Research
University of Alaska
Fairbanks, Alaska 99701

July 1983

RESEARCH SUMMARY

Background

Rural Alaska educators are skeptical about the applicability of national "effective schooling" research to culturally different village schools. The effective schooling research focuses on such matters as efficient use of classroom time, using standardized test scores to set academic priorities, and direct instruction to the class as a whole.

The Alaska Department of Education is planning to establish a rural Effective Schools Project in 1983. The Department is specifically concerned about the appropriateness of this research for rural Alaska and generally concerned with how to make the Effective Schools Project of value to rural education.

Purpose

In view of the controversy on effective schooling practices in rural Alaska, we added questions on this topic to a general survey of rural teachers. We asked teachers:

- how often they or their schools used the kinds of practices discussed in the national literature on effective schooling;
- how often they or their schools used instructional practices research has found to be especially effective with Native American children;
- what instructional methods they personally found most effective in their own communities; and
- how satisfied they were with students' academic progress, their own opportunities for professional growth, and other conditions of rural Alaska education.

Methods

We received surveys from 304 rural teachers. One teacher was randomly sampled from each school outside urban areas (such as Anchorage or Fairbanks). Response rate was 96 percent.

While the response rate was unusually high for a mailed survey, the limitations of questionnaires must be kept in mind in interpreting the results. We could not ask teachers in a survey how often they used many of the practices identified in the national literature on effective schooling; classroom observation would be required. In addition, standard measures of such concepts as "academic expectations" may not be applicable to rural Alaska.

Results

National Effective Schooling Practices

The majority of rural teachers do not often use national effective schooling practices. Fewer than half the teachers, for example, said that their schools often used standardized testing to set academic priorities or that their schools had found ways to schedule non-academic activities to limit disruption of instructional time.

Among teachers of junior high school students and above, about half regularly assigned homework. Rural teachers pointed out that many students did not have the lighting, space, or opportunity at home to complete homework. About a quarter of the teachers, however, overcame this problem by holding after-school study sessions twice a week or more. The classroom atmosphere, they felt, helps students get down to work and a teacher is available when students need assistance.

Teachers in all rural schools expected virtually all of their students to complete high school. The majority of teachers in Native majority schools, however, did not expect many students to attend or complete college, and they believed parents held similar views.

Only about 40 percent of teachers in Native majority schools felt that their students' academic ability was the same or higher than students' nationwide and that achievement at or above national norms could be expected of their students. In view of the isolation and different cultural background of many communities, teachers' views may be realistic. These results, however, underscore the problem of determining what "counts" as high academic expectations and reasonable standards for success in a village setting.

Effective Practices in Native American Education

While the national literature on effective schooling focuses on such issues as efficient use of time and standardized test scores, the research literature on Native American education has identified a different set of "effective" educational practices. These include, for example, use of Native teacher aides, self-paced instruction, and use of local examples to illustrate academic concepts. Most teachers in Native majority communities said they used these practices often.

When asked to describe the teaching practices they personally found effective, rural teachers emphasized those in the Native American research literature more often than those in the national effective schooling literature. Teachers emphasized the usefulness of such practices as 1) diverse instructional techniques, especially hands-on materials, 2) self-paced instruction, especially where the teachers set standards for how much work should be completed, 3) cooperative student learning, especially group projects and peer tutoring, and 4) involving parents and community people in the classroom.

Teacher Satisfaction with School Conditions

Most rural teachers are satisfied with their pay and benefits, teacher-student relationships, student discipline at their schools, and relationships between the school and the community. What frustrates many rural teachers is relationships with the district center, not relationships across cultures. About half the teachers in Native majority communities were dissatisfied or only somewhat satisfied with the district board's actions, the superintendent's management, and the support they receive from the central office. Many teachers are also dissatisfied with their own opportunities for professional growth.

Most rural teachers, especially more experienced teachers, are satisfied with the general quality of education at their schools. In Native majority communities, however, slightly over half the teachers were dissatisfied or only somewhat satisfied with their students' academic progress.

Implications

The focus of effective schooling projects in most states is academic progress. These results suggest that many rural teachers, particularly those in Native majority communities, see academic progress as a problem and will be receptive to this issue. Most rural teachers, especially experienced teachers, are satisfied with the general quality of education their schools offer. The Rural Effective Schools Project should avoid any negative implications about rural schools.

Most rural teachers, however, are unlikely to consider the national research on effective teaching helpful. When they consider what works in their own schools, they are likely to focus on practices emphasized in the research on Native American education. The Rural Effective Schools Project can point out that there is typically no conflict between the research on effective schooling and the research on Native American education.

In working with village schools, the Rural Effective Schools Project should be aware of the tensions that sometimes exist between the district center and the village schools and of the need to develop independent support for the project at both the central office and the individual school level. The project also needs to be aware of rural teachers' sensitivity to what rural parents want and to collaborate with parents as well as with teachers in any efforts to improve rural schools.

THE ISSUE

Rural Alaska educators are skeptical about the "effective schooling" practices summarized in the Governor's Task Force on Effective Schooling (1981). The Task Force attempted to identify, on the basis of national research, "effective schooling practices which would have general applicability to Alaskan students" (p.43).[1] The Alaska Department of Education (DOE) is using these findings to assist Alaska schools in designing their own improvement strategies. In 1982, DOE focused on urban schools; in 1983 DOE plans to begin a Rural Effective Schools Project.

Rural educators question whether the national findings on effective schooling—usually coming from large urban elementary schools—apply to the small Native multi-grade schools typical of rural Alaska. For example, national research on effective schooling shows that "children in the primary grades evidence higher achievement levels when they receive instruction in closely supervised, highly structured small group settings" (Governor's Task Force, p. 62). Direct instruction in small group settings is difficult to arrange in rural schools. The teacher must monitor children sometimes spanning five grade levels or more. A small group of students at the same grade level may not even exist. Self-paced individualized instruction, in the view of many rural teachers, is what works.

Is the national research literature irrelevant to the multi-grade classrooms of rural Alaska? Or do Native children also learn more from direct instruction in small groups rather than self-paced instruction where this situation can be arranged?

Rural teachers also question the national research literature on effective schooling because it does not take into account the specific cultural

characteristics and learning styles of Native American children. Indeed, a review of the research on Native American education has identified a different set of "effective" instructional practices (Cotton and Savard, 1981a). This set of practices does not typically contradict the findings of national research. It focuses, however, on other matters--the importance of warm, supportive teachers, Native American teachers and teacher aides, hands-on materials, and cooperative student projects.

PURPOSE OF REPORT

The purpose of this report is to provide background information for educators interested in finding ways to support rural schools in increasing their effectiveness.

We present the views of 304 randomly sampled rural Alaska teachers on effective instruction in their communities. We asked teachers:

1) how often they or their schools used the national effective schooling practices recommended in the Task Force Report;

2) how often they or their schools used the instructional practices research has found to be especially effective with Native American children;

3) what instructional practices they personally found most effective in their own communities; and

4) how satisfied they were with their students' academic progress, their own opportunities for professional growth and development, and other school conditions in rural Alaska.

METHODS

This teacher survey was part of a large study of school governance in rural Alaska conducted by Dr. Gerald McBeath at the University of Alaska with the assistance of Judith Kleinfeld, Bill McDiarmid, and others. In view of the controversy on effective schooling practices in rural Alaska, we added questions on this topic to a general survey of rural teachers.

The Sample

We mailed the survey in the spring of 1982 to one randomly selected teacher from each rural Alaska school (N = 315). (We defined "rural" as schools outside urban areas, such as Anchorage, Fairbanks, Juneau, and Kenai.) The response rate was extremely high—96 percent of the rural teachers answered our questions. Most teachers answered the questions carefully; indeed, many wrote notes in the margins to clarify their views.

The total sample—304 rural Alaska teachers--is unusually large and representative of rural schools. Since we sampled one teacher from each rural school (not rural teachers in general) the sample includes large numbers of teachers from small, multi-grade schools.

Limitations of a Survey

In asking teachers about their own instructional practices or those commonly used at their school, we faced a problem. Some of the most important instructional practices identified in the national literature cannot be measured through a survey.

Study after study, for example, has found that in some classrooms students spend most of their time doing academic tasks. In others, classwork is constantly interrupted because the teacher stops to discipline students, pass out materials, or attend to administrative details. "Time on task" is strongly related to gains in achievement on standardized tests (see review by Cotton and Savard, 1981b).

A mailed survey, however, cannot be used to measure how much time rural Alaska students spend doing academic work. Most teachers could not say with any accuracy how many minutes a day their students are on task. Classroom observation--extremely expensive and time-consuming in remote rural schools--would be required. What we could ask teachers in a mailed survey is a related question--whether their school has found a way to limit the interruptions common in rural schools, for example, basketball games, medical and dental exams, student trips, and the like.

In short, we could not ask rural teachers about every effective instructional practice discussed in the Task Force Report. We did ask about those practices which teachers could report on in a mailed survey.

Data Analysis

We analyzed teachers' reports by many categories--whether the school was Native majority (80 percent or more), white majority (80 percent or more), or of mixed ethnicity; whether the school was REAA, BIA, city or borough; whether the school was large or small; and the number of years experience the teacher had in the community or in rural Alaska education.

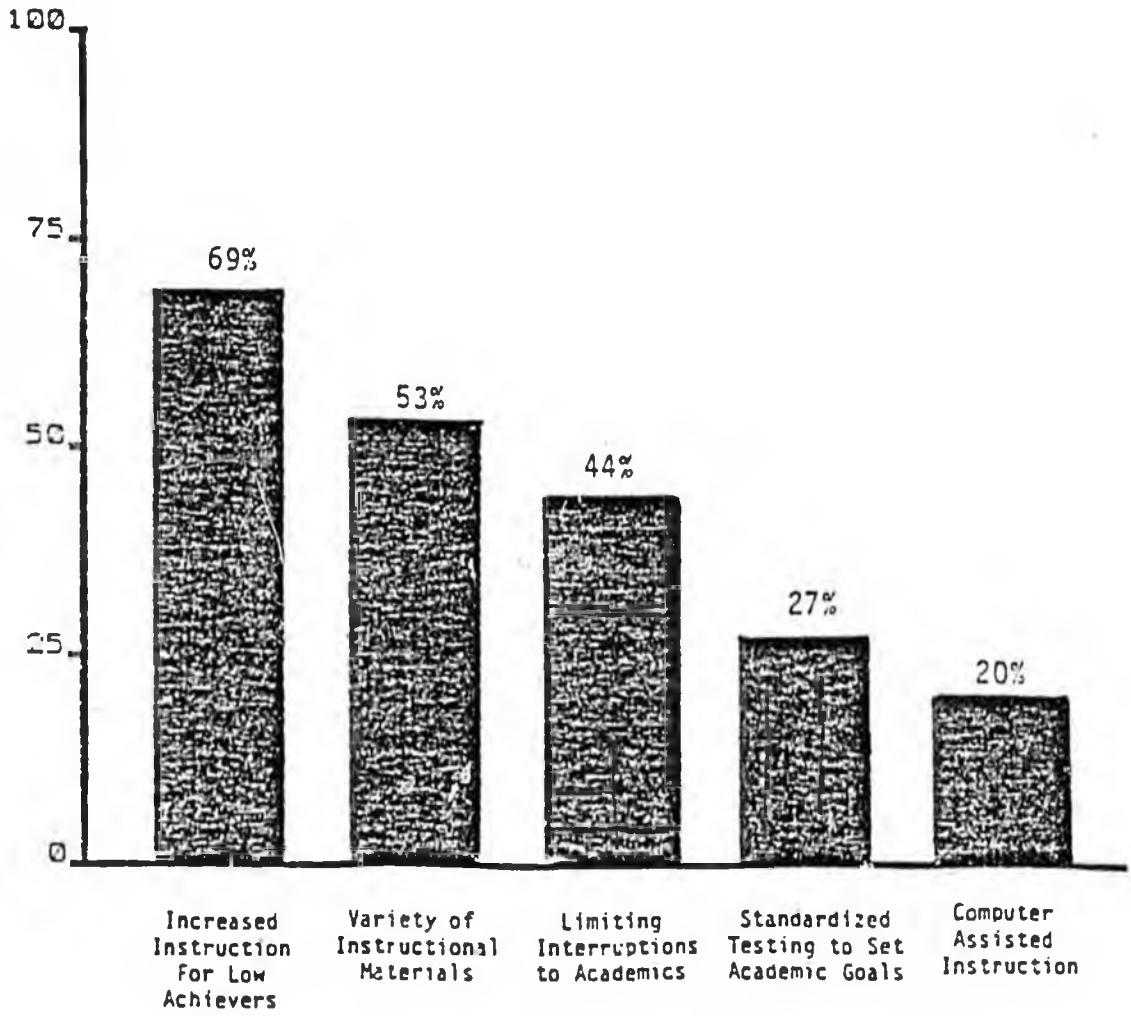
In presenting the results, we use the categories where statistically significant differences most frequently occurred. In the case of the principal's instructional role, for example, the greatest differences occurred in schools of

different size. In the case of teachers' expectations about whether or not their students would attend college, the greatest differences occurred between Native and white majority communities. Where no substantial differences occur, we present results for all rural teachers.

FINDINGS

Use of National Effective Schooling Practices

National research suggests that the following practices are strongly and consistently related to student achievement (Governor's Task Force, 1981). We asked rural Alaska teachers how often they used them:



- Allocating additional instructional time for low ability, low-achieving students (including Title I and other programs).
- Using computer-assisted instruction to supplement regular teaching.
- Using standardized test scores to set academic priorities and objectives.
- Using diverse instructional materials including kits, mock-ups, modules and hands-on projects.
- Scheduling non-academic activities to limit disruption of instructional time.

Of these five practices, the only one used in most schools (69 percent) was increasing instructional time with low achieving students (Table I). Federally funded Title I programs probably account for the frequency of this practice. About half the teachers (53 percent) said they used a variety of instructional materials. But less than half said that the school attempted to schedule non-academic activities outside classtime, that computers were used on a regular basis,[2] or that the school paid attention to standardized test scores in setting academic goals and priorities. Most teachers said that their schools used these practices "somewhat" but not "often."

TABLE 1

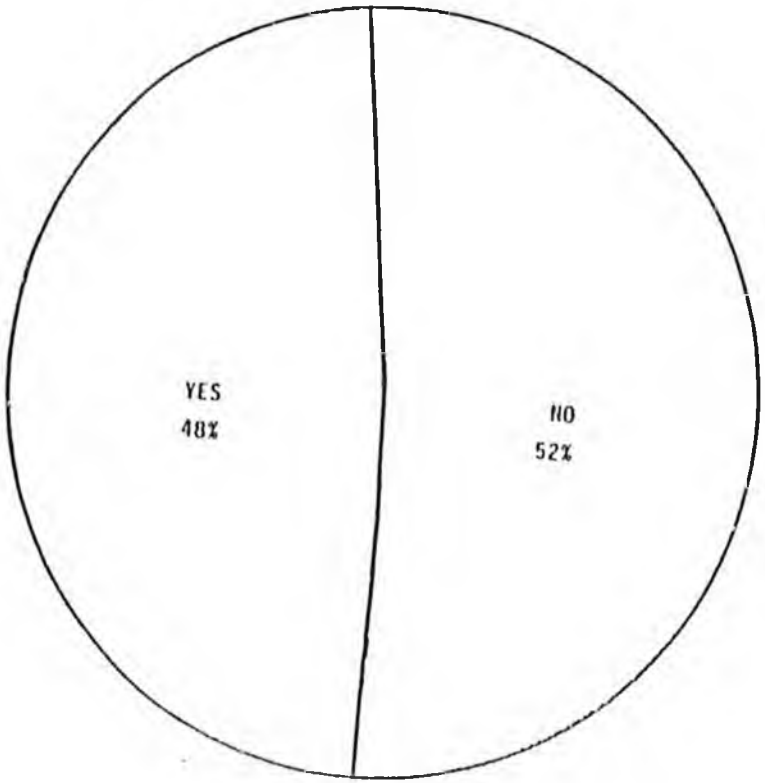
NATIONAL EFFECTIVE TEACHING PRACTICES

TEACHERS USING PRACTICE OFTEN:
ALL RURAL SCHOOLS

SOURCE: McBeath, G., Kleinfeld, J., McDiarmid, G., and Coon, D. A Statewide Survey of Rural Alaska School Teachers, Fairbanks, AK: Center for Cross-Cultural Studies, University of Alaska, 1982.

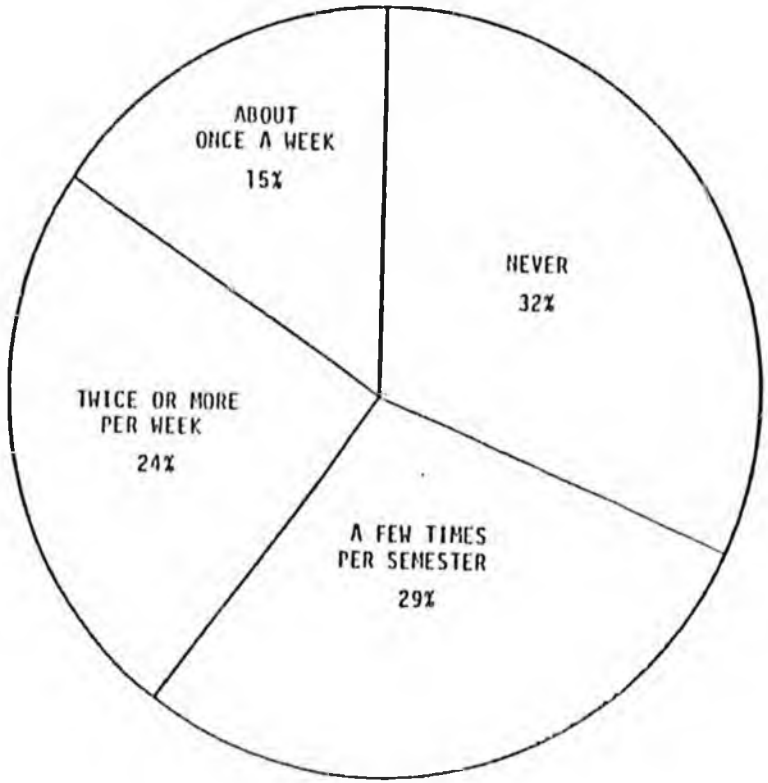
We found very little difference in the use of these practices in schools of different size or of different ethnic composition. Since BIA schools are being phased out in rural Alaska, it is interesting, however, that these were the schools most likely to use some of these practices. BIA schools were significantly more likely to use standardized test scores to set academic goals and priorities (50 percent) and to schedule non-academic activities so they did not interrupt classwork (62 percent). We do not know why this is the case. Possibly these results indicate the narrower academic emphasis of the BIA—an older and more traditional school system.

Homework



Another instructional practice related to student achievement in national research is regularly assigning homework (Coleman, Hoffer, and Kilgore, 1982). In rural Alaska many teachers find whether or not to give homework a troublesome issue. As some teachers explained in the margins of the survey, students may not have the lighting, space, or opportunity at home to complete homework. (One teacher in a traditional Eskimo community wrote that the "school board requested that students not be given homework.")

In view of these circumstances, we asked rural teachers whether they regularly assigned homework to their students. Slightly less than half (48 percent) said they did (Table 2). Some of these teachers, of course, teach in the early elementary grades where homework is not conventional. When we consider only teachers of junior high and high school students, the proportion of teachers who assign homework increases but only slightly (55 percent).



Some rural teachers, aware that students find it difficult to do homework at home, hold before or after school study sessions where students can do homework. The classroom atmosphere, they argue, helps students get

TABLE 2

HOMEWORK AND AFTER-SCHOOL STUDY SESSIONS:

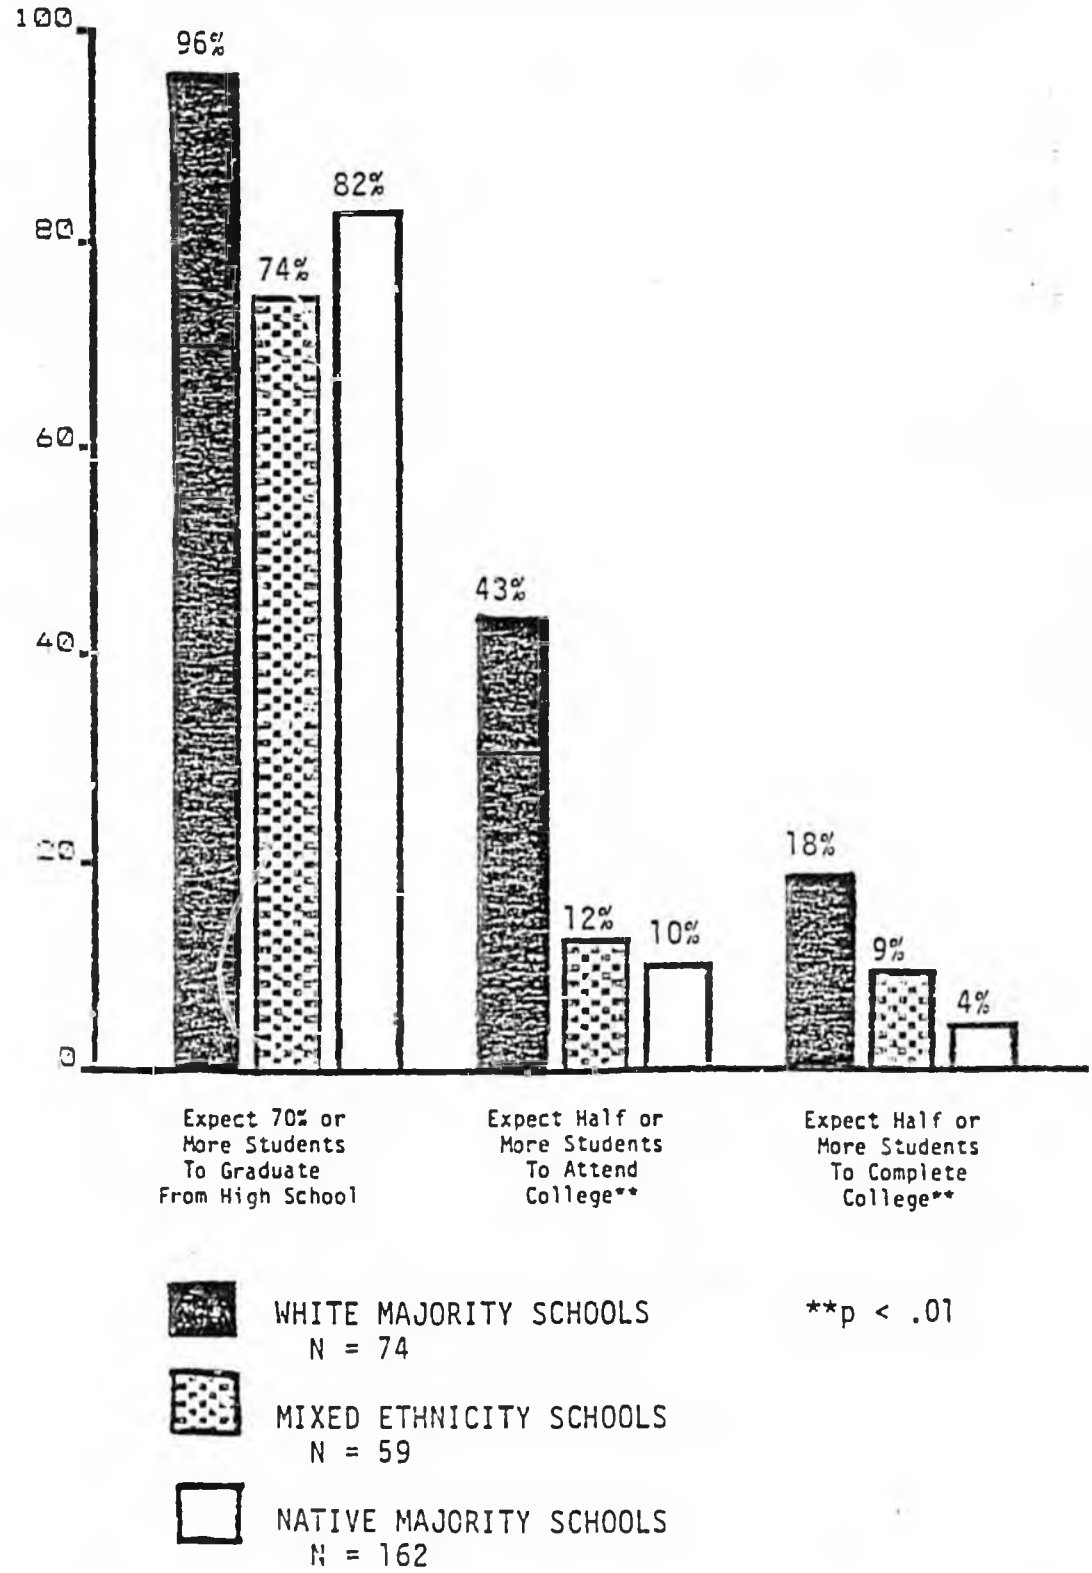
down to work and the teacher is there when the students need help. About a quarter of the rural teachers we surveyed held such study sessions as often as twice a week and another 15 percent held them once a week (Table 2). Teachers of junior high and high school students held after school study sessions no more frequently than other teachers.

More experienced rural teachers are more likely to hold after school study sessions. For example, only about 20 percent of teachers in Native communities with one to four years' experience held after school study sessions; among teachers with five or more years' experience 46 percent held such sessions ($p < .06$).

Teacher Expectations



In the national literature on effective schooling, holding high expectations for student achievement has been found to be a critical characteristic of effective teachers (see especially Brookover, 1979). Typically expectations are measured by asking teachers such questions as what proportion of their students they expect to complete high school and attend college, how they would compare the ability of their students to students nationally, and whether they feel their students can be expected to achieve at national norms.[3]

Rural teachers, whether their students are mostly Native or mostly white, expect the majority of their students to complete high school (Table 3). Teachers in Native majority schools, however, are significantly less likely to expect students to attend and complete college than teachers in white majority schools (Table 3).

Rural teachers' own views about college for their students are consistent with what they think parents want for their children. In Native

TABLE 3

RURAL TEACHERS' EXPECTATIONS ABOUT
HIGH SCHOOL AND COLLEGE COMPETITION:
WHITE MAJORITY, MIXED, AND NATIVE MAJORITY SCHOOLS

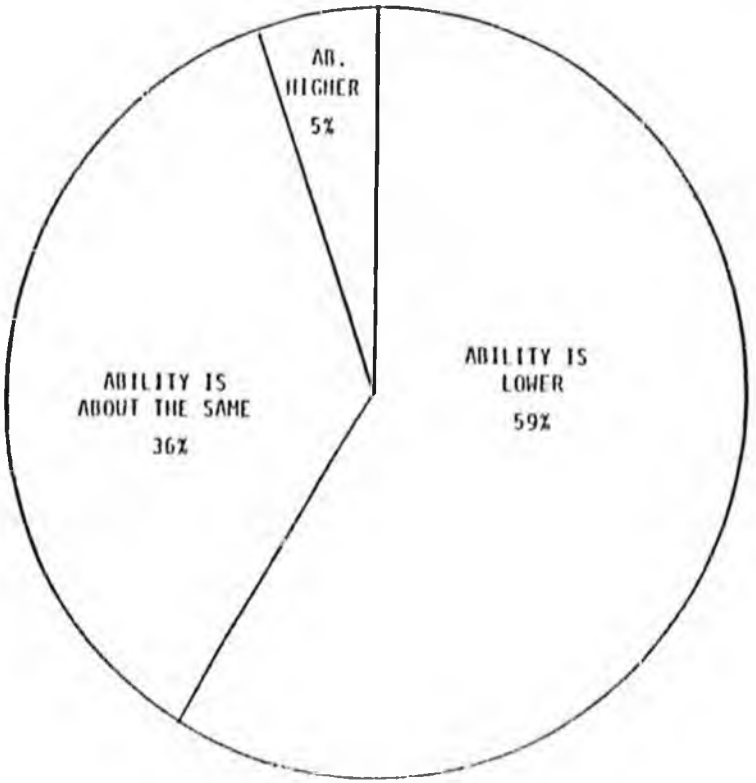
majority communities, 49 percent of the teachers said that none of the parents expected students to complete college. In white majority communities, the same proportion of teachers believed that parents expected half or more students to complete college.

We did not survey parents in either Native or white communities, and we do not know if teachers' perceptions are correct or incorrect. Teachers' comments in the margins of the surveys, however, suggest their concern about parents' support for what they are trying to do in school:

> "It gets very depressing to a teacher. You really get tired of playing the heavy and being the only (most of the time) negative influence on their life. By negative I mean that you try to enforce some kind of discipline or rules."



> "Parents are reluctant to see their children leave home and become indoctrinated in a foreign culture."

> "If the parents would support the teacher we would have much greater success."

When we asked rural teachers about the level of academic achievement they could expect of their students, there were again wide differences between Native majority schools and white majority schools. About 60 percent of rural teachers in Native majority communities felt that the academic ability of their students was lower than that of students nationally (Table 4). Sixty percent also felt that their students could not be expected to achieve at national norms (Table 5). Similarly, only slightly more than half the teachers in Native majority communities felt their schools could be better than average (Table 6).

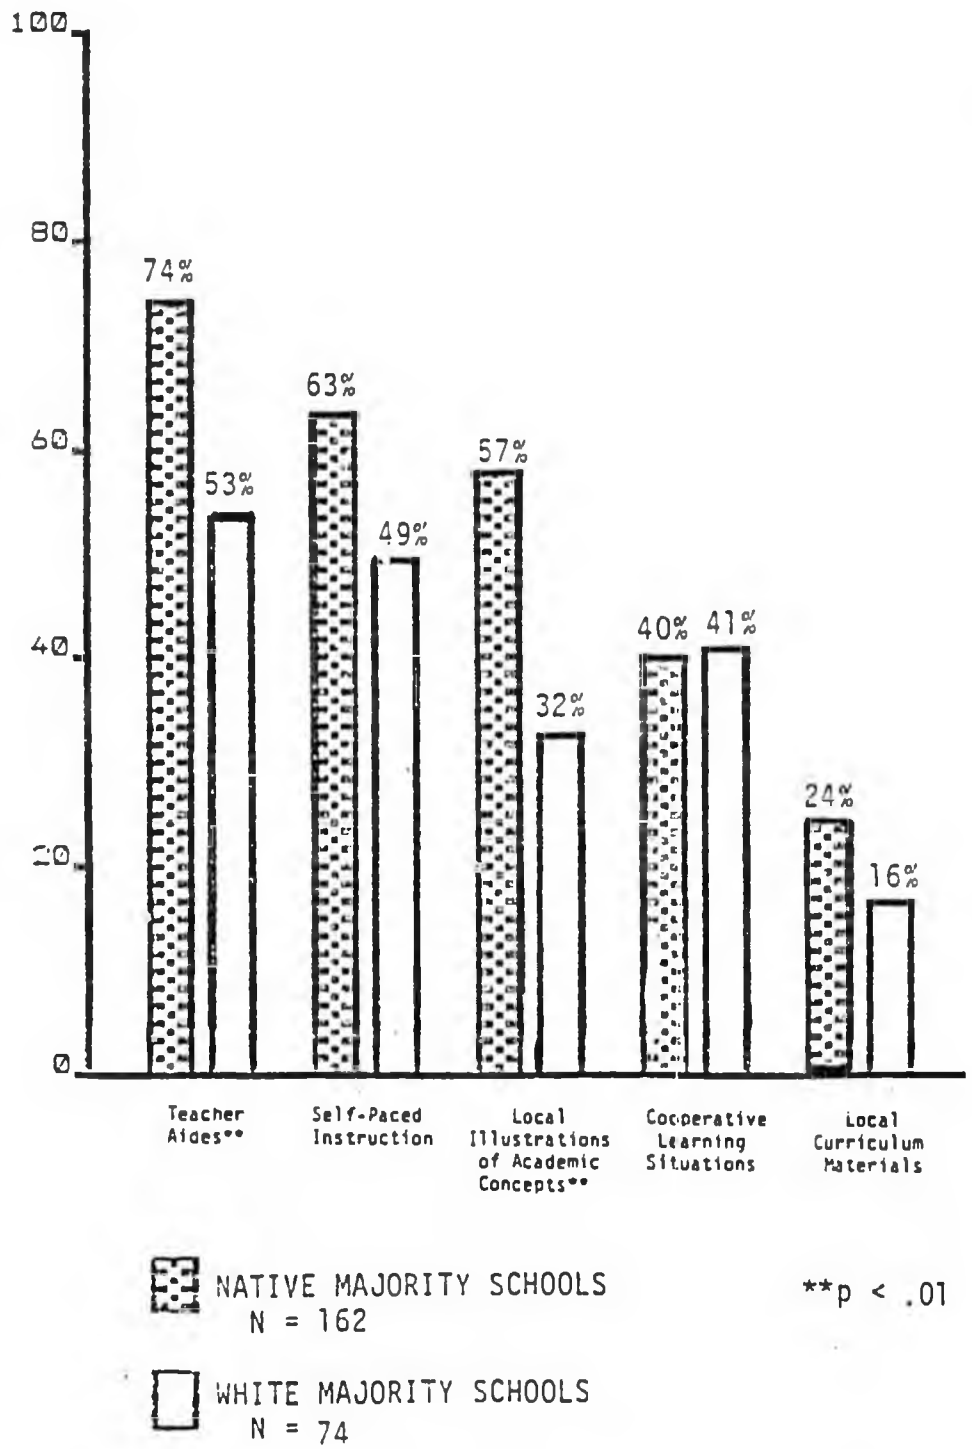
It is difficult to know how to interpret these results. One view is that rural teachers are simply being realistic. They are aware that their students have grown up in isolated, culturally different communities and that for many standard English is a second language. They know that in fact most students score below national norms. It would be unreasonable to expect their students to do as well as students nationally. Indeed, several teachers wrote on their surveys that we should be careful NOT to interpret their responses as "low expectations."

While we were inclined to accept this view, it is still troubling that so many rural teachers do not expect their students to achieve at national norms. A national norm, after all, is an average of children from the inner city and rural Mississippi as well as from Scarsdale. The issue of how to set reasonable standards, of what kinds of academic performance should count as success, is a vexing one in rural education.

Use of Native American Effective Teaching Practices

In a review of the research literature on Native American education, Cotton and Savard (1981a) identified instructional practices especially effective with Indian and Eskimo students. These practices are quite different from those identified in the national literature on effective schooling. They emphasize localized instruction rather than efficient use of time. The practices include:

- Use of Native teacher aides
- Self-paced instruction
- Cooperative student learning situations (such as peer teaching and group projects)
- Use of local curriculum materials (such as legends)
- Use of local examples to illustrate academic concepts



The practices listed above, however, are not supported by a substantial body of well-designed research. In general, research on Native American education is scarce. Such practices as "time on task" have not been systematically examined with Native Americans.

We found that rural teachers in Native majority schools used the practices linked to effective teaching of Native American students fairly often (Table 7). Almost three-fourths of the teachers, for example, said their schools often used teacher aides. More than half the teachers frequently used self-paced instruction and relied on local examples to explain academic concepts. More experienced teachers were especially likely to use these practices. For example, 44 percent of teachers with five or more years experience in the community often used local curriculum materials; among teachers with two to four years experience, 17 percent often used local

TABLE 7

USE OF INSTRUCTIONAL PRACTICES RESEARCH HAS FOUND ESPECIALLY EFFECTIVE WITH NATIVE AMERICAN STUDENTS: NATIVE MAJORITY SCHOOLS AND WHITE MAJORITY SCHOOLS

materials ($p < .04$). More experienced teachers were significantly more likely to use local examples to illustrate academic concepts. They were somewhat more likely (the trends did not quite reach conventional levels of statistical significance) to use self-paced instruction and cooperative student learning situations.

Instructional Practices Rural Alaska Teachers See as Highly Effective in Their Communities

We asked rural teachers to describe briefly the instructional practices they found particularly effective in their own communities. Each of the following practices were mentioned by about 20 percent of the teachers (a fairly large group considering the wide variety of practices teachers mentioned):

1. Use of diverse instructional materials, especially hands-on materials.

> "Any type of hands-on class seems to be a better motivator than a purely academic program. Arts, music, small engines, skin sewing, etc."
>
> "Hands-on projects that are pertinent and meaningful to everyday life."
>
> "Hands-on projects have shown the most knowledge gains."

2. Self-Paced Instruction, especially when the teachers sets some standards for the amount of work to be completed.

> "Self-paced with guidelines (such as at least five pages in math done by Friday; they can go faster but have to meet the minimum requirements)."
>
> "As I have only ten students in a one room school, self-paced (and teacher-paced) instruction works well. I find group activities hard to plan because of the grade level spread."

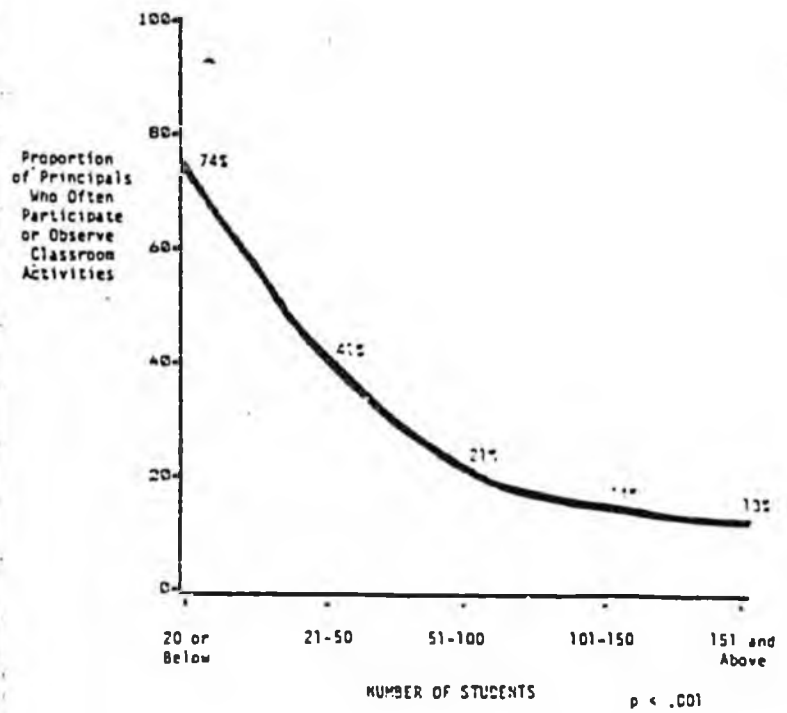
3. Cooperative Student Learning, especially group projects and peer tutoring.

> "Group assignments are very effective."
>
> "In a multi-grade classroom, the older students make wonderful teachers for the younger students."
>
> "Group projects such as a weekly school-community newspaper."

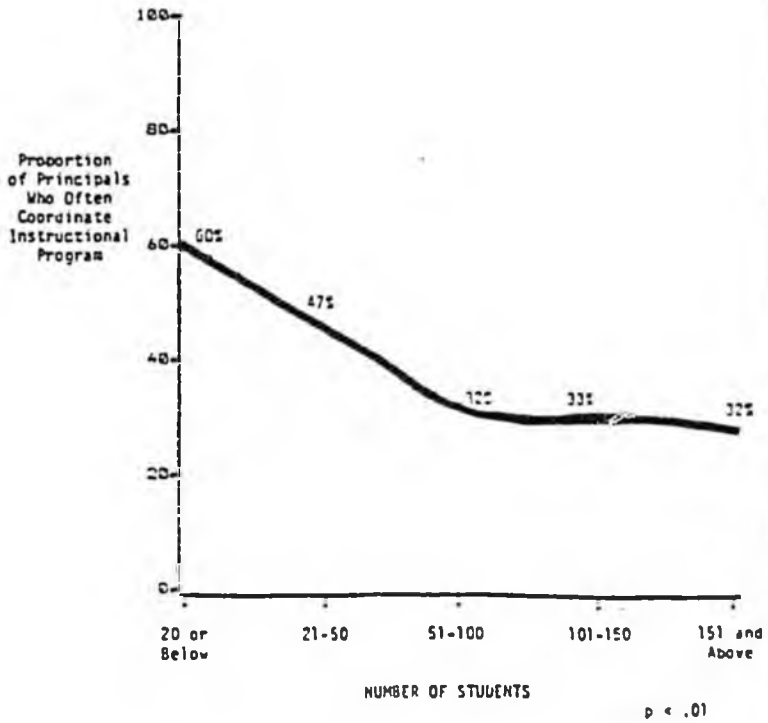
4. Involving Parents and Community People in the Classroom.

> "Sending home nightly study guides for the family to work on that day's reading vocabulary and word skills." (majority white community)
>
> "Retired community people with special talents and interests." (majority white community)

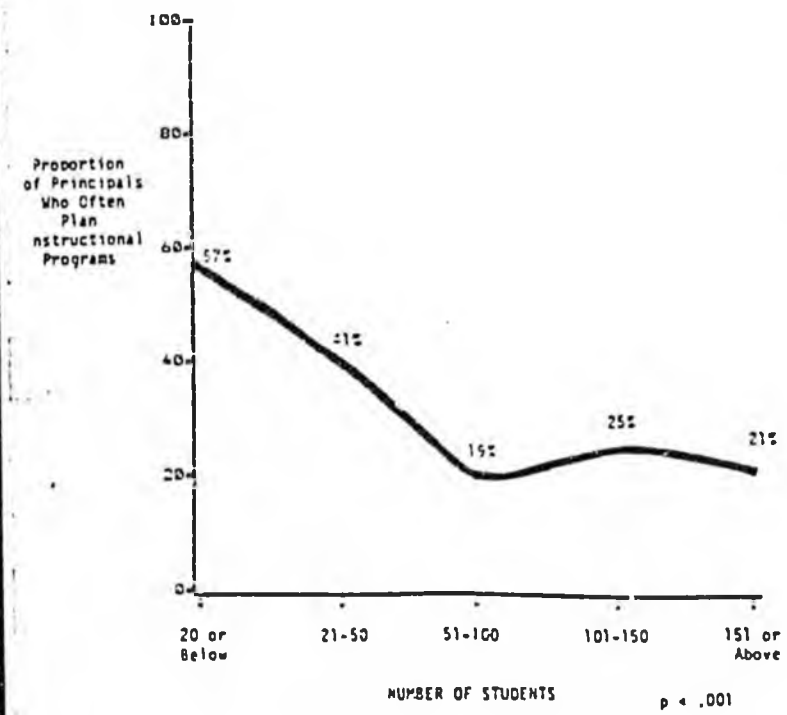
When asked to describe the teaching practices they saw as effective, few rural teachers mentioned any of the practices discussed in the national literature on effective schooling.[4] The exception was the use of diverse instructional materials and here rural Alaska teachers added a different emphasis—the importance of hands-on materials.



Rural Principals' Instructional Role



The national literature on effective schooling suggests that the achievement of low-income children goes up when the building principal takes on the role of instructional leader and focuses staff and student energy on raising achievement levels (Cotton and Savard, 1981c).



Principals in Alaska rural schools, especially smaller schools, already participate to a great extent in the business of teaching (Table 8). The role of the principal is strongly related to the size of the school. In very small schools, almost three-fourths of the principals are also classroom teachers. In schools of 50 students or below, about half the principals often plan, coordinate, and evaluate instruction.

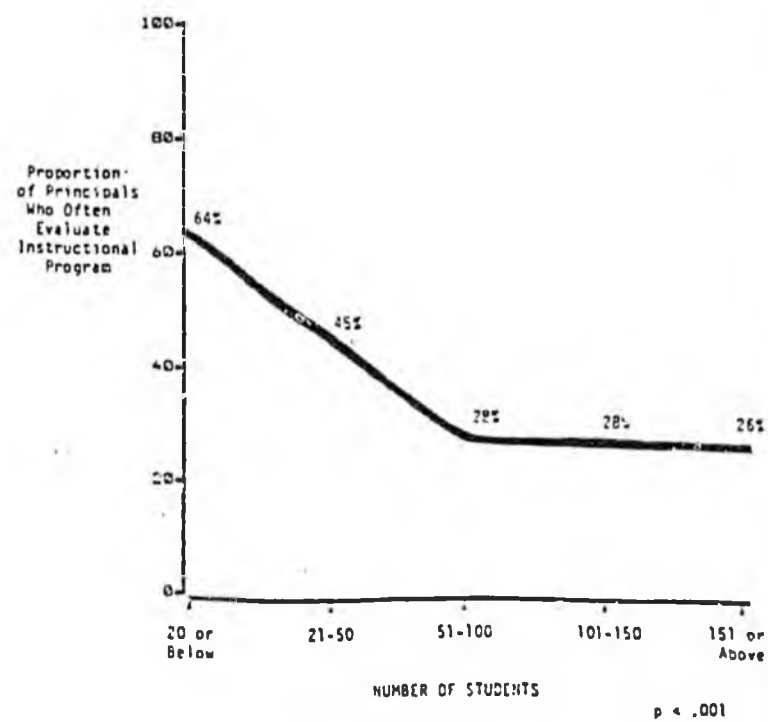


TABLE 8

THE PRINCIPAL AS INSTRUCTIONAL LEADER:
ALL RURAL SCHOOLS

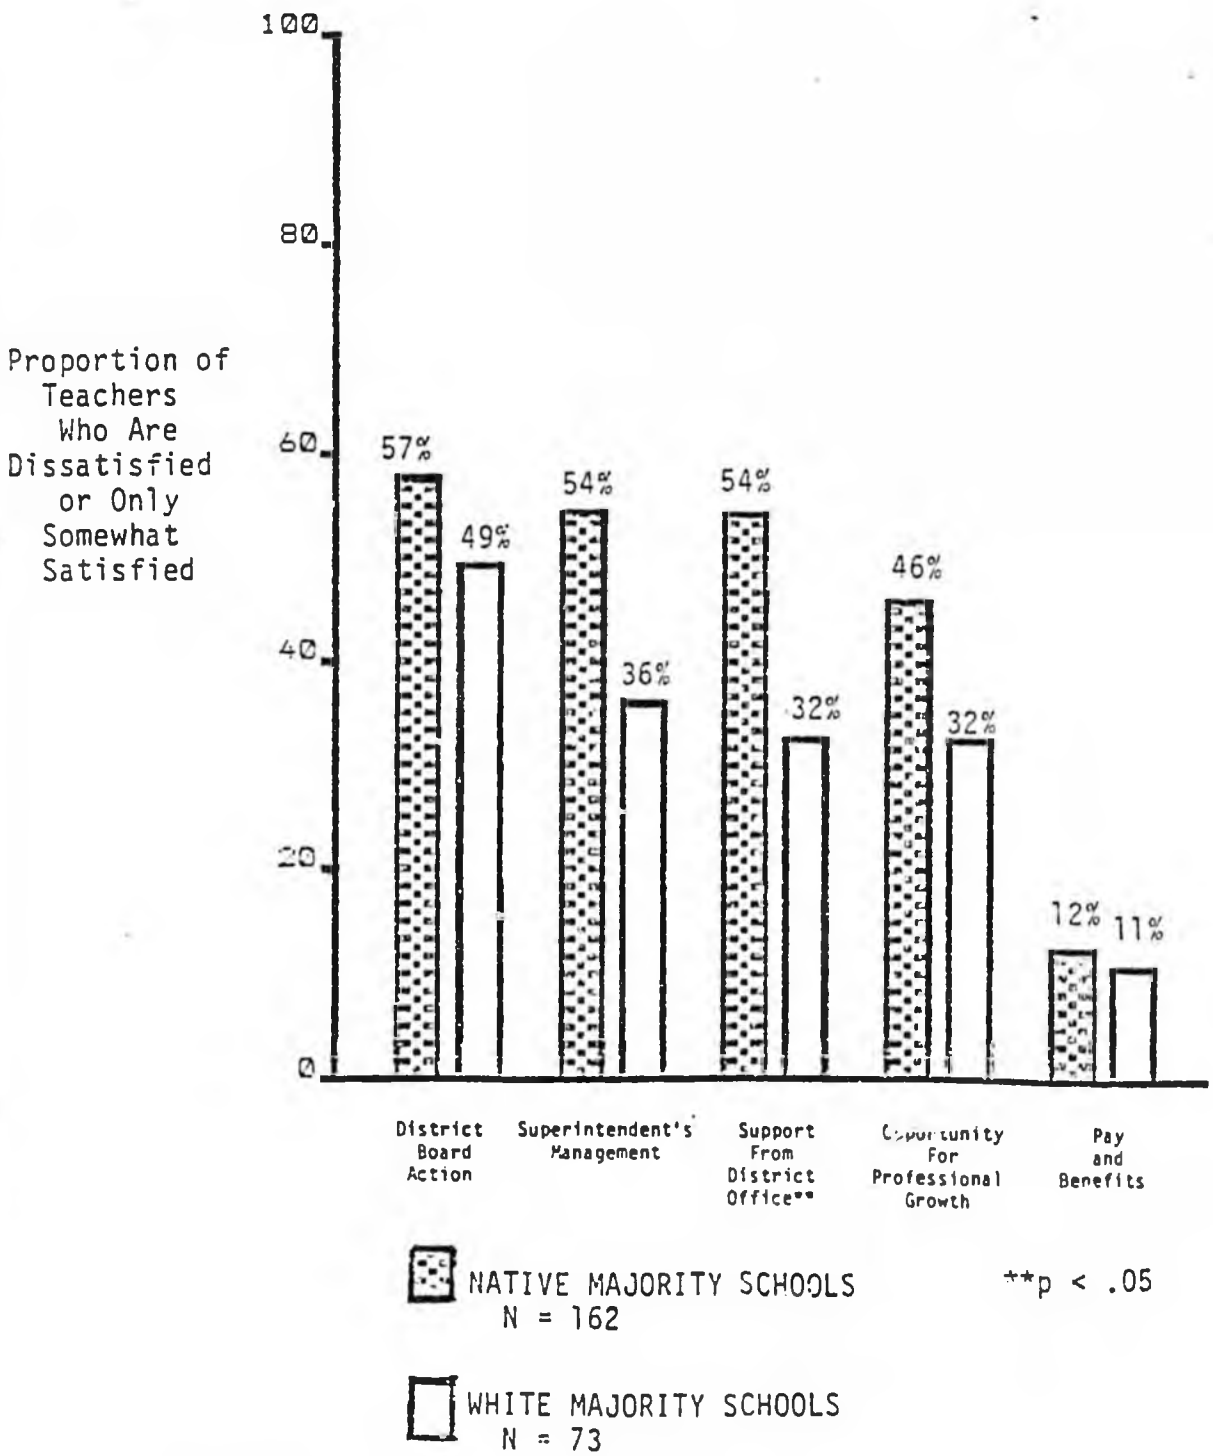
Rural Teachers' Satisfaction With School Management and Working Conditions

Reading through 304 teacher surveys, many marked with marginal comments, was a disheartening experience. The teachers' dominant mood was frustration. Occasionally, a teacher would voice satisfaction:

> "This is a great place to be, challenging students, helpful parents, and a cooperative district. We love it here so I don't know when we'll leave."

But the majority of the notes in the margins were complaints. Many teachers were depressed and dissatisfied, even though the majority (78 percent) thought they were personally successful as rural teachers.



We asked teachers what they were satisfied and dissatisfied about—pay and benefits, housing, relationships with the students and with the community, district office management, students' academic progress, and so on. The results surprised us.

The majority of teachers were not concerned about the standard issues discussed in contract negotiations or legislative reports or the academic literature. Most teachers (88 percent) were satisfied with their pay and benefits (Table 9). Housing was an acute problem for some (about a third), but not for most. Nor did teachers find it difficult to develop good relationships with the culturally different students they taught. Indeed most teachers (93 percent) saw their relationships with students as a major source of satisfaction.

What frustrated teachers most was not relationships with different cultures but relationships with the district office. More than half the teachers in Native majority communities were dissatisfied or only somewhat satisfied

TABLE 9

TEACHER SATISFACTION WITH SCHOOL MANAGEMENT
AND WORKING CONDITIONS:
NATIVE MAJORITY SCHOOLS AND WHITE MAJORITY SCHOOLS

**p < .05

with the district school board, the superintendent's management, and the support they received from the district office.

Several teachers commented on the margins of their survey, for example, that the school near the central office received an unfair share of equipment. Some teachers in remote schools said that the "superintendent never has been here to make a visit" and that the district office "too frequently forgets the village schools." Others felt that the district staff did not support them and did not understand their situation:

> "Many problems that face rural schools are self-inflicted—usually from the central office. Administrators who have never worked or lived in rural Alaska often make decisions that do not fit village life or needs."

These types of tensions are common between any "center" and its "periphery", whether it is a corporate headquarters and its remote offices, a city and its countryside, or the district office and its village schools. The central office perspective is, of course, quite different. Central office staff see themselves as having many schools to visit, many programs to administer, many grant applications and reports to write. The point of interest to the rural Effective Schools Project is the existence of such tensions and the need to develop a strategy for change that is supported by both the central office and the village schools.

Another area where a large proportion of teachers were dissatisfied was with their own opportunities for professional growth. In Native majority communities, 46 percent of the teachers mentioned this area (Table 9). One teacher wrote on her survey:

> "I am in a tiny school—one other teacher not my husband. I have no one to ask questions of. My class of primary grade children includes an incredible range of students (skill, intelligence, behavior, motivation). I have an unworkable curriculum guide which presents me with ample materials to use with each grade--three--and each subject—eight—but no advice at all for my class. My district has offered me one training session, one week. I am alone!"

Rural teachers see the lack of opportunities, for example, to talk over their teaching problems with other professionals as one of the serious problems of village teaching. Professional exchanges in an isolated village school are difficult. The teaching staff itself is small and few instructors teach similar grade levels or subjects. The teacher can't talk shop with someone else, for example, who is struggling with how to teach high school English. In addition, interpersonal tensions can develop between rural teachers at the same school. Unlike urban teachers, a village teacher cannot leave it all, vent frustrations to an uninvolved party, and return the next morning with a different perspective.

EFFECTIVE SCHOOLING IN RURAL ALASKA:

INFORMATION FOR THE RURAL EFFECTIVE SCHOOLS PROJECT

Judith Kleinfeld and G. Williamson McDiarmid

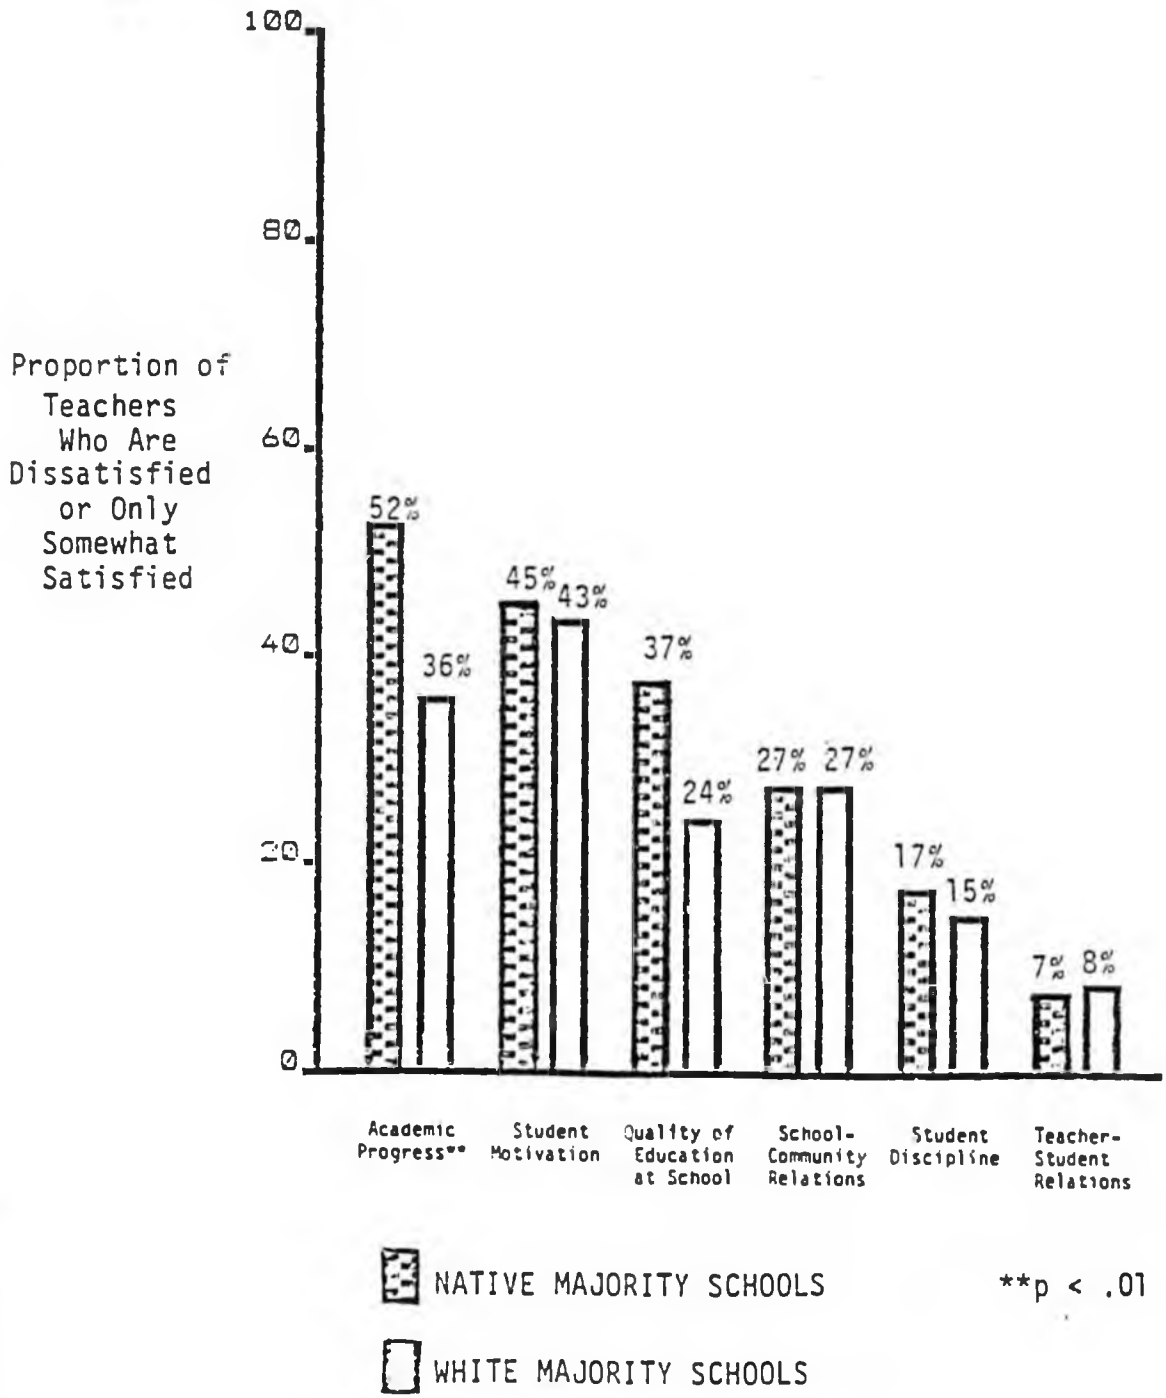
July 1983



Rural Teachers' Satisfaction With Educational Conditions

Most rural teachers (63 percent) were satisfied with the general quality of education at their school (Table 10). Teachers with more experience in rural Alaska education were significantly more satisfied. Of teachers who had five years or more experience, for example, 79 percent were very or mostly satisfied with the general quality of education.

When we asked teachers more specifically about academic progress, however, less than half the teachers were satisfied. More experienced teachers were not significantly more satisfied than those new to rural Alaska education. Teachers saw a key problem as motivation, not discipline or teacher-student relationships (Table 10).

TABLE 10

TEACHER SATISFACTION WITH EDUCATIONAL CONDITIONS:
NATIVE MAJORITY SCHOOLS AND WHITE MAJORITY SCHOOLS

IMPLICATIONS FOR THE RURAL EFFECTIVE SCHOOLS PROJECT

In attempting to change schools, it is critical to begin with what teachers see as problems. It is important, therefore, to know that many rural teachers do see students' academic progress—the typical focus of statewide effective schooling projects—as a serious issue. Rural teachers may well be receptive to a project aimed at assisting them to increase students' academic skills. The majority of teachers are satisfied, in contrast, with the general quality of education in their school. A project that appears to teachers to be based on the assumption that rural schools are somehow "failing" will be unattractive.

Rural Alaska teachers are not likely, however, to be receptive to the instructional practices that national research has found to be important in raising achievement among low income children. Most of these practices are not used often in rural schools. Nor are these the practices that come to mind when teachers think about what really works in rural classrooms.

The majority of teachers in Native majority communities, in contrast, do use often some of the instructional practices that research has linked to the effective education of Native American education—Native teacher aides, self-paced instruction, using local examples to illustrate academic concepts. When we asked teachers what worked in their own classrooms, they mentioned these kinds of practices, not the practices emphasized in the national research literature.

The Rural Effective Schools Project should point out to teachers that there is no necessary contradiction between the national research on effective schooling and the research on Native American education. (The value of individualized, self-paced instruction is an exception.) The effective schooling

literature focuses in large part at the school level. The Native American education literature focuses primarily at the classroom level. It is not surprising that teachers, concerned with making their classrooms run well and fine tuning their methods, are more interested in the classroom level. Both sets of practices may be important to rural schooling.

In working with teachers to improve small rural schools, there are special opportunities and special pitfalls. An opportunity is that many rural teachers are dissatisfied with what they are offered in the area of professional growth and development. The Rural Effective Schooling Project may be able to provide professional assistance that teachers will appreciate. Another advantage is that rural principals, particularly in small schools, are already active in instruction. Many principals are principal-teachers and plan, coordinate, and evaluate the instructional program. Rural principals are strategically placed to become instructional leaders.

In working with village schools, however, the Rural Effective Schools Project should be aware of the tensions that exist between many village schools and the central office. The Project should carefully develop independent support at both the school and central office levels.

The Rural Effective Schools Project also needs to be aware of rural teachers' sensitivity to what parents want and the feeling of teachers in some communities that parents do not expect their children to go on to college. The issue of what should count as high expectations and academic success in a culturally different village school warrants discussion. This is an issue that cannot be appropriately considered without the participation of village parents. Above all, the Rural Effective Schools project needs to gain the active support of parents for efforts to improve rural schools.

FOOTNOTES

[1] Many reviews of the literature on effective schooling practices have been published in the national literature. This paper refers primarily to the literature reviews conducted by the Northwest Regional Educational Laboratory. These reviews were commissioned by the Governor's Task Force on Effective Schooling and form the research base most discussed in Alaska.

[2] This survey was done in the spring of 1982. More computers have been introduced to rural school since this time. How often they are used, however, is another question.

[3] We used the set of questions developed by Brookover et al. (1979) to measure academic expectations. Brookover found these items to be highly related to achievement in Michigan schools enrolling low income black and white children. We made minor modifications of these items to make them more appropriate for rural Alaska.

[4] Our survey question on what instructional practices the teacher personally found effective came after the survey questions asking whether the teacher used the practices described in the national literature or the literature on Native American education. We asked teachers to draw either from these lists or elsewhere in describing what they personally found effective.

February 7, 1984

Rep. Vern Hurlbert
Alaska State Legislature
Pouch V, State Capitol
Juneau, Alaska 99811

Dear Vern;

With respect to your recent letter concerning House Bill 504, I would like to state that I do support the concept of this bill. I do, however, have some reservations with respect to section 14.43.630, entitled "Conditions of Loans." In order to encourage a larger number of Native people to take advantage of this loan program, I would suggest the following revisions: 1) Loans should be available to graduate students as well as undergraduates. 2) The forgiveness scale for returning to the home school district to teach should be extended to returning to any rural district in Alaska to teach (perhaps with a maximum of 75% forgiveness for the latter option).

I personally feel that these amendments would increase the quality and the quantity of applicants. As a professional in the field of education, I am encouraged in your efforts to pass this bill, and wish you success and support. Please feel free to share this letter with The Speaker of the House, Mr. Joe Hayes.

Sincerely,

Janet

Representative Vern Hurlbert
Alaska State Legislature
Pouch V
State Capitol
Juneau, Alaska 99811

Dear Representative Hurlbert:

This letter is written in support of House Bill No. 504 which was recently introduced in the second session of the 13th Legislature.

As Native Leaders of Native Corporation and the Community we are well aware of your concerns on the lack of Native teachers within the teaching position. Unfortunately to our knowledge their is only two certified Native teacher in the district.

We need to work together to encourage educational excellence in all perspective among our students and to place role models in the classrooms.

One other thing is to encourage or have mandatory regulation of Department of Education and the local School District hire certified Native teachers when they are graduates of X-CED Programs.

In any event we sincerely support the concept of House Bill 504.

Sincerely,

Nancy James
General Manager

Re: HB 504

Dear Representative Hurlbert:

At a recent meeting of the Alaska Native Land Managers Association, the membership passed the enclosed resolution urging passage of HB 504, dealing with establishing the teacher scholarship loan program.

We feel that this bill satisfies an important need in rural Alaska. For too long, young people have left the villages to attend college, never to return. Additionally, we have watched a parade of non-native teachers through the village schools. We feel that it is important to have a stable staff of teachers in rural schools. We also feel that it is preferable to have native teachers teaching in predominantly native schools in order to understand and preserve the unique culture and history of Alaska Native peoples. It is our feeling that native teachers will provide a valuable role model for students in rural Alaska. The students need to see that they can be a success and that they can be leaders in today's world.

We feel strongly that the passage of HB 504 will be another step along the path towards improving rural education and the lives of rural Alaskans.

Very truly yours,

Daniel Alex

Bill

February 1, 1984

Representative Joe Haynes
Pouch V
Juneau, Alaska 99811

Dear Representative Hayes:

I am responding to Representative Vern Hurlbert's letter concerning House Bill No. 504. As a Native with elementary certificate, I fully support this bill.

This year I am in NEA-Alaska Minority Affairs Committee, but due to my location I am unable to work closely with other Native teachers in my region. I am also having some difficulty with telephones and mail service, which is not my fault.

I have been teaching at Gambell Elementary School for two years. This year I am asking BSREAA for transfer to Shishmaref which is my home town. I have not heard from them yet other than my principal, Dave Bowling, recommending for the transfer. I would very much like to teach there, for simple fact, I have my parents and my house there. I also have other projects I would like to do. Enclosed you will find part of my official records, which clearly stated my reason since the year I graduated.

One of the main reasons why it is hard for Natives to come back to the villages is lack of support from the District and the Board. you see, I am the first person from my village to earn a degree in education but due to jealous and other factors, I have unable to teach in my village.

One of the reasons why we have few graduates is because of lack of funds to continue and complete training to become a teacher. I am still paying for my state loan. Students with families have no money to support families while at the campus, and therefore takes forever to complete courses. We have many students in our regions who have been students for years but due to lack of funds, it is impossible to complete any projects.

One thing I oppose is Sec.14.43.650,(b)Each school district shall award teacher scholarship loans... My reason is some students may not be award due to personal conflict with the Board president o administors. Some people are very hard to deal with in the villages. They tend to create problems which prevents students from recieving support. They tend not follow professional criteria. I think this is wrong for I was and still the victim of such actions. We need some one else to over see the program if it passes. In fact, I would like to be involve in such program.

I have been very successful with my students this year and last. I feel we should have more Natives in positions.

Thank you for supporting our people. Someday, I hope we will be treated like any other teachers in the world and be proud.

Sincerely,

George Olanna, Sr.

Juneau, Alaska 99811

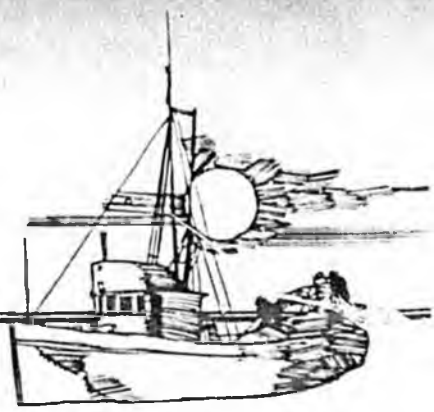
Re: HB 504

Dear Representative Tischer:

At a recent meeting of the Alaska Native Land Managers Association, the membership passed the enclosed resolution urging passage of HB 504, dealing with establishing the teacher scholarship loan program.

We feel that this bill satisfies an important need in rural Alaska. For too long, young people have left the villages to attend college, never to return. Additionally, we have watched a parade of non-native teachers through the village schools. We feel that it is important to have a stable staff of teachers in rural schools. We also feel that it is preferable to have native teachers teaching in predominantly native schools in order to understand and preserve the unique culture and history of Alaska Native peoples. It is our feeling that native teachers will provide a valuable role model for students in rural Alaska. The students need to see that they can be a success and that they can be leaders in today's world.

We feel strongly that the passage of HB 504 will be another step along the path towards improving rural education and the lives of rural Alaskans.



Very truly yours,

Juneau, AK 99811

RE: House Bill #504

Dear Mr. Speaker:

I wish to speak in support of House Bill #504 related to a teacher scholarship fund for native students. Having spent the last eight years in Alaska bush and rural school systems, I know that our native students do need the relationships that native teachers can give to them.

We need positive counseling efforts to lead our future native teachers into the profession and give them support while they develop their teaching skills.

I thank you for the introduction of this bill and wish you and Representative Hurlbert success in its passage.

Sincerely,

Nyal D. Worsham, Supt.

enclosure: 1

Mauneluk Manpower
Testamony on HB 504

Thank you for this opportunity to comment on HB 504. My name is Fred Wemark, Special Assistant with Mauneluk Manpower. I manage a program that brings career awareness into the villages. The main thrust for the program is to get the students and adults within the villages to think about what they would like to do in the village or region in the way of an occupation. We explore all the potential possibilities of work and try to give as accurate a picture of employment as possible in the future.

Your Bill reaches right to the heart of employment that will always be present regardless of the amount of development the rural parts of our great state may or may not enjoy. As long as there is a rural population there will be teaching jobs available. It is only fitting that these positions be taken by those that will live in the community and raise their families and keep the money within the community. This not only makes sense from an economic standpoint but from a social standpoint also.

There are many students in our University system that are studying for a career in Education. But those people are to few. Your bill will increase that number dramatically. More and more the high school students are realizing the importance of a higher education. With the rural economy in the shape it is in those hopes for a higher education fades with the lack of money to send them to school. Hope is now on the horizon. I urge that you pass this important piece of legislation as soon as possible with the appropiate funding.

Thank you.

CITY OF SCAMMON BAY

GENERAL DELIVERY
Scammon Bay, Alaska 99662 / (907) 558-5529

The Honorable Anthony Vaska
State Representative for District 25
Alaska State Legislative
Pouch V
Juneau, Alaska 99811

2-7-84

Dear Tony,

Hello there Mr. Vaska! I understand that you and Senator Sackett were very busy having to meet with your constituients in Bethel. I'm sorry I did not have an opportunity to see you when Frank Aguchak and I went down to Juneau during the week of Febuary 1-4 to do political business with our district legislator..Anyway I talked with your /isaltive assistant, Jim Plasman and, gave him a copy of Scammon Bay's Capital priority needs for this year.

We also would like for you to support H.B. 504 introduced by Representative Joe Hayes which is a bill aimed at providing a teacher scholarship loan program.

It's time that rural students especially natives must have sufficient financial recourse in order to come back to their own villages and teach. We would like for you to oppose the State take over of Mt. Edgecumb High School. Both of these issues are fully supported by the majority of the AVCP delegates which convened in Hooper Bay on January 26-27. You know as well as we know that it's unnessary for the State to take another financial burden when there's so much to full for rurals basic need's.

Well, Tony, if theres anything I can do in anyway, please let me know.

Sincerely,

Homer Hunter Jr.
Mayor

Juneau, Alaska 99811

Dear Speaker Hayes:

I am writing to you in support of House Bill no. 504, which uou introduced recently in the second session of the 13th legislature. This bill if passed, will greatly encourage and enhance our native people to come back and teach among their own people and will improve the quality of education which is vital in this area. Representative Vern Hurlbert is avare of this and it is his concern for his constituents in District 24 of which he represents.

Mr. Speaker, I advice your integrity and is some what surprise to me that you are concerned for us natives, therefore, I believe that is the kind of leadership we need in Juneau. Thank you very much!

Sincerely,

Andrew Brown, Vice-Mayor

January 27, 1984

Mr. Joe Hayes
Speaker of the House
Pouch V
Capitol Building
Juneau, Alaska 99811

Dear Speaker Hayes:

I am in receipt of a letter from Vern Hurlbert and a copy of HB 504. The idea seems a propitious one and has my enthusiastic support. I have noticed the problem you described with village schools in this area, wherein the bulk of the students are native and the teachers non-native. The teacher turnover rate is also sometimes rather appalling. I am sure the problem is even more marked in the northern sections of the state.

The only question I have is a legal one; namely, what is the advice of the AG's office on the constitutionality of Sec. 14.43.630 wherein preference is given to certain districts. I understand the intent, applaud it as morally correct and a practical necessity (if you are to accomplish the stated goal and not end up giving the bulk of the scholarships to non-natives from non-native majority school districts) but wonder if it runs afoul of due process clauses. It is worth getting an opinion on beforehand to make sure the bill is couched in terms that are proof against later litigation.

Sincerely,

Thomas L. Conley, M.D.
Secretary

MS. MATILDA GAMBLE
MRS. ANN MACKOVJAK
DR. JACK LESH

Representative Vern Hurlbert
State Capital
Pouch V
Juneau, Alaska 99811

Dear Representative Hurlbert:

I would like to respond to House Bill NO. 504 which was recently introduced in an effort to encourage Alaska Native high school graduates to return to their home village to teach.

Prior to my tenure here in Chatham School District, I spent nine years on the Sheldon Jackson campus encouraging and developing a teachers education program. I am very interested in presenting role models for the village; however, I think your approach is wrong.

In our school district I would be in favor of hiring a student to return to the area, but not the same village. Experience from Bible times to the present will demonstrate that people returning to their home village are unduly critized or subjected to demands not common to other candidates.

I also think the loan is discriminatory. This fact on the surface may not seem like an important clause; however, minorities like to know they made it on their own merits. I also think people are more inclined to succeed at something they invest time and money in.

Finally, I think many native graduates do something other than teach simply because they can demand more money as a college graduate in another occupation.

Many of our Sheldon Jackson graduates were either offered employment and terminated or never started due to the high wages they were able to attain through private enterprise or the native corporations. I do not think this program will change this fact and may in the long run do a disservice.

Please write or call me if I can be of further service or add clarification

Sincerely,

Darrell G. Moore

Darrell G. Moore, Supt. of Schools

cc: Joe Hayes, Speaker of the House
Reading File

Native teacher fund envisioned

(Continued from Page One)

tive students among the state's ethnic minorities return to the rural schools which continues the ethnic imbalance.

A high turnover of as much as 40 percent of teachers in rural education attendance areas in the state.

The bill states that current programs such as the X-CED program at the University of Alaska has failed to rectify the problem.

The loan program would appropriate money to be loaned to high school graduates or students within six months of graduation from a state public high school who have sufficient credits to be admitted to an accredited college. Those students also must be enrolled in or show intent to enroll in a university program which aims at a teaching degree for elementary or secondary school. The student also must meet criteria established by the local school board.

If the student is awarded the scholarship and completes his education and returns to the village, a percentage of his loan will be "forgiven" by the state at a rate of 15 percent each year for the first three years of teaching; 25 percent of the total loan for the fourth year completed and the final 30 percent for the fifth year.

The bill is given good change for success on the House side of the legislature because it is supported by the House Majority coalition of urban Republicans and Bush Democrats and because Hayes, the powerful House Speaker, is backing it. It isn't often that a bill sponsored by the Speaker is defeated.

On the Senate side, it is given fair chance for passage by Sen. Frank Ferguson, D-Kotzebue, who said that it will probably pass in a refined form after some things are ironed out.

One possible problem the bill may have is surviving a legal challenge on the basis that it discriminates in favor of one specific ethnic group. The bill directs that the scholarships be awarded on a level proportionate to the percentage of ethnic representation.

Therefore, if 80 percent of the students are Native, 80 percent of the scholarship money must go to Native students.

Recent laws directing money at a specific group, such as the Longevity Bonus program which gives money to Alaska residents older than 65 years who have lived in the state since statehood has been ruled unconstitutional on the grounds that it discriminates against a person who moved to the state after statehood.

Tony Vaska of Bethel, who is a member of the Bush Caucus but not a member of the House Majority, said he thinks it will not survive a constitutionality test.

Hayes said he has had the Legislature's lawyers review the bill and they found it all right. He said the state attorney general has yet to review the bill.

Veteran observers of the Legislature found the key sponsor of the bill – Hayes – to be of particular interest because of his urban background. One commented that "if there ever was any doubt that Hayes is running for governor, this kills it."

Hayes responds to such skepticism by saying "I suppose it would look (like he is trying to gain a rural support) but I just know the problems of rural people. I fly a lot and get out into the villages more than other urban legislators. I also have worked with the Bush Caucus for the past two years and I know of their concerns."

He said that Hurlbert was instrumental in pushing the bill and is second sponsor on the document.

Gov. Bill Sheffield had no comment on the bill other than to point out that programs do exist in the state to draw rural students into teaching.

And as for Hayes drawing a gubernatorial constituency, Sheffield said, "I told him, I'll outcampaign him 125 to one and I have more staying power."

Child abuse bill introduced

The Associated Press

Juneau — Certain kinds of child neglect and abuse unpunishable under existing law would be classified as felonies by a bill introduced in the Alaska House of Representatives.

The legislation is aimed at adults who use force against children or who "intentionally cause or permit a child to be placed in circumstances resulting in serious physical injury."

The measure (HB 489) is sponsored by House Democrats Jack McBride of Ketchikan, Niilo Koponen of Fairbanks and Mike Szymanski of Anchorage.

RECEIVED
FEB 1984

THE LAKE AND PENINSULA SCHOOL BOARD

SARA HORNBERGER, President
Port Alsworth, Alaska 99653
P.O. Box 69, Iliamna, AK. 99606

February 3, 1984

The Honorable Vern Hurlbert
Alaska State Representative
Pouch V - Capital Building
Juneau, Alaska 99811

Dear Vern:

Thank you for yourletter of January 20, 1983, in reference to House Bill No. 504. I appreciate the opportunity to comment on it. In realization of how very busy you folks are down there, I still hope that you will find time to read my letter of reply in addition to the reading by an administrative assistant. (I have no objections to this system - I know it is necessary if you elected officials are to be able to accomplish anything.)

I believe that my comments are made from a position of great strength. We have in our school district an administrative assistant, Frank Hill; two principal teachers, Norm Auberg and Pete Hill; and three teachers, Pauline Hobson, Larry Hill, and Gwen Nielsen; and one teacher on leave, Emma Hill, who are Native. In addition, we recently inaugerated a minority administrative apprenticeship and Frank Hill is the first person to participate. Wherever possible we hire local people to do school district jobs as for example, Alex Wassilie our North Area Maintenance Person.

Going from there, I want to ask if anyone had done any research at all to see if this bill will do what it proposes to do? Three of our Native teachers got their degrees through the ARCTIC program (later called X-Ced); Several refused all financial help of any sort preferring the joy of being able to say, "I did it all by myself." Several used the regular state loan program and BIA assistance.

In our district at least there has been no lack of assistance for village persons interested in higher education of any sort in obtaining any possible loan, grant, or scholarship. Persons who work as aides who show promise are encouraged - urged - to go on and get their degrees. Some few have attended the university sporadically. The members of the school board and the local teachers association have joined together for five years to grant two scholarships a year to district high school seniors in the name of one of our members who was killed in a snowmachine accident shortly after she enrolled in a teacher preparation program in Anchorage. She was a Native from Newhalen. We have youngsters from our district in college under the regular state loan program; but, so far as I know, my daughter is the only one in a teacher training program.

The Hon able Vern Hurlbert

I should add that oneof our current board members, Jeannie Ihly, a Native from Chignik Lake, has enrolled in college in Anchorage with the intention of becoming a primary teacher.

Where does this leave us? I believe that this bill will not do what you hope it will. All the money in the world will not prompt a person to attend college unless that person has the sincere desire, the personal drive to go. Secondly, that person, if he/she is to become a teacher must be willing to face a five-day-a week, nine-month-ayear job; a job that is very intense and demanding. How many of our village people really want that sort of job? So we are talking about motivation. What is going to motivate a youngster from a village who enjoys the freedom of a life of trapping, fishing, hunting, etc., without the demands of a time clock, to take on the other sort of life? There are two things that cause a person to become a teacher: for some it is a calling; they cannot imagine doing anything else; it is their life; for other it is a job, a way to make a living and have three months a year off, etc. If a youngster from a village doesn't have an intense desire to become a teacher, I can't imagine that this loan program will inspire him/her to spend four years away from home in school to become a teacher. That child is going to get a trade that will enable him/her to go out and earn money when it is needed and then go home and enjoy life, and I don't blame that person one bit. Who wouldn't prefer that sort of life! So, we have a motivation problem.

We have one more problem. The fact that a person is a Native does not mean that he/she will make a good teacher, anymore than membership in any other race guarantees skill in any profession. This bill has no criteria set up at any place to evaluate participants. Today our children must have the very best possible teachers for the basics. We have many fine people in our villages who can and do work in the schools assisting with local culture programs, bi-lingual programs, who are not college graduates. Many of them have not finished eighth grade. They cannot teach math or reading or other subjects the certificated teachers handle; rather, the two work as a team complimenting each other when the program is handled properly.

One last point I'd like to speak to is teacher turnover. Years ago when Bristol Bay Borough was formed and took over the schools one of our main concerns was teacher turnover. However, that is not all bad. Teachers like preachers maybe need to move around. I'm not going to dwell on this, but the question is a very debatable one. Furthermore, we have discovered that not all residents of a village are pleased when a local person comes home as a teacher. Was it not Christ who said something to the effect that a prophet is not without honor except in his own country.

This letter, of course, contains my opinions only and most certainly does not speak for the other members of the board either individually or as a legal group.

Most sincerely,

Sara Hornberger

Sara Hornberger (Mrs.)

504

AVCP

Association of Village Council Presidents
P. O. Box 219 • Bethel, Alaska 99559 • Phone 543-3521

February 1, 1984

Hon. Joe Hayes
Speaker of the House of Representatives
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representatives Hayes:

On behalf of the Association of Village Council Presidents, regional non-profit Native corporation for the 56 Yupik Native communities of the Yukon-Kuskokwim delta region, I wish to commend you and the 27 co-sponsors for your introduction of House Bill 504, providing for a teacher scholarship loan program.

We concur with the legislative findings as stated in the bill. In particular, incentive has not be provided for Alaska Natives to pursue teaching careers in rural Alaska. Throughout the State (REAA) schools and remaining federal (BIA) schools, there are almost no Native teachers available for the almost totally Native student bodies. We sincerely appreciate your sponsorship of H.B. 504 and encourage your aggressive efforts for the enactment of this very beneficial legislation.

There is one small group of rural school districts which has overcome many of the difficulties which H.B. 504 seeks to correct. In the examination of rural education issues by you and your colleagues, we wish to encourage you to consider the future of five locally-controlled community schools in the AVCP-Calista Region. The Native communities of Akiachak, Akiak, Chefornak, Chevak and Tuluksak manage the only village-operated community schools in Alaska.

Beginning in 1977, these village council chose to operate their own community schools, apart from the federally-operated BIA schools and the State REAA systems. The federal government provides funds through the BIA appropriations, however management of the education programs and school districts is completely controlled at the community level.

Local community, Native involvement is provided in every aspect of the education program of these "contract" schools. The largest school, for example, has eight certified Alaska Native teachers in its teaching staff. Community school boards at these schools completely determine, within the village, all administrative, curriculla, fiscal and policy decisions concerning school district operations.

Unfortunately, these schools are scheduled to be closed at the end of the 1984-85 school year.

The schools are community-operated and controlled, while funds are provided by the federal government under contracting provisions of the "Indian Self-Determination and Education Assistance Act." The communities wish to continue to locally manage their education programs, however federal funds will not be available beyond federal FY-85.

These schools have requested financial assistance from the State to continue to operate their districts. Under present policies, the state will not provide education funds to the contract schools because they are operated by Native community councils (village councils), which were organized prior to statehood. The councils are recognized as "tribal governing bodies" by the federal government.

Although the village council "contract" schools have agreed to admit all student village residents to the schools, regardless of race, the present state policy regards them as "private" schools because they are operated by Native community councils.

Despite their desire the maintain community control over the village education programs, the contract schools' only other option is to join the REAA education systems. They are very reluctant to do so because of the loss of community control over the education program, and because of the successes which they have achieved through the systems which have been established by them and which are now in place. If, for example, a Native community school becomes part of an REAA, they will be absorbed by a school district which encompasses up to 35 or more other communities, and will no longer have effective control over education at the community level.

The history, circumstances, and legal and policy issues are perhaps more complicated than I describe in this letter, however the basic aim of the village contract schools is simple. They wish to maintain effective local control and community operation of their schools. This goal is becoming destroyed by pressures of state and federal policies over which they have no effective control. We hope that you will consider the fate of these school districts among other rural education issues under review by the legislature.

By alerting you to the matter of Native community schools, we in no way wish to diminish the importance of your continued support for H.B. 504. Your interest in rural and Native education needs, as evidenced by H.B. 504, is genuinely appreciated.

Sincerely,

Dear Mr. White:

Thank you for your letter regarding HB 504 - "An Act establishing the teacher scholarship loan program."

HB 504 was introduced 1/10/84 and referred to the Health & Social Services Committee, which is chaired by Representative Mae Tischer. The bill has further referrals to the House Committee on Loans, chaired by Representative Rick Uehling and the Finance Committee, chaired by Representative Al Adams. Any further correspondence you may have should be addressed to these Committees.

I have forwarded your letter to the Health, Education and Social Services Committee. Thank you for your interest in the Legislative process.

Sincerely,

Jack

Juneau, Alaska 99811

Dear Representative Fuller:

Enclosed is a letter which we submitted at the hearing recently on HB 504. We feel that this bill could serve an excellent purpose in the bush but feel strongly that private school graduates should not be restricted from participation. Our letter expresses our viewpoint.

The method of payment might need to be altered in order to avoid channeling funds through a private school to the recipients, but I am sure that this could be done without altering the intent of the bill. I am inclined to believe that it would be preferable, at any rate, to have recipients receive grants directly from the state on nomination from the districts. This method would largely parallel the present Student Loan program while giving the districts input on promising candidates.

Other items in the bill which might be given additional consideration are the following:

Sec. 14.43.640 Conditions of loan. Paragraph 2 requires that the borrower must teach in the district from which he/she graduated in order to be eligible for loan forgiveness. I believe that this is entirely too restrictive. In small districts such as Nome or Dillingham, an opening may not be available upon graduation. Also, marriage often requires a graduate to re-locate. It has been our experience that most Alaska Native graduates do return to the bush, and the value of others in the major city school systems is significant in its impact on Native students in those areas as well.

It seems unfortunate also that a returning student would be restricted from teaching in a private school in order to receive credit toward forgiveness. Federal teacher loans have not made this distinction. If the school is classified as having a high percentage of minority students, the borrower may apply for a percentage of forgiveness regardless of the public or private status of the school.

I am personally inclined to think that the loan should be supplemental rather than set at $10,000 maximum without restrictions. BIA loans, for example, require that the applicant "show financial need after other sources of funding have been considered." Some such requirement would serve the double purpose of weeding out the less serious applicants and would increase the numbers of students who could be served.

I think that there should be close state monitorship of the loan recipients through the four years. This might require more than the present regulations for the Student Loan program.

Again, we want to indicate our strong support for this bill and will appreciate your consideration of the items we have discussed.

cc. Rep. Joe Hayes

Sincerely,

Alfred S. White

February 3, 1984

Alaska House of Representatives
Health, Education and Social Services
House Special Committee on State Loans and Finance
Juneau, Alaska 99801

Dear Committee Members:

We are taking this opportunity to comment on House Bill No. 504 which has recently come to our attention. We certainly applaud the intent of the bill to enlarge the number and strengthen the training of ethnic minorities, particular Alaska Natives, in the teaching profession by offering teacher scholarship loans. We have recognized this need since 1954 when Covenant High School was opened and have encourage both public and private support of teacher training.

We are surprised, however, to discover that Native graduates of private schools are discriminated against in receiving this assistance. Since the intent of the bill is "to encourage members of ethnic minorities to return to rural schools as teachers," and since "almost no students among the state's ethnic minorities return to rural schools to teach," it would seem that every able condidate would be encouraged to participate.

The success of such schools as St. Mary's High School and Covenant High School in providing graduates with college skills has been widly recognized and documented by studies such as those of Judith Kleinfeld at the University of Alaska. A quick survey of Covenant High School's alumni list indicates at least 10 people, all but three of whom are Alaska Natives, who have teaching degrees. One, Sam Towarak, is president of Chuchi Community College in Kotzebue. Probably at least another 10 have education minors or are presently working on education degrees. It is entirely possible that the incentive of a bill like HB 504 would have encouraged other such private school graduates with college skills to enter education. It might also have led some of these young people who showed an interest in education, but entered other fields, to find a place in education.

We see no problem in administering this legislation with graduates of private schools as recipients. Funds would be made available to eligible Alaskans without discrimination in the same way Alaska Student Loans are made available. No payments would be made to private or denominational schools. The Bureau of Indian Affairs Scholarship Grant Program, federal Pell Grants, etc. are all administered on this basis. Students receiving teacher scholarship loans may very well attend private colleges. It seems unreasonable that they would be restricted from attending a private high school to become eligible.

It would seem that the same formula for awarding scholarships by public schools could be used in such schools as Covenant High School. In communities where there is a single high school in the district, such as Nome or Dillingham, the process of awarding scholarships would be identical to the situation at Covenant High School. We would simply be considered as a district, as we are now with the Alaska High School Activities Association.

Again, we wish to offer our strong support for this legislation which shows promise of dealing with a serious deficiency in our rural communities - the lack of Native educators. We hope that the committee will increase the bill's scope to include what we believe is a strong source of eligible candidates for the program - the private and denominational schools.

Sincerely,

Alfred S. White

February 1, 1984

Hon. Joe Hayes
Speaker of the House of Representatives
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representatives Hayes:

On behalf of the Association of Village Council Presidents, regional non-profit Native corporation for the 56 Yupik Native communities of the Yukon-Kuskokwim delta region, I wish to commend you and the 27 co-sponsors for your introduction of House Bill 504, providing for a teacher scholarship loan program.

We concur with the legislative findings as stated in the bill. In particular, incentive has not be provided for Alaska Natives to pursue teaching careers in rural Alaska. Throughout the State (REAA) schools and remaining federal (BIA) schools, there are almost no Native teachers available for the almost totally Native student bodies. We sincerely appreciate your sponsorship of H.B. 504 and encourage your aggressive efforts for the enactment of this very beneficial legislation.

There is one small group of rural school districts which has overcome many of the difficulties which H.B. 504 seeks to correct. In the examination of rural education issues by you and your colleagues, we wish to encourage you to consider the future of five locally-controlled community schools in the AVCP-Calista Region. The Native communities of Akiachak, Akiak, Chefornak, Chevak and Tuluksak manage the only village-operated community schools in Alaska.

Beginning in 1977, these village council chose to operate their own community schools, apart from the federally-operated BIA schools and the State REAA systems. The federal government provides funds through the BIA appropriations, however management of the education programs and school districts is completely controlled at the community level.

Local community, Native involvement is provided in every aspect of the education program of these "contract" schools. The largest school, for example, has eight certified Alaska Native teachers in its teaching staff. Community school boards at these schools completely determine, within the village, all administrative, curricula, fiscal and policy decisions concerning school district operations.

Unfortunately, these schools are scheduled to be closed at the end of the 1984-85 school year.

The schools are community-operated and controlled, while funds are provided by the federal government under contracting provisions of the "Indian Self-Determination and Education Assistance Act." The communities wish to continue to locally manage their education programs, however federal funds will not be available beyond federal FY-85.

These schools have requested financial assistance from the State to continue to operate their districts. Under present policies, the state will not provide education funds to the contract schools because they are operated by Native community councils (village councils), which were organized prior to statehood. The councils are recognized as "tribal governing bodies" by the federal government.

Although the village council "contract" schools have agreed to admit all student village residents to the schools, regardless of race, the present state policy regards them as "private" schools because they are operated by Native community councils.

Despite their desire the maintain community control over the village education programs, the contract schools' only other option is to join the REAA education systems. They are very reluctant to do so because of the loss of community control over the education program, and because of the successes which they have achieved through the systems which have been established by them and which are now in place. If, for example, a Native community school becomes part of an REAA, they will be absorbed by a school district which encompasses up to 35 or more other communities, and will no longer have effective control over education at the community level.

The history, circumstances, and legal and policy issues are perhaps more complicated than I describe in this letter, however the basic aim of the village contract schools is simple. They wish to maintain effective local control and community operation of their schools. This goal is becoming destroyed by pressures of state and federal policies over which they have no effective control. We hope that you will consider the fate of these school districts among other rural education issues under review by the legislature.

By alerting you to the matter of Native community schools, we in no way wish to diminish the importance of your continued support for H.B. 504. Your interest in rural and Native education needs, as evidenced by H.B. 504, is genuinely appreciated.

Sincerely,

The Honorable Joe L. Hayes, Speaker
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Mr Hayes:

House Bill No. 504, creating a teacher scholarship loan program for Alaska Native high school graduates who would earn a teaching degree and return to their district to teach, would give incentive for our Native students to enter into a field which would allow them to return to their villages or districts to teach.

Often, students are reluctant to enter this sector because upon conclusion, they are forced to move out of their environment to seek employment opportunities. House Bill No. 504 would alleviate this hurdle.

Sincerely,

Trefon Angasan, Jr.
Director, Shareholder Relations

Representative Vern Hurlbert
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Rep. Hurlbert;

First, let me say I appreciate your sending me a copy of House Bill 504 and giving me the opportunity to respond.

Let me preface my comments by saying I have been in education in Alaska for twenty years and am myself a product of the Alaskan schools. So my comments will be somewhat bias.

As I read the bill, the intent is to encourage more Alaskan natives to pursue a career in education, However, the bill states "ethnic minorities". I read this to be negro, asian, hispanic, as well as Alaskan native. The bill must be more specific to accomplish the goal. I personally would be concerned if all minorities were eligible and I was not. That indeed would be a reverse discrimination. When I graduated from high school, the BIA assisted the native students in furthering their edcuation. Possibly the state could pattern a scholarship program from the BIA.

Also, under the conditions of the loan, could you amend the section for payment by the State if borrower teaches in one of the State's rural school districts instead of anywhere in Alaska?

Again, thank you for the opportunity to comment.

Sincerely,

Stephen T. McPhetres

Re: HB 504

Dear Representative Hurlbert:

The Alaska Native Land Managers Association would like to thank you for co-sponsoring House Bill 504 dealing with establishing the teacher scholarship loan program.

We feel that it is very important to train teachers who will return to their rural villages to work. It will improve the quality of education in rural Alaska to have teachers from the area work in their schools. We hope that this will be a significant factor in improving the education system in rural Alaska.

We appreciate the support you have shown for rural Alaskan education by co-sponsoring this legislation. We look forward to working with you for the early passage of this bill.

Very truly yours,

Daniel Alex

HOUSE OF REPSENTATIVES
JUNEAU, AK

FEB. 15, 1984

DEAR REP. Vern Hulbert

THIS IS A LETTER CONCERNING HOUSE BILL NO. 504 IN SUPPORT OF STUDENT LOANS TO AKASKAN STUDENTS. I AM IN FULL SUPORT OF THIS BILL. I CAN HONESTLY SPEAK ON THIS ISSUE. WHEN I ATTENED THE X-CED PROCRAM THERE WHERE MANY DISCOMFORTS I HAD TO ENCOUNTER IN APPLYING FOR FUNDING AS AN OFF CAMPUS STUDENT. THE EXISTING LOANS WERE NOT ENOUGH TO MET THE NEEDS OF ANYONE WITH A FAMILY. WE ALL UNDERSTOOD THAT IT COSTED MONEY TO GO TO SCHOOL BUT THE HARDSHIP WAS AT TIMES VERY DEMANDING ON OUR SLIM BUDGETS.

THE BILL HAS INSIGHT FOR OUR NON-CERTIFIED TEACHERS WHO HAVE BEEN VERY DEDICATED TO THEIR JOBS. THAY HAVE WORKED VERY SILENTLY WITHOUT RETIREMENT BENIFITS ON PART TIME BASES. I CAN FORESEE THEM GOING ON TO SCHOOL NOW IF THIS BILL IS PASSED IN BOTH HOUSES. THE COMMUICATION WHICH LINKS THE VILLAGE LIFE AND THE SCHOOLS ARE THE NON-CERTIFIED AIDES. PERHAPS, IN THE FURTURE WITH MORE CERTIFIED TEACHERS WHO ARE ALASKAN NATIVES A BETTER DELIVERY OF EDUCATION WILL BE A REALITY HERE IN RURAL ALASKA.

I ALSO CAN SEE ANOTHER BARRIER WHAT WILL BE DONE FOR THE NATIVE CERTIFIED TEACHERS WHO MUST WAIT FOR THE TENURE TEACHERS TO MOVE ON I MYSELF SIT IN THAT POSITION AND HAVE BROUGHT IT TO THE ATTENTION OF THE REAA BOARD THE REPLY WAS THE TENURE TEACHER OR AN OPENING WITHIN THE DISTRICT WHEN EVERY THE WAS ONE WHERE I CAN FIT THE SLOT.

SINCERELY

Thank you for this opportunity to submit written comments on House Bill No. 504. I admire the legislators insight into the problems of Rural Alaska and I applaud them for their inventiveness. Keep up the good work!!

Once again thank you for this opportunity.

Sincerely,

Fred Wemark
Special Assistant

enclosure: 1

Mauneluk Manpower
Testamony on HB 504

Thank you for this opportunity to comment on HB 504. My name is Fred Wemark, Special Assistant with Mauneluk Manpower. I manage a program that brings career awareness into the villages. The main thrust for the program is to get the students and adults within the villages to think about what they would like to do in the village or region in the way of an occupation. We explore all the potential possibilities of work and try to give as accurate a picture of employment as possible in the future.

Your Bill reaches right to the heart of employment that will always be present regardless of the amount of development the rural parts of our great state may or may not enjoy. As long as there is a rural population there will be teaching jobs available. It is only fitting that these positions be taken by those that will live in the community and raise their families and keep the money within the community. This not only makes sense from an economic standpoint but from a social standpoint also.

There are many students in our University system that are studying for a career in Education. But those people are to few. Your bill will increase that number dramatically. More and more the high school students are realizing the importance of a higher education. With the rural economy in the shape it is in those hopes for a higher education fades with the lack of money to send them to school. Hope is now on the horizon. I urge that you pass this important piece of legislation as soon as possible with the appropiate funding.

Thank you.

HB 504
HESS

CITY OF SCAMMON BAY

GENERAL DELIVERY
Scammon Bay, Alaska 99662 / (907) 558-5529

The Honorable Anthony Vaska
State Representative for District 25
Alaska State Legislative
Pouch V
Juneau, Alaska 99811

2-7-84

Dear Tony,

Hello there Mr. Vaska! I understand that you and Senator Sackett were very busy having to meet with your constituients in Bethel. I'm sorry I did not have an opportunity to see you when Frank Aguchak and I went down to Juneau during the week of Febuary 1-4 to do political business with our district legislator..Anyway I talked with your /isaltive assistant, Jim Plasman and, gave him a copy of Scammon Bay's Capital priority needs for this year.

We also would like for you to support H.B. 504 introduced by Representative Joe Hayes which is a bill aimed at providing a teacher scholarship loan program.

It's time that rural students especially natives must have sufficient financial recourse in order to come back to their own villages and teach. We would like for you to oppose the State take over of Mt. Edgecumb High School. Both of these issues are fully supported by the majority of the AVCP delegates which convened in Hooper Bay on January 26-27. You know as well as we know that it's unnessary for the State to take another financial burden when there's so much to fall for rurals basic need's.

Well, Tony, if theres anything I can do in anyway, please let me know.

Sincerely,

Homer Hunter Jr.
Mayor

TO: Mae Tischer, Chairman
House HESS Committee
Members of the Committee

DATE: February 21, 1984

RE: HB 504; "An Act establishing the teacher scholarship loan program."

NEA-Alaska strongly supports and encourages favorable consideration of the concept of scholarship incentives as a method of encouraging Alaska Natives to pursue careers in teaching in the public schools in Alaska. This particular issue was established as one of the six major legislative priorities of the Delegate Assembly, meeting in Anchorage in January.

It may be appropriate for the Committee to seek data relative to the previous implementation of AS 14.43.050 -.090 for purposes addressing specifically identified needs. SB 426 expands upon the provisions of the above referenced statute.

We would further encourage that the Committee, either on its own initiative or through the Department of Education, consider the feasibility of conducting an annual survey of all Alaska Native High School sophomores, juniors, and seniors and, perhaps even a supplemental survey of their parents and guardians as well, in an effort to build a data base which could be used to bring even more focus to this kind of legislation on a long term basis. Specifically, it seems appropriate to have more information on:

- career aspirations, expectations, needs
- current deterrents, barriers, problems
- extent and nature of counseling and adequacy of curriculum

A recent survey published by Texas Christian University on "Factors Related to High School Students' Interest in Teaching as a Profession" strongly suggest that a decline in parental interest in encouraging their children toward teaching is a major factor. It may be appropriate to ascertain the validity of this conclusion for Alaska.

With an increasing number of Native students in the urban areas perhaps it is worthy of some emphasis to encourage, through incentives, more Native teachers in these areas as well.

It also seems appropriate to consider making this loan program an adjunct of the regular student loan program, but utilizing an expanded and separate sub-committee of the Post Secondary Education Commission which would also include practicing teachers and parents among its membership.

We feel that it is appropriate to raise some caution relative to geographic restrictions upon where a recipient may chose to teach. Reduction in the teaching force, non-retention and/or desire to voluntary job changes may have some effect on mobility of the recipients.

Finally, it may also be appropriate to clarify the legislative intent of HB 504 as it pertains to the term "teacher." AS 14.20.207 currently provides that the term teacher is also intended to cover administration. It is our recommendation that the primary focus be toward those who are actually in a classroom teaching circumstance.

Respectfully Submitted,

Bob Manners
Executive Secretary

February 24, 1984

Jim Greig, Ph. D.
Box 399
Bernalillo, N.M. 87004

Dear Dr. Greig:

Thank you for your February 1st letter and the fascinating description of some of the high costs of education in rural Alaska. I had been aware they were high, but your material was a real eye-opener. Obviously, to the extent that it can be documented and publicized, it will work to the advantage of the bill I have sponsored.

In addition to that interest, however, it appears this might be material of interest to the Legislative Auditor. I will forward a copy of your material and of this letter to Representative Bob Bettisworth, Chairman of the Legislative Budget and Audit Committee, for his perusal.

With your interest in education you might be pleased to know that the bill, which has been the feature of several public hearings recently, is very popular, and it appears at this point that implementation could begin in the upcoming school year (next Fall). It has the strong support of the State Board of Education, the Director of Postsecondary education, and numerous other ranking officials in the education community. It very well could prove to be the sensible solution to a bothersome and very expensive problem.

Again, thank you for the information, and for your expression of support for the legislation.

Sincerely,

Joe L. Hayes
SPEAKER OF THE HOUSE

FUND STUDENTS, NOT PROFESSORS -- THE HAYES SCHOLARSHIP BILL

Rural Native American students may soon receive $10,000 per year scholarships towards teaching degrees if the bill recently introduced by Alaska State Representative Joe Hayes is successful. Many voters may see this as too much money lavished on a favored ethnic minority. They may see this bill as both an example of government waste and of government reverse discrimination. But, I have good evidence to show that this bill is neither wasteful nor discriminatory. The reality is quite the opposite.

My evidence comes from inside information, information that is common knowledge among rural college professors and administrators but is almost never released to the general public. I can divulge this information because I was willing to risk my career in Alaska rather than cover up the waste that I found in rural higher education. For any that care to investigate this evidence, I have quite extensive, specific information. In 1981 and 1982 I worked as a University of Alaska professor among Native American villages along the Yukon River. Then, in the spring of 1983, I worked as the director of a "non-profit" Native teacher education program among the villages of the Bering Sea. The following are just as few of my experiences as a rural educator.

When I arrived at my job on the Bering Sea, I was responsible for directing an on-going $346,000 Federal program that was coordinated with two University of Alaska programs that cost about $252,000. In all, we were spending about $600,000 per year. All the publicly released documents -- grant requests, appeals for more state funding, etc. -- advertised that we had over 40 students, all rapidly progressing towards their teaching degrees. But, after I had been on the job for a month, nothing seemed to be happening. Four or five students seemed to be doing some of their assignments, but that was about all. This program had been running for a year and a half before I arrived. Had the students done any work during that year and a half? It was hard to say. No credit hour totals had ever been compiled. What was the total cost of this program? Again, no total cost figures had ever been kept. I asked the university officials for their totals, but they said that they didn't have any.

In attempting to determine the success rate of my program, I began to piece together the facts. If the program really was not working, perhaps something could be done to improve it. But, first I had to determine what was actually happening. So, I began to assemble complex charts on my office walls -- charts showing student progress during the current semester and charts showing student progress during the previous semesters.

At first it was difficult to determine just what I should consider as a "student." After all, I had over 40 people signed up, and all were claiming to be "students." Yet, little work was being done. But, then I found a clear solution. If, for example, those in my program completed a total of 1000 courses (3 credit hours each) during the school year, and if each full time student was theoretically expected to complete 10 courses per year, then I could justifiablly speak of having 100 "students." This would be true no matter how many people were actually on my rolls. Further, if the total cost of my program was, for example, $1,000,000 per year, then I could say that the efficiency of this program was $10,000 per student per year.

February 24, 1984

Jim Greig, Ph. D.
Box 399
Bernalillo, N.M. 87004

Dear Dr. Greig:

Thank you for your February 1st letter and the fascinating description of some of the high costs of education in rural Alaska. I had been aware they were high, but your material was a real eye-opener. Obviously, to the extent that it can be documented and publicized, it will work to the advantage of the bill I have sponsored.

In addition to that interest, however, it appears this might be material of interest to the Legislative Auditor. I will forward a copy of your material and of this letter to Representative Bob Bettisworth, Chairman of the Legislative Budget and Audit Committee, for his perusal.

With your interest in education you might be pleased to know that the bill, which has been the feature of several public hearings recently, is very popular, and it appears at this point that implementation could begin in the upcoming school year (next Fall). It has the strong support of the State Board of Education, the Director of Postsecondary education, and numerous other ranking officials in the education community. It very well could prove to be the sensible solution to a bothersome and very expensive problem.

Again, thank you for the information, and for your expression of support for the legislation.

Sincerely,

Joe L. Hayes
SPEAKER OF THE HOUSE

JLH:rjn

Such cost effectiveness is so easy to calculate that it could be demanded by the State Legislature and even published in the newpapers. In this way alternative programs could openly compete with each other for public funds. At present, university administrators hide such statistics as though they were nuclear secrets.

For example, one day two officials from a rural community college came by and noticed the charts on my wall.

"Better not display information like that," said one.

"Best not to collect such information in the first place," said the other.

These well intentioned men simply wanted to give me good survival advice. Nevertheless, I kept on with my chart work. Soon my charts clearly showed that over the last year and a half this program had not 40 students but only 5 students. I was generously calculating that one "student" would complete about seven courses per year -- which is only a part-time load anywhere else. Further, we were spending not $10,000 but $120,000 for each student each year. At this rate, the price of just one teaching degree was going to be well over $700,000.

I went to a high administrator of the local community college that formed part of this program.

"Look at these charts," I said. "This program clearly isn't working."

"I know," said the administrator, "but we have tried almost everything."

I had been giving some thought to another, quite obvious approach. It seemed to me that most Native American college graduates that I met in rural Alaska earned their degrees at major campuses. Scholarships large enough to allow our average student, who often had dependent children, to venture onto a large campus, might be the way to go.

"What about setting up a large scholarship fund to send our best students to major campuses?" I asked. "It might be worth a try."

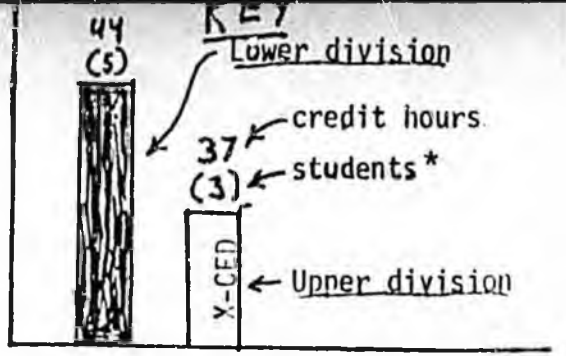
"No way!" He said.

At this point, I should give the reader some background information. Why was this administrator so upset over my suggestion? The answer is that if these scholarships were granted, his college would not only be losing student tuition money, but it would also be faced with decreasing enrollment statistics. His total student enrollment was a major factor in his own funding and was a major factor by which his bureaucratic superiors measured his effectiveness as an administrator. He didn't want to send away promising students -- even if it was to their advantage.

Why don't other rural professors protest over the waste within their own programs? After all, don't professors have the freedom and desire to "profess" the truth? The answer to this is, again, "No way!" Almost two hundred Ph.D's applied for the position that I was selected for at the University of Alaska. Most of these were unemployed. Even if they could find jobs in the Lower Forty-Eight, their average pay would only be about $18,000. The Alaskan bush is often their last chance to make up for all those years at the poverty level. My Alaskan job paid about $50,000 per year, plus a long vacation, junkets to southern

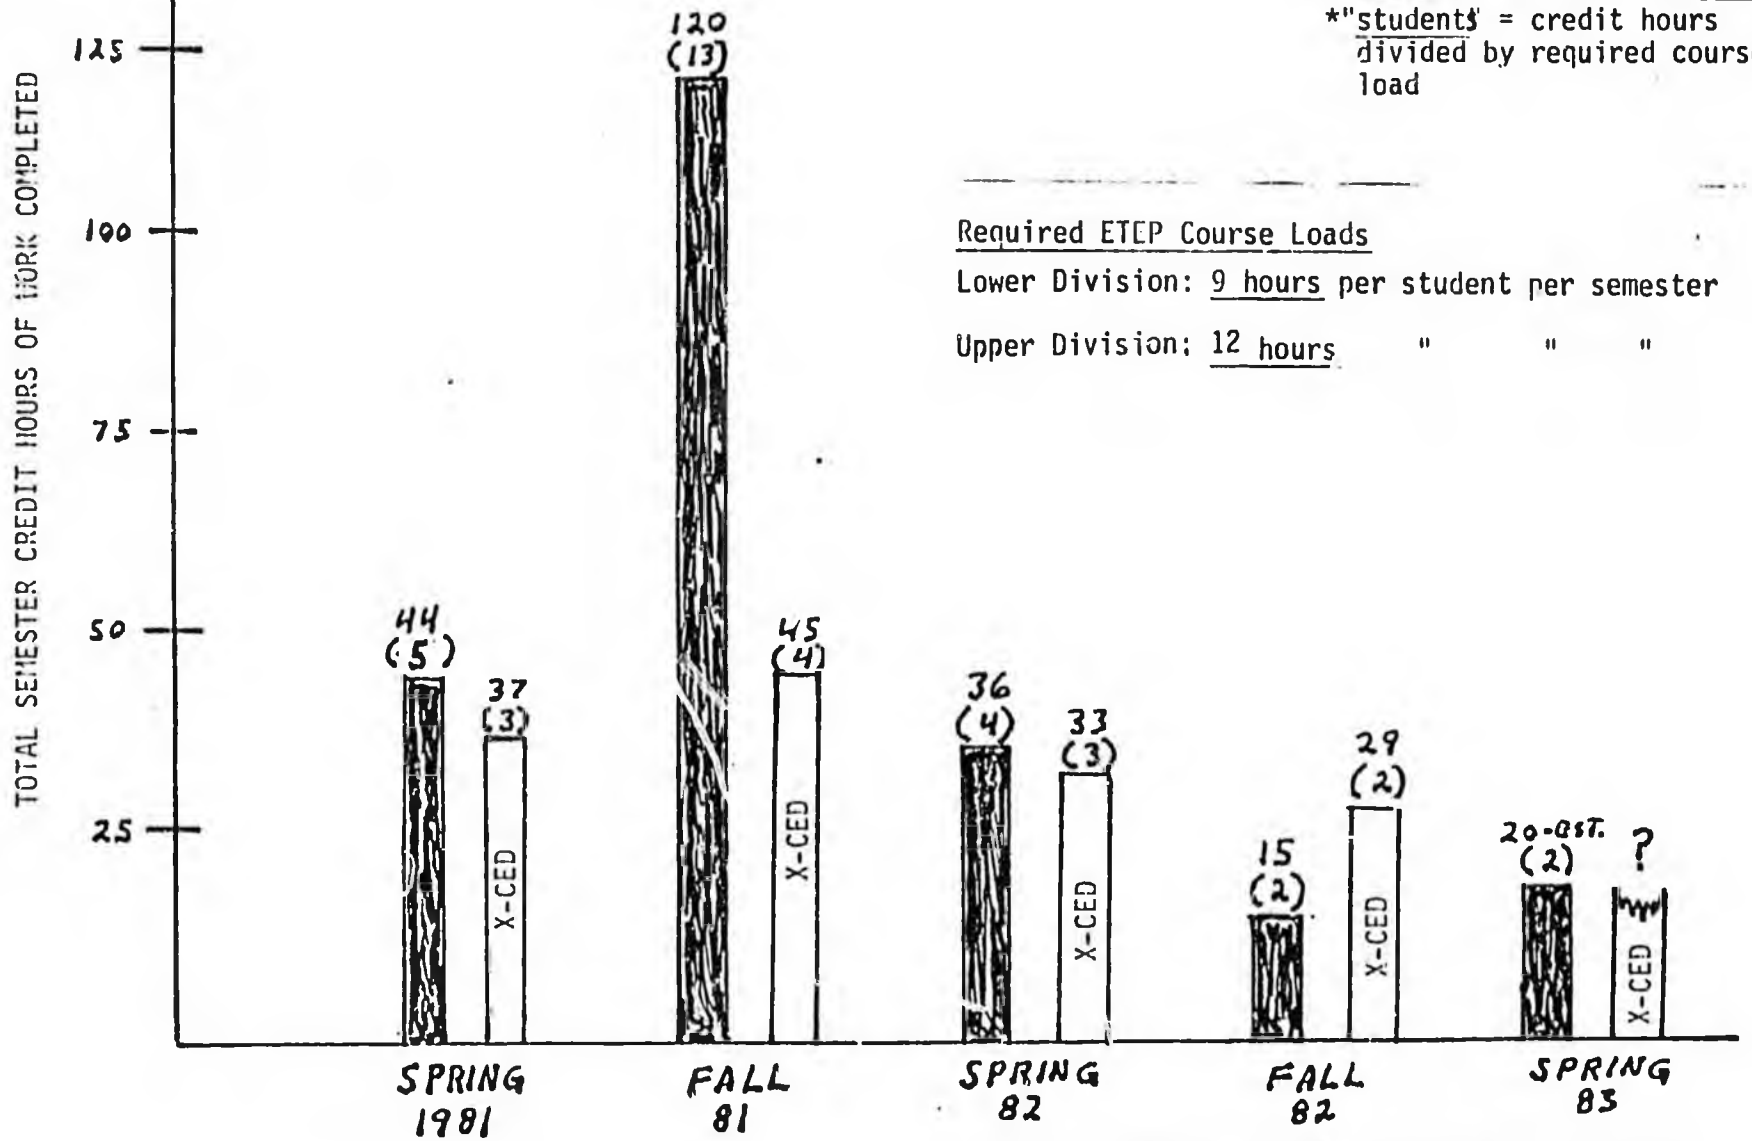
California, and other benefits. With these wages and with 200 Ph.D's waiting in line to replace you, are you going to rock the boat? Probably not.

If you are a boat rocker, you are very quickly replaced. Through a process of natural selection, all boat rockers are soon jettisoned, and only those with a stomach for this kind of excursion survive. I now run my own construction company in New Mexico.



So, would this $10,000 scholarship be wasteful? Not at all. In fact, quite the opposite. If my program is typical, and I believe it is, the taxpayer is already spending up to $120,000 a year for each rural student. How much better would it be for this money to fund twelve students directly, instead of one student indirectly. As it is, most of this $120,000 per student never benefits the student, but instead benefits the bank account of some professional educator. The case is similar if the efficiency of the main rural teacher education program of the University of Alaska at Fairbanks, the X-CED Program, is put to the test. X-CED spends in excess of $1,130,000 per year to field eight professors, some with as little as two or three actual students. This money alone would fund 113 $10,000 scholarships -- perhaps far more scholarships than rural Alaska could presently absorb. Figured this way, the direct benefits become tremendous, and this scholarship program is already funded. It is just a matter of switching the money around.

Would this scholarship constitute reverse discrimination? I think not. The point of this scholarship is not to reward someone for having a particular kind of genes, but for having a particular kind of knowledge. Someone with, for example, Inupiaq ancestory who was raised in Ireland would not be a fitting candidate for these scholarships. On the other hand, an Irish child adopted by an Inupiaq family presumably could become a scholarship candidate. Further, these scholarships would not be designed to reward a student simply because he is a product of Alaskan Native culture. If, for example, the proposed scholarship were for a degree in electrical engineering, then the student's cultural knowledge would have no relevance. But, the point here is that such cultural knowledge is directly relevant to the student's future duties as a teacher of his own children. As has been amply demonstrated, teachers from the American mainstream rarely remain in a Native American village long enough to understand their new culture or to understand their students. Due to this lack of cultural and linguistic knowledge, effective education suffers.



To conclude, from direct experience I know that much of rural higher education is extremely wasteful. For every $100,000 the state pours into rural programs, over $90,000 gets drained away by a vast bureaucracy of professional educators. How much better would it be to give the students money directly and to cut out all of these expensive middlemen. These educators will certainly scream over such a proposal. But, they can easily be silenced by auditing their programs and calculating the total cost per actual student. At present this ratio is never made public.

Secondly, It seems only fair that rural Alaskan communities be given the opportunity to educate their own children. These scholarships should not be seen as discriminating against those who are not Native Americans, but as rewarding those who have a specialized and valuable kind of knowledge.

BAR GRAPH of ETEP PROGRESS

*"students" = credit hours divided by required course load

Required ETEP Course Loads

Lower Division: 9 hours per student per semester

Upper Division: 12 hours " " "

Totals do not include work by 2 non-Native students who are not funded by ETEP.

Presented by Jim Greig, ETEP Director, to the Kawerak Board of Directors, April 20, 1983.

Prepared by Jim Greig, ETEP Director

(2)

ANALYSIS OF ETEP PERFORMANCE -- APRIL 20, 1983
(With some revisions for more precise data & corrections on 4/24)

TOTAL PROGRAM COST (Both X-CED & Lower Division, Spring Sem. '81 -- Sp. Sem. '83)	
ETEP Budget for Entire Program (11/1/80 to 6/30/83)	$848,296
Cost of X-CED for 2½ years *	382,880
Cost of NWCC for 2½ years *	247,430
Total Program Cost (X-CED & Lower Division)	1,478,606
Total Credit Hours Produced (X-CED & Lower Division) *	517
Cost per Credit Hour	$2860
Cost for One 130 hour Teaching Degree (B.Ed.):	$371,800
Average number of students per semester (Calculated using "required course loads" -- see bar graph) *	8

COSTS FOR 1982 - 1983 SCHOOL YEAR (Both X-CED & Lower Division)	
Total Program Cost	$598,762
Total Credit Hours Produced (est.)	88
Cost per Credit Hour	$6804
Cost for 130 hr Teaching Degree (B.Ed.):	$884,520
Average numbers of students per semester (Calculated using "required course loads" -- see bar graph)	4

ANALYSIS OF BERING STRAITS REGION X-CED PERFORMANCE -- Prepared April 22, 83

TOTAL X-CED PROGRAM COST, SPRING SEMESTER '81 THROUGH SPRING SEMESTER '83	
Total X-CED Budget (est., extrapolating from '82-'83) *	$382,880
Total Semester Credit Hours Produced (est.) *	173
Cost per Credit Hour	$2,213
Cost for 130 hour teaching degree (B.Ed.)	$287,690
Average number of students per semester * (Total cdt. hrs., divided by 5 semesters, divided by 12 hr. normal course load)	2.9

*Separate sheets of paper contain information explaining these calculations

PREPARED BY JIM GREIG, ETEP DIRECTOR

REVISED COSTS 4/20/83

CORRECTED NWCC COSTS 4/24/83

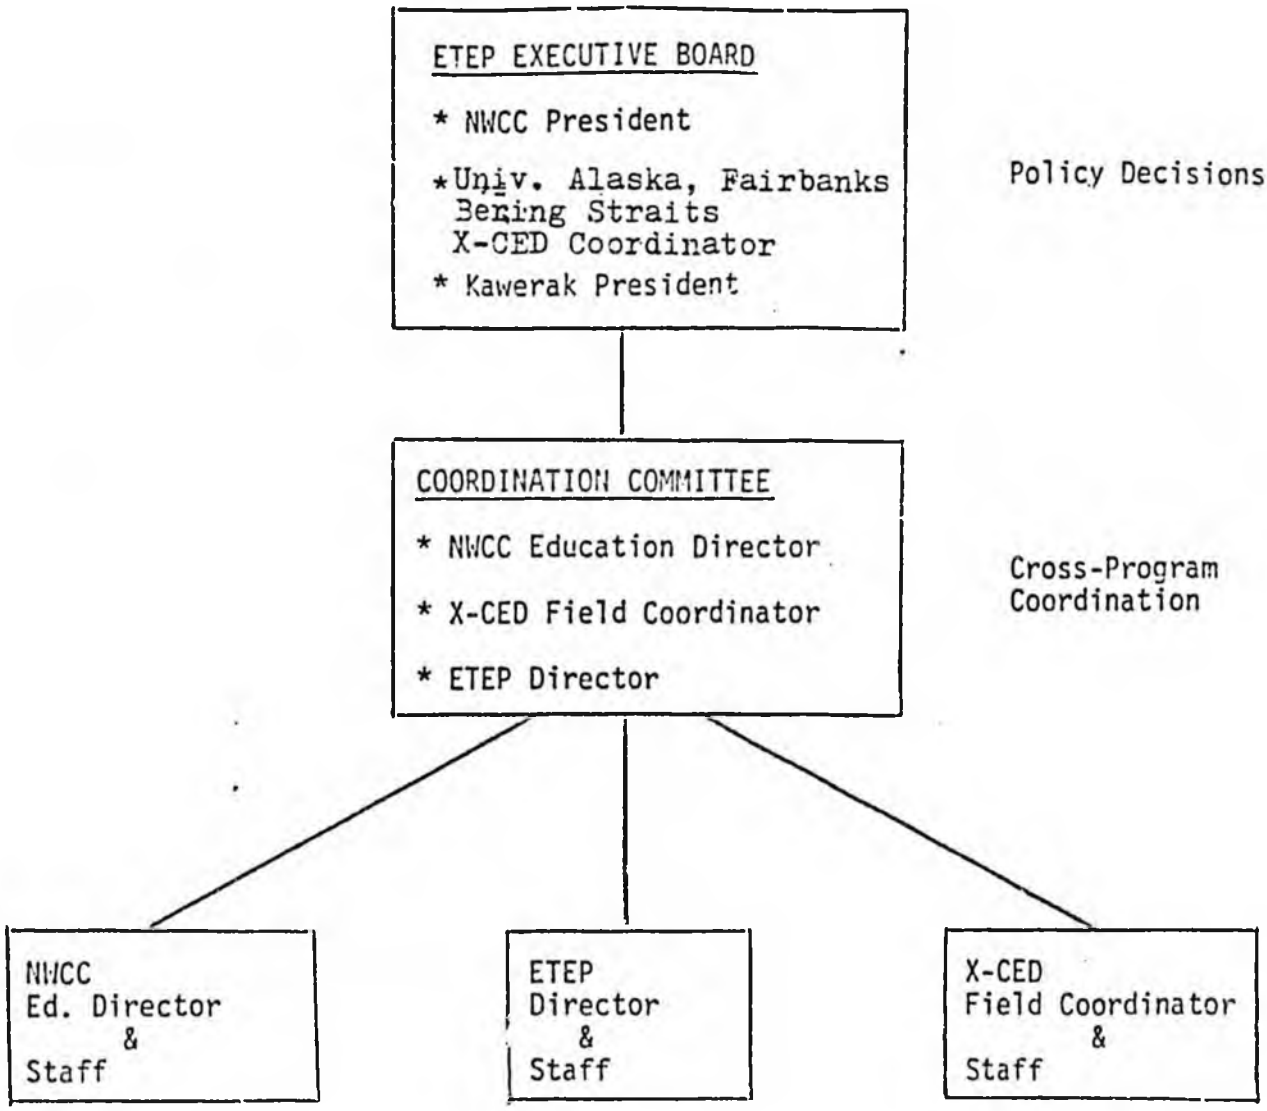
ETEP, X-CED, & NWCC ANNUAL COSTS FOR ETEP PROGRAM (UPPER & LOWER DIVISIONS)

ETEP	1982-83 Budget	$346,630

X-CED

Total X-CED Budget 1982-83
$1,130,966
Total number of X-CED student state-wide: 96
Number of X-CED students in Bering Straits Region: 13
Therefore costs: 13/96 x $1,130,966 = $153,152

NWCC



NWCC Affiliated Staff Salaries: $73,150
(from ETEP Title VII grant request p.7-14
Travel (not, as in ETEP, 25% of salaries but, approximately 10%) $7,315
Indirect charges (as in ETEP, 23%) $18,507

Total for NWCC $98,972

TOTAL FOR ALL OF THE ABOVE (i.e. for school year 1982-83) $598,762

NOTE: These two information sheets on ETEP organization, although prepared for a Title VII grant proposal, generally show the de facto ETEP organizational plan.

Ousted director raps rural teacher program

By MARTHA ELIASSEN
Daily News reporter

The former director of a Nome-based Eskimo teacher training program claims he was fired because he has said publicly that the program costs too much and it is not working.

Dr. Jim Greig, a philosophy professor who has taught in universities around the world and was hired in January to oversee the Eskimo Teacher Education Program in northwest Alaska, claims hundreds of thousands of dollars are going into the program but only a handful of students are benefiting.

The program was developed two years ago by Kawerak Inc., a non-profit Native corporation, to provide teacher training in individual villages. It is coordinated by Kawerak, the Northwest Community College in Nome and a cross-cultural education program based at the University of Alaska-Fairbanks.

University and Kawerak officials say Greig was not on the job long enough to make an accurate judgment. They say he misunderstood the nature of the training program.

In the past year and a half, Greig said, about $598,000 a year has been used to educate five students. Although 27 students are registered this semester, Greig said, the majority are students "in name only." They do not attend classes or complete assignments regularly and have collectively earned only 16 credit hours this semester, he said.

Greig estimates the cost of one teaching degree earned through the program at $800,000.

"Everybody realizes it isn't working and they don't know what to do," Greig said.

After he was hired in January, Greig said he spent the first month or so writing grants for the program because funds run out this summer. But after praising the program to the government and oil companies, Greig said he began investigating its success in producing Eskimo

Continued from Page A-1

teachers for village schools.

"A lot of money has been spent since the ETEP program began with very little produced," Greig said in an initial memo to Caleb Pungowiyi, Kawerak president.

Greig said he gave a presentation to the Kewarak board of directors April 21 outlining what he says are the shortcomings of the program. He received a memo from Pungowiyi April 25 telling him he had been fired for unsatisfactory performance.

"Obviously, I am being fired for telling the truth," Greig said. Facts about the success rate of the program have been deliberately hidden to make sure it continues, he said.

"There are a few people out there who understand how the system works and are milking it for all it's worth," Greig said.

"My firing is made even more repugnant by being described as 'in the interests of students,' " Greig said in a protest letter to Pungowiyi. "Eight-hundred-thousand dollar degrees are not in the interest of the students — their interests lie in the efficient use of the $598,000 poured into ETEP each year."

Pungowiyi said Greig does not understand what the program is meant to accomplish and made judgments about rural Alaska he did not have the background to make.

"What Jim does not understand is the need for Eskimo teachers and the cost of education in rural Alaska," Pungowiyi said.

The aim of the program is to prepare Eskimos for teacher certification in their own villages, at their own pace, he said.

Though Greig had proposed that it would be much cheaper to give Eskimo students university scholarships, Eskimos who enroll in urban colleges have a high dropout rate, Pungowiyi said.

"There is no doubt that the program is expensive," Pungowyi said. The pay-off will be in 10 or more years rather than within the next two years, he said.

Mike Metty, Northwest Community College president, said Greig made his judgments with only "a couple of months of observation." The goal of the teacher training program is to develop a pool of young people who could one day become certified teachers, he said.

Metty acknowledged enrollment in the program fluctuates. "Right now, we know we're going to lose students on St. Lawrence Island because whaling has started," he said. Education in rural Alaska is unlike education anywhere else because of the demanding way of life, he said.

Furthermore, college is a relatively new idea in the Eskimo culture, Metty said.

"There was no premise that the program was going to produce 40 teachers in four years," Metty said. "We hope to get 30 or 40 teachers over a decade."

But Dr. Gene Adam, former field coordinator for the university cross-cultural program, said some of the original grant applications had more optimistic projections.

Adam, who now teaches English at Fairbanks Community College, supports Greig's view and said the spending bears investigation by taxpayers.

"I think he (Greig) is saying, 'Here is the cost, here is the product,' " Adam said.

Rural education is expensive and it is difficult to coordinate, Adam said. "I have the greatest respect for those students. They have to catch fish, they have to work, they have to take care of their kids and they have to mail in their homework," he said.

"The idea of bringing education into every little valley is a noble one but it's not very practical," Adam said.

Rep. Terry Martin, R-Anchorage, said Greig's concerns about the Nome-based programs are similar to his own about the high cost of rural education in general.

"When you compare it to some of the other programs I've been bickering about, it's not out of line," Martin said.

"The concept has been around for a long time to get Native people to work with Native people," Martin said but the cost of present methods is too high.

In addition to the letter to Pungowiyi protesting his firing, Greig flew to Fairbanks from Anchorage Tuesday to discuss the situation with university officials.

He said he plans on returning to New Mexico in a week or so to resume a lucrative adobe construction business.

END

Mr. William Willoya
Box 484
Nome, Alaska

Dear Mr. Willoya,

Thank you for forwarding your comments on HB 504. I found them enlightening and thoughtful. They will be an important contribution to what we are attempting to make a thorough and complete review on the subject of rural education in Alaska, as it affects the proposed program.

I have forwarded your comments to the HESS Committee for its final work sessions on the bill, and it will become a part of the permanent bill file.

I appreciate your taking the time to attend the hearing and to type and send your comments. When I may be of further assistance or information, please feel free to contact me.

Sincerely,

Joe L. Hayes
SPEAKER OF THE HOUSE

JLH:rjn

FEB 1 0 1984

Teleconference opinions of William Willoya on
House Bill no. 504 at Nome Alaska, Feb.4,1984.

As per your request for written words here is a brief, concise recap of my oral testimony. I am a bachelor of Arts certified, graduate of Alaska Pacific University, class of 1974. Prior to that I was a student of "Arctic" teacher training program, class of 1969.

The experiences I have had in the Arctic as a working person and Principal Teacher number 30 years, approximately 9½ in k-12 schoolteaching. I arrived thru the back door into education,(which is one of many careers I have pursued). Hence I have the objectivity to look at any stratum of Arctic Society with a relatively unprejudiced, experienced eye. With this in mind let me remind you the Arctic, now "x-ced" program is a visible bureaucracy, created by the Alaska people to using your "words." "Therefore, it is the intent of the legislature to establish the teacher scholarship loan program to encourage members of ethnic minorities to return to rural schools as teachers and relieve the conditions described in this section".

As per my testimony as living proof that Arctic X-ced is a viable program. Except, the Super insulated bureaucratic intelligentsia administered the program. I am totally opposed to programs that are statistical "miracles" and real life failures. This is true with any program that involves several layers of accountability, in which native people are the constituents, technicians and professionals work for and are accountable to. In all cases the legislature hears the professionals and not the village spokesman when programs are called into account.

Sec. 14.43.630 I Object: Local school boards should be the "total" process. Selection,administration,Identification of Awardee, Guardianship of the funds, etc.etc.

Reason: Professional Educators know there finest students, know there local school board, know the familys, know whether or not the student -is sincere in purpose, Pure in motivation, and hard working enough to stick out 4 years in college. School Districts statewide are in political and administrative chaos. Most of the elected school boards leave every type possible work To the administration. Hence, if this provision is left in infighting, quota politicking,promoting, and other common tactics will be employed to insure the "right" student is awarded.

As per the testimony on Article 7 I reiterate the goals. Rural students are the aristocracy of the Arctic kingdom. All life goals, plans, efforts, and societal measures are planned with the idea in mind of insuring the student child will be awarded the highest degree of status. Hence, when jobs take children away enmasse the subsistance villagiers revolt by sabotageing the take away our children,program. Right now there is not enough sophistication to keep the talented in remote villages. I can name you the survivors of "Arctic X-ced" left in villages if you wish, on my fingers and toes. Arctic Attrition will kill this bill as surely as a firing squad. A subsistence person is Arctic Royalty. A child, spoiled, self sufficient, aristocratically upbred, secure, in full control of that society does not necessarily find education a progressive entity. Hence, I suggest that this bill be redrafted so that earlier identification of client students, and school boards be finally called on to correct the deficiencies of this bill and the Village Local school boards in conjunction with Local teachers keep this bill out of the hands of bureaucracys.

Finally, let me congratulate you for your universality, progressive mindedness, and fairness to all Alaskans, especially the future ones now in school.

William A Willoya

Introduced: 1/10/84
Referred: Health, Education & Social Services, House Special Committee on State Loans and Finance

BY HAYES, HURLBERT, ADAMS, ABOOD, BARNES, BUSSELL, CATO, COWDERY, DAVIS, FULLER, FURNACE, GRUSSENDORF, HERRMANN KOPONEN, LINDAUER, LISKA, MALONE, MARTIN, M.W.MILLER, RINGSTAD, SHULTZ, SZYMANSKI, UEHLING, WARD, ZHAROFF, FRITZ, BETTISWORTH AND MCBRIDE

IN THE HOUSE

HOUSE BILL NO. 504

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act establishing the teacher scholarship loan program."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43 is amended by adding new sections to read:

ARTICLE 7. TEACHER SCHOLARSHIP LOAN PROGRAM.

Sec. 14.43.600. FINDINGS AND INTENT. (a) The legislature finds that there is a wide and unacceptable disparity between the ethnic distribution of teachers and the ethnic distribution of students in the state public schools. Particularly in rural areas, many schools have virtually no Native teachers and no non-Native students. The undesirable effects of this disparity include the following:

(1) there is a serious weakness in the ability of teaching staffs, particularly in rural schools, to foster a sense of ethnic traditions and cultures in the students;

(2) many rural students are forced to exist in two entirely separate situations: the essentially traditional atmosphere of many Native homes, and the essentially modern atmosphere of the classroom;

(3) almost no students among the state's ethnic minorities return to rural schools to teach, continuing the ethnic imbalance and exacerbating its effects; and

(4) there is an annual turnover of 40 percent among teachers in rural educational attendance areas in the state.

(b) The legislature further finds that existing programs have failed to increase the proportion of members of ethnic minorities

teaching in rural schools. Therefore, it is the intent of the legislature to establish the teacher scholarship loan program to encourage members of ethnic minorities to return to rural schools as teachers and relieve the conditions described in this section.

Sec. 14.43.610. PROGRAM ESTABLISHED. There is established the teacher scholarship loan program to provide an incentive for graduates of Alaska high schools who are from ethnic minorities to pursue teaching careers in Alaska schools.

Sec. 14.43.620. TEACHER SCHOLARSHIP REVOLVING LOAN FUND. There is created a teacher scholarship revolving loan fund. The fund shall be used to make scholarship loans to students selected under AS 14.43.600 - 14.43.650. All repayments of principal and interest on teacher scholarship loans shall be paid into the teacher scholarship revolving fund and shall be used to make new teacher scholarship loans. If estimated funds available from teacher scholarship loan repayments are inadequate to fully fund estimated teacher scholarship loans for any fiscal year, additional funding from the general fund may be requested and appropriated for that year.

Sec. 14.43.630. ADMINISTRATION. The teacher scholarship loan program shall be administered by the student financial aid committee (AS 14.43.095) in accordance with regulations adopted by the committee. The committee shall distribute the funds available for teacher scholarship loans annually to local school boards giving a preference to school districts with a high percentage of students in ethnic minorities and a low percentage of teachers in ethnic minorities. The local school boards shall select the recipients of the teacher scholarship loans.

Sec. 14.43.640. CONDITIONS OF LOANS. Each school district shall award teacher scholarship loans subject to the following conditions:

do they also have to be perfect teachers?

(1) the conditions provided in AS 14.43.120 apply except that no loans may be made to graduate students and the state shall repay a portion of a teacher scholarship loan under AS 14.43.120(j) only if, in addition to the other criteria, the borrower is also employed as a public school teacher in the state during the period for which the loan is forgiven;

(2) if a borrower meets the conditions provided in paragraph (1) of this section and is employed as a public school teacher in the ~~district~~ LV School from which the borrower graduated, the portion of the loan that shall be paid by the state is the following percentages of the total loan received plus interest up to a total of 100 percent of the total loan:

(A) one year employment, 15 percent;

(B) two years employment, an additional 15 percent;

(C) three years employment, an additional 15 percent;

(D) four years employment, an additional 25 percent;

(E) over four years employment, an additional 30 percent; and

(3) a loan may not exceed $10,000 in a school year.

Sec. 14.43.650. SELECTION CRITERIA. (a) To be eligible for a teacher scholarship loan, a student must

(1) be a graduate of, or scheduled for graduation within six months from, a state public high school, with sufficient credits to be admitted to an accredited college or university;

(2) be enrolled in or show evidence of intent to enroll in a degree program directed at a teaching career at the elementary or secondary school level; and

(3) meet the conditions set by the student's local school district with respect to the district's requirements for teachers in

Too vague

particular subject areas.

(b) Each school district shall award teacher scholarship loans in direct proportion to the distribution of ethnic groups among the students eligible for graduation from the school district each year.

(c) A student may not be awarded a scholarship loan under AS 14.43.090 - 14.43.160 and a teacher scholarship loan under AS 14.-43.600 - 14.43.650 for the same school year.

Juneau, Alaska 99811

Dear Speaker Hayes,

Please accept this letter as an expression of my support for HB 504, a bill which would create a teacher scholarship loan program. I am specifically supportive because this bill is designed to encourage Alaska Native high school graduates to earn a teaching degree and to return to their districts to teach.

In my position as a probation officer with Youth Services for the State of Alaska, I have noticed there is a real absence of Native teachers within the villages in my district. The intent of this bill would make an effort to address this deficiency and would provide economic incentive for Native students who obtained their teaching credentials to return to their home communities to teach local Native students.

I understand there will be a public hearing in Bethel by the Health & Social Services Committee on February 5, 1984. I will not likely be able to attend that hearing on that day, so would ask that this letter serve as an expression of my support and that my views would be considered along with the public testimony taken at that upcoming hearing.

Thank you for the opportunity to address you on this matter.

Sincerely,

Robert Buttcane

Joe L. Hayes
Representative
State of Alaska Legislature
Pouch V
Juneau, AK 99811

Dear Honorable Representative Hayes:

I read with great interest the article in the Tundra Times concerning the bill that you and other members of the House have submitted with regard to the increase in native student teacher loans. I consider this one of the most significant bills that has entered the Legislature in terms of an impact upon schools in rural Alaska. As you know, our College at the University has been responsible for the development and the execution of the Cross-Cultural Education Development (X-CED) Program in rural Alaska. During the early years of this particular program, when it was known as the ARTTC program, the students involved had access to stipends and were able, therefore, to be students full time. The number of graduates and the number of successful completions were significantly higher than after this particular program ceased. Obviously, this is accounted for by the fact that students were able to be full time students who did not additionally have responsibility for working full time. Although the X-CED Program continues to graduate students, the potential for success would greatly be enhanced by a loan program such as yours. We know that a large number of interested and motivated native people are present in the villages who wish to become teachers. The X-CED Program, itself, over its short ten years has only scratched the surface. However, within those ten years the program can account for thirty-three precent of all of the native graduates of the entire University of Alaska system since it began. This is a significant and perhaps shocking statistic; however, it is fact and indicates that such a rural-based program has tremendous potential for increasing accessibility of native people to education. A bill such as yours will provide the stability to enable students not only to go full time, but for instruction to take place in short workshops, for students to be able to come to campus for short periods of time, and for other teaching configurations which are really prohibited when a person must work full time while trying to complete a baccalaureate degree.

Again, I would like to thank you for your foresightedness in introducing such a bill. If there is any way I can be of support in any small way, please let me know. With best wishes for success,

Sincerely,

Gerald V. Mohatt

The Honorable Vern Hurlbert
Alaska State House of Representatives
Juneau, AK 99801

Dear Mr. Speaker:

Your letter dated January 16, 1984, is commendable, as it states very desirable objectives. If the bill you described were to pass, it would help motivate native peoples to enter the teaching profession. I support such a bill and hope it passes into law.

We are very concerned about our native students and also our own children who have gone out to college and received their teaching d ree. They return to their home town but are never considered for positions they have been trained.

I might mention that my daughter Lillian graduated from an accredited college with a BA in teaching and is certified to teach in the state of Alaska. She is a Tlingit and grew up in the state of Alaska. In the past, she applied for a teaching position at Klawock and Craig, to no avail. It is with some hesitation that I say that her Dad, uncles,

aunts, cousins and myself taught school for many years. Her Dad and some uncles are now retired from teaching and we had enccuraged the younger family members to continue in this profession. She doesn't have any interest in teaching in any other area because she would rather work with her own people.

Administrators hired outside of Alaska have no interest in hiring local teachers. I personally have applied at the same school three consecutive years and was told, I wasn't strong enough.

In order to push your bill through you need to convince the administrators and the local school boards. The administrators work their way into controlling the school board which completely throws out local hiring.

Thank you for your letter.

Truly yours,

Virginia Y Demmert

SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 514

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the regulation of private schools."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. PURPOSE. In conformity with the fundamental right to freedom of religion guaranteed by the constitutions of the United States and the State of Alaska and in recognition of the right of parents to choose to have their children educated in private schools, it is the purpose of this Act

(1) to ensure that in matters of education by religious organizations the state shall not control or interfere with the rights of conscience and religious liberty;

(2) to further the state's legitimate interest in ensuring the quality of all education, including private education; and

(3) ~~to allow~~ diversity in education by ~~encouraging~~ minimizing STATE regulation of private education. State involvement in the affairs of

* Sec. 2. AS 14.07.020 is amended to read:

Sec. 14.07.020. DUTIES OF THE DEPARTMENT. The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state and adopt or recommend plans for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public schools;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools which meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian [DEPARTMENT OF HEALTH AND SOCIAL SERVICES], standards that will assure healthful and safe conditions in the public and private schools of the state including a requirement of physical examinations and immunizations in private pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) [IN COOPERATION WITH THE DEPARTMENT OF HEALTH AND SOCIAL SERVICES,] exercise general supervision over public [AND PRIVATE] pre-elementary schools [AND OVER THE EDUCATIONAL COMPONENT OF NURSERIES AS DEFINED IN AS 47.35.080(4)]; pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

(9) provide accredited elementary and secondary correspondence study programs available to any Alaskan through a centralized office of correspondence study;

(10) accredit private [ELEMENTARY AND SECONDARY] schools which request accreditation and which meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction project begun after July 1, 1978; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, basic education, and fire-service training to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11.020.

* Sec. 3. AS 14.30.010(b) is amended to read:

(b) This section does not apply if a child

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; or

(C) attendance at an educational program operated in compliance with AS 14.45.100 - 14.45.140 by a religious or other private school [ATTENDANCE AT A PRIVATE SCHOOL IN WHICH THE

AVERAGE STUDENT PROFICIENCY IS NOT LESS THAN THE AVERAGE PROFICIENCY FOUND IN THE PUBLIC SCHOOLS IN THE AREA AS MEASURED BY NATIONAL ACHIEVEMENT TESTS; THE DEPARTMENT WITH ASSISTANCE FROM REPRESENTATIVES OF THE PRIVATE SCHOOLS SHALL PROMULGATE REGULATIONS DEFINING THE SUBJECT AREAS TO BE TESTED AND THE MINIMUM AVERAGE SCORES TO BE ACHIEVED];

(2) attends a school operated by the federal government;

(3) has a physical or mental condition which a competent medical authority determines will make attendance impractical;

(4) is in the custody of a court or law enforcement authorities;

(5) is temporarily ill or injured;

(6) has been suspended or denied admittance according to AS 14.30.045;

(7) resides more than two miles from either a public school or a route on which transportation is provided by the school authorities, except that this subsection does not apply if the child resides within two miles of a federal or private school which the child is eligible and able to attend;

(8) is excused by action of the school board of the district at a regular meeting or by the district superintendent subject to approval by the school board of the district at the next regular meeting;

(9) has completed the 12th grade;

(10) is enrolled in a full-time program of correspondence study approved by the department; in those school districts providing an approved correspondence study program, a student may be enrolled either in the district correspondence program or in the centralized correspondence study program;

(11) is equally well-served by an educational experience approved by the school board as serving the child's educational interests despite an absence from school, the request for excuse is made in writing by the child's parents or guardian, and approved by the principal or administrator of the school that the child attends.

* Sec. 4. AS 14.45.030 is amended to read:

Sec. 14.45.030. NON-EXEMPT SCHOOLS [ATTENDANCE AND ANNUAL REPORTS REQUIRED]. Teachers and others in charge of religious or other private [OR DENOMINATIONAL] schools not operated in compliance with AS 14.45.100 - 14.45.140 are not exempt from laws and regulations relating to education. Non-exempt schools shall make regular monthly attendance reports and annual reports to the commissioner in the same manner as teachers and superintendents in the public schools.

* Sec. 5. AS 14.45 is amended by adding new sections to read:

ARTICLE 2. EXEMPT RELIGIOUS AND OTHER PRIVATE SCHOOLS.

Sec. 14.45.100. EXEMPTION. A religious or other private school that complies with AS 14.45.100 - 14.45.140 is exempt from other provisions of law and regulations relating to education except law and regulations relating to physical health, fire safety, sanitation, immunization, and physical examinations.

Sec. 14.45.110. REQUIREMENTS OF EXEMPT SCHOOLS. (a) The parent or guardian of a child enrolled in a religious or other private school that complies with AS 14.45.100 - 14.45.140 shall file an annual notice of enrollment in the school for the child with the local public school superintendent for the area in which the child resides on a form provided by the department. The form shall be signed by the parent or guardian and the chief administrative officer of the school and returned to the local public school superintendent by the parent or guardian. The school shall notify the local public school

superintendent within a reasonable time if the child is no longer enrolled in or attending the school.

(b) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.140 shall maintain monthly attendance records for each student enrolled in the school, shall operate on a regular schedule, excluding reasonable holidays and vacations, during at least 180 days of the year, and shall make an annual report to the commissioner of the number of students in each grade and the school calendar.

Sec. 14.45.120. STANDARDIZED TESTING REQUIREMENTS. (a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.140 shall administer a nationally standardized test selected by the chief administrative officer of the school to all students enrolled in grades four, six, and eight at least once each school year.

(b) The nationally standardized test must measure achievement in English grammar, reading, spelling, and mathematics.

(c) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.140 shall maintain records of the results of the nationally standardized tests and the records shall be made available to the parent or guardian of the student. Each school shall make composite test results for the school available annually to an authorized representative of the department. The composite test results of a religious or other private school operated in compliance with AS 14.45.100 - 14.45.140 are not public information unless each public school

(1) is also required to administer a nationally standardized test that measures achievement in English grammar, reading, spelling, and mathematics; and

(2) the composite test results for each public school are public information.

Sec. 14.45.130. RECORDS. (a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.140 shall maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, and courses taken at the school.

(b) The chief administrative officer of a school that elects to comply with AS 14.45.100 - 14.45.140 shall certify under oath to the department that the records required under (a) of this section are being maintained.

Sec. 14.45.140. DEFINITION. In this chapter

(1) "religious school" means a private school operated by a church or other religious organization that does not receive direct state or federal funding.

* Sec. 6. AS 14.45.020 is repealed.

• ALASKA COUNCIL OF SCHOOL ADMINISTRATORS •
326 Fourth St., Suite #510 Juneau, Alaska 99801 586-9702

an organization of Alaskan School Administrators

January 24, 1984

The Honorable Mae Tischer
House of Representatives
Chairman, Health, Education
and Social Services
Pouch V
Juneau, AK 99811

Dear Representative Tischer:

The Alaska Council of School Administrators would like to go on record as supporting H.B. 514 as amended. We are particularly pleased that the bill calls for a process of notifying local school districts about enrolled or non-enrolled students as found in Sec. 14.45.110. This bill enables the chief administrative officer of a district to fulfill his requirements under the compulsory attendence law AS Sec. 14.30.030.

Once again, we support the bill as written and urge its adoption.

Sincerely,

Don MacKinnon
Executive Secretary

DM:clc

American Association of University Women
Alaska State Division

Susan R. Clark, State Legislative Chair
1109 C Street, Juneau, Ak. 99801
(907) 586-6952

23 January 1984

The Alaska Division of AAUW would like to go on record in support of an amendment to HB 519/SB 354, relating to the regulation of private schools. On page two of the bill (in Sec. 2. AS 14.07.020.) we would recommend that (8) read as follows: "...pre-elementary schools in this paragraph means schools for children ages three through five years when the school's primary function is educational and the program operates for four or fewer hours a day." Of specific concern to us is the health and safety of pre-elementary children ages 3 through 5 who spend from five to 10 or more hours daily in care outside their home.

Without this ammendment a loophole is created or rather maintained in Alaska statute that permits any program offering care to children up to 10 hours or more a day to exempt itself from health and safety regulations governing all Alaskan day care centers - even though that program is not functionally different from a day care program. The Dept. of Education has been called to task over the last several years by both the State Division of Internal Audit and the Federal Office of Child Development for the lack of a clear definition. Says the latter: "Your statute is indeed weak, allowing for confusion and almost any interpretation..." The Dept. audit found that "neither of the statutes [D.O.E.'s wording nor D.H.S.S's AS 47.35.010-80] set criteria nor define what is to be considered a primarily educational facility versus a child care facility;" and "because primarily educational has not been defined, neither the regulator Departments, the facilities themselves, nor the public has a positive definition to use in deciding whether or not a program is a preschool or daycare program. As a result, any facility may choose to be classified as a preschool, and avoid the requirement to comply with daycare standards."

One of the issues involved here is that education of pre-elementary children is different than the academic emphasis of elementary education, due to shorter attention spans, the need for more physical movement (and the need for physical rest), and the underlying necessity of children needing to learn pre-academic skills. Goals for a pre-schooler are different than those for an older child, and Early Childhood educators set out the following as desirable outcomes of a preschool education:

a. Development of a positive self-concept, a sense of self-worth that comes from experiencing success, and a growing awareness of one's strengths as well as one's weakness.
b. Achievement of independence in decision making and a sense of mastery over one's environment (buttons, bows and zippers...); plus an achievement of mutual interdependence - a sense of responsibility for self and others within a community or group.
c. Movement from preoccupation with one's own biological and

psychological needs toward involvement in outside interests and activities; finding pleasure from human interaction; seeking problems and finding satisfaction in solving them.

d. Internalizing the concepts of problem solving abilities.
e. Coping with change and wider relationships.

Parents overwhelmingly want the option of an enrichment program for their children - the inclusion of life-expanding experiences not normally available in the home - and early enrichment has been shown to be important to the full development of all types and classes of children. Because of these factors all quality childcare programs at the pre-elementary level have (and all programs are encouraged to have) educational components teaching the basic life skills of self-sufficiency, socialization, and basic cognitive skills. Parents and community are no longer willing to accept custodial childcare or "warehousing" of kids as acceptable. Thus based on educational content there is no functional difference between a full day "preschool" and a good day care center. In fact in the D.O.E. audit, "of the 19 daycare programs surveyed, 18 stated they offered a preschool program." Ironically in Alaska while parents are lured by the term "preschool" into thinking they are doing better by their children, the standards for preschools are considerably lower than for daycare centers. [See attachment for comparison.]

When a young child is in care for all day every day, the program ceases to be solely a "school" and must include attention to nutritional needs, rest, staff health, adequate supervision with enough staff to attempt to meet the individual needs of each child, and enough space to meet the need to be physically active. Quality childcare is commonly described in national studies as having a tight child/staff ratio (a small number of children to each staff member). Safety in emergencies is a factor, but in normal times children under five need more individual attention than they will ever need at any other time. To form strong and positive self-concept, children need to be listened to, supported and encouraged. A large number of children can be tolerated in "school"-like situations for short periods during the day when activities are highly structured, but the emphasis must necessairly be on control. On a full time basis that can contribute to degrees of "maternal deprivation" resulting from the lack of a strong, rewarding relationship in the early years with a single close adult. "Preschools" have no child/staff ratio requirements. Similarly "pre-schools" have no minimum space requirements although the D.O.E. audit pointed out that adequate space is "absolutely necessary to ensure a quality, developmentally-orientated child care program":

> "the higher the quality of space in a center, the more likely were teachers to be sensitive and friendly in their manner toward children, to encourage children in their self-chosen activities and to teach consideration for the rights and feelings of self and others. Where spatial quality was low, children were less likely to be involved and interested, were more likely to exhibit agressive behavior, and teachers more likely to be neutral and insensitive in their manner, to use large amounts of guidance and restriction, and to teach arbitrary rules of social living."

There can be a workable definition of "pre-elementary school". Most legitimate pre-schools operate from two and a half to three

hours a day, as do most kindergartens for 6 year olds. Even elementary and high school kids do not attend school longer than about 6 hours a day, yet we permit three year olds to attend "school" 10 hours a day. We expect pre-schools to offer a fairly highly structured program for children and often the child/staff ratio is large (20 or more youngsters to 1 adult), but on a short time basis this can be acceptable. Beyond four hours the needs of small children demand more nurturing and less structured care, more space and less control, provision for a nutritional meal and snacks, a time for rest and naps, and the assurance that staff are not carriers of T.B., and assurance that an emergency plan is operable. After four hours children need more individual attention.

All 50 states regulate full-day child care, though in many states it took a tragedy to enact licencing laws. Without this amendment, Alaska is the only state not regulating full day programs which are funtionally identical to day care centers.
The results are a "risk to children", says the D.O.E. audit, for "programs quickly call themselves pre-elementary schools when they learn that is a means of escaping regulations." Please don't let tragedy have to happen first, before we correct what no other state will tolerate.

Preschool Standards are Lower Than Daycare Standards

In Alaska, the Department of Education's standards for preschools are lower than the Department of Health and Social Services standards for daycare centers. For example, the only preschool standard equal to daycare standards is the immunization standard as shown in the following table.

COMPARISON OF DAYCARE AND PRESCHOOL STANDARDS

STANDARD	DAYCARE	PRESCHOOLS
License Renewal	Annual	5 yrs.
Agency Review	Annual	5 yrs.
Staff Pupil Ratio	1-10	no standard
** Indoor Space	35 sq. ft.per child	no standard
Outdoor space	75 sq. ft.per child	no standard
Fire Inspection	Annual	5 years
Sanitation Inspection	Annual	5 years
Health Program	required	no standard
Prone Rest	required	no standard
Immunizations	required	required
Nutrition Program	required	no standard
* Corporal Punishment	regulated	no standard

The Department of Health and Social Services also requires that daycare programs provide opportunities and experiences to promote the individual child's physical, emotional, social and intellectual growth, as outlined below:

- -- opportunities for balance of active/quiet play, group and individual, and indoor and outdoor play;
- -- opportunities for individual self expression in conversation. imaginative play and creative expressions;
- -- use of games, toys, books, sand, puzzles, for intellectual and social development;
- -- walking excursions/field trips; and
- -- equipment and furniture be of sufficient quality and quantity and appropriate to a child's use.

* The regulation reads: "Satisfactory compliance with this subsection requires that ... (7) caregivers not use any form of corporal punishment unless otherwise approved in writing by the parent of the child, and that they not use any other technique which is humiliating, shaming, frightening, or otherwise damaging to a child."

** "Several studies have found that most social involvement appears to occur at medium density (35-50 sq. ft. per child), while agressiveness occurs at higher densities (below 35 sq. ft.) and random behavior occurs in large undifferentiated settings (over 50 sq. ft.)."

STATE OF ALASKA
THE LEGISLATURE

POUCH Y STATE CAPITOL
JUNEAU ALASKA 99811

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM January 20, 1984

SUBJECT: Sectional analysis of CS HB 514 (HESS)

TO: Representative Mae Tischer
Chairman, House HESS Committee

FROM: Keith B. Levy KBL
Legislative Counsel

You have requested a sectional analysis of CS HB 514 (HESS), "An Act relating to the regulation of private schools." The main thrust of the bill is to allow religious and other private schools to opt out of the general laws and regulations applicable to private schools if they agree to comply with certain minimal requirements.

Section 1 states that the purpose of the bill is to guarantee that the state will not interfere with the constitutional right of freedom of religion while at the same time ensuring the quality of all education in the state and minimizing the the regulation of private education.

Section 2 amends the duties of the Department of Education with respect to private education (AS 14.07.020). It provides that the department will consult with the state fire marshall and the state sanitarian rather than the Department of Health and Social Services on matters of health and safety (AS 14.07.020(7)). It clarifies that the department must require physical examinations and immunizations in private pre-elementary schools (AS 14.07.020(7)). Section 2 also provides that the department is no longer responsible for the general supervision of private pre-elementary schools and nurseries. Supervision over public pre-elementary schools will no longer be done in cooperation with the Department of Health and Social Services (AS 14.07.020(8)). Finally, section 2 makes clear that the department may provide voluntary accreditation for any private school that requests it, although the department is not authorized to require private schools to be licensed (AS 14.07.020(10)).

Section 3 amends the state's compulsory education law (AS 14.30.010) to provide that attendance at a school operating in compliance with AS 14.45 (see section 5, below) satisfies the compulsory education requirements.

Section 4 provides that a private school that does not choose to comply with AS 14.45 (see section 5, below), is not exempt from other laws and regulations relating to education and must make attendance reports in the same manner as public schools.

Section 5 provides the minimum requirements a religious or other private school must meet if it elects to be exempt from other provisions of law and regulations. However, even these schools are subject to laws and regulations relating to physical health, fire safety, sanitation, immunization, and physical examinations (AS 14.45.100).

The parent or guardian of a child enrolled in an exempt school must file an annual notice of enrollment with the local public school superintendent on a form signed by the school administrator and the parent (AS 14.45.110(a)). The school must notify the local public school superintendent if the child is no longer attending or enrolled in the school. The exempt school must maintain monthly attendance records, operate on a regular schedule of at least 180 days, and report to the commissioner of education annually the number of students enrolled in each grade and the school calendar (AS 14.45.110(b)).

An exempt school must also administer a nationally standardized test to all students in grades four, six, and eight at least once each school year (AS 14.45.120(a)). The test must measure achievement in English grammar, reading, spelling, and mathematics (AS 14.45.120(b)). The school must maintain records of the results of these tests and make them available to the parent or guardian of the student. The school is required to make composite test results available annually to an authorized representative of the Department of Education, but these results are not public information unless each public school is subject to similar testing requirements, the result of which are also public (AS 14.45.120(c)).

The exempt schools are also required to maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, and

courses taken at the school. The administrator of the school must certify under oath that these records are being maintained (AS 14.45.130). Finally, "religious school," as used in these sections, is defined as a private school operated by a church or other religious organization that does not receive direct state or federal funding (AS 14.45.140).

It should be kept in mind that these provisions are not mandatory unless the private school chooses to exempt itself from other laws and regulations relating to education. Also, this option is available to all private schools, religious and otherwise.

From: League of Women Voters, AAUW (American Association of University Women), NAEYC (National Association for the Education of Young Children), the Alaska Women's Lobby

Re: SB 354, HB 514 An Act relating to the requlation of private schools.

Requesting: An ammendment defining the term "pre-elementary school" in Sec. 2. AS 14.07.020. (8)..."pre-elementary schools is this paragraph means schools for children ages three through five years when the schools' primary function is educational and the program operates for four or fewer hours per day."

Problem: Without this ammendment a loophole is created in Alaska statute that permits any program offering care to children up to 10 hours or more a day to exempt itself from health and safety regulations governing all Alaskan day care centers - even though that program is not functionally different from a day care program.

Issues: (1) Education of pre-elementary children is different than the academic emphasis of elementary education, due to shorter attention spans and the need for more physical movement.

(2) All quality childcare programs at the pre-elementary level have educational components which include teaching basic life skills including self-sufficiency, socialization, and basic cognitive skills. Based on content there is no functional difference between a full day "pre-school" and a good day care center.

(3) When a young child is in care for all day every day, the program ceases to be solely a "school" and must include attention to nutritional needs, health of the staff, supervision with at least one staff person to 10 pre-schoolers so that the staff can attempt to meet the individual needs of each child, and enough space to meet the needs to be physically active.

(4) Most legitimate pre-schools operate from two and a half to four hours a day. Even kindergarten limits 6 year olds to two and a half to three hours. Elementary and high school kids attend only 6 hours, yet we permit a three year old to attend "school" 10 hours a day!

THE DEPARTMENT OF EDUCATION NEEDS TO IMPROVE MANAGEMENT OF PRESCHOOL PROGRAMS

FEBRUARY 1982

STATE OF ALASKA
OFFICE OF THE GOVERNOR
DIVISION OF INTERNAL AUDIT

05-41

SUMMARY

The Department of Education is responsible for preschool programs in the State of Alaska. There are at least 185 early childhood programs in the state that provide preschool services.

This report shows that the Department of Education needs to better manage preschools, and needs to define which early childhood programs should be classified as preschools. The report also shows that the Department needs to set standards for preschools.

BETTER MANAGEMENT OF PRESCHOOL PROGRAMS IS NEEDED

The Department has certified only 28 early childhood programs as preschools, and has monitored even fewer. Historically, the Department has placed little emphasis on preschools. In addition, deciding which early childhood programs actually are preschools is difficult because the Department has not provided a definition of preschools. The lack of a definition causes confusion for those attempting to manage other child care programs.

STANDARDS FOR PRESCHOOLS SHOULD BE IMPROVED

The Department has not developed adequate preschool standards. And, although Alaska Statutes require that the Department of Education cooperate with the Department of Health and Social Services in regulating preschools, there has been little cooperation. Inadequate standards lead to inconsistent care for similar populations in preschool and daycare centers, and lessens the value of the preschool certification process.

RECOMMENDATIONS

To assure that the Department of Education meets their management responsibilities for preschools, we recommend the Commissioner require that:

-- preschool programs in Alaska are regulated; and

-- preschool programs are monitored to assure compliance with requirements.

To help eliminate the confusion in determining which early childhood programs are preschools, we recommend the Commissioner provide a definition of which early childhood programs are preschools.

To assure that the similar populations in preschool and daycare programs receive consistent care, we recommend the Commissioner of the Department of Education cooperate with the Commissioner of the Department of Health and Social Services in developing health, safety and developmental standards for preschools. We also recommend the Commissioner of the

Department of Education develop standards for the educational component of preschools.

DEPARTMENT COMMENTS

In response to our draft report, the Commissioner of the Department of Education and the Commissioner of the Department of Health and Social Services agreed with our recommendations and are taking action to improve management of early childhood programs. (See Appendices I and II)

APPENDIX I - Department of Education Response
APPENDIX II - Department of Health and Social Services Response

INTRODUCTION

There are at least 37,000 children 6 years old or younger in Alaska. Many of these children spend part of their time in organized early childhood programs, such as preschools. Research has produced abundant evidence that a good child development program has significant short and long term effects. Early childhood programs have been found to have a positive effect on a child's self respect, proficiency at learning, achievement and intelligence test scores, reduction of grade failure, and social development. According to a major economic study the benefits of a quality child development program provide a 248 percent return on the original investment.

In the State of Alaska, the Department of Education is responsible for setting preschool standards for a level of care that will insure safety, reduce predictable harm, and provide developmental opportunities. The Department of Health and Social Services is similarly responsible for daycare programs.

DEPARTMENT OF EDUCATION RESPONSIBILITIES

Alaska Statute 14.07.020 provides that the Department of Education, in cooperation with the Department of Health and Social Services, exercise general supervision over public and private preschools and over the educational component of daycare centers, and prescribe regulations that will assure healthful and safe conditions in the schools. The Departments' responsibility is defined in Section 4 of the Alaska Administrative Code 60.010 which requires the Department issue a certificate of approval after:

- conducting an investigation of preschool applicants;
- reviewing the proposed plan of education, mode of operation and supervision of children; and
- investigating whether the programmatic objectives of the preschool are being met.

This regulation also requires that preschools have:

- a valid Department of Education certificate displayed with effective dates;
- insurance;
- a Cumulative Health Record Form and records of immunization of children;
- records of physical exam and records of immunization for staff and volunteer workers;
- a disaster plan;
- documentation, on file with the Department of Education, showing inspections for public safety were made before certification and;
- provided programmatic requirements to the Department of Education.

DEPARTMENT OF HEALTH AND SOCIAL SERVICE RESPONSIBILITIES

The role of the Department of Health and Social Services is to license, investigate and supervise daycare centers; and to issue and enforce regulations. Facilities that are primarily educational are exempt from Department of Health and Social Service regulation.

OTHER STATE INVOLVEMENT IN PRESCHOOL AND DAYCARE PROGRAMS

The Department of Community and Regional Affairs contracts with local communities to provide daycare assistance to enable parents to work or enter training. In addition, the State, through the Department, provides funds to Federal Head Start programs in Alaska.

The Department of Commerce and Economic Development provides a revolving loan fund to enable daycare facilities to obtain loans when necessary to meet licensing standards.

In addition, the Department of Environmental Conservation and the Department of Public Safety review early childhood programs for compliance with fire and sanitation standards.

SCOPE OF THE REVIEW

We performed the following steps in reviewing Department of Education's role in exercising general supervision of Alaska's preschools:

- -- reviewed applicable statutes and administrative procedures;
- -- interviewed educators, Departmental administrators, and early childhood learning center staff;
- -- visited preschools;
- -- reviewed and analyzed documents of the Department of Education and preschools; and
- -- gathered information by questionnaires to similar programs in other states, and to preschool and daycare centers in Alaska.

BETTER MANAGEMENT OF PRESCHOOL PROGRAMS IS NEEDED

Historically, the Department of Education has taken little action to manage preschools and has not allocated resources for managing preschools. As a result, the Department has certified and monitored few preschools, which could expose the State to liabilities. In addition, the Department's failure to develop a definition which distinguishes between child care programs and preschools results in confusion for those attempting to manage other child care programs.

THE DEPARTMENT OF EDUCATION MAKES LITTLE EFFORT TO MANAGE PRESCHOOLS

Little staff time or funds are allocated to performing the Department's statutory obligation in early childhood education. The Department staff member responsible for early childhood education programs is also responsible for guidance and counseling, and private and denominational schools. Only about one eighth of her staff time is allocated to the early childhood program. In addition, the Department of Education budgets show that no funds have been allocated to early childhood programs in the last 5 years.

FEW PROGRAMS ARE CERTIFIED

The Department of Education certifies few preschool programs. Responses to questionnaires from 41 of Alaska's 52 school districts showed that there are at least 167 preschool programs in the State. Yet, during the past 5 years the Department of Education has certified only 28 programs. In addition, many of the 28 certificates were given without the necessary documentation on file in the Department. For example, of the 28 programs certified, the Department did not have a fire and sanitation inspection report on file for 12 of the programs, did not have documentation of insurance for 18 programs and did not have programmatic requirements for 18 of the programs.

In addition, many daycare centers are offering preschool programs without Department of Education supervision over the educational component. For example, of the 19 daycare programs surveyed, 18 stated they offered a preschool program but were not certified by the Department of Education.

FEW PROGRAMS ARE MONITORED

The Department is not making onsite visits to monitor the safety, medical records, insurance records or to see if the school is actually implementing a curriculum. The Department has made only about 15 onsite visits in the last 5 years. The early childhood coordinator stated that seven of the onsite visits occurred as a result of a crisis situation and the other reviews were performed on lunch hours while traveling for other reasons.

LIABILITY EXISTS FOR NONPERFORMANCE OF STATUTORY RESPONSIBILITY

The concept of "State Certification" implies to the public that:

-- the preschool is, in fact, an education institution; and

-- the State, through the appropriate agency, has determined the preschool to be in compliance with appropriate laws and regulations.

In a November 1980 memo to the Department of Law, the Commissioner of Health and Social Services expressed concern about the number of unregulated preschools. The Commissioner stated in the memo that the problem of unregulated preschools causes unequal application of the law and has the following results:

1. Lowering respect for Alaska statutes in general.

2. Enforcement problems for this Department. Programs quickly call themselves pre-elementary schools when they learn that is a means of escaping regulations.

3. Risk to children in unregulated pre-elementary schools.

4. A large early childhood population subject to immunization regulations but not receiving the immunizations.

In response, the Department of Law noted that:

> "This office understands that the Department of Education does not now investigate facilities applying for certification and does not supervise the physical examination of immunization requirements. Nor is the department involved in monitoring of other health and safety codes.
>
> Even assuming that there are no certifiable pre-elementary schools in Alaska, the department's records should reflect that applications have been submitted and that investigations have taken place sufficient to determine that the Department of Education finds that no facility is a pre-elementary school or a day care facility with an education component."

The Department of Laws' advisor to the Department of Education told us that the Department of Education has been designated to perform a responsibility and currently is not performing it. Failure to perform where there is a duty to perform, can place the State in a position of exposure to liability.

PRESCHOOLS ARE NOT DEFINED

Alaska Statute 14.07.020 (8) provides that the Department of Education "...exercise general supervision over public and private pre-elementary

schools...when the school's primary function is educational." Alaska Statute 47.35.010-80 provides that the Department of Health and Social Services license..."an establishment providing care and services for any part of the 24-hour day for a child... but does not include any establishment whose primary purpose is educational." Neither of the statutes set criteria nor define what is to be considered a primarily educational facility versus a child care facility.

In 1975, the Department of Health, Education and Welfare (Federal Office of Child Development) commented in a letter to the Department of Health and Social Services that "Your statute is indeed weak, allowing for confusion and almost any interpretation..." The letter said that the most difficult job for the two Departments was the formulation of a clear and full definition of a facility whose function is "primarily educational", and the Departments should work towards better statutes and a clarification of the primarily educational function. The letter said a definition is needed so each applicant will know whether or not the law applied to their program and so each Department has a positive definition to use in deciding whether or not a facility is in their area of responsibility.

Even though the statute is weak, the Department could take action to establish standards and a definition of preschools, but they have not done so. In 1971, the Attorney General stated that a determination must be made whether a given school is actually primarily educational, and the "Department of Education...may define what type of program or programs is primarily educational."

RESPONSIBILITY FOR REGULATION IS NOT CLEAR

Because primarily educational has not been defined, neither the regulatory Departments, the facilities themselves, nor the public has a positive definition to use in deciding whether or not a program is a preschool or daycare program. As a result, any facility may choose to be classified as a preschool, and avoid the requirement to comply with daycare standards. For example, 8 of the 28 certified preschools provide daycare services but do not have to comply with daycare standards because they chose to be certified as preschools

This problem also creates confusion for regulatory agencies. At locations where both preschool and daycare services are provided, the Department of Health and Social Services has found it difficult to determine compliance because two different standards are used. For example, children in the Department of Education regulated preschool program often intermingle with children in the Department of Health and Social Services regulated daycare program, thereby changing the acceptable staff pupil ratio.

In addition, the Municipality of Anchorage also has difficulty issuing accurate, legal and meaningful permits because some child care centers are providing services regulated by their ordinance and services regulated by the Department of Education.

The Department of Health and Social Services and the Municipality of Anchorage told us that the regulatory confusion also results in some early childhood programs being unregulated. For example, we found 36 early childhood programs unregulated by either the Department of Health and Social Services or the Department of Education.

STANDARDS FOR PRESCHOOLS SHOULD BE IMPROVED

The Department of Education's preschool standards do not assure that certified preschools provide quality educational programs in a safe and healthy setting. Alaska Statutes require that the Department of Education cooperate with the Department of Health and Social Services in regulating preschools, but cooperation has not occurred. In addition, the statutes do not give the Department authority to enforce standards. Inadequate standards lead to inconsistent care for similar populations in preschools and daycare centers. Also, the value of the preschool certification process is questionable because of the inadequate standards.

PRESCHOOL STANDARDS IN ALASKA ARE INADEQUATE

Preschool standards should assure that certified preschools provide quality educational programs in a safe and healthy setting. But, the Department of Education has not established educational standards for preschools. In addition, the Departments health and safety standards for preschools are lower than the standards the Department of Health and Social Services has established for daycare centers.

Standards are Needed to Assure Quality Preschool Programs

According to Federal and national association authorities in the field of child care and development, there are two levels of standards. First, there is licensing, which is the base level and assures that a program or facility meets health, safety and child development standards.

The second level generally supplements basic licensing and is designed to assure quality where a specialized service, such as education, is being offered. Thus, a facility providing child care should be licensed, while a facility operating as a preschool should have a child care license plus be certified as a preschool.

Educational Standards Have Not Been Developed

The Department of Education has not developed specific educational standards for preschools. The Department only requires that preschools provide written information concerning the schools philosophy and goals. Examples of standards that many states have set for preschools are those relating to teacher certification and space requirements.

Teacher Certification

According to education authorities the quality of the staff determines, to a high degree the excellence of an educational program. For example, The Teacher Education Committee of the Association for

Childhood Education International has recommended that teachers of children three through eight years of age:

-- should have study in the areas of physical and biological sciences, mathematics and philosophy, language and literature, the social and behavioral sciences, and the fine arts.

-- should have a minimum of twenty-four semester hours of professional preparation in the field of early childhood education,

-- should have supervisory experience with young children, and

-- should be required to take refresher courses and to keep active affiliation with professional organizations.

In a recent survey of 26 states, 17 said they require separate certification, four said they require a separate early childhood endorsement, and five said they currently have no requirement on early childhood teacher certification.

Alaska is one of the five states surveyed that does not require any early childhood training as a prerequisite for teaching children under age six. The Department of Education allows any person 19 years old or over, or any student who is age 16 and enrolled in a training program, to be a staff member.

Space

National experts advise that an adequate amount of space available for children's activities is absolutely necessary to ensure a quality, developmentally-orientated child care program. For example, research has shown that space effects the quality of living and learning within a center:

> "the higher the quality of space in a center, the more likely were teachers to be sensitive and friendly in their manner toward children, to encourage children in their self chosen activities, and to teach consideration for the rights and feelings of self and others. Where spatial quality was low, children were less likely to be involved and interested, and teachers more likely to be neutral and insensitive in their manner, to use large amounts of guidance and restriction, and to teach arbitrary rules of social living."

In addition, tendencies towards social versus aggressive behavior has been found to be effected by space and according to a research study report:

"Several studies have found that most social involvement appears to occur at medium density (35-50 sq. ft.), while aggressiveness occurs at higher densities (below 35 sq. ft.) and random behavior occurs in large, undifferentiated settings (over 50 sq. ft. per child)."

Eight of the ten states who responded to our survey on this question required a minimum of 35 square feet per child. The Department of Education has not established space requirements for preschools in Alaska.

Preschool Standards are Lower Than Daycare Standards

In Alaska, the Department of Education's standards for preschools are lower than the Department of Health and Social Services standards for daycare centers. For example, the only preschool standard equal to daycare standards is the immunization standard as shown in the following table.

COMPARISON OF DAYCARE AND PRESCHOOL STANDARDS

STANDARD	DAYCARE	PRESCHOOLS
License Renewal	Annual	5 yrs.
Agency Review	Annual	5 yrs.
Staff Pupil Ratio	1-10	no standard
Indoor Space	35 sq. ft.per child	no standard
Outdoor space	75 sq. ft.per child	no standard
Fire Inspection	Annual	5 years
Sanitation Inspection	Annual	5 years
Health Program	required	no standard
Prone Rest	required	no standard
Immunizations	required	required
Nutrition Program	required	no standard
Corporal Punishment	regulated	no standard

The Department of Health and Social Services also requires that daycare programs provide opportunities and experiences to promote the individual child's physical, emotional, social and intellectual growth, as outlined below:

- -- opportunities for balance of active/quiet play, group and individual, and indoor and outdoor play;
- -- opportunities for individual self expression in conversation, imaginative play and creative expressions;
- -- use of games, toys, books, sand, puzzles, for intellectual and social development;
- -- walking excursions/field trips; and
- -- equipment and furniture be of sufficient quality and quantity and appropriate to a child's use.

COOPERATION IN DEVELOPING PRESCHOOL STANDARDS HAS NOT OCCURRED

Alaska Statutes require that the Department of Education cooperate with the Department of Health and Social Services in the general supervision

THE VALUE OF ALASKA'S PRESCHOOL CERTIFICATION PROCESS IS QUESTIONABLE

Those who are aware of the Department of Education's standards for preschools generally consider the preschool certification process to be meaningless. For example:

-- Many of the early childhood educators we interviewed said that because of the Department's inadequate standards, the preschool certificates issued by the Department do not assure a quality preschool program. Certification is, in fact, misleading to parent consumers.

-- We interviewed instructors of two early childhood training programs and both teach their students that the Department's standards are not an acceptable standard to assure a quality preschool program.

-- We visited one two-hour a day educationally oriented program that chose to be licensed as a day care center rather than a preschool because they thought parents would have no assurance of a quality preschool program if it only complied with the the Department's preschool standards.

-- The legislature recently mandated that eligibility for a child care grant program is dependent on compliance with day care licensing standards. Those preschools certified by the Department of Education are not eligible for the grants unless they also have a daycare license.

CONCLUSIONS AND RECOMMENDATIONS

CONCLUSIONS

The Department of Education needs to better manage preschool programs. During the past 5 years, the Department certified only 28 preschools and visited for monitoring purposes only 15 preschools. But, our analysis shows that there are at least 167 preschools. And, 18 of 19 daycare programs surveyed said they provided preschool services. In addition, because the Department of Education has not provided a definition of preschools there is confusion for those attempting to manage other early childhood programs.

The Department of Education has not cooperated with the Department of Health and Social Services in developing standards for preschool programs. Currently, there is inconsistent care for similar populations in preschools and daycare programs because preschool standards are lower than daycare standards. Preschools programs should meet daycare standards and should meet additional standards for education.

RECOMMENDATIONS

To assure that the Department of Education meets their management responsibilities for preschools, we recommend the Commissioner require that:

-- preschool programs in Alaska are regulated; and

-- preschool programs are monitored to assure compliance with requirements.

To help eliminate the confusion in determining which early childhood programs are preschools, we recommend the Commissioner provide a definition of which early childhood programs are preschools.

To assure that the similar populations in preschools and daycare programs receive consistent care, we recommend the Commissioner of the Department of Education cooperate with the Commissioner of the Department of Health and Social Services in developing health, safety and developmental standards for preschools. We also recommend the Commissioner of the Department of Education develop standards for the educational component of preschool.

DEPARTMENT COMMENTS

Both the Department of Education and Department of Health and Social Services responded to a draft of this report. Their comments are summarized below and are included as appendices I and II of this report.

Department of Education

The Commissioner of the Department of Education agreed with our recommendations and listed actions the Department has taken or will take to resolve the problems associated with managing preschool programs. The actions include:

-- Developing a tentative agreement with the Department of Health and Social Services and the Department of Community and Regional Affairs for coordination of early childhood programs.

-- Introducing a request for statutory change to require all child care programs be licensed by the Department of Health and Social Services for base level standards.

-- Development of standards for a voluntary education certification process in addition to the mandatory base level licensing.

-- Establishing on site reviews for evaluation of the educational component of certified preschools. (See Appendix I)

Department of Health and Social Services

The Commissioner of the Department of Health and Social Services agreed with our recommendations and is also in agreement with the plans for improvement as presented by the Department of Education. (See Appendix II)

MEMORANDUM State of Alaska

TO: John O'Meara, Director
Division of Internal Audit
Office of the Governor

DATE: February 2, 1982

FILE NO:

TELEPHONE NO: 465-2800

FROM: Marshall L. Lind, Commissioner
Department of Education

SUBJECT: Response to Draft Report

Attached is our response to your draft report titled "The Department of Education Needs to Improve Management of Preschool Programs". As you will note in our response, we are planning a series of actions which will address the conditions described in your report.

You and your staff are to be complimented for the professional manner in which the review was conducted and the report presented. The findings and recommendations are proving useful to us in planning how to better meet our responsibilities for preschool programs.

Division of Internal Audit

RESPONSE TO
THE DEPARTMENT OF EDUCATION NEEDS TO IMPROVE MANAGEMENT OF PRESCHOOL PROGRAMS

FEBRUARY 1982

STATE OF ALASKA
DEPARTMENT OF EDUCATION

INTRODUCTION:

The Department of Education is in basic agreement with the findings of the report by the Division of Internal Audit titled "The Department of Education Needs to Improve Management of Preschool Programs". In responding, therefore, we will make no effort to counter any of the findings of the report. We also believe that nothing would be gained by attempting to present reasons for our past activities in the management of preschool programs. Rather, we will present those actions which have been taken and those planned to address the conditions described in the report.

ACTIONS TAKEN:

During the past two months we have met several times with a representative from Health and Social Services and once with a representative from Community and Regional Affairs. These meetings have resulted in a tentative agreement between the three departments for the coordination of early childhood programs. We have also met with representatives from the Alaskan chapters of the National Association for the Education of Young Children to discuss plans for the role these chapters might play in the management of preschool programs. A presentation has also been made before the State Board of Education. At this meeting the board voted unanimously to endorse the early childhood education career ladder certification concept. The Board was also advised of tentative plans for carrying out Department of Education responsibilities for preschools.

ACTIONS PLANNED:

The tentative plan for managing preschool programs consists of the following steps. The conditions from the report, which will be addressed by each step, are presented following the description of each step.

PROPOSED STEP I:

All day care programs, including those claiming to be preschool programs, will be licensed by the Department of Health and Social Services. This base level of licensing will be mandatory and no programs should be exempt from the licensing requirement.

CONDITIONS ADDRESSED:

Requiring that all programs which provide services for preschool age children be licensed by Health and Social Services will clear up the confusion which currently exists for regulating agencies, and for the care providers. It will not be necessary to make a predetermination of whether or not a program is "primarily education." Programs will not be able to avoid basic licensing requirements by claiming to be educational programs. The plan will insure that all programs meet basic health, safety and child development standards, and will eliminate instances of inconsistent care for similar populations of children and differential treatment of care providers.

The plan will also negate the need for the Department of Education to obtain the enforcement authority giving it the power to close schools which do not meet basic health and safety standards, since Health and Social Services already has this authority and will be responsible for base level licensing which will insure adequate health and safety standards.

Implementing Step I of the plan will necessitate a change in statute. The Departments of Health and Social Services and Education are currently working cooperatively to determine those required changes. We anticipate that we will be introducing requests for statutory changes during this legislative session.

The change in licensing requirements will also greatly increase the staff load for Department of Health and Social Services licensing personnel. This will not correspond with a decrease for Department of Education personnel, since Department of Education personnel are not currently involved in licensing. Successful implementation will, therefore, require an increase in the Department of Health and Social Services licensing budget.

PROPOSED STEP II:

Day care centers wishing to have their educational programs certified will, on a voluntary basis, notify the Department of Education. An on-site review of these facilities will be conducted using a criteria for preschool programs. Those programs successfully meeting the criteria will be certified by the Department of Education.

CONDITIONS ADDRESSED:

This step will satisfy the Department of Education's statutory responsibility for certifying preschool programs. It will also provide a definition for preschool programs without making it a condition for base level licensing.

Since the certification process is voluntary only those programs choosing to go beyond base level licensing will do so.

It is anticipated that certification will be at two levels, a basic acceptance level and an exemplary level. We plan to develop an on-site review process which will involve persons from the regional chapters of the National Association for the Education of Young Children as members of the review teams. This will result in a peer monitoring process administered by the Department of Education.

The standards for preschool programs which will be used as the criteria for certification will be developed by a Task Force during the Spring of this year. The Task Force will be made up of persons from the state who are knowledgable in the area of preschool education and who represent the various groups who will be impacted by the plan for managing preschool programs.

CONCLUSION:

These, then are the activities which have taken place and the plans for future activities which will enable the Department of Education to better manage preschool programs.

We feel that the plans represent a cooperative inter-departmental effort which will result in the coordination and better management of preschool programs as well as early childhood programs in general.

STATE OF ALASKA

Office of the Governor
Division of Internal Audit

John O'Meara, Director
Division of Internal Audit
Office of the Governor
Pouch AU
Juneau, Alaska 99811

Dear Mr. O'Meara:

This is in response to your draft report titled "The Department of Education Needs to Improve Management of Preschool Programs." The Department of Health & Social Services is in general agreement with the findings of the audit. The document captures the essence of a serious problem and we are hopeful that the plan developed between the Departments--of Education and Health & Social Services will provide corrective action. We have received the Department of Education's response to the audit which outlines that plan.

The Department of Health & Social Services is pleased to have been a participant in recent meetings between representatives of the Departments of Education, Community & Regional Affairs, and Health & Social Services. The dialogue which has begun is extremely useful and the tentative inter-departmental agreement establishes a new precedent of coordinating between three departments around concerns for young children and their families.

The Department of Health & Social Services is in full agreement with proposed Step 1 of the Department of Education's response, that all child care facilities now called Day Care Centers, Family Day Care Homes, and Preschools be licensed under one standard by the Department of Health & Social Services. A recognized principle of government is responsibility to provide equal protection and opportunity to all citizens. For young children who spend part of the day away from their families, the State fulfills this responsibility in part, through licensing to assure a basic level of care and protection, adequate program, and opportunity for development. Licensing under one standard will eliminate the disparity between the care children receive in day care facilities and preschools.

The Department of Health & Social Services is in full agreement that a change of statute is necessary to implement Step 1. In the ten years since the statutes were changed, the disparity has increased rather than decreased. A clear legislative mandate is required to correct a problem of this long standing.

The Department of Health & Social Services will require an increase in staff to perform the licensing studies. Without additional staff the Department of Health & Social Services could not accept the responsibility for an estimated 167 additional programs.

The Department is aware that some programs not now regulated may be fearful that Department of Health & Social Services regulation would result in closure of needed programs. The Department, should it receive the authority, fully intends to implement carefully and in as a supportive manner as possible. Every person or organization whose activities are regulated through licensing has the right to notice of the requirements and an opportunity to comment on them. When there are findings of non-compliances, information for correcting areas of non-compliance will be provided and reasonable time limits for meeting the new standards will be established. It is the Departments' belief that in regulating a new area, two years may be required for full implementation.

The Department of Health & Social Services believes that proposed Step 2 in the Department of Education's response, the certification of educational programs on a voluntary basis, will be well received by providers of early childhood programs. Our experience with day care centers is that directors want to have the educational component of their programs recognized. We are also in agreement that peer monitoring through regional chapters of the National Association for the Education of Young Children is an appropriate role for a professional organization to take and are therefore, in agreement with the Department of Education's plan to use this model.

It is the intent of the Department of Health & Social Services to fully cooperate with the Department of Education in implementing the proposed plan in a timely manner. It is also our intent to continue work on the inter-departmental agreement between the Departments of Education, Community & Regional Affairs, and Health and Social Services for the coordination of Early Childhood programs.

The Division of Internal Audit is to be commended for the careful study given to this important area.

Sincerely,

Helen D. Beirne

STATEMENT OF QUESTIONS INVOLVED

Catholic League for Religious and Civil Rights concurs with the Counter-Statement of Questions Involved which Appellees presented.

STATEMENT OF FACTS

Catholic League for Religious and Civil Rights concurs with the Counter-Statement of Facts Appellees presented.

ARGUMENT

I.

THE CIVIL AND RELIGIOUS RIGHTS OF PARENTS IN THE EDUCATION OF THEIR CHILDREN ARE VALUES STRONGLY RECOGNIZED BOTH IN THE PRONOUNCEMENTS OF THE CATHOLIC CHURCH AND THE UNITED STATES SUPREME COURT'S INTERPRETATION OF THE UNITED STATES CONSTITUTION.

This case requires this court to determine the extent to which a state may limit the fundamental right of parents to educate their children in accordance with their religious beliefs.

The Catholic Church recognizes a primary and most significant role which parents must play in the education of their children. For example, the Second Vatican Council stated:

> [S]ince parents have conferred life on their children, they have a most solemn obligation to educate their offspring. Hence, parents must be acknowledged as the first and foremost educators of their children. Their role as educators is so decisive that scarcely anything can compensate for their failure in it. For it devolves on parents to create a family atmosphere so animated with love and reverence for God and others that a well-rounded personal and social development will be fostered among the children. Hence, the family is the first school of those social virtues which every society needs.
>
> SECOND VATICAN ECUMENICAL COUNCIL, DECLARATION ON CHRISTIAN EDUCATION, GRAVISSIMUM EDUCATIONIS (1965), no. 3.

In a recent pronouncement Pope John Paul II elaborated on the nature of this primary parental role and explained that it could never be completely alienated to others:

> The right and duty of parents to give education is essential, since it is connected with the transmission of human life; it is original and primary with regard to the educational role of others, on account of the uniqueness of the loving relationship between parents and children; and it is irreplaceable and inalienable, and therefore incapable of being entirely delegated to others or usurped by others.
>
> POPE JOHN PAUL II, APOSTOLIC EXHORTATION, THE ROLE OF THE CHRISTIAN FAMILY IN THE MODERN WORLD, FAMILIARIS CONSORTIO (1981) (hereinafter "FAMILIARIS CONSORTIO"), at no. 36 (emphasis in original).

The significance of the right and duty of Christian parents to educate their children in a manner comporting with their faith led the Pope to state that the "rights of parents to choose an education in conformity with their religious faith must be absolutely guaranteed." FAMILIARIS CONSORTIO at no. 40.

Interestingly the concerns the Catholic church has expressed have been mirrored to a large extent by the pronouncements of the United States Supreme Court in cases involving constitutional challenges to state statutes impinging upon parents' religiously motivated choices in the education of their children. The first case lending support to this conclusion is Pierce v. Society of Sisters, 268 U.S. 510 (1925). There the Supreme Court upheld a challenge to a law forbidding attendance at private schools on the basis of a "liberty" interest which the Court felt inhered in the Due Process Clause, U.S. CONST., amend. XIV. The Court noted that there was a "liberty of parents and guardians to direct the upbringing and education of children under their control." 268 U.S. at 534-535. The Court further observed, "The child is not the mere creature of the State; those who nurture him and direct his destiny have the right, coupled with the high duty, to recognize and prepare him for additional obligations." 268 U.S. at 535.

Although Pierce was decided under a "substantive due process" rationale, which fell out of favor for a time before making a powerful return in the "personal privacy" cases of the last two decades, the same basic right of parental educational direction was reaffirmed, primarily on the basis of the Free Exercise Clause, U.S. CONST., amend. I, in Wisconsin v. Yoder, 406 U.S. 205 (1972). There the Court concluded that enforcement of Wisconsin's compulsory education statute would impinge upon Amish parents' rights to direct their children's religious upbringing. See Id. at 215-219. The Court's holding further determined that the involved State interests in compulsory education could not, override the parents' legitimate claims under the Free Exercise Clause. See Id. at 219-236.

The above discussion demonstrates most clearly that Catholic parents place a great value on their right and responsibility to educate their children in a manner comporting with their religious faith. They recognize that this right and responsibility is primarily theirs, cannot be completely alienated to another entity, requires careful and deliberate exercise and should be protected against any deleterious state action. They further recognize that this right and responsibility is not a creation of a Church, but a basic trait of parenthood. Accordingly, Baptist parents enjoy the same basic right and responsibility in the education of their children and this right and responsibility must be protected from adverse state interference. The above discussion further demonstrates that the United States Supreme Court has recognized the basic right and responsibility parents have for the education of their children in accordance with their religious beliefs as inhering in the Constitution and subject to State interference only when necessary to protect a compelling state interest. With this background we now consider the sectarian school systems which have arisen from the exercise of constitutionally protected parental educational

choice and the particular examples of State interference with these sectarian schools which are alleged to infringe upon this parental choice.

II.

CONSTITUTIONALLY PROTECTED CATHOLIC PARENTAL EDUCATIONAL CHOICES, LIKE CONSTITUTIONALLY PROTECTED PROTESTANT EDUCATIONAL CHOICES, HAVE RESULTED IN SECTARIAN SCHOOLS WITH DIFFERENT EDUCATIONAL PURPOSES AND REGIMENS THAN PUBLIC SCHOOLS. THUS, TEACHER OR CURRICULUM REQUIREMENTS TAILORED FOR PUBLIC SCHOOLS ARE UNSUITABLE FOR SECTARIAN SCHOOLS AND CAN IMPAIR CONSTITUTIONALLY PROTECTED PARENTAL EDUCATIONAL CHOICES.

In efforts to exercise their constitutional rights to educate their children in accordance with their religious beliefs, Catholic and Protestant parents have each formed school systems which serve as alternatives to the public school system. In their brief and the trial record, the Plaintiff-Appellees have made this court aware of the pervasively Christian character of the Fundamentalist Protestant school. It is interesting to note that the Catholic school, like the Fundamentalist Protestant school, is founded upon a distinctly Christian approach to education.

A description of the distinctly Christian approach of the Catholic school may be found in The Sacred Congregation for Catholic Education's document, THE CATHOLIC SCHOOL, issued March 19, 1977. The Sacred Congregation makes clear that the distinctive feature of a Catholic school is "its reference to a Christian concept of life centered on Jesus Christ." SACRED CONGREGATION FOR CATHOLIC EDUCATION, THE CATHOLIC SCHOOL (1977), at no. 33. "Christ is the foundation of the whole educational enterprise in a Catholic school," Id. at no. 34, and "The Catholic School is committed . . . to the development of the whole man, since in Christ, the Perfect Man, all human values find their fulfillment and unity." Id. at no. 35. The goal at which the Catholic school aims is "forming in the Christian those particular virtues which will enable him to live

a new life in Christ and help him to play faithfully his part in building up the Kingdom of God." Id. at no. 36. Based on these premises the Catholic school has the tasks of synthesizing culture and faith and faith and life. Id. at no. 37. "The first [of these two tasks] is reached by integrating all the different aspects of human knowledge through the subjects taught, in the light of the Gospel; the second in the growth of the virtues characteristic of a Christian." Id.

This description of the Catholic school, like the descriptions of the Baptist schools this Court has been provided with in Plaintiffs' briefs and the trial record, requires one clear conclusion. That is that private sectarian schools, including Catholic schools, have as their central purpose to "instruct a child in the way he should go"[1] through bringing a child to a point of informed adherence to and practice of basic Christian values. Accordingly, a private sectarian school, like a Catholic school, will fundamentally differ from a public school by including the instruction of Christian values as they relate to every phase of the curriculum. The important presence of Christian values in sectarian school courses means that these courses may often not clearly resemble courses taught in a public school. Further, the qualifications necessary to teach these value laden subjects in a sectarian school will differ from those needed to teach the same type of courses in a public school in which transmission of religious values is forbidden. This means that the constitutional guarantee of parental educational choice can only be preserved if parents opting for sectarian education are permitted to choose sectarian schools which have teachers and curricula which may substantially differ from those found in public schools. State regulations which attempt to require private schools to

---

[1] Proverbs 22:6.

conform to requirements which may be appropriate for public schools, thus, can significantly impair the constitutionally protected parental choice of sectarian education. As will be seen more fully in succeeding pages, the state requirements at issue in this case have this unconstitutional effect.

III.

THE REQUIREMENT OF 1921 MICH. PUB. ACTS 302, SECTION 3, MICH. COMP. LAWS ANN. § 388.553 (1976), THAT TEACHERS IN PRIVATE SCHOOLS HOLD A TEACHING CERTIFICATE EQUIVALENT TO THAT REQUIRED OF PUBLIC SCHOOL TEACHERS IS AN IMPINGEMENT UPON PARENTS' CONSTITUTIONALLY PROTECTED RIGHTS TO EDUCATE THEIR CHILDREN IN ACCORDANCE WITH THEIR RELIGIOUS BELIEFS WHICH DOES NOT ADVANCE A COMPELLING STATE INTEREST NOR CONSTITUTE THE LEAST RESTRICTIVE MEANS TO ACHIEVE ANY ARGUABLY PRESENT STATE INTEREST.

In 1921 P.A. 302, Section 3, MICH. COMP. LAWS ANN. § 388.553 (1976), the State has enacted a "certification" requirement for private school teachers, which reads in relevant part:

> No person shall teach or give instruction in any private, denominational or parochial school within this state who does not hold a certificate such as would qualify him or her to teach in like grades of the public schools of the state . . . .

In approaching the issue of whether this proposal unconstitutionally interferes with rights guaranteed by the Free Exercise Clause of the U.S. CONST., amend. I, it is first necessary to examine whether there exists any burden on the free exercise of religion. See Sherbert v. Verner, 374 U.S. 398, 403 (1963). The free exercise right involved is that of parents of private school children to effectively exercise their constitutionally protected right to choose a sectarian education for their children. If this right is burdened by the state regulation, the State will be required to prove that this regulation implements a compelling state interest, and that the regulation is the means placing the least restriction on parents' free exercise rights which can implement this interest. See Sherbert, 374 U.S. at 406-408.

Addressing the question of whether the proposal burdens free exercise requires a further examination of the role of the teacher in the sectarian school context. As Plaintiffs' brief and trial testimony makes clear, a teacher in the Baptist schools is involved in a ministry in which he or she is shaping young people in accordance with Christian values. The teacher in the Catholic school has this same responsibility. In the first of the two tasks of the Catholic school explained supra, the integration of faith and culture, the teacher plays a critical role. The Sacred Congregation for Catholic Education noted in this respect:

> Since the educative mission of the Catholic school is so wide, the teacher is in an excellent position to guide the pupil to a deepening of his faith and to enrich and enlighten his human knowledge with the data of the faith. While there are many occasions in teaching when pupils can be stimulated by insights of faith, a Christian education acknowledges the valid contribution which can be made by academic subjects towards the development of a mature Christian. The teacher can form the mind and heart of his pupils and guide them to develop a total commitment to Christ, with their whole personality enriched by human culture.
>
> SACRED CONGREGATION FOR CATHOLIC EDUCATION, THE CATHOLIC SCHOOL (1977), at no. 40.

The specific qualifications and duties of the teacher in the sectarian Christian school have been further explained by the Sacred Congregation in these manners:

> The school considers human knowledge as a truth to be discovered. In the measure in which subjects are taught by someone who knowingly and without restraint seeks the truth, they are to that extent Christian. Discovery and awareness of truth leads man to the discovery of Truth itself. A teacher who is full of Christian wisdom, well prepared in his own subject, does more than convey the sense of what he is teaching to his pupils. Over and above what he says, he guides his pupils beyond his mere words to the heart of total Truth.
>
> The cultural heritage of mankind includes other values apart from the specific ambient of truth. When the Christian teacher helps a pupil to grasp, appreciate and assimilate these values, he is guiding him towards eternal realities. This movement towards the Uncreated Source of all knowledge highlights the importance of teaching for the growth of faith.
>
> Id. at nos. 41, .

Finally, the Sacred Congregation emphasized the crucial role of the teacher in the process of integrating faith and culture:

> The achievement of this specific aim of the Catholic school depends not so much on the subject matter or methodology as on the people who work there. The extent to which the Christian message is transmitted through education depends to a very great extent on the teachers. The integration of culture and faith is mediated by the other integration of faith and life in the person of the teacher. The nobility of the task to which teachers are called demands that, in imitation of Christ, the only Teacher, they reveal the Christian message not only by word but also by every gesture of their behaviour. That is what makes the difference between a school whose education is permeated by the Christian spirit and one in which religion is only regarded as an academic subject like any other.
>
> Id. at no. 43.

Although the Sacred Congregation places special emphasis on the Catholic school teacher's critical role in the pupils' integration of faith and culture, it emphasizes that the teacher's role also extends into the very central matter of the pupils' integration of faith and life: "The fundamental aim of teaching is the assimilation of objective values, and, when this is undertaken for an apostolic purpose, it does not stop at an integration of faith and culture but leads the pupil on to a personal integration of faith and life." Id. at no. 44. More specifically, the Sacred Congregation directs:

> The Catholic school should teach its pupils to discern in the voice of the universe the Creator Whom it reveals and, in the conquests of science, to know God and man better. In the daily life of the school, the pupil should learn that he is called to be a living witness to God's love for men by the way he acts, and that he is part of that salvation history which has Christ, the Saviour of the world, as its goal.
>
> Id. at no. 45.

This background of the Catholic school, as part of the species of sectarian schools this proposal attempts to regulate, illustrates the absolutely crucial role of the unabashedly Christian teacher to the successful working of the school. Thus, any state regulation which would restrict this pool of Christian

teachers will burden religious protections guaranteed by the Free Exercise Clause, U.S. CONST., amend. I. By substantially diminishing the pool of available teachers with the requisite Christian qualifications, the State's certification requirement impedes the carrying out of sectarian school parents' Free Exercise right to select the teachers who would most effectively fulfill the crucial role of a sectarian school teacher. More specifically, the sectarian school is required to forego the services of many teachers who would superiorly transmit to students the authentic Christian approach to both religious and secular subjects. Instead, the school is required to select teachers who are less capable, and perhaps almost unqualified, on the important basis of their religious convictions, but who possess valid teaching certificates which, even in secular subjects, bear little relationship to their ability to effectively teach. Thus, when sectarian schools choose to comply with the type of certification requirements found in this case, the result can be a lessening of the schools' ability to effectively transmit Christian values to students. Because transmission of these values constitutes the central and unique mission of the sectarian school, and the purpose for which parents would choose a sectarian school to effectuate their Free Exercise rights to educate their children in accordance with their religious beliefs, the statute's impairment of the sectarian school's ability to effectively transmit Christian values is an unconstitutional interference with these parents' rights, under the Free Exercise Clause, U.S. CONST., amend. I.

While the teacher certification requirement wreaks havoc with parents' rights to effectively choose a sectarian school for their children, it is not an appropriate means to accomplish any interests the State may have in insuring that sectarian school children receive a proper education. Although the State may have a compelling interest in compulsory school attendance generally, it

does not follow that the state has carried its burden of proving that its certification requirements achieve this interest in the manner least restrictive to parental rights to educate their children in accordance with their religious beliefs. Initially, the fact that only a handful of the states have been shown to require certification for private school teachers is strong evidence that a certification requirement is unnecessary to satisfy the educational interests all states share. Further, the State has offered little clear empirical evidence to demonstrate that a certification requirement is necessary to guarantee high quality education. Finally, there are undoubtedly means which place fewer restrictions on free exercise rights, such as requiring parents to educate their children, requiring schools to provide the acknowledged universal "basics" of education and limiting any gross parental abuse of their educational duty through child abuse statutes, which could effectively monitor and guarantee the reception of quality education. Accordingly, the requirement for certification of private school teachers is an unconsitutional infringement upon sectarian school parents' rights to educate their children in accordance with their religious beliefs.

IV.

THE REQUIREMENT OF 1921 MICH. PUB. ACTS 302, SECTION 1, MICH. COMP. LAWS ANN. § 388.551 (1976), THAT COURSES OF STUDY IN PRIVATE SCHOOLS BE OF THE SAME STANDARD AS THOSE PROVIDED BY THE GENERAL SCHOOL LAWS OF THE STATE IMPERMISSIBLY IMPINGES UPON PARENTS' FREE EXERCISE RIGHTS UNDER THE U.S. CONST., AMEND. I, TO EDUCATE THEIR CHILDREN IN ACCORDANCE WITH THEIR RELIGIOUS BELIEFS, IS NOT NECESSITATED BY A COMPELLING STATE INTEREST AND IS NOT THE METHOD TO ACHIEVE ANY PURPORTED GOVERNMENTAL INTEREST WHICH HAS THE LEAST EFFECT UPON THE PROTECTED RIGHTS.

The curriculum regulations present much the same problems as the teacher certification requirements, and are unconstitutional for very similar reasons.

Curriculum, like teacher qualities, is a central feature distinguishing sectarian private schools from public schools and parental preferences for a private school are often based upon this distinction. It is well known that public schools are generally restricted in their ability to transmit Christian values. See Abington Township School District v. Schempp, Murray v. Curlett, 374 U.S. 203 (1963) (Prohibiting Bible reading in public schools except when studied as literature); Engel v. Vitale, 370 U.S. 421 (1962) (Prohibiting recitation of government composed prayer in public schools). In sharp contrast, sectarian schools are very concerned with the transmission of these values. In the case of Catholic schools it has been noted:

> The specific mission of the school, then, is a critical, systematic transmission of culture in the light of faith and the bringing forth of the power of Christian virtue by the integration of culture with faith and of faith with living. Consequently, the Catholic school is aware of the importance of the Gospel-teaching as transmitted through the Catholic Church. It is, indeed, the fundamental element in the educative process as it helps the pupil towards his conscious choice of living a responsible and coherent way of life.
>
> SACRED CONGREGATION FOR CATHOLIC EDUCATION. THE CATHOLIC SCHOOL (1977), at no. 49.

The pervasive importance of gospel teaching is further emphasized in its lack of confinement to specific religion courses in a sectarian school and its role in insuring that students obtain more than a mere intellectual appreciation of the truths of Christ:

> Without entering into the whole problem of teaching religion in schools, it must be emphasized that, while such teaching is not merely confined to "religious classes" within the school curriculum, it must, nevertheless, also be imparted explicitly and in a systematic manner to prevent a distortion in the child's mind between general and religious culture. The fundamental difference between religious and other forms of education is that its aim is not simply intellectual assent to religious truths but also a total commitment of one's whole being to the Person of Christ.
>
> Id. at no. 50.

Obviously, sectarian schools, including Catholic schools, must have significant latitude in the development of their curricula if they are to serve as effective objects of parents' constitutionally protected rights to educate their children in accordance with their religious beliefs. However, the framework of state regulation of private school curricula in this case has great potential to impair this required freedom. The "same standard" language of the involved statute is construed to require comparison to the local public school curriculum,[2] but is sufficiently vague to permit a number of different modes of enforcement. If the enforcing entity were to interpret this language only to require a review of course titles to see that the sectarian school curriculum included instruction in the acknowledged universal "basics" of education, there would normally not be significant impairment of religious freedom. But, even under this minimal review there would be a potential for significant potentially objectionable courses in areas such as sex education or "values clarification" which can be found in many public school curricula.

Further, the language of the involved statute does not require the enforcing entity to limit its inquiry into whether private schools are of the "same standard" as public schools to an examination of course titles. If an enforcing entity were to determine that the "same standard" requirement extended to the content of courses in each school, significant infringement of parental rights would result. This would occur because the content of a sectarian school course, in which the Gospel should be emphasized, could differ in major respects from similar courses in public schools in which the Gospel is not emphasized.

---

[2] See Sheridan Road Baptist Church v. State, No. 80-26205-A2, slip op. at 7 (Ingham Co. Cir. Ct. Dec. 29, 1982).

Thus, the ambiguous language of the statute, standing alone, results in great potential for infringement of parental rights under the Free Exercise Clause to educate their children in accordance with their religious beliefs. However, the significant difficulties inherent in this ambiguous statute are aggravated by the fact that the body enforcing the statute is not an "impartial" governmental body. Instead, the superintendent of the school district in which the sectarian school is located has enforcement responsibilities. See Sheridan Road Baptist Church v. State, No. 80-26205-A2, slip op. at 7 (Ingham Co. Cir. Ct. Dec. 29, 1982). It is not difficult to imagine the potential for abuse which may exist when a public school superintendent, whose system is losing students and state aid by the presence of vibrant sectarian schools, is given the responsibility to enforce the standards these sectarian schools must meet. Accordingly, the statute in this case represents a significant infringement of parents' constitutional rights to educate their children in accordance with their religious beliefs.

Although the statute significantly infringes upon parents' constitutional rights, there exists little relationship between the statute and the state's expressed purpose of "quality education." Initially, the trial judge correctly noted that the statute does not guarantee quality education on a state-wide basis, but instead merely insures that the private school will match the quality of the local public school. Further, if the statute only requires an inspection of course titles, it is difficult to see what major positive or negative impact it would have on the quality of education. Finally, if the statute requires a significant conformity between the content of private and public school courses, it could actually have the effect of reducing educational quality by forcing superior sectarian school courses to resemble inferior public school courses. In any event it is clear that the statute is neither an appropriate means to

achieve the stated purpose of quality education nor the "least restrictive means" to achieve this end. Accordingly, the statute is an unconstitutional infringement of sectarian school parents' Free Exercise rights to educate their children in accordance with their religious beliefs.[3]

---

[3] Although this brief's focus has been on parental Free Exercise rights to educate their children in accordance with their religious beliefs, it appears that both the teacher certification and curriculum requirements create an unconstitutional excessive entanglement between government and sectarian schools. In noting that a more indirect regulation, involving sectarian school teachers' collective bargaining rights, could pose "entanglement" problems, the United States Supreme Court noted:

> "Whether the subject is 'remedial reading,' 'advanced reading,' or simply 'reading,' a teacher remains a teacher, and the danger that religious doctrine will become intertwined with secular instruction persists." Meek v. Pittenger, 421 U.S. 349, 370 (1975). Cf. Wolman v. Walter, 433 U.S. 229, 244 (1977). Good intentions by government --or third parties--can surely no more avoid entanglement with the religious mission of the school in the setting of mandatory collective bargaining than in the well-motivated legislative efforts consented to by the church-operated schools which we found unacceptable in Lemon, Meek, and Wolman.
>
> NLRB v. Catholic Bishop of Chicago, 440 U.S. 490, 501-502 (1979).

The thrust of the Catholic Bishop language would appear to be that, even if government regulation of sectarian school teacher qualifications and curricula did not impinge upon parental Free Exercise rights, pervasive regulation of these matters, which appears to be actually or potentially present in this case, could present an unconstitutional "excessive entanglement" between the state and sectarian schools. It would further appear that this rationale formed much of the basis of the ruling under review in this matter.

RELIEF

Based upon the foregoing discussion, the Catholic League for Religious and Civil Rights requests that this Court rule that 1921 Mich. Pub. Acts 302, Sections 1 and 3, MICH. COMP. LAWS. ANN. §§ 388.551 and 388.553 (1976), violate the Free Exercise Clause of the U.S. CONST., amend. 1, and award the Plaintiff-Appellees any relief to which they are entitled in this action.

Respectfully submitted, this 5TH day of July, 1983.

STATE CAPITAL
JUNEAU, ALASKA 99811
(907) 465 3777

House of Representatives
HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

MEMORANDUM

TO: Representative Mae Tischer
FROM: Bill Lovell, Staff
DATE: January 21, 1984
RE: Comparison of proposed CSHB 514 (HESS) and HB 514

For your information, I have compared the proposed HESS Committee Substitute for House Bill 514 to the original version of the bill.

Section 1 of the proposed CS has three changes from the original bill:

Page 1, lines 11 - 12, Adds "and in recognition of the right of parents to choose to have their children educated in private schools". The effects of the amendment are to balance the draft formation and to add additional emphasis to the independence and security of religious and other private schools.

Page 1, line 19, Adds a new subsection (3), to read, "to minimize regulation of private education." The effect of the new language is to further clarify and emphasize the intent of the bill.

Section 2 of the proposed CS contains no changes from the original bill.

Section 3 of the proposed CS has one change from the original bill:

Page 3, line 27, Substitutes "AS 14.45.100 - 14.45.140" for the original citation, "AS 14.45". This change is made upon recommendation of Legislative Counsel in order to correctly identify the accurate legal reference.

Section 4 of the proposed CS contains no changes from the original bill.

Section 5 of the proposed CS has one change from the original bill:

Page 6, line 13, Substitutes "grades four, six, and eight" for the original language, "grades one, three, six, and nine". The effect is to make testing requirements for private schools more in line with the testing requirements for public schools. At this time, the state requires a random sampling of school districts to administer a "student assessment" at least once a year to students in grades four and eight; this amendment adopts that requirement for all private schools and adds one additional required test in the sixth grade to further ensure adequate core education.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM January 24, 1984

SUBJECT: Health and safety regulation of private pre-elementary schools (CSHB 514(HESS))

TO: Representative Mae Tischer
Chairman, House HESS Committee

FROM: Keith B. Levy KBL
Legislative Counsel

You have requested an opinion on the implication of CSHB 514(HESS) with respect to health and safety regulation of private pre-elementary schools. The bill, while removing the supervision of private pre-elementary schools from the Department of Education, in no way removes the power of the Department of Public Safety to regulate these schools with respect to fire safety or the Department of Health and Social Services to regulate with respect to health standards. In fact, several sections in the bill as well as other provisions of law make it clear that private pre-elementary schools may be regulated with respect to health and safety.

To begin with, AS 14.07.020(7), as amended by section 2 of the bill, provides that the Department of Education shall:

> prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe conditions in the public and private schools of the state including a requirement of physical examinations and immunizations in private pre-elementary schools.

That section applies general health and safety standards to all the public and private schools in the state, including the private pre-elementary schools. It also imposes a specific requirement of physical examinations and immunizations on private pre-elementary schools. In other

words, private pre-elementary schools are subject to health and safety regulations generally under the bill.

Moreover, Title 18 of the Alaska Statutes sets out provisions for health and safety, all of which, if appropriate, apply to private pre-elementary schools unless some specific exemption exists. There is no such exemption in CSHB 514(HESS).

Specifically, AS 18.70.080 provides for the Department of Public Safety to adopt regulations for fire safety applicable to all public buildings. "Buildings" is defined very broadly in AS 18.70.300 and would clearly apply to private pre-elementary schools.

In conclusion, CSHB 514 (HESS), while providing that private pre- elementary schools are no longer subject to regulation by the Department of Education, has no effect on the ability of other departments to regulate these schools with respect to health and safety.

J2/070

January 18, 1984

I want to thank the sponsors of HB 514 and Senate Bill 354 for their attitude, concern, and intentions. The purpose of this legislation as expressed is excellent. The assurance of religious liberty and a child's education without conflict is supported by most of us. However, there is an incongruence in the bill as written. Section I subsection (1) states that "the state shall not control or interfere with the rights of conscience and religious liberty;". Yet, in this bill churches seeking exemptions have to meet conditions and file reports to the state.

I am the Minister of Education for Glacier Valley Baptist Church, in Juneau. As a church we can not request or accept an exemption from the Department of Education. Exemptions can only be granted to a lesser by a greater power. We can not take an easy way out from possible confrontations if that way involves denial of the Sovereignty of our Lord.

The state can still meet its obligations of ensuring that a child receives an education that prepares him as a viable member of society, by placing the primary responsibility of education where it belongs, on the parent. The parent should be responsible for the reports to the state if he elects to educate his child in a program other than the public schools, or state controlled alternatives.

In view of the purpose of this legislation, please see my enclosure for the suggested changes.

Thank you.

Sincerely,

William E. Brown

level of safety for 3-5 year olds. Most parents assume that teachers and staff have received a Tine test, since that is required so uniformally of people dealing with children. Most parents are unaware that in spaces smaller that that which allows 35 sq. ft. per child (the minimum for day care licensing), crowded conditions increase the incidence of sickness and disease.1 In addition in those same conditions children are more likely to be less involved and interested and more agressive while teachers tend to be more restrictive and arbitrary.[2] Parents assume that a program caring for their children has insurance coverage. Most parents assume that at least some of the staff has first aid training and that planned and practiced emergency procedures are in place. None of these are assured when a program is exempt from minimum state regulation, although nowhere does this bill require exempt programs to inform its parents that it has chosen to remove itself from state regulation.

Both the League and AAUW believe that "regulations and standards appropriate to the locale and involving health, nutrition, safety, space per child, and staff training should be adopted by state...governments"; that regulatory licensing by the state for care of children during the day is necessary; and that "essential in a full day care situation are a tight child-staff ratio and the provision of nutritional meals and snacks." Because of these positions we feel that permitting all private pre-schools, including those who care for children up to 10 hours/day, is an unwise move. Since the legislature is determined to do this, however, we support the Senate ammendment that would exempt only those pre-elementary schools which have connections with an established elementary program. We feel that greater internal control may result in such situations, and the public is protected from unscruplous programs providing all day care of children, but simply using the "pre-elementary" term as a convienient way to escape licenture.

In addition we support the Senate ammendment that specifically spells out that programs serving pre-kindergarten kids may not be exempt from regulation if it receives state payments or subsidies. We feel it is important to make that clear since private pre-schools may be eligible for state monies through the Child Care Revolving Loan Program, the Child Care Food Program, Chapter I monies, and the Rural Development Assistance Program (according to the Senate Advisory Day Care Status Report). The state should not help to finance those programs which may be physically or mentally unhealthy for young children. Thank you.

PROPOSED AMENDMENT TO

CS FOR SENATE BILL 354 (Judiciary)

*Section 1. PURPOSE. In conformity with the fundamental right to freedom of religion guaranteed by the constitutions of the United States and the State of Alaska; and in recognition of the right of parents to choose to have their children educated in private schools; it is the purpose of this Act

(1) to ensure that in matters of education by religious organizations, the state shall not control or interfere with the rights of conscience and religious liberty; and

(2) to further the state's legitimate interest in ensuring the quality of all education, and

(3) to allow diversity in education by encouraging private education.

Bill,
Mac wants to add this to the CS you're working on.

Re: CSHB 514 (HESS)

Dear Representative Tischer:

You have asked that we indicate whether CSHB 514 (HESS) remedies the equal protection problems which we identified last year during consideration of HB 357. We believe that it does. For additional detail, please refer to our review of SCS CS HB No. 357 (Rls) am S, a copy of which is enclosed.

If you have other questions, do not hesitate to contact this office.

Sincerely,

CHAIRMAN

A PROPOSAL TO ESTABLISH THE
ALASKA CENTER FOR INTERNATIONAL BUSINESS

Submitted to the University of Alaska

President
and
Board of Regents

December, 1983

University of Alaska, Anchorage

A Proposal to Establish the

ALASKA CENTER FOR INTERNATIONAL BUSINESS

OVERVIEW

Alaska must increasingly look to the utilization of its natural resource base and the development of international markets to sustain its history of economic growth. Such development will occur primarily in response to market system forces and the broader socio/legal structure within which the market system functions. However, total reliance on the unfettered functioning of the market system does not ensure that Alaska will enjoy an optimum rate of resource development and economic growth. There are two fundamental reasons for this.

First, the institutional framework within which the market system functions may impose external barriers which preclude or hamper resource development and the establishment of international markets. The prohibitions on round log exports and federal legislation that prevents the export of North Slope crude are both examples of institutional barriers.

Second, there is a strong probability that the functioning of markets may suffer from internal inefficiencies. The efficient operation of markets is highly dependent upon several critical factors, including the quality of information and knowledge about markets, the costs of transactions, the absence of significant external costs and benefits, and economies of scale.

Public policy and public institutions have a major role to play in dealing with both the problems of institutional barriers and the inefficient functioning of markets. It is within this context that the proposal for the Alaska Center for International Business is presented.

The mission of the Center is simple and specifically focused.

> The Center is to facilitate the development of sound business and economic relations between Alaska and Pacific-Asian nations, circumpolar regions, and other nations.

In carrying out this mission five objectives are identified.

1. To foster a better understanding of business and economic relationships between Alaska and Pacific-Asian nations and others.

2. To provide members of business and government, through instruction and training, the specific skills and techniques needed for doing business with nations in Pacific-Asia and other regions of the world.

3. To analyze the opportunities for, and constraints on business and economic relations in both the private and public sectors.

4. To carry out research on international markets and marketing designed to facilitate the development of Alaska resources and the establishment of markets for these resources.

5. To establish a central point for the acquisition, analysis, and dissemination of information specifically related to international markets and Alaska resources and economic conditions.

To achieve these objectives the Center is structured around three major components; instruction, including professional training and development, research, and public service. The emphasis within instruction is focused on two related aspects. First, an integrated set of professional training and development seminars and short courses will deal specifically with the issue of "how to do business with Pacific-Asian nations and others." A similar set of short courses and seminars will be provided for representatives of Pacific-Asian and other nations, with the focus shifted to "how to do business in Alaska." The second instructional emphasis focuses on "internationalization" of the UAA School of Business and Public Affairs curriculum. This would be accomplished in two phases. Initially, appropriate existing courses would be revised to provide more substantive international content. As the Center capabilities grow specific international business courses would be introduced into the curriculum.

The research component has as its focus applied research, aimed at two major areas. The first is international markets and marketing. The second addresses the broader question of institutional constraints and barriers and public policy solutions.

The service component is built around the establishment of a comprehensive computerized data base detailing international markets and economic conditions, and Alaska resource availability. Dissemination of data base information, coupled with research analyses and Center reports will constitute the major service effort.

The development phase of the Center envisions the creation of a one-half time director position, five full time faculty positions, and six research associate positions. By the end of the first five years it is anticipated that a substantial portion of Center activity will be self supporting. The Center will actively seek permanent endowment for two of the full time faculty positions. It is also projected that grants and contractual research will provide the majority of funding for research activity by the end of the development phase. Finally, the professional development and training instructional program would be largely on a self support basis.

In summary, we are proposing the establishment of a center to address a specific, critical need of Alaska. It is highly appropriate that the center be located within a university setting, with its unique combination of instructional, research, and public service capabilities and its abilities to blend both private and public sector support.

A PROPOSAL TO ESTABLISH THE ALASKA CENTER FOR INTERNATIONAL BUSINESS

Need

Alaska occupies a strategic position in the future of Pacific Asia's accelerated economic growth and development. Credence is given to this fact but the implications are scarcely understood. Major cultural and institutional barriers exist in the development of constructive business and economic policies and relations. Even simple matters prove to be chronic road blocks, restricting and hampering Alaska's international business in this fastest developing region of the world. By the turn of the century, forecasters project that the major center of business activity will shift from Europe and even possibly the U. S. North Atlantic to Pacific Asia, mainly Japan (pop. 115 million) and to the four so-called little dragons--South Korea (pop. 40 million), Taiwan (pop. 20 million), Hong Kong, and Singapore. If the Peoples Republic of China (pop. 1.2 billion) continues its economic reforms, then another tremendous segment will be added to this vast economic region. Equally important is the economic progress of Asian, with this collective of nations already a major trading partner of the USA.

Alaska will become the important bridge between the United States and Pacific Asia because of its strategic location and vast natural resources. The task now is to construct this bridge in a sound fashion. There is also a growing interest among non-pacific-Asian nations, including circumpolar nations, in developing a closer business and economic relationship with Alaska. Toward this end, this proposal is submitted.
