The California-based Fair Housing for Children Coalition (FHCC) conducted a survey of apartment ads in newspapers. In Los

Focus

Angeles, 71 percent allowed no children of any age, and Fresno, San Diego, and San Jose showed 53 percent, 65 percent, and 70 percent respectively.

"We've dealt with people who are living with six kids in a station wagon on the Santa Monica pier, and a woman living with two kids in a tent on the beach," says FHCC executive director Dora Ashford.

FHCC also gets calls from pregnant women worried that they will lose their apartment when they have their baby.

"We had a recent case of a couple in Santa Monica who had a baby a few months ago. They got a letter from [the apartment management company] saying, 'Congratulations on your new baby -- and we would like you to find another place to live in 60 days.'"

But when FHCC lawyers took the case and pointed out that the family would not be violating any occupancy codes, and that a local ordinance forbade age discrimination, the family was allowed to stay.

The generally tight housing market is a major cause of the problem, Ms. Ashford says.

"As long as the housing crisis worsens [the discrimination problem] will, too. Families with children are in a worse position to buy their way out, as are the elderly, when housing crunches hit, so they're hurt a lot worse than other people."

Helen Blank of the Children's Defense Fund (CDF) says positive steps are being taken. The HUD study, for instance, is an example of interest in the issue on the part of the federal government.

Moreover, anti-discrimination statutes have been passed in Arizona, Connecticut, Delaware, Illinois, Massachusetts, Minnesota, New Jersey, New York, and the District of Columbia. The California Legislature is considering similar legislation.

The CDF has set up a national network of organizations concerned with discrimination against families with children. Its purpose, Ms. Blank says, is ". . . to communicate with each other about local ordinances they are working on, share strategy, and give each other mutual support."

Dr. Roistacher says increasing the number of available homes and apartments would help solve the problem. She says HUD is looking into possible roles that it can take, and also would like state and local governments to get involved with the issue.

Cover: Ads are shaded to indicate those which state in print they will not accept children--full shading means no children of any age, diagonal shading indicates a portion of the complex excludes children, "X's" indicate age restrictions such as "infants only." Section was taken from a 1973 Los Angeles newspaper survey. Follow-up phone calls to the remaining ads (unshaded) revealed an additional 50% would not accept children.

PREFACE

In 1977, the following "action item" appeared in the California Statewide Housing Plan, a publication of the California Department of Housing and Community Development:

> The Fair Housing Act and the Unruh Civil Rights Act should be amended so that they contain identical lists of the factors upon which discrimination is prohibited, and to add to those lists at least "families with children."

Statewide attention was turning to the plight of renters who are denied housing solely because they have children.

This interest prompted a state senator from Hollywood, David A. Roberti, to introduce three consecutive pieces of legislation designed to extend fair housing protections to renters with children.[1] Several local governments also passed ordinances to protect renters with children from discrimination.[2] However, during extensive public hearings on these laws it became apparent that there was little statewide or multi-city data available on the extent and effects of anti-child rental policies.

This report attempts to supply some of that information. We hope it will encourage others to examine the housing problems of families with children and to re-evaluate public and private policies that exclude children from shelter.

---

[1] SB-440, the last of these bills, was narrowly defeated in January 1980 in the California State Senate. On March 19, 1980, Sen. Roberti introduced SB-2024 which prohibits all arbitrary housing discrimination based on age. In addition to families with children, SB-2024 also protects other tenants from age discrimination, e.g., single young adults in their twenties, who may be stereotyped as "swinging singles."

[2] Ordinances have been adopted in San Francisco (1975), Berkeley (1975), Davis (1979), Santa Monica (1979), Los Angeles (1980), and the County of Santa Clara (1979).

SUMMARY

The findings of this study are as follows:

1. The percent of families with children who are renters ranged from 28 percent in San Jose, to 55 percent in San Francisco, in every case a significant percentage of all families. For the state as a whole, 30 percent of families with children are renters.

2. A sample survey of newspaper advertisements for available apartments in Los Angeles found that only 14 percent surveyed allowed children with no age restrictions, and 15 percent allowed only certain ages. Thus, 71 percent of the apartment units surveyed allowed no children of any age.

Surveys in Fresno, San Diego, and San Jose found that 53 percent, 65 percent, and 70 percent, respectively, of units surveyed would not allow children of any age.

In contrast, the same type of survey in San Francisco, which has an ordinance prohibiting "no-kids" rentals, found that only 12 percent of units surveyed banned all children.

3. In all cities except San Francisco, the child-exclusion rate was significant even among larger units. In the 4 cities where child discrimination is legal, only 17 to 32 percent of two-bedroom units, and between 24 and 45 percent of three-bedroom units accept children.

4. Exclusion of families with children is being perpetuated in newly constructed rentals. Seventy-four percent of new rental units surveyed in Los Angeles exclude children. By comparison, only 10 percent of new units surveyed in San Francisco exclude children.

5. In every city studied except San Francisco, median rents are higher for equivalent sized units that allow children as compared to those which exclude children.

6. Renter families with children are inadequately housed significantly more often than renters without children. This tendency is true in all of the cities studied as well as for the state as a whole (45 percent of renters with children are inadequately housed, compared to 32 percent of renters without children).

7. Even when income is held constant, families with children are more often inadequately housed than childless renters. Among moderate and upper income renters, the rate of inadequate housing is twice as great for families with children as for those without children.

8. In all cities studied and for the state as a whole, approximately half of all renter families with children are inadequately housed. Between 81 and 98 percent (varies by city) of very low income renters with children are inadequately housed.

9. Holding number of persons per household constant, families with children are inadequately housed more often than other renters. In all cities studied and for the state as a whole, among two-person renter households, families with children are inadequately housed nearly twice as often as families without children.

10. When family size and income are simultaneously held constant for the state as a whole, two-person middle and upper income renter households with children are inadequately housed 10 times more often than their childless counterparts.

11. In all 5 cities, minority and especially female-headed families with children are renters significantly more often than non-minority or male-headed families with children, and thus are affected more severely by all renter housing problems. (It should be noted that although minorities are disproportionately affected by rental housing problems, the majority of inadequately housed renters with children are "white."[1])

12. Exclusion of renters with children from a major portion of the rental market is, in effect, excluding most minorities and women.

13. While minority renter households with children are inadequately housed to a significantly greater degree, minority renters without children do not face housing problems any more often than "white" renters of comparable income.

Similarly, female-headed renter households with children tend to

---

[1] "White" as used here means other than Black or Hispanic. It may include other minority groups which represent smaller portions of the population.

be ill-housed to a greater extent than all other renters with children, while female-headed renter households without children have a level of housing problems identical to other childless renters.

14. Renters with children are concentrated in a number of neighborhoods in each city. These concentrations correlate with concentrations of minorities and women, demonstrating that "no-children" housing tends to reinforce, if not create, segregated living patterns by age, race, and sex.

15. Since families with children make up less than a third of the renter household population, a non-discriminatory housing market would mean that in a representative building, childless renters would outnumber renters with children by at least 2 to 1, thus eliminating the undesirably high concentrations of children revealed by this study.

16. With respect to landlord concerns about decreased property values, the presence or absence of children is not a factor in determining a building's market value.

17. No empirical evidence was found to show that operating and maintenance costs are higher for buildings that allow children.

18. The presence of children in rental buildings does not affect liability or property insurance rates.

19. Building code and safety standards are identical for apartment buildings with and without children. Swimming pool fencing ordinances apply to all buildings whether or not children are in residence.

ACKNOWLEDGEMENTS

We wish to thank the Rosenberg Foundation for their concern for the welfare of children, and the following hardworking and persistent persons for assisting the project:

-- Jim Lowery and Ruth Yannatta Goldway of the Center for New Corporate Priorities, for advice and assistance on funding;

-- Melanie Lewis for indispensable help at every stage of the project;

-- Suzanne Burrall, Carole Oligario, Chester Covington, and Michael Fitzgerald for office help and survey work;

-- Volunteer surveyors in San Diego (Laura Lent, Tom Kozden, Melissa Birch, Barbara Powell, Therese Cauchon, Walter Rosenburg, Alice M. Flores, Kathy Pode, Kathy Perlis, Caryn Johnson, Rebecca Boyer, Sheryl Cook); Los Angeles (Micke; Rosado, Lorraine Farrell, Gloria Kalesn, Rena and Perry Horowitz, Lois Surnow, Sylvia Montoya); Fresno (Ute Rauscher. Barbara Belmonte, Kay Bryan, Mary Hall, Vera Zavala, Kathy Chastain, Tom Taylor); San Jose (Sheila Torres W., Angie Carrillo, Nancy Robertson, Dan Basora); and San Francisco (Mark McBride, Linda Walsh, Benilde Sarrico, Andrew Bundy);

-- Carl Elan for data analysis, and Phil Rush for survey work.

And finally, thanks to Anna, Fred, Ian, Alisa, and Skip for their patience.

"Children's issues are not 'kiddie' issues--they are issues of social justice and the wider social welfare of the nation."

--Kenneth Keniston

INTRODUCTION

This report presents the results of a 1979 study on the extent and effects of discrimination against families with children in rental housing in California. Five cities were selected for study: Fresno, Los Angeles, San Diego, San Francisco and San Jose.[1] These cities represent all areas of the state and together comprise more than 30 percent of the state's population. In addition, data for the state as a whole were extensively analyzed.

The data presented are based on analysis of U.S. census materials, local "mid-decade" censuses, local housing surveys and plans, and original survey research.

---

[1] At the time of the study, San Francisco was the only city of these 5 that prohibited housing discrimination against families with children. Los Angeles passed a similar fair housing law in 1980.

Originally this project covered 6 cities, but Redding was dropped because census and housing survey information necessary to develop the tabulations shown in the report are not available for cities of that size outside Standard Metropolitan Statistical Areas (SMSA's).

THE HOUSING SHORTAGE FOR RENTERS WITH CHILDREN

Several factors have contributed to the housing crisis facing California renters with children. Among these are: 1) low vacancy rates; 2) high cost of home ownership; 3) exclusion of families from existing rentals; and 4) exclusion of families from newly-constructed rentals.

Low Vacancy Rates

A healthy rental vacancy rate is considered to be between 5 and 6 percent. Such a rate is high enough to allow people opportunities to move and to allow for the absorption of population growth and new household formation, but is low enough to allow owners of rental property to meet their costs.

Table 1 shows vacancy rates for the State of California and the 5 target cities. The state overall has an extremely low vacancy rate, less than half the "healthy" 5 percent. The low vacancy situation in rentals has been exacerbated by the low level of new construction of rental units and by condominium conversions, which reduce the available rental stock.

In such low vacancy situations renters must compete for available units, with the result that "less desirable" tenants, such as families with children, are excluded from major portions of the market. This exclusion cuts the true vacancy rate for the excluded class to a fraction of the overall vacancy rate. In Los Angeles, for example, where the overall renter vacancy rate is 2.6%, the effective vacancy rate for families with children is less than eight-tenths of one percent.

In San Jose, where the renter vacancy rate is at a healthy level (5.4%), the effective vacancy rate for families with children is only 1.6%.

High Cost of Homeownership

An ever-increasing percentage of families with children in California are renters. To a large degree this shift toward renting is a result of the high cost of homeownership.

Table 1

VACANCY RATES

	Overall	Owner	Renter
State of California	3.2%	N.A.	N.A.
City of Fresno	1.6%	1.3%	2.0%
City of Los Angeles	2.5%	2.3%	2.6%
City of San Diego	3.9%	4.1%	3.7%
City of San Francisco	2.4%	0.4%	3.4%
City of San Jose	3.5%	2.6%	5.4%

Source: 1979 Housing Assistance Plans for the five cities
1979 California Statewide Housing Plan

According to the California Department of Housing and Community Development, in 1979 the median sales price of a single-family home in California was between $90,000 and $100,000. Few families can afford the traditional option of buying a home in which to raise a family because although the median value of a home rose by 220 percent in the past 9 years, the median income of a household rose by only 98 percent during the same period.

In another example, the SCAG[1] Regional Housing Element found that while a middle-income family ($10,000/year) in 1970 could afford to buy about half the homes in the state, in 1977 the equivalent-income family ($15,000/year) could afford less than 15 percent of those homes.

Exclusion of Families with Children from Existing Rental Units

Data Sources and Methods - To document the problem of exclusion of families with children, a survey of 5 California cities was used. The survey was conducted on two dates, approximately one month apart, in each city. Using rental listings in the major newspapers in each city, surveyors called the available rentals as if they were seeking to rent the units and asked whether children were allowed. The results were tallied by rent levels, by number of bedrooms, by whether the apartment was furnished or unfurnished, and by number of units in the building. A copy of the survey instruments are included in Appendix A. The results were used to determine child-exclusion rates and types of age restrictions.

In addition to this survey, an earlier survey of 10,000 Los Angeles rentals was used to compare rents on apartments which allow children to those which prohibit children.

Newspaper surveys have been used by a variety of agencies to determine rental rates, costs and availability. The Southern California Association of Governments, U.S. Department of Housing and Urban Development, public housing agencies and city planning departments are among the groups who have found newspaper rental listings to be an excellent source of housing market data. Furthermore, not only are newspaper advertisements

[1] Southern California Association of Governments

the most frequently used information source for active searchers, they also prove to be the most effective means for most who obtain housing.[1]

Findings - The survey conducted for this study found that children are excluded from the majority of rental units in every city studied, except San Francisco where "adults only" rentals are prohibited by local ordinance:

	Accept Children	No Children	Age Restrictions
Fresno	24%	53%	23%
Los Angeles	14%	71%	15%
San Diego	23%	65%	13%
San Francisco	86%	12%	2%
San Jose	22%	70%	8%

Thus, in all of the cities where exclusion of children is allowed, less than one-fourth of all rentals allow children of any age. Even including buildings with age restrictions, less than one-half of the units surveyed allow children.

The problem is most severe in San Jose, San Diego, and Los Angeles, where 70, 65, and 71 percent, respectively, of rentals allow no children of any age.

In contrast, the same type of survey in San Francisco, where local ordinance prohibits "no-kids" rentals, found that only about 12 percent of rentals surveyed banned all children, and only 2 percent placed age restrictions on tenant children.

The San Diego survey results are matched almost perfectly by a study performed by the San Diego Apartment Owners Association which found that only 34 percent of San Diego City rentals allow children.

---

[1] Kevin F. McCarthy, Housing Search and Mobility, The Rand Corporation, R-2451-HUD, September 1979. (Note: The Rand study suggests that illegal racial discrimination may cause some low-income searchers in racially mixed areas to depend more on friends and relatives as information sources rather than on newspapers. That theory, if true, would only apply to one survey--San Francisco's--because discrimination against children is neither illegal nor covert in the other 4 cities studied.)

Table 2 shows the same survey results tabulated by number of bedrooms in the unit. The exclusion rate remains high even in the units which by any standard should be large enough to accommodate families with children. The vast majority (about 75%) of renter families with children have only one or two children, and would therefore need a two-bedroom or smaller unit. Yet only about one-fourth of the two-bedroom units surveyed accept children without restrictions. In San Jose and Los Angeles over 70 percent of the two-bedroom rentals prohibit children of any age.

Even among three or more bedroom units, which should accommodate families, the majority of available rentals in every city studied, except San Francisco, either accepted no children or imposed age restrictions. In San Jose, Fresno, and Los Angeles, only 38, 35, and 24 percent, respectively, of three-bedroom rentals allow children.

The argument is often made that many buildings must exclude children because the available units are not appropriate for family use. The results of the survey indicate that, while the larger rentals do allow children somewhat more often than the smaller units, the exclusion rate is high even among rentals which would be considered "appropriate" for family tenancy. In this regard it is also interesting to note that in 3 of the 5 cities surveyed efficiency (or zero-bedroom) units are more likely to be available to families with children than are one-bedroom units, a situation which clearly does not support the "appropriateness" argument.

Exclusion of Families from Newly-Constructed Rentals

The argument is often made that the housing problems of families with children could be solved by simply building more rental units. While more rental construction is clearly a partial solution in that it eases pressure on the rental market, it does not appear to be the answer, or even a major component of the answer to the problem.

A survey was conducted of newly completed rentals in Los Angeles City, using building permits issued in 1977 to insure that the units involved had been completed and were occupied at the time of the survey in September 1979.

3+	12	37.5%	6	18.8%	14	43.8%	32	100.0%
Total	71	21.8%	228	69.9%	27	8.3%	326	100.0%

Source: Fair Housing Project Survey, 1979

A total of 3,148 units were surveyed, representing a sample of one-third of the rental building permits issued by Los Angeles in 1977. They include permits issued from all district offices. The findings are as follows:

Total Units Surveyed	3,148
Number converted to condominium	354
Condominiums allowing children	79 (22%)
Adults-only condominiums	275 (78%)
Number available for rent	2,794
Rentals allowing children	728 (26%)
Adults-only rentals	2,066 (74%)

Thus only about one-fourth of the new rental units in Los Angeles are available to families with children. The exclusion of families with children in the rental market is being perpetuated in new construction. New units are therefore not alleviating the problems faced by renters with children in Los Angeles.

By contrast, in San Francisco a study of 493 units revealed that only 10 percent of new units prohibited children. Also, none of the condominium conversions in San Francisco excluded children, as compared to 78 percent in Los Angeles. The findings were:

Total Units Surveyed	493
Number converted to condominiums	147
Condominiums allowing children	147 (100%)
Adults-only condominiums	0
Number available for rent	346
Rentals allowing children	311 (90%)
Adults-only rentals	35 (10%)

Clearly, San Francisco's ban on rental discrimination against children has had a positive effect on the availability of new rental units to families. A secondary effect appears to be the carry-over of nondiscriminatory policies from apartments to condominiums.

ECONOMIC IMPACT OF DISCRIMINATION AGAINST RENTERS WITH CHILDREN

Renters with children, as a class, are in the curious position of paying the price of their own exclusion. As explained by economist Claude Elias, "...the fact that families with children are arbitrarily excluded from certain units represents a limitation to their choice of units, and so to that extent, they pay the cost of that arbitrary restriction."[1]

Higher Rents

The same survey discussed earlier found that rentals which allow children tend to command a higher rent than those which exclude children.

Table 3 shows the survey results by rent category. With the exception of San Francisco where an ordinance prohibits discrimination against families with children in rental housing, the most expensive units (rents of $450 per month and over) are most likely to rent to families with children.

Table 4 shows the median rent by bedroom size for rentals which allow, exclude, or restrict children. No clear pattern is evident for units that restrict children. However, comparing units which accept children to those which absolutely exclude children, in every case except San Francisco, median rents are higher for equivalent sized units that allow children. Rents are generally between $20 and $30 more per month higher for equivalent units that allow children, with the smaller difference being in one-bedroom rentals in Fresno, where buildings which allow children had the same median rents as "no-children" buildings. The biggest difference is in three-or-more bedroom units in Los Angeles where rentals that allow children have median rents $97 higher than similar sized units which exclude children.

*unfurnished units

Source: Fair Housing Project Survey, 1979

It is noteworthy that in San Francisco, where over 85 percent of all units surveyed allow children, rents tended to be higher for buildings that prohibit children, placing the cost of illegal discrimination on those practicing discrimination rather than on the excluded class.

The findings of this survey are further supported by earlier surveys of more than 10,000 units in Los Angeles. Table 5 compares average rents for restricted vs. not-restricted buildings from that survey. Again, particularly among the larger bedroom sites, rentals which allowed children were significantly more expensive than those which did not.

Inadequate Housing Conditions

Having established that there is widespread discrimination against families with children in rental housing and that the restricted market is forcing families to pay higher rents, the study sought to examine additional effects of this discrimination. For example, if families with children could afford to pay more for housing or if the available stock, although limited, was sufficient to accommodate the need for family rental housing, then the discrimination problem could be said to have insignificant economic impacts. Consequently, the study compared inadequate housing conditions for renter families with children to those without children using federal and California state definitions of inadequate housing:

-- overpaying: paying more than 25% of gross income for rent
-- overcrowding: more than 1.01 persons per room
-- substandard: living in a unit which lacks one or more essential systems (plumbing, heating, etc.) or has a major defect or combination of defects which make the unit unsafe or unsanitary

The study found consistently that renters with children are inadequately housed more often than those without children.

Data Sources & Methods - The study of the effects of discrimination is based on analysis using the following data sources:

-- U.S. Census of Housing and Population, special cross-tabulations
-- local "mid-decade" censuses and housing surveys to update census materials in each of the 5 cities

* The average rents shown on the Table includes all sizes of apartments; but because some "singles" are not suitable for families, rents have been refigured for averages without singles: 1976 - $284; 1977 - $357; 1978 - $363; Total - $349. Even not counting singles, average rents for apartments refusing children are significantly lower than those accepting.

** A small number of listings (5 - 7%) indicate that they will accept or will consider children on an age-restricted basis, usually infants or older teenagers.

SOURCE: Brief of Amicus Curiae Fair Housing for Children Coalition, Wolfson v. Marina Point, Ltd., Los Angeles County Superior Court, September 18, 1978.

-- The Census/HUD Annual Housing Survey for San Francisco, San Diego, and Los Angeles
-- The California Statewide Housing Plan and other materials supplied by the California Department of Housing and Community Development (HCD)

Findings - For the State of California as a whole, 45% of renters with children are inadequately housed, as compared to 32% of renters without children.[1]

A similar comparison held true for each of the five cities studied. To summarize:

City	Percent of Renters Inadequately Housed	
	With Children	Without Children
State of California	45%	32%
Fresno	46%	35%
Los Angeles	49%	35%
San Diego	48%	42%
San Francisco[2]	50%	38%
San Jose	51%	41%

Holding income constant, the results are even more striking. Table 6 compares inadequate housing by income group. Low income is here defined as income below $15,000 per year (or about 80% of the statewide median); moderate income is $15,000 - $22,499 (or 80 - 120% of the statewide median); and upper income is defined as $22,500 and up. These are standard State of California definitions.

---

[1] Note that in this comparison and all subsequent comparisons of inadequate conditions the data presented are for households with two or more persons. Since single-person households do not have children, they do not provide a valid comparison to households with children, and therefore were excluded from the analysis.

[2] Please note that statistics on inadequate housing for San Francisco are not current enough to reflect any changes caused by the local anti-discrimination ordinance, and in any case the ordinance has not been in effect long enough to affect the overall living patterns in that city as reflected in this analysis.

* Less than 1%.

As Table 6 shows, the majority of low income renters in California face some housing inadequacies. However, it is consistently found that all income renters with children are more often inadequately housed than those without children.

Among moderate and upper income renters who should be able to function adequately in the housing market, a substantial percentage of families with children continue to be inadequately housed, while less than half as great a percentage of renters without children face these problems. In three of the 5 cities, Los Angeles, San Jose and San Francisco, more than 20 percent of moderate income renters with children are inadequately housed. Even for upper incomes, for the state as a whole and for three of the 5 cities surveyed, more than 12 percent are inadequately housed. This compares to between 2 and 5 percent of renters without children.

It is evident, therefore, that insufficient rentals are available to families with children at all incomes, and that even those families who, by virtue of their income, could be expected to be able to obtain decent housing at affordable rents, are forced to overpay or overcrowd in order to be housed.

Table 7 details the findings by income group. It shows that holding income constant, families with children are consistently more often inadequately housed than renters without children.

Inadequate housing conditions were also compared holding family size constant in order to investigate whether renters with children were overpaying and overcrowding more often than childless renters because of the greater number of people in the household. Table 8, therefore, shows inadequate housing conditions by number of persons per houshold. Consistently, renters with children are less well-housed than other renters. For the state as a whole, among two-person households, renter families with children are inadequately housed nearly <u>twice as often</u> as those without children, as shown by Table 8a:

Table 8a
SUMMARY OF STATE PERCENTAGES FROM TABLE 8

Persons per Household	Percent Inadequately Housed Renters	
	With Children	Without Children
2	65	34
3-4	37	24
5+	55	54
Total	45	32

These results are consistent among the 5 cities studied. Clearly, therefore, the greater problem faced by families with children does not result from their larger size. In this regard it is also noteworthy that two-person renter families with children are ill-housed (65% statewide) more often than large (5+ person) families with children (55% indadequately housed statewide).

Finally, Table 9 holds both income and family size constant for renters with and without children. At every income and for all areas studied, renters with children are more often inadequately housed. Again, the most striking comparison is among middle and upper income households. For the state as a whole, Table 10 shows that of two-person households with incomes above $15,000 per year, families who should, by income and family size standards, have available to them the majority of rental units, experience inadequate housing 10 times as often as the percentage of renters with no children.

With all other factors held constant, the renter with a child is, therefore, much more likely to overpay, overcrowd, or live in substandard conditions than the all-adult household.

SOCIAL AND PSYCHOLOGICAL IMPACT

In addition to economic burdens, there are other negative effects associated with housing discrimination against children. Among these are psychological damage to children, de facto discrimination against a large percentage of women and minorities,[1] and segregation by age, race, and sex.

Effect on Children

"Since every human being depends upon his cumulative experiences with others for cues as to how he should view and value himself, children who are consistently rejected understandably begin to question and doubt whether they, their family, and their group really deserve no more respect from the larger society than they receive."

--Kenneth B. Clark, Dark Ghetto: Dilemmas of Social Power, 1965

"The problems children face as public liabilities are related directly to the way our larger economic and political system operates. It is a system that is making life harder in our schools, our communities, and our families. It threatens not only our children's humanity, but the possibilities of their being able to live as citizens in a political democracy."

--Will Riggan, "Children as Social Liabilities: Working Paper #9," Childhood and Government Project, UC Berkeley, 1976

---

[1] California's Unruh Civil Rights Act and Rumford Fair Housing Act collectively protect renters from discrimination based on race, religion, national origin, ancestry, sex, marital status, and physical disability. The courts have extended these protections to unmarried couples, homosexuals, men with long hair, and persons of "unusual" political views. However, as now interpreted, it is perfectly legal under state law to refuse to rent to any person who has a child. This legal loophole is being challenged by a couple who were evicted for having a baby in an adults-only complex. Their case, Wolfson v. Marina Point, Ltd., is on appeal before the California Supreme Court.

According to sociology researcher Dr. Susan Robbins, "It is clear from these and other psychological and sociological studies that discrimination against children can result in grave damage to the essential social structures upon which society depends--the family, the socialization of the young, and the integrated social structure as a whole."

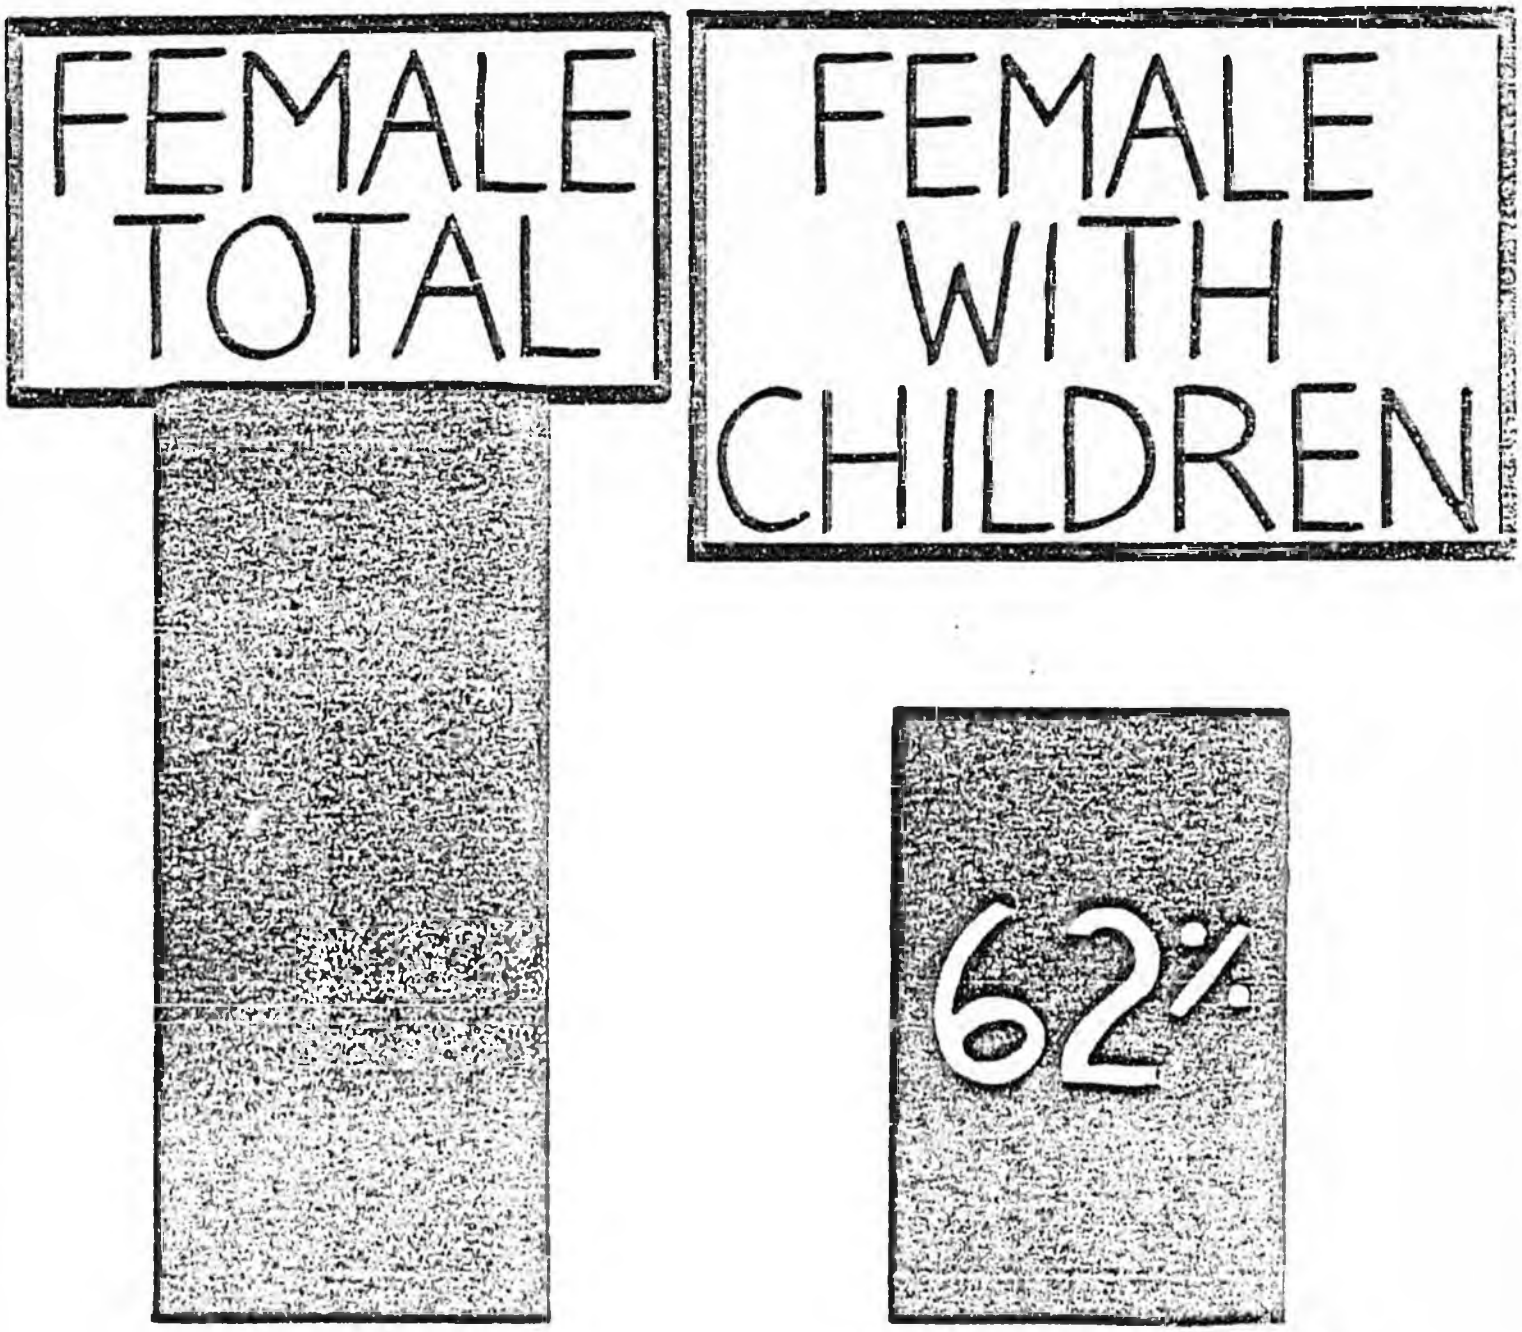
Impact on Minority and Female-Headed Households

Black, Hispanic and female-headed families with children are renters more often than "white"[1] or male-headed families with children. Consequently, they are more deeply affected by any problems related to rental housing. Charts 1-3 show that, statewide, a major percentage of minority renters (41% for Blacks, 54% for Hispanics) and female-headed renter families (62%) have children.[2]

Table 10 compares minority and female-headed households to total and "white" households with children as to the percent who are renters. So, for example, in Fresno where 36% of all families with children are renters and only 30% of "white" families with children are renters, as many as 57% of Black, 47% of Hispanic, and 72% of female-headed families with children are renters. Thus, in Fresno, Blacks with children rent nearly twice as often as "whites," and female-headed households are renters twice as often as families with children overall.

In all 5 cities, a far greater percentage of minority and female-headed families with children are renters than is true of non-minority or male-headed families.

From this data alone it is apparent that exclusion of families with children also tends to exclude minorities and female-headed families.



---

[1] "White" as used here means other than Black or Hispanic. It may include other minority groups which represent smaller portions of the population.

[2] Although each chart includes all households which fit the category description, some households fall into more than one category, e.g., some Black renter households are also female-headed. Therefore, the categories cannot be added together to obtain a grand total.

Fresno	36%	57%	47%	30%	72%
Los Angeles	49%	62%	69%	38%	73%
San Diego	41%	57%	50%	37%	65%
San Francisco	55%	65%	66%	46%	75%
San Jose	28%	47%	42%	24%	60%

Table 11 summarizes an analysis of inadequate housing conditions for minority and female-headed as compared to "white" families with children. The table shows that among all groups studied, renter families with children have worse housing than renters without children.

In addition, minority and female-headed households are consistently inadequately housed more often than "white" households with children, even holding income constant.

More importantly, while minority and female-headed renter families with children are inadequately housed to a significantly greater degree, minority renters without children do not appear to face housing problems any more often than "white" renters of similar income.

Thus, to the extent that discrimination against minorities and women exists in the California housing market, it appears to be directed at families with children. When racial and sex discrimination lead to inadequate living conditions, it appears that they are confined to families with children.

These findings further suggest that exclusion of renters with children from a major portion of the rental market is in effect excluding minorities and women. They certainly show a disproportionately large impact on minority and female-headed households even when income is taken into consideration.

Clustering/Segregation

To quote economist Claude Elias, "...the results of arbitrary exclusion will be (the) clustering (of) families with children and that would impose certain social problems, such as the need for additional schooling facilities, transportation patterns, differential traffic controls, more police protection, more recreational facilities--and these costs are borne by the general taxpayer, by society as a whole."[1] Dr. Elias concludes that clustering does not strike housing economists as an economic method for solving the housing allocation problem.

Renters with children do tend to become clustered as a result of their exclusion from the majority of the housing market. In California, families

* "White" as used here means other than Black or Hispanic. It may include other minority groups which represent smaller portions of the population.

with children comprise just over 30 percent of all renters. The availability surveys of rental ads done in 1979 by the Fair Housing Project indicate that between .6 and 35 percent of all rental buildings allow children. Consequently, virtually all renters with children must be concentrated in those buildings to the exclusion of families without children. Such buildings then become "children's ghettos."

Further, by mapping renter families with children by census tract, it was found that they are concentrated in certain areas of each of the cities studied. Maps 1-5 show these clusters. (See Appendix B)

The study also found a correlation between "children clustering" and "racial clustering." Each of the census tracts identified as having a concentration of renters with children was examined for racial composition and proportion of female-headed households. It was found that in the majority of census tracts with high concentrations of renters with children, there were also more minority families and more female-headed households than the citywide norm.

Table 12 summarizes these results. In every city studied there was a correlation between renters with children and minority households. In all but Fresno there was a correlation with female-headed households. The correlation between the isolation of children and minorities was strongest in Los Angeles (78%). The correlation between the isolation of children and female-headed households was strongest in San Jose (93%) with a very strong correlation (83%) also appearing in San Diego.

These correlations occur partly because minority and female-headed households with children tend to be renters more often than "white" male-headed families with children. However, the clustering does demonstrate that "no-children" housing tends to reinforce, if not create, segregated living patterns by age, race and sex.

Not surprisingly, a recent study found that discrimination against children intensifies racial imbalances in schools. "Both the exclusion of middle class white renters from the city and the exclusion of poor minority renters from the suburban housing markets intensify the problem of school segregation."[1] "Jurisdictions which permit discrimination

against children in the rental or sale of housing should be asked to examine its impact on school segregation and the future enrollment in their local public schools. This discrimination almost certainly produces 'white flight' of families with school children from the city and some suburbs."[1]

Finally, the adverse effects of age segregation are not limited to children and their families. A recent study of housing preferences of the elderly strongly recommended that "...alternatives should be provided that allow older persons to live in age-integrated environments if they so desire. The vast majority of the community elderly stated a preference for age-integrated surroundings, if given a choice."[2] A related manual on house-sharing explained the benefits of age-integration: "It appears that intergenerational contact, providing it is under favorable conditions, can promote more positive attitudes toward the young and greater willingness to share with them."[3]

LANDLORD CONCERNS

Concern is often expressed that the presence of children in apartment buildings may lower property values, increase operating costs, and require owners to make substantial "safety" improvements.

Research under this project found no empirical data to support these claims. In any case, the results of the survey of available rentals (see Tables 3-5) show that even if it is true that it is more expensive to rent to families with children, it is also true that rentals which allow children command higher rents.

Property Values

According to the California State Savings and Loan Commissioner and two major savings and loan institutions,[1] there is no known policy in the industry that would result in underappraisal of property because of the presence of children. In fact, the Society of Real Estate Appraisers (SREA) indicates that member appraisers do not even record whether or not buildings accept children when determining the value of a building--it simply is not an important factor.

Maintenance Costs

The following agencies were contacted in an effort to determine whether or not maintenance costs were higher in buildings which accept children as compared to those that were adults-only: Real Estate Research Council of Southern California, U.S. Department of Housing & Urban Development/Los Angeles Area Office, and the Society of Real Estate Appraisers. None of these sources was able to provide us with data on maintenance cost comparisons of buildings with and without children, nor could they refer us to any agency which had this information.

In addition to the above inquiries, questionnaires were sent to the following associations requesting information on any such studies they

---

[1] Home Federal Savings and Great Western Savings & Loan Association

might have done: 1) Apartment Association/Los Angeles-Western Cities; 2) Apartment House Association Consolidated, San Francisco; 3) Fresno Apartment Association; 4) Tri-County Apartment Association; 5) California Apartment Association; 6) San Diego Apartment & Rental Owners Association; 7) San Fernando Valley Apartment Association; 8) Foothills/Pasadena Apartment Association; 9) Affiliated Cities Apartment Association; and 10) California/Southern Cities Apartment Association. The first five associations responded, but other than a suggestion to contact individual apartment owners, none was able to supply the information requested.

A request for maintenance data was also made of a witness in a child-evictior case who testified that, "Basically, the presence of children in an apartment project tends to cause the operating cost of that project to be greater than they would otherwise be and also tend to cause the ability of the project to command premium rent from other tenants to be less than what might otherwise be."[1] No supporting data for this statement was introduced as evidence during the trial, and subsequent inquiries have also failed to produce back-up data.

Finally, a review of the available published literature regarding discrimination against children revealed only one reference to higher maintenance costs in buildings which accept children. However, that claim was based on an interview with one apartment owner and, again, no supporting data was cited.[2]

It appears that there is no empirical data which compares maintenance costs in buildings which do and do not allow children. Should this type of study be made, care should be taken to hold constant such factors as building age, location, amenities, and so forth, as these will clearly affect maintenance costs. Also, the percentage of renters with children in the sample should not exceed their percentage in the general renter population in order to avoid any distortion caused by "ghettoization."

---

[2] Dennis Shaw, Journal of Family Law, V. 16, 1977-78.

Finally, in assessing the importance of maintenance cost studies as a rationale for child-discrimination, it should be determined whether or not comparisons of this sort could be used to discriminate against other classes of renters if it were found that buildings occupied solely by these other classes had higher maintenance costs. In both cases, it can reasonably be argued that other factors are involved.

Insurance Rates

According to the California State Department of Insurance, "It has been this Department's experience...that an apartment's liability and property rates are not affected by whether or not children are residing in the apartment building. Also, we have never received a rating complaint regarding the residence of children in an apartment building."[1]

Additional information was received from the Transamerica Insurance Group, stating that although "some apartment building features do influence premiums," that was due to "the inherent hazard of such features, not the presence of children."[2] The fact that children do not raise insurance rates for apartment buildings was also confirmed by representatives for the Kemper Insurance Company and Farmer's Insurance Company, both in Los Angeles.

The findings of this study are that the insurance industry, with its enormous amounts of data on claims, does not consider the presence of children a significant factor in setting rates for apartment buildings.

Building Modifications/Safety Standards

Information was obtained from building departments in the 5 cities studied. In all cases, owners of dwellings are subject to either state or local housing codes, building codes--and their amendments--and various

[2] Letter from E. J. Cogan, Transamerica Insurance Group, December 14, 1979, to Fair Housing Project.

swimming pool codes, irrespective of whether or not children are in residence. According to a representative of the Los Angeles Building Department, if an adults-only building were inspected and found to be safe and up to code, and a child subsequently moved in, no modifications would be required.[1] One of the California legislative proposals emphasized this point by declaring that protecting families from rental discrimination shall not "be construed to require a landlord to make an improvement to a housing accomodation beyond the minimum standards established by building codes and regulations approved by a state or local agency which has the responsibility to approve building plans and designs."[2]

None of this has been interpreted as disregard for the safety of children, but rather an acknowledgement of the fact that living in an apartment instead of a house presents no special high-risk situations for children. Sadly, Los Angeles County statistics confirm this observation. In 1979, of the 35 children under 12 years of age who drowned in swimming pools, 32 (or 91%) were found in private home pools. One child was found in an apartment house pool. In other types of drownings, three children under the age of 10 died in bathtubs, one in a river, and one in a lake.[3]

It is clear that a variety of situations, including taking a bath, can be dangerous to young, unsupervised children and that parents have the ultimate responsibility for their children's safety -- whether inside or outside of a dwelling unit.

In denying a family shelter for "safety reasons" (e.g., pools, stairways, balconies, parking lots), it may be that the real safety issue is missed. As documented elsewhere in this report, many families are living in dilapidated, substandard, and overcrowded housing. These are dangerous conditions over which their parents have little control because they are deprived of choice in the housing market.

"A decent home and a suitable living environment for every American family."

--a national goal since 1949
--a state goal since 1970

CONCLUSIONS AND RECOMMENDATIONS

It is apparent from this study that the basic human need for adequate shelter is not being met for a large percentage of California's renters with children. Part of the problem is caused by an insufficient supply of units, but a significant part is caused by the arbitrary exclusion of families with children from those units which do meet their needs.

In order to lessen the burden of this housing shortage-within-a-shortage for families with children, and to encourage intergenerational housing patterns in the future, serious consideration should be given to the following actions:

1. Enactment of a statewide law, similar to those in effect in 7 other states, prohibiting housing discrimination against renters based exclusively on age, parenthood, pregnancy, or the potential or actual tenancy of a minor child.[1]

2. Adoption of local ordinances in the absence of statewide protection for renter families with children.

3. An increase in public incentives to private industry to meet the housing needs of families--especially those with 3 or more children--i.e., expansion of all federal rental programs and increases in rent limits to realistic levels.

4. Enforcement of existing regulations which prohibit discrimination against families with children in publicly financed or publicly insured housing projects.

5. Adoption of local regulations and plans that give incentives for construction of developments which offer a mix of 2 or more bedroom

---

[1] Although such protections normally cover only rentals, their expansion to owner-occupied units may be necessary to deal with the growing child-exclusion problem in the sale of condominiums, cooperatives, mobile homes, and "planned communities."

units with 0-1 bedroom units and which include amenities for all age groups.

Note: These actions deal mainly with the unavailability of housing for families with children. For a broader look at the housing problem, please see the California Statewide Housing Plan, 1979 Update, especially Section II, "Policies and Action Items," and Section III, "Farmworker Housing Plan Update." Available from the Department of Housing and Community Development, 921 Tenth Street, Sacramento, CA 95814.

6. At the federal level, serious consideration should be given to amending civil rights legislation so that it will protect families with children from housing discrimination.

STATE OF ALASKA
THE LEGISLATURE

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM April 15, 1982

SUBJECT: Discrimination in rental housing accommodations (Work Order No. 12-2776)

TO: Representative Hugh Malone

FROM: Tamara Brandt Cook
Legislative Counsel

You have asked whether a recent California case, Marina Point, Ltd. v. Wolfson, 180 Cal. Rep. 496 (California 1982), has any application under Alaska law. The case deals with the question of whether an owner of an apartment complex may refuse to rent an apartment to a family solely because the family includes a minor child. The California Supreme Court concluded that the owner could not, but two justices dissented.

Although the exclusionary policy was challenged on the basis of an impermissible infringement on state and federal constitutional rights of familial privacy and equal protection of the law as well as on the basis of statutory rights, the case was decided under the Unruh Civil Rights Act of California. The court specifically declined to reach either state or federal constitutional contentions. Marina Point, supra, page 497, page 501. The dissent noted that equal protection and due process principles place no restrictions on purely private actions, but affect only state action. Marina Point, supra, page 512.

In general, a case decided by another state court has no precedential value in Alaska. Nevertheless, had the case been decided on federal constitutional grounds the reasoning in the case could have been directly applied. The Alaska court could also have rejected the reasoning of the California court in interpreting the federal constitution. Although each state court interprets its own constitution and its own statutes, the Alaska court relies on case law from other jurisdictions to support similar conclusions.

The court could rely on the reasoning in this case, especially if the court were interpreting a statute similar to the Unruh Civil Rights Act of California. However, AS 18.80.230 and AS 18.80.240 differ considerably from the Unruh Act, so I suspect that Marina Point, supra, would be deemed to be of little value in interpreting Alaska law.

The pertinent part of the Unruh Act, Civil Code section 51 provides:

> All persons within the jurisdiction of this state are free and equal, and no matter what their sex, race, color, religion, ancestry or national origin are entitled to the full and equal accommodations, advantages, facilities, privileges or services in all business establishments of every kind whatsoever.

The phrase "all business establishments" has been held to apply to the business of renting housing accommodations. Marina Point, supra, page 501. In addition, the California court has interpreted the statute to prohibit all arbitrary discrimination by business establishments, with the particular bases of discrimination listed (sex, race, color, etc.) being illustrative rather than restrictive. In re Cox, 474 P.2d 992 (California 1970). This judicial interpretation has not been disturbed by the legislature. The court notes that the legislature is presumed to be aware of and to have acquiesced in the judicial construction when it amends a statute without altering the portions that have been construed as was done with the Unruh Act in 1974. Marina Point, supra, page 504. The court bases its holding that an owner may not refuse to rent an apartment to a family solely because the family includes a minor child on the fact that this amounts to arbitrary discrimination within the terms of the Unruh Act as judicially construed.

The pertinent Alaska statutes have not been judicially construed to forbid any arbitrary discrimination as was done in California nor have they been construed to forbid discrimination on any basis other than those specifically listed in the statute. AS 18.80.230 forbids discrimination in public accommodations on the basis of "sex, marital status, changes in marital status, pregnancy, parenthood, race, religion, color or national origin". (Emphasis added). AS 18.80.240 deals with the discrimination in the sale or rental of real

property separately from the section that deals with discrimination in public accommodations. Discrimination is forbidden on the basis of "sex, marital status, changes in marital status, pregnancy, race, religion, color or national origin". Discrimination in public accommodations and discrimination in rental of property are treated the same under the Unruh Act, while discrimination in these two areas are treated differently in Alaska. In fact, AS 18.80.250(1) and (2) specifically authorizes discrimination in the rental of housing as between married and single people. It would be difficult for the court in Alaska to conclude, as the court in California concluded, that the legislature intended to forbid all arbitrary discrimination with respect to the rental of housing. The fact that "parenthood" is included in the list of protected classes for purposes of public accommodations and excluded from the list for purposes of rental housing suggests the opposite, that the legislature intended to forbid discrimination in the rental of housing only on the basis of specifically listed factors.

In conclusion, since the decision in Marina Point, supra, is based on a statutory scheme that differs markedly from the statutory scheme in Alaka, it will have no direct affect on Alaska law.

Charlie Bussell, Chairman
Judiciary Committee
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Chairman Bussell:

Re: House Bill 1 and 131

We would like to voice our opposition to the portion of House Bill 1 which allows 45 calendar days, rather than 30 days written notice to terminate month to month tenancy and substantial changes to rental agreements. We believe that 30 days is adequate and would not be especially good for either landlord or tenant. Most people who are renting on a month to month basis want the flexibility of being able to move within a month's time. We believe putting a longer time period on is apt to give landlords reason to require a month and a half rath r than last month's rent which would be a hardship on tenants. On the landlord's side we believe the longer time would increase problems and lost rents if you have a tenant problem. Landlords must increase rents to recoup lost revenue so in the long run the tenant is the loser.

We also oppose House Bill 131. in its entir ty. It just adds more rules and regulations. Most buildings which can adequately hold children rent to parents so it seems a waste and will only add problems. Also, landlords must know the number of tenants in an apt. and keep records which could be misconstrued as "keeping records of someone's parenthood status".

Please consider these views when the bills come before your Committee.

Sincerely,

Ken & Arlene Brovald

The drunken slaughter must halt

The years are gone but the pain, emptiness and grief remain. Haunting memories have returned. It is a nightmare I've lived through three times in thirteen years.

In what was called the worst accident in Anchorage my 17-year-old niece, one of three Anchorage East High cheerleaders, was killed by a drunken driver as she returned from a wrestling match in 1970.

In 1977, another niece was assisting a motorist on the Seward Highway when she was struck and killed, again by an impaired driver.

Two weeks ago tragedy struck again. While I have yet to learn all the details, I do know my lovely young 20-year-old nephew was obeying all traffic laws and minding his own business when his vehicle was smashed into by a participant in a drag race on Benson Blvd. Police records indicate drinking, speeding and running a red light. My nephew is now dead.

I know that nothing I can do can bring my nephew back but I feel I can and must attempt to save the lives of others like he and my two nieces.

I have questions and I want answers. Those who read this should want answers, too!

Why was there no publicity surrounding my nephew's accident? I'm aware of two other accidents involving similar circumstances the same evening. All three accidents occured sometime after a concert at the Sullivan Sports Arena. None of them received any media attention. Why?

Ironically, the following week there were public hearings regarding the sale of beer and wine at the arena. Is the city so interested in the profit of such sales that information about accidents on the night of concerts are routinely and purposefully suppressed? I would suggest the municipal fathers take another look at this issue. If we are truly attempting to rid ourselves of the menace of drunken drivers it astounds me to think our municipal government is pushing the sale of intoxicating beverages and suppressing the possible consequences. You can be assured I will be knocking on the door of the mayor and members of the assembly to see this decadence stopped.

MADD, I'll be knocking on your door too. It is time for the wanton slaughter of innocent people on our roads and highways to cease forever.

...and humane decision

News 3/10/83

These are my feelings, too Alice Blevins

Comments Regarding HB 131

OR

from a landlady of 17 years experience owning a 4-plex of three bedroom units across the street from an elementary school.

The purpose of owning rental property is to make a profit. The way to do this is to rent at a price which covers expenses plus a profit equal to what you would get if the capital were invested elsewhere plus a factor for management. In the case of the owner of one 4-plex, this management factor is usually represented by his own time and energy.

In an era when the State is being asked to provide endless social services, cultural uplift, sports palaces, indoor high school hockey rinks, senior citizen recreation centers, free abortions, birth control pills for minors without parental notification, etc., it would seem that the State would appreciate a small business person trying to provide for their own retirement.

Unless the State wishes to take over the rental housing industry-with its risks - it would do well to make the laws as clear, brief and non restrictive as possible regarding that industry.

The repeated references to parenthood in this bill are disturbing because it is not clear whether this means parenthood or children. We at Alaska Landlord and Property Managers Ass'n.of which I am on the executive board, had always thought it meant a human being who was a father or a mother. The Human Rights Commission in Anchorage seems to think it means parents with children occupying the same dwelling unit. There seems to be little or no case law on the subject.

It is immaterial to me whether a tenant has experienced parenthood or not. However, a tenant with a child between 15 months and 8 yrs. living with him is a different matter. I have found that putting tenants with such children on the upper floor disturbs the tenant below. It is primarily the sound of their running and playing over head that bothers the lower tenant. This is very real. It is much more satisfactory for all concerned to put such families on the lower level of my 4-plex. Also I am selective of the parents; do they appear to be able to control the kids in respect to others' property and their quiet enjoyment of the areas they share in common with other tenants?

I consider families with children desirable because they stay longe I am very strongly against #0131 because I would lose tenants if I had to place certain children in those upper units.

March 15, 1983

Mr. Walter Furnace
House of Representatives
Juneau, Alaska 99811

Dear Mr. Furnace,

I am writing concerning HB 131 which is up for consideration before the Labor and Commerce Committee. Let me say that I as a landlord and property owner am opposed to any legislation that will make a criminal out of me because I am compelled by law to rent, lease any of my property to anyone who may cause damage, or by their actions or life style cause problems for me. I have no quarrel with the sex, race, religion, or national origin but I do feel that because of the nature of some of my rentals I have to be able to exercise some control over to whom I rent. Some of my tenants work irregular hours and need to have quiet, this may not be possible if I were compelled to rent to tenants with children. In some instances when I do rent to tenants with children, I feel that I should have the right to determine the number of children I feel the apartment can comfortably and safely accomodate. We are becomming more aware of child abuse and I feel that over-crowded conditions contribute to this social problem.

Also, I feel that the sale and rental of property are two different ball games. As long as I own the property I have to be responsible for the condition of the property and the welfare of the other tenants. If I chhose to sell the property, and I am referring move to single family dwellings, then it becomes the property of the buyer and he is turn can do with the property as he wishes without having to concern himself with the well-being of the other tenants.

I trust you will take into consideration some of the rights of the property owners as well as the tenant when you review this bill. As a property owner, I have a much larger investment in my property than a tenant who at most may have a few hundred dollars set aside as a security deposit. In most cases the security deposit will notbegin to compensate for the damage an inconsiderate tenant can do.

Sincerely,

Ralph S. Hanson

Execution set for Monday

By CHARLES C. HILL
The Associated Press

New 1/24/83

HUNTSVILLE, Texas — Attorneys for convicted murderer Thomas Andy Barefoot, sentenced to die Tuesday by lethal injection, will ask a U.S. district judge Monday to put off the execution because they say there is new evidence in the case.

Barefoot's lawyers, who also have appealed to the Supreme Court for a stay of execution, will go before U.S. District Judge Lucius Bunton in El Paso on Monday.

Barefoot, convicted of killing a Harker Heights policeman, is scheduled to die before dawn Tuesday in the same death chamber where Charlie Brooks Jr. on Dec. 7 became the first U.S. inmate to be executed by lethal injection.

Barefoot's execution would make Texas the first state to put to death more than one prisoner since the Supreme Court reinstated the death sentence in 1976.

Barefoot, 37, maintains he is innocent and said that if the state kills him, it would be committing the "most premeditated of murders."

His latest appeals came after the 5th U.S. Circuit Court of Appeals on Thursday rejected defense lawyers' contentions that a stay should be granted on grounds that two psychiatrists' testimony should not have been allowed and that a witness now says she lied when she said a man she saw near the time of the shooting resembled Barefoot.

The former oilfield roughneck was convicted of capital murder in the death of policeman Carl Levin, 31, on Aug. 7, 1978, in Harker Heights, a central Texas town.

Prosecutors said Barefoot shot Levin while being questioned about a nightclub fire. They said Barefoot feared the officer would discover Barefoot was a fugitive, wanted in New Mexico on charges that he raped a 3-year-old girl and escaped from jail.

midnight, the prison warden would give the condemned man a chance to say his last words. Then the warden would give word to start the execution.

The executioner, who be hidden behind a locked door and a wall with a one-way mirror, would inject the intravenous solution by means of a tube snaking through the wall to the inmate. Death should come within minutes. Two other drugs are also injected to assure death.

Brooks, convicted of murdering an auto mechanic in Fort Worth, was the first Texas inmate executed since 1964.

He previously had served a year in in prison for cocaine possession in Louisiana and another year for possession of a sawed-off shotgun in Oklahoma.

Prison officials say that if his appeals fail, Barefoot would be executed at The Walls prison in the same manner as Brooks:

About 11:30 p.m. Monday, two needles would be inserted into his arms and connected to neutral intravenous solutions. A few minutes after

Ignore liberals; fry the murderers

Reinstatement of the death penalty is long overdue. The bleeding heart liberals would have you believe these murders were altar boys on holiday. I say fry the creeps.

Capital punishment views sought

To the editor:

I am writing this in hopes that thinking people will become aware of House Bill 140, which as of this writing was awaiting a hearing in the House Judiciary Committee. This bill, if passed, would authorize capital punishment for certain offenses within the state.

With this bill, we seem to once again put aside the information gathered on the subject and resort to the ancient eye-for-an-eye and tooth-for-a-tooth philosophy. Admittedly, our justice system needs a radical overhaul, but the short-term solution of killing people for killing people makes little sense to me. Many of the people who call themselves "experts" on criminology have basically come to similar conclusions, namely, the death penalty does not stop the kind of crimes it is designed to, but tends to show a lower stage of development for the societies which use it.

I'd like to again call on all those thinking people who feel other solutions should be sought in place of state-sanctioned killing, to write to our representatives on this bill. I'd like to especially appeal to my friends in the pro-life movement and hope that their desire for consistency will compel them to speak out on this issue.

Greg Stevens
Juneau

LETTERS TO THE EDITOR are the readers' opportunity to speak out on any legitimate or timely topic. Letters should be typed or neatly handwritten. Brevity is desireable. Anonymous letters will not be published, and the editor reserves the right to edit as necessary. Letter writers should include their address and phone number for the editor's reference.

Death penalty debate

News 2-15-83

Legislators and onlookers in the Alaska Senate got a rueful chuckle out of committee referrals made by Senate President Jalmar Kerttula for a death penalty bill introduced last week. Sen. Kerttula sent the bill to both the Judiciary and Finance committees, noting that "it costs money" when the latter assignment drew guffaws. Sen. Joe Josephson, who chairs the Senate Health and Social Services Committee occasioned further chuckles with his observation that the bill "has certain health implications as well."

The laughter no doubt served to break the tension surrounding a very serious matter for all concerned. But committee referrals to at least two different panels indicate that the Senate will give the idea plenty of scrutiny before moving on any death penalty bill this session. And that scrutiny suggests a further consideration for chairmen planning committee hearings: the need for broad public participation in any decision to embrace the death penalty in our state.

The death penalty implicates every citizen in a cycle of violence the state seeks to stop. Before any death penalty bill can advance to a vote of the legislature, it must bear widespread scrutiny and debate among all Alaskans. Public hearings must be held around the state; reputable research about the death penalty and its impacts must be widely distributed and debated; the methods and circumstances of imposing capital punishment must be carefully defined; and, finally, Alaska citizens and their leaders must forthrightly confront the moral dimensions of a painful issue. Such scrutiny would be difficult at best, but it is the very least demanded of a democratic state that would adopt the authority to impose a penalty of death.

News - 2-8-83 — *Bennett E. Taber*

Death penalty instills respect

Your Jan. 30 editorial opposing the death penalty begs reply. Illegal executions is very much in force and has been. All victims of illegal execution (murder) are innocent. This overwhelms the concerns that the state might mistakenly condemn the wrong person.

No proponent I know of wants revenge. We want that potentially violent minority we live with to have respect for society and its laws. In place of respect there is arrogance and contempt. I've seen guns waved and murder threats casually performed.

Sometime in the future, social evolution will take us to that plateau of civilization where we no longer need state executions. How could you state that the victim's pain is acknowledged and properly mourned. Very untrue! No one can imagine the Hitchcock nightmare of a fear-ravaged poor soul fending off repeated strikes of a sharp knife. Or the silent struggle of a woman, her neck in the strong grip of the strangler.

Please print this as soon as possible so it will work as a reply to your editorial.

Pestinger proposes death penalty

by Bill White
Times Juneau Bureau

Juneau — A bill to resurrect the death penalty in Alaska after a 28-year absense from the state's law books was introduced today by freshman Rep. Sam Pestinger.

The bill would allow a judge to sentence to death some criminals convicted of first degree murder. The method of execution would be decided by the state agency in charge.

"During my campaign, there was strong voter support throughout our district for a carefully reasoned law that would permit capital punishment," said Pestinger, R-Anchorage.

"I believe this is such a law."

Sen. Fritz Pettyjohn, R-Anchorage, is working on a similar bill for introduction in the Senate.

The death penalty was abolished in Alaska in 1957. Co-sponsor of that bill was Sen. Vic Fischer, D-Anchorage, then a member of the territorial legislature.

"It's anti-Christ," Fischer said Thursday of Pestinger's proposal.

"As punishment it violates the commandments," he said, citing the one that states, "Thou shalt not kill."

"And it violates the (state) constitution," he added, citing the section that says, "Penal administration shall be based on the principle of reformation and upon the need for protecting the public."

Alaska executed nine criminals before the death penalty was abolished. The last to die was Eugene La Moore, who was hanged in 1950 at the Juneau federal jail for the murder and robbery of a local grocer.

Pestinger's bill calls for the jury to advise the judge on whether to sentence a first degree murderer to death or life in prison. The judge would need to find one of seven "aggravating factors" to exist before imposing the death sentence. They include:

- The defendant tortured or committed aggravated battery on the victim.
- The defendant was a paid assassin.
- The defendant murdered a police officer, fire fighter, prison guard or prosecutor.
- The defendant belonged to a gang or terrorist group of at least five members, and the murder was committed to further the group's criminal goals.

Pestinger said the jury's advice — which may be ignored — and the aggravating circumstances provide needed checks on the judge's sentence.

"When you're talking about taking a man's life, then you need a lot of checks and balances," he said.

Pettyjohn said his bill proposes one main difference. The jury, not the judge, would impose sentence after a separate hearing on the sentence.

Gov. Bill Sheffield said during his election campaign he supports capital punishment. But he refused to comment on Pestinger's bill without reading it, then reviewing it with Cabinet members, the legislature and the public.

Supreme Court blocks killer's execution

Associated Press Time 1/20/83

Huntsville, Texas — Less than a day before convicted police killer Thomas Andy Barefoot was to be put to death, his execution was blocked by the U.S. Supreme Court.

In a surprise move, the court in Washington scheduled a hearing on Barefoot's case April 26 and told Texas authorities to keep him alive at least until they use his case to decide how federal courts should handle emergency death penalty appeals.

Barefoot had been waiting today in a 7 foot by 9-foot cell a few feet from the death chamber in The Walls prison in downtown Huntsville. He was transferred to The Walls today from death row at the Ellis Unit, about 13 miles northeast of Huntsville, prison spokesman Rick Hartley said.

Barefoot, 37, was convicted of killing a Harker Heights policeman in 1978. He insists he is innocent and that his execution by lethal injection would be "the most premeditated of murders."

Barefoot shot police officer Carl Levin, 31, on Aug. 7, 1978, while being questioned about a nightclub fire. Officials said Barefoot feared Levin would learn he was wanted in New Mexico on charges that he raped a 3-year-old girl and escaped from jail.

The 5th U.S. Circuit Court of Appeals on Thursday rejected a motion to stay the execution.

The defense in the appeal argued that a trial witness has admitted lying when she said she saw a man resembling Barefoot around the time of the slaying, and it said that testimony was improperly allowed.

Six states have executed one man each since the Supreme Court approved reinstatement of capital punishment.

The execution of Charlie Brooks Jr. on Dec. 7 in Texas was the most recent and was the first time an execution was carried out by lethal injection.

Barefoot has twice served one-year prison terms, in Louisiana for cocaine possession and in Oklahoma for possession of a sawed-off shotgun.

court report

Child molesting trial opens

A jury of three women and nine men on Tuesday listened to the prosecution's opening statement in the sexual molestation trial of Gillie Jacko, 77. Jacko, of Pedro Bay, is charged with molesting five elementary school-aged girls during the past few years. In her opening statement, Assistant District Attorney Betsy Sheley told the jury that the girls themselves, their confidants and public officials would testify during the trial this week. Defense lawyer Dan Hensley will make an opening statement after Sheley presents her case. There are 45 felony child molesting cases currently open in Anchorage, according to Sheley.

Change of venue granted

The trial of an accused escapee was moved to Palmer Tuesday. Thomas Nelson, 31, allegedly climbed the Palmer Jail fence and escaped late Sept. 30. He was caught walking toward Glennallen at at Mile 131.5 of the Glenn Highway, according to court papers. Nelson is serving time for selling stolen outboard motors. Nelson apparently boycotted his scheduled trial Tuesday, remaining at Sixth Avenue Jail until a talk with his lawyer convinced him to show up. Then defense lawyer Jonathon Katcher moved to move the trial to Palmer, largely for the convenience of witnesses. Judge Karl Johnstone consented to the Palmer jury.

JUNEAU EMPIRE

WILLIAM S. MORRIS III
PRESIDENT and PUBLISHER

JEFFREY A. WILSON
GENERAL MANAGER

CARL SAMPSON, Managing Editor
FRED HOWARD, Circulation Manager
TOM BLUMENSHINE, Production Manager

We favor the death penalty

Eight people are shot to death and then se afire aboard a fishing boat anchored near Craig.

Six McCarthy residents are gunned down i cold blood.

Four Anchorage teen-agers are chased dow and shot to death as they walk through a park.

Two elderly Juneau residents are bound, stal bed 60 times until they die and then sexuall assaulted.

Listed above are multiple murders that ha pened in our state during the last year. These a not just crimes; they are outrages against societ The grief they have caused cannot be measured prison sentences; it is not enough just to tal those criminals off the streets.

For crimes so shocking, so hateful, we belie the death penalty should be imposed.

The death penalty cannot be debated witho emotion.

In arguing against it, many people believe a "civilized society" should never take a life. They argue the "eye for an eye" tenet should never be applied, and that the sentence is not a deterrent.

In the vast majority of cases, those arguments stand up. A person who acts in a moment of passion, even if he kills another person, should be given the benefit of the doubt and no death penalty should be allowed.

In the some cases, though, the criminal has suspended the rules of humanity.

Multiple murders — when a person kills one person and then keeps on killing — do not qualify the criminal for the compassion of society.

Neither do planned murders.

Neither does the killing of a law officer.

A death sentence should be imposed only after all possible avenues of appeal are pursued, and there exists no shadow of a doubt that the criminal's rights have been protected and that he or she is guilty as charged.

The Alaska Legislature is reviewing proposals to reinstate the death penalty. We urge its members to adopt such a proposal, as long as it guarantees that all appeals may be pursued.

We do not take joy in advocating such a position. In fact, sometimes it hurts to advocate what we believe is the right thing. But it hurts us not nearly as much as it hurts the friends and families of victims of such horrible crimes and the society that allows such criminals to live.

Call for the death penalty

NEWS 1/12/83

Three murders in Anchorage the last week of 1982 prompt me to urge Gov. Sheffield to deliver on his promise to enact the death penalty as soon as possible.

I'm keenly interested because the lives of 1983 murder victims are at stake. I want to save some of them.

— Harold Hermann

Capital punishment

TIMES 2-26-83

Dear Editor:

So called enlightened experts on criminology may have come to conclusions about the death penalty not stopping the crimes it is supposed to. But us poor, uneducated and unenlightened non-experts are getting fed up to the eyeballs with your garbage and the continued killing by your "rehabilitated" criminals who roam the streets making it unsafe to go out of one's own house.

I refer to several incidents in this community such as the high school girl killed at Eastertime two or three years ago, the woman and her son who were killed about one and a half years ago and the most recent one at Russian Jack Springs Park less than one year ago, when four teen-agers died.

We have had enough. The death penalty may not deter killing in some people's point of view. But I'll tell you what: It sure as shooting eliminates second offenders. It's about time more people became aware of this — politicians and bureaucrats included.

Re: HB 140

Dear Mr. Bussell:

Although other Western nations have largely abolished the death penalty; and after a decade-long moratorium on this ancient form of social vengeance, there now seems to be growing pressure to return it here in Alaska.

It is my hope that this pressure will be resisted and that HB 140 (seeking to reinstate the death penalty in Alaska) will not be supported.

The General Conference of The United Methodist Church has long opposed the death penalty. It is based on the "lex tallionis" which Jesus repudiated (see Matthew 5:38-39). "Gregg V. Georgia", although permitting the use of the death penalty as retribution, conceded the lack of evidence presented to the Supreme Court that it reduced violent crime.

Perhaps the most persuasive case against the death penalty is its history of falling unfairly and unequally upon outcast minorities.

For your information, I quote from the current Book of Discipline of The United Methodist Church:

> "We support governmental measures designed to reduce and eliminate crime, consistent with respect for the basic freedom of persons. We reject all misuse of these necessary mechanisms, including their use for the purpose of persecuting or intimidating those whose race, appearance, life style, economic condition, or beliefs differ from those in authority, and we reject all careless, callous, or discriminatory enforcement of law...In the love of Christ who came to save those who are lost and vulnerable, we urge the creation of genuinely new systems of rehabilitation that will restore, preserve, and nurture the humanity of the imprisoned. FOR THE SAME REASON, WE OPPOSE CAPITAL PUNISHMENT AND URGE ITS ELIMINATION FROM ALL CRIMINAL CODES." (Emphasis mine.)

Thank you for taking time to read this letter. I hope you will do whatever you can to prevent a backward step from bein taken in Alaska with regard to the death penalty.

Sincerely,

Richard K. Heacock, Jr.

Anchorage, Alaska 99503

Dear Mr. Jones:

As you well know, I agree totally with you in regards to the issue of capital punishment in Alaska.

We need to figure a way to get it through the Legislature which as you know contains just enough liberals to break such legislation. In an attempt to circumvent that problem I put out a ballot proposition. I know the results will heavily favor instituting capital punishment for certain crimes in Alaska.

Armed with these results maybe we can lend some backbone to enough of the spineless ones to get the legislation through.

Thanks for the support and I hope we are out of here in a few days.

Best regards,

Representative Charlie Bussell

Anchorage AK

The Honorable Charlie Bussell Apr 23, 1983

Dear Sir,

I wish to express my support for Capitol punishment now being proposed.

To say it is not a deterrent goes against human nature. I think it would be a deterrent in many cases.

I am enclosing an article from Newsweek (May 24, 1982) This lists just a few examples. Of course we have our own cases of Meach and Hastings among many others who have wantonly murdered their victims.

Think of the recent case of three teenagers who murdered a helpless old lady for her car and a small amount of money. Can anyone say they would not have been deterred by the threat of a death penalty?

No one likes Capitol punishment. But we must think of the victims of murder, and perhaps more importantly, the tradegy for the loved ones they leave behind.

Sincerely,

W. C. Jones

The Value of Punishment

GEORGE F. WILL

Last February Jimmy Lee Smith walked out of Soledad Prison. His partner in murder nineteen years ago, Gregory Powell, is scheduled for release from another California institution June 18. These and other parole cases, including Sirhan Sirhan's, have stirred proper fury.

On March 9, 1963, Ian Campbell and Carl Hettinger, young Los Angeles policemen, stopped a car that had made a suspicious U-turn. The occupants, Powell and Smith, pulled guns, disarmed the officers, drove to an onion field near Bakersfield and murdered Campbell. Hettinger escaped. The day Campbell was buried, a kidnapper and rapist named Miranda was arrested. Miranda's case generated one of the Warren Court expansions of defendants' rights. It became the basis of one of the blizzard of motions that caused the Powell-Smith case to consume almost seven years and fill 159 volumes—45,000 pages. The harrowing story is in Joseph Wambaugh's superb book (and movie) "The Onion Field."

Smith and Powell were sentenced to death. Retried, Smith was sentenced to life, Powell to death again. In 1972 California's capital-punishment law was declared unconstitutional, sparing Powell and 101 others, including Sirhan, who now says he should be paroled because his victim, Robert Kennedy, were he alive, would agree that he, Sirhan, has suffered enough.

Crime: It is grotesque for Sirhan to put words into the mouth of the man he silenced. And it is grotesque that in 1975—just seven years after his crime—the parole board set a 1986 release date, now moved up to Sept. 1, 1984. The board acted without knowledge of two letters he has written threatening to kill three people. To his lawyer he wrote concerning an author: "Hey Punk . . . if he [the author] gets his brains splattered—he will have asked for it like Robert Kennedy did . . . neither of you is beyond my reach." These threats may be a sufficient reason, but are not the best reason, for denying him parole. The best reason is that fifteen years in jail is not a punishment that fits his crime.

Sirhan has mastered the buzzwords of the playacting that is a normal part of parole processes. He promises to work "to improve the quality of life" if he gets the parole that he says is dictated by "equal treatment under the laws." Actually, the parole board has treated him as it does other murderers. But he did not just murder a man, he assaulted and maimed the democratic system that so many have died defending.

Punishment always involves a judgment of proportionateness. Of the 102 men who in 1972 were sentenced to die in San Quentin's apple-green gas chamber, 29 have been paroled and 25 have release dates. Steve Grogan, 30, was convicted with Charles Manson (another man saved in 1972). A witness to Grogan's crime quoted him saying: "So I had this big machete and I chopped his head off and it went bloop, bloop and rolled out of the way." Grogan has a 1987 release date. Another murderer, who was paroled after 1972, committed a second murder and is back on death row under a new capital-punishment law. Of the 2,173 men serving life sentences for murder in California, only two have been in prison more than twenty years. Increasingly, a life sentence is seen as a fraud that mocks the dead and jeopardizes the living by trivializing the crime of murder and diluting the indignation society needs for self-defense.

It is grotesque for Sirhan to put words into the mouth of the man he silenced.

William Fain, 36, has twice had his parole from San Quentin blocked by public pressure. In 1967 he flagged a passing car, shotgunned a 17-year-old student and raped two young women. The murder victim's family has gathered 62,500 signatures protesting parole. A court has held that "awareness of the public hostility" is a legitimate reason for denying parole.

It may be unfortunate that parole decisions have become political issues. And it may be unconstitutional for them to be influenced by mass pressure tactics. However, a legitimate function of the political process is to serve as a safety valve when judges or bureaucracies lacerate the public's sensibilities. Furthermore, law has an expressive function, expressing and thereby sustaining certain values. There also is a cathartic function of expressive state action. The Nuremberg tribunals, however problematic they were jurisprudentially, performed the vital function of civilizing the vengeance that was going to be expressed, one way or another.

Retribution: In 1952 Justice Hugo Black wrote: "Retribution is no longer the dominant objective of criminal law. Reformation and rehabilitation of offenders have become important goals of criminal jurisprudence." Today, after 30 years of rising crime and recidivism, we at least know what we do not know—how to reform and rehabilitate. In 1972 Justice Thurgood Marshall wrote that "punishment for the sake of retribution is not permissible under the Eighth Amendment." That is absurd. The element of retribution—vengeance, if you will—does not make punishment cruel and unusual, it makes punishment intelligible. It distinguishes punishment from therapy. Rehabilitation may be an ancillary result of punishment, but we punish to serve justice, by giving people what they deserve.

From plea bargaining through sentencing through paroling, the criminal-justice system is riddled with exercises of discretion that are unjustified by sufficient knowledge, and unrationalized by coherent theories. This is especially true at the parole stage, where judgments often presuppose—rashly—knowledge of rehabilitation and individual predictability.

In penology, as in other fields of social reform, the millennium has been indefinitely postponed. For now, we should do what we know how to do, for reasons we can explicate. We should use the criminal-justice system to isolate and punish—that is, to protect society from physical danger—and to strengthen society by administering condign punishments that express and nourish, through controlled indignation, the vigor of our values. We should be ashamed and alarmed to live in a society that does not intelligently express through its institutions the public's proper sense of proportionate punishment for the likes of Smith, Powell and Sirhan. We are in danger of becoming demoralized—literally, de-moralized.

HB 140
To HE

JAN 1984

January 24, 1984

Rep. Charlie Bussell, Chair
House Judiciary Committee
Pouch V M/S 3100
Juneau, Alaska 99811

Dear Representative Bussell:

Just want to add my word of opposition to the Death Penalty concept for our life style here in Alaska.

When I compare actual societies, I would prefer one in which there is not the concept of ultimate revenge at the point of taking a life for a life.

It seems to me that we are saying "we will kill you to prove how wrong killing is". Doesn't make sense to me.

Sincerely,

John J. Shaffer

Enclosures: some statements on the subject that might be helpful to your deliberations.

Death penalty raises opposition

'Taking life diminishes each of us,' religious leaders say

(Compiled From News Releases

INDIANAPOLIS — Religious leaders here voiced opposition to capital punishment as the state scheduled the execution of convicted murderer Steven Judy earlier this month.

Protestant and Catholic leaders urged the governor to commute the death sentence to life imprisonment prior to the execution, saying that "taking another life only compounds the tragedy and diminishes each of us."

Bishop James Armstrong, the United Methodist leader of the Indianapolis area, was the spokesperson at a news conference four days before the execution along with the Rev. Harold B. Statler of the Indiana Council of Churches and Rabbi Dennis C. Sasso.

Contrary to Will of God

Concern was expressed for the convicted murderer, for the families of both the victims and Judy's foster parents, for those who carried out the execution and for "the values of a civilized society and the conviction that capital punishment is contrary to the will of God."

Their opposition was based on four reasons: "it is morally wrong to continue the cycle of killing," "capital punishment is used in a discriminatory manner," "there is no conclusive evidence that it is a deterrent to crime," and "it is irrevocable — an error cannot be undone."

The 20 district superintendents of the UMC's North and South Indiana annual conferences also requested the governor to commute the sentence.

Several hundred persons gathered for an ecumenical prayer service in St. Ann of the Dunes Catholic Church near the state prison the Sunday before and joined in a candlelight vigil outside the prison.

A statement decrying violence — that which shaped Steven Judy's life, the violence he committed in taking the lives of four innocent victims, and that executed by the state in taking his life — was prepared by Bishop James Armstrong of the Indianapolis Area and read during funeral services March 12 for the convicted murderer.

Bishop Armstrong had been asked to participate in the service by Mr. Judy's foster parents, Mr. and Mrs. Robert Carr, but he could not because of a meeting of the Methodist bishops of four denominations in Atlanta at the same time.

Bishop Armstrong's statement, which included a prayer for the victim's family, was read by the Rev. David Felton, a staff member of the Indiana Council of Churches who conducted the service at a funeral home.

"The Lord of the Christian faith, referring to a primitive law of retaliation, quoted it and said, 'It was said of old, an eye for an eye and a tooth for a tooth; but I say unto you . . .'

"Only the quality of life, expressed in routines of daily life, can overcome the prevailing, spreading climate of violence," the bishop said. "As the Epistle of I John suggests: 'Love must not be a matter of words or talk; it must be genuine and show itself in action (I John 3:18 NEB).' "

The Social Principles of the United Methodist Church state the denomination's official opposition to capital punishment and urges its elimination from all criminal codes.

Public support for the death penalty, however, has reached the highest point in 28 years, with 66 percent now supporting execution for persons convicted of murder, says the latest Gallup Poll.

The poll taken Jan. 30 to Feb. 2 found that 25 percent of the American public opposed capital punishment and nine percent had no opinion.

Public support increasing

Support for capital punishment has risen steadily from a low of 42 percent in 1966. But, while a large majority now favor the death penalty for murder, only 37 percent favor it for persons convicted of rape, 39 percent for treason and 22 percent for airplane hijacking.

Four persons have been executed in the U.S. since the 1976 Supreme Court decision lifting the ban on capital punishment.

Eight women and 731 men are on death row, more than 500 in Deep South states.

A TIME TO SPEAK

Capital punishment

by Most Rev. Michael Kenny
Bishop of the Diocese of Juneau

The first time I met him two years ago, I liked him at once. He had just been named auxiliary bishop of Cleveland. At 41, he was the youngest member of the American hierarchy, and a black. He had an air of confidence about him that was in no way threatening. He was definitely a man on fire, but with a calm and without anger. And he had a warm and welcoming smile.

Since that first meeting, Bishop James Lyke has become not only a friend, but a man I greatly admire and respect. Among the bishops he has become an eloquent spokesman for the poor. Without pointing a finger or being self-righteous, he has challenged the bishops to be consistent, accountable and, above all, faithful to the Gospel. When he speaks, the bishops listen because he is serious, knowledgeable and on target.

At the conclusion of the National Conference meeting in November of 1980, Bishop Lyke took the assembly to task for spending an inordinate amount of time on items of lesser importance that came early on the agenda (e.g. the translation of a prayer for the Mass for St. Kateri Tekakwitha), and not leaving enough time for items of greater significance that came up later (e.g. a statement on capital punishment). The bishops accepted his point and the meeting in 1981 reflected a definite change.

On the capital punishment issue, Bishop Lyke had wanted to speak out in strong opposition. As a black he knew firsthand how unequally the death penalty is meted out to poor people and to minorities. But infinitely more important to him, as a Christian and as a Franciscan, he desired to proclaim how contrary to the compassion and gentleness of Jesus the execution of our brothers and sisters truly is. The bishop had wanted to say these things back in 1980, but time had run out.

Perhaps this is providential. For this month Bishop James Lyke has been given his moment to speak his mind and heart, and to tell others his reading of the Gospel. The circumstances grace his words with an eloquence, a power and a credibility that is inescapable.

On January 1, his 59-year-old brother Amos was murdered in his own home, brutally suffocated by four assailants. In the funeral homily Bishop Lyke spoke his truth.

"For those who killed my brother, we beg God's mercy and forgiveness. With St. Paul, we believe deeply that we shall overcome evil with good. We listen intently to Christ's words, 'Love your enemies; pray for your persecutors.'

"While we would want some form of justice, I would not desire the death penalty. Capital punishment is inconsistent with the way and thinking of Jesus, who could have called twelve legions of angels to his defense, but instead chose to die that even his enemies might have life.

"In a very real way, we are all on trial. So much of what all of us do fosters a climate of violence in our society and feeds the systems of aggression that cheapen human life.

"When we attempt to solve family problems through physical force or vitriolic words, when we applaud the injury of others, when we view television programs or attend movies wherein violence is glorified, when we use or condone the use of drugs, when we join gangs that bring fear and terror to our neighborhoods, when we purchase 'hot' goods, when we participate in these and so many like activities, we support and feed the climate of violence and the systems of aggression."

Thank you, Jim. God comfort you and your family. God give your brother eternal life. And God bless and forgive your brother's murderers.

Former state corrections director opposes death penalty

By CHARLES F. CAMPBELL

Lately there has been quite a lot of talk on the part of candidates for public office about reinstitution of the death penalty in Alaska.

The news reports I have seen suggest to me that those advocating capital punishment legislation, in the course of their political efforts, have not taken the trouble to look into this matter except, perhaps, to read the polls which indicate that 75 percent of the people of Alaska favor the death penalty.

The fact of the matter is that for all of the controversy surrounding it, very few people appear to know what needs to be known about this unhappy subject. For example, it is assumed that, if nothing else, the death penalty would save the state money, when in fact, the data indicates that the death penalty is the most costly remedy available in the criminal justice process.

I will take time here to comment on only one of the considerations which have so thoroughly convinced me that we should continue to reject the notion of capital punishment. The most compelling of these considerations is the matter of the probable effect of executions on those who

might be predisposed to violent crime. During the eight-year moratorium following the decision in Furman v. Georgia, the U.S. Supreme Court listened to reams of testimony on the issue of deterrence and was unable to conclude tht there was a deterrent value to capital punishment.

And now we have extensive research conducted by Bowers and Pierce of Northeastern University, supported by the findings of other investigations, which indicates that executions are *more likely to incite than to deter* potential murderers.

A judgment cannot yet be made as to the validity of the various studies on the question of deterrence, except to say that the weight of the evidence at present strongly argues against use of the death penalty, if our real concern is with the matter of reducing the incidence of major violent crime.

We really should not be surprised at the findings of the Bowers-Pierce research. They tell us something that we already should have realized — that responding to violence with violence begets more violence. The state has no business sinking to the level of the behavior it has the responsbility to punish. Who is helped when the state engages in the grisly act which an execution inevitably is? Certainly not the victim or the victim's loved ones, and, as has become clearer, certainly not the potential victims of major violent crimes.

Apart from the question of deterrence, reinstitution of the death penalty would create a morass of ugly, cultural-

ly divisive, costly problems for the state, while accomplishing nothing of value.

Assuming that they are truly concerned about the best interests of the people of the state, I would strongly urge Mr. Fink and others running for political office, who have chosen to make use of the death penalty question in their political campaigns, to study this serious matter more carefully before talking about it further.

☐ Charles F. Campbell is former director of the Alaska Division of Corrections.

Capital Punishment

From Bishop Jack Tuell

Oregonians face a number of moral issues in the balloting this November, but one that is as clear cut as any is Ballot Measure 8, which would restore the death penalty in certain cases. The United Methodist Church has taken a strong position on the subject: "We oppose capital punishment and urge its elimination from all criminal codes." (Discipline, Page 100.)

I agree with all of my heart that the death penalty is wrong and urge Oregonians to vote "no" on Ballot Measure 8. A brief summary of reasons:

Non-deterrence: The most common argument for imposing the death penalty is that it will deter crime. That is a lie. No reputable study bears out the contention that it will deter crime. Many studies show it to be irrelevant.

Irreversibility: No sentence can be more final than death. Yet frequently new evidence arises in murder cases and a person who has served ten years in prison is found to be innocent and is freed. What if that person were dead, killed by us? A Christian faith that teaches hope and reverence for life cannot condone such action.

Barbarousness: The death penalty is barbarous. "It is a killing done with extensive premeditation, with the long foreknowledge of the victim, with great ceremony, under cover of law and with widespread public approval." (Henry Schwartzchild) Furthermore, we do this act of barbarity, as the State acts in our names. How can a Christian participate in such slaughter?

Unfairness: It is a well-established fact that the people who end up on death row are the poor or the non-white. Of 3,859 people executed in the United States between 1930 and 1968, 53.5% were black. How often has a well-to-do white person accused of murder ended up being executed? And in one of the few situations in the world which may be discriminatory agninst men, over 99% of those 3,859 executed were men.

Those who favor the death penalty often accuse those who oppose it as caring more for criminals than for their victims. Nothing could be further from the truth! But as someone has asked, "Why do we kill people who kill people to prove that killing is wrong?"

Oregon has gained a reputation over the years as a humane and forward looking State. Let us not take this giant step backwards at the November elections.

Faithfully yours,
Jack M. Tuell

PORTLAND PASTOR HONORED

The Reverend Mr. Peter Warner, Pastor of the Parkrose United Methodist Church was honored June 20 by receiving a certificate of recognition by The National Conference of Christians and Jews of Portland. The citation is "For distinguished and uncommon contributions to and dedicated concern for varied segments of our community." "For a sensitive and empathetic spirit contributing to the lowering of barriers and changing of attitudes in the community, all being in the highest traditions of National Conference of Christians and Jews and bringing to bear 'the Brotherhood of Man.' "

Rev. Peter Warner, has been an American citizen for just five years but has been a member of this conference for several years, coming here from Jamaica, where he had been a member of the British Methodist Church and missionary to Jamaica.

In the nomination of Rev. Warner for this award, Barbara Roberts, Multnomah County Commissioner gave evidence of his community service and concern as she describes the several innovative activities in which he and his church are engag Mrs. Roberts states "He is a professi counselor for Northwest Counsel Associates, chairman of the Parkr School Board, referee for both amateur professional soccer. He is the innov for an exciting new mental he program called "David's Harp'."

"David's Harp" is a socialization pro for patients being discharged from me hospitals. The concept of the program i build a bridge between hospital community, by developing self-confide and social skills in returning patie More than 150 person from congregation have volunteered t services, and so far 75 persons h been trained and are working in project that has come to be known "David's Harp."

The United Methodist expresses congratulations to Peter Warner for significant award and the spirit ministry which he performs for Parkr United Methodist Church and Portland community. The entire c ference can add its note of appreciation this member of the annual conference having received this citation.

A PART OF the United Methodist participants in the International School of Christian Mission held at Portland University are: (from left) Don Crego, Smith, Roberta Dykes, Dr. Don Struche New York, and Marji Tuell.

Marji Tuell Contributes Article

Marji Tuell, a Certified Director of Music, speaks of TREADMILLS, TRENDS, AND TREATS, in an article written by her for Music Ministry, a monthly magazine for church musicians. The article appeared in the June, 1978 issue of the paper, edited by our curriculum resources of the United Methodist Church.

Everyone in the conference knows Marji as a person dedicated to good music in the church and one who has led many persons an groups in hymnsinging workshops in churches in Oregon and Idaho. Marji also taught a hymnody class at the April Assembly of The United Methodist Women in St. Louis.

The article is worthy of your attention and reading. It would be well for all church musicians and pastors to read it and share its wisdom within the Church.

Odell Church Plans Addition

October 1, has been set for the build of a new entrance ramp to the Odell U The covered ramp will make easy acc to the basement dining room and upper sanctuary for wheel chair us The building program also calls relocation of restrooms in the church keeping with modern plans related wheel chair persons.

The total cost of the project will amo to $18,000. All of the money has co donations to the project except for $5, from the Mid-Columbia Economic velopment District Area on Aging. new ramp will help the church expand program to senior citizens in community. The Rev. Mr. Ed. Stubb Pastor of the Odell church.

Public reassurance in a civilized way

Superior Court Judge Victor Carlson admirably carried two big burdens in an Anchorage courtroom last week: protecting public safety and dealing with an angry outcry in the wake of the conviction of Charles L. Meach for the murder of four Alaska youths.

There was little doubt, once a Fairbanks jury convicted Mr. Meach of first-degree murder, that the circumstances demanded the stiffest possible sentence for one of Alaska's most brutal and vicious crimes. Charles Meach gunned down four separate victims in cold blood and without the least provocation. Eight years earlier he had killed a 22-year-old grocery clerk and been hospitalized for mental disease or defect. The public needed reassurance that he would never walk the streets again, and so it was done: Judge Carlson sentenced Mr. Meach to 396 years in prison — without chance of parole — in what was the maximum possible sentence and the longest prison term in state history.

But he did more than that. The remarkable part of Judge Carlson's sentencing comments was what he had to say about the "hue and cry for capital punishment" arising from the cold-blooded killings last spring. "I want this record to demonstrate," wrote the judge, "that capital punishment would be wrong and not in the public's interest if capital punishment was available in this case . . ."

And he listed seven concise reasons why the death penalty is inappropriate to a society pretending to call itself humane:

- Homicide on behalf of the state is inconsistent with our culture's most basic respect for human life;
- The expense of trying a capital case is large, since absolutely "no stone can be left unturned" by either side when the life of a defendant is at stake;
- The extra emotional cost to all, especially jurors, encourages acquittals when the prosecution might otherwise meet its burden of proof beyond a reasonable doubt;
- The criminal justice system is not above error, but there can be no recourse if an innocent person is put to death;
- The death penalty skews the administration of justice when defendants — acutely aware that the trial process is not infallible — plead guilty to lesser offenses to avoid the threat of a death penalty;
- Imposition of the death penalty has not been without bias. A greater than representative number of illiterates, poor, minorities and political criminals have faced the death penalty in the United States; and
- Two wrongs do not make a right. The death of a murderer is only symbolic retribution, and can never bring back the victim.

Judge Carlson was correct to impose a sentence designed to keep Charles Meach behind bars the rest of his life — and equally correct to insist that taking still another life would serve no civilized purpose.

House Bill 140
Fiscal Note Analysis
Prepared by Public Defender Agency
Department of Administration

Date: January 16, 1984

If this death penalty bill is enacted, representation of the poor in death cases must be adequate. This is due to the possibility that an innocent person might be killed by mistake. Some degree of mistake is of course a potential problem in all criminal cases. But in non-death cases, the system stands ready to correct those mistakes where they become known. An execution can never be corrected.

Due to these considerations, the processing of a death case is much more complex and expensive than other criminal cases. Not only are extraordinary amounts of attorney time and substantial expert fees necessary in the guilt phase of a trial, but the penalty phase, in which a jury determines whether or not to put a person to death, takes on tremendous significance. This penalty phase requires extensive preparation, the use of psychiatric experts and family and friends from out of state, and other necessary expenditures.

Finally, even after the death penalty has been imposed, the appeal procedures in death penalty cases are lengthy and time consuming. After guilt and penalty phases of a case, the following procedures would be routinely necessary:

(1) Appeal of conviction to the Alaska Court of Appeals.

(2) Petition for Hearing to the Alaska Supreme Court.

(3) Automatic sentence review by Alaska Supreme Court.

(4) Writ of certiorari to the United States Supreme Court.

(5) Post-conviction relief proceedings in state court.

(6) Appeal of post-conviction relief proceedings in the Court of Appeals.

(7) Petition for Hearing of post-conviction relief proceedings to the Alaska Supreme Court.

(8) Writ of certiorari to the United States Supreme Court.

(9) Petition for Writ of Habeus Corpus in the Federal District Court.

(10) Appeal to the United States Court of Appeals.

(11) Rehearing in the United States Court of Appeals.

(12) Writ of certiorari to the United States Court of Appeals.

(13) Commutation applications to executive branch.

(14) Emergency stays to the United States Supreme Court.

The figures in this fiscal note are based on the average number of cases which would have qualified under the bill as capital cases which were handled by this agency during the past two fiscal years. This agency handles approximately 30 first degree murder cases each year which would qualify as capital cases under this bill. The specific figures were arrived at as follows:

(1) Personal Services. This agency is currently 13 attorneys short of the LEAA standards for the maximum number of cases to be handled by an attorney to ensure competent representation when no death penalty cases are involved. Death penalty cases take substantially more attorney time than other cases. For example, the Florida Legislature has adopted standards which permit an attorney to handle no more than eight death penalty trial cases per year, or five death penalty appeal cases per year. For comparison, the LEAA figures are 150 non-death felonies or 25 appeals a year. Some states have applied far more stringent standards. For example, the California state appellate defender permits attorneys to handle only two death penalty appeals per year. Given the fact that the attorneys who handle death penalty cases will have to be given drastic caseload relief, their extra cases will be loaded onto the caseloads of attorneys whose caseloads already exceed recommended maximums. Thus, at a minimum, this agency must be brought close to the nationally recommended number of attorneys required to handle the caseload as it exists without the death penalty. This necessitates the addition of twelve additional attorneys, plus necessary investigation and clerical support staff.

(2) Travel and Contractual Fees. The New York State Defender Association has estimated that a minimum figure for expert witness fees must be $30,000 for the guilt phase and $30,000 for thepenalty phase per case. Thus, the contractual and travel costs for expert witnesses has been calculated at $60,000 per case. This figure does not include any expert fees which might be necessary at the appellate stages. The amount of contractual fees estimated in this fiscal note is substantially less than that amount estimated by the New York Defender Association.

(3) Equipment and Supplies. Other costs include expanded office space for additional personnel as well as equipment and supply money for additional personnel.

House Bill 140
Fiscal Note Analysis
Prepared by Public Defender Agency
Department of Administration

Date: January 16, 1984

The above costs do not take into account contingencies such as reversals and retrials after appeal, travel to Seattle and Washington, D.C. to argue before the Ninth Circuit Court of Appeals and the United States Supreme Court and other costs which at this time are difficult to predict. However, the cost of defending a capital case is tremendous given the unique nature of the death penalty, and without adequate representation a conviction will not withstand appellate challenge.

STATE OF ALASKA
THE LEGISLATURE

POUCH Y STATE CAPITOL
JUNEAU ALASKA 99811
907 465-3800

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM January 17, 1984

SUBJECT: Sectional analysis of HB 140

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee

FROM: Edward H. Hein
Legislative Counsel

Section 1 makes first degree murder a capital felony.

Section 2 provides that a person convicted of a capital felony is subject to a mandatory sentence of 20 - 99 years' imprisonment or death.

Section 3 adds a new section, AS 12.55.115, to the statutes. Subsection (a) allows an automatic appeal to the Alaska Supreme Court of a death sentence for a period of 60 days after the sentence is handed down. The court may extend the time limit. Such an appeal must be given first priority by the court and the court may adopt special rules for hearing such an appeal. The court is required to make three determinations:

(1) was the sentencing influenced by passion, prejudice or arbitrariness?;

(2) was the finding of an aggravating factor supported by the evidence?; and

(3) is the death penalty imposed in similar cases?

Under subsection (b), if the Alaska Supreme Court upholds the death sentence, the trial court is required to specify the time, place and manner of execution.

Section 4 adds five new sections to the statutes:

(1) AS 12.55.177 establishes a procedure for the sentencing of a person convicted of a capital felony. Under subsection (a), sentencing is a separate proceeding following the trial or guilty plea. The proceeding is conducted before the trial jury or, if there was no jury trial, before a specially impaneled jury. Under subsection (b), the state and the defendant may present any relevant evidence concerning aggravating and mitigating factors, so long as the evidence was not obtained in violation of the state or federal constitution and so long as the defendant has the opportunity to rebut hearsay statements.

It is not clear whether subsection (b) is intended to disallow invocation of evidentiary privileges in a sentencing proceeding. The rules relating to evidentiary privileges are the only rules of evidence which are specifically made applicable to sentencing proceedings by Rule 101 of the Alaska Rules of Evidence. In light of the requirements of the Alaska Constitution and of Uniform Rule 39(c) that bills must note any changes being made to court rules, it would be prudent to clarify the legislative intent of subsection (b).

(2) AS 12.55.178 requires the sentencing jury to produce an advisory sentence for the court. The jury must decide three questions:

(A) did aggravating factors exist that justify a death sentence?;

(B) were there mitigating factors involved that outweigh the aggravating factors?; and

(C) should the sentence be a term of imprisonment or death?

(3) AS 12.55.179 requires the sentencing court to consider the evidence and the jury's advisory sentence and to enter a sentence. Subsection (a) provides that if a death sentence is imposed, the court must state in writing the aggravating

factors that exist to justify the sentence and any mitigating factors considered by the court. Subsection (b) restates the fact that a death sentence may be automatically appealed to the Alaska Supreme Court under AS 12.55.115.

(4) AS 12.55.180 lists seven aggravating factors, any one of which could justify imposition of a death sentence if not outweighed by mitigating factors. The aggravating factors are:

(A) committing torture or aggravated battery amounting to deliberate cruelty during the crime;

(B) creating a risk of imminent physical harm to three or more persons;

(C) having a prior conviction of a violent felony;

(D) committing the crime under contract or for money;

(E) committing the crime while on release for another felony charge or for a conviction involving assault as a necessary element;

(F) the victim was a judge, prosecuting attorney, police officer, correctional employee or fireman and the crime was committed during or because of the victim's exercise of official duties; and

(G) the crime resulted from a conspiracy of five or more persons.

(5) AS 12.55.181 lists four mitigating factors:

(A) the defendant committed the crime under duress, coercion, threat or compulsion;

(B) the defendant was young and was influenced to commit the crime by a more mature person;

(C) the defendant acted in response to serious provocation by the victim; and

(D) the defendant helped authorities detect or apprehend others involved in the crime.

At page 4, line 12, the bill states that all mitigating factors, including the four that are listed, must be considered. Thus, a defendant is entitled to raise anything that could be construed as a mitigating factor, even if it is not listed. This statute, however, does not specify who must consider the mitigating factors. Is it the court, the jury, or both? Likewise, this statute does not say whose judgment controls on the question of whether the mitigating factors outweigh any aggravating factors that exist. Under AS 12.55.178(2), the sentencing jury would be required to balance mitigating factors against aggravating factors. But the jury's findings are only advisory. It is not clear, under AS 12.55.181, whether a finding by the jury that the mitigating factors outweigh the aggravating factors is sufficient to prevent imposition of the death sentence if the judge disagrees with the jury's findings. In light of the gravity of this determination, legislative intent should be made clear. This could be done by using the active voice instead of the passive voice at page 4, lines 10-13. The same considerations just discussed apply to the language at page 3, lines 16-18.

Section 5 removes from the jurisdiction of the state court of appeals cases in which a death sentence has been imposed. Note that under the 1984 legislative drafting manual, nothing less than a full subsection should be amended in a bill. Thus, the full text of AS 22.07.020(a) should appear in section 5.

Section 6 The purpose of this section is not clear. Apparently this section is an attempt to remove appeals of death sentences from the jurisdiction of the state court of appeals. The statute being amended, however, deals only with jurisdiction over appeals of sentences of imprisonment. Thus, section 6 is both confusing and superfluous.

ANALYSIS

A. Assumptions:

Enactment of House Bill No. 140 would change the State law to permit capital punishment for the crime of murder in the first degree. Current estimates indicate three convictions per year for this offense would involve executing the death penalty. Because of the lengthy appeal process in cases where the death penalty has been imposed, it is anticipated that a significant number of persons would have to be confined in a separate confinement area. The national average length of time between sentencing and execution of the death penalty is 6 to 7 years. Therefore, we are predicting the need for a maximum of 20 death row beds.

1. Capital expenditures required to provide specialized space not currently available in existing State correctional centers. Details follow in B-1.

2. The new space will be adjacent to an existing facility, but isolated. Existing authorized staff could not provide for the necessary security of inmates housed in the area designated for prisoners sentenced to execution.

3. Two additional fixed guard posts to be created and one post for roving patrol due to the high security and high risk nature of the unit. To man one post 24 hours per day, 7 days per week requires 5 Correctional Officers II plus 1 Supervisor Correctional Officer III.

4. Inflation is estimated at 6% per year except as noted.

5. The unit will be available for occupancy July 1, 1985.

B. Estimated Costs

1. Capital Expenditures

a. Functions and square footage allocations are derived from accepted space standards and are adjusted to an existing design for a 20-cell complex.

b. Assumes this structure will be an addition to an existing institution with all activity for prisoners sentenced for execution to be limited to this maximum security unit.

Analysis (continued)

c. Assumes only the usual 6% equipment factor and does not include costs for whatever type of equipment would be appropriate for the specified method of execution.

d. It is estimated that the cost will be $281.00 per square foot, considering the fact that this unit must be more secure than other facilities under construction and the relatively small size of the building.

e.

Area Identification	Square Footage	
Secure Control Room	120	
20 cells w/commodes @ 80 sq. ft. per cell	1600	
Day room/Dining area	300	
Shower Rooms (Male, Female)	140

	x $281	
	$ 1,440,968	bldg. cost 10/81
	20,988	secure outdoor rec. yard
	$ 1,461,956	bldg. & yard
	438,587	30% admin/ overhead factor
Total Projected Cost	$ 1,900,543	

Analysis (continued)

2. Salaries & Related Costs Starting in FY 1986

a. Staff
Based on FY85 Budget
Costs + 4%

15 Correctional Officer II Positions Salary/Benefits	$ 825,762
3 Correctional Officer III Positions	160,661
Total	$ 986,423

b. Other Costs

Travel (Staff Training)	5,500
Utilities, Cable TV, Subscriptions	7,600
Food, Clothing, Bedding	6,600
Equipment	2,600
Total	$ 1,008,723

c. For years after FY86 assumes 3% inflation factor.

NOTE:

It is assumed that State expenditure will also occur in the Department of Law and the Public Defender's Office for the lengthy appeal process. The costs for the other two agencies are not addressed in this fiscal note.

POSITION PAPER
House Bill No. 140

Amended
January 17, 1984

"An Act authorizing capital punishment, classifying murder in the first degree as a capital felony, and establishing sentencing procedures for capital felonies."

House Bill No. 140 classifies first degree murder as a capital offense and establishes the death penalty as an available penalty under specified circumstances.

With the Furman vs. Georgia ruling in 1967, the United States Supreme Court declared what amounted to a moratorium on capital punishment. The moratorium was, in effect, lifted in 1975 when the Court approved death penalty legislation which had been passed in Florida, Georgia, and Texas. Thirty-seven states have subsequently passed death penalty legislation but, despite continuous, vigorous effort on the part of state prosecutors, there has been little success in implementation of these statutes. As of December 31, 1982, there had been five executions. Gary Gilmore, executed by a firing squad in January 1977 in Utah, and Jesse Walter Bishop, executed by a gas chamber in Nevada in October 1979, did not appeal and succeeded in obtaining court rulings prohibiting others from proceeding with the appeal process in their behalf. Steven Judy, who was electrocuted in Indiana on March 9, 1982, also elected to forego the appeal process. Therefore, John Spenkelink, who was electrocuted in Florida in May 1979, and Charlie Brooks, Jr., who was injected intravenously in Texas in December of 1982, are the only two people to have been involuntarily executed. Persons were executed during 1983, however, these statistics are not yet available from the US Bureau of Census.

Meanwhile, the number of men and women on death rows around the country has risen to almost 1050. All of these offenders are in various states of the appeal process. The legal costs and the associated costs to these states are enormous. The maintenance of a "death row" is also extremely expensive because of space and staff requirements. There is a likelihood that the death penalty is the most costly remedy possible in a criminal proceeding, even more costly than life imprisonment.

House Bill No. 140 presumably uses model provisions which are designed to meet constitutional requirements for a legal capital punishment statute. The bill does not, however, speak to the method of execution. Neither does the bill indicate what agency of the State would be assigned to this responsibility. A determination would have to be made as to whether the State would electrocute, hang, shoot, gas or lethally inject the guilty party and who would do it. We can be certain that no other state or jurisdiction would be willing to take on this kind of task for us by contract. The costs, the confusion, the controversy, and the negative psychic impact that would surely accompany our having to take on this function for ourselves would be profound.

Perhaps undertaking this new approach to punishing murderers in Alaska would be worthwhile if we could be sure that the result would be fewer murders. There is no doubt that capital punishment effectively deters those subjected to it, but whether it has any value in deterring others, especially those with the most serious homicidal tendencies, is questionable. During the eight-year moratorium, the United States Supreme Court listened to a great deal of testimony on the issue of deterrence, but was unable to conclude from the evidence presented that there was a deterrent value to capital punishment.

Mr Chairman & Committee #1

THE CHAIR IS BOLTED TO THE FLOOR NEAR THE BACK OF A 12 FT. BY 18 FT. ROOM. YOU SIT ON A SEAT OF CRACKED RUBBER SECURED BY ROWS OF COPPER TACKS. YOUR ANKLES ARE STRAPPED INTO 1/2 -MOON-SHAPED FOOT CUFFS LINED WITH CANVAS.

A 2 IN. WIDE GREASY LEATHER IS SECURED AROUND YOUR WAIST, JUST ABOVE THE HIPS. A COOL METAL CONE ENCIRCLES YOUR HEAD. YOU ARE NOW ONLY MOMENTS AWAY FROM DEATH.

BUT YOU STILL HAVE A FEW SECONDS LEFT. TIME BECOMES STRETCHED TO THE OUTERMOST LIMITS. TO YOUR RIGHT YOU SEE THE MAHOGANY FLOOR DIVIDED THAT SEPERATES FOUR BROWN CHURCH-TYPE PEWS FROM THE REST OF THE ROOM. THERE IS ANOTHER DOOR AT THE BACK THROUGH WHICH THE WITNESSES ARRIVE AND SIT IN THE PEWS. YOU STARE UP AT TWO GROUPS OF FLOURESCENT LIGHTS ON THE CEILING. THEY ARE ON. THE PAINT ON THE CEILING IS PEELING.

YOU FIT IN NEAT AND SNUG. BEHIND THE CHAIR'S BACK LEG ON YOUR RIGHT IS A CABLE WRAPPED IN GREY TAPE. IT WILL JUICE THE ELECTRICAL CURRENT TO THREE OHER WIRES: TWO GOING TO EACH OF YOUR FEET AND THE THIRD TO THE CONE ON TOP OF YOUR HEAD. THE ROOM IS VERY QUIET. THE AIR WENT ABOVE YOUR HEAD IN THE CEILING BEGINS TO HUM. THE EXECUTIONER HAS TURNED ON THE FAN TO SUCK UP THE SMELL OF BURNING FLESH. THERE IS NO TIME LEFT. ON YOUR RIGHT YOU CAN SEE THE WAIST-HIGH, ONE-WAY MIRROR IN THE WALL. BEHIND THE MIRROR IS THE EXECUTIONER, STANDING BEFORE A GREY MARBLE CONTROL PANEL WITH GAUGES, SWITCHES, AND A FOOT LONG LEVER OF WOOD AND METAL AT HIP LEVEL.

THE EXECUTIONER PULLS THIS LEVER 4 TIMES. EACH TIME 2,000 VOLTS WILL CURSE THROUGH YOUR BODY, MAKING YOUR EYEBALLS FIRST BULGE, THEN BURST AND THEN BROILING YOUR BRAINS.

~~Dep. of Committee~~

TODAY, AN OLD ARRAY OF TOUGH QUESTIONS DEALING WITH CAPITOL PUNISHMENT IS BEING EXAMINED. ~~SENATE BILL NO. 121~~ House bill NO 140 "AN ACT AUTHORIZING CAPITOL PUNISHMENT, CLASSIFYING MURDER IN THE FIRST DEGREE AS A CAPITAL FELONY, AND ESTABLISHING SENTENCING PROCEDURES FOR CAPITOL FELONIES" IS ON ITS WAY TO US THE VOTERS.

ALASKA HAS ~~NEVER~~ HAD A DEATH PENALTY ~~AND~~ IT IS NOT TIME FOR ONE NOW OR VER. TODAY I AM GOING TO EXAMINE THREE QUESTIONS DEALING WITH CAPITOL PUNISHMENT.

--IS CAPITOL PUNISHMENT A DETERRENT TO MURDER?

--IS CAPITOL PUNISHMENT FAIR?

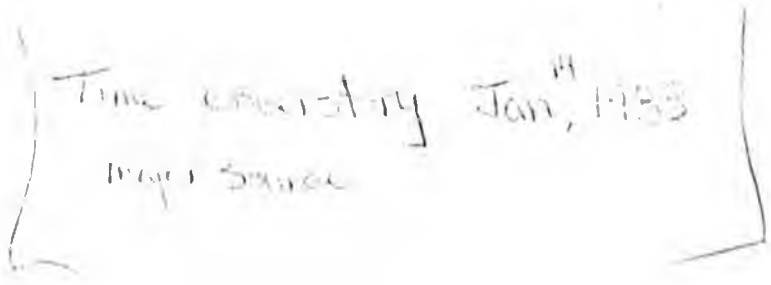
THAT IS DOES IT FALL EQUALLY ON THE WEALTHY WHITE SURGEON REPRESENTED BY EDWARD BENNETT WILLIAMS AND THE INDIGENT BALCK WITH COURT APPOINTED COUNSEL?

--IS IT CIVILIZED TO TAKE A LIFE IN THE NAME OF JUSTICE?

THE IDEA OF DETERRENCE CAN BE QUICKLY REDUCED TO VERY PERSONAL RUDIMENTS: IF I KNOW I WILL BE PUNISHED SO SEVERELY FOR A CRIME, I WILL NOT COMMIT THE CRIME. ACCORDING TO NY UNIVERSITY LAW PROFESSOR ANTHONY AMSTERDAM "WAHT DETERS EOPLE FROM CRIME IS THE LIKELY'OOD OF GETTING CAUGHT AND UNDERGOING PUNISHMENT" TODAY EVEN AT A RATE OF 100 EXECUTIONS ANNUALLY, AN IMPLAUSIBLY HIGH FIGURE GIVEN TODAYS JUDICIAL GUARANTEES AND APPEALS PROCESS, A KILLERS CHANCES OF GETTING CAUGHT, CONVICTED AND EXECUTED WOULD FOR HIM STILL BE COMFORTABLY LOW, 250 TO 1.

IS IT FAIR? PROSECUTORS HAVE GREAT LEAWAY IN DECIDING WHICH HOMICIDES TO TRY AS CAPITOL MURDERS. A KILLER CAN BE PERSUADED TO TESTIFY AGAINST AN CCOMPLICE TO SAVE HIS OWN LIFE. A MURDERER BROOKS, WAS CONVICTED AND EXECUTED; FOR THE SAME MURDER HIS PARTNER MUST SERVE ONLY EIGHT MORE YEARS IN PRISON. A RECENT STUDY ON HOMICIDE CASES IN HUSTON'S HARRIS COUNTY IS TROBLING. IN

IN CASES WHERE A BLACK OR CHICANO HAD KILLED A WHITE, 65% of the defendants WERE TRIED FOR CAPITOL MURDER.\ WHILE ONLY 25% OF WHITES WHO KILLED A BLACK OR HICANO FACED THE DEATH PENALITY.\ A SERIOUS PROBLEM IS THE QUALITY OF LEGAL HELP FOR MURDER DEFENDANTS. THE TEXAS STUDY FOUND THAT 3/4 OF THE MURDERERS WITH COURT APPOINTED LAWYERS WERE SENTENCED TO DEATH AGAINST ABOUT A THIRD OF THOSE REPRESENTED BY PRIVATE ATTORNEYS. CHARLETTE HOLDMAN DIRECTOR OF FLORIDAS CLEARINGHOUSE ON CRIMINAL JUSTICE SAYS "EVERY PERSON SENTENCED TO DIE COMES FROM A CASE FOUGHT WITH ERRORS. IF YOUR ADEQUATELY REPRESENTED YOU DON'T GET DEATH. IT"S THAT SIMPLE". ACCORDING TO ACLU'S SCHWARSCHILD, "A SOCIETY THAT BELIEVES THAT THE KILLING OF A HUMAN BEING IS A SOLUTION TO ANY PROBLEM IS DEEPLY UNCIVILIZED. THE MARGINALLY DEMENTED GUY, SAYS SCHWARSCHILD SEES AN EXECUTION AS A PERSCRIPTION NOT A THREAT. HE THINKS \ IF THE STATE HAS A QUARREL WITH GARY GILMORE IT KILLS HIM. IF I HAVE A QUARRELL WITH SOMEONE I'LL KILL HIM'. THE ELECTRIC CHAIR CAUGHT ON SLOWLY IN THE US AND NOT AT ALL ABROAD. DURING THE 1920s and 30s THE CYANIDE GAS CHAMBER BECAME STAE OF - THE AMERICAN ART. NOW THERE ARE LETHAL INJECTIONS WHICH ARE SEEN AS STILL MORE "HUMANE." THIS LATEST TECHNICAL REFINEMENT WHICH THE EUROPEAN PRESS FINDS, CHILLING AND FACINATING SEEMS TO REMAIN STRICTLY A US PRACTICE.



NOTRE DAME THEOLOGY PROFESSOR SUMS UP OUR OBSESSION WITH "HUMANE" CAPITAL PUNISHMENT LIKE THIS: "THIS SEARCH FOR A HUMANE WAY OF KILLING IS A BUNCH OF SENTIMENTAL SECULAR HUMANISM. WHY DO YOU WANT IT TO BE HUMANE? TO REASSURE YOURSELF?

EVIDENCE SHOWS CAPITOL PUNISHMENT IS NOT A DETERRENT OT MURDER.\ CAPITOL PUNISHMEN CASES ARE NOT HEARD FAIRLY AND WITH OUT EXAGURATED BIASIS.\ WE SAY WE THINK HUMAN LIFE IS SCARED. AND THEN, TO PROVE THAT, WE KILL SOMEBODY. WE CALL THAT CIVILIZED.!'

House Bill No 140

BY VOTING DOWN ~~SENATE BILL NO 121~~ WE ARE NOT LEFT WITHOUT ANY ALTERNATIVE. TODAY CURRENT LAW DEMANDS AT LEAST 20 YEARS BUT NOT MORE THAN 99 YEARS IN A CONVICTION OF FIRST DEGREE MURDER.

IN THE MAJORITY OF CASES THIS SENTENCE IS SUFFICENTLY HARSH. STATISTICS SHOW THAT FEWER THAN 1% OF FREED MURDERERS KILL AGAIN AFTER THEIR RELEASE FROM PRISON. DO WE WANT TO TAKE THAT CHANCE? ARE YOU WILLING TO PUT THE LIFE OF YOUR WIFE OR CHILDREN ON THE LINE? ARE YOU WILLING TO RIST THAT A MURDERER LIKE CHARLES MANSON WILL NOT REPEAT HIS HIDIOUS CRIME? AS IT STANDS NOW, MANSON WILL BE ELIGIBLE FOR PAROLE IN 1985. WHAT I ADVOCATE IS A LIFE SENTENCE WITHOUT PAROLE. THIS MEETS ALL THE CRITERIA FOR JUST PUNISHMENT. A LIFE SENTENCE IS IN ITS SELF UNIMAGINABLY HARSH. AND IT PROTECTS OUR SOCIETY OUTYAND ME FROM REPEAT OFFENCES. AS JAYCEES AND ALASKANS WE MUST SEE THAT HOUSEBILL NO. 121 DOES NOT BECOME LAW. WHEN IT APPEARS ON YOUR BALLOT VOTE NO ON A DEATH PENALTY. STATE SANCTIONED MURDER IS UNQUESTIONABLY WRONG!

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M April 10, 1984

SUBJECT: Sectional analysis of CSHB 140(Judiciary)

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee

FROM: Edward H. Hein
Legislative Counsel

Section 1 makes first degree murder a capital felony.

Section 2 amends AS 12.30.040(b) to provide that a person convicted of a capital felony may not be released on bail either before sentencing or pending appeal.

Section 3 provides that a person convicted of a capital felony is subject to a mandatory sentence of 20 - 99 years' imprisonment or death.

Section 4 adds a new section, AS 12.55.115, to the statutes. Subsection (a) allows an automatic appeal to the Alaska Supreme Court of a death sentence for a period of 60 days after the sentence is handed down. The court may extend the time limit. Such an appeal must be given first priority by the court and the court may adopt special rules for hearing such an appeal. The court is required to make three determinations:

(1) was the sentencing influenced by passion, prejudice or arbitrariness?;

(2) was the finding of an aggravating factor supported by the evidence?; and

(3) is the death penalty imposed in similar cases?

Under subsection (b), if the Alaska Supreme Court upholds the death sentence, it is required to issue a death warrant and deliver it, with a copy of the court's opinion, to the commissioner of corrections. The commissioner then

specifies the time, place and manner of execution. The defendant may choose death by lethal injection or by firing squad.

Under (c) firing squad executions must take place at a state prison. The squad consists of six peace officers chosen by the commissioner of corrections and paid in an amount set by the commissioner.

Under (d) the commissioner must consult with a licensed physician and then select a method of injection and a drug or combination of drugs to be used in executions by injection.

Under (e) the commissioner and a licensed physician must be present at each execution. The commissioner may invite up to nine citizens to witness an execution, including, among others, relatives and religious persons designated by the defendant.

Under (f) the commissioner of corrections must certify the death of the person executed.

Under (g) six members of the news media may attend an execution and serve as a pool for other news media.

Under (h) cameras and other recording equipment may not be used at the execution site until the execution is completed and the body is removed. Violation of this provision is a class B misdemeanor.

Under (i) persons attending an execution may be searched.

Under (j) the only additional persons who may attend an execution are necessary staff designated by the commissioner of corrections. Minors may not attend.

Under (k) the Department of Corrections must adopt regulations governing attendance at executions.

Section 5 adds six new sections to the statutes:

(1) AS 12.55.177 establishes a procedure for the sentencing of a person convicted of a capital felony. Under subsection (a), sentencing is a separate proceeding following the trial

or guilty plea. The proceeding is conducted before the trial jury or, if there was no jury trial, before a specially impaneled jury. Under subsection (b), the state and the defendant may present any relevant evidence concerning aggravating and mitigating factors, so long as the evidence was not obtained in violation of the state or federal constitution and so long as the defendant has the opportunity to rebut hearsay statements.

It is not clear whether subsection (b) is intended to disallow invocation of evidentiary privileges in a sentencing proceeding. The rules relating to evidentiary privileges are the only rules of evidence which are specifically made applicable to sentencing proceedings by Rule 101 of the Alaska Rules of Evidence. In light of the requirements of the Alaska Constitution and of Uniform Rule 39(e) that bills must note any changes being made to court rules, it would be prudent to clarify the legislative intent of subsection (b).

(2) AS 12.55.178 requires the sentencing jury to produce an advisory sentence for the court. The jury must decide three questions:

(A) did aggravating factors exist that justify a death sentence?;

(B) were there mitigating factors involved that outweigh the aggravating factors?; and

(C) should the sentence be a term of imprisonment or death?

(3) AS 12.55.179 requires the sentencing court to consider the evidence and the jury's advisory sentence and to enter a sentence. Subsection (a) provides that if a death sentence is imposed, the court must state in writing the aggravating factors that exist to justify the sentence and any mitigating factors considered by the court. Subsection (b) restates the fact that a death sentence may be automatically appealed to the Alaska Supreme Court under AS 12.55.115.

(4) AS 12.55.180 lists seven aggravating factors, any one of which could justify imposition of a death sentence if not outweighed by mitigating factors. The aggravating factors are:

(A) committing torture or aggravated battery amounting to deliberate cruelty during the crime;

(B) creating a risk of imminent physical harm to three or more persons;

(C) having a prior conviction of a violent felony;

(D) committing the crime under contract or for money;

(E) committing the crime while on release for another felony charge or for a conviction involving assault as a necessary element;

(F) the victim was a judge, prosecuting attorney, police officer, correctional employee or fireman and the crime was committed during or because of the victim's exercise of official duties; and

(G) the crime resulted from a conspiracy of five or more persons.

(5) AS 12.55.181 lists four mitigating factors:

(A) the defendant committed the crime under duress, coercion, threat or compulsion;

(B) the defendant was young and was influenced to commit the crime by a more mature person;

(C) the defendant acted in response to serious provocation by the victim; and

(D) the defendant helped authorities detect or apprehend others involved in the crime.

(6) AS 12.55.182(a) provides that if there is reason to believe that a person sentenced to death is incompetent or pregnant, the commissioner of corrections must notify the sentencing court, the prosecuting attorney and the person's defense counsel. The sentence of execution is then stayed until further order of the court. The term "incompetent" is not defined.

Under (b) the mental condition of the person who is thought to be "incompetent" or pregnant must be examined in accordance with AS 47.30.060 - 47.30.070. These statutes, however, were repealed in 1981. If the person is found to be incompetent, the person shall be committed. It is not clear what happens if the person later is found to be competent after being committed. If the person is found to be competent in the initial examination, that finding must be sent to the supreme court and the commissioner of corrections. The supreme court then must issue another death warrant and deliver it to the commissioner with another copy of finding that the person is competent. This warrant must specify a date of execution 30 to 60 days thereafter.

Under (c) if the defendant is pregnant, the (trial?) court must transmit a certificate making that finding to the supreme court and the commissioner of corrections. The execution is then stayed until the defendant is no longer pregnant. Immediately after the child is born or the pregnancy is otherwise terminated the (trial?) court must certify that fact to the supreme court and the commissioner of corrections. The supreme court must then issue another death warrant specifying a date of execution 30 to 60 days thereafter.

Section 6 removes from the jurisdiction of the state court of appeals cases in which a death sentence has been imposed. Note that under the 1984 legislative drafting manual, nothing less than a full subsection should be amended in a bill. Thus, the full text of AS 22.07.020(a) should appear in section 5.

Section 7 the purpose of this section is not clear. Apparently this section is an attempt to remove appeals of death sentences from the jurisdiction of the state court of appeals. The statute being amended, however, deals only with jurisdiction over appeals of sentences of imprisonment. Thus, section 6 is both confusing and superfluous.

THE LEGISLATURE

LEGISLATIVE AFFAIRS AGENCY

POUCH Y - STATE CAPITOL
JUNEAU, ALASKA 99811
907 465 3800

MEMORANDUM January 17, 1984

SUBJECT: Sectional analysis of HB 140

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee

FROM: Edward H. Hein
Legislative Counsel

Section 1 makes first degree murder a capital felony.

Section 2 provides that a person convicted of a capital felony is subject to a mandatory sentence of 20 - 99 years' imprisonment or death.

Section 3 adds a new section, AS 12.55.115, to the statutes. Subsection (a) allows an automatic appeal to the Alaska Supreme Court of a death sentence for a period of 60 days after the sentence is handed down. The court may extend the time limit. Such an appeal must be given first priority by the court and the court may adopt special rules for hearing such an appeal. The court is required to make three determinations:

(1) was the sentencing influenced by passion, prejudice or arbitrariness?;

(2) was the finding of an aggravating factor supported by the evidence?; and

(3) is the death penalty imposed in similar cases?

Under subsection (b), if the Alaska Supreme Court upholds the death sentence, the trial court is required to specify the time, place and manner of execution.

Section 4 adds five new sections to the statutes:

(1) AS 12.55.177 establishes a procedure for the sentencing of a person convicted of a capital felony. Under subsection (a), sentencing is a separate proceeding following the trial or guilty plea. The proceeding is conducted before the trial jury or, if there was no jury trial, before a specially impaneled jury. Under subsection (b), the state and the defendant may present any relevant evidence concerning aggravating and mitigating factors, so long as the evidence was not obtained in violation of the state or federal constitution and so long as the defendant has the opportunity to rebut hearsay statements.

It is not clear whether subsection (b) is intended to disallow invocation of evidentiary privileges in a sentencing proceeding. The rules relating to evidentiary privileges are the only rules of evidence which are specifically made applicable to sentencing proceedings by Rule 101 of the Alaska Rules of Evidence. In light of the requirements of the Alaska Constitution and of Uniform Rule 39(e) that bills must note any changes being made to court rules, it would be prudent to clarify the legislative intent of subsection (b).

(2) AS 12.55.178 requires the sentencing jury to produce an advisory sentence for the court. The jury must decide three questions:

(A) did aggravating factors exist that justify a death sentence?;

(B) were there mitigating factors involved that outweigh the aggravating factors?; and

(C) should the sentence be a term of imprisonment or death?

(3) AS 12.55.179 requires the sentencing court to consider the evidence and the jury's advisory sentence and to enter a sentence. Subsection (a) provides that if a death sentence is imposed, the court must state in writing the aggravating

factors that exist to justify the sentence and any mitigating factors considered by the court. Subsection (b) restates the fact that a death sentence may be automatically appealed to the Alaska Supreme Court under AS 12.55.115.

(4) AS 12.55.180 lists seven aggravating factors, any one of which could justify imposition of a death sentence if not outweighed by mitigating factors. The aggravating factors are:

(C) having a prior conviction of a violent felony;

(D) committing the crime under contract or for money;

(E) committing the crime while on release for another felony charge or for a conviction involving assault as a necessary element;

(F) the victim was a judge, prosecuting attorney, police officer, correctional employee or fireman and the crime was committed during or because of the victim's exercise of official duties; and

(G) the crime resulted from a conspiracy of five or more persons.

(5) AS 12.55.181 lists four mitigating factors:

(A) the defendant committed the crime under duress, coercion, threat or compulsion;

(B) the defendant was young and was influenced to commit the crime by a more mature person;

(C) the defendant acted in response to serious provocation by the victim; and

(D) the defendant helped authorities detect or apprehend others involved in the crime.

At page 4, line 12, the bill states that all mitigating factors, including the four that are listed, must be considered. Thus, a defendant is entitled to raise anything that could be construed as a mitigating factor, even if it is not listed. This statute, however, does not specify who must consider the mitigating factors. Is it the court, the jury, or both? Likewise, this statute does not say whose judgment controls on the question of whether the mitigating factors outweigh any aggravating factors that exist. Under AS 12.55.178(2), the sentencing jury would be required to balance mitigating factors against aggravating factors. But the jury's findings are only advisory. It is not clear, under AS 12.55.181, whether a finding by the jury that the mitigating factors outweigh the aggravating factors is sufficient to prevent imposition of the death sentence if the judge disagrees with the jury's findings. In light of the gravity of this determination, legislative intent should be made clear. This could be done by using the active voice instead of the passive voice at page 4, lines 10-13. The same considerations just discussed apply to the language at page 3, lines 16-18.

Section 5 removes from the jurisdiction of the state court of appeals cases in which a death sentence has been imposed. Note that under the 1984 legislative drafting manual, nothing less than a full subsection should be amended in a bill. Thus, the full text of AS 22.07.020(a) should appear in section 5.

Section 6 The purpose of this section is not clear. Apparently this section is an attempt to remove appeals of death sentences from the jurisdiction of the state court of appeals. The statute being amended, however, deals only with jurisdiction over appeals of sentences of imprisonment. Thus, section 6 is both confusing and superfluous.

REV. DATE: 01/07/84

DEATH PENALTY LAWS

BACKGROUND

In FURMAN v. GEORGIA, 408 U.S. 238 (1972), the U.S. Supreme Court found that the procedures by which to impose the death penalty were "arbitrary and capricious" and therefore in conflict with the 8th and 14th amendments. The court did not declare the death penalty itself to be unconstitutional. Rather, the court found that the GEORGIA law did not provide any standards to guide the sentencing authority when deciding which defendants convicted of a capital offense should be sentenced to die and which should live.

After the FURMAN decision, GEORGIA and many other states designed new capital punishment laws to comply with the court decision. State legislatures generally enacted two types of laws: mandatory death penalty laws for persons convicted of a certain capital offense and laws to provide objective standards to guide the sentencer in determining what punishment should be imposed. Both types of law were written to reduce and define the discretion of the sentencer. Mandatory laws completely removed the decision of whether or not to impose the death penalty from the judge or the jury and were later declared unconstitutional. In WOODSON v. NORTH CAROLINA, 96 S. Ct. 2978 (1976) and ROBERTS v. LOUISIANA, 96 S. Ct. 3001 (1976), the U.S. Supreme Court held that a sentence of death cannot be an automatic consequence of guilt and such sentences must consider the circumstances of the case and the individual offender.

In 1976, the laws of GEORGIA, FLORIDA, AND TEXAS were upheld by the United States Supreme Court (See GREGG v. GEORGIA, 96 S. Ct. 2909; PROFFITT v. FLORIDA, 96 S. Ct. 2960; and JUREK v. TEXAS, 96 S. Ct. 2950). Each law provides standards to guide the sentencing authority in deliberations regarding the punishment of death. The following common characteristics can be found in these laws. First, the procedure is two-tier; a trial is held to determine guilt and a separate sentencing hearing is held to determine the appropriate punishment, life imprisonment or death. Second, during the sentencing hearing, the sentencing authority must consider certain factors, issues and circumstances specified or required by law. Evidence is introduced and both the prosecutor and the defendant can present arguments relating to these issues. Third, any decision to impose the death penalty is reviewed by the state supreme court. Although the laws are similar, each state has taken a somewhat different approach to establish standards to govern sentencing procedures.

In TEXAS and FLORIDA, sentencing hearings are held before a jury (Tex. Code Crim. Pro. 37.071 and Fla. Stat. Ann 921.141). GEORGIA law allows the judge or the jury to consider evidence during the sentencing hearing (GA Code Ann. 27-2503).

In order for a death sentence to be imposed in GEORGIA, the sentencing body must find at least one aggravating circumstance specified by law to exist and make a recommendation that the individual be sentenced to death (GA Code Ann. 26-3102 and 27-2534.1) A history of assaultive behavoir is an example of an aggravating circumstance. Unlike Georgia, FLORIDA lists both aggravating and mitigating circumstances to be considered by the sentencing jury. The sentencing jury then submits an advisory sentence to the court (Fla. Stat. Ann. 921-141). Among the circumstances considered to be mitigating factors are the defendant's state of mind and if the defendant is of a particularily young age. When considering the appropriate sentence to be imposed, the mitigating factors can outweigh the aggravating factors. The trial judge in FLORIDA makes the final decision of what sentence to impose, life imprisonment or death.

Neither aggravating or mitigating circumstances are specified in TEXAS law. However, the jury must consider three issues and render a verdict of "yes" or "no" on each issue. First, did the offender behave in a deliberate manner? Second, is the offender likely to commit future acts of violence? Third, if evidence has been presented to show that the offender was provoked by the victim, were the actions of the offender unreasonable in light of the provocation? If the jury answers "yes" to each issue it must consider, the court is required to sentence the offender to death (Tex. Code Crim. Proc. 37.071). In JURECK v. TEXAS, the court held that although "Texas has not adopted a list of statutory aggravating circumstances...its action in narrowing the categories of murders for which a death sentence may ever be imposed serves much the same purpose." (JURECK v. TEXAS, at 2955). The Texas Penal Code limits capital homicides to intentional and knowing murders committed in five situations (Tex. Penal Code 19.03, 1974).

In reviewing a death sentence, the GEORGIA state supreme court is required by state law to determine, 1) if the sentence was imposed in an arbitrary, prejudicial or passionate manner, 2) if the evidence supports the sentencing authority's finding of the aggravating circumstances, and 3) if the sentence is disproportionate or excessive to other sentences imposed in similar cases (GA Code Ann. 27-2537). Neither FLORIDA nor TEXAS laws direct the state supreme court to conduct a certain kind of review but review is automatic (Fla. Stat. Ann. 921-141 and Texas 37.071).

By specifying circumstances and issues for consideration when determining the appropriate sentence of a capital offender, the legislatures of GEORGIA, TEXAS and FLORIDA have provided an acceptable mechanism to reduce arbitrary decision-making. Supreme court review is an extra safeguard to protect against totally discretionary sentencing.

RECENT LEGISLATION

To date, thirty-eight states and the federal government have laws to impose the death penalty for certain crimes.

STATE	METHOD	# OF PERSONS ON DEATH ROW

MEMORANDUM

TO: Representative Charlie Bussell

FROM: Nancy Pease *Nancy Pease*
Legislative Analyst

RE: Reinstating the Death Penalty
Research Request 84-2

Craig Lovell of your staff requested information on the reinstatement of the the death penalty in other states. Specifically, he asked about the steps that were taken in other states to reinstitute or oppose the death penalty, and the issues that were raised. He also asked for a description of past Alaska legislation aimed at reinstating the death penalty.

Reinstatement through Legislation

A summary of death penalty laws released by the National Conference of State Legislatures on January 7, 1984 lists 38 states which prescribe capital punishment for heinous crimes (see Attachment A). In many of these states, the death penalty had at one time been abolished, declared unconstitutional, or invalidated by its similarity to death penalty statutes that were ruled unconstitutional in other states. In most cases, legislation was the means of reinstating or substantially revising the death penalty to meet constitutional requirements.

States where new death penalty statutes have been enacted through legislation include; New Jersey (1982); Connecticut, Idaho, Ohio and Washington (1981); Alabama (1980); South Dakota (1979); Maryland, Pennsylvania, Arizona, Maine, Maryland and South Carolina (1978); Illinois, Indiana, Missouri, Mississippi, Montana, Missouri, Nevada and North Carolina (1977); Florida, Georgia and Oklahoma, (1976); and Texas (1974).

Although legislation has been the method by which the death penalty has been reinstated in most states, the support or opposition of the executive branch, the judiciary, and the public have been strong factors in other states.

Public Initiatives and Referenda

In Massachusetts, voters reinstated the death penalty by approving a referendum amendment. In California, a ballot initiative succeeded in increasing the types of crimes and the circumstances in which the death penalty could be imposed. In Oregon, since 1914, voters have twice abolished and twice reinstated the death penalty (through both public initiatives and one legislative referendum). Most recently in Oregon, petitioners failed to collect enough signatures to place the two measures on the state ballot that would be necessary to reinstate the death penalty (a constitutional amendment of the Oregon Criminal Code and a statute providing for capital punishment). Michigan proponents of the death penalty also failed last year in their attempt to petition for a ballot vote on amending the Michigan constitution which currently prohibits capital punishment.

States Without A Death Penalty

The following states and U.S. jurisdictions do not have a death penalty: Alaska, District of Columbia, Hawaii, Iowa, Kansas, Maine, Michigan, Minnesota, North Dakota, Oregon, Rhode Island, West Virginia, Wisconsin and Guam.

As you are probably aware, both Alaska and Hawaii abolished capital punishment as territories, and, as states, have never instituted capital punishment laws. The District of Columbia has established through case law a criminal code which does not prescribe the death penalty. Guam has also never had a death penalty, and a referendum to institute one in the late 1970s failed through the electorate.

Michigan is the only state whose constitution prohibits capital punishment. According to Henry Schwarzchild of the American Civil Liberties Union's (ACLU) Capital Punishment Project, the northern tier of midwestern states have historically opposed the death penalty, dating back to the progressive farmer/labor movement of the mid-nineteenth century. Although South Dakota broke with that tradition in 1979, Mr. Schwarzchild guardedly predicted that the traditional opposition to the death penalty in the upper Midwest is "unlikely to be undone" in the near future. In Michigan, a 1983 referendum drive to amend the constitutional prohibition of capital punishment failed to collect enough valid signatures to place the amendment on the ballot. In Wisconsin, death penalty legislation is regularly introduced--and regularly fails to pass.

Gubernatorial Opposition

In other states, a strong stand by the governor has been a factor in preventing reinstatement of the death penalty. According to Mr. Schwarzchild of the ACLU, the governor of New York has vetoed death penalty statutes passed by that state's legislature in each of the past nine years. The Governor of Kansas also vetoed death penalty legislation in three recent years. In New Jersey, according to the assistant director of the New Jersey Department of Criminal Justice, the previous governor vetoed every death penalty bill approved by the state legislature during his eight-year tenure; only with the election of a new governor in 1982 did the death penalty become law. The previous Governor of Kentucky also blocked legislation to reinstate the death penalty for the length of his term in office.

Action on the Death Penalty Issue in Four States

In response to your interest in the dynamics and the debate surrounding death penalty legislation in other states, we contacted directly several states where the issue has recently been subject to public debate.

In South Dakota, Dennis Holmes of the Attorney General's office said that until recently, the death penalty issue had been in abeyance in his state for a number of years, partly because there were few sentencings in the 1950s and 1960s. In 1977, the legislature removed the death penalty from the statutes when its constitutionality was called into question by U.S. Supreme Court rulings against similar statutes in other states. In 1979, despite some public protest, a new death penalty was enacted by the South Dakota legislature as part of a major recodification of criminal procedure to meet federal guidelines. Since the reenactment, only three capital offenders have been prosecuted in South Dakota, and all three offenders were sentenced to life imprisonment. Mr. Holmes estimates that since the reenactment of the death penalty, opposition has dwindled, and public support has grown.

In Pennsylvania, according to Assistant Attorney General Rosalyn Robinson, the executive and the legislative branches have opposed one another on the death penalty issue in recent years. In 1971, the attorney general issued an opinion ordering the release of death row prisoners and the dismantling of the state's electric chair. In 1978, the legislature overrode the governor's veto of a new death penalty bill and amended three Pennsylvania statutes. The amended statutes provide for a bifurcated trial for capital crimes, procedural guidelines for weighing aggravating and mitigating circumstances, and an automatic review by the Pennsylvania Supreme Court of every death sentence. The new statutes have been upheld in the three cases appealed to the Pennsylvania Supreme Court to date.

An assistant attorney general in Vermont reported that his state is considered to be a de facto abolition state because the current death penalty is probably unconstitutional under the rulings of the U.S. Supreme Court in Furman v. Georgia. According to the assistant attorney general, capital punishment is limited to a very few crimes and because there are very few incidences of such crimes in Vermont. Although electrocution is the prescribed method of killing, Vermont has no electric chair, and no one has been executed in Vermont since the 1940s.

Except for an unsuccessful bill to revise the death penalty several years ago, there has been no real movement for or against the death penalty in Vermont. Th assistant attorney general perceived minimal legislative or gubernatorial interest in the issue, and said that public advocacy of the death penalty appeared to be insignificant.

By contrast, in Oregon, the death penalty has been hotly debated for the past seventy years. In 1914, a petition initiative amended the Oregon Constitution to abolish capital punishment. In 1920, voters in a primary election instituted capital punishment for unmitigated cases of first degree murder. In 1964, the people adopted a legislatively referred repeal of the death penalty. In 1971, the revision of the Criminal Code made no provision for the death penalty. In 1978, an initiative campaign succeeded in making aggravated murder a capital offense, but the Oregon Supreme Court disapproved the specified trial procedure. In 1981, a bill to reinstate the death penalty died in judiciary because the Oregon Constitution specifies that the penal system must provide rehabilitation and not retribution, and also specifically prohibits cruel and unusual punishment.

According to Stevie Remington of the Oregon chapter of the ACLU, death penalty bills have been introduced in every session of the Oregon legislature since 1963, and have died in committee almost every year. In one instance, the Rules Committee passed a measure on to the full chamber where it was defeated by a 2 to 1 margin. However, the current governor of Oregon supports capital punishment and public opinion polls show 80 percent of Oregon residents favor it. A petition drive is again under way to place a constitutional amendment and a death penalty statute on the ballot in 1984.

Debate of Death Penalty Issues

Our conversations with legal and legislative professionals and with advocacy groups in several states seem to confirm that capital punishment has aroused the same moral, ethical, legal and political controversies wherever and whenever it has been considered. Because of the complexity of the death penalty issues, none of the states we contacted

were able to furnish a brief summation of either the public or legislative debate. However the issues have been well summarized by respected scholars of the subject in a number of books and articles.

For advocates on both sides of the issue, Hugo Bedau's The Death Penalty in America has been for many years a useful repository of the facts and the main arguments. In his third edition of this "thinker's reference", Bedau has included a section of powerful arguments favoring capital punishment from such eloquent advocates as Walter Berns, Ernest van den Haag, and Glen D. King. These statements are balanced by such well-known abolitionists as Anthony G. Amsterdam, Charles L. Black, Jr., and Henry Schwarzchild. Both sides deal with the philosophical considerations that must be resolved in deciding whether or not the state has a right to kill a convicted felon. We will be happy to provide you with a library copy of The Death Penalty in America if you are not already familiar with this comprehensive reference.

In addition, we also have available two other summaries of the moral and legal issues that seem to have risen every time and place the death penalty has been considered.

History of Death Penalty Legislation in Alaska

Since the abolition of the death penalty in Alaska in 1957, legislators have introduced at least seven measures relating to capital punishment. Six of these measures, including three pending in the current session, would provide for reinstatement of the death penalty. The seventh related measure, introduced in the First Alaska Legislature, redefined "felony offense" to omit reference to punishment by death. Attachment A describes the death penalty bills and notes their sponsors, dates of introduction, and their assignments to committees. None of the bills to reinstate the death penalty in previous sessions succeeded in passing through the committee review process in both chambers of the legislature.

In addition to these bills, it is possible that the death penalty could have been proposed as part of broader revisions of the criminal code and stricken by amendments before the bill's passage.

ATTACHMENT A
ALASKA LEGISLATION RELATING TO THE DEATH PENALTY
1958-1984

Thirteenth Legislature

House Bill No. 140, sponsored by Rep. Pestinger and cosponsored by Reps. Ward, Flood, Liska, and Shultz, would authorize the death sentence in Alaska and classify first degree murder as a capital felony, punishable by 20-99 years in prison or by death. (Amends AS 11.41.100(b) relating to first degree murder and AS 12.55.125 relating to the sentence.)

Establishes procedures for automatic review by the Supreme Court of any death sentence handed down. Establishes sentencing procedures for capital felonies. In any sentence of death, the court must issue written finding of the aggravating factors that exist to justify the sentence and the mitigating factors considered by the court. Lists aggravating and mitigating factors to be considered in capital felonies. At least one aggravating factor must be found to exist in order to impose the death sentence. Aggravating factors must not be outweighed by mitigating factors, Does not provide for effective date (effective 90 days after Governor's signature).

Introduced January 28, 1983 and referred to Judiciary and Finance.

House Bill No. 235, sponsored by Rep. Bussell and cosponsored by Reps. Uehling, Liska and Shultz, would authorize an advisory vote on whether to institute the death penalty in Alaska for first degree murder. The question would appear on the ballot at the next general or special election in the following form: "Shall the Legislature of the State of Alaska enact laws instituting capital punishment for first degree murder?" Effective immediately.

Introduced March 4, 1983 and referred to Judiciary.

Senate Bill No. 121, sponsored by Sen. Pettyjohn and cosponsored by Sens. Kelly, P. Fischer and Faiks. Identical to HB 140, with one change. In HB 140, the jury would be responsible for issuing an advisory sentence to the court for capital felonies. The court would then deliberate and enter a sentence of death or a term of imprisonment. Under SB 121, the advisory sentence provision is eliminated and the jury would be directly responsible for issuing either the death sentence or a prison sentence.

Introduced February 11, 1983 and referred to Judiciary and Finance.

Twelfth Legislature

Senate Bill No. 73, sponsored by Sen. Bradley, would make first degree murder a capital felony (amendment to AS 11.41.100(b)) punishable by a definite term of imprisonment of from 20 to 99 years or by death (amendment to AS 12.55.125(a)). Currently murder in the first degree is an unclassified felony and is punishable by a definite term of imprisonment of from 20 to 99 years.

Adds new sections to AS 12.55 requiring automatic review of any death sentence by the Supreme Court within 60 days; outlining the sentencing procedure for a capital felony; requiring the jury to give an advisory sentence for a capital felony including aggravating or mitigating factors or whether the defendant should be sentenced to jail; and listing aggravating and mitigating factors to be considered in a capital felony case.

Amends the jurisdiction of the Court of Appeals to specifically state that the court does not have appellate jurisdiction in actions and proceedings commended in the superior court involving prosecution for a capital felony for which a death sentence is imposed (amendment to AS 22.07.020(a)(1) & (b)). Does not provide for an effective date.

Introduced January 14, 1981 and referred to State Affairs and Judiciary.

House Bill No. 458, sponsored by Rep. Hurlbert, is identical to SB 73

Introduced April 2, 1981 and referred to Judiciary.

Eighth Legislature

House Bill No. 675, sponsored by Rep. Saylors, relates to the imposition of the death penalty and changing Rule 35, Rules of Criminal Procedure. Amends AS 11.05 by adding a new section (Sec 11.05.015) entitled PUNISHMENT FOR CERTAIN MURDER CONVICTIONS.

Introduced February 21, 1974 and referred to Judiciary.

First Legislature

Senate Bill No 255, sponsored by the Judiciary Committee, reclassified crimes and redefined felonies and misdemeanors, removing punishment by death from the definition of felony; amending Sec. 65-2-2, ACLA 1949 as amended by Sec. 3, Ch. 132, SLA 1957; and providing for an effective date.

Signed into law on March 31, 1960.

Compiled, with revisions, from Alaska legislative records.

A Point of View article submitted for publication in the Anchorage Daily News, Anchorage, Alaska, by Pastor Jack R. Bacher, Scenic Park Bible Church, 7145 Nadelynne Drive, Anchorage, Alaska 99504

never published JB

* * * * * *

Recently (August 23, 1982) the readers of the Anchorage Daily News were editorially told that "Alaskans must reject it" (the death penalty).

I personally take issue with the tenor and conclusions of that editorial. It is riddled with glaring contradictions when compared to revealed truth; it describes as "uncivilized" those who hold the position of capital punishment.

There are many of us who take the position as taught in the Bible that capital punishment is fundamental to law as instituted by God. Therefore any statements made to demean or ridicule the principle are perceived as made directly against an all-wise God. The question I ask is this: why do we creatures resist the clear teaching of our Creator?

I believe I found the answer to that question in the first mention of capital punishment in the Bible. It is found in Genesis 9:6, "Whoso sheddeth man's blood, by man shall his blood be shed; for in the image of God made he man." This was stated long before the giving of the Ten Commandments and other precise statements of "Mosaic" law.

The stance of the entire law system in our country is "justice for all;" it comes directly from the Bible. Explicit instruction is recorded regarding the taking of life from another human being with premeditation (murder in the first degree). The person so doing and found guilty was put to death. Even the concept of second degree

--more, page 2

murder and manslaughter are carefully described and the punishment proscribed to fit the crime.

Many of us who believe the Bible do not believe that is subject to debate by finite social scientists who see themselves as "civilized". The continual debates, studies, research polls, on ad infinitum on the "deterrent" issue are nothing mor- than the product of our own thinking. It is obvious from the standpoint of Scripture that punishment is a deterrent to crime. However, that principle will not apply unless the punishment fits the crime, as ordained of God. Confusion and polarization always permeates a society which rejects Divine principles.

Perhaps some who are reading this are "seething" at this point because of their total rejection of Biblical concepts. However I have not yet made my point which really explains why we have such polarization of basic issues like capital punishment. It is found in the passage quoted above, Genesis 9:6. The words not only give the concept for capital punishment but also the reason for it. The reason why a murderer's life is to be taken: "for in the image of God made he man!"

Man is in a category of "equal importance." To God, the man's life who is taken in murder is equally important to the life of the one who took it. It is obvious that the man who took the life of another did not feel that way. And when we do not obey God and take the life of the murderer we side with the murderer who decided the life of his victim was not as important. And we call that position "civilized." Hardly!

----more, Page 3

But that does not explain why we have this difference of opinion in our society today. This difference exists because many people do not believe that man "was created in the image of God." The Humanist teaching of the evolutionary hypothesis on origins has degraded our image of our fellow man. To many, man is only a creature of chance, with no particular reason for existence and certainly no destiny of any importance. (Today many animals enjoy greater protection under law than does man himself.)

Logically therefore we can take the position that the murderer is more important than his dead victim. After all, the murderer is still alive; his victim is dead. This same evolutionary thought has brought us to positions of difference over abortion and will become more apparent as the issues of infanticide and euthanasia are debated.

I certainly do not want to convey the "all is over for us attitude." The equal time debate on teaching Scientific Creation/ Evolution is a healthy sign that the generation now being schooled will have an opportunity for an alternative philosophical base. Scientists by the hundreds are withdrawing their support of the exclusivist position of offering only the evolutionary explanation on origins. Hopefully the American sense of fairness will demand that Scientific Creationism will be given equal time.

Deterrence, Death, and the Victims of Crime: A Common Sense Approach

*Frank G. Carrington**

I. Introduction

The concept of deterrence is one of the most important in the formulations of the victim advocate, primarily because of two essential premises that underlie the entire field of victim advocacy. The first, but not necessarily the most important, of these premises concerns the policy that favors assuaging the plight of persons after they have been victimized. This relief can be provided in a number of different ways: compensation to innocent victims from the states; restitution to victims as a condition of granting probation to the criminal; victim counselling;[1] and victim/witness assistance programs.[2] The second premise of victim advocacy, namely, preventing victimization from ever occurring, is also of critical importance because, obviously, in each instance in which a given act of victimization is prevented, the palliative measures described above will not be necessary.

This preventive goal can be effectuated through two types of activity. First, victim advocates often engage in activity that encourages and assists the potential victim of crime to help himself in programs such as neighborhood watch, inscription of identifying serial numbers on personal property, and other citizen crime prevention programs. The second type of activity, with which this Article primarily deals, entails efforts by victim advocates to structure the system to deter would-be criminals from engaging in acts of victimization. It also requires efforts to deter third parties—for example, parole officials, whose duties include making decisions

2. A number of these programs have been established in various prosecutors' offices across the country.

that may place dangerous criminals in a position to victimize again—from acting to the detriment of potential victims.

In sum, the notion of deterrence has assumed critical dimensions in the area of victim advocacy and assistance. Part II of this Article deals with deterrence generally as a common sense concept and emphasizes the potential impact that different attitudes toward this concept have on crime victims. Part III then focuses on particular aspects of deterrence in the capital punishment controversy—again by emphasizing the effect on victims. The final part of the Article explores a rather new area of the law that applies the concept of deterrence—by threatening civil liability for gross negligence in the handling and release of prisoners—to third party custodial officials in an attempt to prevent future victimization. The Article concludes that a common sense approach to the question of deterrence, rather than one which is based on delaying any decision until all the empirical evidence is compiled, is necessary to combat the serious crime problem that now faces the country.

II. Deterrence: A Common Sense Concept

To deter an individual from a contemplated activity, one must discourage or restrain that individual from acting or proceeding through the inducement of fear, doubt, or some sense of deprivation. Deterrence does not act as a direct restraint on conduct; rather, it works to manipulate the motives or incentives behind that conduct. The deterrence rationale depends on a conception of human motivation that is based on a function of cost over gain. Successful deterrence, therefore, requires that the certainty and quantum of punishment sufficiently outweigh any expectation of possible gain in the mind of the would-be wrongdoer.[3]

The value of punishment as deterrence rests not on how it affects individual offenders, but on how it affects the future conduct of the general public.[4] Indeed, in the individual case deterrence already has failed. As one contemporary proponent of deterrence, Ernest van den Haag, has pointed out, "[d]eterrent effects largely depend on punishment being meted out according to the crime, so that a prospective offender can know the likely cost of the offense and be deterred by it."[5] In other words, members of the public

the poor face in attempting to improve their situation to the level of a literal truth, this argument assumes its conclusion. It boldly equates the condition of life in the inner cities with the conditions found in Attica, Green Haven, Soledad, or San Quentin. Indeed, if this argument were extended to its logical conclusion, it would identify every person who lives in the ghetto with a felon who is behind bars because society has deemed that he is too dangerous to be at liberty. The argument completely ignores the great majority of inner-city dwellers who are decent, hard-working individuals. These people admittedly live under conditions that are deplorable, but they do not become criminals; rather, they want nothing more than to conduct their affairs in relative freedom from criminal harm. If everyone who resided in the inner city were a criminal and found prison life preferable to ghetto life, this argument might have some superficial merit; the facts, however, simply do not support such a proposition.

A positive correlation between poverty and crime undoubtedly does exist, but, as James Q. Wilson contends, "[t]he desire to reduce crime is the worst possible reason for reducing poverty. . . . Reducing poverty and breaking up the ghettoes are desirable policies in their own right, whatever their effects on crime."[13] Opponents of deterrence, however, apparently conclude that if poverty is in some sense a cause of crime, then only the elimination of this cause will reduce crime. Wilson finds that these opponents have "become so preoccupied with dealing with the causes of the crime (whether . . . social conditions or police inadequacies) that [they] have almost succeeded in persuading [them]selves that criminals are radically different from ordinary people—that they are utterly indifferent to the costs and rewards of their activities."[14] He argues that no evidence exists to support this conclusion, and that regardless of whether criminals are prone to accept greater risks or have a weaker sense of morality than an average citizen, "if the expected cost of crime goes up without a corresponding increase in the expected benefits, then the would-be criminal . . . engages in less crime."[15]

Opponents of deterrence often base a second argument on sta-

13. J. WILSON, *supra* note 3, at 203. In response to the notion that poverty causes crime, Wilson notes that the dramatic increase in crime during the last fifteen years has occurred "concurrently with a general rise in the standard of living and thus could not be explained by worsening social conditions." *Id.* at 74.

14. *Id.* at 175.

15. *Id.* at 175-76.

must expect that if they commit a particular crime, their punishment will be comparable to what past offenders have received. If these offenders repeatedly are paroled, or if they are never apprehended at all, then the ostensible threat of a stiff statutory penalty has virtually no deterrent effect.[6]

These notions of a perceived threat and cost versus gain do not require that potential criminals perform some rational calculation of the cost/benefit ratio. Irrespective of their intellectual capacity to understand a concept, human beings are capable of responding to threats, learning from experience, and forming habits.[7] Deterrence, therefore, does not depend on the rationality of a response, but merely on the likelihood and regularity of a response to a particular threat.[8]

Some commentators, however, reject this theory of deterrence for a variety of reasons. One respected federal judge, for example, dismissed the concept outright in a recent article.[9] This criticism of the deterrence rationale primarily rests on two arguments, neither of which can withstand careful scrutiny. First, the article advances the theory that living in the inner city is worse than living in a prison, and that the threat of incarceration, therefore, has no deterrent effect on those who live in the ghettos.[10] From the premise that most crime is committed by members of "an underclass of brutal social and economic deprivation . . . [who] are raised in deteriorating, overcrowded housing . . . [and who] are denied [a] sense of order, purpose, and self-esteem,"[11] the article succinctly concludes that "the threat of prison may be a meaningless deterrent to one whose urban environment is itself a prison."[12]

By elevating a metaphorical illustration of the difficulties that

tice, "an impotent society."[20]

Judge Bazelon candidly acknowledged in his article in the *American Bar Association Journal* that he has no ready answers for the country's crime problem.[21] This author makes the same acknowledgement.[22] The point of the foregoing discussion is simply that considering the unparalleled difficulties in apprehending and convicting criminals, the lack of a significant drop in crime rates as incarceration and lengths of sentences increase cannot alone support an argument against deterrence.

Many people today talk in reverent terms of empirical evidence—primarily statistics—as if this were the touchstone of any argument. The conclusion to Judge Bazelon's article typifies this approach:

> We need to know much more about the precise costs of an effective program of deterrence before we can dismiss the recent proposals. At the present time, however, the case for deterrence has not been convincingly made. After a comprehensive review of the literature a panel of the National Academy of Sciences concluded: "Despite the intensity of the research effort, the empirical evidence is still not sufficient for providing a rigorous confirmation of the existence of a deterrent effect. . . . Policy makers in the criminal justice system are done a disservice if they are left with the impression that the empirical evidence, which they themselves are frequently unable to evaluate, strongly supports the deterrence hypothesis."[23]

Nevertheless, the unifying theme of this Article is that considering all the variables at issue in such a volatile area as criminal justice, and taking into account all the statistics for and against deterrence, the entire matter ultimately reduces to principles of common sense.

The disagreement over the question of deterrence between the pragmatists—Wilson, van den Haag, and others[24]—and the theoreticians—represented by Judge Bazelon and the National Academy

22. *But see* U.S. DEP'T OF JUSTICE, ATTORNEY GENERAL'S TASK FORCE ON VIOLENT CRIME: FINAL REPORT (1981) [hereinafter cited as TASK FORCE REPORT]. This report contains a number of recommendations on bail abuse, admissibility of evidence, limitations on post-conviction release, and other procedural aspects of the criminal justice system that are designed to streamline the process and restore a balance between the rights of accused and convicted criminals and the rights of the law-abiding members of society. The author was a member of the Task Force and is naturally prejudiced in favor of the Report. Nevertheless, the recommendations at least are worthy of consideration in dealing with the current crisis in crime in this country.

23. Bazelon, *supra* note 9, at 441.

tistics that purport to prove the ineffectiveness of deterrence; these statistics support the determination that although both the rates of incarceration and the lengths of sentences have risen, the crime rate has not diminished.[16] Thus, the argument concludes, increases in the probability or length of confinement must not deter offenders. This argument, however, ignores the distinction between the likelihood of punishment after apprehension and conviction and the likelihood of actually being apprehended and convicted. The greatest prerequisite of the deterrence argument is that for an action or threat of action to be effective as a deterrent, those against whom the threat is directed—in this case, criminals—must perceive the cost of their deeds to be greater than their prospective gain. In addition, the threat must be total, that is, it consistently must be credible from the time of arrest to actual imprisonment. Despite an almost certain probability of being arrested, an offender will not be greatly deterred from commiting a crime if he foresees only a negligible chance of going to jail. Conversely, the certainty of a long prison sentence after conviction is no deterrent to one who expects never to be apprehended.

Unfortunately, this consistency is absent today. A criminal of even marginal intelligence must know that although his chances of going to prison for a longer time are slightly higher now than they were in the past, his chances of ever being apprehended and convicted—especially in our major metropolitan areas—remain sufficiently minimal that the cost/gain ratio still favors committing the crime. Indeed, crime has reached such epidemic proportions that the police simply cannot deal with all of it, and the victims of this epidemic are bearing the burden. Moreover, our criminal justice system has instituted such a thicket of restraints on police activity and such a morass of contrived protections around criminal suspects—for example, the exclusion of evidence and confessions,[17] an almost unlimited right to bail despite the commission of other crimes while on bail,[18] and open-ended, post-conviction remedies[19]—that we indeed have become, in the words of the Chief Jus-

16. *See, e.g.*, Bazelon, *supra* note 9, at 440-41.

The analogy between the current epidemic of crime and a medical emergency is in no way attenuated, and society thus needs to adopt measures that will abate the alarming rise in crime immediately—not some distant point in the future when everyone concludes that the concept of deterrence breeds no harmful side effects.

As individuals continue to become victims of crime, society's attempts to solve the problem remain frustrated because of the tension between the need for immediate action and the quest for reasonable certainty about the effectiveness of deterrence. No single aspect of the criminal justice system highlights this tension more clearly than the arguments for and against deterrence and the death penalty, which this Article discusses below. The thesis of the Article is that the plight of the victim should be society's overriding consideration, and that the only viable solution to the present stalemate lies in a common sense approach to deterrence and capital punishment.

III. Death and Deterrence: The Capital Punishment Controversy

Proponents of the deterrent value of capital punishment—or, for that matter, any other aspect of deterrence—find themselves in the unenviable position of having to prove a negative. If a person is deterred from doing something, then, by definition, he does not do it. Thus, the numbers of people who refrained from committing felonies because of their fear of execution are difficult to ascertain. Rarely does a resident drop by the station house in his local police precinct to confide to the desk sergeant, "You know, I was planning to kill my wife for the insurance money, but the thought of the death penalty kept me from doing it." Homicide figures in the United States roughly indicate how many people obviously were not deterred from killing, but the number of those who actually were deterred remains—and must remain—incalculable.

---

virus—commonly known as swine flu—creating an epidemic among the American public during the following winter concerned United States public health officials. Researchers soon developed an effective vaccine, but it had potentially serious side effects for various segments of the population. Despite a sharp debate among policymakers about these risks compared to the benefits of a national immunization program, *see* Time, April 26, 1976, at 36, President Ford announced a $135 million program to innoculate the entire United States population. At that time, the Food and Drug Administration, which normally is the body that must approve such drugs before they are made available to the public, had neither tested the vaccine nor certified it as safe and effective. N.Y. Times, March 25, 1976, at 1, col. 1.

of Science panelists—can be stated clearly and succinctly. The former in effect argue that if the threat of punishment increases, or if the perceived cost of crime rises to exceed the perceived gain, then society will deter criminals. The theoreticians, on the other hand, take a conservative, cautious approach; they apparently would argue that policymakers must study the question of deterrence to a far greater degree—until they are clearly convinced of its soundness—before they would alter the system toward a more truly deterrent model.

The argument for delay ignores two salient points. First, criminal justice is not a finite science, and deterrence is not a finite concept. Theorists probably will never know with certainty the inner and outer limits of the deterrence model as a solution to the crime problem. This fundamental reality is the reason that this Article favors a common sense view of deterrence. Since no other approach has produced the desired results, a return to traditional notions about human behavior appears to be the only sensible alternative. Although some people might view this response as simplistic, the cost versus gain rationale is intrinsically logical, and no reason exists not to attempt to apply these principles to criminal justice, particularly when the more complex alternatives have failed demonstrably.

Second, from a pragmatic point of view, crime has reached such alarming proportions that society cannot afford the time that would be necessary to perform leisurely studies of deterrence—gathering empirical data on a gradual basis until the more learned professors are satisfied that deterrence works. Medical scientists, for example, have worked for years to produce cures for chronic, preexisting maladies such as the common cold, influenza, and arthritis that do not place the patient's life in danger. Studies and tests are time controlled: they are conducted first *in vitro* and then *in vivo* by beginning with laboratory animals and progressing to human experiments only under the most rigid conditions. This approach is known as the scientific method, and it is perfectly proper when the urgency is not immediate. The situation, however, is entirely different in emergency circumstances caused by a raging killer epidemic such as a plague or a new and deadly virus that is decimating the population. At this point, any potential remedy that appears likely to cure the disease or prevent its spread will be used without first undergoing rigid testing in clinical conditions.[25]

---

25. In the spring of 1976, for example, the possibility of a new strain of an influenza

of this debate reinforce the contention that if the statistical theoreticians cannot agree—based on the best empirical evidence—whether capital punishment deters murderers, then perhaps returning to a common sense evaluation of the question, which all citizens are capable of making, will be a more feasible and productive approach to the problem.

This common sense perspective begins with a concession from capital punishment proponents that the threat of the death penalty cannot and will not deter every murderer. Crimes of passion, crimes committed by the certifiably insane, and crimes calculatedly undertaken for revenge are all examples of murders that no known threat can deter. Notwithstanding this admission, however, the proposition does not follow that because capital punishment does not deter all murderers, it deters *no* murderers. Justice Stewart succinctly articulated this theme in *Gregg v. Georgia*,[33] in which the Supreme Court affirmed—with Justices Brennan and Marshall dissenting—three state death penalty statutes. Justice Stewart reasoned,

> Although some of the studies suggest that the death penalty may not function as a significantly greater deterrent than lesser penalties, there is no convincing empirical evidence either supporting or refuting this view. We may nevertheless assume safely that there are murderers, such as those who act in passion, for whom the threat of death has little or no deterrent effect. But for many others, the death penalty undoubtedly is a significant deterrent. There are carefully contemplated murders, such as murder for hire, where the possible penalty of death may well enter the cold calculus that precedes the decision to act.[34]

The first noteworthy aspect of the common sense analysis of the death and deterrence question is a simple cause and effect relationship. The several states quit executing murderers in 1966, a year in which slightly more than 10,000 murders were recorded.[35] This hiatus—initially de facto, but after 1972, de jure[36]—lasted approximately ten years, and during that period, the number of murders doubled to over 20,000 in 1976.[37] Undoubtedly, other factors also contributed to this increase, including population growth, deteriorating urban conditions, and an increasing disrespect for the law. The fact remains, however, that abandonment of the supreme

This discussion is not intended to suggest that those who are interested in statistics and empirical evidence have remained uninvolved in the deterrent controversy; indeed, a spirited, if rather arcane, debate currently is being waged among those who would seek to translate numbers and other variables into conclusions about the deterrent value of capital punishment. Of course, any detailed description of these statistical arguments about the death penalty and its deterrent effect is far beyond the scope of this Article. Briefly, sociologists and behavioral scientists initiated the discussion and purported to show—by comparing homicide rates in contiguous states that had adopted opposing positions on the death penalty—that capital punishment was not a crime deterrent.[26] Students of the crime problem accepted these findings almost without reservation for a good number of years.[27]

The debate subsequently widened with the entry of a new group of academic theorists: the econometricians. Using an econometric model that identified the various relevant determinants of murder, Isaac Ehrlich, a respected economist and opponent of the death penalty, published a paper in 1975[28] criticizing the sociologists' and behavioral scientists' method and indicating that each actual execution between 1933 and 1967 could have deterred an average of eight murders.[29] Ehrlich's conclusion drew immediate criticism,[30] to which he responded,[31] and the statistical warfare has continued up to the present.[32] The inconclusive results

A dissenting opinion in a capital punishment case written by the late Justice Marshall McComb of the California Supreme Court[41] provides another example of the average criminal's perception of the death penalty's deterrent effect. To demonstrate the deterrence factor, Justice McComb collected statements from police files of fourteen arrested criminals who had failed to use deadly force in the commission of their crimes because of their fear of being executed. The police had arrested one of these criminals for assault with a knife. She told investigating officers: " 'Yeh, I cut him and I should have done a better job. *I would have killed him but I didn't want to go to the gas chamber.*' "[42] In another case the police arrested three persons, two of whom had prior criminal records, for robbery. Using toy pistols, these offenders had forced their victims into a back room and bound them. When the investigating officers asked them why they had used toy guns instead of real ones, all three agreed that " 'real guns were too dangerous, as if someone were killed in the commission of the robberies, they would all receive the death penalty.' "[43] In yet another example cited by Justice McComb, an ex-convict with at least four aliases and a felony record that dated from 1941 was arrested for robbery. He had used guns in prior robberies in other states, but only pretended to carry a gun in the robbery in question. He told investigating officers that although he had spent only one month in the state, he had known about the California death penalty. When questioned about the gun bluff, he said, " '*I knew that if I used a real gun and that if I shot someone in a robbery, I might get the death penalty and go to the gas chamber.*' "[44] Overall, the offenders demonstrated an awareness of the potential penal consequences of their conduct in each of the fourteen cited cases, and they all intentionally placed themselves in a situation in which an unacceptably adverse result—namely, capital punishment—could not possibly occur. Justice McComb concluded from this evidence that

---

that "these people were simply telling the cops what they thought they wanted to hear." This explanation for the results of the survey might well be accurate, but the fact remains that the condition which gave rise to the study—that the weapon either was not used or could not be used—existed *before* the criminals knew that they would be apprehended, much less before they know whether they would be questioned about their failure to use the weapon.

penalty corresponded to a spectacular and unprecedented rise in the number of capital murders. At the very least, this ten year period of enlightenment—or softness—toward capital punishment created no parallel sense of gratitude in the hearts of potential killers. On the contrary, a more reasonable conclusion is that these people cynically and calculatedly took advantage of the new permissiveness. With the death penalty defunct and state parole laws allowing for release in a relatively few years, they justifiably believed that the murder of the victims of an armed robbery to avoid being identified, for example, was not an unacceptable risk considering the potential gain.

Another type of input offers additional support for the proposition that the relationship between the abandonment of capital punishment and the rise in the number of murders is one of cause and effect. Because actual thought processes and motivations are necessarily private matters that others can only approximate, criminals themselves may provide unique insights into their feelings about the death penalty. In 1970 and 1971 the Los Angeles Police Department surveyed persons whom they had arrested for violent crimes, but who either had carried no weapons, had not used their weapons, or had carried inoperative weapons.[38] Of the ninety-nine criminals who responded to the question about why they had not killed, or, alternatively, why they deliberately had avoided placing themselves in a position where they could have killed, their responses indicated that fifty percent were deterred by fear of the death penalty; about eight percent were unaffected by the death penalty because it was not being enforced; ten percent were undeterred by the death penalty and would kill whether it was enforced or not; and approximately thirty-two percent were unaffected by the death penalty because they would not carry a weapon under any circumstances, primarily because of a fear either of being injured themselves or of injuring someone else.[39] Thus, one out of every two persons who had avoided circumstances in which they might have killed provided the best possible empirical basis for believing in the deterrent effect of the death penalty—their own statements that a fear of the gas chamber governed their actions.[40]

38. Los Angeles Police Dep't, A Study on Capital Punishment (February 1971).

39. *Id.*

40. This study was one of the rare instances in which the proponents of deterrence actually were able to "prove the negative." In discussions with capital punishment experts—both retentionists and abolitionists—the author often has encountered the caveat

fenders. By committing one or more violent crimes—murder, rape, robbery, mayhem, kidnapping with violence, and aggravated assault—an individual unequivocally demonstrates that he is a danger to the community. When this individual is apprehended, convicted, or confined to a mental institution, the government takes full control of him through some form of incarceration or commitment. Similarly, the government assumes partial responsibility for an individual when it places him on parole, probation, work release, or the like. If correctional officials release the individual or permit him to escape under circumstances that constitute some form of negligence, or if they negligently supervise or control him, then these officials arguably should be held liable for any injury that results from the individual's future violent conduct. Liability also could be imposed for a negligent failure to warn certain potential victims either of threats against them or of the offender's dangerous tendencies.

Under this theory of liability, therefore, either the victim or the victim's survivors avoid suing the perpetrators of the crime and instead proceed against those third parties whose negligence—or gross negligence—actually put the offender in a position to victimize. According to the theory, the deterrence value arises from the perceived likelihood that the custodial officials or the government entities for which they work will be held civilly liable for gross negligence in the release or handling of prisoners. The theory holds that this threat will ensure—through the mechanism of enlightened self-interest—that these officials make their decisions and dispositions with the proper regard for the safety of society. By giving officials an incentive to be wary in their decisionmaking, and by deterring them from taking unnecessary risks, this approach may well prevent a good many of the current victimizations.

Several courts have begun to implement this deterrent rationale by permitting actions against correctional officials. *Grimm v. Arizona Board of Pardons and Paroles*,[47] for example, which the Supreme Court of Arizona decided in 1977, is a landmark case in this area. In 1973 Mitchell Blazak robbed a tavern in Tucson and killed John Grimm in the process. Blazak was a parolee whom the Arizona Board of Pardons and Paroles had released after he had served one-third of a 1967 sentence for armed robbery and assault with intent to kill. The Parole Board had released Blazak despite his criminal record dating from 1961, which included—besides the

47. 115 Ariz. 260, 564 P.2d 1227 (1977) (en banc).

the death penalty was indeed an effective deterrent.[45]

The final argument in this common sense analysis of deterrence and the death penalty concerns those people who are most directly affected by the acts of violent criminals—the murder victims themselves. If one concedes that neither side in this debate can prove conclusively that capital punishment does or does not deter murderers, then two—and only two—options remain: either the death penalty does not deter any would-be murderers or it deters at least some of them. If the first possibility proves to be true, then the invocation of capital punishment will not save the lives of any potential victims. Society, however, will be rid of some of its most dangerous predators, and the possibility that these people will kill again should they be released or escape will be foreclosed. On the other hand, if the second possibility is true, then the deterrent effect of making the threat of execution a credible one actually will save a given number of innocent victims from being killed.

The essential question regarding the acceptance of a death penalty with an unproved deterrent value, therefore, becomes whether society should favor the lives of convicted murderers over the lives of innocent victims. Viewed from the perspective of its potential to spare lives, one unquestionably can save convicted murderers by not executing them, but only at a continued high cost in terms of the lives of the innocent. On the other hand, although saving the lives of innocent victims by executing criminals may be less certain, the costs to society of not doing so are also much more severe. Simply stated, a common sense, victim-oriented approach resolves the uncertainty about deterrence in favor of the potential victims rather than the convicted criminals.

IV. Positive Deterrence Through Third Party Victims' Rights Litigation

This part of the Article deals with an area of the law that advocates of victims' rights are just now beginning to accept: litigation on behalf of a crime victim against negligent, or grossly negligent, correctional officials.[46] This approach focuses on the concept of positive deterrence, which relies upon the threat of legal action to eliminate victimization opportunities for potential repeat of-

45. *Id.* at 734-35, 366 P.2d at 40-41, 16 Cal. Rptr. 784-85 (McComb, J., dissenting).

46. For the sake of brevity and convenience, the term "correctional officials" includes parole boards, probation officers, wardens, sheriffs, and anyone else who has a duty to handle prisoners in some manner.

Citing the Arizona statute that set forth the criteria for parole release,[52] the court held that the Board's action in granting parole resulted in a voluntary assumption of responsibility over the convict.[53] The court reasoned that the supervision of a person having dangerous tendencies raises a duty to individual members of the general public and renders the Board liable for injury to individuals stemming from "grossly negligent or reckless release of a highly dangerous prisoner."[54] Under these circumstances, the court held that

> members of the Board are under a duty to inquire further before releasing the prisoner. . . . If the entire record of the prisoner reveals violent propensities and there is absolutely no reasonable basis for a belief that he has changed, then a decision to release the prisoner would be grossly negligent or reckless.[55]

Taylor v. State,[56] a 1973 jury verdict in a lower court case in the State of Washington, reached a result similar to that in *Grimm*. In *Taylor* the warden of the maxi-security state penitentiary in Washington had instituted an ill-conceived and unauthorized "take-a-lifer-to-dinner" program, under which prisoners serving life sentences were permitted to go to dinner outside the prison as a rehabilitative device. One of the beneficiaries of this program was a convict serving a life term who had a prior criminal record of forty-one felony convictions and seventeen escape attempts. The prisoner went to dinner at the home of an unarmed prison baker, crawled out the bathroom window, and subsequently murdered Mr. Taylor and wounded his wife during an armed robbery. Mrs. Taylor's suit against both the State of Washington and the warden—in his personal capacity—resulted in a jury award of $186,000.[57]

Grimm and *Taylor* are typical of those cases in which either victims or their survivors sue correctional officials for gross negligence in the handling of convicted criminals that results in harm to third parties. Despite several decisions in which courts have denied

57. *Id.*

armed robbery and assault with intent to kill—convinctions for burglary (twice), parole violation, and possession of marijuana.[48] In addition, the Board arguably possessed other evidence about the danger to society of releasing Blazak. The court in its opinion summarized eight different psychiatrists' prison evaluations that described him as

> "an extremely dangerous person who should not be free in society until some major psychological changes take place." He is a paranoid schizophrenic whose psychosis prevents him from distinguishing between right and wrong and from controlling his conduct. He has never made an adequate adjustment to society for any prolonged period and is unlikely to change. He has a definite potential for violence.[49]

In any event, the Board released Blazak after he had served only a fraction of his sentence, and shortly thereafter he murdered Mr. Grimm. Mrs. Grimm sued the members of the Parole Board for the wrongful death of her husband based on their gross negligence in the release; the Board defended on the grounds of an absolute immunity for public officials. On appeal, the Arizona Supreme Court ruled that the Parole Board members owed a duty to individuals when they make a decision "to release on parole a prisoner with a history of violent and dangerous conduct."[50] In holding that plaintiffs had stated a cause of action—subject, of course, to proof of all the other elements of actionable negligence—the court rejected the Board's absolute immunity rationale and affirmed the need for some method of accountability for bureaucratic decisionmaking. The court stressed the need to deter grossly negligent official action:

> We have come to this conclusion because of the increasing power of the bureaucracy—the administrators—in our society. The authority wielded by so-called faceless bureaucrats has often been criticized. . . . While society may want and need courageous, independent policy decisions among high level government officials, there seems to be no benefit and, indeed, great potential harm in allowing unbridled discretion without fear of being held to account for their actions for every single public official who exercises discretion. The more power bureaucrats exercise over our lives, the more we need some sort of ultimate responsibility to lie for their most outrageous conduct. There may even be some deterrent value in holding officials responsible for shocking outrageous actions. In any case, democracy by its very definition implies responsibility. In this day of increasing power wielded by governmental officials, absolute immunity for nonjudicial, nonlegislative officials is outmoded and even dangerous.[51]

tion to victimize. Thus, the harmful result is not as immediately foreseeable, and a simple negligence standard arguably is inappropriate.

Correctional officials perform the most difficult and demanding job in criminal justice today. To second-guess every disposition made in good faith by these officials by permitting civil lawsuits might unfairly burden and unduly restrict their decisionmaking process. At the same time, a standard requiring intentional malefaction provides too little control over their actions. The proper balance between these two competing considerations, therefore, lies in the concept of gross negligence as a prerequisite for liability. Indeed, almost every court that has held correctional officials liable has based its decision on a finding of gross negligence.[61] The court in *Grimm*, for example, relied on this standard;[62] it reasoned that the standard struck "the proper balance between the competing interests. The public has an interest in protection from premature release of highly dangerous prisoners as well as an interest in holding public officials responsible for outrageous conduct. The Board members have an interest in freedom from suit for reasonable decisions."[63] Similarly, the recently published final report of *The Attorney General's Task Force on Violent Crime* also recommended a gross negligence standard in these situations.[64] For these reasons, a gross negligence standard, which requires a higher degree of culpability than a simple good faith mistake, strikes a proper balance between the unfettered discretion of correctional officials and the policy against second-guessing mistaken dispositions that are made reasonably in good faith. In any event, the wave of victim litigation against third parties is not likely to abate—nor should it. As long as the courts continue to be vigilant in maintaining an appropriate balance between competing societal interests, this type of litigation is the kind of benign, positive deterrence that furthers the policy goals of the American criminal justice system.

---

61. *See, e.g.*, Grimm v. Arizona Bd. of Pardons & Paroles, 115 Ariz. 260, 267, 564 P.2d 1227, 1234 (1977) (en banc).

62. *Id.*

63. *Id.* at 268, 564 P.2d at 1235 (footnote omitted).

64. TASK FORCE REPORT, *supra* note 22, Recommendation 63. Recommendation 63 states that "the Attorney General should study the principle that would allow for suits against appropriate federal governmental agencies for *gross negligence* involved in allowing early release or failure to supervise obviously dangerous persons or for failure to warn expected victims of such dangerous persons." *Id.* (emphasis added).

recovery—principally on the traditional grounds of sovereign immunity[58]—these cases represent a discernible trend in the courts toward permitting recovery when the requisite elements of a negligence or gross negligence cause of action are present.[59] This line of cases is presented solely to illustrate the potential—and growing trend—for victims to utilize the civil courts in lawsuits against third parties, not only to vindicate their own rights—either as victims themselves or as victims' survivors—but also, and perhaps more importantly, to use the law itself as a deterrent against those who are far too willing to experiment with the safety and security of the innocent to advance their own rehabilitative theories.[60]

This application of the deterrence concept to tort litigation presents a difficult theoretical problem of determining the proper standard of care that correctional officials owe to each member of the public. In many, if not most, personal injury lawsuits, the connection between the defendant's action and the plaintiff's injury is relatively easy to foresee. In cases against correctional officials, however, the defendants are not the actors who directly cause the injury; rather, their negligence merely places the criminal in a posi-

60. Areas other than the handling of prisoners also have utilized the concept of positive deterrence through victim lawsuits against negligent third parties. For example, victims who have been injured because of a failure of security on leased premises have successfully sued and recovered. *See, e.g.*, Kline v. 1500 Massachusetts Ave. Apt. Corp., 439 F.2d 477 (D.C. Cir. 1970); Duarte v. State, 84 Cal. App. 3d 729, 148 Cal. Rptr. 504 (1978); O'Hara v. Western Seven Trees Corp., 75 Cal. App. 3d 798, 142 Cal. Rptr. 487 (1977). Likewise, innkeepers have been held liable for the failure to provide proper security for guests who were victimized. *See, e.g.*, Garzilli v. Howard Johnson's Motor Lodges, Inc., 419 F. Supp. 1210 (S.D.N.Y. 1976). Finally, owners of premises have been held liable to business invitees. *See, e.g.*, Quinn v. Smith, 57 F.2d 784 (5th Cir. 1932); Taylor v. Centennial Bowl, 65 Cal. 2d 114, 416 P.2d 793, 52 Cal. Rptr. 569 (1966); Earle v. Colonial Theater Co., 82 Mich. App. 54, 266 N.W.2d 466 (1978).

V. Conclusion

This Article has attempted to demonstrate that only a paucity of actual knowledge is available on the concept of deterrence. Although the theory of cost versus gain—a pure threat of sanction as a deterrent to criminal activity—is logically compelling, hardly anything in this area can be proven even by a preponderance of the evidence, much less with mathematical certainty. The question that society must address, therefore, is whether to accept the reasonable, but concededly unprovable, proposition that a would-be criminal's motivation to commit lawless and violent acts will diminish in direct proportion to the extent that the criminal justice system provides a credible threat of swift and certain apprehension and punishment. The only alternative solution apparently is to wait—as the theoreticians cited above would advocate[65]—until the concept of deterrence can be proven empirically. The thesis of this Article is that this latter approach is in large part responsible for the lamentable situation in which our criminal justice system now finds itself. The time has come for society to adopt a common sense approach to the question of deterrence and to return the rights of innocent victims to their rightful position as the principal priority of the American criminal justice system.

JUNEAU - Death by hanging (being) Alaska's most severe penalty for the commission of a crime would be abolished under terms of a bill passed by the territorial House today.

By a 14-9 vote, with one member absent, the House passed and sent to the Senate a bill that would strike all forms of capital punishment from the territorial law.

The vote followed a day and a half of debate in which the co-author of the bill, a lawyer, said "the hideous mistake of executing an innocent man" makes it impossible "ever to bring him out of the grave into God's (?)."

"I have been unfortunate enough to witness execution." said Rep. Warren Taylor (D-Fairbanks) "and the cold-blooded methodical way they are carried out makes you wonder if it isn't legal murder."

Taylor, who introduced the bill with Rep. Vic Fischer (D-Anchorage) told the House and a packed gallery yesterday that he had been a lawyer in Alaska 30 years next month.

"I've taken part in 31 homicide trials, quite a few in the first degree." he said, "both as a prosecutor and a defense attorney." he added.

"I recall a case in Valdez where I was prosecuting a very good friend of mine. A combination of cabin fever and raw alcohol led him to trouble, and unfortunately the jury brought in a verdict in the second degree. Had it been different, I would have carried to the grave that scar on my soul."

One of the strong opponents to the bill, Rep. Dora Sweeney (D-Juneau) recalled two famous cases in support of her argument that the death penalty should be continued.

"Remember Winnie Ruth Judd," Rep. Sweeney said, "A Juneau girl who horribly hacked up two persons and tried to ship their bodies all over everywhere in a trunk, she lives today in an institution, from which she has escaped several times."

Then she pointed to the recent case of John Gilbert Graham, the Colorado youth executed for planting a bomb aboard a commercial airliner and killing more than 50 persons.

"If that happens in Alaska," Mrs. Sweeney said, "and this bill passes , we could not penalize him with any more than life imprisonment -- from which he eventually could be freed."

Rep. Seaborn J. Buckalew, Jr. (D-Anchorage) protested that the bill "protects a class of people who don't deserve the consideration we are giving them."

Taylor said Rep. Sweeney believed in the commandment "of thou shall not kill-but," Taylor added: "There is a period after kill."

"And Mr. Buckalew," Taylor said, "has the District Attorney complex--show them no mercy."

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

This bill requires imposition of capital punishment for the crime of first degree murder in the presence of certain aggravating factors enumerated in section 12.55.180 of the bill. Obviously, should these factors be present, a most vigourous and lengthy defense can be expected from defendants' counsel. The amount of state resources required to prosecute capital cases is unquantifiable at this time. It is bound, however, to be considerable, both at the trial and appellate levels. Recent experience in other states suggests that very protracted and expensive litigation may be necessary to implement the provisions of the Act.
The Territorial Legislature abolished the death penalty in Alaska in 1957, and we simply do not have any historic data upon which we can make an accurate projection.

Surprising Facts About The Death Penalty

No white has ever been executed for the rape of a black in the U.S.

Nearly three quarters of all murders involve members of a family or acquaintances.

Since 1900, there has been, on the average, one case per year in the U.S. in which an entirely innocent person was convicted of murder.

Of all the people executed in the U.S. since 1930, over 54 percent were black. The population of the U.S. during this period was 9 percent black.

At the last public execution in the U.S. (a Kentucky hanging in 1938) 20,000 people turned out to watch.

Numerous studies have examined the risk presented by paroled murderers and the findings have always been the same: their rate of parole violation is by far the lowest of all classes of offenders.

In 1970, the average time spent in prison under sentence of death was 32.6 months.

The vast majority of capital crimes is committed during a moment of great emotional stress, in fear, or under the influence of drugs or alcohol. The question of deterrence seems inapplicable here.

States that have reinstated the death penalty after abolishing it have not shown a decreased rate of criminal homicide: In Deleware, for example, there was no death penalty from 1958 to 1961. After restoration, homicide increased by 3.7 persons per 100,000 population.

Though blacks constitute 54 percent of murder victims, only 13 percent of the persons currently on death row had black victims.

Since 1972, 62 percent of death row inmates were unskilled, service, or domestic workers; 60 percent were unemployed at the time of their crimes.

As of April 1980, nearly 75 percent of the national death row population is in the Deep South.

In Georgia, between 1973 and 1977, over three times as many convicted defendants who had killed white victims received a death sentence as did those who had killed

black victims.

During the same period, *geographical* discrepancies within the state were also significant: persons sentenced within Georgia's central region were four times as likely to get "death" as were those sentenced in the Atlanta area.

Never in the history of Florida has a white person been executed for a crime against a black person.

America's opinion of who should be killed has changed radically over the years. During the colonial years, King George III required the death penalty for 156 different crimes, including such offenses as stealing apples from an orchard, breaking the dam of a fishpond, cutting down trees in Putney Park — and the cultivation of tobacco plants.

Most prisoners under sentence of death are poor and so are represented by state-appointed lawyers. Most states make no provision for state-financed legal representation beyond the trial and direct appeals.

More than 650 men and women were on death row as of May, 1980, and the number is growing at the rate of over 10 a month. This is the largest death row population in U.S. history and may be the largest in the world.

Georgia has put 366 persons to death since 1930 — the highest rate for any state.

Of 455 men executed for rape in the U.S. since 1930, 405 (90 percent) were black; all but two of these executions occurred in the South.

Despite widespread publicity before and after the May 25, 1979, execution of John Spenkelink, Florida's first execution in 15 years, the state's murder rate jumped 14.4 percent during the first six months of 1980.

The state of Georgia has already spent nearly $1 million in preparation for Jack Potts' execution; meanwhile the condemned man has received only minimal medical attention for injuries sustained during his arrest six years ago, when a bullet hit his mouth, shattered his teeth and tongue and lodged 1 cm. from his spine.

In capital cases involving more than one participant, the prosecutor seldom asks for the death penalty for more than one of them. In order to obtain the powerful evidence necessary to win a death sentence, he will make a deal with all participants except one. The defendants who successfully "plea bargain" testify against the defendant chosen for the gallows and in return receive sentences of imprisonment or less. Thus, John Spenkelink died in the electric chair; his partner, Frank Brum, who cooperated with the prosecution, confessed to participation in the same murder and went free.

For a punishment to be a deterrent, it must be consistently and promptly employed: between 1930 and 1960, there was one execution for every 70 homicides, and the rate has dropped sharply since then.

In 1978, nearly 70 percent of U.S. whites favored capital punishment while only 24 percent of blacks felt the same. Juror selection can have serious implications for the outcome of capital cases.

A Delaware policeman who had forcefully argued for restoration of capital punishment in that state on the grounds of its deterrent value killed his wife just 10 days after the penalty was restored in 1961.

Between 1928 and 1949, average homicide rates in death penalty states were between two and three times higher than in abolition states.

Of the 553 people executed in the history of the U.S. for the crime of rape, 497 or 90 percent were black even though blacks comprise only about 11 percent of the nation's population. In 1976, the Supreme Court decided it was unconstitutional for a state to execute a person for the crime of rape. The 553 people lived — and died — too early in our country's history to enjoy their full Constitutional protections.

Debate heats up over capital punishment bill

Moral Majority for, Catholics against it

teve Hansen
s Writer

Two of the state's largest religious organizations — the Catholic Archdicese of Anchorage and the Moral Majority — have taken opposite sides in the emotional debate over imposing the death penalty in Alaska.

The archdiocese adamantly opposes capital punishment, while Moral Majority strongly favors it.

The religious organizations presented their opinions during a state Judiciary Committee public hearing here Friday.

In addition, more than a dozen others stated their opposition to the bill which, if approved, would allow juries to sentence to death people convicted of first-degree murder.

The meeting was marked by impassioned and emotional outbursts. Sen. Fritz Pettyjohn, R-Anchorage, one of four co-sponsors of the bill, argued several times with people who spoke against the legislation.

Few of those who testified addressed the bill itself. Most appeared to want a chance state their feelings on the controversial subject.

Father Steven Moore, who represented the archdiocese and Archbishop Francis T. Hurley at the hearing, said the death penalty is contrary to the teachings of Jesus.

"Jesus himself rejected a notion of punishment base on 'an eye for an eye, and a tooth for a tooth,' " Moore said. "Instead he urged forebearance in the face of evil, compassion and love.

"The ministry of Jesus was one of salvation, healing, and reconcillation."

But Tim Ewell, executive director of Moral Majority of Alaska, said, "Capital punishment is definitely a means God set forth for society."

About three-quarters of those who spoke Friday were against the death penalty. But during a recess late in the day, Pettyjohn said he didn't feel the testimony was representative of public sentiment.

"It's been 90 percent attorneys, a couple of ministers and one guy who's a private citizen," he said. "The people in my district are at work."

Pettyjohn represents South Anchorage. He estimated about 75 percent of his constituents favor the death penalty.

But Sen. Joe Josephson, D-Anchorage, co-chairman of the committee, said he opposed the bill. "I think the testimony shows the bill has many defects," he said.

Most of those opposing the bill said they didn't think the death penalty was a workable deterent against murder, that it tends to discriminate against minorities and that there is a chance an innocent person could be executed.

Norris Klesman of The Times

Dick Eliason, Joe Josephson and Fritz Pettyjohn, left to right, listened to arguments for and against the death penalty for first-degree murder Frida

Attorney Lynn Allingham added that someone sentenced to life imprisonment can always be released if new evidence is uncovered which proves innocence.

"But if we execute someone, there's no turning back," she said.

Former attorney general John Havelock said, "What you are doing is firing a cannonball into the air and no one knows where it'll land. I think it's is a dud."

But those in favor said capital punishment was needed to protect the public from killers.

Citing the 1982 murders of four Anchorage teen-agers by Charles Meach and six killings in McCarthy earlier this month, Burton Carney, a Moral Majority official, said, "I think there is a place in our society for capital punishment."

STATE OF ALASKA v. NEWTON LAMBERT

Lambert sentenced to 99 years in prison

No parole for 50 years, judge orders in killing

By CHRISTOPHER JARVIS
The Juneau Empire

Convicted murderer Newton Lambert was sentenced to 99 years in prison in Juneau Superior Court this morning and will not be eligible for parole for 50 years.

"I suppose this is the worst murder ever committed in this city," Juneau Superior Court Judge Rodger Pegues said as he handed down the sentence. "It was a gruesome, awful crime."

After hearing arguments for and against the maximum sentence, Pegues said "it all adds up to the maximum sentence."

Lambert, 21, declined the opportunity to speak on his behalf and showed no emotion as the sentence was pronounced.

"I don't have anything to say," a handcuffed Lambert said on leaving the courtroom.

Lambert will not be eligible for parole until the year 2034, when he will be 10 years older than Anne Benolken was when she has murdered.

Lambert was convicted in November of the April 4, 1982, beating and stabbing death of 61-year-old Mrs. Benolken in her South Franklin Street apartment. She was beaten, stabbed 60 times and sexually assaulted.

Lambert was acquitted of the beating and stabbing death of her 63-year-old husband James who was killed at the same time. He too was sodomized.

"People who are inherently law abiding don't need a criminal justice system, except to protect them," Pegues said.

Defense attorney Tom Findley called the length of the prison term "a death sentence" after arguing that Lambert should be sentenced to 40 years in prison with 10 suspended. That would have allowed Lambert's release at age 51.

After speaking of the drugs and alcohol Lambert said he took the hours before the murder, Findley said, "I don't offer Newton Lambert's condition as an excuse, but an observation."

Lambert was "not the deliberate, calculating cold-blooded killer," who deserved the maximum sentence, Findley argued.

Lambert testified at his trial he was on a binge of alcohol, cocaine, LSD and amphetamines in the days before the murder.

Lambert denied "and still denies" any involvement in the killings, Findley said.

His only memory before waking up in the bathtub of the dead couple's apartment was drinking a Heineken beer at a downtown Juneau bar after leaving a birthday party for him at the Indian Village, Lambert said during his trial.

Lambert said he entered the living room of the Lower F&L

Photo by Brian Wallis

Newton Lambert: 99-year sentence.

apartment where he found Anne Benolken's body on a mattress on the floor and the her dead husband's partially clad body kneeling over the end of it.

Findley argued that Lambert was not a "leader" in the crime, saying Svobodny alleged throughout the trial that co-defendant Emanuel Telles was the instigator.

Telles was acquitted of both murders during his trial.

Lambert should receive a shorter sentence and the opportunity to "at least give him the end of his life" out of prison, Findley said.

"The way it is now, he'll probably be dead before he gets the opportunity to go before a parole board and wheeze 'I'm 71, please let me out,'" Findley said.

Allowing him to live the last years of his life as a free men, Findley told Pegues, "is hardly asking you for a break."

Findley's recommendation would send the message that "if you participate in a murder, you will spend 30 years behind bars and 10 years on probationary status before society will let go of you," Findley said.

Pegues denied Lambert any "glimmer of hope," by ordering he serve at least 50 years in prison, Findley said later.

"Mr. Svobodny and Mr. Collins want you to turn out the light," Findley told Pegues. Robert Collins was the probation officer who prepared Lambert's presentence report.

No sentence rendered by the court would be sufficient, Svobodny said, "to bring back to society a member of this community," or to "wash away the fear" in the community during the year after the elderly couple's death.

"I wish I was a better orator," Svobodny said in urging Pegues to hand down the maximum sentence. "I wish I could make it clear to everyone in the courtroom what Mrs. Benolken went through just speaking the words."

Society was warned of what Lambert would do, Svobodny said, particularly after psychologist Dr. Anthony Mander said two months before the couple's death that Lambert had homicidal thoughts and could become assaultive at the "slightest criticism."

"There is nothing left to do but put him in a jail setting, frankly, for the rest of his life," Svobodny said.

Because of the record of assaults, two felony arrests, one felony conviction and a history of alcohol-related offenses, all since he was 13, "we had all kinds of notice about what Mr. Lambert was going to do the rest of his life," Svobodny said of any chance for rehabilitation.

The "legal profession is not a science but probably more an art," Svobodny said. Sentencing is "the most difficult part of the criminal justice system," because it requires balancing to assure justice is served while attempts are made to rehabilitate the criminal.

"This is one of the easiest sentences I've come to," Svobodny said, because "I can not find any factor to suggest Newton Lambert should be sentenced to anything less than 99 years."

HOUSE OF REPRESENTATIVES

OFFICE OF THE MAJORITY LEADER

Room 216
STATE CAPITOL

HB 140

TO: Rep Bursell

ATTN: _____

REMARKS:

A recent story (Jan 18) in the Juneau Empire told of Newton Lambert's being sentenced to 99 years - 50 without parole - for "sexually assaulting" and killing Anne Benolken by beating and stabbing her 60 times. (He was found not guilty of killing her husband, who also was sodomized and killed by beating and stabbing)

The attached printout (from House Research) shows the projected cost of nurturing and caring for him for the next 50 years. (used $88 per day and 6% inflation; obtained from Corrections

SB 121

TESTIMONY ON THE DEATH PENALTY

Dana Fabe, Public Defender, March 18, 1983

There are many ethical and moral reasons for not adopting the death penalty. The state is legitimizing the premeditated killing of humans. The death penalty is most often racially and economically discriminatory in its application. Innocent people can be killed by mistake. The death penalty does not act as a deterrent and in fact has a brutalizing impact on a community or society as a whole.

I oppose the death penalty for these reasons and many more. However, I would like to take my time for testifying to address the costs of implementing this bill, focusing on the costs of defending a death penalty case.

If this death penalty bill is enacted, representation of the poor in death cases must be adequate. This is due to the possibility that an innocent person might be killed by mistake. Some degree of mistake is of course a potential problem in all criminal cases. But in non-death cases, the system stands ready to correct those mistakes when they become known. An execution can never be corrected.

Due to these considerations, the processing of a death case is much more complex and expensive then other criminal cases. Not only are extraordinary amounts of attorney time and substantial expert fees necessary in the guilt phase of a trial, but the penalty phase, in which a jury determines whether or not to put a person to death, takes on tremendous significance. This penalty phase requires extensive attorney preparation, the use of psychiatric experts and family and friends from out of state, and other necessary expenditures.

Finally, even after the death penalty has been imposed, the procedures in death penalty cases are lengthy and time consuming. After the guilt and penalty phases of a case, the following procedures would be routinely necessary:

(1) Appeal of conviction to the Alaska Court of Appeals.

(2) Petition for Hearing to the Alaska Supreme Court.

(3) Automatic sentence review by Alaska Supreme Court.

(4) Writ of certiorari to the United States Supreme Court.

(5) Post-conviction relief proceedings in state court.

(6) Appeal of post-conviction relief proceedings in the Court of Appeals.

(7) Petition for Hearing of post-conviction relief proceedings to the Alaska Supreme Court.

(8) Writ of certiorari to the United States Supreme Court.

(9) Petition for Writ of Habeus Corpus in the Federal District Court.

(10) Appeal to the United States Court of Appeals.

(11) Rehearing in the United States Court of Appeals.

(12) Writ of certiorari to the United States Supreme Court.

(13) Commutation applications to executive branch.

(14) Emergency stays to the United States Supreme Court.

The Public Defender Agency estimates that it would cost approximately 3.5 million dollars next fiscal year to defend the estimated number of capital cases which would be assigned to this statewide agency. The figures in this fiscal note are based on the number of cases which would have qualified under the bill as capital cases which were handled by this agency during Fiscal Year 1982. This agency handled 30 first degree murder cases which would qualify as capital cases under this bill. The specific figures were arrived at as follows:

(1) Personal services. This agency is currently 11.5 attorneys short of the LEAA standards for the maximum number of cases to be handled by an attorney to ensure competent representation when no death penalty cases are involved. Death penalty cases take substantially more attorney time than other cases. For example, the Florida Legislature has adopted standards which permit an attorney to handle no more than 8 death penalty trial cases per year, or 5 death penalty appeal cases per year. For comparison, the LEAA figures are 150 non-death felonies or 25 appeals a year. Some states have applied far more stringent standards. For example, the California state appellate defender permits attorneys to handle only 2 death penalty appeals per year. Given the fact that the attorneys who handle death penalty cases will have to be given drastic caseload relief, their extra cases will be loaded onto the caseloads of attorneys whose caseloads already exceed recommended maximums. Thus, at a minimum, this agency must be brought up to the minimum number of attorneys required to handle the caseload as it exists without the death penalty. This necessitates the addition of twelve additional attorneys, plus necessary investigation and clerical support staff.

(2) Travel and Contractual Fees. (a) The New York State Defender Association has estimated that a minimum figure for expert witness fees must be $30,000 for the guilt phase and $30,000 for the penalty phase per case. Thus, the contractual and travel costs for expert witnesses has been calculated at $60,000 per case. This does not include any expert fees which might be necessary at the appellate stages.

(3) Equipment and Supplies. Other costs include expanded office space for additional personnel as well as equipment and supply money for additional personnel.

The costs described above do not take into account contingencies such as reversals and retrials after appeal or travel to Washington, D.C. to argue before the United States Supreme Court and other costs which at this time are difficult to predict. Furthermore, the cost of defending a death case is just one component of the total cost to the system of processing a capital case. The New York Defender's Association estimates the total of defense, prosecution and court costs of procesing a capital case at $1,498.100 prior to any appeals and $1,828,100 once all appeals have been processed. This figure does not include such costs as special telephone lines running from the prison to the Unted States Supreme Court or Governor's office. The cost of extra police personnel for crowd control and helicopter security are also hidden costs. Finally the cost of an actual execution can be high. The State of Georgia which executes by electrocution spent more than $250,000 solely for the anticipated but aborted, execution of Jack Howard Potts in 1980.

March 18, 1983

My name is Judy Zimicki. My address is SRA 4007-A, Anchorage, AK., 99502. I represent myself today as a citizen concerned about the degrading effect that the death penalty would have on the moral fabric of our society.

In January, 1977, a 10 year moratorium on capital punishment ended with the execution of Gary Gilmore in response to a rapidly rising crime rate and, maybe more importantly, the resultant dramatic increase in the fear of crime. The result is an institution of death at the hands of the state for certain types of homicide.

The strength of the cry for the death penalty can be directly correlated to specific events. In our state, the Meach killings last year brought close to home for all Anchorage residents the grim reality of murder. And, more recently, the seemingly calculated cold-blooded McCarthy killings bring out our animal instincts with a desire to kill, literally, a person who could commit such acts.

But the institution of the death penalty is much more than an emotional reaction. When capital punishment is legalized, the effects are profound and subtle, and still unknown.

The most common argument for the death penalty is deterrence. There seems to be no statistics to back this claim. The only study since 1945 that supports the deterrence argument was released in 1975 by an economist named Isaac Erlich. Review of his economic models immediately put his methodology under fire by both critics and proponents of capital punishment.

A look at some statistices may be helpful here. In 1033, the homicide rate in the United States was 9.7 murders per 100,000 people. During the 1930's executions averaged 150 per year. Through the post war years of 1945-60, the homicide rate fluctuated with a maximum of 6.4/100,000. In 1960, there

were 4.7 murders/100,000/ Executions at this time of relatively low homicide rates, however were down to an average of 24 per year, only 16% of the 1930's execution rate.

By 1973, the homicide rate had climbed to 9.4 and it currently rests at 9.8/100,000. Reasons offered to explain the high rate include such diverse factors as economic hard times (analogous to the 30's), the increased availability of hand-guns and the "coming-of-age" of the post-war baby boom. Looking at other countries, England, and abolitionist state, has a homicide rate of 1.1 while Japan, which practises capital punishment, has a rate of 1.0/100,000.

The moral argument against the death penalty is harder to express. In a few words, the state does not have a right to kill, no matter what heinous act someone has committed. Violations of human rights by individuals do not give the State a right to violate human rights. The United States is held up worldwide as an example of guaranteed civil liberties. The reinstitution of the death penalty in the United States is thus viewed as the first step in lessening of these rights and may promulgate executions elsewhere in the world. We watch with horror and disgust news reports of abuses of state power in other countries in the name of fighting terrorism or maintaining state stability. How, then, can we justify State murder in our own country in the name of reducing crime? And shouldn't we question the subtle negative effect state-sponsored murder might have by serving as an example of what to do when we think a wrong has been committed?

Let us look briefly at the number of criminals that would be considered for capital punishment in Alaska. In 1980, a review of felony sentences by the Alaska Judicial Council determined that 1.04% (or 5/481) sentences in urban courts were for first degree murder. During the same period, no first degree murder sentences were recorded in the 372 rural location felony sentences. Therefore, statewide, first

degree murders in 1980 accounted for 5/853 or just under one-half of one percent of felony sentences. In light of the moral questions mentioned above, is the institution of capital punishment for such a small percentage of felonies worth risking the uncertainties, biases, cost and moral degredation?

My final point today addresses the fear of crime which I mentioned earlier as one of the prime factors in the cry for the reinstitution of the death penalty. Crime is a frightening aspect of our daily lives, and the fear grows whenever we read a report of a burgulary, murder or rape situation in which the victim could have easily been ourselves or someone close to us.

As legislators and leaders in the State, you should be directing your efforts to the improvement of the criminal justice system and to the identification of and elimination of the social conditions that foster crime and unrest in our state. Capital punishment is not the answer. It is not a deterrent to crime and thus will not affect the crime rate nor ease our fears. Reinstitution of the death penalty in Alaska is only a symbolic and ineffective gesture of retribution. As such, instead of deterring crime, capital punishment would offer a false sense of security and ultimately delay any more positive measures.

Thank you for the opportunity to testify today.

TESTIMONY BEFORE THE HESS COMMITTEE OF THE SENATE OF THE STATE OF ALASKA

TIMOTHY V. EWELL
EXECUTIVE DIRECTOR
MORAL MAJORITY OF ALASKA
P.O. BOX 101779
ANCHORAGE, ALASKA 99510

Thank you for the opportunity to come before you today. It is indeed a privilege to be a part of my State Government. I feel as do many others, that it is not only my privilege but my duty to let you know how I feel on legislation that affects me and the people I represent.

My qualifications are not as great as those learned jurors that have appeared before you this morning. However, I am a citizen of the State of Alaska for some years now and I have been active in the social/political areas of our State for much of that time. I have served on the Anchorage Crime Commission and as lobbyist in Juneau.

I support the reinstitution of the Death Penalty in the State of Alaska and I support Senate bill number 121 as a means to do that.

First, let me clear up some misconceptions you may have. I have read a lot of letters to the editor lately that improperly quote Biblical references and because I believe in the Bible and its principles, I would like to clear those issues up. The one that comes up the most often is the commandment that is translated in the King James Version of the Bible as "Thou shalt not kill." In 16th century England the meaning was clear but today our language does not properly do it justice. The proper translation in modern language is "Thou shalt not commit murder."

The Bible is clear in showing that God imposed the death penalty and not just for murder offenses but in lesser cases also. And He did not always deal out the punishment directly but used the government established and in effect at the time to carry out that punishment.

God has the right to give life and the right to take it away. And God gave rules by which we must conduct ourselves. To disobey these rules is to subject oneself to the appropriate penalty. It was not judged on wealth, or who one knew but was given out the same to Kings and paupers.

Our founding fathers recognized that God was the creator of the universe and the giver of all laws. Upon that principle they built this land. But we have become a nation of people who not only refuse to recognize God's sovereignty but also that He exists at all.

I go through all this because what we are talking about today is very much a moral issue. And we must have a base for a moral consciousness or we cannot even communicate, which I fear is half our problem anyway.

Let us therefore make some suppositions. Let us assume that at all times and for all reasons, murder is unacceptable in our society. Then it follows that those who commit murder do so against the wishes of society.

If society offers no punishment for the crime, then what is to keep people from ignoring societies wishes.

I submit to you that human beings are more satisfied in their daily lives if they live within boundaries. That living within boundaries is the true test of freedom. The person who works at a job where the boss never says you're doing a good job or doing a bad job is liable to be insecure because he doesn't know what his boundaries of acceptability are. The person drives a car beyond the speed limit or in a reckless fashion does so with the clear feeling that he is overstepping the boundaries that have been established for him.

This is especially evident in the child abuse crimes that are now coming to light here in the city of Anchorage. I have known about this investigation for some time and I am glad it is finally out where it can be seen. I believe that the reason we are seeing such an increase in child abuse and the problems it creates is because of the past generation of "Spock" children who are now adults who were not disciplined properly and who were taught the philosophy "if it feels good, do it."

This problem did not exist 20 years ago like it does today. But the problem is that the parents did not establish boundaries for their children, there were no taboos, no rights and wrongs and hence the children experiment, often into adulthood to try to find where the real boundaries lie. They push it as far as they can.

Now don't get me wrong. I don't advocate child abuse in any form but corporal punishment, "The board of education applied properly to the seat of understanding" is proper and just.

And just as much as a child needs to know his boundaries, so do we as members of society need to establish and live within socially accepted boundaries.

One of those who testified this morning said that only "desperate and angry people cause crime and often under the effects of drugs and alcohol." This is blatently false. There are many people who commit crimes simply for financial gain. They don't <u>need</u> more money they just want it. And there are a great number of people who commit crimes "under the influence of drugs or alcohol" who in fact premeditated the crime and then used that as an excuse.

The public defender who spoke this morning said this bill would legitimitize premeditated murder. I disagree. I believe that the 1973 Roe vs. Wade decision which allowed the taking of unborn "innocent" human life, is the legitimitizing of premeditated murder. I further believe that this bill merely sets standards of conduct beyond which society will take certain action and it warns the would be offender that should he/she go beyond societies standards and take a human life, that the penalty shall be death.

That is truly justice. It should be fairly and equally meted to all.

When she spoke she also alluded to some statistics about Florida in 1979, and how that despite the institution of the death penalty, homicides had risen. She failed to speak to the fact that at this same time there was an influx of hundreds of thousands of Cuban/Haitian refugees into the south Florida area and that crime in general saw a great upsurge because of trying to deal with this unexpected situation.

Now I say that to say this, that statistics are really meaningless unless all factors involved are considered. For instance, when we talk about the rate of homicide we must look at the other social/economic conditions at work at the same time and not just the fact of whether or not capital punishment was in effect at the time.

Now just a few words about cost. What is the cost of trying the case in proportion to one "innocent" human life - I.E. the Charles Meach case. Four people might be alive today if he had earlier been found guilty of murder in the first degree and executed.

And this is not for the sake of revenge, but for the protection of society.

Now let's talk about the court system that deals with the problem. I am amazed at how our system of justice has changed over the last 60 or 90 years. I will bet that there is not more than one lawyer in this room who has spent any time at all seriously studying the law of Blackstone.

Today, we study case law which is not law it is "justice by precedent." But it is not justice because it cannot be equally handed down to all people. Instead, ever since supreme court justice Oliver Wendell Holmes, we have evolving law that changes not by what our elected legislators create, but by what a judge determines in his mind the law means at any given point in time in relation to any given set of circumstances.

And we see the results. We do not have justice. The attorneys who have testified here today have all told you about the fact that there is a disproportionate share of minorities in prison. That is because we do not have justice,

we have "judge law."

Now let me say a few words about the "American Image."

The nations of the world look to America to see how we are handling our crime problems. We are not doing a very good job. They see us as weak and inefficient. A strong statement on crime and punishment will strengthen our image abroad, not weaken it.

Now let me say a little bit about the jury process. Mr. Hitchcock seemed to hold some disdain for their ability to reach a reasoned determination of guilt or innocence. I submit that the jury probably has more ability in such matters than a whole school of judges and lawyers. That is why the system was established and that is why it has remained and been effective. But there are some who hold an elitist point of view that believe they know what is best for us. The question I would ask is: "Did your I.Q. and common sense miraculously become greater than that of the common man when you were graduated from law school or were appointed to the bench?" I believe there are those who believe so.

And as for the delegating to another the responsibility to make life and death decisions, i.e. a supreme court review or for that matter, the persons who actually perform the execution, they are hired by society to perform that job. If they do not wish to accept the responsibility, they do not have to hold the job.

But I think it all boils down to one thing. Either there is life after death, or there is not. If there is no life after death, then where is the sanctity in human life. However, if, as I believe, there is life after death, then God will be the final judge. He rules now in everything we say and do and He will rule then.

SENATE JUDICIARY COMMITTEE

SPECIAL HEARING IN ANCHORAGE

MARCH 18, 1983

on

SB 121

The meeting was called to order at 9:30 a.m. on the 5th floor of the court building located at 303 K Street, Anchorage, by Senator Josephson, Co-chairman.

Present at the hearing were Senators Josephson, Eliason and Pettyjohn.

The following individuals, most if not all of whom were members of or affiliated with the Moral Majority of Alaska, testified in favor of the bill:

Cecilia Young

Tim Ewell, executive Director of the Moral Majority of Alaska, who stated, among other things, that "God doesn't change, He gives you different ways to be saved".

John S. Jacobsen;

Burton Cortney;

George Steinberg;

Kenneth Anderson;

David Liddington;

Carolyn Glover on behalf of her husband;

Michael Hick;

Teresa Jones;

Richard Phillips.

The following individuals testified against the bill:

Tim Stearns, an attorney representing prisoners in the pending Cleary litigation, who focused on the lack of objective standards in Senate Bill 121 as presently drafted;

John Katcher, a Public Defender;

Linda Kincaid, on behalf of Judy Zimicki, a private citizen;

Dr. John Garvin, a member of the United Methodist Clergy and a Social Worker;

Dana Fabe, Public Defender, who focused on the cost of implementing the bill;

Robert Wagstaff, an attorney, who focused on having to deal with the reality of death as a human being;

Brant McGee, an attorney and life-long Anchorage resident;

Ron Zobel, an attorney, who cited a law review article by Jack Greenberg, (91 Yale L.J. 908);

John Havelock, the Director of Legal Studies, UAA, and former state Attorney General, whose statements included the following:

> This bill is basically a "dud" and no one will ever be executed under it because it is very poorly drafted and leaves open many crucial constitutional and interpretetional questions
>
> The bill promises what it just can't deliver and poses an endless series of headaches
>
> The bill will have a serious, adverse impact on racial relations
>
> The bill confuses charging elements and sentencing factors
>
> The bill establishes false standards incapable of being measured, and there are a number of mitigating factors missing
>
> Constitutional issues are raised by the fact that the bill utilizes factors as part of its sentencing procedure that other states use as elements of the crime itself
>
> An analysis of first degree murder convictions in Alaska in the past 10 years should be made.

Lynn Allingham, an attorney, who stated that the death penalty is simply barbaric;

Lewis Gordon, an attorney, co-founder and local leader of Amnesty International;

John Angell, a professor at UAA and the Director of the Justice

Center, who stated that the American Psychiatric Association opposes capital punishment because it's counter-productive;

Nancy Gordon, an attorney member of the Alaska A.C.L.U.;

Walter Share, an attorney who specializes in criminal appeals;

Murphy Archibold, an attorney;

John Suddock, an attorney appearing on behalf of the Alaska Academy of Trial Lawyers;

Father Steve Moore, on behalf of the Archdiocese of Anchorage;

Robert Burk, a private citizen;

Sylvia Short, an attorney and the Area Coordinator for the Unitarian Council;

Mark Johnson, a senior at West High in Anchorage, who had two main objections to the bill: (1) its cost and (2) the danger that a mistake will be made and an innocent person will be executed;

Roger Miller, a private citizen whose main message was that "we must not codify blood revenge";

John Murtagh, an attorney in private practice specializing in criminal matters, who focused on a number of defects and ambiguities in the present bill;

John M. Richards;

Karla Huntington;

Doug Elliot;

Phillip Weidner.

The meeting broke for lunch between noon and 1:30 p.m. and adjourned at 4:26 p.m.

SEN. HALFORD/Connie Halford

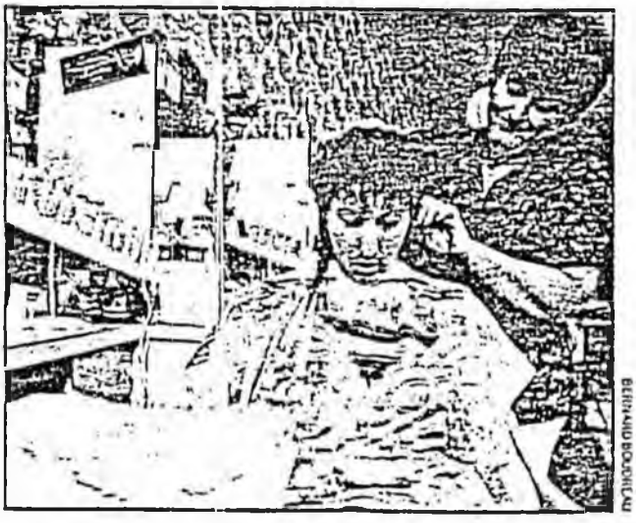
TRUE-LIFE DRAMA

LOUISE LACORTE KEEPS A KILLER IN JAIL

When she heard that the man who had murdered her daughter was up for parole after only seven years in prison, a peace-loving California beautician turned herself into a fighter overnight. This is the story of what she did—and why. By JOSEPH N. BELL

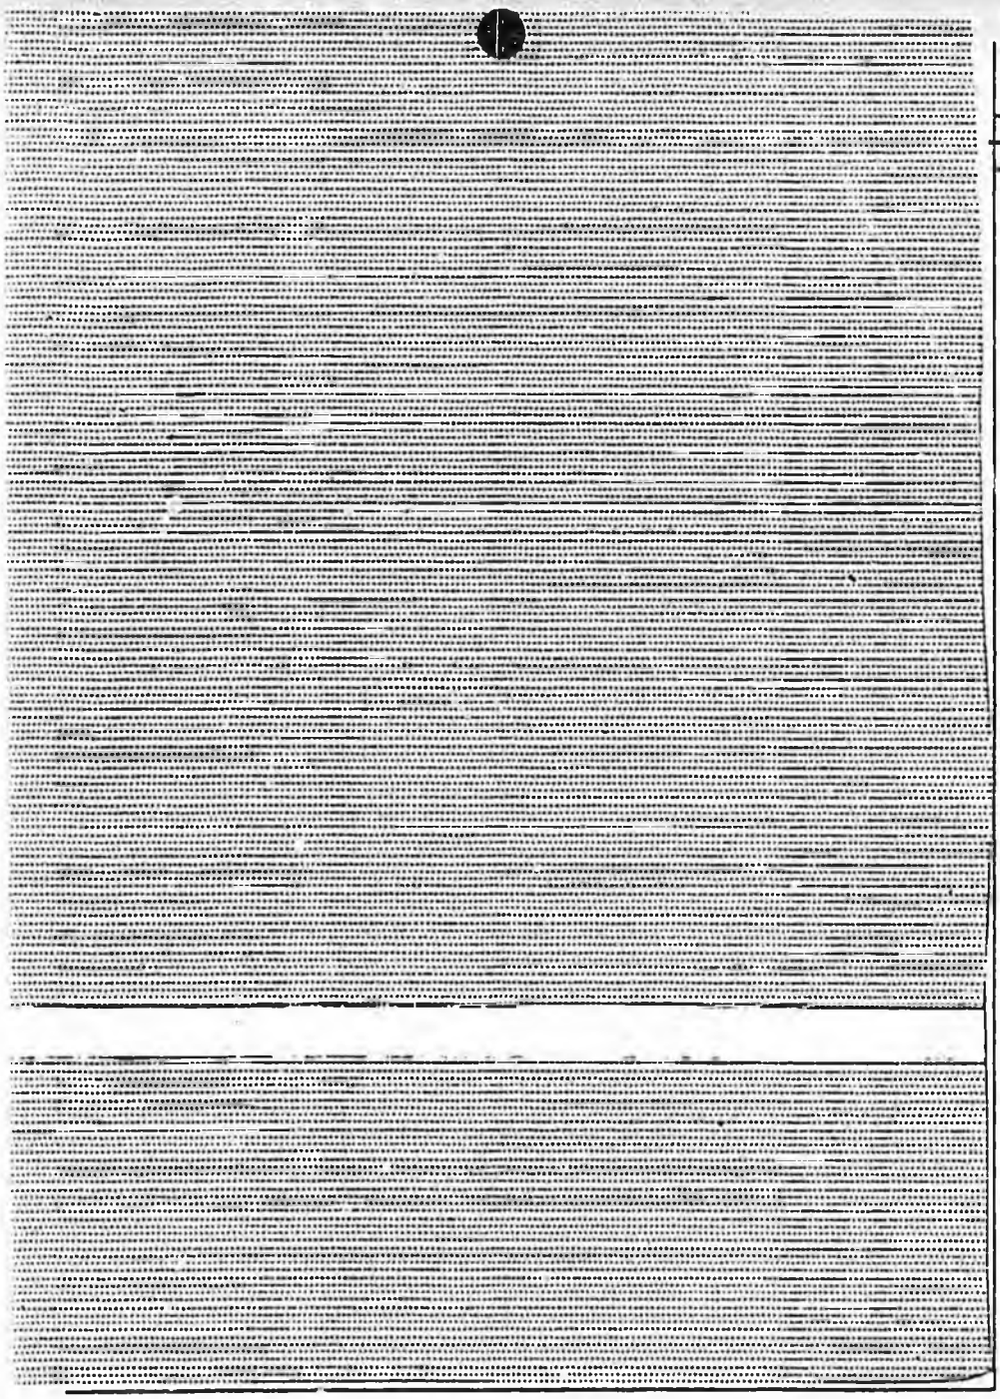
There's a 38-year-old convicted murderer at the California Men's Colony in San Luis Obispo named Richard Lanill Johnson. On February 11, 1976, he held a .22 rifle to the forehead of an 18-year-old girl he'd never seen before and shot her four times between the eyes. Less than seven years later—on October 26, 1982—a parole board met with Richard Johnson to decide whether or not to set him free.

Louise LaCorte of Arcadia, Calif., is the mother of Johnson's victim. In her half-century of life, she has survived two shocks almost beyond human endurance. The first was being told that her daughter, Cathy, had been brutally murdered. The second was learning that Cathy's killer—once sentenced to death—might be paroled. She couldn't do anything about the first shock. But she could—and did—do a whole lot about the second.



When the deeply concerned police officer who had originally found and arrested Cathy's killer told Louise and her husband, Sam, about Johnson's scheduled parole hearing, Louise turned her neighborhood beauty shop over to an assistant and charged head-on into battle. In the end, she not only managed to block Richard Johnson's parole, but also focused public attention on a system that makes it possible—even commonplace—for vicious killers to be turned loose into society.

The situation that faced Louise LaCorte was far from unique, especially in the state of California. In 1976, only a few weeks after Johnson was convicted of the murder of Cathy LaCorte, the California Supreme Court ruled that the state's death penalty law was unconstitutional. When the decision was handed down, Johnson became one of 104 men awaiting execution whose sentences were changed to life imprisonment. By now, 29 of these have been paroled, and 25 more have release dates! (One of those paroled committed a second murder and is back on death row again, under a new capital punishment law which was upheld in 1978. Since that law does not apply retroactively to people who had been sentenced before its passage, it does not affect Johnson.) Of the 2,175 people serving life sentences for murder in California, only two have been in prison more than 20 years, and the average convicted murderer has been confined about 12 years.



Among those who have been considered for parole in recent years are members of the Manson gang, the onion-field killers of Joseph Wambaugh's novel, and Sirhan Sirhan, the man who murdered Robert Kennedy.

The situation is not limited to California. In Utah, a convicted murderer named Jack Henry Abbott got a lot of national attention last year when author Norman Mailer and several literary colleagues argued eloquently and successfully for his release after he wrote a critically acclaimed book about prison life. Six weeks after he was paroled, he killed again. More recently, a Texas judge pledged to work for changes in the parole system because a man he had sentenced to 60 years in prison—the admitted killer of 13 women—would be eligible for parole in 20 years.

To page 54

To prepare for the next round of their battle to keep their daughter's killer in jail, Sam and Louise LaCorte continue to collect petitions (*top, left*). Behind them, in the living room of their Arcadia, Calif., home is a portrait of their late daughter, Cathy. At right, Louise at work in her neighborhood beauty shop. Her "customer" is her daughter, Linda, now 28, married and the mother of a daughter.

KEEP KILLERS IN JAIL

From page 50

Johnson's two-week trial in October 1976 had been agony for Louise and Sam LaCorte. Day after day they sat in the courtroom, watching their daughter's killer stare impassively at witnesses, with never a trace of emotion. (What the LaCortes wanted, of course, was a chance to confront him with one question: *Why did you kill her? Why?* But they never got their chance. Johnson remained as inflexibly mute as he had been during prior police questioning.) He never took the stand in his own defense.

The evidence was damning: A gun found in his house was identified by ballistics experts as the murder weapon; a fingerprint found at the scene matched a set of Johnson's prints on record from a previous arrest.

The verdict was guilty; the sentence, death. The LaCortes thought the sentence was fair (they are not opposed to capital punishment), as did Detective Frank Salerno, the man who had tracked down Johnson. Says Salerno, "He was wanted for rape and murder in St. Louis when we arrested him. He is one of the most coldblooded individuals I've ever met. People like him have no more feeling for the value of human life than that piece of paper on my desk. If they want something, they take it. This was the most brutal, senseless murder I've seen in 21 years of law-enforcement work."

When Johnson's sentence was changed to life imprisonment as a result of the Supreme Court decision, Louise and Sam were able to accept that as the law of the land. "But at the time," Louise says, "we thought that a life sentence meant *life*. We didn't know it could mean only seven years."

After Johnson had been locked up, the LaCortes set about trying to get their lives on track again. They couldn't afford to give in to grief. At the time, their youngest child, Kenneth, was only 10 (their daughter Linda was 21 and married), and Louise felt that "if I was going to give Kenneth anything like a normal life, he wasn't going to see his mother in tears every day. If I needed to cry, I did it in the car on my way home from work."

The tears had long since dried when Frank Salerno called the LaCortes last May with an appalling message: A parole hearing date had been set for Richard Johnson. Sam took the call, and Louise came home from a long day of work to find her husband badly shaken. "I kept asking myself," Sam recalls, "if Cathy's life was worth just seven years of her killer's life."

Louise turned shock and anger to instant action. She called Salerno and asked what they could do to prevent Johnson's parole. He told her to find as many people as she could to write letters of protest to the parole board. But time was short. The hearing was to be held on June 22, and any relevant material had to be in the hands of the board 10 days before the hearing. That gave the LaCortes only two weeks to muster the troops.

Sam LaCorte is a gentle and introspective man; Louise is outspoken and impulsive. So by mutual consent, Louise took charge of the campaign while Sam tended to his contracting business. "I couldn't believe the change in her," he says. "Normally, she would never say anything to upset anyone. But when she is fighting for Cathy's rights, she becomes a different person."

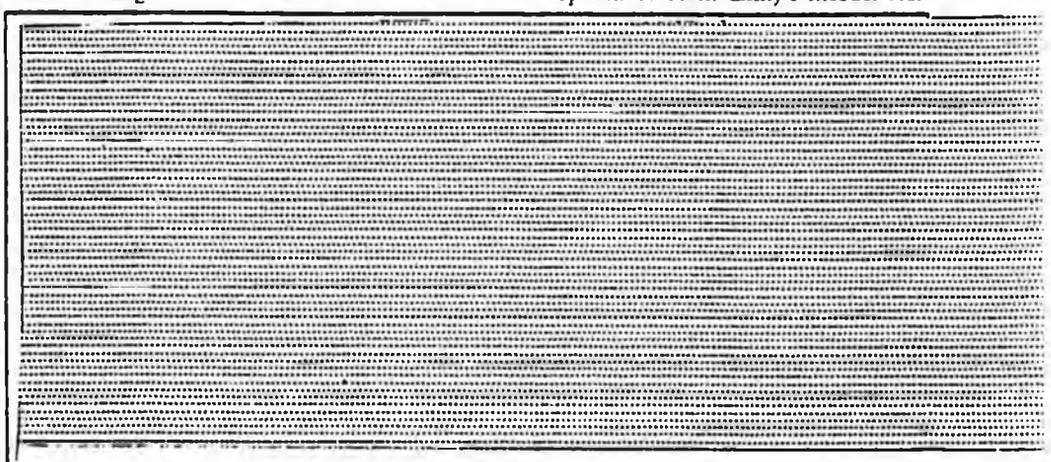
First, Louise assembled the family and told each of them to find as many letter writers as they could. Then she turned to the regular customers at her beauty shop. "Most of them didn't know about Cathy, and I couldn't stand there all day and tell the story over and over, so I put it all in a letter I left on the front counter for anyone to read."

The letter described Cathy as an 18-year-old freshman at Pasadena Bible Institute who had been known at Arcadia High School for her effervescent friendliness. It told how her boyfriend, Robert Morton, had come by the LaCorte home in his ancient VW van at noon on February 11, 1976, to take Cathy to school. A cleaning woman heard them discuss first driving into the hills behind Arcadia for a look at Los Angeles on a rare clear crisp day. They were never seen alive again. Their bodies were discovered at 4:30 that afternoon in the back of the van, parked on a dirt turnout overlooking the city. Cathy had been shot in the face and Bob—bound and gagged—had been killed by three shots in the back of the head.

It had taken nine months to find and convict the man who killed them—possibly for the $11 which was found missing from Bob's wallet. Now this man was being considered for parole, and Louise was looking for help. She concluded her letter: "This has been very hard for me to write; it opens old wounds. But we *must* take a stand. We must protect ourselves and our children from him and others like him. If we sit back and do nothing, he will be released from prison to stalk others. And don't kid yourself, *he will kill again.*"

The response was instantaneous. So many outraged customers wanted to pass the word on to others that Louise had the letter printed and within a few days handed out several hundred copies. Still, she couldn't be sure how many people were actually writing letters, so she looked for a more effective avenue of protest. When she tried local newspapers and TV stations, she found they weren't interested. ("We didn't have enough numbers yet.") Then she heard about an organization called Citizens for Truth. Formed by a young computer executive named John Mancino, the organization had been influential in preventing the release of Sirhan Sirhan by flooding the parole board with petitions. Public response to this effort was so positive that Mancino was now offering the help of his organization wherever it was needed to "keep killers, rapists and child molesters off the streets." Louise called Mancino, and he advised her to forget letters and circulate petitions instead, concentrating on big numbers. "He told me that the courts and politicians will *hate* to listen if you get enough people," says Louise.

Along with her daughter, Linda, and three close friends, Louise set out to do just that. "I don't think I went to bed for a week," she says. "I called everywhere I knew groups would be coming together—churches, beauty shops, clubs, shopping malls—and people who took petitions kept coming back for more. I also called on every public official I could think of whose support would help our campaign. Within five days, we had 10,000 signatures."



That's when Louise went back to the media. The local CBS station picked it up first. Then, with Mancino's help, Louise and Sam held a press conference that was covered by virtually every TV station and newspaper in the area, including the prestigious *Los Angeles Times*. At the same time, Louise was going after even bigger game. She called the Attorney General, a half-dozen state legislators, the Los Angeles County District Attorney and the court officials who would present the public's side in the parole hearing. When her calls weren't returned, she kept boring in, pleading with officials who had offered help to put pressure on those who hadn't.

She was indefatigable, and she won converts by the thousands. Before her two weeks were up, Louise had collected a total of 24,671 signatures on petitions protesting the release of Richard Johnson. Then, two days before the deadline, the LaCortes learned from a friendly newspaper reporter that the parole hearing had been canceled indefinitely, ostensibly because Johnson's attorney had gone to court to demand that his client be allowed to see the letters protesting his parole before the hearing took place.

Louise and Sam delivered their petitions to the prison anyway, followed by a horde of TV and newspaper reporters. They were received by Carl Weaver, acting classification and parole representative. When Louise handed him the petitions, she insisted on written assurance that they be notified by registered letter of the new hearing date. Recalls Sam: "Weaver was really gritting his teeth, because Louise was very demanding."

Now there was nothing to do but wait. Meanwhile, two related events happened rather quickly. First, California voters passed a proposition permitting the families of victims to testify at parole hearings. The proposition was quickly tested in the Supreme Court, declared constitutional and is now a law in the state of California. Second, a hearing was held on Richard Johnson's petition to see the letters before the hearing. Many of Louise's letter writers were terrified at the prospect of a vindictive killer at large who knew they had protested his release. The court agreed, ruling Johnson could see the letters but only with names and addresses removed. Johnson's parole hearing was then rescheduled for October 26, 1982.

People involved in Cathy's murder feel

strongly that rehabilitation is not an issue in Johnson's case. Says Frank Salerno: "You can't rehabilitate people who have broken the law as often as Johnson has and who have shown they don't want to—or can't—live lawfully within society."

The question of rehabilitation is basic to the concept of parole, first introduced in New York State in 1877 by social reformers who believed punishment should fit the criminal and not the crime. Within four decades, parole had spread to the Federal penal system and virtually all of the states, providing a means for early release of prisoners who were judged by a politically appointed parole board ready to be "rehabilitated."

The obvious inequities and unevenness of the system and a hardening attitude toward law and order in the last decade have spawned two different approaches to parole reform. The Federal penal system has now adopted a carefully weighted set of specific guidelines to evaluate a prisoner's parole "score," thus removing subjective judgments. At the same time, a growing number of states have adopted a form of determinate sentencing in which punishment for specific crimes is fixed by statute and the possibility of parole is much more severely limited. In spite of these reforms, however, thousands of convicted killers are walking the streets of America, and the horror stories pile up. While the LaCortes awaited Johnson's parole hearing, for example, a 10-year-old child was raped and murdered in their area, and the prime suspect was a man with a long record of child molesting who had just been paroled from prison.

The LaCortes don't want Richard Johnson out of prison—ever. And on October 26, 1982, in San Luis Obispo, they were allowed to testify to that point at Johnson's parole hearing. They were also allowed to present their petitions and argue the case for their dead daughter directly before the people who would decide whether or not to free her killer. The verdict: parole denied to Richard Lanill Johnson.

The LaCortes are pleased but wary. They know that under the existing law Johnson will come up for parole again and again. They've won this one, but there is a seemingly endless series of similar challenges looming ahead. They know that public support will be harder to muster as time goes on. But that doesn't moderate their determination.

"I feel so angry," says Louise, "to have had to go through that first parole hearing. And yet I know in a few years we'll have to go through it all again. We'll be waiting—and watching. I'll fight his parole as long as I have breath in me.

"If I could do anything to make up for Cathy's death, it would be to make our country a better place by fighting for changes that need to be made in our laws and our parole system. If what we've done can help bring that about, it almost makes the pain worthwhile." ■

We favor the death penalty

Juneau Empire 3/7/83

Eight people are shot to death and then set afire aboard a fishing boat anchored near Craig.

Six McCarthy residents are gunned down in cold blood.

Four Anchorage teen-agers are chased down and shot to death as they walk through a park.

Two elderly Juneau residents are bound, stabbed 60 times until they die and then sexually assaulted.

Listed above are multiple murders that happened in our state during the last year. These are not just crimes; they are outrages against society. The grief they have caused cannot be measured in prison sentences; it is not enough just to take those criminals off the streets.

For crimes so shocking, so hateful, we believe the death penalty should be imposed.

The death penalty cannot be debated without emotion.

In arguing against it, many people believe a "civilized society" should never take a life. They argue the "eye for an eye" tenet should never be applied, and that the sentence is not a deterrent.

In the vast majority of cases, those arguments stand up. A person who acts in a moment of passion, even if he kills another person, should be given the benefit of the doubt and no death penalty should be allowed.

In the some cases, though, the criminal has suspended the rules of humanity.

Multiple murders — when a person kills one person and then keeps on killing — do not qualify the criminal for the compassion of society.

Neither do planned murders.

Neither does the killing of a law officer.

A death sentence should be imposed only after all possible avenues of appeal are pursued, and there exists no shadow of a doubt that the criminal's rights have been protected and that he or she is guilty as charged.

The Alaska Legislature is reviewing proposals to reinstate the death penalty. We urge its members to adopt such a proposal, as long as it guarantees that all appeals may be pursued.

We do not take joy in advocating such a position. In fact, sometimes it hurts to advocate what we believe is the right thing. But it hurts us not nearly as much as it hurts the friends and families of victims of such horrible crimes and the society that allows such criminals to live

Killing criminals is no solution

To the Editor:

I am unconditionally opposed to the reinstitution of the death penalty in Alaska. A close look at homicide rates at different periods of our country's history demonstrates no correlation between the number of homicides and the practice of capital punishment. The recent increase in the U.S homicide rate from 4.7/100,000 in 1960 to the current 9.8/100,000 cannot be reversed or even slowed by the enactment of death penalty statutes on a state or federal level. People who commit murder do *not* stop to fully weigh the consequences of their acts and, therefore, will not be deterred by the threat of state-sponsored murder.

In most respects, the U.S. is a shining example in the world of consideration for civil liberties and fundamental human rights. In the industrialized world only Japan, South Africa, the Soviet Union and the United States still practise capital punishment. Reinstitution of the death penalty in the U.S. diminishes our credibility in our efforts to promote "liberty and justice for all" worldwide. Let's not be hypocrites. Instead of capital punishment we should concentrate on determining and then eliminating the causes for violent crimes. Killing individual criminals is not the answer.

— *Judy Zimicki*

Murder any way you slice it

Dear Sir:

Charles Meach was convicted of an unpardonable crime: murder Let's hope the state does not react by implementing murder as a legislative policy. Capital punishment is not a deterrent. It's institutionalized murder.

— *Sara Juday*

Don't turn justice system into circus

In Texas within the past four months, a crowd gathered outside the Huntsville Prison for the midnight execution of a convicted murderer. Anticipating a possible reprieve, certain supporters of the execution shouted encouragement with pep rally-style slogans. Vendors sold hot dogs. There was no reprieve and the convicted killer was executed.

Another man, tried on the same charge as the man who was executed, was convicted and received 40 years in jail. It was never proven which man pulled the trigger. One was executed, and one . . . paroled in a few years?

More recently, Andy Barefoot was granted a stay of execution just hours before he was to die. Since then a key witness has recanted her testimony and Barefoot will likely receive a new trial.

These cases present the death penalty in action; a definite, irrevocable punishment administered by an imperfect and inequitable system.

That some criminals deserve to die, I would not argue. That we can be perfect in our justice, I *would* argue.

As much as anyone, I wish such criminals removed from society. I want them locked away forever. And deep down, I know that if it happened to me and mine, I'd want to kill. However, justice is what we attempt with our laws. We seek equity, fairness and we seek to establish standards of morality, rather than succumb to base emotion.

Inequity, uncertainty, circuses, finality — the price exacted by the death penalty. Perfection of judgment is demanded, yet impossible to achieve.

The Alaska Legislature is now considering legislation that would establish the death penalty in this state.

Tell them no.

— *Roger Miller*

Death sentences do protect society

Contrary to belief, the death penalty has always been in effect in Alaska.

Criminals and murderers have been sentencing innocent people to death (without a trial) regularly. There is no reason why our society should feed and house a convicted murderer, (such as Meach) for the rest of his life.

It is my firm belief that even Meach would have gotten off with a slap on the wrist if the public hadn't been so outraged by his acts. A person, quite often, murders someone, gets a light sentence, then gets out on parole early, and the people who testified against him live a life of fear because the murderer may retaliate against them.

Is it any wonder our good citizens try not to get involved?

The death penalty may not, (although I think it will) deter anyone from committing his first murder but, he sure as hell won't commit a second!

It is time we quit coddling criminals with jail time, with TV and game rooms, etc. and make them pay according to their crime.

Yes, by all means, the death penalty should be reinstated.

— *Ben Rule*

A. Death penalty is no bargain

A common argument made in support of the proposed reinstatement of the death penalty is that the state and its taxpayers should not have to bear the cost of supporting for life those who have committed murder or other heinous crimes. Yet if the experience of other states holds true for Alaska, the cost of the death penalty to this state's citizens would be far greater than the present system of incarceration.

The reason for this is the extraordinarily high legal cost associated with the death penalty. Protracted appeals to the Court of Appeals, the Supreme Court and federal courts, including motions for stays of executions, and various emergency motions; probable appointment of two attorneys at state expense for defendants in capital cases, and challenges to the constitutionality of the statute itself ensure that tremendous expense will be borne by all Alaskans. Even though a prisoner sentenced to life imprisonment may be housed at state expense for decades, comparison of overall costs suggests it would be more economical to continue with thepresent system.

Numerous compelling non-economic arguments against the death penalty can be made. For those conceived primarily with the economics of capital punishment, it's high time to face the fact that the death penalty is no "bargain."

— *Lewis Gordon*

A. Let's not condone murder by state

A common argument for reinstitution of the death penalty is that others will be deterred from committing these horrible crimes once the criminals are executed. The studies on deterrence have proven nothing conclusively. It can be argued though, that most murders are committed impulsively, not in a premeditated manner, and that the death penalty would not deter these people.

Furthermore, I disagree with the state issuing a death sentence; as if the state carrying out the act made it justified. Murder is just that, no matter who commits it.

The recent introduction of lethal injections to carry out murder is by no means more humane or has it been proven painless. How can taking another person's life be considered painless or humane? Some doctors have stated their opposition to the use of medical practices to carry out a death sentence since their purpose (the doctors and their practices) is to heal people and preserve life.

Finally, in debating this issue both sides should remember the victim and the family and that neither are served by revenge. To serve a long sentence, a possible life sentence, and pay with the loss of freedom is a much more just and fitting punishment.

— *John Loin*

A. Life is a basic human right

There can be no justification for the violation of the most fundamental of human rights — life. There can be no justification even if a murder can be proven. Governments do not have the right to violate human rights regardless of the violations by the individuals; by doing so governments give tacit approval FOR the violation of human rights. Human rights are fundamental and therefore universal. There can be no exceptions made or we are all in danger.

— *Kimberly McGee*

A. Executions actually cost more

Just a thought on the Death Penalty issue: There are some people who believe it is cheaper to kill someone than it is to maintain them in a prison. According to the New York State Defender's Association, it is estimated to cost $1.5 million to prosecute a capital punishment case (1982 estimate), before any appeal was filed. We all know how many appeals can be filed. In comparison a year in prison in Alaska averages $21,500. You don't need to be a mathematical wizard to see where the "bargain" really is.

— *George Shedlock Jr.*

Q. "What is your view of the death penalty?

A. Too much talk about mercy

The death penalty should not be taken lightly. But what of the victims? Were they shown mercy? Did they die a painless death? What of the animals that kill children? In some cases, even here in Anchorage, the method of murder is enough to make you sick. There are those that say life sentences are excessive. Come on. Enough is enough. Mercy? I think not. Let the punishment fit the crime.

— *Richard Nofich*

A. Executions degrade society

The reintroduction of the death penalty would be a step backwards for Alaska. These industrialized countries have abolished capital punishment because it degrades the humanity of society without contributing to crime prevention. The homicide rates in the abolitionist countries are often much lower than in the United States. How many Alaskans would feel any safer in New York, Illinois or Florida where the death penalty exists. The effect of the death penalty has often been to discourage juries from convicting the accused of murder. Thus, instead of creating a real deterrent, the penalty can result in more acquitals. Given the weaknesses of the deterrance argument, the death penalty must be considered blood revenge. This state should not degrade itself by taking a person's life in revenge.

— *Bruce M. Landon*

A. Eye for eye makes a lot of sense

There are reasons other than a deterrent to crime (which the death penalty apparently is not) for re-instituting the death penalty.

1) When a person is murdered or rendered a basket case by torture, mutilation, etc., society has lost the beneficial services of that person, to say nothing of the suffering and deprivation of family and friends. To execute the person and/or persons responsible for this loss would be a very effective way of ensuring that those particular individuals would not ever cause such a loss again.

2) Not only has the criminal removed a productive individual from contributing to society but the criminal, if imprisoned rather than executed, costs society even more than the initial loss in terms of sheer upkeep in prison. It is a valid question to ask whether in point of fact that money could be used for a more productive purpose. Perhaps some of it could be used to compensate the victim's family; some could be used in social programs to aid elderly or economically disadvantaged families. Especially now, given the recession, such social help programs are greatly underfunded. What better use to put money than for something positive, rather than maintaining a social drain by supporting a criminal.

3) Regardless of whether the crime was perpetrated by a sane or an insane individual, the effect is the same: the loss of the beneficial contribution of the victim. The perpetrator is a negative contributor, not only removing a beneficial contributor but causing other negative effects, such as social stress, diversion of funds for upkeep of the criminal instead of using the money for social good, etc. Thus, sanity or insanity should have no bearing on the use of the death penalty in any particular case. The crime has been committed, period; society has suffered an irreplaceable loss and there is little logic in throwing good money after bad.

I realize that there is the danger of executing an innocent person. However, innocent people can be convicted and ruined just as effectively now under our current judicial system. The point is that society has to balance the cost of criminal maintenance versus execution and use of maintenance funds for other more generally beneficial social causes.

The Biblical axiom of an "eye for an eye and tooth for a tooth" may had greater social benefit than we have given it credit for.

— *Margaret Archey*

A. Don't tarnish image of U.S.

The United States has a substantial position as a world leader. Major elements of our life from our art to our government are exported to other countries. We set standards for other countries to follow if they are to receive our aid and/or favorable diplomatic treatment. In taking this kind of leadership in the world it is important that the U.S. set an example in the area of the death penalty. While some of us may see substantial differences in the way a U.S. court metes out the death penalty and the way a particular dictator, for example, dispatches that judgment, that perception of difference is unlikely to be clear to those without an intimate knowledge of our system. To effectively influence those in power in various countries with poor human rights records it is important that we set irreproachable standards for ourselves. We must not give those with lower human rights standards or irreverence for human life any excuse to abuse their power by using comparisons to the capital punishment standards of the U.S. (no matter how incorrect this perception may be). The death penalty should be abolished.

— *Robert L. Bu*

Death penalty debated

By TOM KIZZIA
Daily News reporter

3-1983

A long line of lawyers, academics and clergymen went to the podium of the Supreme Court chambers here Friday to call the state's proposed death penalty immoral, ineffective and, in some cases, counter-productive.

Their testimony was followed at the end of the day by that of the executive director of Moral Majority, a half-dozen representatives of a Christian academy and several others who said a death penalty would bring the power of retribution and justice to Alaska.

The state legislature is considering several bills that would, for the first time since territorial days, provide Alaska with the death penalty for certain aggravated murders.

Sen. Joe Josephson, D-Anch., who chaired Friday's hearing of the Senate Judiciary Committee, said at the end of the day that a poll of Alaskans today would probably find a majority in favor of the death penalty. "But my responsibility is to act on information," he said, "and I think the public attitude would change if they had the opportunity to hear the testimony today."

Josephson said he would vote against the death penalty bill.

R-Anchorage, who introduced the bill with three other senators, said no testimony in a public hearing would change his mind about the need for a death penalty. It would only help refine the legislation, he said.

Asked at noon about the morning's testimony, which had been unanimously against the proposed bill, Pettyjohn said, "My neighbors in south Anchorage aren't here. And I know how they feel about it."

Several speakers referred to capital punishment as "premeditated murder" and spoke of the chances for making mistakes, Where they contended that long prison terms would effectively isolate dangerous criminals from society, others who spoke at the end of the day said society demanded more.

Citing several multiple murders in Alaska, Burton Carney of Harvester Academy said, "I think there is a place for retribution."

"The way things are going now, you're either a killer or a killed," said Kenneth Anderson. "I'd rather be a member of a state with capital punishment than be on a list of the killed."

The abstract idea of capital punishment may be able to carry public opinion polls, said former Attorney General John Havelock, but he predicted public opinion would reverse itself if the bill were passed and the state actually executed somebody.

leveled his criticism at the legislators themselves and what he called "the Pontius Pilate aspects of the bill." The Senate bill would leave it to the state Supreme Court to decide the method of execution for criminals, and Wagstaff said legislators were ducking an unpleasant issue.

"You have to deal with the reality of death," Wagstaff said. "You cannot wash your hands and let the Supreme Court decide."

A number of speakers Friday cited studies that found imposition of the death penalty in other states had not deterred the crime of murder. In some cases, they argued, publicity surrounding an execution was credited with an increase in the number of murders over the next four to six weeks.

Dana Fabe, head of the Anchorage Public Defenders office, said the death penalty would mean 12 new appeal steps and cited a New York State estimate of the cost of a capital trial and appeals at $1.8 million. Fabe and others said the death penalty has historically been used disproportionately against blacks and Native Americans and in particular against murderers whose victims were white.

There would be a "serious impact on race relations . . . if the first person out of the chute that you're going to execute is an Eskimo," said Havelock, who is now director of legal studies for the University of Alaska.

Methodist minister John Garvin said he feared the state would "sweep the problems under the rug" by passing a death penalty when "social restoration" and pre-

Garvin questioned the motives of "law and order advocates who want to 'get the bastards.' "

To that, an embattled Pettyjohn responded, "What do you want to do with the bastards? Change their souls, right?"

"That's very well summed up," Garvin said.

Pettyjohn finally received some reinforcement about 3 p.m. when Tim Ewell, executive director of Moral Majority, said the death penalty was necessary to strengthen the line between right and wrong. "If society offers no punishment for the crime, then what is to keep people from ignoring society's wishes?" he asked.

He said the Bible's commandment "Thou shalt not kill" was actually a poor translation. The proper translation, he said, should be "Thou shalt not commit murder."

A different theological interpretation was offered the Judiciary Committee by the Rev. Steven Moore, who said that capital punishment would increase the cycle of violence in society by teaching "that the answer to vio-

DEATH PENALTY DEBATED CONT'D

lence is violence." Said Moore: "Law is a teacher of the values of society as well as the protector of values."

The Senate bill says a jury could apply the death penalty if a defendant:

- Was deliberately cruel and the murder involved torture or "aggravated battery."
- Endangered more than two other people.
- Has a prior violent felony conviction.
- Committed murder for pay.
- Was on release for another felony charge or conviction that involved assault.
- Killed a law enforcement officer acting in the line of duty.
- Committed murder to further the criminal objectives of an organized group of five or more persons.

Against these seven aggravating factors, a jury would have to balance four mitigating factors:

- The defendant's conduct was in some way forced.
- A young defendant was influenced by an older person.
- The defendant was seriously provoked by the victim.
- The defendant helped authorities capture others involved in the crime.

A similar bill in the state House would leave the balancing decision on the sentence to the judge. Several who testified Friday criticized separating the jury proceeding for sentencing in the Senate version, which would allow hearsay and other evidence not admitted during the criminal trial.

The name of repeat murderer Charles Meach was raised several times by proponents of the death penalty. "Four people might be alive today if he had earlier been found guilty of murder in the first degree and executed," said Ewell.

Opponents of the bill said life without parole would have been just as effective in getting Meach out of the way, and pointed out that Meach had not gone to jail for the first murder because of a successful insanity plea.

Pettyjohn observed that the state had since toughened its insanity statute. But attorney John Murtagh said that under the capital punishment proposal and the new guilty-but-mentally ill law, "society could spend 12 years restoring a person to mental health and then kill him."

Austin Times A-5 4/21/83

High court to review death row appeals

Associated Press

Washington — The Supreme Court is considering a case that may yield a life-and-death timetable for some 1,200 condemned murderers nationwide.

The justices are expected to use a Texas case argued before them today to decide, by July, how federal appeals courts should handle emergency appeals from death row.

At issue is what standard those 12 appeals courts should use in deciding whether to postpone the execution of a death row inmate who has filed a new appeal with them.

The 5th U.S. Circuit Court of Appeals, based in New Orleans, has adopted a policy of denying postponement requests unless the death row inmate can show the underlying appeal likely will be successful.

Other appeals courts use a much less demanding standard, granting execution delays if the underlying appeal is not frivolous.

The standard the Supreme Court selects could result in months, even years, of added court proceedings and execution delays.

Also at issue in the case of Thomas Barefoot, sentenced to die by lethal injection for the 1978 murder of a Texas police officer, is whether psychiatrists should be allowed to testify about a convicted murderer's "future dangerousness."

Juries now hear such testimony in choosing between the death penalty or life in prison as an appropriate punishment.

Barefoot was to die last Jan. 25, but less than 12 hours before his scheduled execution the Supreme Court ordered that he be kept alive and that his emergency appeal be made a test case.

Barefoot was convicted of the Aug. 7, 1978 shooting death of Carl Levin, a Harker Heights, Texas, police officer who had been investigating a night club fire.

A New Iberia, La., native, Barefoot was then a fugitive wanted in New Mexico on criminal charges. Prosecutors said he shot Levin in the head at close range to avoid arrest.

Barefoot's case attracted considerable unsolicited advice for the high court.

The Legal Defense Fund, a civil rights group active in representing death row inmates, and the American Bar Association, the nation's largest organization of lawyers, opposed the 5th circuit court's standard.

"A stay should be granted unless it can be determined on the face of the available documents that the inmate's claims are frivolous," ABA President Morris Harrell argued.

But the conservative Washington Legal Foundation urged the justices to uphold the 5th circuit court's more stringent standard.

"The instant case offers a primary illustration of the problems (of delay) which currently plague the administration of capital punishment . . . and undermine public confidence in the criminal justice system," the foundation's lawyers said.

The American Psychiatric Association urged the justices to ban psychological testimony on future dangerousness.

Use of such testimony "is constitutionally invalid because it undermines the reliability of the fact-finding process," the association contended.

"Because the prejudicial impact of such assertedly 'medical' testimony far outweighs its value, it should be barred altogether in capital cases," the association said.

It added: "At the minimum, psychiatrists should not be allowed to offer medical opinions concerning the likelihood of long-term future dangerousness unless they have conducted an in-depth psychiatric examination of the defendant."

Barefoot's jury, in determining his punishment, heard from psychiatrists who had not examined him but were asked hypothetical questions about his future danger to society.

Who needs protection?

This evening's March 19 TV news report pictured Sen. Joe Josephson stating, "We must be very, very careful to protect the rights of the A.P.I. residents to be different." The recent murders of four teenagers in Russian Jack Park is the finest example of protecting their rights to be different.

I would like to remind the Honorable Mr. Josephson that he should be equally careful to protect my right to not be murdered.

— Edward M. Boyd

Capital punishment

Dear Editor:

It seems our legislators forget that they represent the opinion of those who elected them. I believe the m jority of their constituents favor ..pital punishment. It is unfor..ate that those who are now ba..ing at passage of such a bill did ..t voice that opinion during the election campaign.

Re: a remark by one of these mental giants, "If we can't do it right, we shouldn't do it at all."

If his logic holds true, he should have never gone to Juneau.

Another profain remark: "Capital punishment discriminates against minorities."

Hogwash. This may be true in the Lower 48, but most of the likely candidates for capital punishment up here are white. Most Alaskans don't judge a person by his race or national origin, but on his own worth.

I agree that capital punishment is not a detereent to crime, but it's apparent the system we have now isn't either. Capital punishment will certainly deter second offenses. The automatic review and appeals in these capital convictions, along with the trial by jury, beyond a shadow of a doubt, should minimize mistakes.

I think it's time that our elected officials voice the will of the people they represent, even though it does not coincide with their own beliefs. If they canot represent us because of inner conflict, they should step down. Do it our way, or get out.

R. Wolf
3182 Prescot

Capital punishment

Dear Editor:

I don't want people getting the death penalty, because they have a right to live. They can live in jail.

I read about Charles Brooks being killed with a poison needle. The most common sentences to the death penalty are the gas chambers and the electric chair.

It's not right to kill. The Ten Commandents say, "Thou shall not kill" and "Forgive thy neighbor." People should not kill other people. Bread and water does not cost that much. The government could build more prisons for the overcrowding in the jails.

Do you know there are 1,137 people waiting to be executed? The executer will pull a lever four times. Each time it unleashes 2,000 volts of electricity. The first jolt will bulge your eyes, then it bursts you eyes and then it fries your brains.

If you're going to execute people by the electric chair you should at least get a new chair. The one in New York is almost 100 years old.

Death Penalty

Dear Editor.

I often find myself at odds with you and the people of Juneau. I am one of those "fools and fanatics" who was and still is in favor of moving the capital.

However, I am strongly in agreement with your editorial reprinted in the Anchorage Times. It is the most eloquent argument I have heard yet in favor of the death penalty.

You are right when you say that the death penalty cannot be debated without emotion. I have wanted to write to the Anchorage papers to try to counter all the emotional letters and have been unable to find an unemotional way to express my views on this subject and I have thus been afraid that anything I say would just add to the heat and probably not change any minds.

Yet the best argument in favor of capital punishment is an emotional one. It is based on one of the most natural and decent of human emotions. That is revulsion to atrocities.

As you point out, many homicides may not warrant the death penalty. When a person kills one person in a moment of passion and perhaps even with some provocation, society cannot condone his act, but can show him some degree of compassion. But those who deliberately commit sadistic, perverted or debased acts and show absolutely no compassion for others are not themselves worthy of any compassion whatever.

Massachusetts recently became the 38th state to adopt a death penalty. Alaska should become the 39th. If our legislators are hesitant to act on this matter, then let them do as Massachusetts did and let the people vote on it at the next election. I feel confident that Alaska voters would approve reinstatement of the death penalty.

Sincerely,

Garry St. John

Arguments in favor of the death penalty

Times 3-17-83

From The Juneau Empire

EIGHT PEOPLE are shot to death and then set afire aboard a fishing boat anchored near Craig.

Six McCarthy residents are gunned down in cold blood.

Four Anchorage teen-agers are chased down and shot to death as they walk through a park.

Two elderly Juneau residents are bound, stabbed 60 times until they die and then sexually assaulted.

LISTED ABOVE are multiple murders that happened in our state during the last year. These are not just crimes; they are outrages against society. The grief they have caused cannot be measured in prison sentences; it is not enough just to take those criminals off the streets.

For crimes so shocking, so hateful, we believe the death penalty should be imposed.

The death penalty cannot be debated without emotion.

In arguing against it, many people believe a "civilized society" should never take a life. They argue the "eye for an eye" tenet should never be applied, and that the sentence is not a deterrent.

In the vast majority of cases, those arguments stand up. A person who acts in a moment of passion, even if he kills another person, should be given the benefit of the doubt and no death penalty should be allowed.

IN SOME CASES, THOUGH, the criminal has suspended the rules of humanity.

Multiple murders — when a person kills one person and then keeps on killing — do not qualify the criminal for the compassion of society.

Neither do planned murders.

Neither does the killing of a law officer.

A death sentence should be imposed only after all possible avenues of appeal are pursued, and there exists no shadow of a doubt that the criminal's rights have been protected and that he or she is guilty as charged.

The Alaska Legislature is reviewing proposals to reinstate the death penalty. We urge its members to adopt such a proposal, as long as it guarantees that all appeals may be pursued.

Capital punishment is no crime

This is the mentality that leads to murder, rape and robbery. The criminal feels that the chances are excellent that he won't get caught or if caught that there will not be sufficient evidence to make an arrest, or that if arrested he won't be brought to trial, or if brought to trial that he won't be convicted and that if convicted he won't have to serve all his time.

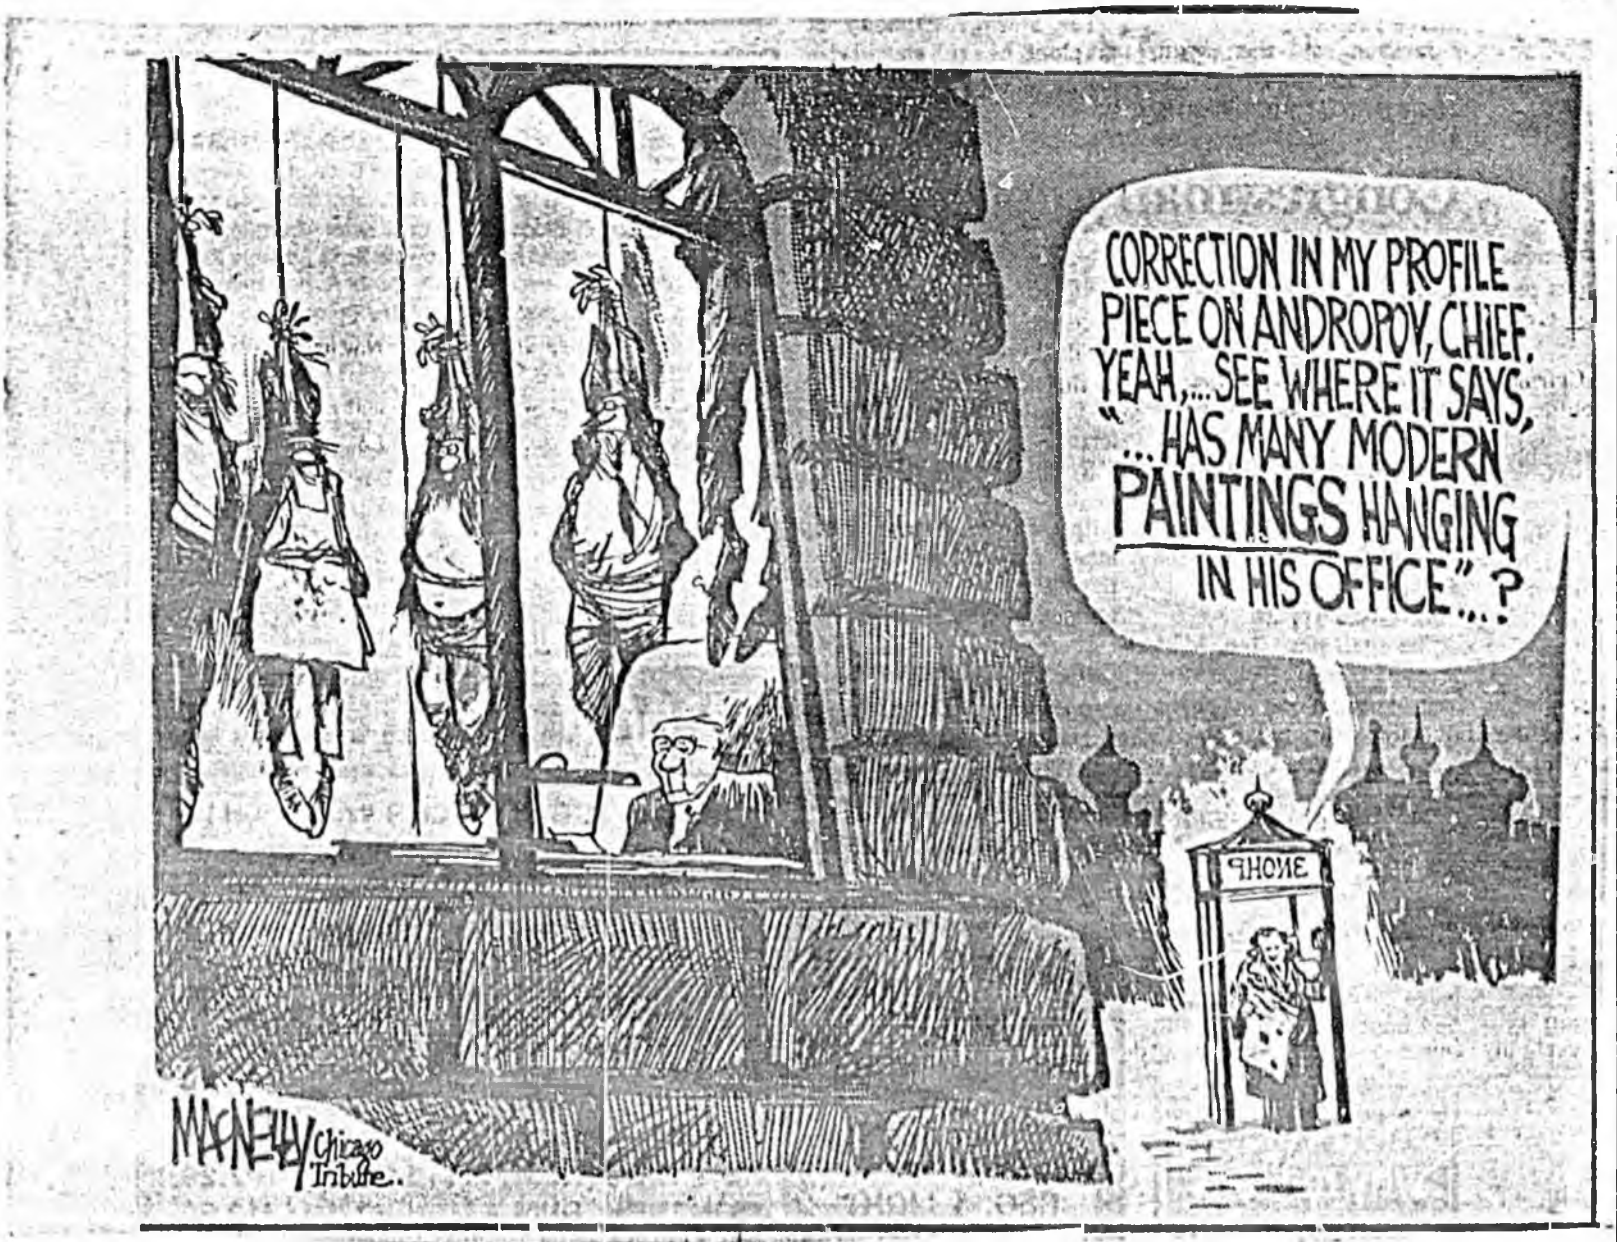
This kind of thinking highlights the shortcomings of our "justice" system. Justice is defined by Webster as "the assignment of merited rewards or punishments." Meaningful words like "adultery, virginity, ethics, honor and justice" have fallen into disuse in our modern, enlightened age.

House Bill 140, authorizing capital punishment, is an attempt to turn this attitude around. Some say, "You can't legislate morality." Legislation is in itself an expression of the moral values held by that community or state. In my district, 88 percent of the voters favor capital punishment. If we care about the concept of justice we should overwhelmingly support this piece of legislation.

For those who feel capital punishment is wrong or anti-Biblical, I would like to make a few comments. Capital punishment is not a violation of the Sixth Commandment, "Thou shalt not kill." The Hebrew word translated "kill" in that commandment means "murder" and should be read "Thou shalt not murder."

Within the same context of the next chapter the commandment is given to execute persons for specific crimes and it says, "the murderer shall surely be put to death." The Sixth Commandment is given to individuals, not state or judicial council. Who would accuse a policeman or soldier of murder when killing in self-defense or in defense of others?

In the New Testament, Christ did not abolish death for a murderer. He stated in Matthew 26:52, "All they that take the sword shall perish with the sword," which is a restatement of the law of capital punishment found in Genesis 9:6, "Who so sheddeth man's blood, by man (courts and government) shall his blood be shed."



If you can't imagine Christ pulling the switch on the electric chair, read Matthew Chapter 23 or 25:41 where he says, "Depart from me, ye cursed, into everlasting fire, prepared for the devil and his angels." Even as far over in the Scriptures as Revelation 13:10 we find Christ speaking to John saying, "he that killeth with the sword must be killed with the sword," a clear reaffirmation of the original law of capital punishment found in Genesis. In Deut. 19:11-13, God actually promises to bless the nation that obeys his command that the murderer be executed saying, "that it may go well with thee."

Mercy shown to a willful murderer is really cruelty to all mankind because the murderer has the potential to murder more people including you, me and our families. The murderer will find it easy to continue to kill those in society as well as in prison since he knows no worse punishment is awaiting him.

Some say those who support capital punishment must think we have an infallible system of justice. No so! However, let's not confuse the law with the administration of the law, as that would be like "throwing out the baby with the bathwater." A man should never be condemned to die until all doubt of his guilt has been satisfied. Many of those charged with murder are conclusively guilty, such as Hinkley.

Blackstone, the great authority on Anglo-Saxon law said, "Capital punishment for murder is the capstone of the arch of justice." Remove the capstone, and the whole structure will fall.

Capital punishment

Times
3-4-83

Dear Editor:

The commandment "Thou Shalt Not Kill," was not meant only for the "bad guys." It is meant for All. This includes our legislators, and you and I: Everyone!

If House Bill 140 is passed into law, not only are our legislators guilty of murder but also those who sit back and make no effort to influence their vote are guilty.

I do not know how many times innocent men have been executed but I do know it has happened. Can we justify taking the life of an innocent person by mistake to punish the guilty?

"Vengence is mine, saith the Lord!" Not yours! Not mine! And He will have vengence on murders!

Passage of this bill would be a sin against God! And anyone allowing it to be passed will be guilty of murder each time a convict is executed!

Capital punishment

TIMES 2-26-83

Dear Editor:

So called enlightened experts on criminology may have come to conclusions about the death penalty not stopping the crimes it is supposed to. But us poor, uneducated and unenlightened non-experts are getting fed up to the eyeballs with your garbage and the continued killing by your "rehabilitated" criminals who roam the streets making it unsafe to go out of one's own house.

I refer to several incidents in this community such as the high school girl killed at Eastertime two or three years ago, the woman and her son who were killed about one and a half years ago and the most recent one at Russian Jack Springs Park less than one year ago, when four teen-agers died.

We have had enough. The death penalty may not deter killing in some people's point of view. But I'll tell you what: It sure as shooting eliminates sec- offenders. It's about time more people became aware of this — politicians and bureaucrats included.

Malone questioned on judicial challenge stand

To the editor:

An open letter to Rep. Hugh Malone:

I understand you are a surveyor, I hope you get your transit out and take a good look at where you're going, as I understand you opposed the Milo Fritz bill which would repeal the law of peremptory challenge. By letting this law stay in running Judge Hornaday out of Homer, do you for one think this will solve the problem?

When there is a new judge assigned, regardless of his attitude toward drunken driving and other crimes, this will only tell lawyers who use this law to load their pockets with taxpayers' money. Apparently Chief Justice Burke and Judge Rowland want to keep this law on the books, perhaps for the day when they topple and have to take defending drunken drivers. I am told when Judge Rowland was a visiting judge in Homer, he apparently wasn't interested in saving taxpayers money, as he flew his own plane, landing on Lake Beluga. Another visiting judge recently, along with a district attorney and a game warden, were seen as they ran aground on the bar and he was so hard aground, he didn't show up to court till 2 p.m. the next afternoon. Judge Hornaday is a skilled navigator and keeps his ship off the bar.

If this peremptory law is so all-fired necessary, why not put our courts on a paying basis and let them pay for visiting judges, instead of having people who are able to survive the drunken drivers, as in most states one found guilty or the loser in a civil action is required to pay the cost of court. As of now, we the taxpayers are not only paying the cost, we're also paying for a public defender who apparently uses excess time with this peremptory or other laws, stalling to feather his own nest, telling people who want to plead guilty to plead not guilty so they can run up expense. Also, I know of one case where a man had a quite steady job on the Slope and a public defender, defending him on a criminal trespass case.

WHO is paying?

I'm almost to the point of advocating a repeat of history, as was in Colonial Williamsburg, Virginia, in 1658.

I hope you'll see the light.

Some questions for anyone interested in such subjects:

1. Why not breath-test equipment in all bars and places liquor is sold?

2. Why not let the people vote for all judgeships as long as we are paying their salaries?

3. Why couldn't we send other peremptied judges for a Homer visiting judge?

4. Why, as heard on a teleconference before a committee, are three Anchorage judges not sent as visiting judges to Homer — maybe too tough or lawyers can't dictate to?

5. I am told you are against the bill, Rep. Malone. Why?

I and many of the voters are watching to see if our representatives are satisfying the will of the people.

Calvin H. Hand,
Anchor Point

Capital punishment views sought

To the editor:

I am writing this in hopes that thinking people will become aware of House Bill 140, which as of this writing was awaiting a hearing in the House Judiciary Committee. This bill, if passed, would authorize capital punishment for certain offenses within the state.

With this bill, we seem to once again put aside the information gathered on the subject and resort to the ancient eye-for-an-eye and tooth-for-a-tooth philosophy. Admittedly, our justice system needs a radical overhaul, but the short-term solution of killing people for killing people, makes little sense to me. Many of the people who call themselves "experts" on criminology have basically come to similar conclusions, namely, the death penalty does not stop the kind of crimes it is designed to, but tends to show a lower stage of development for the societies which use it.

I'd like to again call on all those thinking people who feel other solutions should be sought in place of state-sanctioned killing, to write to our representatives on this bill. I'd like to especially appeal to my friends in the pro-life movement and hope that their desire for consistency will compel them to speak out on this issue.

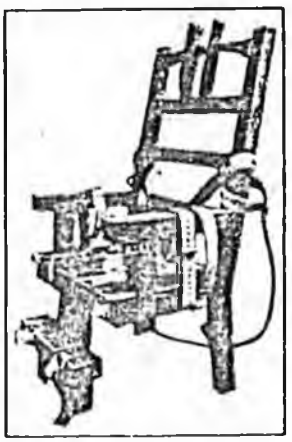
Public reassurance in a civilized way

Superior Court Judge Victor Carlson admirably carried two big burdens in an Anchorage courtroom last week: protecting public safety and dealing with an angry outcry in the wake of the conviction of Charles L. Meach for the murder of four Alaska youths.

There was little doubt, once a Fairbanks jury convicted Mr. Meach of first-degree murder, that the circumstances demanded the stiffest possible sentence for one of Alaska's most brutal and vicious crimes. Charles Meach gunned down four separate victims in cold blood and without the least provocation. Eight years earlier he had killed a 22-year-old grocery clerk and been hospitalized for mental disease or defect. The public needed reassurance that he would never walk the streets again, and so it was done: Judge Carlson sentenced Mr. Meach to 396 years in prison — without chance of parole — in what was the maximum possible sentence and the longest prison term in state history.

But he did more than that. The remarkable part of Judge Carlson's sentencing comments was what he had to say about the "hue and cry for capital punishment" arising from the cold-blooded killings last spring. "I want this record to demonstrate," wrote the judge, "that capital punishment would be wrong and not in the public's interest if capital punishment was available in this case . . ."



And he listed seven concise reasons why the death penalty is inappropriate to a society pretending to call itself humane:

- Homicide on behalf of the state is inconsistent with our culture's most basic respect for human life;
- The expense of trying a capital case is large, since absolutely "no stone can be left unturned" by either side when the life of a defendant is at stake;
- The extra emotional cost to all, especially jurors, encourages acquittals when the prosecution might otherwise meet its burden of proof beyond a reasonable doubt;
- The criminal justice system is not above error, but there can be no recourse if an innocent person is put to death;
- The death penalty skews the administration of justice when defendants — acutely aware that the trial process is not infallible — plead guilty to lesser offenses to avoid the threat of a death penalty;
- Imposition of the death penalty has not been without bias. A greater than representative number of illiterates, poor, minorities and political criminals have faced the death penalty in the United States; and
- Two wrongs do not make a right. The death of a murderer is only symbolic retribution, and can never bring back the victim.

Judge Carlson was correct to impose a sentence designed to keep Charles Meach behind bars the rest of his life — and equally correct to insist that taking still another life would serve no civilized purpose.

THE PUNISHMENT OF DEATH

it may deter a few; does it deter the many?

Who can quarrel with the intent of the death penalty? Its purpose is to validate the preciousness of human life by imposing the ultimate punishment on those who commit the ultimate crime.

Too bad it doesn't work that way.

Consider who qualifies for the death penalty.

Not the enraged individual who in unpremeditated fury kills a spouse or a barroom adversary—the single most common kind of murder.

Not the person who kills by accident or negligence.

Not the rare person who is so mentally deranged that he cannot be held legally accountable for his actions.

That leaves the professional and the otherwise premeditated murderer (both are statistically rare species) and the felony murderer who kills during the commission of another crime, such as robbery, burglary or home invasion.

In truth, the last is the only class of killer from whom innocent society needs systematic protection and for whom society demands execution. But most felony murderers do not intend to kill and do so out of panic, rage or accident. In the absence of prior intent to commit a capital crime, they are not deterred by prior considerations of capital punishment.

Which leaves a subclass of felony murderer whom society has every right to hate and fear: the sadistic psychopath, who doesn't just kill in the course of robbing but may commit robbery as an excuse to kill, terrorize or maim. This is the fellow who holds up the mom-and-pop grocery store for $60 and then pumps bullets into the owner pleading for his life or who takes the wallet from an unresisting victim and then sticks a knife in him.

Only the most principled humanitarian would spare these killers' lives—and maybe a few criminologists who find the threat of death not a deterrent to murderous behavior but an inducement to it.

Psychologists who specialize in violent antisocial behavior have long recognized that the most dangerously hostile, aggressive and sadistic criminals tend to be mentally deranged but legally sane individuals who are embarked on a campaign of self-destruction. Most of those criminals would laugh at that idea; and it certainly doesn't seem that way to their innocent victims. But where the badly troubled person from the so-called upper classes tends to turn his hostility inward, sink into an abyss of depression and end his own life with a bottle or a bullet, his less introspective and socialized counterpart takes his frustration and aggression out on others until he is caught or killed.

For this person, brutality has the immediate payoff of compensating for an intolerable sense of impotence; the ultimate reward is to be transformed by society into a celebrity murderer, attended regally by a vengeful justice system, and then to be solemnly and ceremonially executed by the state. To "ride the lightning."

The percentage of murderers who kill in order to be killed is unknowable, but it seems likely they outnumber those who rationally weigh the prospect of execution and are deterred.

Add to that another unhappy fact of criminal behavior: The rational felon whose planned or unplanned act could cost him his life may well elect to leave no living witnesses.

And add to that a cultural effect of capital punishment that to students of violent behavior is the most worrisome of all. By performing executions in the name of justice, the state validates the idea that killing is an appropriate response to sufficiently wicked or intolerable behavior. Which happens to be the exact frame of mind that prevails in the most common of murder situations—the bedroom or barroom rage. Whether cloaked in legal pageantry or performed in a moment of white fury, the message is the same: *The son of a bitch had it coming!*

Not even the Supreme Court has suggested that the death penalty deters murder. In 1976, it took, instead, the curiously honest position that execution primarily serves a retribution function, that it fulfills an emotional need of citizens outraged and frustrated at the prevalence of crime and violence. That it certainly does. Contrary to the lofty position of the true humanitarian, the less philosophical citizen may in fact derive comfort and genuine satisfaction from bloody vengeance. But a wiser court and wiser men in public office might have considered that the transient satisfaction of a blood sacrifice may well be paid for by additional violence and suffering inspired by its lethal example.

Death penalty debate

juds. 2-15-83

Legislators and onlookers in the Alaska Senate got a rueful chuckle out of committee referrals made by Senate President Jalmar Kerttula for a death penalty bill introduced last week. Sen. Kerttula sent the bill to both the Judiciary and Finance committees, noting that "it costs money" when the latter assignment drew guffaws. Sen. Joe Josephson, who chairs the Senate Health and Social Services Committee occasioned further chuckles with his observation that the bill "has certain health implications as well."

The laughter no doubt served to break the tension surrounding a very serious matter for all concerned. But committee referrals to at least two different panels suggest that the Senate will give the idea plenty of scrutiny before moving on any death penalty bill this session. And that scrutiny suggests a further consideration for chairmen planning committee hearings: the need for broad public participation in any decision to embrace the death penalty in our state.

The death penalty implicates every citizen in a cycle of violence the state seeks to stop. Before any death penalty bill can advance to a vote of the legislature, it must bear widespread scrutiny and debate among all Alaskans. Public hearings must be held around the state; reputable research about the death penalty and its impacts must be widely distributed and debated; the methods and circumstances of imposing capital punishment must be carefully defined; and, finally, Alaska citizens and their leaders must forthrightly confront the moral dimensions of a painful issue. Such scrutiny would be difficult at best, but it is the very least demanded of a democratic state that would adopt the authority to impose a penalty of death.

Senate finds some humor in crime bill

The Associated Press NEWS 2-1-85

JUNEAU — Alaska senators on Friday found some light humor in a grim subject — capital punishment.

The laughter followed the introduction of a bill to authorize the execution of murderers in Alaska. A similar bill was filed in the House last month.

Senate President Jay Kerttula, D-Palmer, referred the measure to the Finance Committee, which drew guffaws from senators.

"Hey. It costs money," Kerttula said.

When the laughter subsided, Sen. Joe Josephson, D-Anchorage, rose to say "I think it has certain health implications as well," which drew another roar from the lawmakers.

The measure (SB121), sponsored by Sen. Fritz Pettyjohn, R-Anchorage and others, would provide that a person convicted of a capital felony "shall be sentenced to a definite term of imprisonment of at least 20 years but not more than 99 years, or shall be sentenced to death."

The bill, which also will be reviewed by the Judiciary Committee, would classify murder as a capital felony.

The measure also would require a death sentence to be approved by the Alaska Supreme Court.

A similar bill was filed in the House by Rep. Sam Pestinger, R-Anchorage. The measure (HB140) is still in the House Judiciary Committee.

TIMES 4/6/83

The death penalty

Dear Editor:

Sylvia Short's "capital punishment" letter of March 26, faults Moral Majority and certain Christian organizations for favoring the death penalty because she thinks it contradicts the teachings of the Prince of Peace. She admits to being puzzled.

It might help this widespread misunderstanding by non-Christians to know that while Jesus came to provide a way of salvation, he also spoke of the destruction of sinners. In Matthew 10:34, he said, "Think not that I come to send peace on earth: I came not to send peace but a sword."

The death penalty is clearly demanded by the word of God. An accused person who was tried and condemned by his peers was led outside the city gates and stoned to death.

In suggesting the head of Moral Majority be crucified like Christ, Ms. Short recommends the very violence she claims to abhor.

SECTION 1

AGAINST CAPITAL PUNISHMENT

I. THE STATE SHOULD NOT KILL

The central argument against capital punishment may be summarized as follows: In the absence of a clearly demonstrable benefit to society, it is morally wrong and pragmatically unsound for the State to be invested with the right to take the life of its citizens.

Abolitionists argue, first, that it is morally wrong to kill, and no less so for the State than for the private individual. Michael V. DiSalle, the former Governor of Ohio, writes:

> First of all, I believe that taking a human life, even to pay for a life already taken, is immoral....Society, echoing the Ten Commandments, says: Thou shalt not kill. Then society illogically continues: Killing is wrong, and in order to prove it is wrong, we will kill you if you kill.1/

While the moral argument, based as it is on the belief in the sanctity of human life, leads some abolitionists to argue that capital punishment is wrong regardless of whether or not it benefits society, this absolute stand is unusual. The following statement by Herbert L. Packer, Professor of Law at Stanford University, is representative of the more prevalent view:

> The case is not that the sanctity of human life is an absolute but rather that it is a highly cherished value that should give way only upon a persuasive showing that some other, more important end will thereby be served.... Unless it can be shown that capital punishment serves prime social purposes that cannot otherwise be served, the claims of its proponents are unconvincing.2/

1/ Michael V. DiSalle, The Power of Life or Death (1965), p. 6.
2/ Herbert L. Packer et. al., "Mr. Barzun and Capital Punishment," The American Scholar (Summer 1962), p. 449.

Abolitionists argue, secondly, that this belief in the sanctity of the individual human life is the central value of our society and should be supported by the actions of the State. They contend that, if the institution of capital punishment does not actually undermine this value, and many believe that it does, it clearly does nothing to reinforce it. Governor Edmund G. Brown of California writes:

> I oppose capital punishment, too, because it brutalizes man; because a society that takes human life cannot invest its citizens with respect for human life.1/

A New York Herald Tribune editorial entitled "The State Should Not Kill" puts it more strongly:

> Whenever the state takes life it cheapens life. Capital punishment panders to man's basic instincts, cloaking retribution in the mantle of the law, coloring vengeance with respectibility, setting a public example for private violence.2/

Third, abolitionist argue that the State should be granted legal power to take the lives of its citizens only if this is clearly necessary for self-defense which, in the case of capital punishment, means the protection of its law-abiding citizens. In the United States, this argument takes the traditional form of the need to protect the rights of the individual against the State, and is summarized as follows by Michael V. DiSalle:

> Those of us who are interested in the freedom of the individual realize that government exists only with those powers that have been delegated to it by the people, and the more restrictions we place upon government and the exercise of the powers that have been delegated to it, the more certain we are that we will have a democratic type of society where the freedom of the individual prevails. It should certainly not be the purpose of people within a society to delegate to government any more authority than that necessary to perform its functions; I feel that the delegation of the right to take away

1/ Edmund G. Brown, Statement on Capital Punishment (1963), p. 2.
2/ "The State Should Not Kill," New York Herald Tribune (March 27, 1960), in Capital Punishment, ed. Grant S. McClellan (1961), pp. 83-84.

> life can only be justified when a certain purpose is to be served; that purpose might be the preservation of society itself against a threat from the outside or a threat from within.1/

In general, abolitionists in the United States are more willing to grant that the death penalty would be justified by its clear necessity for the protection of "society itself against a threat from the outside or a threat from within," than are, for instance European abolitionists. The latter tend to be more concerned than American abolitionists with the danger that capital punishment will be used illegitimately by the State. A representative European view on this issue is expressed as follows by the late Albert Camus:

> ...for 30 years crimes of state have vastly exceeded crimes of individuals. I shall not even mention wars--general or local.... I am referring here to the number of individuals killed directly by the State, a number that has grown to astronomic proportions and infinitely exceeds that of "private" murders. There are fewer and fewer men condemned by common law, and more and more men executed for political reasons.... It is now so much against the individual killer that our society must protect itself than, as against the State. Perhaps this equation will be reversed in another thirty years. But for the present, a legitimate defense must be made against the State, before all else. Justice and the most realistic sense of our time require that the law protect the individual against a State given over to the follies of sectarianism and pride.2/

In summary, then, most American abolitionists argue that the death penalty should stand or fall on proof that it is necessary to protect society. Furthermore, because of the moral and practical evils they see as inherent in the institution of the death penalty, abolitionists argue that the burden of proof rests with its supporters.

It is generally agreed by both sides in the capital punishment controversy that there are two ways in which the death penalty might afford society unique protection. First, it might be a more effective deterrent against major crime that life imprisonment. The deterrent issue is defined as follows by Hugo Adam Bedau:

> The only question [regarding deterrence] which must be settled is this: is long term imprisonment (on the assumptions that it is less savage and more easily administered by the judicial system than capital punishment) as good a deterrent for the major crimes currently punished by death? This formulation leaves open, as it should, the question of how close either penalty is to a completely effective deterrent; and it does not raise the further question, as it shouldn't, whether death might be a better deterrent for certain crimes (e.g., against property) that no one would think of punishing in this way. To put it another way, the real dispute over deterrence is this: how many capital crimes, if any, have been (or might be) prevented by the threat of execution, which would not have been (or would not be) prevented by the threat of imprisonment?1/

Second, the death penalty might be the only way of protecting society against the incorrigibly dangerous. The debate with regard to this second function centers around the issue of whether or not the death penalty is in fact necessary, whether this protection is not provided equally well by measures short of execution.

Abolitionists argue that the death penalty has failed as a deterrent and is unnecessary as a protective measure. They argue that it should be abolished because there is no demonstrable proof that it affords society the unique protection which alone would justify its retention.

1/ The Death Penalty in America, ed. Hugo Adam Bedau (1964), p. 261.

II. DETERRENCE

Hugo Adam Bedau defines the doctrine of deterrence and comments on its importance in the capital punishment controversy as follows:

> ...by far the most common way to employ a punishment as a preventative of crime is to adopt a sufficiently severe penalty so as to compel general obedience out of fear of the consequences of disobedience--the classic doctrine of deterrence. Even though deterrence cannot override every other concern in formulating a rational penal philosophy, there is no doubt that the death penalty's efficacy as a deterrent is the major factual issue in dispute between abolitionists and retentionists.1/

Abolitionists argue that the death penalty's efficacy as a deterrent is, at the very least, called into serious question both by the available statistics and by the evidence of modern psychology.

A. The Statistics

In a study of the death penalty which he prepared at t request of the American Law Institute, Thorsten Sellin notes:

> Any one who carefully examines the... data is bound to arrive at the conclusion that the death penalty, as we use it, exercises no influence on the extent or fluctuating rates of capital crimes. It has failed as a deterrent.2/

Sellin analyzes the four ways in which the deterrent value of the death penalty would be evident it it, in fact, existed:

> It seems reasonable to assume that if the death penalty exercises a deterrent or preventive effect on prospective murderers, the following propositions would be true:
>
> (a) Murders should be less frequent in states that have the death penalty than in those that have abolished it, other factors being equal. Comparisons of this nature must be made among states

1/ Bedau (ed.), op. cit., p. 260.
2/ Thorsten Sellin, The Death Penalty (1959), p. 63.

> that are as alike as possible in all other respects—character of population, social and economic condition, etc.—in order not to introduce factors known to influence murder rates in a serious manner but present in only one of these states.
>
> (b) Murders should increase when the death penalty is abolished and should decline when it is restored.
>
> (c) The deterrent effect should be greatest and should therefore affect murder rates most powerfully in those communities where the crime occurred and its consequences are most strongly brought home to the population.
>
> (d) Law enforcement officers would be safer from murderous attacks in states that have the death penalty than in those without it.1/

In general, the various statistical studies which have been made in an attempt to test the deterrent value of capital punishment concern themselves with one or more of these four propositions.

It will be noted that the majority of the studies in this field have been conducted by Sellin. Professor Emeritus of Sociology at the University of Pennsylvania and President of the International Society of Criminology, Thorsten Sellin has been described as the "foremost statistician in the field of criminal law in the world."2/ He was the principal consultant to Great Britain's Royal Commission on Capital Punishment as well as to the majority of other official government commissions studying this subject. Bedau notes:

> ...[Sellin's] evidence has managed over the past decade to convince a wide variety of legislative committees throughout the English-speaking world, and not in every case were the members of these committees initially receptive to his conclusions.3/

1/ Sellin, op. cit., p. 21.
2/ California Legislature, Senate Committee on Judiciary, Hearing Report and Testimony... (1960), p. 65.
3/ Bedau (ed.), op. cit., p. 265.

Contiguous Jurisdictions - Sellin's studies of the homicide rates in contiguous jurisdictions with and without the death penalty are, in Bedau's words, "the cornerstone of the case against the deterrent superiority of the death penalty over imprisonment."[1] Table 1 below shows the results of four of these studies, described by Mr. Sellin as follows:

> The only fair comparison is one that takes into account regional differences and therefore compares the homicide rates of an abolitionist state with that of its neighbor states. The diagrams shown... [see below] are based on such comparisons. They show the annual size of the homicide death rate per 100,000 population for the period 1920-1958 and the general trend of the rate for each set of states compared.[2]

Sellin's conclusion on the basis of these studies follows:

> The striking thing about these diagrams is that within each set of states the rates are so nearly the same annually and the trends so closely alike that if the lines were not identified with each specific state, no one would dare to guess which lines represented the abolition states....
>
> It is proper to conclude that states which are similar in the character of their population, their urban and industrial development, and their mores have similar homicide rates, whether or not they have the death penalty. In other words, the presence of the death penalty for murder in a state appears to have no more influence on its homicide rates than the absence of the penalty in a comparable state has on the rates of that state. And, if our basic assumption is correct, what holds true for the homicide rates would hold true for the capital murder rates, were they obtainable.
>
> When it once becomes generally understood that the amount and the trends of murder depend on demographic, social, economic, and political conditions, one would realize that the explanation for rises or falls in the statistics of this crime must be sought through a study

1/ Bedau (ed.), op. cit., p. 263.

of these conditions, and that through such a study alone could any possible remedy be found. To hope that this remedy could be found in the application of the death penalty or in its introduction is to grasp at a straw.1/

Abolition and the Criminality Curve in the Same Jurisdiction -

Several studies have been made on the second assumption stated above by Sellin; namely, that, if capital punishment is a deterrent to murder, the homicide rate in a given jurisdiction should increase with the abolition of the death penalty and decrease with its restoration. Sellin has conducted such a study on the basis of the statistics available from states in this country which have abolished the death penalty. In his summary of this study, Bedau writes,

> The selection by Professor Sellin shows that in every abolition state, whether or not it later restored capital punishment, there is no correlation between the status of the death penalty and the homicide rate. This strongly suggests that in the ten states that abolished the death penalty and later restored it the reasons had nothing to do with the measurable effects of death vs. imprisonment as a deterrent to murder.1/

In general, the statistics available from other countries which have either partially or totally abolished capital punishment appear to follow the same pattern: abolition is not followed by an increase in crime. The United Nations report, Capital Punishment, contains the following observation on the effects of partial abolition:

> All the information available appears to confirm that such a removal has, in fact, never been followed by a notable rise in the incidence of the crime no longer punishable with death. This observation, moreover, confirms the nineteenth century experience with respect to such offenses as theft and even robbery, forgery and counterfeiting currency, which have progressively ceased to be punishable with death: indeed, these crimes, so far from increasing, actually decreased after partial abolition.2/

With regard to total abolition, the U.N. report concludes that, "The same general observation can usually be made regarding the total abolition of the death penalty."3/

The Effect of Executions on a Community - Studies have been made on the effect of a series of executions on the capital crime rate in the community where the executions occurred. The reasoning behind these studies is described by Sellin as follows:

1/ Bedau (ed.), op. cit., pp. 333-334.
2/ United Nations, Department of Economic and Social Affairs, Capital Punishment (1962), p. 54.
3/ Ibid., p. 55. See also Sellin, The Death Penalty, pp. 34-50.

> If the death penalty is a deterrent, its greatest effect should be shown through executions which are well publicized. Furthermore, the effect should be most noticeable in the community where the offense occurred, where the trial aroused wide publicity and the offender lived and had relatives, friends and acquaintances.1/

Such a study was conducted in Philadelphia by Robert H. Dann.2/ He compared the number of homicides occurring 60 days before and 60 days after five different executions. A total of 91 homicides occurred in the periods preceding the executions; 113 homicides occurred in the periods following them. Nineteen of the 204 homicides resulted in a sentence of first degree murder. Of these, nine occurred in the "before" period and ten occurred in the "after" period. A study conducted by Leonard D. Savitz in Philadelphia a number of years later yielded similar results. Savitz concluded:

> There emerges, therefore, no pattern that would indicate deterrence.... It can be said in summary, that the author is aware that the short period of time under analysis and the extremely small number of murders dealt with prevent conclusive findings, but we must conclude from the data at hand that there was no significant decrease or increase in the murder rate following the imposition of the death penalty on four separate occasions.2/

Police Safety - The two extensive studies of the comparative safety of the police in jurisdictions with and without capital punishment do not indicate that the death penalty affords the police greater protection. Sellin conducted a major study of the comparative safety of metropolitan police, described by him as follows for the American Bar Association Section of Criminal Law:

1/ Sellin, The Death Penalty, p. 50.
2/ Robert Dann, The Deterrent Effect of Capital Punishment (1935); see James A. McCafferty, "Major Trends in the Use of Capital Punishment," Federal Probation (Sept. 1961), p. 20.
2/ Leonard D. Savitz, "The Deterrent Effect of Capital Punishment in Philadelphia" (1958), in Bedau (ed.), op. cit., pp. 321-322. See also William F. Graves, "The Deterrent Effect of Capital Punishment in

> A few years ago, I sent a questionnaire to the chiefs of police in all cities with more than 10,000 population in the six states that at that time did not have the death penalty for murder, and in the states that bordered on them--seventeen in all. I asked them to give us year by year, beginning in 1920, the number of police killed by a criminal with a lethal weapon. We got a pretty good response--47 per cent--at least from all but the big metropolitan cities; a few of these responded but not enough to really make any comparison easy. We broke the information down in groups of cities by size; there were five or six population groups, so that the large city would not distort the information gained from smaller cities. We computed rates and found to our surprise that there was no difference in the information gathered between the states that had the death penalty and those that did not have it. There were as many police killed in the states with the death penalty, considering the size of the cities involved, as in the states without the death penalty. The argument of the police on the basis of that study falls by the wayside.1/

This study indicated that the rate of police killings was in fact higher in death penalty states than in abolition states: 1.3 per 100,000 in the former, compared to 1.2 per 100,000 in the latter.2/

A companion study of the comparative safety of state police was conducted by Donald R. Campion, S. J. Father Campion summarized his findings as follows:

> ...we conclude that the data available to us after a survey of half the state police forces of the United States do not lend empirical support to the claim that the existence of the death penalty in the statutues of a state provides a greater protection to the police than exists in states where that penalty has been abolished.3/

B. The Psychology of Deterrence

In the opinion of many abolitionists, the deterrent value of capital punishment has been seriously called into question by the evidence of modern psychology and penology. As the U.N. report on capital punishment notes, the majority of specialists in these fields are themselves abolitionists:

> ...it will be noted that, among the leading authorities in penal science, the supporters of abolition appreciably outnumber those who favour the retention of capital punishment. The specialists of the social sciences, criminologists, sociologists, penologists, psychologists, doctors and writers on social science and criminology are, in their great majority, abolitionists.1/

This is substantiated by Bedau in his discussion of what Americans think about the death penalty:

> ...psychiatrists, penologists and possibly social scientists and social workers generally, as well as higher government officials, tend to oppose the death penalty in this country at this time.2/

In his anthology, The Death Penalty in America, Bedau summarizes what in his opinion are the two major abolitionist arguments; one of these arguments is a comprehensive statement of the abolitionist objections to the psychological validity of the death penalty as a special deterrent to murder.3/ According to this argument, murders are either premeditated, or they are not. In the case of unpremeditated murders, no punishment will be effective as a deterrent. Mr. Bedau's comment here reflects the conviction held by many that

1/ United Nations, op. cit., p. 62.
2/ Bedau (ed.), op. cit., p. 236.
3/ Ibid., pp. 270-272. See p. 16 below for a discussion of the second argument.

this category comprises a considerable percentage of those who commit violent crimes:

> When one considers that most of the undeterrables are likely to be suffering from one or another form of mental illness, and that considerable evidence exists to show that murderers and condemned men generally include a large proportion who are sick, it seems pointless to threaten such offenders with death.1/

The argument continues that premeditated murders are committed by people who either do or do not expect to be caught. About the latter category, those who expect to be apprehended, Bedau comments:

> In the latter case, there is nothing whatever gained (so far as controlling his behavior is concerned) by threatening to kill him as his punishment; for he is likely to try to kill himself (just as he is likely to surrender to the police right after his crime). Such cases are by no means rare.2/

Abolitionists argue that, for this type of murderer the death penalty is, in fact, more apt to be an inducement than a deterrent. Sellin has noted the existence of

> ...good evidence that the availability of instruments used to inflict the punishment of death has induced people of unbalanced mind to seek that punishment as a devious means of suicide.3/

In a section entitled "Capital Punishment as Cause for Murder" in the study he made for the American Law Institute, Sellin itemizes cases of people attempting to commit suicide by execution.4/

It is equally difficult to see, the argument continues, what value as a deterrent the death penalty has for those who plan their murder on

1/ Bedau (ed.), op. cit., p. 271.
2/ Ibid.
3/ Sellin, "Capital Punishment," p. 4.
4/ Sellin, The Death Penalty, pp. 65-69.

the assumption that they will get away with it. Bedau comments:

> Gangland killings, kidnappings for ransom, and a large proportion of all serious crimes are committed by those who think they will never be caught. The obvious, and probably the only, way to deter such persons is by increasing the effectiveness of law enforcement and criminal prosecution in the courts.1/

This category of murderers, including as it does the gangland killer, is of considerable importance. It would seem that the deterrent theory should be applicable here, if anywhere: the gangster, murdering as a means to an end, would seem to be capable of rationally considering other possible ends of his action--for instance, his own death. However, the facts seem to justify the conviction of those engaged in organized crime that they have virtually no reason to fear the death penalty. Sellin testified as follows before the New Jersey Commission to Study Capital Punishment:

> Defenders of the death penalty would probably feel that if anybody deserved this punishment, it will be the hired killer in organized crime. It's a well-established fact that such murderers enjoy almost complete immunity, that the instances in which even a conviction has been secured are extremely rare, and that deterrence plays no role in this connection.2/

This leaves one final category: "those who are sane and cautious enough to weigh the risk of punishment against the anticipated gain from crime, and who would decide that the risk is too great if the threatened punishment is death, but not great enough to deter them if it is only imprisonment."3/ Bedau quotes the following passage

1/ Bedau (ed.), op. cit., p. 271.
2/ New Jersey Commission to Study Capital Punishment, Report (1964), p. 13. See also Sellin, "Capital Punishment," p. 5.
3/ Bedau (ed.), op. cit., p. 272.

from the Ceylon Report on Capital Punishment as the answer to the question, "How many such persons are there in the total population?":

> It would be most exceptional for a man to be insufficiently sane and normal to be deterred by the risk of a sentence of protracted imprisonment but yet sufficiently sane and normal to be deterred by the risk of his own execution, when both risks are at a level of contingency which he is doing his utmost to avoid.1/

C. The Administration of the Death Penalty

Those opposed to the death penalty argue that the very way in which it is necessarily administered undercuts whatever deterrent effect it might have for those capable of exercising some degree of rationality. Bedau considers this to be one of the two major abolitionist arguments, and discusses it in some detail:

> Since the time of Beccaria, Bentham, Rush and Livingston, most penologists have agreed that for any punishment to have optimum efficacy as a deterrent, the penalty must be imposed consistently, immediately and inexorably; that is, on all offenders, promptly after their crime, and in such a way that the general public expects exactly this. But in practice, not one of these conditions is satisfied by the way capital punishment is administered. Only a small proportion of first degree murderers are sentenced to death and even fewer are executed. The delay in convicting and executing those who do get a death sentence is increasing and notorious. So, almost anyone who contemplates some horrible crime can see some chance in getting away with it, or at least in not having to pay the supreme penalty. If, in practice, the death penalty is no more effective a deterrent for murder, rape and kidnapping than imprisonment is, this may be the reason. One must either admit it, and keep capital punishment on other grounds, in the knowledge that it cannot be made a better deterrent than it is; or else abandon the jury system, the right of appeal, and deprive the accused of most of his basic constitutional rights in all capital cases, in the hopes of improving the deterrent efficacy of the death penalty; or else get rid of the death penalty itself in the confidence that imprisonment is on the evidence as good a deterrent and considerably simpler to administer.2/

1/ Quoted by Bedau (ed.), op. cit., p. 272.
2/ Bedau (ed.), op. cit., p. 270.

III. THE DEATH PENALTY AS A PROTECTIVE MEASURE

Most abolitionists agree that the institution of the death penalty would be justified by its necessity as a protective measure against the incorrigibly dangerous. The debate here differs from the debate about deterrence in that there is clearly no question about the effectiveness of capital punishment as a protective measure. The argument turns on the issue of whether or not the death penalty is, in fact, necessary. In so far as there actually is a danger to society from those found guilty of capital crimes, is it possible to provide protection by some means short of their death? Abolitionists argue that this danger is considerably exaggerated by retentionists and, more importantly, that life imprisonment is a completely adequate protective measure. Sellin comments:

> In the last analysis, the argument that the life sentence does not offer an adequate safeguard against further homicidal criminality by a murderer who is not executed appears untenable. Basically, those who advance it probably feel that the life sentence, in practice, is not an adequate punishment for murder.1/

The abolitionist arguments on the issue of incapacitation are summed up as follows by the late Lewis E. Lawes, the warden for many years of Sing Sing Prison:

> Murderers make the best prisoners. They are least troublesome to any warden, and often they accomplish a great deal behind bars. I know of none released during my wardenship at Sing Sing who reverted to crime. Furthermore, it is not true—at least in New York State—that a murderer whose death sentence is commuted to life imprisonment can easily obtain his freedom. The average period of incarceration among those who receive the second commutation is about twenty years. Granted that other states are too lenient,

---

1/ Sellin, The Death Penalty, pp. 78-79.

> that would be an argument for a better administration of justice, not for putting people to death.1/

A. "Murderers Make the Best Prisoners"

It is generally agreed that murderers do, in fact, make the best prisoners and that the percentage of violent crime committed by them in prison is negligible. A survey conducted in 1950 by the International Penal and Penitentiary Commission comparing the behavior of prisoners serving sentences for murder with the behavior of those serving sentences for other offenses clearly indicated this to be the case in countries abroad. Sellin discusses the results of this survey and continues:

> The same views as those...expressed by prison administrations in many European countries are held by American wardens and superintendents of correctional institutions. Lifers are generally considered to be among the best behaved prisoners. It would be unnatural were they not at times involved in disciplinary violations, and examples are known when some lifer has committed an assult in prison and even a homicide, but these appear to be very rare exceptions. Generally speaking, such murderous offenses are committed by prisoners serving sentences for other crimes than murder.2/

B. The Danger from Released Murderers

Statistics indicate that the behavior of first degree murderers released on parole is, in the words of Sellin, "very good, much better than that of other prisoners who have been paroled, especially property offenders."3/ This is equally true of those who have been pardoned. Bedau comments:

1/ Lewis E. Lawes, "Capital Punishment," Encyclopedia of Criminology, ed. Vernon C. Brannam and Samuel B. Kutash (1949), p. 44.
2/ Sellin, The Death Penalty, p. 72. See also Bedau (ed.), op. cit., pp. 400-401.
3/ American Bar Association, Section of Criminal Law, op. cit., p. 24.

> The general position of American penologists on the matter of pardoning (or paroling) murderers was stated succinctly a decade ago by the retired Director of the Federal Bureau of Prisons, Sanford Bates, when he informed the Royal Commission on Capital Punishment: "Cases of murder committed by persons pardoned from the death penalty are rare if not almost unknown." This is almost as true of all murderers, whether sentenced to death and commuted by the governor or sentenced to life imprisonment by the jury, and whether kept in prison or released....1/

Abolitionists are generally agreed that the misguided release of those who remain a danger to society indicates a need for the reform of a state's parole practices, rather than for retention or reinstatement of capital punishment. In the words of Robert G. Caldwell, a lawyer and noted criminologist:

> For example, it is clear that the possibility of releasing dangerous prisoners into the community could be reduced by improving the rehabilitative facilities of our correctional institutions and by strengthening our pardon and parole procedures. An execution, it is true, absolutely eliminates this possibility; but since it is to be prescribed as punishment for a crime, one can hardly maintain that in a given case it should be used not so much because a certain offense has been committed but because we are too lenient and inefficient in the operation of our correctional systems.2/

Moreover, abolitionists argue that the low rate of recidivism among paroled murderers indicates that in general dangerous prisoners are not being released, and that the danger of such releases is greatly exaggerated.

Finally, the abolitionist position on the alleged lack of a satisfactory alternative penalty is summed up as follows by Donal E. J.

1/ Bedau (ed.), op. cit., p. 397; see pp. 397-399 for state statistics.
2/ Robert G. Caldwell, "Why is the Death Penalty Retained?", The Annals (Nov. 1952), pp. 48-49. For statistics and a discussion of the actual length of life sentences in various states, see Sellin, The Death Penalty, pp. 72-76.

MacNamara, Dean of the New York Institute of Criminology:

> The record in abolition jurisdictions, some without the death penalty for more than one hundred years, both in the United States and abroad, in which imprisonment for indeterminate or stated terms has been substituted for the penalty of death, is a clear demonstration that alternative penalties are of equal or greater protective value to society than is capital punishment.1/

1/ Donal E. J. MacNamara, "The Case Against Capital Punishment," Social Action (April 1961), p. 12.

IV. RETRIBUTION VS. VENGEANCE

Abolitionists do not accept the argument that capital punishment is defensible on the grounds of retribution, apart from any benefit it may afford society either as a superior deterrent or as a necessary protective measure. According to many proponents of capital punishment, some criminals are simply unfit to live; they have committed acts so heinous that the only appropriate punishment is death. This function of the death penalty is commonly referred to on the retentionist side as retribution and on the abolitionist side as vengeance.

Abolitionists argue that the motivation behind this use of the death penalty is of the same order as the irrationality which provoked the criminal to the act for which he is being executed. Arthur Koestler comments:

> Yet though easy to dismiss in reasoned argument on both moral and logical grounds, the desire for vengeance has deep, unconscious roots and is roused when we feel strong indignation or revulsion--whether the reasoning mind approves or not. This psychological fact is largely ignored in abolitionist propaganda--yet it has to be accepted as a fact. The admission that even confirmed abolitionists are not proof against occasional vindictive impulses does not mean that such impulses should be legally sanctioned by society, any more than we sanction some other unpalatable instincts of our biological inheritance. Deep inside every civilized being there lurks a tiny Stone Age man, dangling a club to rob and rape, and screaming an eye for an eye. But we would rather not have that little fur-clad figure dictate the law of the land.1/

The purpose of the criminal law is to provide protection against man's irrationality and violence, not to furnish a means of expressing it. Abolitionists contend that the death penalty is a violation of

1/ Arthur Koestler, Reflections on Hanging (1957), p. 100.

this purpose. In the words of Theodore McKeldin, former Governor of Maryland:

> The function of the criminal law is to protect the law-abiding, not to sate society's lust for revenge. Only as a protector of the lives and property of honest men does it deserve the respect and support of honest men. Hence anything that tends to associate it with the idea of vengeance impairs its dignity and subtracts from the respect that intelligent people accord it. The argument that the death penalty is needed to allay public excitement is an argument against capital punishment, not in its favor.1/

In summary, then, of the central argument against capital punishment, those who oppose the penalty believe that it does not deter would-be murderers more effectively than life imprisonment, and that life imprisonment is a fully adequate safeguard against those who have committed murder. In the words of Thorsten Sellin:

> The belief that the death penalty is a unique instrument for the protection of society against murder and superior to life imprisonment in this respect is not supported by any credible evidence now available to us.2/

In the absence of "credible evidence" that the death penalty is necessary to protect society, abolitionists argue that its only purpose is to satisfy man's desire for vengeance. The acceptance of vengeance as a legitimate goal of the criminal law of a civilized state is, according to abolitionists, morally wrong and pragmatically dangerous.

1/ Maryland Committee on Capital Punishment, Report (1962), p. 25.
2/ Sellin, "Capital Punishment," p. 9.

V. THE DEATH PENALTY AND CRIMINAL JUSTICE

A number of the arguments against capital punishment relate to its alleged incompatibility with equitable and efficient criminal justice. The following statement by Herbert L. Packer of Stanford Law School is representative of the opinion of many, particularly in the legal profession, who oppose capital punishment:

> The case for abolition rests most securely, I think, on pragmatic considerations. Very simply, capital punishment is more trouble than it is worth. Criteria for its even-handed application are totally lacking; its effect on the administration of justice is malign and pervasive; it brings the law into disrepute.1/

A. The Possibility of Error

A major argument in this area is the danger that an innocent man will be executed. The Marquis de Lafayette once said, "I shall ask for the abolition of the penalty of death until I have the infallibility of human judgment demonstrated to me."2/ The argument remains the same today. Sellin writes:

> Human justice can never be infallible. No matter how conscientiously courts operate, there still exists a possiblity that an innocent person may, due to a combination of circumstances that defeat justice, be sentenced to death and even executed. That possibility is made abundantly clear when one considers the many instances in which innocent persons have been saved from the extreme penalty either by the last minute discovery of new evidence or by a commutation followed, perhaps after many years in prison, by the discovery of the real criminal.3/

In The Death Penalty in America, Bedau abstracts "seventy-four cases occurring in the United States since 1893, in which a wrongful conviction

1/ Packer, op. cit., p. 441.
2/ Quoted by Otto Pollak, "The Errors of Justice," The Annals (Nov. 1952), p. 115.
3/ Sellin, The Death Penalty, p. 63.

of criminal homicide has been alleged and, in most cases, proved beyond doubt."[1] These cases resulted in the following penalties:[2]

Death sentence executed	8
Death sentence not executed	23
Life sentence	30
Less than life sentence	10
Conviction averted	3
Total	74

Bedau comments that while there is some doubt whether the right men executed were innocent, "no doubt, however, attaches to the fact that nearly two dozen men have been sentenced to death for crimes they demonstrably did not commit."[3] He also points out that 11 of the 30 life sentences occurred in abolition states.

> Had the death penalty not been abolished in these states, it is likely that at least some of these eleven men would have received a death sentence and been executed.[4]

Several governors who have had to make the final decisions on executions have been particularly emphatic about the reality and seriousness of the danger of executing the innocent. Both Governor Edmund Brown of California[5] and Michael V. DiSalle, former Governor of Ohio,[6] recount incidents which illustrate this danger. Bedau points out that, reputedly, the States of Maine, Rhode Island, and Wisconsin abolished the death penalty during this century because of the hanging of innocent men.[7]

7/ Bedau (ed.), op. cit., p. 1[illegible].

B. Inequality of Application

Opponents of the death penalty are universal in their denunciation of the injustice with which this penalty is enforced. Mr. Bedau speaks for abolitionists in general in his comment that, "The whole pattern of treatment of capital convictions by the higher courts seems devoid of rhyme or reason."[1/]

Abolitionists charge that racial prejudice, particularly against Negroes, is a major factor in the unequal application of the death penalty. They cite particularly statistics on executions for rape. The Federal Bureau of Prisons, in its 1965 national prisoner statistics bulletin on executions, indicates that during the period 1930-1964, nine-tenths of all executions for rape have been of non-white males.[2/] On this subject, Bedau notes:

> ...as National Prisoner Statistics shows, of the nineteen jurisdictions that have executed men for rape since 1930, a third of them have executed only Negroes. In those six states, the very existence of rape as a crime with an optional death penalty is, in the light of the way it has been used, strong evidence of an original intent to discriminate against non-whites. This was probably the purpose behind the decision in Tennessee in 1915 to abolish capital punishment for murder and treason, but to retain it for rape.[3/]

According to abolitionists, a second factor in the inequitable use of the death penalty is reflected in the fact that with few exceptions, it is the "poor and friendless" who are executed. Because of the very nature of our law courts, the difference between life and death is frequently determined by the ability of the accused to provide himself with skilled legal counsel. Former

1/ Bedau (ed.), op. cit., p. 410.

Governor DiSalle writes:

> I have never seen a person of means go to the chair. It is the well-heeled gangster, the professional killer who can afford the best legal talent to defend him, who gets off with a lesser sentence. It is the poor, the illiterate, the underprivileged, the member of the minority group—the man who because he is without means is defended by a court-appointed attorney—who becomes society's blood sacrifice.
>
> The court-appointed defender, diligent though he may be, is always handicapped. Sometimes he is inept—there is no criterion of experience in criminal law to guide a court appointment—and always he lacks the staff and funds available to the prosecution. Without funds and personnel to investigate the background of jurors and witnesses, to check alibis and examine the evidence before trial, the court-appointed attorney and his client have two strikes against them before they even enter a plea.1/

Abolitionists argue that the inequalities involved in the actual use of the death penalty undermine the justification of it on the basis of the protection it may offer society. They maintain the facts indicate that, far from serving a rational, legitimate purpose, the death penalty is an instrument of class and racial prejudice and a test of expensive legal ingenuity.

Abolitionist argue further that the way in which the death penalty is actually used completely invalidates any possible defense of it on the grounds of society's right to retribution. They state for instance, that it is difficult to defend the position that Negro rapists merit death while white rapists, for the most part, do not. Sellin comments:

> ...If I were an adherent of the view of retributive justice, I might—if my emotions did not deprive me of my reason—wish to find out if retributive justice is efficiently and properly administered....
> If only about 4 percent of those who actually commit murders in the first degree [are executed], a figure based on what we conservatively estimate to be the

1/ [illegible] -- [illegible] -- 10-11.

> number of capital murders committed annually in the United States and the accurate knowledge we have of the number of executions, it is obvious that, whatever the elements may be that produce the attrition, retribution is but rarely achieved and in no equitable manner. Therefore, just as the death penalty has proved to fail as a special means of social protection, so it has failed as an instrument of retributive justice.1/

C. The Administration of Criminal Justice

Abolitionists contend that the existence of the death penalty has a bad effect on the administration of criminal justice. This point of view is summed up as follows in the report of the Florida Special Commission for the Study of the Abolition of Death Penalty in Capital Cases:

> When the life of an accused person is at stake, it is more difficult and takes longer to impanel juries because prospective jurors dislike such cases and are frequently disqualified because they do not believe in the death penalty. Trials become longer and more expensive and emotions are especially likely to confuse the issues. Indeed, the guilty person is more likely to escape punishment altogether because of the reluctance of the jury to convict and thereby make the death penalty a possibility. Appeals are more likely to result in reversals, and this brings on new and equally expensive trials. More are of the opinion that there would be many convictions for what are now capital crimes if life imprisonment replaced execution.2/

The issue of the disproportionate amount of time involved in capital cases was the subject of a study conducted in 1961 by the American Bar Foundation, the research branch of the American Bar Association. The Foundation concluded that that the long delays in capital trials and in the carrying out of death sentances weakened public confidence in the law.3/ The study was prompted by the Caryl Chessman case, which began

1/ Sellin, "Capital Punishment," op. cit., p. 10.
2/ Florida Special Commission for the Study of the Abolition of Death Penalty in Capital Cases, Report (1965), p. 26.

in June 1948 and ended with his execution on May 2, 1960. Abolitionists argue that, while this case is an extreme, it is not an anomaly. In 1957, two prisoners were executed in California after seven years of appeals and trials.

As the report of the Florida Special Commission indicates, another major objection in this area is that the emotion aroused by the spectacle of a man fighting for his life is not compatible with the just and rational administration of the law. Governor Edmund G. Brown of California has referred to the capital trial as "our modern equivalent of the Roman Circus."[1/] The effect of this emotion on the trial itself is seen by many eminent lawyers to be deplorable. Mr. Justice Frankfurter, in his appearance as a witness before the British Royal Commission, said:

> When life is at hazard in a trial, it sensationalizes the whole thing almost unwittingly; the effect on juries, the bar, the public, the judiciary, I regard as very bad. I think scientifically the claim of deterrence is not worth much. Whatever proof there may be in my judgment does not outweigh the social loss due to the inherent sensationalism of a trial for life.[2/]

The retentionist response to this category of arguments is that they indicate the need for legal reform, not the abolition of capital punishment.[3/] Those opposed to the death penalty reply that recommending legal reform is no answer unless retentionists are, to quote Herbert L. Packer, "prepared to propose the solution that has so far eluded all students of the subject."[4/] In fact, many abolitionists argue that the death penalty is a major factor operating against the

1/ Brown, op. cit., p. 5.
2/ Quoted by Richard C. Donnelly, "Capital Punishment," Congressional Record, Aug. 24, 1960, p. A6285.
3/ See below, pages 61-65.

reform of our criminal law. The late Professor Sam Bass Warner of Harvard Law School said that "the existence of the death penalty for first degree murder is one of the principal reasons, if not the main reason, why it is extremely difficult to get judges and legislators to remove procedural barnacles from our law."[1] Dr. Sheldon Glueck, a professor at Harvard Law School and an eminent sociologist, comments that the death penalty "bedevils the administration of criminal justice all the way down the line and is the stumbling block in the path of general reform."[2]

D. Technicalities of the Law

In the majority of jurisdictions which retain capital punishment, a person convicted of murder can only be sentenced to death if he is found to be legally sane and guilty of murder in the first degree. A number of eminent lawyers have argued that many of the abuses surrounding the death penalty stem directly from the inadequacy of the legal definition of sanity and the vagueness of what Herbert Ehrmann refers to as the "metaphysical" distinction between first and second degree murder.[3]

Mr. Justice Cardozo commented as follows on the distinction between first and second degree murder:

> I think the distinction is much too vague to be continued in our law.... The statute is framed along the lines of a defective and unreal psychology.... The present distinction is so obscure that no jury hearing it for the first time can fairly be expected to assimilate and understand

1/ Quoted by Herbert B. Ehrmann, "The Death Penalty and the Administration of Justice" (1952), in Bedau (ed.), op. cit., p. 433.
2/ Quoted by James A. McCafferty, "Major Trends in the Use of Capital Punishment," Federal Probation (September 1961), p. 21.
3/ Ehrmann, op. cit., p. 429. For a discussion of the distinction between first and second degree murder and its historical development,

> it. I am not at all sure that I understand it myself after trying to apply it for many years and after diligent study of what has been written in the books. Upon the basis of this fine distinction with its mystifying psychology, scores of men have gone to their deaths.1/

Professor Packer of Stanford Law School points out that the arbitrariness with which the death penalty is used is directly related to the lack of guidance afforded by the law in this area:

> All students of the subject agree that the grading of murder into degrees, characteristic of most American penal codes, is hopelessly inept. Tacit recognition that this is so underlies the fact that in most jurisdictions the grading of murder has been reinforced by conferring discretion on the jury to decide whether persons convicted of first degree murder shall be executed or imprisoned. The result is that in practice the selection of those to be executed is the result of arbitrary, whimsical and uninformed choice. At this most crucial point in the administration of even-handed justice, law abdicates completely. The choice of life or death reflects mainly the strains and tensions of our society, most notably in the Southern states, but throughout the country as well.2/

The stand taken by abolitionists on the issue of legal sanity in capital trials centers around their objection to the M'Naghten Rule, the test of sanity in most jurisdictions. This rule is based on a decision handed down in 1843 and states, in essence, that a person is legally sane if, at the time of the commission of his crime, he was capable of distinguishing between right and wrong. The abolitionist view of the effect of this ruling on criminal justice is summed up as follows in the report of the Florida Special Commission:

> Many feel that the death penalty makes the issue of insanity as a defense to a charge of capital crime a thorn in the side of the administration of criminal justice. Insanity of the accused is often in issue, but the law's test of ability to distinguish between right and wrong is hard

1/ Quoted by Ehrmann, op. cit., p. 429.
2/ Packer, op. cit., p. 441.

> to apply because modern medicine does not even recognize this type of "insanity" as a clinical entity. As a result, the expert medical witnesses often testify that the accused is suffering from mental disease, but then the judge tells the jury, in effect, that this is not the "insanity" recognized by the criminal law.1/

A prominent San Francisco psychiatrist, Dr. Bernard L. Diamond, testified before the California Legislative Subcommittee on Capital Punishment that "Only a driveling idiot has no conception of right and wrong." He went on to describe the consequences of the M'Naghten rule as follows:

> The result is that a given psychiatrist will answer, as to the knowledge of right and wrong, on the part of an accused person, in accordance with his own prejudices, or (worse yet) with the wishes of the side that hired him. The conclusion is, therefore, unescapable that the right and wrong test satisfies the requirements of neither psychology nor medicine, nor, indeed, of the law itself.2/

In summary, then, many, particularly in the legal profession, argue that our present laws on who shall and shall not be sentenced to death are inadequate. Furthermore, it is argued that these laws, particularly with regards to the issue of legal sanity, are essentially inaccessible to reform within the framework of the law as it now stands. In the opinion of many, it is no accident that the law relating to capital punishment has not been reformed along the lines of a more realistic view of psychology. This would mean opening the doors to a deterministic view of individual responsibility which is essentially incompatible with the assumptions underlying our system of law. Arthur Koestler writes in his book, Reflections on Hanging:

1/ Florida Special Commission, op. cit., p. 26.
2/ Quoted by Eugene B. Block, And May God Have Mercy (1962), p. 80.

> The reason why the law relating to capital punishment cannot be reformed is basically simple. It could only be reformed at the price of undermining the concept of criminal responsibility by such deterministic notions as "irresistible impulse" or "diminished responsibility"--that is, by making determinism statutory, as it were. This necessity does not arise in the case of other offenses, because the sentence is elastic.... To sum up. The deficiencies of the capital law are irremediable because the death-penalty is based on a philosophical concept of criminal responsibility which does not admit the compromises with the determinist view practiced in other courts. Regarding all other offences, the administration of the law is elastic; the death-penalty, by its nature, excludes gradings of culpability. This rigidity and finality, which is the very essence of the capital law, is at the same time the reason of its attractiveness and symbolic value for the anti-progressive forces in society.1/

Furthermore, abolitionists argue that it is essentially impossible to determine the degree to which an individual is responsible for his behavior with sufficient certainty to base a life and death decision on it. Koestler comments on this point:

> Yet even by revolutionizing the basic concepts of Common Law for the sole purpose of making capital law a little less barbaric, its self-contradictions would remain. Since the frontiers between "responsible" and "irresponsible" are fluid, problematical and bedevilled by metaphysical problems, any drawing of the line by legal definition would be arbitrary. And since it is impossible to define when a man acted freely and ought to die, or when he acted under compulsion and ought to live, the only solution is to bring capital law into line with the remaining body of the Common law by eliminating the unique, fixed, all-or-nothing penalty which admits of no gradations.2/

Abolitionists tend to see the difficulty of determining individual responsibility as relevant only to the death penalty, not to lesser sentences, or to penology in general. Many retentionists regard abolition of capital punishment as a triumph for the view that

1/ Arthur Koestler, Reflections on Hanging (1957), pp. 102-104.
2/ Ibid., p. 103.

criminal behavior is an illness which should be cured, not punished—a step in the transition, prophesied by Jacques Barzun, from law to social work.[1] Abolitionists argue that precisely the opposite is true, that it is the existence of the death penalty which has forced criminal justice to become embroiled in the issue of psychological determinism. Packer writes:

> But what...has been primarily responsible for the extremist position that criminals should all be regarded as sick rather than bad? Demonstrably, it has been capital punishment. This is the spur and this is the rallying point for the attack upon law. The polemic battle that has enlisted so much psychiatric talent has been waged almost entirely with reference to capital punishment. It is in the murder trial that the issue of the extent to which the mental condition of the defendant should excuse or mitigate has been most often and most acrimoniously litigated. As Chief Justice Weintraub of N.J. said: "For all practical purposes the furor...is confined to the disposition of offenders convicted of murder. It is the death penalty that sparks the quarrel."[2]

1/ Jacques Barzun, "In Favor of Capital Punishment" (1962), in Bedau (ed.), op. cit., p. 157. See page 57 below.

2/ Packer, op. cit., p. 442.

V. THE RELIGIOUS ARGUMENT

Many Protestant churches have taken an official stand against capital punishment. While the Roman Catholic Church has not taken a stand on either side, according to the recent U.N. study it has in recent years been moving more towards the view that the death penalty should be abolished.[1/] Most Jewish organizations are officially opposed to the death penalty.

The religious argument against the death penalty generally centers around the belief that even sinful men are the objects of God's redemptive love, and that vengeance belongs to God, not man. In the words of Bishop John Wesley Lord of the Washington, D.C. Conference of the Methodist Church:

> A Christian view of punishment must look beyond correction to redemption. It is our Christian faith that redemption by the grace of God is open to every repentant sinner, and that it is the duty of every Christian to bring to others by every available means the challenge and opportunity of a new and better life. We believe that under these circumstances only God has the right to terminate life.[2/]

Similarly, the following resolution was adopted in 1958 at the General Convention of the Episcopal Church:

> Inasmuch as the individual life is of infinite worth in the sight of Almighty God; and
> Whereas the taking of human life falls within the providence of Almighty God and not within the right of man; Therefore be it Resolved, That the General Convention goes on record as opposed to capital punishment.[3/]

The Bible is used by both sides in the capital punishment controversy. Abolitionists cite Romans, XII, 17, in which Paul says:

1/ United Nations, op. cit., p. 64.
2/ Maryland Committee, op. cit., p. 24.
3/ Quoted by Florida Special Commission, op. cit., p. 24.

> Recompense to no man evil for evil....avenge not yourselves, but rather give place unto wrath: for it is written, Vengeance is mine; I will repay, saith the Lord.

In the Old Testament, they point, first, to the fact that Cain was not put to death (Genesis IV, 15), and to the adjuration in Leviticus, XIX, 18:

> Thou shalt not avenge, nor bear any grudge against the children of they people, but thou shalt love thy neighbor as thyself: I am the Lord.

More generally, those opposed to capital punishment for religious reasons argue that the whole Christian concept of love and redemption as presented in the New Testament runs counter to use of the death penalty in a system of justice. In support of this, they refer specifically to the Sermon on the Mount (e.g., Matthew V, 44) and to Luke VI, 35.

In addition to the Old and New Testaments, abolitionists quote St. Augustine in opposition to capital punishment. The following passage is from a plea that some Donatists, a heretic African sect, who had confessed to the heinous murder of Christians, be spared the death penalty:

> We do not wish to have the the sufferings of the servants of God avenged by the infliction of precisely similar injuries in the way of retaliation. Not, of course, that we object to the removal from these wicked men of the liberty to perpetrate further crimes, but our desire is rather that justice be satisfied without the taking of their lives or the maiming of their bodies in any particular; and that, by such coercive measures as may be in accordance with the laws, they be drawn away from their insane frenzy to the quietness of men in their sound judgment, or compelled to give up mischievous violence and betake themselves to some useful labour.1/

1/ Quoted by Koestler, op. cit., p. 100.

VII. PUBLIC OPINION

The four most recent Gallup Poll surveys indicate a steady decrease of public support for the death penalty. In each case, the question asked was, "Are you in favor of the death penalty for persons convicted of murder?" The results of the four polls are shown below:[1]

	1966	1965	1960	1953
Yes	%42	%45	%51	%68
No	47	43	36	25
No Opinion	11	12	13	7

The waning public support for the death penalty is reflected on the state level by the fact that in 1965 alone four states abolished it.[2] On the federal level, 1965 saw the Justice Department's break with its previous official postion of neutrality on the issue. Deputy Attorney General Ramsey S. Clark wrote in a letter to the House District Committee:

> We favor the abolition of the death penalty.... This nation is too great in its resources and too good in its purposes to engage in the light of present understanding in the deliberate taking of human life as either a punishment or a deterrent to domestic crime.[3]

A number of sociologists have commented on the extent to which the retention or abolition of capital punishment depends on the public attitude toward it,[4] and have predicted that the current trend of increasing opposition will culminate in the abolition of the death penalty in this country, at least in practice if not in law. After itemizing

1/ Washington Post, July 2, 1966, p. A3.
2/ Iowa and West Virginia abolished it completely; New York and Vermont abolished it except for special crimes (e.g., killing a policeman acting in the line of duty).
3/ New York Times, July 24, 1965, p. 1.
4/ Bedau (ed.), op. cit., pp. 231-232.

various factors that have contributed to the decline of public support, Sellin concludes that:

> ...it is not difficult to explain the rapid downward trend in the number of executions annually from a high of 199 in 1935 to 57 in 1960. And this trend is likely to continue, barring unforeseen social crises, until executions will become a much greater rarity than today and will ultimately be abandoned.1/

There were seven executions in 1965, an all-time low in the history of this country.

SECTION 2

IN FAVOR OF CAPITAL PUNISHMENT

I. THE STATE SHOULD PROTECT THE LAW-ABIDING CITIZEN

The central argument in defense of capital punishment is that the first responsibility of the State, and thus of the criminal law, is the protection of the law-abiding. As long as there is substantial reason to believe that capital punishment serves this function, it should be retained. This argument is expressed as follows in the majority report of the New Jersey Commission to Study Capital Punishment:

> This Commission has an obligation to the people of the State of New Jersey. Our citizens deserve the maximum degree of protection from injury both to their persons and to their property. In case of doubt as to which method will create the most likely optimum of protection, this Commission is bound to retain the type of punishment which throughout history has proved to be the most severe. ... It seems clear that those who seek the abolition of capital punishment are concerned with the saving of the lives of those convicted of the crimes in question....Yet most, if not all of those seeking abolition would, the Commission is certain, retain the death penalty if they were satisfied that it would save innocent lives. One abolitionist witness thought that the saving of a single life would not be enough. The Commission, however, in its obligation to the people of this State, is not justified in gambling the life of a single citizen.1/

Retentionists argue that if this goal of providing the law-abiding citizen optimum protection conflicts with the welfare of the criminal, then it is the criminal who must be sacrificed.

1/ New Jersey Commission to Study Capital Punishment, Report (1964), pp. 7-8.

Retentionists assert that the death penalty affords the law-abiding unique protection in two ways. It is, they argue, superior to life imprisonment as a deterrent to would-be murderers, and it is necessary as a protective measure against the incorrigibly dangerous. Furthermore, those in favor of capital punishment contend that because of the responsibility of the State to protect its citizens, the burden of proof rests with the abolitionists. Those opposed to capital punishment must, according to retentionists, prove conclusively that the death penalty is ineffective as a deterrent and unnecessary as a protective measure before abolition can be seriously considered.

II. DETERRENCE

A. The Evidence of Experience

The case for retaining the death penalty has the support of a majority of the law enforcement profession. Ralph G. Murdy, Managing Director of the Baltimore Criminal Justice Commission, writes,

> There is no question that a large majority of law-enforcement officers throughout the country favor capital punishment. The June 1960 issue of the official publication of the International Association of Chiefs of Police was entirely devoted to capital punishment without any expression from a police administrator encountered who favored its abolition. Occasionally an endorsement will be seen from a police administrator in a noncapital punishment state. However, only a few are active in presenting a case against capital punishment.1/

Sheriff Peter Pitchess of Los Angeles County testified as follows before the California Senate Committee on the Judiciary,

> But I can tell you that the overwhelming majority of people in law enforcement—the ones who are dealing with these criminals, the ones who are seeing them not as statistics but real live human beings, and who are studying their human behavior—are overwhelmingly convinced that capital punishment is a deterrent.2/

J. Edgar Hoover, Director of the Federal Bureau of Investigation since 1925, is unqualifiedly opposed to the abolition of capital punishment. The 1959 issue of The Uniform Crime Reports for the United States contains the following statement by Mr. Hoover:

> The professional law enforcement officer is convinced from experience that the hardened criminal has been and is deterred from killing based on the prospect of the death penalty.... For the law enforcement officer the

1/ Ralph G. Murdy, "A Moderate View of Capital Punishment," Federal Probation (Sept. 1961), p. 13.
2/ California Legislature, Senate Committee on Judiciary, Hearing Report and Testimony... (1960), p. 150.

> time-proven deterrents to crime are sure detection, swift apprehension, and proper punishment. Each is a necessary ingredient.1/

The importance of the support of the death penalty by members of the law enforcement profession is evidenced by the weight placed on it in the following passage from the New Jersey Commission majority report:

> The Commission is convinced that capital punishment does deter some potential murderers from committing capital crimes. More particularly, it is believed that the deterrence is most significant in the area of felony murder and in the area of a truly premeditated crime. While the statistical information presently available does not indicate a significant difference in the homicide rates between abolition states and capital punishment states, even when adjoining, this statistical information was admittedly not restricted to capital crimes, did not include the incidence of felony murders, the relationship of aggravated assaults to homicides, or the relationship of Police woundings. Those presenting only raw homicide figures admitted that these were as yet the best available, and for the purpose of further analysis they would like to have available the additional information set forth above. On the other hand, those most intimately concerned with law enforcement gave evidence and their conclusions that capital punishment is a deterrent in some cases.2/

The conclusion that capital punishment has a deterrent value "in the area of felony murder and in the area of a truly premeditated crime" is emphasized and backed with evidence in the majority of the defenses of capital punishment. The following is the introductory paragraph of a report from the Los Angeles Police Department presented as evidence at hearings before the California Senate Committee on Judiciary:

1/ Federal Bureau of Investigation, The Uniform Crime Reports of the United States (1959), p. 14.
2/ New Jersey Commission, op. cit., pp. 8-9.

> "The following defendants in conversations with reporting officers stated that they either: (1) used toy guns; or (2) empty guns or (3) simulated guns in robberies rather than take a chance on killing someone and getting the gas chamber."1/

The report then discusses 13 defendants who had been involved in a total of 28 felonies, with 28 potential victims.

In his statement before the American Bar Association Section of Criminal Law in 1959, Richard E. Gerstein, as State's Attorney of the Eleventh Judicial Circuit of Florida, cited the following instances from testimony given by law enforcement officers concerning the deterrent value of the death penalty:

> (1) Criminals who have committed an offense punishable by life imprisonment, when faced with capture, refrained from killing their captor though by killing, escape seemed probable. When asked why they refrained from the homicide, quick responses indicated a willingness to serve a life sentence but not to risk the death penalty.
> (2) Criminals about to commit certain offenses refrained from carrying deadly weapons. Upon apprehension, answers to questions concerning absence of such weapons indicated a desire to avoid more serious punishment by carrying a deadly weapon, and also to avoid use of the weapon which could result in imposition of the death penalty.
> (3) Victims have been removed from a capital punishment state to a non-capital punishment state to allow the murderer opportunity for homicide without threat to his own life. This in itself demonstrates that the death penalty is considered by some would-be killers. Statistics cannot tell us how many lives have thus been saved.

In several cases, the indication of the clear awareness and consideration on the part of the criminal of the capital laws of different states have led abolition states to reinstitute the death penalty. Thorsten Sellin testified before the British Royal Commission as follows:

1/ Quoted by California Senate Committee, op. cit., p. 17.
2/ American Bar Association, Section of Criminal Law, 1959 Proceedings (1960), p. 15.

> South Dakota reintroduced the death penalty because a couple of Illinois convicts, who had finished serving their terms, tramped across the state and killed a couple of filling-station attendants, if I remember correctly--they were robbery murders.1/

The Attorney General of Kansas testified before the British Royal Commission that:

> One of the contributing factors leading to the re-enactment [in the State of Kansas] of the death penalty for first degree murder was the fact that shortly prior thereto numerous deliberate murders were committed in Kansas by persons who had previously committed murders in states surrounding Kansas, where their punishment, if captured, could have been the death penalty. Such murders in Kansas were admittedly made solely for the purpose of securing a sentence to life imprisonment in Kansas if captured.2/

More recently, a letter was intercepted by the Delaware State Police in which a murderer wrote that he had known before he killed that the most he could get was 15 years. The murder occurred after Delaware had repealed capital punishment in 1958 and was a major factor in the reinstitution of the death penalty in that state in 1961.3/

B. The Psychology of Deterrence

> The majority report of the New Jersey Commission noted:
>
> No punishment would be a deterrent for a crime of passion, or a crime committed by one who is insane. These are not the persons who generally receive the death penalty.4/

The fact that many murders appear to be either crimes of passion or acts of insanity is interpreted by retentionists not as an indication of the death penalty's uselessness as a deterrent, but of its success in

1/ Quoted by Hugo Adam Bedau (ed.), The Death Penalty in America (1964), p. 336.
2/ Ibid.
3/ Maryland Committee on Capital Punishment, Report (1962), pp. 30-31.
4/ New Jersey Commission, op. cit., p. .

deterring people from premeditated murder. The following is from the Canadian Parliamentary Committee's Report on Capital Punishment:

> One measure of its [the death penalty's] deterrent effect was afforded by an analysis of murders which indicated that a considerable proportion, probably in excess of half, are committed under the compulsion of overwhelming passion or anger where no deterrent could have been effective. This would seem to demonstrate that the death penalty, coupled with the excellent standards of law enforcement prevailing in Canada, has been successful in deterring the commission of deliberate, premeditated murders and reducing their incidence to minimum proportions. The deterrent effect may also be indicated by the widespread association of the crime of murder with the death penalty which is undoubtedly one reason why murder is regarded as such a grave and abhorrent crime.1/

The minority report of the Massachusetts Special Commission contains a related observation:

> ...we believe that the death penalty threat is effective in preventing large numbers of wrongdoers from ever allowing themselves to reach that stage of criminality where they become victims of uncontrollable impulses and subjects of murder commissions. It is in this early grey zone of murder premeditation that the death penalty threat is most apt to be operative and effective.2/

As indicated in the passage from the Canada report quoted above, retentionists also believe that the death penalty is effective as a deterrent in the broadest sense, by reinforcing the public abhorrance of murder. It is argued that the death penalty reinforces the public's belief in the sanctity of human life by associating this abstract moral concept with the strong instinctive fear of one's own death. Richard Gerstein comments on this point as follows:

1/ Quoted by Bedau (ed.), op. cit., p. 268.
2/ Massachusetts Special Commission Established for the Purpose of Investigating and Studying the Abolition of the Death Penalty in Capital Cases, Report and Recommendations (1958); the minority report is reprinted in Capital Punishment, ed. Grant S. McClellan (1961), p. 82.

> Furthermore, as the Royal Commission [of Great Britain] opined, the death penalty helps to educate the conscience of the whole community, and it arouses among many people a quasi-religious sense of awe. In the mind of the public there remains a strong association between murder and the penalty of death. Certainly one of the factors which restrains some people from murder is fear of punishment and surely, since people fear death more than anything else, the death penalty is the most effective deterrent.1/

C. The Statistics2/

Those in favor of capital punishment assert that the question of the superior deterrent value of the death penalty to life imprisonment most probably cannot be—and certainly has not been—definitively answered by statistical studies. This argument is supported by the following passage from the Florida Special Commission's report on capital punishment:

> Superficial consideration might lead one to conclude that this question [whether the death penalty is superior to imprisonment in deterring those persons who would otherwise commit serious crimes] might be answered by scientific and statistical studies, but such is not the case. There is no reliable method for determining who has contemplated committing a capital crime but refrained due to the fear of the death penalty as distinguished from other forms of criminal punishment.... It is probably impossible to subject deterrence to scientific study in any direct way. The facts cannot be ascertained so that they can be subjected to scientific analysis and interpretation.3/

1/ American Bar Association, Section of Criminal Law, op. cit., p. 17.

2/ The statistical studies of the deterrent effect of the death penalty are discussed in detail in Section 1, pp. 5-12 above. The following comment from the State of Florida's Report of the Special Commission for the Study of Abolition of Death Penalty in Capital Cases is relevant here:

> One caution is appropriate at this point: it is those opposed to the death penalty who have been active in research and who are responsible for the statistical studies discussed herein (p. 19).

3/ Florida Special Commission for the Study of the Abolition of Death Penalty in Capital Cases, Report (1965), pp. 13-14.

First, as the Florida report indicates, there is the obvious point that those who are deterred do not show up as statistics. Secondly, both abolitionists and retentionists agree that the available statistics are inadequate. Hugo Adam Bedau, an abolitionist, writes in The Death Penalty in America:

> In a word, there is no exact information anywhere as to the volume of capital crimes in the United States. Difficult as it is to specify the capital laws for the nation as a whole, it is impossible with the present sort of criminal statistics to specify the exact amount of capital crimes for even one jurisdiction in even one year for even one crime! Ten years ago, George B. Vold complained, "There are no general statistics available as to the number of offenses committed per year for which death is the required penalty." Nothing has changed in the interim.1/

The major difficulty is that the only murder figure available for use in attempting to gauge the effect of capital punishment on the murder rate is the "murder and non-negligent manslaughter" figure reported by the Federal Bureau of Investigation in its annual publication, Uniform Crime Reports for the United States. As Mr. Bedau points out:

> Since some states have no death penalty for murder, the national totals of "murder and non-negligent manslaughter" will exceed the number of homicides punishable by death. What is even more important, the F.B.I. does not distinguish between total murders (or first degree murders), which alone carry the death penalty, and all lesser forms of non-negligent criminal homicide, in particular second degree murder and voluntary manslaughter, crimes usually punished by imprisonment. Instead, all voluntary or non-negligent criminal homicides are lumped together in Uniform Crime Reports under the title, "murder and non-negligent manslaughter."... What one wants to know, of course, is what fraction of the totals entered in this fashion are murders; and what fraction of this fraction are capitally punishable homicides, i.e., murders where a normal adult (not a child, juvenile, or lunatic) is the

1/ Bedau (ed.), op. cit., pp. 56-57.

> criminal and where a capital indictment might issue (excluding, therefore, those cases where the murderer commits suicide). It is impossible to supply this information at present.[1]

Mr. Bedau comments as follows on the validity of this "murder and non-negligent manslaughter" figure for the purpose of capital punishment statistics:

> One of the first criminologists to discuss the statistical relationship between general homicides and capitally punishable homicides was the late Professor Edwin H. Sutherland. In 1925, he pointed out that although (a) the number of homicides far exceeded the number of first degree murders (and, by inference, the number of capitally punishable homicides), (b) the ratio of the two was sufficiently constant to use the former as a guide to the latter.... there is no doubt that [(a)]...is true. But what about (b)? It is extremely difficult to determine what evidence it is based on. Sutherland himself offered none, but advanced it as a plausible assumption. In the intervening generation, no criminologist has done any better.[2]

Mr. Bedau subsequently analyzes in some detail one specific difficulty involved in relying on inferences from homicide rates to capitally punishable murder rates:

> We have already seen...how sketchy the known connection is between the two rates. To whatever degree the former is an unreliable guide to the latter -- which we have no way of directly measuring at all -- to that degree all the studies... [relying on it] are unreliable at the crucial point: is the death penalty an effective deterrent for those kinds of homicides punishable by death? Here is one kind of difficulty that arises when one expects homicide statistics to provide a conclusive answer to this question. Data reported [in an article by Thorsten Sellin]...show that the ten-year average of annual homicide rates in Ohio fell during the 1920's from 7.9 per 100,000 of population to 3.8 in the 1930's. Yet if the death penalty had been abolished in Ohio at the beginning of this period and if (let us suppose) abolition had been followed by a dozen or so more murders each year thereafter, the general homicide rate would have decreased almost exactly as

---

1/ Bedau (ed.), op. cit., p. 61.
2/ Ibid., pp. 68-69.

> in fact it has, and at no time would the rate for any given year be more than a tenth of one per cent greater than it has been. Thus, while we could truthfully say that the abolition of the death penalty in Ohio had been followed by a decrease in the general homicide rate, it would also have been true that abolition resulted in an increase in the total number of murders, and this despite the constancy of the ratio of total homicides to murders (except in the first year after abolition). For all we know, this is exactly what has happened in all the abolition states, which without exception show a steadily declining general homicide rate over the past several decades. The number of crimes at stake here is so small that they would never be noticed by anyone who relies on the ordinary vital and criminal statistics of homicide.1/

The report of the Florida Special Commission contains the following comment on the inadequacy of statistical comparisons based on the F.B.I. murder and non-negligent manslaughter figure:

> Perhaps it is fortunate that the judgment of most persons who have studied them is that they do not prove much; that while they do not prove that the death penalty is a superior deterrent, they do not prove that it is not .... J. Edgar Hoover, Director of the Federal Bureau of Investigation, favors retention of the death penalty, but he has charged that statistical comparisons [based on inferences from homicide rates to first degree murder rates] are "completely inconclusive."2/

D. The Need to Protect the Police

The defense of the death penalty on the grounds that it is necessary for police protection is a special case of the argument that its deterrent value is superior to that of the penalty of life imprisonment. It might be noted that two of the thirteen states which have generally abolished capital punishment have retained it for the offense of killing a policeman acting in the line of duty.

1/ Bedau (ed.), op. cit., pp. 265-266.
2/ Florida Special Commission, op. cit., p. 17.

Members of the law enforcement profession are generally convinced that the death penalty protects the police. The minority report of the Massachusetts Special Commission comments:

> We have been impressed by the urgent demands of large numbers of law-enforcement officers that the death penalty be retained. These men have not made the speculative study of the problem with which they are confronted that would enable them to present their conclusions in compelling statistical form. Their point of view is not, however, for this reason to be taken lightly, especially in view of their insistence that their own lives are endangered by their efforts to protect the lives and property of their fellow men....1/

1/ Massachusetts Special Commission, in McClellan (ed.), op. cit., p. 79.

III. THE DEATH PENALTY AS A NECESSARY PROTECTIVE MEASURE

Those in favor of the death penalty argue that the second way in which it affords society unique protection is by guaranteeing that certain criminals who have committed particularly heinous crimes will not have the opportunity to do so again. Jacques Barzun, Provost of Columbia University, defends the death penalty on these grounds as follows:

> The uncontrollable brute whom I want put out of the way is not to be punished for his misdeeds, nor used as an example or a warning; he is to be killed for the protection of others, like the wolf that escaped not long ago in a Connecticut suburb. No anger, vindictiveness or moral conceit need preside over the removal of such dangers. But a man's inability to control his violent impulses or to imagine the fatal consequences of his acts should be a presumptive reason for his elimination from society.1/

Retentionists do not accept the abolitionist position that life imprisonment is in all cases a sufficient safeguard. They argue that some criminals are incorrigibly anti-social and will remain potentially dangerous to society for the remainder of their lives. These men constitute a danger to prison officials and to the other inmates, and there is always the chance that they may escape.

Furthermore, retentionists argue that, because the life sentence rarely means that an offender is in reality imprisoned for life, there is a serious possibility that dangerous men will be released on parole. Mr. Barzun points out that it is impossible to be certain that a murderer has, in fact, been "cured":

1/ Jacques Barzun, "In Favor of Capital Punishment" (1962), in Bedau (ed.), op. cit., pp, 155-156.

> The "scientific" means of cure are more than uncertain. The apparatus of detention only increases the killer's anti-social animus.... Some of these are indeed "cured"—so long as they stay under a rule. The stress of the social free-for-all throws them back on their violent modes of self-expression. At that point I agree that society has failed—twice: it has twice failed the victims, whatever may be its guilt toward the killer.1/

The defense of the death penalty on the grounds that it is a necessary protective measure is directly related to the argument that there is no satisfactory alternative sentence for those criminals who clearly constitute a continuing danger to society The obvious possible alternative is the life sentence without the possibility of parole. However, a number of penologists believe that this is a highly unsatisfactory solution. They argue that such a sentence removes all inducement to improve and thus greatly increases the difficulty and danger involved in handling the man so sentenced. The Maryland report noted the reaction of Ralph G. Murdy, the Managing Director of the Baltimore Criminal Justice Commission, to such a suggestion as follows:

> ...Mr. Murdy observed that many penal experts believe the no-parole sentence for life-terms creates a hard core of incorrigibles in prisons who fear no authority because they can never be set free. They are robbed of the incentive to behave, he said.2/

Thorsten Sellin comments on the absolute life sentence as follows:

> Recent legislation in some states and proposed in others, depriving a person sentenced to life for murder of that hope [of future release], may prove to be most inadvisable.3/

The former Director of the Maryland Department of Parole and Probation, Mr. Wallace Reidt, indicated to the Maryland Commission that

---

1/ Barzun, in Bedau (ed.), op. cit., p. 159.
2/ Maryland Committee, op. cit., p. 20.
3/ Thorsten Sellin, The Death Penalty (1959), p. 72.

the possibility of the no-parole life sentence replacing the death penalty was a major reason for his opposition to the repeal of capital punishment in that state:

> If capital punishment is abolished, there will be considerable pressure to prevent parole in life terms and there will be removed what I believe is a great deterrent in the handling of prisoners in institutions.
>
> Most persons connected with institutions feel that unless there is some fear of punishment or hope of reward that a good many life-termers would cause a great deal of trouble in the institutions and make the work of prison officials much more dangerous than it now is.1/

A. The Second-Time Murderer

Several states which have generally abolished capital punishment have retained it for a person found guilty of murder who then murders again. The argument that the death penalty should be retained for those who murder a second time is a limited version of both the argument that the death penalty is necessary as a protective measure, and the argument that it is more effective than life imprisonment as a deterrent. Sidney Hook, Professor of Philosophy at New York University, comments:

> ...in a sub-class of murderes, i.e., those who murder several times, there may be a special group of same murderers who, knowing that they will not be executed, will not hesitate to kill again and again. For them the argument from deterrence is obviously valid. Those who say that there must be no exceptions to the abolition of capital punishment cannot rule out the existence of such cases on a priori grounds. If they admit that there is a reasonable probability that such murderers will murder again or attempt to murder again, a probability which usually grows with the number of repeated murders, and still insist

1/ Maryland Committee, op. cit., p. 23.

> they would never approve of capital punishment, I would conclude that they are indifferent to the lives of the human beings doomed, on their position, to be victims.1/

Of the thirteen states which have generally abolished capital punishment, four of them retain it for some type of second-time murder, as follows:

> New York: Killing a peace officer acting in the line of duty; and murder committed by a prisoner acting under sentence of life imprisonment.
>
> North Dakota: Murder in the first degree committed by a prisoner already serving a sentence for murder in the first degree.
>
> Rhode Island: Murder committed by a prisoner under sentence of life imprisonment.
>
> Vermont: Second conviction of murder, at discretion of jury, provided the two cases are not related; and first-degree muder of a police officer or prison guard who is on duty.

1/ Sidney Hook, "The Death Sentence" (1961), in Bedau (ed.), op. cit., p. 153.

IV. RETRIBUTION AND THE SANCTITY OF HUMAN LIFE

Capital punishment is defended by some on the grounds that it satisfies a legitimate communal need for retribution aroused by particularly heinous crimes. Society's desire that a man pay with his life for a violent crime represents both society's moral condemnation of such acts, and the closing of the ranks against those who violate society's laws. Thus, Lord Justice Denning testifie before the British Royal Commission on Capital Punishment that:

> The punishment inflicted for grave crimes should adequately reflect the revulsion felt by the great majority of citizens for them. It is a mistake to consider the objects of punishment as being deterrent of reformative or preventive and nothing else.... The ultimate justification on any punishment is not that it is a deterrent, but that it is the emphatic denunciation by the community of a crime; and from this point of view, there are some murders which, in the present state of public opinion, demand the most emphatic denunciation of all, namely the death penalty.1/

Closely related to the defense of the death penalty on the grounds that it satisfies the legitimate public demand for retribution is the argument that capital punishment is, in fact, a public and official testimony to the belief in the sanctity of human life. This argument was stated as follows by Roy A. Gustafson, District Attorney of Ventura County, before the California Senate Committee on the Judiciary:

> Capital punishment...is based upon our concept of the high value placed upon life. We consider life to be the most precious possession and, therefore, when the crime is the most heinous and most grave of all crimes, then we make the man forfeit the thing that is most precious to him, namely, life.2/

1/ Quoted by Richard C. Donnelly, "Capital Punishment," in Congressional Record, Aug. 24, 1960, p. A6284.
2/ California Legislature, Senate Committee on Judiciary, op. cit., p. 103.

In answer to the abolitionist assertion that capital punishment is, in fact, a violation of the sanctity of human life, retentionists argue as follows:

> There is too much loose talk about the sacredness of human life. A life is sacred only when it makes itself sacred; when it respects the lives and rights of others.... A cold-blooded murderer, having cunning intelligence without moral restraint, is infinitely more dangerous than any other animal on earth.1/

J. Edgar Hoover characterizes as "maudlin" the view that "the most wanton slayer [is] 'a child of God' who should not be executed," and continues, commenting on a crime committed recently in California:

> Was not this small, blonde six-year-old girl a child of God? She was choked, beaten, and raped by a sex fiend whose pregnant wife reportedly helped him lure the innocent child into his car and who sat and watched the assault on the screaming youngster. And when he completed his inhuman deed, the wife, herself bringing a life into the world, allegedly killed the child with several savage blows with a tire iron. The husband has been sentenced to death. Words and words and words may be written, but no plea in favor of the death penalty can be more horribly eloquent than the sight of the battered, sexually assaulted body of this child, truly a "child of God."2/

1/ Evelle J. Younger, "A Sharp Medicine Reconsidered" (1956), in McClellan (ed.), op. cit., p. 16.
2/ J. Edgar Hoover, "Statements in Favor of the Death Penalty" (1961), in Bedau (ed.), op. cit., p. 133.

V. THE ABOLITION MOVEMENT AND MODERN LIBERALISM

There is a strong feeling among those in favor of capital punishment that the abolition movement of today is in many respects a corrollary of the permissive, deterministic view of individual behavior which characterizes much modern psychology and is reflected in the thinking of many liberal intellectuals. With regard to penology, this view is characterized—so the retentionist argument goes—by a belief that society is responsible, and thus to blame, for the ills of its misfits, and by a preference for the black sheep over the white. Retentionists point to such passages as the following to illustrate their case:

> By the establishment of a motive, an understanding of the crime, at least in the legal sense, is achieved, and no more official effort is extended from or charged to the authorities to go beyond and find a deeper insight into the true motivation of the mind of the man who kills.
>
> Acceptance in legal procedures of the motive at large is based on the presumption that, unless it is proved otherwise through the intricacies and formalities of the court trial, the individual [murderer] is like any other person, who could exercise at pleasure any function he chose. There is no recognition of the fact that if he had been in possession of such perfect powers of reasoning and such ideal forces of will, he could have prevented the occurrence of the fatal act. In reality, he is in his predicament for the very reason that he was incapable of behaving like a complete man, the master of himself. However, people in general refuse to look upon him as an invalid, and find considerable gratification in obtaining for society a maximum security and protection by imposing a maximum retribution.1/

The distance between this approach and that of many retentionists may be seen by contrasting the above passage with the following statement by Jacques Barzun, Provost of Columbia University:

1/ Ralph S. Banay, "Study in Murder," The Annals (Nov. 1952), p. 33.

> I happen to think that if a person of adult body has not been endowed with adequate controls against irrationally taking the life of another, that person must be judicially, painlessly, regretfully killed before that mindless body's horrible automation repeats.1/

Barzun sums up the general viewpoint discussed above as follows:

> Social science tends steadily to mark a preference for the troubled, the abnormal, the problem case. Whether it is poverty, mental disorder, delinquency or crime, the "patient material" monopolizes the interest of increasing groups of people among the most generous and learned. Psychiatry and moral liberalism go together; the application of law as we have known it is thus coming to be regarded as an historic prelude to social work, which may replace it entirely. Modern literature makes the most of this same outlook, caring only for the disturbed spirit, scorning as bourgeois those who pay their way and do not stab their friends. All the while the determinism of natural science reinforces the assumption that society causes its own evils. A French jurist, for example, says that in order to understand crime, we must first brush aside all ideas of Responsibility. He means the criminal's and takes for granted that of society. The murderer kills because reared in a broken home or, conversely, because at an early age he witnessed his parents making love. Out of such cases, which make pathetic reading in the literature of modern criminology, is born the abolitionist's state of mind: we dare not kill those we are beginning to understand so well.2/

Generally speaking, retentionists argue that, regardless of the developments of the day in the field of psychology, law and order cannot exist unless people are held individually responsible for their actions and thus subject to the control of punishment if they fail to obey the law. Those in favor of capital punishment argue that it reflects, both pragmatically and symbolically, this fundamental tenet of our society, and that its abolition could well be seen as an endorsement of the kind of liberalism described by Mr. Barzun—a view which,

1/ Barzun, in Bedau (ed.), op. cit., p. 159.
2/ Ibid., pp. 157-158.

if incorporated into our laws, would lead to social anarchy. Richard Gerstein commented on this point as follows before the American Bar Association:

> Society must also consider what effect the abolition of capital punishment could have upon the philosophy of the youth of our country. Many of them might very well look upon the criminal code, including that part of it forbidding murder, as a mere convention of society which advanced thinking and progressive social theories permit them to set aside as a matter of no consequence. This theory leads to the belief that each is a law unto himself; that each may choose the laws which he will obey, and that he may violate the rest. This type of thinking would eventually lead us into virtual anarchy.1/

More specifically, retentionists argue that the concern of abolitionists for the criminal has led them to place far too much emphasis on rehabilitation, as opposed to deterrence and protection, as the purpose of punishment. Richard Gerstein comments that, "we must not forget that reformation is an enjoyable by-product, not the sole goal of punishment."2/ The minority report of the Massachusetts Special Commission notes,

> ...it might be well here to point out that it is the opinion of the minority that the majority report lays too great stress on the welfare of the individual criminal subject to a sentence of execution. It is not our intent to deprive the criminal of every consideration which may be afforded to him by the executive powers of the state subsequent to his sentencing to execution. However, the urge that this one could be rehabilitated or that one could be given psychiatric treatment and therefore they all are salvable does not solve the problem of suppressing potential murderers. If one becomes convinced that the drastic measure of execution is the effective deterrent, then it must logically follow that the innocent lives saved thereby

1/ American Bar Association, Section on Criminal Law, op. cit., p. 18.
2/ Ibid.

> are of far greater import than the criminal life sacrificed. This method of thinking must of necessity divorce itself from any thought of the rehabilitation of the properly condemned criminal.1/

The New Jersey Commission majority report comments in a similar vein,

> The great increase of crime in this State has coincided with a greater tendency to emphasize the rehabilitation factor in criminology as against the punishment or retributive and deterrent aspects of criminology. The Commission cannot conclude that easing the lot of the murderer will cause less crime or fewer criminal homicides.2/

The supporters of capital punishment contend that this misplaced emphasis on rehabilitation as well as the general willingness to "brush aside all ideas of Responsibility" is a corollary of the fact that many abolitionists argue from theory rather than from a direct experience with the realities of crime and law enforcement. J. Edgar Hoover comments,

> As a representative of law enforcement, it is my belief that a great many of the most vociferous cries for abolition of capital punishment emanate from those areas of our society which have been insulated against the horrors man can and does perpetrate against his fellow beings.3/

Direct experience with law enforcement has led most members of this profession to support the death penalty. Sheriff Pitchess of Los Angeles County testified as follows before the California Senate Committee investigating capital punishment:

> ...When I was in law school, I remember that I prepared a paper supporting the abolition of capital punishment. I changed my mind. I went directly from law school into the F.B.I. I can't tell you whether it was within a year or two years, but it wasn't long after I had been in the active field of investigating that I changed my mind, and I have become progressively more convinced.

1/ Massachusetts Special Commission, in McClellan (ed.), op. cit., p. 78.
2/ New Jersey Commission, op. cit., p. 7.
3/ Hoover, in Bedau (ed.), op. cit., p. 130.

> I wish I could be as positive and as certain as the proponents of abolition--I wish I could be. I am as certain as I can be, after searching my own conscience, that it is a deterrent, but my change--and I am not ashamed to admit that I did change my mind--was based on my direct contact with the criminals, who convinced me that it was a deterrent to them.1/

1/ California Legislature, Senate Committee on Judiciary, op. cit., pp. 150-151.

VI. THE DEATH PENALTY AND CRIMINAL JUSTICE

With regard to the complex of arguments relating to capital punishment and criminal justice (see pp. 23-33), retentionists contend, first, that the institution of capital punishment should stand or fall on the issue of whether or not it provides maximum security for the law-abiding, and not on the fact that certain abuses exist in its use, or that it is time-consuming and expensive to adminster. Secondly, they argue that many of the abuses alleged by abolitionists either do not actually exist or are remediable through a reform of the courts. Supporters of the death penalty point out that its efficacy as a deterrent is itself undermined by the inequalities and inefficiencies in the administration of criminal justice; what is indicated here is not the need to abolish the death penalty, but the need to reform criminal procedure.

A. The Possibility of Error

A major issue in this area is the alleged danger of executing the innocent. First, there are those who argue that this is not, in fact, a real possibility, given the precautions taken by the courts in capital cases. Judge Learned Hand commented,

> Our procedure has always been haunted by the ghost of the innocent man convicted. It is an unreal dream.1/

There have been no known cases of the execution of an innocent man in this country.2/

1/ Quoted by Florida Special Commission, op. cit., p. 29.
2/ Bedau (ed.), op. cit., p. 440; see pp. 23-24 above.

The position of those retentionists who admit that the possibility of error does exist is summed up by the Florida report as follows:

> Proponents of capital punishment who admit that the possibility of convicting an innocent man is present maintain that such a possibility is extremely remote today due to the painstaking care that the courts take and the many avenues for correcting trial error. . The task of conducting capital punishment trials is carried out with every possible precaution in favor of an accused thereby making the chance of a miscarriage of justice infinitely small.1/

Those who support the death penalty argue that, insofar as there is a risk that an innocent man will be executed, it is justified by the protection afforded to society by the death penalty. This argument is stated as follows by the minority report of the Massachusetts Special Commission:

> We do not feel, however, that the mere possibility of error, which can never be completely ruled out, can be urged as a reason why the right of the state to inflict the death penalty can be questioned in principle.... All that can be expected of [human authorities] is that they take every reasonable precaution against the danger of error. When this is done by those who are charged with the application of the law, the likelihood that errors will be made descends to an irreducible minimum. If errors are then made, this is the necessary price that must be paid within a society which is made up of human beings and whose authority is exercised not by angels but by men themselves. It is not brutal or unfeeling to suggest that the danger of miscarriage of justice must be weighed against the far greater evils for which the death penalty aims to provide effective remedies.2/

1/ Florida Special Commission, op. cit., p. 29.
2/ Massachusetts Special Commission, in McClellan (ed.), op. cit., p. 61.

B. The Alleged Inequality of Application

Abolitionists allege that there is a discrimination in the use of the death penalty, based primarily on race, wealth, and legal counsel. The retentionist answer to this allegation is well stated as follows by Hugo Adam Bedau, himself an abolitionist:

> One of the contentions of abolitionists in this country, popularized by the late Warden Lawes, is that "only the poor, the friendless and the foreign-born" are sentenced to death and executed. As a description of the class of persons executed, this is probably fairly accurate (though, with the virtual curtailment of immigration, the place of the foreign-born has been taken by native non-whites). But if it is meant to imply deliberate discrimination by trial courts, appellate courts and boards of pardons, it remains unproved. The vast majority of all prisoners throughout our country's history have been the poor, the friendless and the foreign-born (or non-white). It has yet to be shown that murderers or prisoners under death sentence differ significantly in these respects from other criminals.1/

On the specific issue of the high percentage of Negroes sentenced to death, it has been noted:

> Much previous research in criminal homicide, which includes murder in the first degree, has demonstrated the fact that a disproportionate contribution to the homicide rate is made by Negroes. It is no surprise, therefore, that as many as thirty-six per cent of persons placed on death row are Negro. Consistent with independent research and the Uniform Crime Reports, Negroes comprise between three and four times more of the criminal homicide cases (either as offenders or as victims) than they do of the general population.2/

1/ Bedau (ed.), op. cit., pp. 411-412. For statistics which substantiate Bedau's argument, see California Legislature, Senate Committee on Judiciary, op. cit., pp. 106-108.

2/ Marvin E. Wolfgang, Arlene Kelly, and Hans C. Nolde, "Executions and Commutations in Pennsylvania" (1962), in Bedau (ed.), op. cit., p. 473.

C. The Need for Reform

As indicated above, retentionists view the existence of abuses in the administration of the death penalty not as an argument for abolishing the death penalty, but for reforming the courts and the criminal procedure. Mr. Barzun's comment on the danger of executing the innocent is generally relevant here:

> ...what is at fault in our present system is not the sentence [of death] but the fallible procedure.... What the miscarriages point to is the need for reforming the jury system, the rules of evidence, the customs of prosecution, the machinery of appeal.1/

Retentionists contend that if the death penalty is a less effective deterrent than it might be, a major reason is the rarity of its use. A number of abolitionists concur. Thorsten Sellin comments:

> We arrive then at the conclusion that if the death penalty is to have any restraining effect there must be an adequate threat of execution, but no one has ventured to calculate how great the risk of possible execution must be in order to constitute an adequate threat.2/

Bedau develops this argument at some length:

> Since the time of Beccaria, Bentham, Rush and Livingston, most penologists have agreed that for any punishment to have optimum efficacy as a deterrent, the penalty must be imposed consistently, immediately and inexorably; that is, on all offenders, promptly after their crime, and in such a way that the general public expects exactly this. But in practice, not one of these conditions is satisfied by the way capital punishment is administered. Only a small proportion of first degree murderers are sentenced to death and even fewer are executed. The delay in convicting and executing those who do get a death sentence is increasing and notorious. So, almost anyone who contemplates some horrible crime can see some chance of getting away with it, or at least in not having to pay the supreme penalty. If, in practice, the death penalty is no more effective a deterrent for murder, rape and kidnapping than imprisonment is, this may be the reason.3/

1/ Barzun, in Bedau (ed.), op. cit., p. 163.
2/ Sellin, The Death Penalty, pp. 20-21.
3/ Bedau (ed.), op. cit., p. 270.

Those in favor of retaining the death penalty do not accept the abolitionist argument that it is impossible to effect the reforms necessary to make capital punishment a more credible threat to the man contemplating a horrible crime. The Massachusetts Special Commission minority report comments:

> I does not seem logical to say that the death penalty should be abolished because statistics prove that it is not a deterrent. It seems more consistent to urge that every effort be made to minimize the influence on the effectiveness of the death penalty of factors extrinsic to itself, and thus to realize to the maximum its intrinsic value.... If we admit that the state has, in principle, the right to inflict it, we should admit likewise a corresponding obligation on the part of the state to make it effective and we should not urge failure to do this as proof that the death penalty itself is not necessary.1/

1/ Massachusetts Special Commission, in McClellan (ed.), op. cit., p. 77.

VII. THE RELIGIOUS ARGUMENT

The defense of capital punishment on religious grounds rests primarily on two points. First, it is argued that the death penalty is a testimony to the sacredness of life, and—in the case of the Hebrew-Christian tradition—that the Bible clearly differentiates between murder and the death penalty as a just punishment for the taking of God-given life. This argument is supported by the following passages, as well as others, from the Old Testament:

> Whoso sheddeth man's blood, by man shall his blood be shed: for in the image of God made he man (Genesis, 9:6).
>
> He that smiteth a man, so that he die, shall be surely put to death....But if a man come presumptuously upon his neighbor to slay him with guile; thou shalt take him from mine altar, that he may die (Exodus, 21: 12, 14).
>
> Whose killeth any person, the murderer shall be put to death by the mouth of witnesses.... Moreover ye shall take no satisfaction for the life of a murderer, which is guilty of death; but he shall be surely put to death ...and the land cannot be cleansed of the blood that is shed therein, but by the blood of him that shed it (Numbers, 35: 30, 31, 33).

Turning to the New Testament, it is argued that the law of love preached by Jesus implies the need for the existence of a strong civil law, and that it is a misreading of the New Testament to see it as advocating leniency for criminal behavior. This argument is summed up as follows by Rev. Jacob J. Vellenga who, since 1958, has served as Associate Executive of the United Presbyterian Church in the United States:

> The law of love, also called the law of liberty, was not presented to do away with the natural laws of society, but to inaugurate a new concept of law written on the

> Church is ever to strive for superior law and order, not to advocate a lower order that makes wrongdoing less culpable...wherever and whenever God's love and mercy are rejected, as in crime, natural law and order must prevail, not as extraneous to redemption but as part of the whole scope of God's dealing with man.1/

He continues:

> The law of capital punishment must stand as a silent but powerful witness to the sacredness of God-given life. Words are not enough to show that life is sacred. Active justice must be administered when the sacredness of life is violated.2/

In addition to the Old and New Testaments, St. Thomas Aquinas is also quoted in support of capital punishment: "It is lawful to kill an evil-doer insofar as it is directed to the welfare of the whole community."3/

VIII. PUBLIC OPINION

Thirty-seven states, the District of Columbia, and the Federal Government have the death penalty. Of the thirteen states which have abolished it, only eight have done so completely. Five retain it on a limited basis, for such crimes as killing a policeman acting in the line of duty and the killing of a prison guard by an inmate who is serving a life term for murder. Jacques Barzun's assertion that his views in favor of the death penalty "are now close to unpopular" has been answered by Jerome Hathanson, a leading abolitionist, as follows:

> When I read this I wondered if he and I live in the same United States. How close is close?...A few years ago a special Massachusetts commission recommended abolition of the death penalty, whereupon the legislature promptly voted against its own commission. A few years ago Delaware abolished capital punishment. Subsequently, as has happened elsewhere, an especially outrageous crime led to a demand for its restoration. The legislature responded favorably to the demand, the Governor vetoed the measure, and it was passed again over his veto. The Governor of California is a supporter of abolition, but there is hardly the ghost of a chance, after the furor over the Chessman case, that it will be realized during his administration, even if he is elected to another term in office.... One could go on and on...After working a number of years in behalf of abolition, I have the contrary impression that the preponderance of popular sentiment is on [Mr. Barzun's] side.1/

The reason for such public support--and its importance as an argument in favor of the retention of the death penalty--is commented on by Mr. Ralph G. Murdy, Managing Director of the Baltimore Criminal Justice Commission, as follows:

> Traditionally, our people have believed capital punishment necessary to control attacks on body and life. A majority today still holds that belief despite evidence of growing hesitation and question. To fly in the face of such

---

1/ "Capital Punishment"

> conviction by completely doing away with the death penalty would only serve to further weaken the faith of our citizens in the administration of justice.1/

The abolitionist argument that such popular feelings are based on emotion and prejudice rather on a knowledge of the facts is answered by the retentionists as follows:

> Abolitionists say the public is not enlightened. That argument is always used to rationalize a minority point of view; but it is no more valid in this case than in any other case where two points of view exist and the question is resolved in accordance with the democratic process.2/

COVER STORY

An Eye for an Eye

Death Row (pop. 1,137) may soon lose a lot more residents to the executioner

The chair is bolted to the floor near the back of a 12-ft. by 18-ft. room. You sit on a seat of cracked rubber secured by rows of copper tacks. Your ankles are strapped into half-moon-shaped foot cuffs lined with canvas. A 2-in.-wide greasy leather belt with 28 buckle holes and worn grooves where it has been pulled very tight many times is secured around your waist just above the hips. A cool metal cone encircles your head. You are now only moments away from death.

But you still have a few seconds left. Time becomes stretched to the outermost limits. To your right you see the mahogany floor divider that separates four brown church-type pews from the rest of the room. They look odd in this beige Zen-like chamber. There is another door at the back through which the witnesses arrive and sit in the pews. You stare up at two groups of fluorescent lights on the ceiling. They are on. The paint on the ceiling is peeling.

You fit in neat and snug. Behind the chair's back leg on your right is a cable wrapped in gray tape. It will sluice the electrical current to three other wires: two going to each of your feet, and the third to the cone on top of your head. The room is very quiet. During your brief walk here, you looked over your shoulder and saw early morning light creeping over the Berkshire Hills. Then into this silent tomb.

The air vent above your head in the ceiling begins to hum. This means the executioner has turned on the fan to suck up the smell of burning flesh. There is little time left. On your right you can see the waist-high, one-way mirror in the wall. Behind the mirror is the executioner, standing before a gray marble control panel with gauges, switches and a foot-long lever of wood and metal at hip level.

The executioner will pull this lever four times. Each time 2,000 volts will course through your body, making your eyeballs first bulge, then burst, and then broiling your brains . . .

That big old mahogany armchair is practically antique, but it still works. First used in 1890, it is the world's oldest and most prodigious electric chair: 695 convicted men and women died in its grip, nearly one a month for the better part of a century. For most of those years it was housed at Sing Sing, contributing to that place's hellhole notoriety. Now it squats on the fourth floor of Green Haven prison in New York.

But the state has killed no one since the summer of 1963, when Eddie Lee Mays was electrocuted at Sing Sing. And for some time to come, this prototypical electric chair with the flip nickname ("Old Sparky") seems likely to remain nothing more than a grim curiosity. The state's new Governor, Mario Cuomo, promises to veto any capital-punishment statute the New York legislature passes, just as his predecessor did every chance he got.

But New York is not typical of these angry times. The country's decade-long moratorium on capital punishment ended in 1977 when Gary Gilmore dared Utah to shoot him and, six years ago this week, Utah obliged. Five men have been executed since. One shared Gilmore's flashy passion for martyrdom: Jesse Bishop, who gunned down a newlywed during a casino holdup, practically volunteered for Nevada's gas chamber. Three were electrocuted: John Spenkelink in Florida, for killing a ne'er-do-well like himself; Steven Judy in Indiana, for strangling a motorist he waylaid and drowning her three children, ages two to five; and Frank Coppola in Virginia, for bludgeoning to death his robbery victim. Last month in Texas, Charlie Brooks Jr., the only black among the six, achieved a milestone when he became the first American ever executed by means of a drug overdose.

Other states seem anxious to get in step. Two weeks after Brooks was executed, Massachusetts became the 38th state with a death penalty on the books, and Oregon seems likely to become the 39th, 20 years after capital punishment was abolished there by popular vote.*

The national death-row population today is 1,137. That is 200 more than a year ago, twice as many as in 1979, and larger, moreover, than ever before. Florida alone has 189 death-row prisoners, Texas has 153, Georgia and California 118 each. The inmates include about a dozen teen-agers, 13 women (five of them in Georgia) and six soldiers. Half of the condemned are white.

The long-building public sentiment to get tough with violent criminals, to kill the killers, seems on the verge of putting the nation's 15 electric chairs, nine gas chambers, several gallows and *ad hoc* firing squads back to regular work. In addition, five states have a new and peculiarly American technique for killing, lethal anesthesia injections, which could increase public acceptance of executions. Experts on capital punishment, both pro and con, agree that as many as ten to 15 inmates could be put to death this year, a total not reached since the early 1960s. "People on death rows are simply running out of appeals," says the Rev. Joe Ingle, a prison activist and death-penalty opponent. "I fear we are heading toward a slaughter."

For years, the capital-punishment debate has been sporadic and mainly intramural—professor *vs.* professor, lawyer *vs.* lawyer—as executions took place only once or twice annually at most. Says Florida's Governor Robert Graham, who signed Spenkelink's death warrant in 1979: "We haven't enforced the death penalty much, so we've been able to avoid all the responsibilities that go with that experience."

But now an old array of tough questions—practical, legal, moral, even metaphysical—is being examined. Is the death penalty an effective, much less a necessary, deterrent to murder? Is it fair? That is, does it fall equally on the wealthy white surgeon represented by Edward Bennett Williams and the indigent black with court-appointed (and possibly perfunctory) counsel? Most fundamental, is it civilized to take a life in the name of justice?

Fear, pure and simple, is behind the new advocacy of the death penalty. Between 1960 and 1973, the U.S. homicide rate doubled, from 4.7 murders per 100,000 people to 9.4. The rate has leveled off considerably and stands at 9.8 per 100,000 today. (Other countries' rates are, by U.S. standards, amazingly low: England, 1.1, and Japan, 1.0, are typical.) No more precipitous increases are expected this century: criminologists believe that the murder spree of the '60s and early '70s was mostly the doing of World War II baby-boom children passing through their crime-prone years of adolescence and young adulthood. As it happened, the number of young people and cheap, readily available handguns burgeoned at the same time. Handguns are used in 50% of U.S. murders.

But a U.S. public that has felt terrorized by murderers and thugs is unreceptive to promises that the worst may be over and understandably finds the current level of violent crime intolerable. According to a Gallup poll last fall, 72% of Americans now favor capital punishment, up from just 42% in 1966. "People are frightened and upset about crime in the streets," says William Bailey, a Cleveland State University sociologist. "Nothing seems to be done to solve the problem, so the feeling grows that if we

*Other states now without a death penalty: Alaska, Hawaii, Iowa, Kansas, Maine, Michigan, Minnesota, North Dakota, Rhode Island, West Virginia and Wisconsin.

"I Didn't Like Nobody"

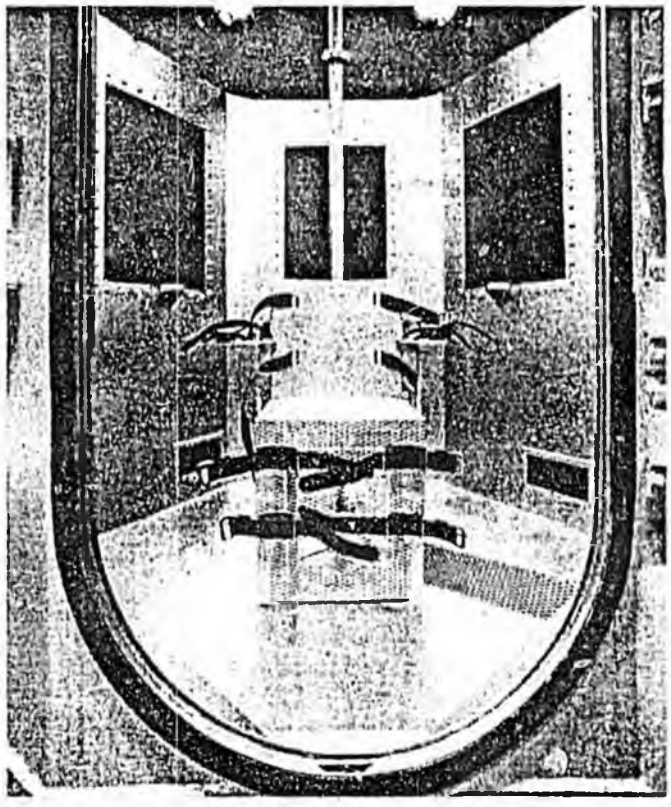
On the night of June 3, 1973 a Chevrolet Caprice, driven by a woman, was forced off Interstate 57 in southern Cook County, Ill., by a car carrying four men. One of them pointed a 12-gauge pump shotgun at her, ordered her to strip and then to climb through a barbed-wire fence at the side of the road. As she begged for her life, her assailant thrust the shotgun barrel into her vagina and fired. After watching her agonies for several minutes, he finished her off with a blast to the throat. Less than an hour later, the marauding motorists stopped another car and told the man and woman inside it to get out and lie down on the shoulder of the road. The couple pleaded for mercy, saying that they were engaged to be married in six months. The man with the shotgun said, "Kiss your last kiss," then shot both of them in the back, killing them. The total take from three murders and two robberies: $54, two watches, an engagement ring and a wedding band.

The man ultimately convicted of the "I-57 murders" now sits confined in the Menard Condemned Unit, the official name for death row in the Illinois prison system. Yet Henry Brisbon Jr., 28, does not face execution for those three killings nearly ten years ago. Illinois' death penalty was invalidated in 1972 and was not restored until 1977, the year that Brisbon was finally brought to trial. At that time, the judge sentenced him to a term of 1,000 to 3,000 years in prison. It took Brisbon less than one year to kill again, this time stabbing a fellow inmate at Stateville Correctional Center with the sharpened handle of a soup ladle. At the trial for this murder, Will County State's Attorney Edward Petka described Brisbon as "a very, very terrible human being, a walking testimonial for the death penalty." The jury agreed.

Brisbon's eleven months on death row have been quiet, compared with his Stateville years, when he took part in 15 attacks on inmates and guards, instigated at least one prison riot, trashed a courtroom during a trial and hit a warden with a broom handle. "I'm no bad dude," he says, "just an antisocial individual." The third of 13 children, Brisbon thinks that his upbringing by a strict black Muslim father made him different: "I was taught to be a racist and not like whites. As I grew up, I decided I didn't like nobody."

Brisbon has 90 well-supervised minutes each day outside his small (7 ft. 7 in. by 5 ft. 10 in.) cell. He works out with weights, keeping his 155 lbs. (on a 5-ft. 9-in. frame) in shape. He complains about his confinement: "Can't take two steps in this cage. It's inhuman. And that dull-ass color blue on the walls in no way brightens my life." He has devised a novel idea about judicial reform: "All this talk about victims' rights and restitution gets me. What about my family? I'm a victim of a crooked criminal system. Isn't my family entitled to something?" The shadow of the death penalty does not faze him: "I don't see that happening to me. What would killing me solve? Isn't that just another murder? If I get to die, it's going to be of natural causes." The state of Illinois thinks otherwise. Says Michael Ficaro, who prosecuted the I-57 case: "On the day he dies in the chair at Stateville, I plan to be there to see that it's done. Nobody I've heard of deserves the death penalty more than Henry Brisbon."

can't cure murderers, something we *can* do is kill them." Jim Jablonski, 44, a Chicago steelworker, speaks for a lot of furious citizens. "Murderers got to pay," he says. For him the next sentence follows self-evidently: "I say, fry the bastards."



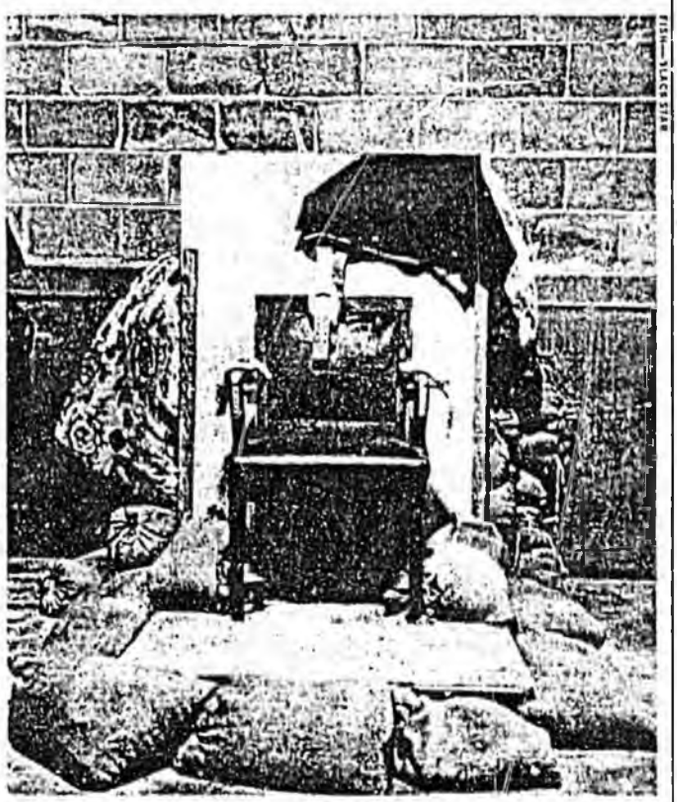
Execution by injection may be too new to have its tough-guy slang like "fry." But last month outside the prison at Huntsville, Texas, the sentiment was the same. As Charlie Brooks waited to be injected, a crowd of 300 gathered to celebrate. Some of the pro-execution revelers, mostly college students, carried placards; KILL 'EM IN VEIN, said one. "Most of the people I know are for capital punishment," declared Paula Huffman, 21, a Sam Houston State University senior at the deathwatch. "And so am I. Definitely." Nevertheless, when the moment arrived, just after midnight, she and the rest of her shivering, smiling chums suddenly turned quiet and grave.

Historically, American executions were public, the last in Kentucky in 1936. Hanging was standard for 200 years, through the 1800s. More primitive means—burnings in particular—were extreme rarities even in the 17th century. Up until 1900, nearly all executions were carried out by local jurisdictions; lynchings were as frequent as legal hangings. But by the start of the Depression, state authorities had mostly taken over the grim chore.

At that time, the U.S. was hardly less murderous than it is today. In 1933 there were 9.7 homicides per 100,000 Americans, which is just shy of the 1981 figure. The murder rate began a steady decline in 1934, but judges and juries meted out death sentences at a ferocious clip for the rest of the '30s. As many as 200 people a year were legally executed, more than ever before or since in the U.S. During the '30s, and even through the '50s, executions were so routine that they merited at most a paragraph or two in out-of-town newspapers.

Not just murderers were put to death. Rapists were executed every year in the U.S. until 1963.* After 1930, there were 455 men executed for rape, most of them in the South and 89% of them black, a majority grotesquely out of proportion to black sexual offenses. Black murderers too were executed much more frequently than white killers, a pattern that prevailed through the 1960s.

*There is still one man condemned to die for a crime other than murder: Lusious Andrews, 31, sentenced in Florida in 1981 for the "sexual battery of a child."



Maryland's gas chamber: 14 people wait

After World War II, executions became less popular. The reduction was steady: 82 by 1950, 49 in 1959 and finally just two in 1967, one of whom was Aaron Mitchell, a California murderer denied clemency by then Governor Ronald Reagan. The nation's chairs, gallows and gas chambers were temporarily retired partly because judicial standards became more scrupulous—often after legal battles waged by the NAACP Legal Defense Fund (L.D.F.) and the American Civil Liberties Union—and, more ineffably, as an extension of two centuries of penal reform *(see box)*. But most important, during the decade and a half after the war, the U.S. homicide rate stayed fairly constant and unalarming, never rising above 6.4 per 100,000 (in 1946). Year after year, there were roughly 8,000 killings (a third of the 1981 total), seemingly as predictable and steady as deaths from accidental drownings (5,000 a year) or falls (19,000). Americans felt unthreatened. They could afford the emotional luxury of indulging their instincts for reason. During 1964 and 1965, three states (Oregon, Iowa and West Virginia) abolished capital punishment, and Vermont narrowed its applicability mainly to those who murdered policemen or prison guards.

But in most places the retreat from capital punishment was not a formal, statutory change. At any one time no more than a third of the states have been without a death-penalty provision. It seems that Americans want it both ways, retaining the right to exterminate miscreants, as well as having the option not to exercise that awful power. It is easy and sometimes appealing to talk tough and demand mercilessness in the abstract. But to *really* "fry the bastards"? How many? Which ones? "What a person says on a public opinion poll," observes Thomas Reppetto, president of the Citizens Crime Commission of New York City, "and what they'll say on a jury, might well be two different things."

The ambivalence seemed apparent in last November's elections, when capital punishment was a potent political issue but not a decisive one. Like New York, Massachusetts this month inaugurated a Governor opposed to the death penalty. But just three weeks earlier, the legislature in Boston had once again legalized executions. Even increasingly hard-line voters in California chose an attorney general who disapproves of capital punishment.

The uneasiness with capital punishment has led this nation

Utah's rifle range: the chair in which Gary Gilmore died in 1977

"I Don't Think I'm Guilty"

Texas law-enforcement officials and Claude Wilkerson, 28, agree on one point: when the murder for which he was later tried, convicted and sentenced to death took place, Wilkerson was locked up in Houston's Harris County jail. Beyond that incontrovertible fact stretches a tangle of contradictions. Two of Wilkerson's confederates have been tried for the same murder and now face execution. A fourth man, who admitted being present at the scene of the crime, is serving a life sentence, a leniency granted for his cooperation with investigators. Says Wilkerson from his cell on Texas' death row in Huntsville: "I don't think I'm guilty of capital murder, and I don't think the court proved I was."

Wilkerson's road to extraordinary trouble began with an ordinary childhood. The son of a pipefitter, he moved with no particular distinction through his education. He recalls, with irony: "In a high school science class we took a straw poll on the subject of capital punishment. I voted in favor of it." Wilkerson dropped out of Mesa College in Colorado after one year, married, divorced and knocked about in a couple of ill-fated business schemes. He then went to work for Houston Businessman Don Fantich, who local police suspected was an operator in the penumbra of the underworld.

On Jan. 23, 1978, Fantich disappeared, along with a woman who ran a jewelry store, which Fantich owned, and an apparently innocent bystander, Dr. William Fitzpatrick. Police picked up Wilkerson for questioning. While he was in custody, all three missing persons were shot and buried about 100 miles west of Houston. From testimony pieced together from a variety of sources, police found the bodies and deduced that the victims were part of an extortion and kidnaping scheme that Wilkerson had masterminded. While Wilkerson owned up to the plot, he denied any involvement in the murders. Prosecutor Don Stricklin scoffs at this: "He could have told us earlier and saved those people's lives."

Wilkerson's first trial ended in a hung jury, but the second resulted in his conviction. [For reasons of strategy, prosecutors limited charges to the murder of the doctor.] Says Sherman Ross, now a judge, who represented Wilkerson both times: "The district attorney's office good-old-boyed him into a death penalty." For his part, Wilkerson tries to make the best of life on death row: "It takes a great deal of personal effort to not become hard within yourself and hate the free world."

A pudgy soft-spoken man, he has used his abundant time to polish his skill in drawing. Late last year a friend in New York City asked Wilkerson to send samples to be sold at a party. The prisoner netted $200 and has since sold some other artwork. He uses a typewriter in his cell for a widespread correspondence with, among others, some leaders in the American Indian movement. A grandmother of his was a Catawba Indian, and Wilkerson has grown intensely interested in this heritage and its culture. He has taken an Indian name, Ches-ne-o-na-eh, which translates as "the man who kills the wolves." Wilkerson suggests another meaning that this name could convey: "a beautiful being in a scarred world."

"I Want to Die"

"I've put life in one hand and death in the other and weighed the two. To me, death is my only route to freedom." Doris Ann Foster speaks from a small cell at the end of a third-floor hallway at the Maryland Correctional Institution for Women in Jessup, a small town midway between Baltimore and Washington. A heavy door marked "Maximum Security" isolates her not just from the outside world but from other prisoners as well. She is on death row and could become the first woman ever to be executed by the state of Maryland.

Foster says she is ready: "I have thought it out very carefully. I know what I am doing." She has sent a letter to the Maryland Court of Appeals and the U.S. Supreme Court requesting them to pay no attention to the efforts of her public defender lawyers, who have been trying to get her sentence reduced to life, with parole then a possibility after 12½ years. She does not know whether the courts will heed her request, but she dreads the prospect of a long, drawn-out appeal: "If the court says you're guilty and you're going to die, why spend all this money to fight it? Let them carry it out. They will be satisfied, and I will have peace."

Foster previously served four years in other states for robbery and passing bad checks, so she knows about prison. Continuing on death row strikes her as intolerable: "This is ruining my body and eventually would ruin my mind. I could see what I'd be like after ten years here. I don't want to be hostile. I don't want to lose my peace. I have no desire to continue on in such an inhumane existence."

Her acceptance of punishment does not exactly constitute an admission of guilt. Although she was convicted last year of stabbing a 71-year-old woman motel keeper to death with a screwdriver during a holdup, Foster now says, "I couldn't have done it. And if I did, I would not do it with a screwdriver, not to some old lady." This declaration sounds less than ringing. Moreover, it was testimony from her husband Tommy, who had checked into the motel with her, that helped convict Doris Ann. Yet she seems to bear him no grudge. He is in a different Maryland prison, where he is serving a lighter sentence for theft and obstruction of justice, and she corresponds with him regularly. She has 35 other pen pals, including some Indians on death rows elsewhere.

A thin, wide-eyed woman with long, lustrous dark hair, Foster claims to be three-quarters Cherokee (she also says she is 27; Maryland lists her as 38). The walls of her cell are decorated with bold, dark drawings of Indian faces. Books on Indian lore are piled together with other texts on Buddhism, martial arts and the occult. She is allowed half an hour out of her cell each morning for a shower and an hour of exercise later in the day, but she has felt increasingly estranged from other inmates and no longer takes a recreation period. She receives no visitors because she says her surroundings would depress relatives and friends.

She is aware of the notoriety gained by other prisoners who have asked to die, and wants no part of it: "I'm not a Gary Gilmore. I don't want anyone to write a book about me. I want to die or be free. I have a dream to go West with my people. If I got out, that's what I would do." She does not expect that to happen. Instead, she hopes to arrange for the presence of an Indian medicine man at her execution.

of tinkerers to an odd inventiveness. Elsewhere in the world where executions are still regularly carried out—among industrialized nations, only Japan, South Africa and the Soviet Union—the bullet and the noose are used exclusively. Yet in the U.S., only half a dozen states call for old-fashioned firing squads or hangings. The electric chair killed quickly and, it was thought, painlessly. It seemed, in any case, up to date, civilized. (This progressive image is somewhat at odds with the testimony of Willie Francis, 17, who survived a sublethal shock by Louisiana's portable apparatus in 1946. Francis said the experience was in all "plumb miserable." His mouth tasted "like cold peanut butter," and he saw "little blue and pink and green speckles." Added Francis: "I felt a burning in my head and my left leg, and I jumped against the straps." A year later, back in the chair, he was successfully executed.)

The electric chair caught on slowly in the U.S. and not at all abroad. During the 1920s and '30s, the cyanide-gas chamber became state-of-the-American-art. It too was popular only in the U.S. Now there are lethal injections, which are seen as still more "humane." This latest technical refinement, which the European press finds chilling and fascinating, seems sure to remain strictly a U.S. practice. Sums up Notre Dame Theology Professor Stanley Hauerwas: "This search for a humane way of killing is a bunch of sentimental secular humanism. Why do you want it to be humane? To reassure yourself?"

The dilemma of whether to kill the killers comes up in only a small fraction of all U.S. homicides. The criteria for capital murder vary from state to state and even, inevitably, from case to case. In general, there must be "aggravating circumstances." These can be as specific as the murder of a fireman or one by an inmate serving a life sentence; as common as a homicide committed along with a lesser felony, like burglary; and as vague as Florida's law citing "especially heinous, atrocious or cruel" killings. It is estimated that about 10% of U.S. homicides currently qualify, or some 2,000 murders last year. Those killings are the ones the threat of capital punishment is meant to prevent.

The idea of deterrence can be quickly reduced to very personal rudiments: *If I know I will be punished so severely, I will not commit the crime.* The logic is undeniable. Yet in the thickets of real life and real crime, deterrence, while central to practically all punishment, is often very uncertain, and its effect on prospective murderers is especially unclear. Unfortunately, public discussion usually consists of flat-out pronouncements. Capital punishment, says Conservative Commentator William F. Buckley, "is a strong, plausible deterrent." No, declares New York Governor Cuomo, "there has never been any evidence that the death penalty deters." Neither is altogether wrong, but the stick-figure oversimplifications on both sides do a disservice to a complicated question.

The scholarly evidence is not quite as unequivocal as some abolitionists claim. But it does not make much of a case for deterrence. The most persuasive research compared the homicide rates of states that did and did not prescribe the death penalty. For instance, Michigan, which abolished capital punishment in 1847, was found to have had a homicide rate identical to adjacent states, Ohio and Indiana, that were executing. Similarly, Minnesota and Rhode Island, states with no death penalty, had proportionately as many killings as their respective neighbors, Iowa and Massachusetts, which had capital punishment. In 1939 South Dakota adopted and used the death penalty, and its homicide rate fell 20% over the next decade; North Dakota got along without capital punishment for the same ten years, and homicides dropped 40%.

Similar before-and-after studies in Canada, England and other countries likewise found nothing to suggest that capital punishment had deterred murderers any better than the prospect of long prison terms. Used in Britain during the 1950s, a typical "lifer" actually served only about seven years, compared with a much tougher average U.S. "life" term today of 20 years. A comprehensive study in the U.S., by the National Academy of Sciences in 1978, also found that the death penalty had not proved its worth as a deterrent.

Were it not for the work of Economist Isaac Ehrlich, the deterrence debate would be entirely one-sided. Using econometric

modeling techniques to build a "supply-and-demand" theory of murder, Ehrlich argued in a 1975 paper that capital punishment prevents more murders than do prison sentences. Because of the 3,411 executions carried out from 1933 to 1967, Ehrlich speculates, enough potential murderers were discouraged so that some 27,000 victims' lives were saved.

That stunning conclusion drew immediate attacks. Critics, and they are legion, cite a variety of defects: Ehrlich did not compare the effectiveness of the death penalty with that of particular prison terms; his formula does not work if the years between 1965 and 1969 are omitted; and in accounting for the increase in homicides during the '60s, he neglects the possible influences of racial unrest, the Viet Nam War, a loosening of moral standards and increased handgun ownership.

To work at all, deterrence requires murderers to reckon at least roughly the probable costs of their actions. But if a killer is drunk or high on drugs, that kind of rational assessment might be impossible. Passions are often at play that make a cost-benefit analysis unlikely. Most killers are probably not lucid thinkers at their best. Henry Brisbon Jr. *(see box)* may be legally sane, but he is by ordinary standards demented enough to make a mess of any theory of deterrence. Says New York University Law Professor Anthony Amsterdam: "People who ask themselves those questions—'Am I scared of the death penalty? Would I not be deterred?'—and think rationally, do not commit murder for many, many reasons other than the death penalty."

Former Prosecutor Bernard Carey, until 1980 state's attorney for Cook County, favors capital punishment, sparingly used. Yet he says, "I don't think it's much of a deterrent because the kinds of people who commit these crimes aren't going to be deterred by the electric chair." Some might be encouraged. "For every person for whom the death penalty is a deterrent," says Stanford Psychiatry Professor Donald Lunde, "there's at least one for whom it is an incentive." Such murderers, says Amsterdam, "are attracted by the Jimmy Cagney image of 'live fast, die young and have a beautiful corpse.' "

The arguments for capital punishment are usually visceral or anecdotal. Ernest van den Haag, professor of jurisprudence and public policy at Fordham University, says flatly, "Nobody fears prison as much as death." Florida's Governor Graham, who has signed 45 death warrants, cites the case of a restaurant robbery seen by a customer. "Afterward," recounts Graham, "he was the only witness. So the two guys took him out to the Everglades and shot him in the back of the head. If they had felt that being convicted for robbery and first-degree murder was sufficiently different, they might have had second thoughts."

In a sense, death's deterrent power has never really been given a chance in the U.S. Even during the comparative execution frenzy of the 1930s, hardly one in 50 murderers was put to death, a scant 2%. Reppetto estimates that if 25% of convicted killers were executed, 100 a week or more, there might be a deterring effect. But it is unthinkable, he agrees, that the U.S. will begin dispatching its villains on such a wholesale basis. Even at a rate of 100 executions annually, an implausibly high figure given today's judicial guarantees, a killer's chances of getting caught, convicted and executed would for him still be comfortably low: 250 to 1.

Even if executions were on television, there is no guarantee that prospective ax murderers would pay heed. As Camus noted in his 1957 essay against capital punishment: "When pickpockets were punished by hanging in England, other thieves exercised their talents in the crowds surrounding the scaffold where their fellow was being hanged."

But U.S. society is not unprotected just because it lacks weekly or daily executions. "The issue is not whether we slay murderers or free them," notes University of Michigan Law Professor Richard Lempert. "It is whether we send them to their death or to prison for life." Prison is a far more manageable weapon than death, and the U.S. is not at all hesitant to put criminals behind bars: the population there has doubled since 1970, to 400,000. "One trouble with the death penalty," says Henry Schwarzschild, an A.C.L.U. official, "is that it makes 25 years seem like a light sentence."

Opponents of capital punishment feel that prison terms

"I Can't Stop Crying"

At Dunbar High School in Fort Myers, Fla., he was a triple threat: in football, an all-state wide receiver; in basketball, an all-conference playmaking guard; in track and field, a state champion in the 440-yd. run. An honors student, he went on to Edison Community College in Fort Myers but dropped out after 1½ years to enlist in the Army. He was given a medical discharge after 17 months because of attacks of grand mal epilepsy. He married, fathered a son and went back to college, this time in California. His marriage soured, and he returned to Fort Myers, where he sank into alcoholism and despair. Sometime between Oct. 13 and 15, 1973, a woman named Margaret Mears, 68, was raped and beaten to death.

Doug McCray, now 32, had been on a drinking binge and could not account for his whereabouts at the time of the crime when police arrested him for murder six weeks later. The F had matched his palm print with one found in Mears' apartment. Nearly ten years later, McCray says he still does not know whether he is guilty. He has passed two polygraph tests, which prosecutors would not permit in evidence at his trial. An eyewitness who placed McCray in the woman's neighborhood at the time of the slaying later recanted, saying police had coached and coerced him. The physical evidences of rape could not be linked to McCray.

Nevertheless, he now awaits his fate on death row in Florida State Prison at Raiford. McCray looks back in anger: "I feel victimized by the Florida Supreme Court, which waited 5½ years to rule on my case, which granted me a new trial and then abruptly took it away. [A 4-3 decision last March in McCray's favor was reversed six months later when one justice changed his vote without explanation.] I feel victimized by my clemency lawyer, who never even bothered to read the transcript of my trial. I feel victimized by a lawyer who took my mother's few dollars and never came to see me for almost eight years."

Outside observers, including New York *Times* Columnist Anthony Lewis, have rallied to McCray's defense. When a St. Petersburg attorney phoned him and volunteered to help, McCray remembers, "I started to cry. I can't stop crying in this place. It meant so much to me, after all the other things that happened, that this man cared."

McCray lives in a 6-ft. by 9-ft. cell. He and the other 194 inmates on Florida's death row each have a small black-and-white TV. He uses the light from the set to read constantly. "I've read thousands of books. Prison can be as rewarding as college if you actually have a desire to improve your mind." Yet his thoughts always wheel back to the central mystery that has brought him to this place. "The state says it's convenient for me to say I don't remember. But if it were convenient, I could have plea-bargained or made up some alibi. My girlfriend and one of my brothers say I was with them all that night. I wish I knew, even if it meant knowing that I'd done it. Who would want to live after committing such a terrible crime?" Since last fall, McCray has grown progressively more despondent. He now says he will not seek another stay of execution. "I'm tired. I hurt. I just wish to lie in peace. I will allow the state to do what it may.

"I am tired."

without parole would deter as many potential murderers as the death penalty. Says Amsterdam: "The *degree* of punishment is not necessarily a deterrent even to someone who thinks rationally. What deters people from crime is the *likelihood* of getting caught and undergoing punishment." Reppetto agrees: "I always favor something that will get tough with a lot of offenders instead of getting very tough with just a handful."

Two diehard proponents of the death penalty, deterrence hardly matters anyway. Declares Buckley: "If it could be absolutely determined that there was no deterrent factor, I'd still be in favor of capital punishment." Taking the lives of murderers has a zero-sum symmetry that is simple and satisfying enough to feel like human instinct: the worst possible crime deserves no less than the worst possible punishment. "An eye for an eye," says Illinois Farmer Jim Hensley. "That's what it has to be. People can't be allowed to get away with killing." Counters Amsterdam: "The answer can hardly be found in a literal application of the eye-for-an-eye formula. We do not burn down arsonists' houses." The scriptures do preach mercy as well as retribution. Last Saturday, in fact, Pope John Paul II sweetly recommended "clemency, or pardon, for those condemned to death."

The Moral Majority's Rev. Jerry Falwell relies more peculiarly on Christian authority. He claims that Jesus Christ favored the death penalty. On the Cross, Falwell says, He could have spoken up: "If ever there was a platform for our Lord to condemn capital punishment, that was it. He did not."

But was Jesus ever vengeful? Ordinary people are. "Execution is primarily a vengeance mechanism," says Notre Dame's Hauerwas, a pacifist, "but that is not necessarily a bad thing. Vengeance is a way society gestures to itself that justice has forced against injustice." A main point of criminal laws, after all, is to make private feuds unnecessary. "No society should put the burden on me to seek personal retribution," says New York University's Herbert L. London, a social historian. "The state has an obligation not to make me a killer."

During troubled times in the ancient Greek colonies, prominent men would volunteer to be scapegoats. Each was housed and well fed by the authorities, and then, after a year of comfortable

Revenge Is the Mother of Invention

Socrates was lucky. Found guilty of heresy and "corruption of the young," he was condemned to drink a cup of hemlock, a relatively honorable and painless death. By the standards of history, his execution in 399 B.C. was singularly humane.

Not until the Enlightenment, 200 years ago, did societies seriously question the states' right to kill. Until then, the only dilemma had been to find the most ingenious and cruel methods of execution. Boiling, burning, choking, beheading, dismembering, impaling, crucifying, stoning, strangling, burying alive—all were in vogue at various times. The Crucifixion of Jesus Christ was, for its day, only a routine execution.

In ancient China, an occasional penalty was "death by the thousand cuts," the slow slicing away of bits of the body. A 19th century French traveler described an excruciating method in India during the rule of the rajahs: "The culprit, bound hand and foot, is fastened by a long cord, passed round his waist, to the elephant's hind leg. The latter is urged into a rapid trot through the streets of the city, and every step gives the cord a violent jerk, which makes the body of the condemned wretch bound on the pavement . . . Then his head is placed upon a stone, and the elephant executioner crushes it beneath his enormous foot."

What kinds of crime incurred such punishments? Murder and treason have almost always ensured death. Under the Mosaic law, capital offenses ranged from gathering sticks on the Sabbath and adultery to the sacrifice of children to the god Molech. A medieval German code decreed: "Should a coiner [counterfeiter] be caught in the act, then let him be stewed in the pan or a cauldron."

Execution by elephant in 19th century India

England's response to the bewildering social evils caused by the Industrial Revolution was unique even in a world long used to such officially sanctioned slaughter as the Spanish Inquisition, when tens of thousands of convicted heretics were burned. The English meted out the death penalty for more than 200 offenses, including stealing turnips, associating with gypsies, cutting down a tree or picking pockets. "Hanging days" were public holidays, and in 1807 a crowd of 40,000 became so frenzied at an execution that nearly a hundred were trampled to death. Frequently both victims and executioner were drunk, and occasionally the job was botched, with the condemned man being hanged two or even three times. Afterward, the crowds surged toward the corpse, because it and the scaffold were believed to have curative powers.

Death sentences were often arbitrarily applied. The social standing, sex, citizenship or religion of the victims usually determined the degree of horror they would suffer. Death alone was rarely considered a sufficient penalty unless it was preceded by terror, torture and humiliation, preferably in public. One of history's most spectacular executions was that of Damiens, the unsuccessful assassin of Louis XV, in Paris in 1757. His flesh was torn with red-hot pincers, his right hand was burned with sulfur, his wounds were drenched with molten lead, his body was drawn and quartered by four horses, his parts were set afire and his ashes scattered to the winds. The execution was accomplished before a large crowd.

"The more public the punishments are, the greater the effect they will produce upon the reformation of others," declared Seneca in ancient Rome. Over the centuries, many societies came to believe otherwise. The rituals of execution, rooted perhaps in a primitive need for sacrifice, catharsis and revenge, seemed less to cast out the evils of humanity than to feed its blood lust. By the late 18th century, a reform movement had taken hold in Europe, aided by the invention of such "humane" devices as the hanging machine and the guillotine.

Today the death penalty has been abolished in Canada, at least officially in much of Latin America, and in most of Western Europe. In Eastern Europe only Albania has abandoned capital punishment, and it remains in force throughout Asia and the Islamic world. Last year, the world leader in announced executions was Iran, with more than 600.

and black killer, but only 13% when a white had killed a black.

A serious problem is the quality of legal help for murder defendants. The Texas study, conducted by the Governor's judicial council, found that three-quarters of murderers with court-appointed lawyers were sentenced to death, against about a third of those represented by private attorneys. Amsterdam, who has argued eight capital cases before the Supreme Court, contends that "great lawyering at the right time would save virtually everybody who is going to be executed." Scharlette Holdman, director of Florida's Clearinghouse on Criminal Justice, persuades volunteer lawyers to represent death-row inmates. "Every person sentenced to die comes from a case fraught with errors," she says. "If you're adequately represented you don't get death. It's that simple."

Aside from public defenders, there are only about a dozen attorneys working full time on behalf of the condemned. Court-appointed lawyers in most states are not required to stay on a murderer's case after a conviction. "Drunk lawyers, lazy lawyers, incompetent lawyers, no lawyers," says Holdman. "You can have all the correct issues for appeal, but if you don't have a good lawyer to raise them, they don't mean a damn thing." Of 2,000 death sentences imposed during the post-*Furman* decade, about half have been reversed or vacated by the courts.

The careful legal course demanded by the Supreme Court is expensive. Last year the New York State Defenders Association estimated the trial costs for a typical capital-punishment case: a defense bill of $176,000, about $845,000 for the prosecution and court costs of $300,000. The total: $1.5 million, and this before any appeal is filed. Getting a writ before the Supreme Court, just one appellate step, might cost $170,000.

It is often argued, with blithe inhumanity, that there are good fiscal reasons for executing murderers: prison is too costly. It is cheaper to send a student to Stanford for a year than it is to keep a con in nearby San Quentin ($10,000 *vs.* $20,000). But imprisoning one inmate for 50 years would require less than $1 million in New York, not bad compared with the costs of the painstaking appeal process.

Everyone seems afraid of imposing bona fide life sentences, however, and for reasons unconnected with expense. Seventeen states have laws providing for life without parole for those convicted of murdering a robbery victim. Abolitionists say such a sentence is excessive. Statistics show that fewer than 1% of freed murderers kill again after their release from prison, in part because of their advanced age. But if capital punishment is abandoned, it may make sense, politically and emotionally, to permit the public some vengeful satisfaction. Life without parole is unimaginably harsh. But it would be a way occasionally to formalize the revulsion at Charles Manson and his ilk. As it is, Manson will be eligible for parole in 1985.

On death rows, the emotional tone is stuck in some weird, high-strung limbo between hope and hopelessness. Inmates' optimism is the manic wishfulness of losing gamblers. Their fatalism is generally not wise but numb, a brute shrug.

In Illinois, death row is up on a bluff in a sandstone prison opened in 1878. The 49 current inmates have a 19th century landscape artist's view—the Mississippi River and miles of rich farmland beyond—except for the bars and razor wire. Menard Correctional Center (pop. 2,600) is the principal industry of Chester, Ill. (pop. 8,000). The inmates, two of whom are scheduled to be electrocuted this spring, are alone in their cells for at least 21 hours a day. When they are in transit, once a day to the law library and once a day to the recreation room, they are handcuffed. Four of them are "honor residents," permitted to roam unchained in the gray hallways. One of these is John Wayne Gacy, 39, the building contractor and amateur clown convicted three years ago of murdering 33 young men and boys.

Death row is about the same size in Alabama, where 55 men await the chair in Holman. Mitchell Rutledge, 23 years old, I.Q. 84, is among them. "You're just sitting there waiting for somebody to come kill you," says Rutledge of his purgatory, "just like a dog out there in the dog pound." But he does not claim innocence. No: he did kill a man two days before Christmas 1980. Rutledge was doped up and drunk with two friends. One pal brought along a gun, and with it they took off on a joyride in the van of a driver they had robbed of $20 and stashed in the back. It was decided that the victim, Gable Holloway, 28, should die. He begged for his life. But Rutledge, like a zombie, took the pistol and fired. He fired again and again, five shots in all.

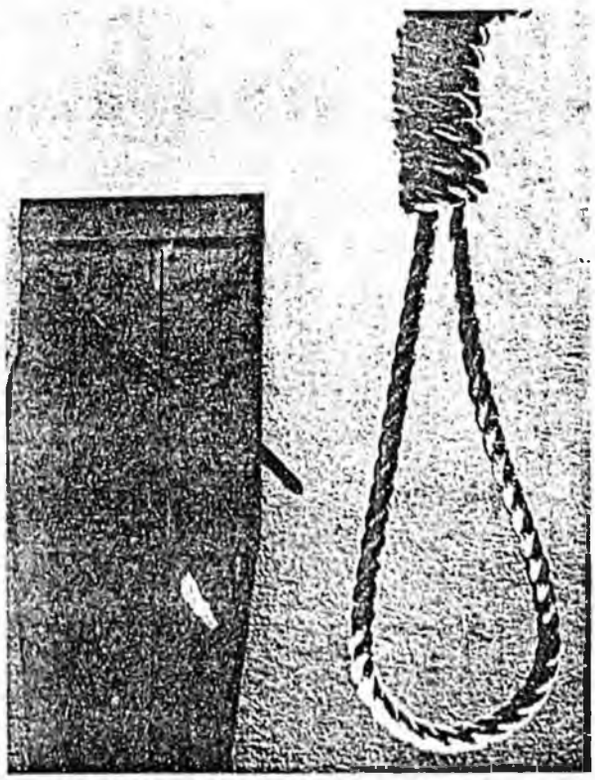
On death row, Rutledge, who was orphaned as a teen-ager, is visited only by his lawyer. He seems full of remorse. "I can't make nobody feel sympathy for me for what I did," he says. "But I just want to let everybody know that I'm sorry for what I did."

Texas' needle: last month the first execution by injection

To most people the life of a foolish punk like Rutledge does not count for much. He is defective. His death would not be unbearably sad, but his destruction by the state of Alabama would be: not a large tragedy, not final proof that the U.S. is barbaric, but still better left undone. Executing Rutledge would be a waste, not so much of his diminished humanity, but of society's moral capital. The gunslinging heroes of corny adventure fiction had it right: there are guys not *worth* killing. Let Rutledge sit and stew in his 8-ft. by 5-ft. pen in Alabama. Forget him.

But then blue-eyed, kind-looking Lawrence Bittaker jerks into view, disrupting high-minded composure. Bittaker, 42, is on death row at San Quentin for kidnaping and murdering five teen-age girls. But that is not all. He and a partner raped and sodomized four of them first, for hours and days at a time, sometimes in front of a camera. But that is not all. He tortured some of the girls—pliers on nipples, ice picks in ears—and tape-recorded the screams. But that is not all. The last victim was strangled with a coat hanger, her genitals mutilated and her body tossed on a lawn so that he could watch the horror of its discovery.

If not for the Bittakers (and Judys, Gacys, Mansons, Specks and Starkweathers), the capital-punishment debate might already have been decided in the abolitionists' favor. Bittaker's prosecutor had an apt beyond-the-pale phrase for Bittaker and his partner: "mutants from hell." Can they be human? Without killers in this league, more of America's logic and instinctive sense of mercy could prevail. There might be more electorates like Michigan's and more Governors like New York's who declare that capital punishment is unworthy of a decent society.



Administration of the death penalty perhaps cannot be made fair enough. As a deterrent, it is probably not necessary. But public passions are inflamed by the inevitable monsters. Civil reason is suspended in the face of what looks like evil incarnate. "It's an emotional issue. It's not a rational issue." Says who? Lawrence Bittaker, an emotional man, whose life is very hard to save. *—By Kurt Andersen. Reported by Lee Griggs/Chicago, B.J. Phillips/Atlanta and Janice C. Simpson/New York*

confinement, taken outside the city and stoned to death. In the view of some death-penalty abolitionists, contemporary executions are not really so different. Each execution is mere "spectacle," according to the A.C.L.U.'s Schwarzschild, "a dramatic, violent homicide under law." Says he: "A society that believes that the killing of a human being is a solution to any problem is deeply uncivilized." Executing murderers does not demonstrate resolute regard for the sanctity of victims' lives. "The marginally demented guy," says Schwarzschild, sees an execution as a prescription, not a threat. "He thinks, 'If the state has a quarrel with Gary Gilmore, it kills him. Then if I have a quarrel with someone, I'll kill *him*.' We say we think human life is sacred. And then to prove that, we kill somebody. That's crazy."

Capital punishment, says L.D.F. Lawyer Joel Berger "attempts to vindicate one murder by committing a second murder. And the second murder is more reprehensible because it is officially sanctioned and done with great ceremony in the name of us all." Not simply just as bad, but worse: this may be the central emotional truth for those who most passionately disapprove of executions. The cretinous killer or the seething psychopath is a loose cannon. But the well-orchestrated modern execution, careful, and thoroughly considered, is horrible because of its meticulous sanity. Executions are worse, in the abolitionists' moral scheme, because the government is always in control; it knows better, but kills anyway.

Proponents see the distinction between murder and state-sanctioned executions in a different light. "One is legal, the other is not," Van den Haag says. "If I take you and put you in a room against your will, it is called kidnaping. If I put on a uniform and put you in a room against your will, it's called arrest."

What was once perhaps the most potent argument against capital punishment arises less often these days. Yet there is a good chance that an innocent man was hanged in England in the 1950s. And in the U.S. today, as death rows swell and the pace of executions quickens, the risks of such a mistake grow. "You know there are going to be some," warns Michael Millman, a California state public defender. Abolitionist Sanford Kadish, a leading authority on criminal law, is less worried. Says he: "The chances are exceedingly remote."

Washington's gallows: only four states still prescribe hanging

Kadish puts his trust in the exhaustive system of judicial review that is now required in capital cases. Today no death-row inmate will be executed until his case has been brought to the attention of his state's highest court, a federal district court, a federal circuit court of appeals and the U.S. Supreme Court. The process is properly slow. In California it takes an average of three years after conviction for a capital case to work its way through the state court system alone. The improbably named James Free, 27, is on death row in Illinois for a double murder. Confesses Free: "I'll use every appeals route I can dream up. That will buy time, maybe five or ten more years."

In 1953, by contrast, a pair of Missouri kidnapers were executed only eleven weeks after their crime. A quarter of the people executed during the 1960s had no appeals at all, and two-thirds of their cases were never reviewed by any federal court.

The historic decision came in 1972, after five years without an execution, and just as fierce public majorities were forming in support of capital punishment. In *Furman* vs. *Georgia*, the Supreme Court nullified all 40 death-penalty statutes and the sentences of 629 death-row inmates, declaring that judges and juries had intolerably wide discretion to impose death or not. This lack of standards made the death sentence "freakishly imposed" on "a capriciously selected random handful" of murderers, wrote Justice Potter Stewart. "These death sentences are cruel and unusual in the same way that being struck by lightning is cruel and unusual." Within a few years, 37 state legislatures had passed statutes designed especially to meet the court's objections.

Most of the new laws went too far, mandating death for certain murders regardless of circumstances, and were overturned by the court. But the statutes adopted by Georgia, Florida and Texas were ruled acceptable. Death is a constitutional punishment, the court decided, not cruel or unusual as long as the judge and jury have given due consideration to the murderer's character and the particulars of his crime, the "mitigating factors."* Against these are weighed the aggravating factors that distinguish capital murder from ordinary homicide.

The court's decisions since have essentially been refinements and tidying addenda. Last January in *Eddings* vs. *Oklahoma*, for instance, the Justices ruled that the judge or jury must consider any mitigating factor the convict claims. Yet to many observers, that sounds like a return toward uncontrollable discretion, the very flaw the court prohibited in 1972. Says former L.D.F. Lawyer David Kendall: "We're right back to *Furman*."

Abolitionists hope so, anyway. They are now arguing a subtle paradox. The prudence and selectivity required by the court, they say, means that executions will be carried out only rarely, and thus will remain arbitrary and freakish, a sort of death lottery. There is always caprice along the way to death row. Prosecutors have great leeway in deciding which homicides to try as capital murders. A killer can be persuaded to testify against an accomplice to save his own life. Brooks was convicted and executed; for the same murder his partner must serve only eight more years in prison.

The Supreme Court's refusal last month to stay Brooks' execution does not give abolitionists much hope for a new landmark ruling in their favor. "We've become technicians," says the L.D.F.'s Berger of his small litigious corps. "The great moral issues have been removed from the legal arena."

At the time of *Furman* it was widely recognized that the system was unquestionably stacked against black defendants, especially in the "death belt" of the South. Some of the racism has been wrung out. Yet clear bias remains, much attributable to prosecutorial choices. A recent study of homicide cases in Houston's Harris County is troubling. In cases where a black or Chicano had killed a white, 65% of defendants were tried for capital murder; only 25% of whites who killed a black or Chicano faced the death penalty. "I don't think it's overt racism," says University of Texas Law Professor Ed Sherman. But prosecutors want to win, and they "perceive that a Texas jury is more likely to give the death penalty to a black who killed a white." A similar South Carolina study found an almost identical pattern: local prosecutors over four years sought death sentences in 38% of homicides involving a white victim

*Of the nine on today's Supreme Court, only Thurgood Marshall and William Brennan believe that the death penalty itself is unconstitutional.

20, April 1981

Pro and Con

Revive the Death Penalty?

YES—"It is morally required as the only appropriate punishment for some crimes"

Interview With Professor Walter Berns

Resident Scholar, American Enterprise Institute

Q Professor Berns, why do you favor the death penalty?

A It is morally required as the only appropriate punishment for some crimes: Treason, particularly heinous forms of murder and particularly heinous rapes, such as the rape of a child or a mass rape of one victim by several individuals. I do not say it ought to be applied to every convicted murderer or even to every convicted first-degree murderer.

Q Doesn't the death penalty verge on the kind of "cruel and unusual punishment" that the Constitution prohibits?

A The men who wrote the Constitution didn't see it that way. The proof is contained in the language of the Constitution itself. The due process clauses of the Fifth and 14th Amendments both speak of the necessity to provide due process when depriving a person of life.

Q Some argue that when society itself takes away life, this undermines the sanctity of life and sets a poor example for citizens—

A On the contrary. The law and the legal community make their respect for life very clear when they threaten to punish murderers by executing them, just as they manifest their respect for property by threatening to jail or fine a person for taking property illegally.

Q Isn't there the danger of punishing the wrong person and then being unable to correct the injustice?

A That possibility always exists, and it becomes a terrible thing when you make a mistake of this sort. Maximum caution must be exercised, and the wording of the statutes ought to embody such caution. A good example is the Florida statute, which makes it absolutely clear to the court that the assessment of the death penalty is—and should be treated as—an extraordinary event.

But in this country, you will search the records in vain for a single example of the wrong person being executed. I know that this has been alleged in the case of Bruno Hauptmann, who was executed in the Lindbergh kidnapping, but I am not persuaded that he was indeed innocent. It has also been alleged in the cases of Sacco and Vanzetti, but I think the evidence clearly shows that Sacco was certainly guilty of those murders and that Vanzetti was executed because he—perhaps foolishly—stood loyally by Sacco and refused to exculpate himself.

Q Is there any real proof that capital punishment deters crime?

A The evidence on this point is inconclusive. For a long time, sociologists in this country made studies that came to the conclusion that the death penalty did not have a deterrent effect greater than that of life imprisonment. But then Isaac Ehlich, an econometrician at the University of Chica-

NO—"Terribly mixed-up people" won't be deterred by the threat of the death penalty

Interview With Patrick V. Murphy

President of the Police Foundation

Q Mr. Murphy, why do you oppose the death penalty?

A Because I don't believe it would have a significant impact on crime. It wouldn't reduce it. Look at the people we've executed recently—like Steven T. Judy, who murdered a woman and then drowned her three children. These are terribly mixed-up people. The threat of the death penalty won't deter people like that from committing murder.

Q Not any of them?

A I've been a policeman for over 35 years, and I've dealt with many of these psychos. Cops always say, "I'd much rather go up against an experienced con than against a psycho, a crazy kid who is going to kill you when you say, 'freeze.'"

When it's all over and you've got the handcuffs on them and they're under control, it turns out that most of them have had horrible lives—they were brutalized as children, their old man was an alcoholic, their mother a prostitute. You try to find out how such a psycho could have put a bullet into that old woman's head, and you find it's because that kid doesn't respect life. He never got much respect for his own life from others.

Q Are you saying that because of mitigating circumstances, that killer you have described does not deserve the death penalty?

A No, that's not what I mean. I don't want to be misunderstood as excusing or condoning crime. Never call me soft on crime. After all, I'm a policeman. What I'm saying is that this kind of person is too far gone to be deterred by the threat of execution.

Q Some argue, however, that the death penalty can have a general crime-deterring effect on everybody by increasing respect for the law—

A If you think so, why not go one step further and make the executions public, as was done in the old days? If you think it is going to deter others, why not do it in a big stadium, in front of a large crowd? I don't think anybody is seriously advocating that today.

Actually, the death penalty may well have the opposite effect of leading to an increase in crime.

Q In what way?

A Violence begets violence. I believe that many policemen lost their lives in this country in the last 10 or 15 years because the police used excessive force, including deadly force, in making arrests. By analogy, I think that when the state applies the death penalty, this supports violence in a way which tends to increase violent crimes.

Q It is often argued, though, that there was less violent crime

Copyright © 1981, U S News & World Report, Inc.

go, examined the question with different statistical techniques and came to the conclusion that one execution may—and I emphasize the word *may*—deter as many as eight murders. That conclusion gave rise to a tremendous controversy, and that is where matters now stand.

My argument for the death penalty is not based on the claim that it necessarily reduces the number of murders. I do think, however, that it has a general deterrent effect on crime by promoting law-abidingness.

Q How do you mean?

A Let me illustrate with an example. What is the proper punishment for someone like the Nazi war criminal Adolf Eichmann, who was hanged? You don't punish an Eichmann because you want to deter others. It would be foolish to think you could do that. You surely don't punish him because you want to rehabilitate him. You don't punish him because you want to incapacitate him. After all, he no longer represents a present danger. What that leaves is retribution, which is indeed an altogether proper purpose of punishment. It's altogether proper to pay criminals back, and how do you pay back someone like Eichmann except by putting him to death?

At the sight of crime, law-abiding citizens feel—and ought to feel—a righteous anger. That kind of anger is absolutely essential for a decent, just society. Like love, and unlike greed, for example, anger is a passion that can reach out to other people. It can be a manifestation of caring for other people. We'd all be lost if everyone reacted as people did in the case some years ago of a woman who was screaming because she was being mugged and murdered: No one even bothered to pick up the phone and call the police.

Righteous anger should be satisfied by punishing the criminal. In this way, by rewarding it, you may promote law-abidingness, which is a general deterrent to all kinds of crime. And in the case of particularly heinous crimes, the anger is rightly so intense that only punishment by death will satisfy it.

Q Could the mandatory death penalty backfire—as in the case of a kidnapper who, knowing he faces the electric chair anyway, might decide to murder the only witness to his crime?

A Yes, that could conceivably happen. On the other hand, there is the case of the inmate serving a life sentence who, knowing he cannot be executed, might decide to murder a guard or a fellow prisoner.

Q Do you think that the mandatory death penalty might sometimes make a jury unduly reluctant to convict a guilty person?

A I'm not sure that the death penalty has any more effect in this regard than another drastic form of punishment, such as life imprisonment.

Q Has there been a movement away from the death penalty in the Western World?

A Yes, but on this point there has been a split between the sophisticated intellectual and the man in the street. All the polls show that the professors want to get rid of the death penalty and the people want to keep it. The law is the embodiment of our morality, of our sense of right and wrong. And, in the last 30 years, respect for the law has declined markedly. ☐

at the time when the death penalty was being more widely applied—

A I don't buy that. It's like arguing that since there was less crime during the Depression, it follows that poverty and unemployment have nothing to do with crime. There are factors other than lack of the death penalty that account for the recent rise in crime. The easy availability of handguns—50 million of them—is at the heart of the problem. And the death penalty won't help resolve it.

Q The Bible speaks of "an eye for an eye and a tooth for a tooth," which implies that the punishment should fit the crime. In the case of particularly heinous crimes, wouldn't that call for the death penalty?

A Well, the Catholic bishops of this country have come out against the death penalty. So have the bishops of Italy. So have many Protestant leaders.

Of the Western European countries, only Spain and France still resort to executions.

Q Some argue that life imprisonment is often a more cruel form of punishment than death. Some inmates have said they would prefer death—

A Yes, I know some of these fellows have said they wanted to die. But I still would prefer not to have the state engage in executions. You know, we're all human, and sometimes we're liable to make a mistake and execute the wrong person. And that is something we can never correct.

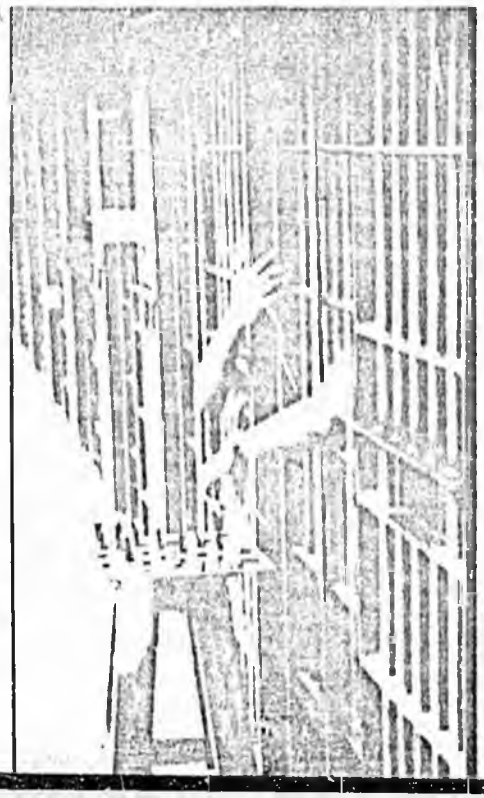
Furthermore, if you look at the history of the death penalty in this country, you'll find that its application has been arbitrary, capricious and discriminatory.

Q In what ways?

A The poor and minorities tend to be overrepresented on death row. Blacks who kill whites are overrepresented in relation to blacks who kill blacks. That tells us something about the way the system works.

People who can afford expensive lawyers can beat the system when it comes to the death penalty as well as other kinds of punishment.

Also, I'm a bit of a cynical New York cop. I have found in the weeds the bodies of mob guys bumped off by other guys in the mob. Those are the coldest, most calculating kinds of murderers—the mob hit men. Their crimes are well planned, very hard to detect and witnesses don't talk, so those are not the people who get executed for murder.



The ones who do get executed are often pathetic, mentally defective people, or are people who killed a wife, a husband, a lover in the heat of passion.

Q What about somebody who is already serving a life sentence and who murders a prison guard? Wouldn't the death penalty be the logical punishment for him?

A You're kidding yourself if you think that by executing one of those types you are going to have a peaceful prison. Those types really place no value on their own life. I'd rather concentrate on preventing that kind of occurrence through reforming our prisons, which are understaffed and overcrowded boiling pots.

How do we deal with crime? I'm looking for the right answers—but I honestly don't believe the death penalty is one of them. ☐

Death-row inmates in a Texas prison play a game of chess between their cells.

America's Inability to Resolve the Cap

COL. I COL. II COL. III

Last of a series

By Phil McCombs
Washington Post Staff Writer

When American University professor Robert Johnson decided last fall to teach a course on the death penalty, he was amazed that 75 students signed up—more than he's ever had in a class. A poll found they favored the penalty 49 to 31 percent with the rest undecided.

Johnson saw it as his job—and moral duty—to change that.

"Death should require absolute guilt on the part of the offender and absolute innocence on the part of the society," he said. "Violence is a social product. . . . Today's capital offenders are invariably drawn from the ranks of the underpriviledged and inadequate. . . . Each and every one of these persons can point to some mitigating circumstances that relieve them of some culpability for their crimes and partially implicate society in their actions."

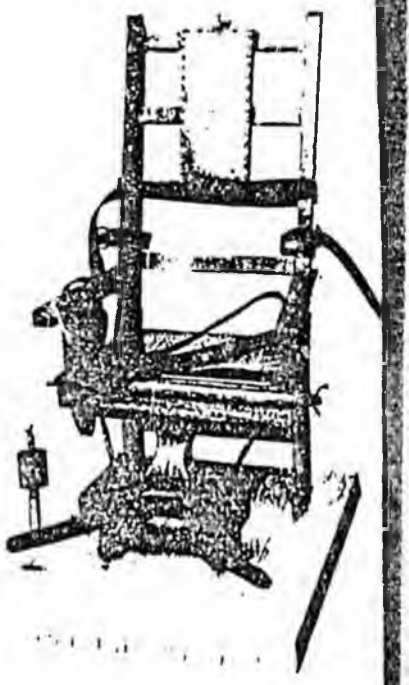
Like Johnson, most academics and the college-educated oppose the penalty, but polls indicate that Americans as a whole strongly support it.

"Liberals generally feel guilty," said Ernest van den Haag, a Fordham University law professor and conservative theorist. "They think that somehow it's their fault that crimes are being committed. . . . Intellectuals belong to a class that is not greatly endangered by murder. . . . They can afford to be terribly humanitarian . . . People who are less educated and have less money are endangered by violent crime."

America's debate on the death penalty encompasses a wide range of moral, legal and political questions of the sort that seem calculated to raise ideological temperatures on both the left and right. Some of the issues, such as whether the penalty deters criminals, have spawned intricate scholarly analyses; others, such as why the poor are executed with disproportionate frequency, raise painful sociological questions. Finally, there is the simple, awesome question of whether it is ever right to take a human life.

Confronted with questions of such magnitude, the nation's political and judicial systems have been unwilling or unable to definitively resolve the nation's capital punishment dilemma. There is little evidence that this will change soon even though six years ago the U.S. Supreme Court declared the death penalty constitutional and 35 state legislatures passed new death statutes based on the high court guidelines.

While the future of the penalty remains in limbo, its pros and cons are argued by legal scholars, philosophers, law enforcement officials and social scientists as well as ordinary citizens. The debate can be cool and intellectual, with complex arguments and empirical research, or highly emotional, drawing on deeply held feelings of right and wrong. For the most part, the debate "has been waged on moral grounds," wrote Supreme Court Justice William J. Brennan Jr. "The country has debated whether a society for which the dignity of the individual is the supreme value can, without a fundamental inconsistency, follow the practice of deliberately putting some of its members to death."



For Henry Schwarzschild, head of the American Civil Liberties Union capital punishment project, the answer is an emphatic no: "Society should not be in the business of killing human beings . . . God knows what [murderers] deserve. The question is not what they deserve, it is what we are entitled to do to each other . . . We have seen in the 20th century states shed torrents and rivers of blood. We create political institutions to protect and enhance human life, not to kill . . . People learn the lesson from executions that killing somebody is an acceptable answer to some problems . . . No society that believes that can consider itself civilized."

The Supreme Court and the D

1972 Decision

Justice Thurgood Marshall, citing evidence that the death penalty does not deter, wrote that it is "morally unacceptable to the people of the United States at this time in their history" . . .

share the earth with you. This is the reason, and the only reason, you must hang."

Schwarzschild called the Berns argument in favor of retribution—and by extension the Arendt argument—"deeply dangerous" and "prefascist."

"I really do take offense at that," said Berns. "Does that say the U.S. is a fascist country in its history when it executed criminals? Was Israel fascist when it executed Eichmann? . . . Was Abraham Lincoln, who signed 262 death warrants, fascist?" Berns said his support of the penalty is contingent on its being applied only to the worst criminals without racial discrimination.

"The thought that murderers are to be given as much right to live as their victims oppresses me," wrote van den Haag. "Never to execute a wrongdoer, regardless of how depraved his acts, is to proclaim . . . no human being can be wicked enough to be deprived of life. Who actually can believe that? I find it easier to believe that those who affect such a view suffer from a failure of nerve."

Johnson, the American University professor, said the ultimate penalty should be life in prison because it "leaves open the door for mercy. You can always reconsider [if there are] dramatic and enduring changes of character . . . or new evidence." And Johnson argues that the conditions on death row itself are so painful as to constitute cruel and unusual punishment.

In its 1976 landmark decision upholding the constitutionality of the death penalty for murder, the U.S. Supreme Court specifically endorsed retribution as "an expression of society's moral outrage." The lead opinion said while this "may be unappealing to many, . . . it is essential in an ordered society that asks its citizens to rely on legal processes rather than self-help to vindicate their wrongs. . . . The decision that capital punishment may be the appropriate sanction [for murder] must be directly related to the personal culpability of the criminal defendant."

Since 1930, 3,859 persons have been executed in the United States, 54 percent of them for murder committed in the southern states. Many of the executions were for crimes that would not be considered capital offenses today. Many were for crimes committed by persons who were juveniles, mentally retarded or insane. Many were for crimes that occurred accidentally as the offender fled during a robbery in a state where 298 of the 366 people executed since 1930 were black.

Two justices, William J. Brennan Jr. and Thurgood Marshall, declared the penalty unconstitutional under any circumstances. "The calculated killing of a human being by the state involves, by its very nature, a denial of the executed person's humanity," wrote Brennan. Marshall cited evidence that the penalty doesn't deter and said, "It is morally unacceptable to the people of the United States at this time in their history."

The decision invalidated death laws of 41 states, the District of Columbia and the federal government and took more than 600 off death row.

In response, 35 state legislatures and Congress drafted new death laws. Polls showed increasing concern with crime and support for the penalty.

In its landmark 1976 decision, the court approved, by a 7-to-2 majority, death-for-murder laws in Georgia, Florida and Texas drafted in response to its 1972 decision. The new laws provided for "guided discretion" in capital sentencing. Factors of aggravation and mitigation would be considered in special sentencing hearings and later reviewed by higher courts to safeguard against prejudice.

"It is an extreme sanction, suitable to the most extreme of crimes," said the lead opinion by Justices Stewart, Lewis F. Powell Jr. and John Paul Stevens. ". . . The concerns expressed in [the 1972 decision] can be met by a carefully drafted statute that [focuses] the jury's attention on the particularized nature of the crime and . . . individual defendant . . . In this way the jury's discretion is channeled. No longer can a jury wantonly and freakishly impose the death sentence."

Concurring, Justices White and William H. Rehnquist and Chief Justice Warren E. Burger scolded opponents of the penalty for

Exactly the opposite, wrote Walter Berns, author of "For Capital Punishment: [illegible]e and the Morality of the Death Penalty," [illegible]e execute the worst criminals "out of moral necessity . . . We want to punish them *to pay them back* [and by doing so] we demonstrate that there are laws that bind men across generations [and] nations. . . . The criminal law must . . . be made awe-inspiring. . . . It must remind us of the moral order by which alone we can live as *human* beings. . . . To punish criminals, even to execute them, is to acknowledge their humanity . . . as responsible moral beings."

Perhaps nothing illustrates so sharply the difference between these two as their views of Ismel's capture, trial and execution in 1961 of former SS Lieutenant Colonel Adolf Eichmann, who sent millions of European Jews to their deaths. Schwarzschild, a Jew who escaped Nazi Germany at 14, adamantly opposed the execution. Berns said justice demanded it, and it was the passion of Nazi-hunter Simon Wiesenthal who made him realize the moral necessity of retribution.

In many ways, the Eichmann case is the ultimate test for an opponent of the death penalty—like asking, on a larger scale, if that opponent would still oppose the penalty for someone who had brutally raped and murdered his wife and 3-year-old daughter. Eichmann provides the "supreme justification of the death penalty," wrote Hannah Arendt in her book, "Eichmann in Jerusalem: a Report on the Banality of Evil." She argued that the justice of retribution for the crime of mass murder might have been better understood had the judges simply told Eichmann:

". . . We are concerned here only with what you did, and not with the possible non-criminal nature of your inner life and of your motives or with the criminal potentialities of those around you. You told your story in terms of a hard-luck story [but] there still remains the fact that you have carried out . . . a policy of mass murder . . . And just as you supported and carried out a policy of not wanting to share the earth with the Jewish people and the people of a number of other nations—as though you and your superiors had any right to determine who should and who should not inhabit the world—we find that no one, that is, no member of the human race, can be expected to want to in extreme cases is an expression of the community's belief that certain crimes are themselves so grievous an affront to humanity that the only adequate response may be the penalty of death."

∞

While philosophers have struggled with the moral implications, the courts have engaged in a painstaking effort of their own to reach a consensus on capital punishment and when, if ever, it was justified.

In 1636 in New England the death penalty was imposed for idolatry, witchcraft, blasphemy, assault in sudden anger, sodomy, buggery and adultery, among others. By 1850 abolitionist sentiment was strong, and gradually laws making death mandatory for specified crimes were eliminated. Many states dropped the penalty entirely.

By the 1930s, the high point of executions in America, there were 167 executions a year, an average that dwindled to 72 a year in the 1950s. Executions ceased in 1967 as officials waited to see what the Supreme Court would do.

For years the court had avoided the issue entirely. Then in 1972, faced with the increasingly urgent need to provide some guidance, it finally spoke.

In a narrow 5-to-4 decision the court declared the penalty was being administered in an unconstitutional way because juries operating with "untrammeled discretion" were handing it out in an arbitrary, discriminatory, even "freakish" way.

Receiving a death sentence was "cruel and unusual in the same way that being struck by lightning is cruel and unusual," wrote Justice Potter Stewart. Byron R. White added, "There is no meaningful basis for distinguishing the few cases in which it is imposed from the many cases in which it is not." William O. Douglas said the death laws were "pregnant with discrimination" against the black and poor. "One searches our chronicles in vain for the execution of a member of the affluent strata of this society."

One of the court's key concerns in 1972 was possible racial discrimination. The three cases that brought on the decision—a murder and a rape in Georgia and a rape in Texas—all involved black offenders and white victims. The murder, a shooting, had occurred during a robbery.

arguing that no matter how effective the death penalty may be as a punishment, government created and run as it must be by humans, is inevitably incompetent to administer it. This cannot be accepted as a proposition of constitutional law." The penalty is necessary, they said, even though "mistakes will be made and discriminations will occur."

At the same time, the court declared mandatory death laws unconstitutional because they treat "all persons convicted of a designated offense not as uniquely individual human beings, but as members of a faceless, undifferentiated mass."

States like Virginia that had passed mandatory statutes after 1972 quickly redrafted them along "guided discretion" lines. Virginia's new law, patterned after the new Georgia law approved by the Supreme Court in 1976, went into effect in 1977, Maryland's in 1978. The District never drafted a new statute and in 1980 killed the old one. The last execution in a local jurisdiction was in Virginia in 1962.

After the 1976 decision the "capital punishment bar," as the small but devoted band of lawyer-opponents to the penalty is known, switched to delaying tactics and began filing every possible appeal in every death case. Four executions have taken place, but a de facto moratorium on executions in America now exists and the United States in effect has joined most Western nations in either dropping the penalty or letting it fall into disuse.

No one knows how long this may last. American juries continue to send 150 murderers a year to death row, where there are already 1,009 residents, according to the NAACP Legal Defense and Educational Fund Inc.

"My own armchair reading is the public feels comfortable in having [the death penalty] on the books," said Washington attorney David E. Kendall, who has handled death cases, "but there is an enormous inertia and resistance to actually executing people."

Scholars who search for the reasons behind the strong public support for the penalty believe that people are concerned by crime and that they hope the penalty will deter criminals. "I think crime in the streets and law and order have become a genuine concern to a lot of people," said Tufts Uni-

Col. IV

Does the death penalty deter criminals?

Ever since the 18th century man of letters Dr. Samuel Johnson observed pickpockets at work in a crowd watching a pickpocket hang, researchers have faced the problem that it is clear when the penalty fails to deter but not when it succeeds.

Early studies by Thorsten Sellin, professor of sociology emeritus at the University of Pennsylvania, found states with the penalty had as many murders and murderous assaults on police as states without it. Murder didn't decrease when states instituted the penalty or increase when they abolished it.

Executions may even encourage murder, said William J. Bowers and Glenn L. Pierce of Northeastern University's Center for Applied Social Research. Studying a 56-year period in New York, they found two additional murders after each execution and decided executions send messages of "lethal vengeance."

But a 1975 analysis by Isaac Ehrlich found each execution in America may have saved eight lives by deterring potential murderers. While Bowers and Pierce said the study has been called into question by other research, the Supreme Court conc'ed death "undoubtedly is a significant ...erent" for "many" potential murderers.

"No other punishment deters men so effectually from committing crimes," said an early expert quoted by the Supreme Court. "This is one of those propositions which it is difficult to prove. . . . It is possible to display ingenuity in arguing against it, but that is all. The whole experience of mankind is in the other direction."

State legislators depend on such experience in passing death laws, and Justice White wrote that their actions should not be viewed "as some form of vestigial savagery or as purely retributive [but as] solemn judgments, reasonably based, that imposition of

clearly racist in a vast majority of cases. Gary Kleck, writing in the American Sociological Review, found "huge racial differentials" in death sentences handed out to blacks and whites for rape because the penalty was used to punish blacks who raped whites in the South. There have been no executions for rape outside the South or border states since 1930, and today death for rape has virtually disappeared. Only two persons are now on death row for rape, and their victims were children. In 1978 the Supreme Court outlawed the penalty for rape of an adult woman.

Studying the racial characteristics of those who received the death penalty since 1930, Kleck found that in 25 of 38 years examined, white murderers were more likely to receive death sentences than black murderers. For the period as a whole, he put the chance of a black convicted murderer receiving a death sentence at .972 percent versus 1.043 percent for a white murderer.

In the South, however, he found blacks more likely to receive death sentences for murder—but only prior to 1950; after that, the rate was the same for both black and white murderers.

Outside the South after 1950, however, white murderers had a higher chance of being sentenced to death than black murderers.

"Every single study consistently indicating discrimination toward blacks was based on older data from southern states," he wrote. ". . . The evidence considered as a whole indicates no racial discrimination in use of the death penalty for murder outside the south [prior to 1950]."

Bowers and Pierce, the Northeastern University social scientists, studied death sentences imposed between 1972 and 1977 and found another kind of discrimination: Blacks who killed whites were far more likely to receive death sentences than killers in any other racial combination.

Writing in the journal Crime & Delinquency, they reported that in Georgia they found a black 33 times as likely to get death for murdering a white as for murdering another black. The same black murderer was also substantially more likely to get death than a white murderer, regardless of whether the white murdered a black or white.

On the other hand, a black who murdered someone of his own race was substantially less likely to get death than a white murderer regardless of the race of his victim.

Bowers and Pierce attributed their findings to the "racist tenet: that white lives are worth more than black lives," although this would not appear to explain why a white was substantially more likely than a black to get death for murdering a black.

Kleck, who also noted that blacks were "devalued" as crime victims, added that "white paternalism," or the view that blacks are "child-like creatures who were not as responsible for their actions as whites," may help explain why a white murderer would be held more accountable than a black murderer in the case where the victim was a "devalued" black.

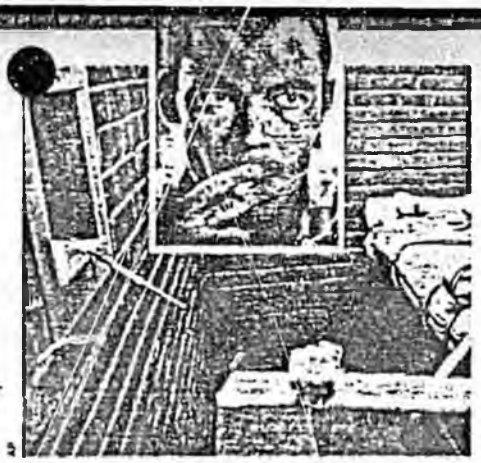
Like Kleck's, the Bowers-Pierce overall data, if not broken down by race of victim, actually shows white murderers in Georgia taken as a whole twice as likely to be sentenced to death as black murderers.

That is because there were in Georgia almost twice as many black-on-black murders—the combination that got by far the lowest death-sentence rate—as all other murder combinations taken together.

Bowers and Pierce think the court needs to consider their research because "either discrimination by race of offender or disparities of treatment by race of victim of the magnitudes we have seen here are a direct challenge to the constitutionality of the [new] capital statutes."

Supreme Court's Death-Row Dilemma

New confusion over the death penalty spread in early October when a convicted murderer received an 11th-hour reprieve as he lay strapped on a death bed awaiting a lethal injection.



U.S. Supreme Court Justice Byron White granted the unusual stay October 5 just as a saline solution was being pumped into James Autry's veins at the Texas penitentiary in Huntsville to prepare him for execution. Only two days earlier, White was part of the Supreme Court majority that denied Autry's appeal in a 5-to-4 ruling.

The swift turnaround astonished even the condemned man's attorney, Stefan Presser of the American Civil Liberties Union, who said: "On Monday, because he didn't invoke the right words and the right theory, the Court was going to let him die. Then he said the right words, and the Court gave him life."

Autry, 29, was convicted of killing a store clerk in 1980 after she asked him to pay for a six-pack of beer.

Meanwhile, the fate of 1,230 convicts on death rows across the country remained as murky as ever, with prosecutors and defense lawyers alike puzzled over what to do next.

"I don't know how to proceed," said Alan Dershowitz, a Harvard law professor who represents three condemned inmates. He termed the Justices' handling of the Autry case a "scandalous spectacle of ineptitude."

Autry was strapped and awaiting lethal injection when reprieve came down.

Paul Richwalsky, a state prosecutor in Louisville, said: "We as prosecutors look to higher courts, especially the Supreme Court, for guidance. What kind of barometer is this?"

Justice White's switch came after Autry's new lawyers raised a fresh constitutional issue—whether a state must review each death sentence to make sure it is in line with others imposed for similar crimes. The Court hears arguments on that question—raised in a California case—on November 7.

The Justices have made numerous attempts in recent years to clarify how the death penalty can be imposed. But each time they dispose of one issue, defense lawyers raise a new one. Result: Only eight death-row inmates have been executed since 1967. □

Grass-Roots War Over Gun Control

Firearms advocates and critics are fighting a touch-and-go battle over gun control that stretches from city halls and state legislatures to Congress and the Supreme Court.

The Justices on October 3 left intact a handgun ban in the Chicago suburb of Morton Grove, refusing to consider arguments that the measure violates the constitutional right to "keep and bear arms." The action removed a cloud over antigun measures on the books in several Illinois cities, and now towns across the country are expected to consider similar laws. Other developments cited by gun-control advocates—

- A decrease by one third in Chicago gun murders in 1982, the same year the city barred new handgun registrations.
- A new law in Washington State that lengthens a waiting period to buy a pistol and lets police seize guns from persons accused of domestic violence.
- A federal judge's ruling that gun manufacturers can be held liable for damage that results when their products fall into the wrong hands.

Opponents of gun control, led by the National Rifle Association (NRA), also claim a string of new victories headed by last fall's defeat at the polls of a handgun-registration proposition in California. On the same day, Nevada and New Hampshire approved measures guaranteeing citizens' right to own guns, and Utah residents will vote next year.

Several cities now have ordinances that require residents to own weapons, although the laws are regarded as symbolic and are not enforced.

Only hours after the Supreme Court's Morton Grove decision, trustees in the Chicago suburb of Skokie voted 4 to 3 against banning handguns. Member Frank McCabe, who voted no, said passing an ordinance "with no intent to enforce it causes contempt for the law."

The next big local skirmish is expected in Ft. Lauderdale, Fla., where county officials are considering several gun-control measures.

The U.S. Senate is studying a proposal to relax federal curbs on gun sales—a plan praised by the NRA as an aid to hunters and collectors but assailed by critics who say it would allow criminals to obtain guns by mail.

With firearms used in 60 percent of America's murders, both sides say gun control will be hotly debated in 1984 election campaigns. Said the NRA's Andrew Kendzie: "It will always be one of the country's most volatile issues." □

AMERICAN JUSTICE

In the wake of a serious crime, justice is swift: Police sift the clues and track down the culprit, the prosecutor throws the book at him; judge and jury do their duty, and the criminal slinks off to prison—a social menace no more.

Then the credits roll and the television show is over. Americans turn their attention back to the real world, where things are different.

The real world, where—

- In 4 out of 5 cases of serious crime, there is not even an arrest, let alone a conviction.
- Of the cases in which arrests do occur, some are dropped, and just about half end in guilty pleas or convictions.
- One lawbreaker might draw a stiff penalty, another a light penalty for the same offense.
- Most convicts serve only a fraction of their prison terms before being put back on the street, and many of them return to crime.

The rate of violent crime has more than quadrupled during the last two decades—creating unprecedented strains. Police and prosecutors are overworked. Courts are staggering under heavy backlogs. Prisons are bursting with surplus inmates. The result: Bitter controversy engulfs almost every method by which our society struggles to cope with lawlessness. Americans are angry. Many of them believe that the institutions of law and order somehow have come unglued, exposing them and their families to a growing risk of death, injury or property loss at the hands of thugs.

Civil proceedings are arousing fears as well. An explosion of lawsuits has made people feel more and more vulnerable to a wrathful passer-by, customer, neighbor, employe, business partner—perhaps even one's own child. The crush of litigation also has quickened concern about the fees and ethics of lawyers, whose ranks have swollen fast.

Yet how the justice system works—how it *really* works—remains a mystery to many. People's "knowledge" often boils down to a stream of half-truths and misimpressions gained from Hollywood, TV and newspapers. This prompted *U.S. News & World Report* to prepare this 24-page section to help readers understand procedures that are designed not only to punish the guilty but also to protect the innocent. □

A Quiz of Your Legal IQ

Here is a simple quiz to measure how much you know about the U.S. system of justice (the answers appear below).

1. How much time does the average police officer spend dealing with crime?
A. 75 percent. B. 15 percent. C. 40 to 50 percent.

2. The average salary of a police officer after five years on the force is:
A. $13,000. B. $22,000. C. $18,000.

3. The job of a grand jury is to:
A. Weigh the defendant's guilt or innocence. B. Determine whether inmates get parole. C. Decide whether a case goes to trial.

4. How many persons slated for trial on serious criminal charges plead guilty?
A. 60 percent. B. 10 percent. C. 80 percent.

5. The average time served in prison by a person convicted of a felony—a serious crime—is:
A. 26 months. B. 6 months. C. Between 5 and 6 years.

6. How many appeals are filed with the Supreme Court each year?
A. 750. B. 5,300. C. 1,500.

7. How may federal judges be removed from office?
A. Impeachment and conviction by Congress. B. Supreme Court order. C. Dismissal by the President, with Senate consent.

8. Which constitutional amendment protects citizens against unreasonable searches?
A. Fourth Amendment. B. First Amendment. C. Fourteenth Amendment.

9. Junior attorneys in law firms are paid an average salary of:
A. $15,900. B. $35,200. C. $26,600.

10. How many civil suits are brought annually in the United States?
A. About 1 million. B. Almost 37 million. C. More than 12 million.

11. Which side wins most often when a civil suit is tried?
A. The plaintiff—the person suing—wins 80 percent of the time. B. The defendant is victorious in 68 percent of cases. C. Each side wins about half the time.

12. The standard used by juries to decide a civil case is:
A. The preponderance of the evidence. B. Guilt beyond a reasonable doubt. C. The reasonable-man standard.

13. In most small-claims courts:
A. Lawyers are required to reduce their fees. B. Disputes under $700 are tried. C. Written evidence is excluded at all times.

ANSWERS
1. C. 2. B. 3. C. 4. C. 5. A. 6. B. 7. A. 8. A. 9. B. 10. C. 11. C. 12. A. 13. B.

The Complex Maze in Criminal Courts

"Adversary justice" pits prosecution against defense in a war that is governed by intricate rules. For a guided tour of the battlefield—

When a person is arrested for a serious crime—and the handcuffs snap shut around his wrists—he enters a legal maze with many possible exits.

He may find one within hours and quickly be back on the streets. Or, if he is one of the unlucky few, he may never know freedom again.

Critics seethe with indignation over procedures that they believe give the guilty too many loopholes for escape. "It's difficult to explain to crime victims the weaknesses and inefficiencies of our system," laments Philadelphia's district attorney, Edward Rendell.

Most defenders acknowledge that the process has its flaws, which smart lawyers and jailhouse-wise hoodlums feel no compunction about exploiting. But they contend that when analyzed step by step the system makes more sense than critics admit.

After an arrest, the first milestone is a hearing to determine whether the *defendant* will be released until trial or held in the county jail. The judge may free the person on his own *recognizance*, a written pledge to appear for trial, or may require deposit of bail that is forfeited if the accused fails to show up in court.

In about half the states, the judge can deny bail altogether if the suspect has a criminal record or seems to be a danger to the community. In the rest of the states and in federal courts, the law allows denial of bail only when there is substantial doubt that the person, if freed, will return for trial. Many judges, however, faced with a defendant perceived to be a social menace, do not hesitate to set bail so high that the suspect cannot pay it.

Nearly 90 percent of those released do show up for trial—but more than 10 percent of them commit new crimes in the meantime.

The DA weighs in. Police lay out the evidence they have for the district attorney and his assistants, who decide whether to prosecute. The basic question these lawyers ask: Is there enough proof to convince a jury of guilt "beyond a reasonable doubt"—the test that prevails in criminal courts?

In a significant number of cases, the answer is "No" and the charges are dropped. Even if a case is acceptable on legal grounds, prosecutors may scuttle it because of a backlog of more-important prosecutions. The majority of law violations in the U.S. are not crimes of violence but lesser offenses such as vandalism and public drunkenness, which are often referred to social-service agencies instead of the courts.

When prosecutors decide to take a case to trial, in about half the states they file an *information* with the court stating the charges.

Defendant and his lawyer face the judge. Fully 80 percent of jury trials are averted or cut short by guilty pleas.

In the rest of the nation, serious criminal accusations are forwarded instead to a panel of six to 23 citizens chosen to sit for periods of several months as a *grand jury*. These sessions are closed to the public. The grand juries hear government lawyers present documents or testimony from major witnesses.

Unless called as a witness, the defendant never sets foot in the grand-jury room and is not permitted to offer a defense. Reason: The grand jury does not seek to determine the truth of the charges, but only whether there is enough evidence to warrant a trial.

If the answer is "Yes," the grand jury votes a *true bill*—an indictment laying out the charges. In theory, this decision is made independently. But most experts agree that with rare exceptions grand juries follow prosecutors' cues.

By this time, the accused more often than not already will have a lawyer—a right of every person charged with a crime. Three fourths of all defendants can't afford to hire an attorney. They rely on publicly paid lawyers who either work full time as public defenders or are appointed by the courts for such work part time.

While the estimated 25,000 lawyers in private criminal-law practice can select their own clients, the typical public defender is overburdened. Often young lawyers no more than a few years out of law school, they grapple with 400 cases a year, or more than one a day.

Truth on trial. The role of defense lawyers in U.S. courts is just as crucial as that of prosecutors.

In many countries, the questioning of witnesses in criminal proceedings is handled by judges or some other neutral official, and guilt and innocence are decided by a judge or panel of judges.

U.S. trial procedures are built on a different premise: That the facts are brought out best—and justice best served—by pitting opposing counsels against one another before a neutral judge and jury. This *adversary system* has defects. For one thing, the lawyers are not always equal in talent. One attorney's superior trial tactics may overshadow the substance of the case.

What's more, appeals to emotion and the withholding of evidence from the other side until the last possible moment are commonplace. Nicholas Kittrie, a professor of law at American University, says "the surprise witness, document or demonstrative evidence" often influences a jury's findings.

Still, most experts agree with Prof. Alan Dershowitz of Harvard Law School that the adversary system "generally produces accurate results" while safeguarding the rights of the accused.

However a case comes out in the end, the defense starts at a disadvantage. "The prosecution has all the police reports, laboratories and computers," says Rick Wilson of the National Legal Aid and Defender Association. "That leaves the defense in the dust."

Squaring off. A defendant's first chance to rebut the charges comes at the *preliminary hearing*, a court session held soon after an indictment. The prosecution presents evidence aimed at establishing a basis for the case to go

Arrest. After a suspect is apprehended, prosecutor and grand jury decide whether the case should go to trial.

Selection of jury. Both prosecution and defense probe the attitudes of jurors carefully before accepting them.

to trial. The defense may make a motion that evidence be excluded on grounds that it was seized unlawfully, that the suspect's rights were violated during police questioning or that some other infraction of civil liberties occurred. These basic protections are outlined in the box on page 40. Attorneys for presidential assailant John W. Hinckley, Jr., were able to bar some police testimony from his trial because his lawyer wasn't present when federal agents first questioned him.

The judge can dismiss all or some of the charges. Usually, he rules that while some evidence may be inadmissible, the case can go to trial.

Many defendants who lose this first round decide to plead guilty. Often, they can win a reduction in the severity of charges—and thus a lesser sentence—by negotiating a *plea bargain* with the prosecutor.

Although most guilty pleas come just before trial, a defendant can plead guilty at any time before the verdict is in. One Virginia man, fearful of getting the death penalty, decided to plead guilty to a reduced murder charge as the jury was deliberating over his case—only to learn later that the jurors had been prepared to acquit him.

At least 80 percent of cases end in guilty pleas. Prosecutors thus avoid costly, time-consuming trials and the risks of acquittals. Defendants get lighter sentences than they might have received had they fought to the bitter end.

Cases that do not end in plea bargains before trial rarely go to trial quickly. A survey of 32 metropolitan areas by the National Center for State Courts showed that the median time from filing of charges to trial ranged from 42 days in Portland, Oreg., to nearly a year in Buffalo.

Court backlogs are only one reason for delays. Defense lawyers often seek to postpone trials in the hope that prosecution witnesses will decide not to testify or will perhaps forget details of the crime. "The world's greatest defense attorney is Father Time," says Tulsa lawyer Patrick Williams.

Day of reckoning. Once the trial date finally arrives, the lawyers match their wits first in the empaneling of the jury. Its makeup is vital because—when the crime is serious—a unanimous vote of 12 jurors is needed to reach a verdict. Selection can take many hours and even many days as the lawyers question potential jurors on their backgrounds and beliefs.

Once the jury is chosen, the prosecutor makes an opening statement, sketchily describing the case against the accused. The defendant's attorney briefly tells the jury what line of defense will be offered.

Next, the prosecutor starts calling witnesses to build his case. When he completes his questioning of each, the defense attorney gets a chance to *cross-examine*—an interrogation often used to attack the witness's credibility. Says legal scholar David Neubauer: "In cross-examination, each side has the opportunity to examine the witnesses' truthfulness, to probe for possible biases and to test what witnesses actually know, not what they think they know."

Then comes the defense's turn to call witnesses, though it is not obliged to do so and may rely entirely on challenging prosecution evidence.

Many legal battles are fought out of the jury's presence, with both sides debating before the judge what evidence may be presented to jurors.

Although some criminal trials are over in a day or less, many take weeks or months as each side raises a string of objections to the other's evidence. Some defense lawyers make no bones that they do this partly in the hope that an appeals court later will overturn a conviction because of an erroneous ruling by the trial judge.

"We are obligated as lawyers to do

Questioning of witnesses. Each side presents testimony buttressing its case.

Cross-examination. Each lawyer has a chance to shake the credibility of the opposition's witnesses.

When Juveniles Run Afoul of the Law

The nation's juvenile-justice system, designed to shield delinquent youths from the harsh treatment given to adult criminals, is doing its job too well.

That is the view of critics of the juvenile courts, who contend that the lenient handling of youthful offenders is as much to blame as anything for the surge of violent crime by the young.

It is an issue on which public attitudes have come full circle in recent decades. When juvenile courts were created at the turn of the century, reformers believed young lawbreakers needed to be sheltered in a variety of ways, in addition to being kept apart from adult criminals.

Juvenile-court hearings and records were closed to the public. A jargon was created so delinquents would not be tainted by criminal-court terms. Youths were accused in a "petition," not an indictment, and were not locked up without bail but rather "detained in their best interests." Instead of being found guilty, they were "adjudicated delinquent" and sent not to prisons but to "training schools."

Without the trappings of the adult justice system, youths often found themselves in court with only a judge, a social worker and their parents.

Over the years, critics came to believe that this closed system—whatever the intent—did not always treat delinquents fairly. Judges' philosophies of treatment varied so much that some youths were sent to prison when they should have been sent home; others were set free when they should have been thrown behind bars.

In a noted 1967 case, *In re Gault*, the Supreme Court declared that youths have the right to a lawyer and other legal protections. Since then, juvenile-court proceedings have become more and more like adult trials, with prosecutors, defense attorneys and stricter rules of evidence. Many hearings now are open.

In recent years, 14 states have passed laws to send to adult courts certain youths under 18 charged with serious crimes. After conviction there, they may end up in adult prisons. Several other states have made it possible for even younger children—some as young as 10—to be sent to criminal court.

Nearly 500,000 youths are jailed in detention units each year, either to await trial or to serve sentences that typically run a year or less. Judges send about 65,000 annually to state training schools—youth prisons where delinquents spend one or two years, on average.

In most states, the jurisdiction of juvenile authorities ends at age 21. For this and other reasons, young offenders tend to spend less time behind bars than adults implicated in similar crimes.

But the conditions in places where juveniles are held are often so poor that critics say they encourage criminality. "The cells at Alcatraz are better than what many of those kids are sitting in today," contends Mark Soler of the San Francisco-based Youth Law Center.

It's too soon to gauge effects of the get-tough drive, analysts say. Harsher measures may keep some violent youths off the streets for longer periods, but experts predict that whether they remain in juvenile courts or are shifted to adult tribunals, delinquents will continue to be treated more leniently than adult criminals.

Says Louis McHardy, director of the National Council of Juvenile and Family Court Judges: "All we're doing is creating a new juvenile-justice system within the adult system. Young criminals require special attention, and most will continue to get it."

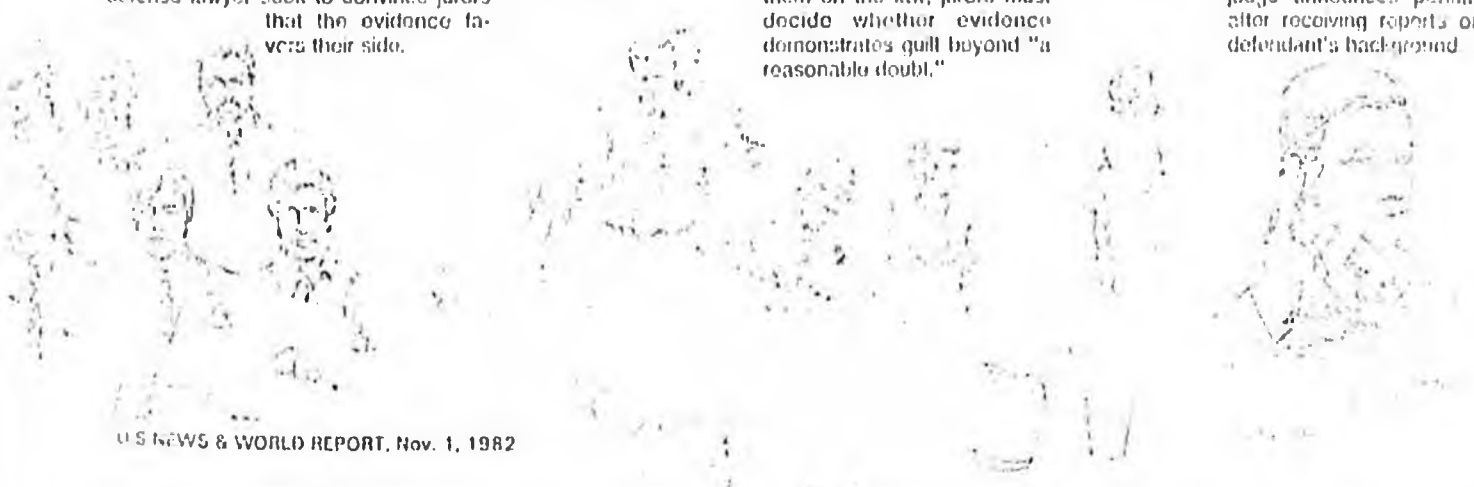
everything we can to assist our clients," comments John Ackerman, president of the National Association of Criminal Defense Lawyers. "If we fail to do so, we should be disbarred and can be sued for malpractice."

Once each side has presented its case, including rebuttal testimony, opposing lawyers deliver *final arguments*—perorations putting the evidence in the light they want the jury to see it.

Jury takes the driver's seat. The judge then instructs jurors on how to apply the law to the facts. For example, the jury may be told that it can find the defendant guilty of first-degree murder only if the evidence shows intent to kill and premeditation. By contrast, killing someone through negligence constitutes manslaughter, which carries a far lower penalty.

Jurors sometimes are told the range of penalties for the offenses at issue, so they have an idea what a finding of guilty will mean to the defendant. In a few states, juries recommend punishments or actually impose them. In others, the judge sets the punishment.

Nearly three fourths of trials end in guilty verdicts. Virtually all such verdicts are appealed, if for no other reason than that the courts now afford every defendant the right to an attorney for appeals as well as for trials.



Defendants held in custody before their trials begin serving prison terms—if one is imposed—while the appeal is pending. Some of those who were out on bail before trial are locked up once the jury returns a guilty verdict, but many remain free until appeals are exhausted.

A person can seek reversal of a con-

Final arguments. Prosecutor and defense lawyer seek to convince jurors that the evidence favors their side.

viction from the trial judge, then from an appeals court and then from the state supreme court. Separately, civil suits can be filed either in state or federal courts seeking release on the ground that a conviction was contrary to *due process of law*—a constitutional right not to be deprived of one's liberty except in accordance with fair procedures. These *habeas corpus* suits—a Latin phrase for "You have the body"—are sometimes taken all the way to the U.S. Supreme Court.

In appellate proceedings, no witnesses are called, and there is no jury. The judges simply review the transcript of the trial, read lawyers' briefs and listen to their oral arguments.

Posttrial maneuvering can drag on four or five years or even longer. A task force appointed by Atty. Gen. William French Smith reported in 1981 that "public confidence in the criminal-justice system tends to be eroded by a perception that the law allows a virtually endless stream of attacks on the conviction."

Appeals courts also come under attack for reversing criminal convictions on technical points. However, only a small percentage of guilty findings are in fact reversed.

Contours of a crackdown. Congress, state legislatures and the courts themselves have paid increasing attention in recent years to demands for criminal-justice reforms.

High on the agenda is speeding up the handling of cases. Chief Judge Lawrence H. Cooke of New York State, citing the dozen postponements that occur in the average criminal trial in New York City, has launched a crackdown on delays that he hopes will be a model for the nation.

Declares Cooke: "Judges have got to stiffen up and not give in to the 'easy come, easy go' court system favored by the lawyers."

In 1974, Congress passed a law requiring trials within 100 days of a federal indictment; most states now have similar rules. But the defendant may give up his right to a speedy trial, hoping that a delay will benefit him or her. "Speedy-trial guidelines have had little impact because they are not enforced," says Alexander Aikman of the National Center for State Courts.

Reformers also want to clamp down on appeals. Among changes being considered in Congress and some states are limiting convicts' right to file *habeas corpus* suits and putting time limits on steps in the appeal similar to the speedy-trial laws now on the books.

Others would lessen the restrictions on what is admissible as evidence.

Alaska has eliminated plea bargaining, and some local prosecutors have curtailed the practice, especially for aggravated offenses.

Says Robert Macy, district attorney of Oklahoma City: "If the defense wants to accept my recommendation, fine, but I don't bargain."

Even so, few sweeping changes are likely in what have come to be regarded as basic American rights.

"Due process of law was the weapon used against arbitrary, capricious and unreasonable acts by government officials," declares criminal-law expert Isidore Starr. "It may permit some criminals to escape their just deserts, but it also protects the innocent. The principle should not be changed lightly." □

Our Rights in Court: How They've Changed

Americans accused of crime enjoy a wide array of legal protections rooted in the U.S. Constitution and the body of common law inherited from England.

These safeguards—interpreted, reinterpreted and amended over the decades by the courts, Congress and the state legislatures—"are extended to defendants not because we sympathize with their actions but because in upholding their rights we protect our own," says Judge Damon Keith of the U.S. Court of Appeals for the Sixth Circuit.

Still, there are sharp divisions over how broad these protections should be. Some critics assert that the courts have applied them so sweepingly that the legal system now favors defendants unduly.

For a look at key criminal-law issues and the debate over them—

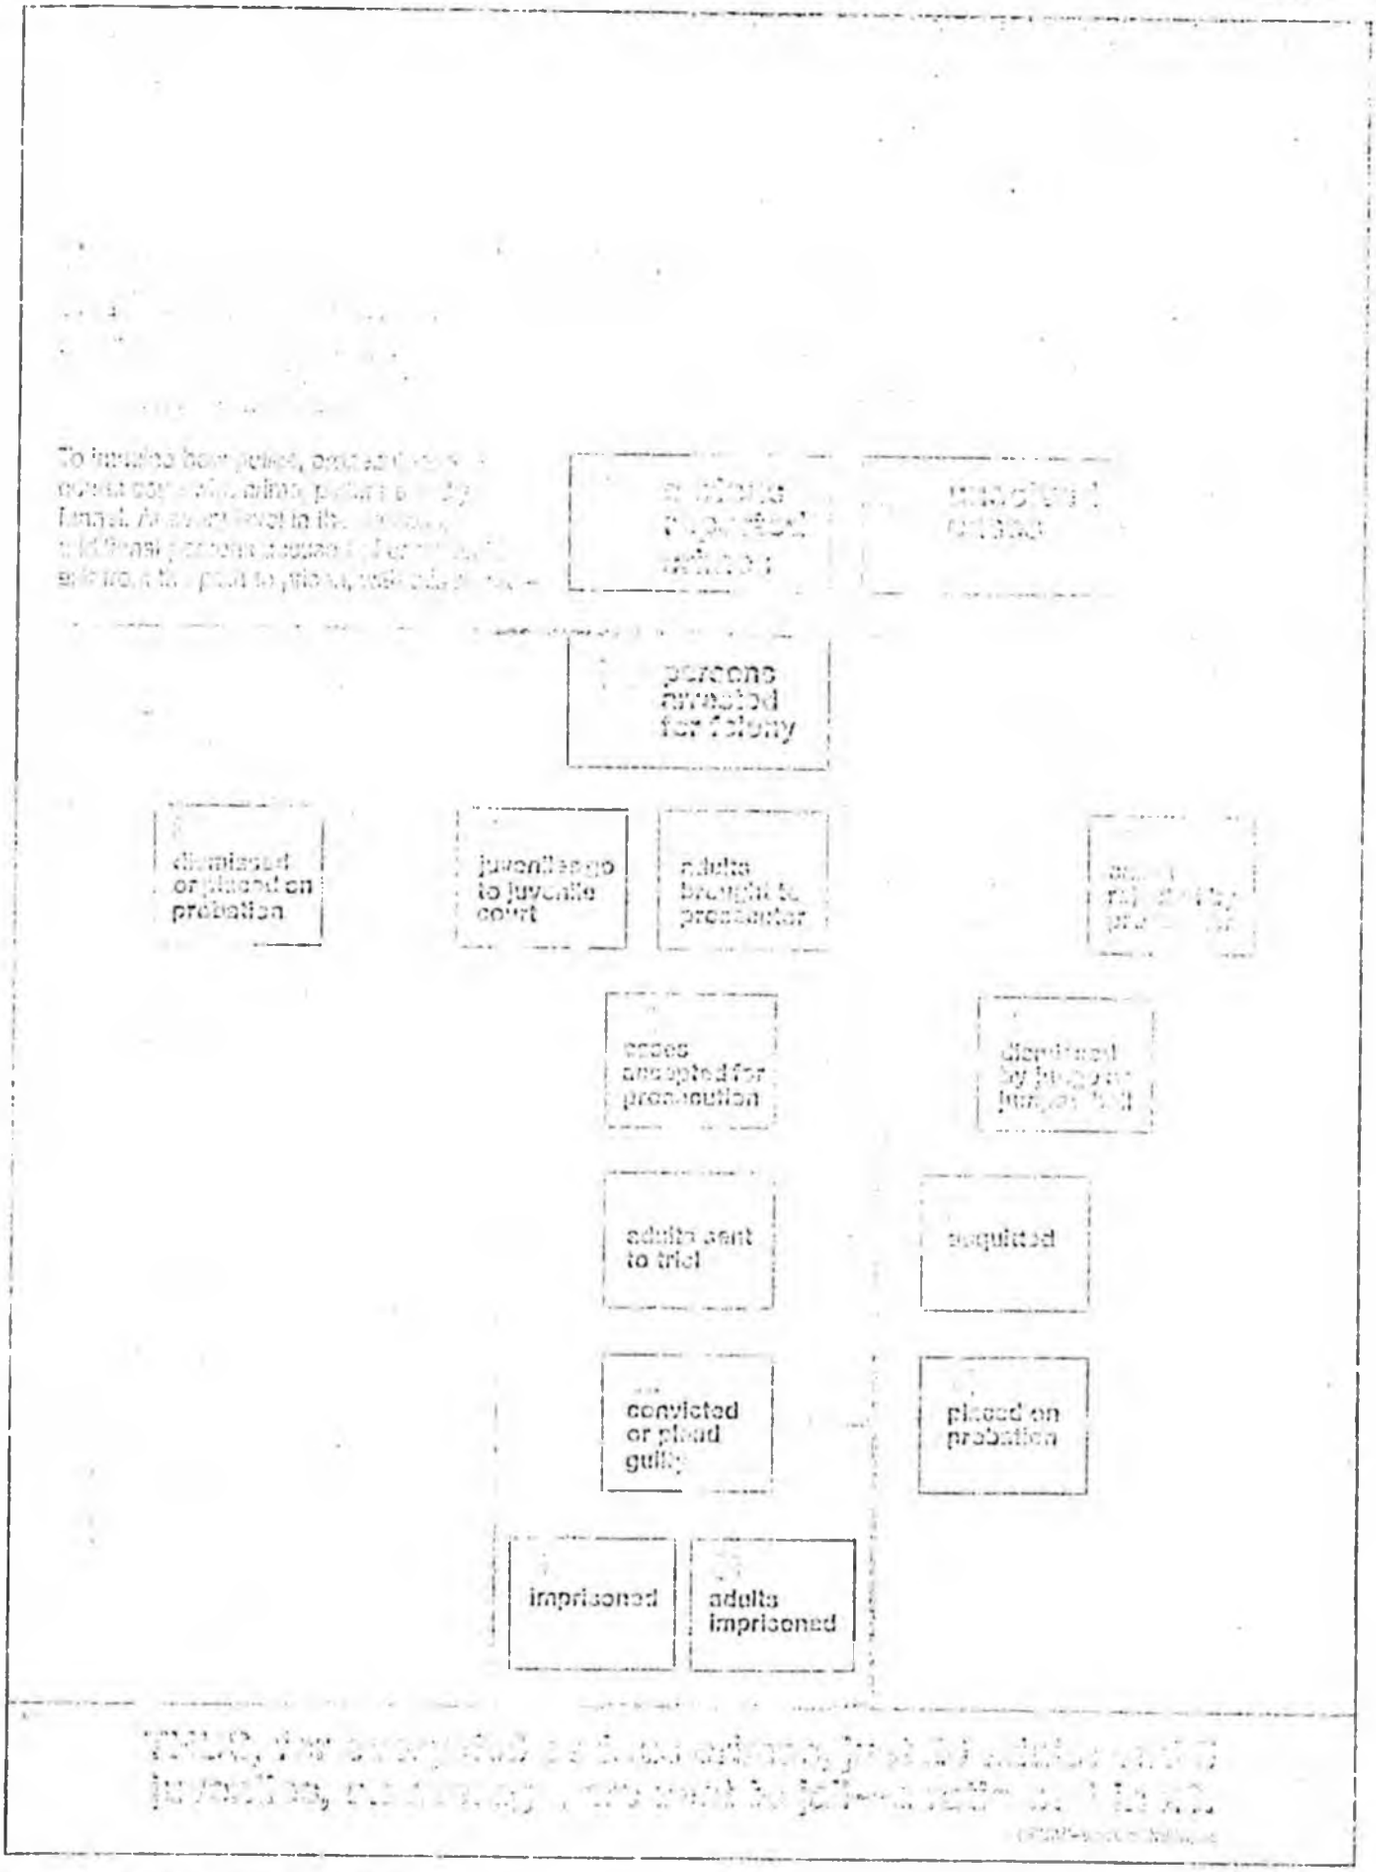
No unreasonable searches. Since 1961, the Supreme Court has ruled in a series of cases that evidence obtained by police in violation of the Fourth Amendment cannot be used in court. To protect people against "unreasonable searches and seizures," the Constitution requires police to get a warrant from a judge before invading privacy in pursuit of evidence. The Justices have held that warrantless searches can be made only in connection with an arrest or when an object is in plain view.

Police officers complain that the Court has not provided clear and consistent guidance. For example, the Justices ruled that officers need a warrant to search containers in an automobile, and then just a year later reversed themselves.

Critics argue that evidence gathered in good faith should be admissible even if seized in violation of court-mandated procedures. Defenders of current law say this would spur undue intrusions on privacy.

Self-incrimination ban. The Fifth Amendment provides that a person cannot be compelled "to be a witness against himself." The Supreme Court ruled in the 1966 case of *Miranda v. Arizona* that before questioning suspects, police must tell them of their rights to remain silent and to have a lawyer present. Statements obtained under coercion were declared inadmissible, and some convictions have been overturned on this basis. Asserts Chief Justice Robert Donnelly of Missouri: "The *Miranda* rule is an example of tipping the balance in favor of the accused."

Proponents say the procedure keeps law officers from abusing persons in custody. "I wouldn't want to see the third degree come back," says one prosecutor.



Presumption of innocence. Under English common law, accused persons are presumed innocent until they plead guilty or are tried and convicted. Traditionally, they were seen as entitled to release until trial unless there were grounds to believe they would flee.

Because many criminals often commit crimes while on bail, however, the trend in the U.S. has been to give judges the power to deny bail to suspects considered dangerous to the community. Civil libertarians oppose such "preventive detention" as contrary to the presumption-of-innocence principle.

Other defendants' rights—all widely accepted:

- The Sixth Amendment gives defendants the right to a trial "by an impartial jury."
- The Fifth Amendment prohibits double jeopardy—being tried more than once on the same charge.
- Under a traditional doctrine of adversary justice, witnesses may testify only to what they know first hand. Hearsay—secondhand information—is inadmissible because the other side cannot cross-examine the source.
- The self-incrimination ban also bars disclosing a defendant's criminal record to jurors unless he chooses to testify in his own defense.

Police Find Themselves in Double Squeeze

It's no wonder the forces in blue don't catch more crooks. Their budgets continue to get tighter and society keeps giving them extra chores.

For America's police, the rise of violent crime during most of the last two decades is only headache No. 1.

Police officers are expected not only to collar lawbreakers but perform a wide array of other community roles as well, from argument settler to dogcatcher. They are what one chief calls with pride, "do-everything guys."

Yet declining revenues and new federal priorities have caused many police forces to shrink even as population, crime volume and paper work swelled.

"Police work used to be a very comfortable world in which we did pretty much what we pleased," says Minneapolis Police Chief Anthony Bouza, a 29-year veteran of law enforcement. "But the pressure of street crime has changed all that and created heavy demands for improved performance."

To meet the challenge, a new breed of cop has emerged, far better trained than his predecessor of only 10 years ago. The language of police chiefs now includes such business-school terms as "cost analysis" and "managing by objective." The computer is becoming as standard a piece of police equipment as the .38 special.

The modern management techniques and new technology have been grafted onto what is probably the most decentralized law-enforcement network in the world, a jumble of overlapping jurisdictions.

Since the first full-time professional foot patrolman was assigned his beat in Manhattan in 1845, five levels of authority have grown up: Municipal forces, ranging from New York City's 23,351 sworn officers to any number of one-constable hamlets; county sheriff's units; state police forces, often dubbed "the highway patrol"; national-government agencies, of which the Federal Bureau of Investigation is only the best known, and many independent, specialized police units such as housing, transit and park police.

Illustrating the potential for chaos in such a system, an Encyclopaedia Britannica writer created a hypothetical European who is studying in California, picks up a young woman in Nevada, brings her back to campus and murders her. The investigation could involve university police, town police, a county sheriff's office, the FBI because the criminal crossed state lines, immigration authorities because the suspect is a foreigner and, if the woman used drugs, narcotics agents.

The sheer numbers of police units in the U.S. boggle the mind. The FBI receives annual crime reports from more than 15,000 units large enough to keep such data. In addition, there may be as many as 3,000 smaller forces. At the federal level, there are armed law-enforcement and investigative officers operating in more than 100 agencies.

Where most Americans live and work, though, the backbone of law enforcement is the local cop, who represents the overwhelming majority of the estimated 490,000 sworn full-time peace officers on duty nationwide. Affirmative-action efforts have brought women into law enforcement in recent years, but 95 percent of U.S. police officers are male.

Many people think of police work as highly dangerous, and there is no doubt that it can be fatal—about 100 police officers die each year in work-related incidents. Still, the law-enforcement death rate is about half that among construction workers, miners, farm laborers and firefighters.

Police careers would be riskier if officers spent all their time patrolling the streets and answering crime-in-progress reports. In all forces except the smallest, however, there are other specialties to be staffed, among them traffic control, detective work, bomb disposal, SWAT commando-type operations, juvenile delinquency, records and communications.

New York officer on his beat. Pressures on police are mounting.

The Washington-based Police Executive Research Forum has found that, as a nationwide average in towns of 50,000 population or more only 45 officers are actually on patrol in the streets out of every 100 on duty at a given time.

Crime time. Other studies have shown that police officers now spend only about 15 percent of their time dealing with crime. Rival demands vary from filling out reports to handling complaints about uncollected trash and answering medical-emergency calls.

Police always have had to juggle such diverse duties. But only recently have they had to contend with the shrinkage of budgets that has come with economic recession, reduced federal aid—including abolition of the federal Law Enforcement Assistance Administration—and, in some instances, voter-demanded cuts in property taxes.

New York City's force declined from 27,632 sworn officers to 23,351 over five

Maryland State Police unit evacuates an injured person; patrolman writes a traffic ticket. Police are only part-time crime fighters.

years. Philadelphia, Los Angeles and Boston have all lost personnel, while ever sprawling Dallas has 1,990 officers, only 22 more than in 1977.

The average-sized U.S. force decreased by nearly 8 percent between 1978 and 1981—from 130 to 120 employes. The rate of serious crime rose by 22 percent in approximately the same period.

The upshot: Hassled cops made arrests in only 19 percent of the 13 million-plus incidents of violent crime and serious property theft last year. In 4 out of 5 cases, the culprits never encountered a prosecutor, let alone a jury or a jail. The wheels of justice had no chance to grind.

Although serious crime dropped by 5 percent in the first half of 1982, the rate remains so high that in high-crime urban areas most reports of lesser offenses are filed and forgotten. There aren't enough officers to investigate them all.

What's more, prosecutors throw out a substantial number of arrests for lack of evidence. Traditionally, police officers have been rated on the number of "collars" they make—not on whether the charges can be made to stick.

Assembling a prosecutable case takes skill and perseverance that not every officer has. Studies have shown that 15 percent of the typical force makes more than half of the arrests that lead to convictions.

New breed. Despite the array of problems facing them, police leaders in many areas are upbeat about the future.

One reason for the optimism, says Chief Kenneth Medeiros of Bismarck, N.D., a 22-year police veteran, is that "the level of intelligence, education and professionalism has risen in the police community. And the screening process has improved. Gone is the day when you'd line up the applicants, look for the biggest, meanest one and give the badge and gun to him."

In 1969, only 10 states required even minimum training for police recruits. Today, all do so, with at least 120 hours of basic training mandatory everywhere and much more in some states. Course topics showcase the changing demands of police work: Crisis-intervention methods, criminal law and job-stress problems.

Even newer is a drive to make high-quality work uniform throughout the country by offering a seal of accreditation to forces that qualify. Sponsored by top police-leadership groups, the Washington-based Commission on Accreditation of Law Enforcement Agencies is field testing about 1,000 procedures. The guidelines deal with subjects such as collective bargaining with increasingly militant police unions, working with prosecutors and the courts, and minimizing use of deadly force.

The police-brutality issue is a source of strain in many departments. The Justice Department gets more than 10,000 complaints annually of officers killing or beating someone without sufficient cause, of which as many as 100 are serious enough to warrant federal prosecution. Others are charged in local courts or named in lawsuits that at times lead to big damage verdicts.

Law-enforcement leaders insist that the brutality problem is waning. Whether this is true or not, a warier breed of cop clearly has come on the scene. In Passaic Township, N.J., for example, police videotape booking procedures—and let the suspect know it. Several officers record all potentially tense street encounters with pocket tape recorders. "In many places," comments Passaic Chief Howard Runyon, "people sue the police for just no reason. In our area, the police are starting to sue such people back."

Police work is being strengthened by use of computers for paper work and by division-of-labor cooperation among neighboring outfits. A small-town unit might patrol on its own but use the sheriff's computer and ambulances.

Above all, however, law officers are striving to revive the police-community working partnership that preceded the crumbling of the inner cities and the shift from foot patrols to squad cars that occurred in the 1950s and 1960s.

"Not our job alone." In towns small and large, citizens are being asked to be the eyes and ears of the law—individually or through watch groups—and to look out for each other as well. One example is the growth of telephone networks among senior citizens. Says Bismarck's Medeiros: "We're going back to the public and saying, 'Look, folks, this is not our job alone. We're the professionals, but you've got to help.'"

Police are seeking to re-establish themselves in community life, aiming, as Houston's Chief Lee Brown puts it, "to utilize the concept of the foot patrol in a motorized way." Houston, like some other municipalities, is decentralizing its force, giving patrol officers long-term assignments to particular neighborhoods and requiring them to bone up on local problems and build a network of contacts.

Leaders of law enforcement say a start has been made toward blending new techniques and old-time enthusiasms.

Yet the outlook remains uncertain as the modern cop struggles to be crime-fighter, watchman, psychologist and "Mr. Fix-It" all wrapped into one—while the police share of public revenues grows smaller and smaller. □

The Prosecutor in Action Behind the Scenes

Most district attorneys are the courtroom crusaders they are depicted to be. But the job has another side that the public knows much less about.

The nation's prosecutors, stung by charges that they bargain justice away in the back rooms of the courthouse, are experimenting with new ways to crack down on criminals.

These 18,000 lawyers perform one of the most powerful, but least visible, roles in the justice system. As Prof. James Vorenberg of Harvard Law School puts it: "The fate of most of those accused of crime is determined by prosecutors, but typically this takes place out of public view."

Although the arrests police make and the sentences judges impose get most of the attention, it is the prosecutor who decides which cases go to court and what law violations are cited.

Grand juries—citizen panels that review criminal cases before they are filed—evolved centuries ago as a check on prosecutors' authority. But they rarely have served that purpose well and nowadays are used routinely in only half the states.

Violations of federal law range from such white-collar crimes as tax evasion, fraud and bank embezzlement to drug peddling, kidnapping and racketeering. These infractions are prosecuted by 94 U.S. attorneys around the country—appointed by the President—and by 1,900 assistant U.S. attorneys and nearly 400 Justice Department lawyers, who are based in Washington, D.C.

But most offenses, from murder and other violent crimes to shoplifting, are prosecuted in state courts by state's or district attorneys, who are elected by the voters.

DA's are the most political figures in law enforcement. The job sometimes is a springboard to higher office and just as often is fought over by rival political factions determined to prevent investigations of themselves or their allies. "The biggest myth about prosecutors is that they charge people for malicious reasons," according to Dean John Jay Douglass of the National College of District Attorneys. "I'm more concerned about what they don't do—by failing to investigate or dismissing cases—than what they do."

Of the some 2 million serious criminal cases filed each year, not 1 case in 5 actually goes to trial. The others end in dismissals or guilty pleas. Critics charge that prosecutors all too often settle for pleas to lesser charges than the offense warrants.

Typical case: A mugger gravely injures his victim and is charged with both robbery and assault. A prosecutor agrees to drop the assault count if the suspect pleads guilty to robbery. That avoids a trial but also reduces the maximum penalty—a result that may anger crime victims and others.

For their part, many prosecutors assert that the large volume of cases leaves them no choice but to plea bargain in many instances. Other DA's say plea bargaining is appropriate only if a prosecutor discovers that he can't prove an initial charge. "The public has the notion that prosecutors are giving away the store, but it's not true," says District Attorney Edwin Miller of San Diego. "And if anyone does go too far, he must answer to the voters."

The public image of prosecutors is largely shaped by television programs and the movies, in which they are portrayed battling defense lawyers in court. That is part of their job, but most of their work is behind the scenes, overseeing the gathering of evidence.

In the past, district attorneys often waited for police to come to them with proof of wrongdoing. Then they reached a decision on whether a case was worth taking to court.

Today, prosecutors increasingly instruct detectives on what evidence is needed to win in court. In complex cases, they supplement police with their own investigators. Says Los Angeles County prosecutor John Van de Kamp: "We can't rely totally on police. We end up picking up the ball in many cases."

Target: The hard core. Simultaneously, district attorneys are stepping up their efforts against "career criminals"—those with long records who commit numerous crimes.

It used to be that chronic criminals often were out on bail committing new offenses while their cases moved slowly through the courts. This still happens sometimes, but prosecutors these days tend to assign such cases to their best aides, with instructions to handle them promptly. "We're getting these cases to trial within two months," says District Attorney Harry Connick of New Orleans, who adds that the pursuit of repeaters is prompting judges to impose stiffer penalties.

Prosecutors also are addressing the long-neglected problems of victims and witnesses. As cases are delayed time and again—often on the day they are scheduled for trial—witnesses and victims who have dutifully reported to court sometimes become frustrated and refuse to participate further.

To avert this, many prosecutors have set up units to inform those interested in a case of its progress. Some DA's also listen to the victim's version of a crime before making a plea agreement with a suspect. "Prosecutors are becoming champions of victims' rights, and our image is improving," says Louisville prosecutor David Armstrong.

While these and other techniques are making life tougher for criminals, prosecutors are sure to remain under fire.

Comments State's Attorney Andrew Sonner of Montgomery County, Md.: "In this job, your enemies accumulate. You investigate someone; you refuse to fix parking tickets; police object when you charge them with brutality. Prosecutors will always be under pressure." □

A big part of prosecutors' work is outside court, supervising gathering of evidence.

Jury System Not Perfect, But It Works

The ordinary citizens who decide guilt or innocence get high marks from most experts. Still, they're being put under closer scrutiny than ever.

Despite scientific "proof" that it cannot fly, the bumblebee does. So, too, the jury system: By logic, it shouldn't deliver justice, but it usually does.

"Why should anyone think," asks former U.S. Solicitor General Erwin Griswold, "that 12 persons brought in from the street, selected, in various ways, for their lack of general ability, should have any special capacity to decide controversies between persons?"

Yet much more often than not, most observers agree, when jurors are left to apply their experiences and common sense to the evidence presented to them, they render as impartial a brand of justice as is humanly possible.

Trial by jury is guaranteed by the Sixth and Seventh Amendments to the Constitution. But the system isn't frozen in an 18th-century mold.

A growing reform movement is easing many strains, helping to bring "12 good men and true" into the modern era.

Jury service can be an ordeal. Jurors must endure a tedious and intrusive selection process, sit bemused by lawyers' legerdemain and benumbed by judges' hocus-pocus, and then somehow sift the facts and return what may well be an unpopular verdict.

More than 3 million citizens a year are summoned for jury service. Some are on duty for several months, but the trend is toward the so-called one-day, one-trial system: Jurors who aren't selected go home after one day; those who are chosen serve for just one trial.

The old key-man system of calling only community leaders has been largely abandoned in favor of random lists compiled from voter and tax rolls, telephone books and car registrations. Many potential-juror lists are computerized, but some counties still draw numbers out of a barrel.

Not always a dozen. The number 12 is no longer sacrosanct in civil cases. As few as six jurors now are used in many trials, and 31 states allow less-than-unanimous verdicts.

The citizens summoned are, in a sense, on trial, not for any crime but for their attitudes and prejudices. In what is known as voir dire—old French for "to say the truth"—jurors not accepted by the prosecution or the defense are excused either for cause, or without explanation, up to a limit.

In these choices, lawyers long have relied on ethnic stereotypes and seat-of-the-pants hunches to a degree. Today, however, the emphasis is on more-sophisticated selection techniques.

Firms that specialize in jury research for lawyers use such tools as "micromomentaries," fleeting changes of expression that indicate whether a potential juror is telling the truth; "alpha factors," which indicate juror assertiveness, and trick questions to spot hidden biases.

Elaborate shadow juries, chosen for their similarity to the real jury, observe the trial and each night feed back their impressions to the lawyers trying the case.

Lawyer Robert F. Hanley says simulated opening arguments before surrogate jurors helped win a 1.8-billion-dollar antitrust judgment in 1980 for his client, MCI Communications Corporation, against AT&T. The award was the largest antitrust jury verdict in U.S. history. Hanley and associates honed their case by watching the practice jury deliberate behind a see-through mirror.

Research for the rich? Many lawyers see jury research as just another aid to winning cases.

But critics say all the psychological poking into jurors' backgrounds invades privacy, smacks of unconstitutional manipulation of the justice system and, because of the costliness of such a process, tends to favor the richer side in a dispute.

What's more, jury selection now can take almost as long as the trial itself. In one California murder trial of three defendants, it took five months to question more than 250 potential jurors in a screening that filled more than 18,000 pages of transcript. The trial took seven months.

Jurors' ability in complicated cases to understand the issues and render intelligent and impartial verdicts is increasingly being called into question. In England—the birthplace of the jury in the Middle Ages—and in many other countries juries have been abolished in most civil cases for this reason.

The Supreme Court so far has refused to decide whether some cases are too complex to be decided by a jury. But Chief Justice Warren Burger has commented that "it borders on cruelty to draft people to sit for long periods trying to cope with issues largely beyond their grasp."

Other experts are not so sure. "We currently know little about the capacity of juries to evaluate rationally the evidence in complex cases or about the capacity of judges to do the same," says Richard Lempert of the University of Michigan.

In their classic study, *The American Jury*, Harry Kalven, Jr., and Hans Zeisel of the University of Chicago found that in about 80 percent of the criminal and civil cases examined, judges agreed with jury verdicts. In civil cases, juries were only slightly more generous with damage awards than judges.

Unpopular jury verdicts, such as the insanity acquittal of John W. Hinckley, Jr., President Reagan's assailant, fuel critical scrutiny of the system by the public and press. Nonetheless, an abiding, almost mystical faith in a jury of one's peers is deeply rooted in America. In the words of the late Judge Frank W. Wilson of the U.S. district court in Chattanooga:

"For centuries now, the institution of the jury has helped assure English-speaking people all over the world that they got the kind of justice they wanted, and not just the sort of justice that the experts thought was good for them." □

Getting Onto the Bench

Judges, who serve as the conscience of the justice system—setting its tone and shaping its ground rules—typically reach the bench with a helping hand from politicians. But once installed, they are hard to dislodge.

At the federal level, the 132 appeals and 515 district-court trial judges are nominated by the President and must be confirmed by the Senate. Most are recommended by home state senators, who if they are of the President's party have what amounts to a veto over nominees.

After clearing these hurdles, a federal judge acquires unique job security. Only impeachment and conviction by Congress can remove him—a rare event that has not occurred since 1936. A 1980 law increased the judiciary's power to discipline its members through such steps as suspending a judge's right to hear cases. The power of federal judges is broad: The Supreme Court reviews fewer than 1 percent of their rulings.

In the states. Selection and duties of the 26,000 state and local judges vary widely. All states have supreme courts, 30 have intermediate appeals courts and all states have trial courts. Most cities have courts limited to city-law infractions, mostly traffic cases.

When the nation was founded, most state judges were chosen by governors or legislatures. But by the 1830s, says Larry Berkson of the American Judicature Society, "people resented that property owners controlled the judiciary."

In the decades that followed, most states made judgeships elective and many judges soon came under fire as "political machine" candidates. States then began shifting to merit systems in which judges are chosen by governors but go before voters periodically for a yes-or-no vote.

Today, judges are elected in about two thirds of the states, and appointed in the remainder.

Although all states have agencies to discipline misbehaving judges and recommend removal in extreme cases, it usually takes blatant or repeated wrongdoing before a judge is ousted.

Corruption Is Still a Fact of Life

A cop on the beat palms an apple from a grocer's bin. A prosecutor snares a campaign donation by ignoring evidence of a politician's crime. A judge pockets a bribe to let a defendant off easily.

Despite the rectitude maintained by the majority of public servants, corruption small and large does reach into the justice system at times.

Police. From every sign, the problem is greatest with the police. Patrol officers and detectives come into daily contact with the seamy underside of society, where the itch to make a fast buck can be contagious.

A drug dealer caught with his merchandise, for example, might offer officers valuable narcotics under the table not to book him. More often, the effort is to buy permanent insurance against arrest. The Mafia and other organized-crime elements try to shield their gambling, drug-selling and prostitution rackets by putting cops "on the pad" for regular payments.

This type of police corruption—an old story in the big cities of the East and Midwest—now is a growing concern in the Southeast, where a flood of illicit drugs is coming into the country.

In perhaps the most thorough probe of police wrongdoing ever, conducted a decade ago in New York, the so-called Knapp Commission found "corruption to be widespread." The panel described two kinds of violators: "Meat eaters," who "aggressively misuse their police powers for personal gain," and "grass eaters," who "simply accept the payoffs that the happenstances of police work throw their way."

In a Yale University study of police officers in Boston, Chicago and Washington, D.C., about 20 percent were seen breaking the law or admitted that they do so. Typical offenses: Accepting money or goods from a business in exchange for better protection and overlooking minor infractions; taking bribes to void traffic tickets.

Judges. Like the police, judges can use their power for personal gain. In one recent case, a Washington, D.C., judge was found guilty of accepting free moving services from a firm after dropping hundreds of traffic tickets the company had accumulated.

Peter Coruzzi, a New Jersey trial judge, recently was convicted of receiving $22,000 in bribes for releasing one convict from prison and giving another probation instead of a jail term. Coruzzi was sentenced to five years in prison after the verdict, which he is appealing.

Improper influences can creep into judges' lesser duties, too. State judges often must run for re-election, and much of their campaign aid comes from lawyers who expect in return such favors as allowing them delays in filing court papers.

Prosecutors. State's or district attorneys, themselves elected officials, also can be tempted to breach the law for money or political favors. They have wide discretion in pressing—or dropping—investigations, and most of the decisions they make are not put on the public record.

How common abuses of this power are, no one knows, because prosecutors' decisions are seldom probed. Occasionally, wrongdoing comes to light. In one case, a Michigan prosecutor was convicted of embezzling money allocated for paying informers and using it to buy a house.

Corrections officials. Prison guards and probation and parole officers are subject to bribery attempts by inmates and others wanting special privileges. In Westchester County, N.Y., two state-prison employes pleaded guilty in mid-1982 to taking bribes for permitting drugs behind bars.

Law-enforcement authorities have stepped up efforts in recent years to clean up corruption within their own ranks. A special staff of the New York state attorney general's office has successfully prosecuted several hundred police officers and other justice officials. The U.S. Justice Department's public-integrity section has pursued charges of corruption in law enforcement around the country since 1976.

The result: Most experts believe there is less crookedness in law enforcement today than in the past. Yet with power spread so widely, corruption will never be stamped out entirely. □

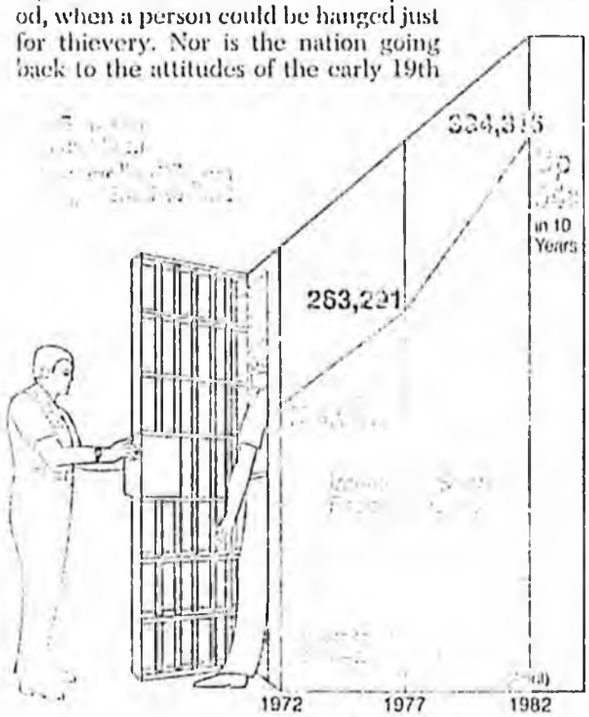
Get-Tough Approach Makes a Comeback

Judges are handing out stiffer jail terms these days, but that is no panacea: Prisons already are overflowing and there is no relief in sight.

Lock 'em up and throw away the key!

Crudely put, that increasingly is the rallying cry in an America fed up with violent crime.

The idea that criminals can be reformed into law-abiding citizens is waning after holding sway for almost a century. Edging it out is the urge to punish for the sake of punishment.



Legislators in state after state, angered by the many ex-convicts who return to crime, have been enacting mandatory prison terms. Judges are handing out longer sentences on their own. "There's a lot of pressure to make the system swift and harsh," says criminologist Sheldon Messinger of the University of California.

The result: America's prisons are bulging with nearly 400,000 convicts, double the total of a decade ago. The U.S.—with one of the world's highest rates of violent crime—also has one of the highest incarceration rates.

No one suggests the country is returning to the harshness of the colonial period, when a person could be hanged just for thievery. Nor is the nation going back to the attitudes of the early 19th century, when Americans invented the penitentiary and, in the words of Thomas Murton, a former Arkansas prison warden, "It was assumed that there was an equation between sin and crime. . . . Inmates were isolated to reflect on their evil deeds until they became converted."

Still, the mood today has more in common with the 1700s and 1800s than with the first two thirds of the 20th century, when "rehabilitation" was the gospel of penologists. That school became entrenched between 1900 and 1920 as most states created systems of probation and parole. Even now, despite the crackdown, these systems supervise three fourths of the 2 million persons under a judge's sentence.

Instead of serving time behind bars, offenders on probation or parole hold jobs or go to school while reporting periodically to a court official. The reasoning is that this helps them adjust to society's pressures and makes them less likely to return to crime than would spending idle time in prison with hardened criminals.

Probationers avoid prison altogether. Parolees are released early; to ease their transition to normal life, many live for a while in halfway houses in residential neighborhoods. Those caught breaking the law or associating with ex-convicts usually are sent back to jail, and may forfeit a chance for such special treatment again.

Studies show that up to 25 percent of probationers and parolees are arrested for new crimes. Defenders of the rehabilitation concept see that as a tolerable success ratio. Critics see it as proof the system is still too lenient.

As for lawbreakers who do considerable jail time, only a small fraction get much job training or education while behind bars. Most prisons do not provide much of either, and many prisoners are not interested in conventional forms of self-improvement, anyway.

Many inmates are in no sense rehabilitated when they leave prison. Recidivism—crime by former convicts—cannot be measured precisely, but it is substantial. The New York-based Criminal Justice Institute reports that about one third of prisoners have served time previously. But some experts believe the true rate of repeat criminality may be 70 percent or more. What the official figures do not show is how many persons return to crime after one conviction but are never caught again.

Arkansas inmates on the "hoe line." Rehabilitation is giving way to punishment more and more.

Increasingly, the view of many judges and other experts is that the best way to cope with recidivism is simply to keep criminals in prison—and off the streets—longer.

Yet there continue to be widespread disparities in sentences. Because each of the country's 28,000 judges has his own idea of justice, of 3 persons committing similar offenses, 1 may be put on probation, another may get a short prison stint and the third a long stay in custody.

In many states, stretches in prison vary by location. In a city where robberies are common, a judge might send an armed robber away for 10 years; the same crime occurring rarely in a rural area might bring 35 years.

Such apparent inequities feed public cynicism and exacerbate prisoners' feelings that the world is stacked against them—feelings that can explode in more antisocial acts later on.

Polls consistently find that Ameri-

cans believe the courts are too lenient in imposing sentences. Judges respond that the public typically knows only the facts of a crime and that jurists, in setting a penalty, must also take into account reports prepared by court officials on defendants' backgrounds.

Propelled by public indignation, many state legislatures in recent years have narrowed the discretion permitted judges and parole boards. Nine states have adopted so-called determinate sentences, which specify in advance the amount of time to be served and bar early release. Another approach, sentence "enhancement," used in 46 states, requires judges to give longer terms to repeat offenders. In some jurisdictions, an extra penalty also attaches to the use of a gun in a crime.

Two states, Minnesota and Pennsylvania, have adopted sentencing guidelines that tell judges what penalty to impose based on facts about the crime and the defendant.

Nationwide, partly as a result of such laws, the average time that convicted felons spend behind bars has risen to 26 months. That average would be longer if more cells were available. But lengthened sentences and stepped-up prosecutions have crammed prisons to overflowing. Parole boards must serve as a "safety valve" at times—releasing inmates early just to make room for new prisoners.

Accordingly, most inmates do far less prison time than what is announced by judges. In many states, one third of a term is routinely chopped off if a prisoner commits no serious infractions while in custody. When other credits are taken into account—such as subtracting time spent in jail awaiting trial—a person with a "life sentence" can be free in less than 10 years.

Bed check. About 90 percent of today's 400,000 prison inmates are in state institutions; the remainder are in federal lockups. Based on the view of corrections experts that inmates should have 60 square feet of space each, the nation's prisons are overcrowded by more than 100,000 persons.

That doesn't even count the 90,000 inmates serving one year or less in local jails and some 70,000 suspects housed there while awaiting trial.

Congestion and other poor conditions have prompted courts in 31 states to order prison improvements. But efforts to keep up with the inmate surge are falling short.

The 90,000 cells either under construction or on the drawing boards will not be enough to accommodate newly arrived prisoners, let alone to reduce overcrowding. Occupancy in what one defense lawyer calls "the crossbar hotel" jumped in 1981 by 40,000—more than 12 percent.

Providing adequate prison space would cost several billion dollars, and there's no sign that either legislators or the voters are willing to foot the bill. A Gallup Poll shows that 57 percent of Americans think their states need more prisons, yet only 49 percent would raise taxes to pay for them.

Fingering "heavy hitters." Many experts doubt that the answer to the crime wave is more prisons, anyway. They say what is needed is a more coherent sorting out of who should be sent to prison and who should not be. "We must make sure that the heavy hitters go to prison but that the lightweights get probation," declares Brad Smith of the National Council on Crime and Delinquency.

Louisiana's electric chair.

Some criminologists believe the stiffest sentences ought to go to persons who have the earmarks of "career criminals." Such things as a history of drug abuse, juvenile delinquency and a poor employment record suggest a likelihood of future lawbreaking, they say.

Criminals who were considered to be better bets for rehabilitation would be placed on probation, which costs only one tenth of the more than $10,000 needed to house a prison inmate for a year.

Critics of this approach argue that no one can accurately predict a person's behavior and that to base sentences on sociological theory is unjust. They contend that respect for the law is undermined unless people are punished evenhandedly for their infractions.

Rehabilitation efforts have not been abandoned. Prison-industry programs are being expanded so that at least some inmates can repay more of the costs of their care and possibly provide restitution to their victims. Even so, many convicts emerge from the penitentiary more disposed than ever to commit crime.

Experts predict that the moves toward more punitive sentences and better rehabilitation opportunities will continue simultaneously, limited by the tax money available.

"Legislators are coming up with patchwork solutions to sentencing," says Robert Cushman of the Sacramento-based American Justice Institute. "They want to banish criminals, but they don't want to pay for it." □

The Legal Logjam On Death Row

Opinion polls show a majority of Americans believe that murderers—in extreme cases—ought to be given a dose of their own medicine.

Yet few of the more than 1,000 persons under sentence of death are likely to be executed soon. Because of fierce legal wrangling, no more than five death-row inmates have been put to death since 1967.

Capital punishment has had a checkered history in America, starting in colonial days when a number of crimes ranging from murder to witchcraft were hanging offenses. In the late 1960s and early 1970s, various legislatures abolished the death penalty as being too harsh. But by the 1980s, many states had restored it, and for a time almost 200 were being executed each year.

In the 1960s, the civil-rights movement was galvanized into action by evidence that blacks were being executed more often than whites committing similar crimes. A legal attack was launched, and in 1972 the Supreme Court held that Georgia, which alone has accounted for nearly 10 percent of the 3,530 U.S. executions in the last 50 years, had violated the Constitution's ban on "cruel and unusual punishment." The ruling struck down all state death-penalty laws.

Though the justices split in this and later cases, the majority holds that the death penalty is constitutional if imposed in a consistent and nondiscriminatory manner for truly heinous crimes.

At present, there is no federal death statute, but since the Court's ruling, 37 states have adopted new laws allowing capital punishment for murder. Some also permit it for aggravated rape or kidnapping.

Death-row inmates seek to prove that even the revised statutes are unfair. Many prisoners' appeals, however, are expected to be exhausted in a few years—perhaps unleashing the biggest round of executions in a half century.

In Prisons, the Pendulum Is Even Headed Worse

Loss of freedom, overcrowding, bad food and dangers behind bars make convicts angry at society. But a close-up look at two prisons shows how improvement of conditions can dampen resentments.

WARTBURG, Tenn.

The man who murdered four people in what he calls "a small reign of terror" has a key to his own cell.

The man who blew off his neighbor's foot and then bashed him in the face with a shotgun butt is treated with respect by his guards.

The man who burgled pharmacies to get drugs can gripe about prison life, and the warden listens.

Here, in a green valley hugged by the high hills of East Tennessee, is the Morgan County Regional Correctional Facility. If there could be such a thing, this would be a prisoner's paradise.

Hell is on the other side of the mountain, a fortress of stone and steel called Brushy Mountain State Prison. The two penitentiaries are just 2 miles apart as the crow flies, 9 miles by winding country road and half a century in terms of how criminals are treated.

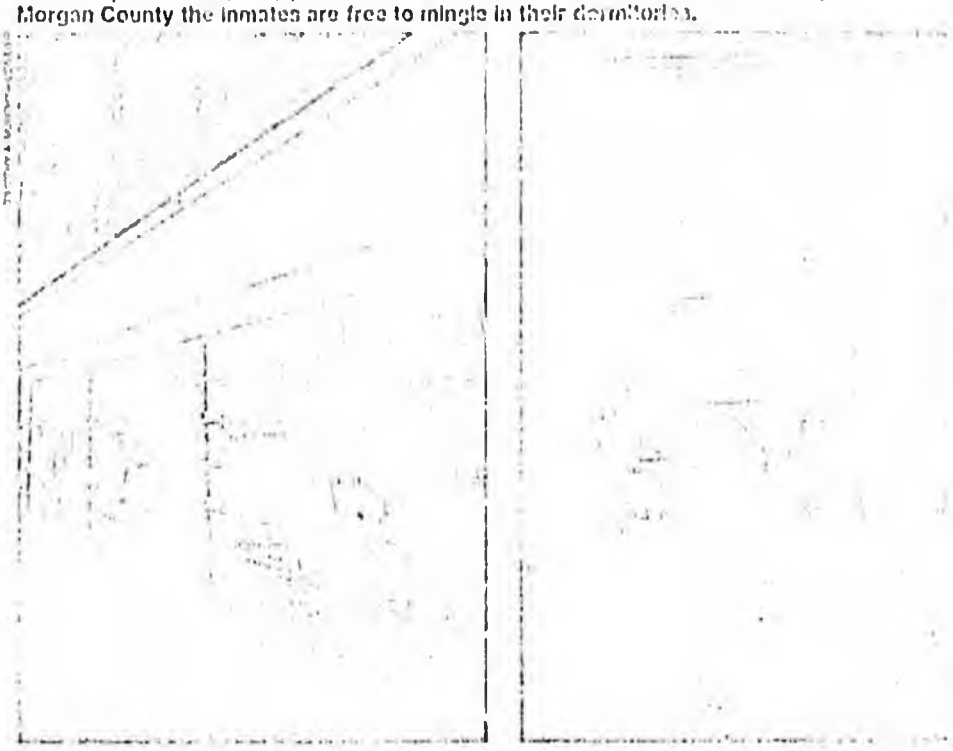
There are murderers, rapists, thieves and child molesters in both facilities. Yet one offers a modicum of hope that some criminals can be rehabilitated. The other is simply a place for punishment.

"Brushy," as the convicts call it in tones of awe, looks, smells and feels like a zoo for humans. Behind its 20-foot-high stone walls, topped with guard turrets, concertina wire and 2,300 volts of electricity, are cells in use that, though soon to be improved, have been ruled unfit for human habitation by a state judge. A visitor is led under close escort through cellblocks, shoes crunching scraps of food that the prisoners have tossed onto the corridor through their steel-barred doors. Kept paired in narrow cells stacked four high on each floor and reached by catwalks, men bear the marks of close confinement—nearly every one has a black eye or a puffed lip, cuts, bandaged hands or crude jailhouse tattoos. They look at the passing entourage in the manner of caged creatures, with flat, blank stares or sidelong glances. Their silence is palpable.

Plotting in solitary. Only in the solitary block do the inmates show spirit. Here, seven men call out jeers about their starchy dinner: Grilled cheese on white bread, corn bread, beans and slaw. An escort says that these men, all white, got a pistol into the prison and shot two black inmates to death last February. How they managed to get a weapon into a maximum-security prison is unknown. An official shrugs: "They've got hours and hours to sit there and outthink you."

Still, there has never been a successful escape in the seven years that Brushy Mountain has been a maximum-security prison. James Earl Ray, the assassin of the Rev. Martin Luther King, Jr., somehow got over the walls in 1977 and again in 1979 but was recaptured and finally transferred to the main state prison in Nashville. There are only a few ways out of Brushy: Die, do the time or do good.

With a record of good behavior, even a murderer in Tennessee may win transfer to a medium-security prison such as Morgan County, where most inmates are young first offenders serving time for nonviolent crimes.



Campus life. From the road, the Morgan County prison looks like a high school with few windows. The warden, Otie Jones, likes to call it a "campus." Inside a 17-acre compound surrounded by a 10-foot-high chain-link fence and arranged in a circle are 16 dormitories that house about 25 men each. All but a few inmates have private rooms with toilet, washbasin, desk, wardrobe and bunk. They can lock their own rooms during daylight hours.

A man can better himself here—if he's ambitious and lacking in basic skills. There are classes that lead to a high-school-equivalency diploma. Also offered are state vocational-school certificates in welding, masonry, small-engine repair, building trades, plumbing and electricity, woodworking and food services. Correction Department officials say they have a good record of finding jobs for those who earn the certificates.

Still, the atmosphere of this institution reeks of servitude, not scholarship. To be inside the compound is to feel less than a man. The prisoners' rooms are hardly bigger than closets—7 by 12 feet—with bare concrete floors and cinderblock walls. At the dining hall, prisoners are given plastic forks with which to eat slabs of tough, unidentifiable meat. There are no plastic knives, the warden says, "because they just take them to their rooms to eat peanut butter."

Four times a day the men must stand like children for a head count, and be prepared to submit to a frisking at any time. There is a correctional officer for every four prisoners. Around the perimeter are three guard towers, each manned by an officer with shotgun, rifle and pistol. Outside

At Brushy Mountain, left, prisoners are locked two to a cell, while at nearby Morgan County the inmates are free to mingle in their dormitories.

the fence is a kennel with four bloodhounds. Most of the inmates pass their days at hard labor under armed guard, tending crops or chopping wood on the prison's surrounding 1,600 acres of farm and forest.

The effect of such a life is evident in the men's manner. And it is odd. Here are 421 hardened men, whose standing among fellow prisoners is based in part on dangerous misdeeds they committed on the outside and on their willingness and ability to fight for themselves on the inside. But faced with a visitor from what they call "the free world," they are diffident, uncertain, even shy. Handshakes are quick and soft; eye contact is brief.

Medium-security convicts at Morgan County work under armed guard to build a shed at kennels of bloodhounds used to track escapees.

Look at reality. To go among them is to lose some notions absorbed from TV cop shows and old James Cagney prison films. At this facility there is a degree of courtesy between guards and convicts, who sometimes exchange greetings and smiles. Convicts questioned say they accept responsibility for being jailed. Only once does an inmate approach a visitor with a tale of innocence: "Got me in here for six years for car theft and forgery, and that forgery charge is wrong because I can't read or write," says a wispy-thin youth with tears in his eyes. Then he adds, "I get out of here tomorrow. They're sending me to the nut house."

More common is the response of French Price, who says, "I should have gotten something for what I did." Price is serving a three-to-five-year term for what he did after, he says, a man tried to lure his daughters—then age 8 and 9—into a car. "I took matters into my own hands," says Price. "I went to his house and he opened the door and I shot him with a double-barrel shotgun. Blew his right foot off. His left calf, too. I wasn't drinking, wasn't trying to kill. I wanted him to suffer. He lay there on the porch and I smashed his face with the gun butt. His folks came out crying, and I said, 'Shut up or I'll shoot him again.' After he cried for a while, I told them, 'O.K., now you can call the ambulance.' Then I sat and waited for police."

In a stunned silence that meets this account, Price searches his cell for a petition for parole that he says has been signed by all the guards. It describes him as "mature, respectful and of a good nature. He does not cause any type of trouble and is not easily provoked."

Plenty of room. Violence, in fact, is rare at Morgan County because, inmates and the warden agree, it is not overcrowded. Designed to house 400 men, it seldom has more than 30 above that limit. In the two years it has been open, officials say, there has never been a knife fight. In early September a woman counselor here was held hostage for 6 hours by a prisoner armed with a sharpened nail fixed to a toothbrush handle. She was freed when tactical-squad officers burst into her office and overpowered the man, who is serving 20 years for murdering a little girl. A week later, the other prisoners were still gritting teeth over the incident: The counselor is popular, and baby killers and child molesters are outcasts in prison society. "We'd have stomped him," said one convict. The inmates say racial tensions are low and homosexual rapes just don't happen. "It's because there are no blind spots in this layout where they can grab you," says an inmate. "It's because I can put my thumb on the bullies," says Warden Jones.

The warden monitors prisoners' complaints through monthly meetings of the inmates' council, made up of one prisoner from each dormitory chosen by his peers. "But the most important things are ignored," claims a former council secretary, W. David Smithe. Among his gripes: TV reception is poor because the prison's antenna is too short to pull in signals over the surrounding mountains; prisoners suffer from gastrointestinal disorders because food trays are often dirty. The warden says he is trying to get cable TV, and a dishwasher will be used soon when a venting system can be installed.

"You want to know what it's like here?" asks Smithe, a burglar doing 10 to 18 years. "It's to become totally dependent again now you are an adult. From when and why you get up in the morning to when and what you eat, decision making is denied. You can't control your own health, your diet. In broad terms you are reduced to nothing.

"Not a moment here you don't feel some tension—a word, a glare, a move. You've got some primitive individuals here. Even if they're young, they're dangerous. It's a lie that prisons are schools for criminals, that a youth going in is learning to crack a safe. But what does occur is a learned willingness to commit crimes that were beyond you before prison. It's a state of mind that's learned. That's what makes people here dangerous."

The man with the most dangerous record here is Jim, who says, "I was an animal. I should have been executed."

Anonymity plea. Jim doesn't want to be further identified "because a certain community would scream if they knew I wasn't doing hard time." Kidnapping, armed robbery and two double murders in 1970 got him a 318-year sentence. With time off for good behavior, he jokes, "I'll get out in year 2121."

But Jim now is a model prisoner, cited by the warden as an example of how one with the right attitude can rehabilitate himself. While doing his time, he has accrued three years of college credits with a 4.0 average. He is writing a novel, working here as a teacher's aide and using his considerable wit to hold his classes' attention. Instead of teaching illiterates to read, "See Dick and Jane run," he offers lines like, "See Trigger Bates kick the warden."

His years behind bars have made him a jailspun penologist with an insider's view of how to rehabilitate criminals.

"Do contract sentencing," he argues. "Set goals for a prisoner when he comes in, that he will earn time off for getting so many years of education, for working in Alcoholics Anonymous, for self-improvement programs. Now you get good time for nothing, just for not making trouble. There's no incentive.

"We don't have prisons run by sadists," he says. "What we have are prisons run by people who are totally apathetic. The public must remember that 97 percent of all men who enter pens return to the free world. If we have guards calling us names, bad food, poor medical treatment, there's nothing we can do about it here. So when we get out, some innocent member of society suffers for the anger we bottle up in the pen. I came out of prisons in Indiana and Kansas truly vicious. I hated everybody and myself. I took off on a small reign of terror. That's why the free world should care about what happens here. Their lives will depend on it." □

The Nature and Pattern of a Lawsuit

For a look at a fast-growing American pastime: How litigation starts, what it costs, the tortuous trail it follows, the odds of winning—

"As a litigant, I should dread a lawsuit beyond almost anything short of sickness and death."

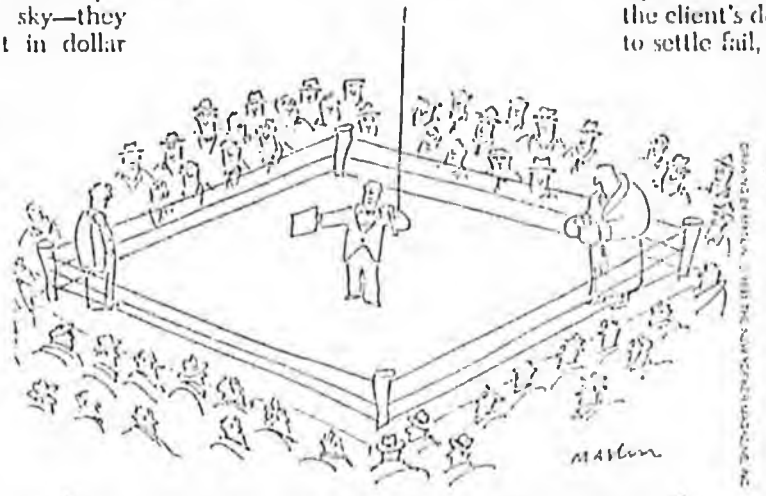
The [illegible] fear that the revered Judge Learned Hand expressed 60 years ago is felt more keenly by Americans today than ever before—and no wonder.

The flood of lawsuits has swelled to a tidal wave in recent decades—more than 12 million suits now are brought each year. Awards in big personal-injury cases are scraping the sky—they jumped almost 25 percent in dollar volume in a recent 12-month period.

Some lawsuits involve billions of dollars; others, goals on which no one could put a price, such as custody of a child. Some suits seek damages for breach of a cut-and-dried contract; others attempt to salve wounded pride.

Lawsuits, fortunately, do not erupt every time someone gets mad. The vast majority of disputes are prevented, settled or resolved out of court.

Moreover, pressure is growing to minimize use of the courts for solving disputes, particularly those that once were settled through church, school and family.



In fact, more than half of the lawyers in the United States rarely if ever set foot in a courtroom. Instead, they may advise corporate clients on tax and other business matters or negotiate sticky situations on their behalf. Many lawyers with individual clients also practice preventive law—preparing wills, trust and estate plans, and advising on financial strategies.

Yet many disputes cannot be prevented by wise planning or tightly written agreements. Planes crash, buildings collapse, and food spoils and poisons people.

New legal hot spots develop in response to changing times: The "palimony" suit against actor Lee Marvin a few years ago triggered similar suits by women who felt jilted by their live-in partners. Corporate marriages have spawned a "takeover bar" that thrives on the Byzantine intricacies of mergers and acquisitions.

Suits in the name of "the public interest" have made the courts a forum for solving a welter of social problems from discrimination to pollution.

"The litigation process was not originally designed to decide broad political questions [or] delicate balances in the allocation of scarce public money," notes Richard Neely, a justice of West Virginia's Supreme Court. He contends that courts often end up making public policy because legislators and bureaucrats all too often duck tough issues.

"In this corner, a man prone to costly and lengthy litigation."

Add to this burden the seemingly limitless spate of "silly suits"—by a schoolboy against the maker of a cookie that was hurled like a discus into his eye, by a wife against her husband for not shoveling snow off the sidewalk, by football fans against a referee's call.

A cause is born. Most lawsuits have their formal beginnings when a person goes to see a lawyer. Ethical standards bar lawyers from actively seeking out clients—so-called ambulance chasing. Lawyers who do so are subject to discipline by the courts, but advertising bans largely have been lifted, making it easier for a person with a legal problem to find a lawyer.

The lawyer either takes the case, explains why there may be no remedy or recommends another lawyer. A lawyer who passes a case on to another often receives a referral fee.

For many persons, the most painful topic during that first interview is not the private details that might have to be discussed—legally protected from disclosure by the doctrine of lawyer-client privilege—but the lawyer's fee.

Veteran practitioners typically demand $100 an hour on average. A day in court costs clients—for the lawyer alone—from $672 in the Northeast to $795 in California.

If the case involves a personal-injury claim, the lawyer will want a contingent-fee arrangement: One fifth to one half of the total money award off the top to him. If no money is received, no fee is paid. But costs of the suit, such as for investigators and expert witnesses and transcribing of testimony, must be paid by the person suing—usually on a pay-as-you-go basis.

Before a case is taken to court, a lawyer typically sends a letter or makes a phone call, vowing legal action unless the client's demands are met. If efforts to settle fail, the case enters the more costly litigation phase.

Most civil suits are filed in state courts. Cases go to federal court only when an issue involving the U.S. Constitution is at stake; when the federal courts are legally bound to take the case, such as with patents or bankruptcies; or when the dispute is between citizens or companies from different states.

First blood. The *plaintiff*, the party bringing the suit, makes allegations in a complaint filed with the court. To give a *defendant* notice and a fair chance to defend himself, a copy must be delivered to each defendant along with a summons, an order to appear in court.

A few states require that the summons be delivered in person. Others allow service by registered mail or legal notice in newspapers. *Long-arm statutes* allow a plaintiff who suffered a legal wrong in his home state to bring his case there rather than in the state of the defendant.

In that first volley, the plaintiff alleges that certain facts are true—for example, that the defendant's auto sideswiped his, injured him and kept him from work for two weeks—and asks for damages to pay for repairs and medical costs not covered by insurance.

In a *class-action suit*, a complaint is filed by one or a small group of persons on behalf of scores or even thousands of

prisoners, stockholders, bank customers or other classes of people with the same grievance.

For instance, 33 makers of corrugated-cardboard containers, who were sued in a flurry of class-action suits a few years back, agreed out of court to pay 325 million dollars. Their opponents, purchasers of their products, claimed they had conspired to fix prices. One firm that held out, Mead Corporation, was found liable and agreed to pay 45 million dollars.

The target of a suit has between 10 and 60 days, depending on the jurisdiction, to file an answer. Failing to do so probably will result in a victory for the plaintiff by default. The defendant also can allege new facts as defenses—for instance, that the plaintiff's speeding actually caused the accident.

In what is called *discovery*, the second stage of a lawsuit, the defendant has a chance to get even. The idea is to turn the contest from blindman's buff into a closer determination of the truth by giving both sides equal access to all of the facts in the case.

The discovery process often promotes out-of-court settlements because it lets parties assess the strengths and weaknesses of their case. Still, some lawyers play legal hardball with pretrial maneuvering, using it to shake their opponents' resolve.

Even in routine cases, there may be much out-of-court testimony. One side—or its witnesses—accompanied by lawyers, goes to the opposing lawyer's office, there to face a barrage of questions that can go on for days. A court stenographer and attorneys' objections to opponents' questions add to the tense courtlike atmosphere as these *depositions* are taken.

In addition, each side peppers the other with *interrogatories*—written questions—or requests for other evidence, such as documents or photos. Here, too, the timing and the scope of the inquiries can be used to tactical advantage.

As a rule, lawyers take the discovery process seriously and turn over even documents that might prove fatal to their case. They know that if they fail to do so, a court may fine or even jail their clients for contempt of court, dismiss a suit or declare a victory for the other side.

Pretrial discovery may take weeks, months or even years, and can add significantly to the length and expense of a lawsuit.

Courtroom crush. There were 205,000 civil cases pending in federal district courts in late 1982, or 399 per federal trial judge, while the median disposition time was 19 months for cases going to trial.

Litigation is even slower in the states. In only two of 32 courts studied by the National Center for State Courts did the median time from filing to jury trial take less than a year. Cases typically took much longer, up to a median time of four years and 135 days in Providence, R.I.

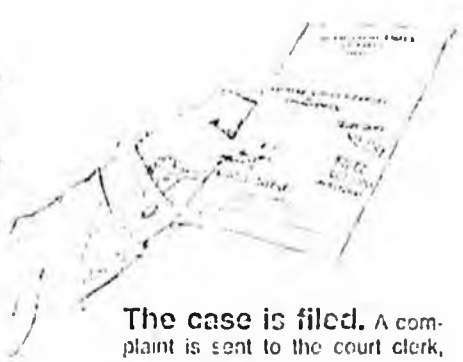
"When it takes four years to get to trial in a civil case, something is radically wrong," says California legal scholar B. E. Witkin. "No one who understands the system can say that it is operating in an efficient manner."

In both state and federal courts, some civil cases jump to the head of the line. Persons seeking emergency action to save a historic building or a rare tree from destruction, or prevent a board of directors from holding a meeting, or allow an election to proceed, ask the court to issue a *temporary restraining order* or an *injunction*. A court will grant the emergency relief if it is convinced that irreparable injury will occur otherwise and that any mon-

Only Trials? Not Every Time

Athenian elders in the time of Pericles, 2,500 years ago, arbitrated civil disputes. Today, clogged courts and widespread vexation over the expense and quality of the judicial system are prompting a second look at arbitration, mediation and other means of settlement.

In more than 180 programs in 50 states, trained mediators or ordinary people help fellow citizens solve their problems. Many issues are picayune, but others involve large sums.



The Community Board in San Francisco trains and supports citizens' panels in several of the city's polyglot neighborhoods. Operating by consensus, the groups mediate neighbors' disputes, simple-assault cases, landlord-tenant issues and the like. The goal, says Director Ray Shonholtz, is to let

Seeing a lawyer. The client explains the problem. The lawyer takes the case, and they agree on a fee.

Getting tough. The lawyer explains his client's position to the other side in an effort to resolve the matter.

The case is filed. A complaint is sent to the court clerk, setting out the allegations, and the document is recorded.

Discovery. Before the trial, each side gathers facts and testimony from the other in transcribed sessions.

"Those who have the greatest stake in a case become directly involved in resolving it."

When a coalition of Colorado environmentalists challenged Homestake Mining Company's plan to mine uranium in Gunnison National Forest, long and costly litigation was avoided. Using the services of the Seattle-based Institute for Environmental Mediation, the two sides hammered out an accord.

In Cleveland, Chief Police Prosecutor José Feliciano set up a mediation program that is expected to handle up to 14,000 complaints a year in hearings conducted by specially trained law students. The program is aimed at the type of complaint that often is dropped by police because it does not meet legal standards or involves friction between close relatives.

New York State Chief Judge Lawrence H. Cooke notes that citizens believe there is more fairness in mediated cases than in adjudicated ones. In one study, 90 percent of defendants in mediated cases said they had a chance to tell their side of the story, compared with 40 percent in court cases, which are governed by much stricter rules of procedure.

Arbitration, a more formal method of dispute resolution in which the arbitrators' decision is binding, is gaining adherents. Chief Justice Warren Burger says arbitration "can cope more effectively with complex business contracts, economic and accounting evidence and financial statements."

Some federal courts have experimented with mandatory arbitration in certain cases in which damages sought are less than $100,000—an approach that Burger asserts "may reduce by as much as half the number of such cases that would otherwise go to trial."

Going private. Shaken by the high costs of litigation, corporations are turning to companies such as Endispute, Inc., to keep them out of court. The Washington, D.C., firm offers "dispute management" services.

One such method: A privately held minitrial, pioneered in 1978 in a dispute between TRW, Inc., and Telecredit, Inc. Lawyers for both sides presented a short version of the case before senior executives of both firms, who then settled their differences.

Another way to skirt clogged courts has been called "rent a judge"—paying a retired judge to hold a full-dress trial, the results of which can be appealed. Los Angeles lawyer Seth Hufstedler resurrected a long-forgotten state law allowing such jurists to hear cases with the consent of both parties. Other litigants have used the same law.

The practice has drawn sharp criticism. Robert Gnaizda, a partner in Public Advocates, Inc., a leading public-interest law firm in San Francisco, calls it "legal apartheid" that allows only wealthy litigants to buy a speedy—and private—solution.

ey that might be awarded if the suit is successful would not compensate for the damage.

At any time before trial, or even during or after trial, the parties to a civil lawsuit can settle. In recent years, *structured settlements* have become the vogue in personal-injury cases—a cash nest egg for the injured victim and attorney fees up front, then periodic payments for life, rather than just one lump-sum payment.

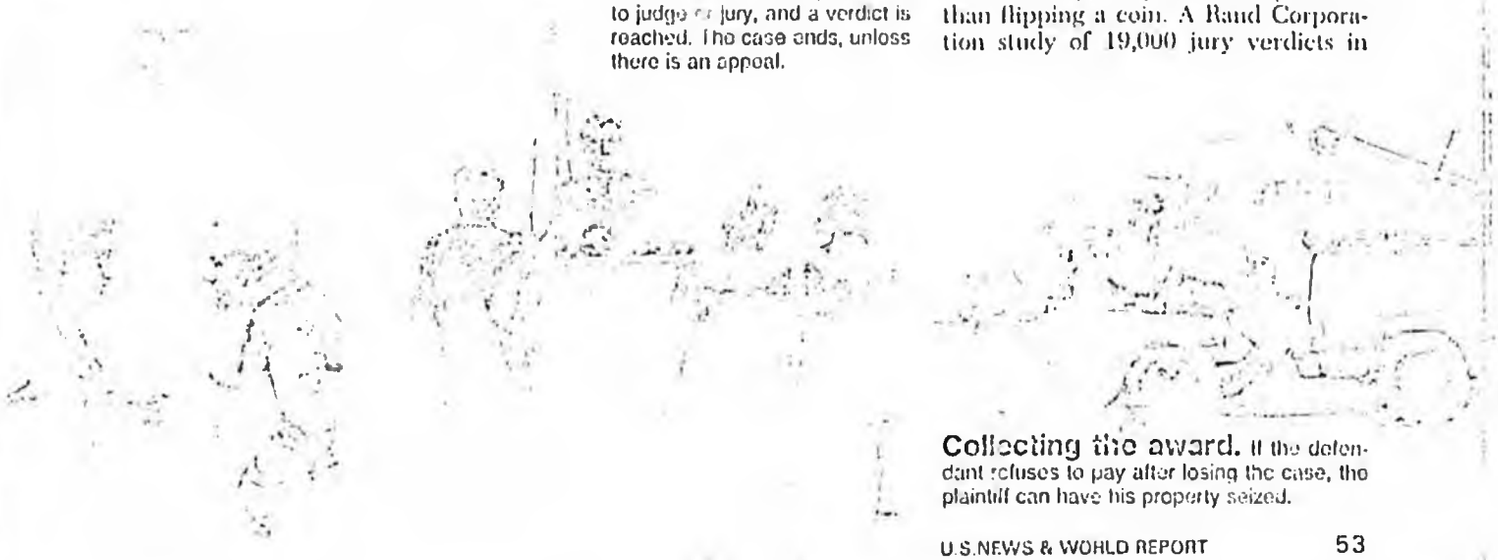
In one such case, parents of a 2-year-old girl who suffered extensive brain damage an hour after birth at Stanford University Hospital agreed in September, 1982, to what at the time was the largest malpractice settlement in U.S. history. Anna Cunningham will never walk, crawl, sit or feed herself, says her lawyer, James Bostwick, but if she reaches 78, her normal life expectancy, she will have received 122 million dollars in annual payments.

Only about 10 percent of cases that enter the litigation phase are tried. The others are dropped, dismissed or settled.

At last: The trial. Civil trials are similar to criminal trials. Prospective jurors are questioned, and six to 12 jurors plus alternates are empaneled. The plaintiff presents his case, with each witness being subject to cross-examination by the opposing attorney. Then the defendant does the same, both sides sum up their cases, and the jury deliberates after getting legal instructions from the judge.

As with criminal prosecutions, rules of evidence can play a large role in shaping the civil case, limiting the evidence to the best, most reliable and relevant information.

Although most civil trials last no more than a day or two, some drag on for many months, straining the stamina and the resources of the litigants and the ability of the judge and jury to sift out the truth.



When the trial ends, 31 states do not require, as in most criminal trials, that the verdict be a unanimous one. In all states, however, the agreement of at least two thirds of the jurors—if not more—is required.

The odds of winning?

Statistically, they are hardly better than flipping a coin. A Rand Corporation study of 19,000 jury verdicts in

Settlement talks. With a costly trial approaching, the lawyers make at least one more attempt to resolve the dispute out of court.

Trial. Evidence is presented to judge or jury, and a verdict is reached. The case ends, unless there is an appeal.

Collecting the award. If the defendant refuses to pay after losing the case, the plaintiff can have his property seized.

Cook County, Ill., over a 20-year span, found that plaintiffs won 51 percent of them.

Nevertheless, the same study found that the average damage award, in 1979 dollars, had more than doubled from $30,600 to $69,000 in the previous two decades.

Nationally, malpractice awards against doctors and hospitals averaged $451,000 in 1981.

Infrequently, a judge will overrule the jury or reduce a damage award when it appears that the jury did not act on the basis of "the preponderance of the evidence"—the test applied in civil cases.

The case still may not be over. Either side can appeal to higher courts. If the defendant refuses to pay, the plaintiff might have to get a court order directing the sheriff to seize his property and sell it to satisfy the judgment. Even here, bankruptcy may foil the quest for payment.

Hour of reform. As courts have been strained to the breaking point by the litigation explosion, reformers have sought to reduce case loads. The number of federal judges had increased from 397 in 1975 to 647 by late 1982. Yet the case load per judge actually increased 36.5 percent over the seven-year period.

A study by the National Center for State Courts says the problem is that each of the legal professionals in a suit—the lawyers for both sides and the judge—expects the others to move slowly, so they all move slowly.

The key to ending the logjam, the center says, is "case management" by the judge—setting time standards for each step of the trial and firm trial dates, riding herd on laggards and granting delays only for good cause.

Four judges in Phoenix who tried case management disposed of 39.1 percent more cases than the rest of the court, and 44.7 percent more trials.

Proposed changes in the Federal Rules of Civil Procedure would give judges the power for the first time to control pretrial discovery, preventing its use to "wage a war of attrition or to coerce a party." Lawyers would be penalized for filing frivolous motions.

Suits filed by persons—prisoners, mainly—on their own behalf make up one fourth of the U.S. District Court's case load in Washington, D.C. Screening catches most of the worthless cases, yet too fine a mesh may prevent a case with merit from being heard.

Videotaping evidence, even whole trials, and pretrial telephone conferences are among some of the technological timesaving innovations that have been used successfully in several states.

Yet no such finite solutions exist for reducing American litigiousness—a way of life that shows no signs of abating. The trauma of the lawsuit may never disappear either, but someday it may be over sooner. □

New Patterns in Family Courts

Reflecting deep, wide currents of social change, family courts are in great ferment. No longer is the husband and father the paterfamilias, the absolute ruler of wife and child. Family courts today are busy aligning the new, more evenhanded order of things.

While not long ago these courts were concerned with breaches of promises to marry and with narrow grounds for divorce, today they must tackle thornier issues.

Family courts establish paternity with complex blood tests and deal with artificial insemination and test-tube babies. Unwed fathers, formerly ignored in custody and adoption proceedings, now have rights of notice.

The "best interests of the child" are taken into account in determining custody and visitation rights. Joint custody is allowed in 28 states, and courts no longer automatically assume that the mother is best at caring for children.

All states but Illinois and South Dakota allow no-fault divorces in which couples dissolve their bonds without accusing each other of adultery or mental cruelty. Simplified procedures permit legal clinics to handle divorces for a modest fee.

Dividing the apple. Financial-support arrangements reflect women's new economic independence. The courts are beginning to give financial recognition to the wife's contributions in the home, while also granting alimony to husbands when their ex-wives earn more. All-but-wed partners, now separated, are demanding that courts grant them support, and some are getting it.

"Virtually no tradition or precedent is secure. There is a real conflict of interests," say family-law experts Henry H. Foster and Doris Jonas Freed. "Everyone in the family is entitled to do his or her thing; and like the members of the Swiss Navy, they are all admirals."

What Happens In Little Cases

Criminal cases and big-money lawsuits grab the headlines, but the largest number of people who go to court are involved in traffic offenses or minor disputes.

Traffic court. Driving cases come before a variety of judges ranging from rural, part-time justices of the peace to full-time jurists in metropolitan areas.

Most of the nation's 59 million traffic violations each year are settled when a motorist simply mails in a fine.

To contest a charge, you must be in court on the date listed on the ticket. Experts advise that you bring witnesses and photographs, if appropriate. If your defense is plausible, you may have a good chance of winning.

You probably don't need a lawyer, since most traffic courts operate informally. But if the charge is drunk or reckless driving, which could bring a jail term, legal assistance may be helpful.

Small-claims court. About 3.5 million times each year, people with gripes against local merchants, neighbors or others turn to small-claims court to resolve the matter simply and quickly. A judge or arbitrator hears both sides, then decides the issue either on the spot or in a short time.

Some pointers:

- Monetary damages are limited—$700 maximum on average.
- Special forms to file a complaint are usually provided at the courthouse. A small fee—$2 to $20—is required, and a waiting period of two weeks is common.
- Be sure to show up for the trial on time, although you may have to wait until your case is called. Many small-claims courts are open evenings or weekends.
- Bring papers, receipts, photos and other items that will help prove your case. Witnesses may help if they appear to be reliable.
- In some states, lawyers may not argue a client's case in small-claims court because that would give the client an unfair advantage. But consider retaining one if the other side will have one.
- Don't be concerned about legal niceties, and avoid long-winded explanations. Just state your case as succinctly as you can.

The Pervasive Influence of Lawyers

The ranks of a multitude for whom the law is a profession grow more numerous by the day—as do the controversies over fees, ethics, training.

Little in this country today remains untouched by lawyers. They abound at every turn, from the fight for life's necessities such as air, water, food and shelter to the quest for liberty and the pursuit of happiness. They advocate, regulate, and—their critics say—often obfuscate.

Richly rewarded for interpreting the sacred entrails of the law, lawyers nonetheless pay a steep price for living off the conflicts with which society is riven: Low public esteem in polls that sometimes rank them with used-car salesmen and garbage collectors.

The contemporary tongue-in-cheek comment about St. Ives, a 13th-century lawyer, still brings knowing chuckles: "He was a lawyer, yet not a rascal, and the people were astonished."

The U.S. has 610,000 lawyers, two thirds of the world's total and almost three times as many as in 1951. About 70 percent are in private practice. Half of the rest work for the government.

The growth of the profession's ranks has been so rapid that a glut exists in many urban areas. Recession and deregulation have put a crimp in the once booming law business in Washington, D.C.—home base for some 27,000 lawyers.

Still, eye-popping salaries and hourly fees show no sign of declining. In law firms, partners' "draws" or earnings average $90,000. Some "rainmakers"—well-connected lawyers who bring in the business—such as Washington lawyer Joseph A. Califano, Jr., pull in between a half-million and a million dollars a year. San Francisco antitrust lawyer Moses Lasky won a million-dollar fee from Telex Corporation for filing just one brief at a critical point in its suit against IBM.

Associates—salaried lawyers who are striving to become partners—average $35,200, but young lawyers at a few New York firms start at $43,000 a year. Fees for lawyers with four or five years of experience average $74 per hour, while beribboned veterans such as the legendary Louis Nizer may charge up to $350 per hour.

Some lawyers, denounced as "greedy swashbucklers" by consumer advocate Ralph Nader, are becoming increasingly bold in charging their clients more as the stakes get larger.

In 1981, law practices took in 24.1 billion dollars, or 0.9 percent of the gross national product, more than the air-transport industry and one fifth as much as the health-services economy.

That claim on the GNP might be smaller were it not for laws in all of the states prohibiting nonlawyers from providing legal services. Although wills often are drafted in law offices by paralegals or unlicensed legal assistants, a nonlawyer who sells advice to the public on how to write the same document can be prosecuted.

Bar groups say this monopoly helps protect the public from charlatans, but the closed society that lawyers constitute has come under increasing antitrust scrutiny in recent years. A ban on lawyer advertising, enforced by the bar for decades, was struck down by the Supreme Court in 1977.

Since then, a flowering of storefront legal clinics that offer low, standardized fees in a Spartan setting has occurred. "The Lawyers at Dart Drug" advertise uncontested divorces at $195 next to panty hose at $2.49. This kind of mass marketing offends the traditional sense of propriety felt by many attorneys, but it is making legal services more accessible to the nonaffluent.

Hiring a famed courtroom practitioner such as Louis Nizer of New York can cost $350 an hour.

Ways to Pick A Good Attorney

Legal experts offer the following tips on finding a lawyer competent to deal with your problems—

- Begin by asking friends or others you trust for a recommendation. Get a consensus if you can.
- Bar-association referral services can help, but they list lawyers without evaluating them.
- For a simple will, real-estate closing or some other routine legal need, a low-cost legal clinic may well fill the bill.
- Consider consulting a certified specialist in complex areas such as tax, trusts or trial work.
- Visit the lawyer and see how you get along. Expect to pay for this consultation.
- Don't be shy in asking about the attorney's credentials. The *Martindale-Hubbell Law Directory*, found at your public library, rates lawyers' abilities and notes key clients.
- Check with your state's lawyer-discipline agency to find out whether the lawyer has had an ethics violation.
- Pin down *fees* and costs in writing. Is there a retainer fee to be paid in advance? Will there be an hourly charge or will your lawyer get a percentage of your recovery in a damage suit?

The elastic ethics and the ineptness of some lawyers and the downright dishonesty of others have hurt the reputation of lawyers even more than high fees, and triggered demands for reform from lawyers themselves.

The American Bar Association, which represents half the nation's lawyers, is putting the finishing touches on a new code of professional responsibility that would strengthen the hand of clients who think they have been cheated. Disciplinary procedures, often lengthy and lenient, are being beefed up. And law schools are teaching more ethics and emphasizing "real life" situations more in training.

Even so, lawyers will never be popular, says New York lawyer Eugene C. Gerhart: "They cannot expect to be liked by those they oppose. They can only hope to be respected for their courage, their competence, their integrity and their loyalty to the eternal ideal of justice." □

The "Hidden Judiciary" And What It Does

They are called ALJ's, and you will find their fingerprints on many of the actions taken by bureaucrats both in Washington and in the states.

Bring up the subject of how an individual's legal rights are determined, and most people picture a black-robed judge perched high on his bench in a marble-paneled courtroom.

Yet the average citizen is touched far more often by rulings made in a less august judicial arena, by what some have called the hidden judiciary.

It consists of a special tier of judges who act as checks on state and federal agencies that make millions of administrative decisions each year—dealing with everything from the issuance of drivers' licenses and the payment of jobless benefits and Social Security pensions to the regulation of utility rates and television stations.

The vast majority of these determinations are not challenged. But hundreds of thousands of them annually are appealed to the 1,153 administrative-law judges (ALJ's) employed by federal agencies or to similar judges at the state level.

In addition, when regulations are being written—whether the subject is surface mining, building design for the handicapped, mechanically deboned meat or one of the myriad other areas in which government intervenes—ALJ's preside over the hearings.

While bureaucrats carry out policies through rules and regulations, the job of ALJ's or hearing examiners is to make sure there is due process, that agency decisions are legal and fair.

No jurors. In appeals of agency decisions, they function much like trial judges in nonjury cases. Parties are represented by lawyers in formal hearings, evidence is submitted, witnesses are heard. In most cases, an ALJ renders a written opinion, which is appealable to agency administrators or commissioners, then to the courts.

Most appeals of agency decisions touch on only one person or one firm, but ALJ rulings at times affect citizens and businesses nationwide. A decision by ALJ Chester Naumowicz at the Federal Communications Commission in 1976 opened up the telephone industry to greater competition.

It is ALJ's who initially try the civil suits filed by regulatory agencies. At the Federal Trade Commission, they decide, among other things, whether corporate activities conflict with antitrust laws or FTC guidelines.

In a case involving General Foods' Maxwell House coffee, for example, an administrative-law judge ruled against the FTC staff, holding that the firm had not used unfair methods of competition to dominate the coffee market.

The agency's staff had filed an antitrust suit against General Foods. After losing the first round, bureaucrats of the FTC appealed to their five-member commission.

At the National Labor Relations Board, 110 administrative-law judges in Washington, San Francisco, New York and Atlanta hear about 1,200 unfair-labor-practice and union-representation cases a year, out of 40,000 filings. The rest are settled by NLRB bureaucrats or dismissed.

More than two thirds of the federal ALJ's work for the Social Security Administration in 125 field offices. They hear more than 250,000 cases a year, determining eligibility for benefit payments. Such hearings are short and relatively simple, taking a matter of hours in most instances.

Outside of Social Security, however, administrative hearings often drag on for many months. The so-called American Telephone & Telegraph basic-rate case at the FCC in the mid-1970's spawned a 16,437-page transcript—plus 15,864 additional pages of exhibits—during 103 days of hearings.

Even after the hearings are over, it can be a long time before a case is wrapped up. Several years ago, the General Accounting Office, the audit-

Special Courts For Special Cases

Within the federal system are a number of specialized courts that handle cases in some complicated or technical areas. These courts, most of which are in Washington, D.C., include:

U.S. Claims Court—Established October 1 to replace old U.S. Court of Claims. Its 16 judges handle every type of money claim against the United States except those involving personal injury.

Court of International Trade—Set up in 1980, its nine judges review government actions dealing with imports, such as disputes over classification or valuation of goods and antidumping laws. Handled 3,207 cases in 1981. Sits in New York.

Bankruptcy Court—Established in 1978, ordered reorganized by Supreme Court in 1982. Some 241 judges in 91 district courts across the country handled a record 527,811 filings in year ended June 30, 1982. Under the U.S. Constitution, all personal and corporate bankruptcies and reorganizations are heard by federal courts.

Court of Appeals for the Federal Circuit—Established October 1 to replace old Court of Customs and Patent Appeals. Handles appeals from Claims Court and Court of International Trade plus patent appeals and patent-infringement cases. Its 12 judges sit in three-judge panels.

Foreign Intelligence Surveillance Court—Set up in 1978 to review applications for electronic surveillance by the government of foreign powers and their agents. Seven district judges, serving part time on the court, approved all 431 requests in 1981.

Tax Court—In this agency, established in 1924, 19 judges have about 30,000 cases pending involving deficiencies or overpayments in income, estate and gift taxes. Ten other special trial judges hear "small tax cases," where the tax due is less than $5,000.

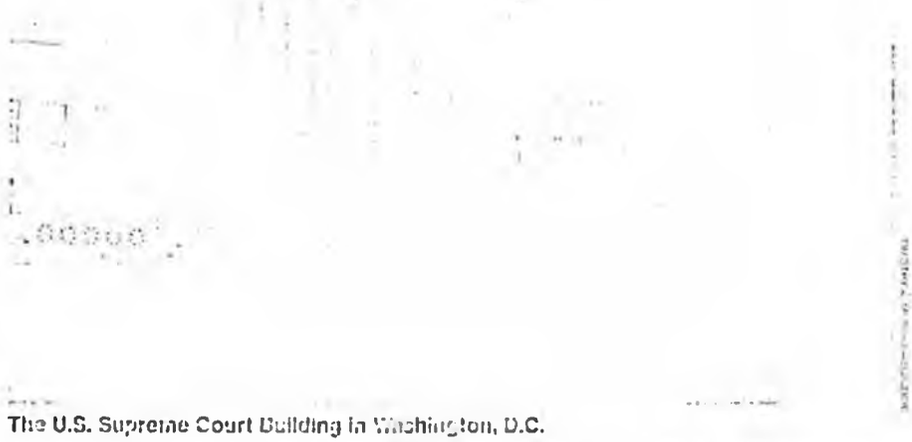
Court of Military Appeals—Established in 1950 as the final appellate tribunal to review court-martial convictions in the armed services. Three civilian judges, who serve 15-year terms as presidential appointees, decided 153 cases in 1980.

ing arm of Congress, studied four agencies it considered typical and found the median time from hearing to final agency decision was 352 days.

The delays often draw complaints from Capitol Hill and private citizens. ALJ's bristle at any suggestion that they are to blame, saying it is the bureaucrats who use up most of the time—a contention borne out by the GAO study.

As little known as they are to many Americans, administrative-law judges date to the days of George Washington, when customs officers were appointed to figure the duties payable on imports and to determine which soldiers were disabled. In time, the system lost public respect because agency actions were often merely rubber-stamped.

Congress tried to correct that problem in 1946 by passing the Administrative Procedure Act, which established the autonomy that ALJ's enjoy today.



They are still employes of the various agencies, as previously, but their pay—about $57,000 for most—now is controlled by the Office of Personnel Management. They are assigned cases on a rotating basis and may not be supervised by any official who performs investigative or prosecutory functions.

It is not a job for burned-out legal hacks looking for an easy berth in government. ALJ's are selected through a rigorous merit program, and 70 percent of applicants are rejected. A former chief justice of a state supreme court was among those recently chosen.

Guarding the turf. The issue of their independence is at the core of a burgeoning controversy over a Reagan administration attempt to clean up the disability rolls. State agencies, working with new Social Security Administration (SSA) guidelines, cut off benefits for some 245,000 of the 2.7 million people on the rolls. But about three fifths of those who have appealed have been reinstated by ALJ's using looser standards developed by the U.S. courts.

Alarmed by the high reversal rate, the SSA has been overruling some decisions—and riling many ALJ's. They say the agency wants them to act more as bureaucrats implementing regulations than as independent judicial officers.

One method of assuring greater independence is a corps or central panel of ALJ's, not tied to any agency, that provides trial services on demand. New Jersey, one of eight states with such a pool, also has reported substantial cost savings. Judge Irving Sommer, chairman of the National Conference of Administrative Law Judges of the American Bar Association, sees an intangible plus: "People know they're getting a fair shake because the judge isn't attached to any particular agency." □

The U.S. Supreme Court Building in Washington, D.C.

A Supreme Court Under Pressure Is Back in the Spotlight

Overwork and ideological divisions, authorities say, are sapping the effectiveness of the nine Justices who sit at the apex of the judicial system.

The U.S. Supreme Court, deluged with cases and split philosophically, is working under the greatest strains it has faced in its 193-year history.

The Court's nine members, among the world's most prestigious judges, are finding it harder and harder to perform their historic dual role—to insure justice for individual Americans while guiding the nation on the meaning of its laws.

The volume of appeals has reached flood stage, with the result that a citizen today has only a slim chance of having a case heard by the Court.

At the same time, sharp and shifting divisions among the Justices over abortion, racial discrimination, prisoners' rights and many other questions often produce murky decisions that confuse lawyers and judges alike and inspire still more lawsuits. The Justices—five of whom are 73 or older—were besieged in 1981-82 with 5,311 appeals from state and federal courts. When the 1982-83 term began, the docket was already two-thirds full.

Today's Supreme Court is far different from the six-member bench set up in 1789. In the early days, almost every case presented was heard. Now, the 200 cases per year that the Court is able to review in detail make up fewer than 5 percent of the appeals filed. Says former U.S. Solicitor General Erwin Griswold, "All you can do is knock on the door and ask to be let in."

Hotly contested issues involving such subjects as taxes, labor rules and other government regulations can remain unresolved for years. On many such questions, some of the 12 federal appeals courts have ruled in opposite ways.

About one third of the Supreme Court's case load is set by law. Included: Lower-court decisions striking down federal laws, state-supreme-court rulings interpreting the U.S. Constitution and boundary disputes between states.

As for the remainder, the votes of four Justices are needed to grant a full hearing. Beyond that, "there are no rules," says Eugene Gressman, University of North Carolina law professor. "Each Justice votes to grant review of cases he or she thinks are important enough to warrant the Court's attention."

A milestone. Since the famed 1803 case of *Marbury v. Madison*, the Court has claimed the power to strike down laws it decides conflict with the Constitution. Virtually no one challenges that doctrine today.

Yet debate rages over the extent to which Justices can broaden past interpretations of constitutional rights, fill in gaps they perceive in laws, or supervise public institutions. Typifying the criticism of "judicial activism" is the charge of former Senator Sam Ervin, Jr. (D-N.C.) that "the people of our land are being ruled by the transitory personal notions of Justices who occupy for a fleeting moment of history seats on the Supreme Court."

In recent decades, split opinions

Justice Stevens at work with law clerks, whose role at the Court has grown.

have guaranteed women broad rights to have abortions, barred prayer from public schools, given wide rights to criminal suspects, ordered schools desegregated and set minimum standards in prisons and mental hospitals.

The Justices became increasingly willing to strike down U.S., state and local statutes, voiding more since 1920 —761—than the 386 ruled unconstitutional in the previous 130 years, says legal scholar Bruce Fein. Activism reached its peak during the 1950s and 1960s under Chief Justice Earl Warren.

All current Justices have joined activist rulings at least on occasion, but William Brennan, Jr., the Court's senior member, and Thurgood Marshall have done so most often.

On the other end of the spectrum, Chief Justice Warren Burger and Justices William Rehnquist and Sandra Day O'Connor, advocates of "judicial restraint," tend to defer to the legislative and executive branches of government. The other Justices—Harry Blackmun, Lewis Powell, Jr., John Paul Stevens and Byron White—swing from one camp to the other, depending on the issue.

In the 1981-82 term, 33 cases—nearly one fifth of the opinions issued—were decided by a one-vote margin, twice as many as in 1980-81. Justices also are more likely nowadays to issue opinions stating their individual views.

No moot points. Justices have ways of rationing the use of their power. For one thing, no matter how important the issue, they refuse to take a case unless it is a real dispute affecting litigants, not a hypothetical question.

As quarrelsome as they may sometimes seem, the Justices try to resolve differences privately. Once or twice during each week of oral arguments, they gather with no aides present, shake hands with each other, discuss the cases they've heard and take a preliminary vote on their decisions. If the Chief Justice is in the majority, he decides who will write the explanation of the Court's reasoning; otherwise, the senior Justice makes the assignment.

Opinion writing can take months. First, drafts are circulated among Court members who voted together. The Justices may sign the proposed opinion, try to persuade the drafter to alter it, or write their own versions. Occasionally, Justices reverse their initial votes after reading other members' drafts. Wade McCree, Jr., U.S. solicitor general from early 1977 to mid-1981 and at one time a federal appeals judge, describes the give-and-take this way: "Justices fight for language they prefer, but to get others to concur, they may soften their positions. That's what a collegial court is all about."

Policy disagreements on the Court will never end, but reformers have proposed several ways to cope with the increasing case load.

One idea, endorsed by four Justices, is creation of a "National Court of Appeals" to which the High Court could refer cases requiring attention but not raising crucial national issues. Justice Stevens has proposed a new court to decide which cases the Supreme Court should hear. In addition, all of the Justices have asked lawmakers to eliminate the requirement that they hear certain categories of cases.

Justice Powell has called, too, for dividing among the Court members the job of screening appeals, eliminating the tradition that "each Justice has to vote on every doggone petition."

Others would curb or abolish oral arguments, the hour-long sessions in which Justices pepper lawyers with questions about their cases.

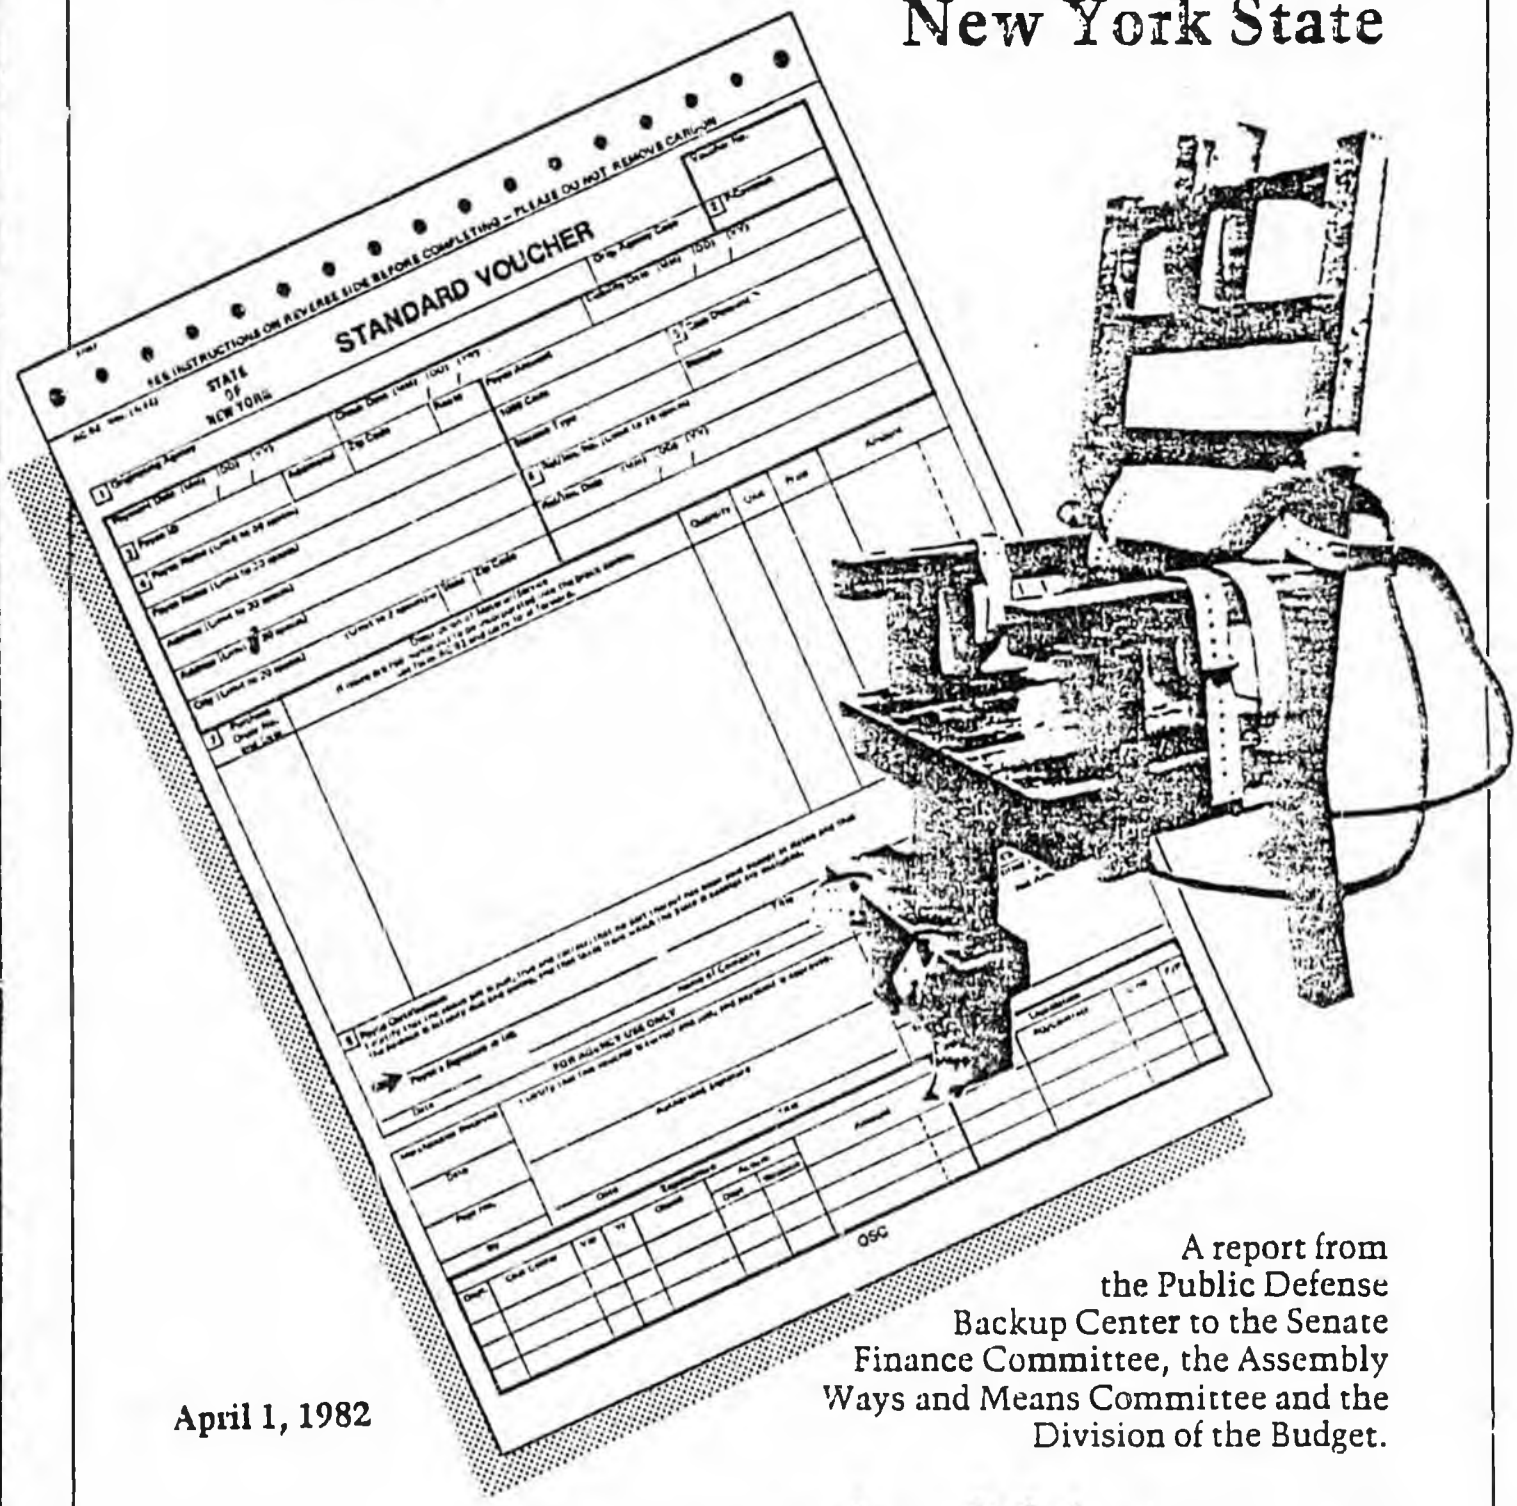
Reformers are split over the role of law clerks, young law-school graduates who serve as research aides. As recently as 1950, Justices each had only one clerk; now, most have four.

Some analysts believe the Court needs more clerks to help screen cases; others complain that the longer, more difficult-to-understand opinions being issued today are partly due to the proliferation of the clerks who draft them.

Flak from the right. Many critics would actually narrow the Court's power. Among ideas being pushed by some conservatives: Taking away the authority of federal courts to hear cases on such subjects as abortion and school prayer and forcing federal judges—all of whom are now appointed for life—to run for office periodically. Opponents assert that such measures would dangerously undermine the independence of the nation's judiciary—a vital element in the American system.

Supreme Court Justices themselves have studiously avoided taking a stand on the court-curbing proposals because they would likely decide the constitutionality of any such measure passed by Congress.

The Court has tempered its activism a bit in recent years—a change some analysts attribute to the wave of criticism being leveled at judges.



Over all, however, experts see little chance that a philosophical majority capable of steering a consistent path will reappear at any time soon. The intellectual ferment and doubts that the Justices reflect run deep throughout American society.

Then, too, observes Potter Stewart, who retired in 1981 after 23 years as a Justice: "Unlike any institution in the world, there is no boss of the Court. Your only boss is the Constitution and the law. Nobody can tell another Justice what to do or what not to do." □

Conclusion 25

PREFACE

Under its contractual obligation with the state of New York to review, assess and analyze the public defense system, the New York State Defenders Association periodically publishes reports to the Legislature, the Governor, the Judiciary and other appropriate instrumentalities. The report which follows preliminarily examines the costs of capital litigation and the fiscal impact of the death penalty on New York State. This report is directed to those who have a legal responsibility to analyze that fiscal impact.

INTRODUCTION

In the last five years, efforts in both houses of the Legislature have pushed New York closer and closer to the passage of a death penalty. During this time, shrill voices have argued every major proposition with reference to the death penalty except one—its actual cost. The floor debates during this period of time provide little hard cost data, but, as will be seen, they make clear that the death penalty will call for the most irrational and disproportionate expenditure of energy and money in the history of criminal justice in this state.[1]

Despite this reality, one searches in vain for legislative information on the subject of actual cost. The memorandum in support of this year's death penalty bill (S.7600/A.9379), as in the past, states that there are "no fiscal implications." Yet, as late as the end of March 1982, the Senate sponsor of the bill reportedly did not know the fiscal implications of the death penalty.[2] The Senate Research Service states in its death penalty briefing paper, "Insofar as the fiscal implications of the death penalty are concerned, the costs of its imposition and the related appeals process are uncertain."[3] Likewise, though the New York State Department of Correctional Services has recognized the issue,[4] it has not projected costs under a death penalty statute.[5]

At a time when New York State is under tremendous fiscal constraint in its efforts to deliver basic human services, it is ironic that no one in government has attempted to assess and project the actual cost of a death penalty here.

Conventional wisdom suggests that it is less expensive to execute a person than to imprison a person for life. Conventional wisdom is wrong. As Mr. Justice Marshall stated in *Furman v. Georgia*, 408 U.S. 238, 357-8 (1972):

> "As for the argument that it is cheaper to execute a capital offender than to imprison him for life, even assuming that such an argument, if

---

[1] The New York State Defenders Association opposes the death penalty for any crime because it is immoral, discriminatory, and inevitably capricious. The penalty provides, and will always provide, the opportunity for masking racism and prejudice. Its history marches in step with the history of genocide; its cadence is the cadence of expediency; its failure, the failure of humankind. The death penalty is obscene violence. There is no excuse for its existence, and someday it will be abolished.

We do not by this paper retreat from these positions.

In the course of this paper, we will comment on sections of the death penalty bill, and, in particular, on those sections dealing with publicly supported defense representation for the poor. Nothing we say here should be read as approval of the bill or an appraisal of its ultimate constitutionality. We are reporting cost data, and that is the purpose of this paper. It is important for state officials and the public to know the price tag which is attached to capital punishment. The costs outlined here are the bottom line. Because death has been held constitutionally to require greater procedural protections, *Gardner v. Florida*, 430 U.S. 349 (1977); *Gregg v. Georgia*, 428 U.S. 153 (1976); *Woodson v. North Carolina*, 428 U.S. 280 (1976), legally required procedures and their attendant costs will continue to escalate.

[2] *Legislative Gazette*, March 29, 1982, at 8, col. 1.

[3] SENATE RESEARCH SERVICE, ISSUES IN FOCUS, No. 82-48, DEATH PENALTY 4 (Jan. 28, 1982).

[4] In July 1978, New York's Department of Correctional Services reported, but did not evaluate the anti-death penalty position that, "... capital punishment is more costly from an economic viewpoint than other alternatives if all costs are counted, including court, prosecution, defense and correctional." DEPARTMENT OF CORRECTIONAL SERVICES, DIV. OF PROGRAM PLANNING, EVALUATION AND RESEARCH, OVERVIEW OF DEATH PENALTY AND REVIEW OF ARGUMENTS FOR AND AGAINST ITS USE 9 (July 1978).

[5] Significantly, states with a death penalty cannot afford the "luxury" of non-examination. The Legislature of Florida knows full well the projection of costs made by Louie L. Wainwright, Director, Florida Division of Corrections. Florida projects an expenditure (absent inflation) of more than $57 million by the year 2000 just to maintain the death row population. BUREAU OF PLANNING, RESEARCH AND STATISTICS, STATISTICAL FACTS, No. SF-80-9, FLORIDA DEP'T. OF CORRECTIONS—DEATH ROW ANALYSIS 2 (Aug. 29, 1980).

true, would support a capital sanction, it is simply incorrect. A disproportionate amount of money spent on prisons is attributable to death row. Condemned men are not productive members of the prison community, although they could be, and executions are expensive. Appeals are often automatic, and courts admittedly spend more time with death cases.

"At trial, the selection of jurors is likely to become a costly, time-consuming problem in a capital case, and defense counsel will reasonably exhaust every possible means to save his client from execution, no matter how long the trial takes.

"During the period between conviction and execution, there are an inordinate number of collateral attacks on the conviction and attempts to obtain executive clemency, all of which exhaust the time, money, and effort of the state. There are also continual assertions that the condemned prisoner has gone insane. Because there is a formally established policy of not executing insane persons, great sums of money may be spent on detecting and curing mental illness in order to perform the execution. Since no one wants the responsibility for the execution, the condemned man is likely to be passed back and forth from doctors to custodial officials to courts like a ping-pong ball. The entire process is very costly.

"*When all is said and done, there can be no doubt that it costs more to execute a man than to keep him in prison for life.*" [Footnotes omitted.] (Emphasis supplied.)

The authority of Mr. Justice Marshall's assertions,[6] as well as other recent work,[7] indicate in general terms, but without contradiction, that a criminal justice system with the death penalty is inordinately more expensive than a criminal justice system without the death penalty.

Seventeen years ago, the State of New York Temporary Commission on Revision of the Penal Law and Criminal Code, in its report recommending the abolition of the death penalty in New York State, said:

". . . [O]wing to their importance, capital cases take longer to litigate at the trial level and obstruct the general administration of criminal justice accordingly; . . . the appellate ramifications are intricate and extensive; . . . the pursuit of other post-judgment remedies leads to many courts, both state and federal, involving substantial segments of the judiciary; . . . the battle to save the 'doomed' man reaches into the executive branch of the government; and, in general, . . . capital cases are disruptive of the orderly process of criminal justice. . . . [W]hatever aspect of the death penalty one examines, one finds nothing but

obstruction, confusion and waste."[8]

The Commission saw early on the direction of capital litigation in the United States and, accepting the inevitable consequences of the then developing moratorium on executions,[9] rejected the death penalty as an inappropriate adjunct to the administration of criminal justice. Since 1955, while we have lived with and without a death penalty in New York State, and in recent years while we have vigorously debated its reemergence, there has been no systematic effort to identify and compute costs. This paper is a preliminary examination of those costs.

---

[8] STATE OF NEW YORK TEMPORARY COMMISSION ON REVISION OF THE PENAL LAW AND CRIMINAL CODE, FOURTH INTERIM REPORT: SPECIAL REPORT ON CAPITAL PUNISHMENT, LEG. DOC. NO. 25, at 97 (1965).

[9] From 1967 until 1977, executions in the United States were suspended by litigation in the federal courts seeking the resolution of constitutional challenges to the death penalty. The United States Supreme Court, in a plurality opinion, declared in *Furman v. Georgia*, 408 U.S. 238 (1972), that discretionary death penalty statutes then in effect constituted cruel and unusual punishment because death was imposed infrequently and in the absence of clear standards. The rare, unpredictable, discretionary use of the sanction of death was deemed to violate the Eighth and 14th Amendments to the United States Constitution. State legislatures responded to *Furman* by enacting either mandatory death statutes or "guided discretion statutes" which utilized bifurcated trial procedures to determine guilt and then punishment. In 1976, the Supreme Court ruled in *Woodson v. North Carolina*, 428 U.S. 280, 310 (1976), that the mandatory death penalty for first degree murder was unconstitutional because it treated all convicted persons not as "... uniquely individual human beings but as members of a faceless, undifferentiated mass to be subjected to the blind infliction of the penalty of death." On the same day, in *Gregg v. Georgia*, 428 U.S. 153 (1976), the Court upheld "guided discretion" statutes which required objective standards to guide, regularize, and make rationally reviewable the process of imposing death. Since *Gregg*, more than a dozen substantial procedural issues have been decided on behalf of defendants by the United States Supreme Court. Capital litigation routinely raises those and other constitutional questions at every stage of review.

PART I:
THE NATURE OF DEFENSE SERVICES UNDER THE PROPOSED DEATH PENALTY BILL

One of the great concerns of the New York State Defenders Association concerning the implementation of the death penalty in New York is whether or not the representation of the poor in death cases will be adequate. The current delivery mechanism for public defense services is clearly inadequate to a death penalty. The County Law leaves to each county responsibility for the development of its own system of defense services. The result is that a crazy quilt of county defender systems exists in the state. The services are insulated, autonomous and unregulated. Resources differ from county to county. It follows that the adequacy of defense representation differs from county to county as well.[10]

The problems of the system have not gone unnoticed in the legislative debate concerning the death penalty in New York. Some representative comments from the Assembly and Senate floor debates follow:

> "The fact is, ladies and gentlemen, we will look at the defense capability. Throughout New York State today there are 20 counties that have . . . no . . . investigators to help in any case, much less a capital case . . . Nine counties have one investigator available, four of them have two and four have three. *Forty-one of our counties—over two-thirds, do not have the investigative capability that the defense attorney needs to defend his client.*" [Emphasis supplied.][11]

> "We are talking in many instances of assigned counsels who are paid very little money by any contemporary standard. *We are talking about a system where the defense really doesn't have the ability to investigate* . . . ***that's the question you are asking yourself, and that's the question each of us has to ask ourselves before we vote on this bill. . . ." [Emphasis supplied.][12]

> "Forty-six counties have asked the New York State Public (sic) Defenders Association for help in doing appeals, the appeal work for the felony criminal matters. *What kind of justice is that, where 46 counties say, after the trial, 'We don't have the expertise and the ability to deal with the appeal process.'* That is the fair trial we are talking about, with an irrevocable penalty." [Emphasis supplied.][13]

---

[10] Article 18-B of the County Law requires each county to adopt a systematic plan for furnishing counsel to indigent defendants. The counties may choose: 1)representation by a public defender; 2)representation by contract with a legal aid society; 3) representation by counsel furnished pursuant to an assigned counsel plan of a bar association; or 4) a combination of these. In the greater part of the state, public defense is a part-time job. Training is not a mandatory part of the statutory scheme. Assigned counsel plans are shrinking as a result of the very low fees paid to public defense attorneys. Nationally, New York ranks 45th with the lowest reimbursement rate at the trial and appellate level. There are 76 distinct defender systems in this state. The common thread that binds them together is underfunding at the county level, a lack of standards for their operation, and the unpopularity of the clients they serve.

[11] RECORD OF PROCEEDINGS, ASSEMBLY, STATE OF NEW YORK (Tuesday, February 17, 1981) (statement of Assemblyman Hevesi), at 875.

[12] RECORD OF PROCEEDINGS, ASSEMBLY, STATE OF NEW YORK (Tuesday, February 17, 1981) (statement of Assemblyman Miller), at 1020.

[13] RECORD OF PROCEEDINGS, ASSEMBLY, STATE OF NEW YORK (Tuesday, February 17, 1981) (statement of Assemblyman Hevesi), at 875-876.

"Who is going to get the death penalty? The poor defendant, the defendant with the poor lawyer more likely. I'll tell you one thing, if there is one certainty—if there is one certainty in what you're about to do—it is that, if you pass the bill and it goes into effect, I am certain that no millionaire will ever burn, that no rich person will ever have the sentence carried out, and that's a fact, and I think we all acknowledge that that's a fact. *The victim of this, the person upon whom this penalty will be carried out, will be the poor unfortunate, the person with the lawyer of less skill or experience than others.*" (Emphasis supplied.)[14]

"When you look at the kinds of people who have been convicted and sentenced to death, they invariably are people from the low income bracket and *there are those of us who believe . . . that if you're poor, you do not necessarily get the kind of legal representation that you would if you had the money to afford the right kind of attorney.* I know you will say that that's not the case, and that there is equitable provision under the law and that there is a fair share, and everyone else will get their day in court, but I think the real world proves that poor people generally carry the brunt when they are charged with murder, particularly if there is a difference in ethnicity." (Emphasis supplied.)[15]

All of these comments reflect upon a defense system that is basically inadequate. Three critical aspects are identified. First, there is no set of experiential standards to be met for the representation of defendants in felony cases in this state. Second, there is county-based disparity in the financing of the public defense system such that certain counties are without the resources to provide adequate representation. Third, there are exceedingly low fees for attorneys, experts, investigators, and other necessary auxiliary services.

The Volker/Graber bill (S.7600/A.9379) responds directly to these issues by: a) removing the burden from counties and making the cost of defense services a state charge; b) attempting to create experiential standards for the representation of defendants in capital cases; and c) creating a standard whereby attorneys, experts, investigators and others will be paid the customary fee for similar privately retained representation or services. In pertinent part, the bill states:

§722-g. Assignment of counsel and related services in criminal actions in which the death sentence may be imposed. 1. *Notwithstanding any other provision of law to the contrary*, in every criminal action in which a defendant is charged with an offense defined in section 125.27 of the penal law, *a defendant who is or becomes financially unable to obtain adequate representation or investigative, expert or other reasonably necessary services at any time either* (a) *prior to judgment*, or (b) *after the entry of a judgment imposing a sentence of death but before the execution of that judgment; shall be entitled to the appointment of one or more attorneys and the furnishing of such other services* in accordance with the remaining provisions of this section.

2. If the appointment is made prior to judgment, at least one attorney so appointed must have been admitted to practice in the courts of this

---

[14] RECORD OF PROCEEDINGS, SENATE, STATE OF NEW YORK (Monday, January 14, 1980) (statement of Senator Connor), at 145.

[15] RECORD OF PROCEEDINGS, SENATE, STATE OF NEW YORK (Monday, March 23, 1981) (statement of Senator Bogues), at 1279-1280.

state for not less than five years, and must have had not less than three years' experience in the actual trial of felony cases in this state.

3. If the appointment is made after judgment, at least one attorney so appointed must have been admitted to practice in the courts of this state for not less than five years, and must have had not less than three years' experience in the handling of appeals in felony cases.

4. Upon a finding in an ex parte proceeding that investigative, expert or other services are reasonably necessary for the representation of the defendant, whether in connection with issues relating to guilt or sentence, the court shall authorize the defendant's attorneys to obtain such services on behalf of the defendant and shall order the payment of fees and expenses therefore pursuant to the provisions of subdivision five hereof. Upon a finding that timely procurement of such services could not practicably await prior authorization, the court may authorize the provision of and payment for such services nunc pro tunc. The court shall determine reasonable compensation for the services and direct payment to the person who rendered them or to the person entitled to reimbursement.

5. *Notwithstanding the rates and maximum limits generally applicable* to criminal cases and any other provision of law to the contrary, *the court shall fix the compensation to be paid to attorneys* appointed pursuant to this section *and the fees and expenses to be paid for investigative, expert, and other reasonably necessary services* authorized pursuant to subdivision four of this section *at such rates or amounts* as the court determines to be appropriate *in order to provide such defendant with representation by counsel and other services as nearly equivalent as possible to those available to defendants who are financially able to obtain such representation and other services for their defense and appeal.*

6. Any compensation, fee or expense to be paid pursuant to this section *shall be a state charge* payable on vouchers approved by the court which fixed the same, after audit by and on the warrant of the comptroller. [Emphasis supplied.]

The bill is an effort to overcome a defective statutory scheme. It is designed to assure equality of service for the poor. Under its terms, the state must appoint and pay for counsel for those unable to afford a lawyer both prior to judgment and at any time up until the actual imposition of the sentence of death.

Investigative, expert and other auxiliary defense services, as well as counsel fees, will be paid on the basis of customary rates for the services in amounts which will provide the defendant with representation and other services " . . . as nearly equivalent as possible to those available to defendants who are financially able to obtain such representation and other services for their defense and appeal."

The meaning of this language and the full scope and extent of what the Volker/Graber bill means is made crystal clear by a review of statements made by the bill's sponsors in debate on the floor of the Legislature. Referring to §722-g(5), Assemblyman Graber stated in 1978:

" . . . [A]nd I surmise today, as this debate progresses, we are going to hear, and hear loud and clear, from those who will say this bill is an attack at minorities, that they cannot get a fair trial, they cannot obtain good counsel, and to those of you who are going to make comment on that particular issue, please read page 9, line 10, section 5 of the bill—

and I would like it read into the record: 'Notwithstanding the rates and maximum limits generally applicable to criminal cases and any other provisions of law to the contrary, the court shall fix the compensation to be paid to attorneys appointed pursuant to this section, and the fees and expenses to be paid for investigative, expert and other reasonably necessary services authorized pursuant to Subdivision 4 hereof, at such rates or amounts as the court determines to be appropriate in order to provide such defendant with representation by counsel and other services as nearly equivalent as possible to those available to defendants who are financially able to obtain such representation and other services for their defense and appeal.'

"I think that says a lot, for it is in that section we are *guaranteeing to those minorities, those indigent people who in the past have not been able to afford good expert counsel; we here, in the State, are going to pay the bill to make sure that they do get the counsel that they need.*" [Emphasis supplied.][16]

Again in 1980, in moving A.8431, Assemblyman Graber stated:

"I am sure later today we will hear that indigent people are unable to get adequate defense counsel because they cannot afford same. ***[Referring again to proposed §722-g[5]] I think that's brand new as far as this state is concerned, that we provide for adequate defense counsel at state cost *to make it absolutely certain that anyone charged with a capital offense . . . would, in fact, have adequate defense.*" [Emphasis supplied.][17]

Last year, on February 17, 1981, referring again to the same section, Assemblyman Graber stated:

"It provides for the appointment of attorneys with experience of three years, if the defendant is unable to employ such an attorney. I am sure later today we will hear that indigent people are often unable to afford adequate defense counsel, because they cannot afford it. *** [722-g[5]] is a first for New York, I believe. *I don't know of any other state that incorporated that into the text of their law.*" [Emphasis supplied.][18]

Thus, a reading of the Assembly debates makes clear that the intent of the sponsors has been to pass a death penalty bill in New York distinctly different and more extensive than any other such bill in America.

Those who are familiar with New York's defense system may find it anomalous that while New York continues to rank 45th in its assigned counsel fee structure for non-capital cases, its Legislature has declared that it shall pay whatever is necessary in death penalty cases. Any doubt regarding this legislative intent, however, is laid to rest by a review of the remarks of the bill's co-sponsors. In 1980, Assemblyman George Friedman stated:

" . . . [N]ever before, never before in the history of any country operating under a system like we operate in the United States of America,

---

[16] RECORD OF PROCEEDINGS, ASSEMBLY, STATE OF NEW YORK (Monday, March 20, 1978) (statement of Assemblyman Graber), at 2040-2041.

[17] RECORD OF PROCEEDINGS, ASSEMBLY, STATE OF NEW YORK (Monday, January 14, 1980) (statement of Assemblyman Graber), at 60.

[18] RECORD OF PROCEEDINGS, ASSEMBLY, STATE OF NEW YORK (Tuesday, February 17, 1981) (statement of Assemblyman Graber), at 854.

have rights of accused individuals been protected as they are in this bill. This bill doesn't say you have a right to counsel; it doesn't say just that the State will give you counsel, *it says that the State will pay the going rate for counsel competent to represent you. That is that under this bill you have the right to get somebody like Percy Foreman to represent you and the State is going to foot the bill. Under no other system do you have that right. . . .*" [Emphasis supplied.][19]

Last year in responding to Assemblyman Hevesi's remarks concerning the inadequacy of counsel and investigative services (*supra* n.11), Assemblyman Friedman stated:

"The bill does not say that investigative services will be provided only where investigators exist or work in the county where the trial is held. No, not at all.

"This bill says that investigative services will be supplied, period, whether it is Onondaga County or Bronx County. If you need investigators for the defense of this accused person, you will get them no matter what county he is in. . . .

"***Any fair-minded person would have to say, yes, it is possible an innocent person might be convicted. But I ask you to consider the other side of it. *This happens to be the most humane and fairest capital punishment bill ever passed in any house of any legislature in any state, and probably any country in the world.*

"*This bill provides . . . for the best lawyers to represent the poor Blacks that you were talking about.* You are right, Blacks in the past, and *minority people in the past, have suffered under capital punishment bills because they have not been able to get the best kind of legal representation. But under this bill, they could, because the bill requires that the State pay the equivalent rate for lawyers in that field. . . .*

***[If] I were accused of a capital crime, I could not hire a lawyer like the fellow now representing Jean Harris down in Westchester County, because he charges some $100 to $150 an hour, and if he was going to put in 100 or 200 hours for my defense, I could not afford it or pay for it. I would have to get one of my friends from Bronx County.

"But a poor person . . . under this bill . . . could go hire Joel Arnou now defending Mrs. Harris; F. Lee Bailey, if he feels like coming in; Mr. Edelstein from Brooklyn, you name it. Under this bill the poor person is going to have that lawyer representing him. It is not just the lawyer, it is the investigative services.

"You know the guys that were found, after their convictions, to have actually been innocent, were found to be innocent because somehow they managed, over the years, to get investigators working for them to dig into the facts and find out what actually happened, and uncover the real truth of the cases. This bill says you are going to have those investigative services at the very beginning. *Whatever is necessary, whatever is needed, if an army is necessary, you can hire them under this bill,* and you can prepare a defense if a defense is necessary." [Emphasis supplied.][20]

---

[19] RECORD OF PROCEEDINGS, ASSEMBLY, STATE OF NEW YORK (Monday, January 14, 1980) (statement of Assemblyman Friedman), at 99-100.

[20] RECORD OF PROCEEDINGS, ASSEMBLY, STATE OF NEW YORK (Tuesday, February 17, 1981) (statement of Assemblyman Friedman), at 881-890.

In 1980, Assemblyman Clark Wemple, another Assembly co-sponsor, stated:

> "This bill is as carefully constructed a piece of legislation that has ever come before this house. There is not a single provision in our Penal Law, our Code of Criminal Procedure, absolutely nothing that comes within shouting distance of this particular bill in terms of its attention to the rights of the accused. ***Any defendant under this bill can have *unlimited funds* to hire the top attorney in his community, in his state, in the Nation, to defend him. ***You can get not just competent counsel under this bill, *you can get the best counsel.* That is the point of distinction." [Emphasis supplied.][21]

And again last year, during the debate on this bill, Assemblyman Wemple stated:

> ". . . [T]*his bill goes far beyond anything we have ever had in this State or in the country in terms of providing those constitutional rights and extra-constitutional rights* that you don't generally find." [Emphasis supplied.][22]

Assemblyman Morahan, speaking in 1981 on the floor of the Legislature, stated:

> ". . . [A]nd they have provided adequate money for defense, and I am not talking about the average public defender brand of defense, but *defense equal to those who would have money.*" [Emphasis supplied.][23]

It is apparent that the supporters of the Volker/Graber death penalty bill recognize the inadequacies of the current system for providing public defense services. It is also absolutely clear that the legislative intent of §722-g(5) is to respond to those inadequacies by supplying "unlimited funds" to the defense in capital cases. In what follows, the price of that response and other costs of capital litigation are detailed.

PART II:
THE COST OF CAPITAL LITIGATION (TEN LEVELS AND BEYOND)

It is now clear that a permanent and indispensible feature of capital litigation involves the review of constitutional, statutory and discretionary questions at a minimum of ten state and federal judicial levels. These include, but are not limited to:

1. the guilt and penalty phases of trial;
2. review by the highest state court of a sentence of death and the underlying conviction;
3. writ of *certiorari* to the United States Supreme Court;
4. post conviction proceedings including evidentiary hearings to vacate judgment or set aside sentence or both;
5. review by the highest state court of adverse determinations in such post-conviction proceedings;
6. writ of *certiorari* to the United States Supreme Court;
7. petition for writ of *habeas corpus* to the United States District Court;
8. appeal of a negative determination of a writ of *habeas corpus* to the Federal Court of Appeals for the circuit encompassing the district wherein the writ was brought;
9. a petition for rehearing *en banc* from a negative determination of the Court of Appeals;
10. a writ of *certiorari* to the United States Supreme Court to review a negative determination of either the Court of Appeals or a rehearing *en banc*.

After final judicial review, commutation applications directed to the executive branch are conducted. Stays at each level or stage of litigation are routine. A litigation process lasting eight to ten years is the norm.[24]

These levels of judicial review are the mandatory daily fare of capital litigation even in states where death penalty statutes, unlike the Volker/Graber bill, fail to provide representation beyond the highest state court.

There is a nationwide network of lawyers, legal workers and organizations routinely seeing to it that lawyers are supplied in the post-conviction stages of capital cases everywhere in the country.[25]

---

[24] While nostalgic longing for simpler times may be appealing, it will not change the course or the length of capital litigation in the United States. The most recent death case before the Supreme Court, *Eddings v. Oklahoma*, __U.S.__, 102 S.Ct. 869 (1982), vacated a sentence of death and remanded for resentencing. The decision handed down January 19, 1982, concerned a shooting which occurred April 4, 1977. If *Eddings* is resentenced to death, the appeal process will begin again. This time-consuming judicial resolution of complex legal questions is something to be proud of. It is one of the indicia which distinguishes the United States of America from a host of "overnight republics" which dot the globe. Furthermore, litigation delay is by no means unique in or limited to death cases. *United States v. IBM*, 615 F2d 923 (2d Cir. 1980) was an antitrust suit brought by the Justice Department in 1969. The suit alleged that IBM had, *inter alia*, monopolized the electronic digital computer market. Discovery lasted from approximately 1969 to 1975. In that year the government's direct case commenced. It lasted for almost three years. From 1972 to 1980, IBM appealed at least five orders from the District Court, two of which were appealed to the Supreme Court. The IBM defense began in 1978. In January of 1982 the lawsuit was discontinued. As of 1979, 90,000 pages of testimony had been transcribed, several hundred witnesses had been deposed and 70 trial witnesses had been called.

[25] This network, partially the outgrowth of the death penalty moratorium strategy, is now in permanent place throughout the country. Thus, even in states which do not provide for representation beyond the highest state court, litigation still takes place and generates all the costs of responding to petitions for writs of *certiorari*, *habeas corpus* and other forms of state and federal post-conviction relief. More importantly, the

By an examination of these ten levels of judicial review, it is possible to actually chart the costs of capital litigation (see Table 1).

TABLE 1[26]
A Model Charting System for Projecting Capital Litigation Cost

STATE I

County Charge						

extent to which capital litigants are entitled to counsel in seeking state and federal post-conviction review (in states failing to provide it) is, itself, a question raised in capital litigation. It is clear that, from an ethical point of view, a lawyer cannot just "drop a capital case." Furthermore, canon 2 of the CODE OF PROFESSIONAL RESPONSIBILITY (DR2-110[A][2]) can be read to require the lawyer in a capital case to pursue the matter in federal court independent of the state's statutory scheme. See also *In Re Anderson*, 69 Cal. 2d 613 (1968). A strong argument that counsel should be required constitutionally to pursue the case into federal court is developing. Sevilla, *Do Court Appointed Counsel In Capital Cases Have A Duty To Pursue The Case In Federal Court?*, 1 DEATH PENALTY REPORTER, No. 9, at 1 (May 1981). It is reasonable to assume that eventually in capital cases a right to counsel for *all* levels of review, similar to the New York State statute, will be constitutionally mandated. The cost of the death penalty in those states that have failed to provide counsel will, at that time, be geometrically increased since such a ruling will no doubt be given retroactive effect.

[26] This chart depicts three channels of review in which capital litigation takes place: "State I," "State II" and "Federal." The stages are numbered in the theoretical order in which a "model" case would proceed. In reality, remands, evidentiary hearings, stays, and certain concurrent proceedings would both alter and add to the numbering system. The boxes represent in graphic form a means to allocate state and county costs across the ten levels of judicial review for defense, prosecution, courts, corrections, and other miscellaneous categories. In our model, "State I" is the first channel of litigation and includes the state trial court proceeding,

State Charge						
County Charge						

In what follows, we discuss "State I"—the first three stages of capital litigation. We will trace a death penalty case through trial, appeal, and United States Supreme Court review. To the extent possible, we allocate and chart the costs for defense,[27] prosecution,[28] corrections,[29] courts,[30] and other miscellaneous categories.

---

direct appeal to the Court of Appeals, and federal relief in the form of *certiorari* to the United States Supreme Court. In the event that relief is denied in this channel, litigation in "State II" (the state's post-conviction remedy channel) commences. Post-conviction proceedings at the trial level, direct review by the Court of Appeals, and again a writ of *certiorari* to the Supreme Court are envisioned. The "Federal" channel includes *habeas corpus* relief in the U.S. District Court, review of adverse decisions by the U.S. Court of Appeals, discretionary relief by rehearing *en banc* in the U.S. Court of Appeals, and again a writ of *certiorari* for Supreme Court review. The eleventh level of this review process includes executive clemency. It should be noted that the statutory apparatus for clemency in the state of New York does not appear to be procedurally sufficient for death cases. See N.Y. CORRECT. LAW ARTICLE 11 (McKinney 1968).

[27] In addition to other authority cited throughout this paper, in February and March of 1982, the New York State Defenders Association conducted a telephone survey of public defender offices, private attorneys, expert witnesses, investigators, correctional personnel, and others in order to determine costs involved in litigating death penalty cases.

[28] Throughout the remainder of this paper, we apply a uniform formula to estimate capital prosecution costs. This formula is based on existing average statewide disparity rates between prosecution and defense. For the purposes of the estimates, we use the baseline defense costs and apply three prosecution to defense ratios. The first, a 2 to 1 ratio, is applied to counsel costs in the guilt and penalty phases. The second, a 3 to 1 ratio, is applied to expert witness and investigation costs in the guilt and penalty phases. The third, a 1 to 1 ratio, is applied to the cost of appeals to the New York Court of Appeals and the United States Supreme Court. These ratios are a reflection of actual experience based on defense/prosecution cost data. As applied, they will consistently yield what we believe are uniformly conservative dollar amounts. Actual prosecution/defense disparity is much greater than 2 to 1 or 3 to 1. In some jurisdictions, disparity runs as high as 8 or 10 to 1. The reader can thus take the prosecution costs reported hereinafter as the minimum cost of capital prosecution, resting precariously upon the assurance that these costs will be no less than what is reported, and will probably be much more. While we hesitate to say how much more, if recent experience is the bellwether, counties will assuredly go bankrupt as they pay for the cost of prosecution in capital cases. Under the capital litigation scheme envisioned for New York by the Volker/Graber bill, prosecution costs will remain a county charge.

[29] We do not yet know the correctional costs generated by the death penalty at the local level. There will be higher security costs attached to capital incarceration in the areas of housing, monitoring, maintenance, transportation, and feeding. Most local jails will be hard pressed to achieve adequate capital case security. We do not, herein, estimate local correctional costs generated by the death penalty. In the state system (post-verdict), capital incarceration takes a tremendous and distinctly identifiable toll. We discuss certain costs associated with state level incarceration infra at PART III.

[30] The difficulty of retrieving useful data for the purpose of projecting court costs in New York State has previously been recognized. NATIONAL CENTER FOR STATE COURTS, NEW YORK STATE BUDGET REVIEW MANUAL: A REPORT OF THE SENATE SELECT TASK FORCE ON COURT REORGANIZATION (1978). For this reason, in this report we rely on survey data from other states.

THE GUILT AND PENALTY PHASES

A. Death Is Different

The United States Supreme Court has recognized that death penalty cases require greater due process procedural safeguards than do non-capital cases. In *Gardner v. Florida*, 430 U.S. 349, 357 (1977), the Court stated:

> ". . . [F]ive Members of the Court have now expressly recognized that death is a different kind of punishment from any other which may be imposed in this country. [Citations omitted.] From the point of view of the defendant, it is different in both its severity and its finality. From the point of view of society, the action of the sovereign in taking the life of one of its citizens also differs dramatically from any other legitimate state action. It is of vital importance to the defendant and to the community that any decision to impose the death sentence be, and appear to be, based on reason rather than caprice or emotion."

The Legislature's intent to have the state pay the defense bill no doubt arises from court decisions like *Gardner* which establish that death cases require greater procedural protection.[31]

In recognizing this constitutional principle, the Legislature has declared its commitment to this new brand of equal protection. It has stated that where the state seeks the irrevocable sanction of death, inability to pay for the best counsel and auxiliary services will not be a bar to receiving them. Under the Legislature's view of due process, in such cases, the state will pay for representation, no matter what it costs.

In the ordinary criminal case in which the appointment of counsel is made for a person unable to afford counsel, the court will appoint counsel. The legislative debates indicate, however, that, although it is not a requirement of our present statutory scheme and has not yet been recognized as an element of the Sixth Amendment,[32] an indigent defendant facing the death penalty in New York State will have the opportunity to choose the lawyer to be appointed. Additionally, although the mechanism for this process of appointment has not been made clear by the Legislature, the Legislature has explicitly pointed out that this will not just be competent counsel but will be the best counsel money can buy:

> ". . . [W]hat we are saying is that whatever the fees are that F. Lee Bailey and the best attorneys, the best criminal attorneys get, are the kind of fees that the State is going to provide for the defense of accused persons who may come under the restrictions of this bill."[33]

While the use of the name F. Lee Bailey may be somewhat symbolic, there is no

---

[31] See *Woodson v. North Carolina*, 428 U.S. 280 (1976); *Gregg v. Georgia*, 428 U.S. 153 (1976); *Furman v. Georgia*, 408 U.S. 238 (1972). Mr. Justice Harlan, concurring in *Reid v. Covert*, 354 U.S. 1, 77 (1957), stated: "I do not concede that whatever process is 'due' an offender faced with a fine or a prison sentence necessarily satisfies the requirements of the Constitution in a capital case." *Gardner* makes clear that a majority of the Court accepted this position.

[32] The U.S. Court of Appeals for the Ninth Circuit has held that a defendant's Sixth Amendment right to counsel is violated when a trial court judge fails to accord appropriate weight to an existing attorney/client relationship in determining whether to grant a continuance founded on the temporary unavailability of the defendant's particular attorney. *Slappy v. Morris*, 649 F.2d 718 (9th Cir. 1981). On March 29, 1982, the United States Supreme Court agreed to review the case. *Morris v. Slappy*, 81-1095. See also *N.Y.L.J.*, March 30, 1982, at 1, col. 4. Thus the question of whether or not a defendant has a federal constitutional right under certain circumstances to "counsel of choice" may soon be resolved.

[33] RECORD OF PROCEEDINGS, ASSEMBLY, STATE OF NEW YORK (Monday, March 20, 1978) (statement of Assemblyman Friedman), at 2079-2080.

question that his fee structure is real. If New York is prepared to pay for the "best" counsel with taxpayers money, it can begin with his law offices in Boston. Bailey's office reported that in serious felony (non-capital) cases, it requires an initial retainer of $50,000. This does not include expenses or per diem trial costs.[14]

Norris Gelman, a Pennsylvania attorney with much trial experience in death penalty cases, stated that an appropriate retainer in a capital case runs anywhere from $25,000 to $50,000 depending on the fact pattern.

Ken Rose, an attorney with Team Defense in Atlanta, an organization that specializes in defending death penalty cases, reported that private attorneys in the Atlanta area require initial retainers ranging from $15,000 to $40,000. The Southern Poverty Law Center similarly found that private attorneys in Alabama require retainers of not less than $25,000.

Fees thereafter will be based on hourly and daily (trial) rates. Fees ranging from $100 to $200 per hour will not be uncommon. The bill provides for the appointment of "one or more attorneys" and it is reasonable to assume that the appointment of two or more attorneys will be the rule, not the exception.[15]

The natural result of the death penalty statute will be that jury trials will be conducted in all capital murder cases. The jury trials will be longer and more expensive than in non-capital cases. Long before the jury is empaneled, however, there will be very high pretrial costs. These include motion practice, investigations, and the use of expert witnesses. A discussion of these follows.

B. Motion Practice

Pretrial motions play an important role in *most* criminal cases. However, a death penalty trial is strikingly different than other felony trials because of the length of each procedural stage and its overall importance to the ultimate objective—preventing the imposition of the sanction of death. Extensive pretrial motions play, therefore, a crucial role in *every* death penalty case.

Motions request specific legal relief or action; they help to educate the trial court and appellate courts as to the standards of extra-special due process that have to be applied to each procedural question in a death case. Motions create a record and set a course of strategy upon which the entire litigation effort in a capital case is patterned.

The usual number of pretrial motions in non-capital cases vary between five and seven. In death penalty cases, every motion will be critical, requiring substantially more time to prepare. Experienced attorneys state that the typical capital case requires the filing of between 10 and 25 trial motions.[16] Many pretrial motions will relate solely to the unique aspects of the defendant's underlying criminal case. Others will be specifically a function of there being a death penalty statute in existence.

Thoroughly researched constitutional attacks on the death statute, motions directed at insulating the jury from ourside influences, and in-depth motions for discovery and the right to inspect and test evidence will be routine. Ordinary motions in criminal

---

[14] Significantly, F. Lee Bailey reportedly spent $350,000 for his own defense against charges of conspiracy to defraud investors arising from his involvement with Glenn Turner (*Time*, Feb. 16, 1976, at 50.) Nor is he alone. John Ehrlichman is reported to have spent $400,000 on his defense. (*Time*, Jan. 13, 1975, at 14.)

[15] Unlike the proposed Volker/Graber bill, the California death statute is silent on the number of lawyers to be appointed in capital cases. Nevertheless, the California Supreme Court has held that a court should presumptively appoint a second attorney if such an attorney "... may lend important assistance in preparing for trial or presenting the case." *Keenan v. The Superior Court of the City and County of San Francisco*, 30 Cal. 3d_____ (Feb. 8, 1982).

[16] *Motions for Capital Cases*, Southern Poverty Law Center, 1981, p. 2.

cases take on a different meaning in death cases. Thus, motions to suppress physical evidence or suggestive identification procedures, motions to dismiss the indictment, or motions to contravert search warrants, the routine matter of any criminal case, are longer, more complicated and more heavily litigated in death cases.

In capital cases, motions for the appointment of expert witnesses, the employment of investigators, the utilization of private psychiatrists for trial and sentencing and special motions to increase the court's consciousness of the requirements of "super due process" are not only routine but required as an element of the effective assistance of counsel.

In virtually every death penalty case, the defense will file motions for change of venue, individual *voir dire*, sequestration of jurors during *voir dire*, and sequestration of a petit jury. The motions are essential to offset prejudicial pretrial publicity and to ensure the defendant an impartial jury.[37] There are reported cases of individual examination of potential jurors that have lasted two to four weeks. The cost of sequestering the jury in a trial that, on the average, lasts from four to six weeks in a capital case, is also substantial.[38]

Professor Robert Buckhout, a professor of psychology at Brooklyn College, Brooklyn, New York, has testified in over 80 death penalty cases. His expertise involves the sufficiency of eyewitness identifications as well as conducting juristic psychological surveys. Juristic psychological surveys involve consulting with the attorneys and preparation of sample questionnaires to assist in targeting special jurors during *voir dire*. At times, he has even assisted attorneys in the actual conduct of *voir dire*. Professor Buckhout's fee for the surveys is $500 per day for in-courtroom testimony with a consulting fee of $100 per hour. In 1977, Professor Buckhout submitted a $25,000 bill in a death penalty trial for a juristic psychological survey.

C. Investigators

Once an attorney appears in a death penalty case, and ordinarily before many of the aforementioned pretrial motions are brought, there arises the need for auxiliary defense services. Foremost among these is the need for an investigator.

Investigators' fees, in our survey, range from $500 to $1500 per day. Hourly rates for experienced investigators were reported to range between $75 and $200. The Office of the State Public Defender in California has found the cost for investigators at trial in some death penalty cases to have been in excess of $40,000. Similar amounts were reported by private attorneys. The National College for Criminal Defense in Houston found that the bare minimum needed for investigation is $10,000, and this figure only represents the investigation required for the trial phase. This figure, by New York standards, is concededly low.[39]

The Sixth Amendment right to the effective assistance of counsel in both federal and state courts requires thorough investigations in all criminal cases. Apparently, this has not gone unnoticed by the Legislature. The legislative debate on what would be paid for investigators included a comment by Assemblyman Friedman about defendants who, years after conviction, were able to secure their freedom with "late" investigative

---

[37] *Motions for Capital Cases*, Southern Poverty Law Center, 1981, pp. 43-44, 78-83.

[38] This cost is not detailed nor estimated herein. It will, however, be a substantial charge.

[39] In *People v. Gravdon*, 43 A.D.2d 842 (1974), a non-capital murder case involving a shooting in a social club, the American Service Bureau, the private investigation firm on the case, found and interviewed more than 35 witnesses. The work in that non-capital matter included the investigation of each complaining witness and the retrieval of statements. The cost of this alone exceeded $25,000.

help. Referring to this issue he stated, *supra*, at n. 20, "This bill says you are going to have those investigative services at the very beginning."

"Up front" investigative services have been shown to be essential. In the recent case of Johnny Ross, imprisoned in Louisiana at 15 and sentenced at 16 to die for a rape he didn't commit, investigative services set him free. These investigative services should have been available pretrial, but were not supplied until the Southern Poverty Law Center brought a *habeas corpus* petition (in the "Federal" or third litigation channel).

The Southern Poverty Law Center received a letter from Johnny Ross in 1975 pleading his innocence. Ross was 16 at the time—the youngest person on death row in America—and the Center took his case. Ross's 1975 trial had lasted less than one day despite the fact that it was a capital case in which his life was at stake.

Among numerous other things, the Southern Poverty Law Center hired Gary Eldredge, a private investigator from New Orleans, to complete the investigation in the Johnny Ross case:

> "Eldredge read the trial transcript and began tracking down alibi witnesses, interviewing investigating officers and pursuing other leads. In reading the transcript, he noticed that the prosecutor had introduced, through the testimony of a criminalist, the rapist's blood type, as determined from a semen sample taken from the rape scene, but the prosecutor had never tied this piece of evidence to Ross.
>
> "For the sake of thoroughness, Eldredge decided to check it out and contacted Ross to see if he knew his blood type. The rapist's was the 'B' group. Ross didn't know his, but told Eldredge he had donated blood a number of times since he'd been imprisoned. So Eldredge contacted the blood bank that served the prison.
>
> "Each of the numerous times Ross had donated, his blood had been typed, and each time it had come up 'O +.' But these were the results of testing by technicians, not physicians, so after informing [the Southern Poverty Law Center] of his findings, Eldredge arranged for a prominent university doctor to test Ross, and his tests produced exactly the same results. ***[The Southern Poverty Law Center] took the evidence to the district attorney's office. Soon thereafter, Ross was released. He is now living with his sister in Denver."[40]

The price of the Gary Eldredge investigation in the Johnny Ross case was $3500. It took place, however, years later than it should have, in conjunction with a federal *habeas corpus* petition. The waste of taxpayer dollars that ensued from unnecessary litigation is nothing compared to the abuse of Johnny Ross's liberty—a deprivation of freedom arising directly from poverty.

A typical criminal case investigation, obviously heightened in a death case, involves searching for and interviewing every potential favorable and adverse witness. It includes crime scene investigations, photographs, the search for and retention of experts, and the review of testimony presented at pretrial hearings and other evidentiary proceedings. The investigator retrieves evidence, follows leads, and develops factual theories. Frequently, the investigator is deeply involved in surveys to test for prejudice within a community and among potential jury veniremen. In a system which requires the marshalling of facts before they are applied to law, the investigator is a crucial and vital part of the defense team.

Nor should it be forgotten that the sentencing phase of the bifurcated trial process is

---

[40] *Poverty Law Report*, Vol. 10, No. 1, Jan./Feb. 1982, at 3.

a co-equal part of capital litigation at the trial level. Thus, the marshalling of facts on the issue of guilt is but 50 percent of the work that a good private investigator will be doing in a capital case.

D. Experts and Auxiliary Services

Experts, such as forensic scientists, juristic psychologists, psychiatrists, crime scene reconstructionists, criminalists, polygraph experts and others contacted in our survey, reported fees ranging from $500 to $1,000 a day for their services. These people are critically necessary to the defense team. While any particular case may require a different configuration of the experts required, all cases will require the extensive use of numerous experts. The fees reported below are exclusive of the expenses required for travel.

Judith Bunker, a technical specialist to the medical examiner in Atlanta, and one of the top crime scene reconstructionists and blood stain analysts in the country, has advised NYSDA that the going rate for such services ranges from $700 to $1,000 per day.

In many capital cases, difficult issues, such as the insanity defense, are often raised. Psychological Evaluations, Inc., in Atlanta, has performed psychiatric and psychological evaluations in death penalty cases throughout the country. Although the individual fees vary, Dr. Anthony Stone, a psychologist, reports the average fee is approximately $700 a day exclusive of expenses.

Our office interviewed Mr. Robbie Robertson of W.A. Robertson and Associates from Atlanta, Georgia. Mr. Robertson is an expert in the administration and analysis of polygraph examinations. He has participated in approximately 25 capital murder cases in which his testimony and analysis were used at pretrial proceedings, and trial and sentencing phases of the bifurcated capital process. His present fee is $200 per day for courtroom testimony. In addition, he charges $150 for the administration of the polygraph examination with the average bill approximating $500 plus expenses.

As stated earlier, Professor Robert Buckhout has appeared in his capacity as an expert witness regarding eyewitness identifications. His courtroom fee is $500 per day. His consulting fee, once again, $100 per hour.

Dr. George Jurow of New York, New York, has been involved in approximately 25 death penalty cases. His expertise centers on *Witherspoon* issues.[41] His research concludes that the exclusion of jurors opposed to the death penalty at trial results in biased juries. His services include consulting with the attorney and sometimes testimony at the pretrial stage. Frequently, he is a witness in support of defense motions to empanel a separate jury for the sentencing phase. His fee is $100 per hour for consulting as well as testimony.

Dr. David Rothstein, of the Michael Reese Medical Center, Chicago, Illinois, is a psychiatrist. Dr. Rothstein has testified in several capital cases in both the trial and penalty phases. His fee is $125 per hour for in-court testimony and $110 per hour for analysis. This fee is exclusive of expenses.

Dr. Seymour Halleck, of the School of Psychiatry at the University of North Carolina at Chapel Hill, has testified in both the trial and penalty phases of capital trials. With a standard fee of $150 per hour, he approximated his average bill to be $2500 for both phases.

---

[41] *Witherspoon v. Illinois*, 391 U.S. 510, 522 (1968), held that a death sentence may not be "... carried out if the jury that imposed or recommended it was chosen by excluding veniremen for cause simply because they voiced general objections to the death penalty or expressed conscientious or religious scruples against its infliction."

A typical death case will use these experts or others just like them. A hypothetical case can easily be designed. Let us assume a case in which three days of crime scene reconstruction, a juristic psychological survey and a polygraph examination are required. Let us further assume a *Witherspoon* jury challenge that takes three days of work and four hours of testimony and the use of one psychiatrist who has conducted a five hour exam and testifies for two hours. This relatively modest use of experts will run up a bill for the state of more than $30,000 in just the guilt phase of a capital case. These costs are real. They will be paid by the state. They will be present in every capital trial.

E. Sentencing in the Penalty Phase

Any aspect of the defendant's character or record and any other circumstance offered in mitigation of punishment must be considered by the jury in the penalty phase of a capital trial. *Lockett v. Ohio*, 438 U.S. 586, 604 (1978). *Lockett* followed on the heels of *Woodson v. North Carolina*, 428 U.S. 280 (1976). In *Woodson*, the Supreme Court, in defining the requirements of capital sentencing procedures, stated that courts must consider the:

> "character and record of the individual offender and the circumstances of the particular offense *as a constitutionally indispensible part of the process of inflicting the penalty of death.*" (Emphasis supplied.) *Id.*, at 304.

In *Gardner v. Florida*, 430 U.S. 349, 358 (1977), the Court held that:

> "[I]t is now clear that *the sentencing process*, as well as the trial itself, *must satisfy the requirements of the Due Process Clause* ***[*T*]*he sentencing is a critical stage of the criminal proceeding at which* [*the defendant*] *is entitled to the effective assistance of counsel.* ***The defendant has a legitimate interest in the character of the procedure which leads to the imposition of sentence. . . ." (Citations omitted.) (Emphasis supplied.)

At this critical stage of the proceeding, the defense may use many of the socio-psychiatric witnesses employed during the trial phase. However, this stage additionally requires the investigation of the defendant's family, friends, neighbors, school personnel, and social workers.

The investigation at the sentencing phase requires a complete retrospective analysis of every positive aspect of the defendant's life from the day of birth to the date of sentence. The witnesses called to this proceeding, vital to establishing evidence in mitigation of sentence, must be made available to testify, requiring, in many cases, the reimbursement of travel expenses and accommodations. Military, school, work, and other records must be designated, located and retrieved.

The Volker/Graber bill will permit the court, upon a showing of prejudice, to discharge the trial jury and empanel a new sentencing jury.[42] Hence, defense counsel will undoubtedly make the same motion as was made at trial for individual *voir dire* at the sentencing phase and for sequestration of the sentencing jury. Here again, a lengthy process of individual *voir dire* is, in many cases, the only possible remedy to empanel a fair and impartial jury on the question of sanction. The main reason courts have granted individual *voir dire* is that it is uniquely suited to capital cases.

Death cases ordinarily are accompanied by tremendous publicity and notoriety. Infection of the jury panel by this kind of publicity, and its resultant effect on jury fact-finding, creates reversible error. Therefore, it is in the interest of the court system to

---

[42] Proposed CRIM. PROC. LAW §400.27(2), S.7600/A.9379 §8 (1982).

permit individual *voir dire* and sequestration of jurors during *voir dire*. Such *voir dire* enables the defense to delve into the area of prejudice without fear that the answers of one juror will taint the entire panel. Such taint preserves an issue for later litigation.

Three of the mitigating factors described in the proposed death bill for New York require the sentencing jury to consider whether ". . . [t]he murder was committed while the defendant was mentally or emotionally disturbed or under the influence of alcohol or any drug . . . ,"[43] whether ". . . [t]he defendant was under unusual and substantial duress or under the domination of another person . . . ,"[44] and whether ". . . [t]he defendant's mental capacity . . . or his ability to conform his conduct to the requirements of law was significantly impaired. . . ."[45] These circumstances clearly contemplate a situation where the defense will be called upon to present extensive testimony of psychologists and psychiatrists. The previously discussed costs of such services will *again* be incurred by the state. They will probably be higher in the penalty phase of the capital trial since the importance of such testimony is magnified by the omnipresence of death.

Furthermore, since 1978, it has been constitutionally explicit that:

> ". . . [T]he Eighth and Fourteenth Amendments require that the sentencer . . . not be precluded from considering, *as a mitigating factor*, any aspect of a defendant's character or record and any of the circumstances of the offense that the defendant proffers as a basis for a sentence less than death."[46]

The requirements which permit relevant evidence in mitigation also result in the defense calling witnesses to establish the cruelty of the death penalty. Former death row inmates, theologians and witnesses to prior executions are the type of non-traditional expert witnesses that now, under rules laid down by the Supreme Court, testify in the penalty phase of capital litigation. The expense of these experts at the sentencing proceeding will be considerable. Little, if any, of this evidence can be legally excluded from the sentencing phase of a capital trial in the United States.

Mr. Lloyd McClendon, Deputy Administrator, Ohio Penal Industries, Columbus, Ohio, is an ex-death row inmate, having spent two years on death row. He has been certified as an expert witness in approximately six death penalty trials throughout the country. His testimony is used at the sentencing stage to rebut the deterrent effect of the death penalty and to support mitigating factors such as the defendant's positive potential. Mr. McClendon's fee is presently $500 a day for in-court testimony. In a recent case in the state of Florida, he submitted a bill to the public defender's office for approximately $2000.

The array of expert witnesses, including social psychiatrists, criminologists, and counselors, whose testimony will bear on the inadequacy of the death penalty as a sanction, requires preparation for a full blown evidentiary, adversarial proceeding. Experts to testify on the death penalty as it is applied in a particular state, professors to testify on the philosophical question of capital punishment, social scientists to resolve jury doubts, and many others are called as witnesses in the penalty phase. Testimony on the inefficacy of the death penalty as a deterrent, on attitudes toward the

death penalty, on racial prejudice, and on every imaginable issue that can prevent the execution of a human being is permissible and systematically used in the sentencing phase of a capital case.[47]

THE COST OF THE GUILT AND PENALTY PHASES

The first stage of "State I" has been seen to be expensive. We recap costs here.

Defense: Charges for the defense will conservatively total $352,700. One hundred seventy six thousand, three hundred fifty dollars ($176,350) is allocated for each phase (guilt and penalty)[48] as follows:

Attorneys	$106,350
Investigators	40,000
Experts	30,000
	$176,350

Prosecution: Our estimate of prosecution costs at the trial level for the guilt and penalty phase of the average capital case in New York is $845,400.[49]

Court: As previously stated,[50] court data is difficult to retrieve for the purpose of capital litigation cost modeling. We do, however, have a guidepost and, in the absence of hard data, we use it. John Ackerman, dean of the National College for Criminal Defense, reports that a local Texas judge, counting only court-time, employees time and jury sequestration, estimated the county cost of a recent death penalty case at over $300,000. This amount did not include appeal, and the defendant in that case did not receive a sentence of death. In fact, the case is now on appeal.

Correctional Cost: As previously stated,[51] we do not estimate or allocate local jail capital incarceration costs.

---

[47] It should be noted that the only experiential competence statutorially required under the Volker/Graber bill is in the *trial* of felony cases (three years). However, the two stages of the bifurcated capital process require experiential competence in both the guilt phase (trial) and the penalty phase (sentencing). The art of sentencing advocacy is a new and developing area. Experience in New York felony court representation, absent more, is not sufficient experience for the sentencing phase of a capital case. Additionally, in New York, experiential competence in similar sentencing proceedings would be virtually impossible to acquire. Although Article 400 of the Criminal Procedure Law presently provides for presentence conferences, summary hearings, and other specified hearing procedures, these proceedings do not approach the complexity or importance of penalty phase proceedings in death cases. Furthermore, the CPL proceedings can only be held before a judge [CPL §§400.10; 400.15(7)(a); 400.16(2); 400.20(a); 400.21(7)(a); 400.30; 400.40(5)] while penalty phase proceedings are held before juries. Although the Volker/Graber bill clearly permits hiring special counsel to assist in penalty phase procedures, including post-trial, presentence motion practice, presentence investigations, hearing preparation and the sentencing hearing itself, we do not independently calculate these fees.

[48] This assumes a concededly low model four week trial of 120 trial hours, exclusive of motions. It assumes two trial lawyers, one investigator, and the expert costs detailed *supra* at D. One hundred twenty five (125) hours of motion work are allocated to the guilt phase, and 344 hours of lawyer time to investigation and preparation (research, witness preparation, client interviews).

[49] See n. 28, *supra*.

[50] See n. 30, *supra*.

[51] See n. 29, *supra*.

We can now allocate and chart some of the costs arising in the first stage of capital litigation—the guilt and penalty phases. (See Table 2 below.)

TABLE 2
COST OF THE GUILT AND PENALTY PHASES

TRIAL						
PENALTY PHASE	Defense	Prosecution	Court	Correction	Other	TOTAL
State Charge	$176,350	—0—	$150,000	—0—	?	$326,350
County Charge	—0—	$422,700	—0—	?	?	$422,700
GUILT PHASE	Defense	Prosecution	Court	Correction	Other	TOTAL
State Charge	$176,350	—0—	$150,000	—0—	?	$326,350
County Charge	—0—	$422,700	—0—	?	?	$422,700

STATE $652,700
COUNTY $845,400
TOTAL $1,498,100

Under the Volker/Graber bill, it will cost New York State and its counties more than $1.4 million to bring a capital case to the point of a death sentence. However, the drain of taxpayers' money will have just begun. The costs associated with the ensuing nine levels of appellate review are substantial.[52] The first two stages of the appellate process within "State I" are detailed below.

DIRECT APPEAL TO THE COURT OF APPEALS

The Volker/Graber bill authorizes a direct appeal to the Court of Appeals from judgment of conviction and sentence of death. The Court of Appeals will review the law and the facts. It will examine the presence of passion, prejudice, or arbitrariness in the sentence. It will review statewide sentencing patterns and determine whether the sentence of death is disproportionate or excessive. The appellate process will increase the total cost of the death penalty procedure by: 1) being more expensive than non-capital appeals; and 2) regenerating the costs of the trial process when cases are remanded for trial. The latter result is not infrequent in death penalty appeals.

The California Office of the State Public Defender reports that nine out of the first 11 death judgment appeals under California's death penalty statute resulted in either

[52] It bears repeating that the proposed bill does not limit the reimbursement of appellate defense counsel to the state appellate forum. Indeed, it requires the appointment of appellate counsel for the federal as well as the state level. The costs associated with "State II" and the "Federal" litigation channel (see Table 1, *supra*) (post-conviction proceedings, appeals, writs of *certiorari*, federal *habeas corpus* petition, federal appeals, rehearings, and writs of *certiorari*) are not detailed in this paper. Furthermore, the Attorney General will represent the state as respondent at each application for a writ of *habeas corpus* and other federal relief. The weighty state costs associated with this representation at three federal stages of litigation are also not detailed herein.

reversals or retrials. That office also reports the cost of a death penalty appeal on the state level to be in excess of $30,000 per case.

The proposed New York bill would require appellate counsel to perfect two appeals at once, i.e., the sentence review[53] and the direct appeal. The expense of this procedure will also be felt by the state and county as they attempt to defend the conviction. The constitutionality of a death penalty statute is almost always attacked on appeal. In New York, this will require the Attorney General's office to appear and defend the constitutionality of this statute.[54]

In our survey on appellate death penalty costs, F. Lee Bailey's office reported a minimum cost of $25,000 to take a non-capital felony appeal. Again, this figure is exclusive of expenses.

The Southern Poverty Law Center reported the cost of an appeal to range from $20,000 to $30,000. Under the New York statute, the costs will be higher.

In order to accurately quantify time involved in a capital case, we examined jurisdictions which have objectified the appellate process by the development of workload standards. In California and Michigan, the state defender offices have quantified non-capital appellate work into work units. By calculating the number of hours to prepare one brief from 300 pages of transcript, the Michigan Appellate Defender Office has developed an "an appellate unit"—a work unit equal to 55 hours of attorney time. Under this formula, a minor non-capital case directly appealed to the highest state court would require 3.7 work units or approximately 203½ hours. This includes an application to appeal, an appellate brief, oral argument, and motion for rehearing. It does not cover reply briefs, client visits, or expenses. The standards for California are substantially similar.

Significantly, the Appellate Section of the National Legal Aid and Defender Association[55] has developed capital case appellate standards and has also done so on the basis of work units. Under these standards, which can permissibly be met under the express provisions of the Volker/Graber bill, 30 work units are the standard work load for one appellate attorney for one year. A direct appeal of a death case to the New York Court of Appeals would constitute 14 work units under these standards.

This figure, which may be somewhat low considering the extensive research and innovation that will be required in the first onslaught of constitutional challenges to the Volker/Graber bill, translates into about five months work or between 800 and 900 billable hours. At the rates charged by the "best" counsel, *supra*, at n. 33, this will translate into defense costs of $80,000.

---

[53] The costs associated with the constitutionally required disproportionality review have not been assessed. The death penalty statute will require the arresting police officer, the prosecuting attorney, the defendant's attorney, and the trial judge to file reports with the Court of Appeals in every case where a defendant is indicted for first degree murder. These reports will have to be filed with the Court of Appeals within 30 days of a disposition by a superior court. They will also have to be separately analyzed in conjunction with each death penalty sentence appeal. The contents of the reports will be designed by rule of the Court of Appeals. They are obviously, therefore, not detailed in the bill. It is, however, clear that, independent of other increased capital case judicial costs, the judicial system will need significant additional resources just to carry out disproportionality review.

[54] N.Y. EXEC. LAW, §71 (McKinney 1972).

[55] The workload standards reported here were presented at the National Appellate Defender Conference conducted by the National Legal Aid and Defender Association, April 10-12, 1981, in Indianapolis, Indiana. The capital case workload standards of 30 work units define a capital brief as 10 units, and a petition for *certiorari* as four.

A direct appeal of a capital case to the New York State Court of Appeals will, therefore, cost New York taxpayers no less than $160,000[56] exclusive of correctional and court costs, as indicated in Table 3 below.

TABLE 3
COST OF DIRECT APPEAL TO THE NEW YORK STATE COURT OF APPEALS

APPEAL						
COURT OF APPEALS	Defense	Prosecution	Court	Correction	Other	TOTAL
State Charge	$80,000	—0—	?	?	?	$80,000
County Charge	—0—	$80,000	—0—	—0—	?	$80,000

STATE $80,000
COUNTY $80,000
TOTAL $160,000

SUPREME COURT REVIEW

Final judgments of the Court of Appeals rendered in death penalty cases are next reviewable by the United States Supreme Court by writ of *certiorari*. Bringing such petitions is routine capital practice. Preparation of the petition and the brief on the merits involve complete review of, and familiarity with, the entire trial transcript and all state court proceedings. The transcripts to be reviewed frequently contain thousands and thousands of pages.

Edward Nowak, Public Defender of Monroe County and an able appellate lawyer who successfully argued the landmark case of *Dunaway v. New York*, 99 S.Ct. 2248 (1979), before the Supreme Court, estimates that the amount of time to adequately prepare a non-capital case for Supreme Court review averages between 150 and 200 hours. Seventy to 100 of these hours cover the preparation of the petition for *certiorari*. Once the petition is granted, however, fine points have to be honed and final briefs have to be prepared. Six lawyer weeks is not an unusual amount of time in non-capital cases.

In capital cases, far more is involved. The record is longer, the issues more complex, the stakes higher. More importantly, the constitutional principles involved have frequently only recently been enunciated and are subject to precise case by case refinement. During this process of review, while the cost of defense services will be a state charge, the cost of prosecutorial time will be a county charge.

The Supreme Court does not look at a *certiorari* petition to do justice to an individual litigant. Despite its reputation, the Supreme Court does not sit as a "court of last resort." Rather, in exercising its *certiorari* jurisdiction, the court seeks to either refine existing propositions of law, explore potential areas for applying settled principles of law, or to resolve constitutional conflicts among the state or federal circuits. In death cases, these principles heighten the existing pressure to find novel issues for Supreme Court reversal.

In the most recent case before the Court, *Eddings v. Oklahoma*, ____U.S.____, 102 S. Ct. 869 (1982), the question presented was whether or not the infliction of the death penalty on a minor who was 16 at the time of the crime constituted cruel and unusual

[56] Prosecution costs are calculated at a ratio of 1 to 1 with defense. See n. 28, *supra*.

punishment under the Eighth and 14th Amendments to the Constitution of the United States. A second question was whether or not the Supreme Court should address the plain error committed by the trial court when it refused to consider relevant mitigating evidence. The petition for *certiorari* was 26 pages long. The state's opposition brief, 20 pages long. The brief on the merits, filed for the petitioner, was 68 pages long. It argued three points of law, cited 81 cases, and discussed 95 domestic statutes. It reviewed the statutes of 11 countries. Seventy-seven other authorities were cited in the brief. Five appendices containing in-depth social research were filed.

The *Eddings* case is not an unusual effort on behalf of a capital defendant. It involved hundreds and hundreds of attorney hours to research, prepare and present the case.[57]

Applying the Michigan work unit formula, a non-capital petition for *certiorari*, brief and argument before the United States Supreme Court requires four units or 220 hours of attorney work. The California formula, applied to Supreme Court review in a non-capital case, would require three appellate work units and approximately 200 hours of attorney time for research, preparation, brief writing, and oral argument. Applying the NLADA Appellate Section standards, a petition for *certiorari* in a capital case would require approximately 256 hours of preparation. Supreme Court review itself, including legal research, preparation, *certiorari* petition, briefs, and oral argument would be equal to or surpass 46 percent of an attorney's work year. This is billable at approximately 883 hours.

Under the provisions of the Volker/Graber bill, which provides fees at the rates charged by the "best attorneys," *supra*, at n. 33, this will translate into defense costs of $85,000.

Supreme Court review of a New York capital case will, therefore, cost New York taxpayers no less than $170,000[58] exclusive of correctional costs as indicated in Table 4 below.

TABLE 4
COST OF SUPREME COURT REVIEW

WRIT OF CERTIORARI						
U.S. SUPREME COURT	Defense	Prosecution	Court	Correction	Other	TOTAL
State Charge	$85,000	—0—	?	?	?	$85,000
County Charge	—0—	$85,000	—0—	?	?	$85,000

STATE $85,000
COUNTY $85,000
TOTAL $170,000

[57] Significantly, the Supreme Court decided the narrower of the two questions in *Eddings*. The constitutionality of imposing the death penalty on a 16-year-old thus remains an open question. The case is now in Oklahoma awaiting a resentencing procedure. NYSDA has been informed that a motion has been made seeking the appointment of a new sentencing judge. This will, of necessity, have to be decided before the case can proceed.

[58] Prosecution costs are calculated at a rate of 1 to 1 with defense. See n. 28, *supra*.

PART III:
A NOTE ON THE COST OF THE "CORRECTIONAL" PROCESS

The fiscal wastefulness of a criminal justice system with a death penalty is epitomized by the cost of incarceration. Since 1976, when the death penalty was held not to be unconstitutional *per se* by the Supreme Court, four people have been executed in the United States.[59] The vast majority of capital defendants do not get executed; rather, ultimately, after enormous agony and squandering of the public treasury, they are sentenced to life imprisonment. It will be the same in New York State. New Yorkers will not only pay for the cost of trial, appeal, and nine levels of review, but also for the incarceration of the inmate during the process and most probably for the rest of his life. It would, in the eyes of some, be better at the outset to offer life imprisonment as the only sanction for first degree murder.

The annual cost of maintaining an inmate in a New York State prison was calculated at $15,050 in 1978.[60] Assuming that the average age of persons convicted of first degree murder is 30,[61] and that they will live until age 70, the cost of life imprisonment for 40 years would be $602,000. At a cost of $1.4 million, a death penalty trial alone will exceed the cost of life imprisonment.

For the defendant facing capital punishment, the cost of special death row security must be added to the annual charges above. Thus, according to representatives of the Florida Clearinghouse on Criminal Justice, during the eight to ten years involved in post-conviction appellate review, an additional $15,000 per year for each inmate will probably be required. This security cost reflects the need to deal with the death row inmate individually, to maintain an individual cell, and to separate the inmate from the general population. This issue is certainly not new to correctional administrators.[62]

Richard McGee, then Administrator of the California Youth and Adult Corrections Agency, stated 18 years ago:

> "There is also the argument of cost. Why support some murderer for the rest of his life when we could execute him and save all that money, the argument goes.
>
> "Like so many arguments favoring the death penalty, this does not

---

[59] Note that of the four, three—Gary Gilmore (1977); Jesse Bishop (1979); and Steven Judy (1981)—all desired execution. Only John Spenkelink did not wish to die. He is thus the only person to be executed against his will since 1967. Since 1976, eight persons on death row have, however, committed suicide.

[60] D. McDONALD, THE PRICE OF PUNISHMENT: PUBLIC SPENDING FOR CORRECTIONS IN NEW YORK 13 (1980).

[61] Florida reports the average age at admission to its death row is 30.8 years. BUREAU OF PLANNING, RESEARCH AND STATISTICS, FLORIDA DEP'T. OF CORRECTIONS—DEATH ROW ANALYSIS 1, STATISTICAL FACTS (Aug. 29, 1980).

[62] Thorsten Sellin, writing in 1961, said: "It has . . . been claimed that [the death penalty] is an economical way of disposing of criminals who, otherwise, would have to be supported at public expense—perhaps for the rest of their lives. Those who employ this cynical argument may be ignorant of the sometimes mountainous costs of the administration of justice in capital cases and they certainly have no knowledge of the realities of prison administration. It is no doubt true that some prisoners, including some lifers, do not make adequate returns to the state—measured in dollars and cents—for some of them are mentally or physically incapable of doing so. But most lifers work in prison. They perform domestic services, they work in prison shops, they do clerical work. If they were paid a wage commensurate with their services, they would be able to pay the costs of their maintenance, but since they are paid little or nothing, it is easy to forget that they are a source of financial profit to the institution in one way or another. Any prison warden will testify to the fact that it is from the group of lifers that he draws a considerable number of trusted inmate employees." *Capital Punishment*, 25 FED. PROBATION, No. 3, at 3 (Sept. 1961).

hold up under factual analysis. The actual costs of execution, the cost of operating the super-maximum security condemned unit, the years spent by some inmates in condemned status, and a pro-rata share of top level prison official's time spent in administering the unit add up to a cost substantially greater than the cost to retain them in prison the rest of their lives.

"Furthermore, perhaps half of those condemned could make highly useful prisoners. It is a common experience that many long-term prisoners settle down to responsible jobs in the prison community which could conservatively be valued at a minimum of half the salary of an employee in industrial, maintenance, clerical and other roles. This would more than pay for both their own keep and that of the other half.

"*Thus, our studies indicate that just on the basis of prison costs alone, it would actually be cheaper to do away with the death penalty.* When the other costs of death penalty cases are added—the longer trials, the sanity proceedings, the automatic and other appeals, the time of the Governor and his staff—then there seems no question but that economy is on the side of abolition."[63] (Emphasis supplied.)

---

[63] McGee, *Capital Punishment as Seen By a Correctional Administrator*, 28 FED. PROBATION, No. 2, at 13-14 (June 1964).

CONCLUSION

Throughout this paper we have suggested the existence of certain indirect costs or made reference to specific costs we do not calculate.[64] These include court costs, jury sequestration, security costs for local correctional facilities, the cost of hiring special penalty phase counsel, and millions of dollars that will be associated with state and federal post-conviction review.

It should by now be clear that government has failed to look at the actual costs of defending and prosecuting capital cases. It has failed to examine the impact of the death penalty on the state's correctional system. It has no idea what the price tag for capital litigation by the Attorney General's office will be.

While prosecution costs in capital cases will probably bankrupt some counties, local governments, already caught in a quagmire over a jail crisis, have yet to examine the impact of capital case security requirements on local correctional facilities.

All these issues must be confronted without appeal to bloodlust. Bloodlust in the name of the public good is a political lie.

And the public? The public is concerned with security on the streets, in homes, at school, in offices. The public is, at best, overlooked by a government's death-bent myopia and, at worst, disregarded.

Crime and justice need to wear a common yoke. The death penalty permanently disengages them one from the other. There can be no murder in the name of justice.

Capital cases do not need to exist. The expenditures outlined in this paper are not necessary. Millions of dollars directly attributable to a death penalty and capital litigation can be instantly saved and redirected by not reinstituting capital punishment in New York State. This is not a choice ordinarily posed to voters or those others who live petrified and diminished by the fear of crime.

Political rhetoric, however, should not be permitted to obscure the true pain of the families of homicide victims. They need closure. For capital defendants, delay and legal review mean life. For the families of homicide victims, delay and legal review mean pain. For both, the process is agonizing.

While many have voiced concern over victims or perpetrators, few seem to know the true agony of either—the agony that comes from the notoriety of five or six appeals, from two or three reviews by the Supreme Court, from being dragged, alone, through the cruel and unusual punishment of waiting.

For the victim's family, it is the seemingly endless grief, memories of the morgue, recounting the report of death, refeeling aloneness.

The death penalty perpetuates victim pain. It also eats at the innards of the accused. Death row:

> ". . . is set up with one thing in mind: to hold a person until execution. None of the programs of education or rehabilitation available to others in even the strictest of prisons are available to death row inmates. The prison is required only to house, feed and then kill the inmate. This makes life on death row far more depressing and meaningless than life normally is in prison. . . . [D]eath row, . . . a ghastly zoo organized and wholly devoted to carrying out the most sordid act imaginable ***is just barely living. It is instinctive existence where the days are stitched together by a thin thread of hope that either the laws under which the penalty was decreed will be ruled unconstitutional or one's conviction will be reversed for some reason. The effects of years of isolation and deprivation, the lack of human contact, touch, and

** See nn. 25, 26, 29, 30, 38, 47, 52, 53, 54, *supra*, and text accompanying them.

sexuality builds unrelievable pressures. The constant possibility of execution added to those pressures makes for a grinding, withering life that is all but intolerable—a 'slow coming dark.' "[65]

The debate on the death penalty has become sordid and loud. It has diminished us all. We have come very far down the road from morality. Too far. The distance is shamefully represented by the theme of this paper—cost. Capital litigation and the costs of the death penalty, however, will not go away until the death penalty is abolished.

As can be seen from Table 5 below, some of the costs of the first three stages of capital litigation will total no less than $1,828,100.

TABLE 5
COST OF STATE I
(Trial, Appeal, Supreme Court)

	Defense	Prosecution	Court	Correction	Other	TOTAL
State Charge	$517,700	—0—	$300,000	?	?	$817,700
County Charge	—0—	$1,010,400	—0—	?	?	$1,010,400

STATE $817,700
COUNTY $1,010,400
TOTAL $1,828,100

By the time the first 40 New York death cases have been tried to verdict, over $59 million will have been expended. By the time the first 21 New York death cases have reached the United States Supreme Court, New York State and its counties will have expended as much as the Governor, in his February crime message, deemed appropriate for the entire statewide Major Offense Prosecution Program. An amount exceeding the Legislature's fiscal year 1982-83 local criminal justice assistance budget will rapidly be spent to pay for the death penalty in New York.

A recent analysis of the criminal justice system[66] indicates that the cost of the system has increased by 120 percent every five years since the early 1900's, while the rate of inflation has only increased by 40 percent every five years. A capital case, therefore, that necessarily taps resources from all facets of the criminal justice system, can be estimated to increase in cost at a similar rate. If 20 percent of the murder cases in New York (251 convictions in 1980)[67] are prosecuted through three stages of litigation as capital offenses at an average cost of $1.5 million, then in current dollars the death penalty will generate costs of approximately $75,000,000. If we assume that the cost will grow in proportion to the cost of the criminal justice system as indicated by the study, then in the year 2000 A.D., the death penalty will cost $1,075,000,000 annually. Perhaps that is what the Temporary Commission on Revision of the Penal Law meant

in 1965 when, regarding the death penalty, it found "nothing but obstruction, confusion and waste."[68]

We have not detailed the costs of an actual execution. They singularly generate inordinate, almost uncontrollable, expense. The state of Georgia, which executes by electrocution, spent more than $250,000 solely for the anticipated, but aborted, execution of Jack Howard Potts in 1980.[69]

Special telephone lines running from the prison to the United States Supreme Court and to the Governor's office are necessary. The cost of extra police personnel for crowd control, helicopter security and the shutdown of federal air space over the prison are but a few items of the irrational cost that will be generated in the rare handful of cases that ever reach the execution stage.

It is our hope that a rational discussion of the costs of the death penalty will lead New York State to a rational conclusion. ■

FOR IMMEDIATE RELEASE
FEBRUARY 13, 1983
PLEASE CREDIT "ABC NEWS"

One out of five Americans has been a crime victim in the past year, according to a new ABC News poll, and 13 percent of the adult population - nearly 22 million people - have been victims of violent crime.

The results of a special ABC News crime poll on the perceptions and realities of crime will be broadcast nationally during two weeks of special ABC News programming on "Crime in America," beginning Sunday, February 13.

The poll also revealed that three out of 10 Americans living in cities were victims of crime last year, along with nearly one quarter of all suburbanites and about one in seven Americans living in small towns and rural areas.

The ABC News poll also found that:

- Blacks are two-and-one-half times more likely than whites to be confronted by violent criminals. Twenty-six percent of all Blacks say they have been violent crime victims, compared to 10 percent of all whites.

- One in 12 Americans has had a close relative murdered, and one in eight knew someone in their neighborhood who was slain. Blacks are more than three times as likely as whites to have had a relative murdered. Twenty percent of blacks have had a relative slain, compared to six percent of whites.

- Twenty-six percent of those surveyed said they worried at least a "good deal of the time" about being murdered. Forty-three percent of victims of crime worry about being murdered, compared to 23 percent of people who never have been victims of violent crime.

- Nearly half of the women polled - 46 percent - said they worry about rape either a good deal or a great amount. Three percent report that they have been raped.

MORE MORE MORE

- Fifty-eight percent of those polled said unemployment, poverty, and related problems are the factors more responsible for crime in the U.S. Eighteen percent blamed drugs and 15 percent blamed breakdowns in family, society, morals, etc.

- A majority of 56 percent feels most judges have more sympathy for criminals than for their victims. Nearly two-thirds think judges have been giving shorter sentences in the last few years, and 88 percent said that is not the way they want it.

- Seventy-six percent want the death penalty for murderers. Seventy percent approve of building more prisons so that longer sentences can be given to criminals and 88 percent of these people are willing to have their taxes raised to pay for the new prisons.

- Seventy percent felt prisons mainly should be places that "teach criminals how to be useful, law-abiding citizens when they get out" rather than places to "punish criminals."

- Most people - 65 percent - disagree that armed citizen patrols are the only way to solve the crime problem. Forty-seven percent believe the best protection against crime is a strong police department.

- More than two-thirds of the gun owners polled said they would use their firearms if a burglar broke into their home. Nearly half of the American households - 47 percent - have firearms.

- Eighty percent said there would be less crime if more parents strictly disciplined their children. Exactly half of those polled said juveniles between the ages of 14 and 18 should be punished as adults if they commit a crime, and 46 percent said they should not be punished as adults.

Some 2,500 people were interviewed for the ABC News poll between December 7 and 18. The margin of error is plus or minus three percent.

(EDITOR'S NOTE: ABC News' two-week programming effort on "Crime in America" will focus on the myths and realities of crime, law enforcement, criminal justice and the prison system in the U.S. It will begin Sunday, February 13 with a special edition of "This Week with David Brinkley," with guests William Webster, FBI Director and William French Smith, Attorney General. The two weeks of programming (February 13 to February 25) will continue on "World News This Morning," "Good Morning America," World News Tonight," "Nightline," "20/20," "The Last Word" and "Viewpoint."

Bureau of Justice Statistics

Bureau of Justice Statistics
Bulletin

Capital Punishment 1982

July 1983

The capital punishment series began in 1930 with an annual report of the number of executions in each State. Several significant additions to the series have been made over the years. Beginning in 1953, statistics were published on the death-row population at yearend. In subsequent years, the series was expanded to include the number and characteristics of persons sentenced to death each year including age, sex, race, marital status, and education. Statistics were also published on the offender's previous homicide or other felony convictions and on whether the offender was in prison, on probation, or on parole at the time of the capital offense. The frequency of judicial and legislative action on capital punishment in the 1970's led to the annual collection of information on the legal status of the death penalty in each State. More recently, the Bureau of Justice Statistics began collecting information on those States that subject each death sentence to automatic appeal and on the minimum age at which an offender may be sentenced to death.

The complete series of capital punishment statistics is published in an annual report that may be obtained by request from the Bureau of Justice Statistics.

Steven R. Schlesinger
Director

Two persons were executed during 1982, one each in Virginia and Texas, bringing to six the total executed since 1967. All six took place after the last major U.S. Supreme Court rulings on the death penalty in 1976.[1] By year's end, the number of inmates under sentence of death stood at 1,050, the largest ever recorded in the Nation.[2] The number of persons sentenced to death during the year was 264—higher than in any other year except 1975—while departures from death row by means other than execution fell to 68, one of the smallest totals in recent history.

The large number of persons on death row at the end of 1982 reflected both an increase in the number of death sentences handed down over the years and lengthened stays because of long appeals. The 264 persons sentenced to death in 1982 represented an increase of 8% over the number condemned in 1981. Twenty-eight of the 37 States with death penalty laws sentenced inmates during 1982. The largest number of sentences were handed down in California and Florida, each with 39 persons, followed by Texas[3] with 28 and Alabama with 20. Ohio and Wyoming were the only States that sentenced persons during 1982 but not 1981. A new death penalty law was passed in Ohio during 1981.

Since 1976, the number of removals from death row has dropped each year with the exception of 1980, when 42 persons were relieved of the death sentence in Alabama as the result of a major court decision. The relationship between removals and additions has varied from year to year, but by 1982 about four persons received the death sentence for every one relieved of it.

During 1982, only 16 States had departures from death row, 5 fewer than in 1981. The largest number of removals occurred in Texas (24) and Florida (13); each of the remaining 13 States granted 6 or fewer removals (departures prompted by legislative or judicial action).

About half of the 64 persons who left death row by means other than death had both their convictions and their sentences vacated, while the next largest group, 31%, had only their sentences vacated. Six deaths occurred among the condemned population, including two executions, three murders, and one suicide. The total number of persons who have died on death row since 1972 is 32, including the six who were executed.

The 1,050 persons awaiting the death penalty at yearend 1982 was almost double the record high on death row at the time of Furman v. Georgia, 408 U.S. 238, in 1972, and 2-1/2 times the number on death row at the end of 1976, the year from which most of the current laws date. More than two-thirds of the 1982 total were held in Southern States. Only one Northeastern State, Pennsylvania, held prisoners on death row. The largest numbers were under sentence in Florida (189), Texas (148), California (120), and Georgia (100). In all, 31 of the 37 States with the death penalty held at least one condemned prisoner at yearend.

About 40% of those under sentence

[1] A seventh person was executed in Alabama on April 22, 1983. All of the seven were men.

[2] The 1982 figures exclude 6 men with military death sentences held under Armed Forces jurisdiction.

[3] The figures for Texas and Georgia on the table on page 2 exclude condemned inmates still held in county jails but will be revised to include them as they enter the State correctional system.

NOTE: Some of the figures for yearend 1981 are revised from those shown in Capital Punishment 1981 (final report), December 1982, NCJ-86484. These figures exclude 5 inmates in Texas who were relieved of the death sentence before December 31,1981, and 1 in Pennsylvania who was reported twice—first in 1979 and again in 1981, and include 24 inmates (6 in Pennsylvania, 6 in Texas, 4 in Georgia, 4 in Louisiana, 2 in Florida, 1 in Tennessee, and 1 in Washington) who, although sentenced to death before the end of 1981, were either reported late to the NPS program or were not in the custody of State correctional authorities by December 31, 1981.

[1]Includes one Maryland inmate who committed suicide and three inmates (one each in Arizona, Oklahoma, and South Carolina) who were murdered by another inmate.

[2]Excludes six prisoners held under Armed Forces jurisdiction.

[3]The death penalty was in effect in New Jersey as of August 6, 1982.

were blacks, roughly the same proportion as in recent years. Twelve members of other races were under sentence—seven American Indians and five Asians.

Twelve States, the largest number since data became available in 1978, held a total of 59 Hispanic inmates under sentence of death. During the 1978-83 period, the number of Hispanics increased more rapidly than the death-row population as a whole—3-1/2 times versus 2.

There were 13 women on death row in eight States, including 4 in Georgia. The number was the highest since data on women have been available. Since 1972, 12 States have sentenced 31 women to death, but 24 women, including 6 sentenced before 1972, have had their capital sentences lifted.

The number of persons on death row was more than double that in 1968, when a sharp increase began because of an informal moratorium on executions. The moratorium allowed the courts to scrutinize the many challenges to the death penalty then being raised at all levels, culminating in the landmark Furman v. Georgia decision in June 1972. In that decision, the High Court held that death penalty statutes as they currently existed were in violation of the Eighth Amendment's protection against cruel and unusual punishment. While the more than 600 persons then on death row waited to have the new ruling applied to them individually, the States began to revise their laws to withstand the Court's scrutiny.

Inasmuch as the Furman decision provided little in the way of guidelines for new legislation, the years that immediately followed it saw a number of attempts and failures by the States to meet standards acceptable to the Supreme Court. These standards emerged gradually through a series of rulings by the Court, mainly in 1976 and 1977. Most current capital punishment legislation, in fact, dates from 1976, modeled after the laws of Georgia, Florida, and Texas that were upheld in rulings during that year.[4]

Today's death penalty laws provide the death sentence only for specific types of murder, for example, murder committed during a felony, murder of a law enforcement officer, and murder for hire.[5] They also provide for

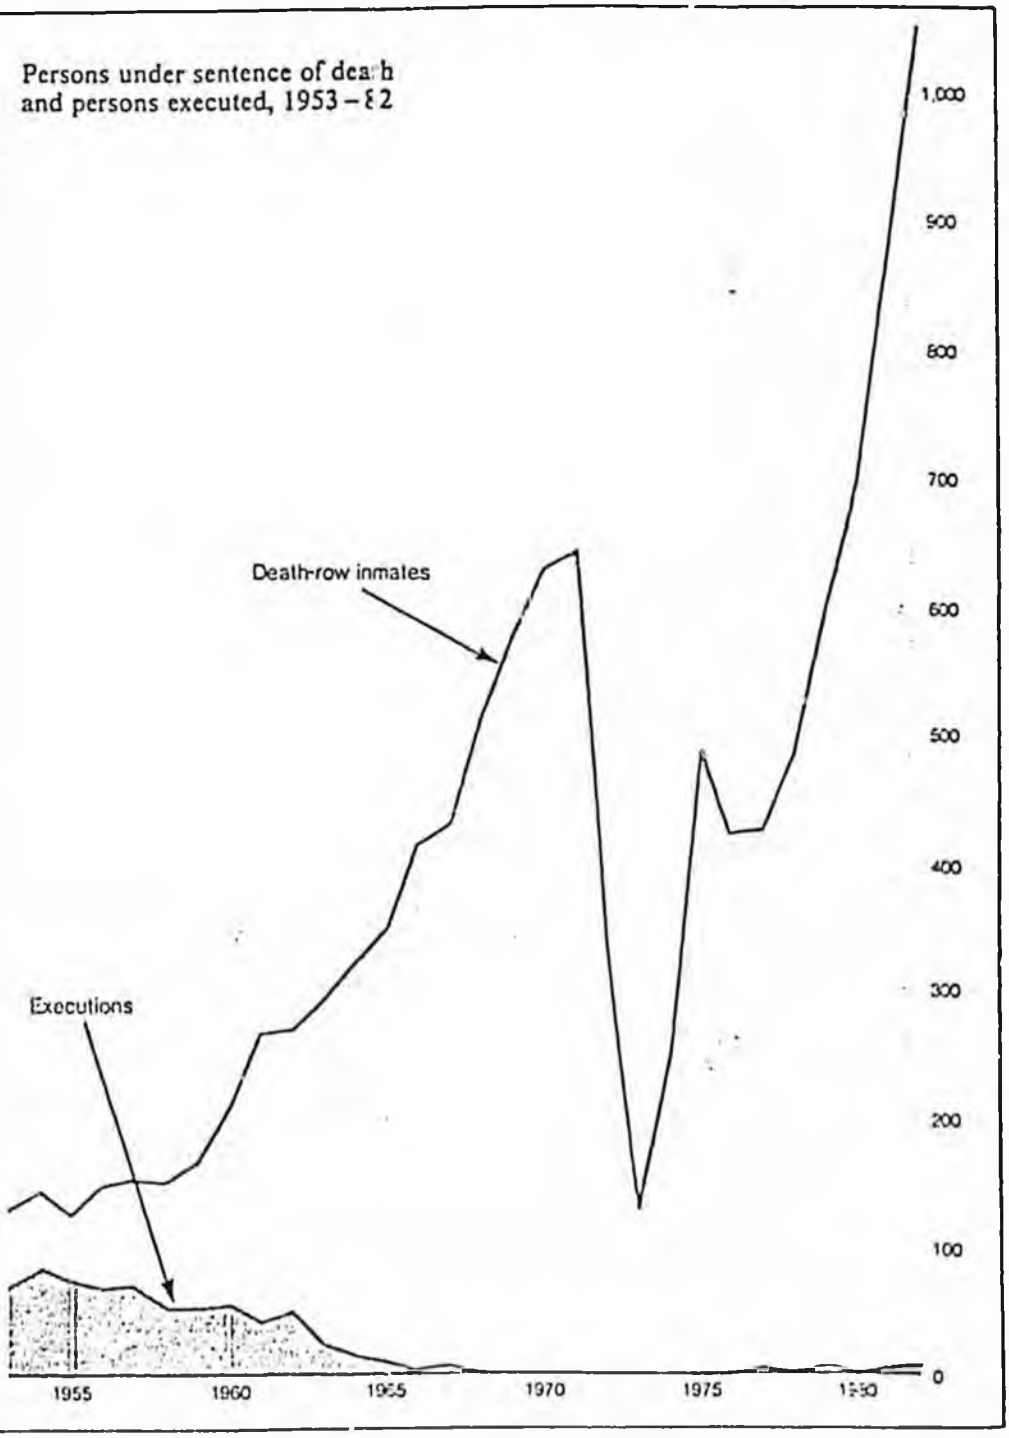
[4]Gregg v. Georgia, 428 U.S. 153 (1976); Proffitt v. Florida, 428 U.S. 242 (1976); Jurek v. [illegible], 428 U.S. 262 (1976).

[5]In addition to specific types of murder, each of the following crimes, most of which have not passed tests of constitutionality at the U.S. Supreme Court level, is a capital offense in at least one State: aircraft piracy resulting in death, armed robbery resulting in death of the (continued on page 3)

"guided discretion," laying down specific guidelines to assist the sentencing judge or jury in weighing both aggravating and mitigating circumstances to the crime. Thus the Court struck a balance between the wide discretion allowed before Furman and the rigidity of mandatory death penalty laws passed in response to Furman but found unconstitutional in several rulings during 1976.

The years that followed the 1976 Supreme Court decisions saw a number of refinements added to the established standards. In 1977, the death sentence was found to be a disproportionate penalty for the rape of an adult woman. Other rulings have held that the capital prisoner is to be afforded every possible legal right, such as the right to have all mitigating circumstances to the crime considered at the time of sentencing.

By the end of 1982, 37 States and the Federal government provided for the death penalty. During the year, New Jersey was added to the list when it enacted a new death penalty law; its previous law had been declared unconstitutional in 1972. For the first time since the Furman ruling, no State's death penalty law had been overturned.



Seven other States made either substantive or procedural changes in their statutes. Arizona provided for a separate sentencing hearing. Idaho added death by a firing squad as an alternative to lethal injection. Nebraska limited the death penalty to those age 18 or older at the time of the crime. Oklahoma further specified the types of murder that constituted capital offenses. South Dakota refined the section of its death penalty law on aggravating and mitigating circumstances. In Utah, revisions were made to the sections dealing with the sentencing hearing and the nature of the jury for that hearing. Virginia made its law more specific by revising the language on murder committed by an inmate confined in a State or local correctional facility.

In addition to legislative actions, a number of court decisions at both the State and Federal level had some impact on the death penalty situation.

In January 1982, the California Supreme Court ruled in California v. Ramos that the required instruction to sentencing juries that a life sentence without parole could be commuted by

[5] (Continued from page 2) victim, assault by a life prisoner resulting in death, hindering preparation for war causing death, kidnaping resulting in severe injury, kidnaping resulting in death, murder by a life prisoner, murder by an inmate of a correctional facility, omitting to note defects in articles of war resulting in death, perjury resulting in the death penalty, rape of a child under age 12, and rape of a child under age 14.

Persons under sentence of death and persons executed, 1953–82

Number of women on death row, yearend 1972–82

Oklahoma	-	-	-	1	-	-	-	1	1	1	1
Texas	-	-	-	-	-	-	-	1	2	2	2

the Governor was unconstitutional. However, removal of potentially affected prisoners from death row was suspended pending a review by the U.S. Supreme Court.

In Eddings v. Oklahoma, the U.S. Supreme Court determined that the failure of the State court to consider as a mitigating circumstance a 16-year-old's emotional disturbance and turbulent family history was unconstitutional. The Supreme Court stipulated that sentencing and reviewing courts may determine the weight to be given relevant mitigating circumstances, but that they may not exclude such evidence totally.

In State v. Logan, South Carolina's Supreme Court decided that the State could not try a defendant for capital murder under death penalty statutes that had been declared unconstitutional before the date of the crime. The State had contended that, since only procedural changes were needed to render the old death penalty statutes constitutionally acceptable, the substantive provisions of the law should be considered as if in effect at the time of the murder. The South Carolina Supreme Court, however, held that the death penalty statute in existence when the crime was committed could not be enforced, and that to try the defendant under such circumstances would violate constitutional guarantees against the application of ex post facto laws.

At the end of 1982, Arkansas, New Jersey, New York, and the Federal system were the only jurisdictions whose death penalty statutes did not require an automatic appeal. Some State laws provide for a review of the sentence, while others require a review of both conviction and sentence.

In most States, the youngest age at which a person can be sentenced to death is the age at which they can be tried as an adult. Since in many States this age standard can be waived, the theoretical minimum age for the imposition of the death penalty ranges from age 10 (Indiana) to age 18. Sixteen States reported no minimum age for the imposition of the death penalty.

Bureau of Justice Statistics Bulletins are prepared by the staff of the bureau. Carol B. Kalish, chief of data analysis, edits the bulletins. Marilyn Marbrook, bureau publications chief, administers their publication, assisted by Julie A. Ferguson. The author of this bulletin is Mimi Cantwell of the U.S. Bureau of the Census.

July 1983, NCJ-89395

Methodological note

Data on persons under sentence of death are collected annually for the Bureau of Justice Statistics by the U.S. Bureau of the Census as part of the National Prisoner Statistics (NPS) program. Data are obtained from the departments of corrections in each of the 50 States and the District of Columbia. The Bureau of Justice Statistics gratefully acknowledges the cooperation of State officials whose generous assistance and unfailing patience make National Prisoner Statistics possible.

Statistics in this series may vary from other death-row counts for any of the following reasons:

- Inmates are not added to the NPS death-row counts at the time the court hands down sentence, but at the time they are admitted to a State or Federal correctional facility.
- Inmates sentenced to death under statutory provisions later found unconstitutional are removed from the death-row count on the date of the relevant court finding rather than on the dates the finding is applied to individual cases. Thus, persons who are technically under sentence of death, but who are no longer at risk, are not counted.
- NPS death-row counts are always as of the last day of the calendar year and will therefore differ from estimates made for more recent periods.

Further reading

A final report on the death-row population in 1982 will be published in late 1983. To obtain the final 1982 report, Capital Punishment 1982, or be added to the bulletin mailing list, write to the National Criminal Justice Reference Service, Box 6000, Rockville, Md. 20850 (301/251-5500). The Deterrent Effect of Capital Punishment: A Cross-State Analysis of the 1960's

Brian E. Forst*

The debate over capital punishment, which for centuries has been waged over essentially nonempirical matters, has focused quite recently on the extent to which executions prevent (or encourage) homicides. Interest in this aspect of capital punishment was considerably heightened when, in the amicus curiae brief submitted in *Fowler v. North Carolina*,[1] the Solicitor General of the United States cited statistical evidence[2] reported by Professor Isaac Ehrlich supporting the hypothesis that capital punishment deters murder.[3]

Before vacating and remanding *Fowler*,[4] the Court received briefs and heard oral arguments in five other death penalty cases,[5] in which the deterrence question, as before, figured prominently.[6] Soon afterward, the Court ruled that "the punishment of death does not invariably violate the Constitution,"[7] and stated that for many murderers "the death penalty undoubtedly is a significant deterrent."[8]

8. Gregg v. Georgia, 428 U.S. 153, 185-86 (1976). Although the Court did not support its belief in the deterrent value of capital punishment with empirical evidence, this evidence was not ignored:

The Supreme Court is by no means alone in its belief that capital punishment deters crime. Eighty-four percent of the respondents to a 1977 National Observer plebiscite supported restoration of the death penalty, and belief in the deterrent effect of capital punishment was the reason most often cited.[9] Public support for the death penalty has been similarly revealed by the Gallup Poll[10] and other opinion surveys.[11]

Belief in the deterrent value of the death penalty, however, is less common within the academic community. While support for Ehrlich's research exists,[12] replications of his analysis[13] have shown that his evidence of deterrence depends upon a restrictive assumption about the mathematical relationship between homi-

"Although some of the studies suggest that the death penalty may not function as a significantly greater deterrent than lesser penalties, there is no convincing empirical evidence either supporting or refuting this view." *Id.* at 185 (footnote omitted). Professor Hans Zeisel has taken issue with this opinion, arguing that the evidence about the deterrent effect is, indeed, "quite sufficient" and that "the request for more proof is but the expression of an unwillingness to abandon an ingrained prejudice." Zeisel, *The Deterrent Effect of the Death Penalty: Facts v. Faiths*, 1976 SUP. CT. REV. 317, 319.

Blumstein ed. 1977) (forthcoming) [hereinafter cited as DETERRENCE AND INCAPACITATION]; Passell & Taylor, *The Deterrent Effect of Capital Punishment: Another View*, Columbia University Discussion Paper 74-7501 (March 1975), reprinted in Reply Brief for Petitioner, App. E., Fowler v. North Carolina, 428 U.S. 325 (1976).

cides and executions,[14] the inclusion of a particular set of observations,[15] the use of a limited set of control variables,[16] and a peculiar construction of the execution rate, the key variable.[17]

This Article first discusses briefly the strengths and weaknesses of time-series and cross-section analyses to test the hypothesis that capital punishment deters homicides. A method that avoids the more serious of these weaknesses is then described and applied to state data for 1960 and 1970 to test the above hypothesis. The results of this initial test do not support the hypothesis. To ensure that these findings reflect reality rather than simply the way in which the key variable was measured, alternative measures of the execution rate are substituted. Similar attempts are made to eliminate other possible biases that have been identified in the literature. None of these modifications of the basic model is found to alter the initial finding in any important way. It is concluded that the evidence of the 1960's supports the theory that capital punishment does not, on balance, deter homicides.

I. TIME-SERIES AND CROSS-SECTION STUDIES

Professor Ehrlich's landmark statistical test of the hypothesis that capital punishment deters homicide consisted of a regression analysis of aggregate data for the United States for the period 1933 through 1969.[18] His basic approach is commonly referred

14. Bowers & Pierce, *supra* note 13, at 199-203; Klein, Forst, & Filatov, *supra* note 13, at 31-32; Passell & Taylor, *supra* note 13, at 6-8; note 33 *infra*.

15. Ehrlich reported that his deterrence result remained when data from the 1930's were excluded, Ehrlich, *supra* note 3, at 410, but others found that the result disappeared when data from the latter part of the 1960's were excluded. Bowers & Pierce, *supra* note 13, at 197-204; Klein, Forst, & Filatov, *supra* note 13, at 20-28; Passell & Taylor, *supra* note 13, at 5, 21, 22.

16. Klein, Forst, & Filatov, *supra* note 13, at 14-17, 20-30. Control variables are used in the analysis of nonexperimental data to reduce the danger of erroneous inferences about relationships between variables. To the extent that the murder conviction rate influences both the execution rate and the murder rate, for example, its omission from an analysis of the deterrent effect of executions would produce the appearance of an association between executions and homicides even if, in fact, no association existed. *See* notes 21-23 *infra* and accompanying text. In the present analysis this problem is recognized and controlled for. *See* notes 38-41 and accompanying notes *infra*.

17. *See* Klein, Forst, & Filatov, *supra* note 13, at 17-19.

18. Ehrlich, *supra* note 3, at 408, 409. Regression analysis is a standard statistical method for determining the mathematical equation that best describes the relationship between a dependent variable (in this case, the homicide rate) and one or more predictor variables. Ehr-

to as "time-series analysis," since the units of observation consist of a series of time intervals—in this case, individual years.

One of the crucial unresolved issues in Ehrlich's time-series analysis centers around the sensitivity of his findings to the exclusion of data from the 1960's. Specifically, he found no deterrent effect when data for the period since 1964 were excluded from the analysis.[19] This conclusion is not surprising, since during the 1960's the murder rate rose precipitously, after decades of slow decline, while the use of capital punishment diminished until terminated in 1967;[20] but it does raise the question of the extent to which the key statistical relationship found in Ehrlich's time-series analysis reflects a true causal relationship. It is possible that the appearance of deterrence that emerges in Ehrlich's time-series study is primarily the product of variables omitted from the analysis, an omission due largely to the unavailability of data.[21] While all nonexperimental measurements are subject to limitations, inferences about deterrence drawn from the analysis of aggregate time-series data appear to be especially prone to error because only a limited array of factors can be incorporated[22] or otherwise reflected[23] to safeguard against spurious findings.

lich's study was the first to estimate the deterrent effect of capital punishment by: (1) measuring factors other than the death penalty that may have affected the homicide rate; (2) measuring the extent to which the death penalty was used when it existed; and (3) attempting to account explicitly for the reverse effect of homicides on the demand for executions.

19. Ehrlich, *Deterrence: Evidence and Inference*, 85 YALE L.J. 209, 217 (1975). This phenomenon was first reported by Passell & Taylor. Passell & Taylor, *supra* note 13, at 5, 21, 22.

20. *See* FEDERAL BUREAU OF PRISONS, DEPARTMENT OF JUSTICE, NATIONAL PRISONER STATISTICS: CAPITAL PUNISHMENT, table 2, at 2 (No. SD-NPS-CP-3, November 1975).

21. It is, of course, also possible that omitted variables cause the finding to understate the true effect of executions on homicides.

22. A key variable not available on an annual basis is the average term of imprisonment for persons convicted of homicide and not executed. The potential importance of this variable lies in its role as a substitute sanction for capital punishment. In an earlier study based on time-series data, Ehrlich himself found that this variable was an effective homicide deterrent. Ehrlich, *Participation in Illegitimate Activities: A Theoretical and Empirical Investigation*, 81 J. POLIT. ECON. 521, 551 (1973). The aggregate number of homicide convictions, a crucial variable in the analysis, is also not available annually. Aware of the potential importance of this variable, Ehrlich constructed rough approximations of its values from F.B.I. estimates of the annual number of homicides, the annual probability of arrest, and the annual probability of conviction given arrest. Ehrlich, *supra* note 3, at 407.

23. One way of reflecting regional factors is with the use of [illegible]

Professor Ehrlich's second empirical test—based on a regression analysis of data for individual states, with separate results for 1940 and 1950—has been cited to further support the theory that capital punishment deters murder.[24] This "cross-section" technique has certain advantages over analysis based on aggregate time-series data: it allows the researcher to observe larger differences in the relevant factors,[25] to control for specific regional effects,[26] and to include potentially important factors about which information is not available on an annual basis.[27]

Several scholars have suggested that the existing estimates of the deterrent effect of capital punishment can be improved by analyzing data that reflect variation *both* temporally and geographically.[28] A method to accomplish this is set forth in the following section.

II. CROSS-SECTION ANALYSIS OF CHANGES

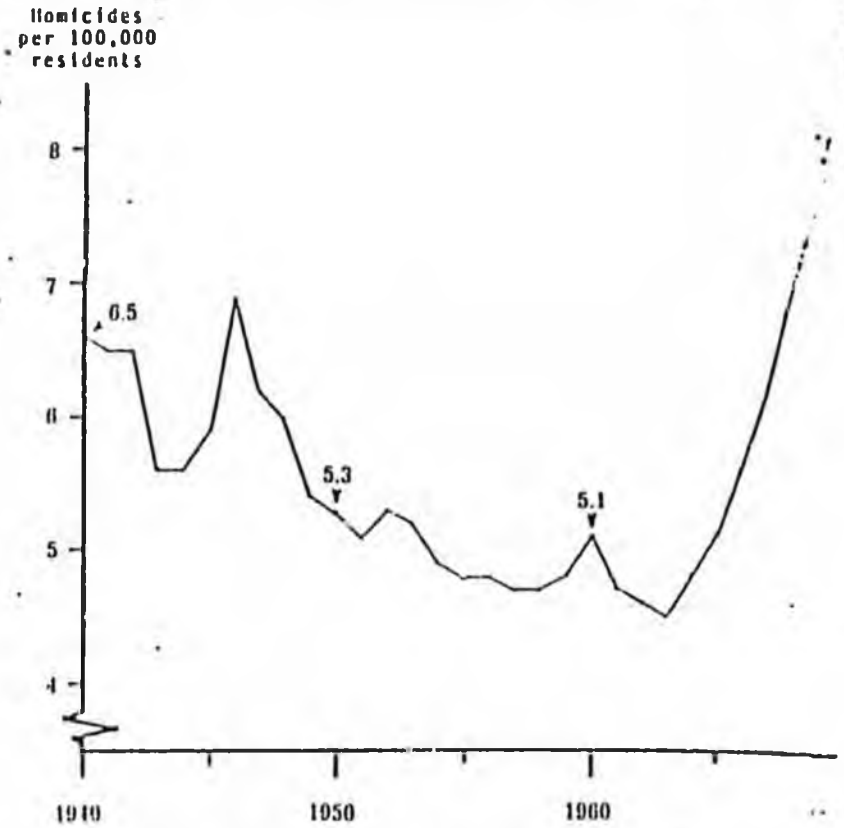
During the 1960's, after years of gradual decline, the homicide rate for the United States as a whole increased sharply (see Figure 1). Although the homicide rate in most states followed this general pattern, it rose much more sharply in some states

regional variables in data that manifest geographical variation. *See* notes 28 & 41 *infra*.

24. Ehrlich referred to these results in his reply to critics, Ehrlich, *supra* note 10, at 213, 217, and reported them in Punishment and Deterrence: Some Further Thoughts and Additional Evidence, a paper delivered at the Joint Meeting of the Operations Research Society of America and the Institute of Management Science, Las Vegas (November 3, 1975) [hereinafter cited as Ehrlich, Punishment and Deterrence]. Here Ehrlich has described these findings as "preliminary and incomplete." *Id.* at 1, they will not be discussed in detail here.

Professor Peter Passell has also performed a cross-state analysis of the deterrent effect of capital punishment, with separate results for 1940 and 1960. His findings differ sharply from Ehrlich's; he concludes that there is "no reasonable way of interpreting the cross-section data that would lend support to the deterrence hypothesis." Passell, *The Deterrent Effect of the Death Penalty: A Statistical Test*, 28 STAN. L. REV. 61, 80 (1975).

25. *See* note 69 *infra*.



26. Aggregation errors associated with the failure to account for these effects are discussed in Baldus & Cole, *A Comparison of the Work of Thorsten Sellin and Isaac Ehrlich on the Deterrent Effect of Capital Punishment*, 85 YALE L.J. 170, 175-77 (1975).

27. *See* note 22 *supra*.

28. Peck, *The Deterrent Effect of Capital Punishment: Ehrlich and His Critics*, 85 YALE L.J. 359, 361 (1976); Zeisel, *supra* note 6, at 317, 330; [illegible], Book Review, 67 J. CRIM. L. & CRIMINOLOGY 359, 360 (1976) (W. BOWERS, EXECUTIONS IN AMERICA).

than in others, and even declined in a few.[29] This cross-state variation, coupled with the differences from state to state in the rate at which use of the death penalty declined from 1960 to 197[illegible], provides a unique opportunity to estimate the deterrent effect of capital punishment on the commission of homicides. The changes in these and other relevant variables that occurred between 1960 and 1970 in each state for which data are available can be measured and used to estimate the average effect of reductions in the execution rate on the rate at which homicides occur in the population. To the extent that capital punishment deters homicides, the homicide rate should have increased by the largest amounts from 1960 to 1970, *ceteris paribus*, in those states with the greatest reductions in the probability that a person convicted of murder would be executed.

Figure 1. The homicide rate in the United States, 19[illegible]-1970*

* Sources: Uniform Crime Reporting Section, Federal Bureau of Investigation, United States Department of Justice, Index of Crime United States, 1933-1972 (Special tabulation presented to the author in March 1975; copy on file with Minnesota Law Review).

Bureau of the Census, United States Department of Commerce, The Statistical Abstract of the United States, table 2, at 5 (1971).

29. From 1960 to 1970 the homicide rate increased in 43 states, declined in five states (Alabama, Maine, Montana, Oklahoma, and Virginia), and was unchanged in two states (Nevada and North Dakota). It increased mostly sharply in Missouri (from 4.6 homicides per 100,000 residents in 1960 to 10.7 in 1970) and New York (from 2.0 in 1960 to [illegible] in 1970). Federal Bureau of Investigation, Department of Justice, Uniform Crime Reports, table 3, at 38-52 (1960), & table 4, at [illegible] (1970).

Examining the data in this manner should overcome the potentially serious problems associated with aggregate time-series analysis.[30] Analyzing intertemporal changes in the relevant variables across states should also improve the estimates available from conventional cross-section analysis,[31] partly by reducing biases associated with omitted variables.[32] Moreover, the results of this approach appear less sensitive to alternative assumptions about the mathematical form of the model that describes the relationships among the relevant variables than do those of either the conventional time-series or cross-sectional approaches.[33] By

30. *See* notes 10-27 *supra* and accompanying text.

31. The cross-section analyses by Ehrlich and Passell are based on the levels of variables for individual census years. *See* note 24 *supra* and accompanying text. These single-year levels are used to estimate the elasticity of the homicide rate with respect to the probability of execution, given conviction for murder. The elasticity of one variable, y, with respect to another, x, is a number indicating the percentage increase (a negative number indicates a decrease) in y that results from a one percent increase in x. Ehrlich has estimated that the elasticity of the homicide rate with respect to the probability of execution, given conviction for murder, is around −0.00. Ehrlich, *supra* note 3, at 414. Since elasticity is a measure of the *effect of a change* in one variable on another variable, estimating elasticities by analyzing actual changes in variables in a cross-section of jurisdictions has considerably more appeal than estimating them from the levels of variables for any given year.

32. According to Klein, estimates based on cross-sectional data are prone to errors of spatial heterogeneity, although in certain instances, these errors can be eliminated by "differencing" two successive cross sections. Specific biases that can be eliminated under this technique include the bias produced by the failure to measure personality effects in samples of households and that produced by failure to measure entrepreneurial effects in samples of business firms. L. Klein, A Textbook of Econometrics 360, 358 (2d ed. 1974). Commenting on a draft of this article, Professor Klein suggested that interstate differences in social mores may constitute a class of effects that can be accounted for by applying this method to cross-state data.

33. Whether the homicide rate is related to other factors in a linear

estimating the differential of the homicide rate rather than the parent relationship between the homicide rate and its determinants, one can be sure of describing a function that is additive in the differences of the explanatory variables.[34]

Applying this method of analysis to the 1960's is appealing for other reasons as well. More control variables are available for the most recent census years, and their measurement tends to be more accurate than it was in 1940 or 1950.[35] Moreover, there has been a great deal of controversy about the period from

or loglinear fashion is very much in controversy. Bowers & Pierce, *supra* note 13, at 190-206; Ehrlich, *supra* note 3, at 406; Ehrlich, *supra* note 19, at 217-19; Klein, Forst, & Filatov, *supra* note 13, at 3[illegible]; Passell & Taylor, *supra* note 12, at 6e-7e; Peck, *supra* note 26, at 300-01. Estimates of the deterrent effect of capital punishment have been found to be quite sensitive to whether the relationship is assumed to be linear or loglinear. *See* note 14 *supra* and accompanying text.

The assumption of loglinearity and the use of logarithms in previous studies have created additional problems. During 1968, 1969, and 1970 there were no executions. Because it is impossible to take the logarithm of zero, Ehrlich assumed that one execution took place in each of these years so that he could use the loglinear model. Ehrlich, *supra* note 3, at 409 n.6. This procedure, however, builds biases into the analysis.

While the true relationship between the homicide rate and its determinants may be nearly linear or nearly loglinear, it is likely, in fact, to be precisely neither.

34. In regressing the change in the homicide rate on the changes in the relevant independent variables, partial differential coefficients rather than slope coefficients are obtained. Letting the homicide rate, Q/N, be determined by the rate at which convicted murderers are executed, E/C, and by other factors, $X_1, X_2, \ldots$, the general relationship is written as

$$Q/N = f(E/C, X_1, X_2, \ldots).$$

The differential of the homicide rate is of the form

$$d\frac{Q}{N} = \frac{\partial \frac{Q}{N}}{\partial \frac{E}{C}} d\frac{E}{C} + \frac{\partial \frac{Q}{N}}{\partial X_1} dX_1 + \frac{\partial \frac{Q}{N}}{\partial X_2} dX_2 + \ldots,$$

regardless of whether the parent function is linear, loglinear, or any other continuous expression. Since the partial differential coefficients will be constants only if the parent function is linear, the differential of the homicide rate will not generally be a linear function. It will, however, be additive in the differences of the explanatory variables. Hence, the regression coefficients produced in the estimate of the differential equation may be viewed as approximations of the averages of the respective partial differential coefficients over the range of observed values.

35. Ehrlich has also suggested that more recent data are likely to be better. Ehrlich, *The Deterrent Effect of Criminal Law Enforcement*, 1 J. Legal Studies 259, 272 (1972).

1960 to 1970 in the reviews of the available time-series evidence.[36] In short, analyzing changes during this decade cross-sectionally would appear to permit one to discover more directly whether the association between the cessation of capital punishment and the upsurge in the homicide rate during the 1960's was primarily causal or coincidental.

A. The Model

The model that provides the initial structure for this analysis is

(1) $Q/N = f(E/C, C/Q, T, Cr, Age, NW, Male, Urb, Enr, Pop, Div, Y, Pov, Emp, S).$

This equation represents the notion that the homicide rate (Q/N) is potentially influenced by the rate at which persons convicted of murder are executed (E/C), the rate at which murders result in conviction (C/Q), the average prison term served by convicted murderers (T), the factors that determine the rate at which crimes other than homicide are committed (Cr), social and demographic characteristics [age (Age), race (NW), sex (Male), urbanization (Urb), school enrollment rate (Enr), resident population (Pop), divorce rate (Div)], economic variables [median family income (Y), proportion of families in poverty (Pov), employment (Emp)], and a binary variable indicating whether the state is southern (S). The sources of data for these variables are given in the Appendix.[37]

Professor Ehrlich has provided theoretical justification for the inclusion of the criminal justice sanction variables and the economic variables.[38] The social and demographic variables have been added to minimize the degree of spuriousness in the estimates of central concern here, those reflecting the effects of the sanction variables on homicides.[39] The rate at which

36. *See* notes 15 & 19 *supra* and accompanying text.

37. *See* pp. 765-67 *infra*.

38. Ehrlich, *Participation in Illegitimate Activities: An Economic Analysis*, in Essays in the Economics of Crime and Punishment 68, 70-92 (G. Becker & W. Landes eds. 1974); Ehrlich, *supra* note 3, at 398-406.

39. Any factor that influences both the execution rate and the homicide rate, if omitted from the analysis, will tend to distort the estimated effect of executions on homicides. Age, race, sex, schooling, population density and size, and family stability are all basic characteristics that would appear to be capable of producing such distortion. Ehrlich has incorporated the first five of these factors in his study of deterrence. Ehrlich, *supra* note 38, at 93.

crimes other than homicide are committed[40] and a binary Southern variable[41] are incorporated to capture the effects of additional exogenous factors that the other control variables do not specifically measure. Values of each of these variables for 1960 and 1970 are shown in Table 1.

Table 1. Aggregate United States values, mean state values and standard deviations for the variables used in the analysis, 1960 and 1970

	U.S. total*		State means[a]		Standard deviations[a]

(a) Means and standard deviations are unweighted statistics for the 32 states for which no data were missing or undefined; (b) per 100,000 residents; (c) based on 48 states (Alaska and New Jersey did not report these statistics in 1960); (d) based on the 33 states that reported in both 1960 and 1970; (e) based on data from 34 states; (f) in millions; (g) based on income earned in the previous year.

* Aggregate U.S. values are used only in these two columns, in Figure 1, and in the concluding section of this paper.

Following the rationale described in the preceding section, the effects of interest are estimated by forming the equation of first differences:

40. A rationale for the inclusion of the nonhomicide crime rate is given in Klein, Forst, & Filatov, *supra* note 13, at 17-19, and in text accompanying notes 64-65 *infra*.

41. It has become a standard practice in cross-state econometric analysis to incorporate a binary Southern variable to reflect other social and demographic characteristics. The use of such a variable in an analysis of homicides is further warranted by the fact that the homicide rates in the South are about twice that of the rest of the nation.

$$(2)\quad \Delta(Q/N) = a + b_1\Delta(E/C) + b_2\Delta(C/Q) + b_3\Delta T + c_1\Delta Cr + c_2\Delta Age + c_3\Delta NW + c_4\Delta Male + c_5\Delta Urb + c_6\Delta Enr + c_7\Delta Pop + c_8\Delta Div + c_9\Delta Y + c_{10}\Delta Pov + c_{11}\Delta Emp + c_{12}S,$$

where Δ denotes the change in a variable calculated by subtracting the 1960 level from the 1970 level, "a" denotes a constant term, b_i denotes a partial differential coefficient for a sanction variable, and c_j denotes a partial differential coefficient for a control variable.

II Parameter Estimates

These coefficients can be estimated using ordinary least-squares regression analysis, with the full set of independent variables incorporated as regressors. These estimates are based on data from the 32 states[42] for which values of all the variables shown were reported both for 1960 and 1970:[43]

$$(3)\quad (Q/N) = \underset{(2.70)}{5.011} + \underset{(12.7)}{11.82}\Delta(E/C) - \underset{(1.92)}{5.714}\Delta(C/Q) + \underset{(.00773)}{.001378}\Delta T - \underset{(15.8)}{38.88}\Delta Pov + \underset{(.00006)}{.001708}\Delta Y + \underset{(.0000002)}{.001430}\Delta Cr + \underset{(17.8)}{38.97}\Delta NW - \underset{(139)}{189.2}\Delta Age - \underset{(.877)}{.95053} - \underset{(34.2)}{29.65}\Delta Emp - \underset{(8.52)}{9.021}\Delta Enr + \underset{(15.5)}{11.24}\Delta Urb + \underset{(150)}{92.58}\Delta Div + \underset{(.000000411)}{.000002382}\Delta Pop + 0\Delta Male \qquad (R^2 = .692)$$

The numbers in parentheses are standard errors, and R^2 is the coefficient of determination, a measure of the proportion of the variance in the dependent variable that is explained by the independent variables used. Thus, 69 percent of the cross-state variance in the change in the homicide rate from 1960 to 1970 can be attributed to the set of variables in the right-hand side of equation (3).

42. The 32 states on which these estimates are based are Arizona, California, Colorado, Connecticut, Delaware, Georgia, Hawaii, Idaho, Illinois, Kansas, Kentucky, Maine, Maryland, Massachusetts, Minnesota, Mississippi, Missouri, Montana, Nevada, New Hampshire, New Mexico, New York, North Dakota, Ohio, Oklahoma, South Carolina, South Dakota, Tennessee, Utah, Washington, West Virginia, and Wyoming. Conviction data were missing for 17 states in 1970, and the average term of incarceration was not available for an additional state (Vermont) in that year.

43. Similar results are obtained when the 1960 level of the homicide rate is included as a regressor to account for nonlinearity in Q/N.

The first result provides no support for the hypothesis that capital punishment deters homicide. The positive regression coefficient for the execution rate variable is, in fact, consistent with a counterdeterrent effect,[44] but the standard error of this estimate is too large for this finding to be taken seriously.[45] Equation (3) does provide evidence, on the other hand, of a deterrent effect of convictions on homicides. Those states with the largest reductions in the ratio of homicide convictions to homicide offenses tended to have the largest increases in the homicide rate, other factors held constant.

This regression equation, however, has too many shortcomings to allow it to stand alone as an adequate test of the deterrence hypothesis. Foremost among these is the imprecision in parameter estimation caused by the inclusion of 15 independent variables—ten of which are not significant (at the .10 level)—in an equation constructed from only 32 observations.[46] Eliminating these ten variables, except for the variable of primary interest, Δ(E/C), produces a result that fits the data better:

$$(4)\quad \Delta(Q/N) = \underset{(R^2=.577)}{} - \underset{(2.10)}{4.222} + \underset{(8.55)}{17.84\Delta(E/C)} - \underset{(1.68)}{5.070\Delta(C/Q)} - \underset{(7.52)}{24.91\Delta Pov} + \underset{(.000507)}{.001515\Delta Cr} + \underset{(13.3)}{30.60\Delta NW} + \underset{(.000526)}{.0004679\Delta Y}$$

44. Ehrlich explained the potential for a counterdeterrent effect as follows: "[O]ne may argue that the differential deterrent effect of capital punishment on the incentive to commit murder may be offset by the added incentive it may create for those who actually commit this crime to eliminate policemen and witnesses who can bring about their apprehension and subsequent conviction and execution." Ehrlich, *supra* note 3, at 398. Courts or juries may also be more reluctant "to convict defendants charged with murder when the risk of their subsequent execution is perceived to be undesirably high." *Id.* at 405. This latter possibility is discussed in text accompanying notes 57-59 *infra*. Von Weber has suggested as an alternative explanation that capital punishment may induce suicidally-inclined persons to commit murder. H. von Weber, *Selbstmord als Mordmotiv*, Monatsschrift Für Kriminalbiologie und Strafrechtsreform 161 (1937).

45. If executions had no effect on homicides, the probability is .91 that random factors alone would have caused the ratio of the regression coefficient for (E/C) to its standard error to be at least 0.91, the result in equation (3).

46. Estimates become increasingly precise (that is, subject to less random error) either as the number of observations increases or as the number of insignificant variables in the regression equation diminishes. The importance of precision in the estimation of the deterrent effect of capital punishment has been discussed by Ehrlich, *supra* note 10, at 22.

This result is basically similar to (3) for the variables of principal focus, except that elimination of nine weak independent variables increases the adjusted coefficient of determination, a standard measure of goodness-of-fit,[47] from .44 to .68, and increases the statistical significance of five of the six remaining variables.

Equation (4) provides evidence that the sharp increase in the homicide rate during the 1960's was the product of factors other than the abolition of the death penalty. Accounting for what appear to be the most important of these other factors—the murder conviction rate, economic variables, race, and the factors that caused non-capital offenses to escalate during the 1960's—it is apparent that these states in which the actual use of capital punishment ceased during the 1960's experienced no greater increase in the murder rate than did the states that did not use capital punishment in the first place. Under the theory that capital punishment deters murder, one would have predicted the opposite.

C. Robustness Tests

Before drawing inferences from data that are not produced by controlled experimentation, it is appropriate to test whether the estimates are "robust" to (that is, hold up under) departures from the assumptions on which the estimates are grounded.[48] Equation (4) is based on several assumptions: (1) the murder rate in any given year is influenced by the number of executions in that year; (2) none of the sanction variables is influenced by any of the other variables used in the regression analysis; (3) the variance in the homicide rate is no larger for highly populated states than for the less populated states; and (4) the rate at which non-capital crimes are committed is not affected by, nor does it affect, the other variables in the analysis. Each of these assumptions can be altered to test for robustness, which

47. The formula for the adjusted coefficient of determination, $\overline{R}^2$, is

$$\overline{R}^2 = R^2 - (1 - R^2)\left[\frac{K}{(N - K - 1)}\right]$$

where R^2 is the coefficient of determination, K is the number of independent variables, and N is the number of observations. A. Goldberger, Econometric Theory 217 (1964).

48. The importance of robustness tests is well established in econometric analysis. H. Theil, Principles of Econometrics 615-16 (1971).

will indicate the reliability of the estimates obtained in equation (4).

1. *Alternative Constructions of the Execution Rate*

Since the execution rate is the independent variable of principal focus in this analysis, it is surely appropriate to vary the methods of measuring it.[49] The construction used in equations (3) and (4) is based on the number of executions and convictions in 1960 and 1970. One alternative is to use executions in 1961 and 1971 instead of executions in 1960 and 1970, respectively, as objective forecasts of the probability that a murder conviction will lead to execution, since executions have been reported to lag behind convictions by about a year.[50] The result corresponding to equation (4) using this alternative measure, which is denoted (E_{+1}/C), is

(5) $\Delta(Q/N) = -8.391 + 2.977\Delta(E_{+1}/C) - 5.631\Delta(C/Q)$ $(R^2=.508)$ (2.21) (11.5) (1.83)
$- 27.32\Delta Pov + .0012486\Delta Cr + 42.01\Delta NW$ (8.03) (.000571) (13.3)
$+ .0007816\Delta Y$ (.000565)

This result is fundamentally no different from equation (4), suggesting that lagging executions does not alter the observed effects of executions on homicides.[51]

To reduce the sampling error associated with the small number of executions that occurred around 1960 and test another lag structure, one can make the numerator of the execution rate the average number of executions over the three-consecutive-year period centered about the year of the convictions in the denominator.[52] This execution rate variable is denoted (E_m/C), and is used in place of (E/C) in equation (4), giving

(6) $\Delta(Q/N) = -5.302 + 15.69\Delta(E_m/C) - 5.823\Delta(C/Q)$ $(R^2=.525)$ (2.15) (15.4) (1.78)
$- 26.83\Delta Pov + .001403\Delta Cr + 40.57\Delta NW$ (7.50) (.000551) (14.2)
$+ .0008700\Delta Y$ (.000545)

Again, this alternative does not produce a result that differs in any important respects from equation (4).

Another execution rate variable can be formed by combining the independent variables (E/C) and (C/Q) into the single variable (E/Q). Although this combination causes an important control variable, the murder conviction rate, to be lost, it allows all 50 states to be included in the analysis.[53] The result is

(7) $\Delta(Q/N) = -2.161 + 13.17\Delta(E/Q) - 13.38\Delta Pov$ $(R^2=.521)$ (1.80) (30.1) (6.02)
$+ .001441\Delta Cr + 33.00\Delta NW + .0001917\Delta Y$ (.000480) (13.4) (.000445)

This result is remarkably similar to equation (4) except for the substantial reduction in the proportion of variance in the homicide rate explained by the independent variables, which is produced by the exclusion of the conviction variable and the use of a larger number of observations. This reduction provides further support for the hypothesis that convictions deter homicides, consistent with findings by Ehrlich[54] and Passell[55] and with the results of equations (3) through (6).

A final construction of the execution rate is designed to eliminate whatever bias results from the reverse effect that changes in the homicide rate may have on the execution rate. All of the above regression equations assume that the causality runs strictly from executions to homicides. These results will be biased to the extent that the execution rate is a function of the

50. The potential importance of alternative constructions has been stressed in previous analyses of the deterrent effect of capital punishment. Ehrlich, *supra* note 3, at 407-08; Passell, *supra* note 24, at 74-77.

50. Ehrlich, *supra* note 3, at 407. Using data from the Federal Bureau of Prisons, I calculated that the median delay between sentence and execution for persons executed during the period 1950 through 1961 was 14 months. The distribution is skewed in the positive direction, indicating a mean delay of somewhat more than 14 months. Federal Bureau of Prisons, Department of Justice, National Prisoner Statistics: Executions 1 (No. 23, February 1960).

51. The decline in R^2 from equation (4) to (5) might be regarded as evidence that the homicide rate is less sensitive to variation in lagged executions than to variation in current executions. More fundamentally, however, it appears systematically related to neither.

52. This idea comes from Passell, *supra* note 24, at 68, who used instead a four-year average of executions.

53. *See* note 42 *supra* and accompanying text.

54. Ehrlich, *supra* note 3, at 410-11. Ehrlich's findings suggest that arrests, convictions, and executions each independently deter the commission of homicides, with arrests appearing to have the strongest effect and executions the weakest.

55. Passell, *supra* note 24, at 69-71.

homicide rate, which would occur, for example, if the demand for capital punishment was stimulated by an increase in the homicide rate. This bias can be reduced by replacing the variable $\Delta(E/C)$ with the estimator $\Delta^{\circ}(E/C)$, formed separately by regressing $\Delta(E/C)$ on all the predetermined variables in Table 1.[56] This alternative produces the result

$$\begin{aligned}(8)\quad \Delta(Q/N) = &- \underset{(2.24)}{3.841} + \underset{(12.8)}{23.05}\Delta^{\circ}(E/C) - \underset{(1.71)}{6.003}\Delta(C/Q)\\ &- \underset{(7.82)}{23.60}\Delta Pov + \underset{(.000525)}{.001527}\Delta Cr + \underset{(13.7)}{38.30}\Delta NW\\ &+ \underset{(.000551)}{.0004168}\Delta Y\end{aligned}$$

which, again, is basically the same as the other equations. Thus, the major finding—that decreases in the execution rate are not associated with increases in the homicide rate—is robust with respect to alternative methods of constructing the execution rate variable.

2. *Alternative Structures of Simultaneity*

Although equation (1) assumes that the causation is unidirectional, some variables in the equation may be both determinants of murder and products of either the homicide rate itself or factors that influence the homicide rate. This phenomenon, known generally as "simultaneity," was assumed in equation (8). One variable other than the execution rate that may be determined simultaneously with the homicide rate is the rate at which homicide offenders are convicted; it may both affect the homicide rate, as is hypothesized in equation (1), and be produced by changes in the homicide rate. The latter would occur if, for example, the ability to convict homicide offenders was

56. The predetermined variables are ΔAge, ΔNW, ΔMale, ΔUrb, ΔEnr, ΔPop, ΔDiv, ΔY, ΔPov, ΔEmp, and S. An alternate estimator, constructed from these variables together with ΔCr, produced a similar result. This general method, called the "two-stage, least-squares regression technique," is described in most standard econometrics textbooks. Because the coefficient of determination, described at equation (3), is difficult to interpret under the application of this technique, it is not reported for equations (8), (9), and (10). *See* P. Dhrymes, Econometrics: Statistical Foundations and Applications 240-03 (1970). Application of this technique to the analysis of crime deterrence, however, may create problems, since one cannot be confident that the control variables included in the equation of primary interest actually permit accurate identification of the crime function. Fisher & Nagin, *On the Feasibility of Identifying the Crime Function in a Simultaneous Model of Crime Rates and Sanction Levels*, in Deterrence and Incapacitation, *supra* note 13.

hampered by an increase in the load of homicide cases. Failure to account for this reverse effect, or for the effect of changes in the execution rate on the conviction rate,[57] might bias all the regression coefficients estimated. To deal with this problem, the estimator $\Delta^{\circ}(C/Q)$ is constructed by regressing $\Delta(C/Q)$ on the predetermined variables.[58] This alternative measure of the conviction rate produces the equation

$$\begin{aligned}(9)\quad \Delta(Q/N) = &- \underset{(3.62)}{4.007} + \underset{(10.4)}{17.66}\Delta(E/C) - \underset{(6.63)}{7.634}\Delta^{\circ}(C/Q)\\ &- \underset{(13.3)}{27.13}\Delta Pov + \underset{(.000820)}{.001300}\Delta Cr + \underset{(18.9)}{42.38}\Delta NW\\ &+ \underset{(.000707)}{.0006370}\Delta Y\end{aligned}$$

Once again, the homicide rate appears unaffected by changes in the execution rate.[59]

Another type of simultaneity may exist with regard to the average term of incarceration served by persons convicted of homicide, T. This would result if, for example, sentences were lengthened in response to an increase in the homicide rate, in an attempt to discourage further homicides. The potential bias produced by this simultaneity can be reduced by forming the variable $\Delta^{\circ}T$, constructed by regressing ΔT on the predetermined variables.[60] The result produced under this construction is

$$\begin{aligned}(10)\quad \Delta(Q/N) = &- \underset{(2.12)}{4.580} + \underset{(8.55)}{17.08}\Delta(E/C) - \underset{(1.66)}{6.019}\Delta(C/Q)\\ &+ \underset{(.007b8)}{.000252}\Delta^{\circ}T - \underset{(7.60)}{26.68}\Delta Pov + \underset{(.000521)}{.001363}\Delta Cr\\ &+ \underset{(14.1)}{44.72}\Delta NW + \underset{(.000548)}{.0006326}\Delta Y\end{aligned}$$

This result is basically similar to the others reported above.

The true system of simultaneity among variables is likely to be considerably more complicated than has been hypothesized. The results obtained by treating the execution rate, the conviction rate, and the average term of incarceration as endogenous variables, however, as was done in equations (8), (9), and (10), respectively, indicate that the biases due to failure to capture

57. *See* note 44 *supra*.

58. The predetermined variables under this formulation include those already cited, *supra* note 56, and $\Delta(E/C)$.

59. Alternative estimators of $\Delta(C/Q)$, one formed without $\Delta(E/C)$ and another formed with ΔCr, produce similar results.

60. *See* note 56 *supra*.

these simultaneous effects in equations (3) and (4) are not large.[61]

3. *Use of Weighted Regressions*

In cross-section analysis the variance of the dependent variable is often larger for more heavily populated places. This condition, known in a more general form as "heteroscedasticity," produces biased estimates of standard errors of the regression coefficients and biased tests of statistical significance. The presence of heteroscedasticity is commonly identified by visual inspection of a plot of the data, although more rigorous methods are available.[62] To eliminate this bias each observation is generally adjusted by weighting it by the square root of the population. Applying this weighting technique to the observations, under equation (4), the result is

$$(11)\quad \Delta(Q/N) = -4.627 + 18.59\Delta(E/C) - 6.340\Delta(C/Q) \quad (R^2=.595)$$
$$(2.54) \quad (10.6) \quad (1.80)$$
$$- 26.49\Delta Pov + .001243\Delta Cr + 50.32\Delta NW$$
$$(8.91) \quad (.000478) \quad (15.8)$$
$$+ .0007042\Delta Y .$$
$$(.000564)$$

The similarity of this equation to equation (4) suggests that the general findings are robust with respect to conventional weighting.[63]

4. *Exclusion of the Other-Crimes Variable*

One of the control variables used in equations (1) through (11) is the rate at which crimes other than homicide are committed. It was included in an attempt to account for the factors that caused crime to increase generally during the 1960's, since the failure of previous analyses to capture these effects may have interfered substantially with their ability to isolate a pure deterrent effect of capital punishment.[64] Certain offenses incorporated in this control variable, however, are likely to differ from homicide only in that the victims did not die. Since it is possible that some nonhomicide offenses may themselves be deterred by capital punishment, having them in the right-hand side of the regression equation may have affected the estimates of the deterrent effect that were reported above.

It is possible to test the effect of this potential bias, whose direction is not obvious, a priori, by estimating a counterpart to equation (4) without other offenses as a control variable.[65] The result is

$$(12)\quad \Delta(Q/N) = -5.371 + 9.564\Delta(E/C) - 6.040\Delta(C/Q) \quad (R^2=.420)$$
$$(2.36) \quad (0.27) \quad (1.02)$$
$$- 10.00\Delta Pov + 42.72\Delta NW + .001412\Delta Y .$$
$$(8.37) \quad (15.8) \quad (.000480)$$

As before, the deterrent effect of capital punishment is not apparent. While the omission of factors that caused crimes other than homicide to increase during the 1960's produces a result that differs somewhat from equation (4),[66] it does not, in this analysis, materially alter the finding.

III. CONCLUSION

The aim of this Article was to investigate empirically the deterrent effect of capital punishment. Building on studies by Ehrlich[67] and Passell,[68] the influence of the execution rate on the homicide rate was estimated by controlling for the effects of other variables and for the reverse effects of the homicide rate on the sanction variables. This analysis differs from previous ones, however, both because it focuses on a unique decade during which the homicide rate increased by over 50 percent and the use of capital punishment ceased and because it examines changes in homicides and executions over time and across states.[69]

61. Similar results are obtained by endogenizing the rate at which crimes other than homicide are committed.

62. *See* Goldfeld & Quandt, *Some Tests for Homoscedasticity*, 60 J. AM. STAT. ASS'N 539 (1965).

63. All the unweighted regression results reported in this paper have also been obtained under the weighted technique, with similar results in each instance.

64. *See* note 60 *supra*.

65. When ΔCr is removed from equation (3) the only independent variables that are statistically significant (at .10) are $\Delta(C/Q)$, ΔPov, ΔNW, and ΔY. Hence, our selection of an efficient subset of independent variables, used in equations (4) through (11), is unaffected by the exclusion of ΔCr.

66. The inclusion of ΔCr in equation (4) reduces substantially the appearance of a strong effect of median family income on the homicide rate obtained in (12). Behind this reduction is a large correlation coefficient (.05) for the pair ΔCr and ΔY. The actual relationships between (Q/N), Cr, Y, and other factors are likely to be extraordinarily complex, and, although the topic is important, exploration of these relationships is beyond the scope of this discussion.

67. *See* Ehrlich, *supra* note 3; Ehrlich, Punishment and Deterrence, *supra* note 24.

68. *See* Passell, *supra* note 24.

69. This approach appears also to yield more efficient estimates of

The findings do not support the hypothesis that capital punishment deters homicides. The 53 percent increase in the homicide rate in the United States from 1960 to 1970 appears to be the product of factors other than the elimination of capital punishment. Foremost among these are a decline in the rate at which homicide offenses resulted in imprisonment (from 41.3 percent in 1960 to 34.6 percent in 1970 for the states that reported in both years) and increasing affluence during the 1960's.[70]

To obtain a sense of how well the estimates, based as they are on individual observations of 32 states, generalize to the United States as a whole, the coefficients of the basic equation, (4), can be combined with changes in the respective independent variables given in the first two columns of Table 1. This produces a predicted increase of 2.68 homicides per 100,000 residents. That the actual increase was 2.7, as shown in Table 1, provides some assurance that the estimates generalize to the aggregate of 18 states not analyzed in equation (4).

The apparent strength of the incarceration rate variable and the apparent weakness of the execution rate and term of imprisonment variables as deterrents to homicide lend some support to Cesare Beccaria's two-hundred-year-old suggestion that certainty of punishment deters more effectively than its severity.[71] There are, however, other explanations for these findings. The appearance of a strong deterrent effect of imprisonments on homicides may be the result of changes in factors omitted from this analysis.[72] And the apparent weakness of the deterrent effect of long imprisonments may be the product of the inaccuracy of our term-of-imprisonment variable,[73] since random errors in the measurement of this variable will bias downward estimates of the deterrent effect of the length of imprisonment.

It seems likely, nonetheless, that this finding of a deterrent effect of imprisonments of persons convicted of murder is more real than spurious. Errors in the measure of murder imprisonments are sure to exist, and these are likely to cause estimates of the deterrent effect of incarceration to understate the true effect.[74] Moreover, this particular finding is consistent with empirical results presented by Ehrlich and Passell.[75] And it supports von Hirsch's suggestion that if penalties for homicide were eliminated entirely it is difficult to imagine that the homicide rate would not increase.[76]

The finding that capital punishment, on the other hand, does not deter homicide is remarkably robust with respect to a wide range of alternative constructions of the execution rate, alternative assumptions about simultaneity among the crime and

the relationship of primary interest, based on the coefficients of variation of the relevant variables. A variable's coefficient of variation is the ratio of its standard deviation to its mean value. In the extreme case in which a factor does not vary, it can have no relationship at all with another factor.

In fact, the coefficients of variation of both the homicide rate and the execution rate are substantially larger (0.023 and 1.51, respectively) in this study than the coefficients of variation for the homicide rate (0.157) and execution rate (0.940) based on annual aggregate United States data for the period 1933 to 1969. The coefficients of variation for the aggregate time-series data are calculated from the independent constructions of Q/N and PXQ_1, based on Ehrlich, The Deterrent Effect of Capital Punishment: A Question of Life and Death, Sources of Data at 2, 6 (May 1975) (unpublished paper on file at MINNESOTA LAW REVIEW).

70. One can only speculate as to why the homicide rate rose the most in those states with the greatest increases in wealth. Increased wealth may have provided more attractive targets to potential offenders and produced heightened expectations and frustration. Since the nationwide increases in family income reported here are attributable to real growth and to inflation in roughly equal shares, see U.S. BUREAU OF CENSUS, STATISTICAL ABSTRACT OF THE UNITED STATES, table 1323, at 811 (1972) & Table 1, at p. 752 *supra*, the inflation component may have produced further frustration, thereby exerting additional upward pressure on the homicide rate. According to table 1323, the Consumer Price Index went from 88.7 to 116.3 between 1960 and 1970, an increase of 31.1 percent. During the same period the median family income rose from $5660 to $9586, see Table 1, at p. 752 *supra* (values for variable Y), an increase of 67.6 percent. Thus, the percentage increase in the median family income due to inflation was 46.6.

71. C. BECCARIA, ON CRIMES AND PUNISHMENTS 58 (H. Paolucci trans. 1963).

72. Suppose, for example, that exogenous changes in omitted social factors in the 1960's produced a disproportionate increase in stranger-to-stranger homicides. This would cause an increase in the homicide rate to coincide with a decrease in the imprisonment rate, since it is harder to apprehend those who commit stranger-to-stranger homicides. The appearance of a deterrent effect would then be false.

73. Passell, *supra* note 24, at 67, has discussed potential sources of error in the measurement of this variable. A particularly important potential source of error comes from the fact that the measure of the average term of imprisonment is based on released homicide offenders, exclusive of homicide offenders who die in prison, some of whom had surely already served lengthy terms of incarceration.

74. On the other hand, errors in the measurement of the number of homicides, which appears both as the numerator of the homicide rate, (Q/N), and the denominator of the conviction rate, (C/Q), are likely to bias the estimates toward the appearance of a stronger deterrent effect of incarceration than may really exist. Kleiman, Forst, & Filatov, *supra* note 13, at 17-19.

75. *See* notes 54-55 *supra* and accompanying text.

76. A. von Hirsch, Doing Justice 39 (1976).

sanction variables, whether or not the observations are weighted, and the inclusion of different subsets of available control variables.

Capital punishment may be a justly deserved and appropriate sanction in some instances. It is certainly an effective way to ensure that a person convicted of murder will not commit further crimes. The results of this analysis suggest, however, that it is erroneous to view capital punishment as a means of reducing the homicide rate.

APPENDIX

DATA SOURCES FOR THE VARIABLES USED IN THIS ANALYSIS

Q/N *Criminal Homicide Rate* = Number of murders and nonnegligent manslaughters per 100,000 residents. FEDERAL BUREAU OF INVESTIGATION, DEPARTMENT OF JUSTICE, UNIFORM CRIME REPORTS, table 3, at 38-52 (1960) & table 4, at 72-81 (1970).

E/C *Execution Rate* = Ratio of the number of executions to the number of homicide prisoners received from court. E/C denotes the ratio of executions to murder convictions that occur in the same year. E_{+1}/C denotes the ratio of executions to convictions, with the executions occurring the year after convictions. E_m/C denotes the ratio of executions to convictions, where E_m is the mean annual number of executions over the three-year period centered about the year of the convictions. The source of the number of executions is FEDERAL BUREAU OF PRISONS, DEPARTMENT OF JUSTICE, NATIONAL PRISONER STATISTICS: CAPITAL PUNISHMENT, table 2, at 8-9 (No. 45, August 1969) for 1960 and 1961 data, and table 2, at 18-19 (No. SD-NPS-CP-3, November 1975) and table 3 (No. 20, February 1959) for the construction of 1959 data. The source of the number of homicide prisoners received from the court in 1960 is FEDERAL BUREAU OF PRISONS, DEPARTMENT OF JUSTICE, NATIONAL PRISONER STATISTICS: CHARACTERISTICS OF STATE PRISONERS, table A5, at 50-51 (1960); the source of the 1970 data is FEDERAL BUREAU OF PRISONS, DEPARTMENT OF JUSTICE, NATIONAL PRISONER STATISTICS, STATE PRISONERS: ADMISSIONS AND RELEASES, table A2, at 6 (1970).

C/Q *Incarceration Rate* = Ratio of the number of homicide prisoners received from court to the number of murders and nonnegligent manslaughters. The source of the number of homicide prisoners received from the court is given under E/C. The number of murders and nonnegligent manslaughters is calculated as the criminal homicide rate, described under Q/N, multiplied by the resident population. The source of the resident population is U.S. BUREAU OF THE CENSUS, DEPARTMENT OF COMMERCE, STATISTICAL ABSTRACT OF THE UNITED STATES, table 11, at 12 (1974) [hereinafter cited as CENSUS ABSTRACT].

T *Term of Incarceration* = Mean time, in months, served by homicide prisoners released from prison (including parolees). Calculated from data given in FEDERAL BUREAU OF PRISONS, DEPARTMENT OF JUSTICE, NATIONAL PRISONER STATISTICS: PRISONERS RELEASED FROM STATE AND FEDERAL INSTITUTIONS, tables 6-54, at 22-70 (1960) and FEDERAL BUREAU OF PRISONS, DEPARTMENT OF JUSTICE, NATIONAL PRISONER STATISTICS, STATE PRISONERS: ADMISSIONS AND RELEASES, table R4, at 47-81 (1970).

Cr *Nonhomicide Crime Rate* = Number of offenses other than murder and nonnegligent manslaughter reported to police per 100,000 residents, calculated as the total crime index rate minus the criminal homicide rate described under Q/N. The sources of the total crime index rate data are the same tables that were cited under the description of Q/N.

Age *Proportion of Residents of the Ages 21-24* = Ratio of the number of residents of the ages 21 through 24 to the total resident population. The source of the number of persons of the ages 21-24 for 1960 is CENSUS ABSTRACT, *supra*, table 19, at 27 (1962); the source of the 1970 data is CENSUS ABSTRACT, *supra*, table 36, at 31 (1972). The Census Bureau gives the 1960 data for persons between the ages 20-24, which we multiply by 0.8. The source of the total resident population is given under C/Q.

NW *Proportion of Nonwhites* = Ratio of the number of nonwhite residents to the total resident population. The source of the number of nonwhite residents is CENSUS ABSTRACT, *supra*, table 31, at 29 (1974). The source of the total resident population is given under C/Q.

Male *Proportion of Males* = Ratio of the number of male residents to the total resident population. The source of the number of male residents is CENSUS ABSTRACT, *supra*, table 17, at 25 (1962) & table 25, at 25 (1972). The source of the total resident population is given under C/Q.

Urb *Proportion of Urban Residents* = Ratio of urban population to the total resident population. The source of the urban population is CENSUS ABSTRACT, *supra*, table 18, at 19 (1974). The source of the total resident population is given under C/Q.

Enr *Enrollment Rate* = Ratio of the number of persons enrolled in public elementary and secondary schools to the number of residents of the ages 5-17. CENSUS ABSTRACT, *supra*, table 196, at 122 (1974).

Pop *Resident Population* = Number of residents, in millions, as of July 1. CENSUS ABSTRACT, *supra*, table 11, at 12 (1974)

Div *Divorce Rate* = Ratio of the number of divorces to the number of residents. The source of the number of divorces is CENSUS ABSTRACT, *supra*, table 95, at 67 (1974). The source of the number of residents is given under C/Q

Y *Median Family Income* = Amount of income, in dollars, such that exactly half the resident families earn at least that much. CENSUS ABSTRACT, *supra*, table 627, at 3[illegible] (1974).

Pov *Proportion of Families in Poverty* = Ratio of the number of families below the low income level to the total number of resident families. CENSUS ABSTRACT, *supra*, table 634, at 391 (1974).

Emp *Proportion of Adults Employed* = Ratio of the number of residents employed in nonagricultural establishments to the number of residents at least 16 years of age. The source of the number of employed residents is CENSUS ABSTRACT, *supra*, table 363, at 226 (1972). The number of residents at least 16 years of age is calculated from the CENSUS ABSTRACT, *supra*, table 19, at 27 (1962) & table 36, at 31 (1972), as follows: For 1960 we use the resident population at least twenty years of age plus 0.8 times the number of residents between 15 and 19 years of age. For 1970 we use the resident population at least 18 years of age plus one-half the number of residents between 14 and 17 years of age.

S *Binary Southern Variable* =1 if the state is Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, or West Virginia; otherwise = 0.

Answer Critic From Utah

JUNEAU (AP) — Democratic leaders of the Alaska Legislature pointed to the record today in defense of legislative activities which drew the fire of a Republican congressman.

Rep. Dawson (R-Utah), in a House speech yesterday, accused the Democratic controlled territorial Legislature of actions which might endanger Alaska statehood.

Dawson accused Democrats of "playing politics" in the rejection of 26 of 35 nominations to territorial boards and commissions by acting Gov. Waino Hendrickson.

The Utah Republican, a strong statehood supporter, also criticized a pre-legislative proposal by former Rep. Wendell Kay of Anchorage, speaker of the House in 1955, that the governor be stripped of patronage powers.

House Speaker Richard Greuel (D-Fairbanks) commented:

"Apparently Rep. Dawson is unaware of the old political custom in Alaska: the elected Legislature usually turns down a large percentage of the appointed governor's board appointments. Actually, the 1957 Legislature departed from tradition in confirming the vast majority of the governor's appointments."

"In confirming two-thirds of the Republican governor's appointees," said Senate President Victor Rivers (D-Anchorage), "the Alaska Legislature demonstrated its willingness to cooperate."

Rivers, a brother of Alaska's provisional "representative in Washington, Ralph Rivers, added:

"In the interest of harmony and good government, the democratic majority went two-thirds of the way. This is in contrast to the Republican controlled Legislature of 1953 which rejected all appointments of a Democratic governor."

Kay, a registered lobbyist at the 1957 Legislature, commented:

"Unfortunately, Rep. Dawson is 4,000 miles away from the Alaska situation. Perhaps this demonstrates how much we need statehood. I still feel it is obvious that an elected Alaskan can better manage Alaska than an appointed federal official."

There has been introduced in the territorial Legislature a much-criticized Democratic-sponsored bill calling for an elected administrative governor, to serve along side the governor appointed in Washington. The latest version of the proposal would make the appointed governor the first administrative governor, serving until the 1958 general election.

A leading Senate Republican, Sen. Mike Stepovich of Fairbanks, supported Dawson's comments. Stepovich said:

"I think he is correct. We'd bet-

ALASKA DEATH PENALTY

JUNEAU (AP) — Death by hanging for Alaska's most severe crimes, like that of the commission of a crime would be established under terms of a bill passed by the territorial House today.

By a 19-9 vote, with one member absent, the House passed and sent to the Senate a bill that would strike all forms of capital punishment from the territorial law.

The vote followed a day and a half of debate in which the co-author of the bill, a lawyer, said "the hideous mistake of executing an innocent man" makes it

neau, Clark Monk and Glen Phillips of Sun Valley, Idaho; Leon Johannsen, brother of the famous Sven Johannsen, racing under the colors of the Girdwood Ski Club; Charles Burnham of Elelson Air Force Base; Erik Jorgensen, Danny McDonald and Art Stubbings of Fairbanks and seven University of Alaska students—Bill King, Norm Saunders, Hazel Owens-Ann Price, Dave Teague, Harvey Turner and Donald Boyce.

Luke Zell, president of the Anchorage Ski Club, announced the following lineups, according to classes, for the slalom and downhill racing at Arctic Valley.

Class A — Joe Young, Gary King, Clark Monk, Ronnie Seater, Glen Phillips, Bill Northway, Jerry Edwards, Johannes Berge, Harvey Turner, Ray Morris and Gene Cox.

Class B — Earle Walker, Mike Beavers, Frans Bjorklund, Merle Akers, Dick Brown, Roger Ridgeway, Erik Jorgensen, Joe Jurkiewicz, Ray Erchaney, Dan McDonald, Art Stubbings, Ron Ferch, Butch Schwende and Pat McElroy.

Class C — Charles Burnham, Norm Saunders, Bill King, Alanson Bartholomew, Warren Henry, Edwin Harper, Roger Shaffer, Jerry Palmer, Robert Boehm, Jerry McMillan, Dave Teague, Sperry Zervas, Ron Davis, Ole Aanjensen, Don Boyce, Arne Ewald, E. B. Mackenzie, Dick Quinn, Bill Earl, Luke Zell, Sam Price, Ray Ervais, Larry Connor and DeHar Long.

Women's division — Hazel Owens Linda Crocker, Bonnie Weimer, Marie Simon, Laurita Heiner, Marion Brown, Pat Graham and Valerie Brote.

Fur Rendezvous ski trophies will be presented at a banquet Sunday night, 8 o'clock at Forest Park Country Club.

The Alaska Sled Dog Championship races continue tomorrow and finish Sunday. A 25-mile leg is run each day [illegible] of the territory's [illegible]

been unfortunate enough to witness executions," said Rep. Warren Taylor (D-Fairbanks), "and the cold-blooded, methodical way they are carried out makes you wonder if it isn't legal murder."

Taylor, who introduced the bill with Rep. Victor Fischer (D-Anchorage), told the House and a packed gallery yesterday that he had been a lawyer in Alaska 20 years next month.

"I've taken part in 31 homicide trials, quite a few in the first degree," he said, "both as a prosecutor and a defense attorney," he added:

"I recall a case in Valdez where I was prosecuting a very good friend of mine. A combination of cabin fever and rum alcohol led him to trouble, and fortunately the jury brought in a verdict in the second degree. Had it been different, I would have carried to the grave that scar on my soul."

One of the strong opponents to the bill, Rep. Dora Sweeney (D-Juneau) recalled two famous cases in support of her argument that the death penalty should be continued.

"Remember Winnie Ruth Judd," Rep. Sweeney said. "A Juneau girl who horribly hacked up two persons and tried to ship their bodies all over everywhere in a trunk, she lives today in an institution, from which she has escaped several times."

Then she pointed to the recent case of John Gilbert Graham, the Colorado youth executed for planting a bomb aboard a commercial airliner and killing more than 50 persons.

"If that happened in Alaska," Mrs. Sweeney said," and this bill passes, we could not penalize him with any more than life imprisonment—from which he eventually could be freed."

Rep. Seaborn J. Buckalew Jr. (D-Anchorage) protested that the bill "protects a class of people who don't deserve the consideration we are giving them."

Taylor said Rep. Sweeney believed in the commandment "of thou shall not kill—but," Taylor added: "There is a period after kill."

"And I say, Buckalew," Taylor said, "has the district attorney complex—show them no mercy."

The bill, as passed after amendments, provides for mandatory life imprisonment for persons convicted of first degree murder.

The old statute also was revised in a section which provides for first degree convictions for persons accused of wrecking a railroad train.

The amendment to that would include mandatory life for a person who "places obstruction on [illegible]

DEW Line Bids Opened

[illegible] bids for building two [illegible] stallations in southwest Alaska are $3,461,000 under the best of the government estimates and $2,347,274 under the highest pair of bids.

The bids were opened by the Alaska District Office of the Corps of Engineers here yesterday.

The low bidder was Monsen-Osberg Co. Its bid for the installation at Cold Bay, near the tip of the Alaska Peninsula, was $3,625,536. Its bid for a similar job at Cape Sarichef, about 100 miles to the west on Unimak Island, was $3,717,551.

The firm also said it would knock off $100,000 if it receives both jobs.

Nine bids were submitted. The government estimate for Cold Bay was $4,959,200; for Cape Sarichef $4,719,222.

The other bids, with Cold Bay listed first, were:

Chris Berg, Inc., Seattle, $5,162,077 and $4,681,280.

Baker & Ford, Bellingham, $5,396,446 and $4,509,906.

Peter Kiewit Sons, $4,122,843 and $3,453,324.

Birch-Green Co., $4,830,512 and $3,216,742.

Morrison-Knudsen Co., $5,042,388 for Sarichef; no bid on Cold Bay.

Bock Constructors and Baker & Kiel, Seattle, $5,191,270 on Sarichef only.

S.S. Mullen Co., Seattle, $4,873,259 on Cold Bay only.

Grove, Shepherd, Wilson & Kruse of New York and Seattle and J. A. Jones Co., of Charlottesville, N.C., and Seattle, $5,093,157 and $5,346,942.

The projects are the first two of six planned in an extension of the defense warning system to the Aleutians.

Baby Show Is Tomorrow

Parents entering their children in the Fur Rendezvous Baby Contest are to bring them to the high school cafeteria tomorrow morning.

Children aged nine months to two years will be judged from 9 to 10; two to three years, 10 to 11; and 3 to 4, 11 to 11:45. Winners in each age group will compete at 2 p.m. tomorrow for the crown of baby king or queen.

Entry blanks are still available at the Spenard Hobby Shop, Northern Commercial Baby Department, Stork Shop and Jack and Jill Shop. To save time, parents are asked to have the entry forms filled in before bringing the children to the show.

The Elmore Homemakers are [illegible]

STRONG AND WEAK RESEARCH DESIGNS FOR DETECTING THE IMPACT OF CAPITAL PUNISHMENT ON HOMICIDE

David P. Phillips*

I. Introduction

This article does not attempt to provide a systematic review of studies on the deterrent effect of capital punishment.[1] Instead, the article encompasses two related topics: (1) a discussion of some common methodological shortcomings of many studies on the deterrent effect of capital punishment, and (2) a suggestion for a type of study design that appears to avoid many of these shortcomings.[2]

To determine whether capital punishment influences the homicide rate, one needs to disentangle the effect of capital punishment from the effect of other variables on homicide. This "disentangling" can be accomplished in two major ways. First, one can use a controlled experiment, or an approximation to one. This approach is favored in the natural sciences and has been the method of choice for most research on the effects of capital punishment. Second, one can use statistical techniques, including regression analysis, correlation, analysis of variance, path analysis, etc.

This paper concentrates on studies that use the controlled experiment as a model study design. Most of these investigations have implicitly followed the study design represented in Table 1. A careful examination of this table will help to reveal systematically some of the common shortcomings of research on capital punishment.

* Associate Professor of Sociology, University of California at San Diego; B.A., Harvard University, 1961; Ph.D., Princeton University, 1970.

1. Capital studies on the deterrent effect of capital punishment may be found in H. Bedau, "The Death Penalty in America" (1964); W. Bowers, Executions in America (1974); Klein, Forst & Filatov, *The Deterrent Effect of Capital Punishment: An Assessment of the Estimates*, in Deterrence and Incapacitation (1978); Zeisel, *The Deterrent Effect of the Death Penalty: Facts v. Faith*, 1976 Supreme Court Review 317.

2. For examples and criticisms of the type of study, see Bowers & Pierce, *The Illusory Deterrence in Isaac Ehrlich's Research on Capital Punishment*, 85 Yale L.J. 187 (1975); Ehrlich, *The Deterrent Effect of Capital Punishment: A Question of Life and Death*, 65 Am. Econ. Rev. 397 (1975); Ehrlich, *Deterrence: Evidence and Inference*, 85 Yale L.J. 209 (1975); Klein, Forst & Filatov, *supra* note 1; Zeisel, *supra* note 1; P. Passell & J. Taylor, *The Deterrent Effect of Capital Punishment: Another View*, Discussion Paper #74-91, Columbia University Department of Economics (1974).

TABLE 1

A COMMON PARADIGM FOR MANY STUDIES OF THE DETERRENT EFFECTS OF CAPITAL PUNISHMENT

	Time 1	Time 2	
Experimental Group	h(1)	h(2)	$d = h(2) - h(1)$
Control Group	h'(1)	h'(2)	$d' = h'(2) - h'(1)$

II. A Paradigm for Evaluating the Soundness of Some Research on the Deterrent Effects of Capital Punishment

The experimental group in Table 1 consists of a population subject to capital punishment at time 1 and not subject to capital punishment at time 2. Ideally, the control group is identical to the experimental group in every respect except one: unlike the experimental group, the control group is never subject to capital punishment. h(1) denotes the homicide rate of the experimental group at time 1, when it is still subject to capital punishment. h(2) denotes the homicide rate of the same group at time 2, after capital punishment has been abolished. d is the difference between the experimental group's homicide rate before and after capital punishment was abolished. In other words, d denotes the amount by which the experimental group's homicide rate has changed during the study period. h'(1) is the homicide rate of the control group at time 1, while h'(2) is the homicide rate at time 2. d' denotes the amount by which the control group's homicide rate has changed during the study period.

Suppose that the experimental group's homicide rate changes over time in one way, and the control group's homicide rate changes in another way. In other words, suppose that d is different from d'. Because the experimental and control groups are similar in every way except for their experience of capital punishment, a large difference between d and d' may then be plausibly attributed to the difference in exposure to capital punishment in the two groups.

As indicated earlier, this seemingly simple study design has frequently been the model for research on capital punishment. Therefore, it is surprising and regrettable that no investigation in the literature meets all the requirements of this study design. No study provides all four pieces of information, h(1), h(2), h'(1), and h'(2), required in Table 1. Instead, a variety of incomplete study designs prevail. In the following section, these incomplete study designs are

III. Four Types of Inconclusive Study Designs

A. *Only Information on* $\left|\begin{matrix} h(1) & h(2) \end{matrix}\right|$ *Is Provided*

In this type of study, there is no control group. The author merely measures the experimental group homicide rate before and after the abolition of capital punishment. If the homicide rate increases after the abolition of capital punishment, the author may be tempted to attribute this increase to the disappearance of capital punishment. In fact, however, the abolition of capital punishment may be only one of many changes experienced by the experimental group between time 1 and time 2. Any of these other changes may be the real explanation for the increase in the homicide rate.

B. *Only Information on* $\left|\begin{matrix} h(1) \\ h'(1) \end{matrix}\right|$ *Is Provided*

In this type of study, the homicide rate in an experimental group, h(1), is compared with the homicide rate of a control group, h'(1), at a time when the first group is subject to capital punishment and the second group is not. A typical example of this type of study occurs when one compares the homicide rate of a state *with* capital punishment to the homicide rates of adjacent states *without* capital punishment. If the homicide rate of the "capital punishment" state is lower than the homicide rate of the "non-capital punishment" states, the author may wish to attribute the lower rate to the presence of capital punishment. In fact, however, adjacent states differ in a great many ways that have nothing to do with capital punishment. Out of the multitude of differences between adjacent states, it seems unreasonable, without additional evidence, to select the presence of capital punishment as the definitive explanation for a low homicide rate.

C. *Only Information on* $\left|\begin{matrix} h(1) \\ h'(2) \end{matrix}\right|$ *Is Provided*

At first sight, it is difficult to imagine how a careful researcher could produce a study of this sort, in which a group at one time is compared with a different group at another time. In fact, however, it is surprisingly easy to conduct a flawed investigation of the sort. Consider, for example, a comparative study of the United States homicide rates in, say, 1950 and 1960. This appears to be a study of type

$$\left|\begin{matrix} h(1) & h(2) \end{matrix}\right|$$

already discussed, but is actually a study of type

$$\left|\begin{matrix} h(1) \\ h'(2) \end{matrix}\right|$$

of forty-eight states, whereas in 1960 it consisted of fifty states. Thus the group being studied in 1950 is not the same as the group examined in 1960, even though the name of the two groups is identical.

In this example, the effect of the error is not very great, and the flaw in the study design, though embarrassing, may not be serious in some circumstances, however, this type of flaw may be both embarrassing and serious. It is serious, for example, whenever comparisons are made using United States homicide statistics for the period 1900-1932. During this period, vital statistics rates were not known for the entire United States, only for those states eligible for inclusion in the Death Registration Area.[4] The geographic makeup of this area changed continually from 1900 to 1932. (From 1933 on, all forty-eight states were included.) Thus, an examination of "United States" homicide rates in the early part of the century generally involves a constantly changing entity. The changes in this entity are masked, however, because the name of the entity remains unchanged.

D. *Only Information on* $\left|\begin{matrix} & h(2) \end{matrix}\right|$ *Is Provided*

This type of study, fortunately, is more common in the popular than in the professional literature. The author of this type of study notices, for example, that California had a high homicide rate in 1970. Out of the myriad features that characterized California in 1970, the author selects one, the absence of capital punishment, and asserts that this is the reason for the high homicide rate. The author does not attempt to determine whether the California homicide rate was equally high *before* the abolition of capital punishment, nor does he attempt to compare changes in California homicide rates with changes in the homicide rates of a matched control group. It is evident that a study of this type cannot provide compelling evidence on the deterrent effect of capital punishment.

Thus, the paradigm for evaluating some studies of capital punishment

$$\left|\begin{matrix} h(1) & h(2) \\ h'(1) & h'(2) \end{matrix}\right|$$

highlights the shortcomings of four common study designs:

$$\underset{\text{A}}{\left|\begin{matrix} h(1) & h(2) \end{matrix}\right|} \qquad \underset{\text{B}}{\left|\begin{matrix} h(1) \\ h'(1) \end{matrix}\right|} \qquad \underset{\text{C}}{\left|\begin{matrix} h(1) \\ h'(2) \end{matrix}\right|} \qquad \underset{\text{D}}{\left|\begin{matrix} & h(2) \end{matrix}\right|}$$

IV. Other Shortcomings of Research on Capital Punishment

So far, only those shortcomings that are revealed by a close consideration of the paradigm illustrated by Table 1 have been discussed. Two additional shortcomings should also be mentioned.

First, almost all studies in the literature seek to determine whether laws, or the absence of laws, about capital punishment affect the homicide rate. Typically, the researcher seeks to determine whether the abolition or reinstatement of the death penalty changes the homicide rate. This type of research often has two obvious weaknesses, in addition to the shortcomings already discussed above: (1) the death penalty is abolished or reinstated very rarely in any given area, and consequently the researcher has very few cases to study; (2) the fact that a state has a law permitting capital punishment does not necessarily mean that the state actually practices capital punishment. If capital punishment is "on the books" but not practiced, it may not have the same effect as a law that is enforced. For these two reasons, studies of the deterrent effect of capital punishment *laws* may not reveal a deterrent effect, even if such an effect actually exists.

Second, almost all studies on capital punishment use yearly rather than weekly or daily statistics.[7] Research using yearly data has typically failed to find a deterrent effect of capital punishment. Such failure may have occurred because (1) there is no deterrent effect, or (2) there is a deterrent effect, but it cannot be detected with crude yearly data. Short-term deterrent effects are obviously more likely to be discovered with weekly than with yearly statistics.

These methodological shortcomings are common in the literature on capital punishment. The next section of this paper describes a type of research that appears to avoid many of them.[8]

V. The Effect of Publicized Executions on the Level of Homicides

As noted earlier, it is desirable to examine daily or weekly homicide statistics in order to detect short-term effects of capital punish-

[7] Cannot locate only two studies. Besides those cited by the author that use weekly or daily homicide statistics to examine the deterrent effect of executions, see H. Dicks, The Deterrent Effect of Capital Punishment, Home Office Research Unit, Research Bulletin No. 34 (1943); Grove, *A Doctor Looks at Capital Punishment*, 40 J. Crim. L. Criminology & Police Sci. 545 (1950); Phillips, *The Deterrent Effect of Capital Punishment: New Evidence on an Old Controversy*, 86 Am. J. Sociology 139 (1980). Dicks's study found no evidence of a deterrent effect, perhaps because the author examined only five executions. Grove's study also found no deterrent effect but only a small fraction of the executions studied were well publicized.

Additionally, one Pennsylvania study examined the deterrent effect of death penalty *sentences* rather than executions. Only four sentences were examined, and no deterrent effect was found. See Sellin, *A Study of Capital Punishment*, 49 J. Crim. L. & Criminology 189, 190 (1958).

ment. A search of the vital statistics collections of the Library of Congress, the National Library of Medicine, and the British Museum revealed only one jurisdiction, England, that both practiced capital punishment and published weekly homicide statistics over a given period of time. The weekly homicide statistics for London from 1858 to 1921 were available for study.

A list of highly publicized English executions for the same time period was generated from a standard encyclopedia of notorious murderers. Table 2 lists these executions, ranked by the amount of publicity each received, together with the number of homicides before, during, and after the week of each execution. The week in which the execution was publicized in the newspaper will henceforth be termed "the execution week" or "the experimental period." The week just before the experimental period and the week just after will be termed "the control period." It is evident that the London in each control period is nearly identical to the London in the corresponding experimental period, except for the presence of an execution in the experimental period. Thus, this procedure for choosing controls avoids the problem of dissimilar experimental and control periods encountered in other study designs.

If executions deter homicides, then the number of homicides in the experimental period should generally be smaller than the number of homicides in the control period. Table 2, column 6, shows the average weekly number of homicides in each control period; column 7 indicates whether the number of homicides in the experimental period was less than the weekly average in the control period (indicated by a "-1") or more than the weekly average (indicated by a "+1"). In three cases the number in the experimental period equaled the weekly average in the control period. In the remaining nineteen cases in Table 2, there are fifteen "-1"s and four "+1"s. In short, there is a general tendency for homicides to decline in the week of a publicized execution.

These data are consistent with the hypothesis that publicized executions produce a brief decline in homicides. This hypothesis is further supported by an additional piece of evidence: the more publicity given to the execution, the more homicides decline. This is evident from an informal inspection of Table 2 and also from a more refined statistical analysis reported elsewhere.[9]

It is difficult to think of a plausible alternative explanation for the findings. The findings are sufficiently strong so that they cannot easily be attributed to chance fluctuations in the data. In technical terms, the results are statistically significant.[10] The findings cannot result

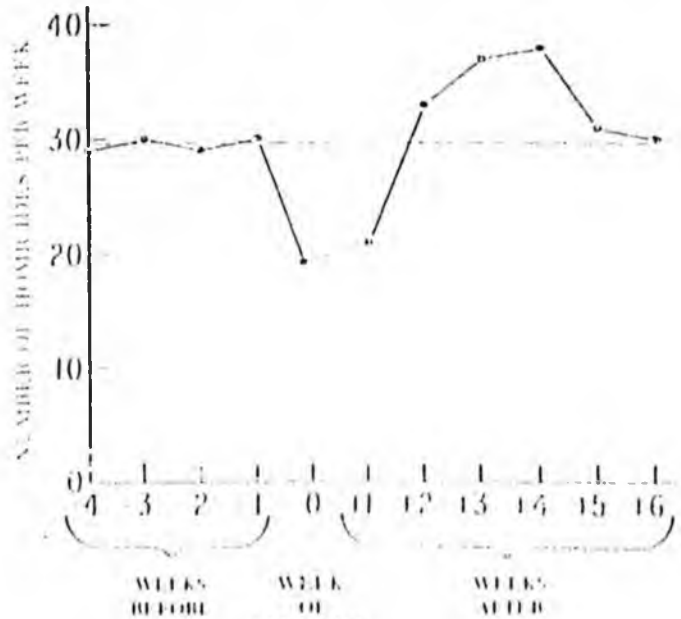

TABLE 2

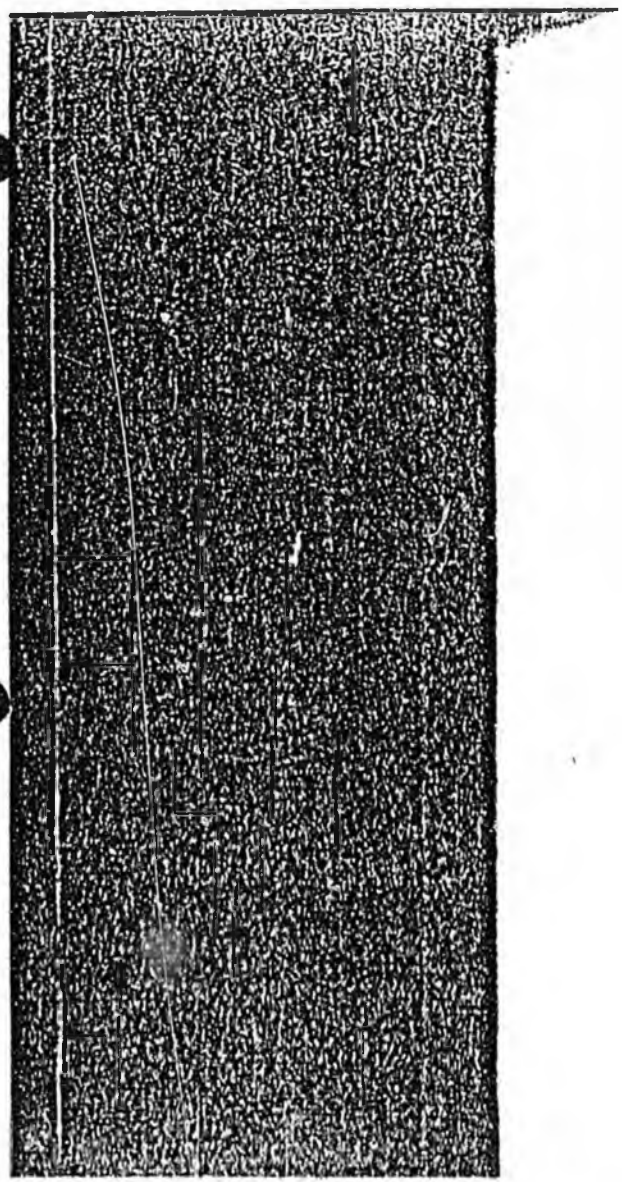

Weekly Homicides Before, During and After Publicized Executions, London, 1858-1921

Name of person executed and date of execution (men in The Times)	No. of homicides during week of execution	Control Period: No. of homicides per week in the 4 weeks before execution week	Control Period: No. of homicides per week in the 3 weeks after execution week	Control Period: No. of homicides per week in the 7 weeks before and after execution week	Average no. of weekly homicides in control period	Difference between observed no. of deaths in execution week and 3 and no. expected (col. 4 − col. 5)

Pace 2/28/1879	963.0	0	1		1	−1.0
Read 12/7/1901	1014.0	2	1		2	0.0
Mahon & Condon 6/4/1849	2016.0	0		1	1.0	−1.0
Owen 8/9/1859	2216.0	0	1	1	1.0	0.0
Dennison 8/16/1911	2154.0	1		0	1	0.0
Marlow 1/30/1911	2014.0	0	1	0	0.5	0.5
Sherrard 12/1/1920	1980.0	2		1	1	1.0
Dowse 12/9/1911	1563.0	1		0.5	0.5	0.5
Bentley 8/11/1901	1270.0	2	1	0.5	1.5	
Parker 10/1/1912	1014.0	0	0		0	0
Dickman 8/10/1910	1014.0	0	1	0.5	0.5	0.5
Stratton Brothers 5/4/1905	2028.0	1	0	0.5	0.5	0.5

from a trend in homicides over time because the selection and treatment of controls corrects for the effects of trend. The findings also cannot be attributed to seasonal fluctuations because the control and experimental periods occur during the same seasons of the year. Similarly, the findings cannot be attributed to day of the week fluctuations in homicides because the experimental and control periods each cover the same days of the week. At present, the best available explanation of the findings is that publicized executions in London from 1858 to 1921 caused a brief decline in homicides during the execution week.

So far, we have examined homicides for a three-week period centered on the execution week. It is instructive to graph the fluctuation of homicides for a longer period of time. When such a graph is made, a curious and unexpected phenomenon is discovered: the dip in homicides just after the execution is canceled by an equally large rise in homicides soon afterwards. Figure 1 shows this pattern quite

clearly. The most plausible explanation of this graph is that homicides are *temporarily* deterred for a two week period; then these temporarily deterred homicides reappear after the publicized execution has faded from memory. Apparently, the "lesson of the scaffold" is real but only temporary, at least in London from 1858 to 1921.

Without further research, it is inappropriate to generalize these findings to contemporary America. The chief value of the study described herein lies not in its findings but in its design. The study examines the effect of executions, rather than death penalty legislation, it employs weekly rather than yearly homicide statistics, and finally, it uses a control group that is nearly identical to the experimental group. Because of these features, the study design avoids many of the shortcomings of traditional investigations. Future research should attempt to apply this study design to contemporary American data.

A Comparison of the Work of Thorsten Sellin and Isaac Ehrlich on the Deterrent Effect of Capital Punishment*

David C. Baldus† and James W. L. Colet‡

During the last 20 years, a substantial number of empirical studies—most prominent among them the work of criminologist Thorsten Sellin—have concluded that the death penalty has no measurable deterrent effect beyond that of life imprisonment.[1] A recent study by Isaac Ehrlich, an economist, challenges this traditional view.[2] Ehrlich criticizes Sellin's statistical methods and, on the basis of a more complex statistical procedure, estimates that "an additional execution per year over the period in question [1933-1969] may have resulted, on average, in 7 or 8 fewer murders."[3] In *Fowler v. North Carolina*,[4] the constitutional challenge to the death penalty now pending in the Supreme Court, the Solicitor General presented Ehrlich's findings to the Court and in his amicus brief cited them as "important empirical support for the a priori logical belief that use of the death penalty decreases the number of murders."[5] The Solicitor General asserted that earlier studies, and specifically those of Sellin, suffered from "investigatory flaws" and that only Ehrlich's work provided a reliable basis for judging whether the death penalty has a deterrent effect.[6] Now that *Fowler* has been set for reargument,[7] an assessment of the Solicitor General's claims has particular importance.

A statistical study cannot prove that executions deter murders, nor

can it prove that they do not. Given a hypothesis about a causal relationship, however, a statistical analysis can determine whether that hypothesis is consistent with past experience. Both Sellin and Ehrlich tested the hypothesis that capital punishment deters murders. Both used a variable to represent the threat of capital punishment, and both compared that variable with the behavior of homicide rates in the United States.[8] However, they used different statistical methods to make their comparisons and arrived at different conclusions.

Sellin used a "matching" technique.[9] He selected clusters of neighboring states "closely similar" in "social organization, composition of population, [and] economic and social conditions"; in each grouping at least one state had abolished the death penalty and at least one retained it.[10] He then compared the homicide rates for the years 1920-1955 and 1920-1962 in abolitionist and retentionist states within each group, and found that the rates in abolitionist states were not significantly or systematically different than the rates in retentionist states.[11]

8. Since the public records kept by the FBI do not include statistics on the number of murders committed each year, the researchers in this area must use the number of "murders and nonnegligent manslaughters" as a surrogate measure of the number of murders. This statistic is generally considered adequate on the assumption that the proportion of murders to nonnegligent manslaughters remains constant from one year to the next. Sellin, *Capital Punishment*, *supra* note 1, at 5-6; *see* Ehrlich 1975, *supra* note 2, at 406-07 (accounting for possible increasing trend in fraction of capital murders among all murders by including chronological time as a factor influencing the homicide rate). Throughout this paper we refer to the "homicide rate" in discussing the data analyzed by Sellin and Ehrlich, with the understanding that the underlying theoretical relationship is between executions and the *murder* rate.

9. Sellin also has performed longitudinal studies of crime rates before and after a change in punishment policy in a given jurisdiction. *See* note 16 *infra*.

the conclusions of the study as "completely unfounded."[18] If Ehrlich's study is reliable, it may be difficult to claim that the death penalty is "excessive and unnecessary" and therefore violates the Eighth Amendment. Because the technical merits of the Ehrlich study have thus become relevant to an important constitutional adjudication, the *Journal* is publishing what is essentially a statistical debate between Ehrlich and his critics.

In the first article, Messrs. Baldus and Cole defend Sellin and contend that his technique is better than Ehrlich's regression method for testing the deterrence hypothesis; in the second article, Messrs. Bowers and Pierce argue that Ehrlich's data are fundamentally inadequate for the method he uses and that no evidence of a deterrent effect is found when his method is correctly applied. Professor Ehrlich then responds with methodological and statistical arguments in support of his initial study and further elaborates on the basic issues underlying his research. In the next issue of the *Journal*, Professor Jon K. Peck[19] will comment on the debate between Ehrlich and his critics.

The difficulties a court faces in attempting to arbitrate an "abstruse statistical dispute" between parties to a litigation were forcefully noted by Judge J. Skelly Wright in *Hobson v. Hansen*,[20] a suit challenging different per-pupil expenditures among elementary schools in the District of Columbia. Judge Wright commented on "the added difficulties which beset the truth finding process when it is necessary to rely upon easily manipulated statistical analyses," and deplored the "overgrown garden of numbers and charts and jargon" which he suggested had obscured the basic issues in the suit.[21] He added:

> The reports by the experts—one noted economist plus assistants for each side—are less helpful than they might have been for the simple reason that they do not begin from a common data base, disagree over crucial statistical assumptions, and reach different conclusions. Having hired their respective experts, the lawyers in this case had a basic responsibility, which they have not completely met, to put the hard core statistical demonstrations into language which serious and concerned laymen could, with effort, understand.[22]

The articles which follow attempt to meet this "basic responsibility" in the context of the statistical debate over the deterrent effect of capital punishment; to the extent it is not met, the Court must rely, as did Judge Wright, "upon burden of proof, and upon straightforward moral and constitutional arithmetic."[23]

> penalty] concluded that, over the past several decades, each execution actually carried out deterred a significant number of murders. Other studies of the death penalty are infected by serious analytical flaws, and so do not provide support for a contrary conclusion.

These articles also illustrate the inherent vulnerability of complex statistical techniques to the adversary process. Any statistical analysis depends on a variety of explicit and implicit assumptions which can be challenged by opposing parties and on which experts may reasonably differ.[24] Since courts generally have no expertise to resolve statistical disputes, they will tend to ignore the evidence altogether once such a dispute arises.[25] The probative value of any study can be destroyed by raising a large number of technically complex objections, which, if not sufficient to disprove the results of the study, will at least undermine them to the point where the decisionmaker refuses to rely on them. This process tends toward Chief Justice Burger's characterization of the evidence on deterrence in *Furman*—an "empirical stalemate."[26] The usefulness of statistical analyses to the courts may depend on the development of procedures to resolve the technical debates which seem inevitably to arise when such studies are put before them.[27]

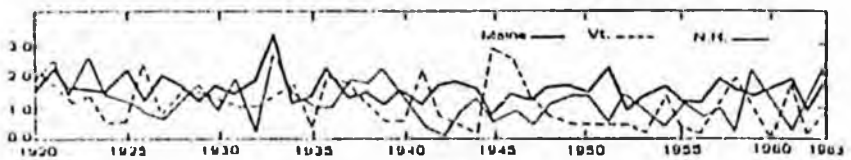
24. *See, e.g.*, J. Johnston, Econometric Methods 121-23 (2d ed. 1972) (mathematical statement of assumptions needed for regression analysis).

25. Finkelstein has noted this tendency in administrative proceedings in which regression studies have been introduced. *Regression Models*, *supra* note 15, at 1111. The lack of success in the use of sophisticated statistical evidence in administrative proceedings necessarily raises doubts about the chances for its success in litigation before the courts, because agencies are likely to be both more able and more willing than courts to use this evidence. An agency has a staff which can develop the expertise necessary to construct an econometric model of a regulated industry. *See, e.g.*, Khazzoom, *The FPC Staff's Econometric Model of Natural Gas Supply in the United States*, 2 Bell J. Econ. & M. Sci. 51 (1971). In addition, statistical evidence often bears directly on the predictions and policy decisions that the agency must make. For example, in a ratemaking proceeding, the agency must forecast the effect of the proposed change in rates on demand and supply in the regulated industry—a question which lends itself to econometric analysis. The relevance of the statistical evidence to regulatory decisionmaking may therefore lead agencies to encourage its use. *See, e.g.*, Southern La. Area Rate Proceeding, 10 F.P.C. 530, 626 (1968), *modified*, 41 F.P.C. 301 (1969), *aff'd*, 428 F.2d 407 (5th Cir.), *cert. denied*, 401 U.S. 950 (1970), *quoted in Regression Models*, *supra* at 1156, Madison Gas & Elec. Co., 5 P.U.R.4th 28, 49 (1974).

26. 408 U.S. 238, 395 (1972) (Burger, C.J., dissenting).

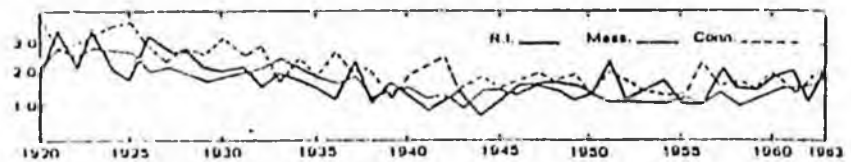
27. Finkelstein, in *Regression Models*, *supra* note 15, at 1155-61, proposes that an administrative agency decide in advance on the data to be used in regression studies put before it in a given proceeding and that the agency require a party objecting to the statistical analysis presented to demonstrate the numerical significance of its objections or even to present a superior alternative analysis of the designated data. While possibly quite useful, these procedures are not likely to be sufficient to yield what their proponent describes as

> a progression towards greater refinement and correctness in statistical methodology which will not only be apparent to the decisionmaker, but which may also achieve results meriting at least tacit agreement among experts.



Id. at 1161. Instead, each side, using high speed computers, may be able to "mine" a limited sample of data for results which support its hypothesis. *See id.* at 1119 n.27; Hobson v. Hansen, 327 F. Supp. 844, 869 (D.D.C. 1971) ("the studies by both experts are tainted by a vice well known in the statistical trade: data shopping and scanning to reach a preconceived result"). Although its implications have not been fully discussed, this problem of "data-mining" has been recognized in economic journals. *See, e.g.*, Jorgenson, Hunter & Nadiri, *The Predictive Performance of Econometric Models of Quarterly Investment Behavior*, 38 Econometrica 213-15 (1970).

From this evidence he drew the "inevitable conclusion . . . that executions have no discernible effect on homicide death rates . . . ."[12]



Ehrlich focused instead on the relationship in the nation as a whole between the homicide rate and "execution risk"—the fraction of persons convicted of murder who were subsequently executed. He compared the differences in homicide rate and execution risk for the years 1933-1969, and found a positive simple correlation between changes in the homicide rate and changes in execution risk—increases in execution risk were associated with increases in the homicide rate.[13] However, when he controlled for the influence of other variables on the homicide rate by using a multiple regression analysis, the relationship became negative. More precisely, he estimated that the elas-

12. THE DEATH PENALTY, *supra* note 1, at 34; *see Homicides*, *supra* note 1, at 138 ("The conclusion is inevitable that the presence of the death penalty—in law or practice does not influence homicide death rates.")

13. Ehrlich 1975, *supra* note 1, at 409. Simple correlation analysis does not take into account the influence of other factors on the homicide rate, and hence is statistically less sophisticated than the multiple regression analysis on which Ehrlich relies for his

ticity of the homicide rate with respect to the execution rate was approximately —.06[14]—that is, a .06 percent decrease in the homicide rate was associated with a one percent increase in execution risk. This finding was the basis for his estimate that "on the average the tradeoff between the execution of an offender and the lives of potential victims it might have saved was of the order of magnitude of 1 for 8 for the period 1933-67 in the United States," and for his "tentative and rough calculation [that] the decline in [execution risk] alone might have accounted for about 25 percent of the increase in the murder rate between 1960 and 1967."[15]

In this paper, we compare the work of Sellin and Ehrlich and attempt to assess the reliability of their statistical evidence as a basis for making inferences about the deterrent effect of capital punishment. We consider three aspects of their approach: (1) the choice of a measure to represent capital punishment; (2) the choice of the nation or state as the unit of observation; and (3) the ability to control for factors other than the death penalty which may affect the homicide rate. We then discuss the replication or corroboration of their results by studies using the same or similar methods. While we do not argue that Sellin and others who have followed his approach have proven conclusively that the death penalty has no greater deterrent effect than life imprisonment, we believe that Sellin's work, despite its methodological shortcomings, offers a more reliable basis than Ehrlich's recent work for inferring whether the threat of capital punishment deters murders. Future studies by Ehrlich or others may weaken the credibility of work that went before him, but on the record to date Sellin makes the stronger case.

It is quite true that Ehrlich's approach is statistically more sophisticated than Sellin's. But statistical sophistication is no cure for flaws in model construction and research design. There are many questions which, because of inadequacies of data or theory, are best studied by simpler methods. The deterrent effect of capital punishment is at this point just such a question.

I. Measuring the Threat of Capital Punishment: Actual Use or Legal Status

The Solicitor General criticized Sellin's work on the ground that it "relied not upon the actual *use* of the death penalty, but upon its statutory authorization, as the independent variable against which the

14. *Id.* at 410 (Tables 3 & 4).

15. *Id.* at 399, 411 n.45.

murder rate was compared."[16] This criticism echoed Ehrlich's argument that "the actual enforcement of the death penalty [as measured by execution risk] may be a far more important factor affecting offenders' behavior than the legal status of the penalty."[17]

There is, of course, a necessary link between the legal status and actual use of capital punishment; the penalty cannot be used if it is not authorized. Moreover, the factor which is directly controlled by courts and legislatures is the legal status of the penalty. The precise question now facing the Supreme Court is whether capital punishment must be abolished, not whether its use should be increased or decreased assuming it is retained. For some purposes, it may be of interest to investigate the effects of increasing the number of executions in retentionist jurisdictions. But in the debate over abolition, the essential question is the effect of changing from a retentionist to an abolitionist jurisdiction.[18] Sellin's approach is directly addressed to this policy choice, and Ehrlich's approach is not.

Sellin compared the homicide rates within six clusters of abolitionist and retentionist states.[19] The execution levels in the retentionist states ranged from New Hampshire (one execution in the years 1920-1955) to Ohio (an average of seven executions a year).[20] Assuming that the penalty, if retained, would be applied as infrequently as in the past 15 years,[21] Sellin's comparisons of abolitionist states with retentionist states which rarely executed people become highly relevant. His other comparisons bear directly on the choice between abolition and retention at the higher execution levels of the earlier years.[22]

Ehrlich's comparison of the homicide rates with the ratio of executions to convictions—execution risk—is less relevant to the question of abolition. His analysis focuses on the marginal effects of small changes in execution risk—the number of murders deterred by one

16. Amicus Brief, *supra* note 5, at 36 (emphasis in original).

17. Ehrlich 1975, *supra* note 2, at 415.

18. For a discussion of the relative reliability of various research designs as a basis for making causal inference about the impact of a particular law, see D. Campbell & J. Stanley, "Experimental and Quasi-Experimental Design for Research (1966); Social Experimentation: A Method for Planning and Evaluating Social Intervention 92-116 (H. Riecken & R. Boruch eds. 1974); L. Zeisel & G. Hawkins, *supra* note 1, at 249-320; Campbell, *Legal Reforms as Experiments*, 23 J. Legal Educ. 219-30 (1970).

19. Sellin did not, however, rely simply on the legal status of the penalty. He included in the category of abolitionist states three which had abolished the penalty except for treason and certain types of murders and had never applied the penalty after it was abolished for ordinary murders. The Death Penalty, *supra* note 1, at 1-2.

20. *Id.* at 25, 28, 32.

21. There was an average of 36 executions in the years 1961-1961, seven in 1965, one in 1966, two in 1967, and none since 1967. W. Bowers, *supra* note 1, at 29.

22. Rates of executions for the five year periods between 1930 and

more execution—rather than on the difference between jurisdictions which do and do not use capital punishment. In Ehrlich's regression equation, the estimated homicide rate increases proportionally as execution risk declines. To predict the effect of abolition on the homicide rate, execution risk is simply set equal to zero in the equation. Representing abolition by zero execution risk fails to distinguish de facto abolition—where the death penalty is authorized but not currently applied—from de jure abolition. Yet even the legal possibility, however remote, of execution might have some deterrent effect. Because of its reliance on execution risk rather than the statutory authorization of the penalty, Ehrlich's study could not detect such an effect.

Moreover, for the particular mathematical form in which Ehrlich constructs his equation, zero execution risk implies either an infinitely large or a zero homicide rate (depending on whether the elasticity for execution risk is negative or positive).[23] These absurd implications show the equation was not designed to predict the effect of abolition. Even if one used a mathematical form which could generate a meaningful prediction of the homicide rate after abolition, such a prediction would be unreliable if based on the data used to construct Ehrlich's equation, because the possibility of error increases as the number of executions on which the prediction is based departs from the average (75) over the period which Ehrlich studied.[24]

II. Choice of Unit of Observation: Nation or State

Presumably because adequate data on arrests, convictions and executions—from which the risk of execution after conviction is computed—are not readily available on a state-by-state basis, Ehrlich compared executions and homicides for the nation as a whole. This aggregate approach cannot measure the extent to which changes in the execution

23. Ehrlich posits a "murder supply function" in which the homicide rate is equal to the product of execution risk and six other variables which in theory influence the homicide rate. Ehrlich 1975, *supra* note 2, at 406 (equation (6)); pp. 129-80 *infra*. Each of those seven explanatory variables is raised to an exponent—the elasticity of the homicide rate with respect to that variable. If the elasticity for execution risk is negative, then as execution risk approaches zero, the product of the variables approaches infinity (because multiplication by a quantity raised to a negative exponent is equivalent to division by the same quantity raised to a positive exponent—in this case, by a quantity approaching zero). If the elasticity for execution risk is positive, then as execution risk approaches zero, the product of the variables approaches zero. To perform the regression analysis for the years 1968-1970, in which there were no executions, Ehrlich had to assume that one execution in fact occurred each year. Ehrlich 1975, *supra* note 2, at 409 n.b.

24. See R. Wonnacott & T. Wonnacott, Econometrics 27-31 (1970). The prediction is based on execution risk, not number of executions. But as the latter declines so will [illegible] convictions do not decline in a greater proportion than executions.

rate are associated with changes in the murder rate for *individual* jurisdictions.

To illustrate this problem, consider the simplified example of a nation composed of three states, two retentionist (*R1* and *R2*) and one abolitionist (*A*). Assume that execution risk decreases in *R1* and remains constant in the other states, and that the murder rate increases in one state, not necessarily *R1*, and remains constant in the other two. No matter which of the three states experiences the increase in murders, the nation as a whole would show an aggregate increase in murder rate and decrease in execution risk; analyzing these aggregate figures would suggest a deterrent effect. This inference would be justified only if the increase in the murder rate occurred in *R1*, where execution risk has decreased. If instead the murder rate increased in state *A* or *R2*, the aggregate correlation would be misleading, because the increase in the murder rate in one jurisdiction could not be attributed to lower execution risk in another. The actual behavior of the murder rate and execution risk in different jurisdictions is, of course, far more complicated than in this example. But the point remains that Ehrlich's use of national data obscures the relationships between murder and execution rates and may yield results which seem consistent with a deterrent effect where no such effect actually exists. Sellin's comparison of murder rates in abolitionist and retentionist states, on the other hand, shows us whether or not homicide rates differ substantially in similar jurisdictions which do and do not use capital punishment. Because it examines differences in homicide rates among retentionist and abolitionist jurisdictions, Sellin's work does not contain the aggregation errors which may vitiate Ehrlich's results.

The aggregation approach used by Ehrlich has the further drawback of concealing regional differences. It is well-known that homicide rates are higher in the South than elsewhere in the United States,[26] and it is entirely possible that the deterrent effects, if any, of capital punishment would vary from one part of the country to another. These differences may be of considerable relevance to a decisionmaker considering the abolition of capital punishment in the United States. Sellin's method, which compares data for groups of contiguous states, would reveal regional differences if they existed; Ehrlich's approach, which aggregates the data for the entire United States, cannot. The fact that Sellin observed no deterrent effect in any region does not minimize the importance of taking a regional approach.[28] It merely adds plausibility to his conclusion that the threat of capital punishment has no measurable deterrent effect.

III. Holding Other Factors Constant

The Solicitor General asserted that "perhaps most importantly, [Sellin] failed to hold constant factors other than the death penalty that might influence the rate of murders." The Solicitor General also stated that Ehrlich's study alone was immune from this flaw.[27] We disagree. Sellin's matching method is simply a different technique for taking account of the influence of other variables than the multiple regression analysis used by Ehrlich. With either method there is the risk that variables not taken into account, or imperfectly taken into account, may influence the observed results. The issue is whether Sellin's or Ehrlich's method is more successful in reducing that risk.

Sellin was acutely aware of the problem of controlling for the influence of other variables on the murder rate. He recognized that the problem had been neglected by earlier work on the deterrent effect of capital punishment,[28] and used a matching method as "a deliberate attempt to eliminate differences other than those in punishment policy that might influence the crime rate."[29] A matching method controls for the effect of other variables by comparing areas which are as similar as possible with respect to those variables, but are different with respect to the variable whose effect is being isolated. Sellin assumed that the important factors influencing the murder rate were roughly similar in neighboring states. As Table III shows, this assumption is supported by a state-by-state comparison for a small sample of the law enforcement and socioeconomic factors which Ehrlich has hypothesized as determinants of the murder rate.[30]

26. The matching technique could not be applied in the Deep South, where there are no abolitionist states. However, Sellin did compare homicide rates in Missouri, which has authorized and applied the penalty, and Kansas, which did not enact it until 1935. THE DEATH PENALTY, *supra* note 1, at 32-33.

27. Amicus Brief, *supra* note 5, at 37-38.

28. *See* Sellin, *Capital Punishment*, *supra* note 1, at 6.

29. J. ZEISEL, H. CALVERT & G. HAWKINS, *supra* note 1, at 264. For this reason, Zeisel, Calvert and Hawkins conclude that Sellin's work is "more reliable than nonmatched interstate comparisons." *Id.*

30. Table III presents comparative socioeconomic data for 1960 and law enforcement data for 1960 for the five groups of states matched by Sellin. (The law enforcement data reflect only a small, nonrandom sample of all the jurisdictions in each state, and are therefore unreliable.) The Table shows that the differences in these factors among the states in each group are generally small, and more importantly, that they do not explain the differences in the observed homicide rates. Consider, for example, the match between [illegible] rate of [illegible] and retentionist states

There are, of course, difficulties in attempting to control for other factors through a matching technique. In selecting areas for matching, it always is possible that an important difference among states will be overlooked. But such a difference would not vitiate the results of the matching study unless the difference were consistently and systematically related to the choice of a punishment policy.[31] The Solicitor General suggested that a difference in arrest and conviction rates might be systematically related to a difference in punishment policy, because jurisdictions which abolish capital punishment could use an increased likelihood of arrest and conviction as an alternative deterrent.[32] A finding that the homicide rate in a retentionist state was similar to the rate in an abolitionist state with higher arrest and conviction rates would then be consistent with the hypothesis of a deterrent effect for capital punishment. However, neither the Solicitor General nor Ehrlich offered evidence to support this relationship.[33]

Ehrlich's multiple regression analysis controls for the influence of variables other than execution risk by incorporating a set of additional explanatory variables into a mathematical formula for the homicide rate. Ehrlich posits a "murder function" in which the national homicide rate is determined by execution risk and six other factors. Of the six, two are law enforcement variables: the arrest rate (the fraction of all murders which are cleared by the arrest of a suspect) and the conviction rate (the fraction of suspects arrested for murder who are subsequently convicted of murder). The other four are socioeconomic variables: the labor force participation rate, the unemployment rate,

Massachusetts and Connecticut with homicide rates of 1.1 and 1.6 respectively. All but two of the variables civilian population and percentage of nonwhites suggest that Rhode Island's homicide rate should be *higher* than the neighboring states, while in fact it is lower than the rates in both Massachusetts and Connecticut.

The sources of data in Table III are as follows: *Column 1*–legal status of death penalty, E. Zimring & G. Hawkins, *supra* note 1, at 265; *Column 2*–homicide rate 1960, FBI, Uniform Crime Reports for the United States 31-37 (1961) (Table 2). *Columns 3 & 4*–FBI (unpublished data on file with *Yale Law Journal*); *Columns 5 & 6*–calculated from Bureau of the Census, U.S. Dep't of Commerce, General Social and Economic Characteristics: 1960 Table 5-3 (1961); *Column 7*–calculated from *id.* Table 59; *Column 8*–calculated from formula in M. Thomsen, A Theory of the Consumption Function 1 (1952), using data from F. Kami, The Value of Time and the Demand for Money, 1921, Table 33 (unpublished doctoral dissertation, Univ. of Chicago). the fraction of the population in the age group 14 to 24, and estimated per capita income.[34] The regression analysis applied to these variables yields an algebraic equation which gives a numerical estimate of the effect of each explanatory variable on the homicide rate. In this sense, Ehrlich's study accounts more precisely for the influence of this set of factors than does Sellin's study.

This precision, however, is misleading. In order for the statistical results to be reliable, the equation must include all variables which significantly affect the homicide rate. The omission of any significant variable not only renders the model incapable of fully explaining the behavior of the homicide rate, but distorts the effects of those variables which have been included.[35] The regression method is therefore best suited to testing a hypothesis based on a well-developed theory which isolates a few determinants of the variable under study.

Hypotheses about the causes of murder cannot rely on such a theory. Ehrlich's analysis relies on an economic postulate—"that the propensity to perpetrate such crimes [as murder] is influenced by the prospective gains and losses associated with their commission."[36] There is no reason to think that economics or any other discipline has yet identified the determinants of the murder rate with enough confidence to rely on results obtained from regression analysis. Indeed, there are strong a priori reasons for thinking that the murder rate would be influenced by a number of variables not considered by Ehrlich, such as rates of migration from rural to urban areas, per capita ownership of weapons, and the level of violent crimes against property. As Zimring and Hawkins point out in their discussion of deterrence:

> Very few, if any, studies done on the impact of criminal law variations on crime give us reason to believe that most of the many factors which should be included in such a statistical analysis are present and accounted for.
>
> . . . .

34. Ehrlich 1975, *supra* note 2, at 398-402 (theoretical discussion of factors influencing murder), 406-09 (empirical discussion of data chosen to measure those factors). In substituting the measured for the true homicide rate, Ehrlich inserts a time trend as an explanatory variable. *Id.* at 406-07.

35. The extent to which the regression analysis explains the behavior of the homicide rate is measured by the coefficient of determination, which is not less than zero and not greater than one. A regression which omits a relevant variable will have a lower coefficient of determination than a regression which correctly specifies the relationship. The omission of important variables from the regression model will also bias the results obtained for the variables which are included. *See* J. JOHNSTON, ECONOMETRIC METHODS 169 (2d ed. 1972) ("*Exclusion* of relevant variables from the regression may be a very serious error . . .") (emphasis in original), 211 (omitted variables may cause the statistical problem of serial correlation in the disturbance term).

36. Ehrlich 1975, *supra* note 2, at 398-99. His other "basic proposition" is that these crimes [illegible] rational conflicts involving pecuniary

> . . . Only when the statistical complexity of such methods lulls the researcher into a false sense that all relevant variables have been accounted for, or that natural variations are in fact present, does multiple-correlation analysis become more dangerous than helpful.[37]

Our a priori skepticism about the adequacy of the variables included in Ehrlich's model is supported by the results of reanalyses of his data, which we discuss below.[38] These reanalyses found that the sign of the elasticity for execution risk changes from positive to negative when the recent years are dropped from Ehrlich's data series. The apparent change in the effect of execution risk on the homicide rate indicates that the variables included by Ehrlich do not explain the behavior of the homicide rate in a consistent manner over subperiods in his sample and suggests that variables not included by Ehrlich may be necessary for a better explanation.

Regression analysis requires the assumption not only that the homicide rate is a function of a fixed set of variables, but also that the function has a particular mathematical form. Ehrlich postulated that the homicide rate was equal to the product of seven explanatory variables and a random error term. The equation which Ehrlich actually estimates is a particular characterization of this relationship in which the logarithm of the homicide rate is set equal to the weighted sum of the logarithms of the explanatory variables. The weights provide estimates of the effect of each explanatory variable on the homicide rate. Since other investigators who have performed Ehrlich's regression analysis using natural numbers rather than logarithms have found no evidence of a deterrent effect, Ehrlich's results seem to depend on his assumptions about the mathematical form of the relationship.[39]

Even assuming that Ehrlich's regression equation successfully isolated the true determinants of the murder function and correctly specified its mathematical form, a serious problem remains with Ehrlich's use of the equation to estimate the tradeoff between executions and murders. Ehrlich measures this tradeoff by the partial elasticity of the homicide rate with respect to the execution rate—the percent decrease in homicide rate produced by a one percent increase in execution risk, assuming that the other variables affecting the murder rate are held constant as execution risk varies. The estimated elasticity of −.065 im-

37. F. ZIMRING & G. HAWKINS, *supra* note 1, at 267-68. Multiple correlation analysis is closely related to, but less sophisticated than, the multiple regression technique used by Ehrlich. *See* R. WONNACOTT & T. WONNACOTT, *supra* note 21, at 107-30; note 11 *supra*.

38. Pp. 181-85 *infra*.

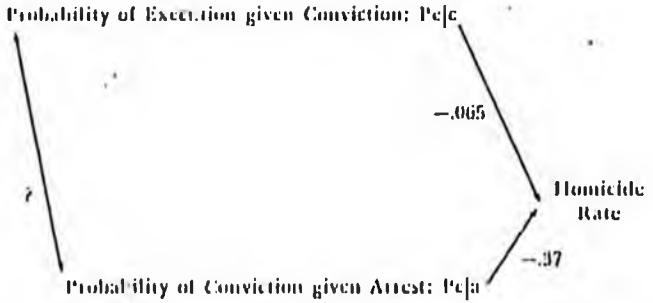
39. *See id.*

plies that at the average levels of executions and murders during the period studied, an additional execution would result in seven or eight fewer murders.[40] Yet, as Ehrlich recognizes, the conviction rate is likely to decline as execution risk increases, because juries seem less inclined to convict a defendant charged with murder the greater the chance the defendant will subsequently be executed.[41] Since in Ehrlich's model the conviction rate also has a deterrent effect, the effect of the decline in the conviction rate will tend to offset the effect of the increase in execution risk. Indeed, if a one percent increase in execution risk produces more than a .175 percent decrease in the conviction rate, then the effect on the homicide rate of the decrease in the conviction rate will outweigh the effect of the increase in execution risk. As a result, the increase in execution risk will cause a net increase, rather than a decrease, in the homicide rate.[42] In reporting his estimated tradeoffs between executions and murders, Ehrlich conceded that "[t]he actual tradeoffs . . . depend partly upon the ability of law enforcement agencies to control simultaneously all [law enforcement variables]"—in other words, to hold arrest and conviction rates constant as execution risk increases.[43] Moreover, in performing another regression which eliminated this problem of interaction between execution risk and the conviction rate, he found smaller, although in most cases still significant, deterrent effects.[44]

Given the difficulty of isolating the determinants of the homicide rate, specifying their mathematical form, and adjusting for the interaction between execution risk and the other law enforcement variables, it is not at all clear that Ehrlich's analysis is more reliable than Sellin's. It is certainly not true that Ehrlich's study of the deterrent effect of the death penalty is uniquely successful in holding other factors constant. The problems are not that simple, nor Ehrlich's approach that satisfactory.

IV. Replication and Corroboration by Other Studies

As we have shown, both matching and regression techniques are necessarily imperfect methods for testing the deterrent effect of capital punishment. Given these inherent imperfections in research technique, the credibility attaching to each study depends on the extent to which consistent results are obtained when a similar approach is applied to different data. A crucial test of the reliability of the results is whether they can be reproduced or corroborated by other studies.



Sellin consistently found no discernible effect of capital punishment on homicide rates in matching a large number of clusters of states. At least four other investigators have used the matching method on different data and reached similar conclusions.[45] Moreover, Sellin's re-

40. Ehrlich 1975, *supra* note 2, at 414 & n.15.

41. *Id.* at 405. In estimating his equations, Ehrlich used a two-stage procedure designed to take account of the interdependence of the law enforcement variables. Ehrlich 1973, *supra* note 2, at 50-60 (statistical appendix). We note that Ehrlich's second stage regression does not hold fixed the four socioeconomic variables which he uses in the first stage but which he does not explicitly include in his murder supply function. Ehrlich 1975, *supra* note 2, at 409 (variables denoted X_1 in Table 2—fraction of nonwhites in residential population, civilian population, per capita real expenditures of all governments, per capita real expenditures on police). Our fundamental criticism, however, is that in using those estimates to calculate the tradeoff between murders and executions, he neglected the interdependence.

42. We owe this point to P. Passell & J. Taylor, The Deterrent Effect of Capital Punishment: Another View, Feb. 1975, at 9-11 (Discussion Paper 74-7509, Columbia Univ. Dep't of Economics) (on file with *Yale Law Journal*). Figure 1 depicts the net effect of the increase in execution risk Pe|c.

Figure 1

The arrows represent causal influences, and the numbers accompanying the arrows represent the elasticities reported by Ehrlich in Equation 3 of his Table 4. Ehrlich 1975, *supra* note 2, at 410. The question mark represents the elasticity of the probability of conviction given arrest, Pc|a, with respect to the probability of execution given conviction, Pe|c. Given the reluctance of juries to convict where execution may follow, this elasticity is expected to be negative, i.e., as Pe|c increases, Pc|a decreases. According to these elasticities, a decline of one percent in the probability of conviction would be associated with a .065 percent increase in the homicide rate. But that same one percent decline in the probability of execution given conviction would lead to some unknown (X percent) increase in the probability of conviction given arrest. And this increase would lead in turn to a decrease of .37 × X percent in the homicide rate, compensating more or less for the increase in the homicide rate resulting directly from the decline in the probability of execution given conviction. In particular, if the elasticity of Pc|a with respect to Pe|c is .175 percent, the result from this causal chain will be a .065 percent (.175 × .37) decrease in the homicide rate. This decrease will exactly offset the .065 percent increase in the homicide rate resulting from the decline in the probability of execution given conviction.

43. Ehrlich 1975, *supra* note 2, at 415.

44. *Id.* at 415 n.16. *But see* P. Passell & J. Taylor, *supra* note 42, at 10-11 (arguing these results are unreliable).

45. W. Bowers, *supra* note 1, at 137-47 (homicide rates in abolitionist states and contiguous retentionist states for four years prior and subsequent to the 1967 judicial moratorium on capital punishment); Bailey, *Murder and the Death Penalty*, 65 J. Crim.

sults are independently corroborated by his comparisons of crime rates in particular jurisdictions before and after capital punishment was either adopted or repealed.[46] These longitudinal studies have imperfections of their own, but as Zimring and Hawkins point out, "the combination of two or more imperfect research approaches may reveal a relatively clear picture about the relation of the variables being studied to rates of crime."[47]

Ehrlich also recognized the need for the broadest possible empirical base for his conclusions. He analyzed his data with six different measures for the key explanatory variable—execution risk—and obtained similar results.[48] He indicated concern that his analysis not be unduly sensitive to changes in the time period to which it was applied, to minor modifications in the selection or computation of variables included in the analysis, or to the use of natural values rather than logarithms as a functional form.[49] Reapplying the statistical analysis to data spanning shorter time periods, he reported results generally consistent, if not in perfect agreement, with his basic conclusions.[50]

However, the efforts of Passell and Taylor to reproduce Ehrlich's results using identical estimation procedures have yielded significant discrepancies, apparently due to minor differences in the data on which the replication was based.[51] These discrepancies necessarily call into

1. & Const'y 116, 121 (1974) (eight groups of states); Schuessler, *The Deterrent Influence of the Death Penalty*, 284 Annals 54, 58 (1952) (five groups); Sutherland, *Murder and the Death Penalty*, 15 J. Crim. L. & Crim'y 522, 526 (1925) (one group of states and one group of cities).

46. The Death Penalty, *supra* note 1, at 34-38 (American states), 38-50 (foreign countries). From the behavior of homicide rates before and after the change in punishment policy, Sellin concluded that the death penalty "exercises no influence on the extent or fluctuating rates of capital crimes." *Id.* at 63. Other longitudinal studies confirm Sellin's results. W. Bowers, *supra* note 1, at 117-57 (comparing homicide rates in states changing from mandatory to discretionary capital punishment); Task, *The Canadian Experiment with Abolition of the Death Penalty*, in W. Bowers, *supra* at 121; Samuelson, *Why was Capital Punishment Restored in Delaware?*, 60 J. Crim. L.C. & P.S. 148, 149 (1969); Schuessler, *supra* note 45, at 58-59.

47. F. Zimring & G. Hawkins, *supra* note 1, at 270.

48. Ehrlich 1975, *supra* note 2, at 407-08 (definition of the six measures of execution risk), 410-11 (regression results for each measure).

49. *Id.* at 412-13.

50. *Id.* at 410 (Table 4), 413 ("[T]he qualitative results . . . are for the most part insensitive to changes in the specific interval . . . time . . . . However, the absolute magnitudes of some of the estimated elasticities . . . do change when estimated from different subperiods.")

51. P. Passell & J. Taylor, *supra* note 12, at 2-4. Ehrlich has provided complete documentation of the data sources for his study in a memorandum released in August, 1975, and dated May, 1975, The Deterrent Effect of Capital Punishment: A Question of Life and Death, American Economic Review (June, 1975); Sources of Data for file with *Yale Law Journal*). This documentation was not available at the time of the replications by Passell and Taylor. Consequently these authors were forced to reconstruct parts of the data base using whatever expenditures seemed most appropriate.

question the reliability of Ehrlich's conclusions. More importantly, further analysis of Ehrlich's data by Passell and Taylor, and later by Bowers and Pierce, indicates that the evidence of a deterrent effect reported by Ehrlich disappears when the model is estimated with natural numbers rather than logarithms or when it is estimated for shorter time periods which exclude the recent years from 1963 to 1969.[52] Furthermore, Ehrlich's model does not explain the homicide rate as well over the long run (1935-1969) as it does in shorter periods, for which it reveals no significant relationship between execution risk and the homicide rate. If a model correctly explains a set of relationships, it will not decrease in explanatory power as more data (years, in the present context) are brought into the analysis. Ehrlich's model has just the opposite property—showing less predictive power over the long run than over the short run. A final piece of evidence on the issue of corroboration is a recent regression study, based on Ehrlich's theoretical model but using 1950 and 1960 data for more than 40 states, which found no deterrent effects associated with execution risk.[53]

Conclusion

It is quite possible that because of the complexity of the social phenomenon involved, we will never know with certainty whether capital punishment does or does not deter murder. Statistical analyses can only test with the available data the hypothesis that a significant deterrent effect exists. On the basis of the work of Sellin and others who have taken his approach, we are inclined to attach more credibility to their view that capital punishment does not have a significant deterrent effect. The credibility we assign to this hypothesis is based upon our confidence in Sellin's choice of a variable to measure the threat of capital punishment, in his use of the state rather than the nation as his unit of observation, his technique for controlling for the influence of other variables which affect the homicide rate, and in the consistent results which he and others have produced applying these methods to different time periods and different jurisdictions.

estimated permanent income and labor force participation as well as particular values from the police expenditure and conviction rate series which Ehrlich had estimated by an unspecified process of interpolation. P. Passell & J. Taylor, *supra* at 3.

52. P. Passell & J. Taylor, *supra* note 12, at 1-8; Bowers & Pierce, *The Illusion of Deterrence in Isaac Ehrlich's Research on Capital Punishment*, 85 Yale L.J. 187 (1975). Ehrlich reported that his "regression results [were] found to be robust with respect to the functional form of the regression equation," but offered no results in support of this statement. Ehrlich 1975, *supra* note 2, at 412.

53. Passell, *The Deterrent Effect of the Death Penalty: A Statistical Test*, 28 Stan.

Given this substantial body of competent research, we are unwilling to abandon the view that it supports on the basis of Ehrlich's single study. Ehrlich's study relies on a measure of the death penalty threat which does not reflect the relationship between executions and murders in specific jurisdictions and which does not focus on the relevant policy question of the effect of abolition. Moreover, Ehrlich's estimated tradeoff rests on the highly doubtful assumptions (1) that the probability of conviction could be kept constant while the probability of execution varies, and (2) that the equation used to control for the effects of variables other than execution risk combines all the significant determinants of the homicide rate in the proper mathematical form.

The use of the Sellin and Ehrlich studies in the context of a constitutional challenge to capital punishment illustrates the need for judicial procedures to evaluate statistical analysis presented by litigants in support of their positions. There is a certain danger in relying on academic work, designed to promote inquiry and further research, as a basis for deciding disputes in a court of law—especially where the stakes involved are high and the implications for society are great. The courts presently do not provide systematic factfinding procedures to resolve issues of "legislative" fact[51] that are critical to the policy judgments courts must make. Until the courts develop procedures to bring complex statistical studies under the scrutiny of the adversary process, it will be necessary to carry on the technical debate over such legislative facts largely in the law reviews.

The Illusion of Deterrence in Isaac Ehrlich's Research on Capital Punishment*

William J. Bowers† and Glenn L. Pierce††

In this critique of Professor Ehrlich's recent research on capital punishment,[1] we conclude that he has failed to provide any reliable evidence that the death penalty deters murder. His data are inadequate for the purposes of his analysis and he misapplies the highly sophisticated statistical techniques he employs. We begin with an evaluation of the data he uses to measure the critical variables in his theoretical formulation and then consider flaws in his analysis which would invalidate his conclusions even if his data were adequate. We conclude by explaining how Ehrlich's analysis produces results which seem consistent with the deterrence hypothesis when in fact they are not.[2]

I. Inadequacies in Ehrlich's Data

The credibility of Ehrlich's conclusions depends on the quality of the data he has used. For measures of the variables at the core of his theoretical analysis, he relies on the Uniform Crime Reporting System (UCRS) of the FBI.[3] The behavior he seeks to explain (the dependent

Ehrlich, The Deterrent Effect of Capital Punishment: A Question of Life and Death, 1973 (Working Paper No. 18, Center for Economic Analysis of Human Behavior and Social Institutions) [hereinafter cited as Ehrlich 1973].

2. The findings presented here are drawn from a more extensive and detailed critique of Ehrlich's work by the present authors. Deterrence, Brutalization, or Nonsense, 1975 (unpublished manuscript, Center for Applied Social Research, Northeastern Univ.). This manuscript includes as appendixes the full regression results for equations used to estimate coefficients in the present paper [of appendix ... and Val. Law Journal] and a complete listing of the data values ... analysis [of ap-

variable) is the annual criminal homicide rate for the United States as reported by the UCRS, and his deterrence variables are the rates of arrest, conviction, and execution for homicide, which also come entirely or in part from the UCRS. Only if these data are sound throughout the full time period covered by Ehrlich's analysis do his findings deserve serious consideration.

A. *The Dependent Variable*

The FBI's national homicide statistics collected in the early years of the UCRS are unreliable. A staff report of the National Commission on the Causes and Prevention of Violence emphasizes this problem:

> [M]any reporting agencies, especially in the nonurban areas, were slow in joining the *UCR* network; there were only 400 agencies reporting to the *UCR* in the 1930's, while today there are about 8,500. Thus, trends of both violent and nonviolent crimes during the early years of the *UCR* are highly questionable as representative of national figures.[4]

Furthermore, the President's Commission on Law Enforcement and the Administration of Justice warns that "figures prior to 1958, and particularly those prior to 1940, must be viewed as neither fully comparable with nor nearly so reliable as later figures."[5]

Ehrlich indicates that he used "readjusted" estimates of the homicide rate supplied by the FBI.[6] The FBI has periodically adjusted their estimates of offenses for earlier years on the basis of recent data on offenses from jurisdictions that entered the reporting program after 1958. Yet to our knowledge there are no published indications of how the readjustments are performed. In any case, the adjustment of figures for as long ago as 40 years on the basis of the current homicide levels of agencies recently added to the sample is of dubious value.

Less problematic are the willful homicide figures compiled by the Bureau of the Census. Unlike the voluntary reporting system of the FBI, Census reports of willful homicide are mandated by law in each state. The annual collection of mortality statistics including willful homicide began in 1900, 30 years before the beginning of the FBI reporting system. By 1933, all states had met the 90 percent coverage requirement for admission to the national Vital Statistics program.[7] Thus, the Census homicide statistics for the nation have been relatively complete since the early 1930's.[8] Furthermore, the classification of "willful homicide" has remained essentially constant over time.[9] For these reasons, perhaps, the Census homicide figures have gained a reputation for reliability, and have been used more widely than the FBI figures in previous studies of the deterrent effects of capital punishment.[10]

If both FBI and Census data provided accurate estimates of the homicide rate, the statistics would, of course, agree. Table II[11] shows that the figures drawn from the two agencies are reasonably well correlated except during the 1930's, when the FBI's reporting system was in its inception. Notably, the FBI homicide estimates are 15 percent below the Census figures for the 1930's, whereas the difference is only about three percent lower for the period after 1940. By all indications, these discrepancies are the result of inadequate sampling, reporting, and estimating in the early years of the UCRS.

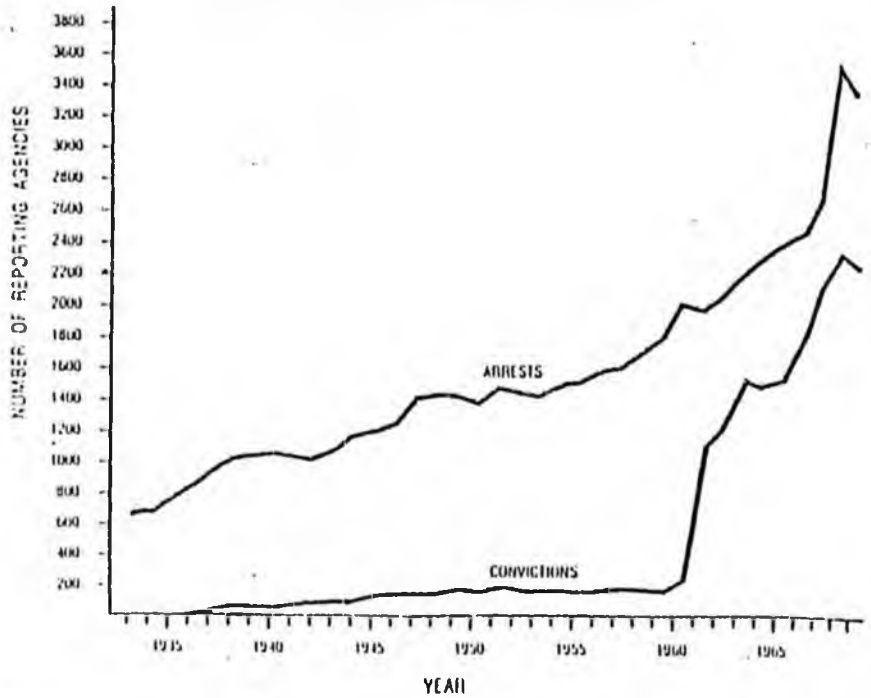
11. TABLE I

Correlations Between Homicide Rates Based on FBI and Census Data by Decade

Effective Period	*Annual Homicide Rates*	*Year to Year Changes in Homicide Rates*
1933-1939	.21	-.69
1940-1949	.81	.90
1950-1959	.95	.76
1960-1969	.98	.79

For data sources, see Appendix, nos. 1, 13.

A correlation of .21 between FBI and Census annual homicide rates for the 1930's means that there is little consistency (only six percent common variance) between the two data sets in this decade. A correlation of -.69 between year to year changes in FBI and Census homicide rates means that an increase between adjacent years in one set [illegible] combine years



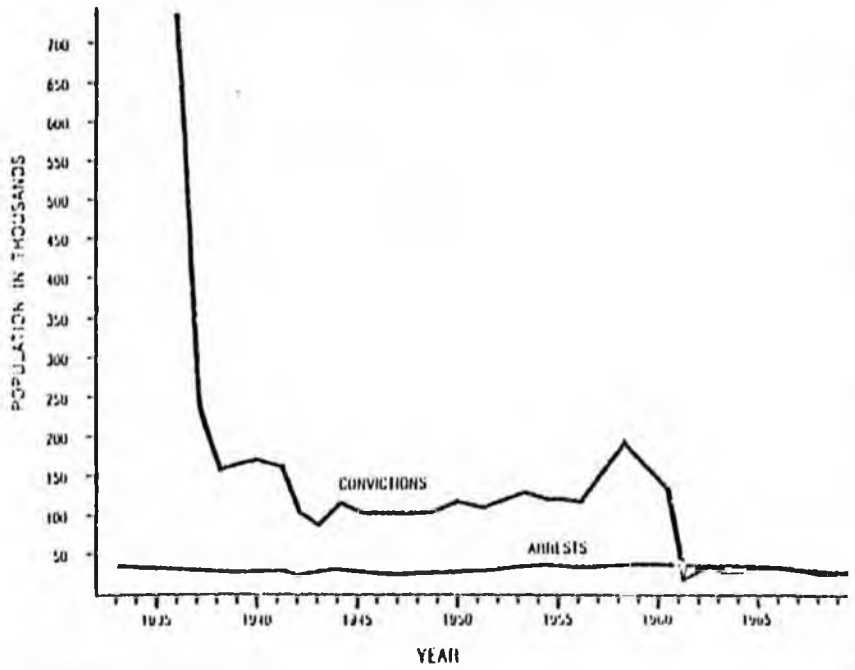
B. *The Deterrence Variables*

The FBI data on arrest and conviction rates are even less reliable. The agencies reporting arrest and conviction statistics have remained a relatively small, self-selected subsample throughout most of the period during which these statistics have been compiled. Indeed, the arrest and conviction figures are based on such small and unrepresentative samples of law enforcement agencies that the FBI has made no effort to readjust earlier arrest and conviction figures on the basis of more recent returns.

As shown in Figure 1,[12] the number of agencies reporting arrest data did not reach 2,000, or about one-quarter of the total number of agencies, until the 1960's, and the number of agencies reporting convictions did not exceed 300 until the 1960's. The abrupt increase between 1960 and 1961 in agencies reporting convictions represents a major change in reporting practices for conviction statistics by the UCRS. Notably, in 1936, the first year in which conviction rates were

12. Figure 1

NUMBER OF AGENCIES REPORTING ARREST AND CONVICTION STATISTICS BY YEAR



reported, the figure Ehrlich used as a national estimate was based on only 13 jurisdictions.

Figure 2[13] shows that the average size of jurisdictions reporting conviction data declined substantially in the late 1930's and the early 1960's. According to recent evidence, conviction rates are relatively low in the nation's largest jurisdictions.[14] Hence the conviction data drawn from disproportionately large jurisdictions in 1936 and 1937 are apt to underestimate the national conviction levels for these years. In fact, the reported conviction levels for these two years are far below those for other years—respectively −5.91 and −4.51 standard deviations below the mean conviction level for the period 1938-1969. Because the 1936 and 1937 conviction levels figure prominently in Ehrlich's estimation of missing conviction values for the years 1933-1935, the conviction rates for the entire period 1933-1937 are apt to be grossly biased in his analysis.[15]

13. Figure 2

POPULATION COVERAGE PER AGENCY REPORTING ARREST AND CONVICTION STATISTICS BY YEAR

For data sources, see Appendix, nos. 2, 3.

11. In 1971, only 31.9 percent of those charged with homicide in jurisdictions with populations of 250,000 or more were convicted, as compared to approximately 50 percent in smaller jurisdictions. Unpublished FBI data on file with *Yale Law Journal*.

12. A May 1975 memorandum prepared by Ehrlich (The Deterrent Effect of Capital

Finally, the measurement of execution risk—the key explanatory (or independent) variable in Ehrlich's work—is confounded by the inadequacies in the homicide, arrest, and conviction data, because execution risk, as defined by Ehrlich, incorporates all three of these variables.[16] Thus, like his dependent variable, all three of his deterrence variables are subject to potentially serious measurement error. While we do not contend that all of Ehrlich's data are inaccurate, we have identified substantial problems with his core variables which cast doubt on his ability to perform a meaningful regression analysis.

II. Errors in Ehrlich's Regression Analysis

We have independently applied Ehrlich's regression technique to comparable data. On the basis of this replication, we find that his evidence of deterrence emerges only under restrictive assumptions about

Sources of Data (on file with *Yale Law Journal*) supplies the auxiliary equations he used to estimate the missing conviction values for 1933 through 1935. To show the importance of the effect of the values for 1936 and 1937 on the conviction estimates Ehrlich obtains for the missing years, we have estimated conviction rates for the years 1933-1937 on the basis of the data for the 1938-1969 period with the auxiliary equation used by Ehrlich to estimate the years 1933-1935 for the data from the 1936-1969 period. It is instructive to compare our estimated conviction rates with the corresponding values used by Ehrlich:

	Ehrlich's Conviction Rates		*Alternative Estimates*	
	Annual Conviction Estimates	*Standard Deviations from the 1938-1969 Mean*	*Annual Conviction Estimates*	*Standard Deviations from the 1938-1969 Mean*
1937	30.3	−4.51	43.7	−.40
1936	25.8	−5.91	44.1	−.29
1935	28.3	−5.18	44.1	−.26
1934	26.9	−5.59	42.8	−.69
1933	30.2	−4.58	43.3	−.53

We have already noted that the reported conviction rates for 1936 and 1937 are far below the mean for the 1938-1969 period. The above comparison also makes clear that these reported rates are far below the values that would be estimated for these two years by applying Ehrlich's auxiliary equation to the data for the 1938-1969 period. Furthermore, Ehrlich's estimated conviction rates for 1933-1935 are also four to five standard deviations below the mean for 1938-1969; as the alternative estimates show, they would be far higher if they were estimated on the basis of the 1938-1969 time period rather than the 1936-1969 time period.

16. Ehrlich 1975, *supra* note 1, at 401. All of his measures of execution risk are in various ways and degrees biased negatively with respect to the criminal homicide rate. Thus, random error in the number of homicides reported will tend to produce a negative correlation between the homicide rate and execution risk as measured by PXQ_t and PXQ_{t-1} because the number of reported homicides in a given year, Q_t, is both the numerator of the homicide rate and a component in the denominator of these two execution measures. See Appendix, nos. 1, 4. The remaining four measures of execution risk will tend to be negatively correlated with the homicide rate as a result of autocorrelated error in the reported number of homicides, because these measures all incorporate prior (lagged) homicide level, in one way or another.

the form of relationships among the variables and only under a narrow selection of the time period for analysis. The limitations required to obtain these results are not justified, since Ehrlich's regression model fits the data better without them. Thus, even if Ehrlich's data were free of errors, the analysis, when properly conducted, would not show that the death penalty has a deterrent effect.

A. *Replication of Data and Regression Results*

To ensure comparability in the replication of Ehrlich's regression analysis, we attempted to use exactly the same data as Ehrlich. Table II[17] describes Ehrlich's and our variables and gives the means and

17. Table II

Variables Used in the Regression Analysis: Annual Observations 1933-1969
(Means and Standard Deviations in Natural Logarithms)

	Variable	*Our Mean*	*Ehrlich's Mean*	*Our Standard Deviation*	*Ehrlich's Standard Deviation*
D_t	$\left(\frac{Q}{N}\right)^a$ = Crime rate: offenses known per 1,000 civilian population.	−2.853	−2.857	.150	.156
Y_t	P^a_a = Probability of arrest: clearance rates.	4.497	4.997	.038	.038
	$P^a_{c\|a}$ = Conditional probability of conviction: fraction of those charged who were convicted of murder.	3.742	3.741	.172	.175
	$P^a_{e\|c}$ = Conditional probability of execution. PXQ_t = the number of executions for murder in year $t + 1$ as a percent of the total number of convictions in year t.	.172	.176	1.718	1.719
X_t	L_t = Labor force participation rate of the civilian population.	−.544	−.546	.029	.030
	U = Unemployment rate of the civilian labor force.	1.743	1.743	.728	.728
	A = Fraction of residential population in the age group 14-24.	−1.759	−1.740	.122	.118
	Y = Friedman's estimate of permanent income per capita.	6.889	6.868	.337	.338
	T = Chronological time (years).	2.685	2.685	.867	.867
N_t	NW = Percent of nonwhite residential population.	−2.216	−2.212	.061	.063
	N = Civilian population in 1,000's.	11.911	11.911	.161	.161
S_t	$XGOV$ = Per capita (real) expenditures on all governments in million dollars.	−7.753	−7.661	.256	.501
	$XPOL_{t-1}$ = Per capita (real) expenditures on police in dollars lagged one year.	2.200	2.111	.146	.306

For data sources, see Appendix and Ehrlich 1975, *supra* note 1, at 409. In his memorandum, *supra* note 15, Ehrlich indicated that the mean of P^a_a is incorrectly stated in his table, and

standard deviations of their logarithms. In most cases, our means and standard deviations correspond quite closely to Ehrlich's. For 11 of the 13 variables, they differ by no more than three percent, and generally by less than one percent. Differences of two or three percent may indicate that where alternates were available we chose a different data source than Ehrlich did. The two variables that show discrepancies of greater than three percent between the two data sets—the indexes of total per capita expenditures of governments ("XGOV") and of per capita expenditures on police ("XPOL$_{-1}$")—differ primarily in standard deviations.[18] In all cases where discrepancies exist, however, we have checked our data carefully, and we are satisfied that we have accurate measures of the variables.

With these data, we have reproduced Ehrlich's basic regression analysis. Table III[19] contains the estimated effects of six different measures of execution risk on the criminal homicide rate. The effects are represented by partial regression coefficients (or elasticities[20]), and their statistical significance is indicated by the ratio of these coefficients to their standard errors—the *t* values of the coefficients. (*t* values of more than 2.0 indicate statistically significant relationships between the dependent and independent variables.)[21]

The six measures of execution risk are alternative ways of representing the conditional probability of execution given conviction for murder. In five of the six measures, Ehrlich incorporates a delay between conviction and execution by dividing the number of executions in one year by the estimated number of convictions in the previous year.[22] In two cases,[23] he estimates execution risk at a given point in time in terms of the numbers of executions and convictions over a prior period of three or four years.[24]

18. Ehrlich's memorandum, *supra* note 15, describes the procedures that he used in obtaining his variables. For XGOV and XPOL$_{-1}$, the two variables with significant differences between the two data sets, we believe that our measures more faithfully reflect Ehrlich's definitions of the variables. Although Ehrlich described XGOV as per capita expenditures of local, state, and federal governments, his memorandum indicates that he actually used government purchases of goods and services and a price deflator for government purchases, instead of government expenditures and an appropriate price deflator. His memorandum also indicates that he failed to exclude defense purchases or expenditures. This is a serious oversight since defense expenditures and purchases represent resources not available for law enforcement activity. Our measure is based on government expenditures and excludes defense expenditures and purchases.

It was virtually impossible to replicate XPOL$_{-1}$ exactly because Ehrlich used an unspecified auxiliary regression equation to estimate unavailable police expenditure data for odd years prior to 1952. Furthermore, his memorandum indicates that he used a price deflator for government purchases rather than a price deflator for government expenditures, as we did.

We constructed two other variables differently than Ehrlich did. While "A" is described as the proportion of the residential population aged 14-24, Ehrlich's memorandum reveals that he used the number of 14- to 24-year olds in both the residential population and the armed forces overseas as a proportion of the total residential population. This is clearly inappropriate since youngsters in this age group overseas cannot contribute to the domestic homicide rate. The slightly greater standard deviation of our measure based exclusively on residential population figures undoubtedly reflects movements of this age group in and out of the country during the war years.

Secondly, "AW" is described as the proportion of nonwhites in the residential population, but Ehrlich's memorandum indicates that he took the number of nonwhites in the total population as a proportion of all those in the residential population. Moreover, he used annual estimates of the nonwhite population from the *Current Population Reports* for the 1960's (see Appendix, no. 1), instead of readjusted estimates based on the 1970 decennial censuses. Again, our measure, based exclusively on residential population figures and readjusted annual estimates, is a more accurate representation of the variable as originally defined.

For further evidence of comparability between the two data sets, note the values of corresponding correlation coefficients for the period 1934-1969:

	Ehrlich's Correlations	*Our Correlations*
PXQ_1 by P^{*}_{-4}	−.028	−.029
PXQ_1 by $P^{*}_{-1}/_{-4}$	−.19	−.181
PXQ_1 by $\left(\frac{O}{N}\right)^{*}_{-1}$	.110	.133
PXQ_2 by $\left(\frac{O}{N}\right)^{*}_{-1}$	.085	.077
PXQ_3 by $\left(\frac{O}{N}\right)^{*}_{-1}$	.026	.077

19. Table III

Estimated Effects of Execution Risk on the Criminal Homicide Rate

Six Alternative Measures of Execution Risk	*Effective Period*	*Partial Regression Coefficients*	*t Values*
PXQ_1	1935-1969	−.018	−.39
PXQ_2	1935-1969	−.068	−3.15
PXQ_{3-1}	1936-1969	−.023	−1.12
TXQ_1	1938-1969	−.059	−2.76
PDL_4	1939-1969	−.065	−3.45
PXQ_4	1935-1969	−.001	−.113

The definitions of these variables are contained in Ehrlich 1975, *supra* note 1, at 406-09.

20. When the execution and homicide variables are in logarithmic form, see pp. 199-200 *infra*, the partial regression coefficients indicate the elasticity of the homicide rate with respect to execution risk—that is, the percentage change in the homicide rate that can be expected from a one percent change in execution risk. Thus, an elasticity of −.068 (associated with PXQ_2) means that a one percent increase in this measure of execution risk can be expected to yield a decrease of .068 percent in the homicide rate.

21. A *t* value of 2.0 is generally taken as an indication of statistical significance because if the true value of the regression coefficient were actually zero, an estimated regression coefficient with a *t* value greater than 2.0 would only occur approximately five times out of 100. A *t* value greater than 2.0 is required for this level of statistical significance when the number of data observations exceeds the number of explanatory variables by five or less.

22. PXQ_4 does not incorporate such a delay.

23. TXQ_2 and PDL_4.

24. Two of Ehrlich's regression equations—PXQ_{3-1} and TXQ_1 in his Table 3, Ehrlich 1975, *supra* note 1, at 410—appear to be either misspecified or mislabeled in terms of the effective period of analysis. Given his data and analytic procedures, 1935 is the earliest possible beginning date for a regression analysis using any of the measures of execution

Table III shows a negative value for the regression coefficient associated with each of the six measures of execution risk. That is, the results of this initial regression analysis appear to indicate that, other things being equal, as the risk of execution among convicted offenders increases, the homicide rate decreases and, conversely, as execution risk declines, the homicide rate rises. For three of the six measures of execution risk, the estimated effect is at least twice its standard error, suggesting that the effect is not likely to have occurred by chance.

These results are similar to Ehrlich's.[25] He finds negative coefficients, ranging from −.039 to −.068, for the six execution measures. In four cases, his negative coefficients are statistically significant. In

tained prior to 1934 since values of many variables lagged one year are required by the reduced form equation. The modified first differences obtained in the second stage of the regression analysis by the Cochrane-Orcutt procedure cannot be obtained prior to 1935 since all exogenous and endogenous variables must be lagged one year. But with PXQ_{t-1} as the measure of execution risk (*see id.* at 406-09), the earliest starting date is 1936. The reduced form first stage equation requires that a lagged value of PXQ_{t-1} be used to estimate arrest and conviction rates, but the first legitimate value of PXQ_{t-1} is that for 1934, not for 1933, since the denominator of this measure incorporates values of homicides, arrests, and convictions lagged one year. This means that estimated arrest and conviction rates cannot be obtained before 1935 and that modified first differences cannot be estimated for periods beginning before 1936. Since Ehrlich gives 1935 as the beginning of the effective period, he may have used an erroneous (probably zero) value for PXQ_{t-1} in the first stage estimation procedure.

With TXQ_t as the measure of execution risk (*see id.* at 406-09), the earliest beginning point for the effective period should be 1938. Since values of TXQ_t depend on data from three prior years, the first values cannot be obtained before 1936; the first stage estimation of arrest and conviction rates with lagged TXQ_t cannot be made for years earlier than 1937; and hence modified first differences cannot be calculated for effective periods starting earlier than 1938. If, as Ehrlich indicates, 1937 is actually used as the beginning date of the effective period, lagged TXQ_t in the first stage equation will be an arbitrary (probably nonzero) value based on data from only two prior years (and a zero value for the third year).

PXQ_{t-1} and TXQ_t are used more extensively than any of the other execution measures in Ehrlich's regression analyses, and in virtually all cases the effective period of analysis begins one year too soon. The following equations in both of his papers would appear to be misspecified, and therefore improperly estimated, in terms of the effective period of analysis: equations 3 and 4 in Table 4 of Ehrlich 1973, *supra* note 1, at 53, and Table 3 of Ehrlich 1975, *supra* note 1, at 110; equations 2-5 in Table 5 of Ehrlich 1973, *supra* at 54, equations 1-6 in Table 6 of *id.* at 55, and Table 4 of Ehrlich 1975, *supra* at 110, and equations 3 and 4 in Table 7 of Ehrlich 1973, *supra* at 57.

We believe these equations are not simply mislabeled but are, in fact, improperly specified with respect to the effective period of analysis. With the data generated from information in Ehrlich's memorandum, *supra* note 15, we have estimated each of the above equations for its maximum proper effective period and for the apparently incorrect one indicated in Ehrlich's tabulations. In every case, we found that the results reported by Ehrlich correspond more closely with the estimates we have obtained for the incorrectly defined effective period. However, the resulting errors of estimation are relatively small in magnitude since they enter the second stage regression results through [illegible] in the first stage estimation of arrest and conviction rates.

[illegible] note 1, at 409-11.

addition, the relative strengths of the effects of arrest (P^ea), conviction ($P^ec|a$) and execution ($P^ee|c$) are the same as Ehrlich reports.[26] According to Ehrlich, "[t]he regression results regarding the effects of P^ea, $P^ec|a$, and $P^ee|c$ constitute perhaps the strongest findings of the empirical investigation. Not only do the signs of the elasticities associated with these variables conform to the general theoretical expectations, but their ranking, too, is consistent with the predictions . . . ."[27] Thus, by reproducing the rank order of effects among arrest, conviction, and execution rates, we have replicated an especially important aspect of his regression results.[28]

B. *Temporal Specification*

If the results of a time series regression analysis are a faithful representation of underlying causal processes, the values of the estimated coefficients will be independent of the specific time period chosen for the analysis. Thus, if the values of the coefficients associated with the various measures of execution risk change substantially when they are estimated for alternative time intervals, the negative values reported in Table III are not a reliable basis for inferring that capital punishment has a deterrent effect on murder.

Ehrlich addressed this issue by repeating the regression analysis for selected subperiods. He performed seven regressions in which varying numbers of years were removed from the beginning of the time series and two analyses in which three years were dropped from the end of the series. These alterations in the effective period of analysis do not appreciably change the elasticities associated with execution risk.[29] Ehrlich does, however, concede that the deterrent effects of arrest, conviction, and execution rates become weaker when as many as seven years are dropped from the recent end of the time series.[30]

We find that all empirical support for the deterrent effect of capital

26. *Id.*
27. *Id.* at 411.
28. Our results are comparable to Ehrlich's in other respects (see appendix B, *supra* note 2, for the full regression results). The elasticities associated with the alternative measures of execution risk are less in absolute magnitude than those associated with arrest and conviction rates, but relative to their standard errors, they tend to fall between those of the arrest and conviction measures. In addition, the signs of the elasticities associated with the remaining causal factors are the same as those obtained by Ehrlich.
29. Ehrlich 1975, *supra* note 1, at 110; Ehrlich 1973, *supra* note 1, at 54.
30. Ehrlich 1973, *supra* note 1, at 20.

punishment disappears when the five most recent years are removed from the time series that Ehrlich selected for analysis. Table IV[31] shows the estimated effects of execution risk on the criminal homicide rate for 16 periods with successively earlier ending dates. For the period ending in 1964, there are no statistically significant negative elasticities associated with the various measures of execution risk. For the period ending in 1963, the estimated elasticities have become positive in every case. Indeed, of the 24 coefficients reflecting the effects of execution risk for periods ending in 1963 and earlier, 20 are positive and only four are negative.

Furthermore, we find that the regression results are more adequate and consistent for the periods with earlier ending dates. The standard errors of the regressions are less, the F and R^2 statistics are consistently higher, and the Durbin Watson statistics are generally more acceptable for the periods ending in 1960 and 1963 than for those ending in 1966 and 1969.[32] In addition, the estimated coefficients for the other variables in the regression equations for the two shorter periods are generally closer in value than in the equations for the longer periods.[33]

Hence for the periods in which the model gives evidence of being more adequately specified, the regression analysis consistently shows a slightly positive—though not statistically significant—effect of execution risk on the homicide rate.

31. Table IV

Estimated Effects of Execution Risk on the Criminal Homicide Rate for Effective Periods with Successively Earlier Ending Dates (Variables in Natural Logarithms)

32. See equations 1.1 to 1.4 in appendix B, *supra* note 2. These statistical measures are

33. Not only does the evidence for deterrence disappear, but Ehrlich's more general theoretical formulation is weakened by our findings. When we examine the results for periods ending in 1963 or earlier, we find only three instances out of 30 possible results which conform to his rank order predictions of the relative strengths of the deterrence variables. See pp. 196-97 *supra*; appendix B, *supra* note 2.

34. See J. Johnston, Econometric Methods 47-50 (2d ed. 1972); R. Wonnacott & T. Wonnacott, Econometrics 91-98 (1970).

35. Ehrlich 1975, *supra* note 1, at 412-13; Ehrlich 1973, *supra* note 1, at 36-37.

C. *Functional Form*

Seldom does an initial theoretical formulation, such as Ehrlich's economic model of the determinants of murder, unambiguously dictate the mathematical function which describes the true relationships among the variables. When the functional form is open to question or when the analyst wishes to establish the generality of his findings, he will typically examine regression results obtained under different assumptions about the form of the model.

Ehrlich assumes that the factors which determine the murder rate have a multiplicative effect. Adopting a standard regression technique, he uses logarithmic values of the variables, in order to transform this multiplicative relationship into an equivalent linear form suitable for regression analysis.[34] He reports that his regression results are not dependent on the specific assumptions he has made about the form of the relationships among the variables—that there is evidence of a deterrent effect even when he performs the regression analysis with the natural values of his variables (which corresponds to a linear rather than a multiplicative relationship among the variables).[35]

Using the natural values of these variables, we have re-estimated the coefficients shown in Table IV. We show these results in Table V.[36] There are, among the 60 estimates in Table V, more positive than negative coefficients associated with the various measures of execution risk. Only two of them, both positive, are statistically significant. The direction and size of the estimated coefficients do not appear to be systematically affected by the choice of time period. In other words, the last few years of the time series, which are apparently responsible for the evidence of a deterrent effect when logarithmic

values are used, yield no such evidence with the natural values of the variables.

III. Sources of Ehrlich's Deterrence Evidence

We have seen that Ehrlich obtains evidence of a deterrent effect only by imposing highly restrictive conditions on his analysis. One might assume that this evidence of deterrence reflects either a strong deterrent effect operating exclusively in recent years or a more pervasive effect obscured by data inadequacies in the early years. We show instead that Ehrlich's evidence is strictly a statistical artifact, not the reflection of a deterrent effect over the entire period of analysis or the most recent subperiod.

in logarithms, the regression coefficients indicate the change in the homicide rate to be expected from a one unit change in execution risk. For example, a coefficient of −.00061 (for PXQ_t in the period 1935-1969) means that a reduction in the number of executions from 10 to nine (per 100 convictions for murder) can be expected to increase the homicide rate from 5.00000 to 5.00061 (per 100,000 population), or to add 12 homicides for a population of 200 million.

A. *The Recent Years*

What is it about the middle and late 1960's which causes the execution variables to show negative effects on the homicide rate when they are in logarithmic but not in natural form? The answer lies in the opposing trends in the two variables and in the nature of the logarithmic transformation. The national homicide rate, as reported by the FBI, rose precipitously in the middle and late 1960's to levels well above those of the 1940's and 1950's. Indeed, between 1962 and 1969 the homicide rate rose almost 60 percent to a level exceeded only by the rate for 1933. At the same time, executions literally came to an end. Hence execution risk—the number of executions among those convicted of murder—took on extremely low values, approaching zero, in the middle and late 1960's.[37] A property of the logarithmic transformation is to emphasize variations at the lower range of a variable. For example, if execution risk is converted into logarithms, a difference between one and two executions per 1,000 convictions will be greater than a difference between 350 and 650 executions per 1,000 convictions. Consequently, the logarithmic transformation accentuates the decline in execution risk that occurred in the 1960's.

To show the effect of the logarithmic transformation on these low values of execution risk, we present in Table VI[38] the corresponding logarithmic and natural values of one of the six measures of execution risk for the years from 1960 through 1969. The natural values of execution risk have dropped from about one percent in

37. There have been no executions since 1967. In order to extend the effective period of analysis through 1969, Ehrlich had to generate nonzero execution rates for the years after 1967, since the logarithm of zero is not defined. He did this by supplying one nonexistent execution for 1968 and 1969 in the calculation of PXQ_t. Ehrlich 1975, *supra* note 1, at 409 n.h.

38. Table VI

Logarithmic and Natural Values of Execution Risk (PXQ_t) for Each Year 1960-1969

	Logarithms		*Natural Values*	
	The Absolute Value	*Standard Deviations from the Mean*	*The Absolute Value*	*Standard Deviations from the Mean*
1969	−3.823	−2.524	.022	−.123
1968	−3.873	−2.564	.021	−.124
1967	−3.131	−2.103	.044	−.111
1966	−3.771	−2.491	.023	−.123
1965	−1.742	−1.252	.175	−.059
1964	−1.156	−1.077	.233	−.041
1963	−.642	−.580	.526	.011
1962	.171	−.001	1.191	.630

the years 1960-1962 to less than .05 percent for the years 1966-1969. The values for the years after 1964 are all slightly more than one standard deviation below the mean for the entire period from 1933 to 1969. Putting execution risk in logarithmic form greatly accentuates the decline. The difference between 1960 and 1969 in logarithmic values (from .229 to −3.823) is more than three times the corresponding difference in natural values (from 1.257 to .022). In fact, for the period from 1966 to 1969, the logarithmic values of execution risk are all more than two standard deviations below their mean. Thus, by using logarithmic values of execution risk, Ehrlich gives considerably more weight in his regression analysis to the extremely low values of this variable after 1964.

Ehrlich has stated that the recent behavior of arrest and conviction rates as well as that of execution risk plays an important role in his regression results.[39] To examine the effect of using the logarithmic values of execution risk and the possibility that the logarithmic transformation of arrest and conviction rates may also influence the regression results, we present, in Table VII,[40] simple correlations of the arrest, conviction, and execution rates with the criminal homicide rate; these are shown for logarithmic and natural values of the variables and for time intervals with successively earlier ending dates from 1969 through 1960. The data for the recent years have an extraordinary effect on the correlation between the logarithms of execution and homicide rates; adding the last five years reduces the correlation from .836 to .123. In contrast, the recent data have much

39. Ehrlich 1973, *supra* note 1, at 70.

40. Table VII

Correlations of Arrest, Conviction, and Execution Rates with the Homicide Rate for Effective Periods with Successively Earlier Ending Dates (Separately for Logarithms and Natural Values of the Variables)

	Arrest Rate (P^a_a)		*Conviction Rate* (P^c_c/a)		*Execution Rate* (PQX_e)	
Effective Periods	*Logarithms*	*Natural Values*	*Logarithms*	*Natural Values*	*Logarithms*	*Natural Values*
1933-1969	−.809	−.832	−.501	−.516	.423	.553
1933-1968	−.801	−.818	−.488	−.496	.270	.611
1933-1967	−.793	−.809	−.492	−.497	.112	.720
1933-1966	−.791	−.808	−.496	−.499	.563	.758
1933-1965	−.792	−.809	−.496	−.499	.716	.773
1933-1964	−.795	−.813	−.494	−.497	.806	.772
1933-1963	−.806	−.821	−.488	−.491	.858	.765
1933-1962	−.820	−.837	−.495	−.500	.857	.750
1933-1961	−.819	−.845	−.506	−.511	.816	.711
		.631	.516	.520	.836	.729

less effect on the correlation between the natural values of execution and homicide rates) adding the last five years reduces the correlation only from .729 to .553.[41] These years have virtually no impact on the correlations, in either logarithmic or natural form, of arrest and conviction rates with the criminal homicide rates. Thus, Ehrlich's evidence of deterrence rests heavily on the relationship between the values of execution risk and homicide rates for the years after 1964.

This conclusion might suggest that the use of the death penalty at the very low levels of execution risk in the middle and late 1960's had a deterrent effect strong enough to produce a measurable effect over the entire period when these recent years are combined with earlier years. We examine this possibility in Table VIII.[42] It shows annual changes in the homicide rate relative to national changes in the homicide rate for the period 1962 to 1968 among states that increased or decreased the number of executions imposed for murder. The relative changes in homicide rate are expressed in homicides per 100,000 people, and are obtained by subtracting the changes in the national homicide rate from changes in the individual states.

41. Note, in this connection, that Ehrlich's extension of the time series on execution risk from 1967 to 1969 by supplying executions for 1968 and 1969 in the calculation of PXQ_e, note 30 *supra*, reduces its correlation with the homicide rate in logarithmic values from .442 for 1933 to 1967 to .123 for 1933 to 1969 and in natural values from .720 to .553 for the same periods.

42. Table VIII

Annual Changes in Criminal Homicide Rate Among States Which Have Increased and Decreased Executions Relative to Annual Homicide Rate Changes in the Nation as a Whole for the Period 1962-1968

	States Which Have Decreased Executions			*States Which Have Increased Executions*		
Annual Change	*Relative Homicide Rate Change*	*Number of States*	*Population Proportion*	*Relative Homicide Rate Change*	*Number of States*	*Population Proportion*
1962-1963	−.10	11	.41	−.03	6	.17
1963-1964	.19	8	.33	−.33	3	.06
1964-1965	−.41	3	.13	.88	1	.02
1965-1966	−.93	4	.05	.50	1	.01
1966-1967	.62	1	.01	.09	2	.11
1967-1968	−.23	2	.11	—	—	—

States imposing executions for murder during this period were identified in Appendix A of W. Bowers, Executions in America 200-401 (1974); criminal homicides annually by state were obtained from FBI, Uniform Crime Reports for the United States (Table 4, 1962-1964; Table 4, 1965-1968); annual population estimates by state were taken from U.S. Bureau of the Census, Dep't of Commerce, Current Population Reports: Population Estimates and Projection (Ser. P-25, No. 480, Oct. 1971) (1962-1968). Changes in homicide rates by groups of states that increased and decreased executions are exactly the average of the annual changes in the states that comprise the group weighted [illegible] population size. The data for these states [illegible]

Conclusion

We have shown that Ehrlich's findings are not a reliable basis for inferring the effects of capital punishment on the criminal homicide rate. Flaws in Ehrlich's data cast doubt on the ability to perform meaningful regression analysis. The analysis itself yields evidence of a deterrent effect only by relying on the unusual nature of the years after 1961 and on the logarithmic transformation of the data. When the analysis is performed for more appropriate periods, the hypothesis that the death penalty deters murders finds no support.

APPENDIX

Specific Data Sources Used in the Replication of Ehrlich's Regression Analysis

1. $\left(\frac{O}{N}\right)^*$ *Criminal Homicide Rate* = Number of Criminal Homicides per year/annual civilian population.

   (a) O = Annual number of murders and nonnegligent manslaughters from 1933 to 1969. Revised figures (1971) provided by the FBI.

   (b) N = Civilian population of the United States in 1,000's from 1933 to 1969. U.S. Bureau of the Census, Dep't of Commerce, Current Population Reports: Population Estimates and Projections Tables 3, 4 (Ser. P-25, No. 499, May 1973).

2. P^*_a *Clearance Rate for Criminal Homicide* = Fraction of murders and nonnegligent manslaughters cleared by arrest. FBI, Uniform Crime Reports for the United States (1933-1969).

3. $P^*_{c|a}$ *Conviction Rate for Criminal Homicides* = Fraction of individuals found guilty as charged for murder and nonnegligent manslaughter. 1936-1969; *id.* After 1962 separate estimates are reported in the *Uniform Crime Reports* annual bulletin. Estimates from the time series which is continuous over the 1936 to 1969 period were chosen. These estimates were generally based on larger population bases. The value for 1961 is the average of the 1960 and 1962 estimates. 1933-1935: values 1933 to 1935 were obtained from Ehrlich (Ehrlich 1973, *supra* note 1, Figure 1).

4. $P^*_{e|c}$ *Execution Risk for Criminal Homicide* (PXQ_1, PXQ_2, PXQ_{3-5}, TXQ_6, PDL_7, PXQ_8) The measures of execution risk are all variations of the form $\frac{E}{C^*}$, where $C^* = Q \cdot P^*_a \cdot P^*_{c|a}$.

   (a) E = The number of executions for murder. U.S. Bureau of Prisons, Dep't of Justice, National Prisoner Statistics Bulletin Table 1 (No. 46, Aug. 1971).

   (b) [illegible] Number of convictions for murder.

5. L *Labor Force Participation Rates:*

   for 1940-1969 $L = \frac{CL}{(TN - TL + CL)}$

   for 1933-1939 $L = \frac{CL}{(N - P13)}$

   (a) CL, TL = The civilian and total labor force in 1000's from 1933 to 1969. U.S. Bureau of Labor Statistics, Dep't of Labor, Employment and Earnings Table A-1 (Jan. 1971).

   (b) TN = Total noninstitutional population from 1940 to 1969. *Id.*

   (c) N = Annual civilian population as defined in 1(b).

   (d) P13 = Annual population 13 years old and under from 1933 to 1939. U.S. Bureau of the Census, Dep't of Commerce, Current Population Reports: Population Estimates and Projections (Ser. P-25, No. 311, July 1965).

6. U *Unemployment Rate of the Civilian Labor Force, 1941 to 1969.* Employment and Earnings Table A-1, *supra* 5(a).

7. A *Fraction of the Resident Population 14 to 24 Years of Age.*

   $A = \frac{P1424}{RP}$

   (a) P1424 = Number of persons 14 to 24 years of age in the resident population.

   1933-1939: Current Population Reports, *supra* 5(d).

   1940-1949: U.S. Bureau of the Census, Dep't of Commerce, Current Population Reports: Population Estimates and Projections Table 1 (Ser. P-25, No. 98, Aug. 1954).

   1950-1959: *id.* Table 1 (Ser. P-25, No. 310, June 1965).

   1960-1969: *id.* Table 2 (Ser. P-25, No. 519, Apr. 1974).

   (b) RP = Resident population in 1000's.
   References same as given in (a) for each of the respective time periods.

8. Y *Friedman's Estimate of Real Permanent Income per Capita.* The following equation was used to compute Y:

   $Y_t = (.530)\, Y_{t-1} + (.226)\, Y_{t-2} + (.150)\, Y_{t-3} + (.100)\, Y_{t-4} + (.07)\, Y_{t-5} + (.019)\, Y_{t-6} + (.033)\, Y_{t-7} + (.023)\, Y_{t-8}$

   (a) The weights in the above equation were obtained from E. Kami, The Value of Time and the Demand for Money, 1971, Table 33 (unpublished doctoral dissertation, Univ. of Chicago).

   (b) Y_{t-1} through Y_{t-8} are logarithmic estimates of per capita real national income for the years 1925 to 1969. The national income figures were provided by E. Kami. Population figures for per capita estimates were obtained from:

   1925-1929: Current Population Reports, *supra* 1(b), Table 4.
   1930-1968: U.S. Dep't of Commerce, Survey of Current Business Table 7.6 (July 1969).

   (c) The per capita income was measured in terms of 1929 dollars using a price deflator obtained from source (a).

9. NW *Percent of Nonwhite Residential Population.*
   References same as given in 7(a) for each of the respective time periods.

If execution risk had a deterrent effect, states with declining numbers of executions would show a relative increase in homicide rate, and states with rising execution levels would show a relative decrease in homicide rate. But Table VIII demonstrates that there is no such pattern in the years since 1962. Among states which decreased executions, the homicide rate rose more than the national figure for two of the periods[42] and less than the national figure for four. Among states that increased executions, the change in homicide rate was below the national change in one comparison, very nearly the same in one case, and actually above in three of the five comparisons.

Table VIII also shows that the use of capital punishment during this period was restricted increasingly to a small minority of states. After 1961, no more than five states imposed executions in a single year, none of them imposed more than one execution per year, and none imposed executions two years in a row. In this situation, the national homicide rate cannot be expected to reflect possible deterrent effects presumed to occur primarily in the jurisdictions that actively use the death penalty. Thus, apart from problems of temporal specification and functional form, it would have been more appropriate, in view of the progressively restricted use of capital punishment in the nation, for Ehrlich to have shortened the effective period of analysis by removing the years after 1963, when no more than 10 percent of the states imposed executions, than to have extended the period of analysis two years beyond the end of executions in the United States.

B. *The Early Years*

We have already described the unreliability of data for the 1930's. By reproducing his regression analysis for effective periods with later beginning dates, Ehrlich may have hoped to diminish the effects of measurement error in these early years. But he has thereby given greater weight to the years after 1961, which are responsible in the first place for his evidence of a deterrent effect.

To determine the effects of measurement error in the early years, we must first remove the idiosyncratic recent years, and then successively drop years from the beginning of the time series. Accordingly, we have performed regressions for periods with 1963 as the ending date and with successively later beginning dates from 1935 through

[42] However, one of these two periods, 1960-1967, involves only one state, Texas.

1940. The estimated coefficients for logarithmic and natural values of two measures of execution risk are shown in Table IX.[43]

We know from Tables IV and V that the elasticities associated with execution risk for effective periods ending in 1963 and earlier are more often positive than negative, though usually not statistically significant. In Table IX, the coefficients are again predominantly positive, and become even more so as years are successively dropped from the beginning of the time series. In fact, the effective periods beginning in 1938, 1939, and 1940 show positive effects for execution risk in all 12 cases. These positive coefficients are, of course, absurd from the viewpoint of the deterrence hypothesis, although they may not be altogether meaningless.[44] They do, however, indicate unambiguously that data inadequacies in the early years of the time series have not obscured deterrent effects of capital punishment. Indeed, by all indications there are no deterrent effects to obscure.

Table IX

Estimated Effects of Execution Risk on the Criminal Homicide Rate for Effective Periods Ending in 1963 With Successively Later Beginning Dates (Separately for Variables in Logged and Unlogged Form) (t Value in Parentheses)

Beginning Date of Effective Period	*Logarithms*		*Natural Values*	
	PXQ_{t-1}	$P\bar{X}Q_t$	PXQ_{t-1}	$P\bar{X}Q_t$
1935	--	.037	--	.000219
	--	(1.02)	--	(.21)
1936	.003	.031	.000225	.000082
	(.08)	(.86)	(.37)	(.08)
1937	.007	.038	.000079	−.000001
	(.19)	(1.02)	(.12)	(−.00)
1938	.038	.033	.001147	.000833
	(.91)	(.95)	(1.46)	(.64)
1939	.062	.061	.001858	.001772
	(1.39)	(1.73)	(1.35)	(1.29)
1940	.095	.056	.001581	.001818
	(1.99)	(1.56)	(1.93)	(1.19)

Table IX presents the effects of two measures of execution risk, PXQ_{t-1} and $P\bar{X}Q_t$. PXQ_{t-1} is the measure used most frequently by Ehrlich, and $P\bar{X}Q_t$ of all the measures, is least biased by measurement error since its one year lagged homicide rate is only one of 18 variables that figure in its estimation. Equations 13.1-16.3 of appendix B, *supra* note 2, present detailed regression results for selected periods beginning in 1936, 1938, and 1940.

[43] The possibility that because of a "brutalizing effect," capital punishment may encourage rather than deter murders is beyond the scope of this paper but is considered in Bowers & Pierce, *supra* note 2. In particular, we discuss the meaning of the positive regression coefficients we obtained when we substituted the number of executions for execution risk.

11. NGOV *Per Capita Real Expenditures on All Governments in Millions of Dollars.*

$$NGOV = \frac{(FE + SLE\text{-}D)}{RP*PD*10}$$

(a) FE, SLE = Federal and state/local expenditure on all governments.
1933-1938: U.S. Dep't of Commerce, Historical Statistics of the U.S.: Colonial Times to 1957 (1960).

1939-1965: U.S. Dep't of Commerce, The National Income and Product Accounts of the United States, 1929-1965 Statistical Tables (1966).

1966-1969: U.S. Dep't of Commerce, Survey of Current Business (July 1970).

(b) D = National defense expenditures.
1933-1938: U.S. Dep't of Commerce, Historical Statistics of the U.S: Colonial Times to 19.7, *supra* (a).

1939-1952: (purchases of goods and services). National Income and Product Accounts of the United States, *supra* (a), Tables 1.1.

1953-1969: (purchases of goods and services). Survey of Current Business, *supra* (a), Table 3.10.

(c) RP = Residential population as defined by 7(b).

(d) PD = Implicit price deflator for all governments.
1932-1965: National Income and Product Accounts of the United States, *supra* (a), Table 8.4.

1966-1969: Survey of Current Business, *supra* (a).

12. $XPOL_{-1}$ *Per Capita Real Expenditures on Police Lagged One Year in Dollars.*

$$XPOL_{-1} = \frac{POLE*100{,}000}{RP*PD} \text{ where}$$

(a) POLE = Total police expenditure.
1932-1966: 6 U.S. Bureau of the Census, Dep't of Commerce, 1967 Census of Governments, No. 5, at 36 (1969).

1967-1969: U.S. Bureau of the Census, Governmental Finances in 1969-70, at 15 (1971).

(b) RP = Residential population as defined in 7(b).

(c) PD = Price deflator as defined in 11(d).

13. *Alternative Vital Statistics Estimates of Homicide.*
Q = Annual number of willful homicides (minus the annual number of executions after 1918, when the two mortality categories were combined).

1933-1936: U.S. Bureau of the Census, Dep't of Commerce, Mortality Statistics (1933-1936).

1937-1969: U.S. Bureau of the Census, Dep't of Commerce, Vital Statistics of the United States (1937-1945); U.S. Public Health Serv., Dep't of Health, Education, and Welfare, Vital Statistics of the United States (1950-1969).

Deterrence: Evidence and Inference*

Isaac Ehrlich†

Because of space limitations and the short time I have been given to prepare my response to the two critiques of my work published in this issue of the *Journal*, I shall confine myself principally to the critique by Bowers and Pierce.[1] I do that not because the paper by Baldus and Cole[2] does not warrant a detailed reply but because an elaborate response to the central issues they raise is contained in a study of mine now in progress which deals critically with published research by Sellin and others.[3] I choose to focus on the Bowers and Pierce piece also because, as I hope to show, their work largely misinterprets and misapplies the framework I have developed for testing the deterrence hypothesis. Addressing their work critically provides the opportunity to elaborate upon some pertinent aspects of my research, hopefully for the benefit of interested scholars.

The conclusions of my time series study of murder basically are two: (1) that previous research never adequately tested a set of direct and specific implications suggested by a general theory of deterrence and (2) that my empirical findings, while tentative and inconclusive by the very nature of observational statistics, are not inconsistent with rather sharp implications emanating from this theory, including the hypothesized deterrent effect of the conditional risk of execution. Bowers and Pierce tacitly accept the first conclusion and seek to evade the second, evidently on faulty grounds. In their efforts to obscure the empirical findings, they have selectively deleted observations, utilized an inferior regression specification, considered irrelevant variables and correlations, and revealed in the process misunderstanding of elementary statistical concepts, as I discuss in points III, IV, and V below. They do not provide evidence based on a systematic statistical analysis showing that capital punishment, or punishment in general, does not deter crime. Essentially, they make only the point that the observed deterrent effect of the risk of execution *can be* confounded

* This reply has been prepared in cooperation with Randall Mark.

† Associate Professor of Business Economics, University of Chicago; Research Associate, National Bureau of Economic Research.

1 Bowers & Pierce, *The Illusion of Deterrence in Isaac Ehrlich's Research on Capital Punishment*, 85 Yale L.J. 187 (1975).

2 Baldus & Cole, *A Comparison of the Work of Thorsten Sellin and Isaac Ehrlich on Capital Punishment*, 85 Yale L.J. 170 (1975).

when insufficient regard is shown for proper methods of hypothesis testing. Indeed, my principal response to Bowers and Pierce is that they concern themselves only with making a point (*i.e.*, confounding a result) rather than testing a hypothesis. There is a fundamental difference between a systematic and statistically coherent test of all the ramifications of a general hypothesis and an exercise in search of that set of circumstances which—for purely technical reasons—may weaken the effect of a single variable within a comprehensive model. Bowers and Pierce do not analyze the effects of variables other than the conditional probability of execution—variables such as estimates of apprehension and conviction risks and unemployment and labor force participation rates. Moreover, they do not address themselves at all to the question of the optimal form of testing for the deterrence hypothesis, given the technical limitations of observational statistics.

I shall respond in some detail only to the substantive issues raised by Bowers and Pierce and to a few of the arguments advanced by Baldus and Cole. Also, I shall point out only some of their more serious errors. For expositional convenience, the discussion below is ordered as seven general points.

I. Corroborating Evidence from Bowers and Pierce

First and foremost, the Bowers and Pierce work, however inadvertently, has lent considerable strength to the case for the deterrent effect of capital punishment, because their application of the theory and econometric methods outlined in my paper over the entire period considered in my analysis produces results quite similar to my own. This is noteworthy for several reasons.

A. Their data set is not identical to the set of data that I utilized.[1] Their comments indicate that at least four variables have been constructed differently in their work.[2]

B. In addition, Bowers and Pierce do not accurately execute my regression analysis in which two measures of execution risk are used to test the hypotheses of the model. Their results in connection with these measures of execution risk are likely to be inferior to my own because they omit an observation; therefore their results are based on fewer degrees of freedom.[3]

C. Furthermore, Bowers and Pierce may have used computational procedures different from those I utilized. That their regression results and coefficients of serial correlation always differ from mine is consistent with this view.[4]

Yet despite these differences, the regression results which Bowers and Pierce report are "similar to Ehrlich's."[5] More particularly, they confirm not only the apparent restraining effect of the conditional probability of execution on the murder rate but also my predicted ranking of estimates of elasticities of the murder rate with respect to the three deterrence variables—the probability of apprehension, the conditional probability of conviction, and the conditional probability of execution.[6] This is at once a confirmation of the strength of my approach and a corroboration of the basic findings. The results stand out in contrast to previous allegations that no evidence exists suggesting that the death penalty may have a restraining effect on the frequency of murder in the population. How Bowers and Pierce attempt to obscure these results is the subject of the three following points.

II. The Effects of Data Imperfections

Bowers and Pierce attempt to invalidate the results of my empirical investigation of the effects of deterrence variables (and these results

1. A detailed description of the data set that I utilized is contained in the memorandum, I. Ehrlich, The Deterrent Effect of Capital Punishment: A Question of Life and Death, American Economic Review (June, 1975); Sources of Data, May 1975 (on file with *Yale Law Journal*). Mr. Bowers, among others, received a draft of this memorandum, which noted some errata in the published paper, and which was completed in July 1975 by Randall Mark.

2. Bowers & Pierce, *supra* note 1, at 191 n.18. They allege that one of these differences, that concerning $NPOL_{t-1}$, is due to my having used an unspecific auxiliary analysis for estimating missing values of this variable. Their allegation is false: my memorandum on data sources, *supra* note 1, at 17-19, outlines in detail the auxiliary procedure utilized. In addition, Bowers and Pierce utilize different values of P^a_{t-1} than did I for the years 1933, 1934, and 1935, because they did not choose to apply the procedure I outlined for estimating these values. Their reference to "Ehrlich's conviction rates" for the years in question is wrong. Bowers & Pierce, *supra* at 191 n.18.

3. Bowers and Pierce suggest that all regressions of mine in which PNO_{t-1} and LNO_t are used as measures of the conditional probability of execution are erroneous. Bowers & Pierce, *supra* note 1, at 195 n.21. They argue that I mistakenly utilized PNO_{t-1} and LNO_t for the effective periods 1935-1969 and 1937-1969, respectively, whereas, they claim, the absence of data on PNO_{t-1} in 1933 would require starting the effective period one year later in each case. They then speculate that an "erroneous (probably zero)" value of PNO_{t-1} must have been inserted by the computer for 1933. *Id.* Contrary to their speculation, however, PNO_{t-1} in 1933 was estimated for use in all regressions with PNO_{t-1} and LNO_t over the periods 1935-1969 and 1937-1969, respectively. The value of PNO_{t-1} in 1933 is estimated as 7.16299 (percent). The estimate is based on published UBI data for the murder rate and for the murder clearance ratio in 1932 and on an estimated conviction risk in that year.

The degrees of freedom associated with a regression are the excess of data points over the number of regression coefficients estimated.

4. The calculations I reported were computed via the Econometric Software Package, into which R.C. Fair's three-stage procedure is integrated. See J. Cooper, Description of the ESP PACKAGE (1972). Bowers and Pierce provide no documentation of their computational procedures.

5. Bowers & Pierce, *supra* note 1, at 190.

6. *Id.* at 197.

alone) by posing, in effect, the extreme argument that data limitations prior to the 1960's preclude any empirical test of the deterrence hypothesis.[10] I do not agree with this general conclusion, and, in addition, I find their analysis concerning particular variables to be superficial and not constructive.

With respect to the dependent variable, the murder rate, the figures I have used are based on the Federal Bureau of Investigation's revised estimates of annual total murders and nonnegligent manslaughters. For the purposes of the empirical investigation, the FBI data are conceptually superior to the homicide series published in the *Vital Statistics of the United States* because the FBI category is defined to include only willful felonious homicides. Law enforcement officials, not health officials, bear the responsibility and undergo training for distinguishing willful felonious homicides from other homicides.[11] Indeed, by definition, the homicide data of the *Vital Statistics* explicitly include justifiable homicides and are likely to include some negligent manslaughters as well.[12] Moreover, the revised homicide data of the FBI reflect that agency's unique opportunity to incorporate into its estimates whatever homicide data have been collected by health officials. In contrast, the homicide figures tabulated for the *Vital Statistics* are never revised after the cutoff date for data collection for a given year.[13] In addition, information on death certificates, on which the *Vital Statistics* figures are based, sometimes may reflect classification of deaths only by medical cause rather than by external cause (such as accident or homicide), especially in those instances when death from homicidal assaults occurs later than the time of assault.

Because the *Vital Statistics* category includes some nonfelonious homicides, one would expect its homicide counts to exceed the FBI estimates. Yet, in every year from 1939 through 1961, the more narrowly defined FBI revised estimates are higher, by more than 900 in some years.[14] These comparisons suggest the importance of the technical considerations cited above that may lead to a significant underestimation of the relevant number of criminal homicides in the *Vital Statistics*. Tests which I have been conducting with independent bodies of data, and which I hope to report in the near future, indicate, nevertheless, that the effects of the deterrence variables—including the conditional probability of execution—on the homicide rate as reported by the *Vital Statistics* are qualitatively the same as those found in my time series investigation.

With respect to the empirical measures of the apprehension and conviction risks, the critics raise the issue of whether the FBI data are "unrepresentative" in the earliest years of the sample period.[15] Yet I have reported results demonstrating that the basic findings of my investigation are observed even without the presence of these early years in the observation set.[16] Moreover, their inference that the conviction data in 1936 and 1937 are biased because of a particular pattern observed in 1974 is purely conjectural and not founded upon any systematic analysis. Imperfections in data notwithstanding, my qualitative results in connection with the effects of apprehension and conviction risks over my entire sample period have been observed by others using the same FBI sources.[17]

More basically, though, the critics' attempt to discredit the empirical investigation on the basis of data quality is self-defeating to their own case. As is well known, "errors of measurement," as they are termed in the econometrics literature, generally lead to underestimation of the true effects of an explanatory variable in a simple regression analysis when that variable is subject to random measurement imperfections.[18] If the true variables of interest were grossly misrepresented by their empirical counterparts, then the statistical implementation of the theory should have *failed* to demonstrate any of the effects theorized. In particular, only a remarkable coincidence could then explain the fact that, as predicted by my theory, the findings show that the probability

10. *See id.* at 187-92. This direct implication of their remarks notwithstanding, Bowers and Pierce subsequently claim that their regression results are "more adequate and consistent" when they examine only subperiods ending early in the 1960's. *Id.* at 198. Yet by their own analysis, data imperfections clearly are less important in the 1960's than in earlier periods. *Id.* at 190-92.

11. Although health officials are expected, when they can, to distinguish homicides from other violent "external" causes of death, namely accidents and suicides, they clearly experience much difficulty in drawing these distinctions. As late as 1970, for example, in which the *Vital Statistics* reports 16,848 homicides, a total of 5,381 violent deaths are classified as due to undetermined cause, *i.e.*, either accidental or purposeful. U.S. Public Health Serv., Dep't of Health, Education, and Welfare, Vital Statistics of the United States 1970, at 256.

12. Homicides inflicted through legal intervention by police are included in the homicide count reported by the *Vital Statistics*. Only beginning in 1959 can such homicides be separated from the total.

13. This failure to revise leads to an understatement of homicides pertaining to a given year [illegible] occurring in that year that were not reported by the cutoff date.

14. Bowers and Pierce's statement, *supra* note 1, at 189, that the FBI estimates differ from those of *Vital Statistics* by only about three percent for the period after 1939 is quite misleading in view of the magnitude of the year to year differences.

15. Bowers & Pierce, *supra* note 1, at 190; *see id.* at 190-92.

16. *See, e.g.*, Ehrlich, *The Deterrent Effect of Capital Punishment: A Question of Life and Death*, 65 Am. Econ. Rev. 397, 410 (1975) (equation 5 of Table 3 and equation 2 of Table 4).

17. *See* W. Vandaele, The Economics of Crime: An Econometric Investigation of Auto Theft in the United States, 1975 (unpublished doctoral dissertation, Univ. of Chicago).

of arrest (measured by the FBI's clearance ratios) had a proportionally larger impact on the murder rate than the conditional probability of conviction (derived from the FBI's statistics) and that the conditional probability of execution had the least effect. The FBI's reported figures on arrest and conviction in the 1930's surely were not tailored to my theoretical predictions 30-odd years later.

III. The Effects of Deleting Observations

Curiously, Bowers and Pierce's remarks in the beginning of Part II of their paper may convey the impression that I have artificially restricted the time span of my empirical investigation to test deterrence effects. The fact is that my empirical investigation was conducted for the longest time period for which necessary data were available at the time of my study. In contrast, Bowers and Pierce conduct the bulk of their analysis over arbitrarily restricted subperiods after deleting specific observations from the complete data set. Their assertion that "Ehrlich's regression model fits the data better without them"[19] is based upon an erroneous method of inference, as I point out in Part V below. Here I shall address the consequences of discarding the information provided by the observations that they choose to omit.

Selective elimination of a sufficient number of observations from a regression analysis is a virtually foolproof method for reversing any single result derived from an original sample. Imagine, for example, a regression line verifying a negative association between the quantity demanded of corn and the price of corn. Since a majority of the data points typically will not lie on the regression line, the selective exclusion of data points can easily turn a significant negative relationship into an insignificant negative association or even a positive one. Such exclusions are particularly disturbing when the entire sample is relatively small. Indeed, the elimination of data points relating to murder in the 1960's—accounting for 17 percent or more of the full sample which I investigated—amounts to, in practice, the selective, nonrandom exclusion of observations crucial to an efficient estimation of the effects of key deterrent variables.

A. Omitting observations from the 1960's drastically reduces the variability in estimates of the conditional probability of execution and in the modified rates of change of these estimates, which are the actual regressors in the analysis. Whereas the rates of change in this variable had been quite stable for the preceding two decades, the objective (measured) risk of execution declined quite sharply starting about 1960. The sharp movements in the rates of change of the conditional risk of execution are, of course, not my invention—they accurately reflect the objective trend in the *true* risk of execution in the 1960's.[20] In addition, murder clearance ratios, used as objective estimates of the probability of arrest for murder, also exhibit little variability over specific subperiods ending in the early 1960's. Thus, variability in arrest and execution risks is particularly small between the late 1930's and the early 1960's.

It is a well known principle that a minimum amount of variability is necessary to perform a regression analysis. Indeed, an *efficient* sample designed for the purpose of estimating via a regression format the partial effects of specific explanatory variables on a dependent variable is one which maximizes the range of variability in the regressors. Imagine, again, the attempt to confirm the negative association between prices and quantities demanded of corn. The attempt would fail if the subperiod selected by a researcher for his regression analysis is one in which corn prices or their rates of change, whichever are relevant, are relatively stable. The appropriate inference, however, is not that the theory of demand fails to explain movements in corn purchases but rather that the selected subperiod cannot be utilized to estimate the partial effect of corn prices on quantities demanded. The importance of such considerations is apparent in my time series analysis not only in connection with deterrence variables but also in

20. The fact that this trend concerns only 20 states that imposed executions in 1960 has no specific relevance in connection with the estimated deterrent effect of execution, contrary to the unsystematic discussion of Bowers and Pierce, *supra* note 1, at 201. Only a subset, and typically a minority, of states enforced the death penalty in any given year. Many fewer than 20 applied the death penalty in every year from 1933 to 1967. Moreover, aggregating over states which had executions and states which did not implies that the estimated elasticity of the murder rate with respect to execution risk is likely to be biased downward relative to the true elasticity. See Ehrlich, *supra* note 15, at 408.

The inferences drawn by Bowers and Pierce, *supra* note 1, at 201-01, concerning murder rate and execution changes in particular states during the 1960's, are based on a faulty methodology. Their analysis of yearly changes in murder rates and executions in specific states over the six-year period 1962-1967 fails to control for the different trends in apprehension and conviction risks or in any other relevant determinants of murder across these states. It considers the absolute number of executions rather than the theoretically relevant conditional risk of execution in each state. It is based on comparisons of contemporaneous changes in executions and murder rates, comparisons which are not capable of identifying the relevant causal relationships in specific cases. Furthermore, the overwhelming trend in all the states compared over this subperiod was toward a complete cessation of executions. The occasional deviations from that trend in each state in a single year cannot serve as a statistically meaningful basis for the classification of states into those with increasing or decreasing executions. These fundamental shortcomings in Bowers and Pierce's independent analysis pertaining to the 1960's further underscores the importance of applying the *full* econometric framework utilized in my study over as long a period as the data permit in order to isolate the

relation to the effect of the unemployment rate on the frequency of murder. While the association between the latter two variables is found to be positive over the entire sample period, this association weakens substantially when the subperiod relating to the 1930's is excluded from the observation set. The significance of the 1930's in connection with movements in the unemployment rate is well known.

B. A related consideration is that the estimates of the objective risk of execution show a strong time trend over the subperiod ending in the early 1960's. Specifically, the graph plotting the logarithms of these estimates over the time period from the late 1930's to the early 1960's appears to be nearly a negatively sloped straight line. Over the same subperiod the murder rate in the United States also exhibits a continual, systematic negative trend. Because of the significant negative trend in estimates of both the frequency of murder and the conditional risk of execution, the estimated effect of the latter on the former over this specific subperiod may simply reflect the effect of pure time trend.

The differences between regression results based on the full sample and those based on subperiods ending in the early 1960's, including those reported by Bowers and Pierce in their appendix B,[21] are consistent with the arguments developed above. Not only does the effect of execution risk appear to become quite weak as data points are deleted, but the effect of apprehension risk also becomes weak due to lack of variability. As indicated above, the effect of unemployment is also sensitive to the deletion of specific subperiods. More importantly, the negative partial effect of the time trend on the murder rate, which was verified over the entire period considered in my study, becomes "insignificant"[22] in Bowers and Pierce's regression results for subperiods ending in the early 1960's, although over those specific subperiods the murder rate continually declined. Hence the effect of pure trend should have been found to be even more pronounced over these periods. The fact that the effects of both the risk of execution and time trend weaken suggests a high degree of competition or multicollinearity[23] between the two variables over subperiods ending in the early 1960's.

C. The absence of variability and the presence of multicollinearity

21. Bowers & Pierce, Deterrence, Brutalization, or Nonsense, 1975, at 24-26 (unpublished manuscript, Center for Applied Social Research, Northeastern Univ.) (appendix B on file with *Yale Law Journal*) [hereinafter cited as Deterrence].

22. The term "significance" here is used heuristically only to indicate relatively low standard errors. Standard tests of significance do not apply in connection with [illegible] estimation procedures.

are hardly unique to my study but occur frequently in time series regression analyses. The conventional remedy to such problems is to *extend* the sample size so that variability may be enhanced and the separate effects of highly related explanatory variables may be extricated and identified. I have pursued this procedure from the outset in my efforts to extend the sample size into the early 1930's and up to the late 1960's. Bowers and Pierce pursue just the reverse course. Following my own report of weak results obtained from subperiods ending in 1963, they go on to perform most of their independent estimations over subperiods in which little meaningful analysis can be conducted.

D. As for the unfounded claim that somehow "significant" deterrent effects of execution risk and other punishment variables are "present" only in a short span of time relating to the 1960's and are not to be found in earlier (or later) periods, I plan to demonstrate in the near future, through evidence based on state-wide data in earlier years, that the deterrent effects of certainty and severity of punishment—including punishment by execution—are not uniquely associated with a specific set of data points.[24]

IV. The Merits of the Logarithmic Format

In the empirical implementation of my general theory of participation in illegitimate activities,[25] I consistently have emphasized a logarithmic-linear specification of the relevant equations. However, as my following comments will show, while the logarithmic-linear specification appears to be preferable on analytical and experiential grounds, the qualitative results from my time series study do not depend exclusively on this functional form.

The logarithmic-linear form can be justified on practical grounds if the elasticities of a dependent variable with respect to a set of explanatory variables are assumed to be constant to the first order of approximation. A logarithmic-linear specification is a superior regression format when the magnitude of the errors in the data are thought to be proportional to the level of the variables that the data purport

24. Further independent evidence on this point is provided by J. Yunker, The Deterrent Effect of Capital Punishment: Comment, Oct. 1975 (unpublished manuscript, on file with *Yale Law Journal*). Yunker's analysis, conducted over a sample period extending through 1974, yields results indicating that the murder rate declines as the risk of execution rises. The statistical methodology he uses, however, is different from my own.

25. *See, e.g.*, Ehrlich, *Participation in Illegitimate Activities: An Economic Analysis*, in Economics of Crime and Punishment 68-134 (G. Becker & W. Landes eds. 1974) [hereinafter

to measure. It would be rather implausible, for example, to assume that the magnitude of underreported and misreported crime is independent of the level of reported crime. This assumption is implicitly invoked by use of the linear specification in the natural values of the variables, the functional form stressed by Bowers and Pierce.[26] More plausibly, one may assume that the magnitude of reporting errors is proportional to the level of the relevant statistics.[27] Furthermore, in the case of murder investigation, the dependent variable of interest is the rate of capital murder rather than the rate of criminal homicide, the actual measure utilized. Previous researchers have assumed that the capital murder rate and the total homicide rate are proportionally related.[28] It would be convenient at least, then, to use a logarithmic-linear specification which enables a direct estimation of elasticities. Moreover, similar considerations also apply to the observed probabilities of apprehension, conviction, and execution, each of which is based upon data relating to reported willful felonious homicides rather than the true level of capital murders. All these considerations suggest that the efficient functional form underlying the murder supply function is likely to be one that utilizes the logarithms of the dependent variable and the key independent variables. And indeed, "prior" information" accumulated through my past work on crime has led me to emphasize the logarithmic-linear regression format because of its observed relative efficiency.

Bowers and Pierce could have tested statistically for the optimal functional specification of the estimated supply-of-offenses function. In particular, they could have examined the efficiency of the logarithmic-linear specification relative to a specification that is linear in the natural values of all variables. In research now in progress, I have conducted statistical tests of optimal transformations based on a likelihood ratio method. As I plan to demonstrate, the conclusion emerging from these tests is that the logarithmic-linear format not only is decisively superior to the format using the natural values of the variables but that the former generally cannot be rejected as the optimal form within the class of single-parameter power transformations. Bowers and Pierce's demonstration that their regression results tend to deteriorate when running the regressions with natural numbers shows only that they evade the question of which of the two transformations is more appropriate. Hence they not only prefer testing the deterrence

26. Bowers & Pierce, *supra* note 1, at 199.

27. For an elaboration of this point, see Ehrlich, *Illegitimate Activities*, *supra* note 25, at Section IV, Note 1.

hypothesis for subperiods of sharply limited usefulness, but they also prefer an inferior regression format.

As I noted in my paper, the basic results from that study were found to be unaffected qualitatively by the choice of functional form. The regression equation I report below was performed with the antilogarithms (*i.e.*, the natural numbers) of the same set of variables used to derive the results reported in my published paper, and indicates that the qualitative deterrent effects of apprehension, conviction, and execution are not exclusively dependent on a specific functional form.[29] Although the specification in natural numbers appears to be clearly inefficient in view of prior information and other tests, time series regression estimates derived via that format in this equation nevertheless indicate the existence of the expected deterrent effects.[30]

V. Basic Statistical Errors in My Critics' Work

Part II of Bowers and Pierce's critique refers to "errors" in my analysis. The fact is that I have learned of no single error in either my theoretical analysis or the statistical methodology used to implement the theory. In contrast, the work by Bowers and Pierce is riddled with errors and demonstrations of misunderstanding of basic statistical principles. A few examples will illustrate.

A. The "R^2" statistic is essentially irrelevant in connection with a two-stage least squares regression analysis or the related three-round procedure used in my study. Yet, with no qualification whatever, Bowers and Pierce cite this statistic in conjunction with every estimated equation which they report.[31] More seriously, they use the "R^2" statistic as a basis for inference.

B. The "R^2" statistics, as well as standard errors of the regressions, computed for subsamples having different ending dates are relied on

29. $q^* = \underset{(3.806)}{.215} - \underset{(-3.771)}{.000891}\Delta^*P^*a - \underset{(-1.573)}{.000830}\Delta^*P^*a - \underset{(-3.021)}{.00385}\Delta^*PNO_a - \underset{(-2.170)}{.238}\Delta^*L$
$+ \underset{(2.128)}{.147}\Delta^*A + \underset{(5.501)}{.000115}\Delta^*Yp + \underset{(1.062)}{.000269}\Delta^*U - \underset{(-6.857)}{.00372}\Delta^*T.$

The estimated equation above pertains to the effective period 1935-1969. The murder rate is represented by q^*; the risks of apprehension, conviction, and execution are represented by P^*a, $P^*c|a$, and PNO_a, respectively; other symbols can be interpreted from Table 2 of my published paper, Ehrlich, *supra* note 16, at 109, and the numbers in parentheses denote ratios of estimated regression coefficients to their standard errors. The estimate for $\hat{\rho}$ is $-.419$. Not only is the direction of the effect of every variable the same as is found with the logarithmic linear specification, but the predicted ranking of the elasticities of the measures of the three deterrence variables also is observed.

30. J. Vanek, *supra* note 24, performs regressions with natural numbers only. His regression analysis also indicates the existence of a deterrent effect associated with the

by Bowers and Pierce to draw the startling inference that regression results are "more adequate and consistent for the periods with earlier ending dates."[32] Their lack of regard for, indeed their apparent lack of awareness of, the diminishing degrees of freedom associated with smaller and smaller subsamples is astonishing. Even if the regression analysis were based on the ordinary, or classical, least squares procedure, comparison of R^2 statistics and standard errors of the regressions across subsamples with successively smaller degrees of freedom would be improper: as Bowers and Pierce surely know, when the number of degrees of freedom is zero, the R^2 statistic necessarily is unity. It should be noted that the deletion of observations from the full set of observations led Bowers and Pierce to estimate regression equations in which the number of observations is as low as 22 while the number of parameters estimated in the reduced-form regression analysis is 19. They apparently fail to recognize that estimated regression coefficients based on successively smaller degrees of freedom become increasingly imprecise. In particular, estimates based upon so few degrees of freedom as those Bowers and Pierce stress are unlikely to be adequate for rejecting the hypothesis of no deterrent effects.[33]

C. At the end of their article, Bowers and Pierce report results from regressions in which they replace the conditional probability of execution—the theoretically relevant variable—with the absolute number of executions.[34] A finding of a positive association between homicide rates and the number of executions is cited as evidence of the "brutalizing" effects of capital punishment. Bowers and Pierce do not recognize, however, that the positive association may be expected on purely technical grounds. Where there are no homicides there can be no convictions or executions. In contrast, when murder rates rise, with arrest, conviction, and execution risks constant or rising, the number of convictions and executions also would rise. A positive (or zero) association between criminal homicides and the number of executions thus is hardly surprising. Indeed, more than 20 years ago this relationship was noted by Schuessler, who recognized that this correlation does not constitute a test of the deterrence hypothesis.[35]

32. Bowers & Pierce, *supra* note 1, at 190.

33. Unfortunately, on this point, as others, Baldus and Cole, *supra* note 2, at 180 & n.34, 181-85, uncritically accept the inferences drawn by Bowers and Pierce and other critics and, thus, implicitly commit the same errors. Without providing any valid grounds for their assertions, Baldus and Cole even more emphatically assert their judgment that the subperiod analysis provides estimates somehow superior to those obtained from the full sample.

For a definition of the term "degrees of freedom," see note 6 *supra*.

34. Bowers & Pierce, *supra* note 1, at 205 n.45; Bowers & Pierce, Deterrence, *supra* note 21, at 214 n.

35. Schuessler, *The Deterrent Influence of the Death Penalty*, 284 Annals 54 (1952),

D. Although I have focused in this discussion on errors contained in the Bowers and Pierce paper, I should point out that the Baldus and Cole paper also is seriously flawed. For example, Baldus and Cole criticize my study because "the second-stage regression does not hold fixed" the cluster of variables denoted as X_2 in Table 2 of my published work.[36] However, these variables serve in the role of "omitted exogenous variables" in the murder supply equation. The remark shows that Baldus and Cole do not understand the simultaneous equation estimation framework underlying my study. Exogenous variables such as those summarized under X_2 *must* not be held constant in estimating the structural murder supply function. If they were, the two-stage least squares procedure would become meaningless. Their effects, however, are integrated appropriately in the estimation procedure through their incorporation in the reduced form regression analysis. This error by Baldus and Cole betrays quite a fundamental misunderstanding of the methodology which they have undertaken to evaluate. Indeed, in their comparisons of my research with that of previous researchers, they do not note the prime benefit of utilizing the simultaneous equation framework—that it attempts to identify the direction of the causal relationship between the frequency of murder and the deterrence variables. The direction of that relationship is not self-evident. For example, in times of high murder rates, states may be more inclined to convict and execute offenders, or even reinstate the death penalty, than in times of low murder rates. The simple association between these variables thus may give the appearance that, for example, an increase in the risk of execution "leads" to an increase in the murder rate, even though the opposite is true. A simultaneous equation estimation framework is designed to identify causal relations and thus avoid potentially biased results.

VI. The Gap Between Evidence and Inference in Previous Research

Bowers and Pierce and, in greater detail, Baldus and Cole, rely heavily on previous research, especially that of Thorsten Sellin, as

as well as by Baldus and Cole, *supra* note 2, at 183 n.45, who also fail to recognize the technical association between homicide and execution rates. It might be noted that Schuessler, at 53-60, went on to attempt a test of the deterrence hypothesis by measuring the simple correlation coefficient between homicide rates and a measure of the risk of execution in 41 executing states over the period 1937-1949. Although he found the correlation coefficient to be −.526, indicating that the murder rate falls as execution risk rises, and although this negative association turns out to be significant statistically at the five percent level for a one-tail test, neither Bowers and Pierce nor Baldus and Cole mention this result.

[illegible] *supra* note *, at 182 n.41.

evidence against the deterrence hypothesis.[37] In this section I shall briefly comment on the research by Sellin and others concerning the deterrence hypothesis.

The principal shortcoming of Sellin's research and related work is that the approach taken and the methods applied do not permit a systematic test of the main implications of the general theory of deterrence, a theory which posits that potential offenders respond to incentives. The shortcoming is basic because the implications following from the *general* deterrence hypothesis are what Sellin was attempting to challenge empirically.[38] Yet his work neither develops nor tests the full range of implications following from the theory that he attempts to reject; nor is a competing theory developed and tested. In addition to implying that punishments in general, and executions in particular, may deter crime, the general deterrence hypothesis provides the testable expectation that punishments imposed only with relative infrequency will have less impact than those imposed with a high degree of certainty. The theory of deterrence predicts not only the direction of effects of, for example, equal percentage changes in the relevant apprehension, conviction, and execution risks, but also the relative order of magnitude of these effects. Although the basic premise of these and other testable implications is that, on balance, potential offenders respond to incentives, Sellin never devised an analytical framework for rejecting this general hypothesis. More significantly, to my knowledge Sellin never reported any parametric or nonparametric statistical tests that could justify his rather strong conclusions. In all, there exists a considerable gap between the limitedly useful evidence provided by Sellin and others following his methodology, and the rather emphatic inferences drawn.

Two examples may illustrate this conclusion. Sellin has compared homicide rates in "abolitionist" and "retentionist" states, as defined by the legal status of the death penalty. But Sellin never accounts for the extent of the actual enforcement of the penalty in retentionist states. Yet by his own analysis, the suggested relevant variable is the risk of execution, not merely its legal status, for "were [the death penalty] present in the law alone it would be completely robbed of its threat."[39] The point is far from being subtle. In a number of "retentionist" states whose homicide rates are compared to neighboring abolitionist states, the execution risk was negligible throughout the entire period investigated by Sellin. For example, in Vermont, New Hampshire, South Dakota, and Nebraska, the death penalty was imposed only rarely after 1920; Massachusetts had no executions after 1917. Not surprisingly, with no allowance for actual execution risks, Sellin's simple graphical comparisons of homicide rates across different states do not *appear*[40] to uncover considerable differences. But could such observations justify his inference: "The conclusion is inevitable that the presence of the death penalty—in law or practice—does not influence homicide death rates?"[41]

This deficiency is even more glaring in tests attempted by Bowers in another work to determine the effect of the moratorium on executions in the United States.[42] Following Sellin's methodology, Bowers compares the levels of murder rates in nine arbitrarily chosen mixes of neighboring states in the four years preceding and subsequent to the judicial moratorium. He reports similar patterns in most groups. However, the plain fact is that *none* of the states in eight of the nine groups had a single execution throughout the period. And in the ninth group, Bowers creates a dubious distinction between New York, classified as abolitionist, and New Jersey and Pennsylvania, classified as retentionist, although New York ceased all executions in 1963—the same year as New Jersey and one year after Pennsylvania. That such comparisons are used as a basis for inference about the deterrent effect of capital punishment taxes one's imagination.

A second general shortcoming characterizing previous research on this issue by Sellin and others is the absence of any systematic standardization of data so that the effect of execution risk can be isolated from the effects of other factors that not only may influence the murder rate but also are expected to be systematically related to the risk of execution. Clearly aware of the general problem, Sellin has emphasized the need to compare states that are "as alike as possible."[43] However, his assumption that neighboring states satisfy this prerequisite is unacceptable. Pairs of neighboring abolitionist and retentionist states, such as Illinois and Wisconsin, Michigan and Indiana, or Massachusetts and Rhode Island, differ in their economic and demographic characteristics, in their crime rates and law enforcement activity, and presumably also in their medical services available to

victims of aggravated assaults.[44] In addition, as my analysis has shown,[45] variation in the legal status of the death penalty occasionally may be a result, rather than a cause, of changes in murder rates and thus may give rise to an apparent positive association between the two variables. For these reasons, the true effect of the death penalty on the murder rate cannot readily be inferred from simple comparisons of the sort performed by Sellin and others.

VII. The Proper Measurement of the Restraining Effect of Capital Punishment

My critics allude to my having inappropriately or incompletely estimated the deterrent effect of capital punishment because I neglected the interdependencies among apprehension, conviction, and execution risks.[46] The fact is that I have stressed and integrated these interdependencies both in my theoretical analysis and in the empirical investigation.[47] Both pairs of authors suggest that the only proper means of estimating the deterrent effect of the death penalty is by allowing apprehension and conviction risks to "vary" with execution risk rather than by holding them "constant," thereby estimating the "total" effect of the penalty. In fact, I have treated empirically both the "partial" effect of execution risk—by controlling for the apprehension and conviction risks—and the observed "total" effect—by estimating the effect of execution risk through a reduced form regression analysis controlling only for exogenous and predetermined variables. The former procedure is without question the only proper way of verifying

44. The performance analysis of Baldus and Cole, *supra* note 2, at 177 n.30, on this point shows little appreciation of the issues involved. At Table 111 their list of data purportedly for one year is a mix of data drawn from two different years (1960 and 1980). Yet the issue on which they are leveling evidence is the extent to which Sellin "controlled for other factors" in each and every year of the 40-odd years considered in his studies. There still exists substantial variation in the variables Baldus and Cole compare within the five groupings of states they consider. They have not presented data for the sixth grouping considered by Sellin. The data sources they cite for the construction of their permanent income measures for the states are not capable of generating such statewide measures. Their inferences about the impact of specific variables on the murder rate in each state are not based on any systematic analysis. In three of their five cases, a retentionist state has the lowest homicide rate within a particular grouping—a fact they choose not to mention. By Baldus and Cole's analysis this fact might be viewed as evidence for deterrence. I am not suggesting, however, that such inference can be justified given the fragmentary nature of the analysis. More generally, I question the logical basis for preferring a statistical method that provides only indirect and incomplete control for specific variables expected to have an impact on the crime rate over a regression analysis attempting to control these variables directly.

45. Ehrlich, *supra* note 16, at 406.

46. *Id.*; *supra* note 21, at 6 n.9; Baldus & Cole, *supra* note

the hypothesized deterrent effect of execution risk, for the theory predicts that an increase in the conditional risk of execution at *given* levels of apprehension and conviction risks would have a deterrent effect on the incentive to commit murder. For the quite distinct purpose of evaluating the overall desirability of capital punishment as an instrument of policy, both estimation procedures, in principle, can provide useful guidance. Indeed, both are reported in my study. Although the "total" effects associated with a few measures of execution risk appear somewhat smaller than their estimated "partial" effects, the quantitative differences are generally small.

It should be pointed out, in this connection, that my critics misconstrue the theoretical predictions relating to the "total" deterrent impact of the risk of execution. While unwarranted movements in execution risk are expected to induce opposite movements in apprehension and conviction risks, the magnitudes of the resulting effects will not necessarily offset the effect of the initial change in execution risk. Moreover, the theory implies that no such compensatory movements[48] are expected when the initial shift in execution is viewed as *warranted*. For example, if there were universal agreement that reinstatement of capital punishment under specific conditions were socially optimal, then there is no compelling reason to expect that juries would be less inclined to convict offenders charged with capital crimes. Levels of apprehension and conviction risks could also be maintained through an appropriate allocation of resources to specific law enforcement activities. Thus estimates of "partial" effects of execution risk, as well as of apprehension and conviction risks, provide useful information from a policy viewpoint.

Concluding Remarks

The basic issue underlying my theoretical and empirical investigation of murder has not been merely the deterrent efficacy of the death penalty but the more general issue of offenders' responsiveness to incentives. My time series analysis of the trend of murder in the United

48. In reference to these possible compensatory changes in apprehension and conviction risks, both Bowers & Pierce, Deterrence, *supra* note 21, at 6 n.9, and Baldus & Cole, *supra* note 2, at 182 n.42, cite an exercise in an unpublished paper by P. Passell & J. Taylor, 'The Deterrent Effect of Capital Punishment: Another View,' Feb. 1975 (Discussion Paper No. 74-7509, Columbia Univ. Dep't of Economics) (on file with *Yale Law Journal*), as evidence that the "total" effect of execution risk on the murder rate is likely to be positive. Ironically, neither pair of authors apparently understands the exercise by Passell and Taylor which has nothing to do with the "compensatory" changes discussed above. In fact, I believe that the exercise by Passell and Taylor is internally inconsistent and irrelevant, but since their paper has not been published yet I

states should not be evaluated as an isolated experiment but rather is part of the more general research into offenders' behavior. Viewed in this more general context, the new research by myself and other social scientists in recent years has lent considerable support to the proposition that, in the aggregate, potential offenders respond to both negative and positive incentives. The growing body of new research by economists and sociologists has indicated the existence of deterrent effects of severity and certainty of punishment as well as other systematic regularities attributable to the effects of incentives.[49] These conclusions have been demonstrated in studies using data from different times and different places. My research on the deterrence effect of capital punishment has produced results compatible with this new evidence.

The bulk of my critics' analyses challenges neither the theoretical formulation of the deterrence hypothesis nor the statistical techniques used in the theory's empirical implementation. Neither Bowers and Pierce nor Baldus and Cole[50] present valid tests that reject the deterrence hypothesis. I hope that their work does not baffle the lawyer pondering the merits of using an economic approach to law or of using statistical techniques to study legal questions. The statistical methodology is quite useful and relevant when appropriately applied. Contrary to the inferences of Bowers and Pierce, their study does not present statistically meaningful evidence that the risk of execution has no deterrent effect, let alone that it has a "brutalizing" effect, on the frequency of murder in the population.

In this reply, I have elaborated upon some aspects of my research which, because of space limitations, have not been fully discussed in my published paper on the death penalty. Needless to say, my discussion here is not a substitute for the published paper. The paper discusses the analytical framework underlying the general deterrence hypothesis, which is the main issue of concern in my research. It also elaborates upon the methodology needed for meaningful tests of that hypothesis. The paper also stresses the limitations of the empirical investigation and the tentative nature of the findings. Indeed, as I stated, conclusions based on studies of historical data necessarily are qualified in view of the difficulties of measuring efficient empirical counterparts of relevant theoretical constructs and in view of intrinsic limitations of statistical inference. However, data imperfections are likely to work *against*, not in favor of, the theorized deterrent effect of punishment and the effects of incentives in general. It is thus remarkable that the evidence of my time series analysis and additional research repeatedly has proven not inconsistent with rather sharp predictions emanating from the deterrence hypothesis. I have not claimed, however, that my research settles the issue of the deterrent effect of capital punishment. Nor have I advocated the use of capital punishment. As I stressed in my paper, the issue of deterrence is but one of a myriad of issues relating to the efficiency and desirability of capital punishment as a social instrument for combatting crime. The study of the deterrent effect of capital punishment is of considerable independent importance in connection with the hypothesis that potential offenders on the whole respond to incentives. Research on this issue undoubtedly will benefit in the long run from legitimate attempts to use more efficient data and statistical techniques than those heretofore employed in studies of capital punishment.

50. Baldus and Cole do not present evidence of their own. They rely mainly upon Sellin's work as evidence, which I discuss briefly at pp. 221-21 *supra*. Their discussion in Section IV merely repeats other authors' inferences and judgments concerning [illegible] which may prove to be unjustified or premature. It is beyond

to organizations which, unlike the typical business corporation, do not seek profit.

In these pages we have distinguished between public service organizations—institutions which channel the largesse of some ... in the interest of others—and mutual benefit organizations, w... in purpose is to allow individuals to pool their income in order ... spend it more efficiently. Public service organizations do not produce income which can easily be assimilated to the "profit" produced by a business for the benefit of investors. Even if this inherent unsuitability of an income tax were disregarded by imposing an arbitrary concept of "income" on their financial activities, the burden of the tax would not reflect the ability to pay of the individual beneficiaries.

The activities of mutual benefit organizations that consist simply in the members' doing together what they could do separately without income tax consequences (such as buying food or operating social facilities) are not fit objects of taxation. But such organizations may also do business with nonmembers or invest in assets which produce income inuring to the benefit of their members. There is no reason to permit income of these types, which would be neither excludable nor deductible from taxable income in the hands of an individual, to escape taxation when acquired under the umbrella of an organization. Frequently, however, the investment income of mutual benefit organizations would not be taxed if it were imputed to (or realized in the first instance by) the group's members, because it is used to defray expenses which the individuals would be entitled to deduct. One example is the investment income of a labor union, used to pay expenses serving the occupational interests of its members; another is a trade association's investment income, used for business expenses or to reduce the members' dues and assessments. In both cases, if the investment income were imputed to (or realized by) the members, they would be entitled to offsetting deductions under § 162. This is why to tax such income would be in effect to penalize taxpayers for doing together what they could do separately without being taxed. In sum, mutual benefit organizations should be taxed only to the extent of their investment income if such income would not be immune from tax in the hands of their members, or to the extent they do business with nonmembers in a way that produces something akin to "profit."

The Deterrent Effect of Capital Punishment: Ehrlich and His Critics

Jon K. Peck†

Editors' Introduction

In the December issue, the *Journal* published a statistical debate on the deterrent effect of capital punishment between Professor Isaac Ehrlich and two sets of critics, Messrs. Baldus and Cole and Bowers and Pierce. Professor Ehrlich's original study of capital punishment, published last spring in the *American Economic Review*, used sophisticated statistical techniques to arrive at conclusions very different from earlier research in the field.[a] Using regression analysis and economic theory, Ehrlich formulated and tested a model of the determinants of the murder rate, and found a significant deterrent effect associated with the use of the death penalty in the United States over the period from 1935 to 1969. The earlier research of Thorsten Sellin and others had consistently found no evidence of a deterrent effect. The issue of deterrence—in particular the technical merits of the Ehrlich study—has been raised in cases pending before the Supreme Court challenging the constitutionality of capital punishment.[b]

In their critiques in the previous issue of the *Journal*, Baldus and Cole argue that Ehrlich's approach is less appropriate for testing the deterrent effect of capital punishment than are the less complex techniques used in

earlier research;[c] Bowers and Pierce adopt Ehrlich's approach but argue that no evidence of a deterrent effect is found when his method is correctly applied.[d] Ehrlich's reply defends the findings of his original study and attacks the analysis of his critics.[e] In this issue, Professor Peck comments on the debate between Ehrlich and his critics, and Professor Ehrlich adds a brief Rejoinder.

In his study of the deterrent effect of capital punishment, Professor Ehrlich estimated a sophisticated econometric model of a type common in more traditional areas of economic analysis.[f] As in any empirical analysis, his econometric specification and choice of data require assumptions beyond those which may be derived from his theoretical analysis. These assumptions concern the functional form of the relationship between the murder rate and its determinants, the form of the remaining but unestimated equations in the overall model of the supply and (negative) demand for murder, the nature of the random disturbance term, the stability of the coefficients over time, the accuracy and appropriateness of the data, and the consequences of aggregating the behavior of individuals to the national level. The correctness of many of these assumptions depends on the correctness of others in this list. Ehrlich's assumptions have been challenged by Bowers and Pierce and by Baldus and Cole in articles in the previous issue of this *Journal*. In this Comment, I will discuss some of their criticisms of Ehrlich's analysis, suggest ways of resolving these disagreements, and point out some weaknesses of the paired-state or matching method—the approach which Baldus and Cole prefer to Ehrlich's regression technique. In addition, I will address briefly Ehrlich's reply to the two critiques of his work.[g]

I. Ehrlich's Critics

Both critiques address the issue of the proper functional form of the relationship between the murder rate and its determinants. It is claimed that evidence of a deterrent effect is found with the logarithmic form but not with the linear form, and that therefore Ehrlich's results depend critically on his choice of functional form.[h]

It is quite true that the incorrect use of a logarithmic form can cause the relatively small values for execution risk in the recent years in Ehrlich's sample to appear to be statistical aberrations which strongly influence the regression line. While the critiques point out the difficulty with using a logarithmic form for values of execution risk approaching zero,[i] there are also problems with using the linear form for these values.[j] The theoretical analysis is not much help in choosing the correct functional form, but the data are. Statistical tests applied to the data can determine the best form over a range of possibilities which includes both the linear and logarithmic forms.[k] Of course neither form is likely to be exactly right, but only an approximately correct shape for the function is needed.

The related question of whether the same model adequately covers both the earlier and later sample periods—whether there is a structural change in the underlying relationship over time—is also a testable proposition. Bowers and Pierce find that the sign of the estimated elasticity of the homicide rate with respect to execution risk changes when the most recent years are dropped from Ehrlich's time series. They reject the possibility that the effect of the death penalty changed in recent years and conclude that the negative association between execution risk and the homicide rate is merely a statistical artifact.[l] But neither Ehrlich nor these critics have rigorously tested for structural change over the sample period. One such test recently reported found evidence of a significant structural shift between the periods 1948-1962 and 1963-1969.[m] In other words, in the recent subperiod the murder rate may be determined by different factors or may be determined by the same factors in a different way. However, the evidence of what appears to be structural change may also be the result of an incorrect specification of the model for the entire time period.

2. Bowers and Pierce stress the inaccuracy in Ehrlich's crime data for the early years in his sample.[9] The seriousness of this problem is impossible to judge. However, the FBI procedure—retroactively readjusting the early data based on analysis of the effects of later increases in the coverage of the reporting network—is similar to the accepted Census Bureau method of adjusting economic time series data for the effects of seasonal variation by using adjustment factors computed in part from later data. The time series generated by the FBI procedure may be amenable to regression analysis.

The inaccuracy of the data is compounded by the inability of Bowers and Pierce to replicate Ehrlich's estimates.[10] I do not know who is correct, but the differences seem too large to attribute to small differences in the definition of the variables or to correlations among the explanatory variables.[11] Ehrlich is clearly right in suggesting that the large differences in the estimates of the serial correlation coefficient reported by him and by Bowers and Pierce raise the question of error in the computation of this and other more important coefficients.[12] Good standards of documentation require that authors spell out exactly their computational procedures and identify the computer programs used.[13]

3. As Baldus and Cole emphasize, the level of aggregation of the analysis has an important effect on the validity of the conclusions.[14] If there are substantial state or regional variations in behavior, and if arrest and punishment for homicide primarily involve the behavior of individuals and states, then estimation of the model ought to be done at the level of the state or, better, the individual. Nothing in Ehrlich's general approach precludes an application of his model to more disaggregated data.[15] However, aggregate analysis is frequently performed in conventional economic problems with reasonable effectiveness. Such an analysis will be free of a statistical bias if the additional variables which ought to be included at the disaggregate (*e.g.*, state) level of analysis are unrelated to the explanatory variables at the aggregate level. However, the omissions will reduce the ability of the aggregate model to predict the murder rate.

4. The most basic point raised by Ehrlich's critics is the challenge by Baldus and Cole to his use of economic theory and regression analysis rather than experimentally based statistical procedures. The above enumeration of the problems with Ehrlich's analysis might suggest that an econometric approach to this problem is hopeless and that the paired-state comparisons endorsed by Baldus and Cole should prevail.[16] But there are also difficulties with the latter approach, especially in a situation in which some relevant variables cannot be controlled or even measured.

Ehrlich begins with a careful economic analysis of the determinants of murder. Many researchers, including some economists, might object that his theory applies at best only to a small subset of homicides and that he has failed to identify and take into account some important causal factors. To the extent that these variables can be specified and measured, they can be tested and controlled for; to the extent they cannot be so identified, one must assume they are not related to the other explanatory variables. If this assumption is false, Ehrlich's results are biased. For some of the variables, such as the urban migration rate, which Baldus and Cole suggested should be included,[17] the assumption seems plausible; for others, such as the level of crimes against property, the assumption seems implausible.

Any analysis must proceed conditionally on the specification of the model. Ehrlich's econometric approach involves many assumptions, some of which are testable; if these assumptions are true or nearly true,[18] his method is able to use them to detect effects which might be too small to detect in a less fully specified model. No one claims that the deterrent effect of capital punishment is large, and it is consequently very important to bring the data to bear on the question as efficiently as possible. Ehrlich imposes a theoretical framework on his empirical analysis and necessarily makes more assumptions than are required in the paired comparison analysis. If these assumptions

10. *Compare id.* at 195 n.19 (Table III) *with* Ehrlich, *supra* note a, at 410 (Table 1), *see Ehrlich Reply*, *supra* note e, at 210-11.

11. For an explanation of why this problem—known as multicollinearity—may lead to large differences in estimated coefficients with small differences in the data sample, see R. Wonnacott & T. Wonnacott, Econometrics 59-63 (1970).

12. *Ehrlich Reply*, *supra* note e, at 211. The serial correlation coefficient measures the correlation between successive values of the disturbance term. If there are computational errors in the calculation of this coefficient, there will also be errors in the computed elasticities for the explanatory variables.

13. In his reply, Ehrlich does identify the computational procedures he used, and they appear to be reliable. *Id.* at 211 n.7.

14. Baldus & Cole, *supra* note c, at 175-77.

15. Ehrlich asserts that his new unpublished research using statewide data supports the findings of his original study. *Ehrlich Reply*, *supra* note e, at 217. Since I have not seen this work, I cannot comment on it. However, a recently published study based on a theoretical model similar to Ehrlich's found no evidence [illegible]. *Deterrent Effect of the Death Penalty: A Statistical Te[illegible]*

16. The paired state or matching method compares homicide rates in neighboring abolitionist and retentionist jurisdictions which are as alike as possible with respect to influences on the homicide rate. See Baldus & Cole, *supra* note c, at 171-72, 177.

17. *Id.* at 180.

18. *See, e.g.*, Fisher, *On The Cost of Approximate Specification in Simultaneous*

are wrong, his conclusions are wholly or partially invalid. But many of these assumptions are testable.[19]

The matching approach has its own set of difficulties. It imposes relatively little explicit structure on the problem and is perhaps less likely than the econometric approach to find effects which are weak. The fundamental problem, however, is that the data are not generated in a controlled experiment. In making matched pairwise comparisons, the choice of pairs is inevitably subjective. To ensure that states are matched on all relevant variables requires a theory just as detailed as in an econometric analysis. In a classical experimental procedure, the control states and treatment levels are assigned randomly to observations to ensure that the effects of omitted variables are not systematic. This is obviously impossible in a "social experiment" where the death penalty is the treatment variable. Even if states are correctly matched in terms of the averages of all relevant variables, other differences may be important. For example, of two states with the same average permanent income, one may have a much greater proportion of low income families than the other. If low income families were disproportionately responsible for homicides, the pairing of the two would be inappropriate.

Another difficulty is the problem of spillovers between states. If state *A* has and uses the death penalty and its paired state *B* does not, it is possible that potential murderers would migrate to state *B* to avoid the death penalty and would thereby cause state *B* to have a higher homicide rate. One could not extrapolate from this comparison to a situation where all states or no states used the death penalty, since in that situation no one could avoid the penalty by migrating to an abolitionist state. Put another way, a murderer might be determined to commit the crime, regardless of the penalty, but might choose to commit it in the state where the consequences are less costly to him. The results of this behavior would give the appearance of a deterrent effect when none is present.

A final difficulty is the possible response of punishment policies to homicide rates. For example, if high or rising homicide rates led states to institute the death penalty and low or declining rates led states to abolish the penalty, retentionist states would tend to have higher homicide rates. This relationship could cancel out a possible negative correlation which would be produced if the penalty were in fact a deterrent. The paired-comparison approach cannot adequately

19. The argument for assuming the validity of certain basis (and statistically assessable) covariate procedures in order to test more specific hypotheses is summarized in

separate these effects, and consequently could fail to yield evidence of an underlying deterrent relationship. On the other hand, the particular regression procedure used by Ehrlich specifically takes account of the possible response of punishment variables to the murder rate.[20]

Any properly executed statistical analysis must include careful diagnostic checking of the model and consideration of alternative models which might also be consistent with the data. When using aggregate time series data, a number of different specifications are usually in general accord with the evidence. Thus the choice among competing models must be based on underlying theoretical analysis and on such empirical clues as particular data points which do not fit the model, correlations among explanatory variables, and stability of the important results under alterations in untestable and weakly maintained assumptions. For the reader to understand and evaluate the author's conclusions, some summary statement of the author's examination of this evidence is vital.[21] Any sound regression analysis must provide such a statement. Diagnostic procedures may be less necessary for a paired-comparison analysis, which requires fewer assumptions, but the diagnostics should include, for example, an investigation of the sensitivity of the findings to the choice of pairings.

II. Ehrlich's Reply

1. In his original article, Ehrlich emphasized as support for his analysis that the ranking in order of magnitude of the estimated effects of his three deterrence variables conforms to his theoretical predictions.[22] In his reply, he emphasizes that Bowers and Pierce, in attempting to replicate his results, obtained the same ranking for these estimates.[23] However, he does not show that this ranking would be inconsistent with other theories of the relationship between capital punishment and the murder rate. In the absence of such a demonstration, this evidence does not provide the strong support he claims.

20. In a regression equation in which the dependent variable (here the murder rate) exerts a causal influence on an explanatory variable (here the fraction of those convicted of murder who are executed), the equation must be estimated as if embedded in a larger model which simultaneously determines both variables. Ehrlich used a procedure appropriate for simultaneous equation estimation. *See* Ehrlich, *supra* note 3, at 406; *Ehrlich Reply*, *supra* note 6, at 319 (use of three round regression procedure related to two stage least squares).

21. In his reply, Ehrlich states that the results of diagnostic tests performed in the course of his research now in progress show that the logarithmic form is optimal for estimating his equation. *Ehrlich Reply*, *supra* note 6, at 208 (likelihood ratio tests for optimal functional form within the class of single parameter power transformations).

22. Ehrlich, *supra* note 3, at 411–416

2. Ehrlich argues that the presence of errors of measurement in a variable can only weaken the variable's estimated effect and hence that improvements in the data could only strengthen his conclusions.[24] Economists are nearly always forced to use imperfect data and yet have drawn many strong empirical conclusions from them. But only the most harmless sorts of measurement error unambiguously reduce the estimated effects of a variable. If measurement errors in a variable are correlated with each other over time or are systematically related to other variables in the analysis, reducing the measurement errors will not necessarily strengthen the estimated effect. For example, when crime rates are high, the police may feel increased pressure simply to arrest someone for a crime even if that person is subsequently released. In Ehrlich's model the probability of arrest of the murderer, which is measured by the percent of murders cleared by an arrest, would then contain a measurement error correlated with the homicide rate. Because of the possibility of nonrandom measurement errors, Ehrlich should not assume that the true effects of execution risk and the other deterrence variables are systematically larger than the estimated effects.

3. Ehrlich argues that Bowers and Pierce have selectively deleted observations in order to distort his empirical findings.[25] However, examining subsets of the data to see if they are mutually consistent is an important part of validating a regression analysis. It is particularly important to examine the recent data, which in Ehrlich's analysis are most affected by the logarithmic transformation and which are in any event most relevant for policy analysis. Ehrlich correctly points out that estimation from a subset will be inefficient because of the reduced variability in the sample,[26] but he overlooks the purpose for estimating over subperiods—checking the specification of the model. When he analogizes the subperiod estimations performed by Bowers and Pierce to the selective deletion of observations in a regression analysis of the relationship between corn prices and quantities of corn demanded, he misses the point. In the terms of his example, Bowers and Pierce are asking whether the nature of the demand for corn has changed since the explosion in food prices of a few years ago; they are not trying to reverse the slope of the regression line by eliminating particular data points that give the line a negative slope.

4. Ehrlich defends his use of the logarithmic form for estimating his equation, but he does not address the problem of how to treat very small or zero values in the variables, a problem which is central to the criticisms made by Bowers and Pierce.[27]

5. Ehrlich attacks the conclusion of Bowers and Pierce that the regression results are better for samples which omit the data from the 1960's.[28] While he correctly identifies statistical errors in their discussion, their basic finding—that whether the estimated effect of execution risk on the murder rate is positive or negative depends on the ending point of the sample period—casts doubt on the stability of Ehrlich's results.

None of the studies considered here can be said to have resolved the question whether the death penalty deters murder. The regression approach can be improved by better specification, better diagnostic testing and disaggregation. The analysis should consider time series data on states in ways that to some extent bring it closer to the paired-comparison method. Thus a resolution and synthesis of these approaches may be possible. Ehrlich concludes in his reply that no statistically meaningful evidence has been presented against his analysis and that his analytical framework withstands the criticisms raised against it. Without denying the usefulness of his approach, which appears to me potentially fruitful, I believe that his particular finding of a deterrent effect rests on as yet inadequately tested assumptions and on an incompletely validated model. I shall await with considerable interest his further contributions on the questions raised in this debate without, for the moment, concluding that he has established a statistically significant deterrent effect.

Finally, I would like to note that according to Ehrlich's equations, a one percent change in per capita income or labor force participation has a much greater effect on the homicide rate than does a one percent increase in the use of capital punishment.[29] Even if the deterrent effect of capital punishment were of statistical significance, it may be so small relative to other influences on the murder rate that it is of little practical significance.

25. *Id.* at 209, 211-17.

26. [illegible] should also be noted that there are alternative estimation pro-

27. *See* p. 361 *supra*. Ehrlich also asserts that using the natural rather than logarithmic values of the variables yields evidence of a deterrent effect. As independent support for this conclusion, he cites an unpublished paper by J. Yunker, The Deterrent Effect of Capital Punishment: Comment, Oct. 1975 (unpublished manuscript, on file with *Yale Law Journal*). I believe Ehrlich would reject the analysis in that paper on grounds similar to his criticism of Sellin's work. Further, Yunker's conclusion that "the real [deterrent] effect is at least five times the size of the effect estimated by Professor Ehrlich" is unmitigated conjecture. *Id.* at 17. The paper also appears to contain technical errors.

28. *Ehrlich Reply*, *supra* note c, at 219-20.

29. *See* Ehrlich, *supra* note a, at 402-10 (Tables 2 & 3) (elasticities for labor force participation and per capita income substantially larger than for conditional probability of execution).

Rejoinder

Isaac Ehrlich†

I appreciate Professor Peck's undertaking to comment on my reply, published in the last issue of this *Journal*, to critics of my work on murder and capital punishment. I wish to address briefly only a few of his remarks.

Peck suggests that the results of my regression analysis concerning the ranking of estimated elasticities of the murder rate with respect to measures of apprehension, conviction, and execution risk could be consistent with alternative theories of crime. In principle, such a possibility never can be denied. I believe his criticism would have been more constructive had he identified what specific theories he has in mind. Unfortunately, he errs in stating that I have not examined this possibility myself. In my own study, I have addressed the issue of whether a theory of crime based upon incapacitating effects of punishment could produce the same ranking of elasticities observed in the study.[1]

I believe that Peck mistakenly ascribes to me an argument that I have not advanced. I have not argued that "errors of measurement" can *only* work against the hypothesized deterrent effect. My reference to the classical case of "errors of measurement" has been quite specific. Curiously, contrary to his own argument, Peck's example in which errors of measurement in apprehension risk are *positively* correlated with the murder rate[2] does, of course, further illustrate why "errors of measurement" are likely to work against the hypothesized deterrent effect of apprehension. My basic point has been that if the variables used in the empirical analysis grossly misrepresent the theoretical variables that they purport to measure, then there is no reason to expect findings consistent with the detailed theoretical predictions.

I am glad Peck agrees with my criticism of statistical errors committed by my critics in their inferences from regression analyses of

subperiods of the full sample.[3] I do not agree with him, however, that my critics' work has addressed the issue of the stability of the regression equation, since they report no tests of stability. Nor do any of the works cited by Peck provide valid tests of stability. While I could not address this technical issue directly in my reply, I did indicate what I believe are the basic reasons for the apparent weak results obtained from analysis of certain specific subperiods.

Many difficulties in research on criminal behavior should rightfully occupy the thoughts of interested scholars, and skepticism is the essence of scholarly work. I am grateful to the editors of the *Yale Law Journal* for allowing me to express my skepticism on some aspects of the work that has been conducted in this area and to elaborate upon my own research.

3 *Id.* at 367.

It may also be of some interest to note that the test of optimal transformations in connection with the form of the regression equation the Box and Cox procedure - - - Peck suggests as the way of determining the efficiency of the logarithmic-linear form is the same one to which I have already referred in my reply. *Compare id.* at 367 n.6 *with* Ehrlich, *Deterrence: Evidence and Inference*, 85 YALE L.J. 209, 218 (1975). Peck does not recognize, however, that the problem of treating zero values of variables can be overcome through an appropriate transformation.

V. Conclusion

This Article concludes this four-part series on oligopolistic pricing. As has been demonstrated, contrived oligopolistic pricing suits will create many allocative and distributional benefits, particularly when they are brought in industries in which D/QV and P/MC are higher than average. Therefore, I have no doubt about the desirability of prosecuting oligopolistic pricing under the Sherman Act whenever it can be proved that explicit anticompetitive threats or promises have been communicated. In fact, although any final conclusion about this issue must await further evidence about the cost of proving illegal oligopolistic pricing whenever verbal threats or promises cannot be proved directly, I suspect that it also would prove desirable to bring (explicitly or implicitly) contrived oligopolistic pricing suits under the Sherman Act on the basis of the kind of circumstantial evidence described in Part III—at least in industries in which D/QV is not too far below average. Indeed, I even think a very good case can be made for passing new legislation that would condemn natural as well as contrived oligopolistic pricing—or at least for trying to prepare the way for such legislation by attempting to educate the business community and the general public to recognize the harmful effects of this practice and, concomitantly, the desirability of its prohibition. In any case, I believe that it would be desirable to prohibit the kind of premature announcement of prices that facilitates natural oligopolistic pricing.[38] I hope that this Article has established not only these results but also the usefulness of applying a sophisticated welfare economics framework when trying to evaluate micro-economic policies.

38. On the other hand, I doubt the desirability of prohibiting a seller from taking advantage of the fact that his rivals would not charge his customers conventional competitive prices even if he would not respond to their behavior, and I am certain that one should not preclude firms from taking advantage of their own competitive advantages. In brief, I would oppose both such prohibitions because I suspect that they would tend to result in too little QV investment being made in a world in which oligopolistic pricing was prohibited and consumer surplus was abundant. *See* Cha*hot*, *supra* note 11, at 37–38; Three Types, *supra* note 20.

The Deterrent Effect of the Death Penalty: A Statistical Test*

Peter Passell†

Any number of arguments may be brought to bear on the issue of capital punishment. One might, of course, oppose or favor the use of the death penalty on moral considerations alone. Equally reasonably, one's opinion might be shaped by how fairly the punishment is administered in practice; the penalty may be applied selectively[1] or reserved for a narrow range of crimes that resist precise legal definition.[2] For many people such arguments alone are not likely to be persuasive. Execution may be commonly viewed as a distasteful alternative to other forms of punishment, but an alternative that could be defended on pragmatic grounds, if the gains in crime prevention are sufficiently great. Thus, informed public opinion might in theory be strongly influenced by evidence of capital punishment's capacity to deter murder and other crimes. If the death penalty were shown conclusively to deter violent crime, many people with moral or legal reservations would accept the costs of the deterrent to obtain its benefits.

The deterrent effect of the death penalty is of particular interest today because courts and legislatures are in the process of redefining the circumstances under which convicted felons may be executed.[3] While the legal merits of the death penalty could be determined by arguments unrelated to

* The author is extremely grateful for the assistance of Lee Friedman, David Kennett, and John [illegible] in the preparation of this Article.

† B.A. 1966, Swarthmore College; Ph.D. 1970, Yale University; Assistant Professor of Economics, [illegible] University.

1. Indeed, the possibility of selective application was the rationale of *Furman* v. *Georgia*, 408 U.S. 238 (1972): "[W]e know that the discretion of judges and juries in imposing the death penalty enables the penalty to be selectively applied . . . ." *Id.* at 255. "[T]hese discretionary statutes are unconstitutional in their operation. They are pregnant with discrimination and discrimination is an intolerable element not compatible with the idea of equal protection of the laws that is implicit in the ban on 'cruel and unusual' punishments." *Id.* at 256–57.

2. *See* C. Black, Capital Punishment: The Inevitability of Caprice and Mistake 19 (1974) (suggesting standards defining homicide).

3. Since the holding of *Furman* that statutes allowing discretionary application of the death penalty are unconstitutional, *see* note 1 *supra*, the state legislative response has been to enact statutes mandatorily imposing the death penalty for conviction of certain crimes. Thirty states have enacted such statutes, *see* Brief for Petitioner at Appendix A, Fowler v. North Carolina, No. 73-7041 (U.S. [illegible]).

The current death penalty litigation centers on *Fowler*, a convicted murderer's challenge to the North Carolina death penalty statute. The basis of the challenge is that given *Furman*'s proscription of discretionarily applied statutes, statutes enumerating crimes for which the death penalty is mandatory are unconstitutional because they do not eliminate the discretion inherent in arrest and prosecution, where a charge becomes determinative of the crime for which one is convicted and thus in turn whether the sentence of death will be imposed. *See* Brief of Petitioner, *supra* at 16–[illegible]. Argument was heard on [illegible], 1975, but a decision was postponed and reargument was scheduled, [illegible] U.S. [illegible], No. 73-7041, [illegible].

deterrence,[4] to the extent that pragmatic concerns are influential[5] the issue could turn on current research in the area.

I. Isaac Ehrlich and His Critics

Opponents of capital punishment can point to a substantial body of empirical literature in psychology and criminology that finds little evidence of a deterrent effect.[6] Recently, however, an economist, Isaac Ehrlich, has completed what is claimed to be an objectively superior statistical test of capital punishment deterrence in the case of murder.[7] When applied to data collected for the United States over the past four decades, Ehrlich concludes that a deterrent effect is discernible.[8]

Prior to Ehrlich's study researchers attempted to test deterrence hypotheses by comparing murder rates in jurisdictions with capital punishment and those without,[9] or murder rates in the same jurisdiction before and after capital punishment was abolished.[10] Another approach has been to compare murder rates before and after death sentences were imposed, or before and after executions actually took place.[11] Under all three approaches, the goal has been to isolate the effect of the death penalty threat from other factors that might explain variations in homicide rates.

While matching culturally similar states or contiguous time periods in a single city or state may be a reasonably effective device for holding social and economic factors constant, it typically also means that very few observations will be available. This data scarcity makes rigorous statistical hypothesis testing very difficult. Hence, even were one to accept without qualification the validity of such research designs and the accuracy of the data employed, their evidence against deterrence could not be considered conclusive.

Ehrlich's approach—following from recent theoretical contributions to the explanation of illegal behavior[12]—is very different. Rather than using the legality or simple frequency of the application of the death penalty (executions per murder) as a surrogate for the subjective threat of capital punishment, Ehrlich employs executions per homicide conviction. Instead of comparing similar jurisdictions or time periods as a device for holding other explanatory variables constant, he specifies an additional set of explanatory variables (income, unemployment, age structure, etc.) and then uses the statistical technique of multivariate regression to isolate the impact of the death penalty deterrence variable. Observation points consist of annual data for the entire United States covering the time period 1935 to 1969.

Ehrlich's conclusions are as different as his technique. While Sellin and others found no evidence of deterrence, Ehrlich discovers a statistically significant trade-off between the murder rate and executions per conviction. The trade-off implies that a 1.00 percent increase in the execution rate will reduce murders by about 0.06 percent.[13] This translates into the "eight lives saved per execution" figure boasted by the Justice Department[14] and reported in the press.[15]

Ehrlich's findings have been criticized on a number of grounds.[16] These critiques find that Ehrlich's results are extremely sensitive to the choice of the time period included in the regression analysis[17] as well as to the mathematical specification of the regression model[18] and note that Ehrlich assumes the causes of murder are the same in all parts of the United States.[19]

4. *See* notes 1 & 3 *supra*.

5. While pragmatic arguments are traditionally grist only for the legislative mill, even the Supreme Court has discussed the deterrence question, although the legal issue before the Court was framed in terms of the constitutionality of discretionary application. *See, e.g.*, Furman v. Georgia, 408 U.S. 238, 345–55 (1972) (Marshall J., concurring).

16. Two types of critical response have been forthcoming. First, economists have found fault with Ehrlich's model. *See* P. Passell & J. Taylor, *supra* note 6. Second, scholars have questioned the use of econometric models for death penalty research, preferring instead comparative studies such as that by Sellin. *See* D. Baldus & J. Cole, A Comparative Analysis of the Empirical Work of T. Sellin and I. Ehrlich as a Basis for Inferring a Causal Relationship Between Capital Punishment and the Homicide Rate in the United States, May 1975 (unpublished paper on file at the Univ. of Iowa).

17. *See* P. Passell & J. Taylor, *supra* note 6, at 45–56.

18. *See* P. Passell & J. Taylor, *supra* note 6, at 60–70.

19. *See* D. Baldus & J. Cole, *supra* note 16, at 19. By the choice of time series observations for the United States as a whole, Ehrlich is, in certain respects, able to make best use of this data, in other respects not. For example, one might expect annual variations in U.S. unemployment rates to reflect more accurately differences in unemployment than variations in unemployment rates between states in the same year.

On the other hand, the value of aggregate United States time series data for the purpose of econometric testing is limited by the need to make a number of assumptions. First, one must assume that the structure of the system explaining murderers' behavior remains the same, or virtually the same, for the entire time period. Second, there must exist a national market for murder in the sense that a change in some national aggregate (per capita income, unemployment, etc.) must have nearly the same effect on murders no matter what the geographic location of the change. One extra execution

Ehrlich also is subject to criticism for his use of Federal Bureau of Investigation crime data.[20] Furthermore, as Ehrlich has noted himself, the trade-off derived between murders and executions depends upon holding constant all other variables in the system, including arrest and conviction rates.[21] Even a modest reduction in conviction rates associated with a rise in execution rates might reverse the impact of the deterrent; Ehrlich's work is therefore consistent with the conclusion that more executions would result in more murders.[22]

Hence, from a conservative scholarly perspective, little has been demonstrated to date about capital punishment deterrence. Opinions, pro or con, must be derived from other sources, empirical or theoretical. Nonetheless, some might argue that Ehrlich has made a prima facie case for the deterrent effect of the death penalty and therefore the burden shifts to the opposition to find contradictory evidence. However one chooses to evaluate Ehrlich's research and that which preceded it, the desirability of additional tests of the deterrence hypothesis using different data is clear. This Article presents such a test using multivariate regression analysis on cross-section state data for the United States for the census years 1950 and 1960.

II. A Model of Murder

Consider the model

(1) $\quad q/n = q(p, s, z)$,

where murders per capita (q/n) are a function of the subjective probability of punishment (p), the severity of punishment for those convicted (s), and a vector of socio-economic variables (z). At this level of generality the model differs little from crime models proposed by Becker[23] and tested by Ehrlich.[24]

Specifying the model more fully,

(2) $\quad q/n = q(p, t, e, a, i, m)$,

where p = the perceived probability of punishment,
t = the perceived prison sentence for those not executed, given conviction for murder,
e = the perceived probability of execution given conviction,
a = a demographic adjustment for otherwise unaccounted-for variations between age groups in the propensity to commit murder,
i = an economic adjustment for otherwise-unaccounted-for variations between income groups in the propensity to commit murder,
m = an adjustment for the proportion of the population which has few family or social ties in the community.

A theoretical justification of equation (2) merits little space here because the ground is covered thoroughly elsewhere.[25] The variables p, t, e are all deterrence variables in the sense that each influences the expected loss to the murderer. Variable p is the product of two variables, the subjective probability of arrest, and the probability of conviction given arrest used by Ehrlich.[26]

A demographic variable a is included to increase the efficiency of the estimators of the principal deterrence variables, since young adults are believed more prone to commit violent crimes.[27] Similarly, some adjustment i

must have an almost identical impact on total murders, whether the execution takes place in Nebraska or Louisiana.

This is more restrictive than the assumption of a similar structure in every state, since aggregation of similar non-linear systems could introduce errors on its own. Suppose for example, that doubling the number of executions from one to two would have the effect of cutting murder rates by ten percent in either Maine or Louisiana. Suppose further there are 500 murders each year in Louisiana and ten in Maine. An increase of one execution in Louisiana would reduce total murders by 50, while an increase of one execution in Maine would deter only ten murders.

In addition, the use of time series data creates purely econometric problems, introducing additional complexity to the interpretation of estimated coefficients. While the value of any econometric technique employed is dependent on a pyramid of assumptions, (1) hypothesis testing with time series estimators is conditional on a larger set of these assumptions; (2) interpretation of estimates will be more dependent upon large sample properties.

20. While use of Uniform Crime Reports as a data base for any study is subject to criticism because the index contains only *reported* crimes, Ehrlich's study is particularly infirm because he used data from the early years of the index when, due to a smaller and less representative sample, it was much less accurate than it is today. *See* Staff Report to Nat'l. Comm'n on the Causes & Prevention of Violence (1969).

21. Ehrlich, *supra* note 8, at 415.

22. *See* part V *infra*.

23. Becker, *Crime and Punishment: An Economic Approach*, 42 J. Pol. Econ. 169 (1968).

24. *See* Ehrlich, *supra* note 8; Ehrlich, *Participation in Illegitimate Activities: A Theoretical and Empirical Investigation*, 81 J. Pol. Econ. 521 (1973). Note, however, that this Article argues that there exists no purely economic explanation of murder in contrast to sociological or psychological explanations. Presumably, the features that distinguish economic models in this context are assumptions of rationality--attempted maximization of perceived self-interest. Some notion of utility maximization, some consistent relationship in which individuals are influenced by their perceived self-interest does lie behind the model proposed here. At the same time the model is sociological and psychological, since some of the environmental variables considered below could easily be fitted to sociological and psychological explanations of violence.

25. *See* Ehrlich, *supra* note 8; Ehrlich, *supra* note 24; Mathieson & Passell, *Homicide and Robbery in New York City*, 5 J. Legal Studies — (forthcoming 1976).

26. This Article and Ehrlich's study both use objective probabilities as estimates for subjective probabilities in the models. State-by-state data on arrest rates, needed to separate objective arrest and conviction probabilities, are not available. Ehrlich was able to separate the two probabilities because data are available, year-by-year, for the United States as a whole. Note, however, since our theory is on states variable, the subjective probability of execution given conviction, this lack of data makes no difference.

27. This might simply be because the "price" of crime is lower for them--they may lose less income by spending time in prison; their sentences may be less harsh; they may systematically perceive

for the income of the observed population might be justified, since poor people generally commit more crimes.[28] Ehrlich included such demographic variables in another cross-section study.[29]

None of these variables, however, accounts for the individuals who are undeterred by social sanctions against murder for other reasons such as the absence of strong family ties or lack of friends and acquaintances in the community. Including such non-economic variables may be crucial if the model is to generate useful estimates of the deterrent effects. If a relevant variable is excluded from the model to be tested, estimates of the coefficients of the variables that are included may be seriously biased, as may be estimates of the standard errors.[30] The problem is quite intuitive. For example, Ehrlich's failure to control for such variables as increased racial tension and private ownership of handguns during the 1960's[31] might have led to spurious results. The decreased use of the death penalty might explain the jump in the murder rate during the period, but so might factors that created the general rise in crime.[32]

III. The Data

Data that might be used to estimate models of deterrence are largely limited to statistics collected through the agencies of the Justice Department. This study uses cross-section state data for the continental United States in 1950 and 1960, with 41 observations for the former year, 44 for the latter.[33] Although cross-section data are not subject to some of the infirmities of time series data,[34] the former have problems of their own. Many institutional sources of murder rate variation[35] cannot be controlled for. In addition, some states have only a few observations of variables, increasing possible measurement error. Despite unavoidable difficulties, estimates based on the cross-section should provide valuable counterpoint to alternative deterrence hypothesis tests.

a lower probability of arrest and conviction. However, it is not necessary to accept this economic view to believe that age composition affects murder rates; it may simply be a sociological phenomenon.

28. Again such an adjustment could be justified in opportunity-cost terms, *see* note 27 *supra*, since poor people lose less by being imprisoned, or in socio-psychological terms if poor people are more prone to violence due to frustration, fatigue, and other factors.

29. *See* Ehrlich, *Participation in Illegitimate Activities: A Theoretical and Empirical Investigation*, 81 J. Pol. Econ. 521 (1973).

30. *See, e.g.*, J. Johnston, Econometric Methods (2d ed. 1972).

31. *See* Ehrlich, *supra* note 8, at 406–08, 414 n.15.

32. I am indebted to Brian Forst for this point.

33. In 1950 data were incomplete for Georgia, Idaho, Michigan, North Dakota, Rhode Island, South Dakota, Vermont; in 1960 Idaho, New Jersey, North Dakota, Vermont.

34. *See* note 19, *supra*.

35. A model utilizing cross-section data shares with models dependent upon aggregate U.S. data a hypothesized lack of homogeneity which is not captured by the included environmental variables (poverty, age distribution, migrant population). Therefore this study adds a dummy variable (D_i) in some estimated forms to allow for differences among ten Southern states (Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Texas, Virginia) and the rest of the country. $D_i = 0$, not Southern; $D_i = 1$, Southern.

For convenience, observed surrogates for the model variables are printed in upper case.

Q/N = murder and non-negligent manslaughter offenses per capita reported to the FBI.[36] This statistic is an inefficient estimator for state-to-state variations in q/n because: (1) some fraction of murders is not reported to local law enforcement agencies or is misclassified; (2) some local agencies do not report crime statistics to the FBI, thereby introducing sampling error into state data; (3) manslaughter, one component of Q, is not a capital crime, and is therefore unlikely to be affected by punishments for capital crimes. If such errors are random, however, Q/N will yield unbiased estimates of variations in q/n.

$P = C/Q$ = the ratio of state prison commitments for murder and manslaughter to reported murders and non-negligent manslaughters.[37] Two factors reduce the efficiency of P as an estimate of p. First, the commitment statistic for murder and manslaughter is not an accurate measure of convictions for murder and non-negligent manslaughter: the crime categories are defined differently and commitments may not take place in the same year as convictions. Second, variations in the objective probability of conviction may not accurately reflect variations in the subjective probability of conviction. Note once more, however, that only systematic errors will introduce bias into the estimation procedure.

T = the mean (1960)[38] or median (1951)[39] number of months spent in prison by convicted murderers released that year. T is an inefficient estimator of t for the same reasons that P is inefficient for p. Additional sources of inefficiency include: (1) for some states T is based on sentences served by only a few released prisoners; (2) time spent in prison may not constitute a homogeneous punishment across states, since some prison systems treat prisoners more harshly than others; (3) sentences served by prisoners released this year but convicted years earlier reflect both current and past attitudes toward sentencing.

36. Statistics on murders and non-negligent manslaughters per 100,000 of population are based on U.S. Dep't of Justice, Fed. Bureau of Investigation, Uniform Crime Reports: Crime in the U.S. (published annually) [hereinafter cited as UCR]. UCR 1960, at 38–52, Table 3; UCR 1959, at 38–41, Table 3; UCR 1956, at 89, Table 31; UCR 1950, at 90, Table 32; UCR 1949, at 94, Table 36; UCR 1946, at 97, Table 33.

37. Statistics on commitments to state prisons for murder and manslaughter are from U.S. Dep't of Justice, Bureau of Prisons, Characteristics of State Prisoners 50–51, Table A5 (1960); U.S. Dep't of Justice, Bureau of Prisons, Prisoners in State and Fed. Institutions 73–74, Table 40, 41 (1950).

38. The source of data for this variable is U.S. Dep't of Justice, Bureau of Prisons, Prisoners Released from State and Fed. Institutions 15–18, Table 3 (1960).

39. The source of data for this variable is U.S. Dep't of Justice, Bureau of Prisons, Prisoners Released from State and Fed. Institutions 24–27, Table 5 (1951). (No data were available for 1950.)

$Ex = (X_{x-1} + \ldots X_{x+2})/4C_x$, a four-year average of executions for murder divided by current convictions.[40] A four-year average is used (1) because of long lags between sentencing and execution, (2) because of the extremely small number of executions in any given year, (3) because it seems reasonable to assume some lags in the formation of subjective expectations of execution given conviction.

A = the percentage of the resident population between the ages of 15 and 24.[41] A serves as an estimate for a, which presumably is some weighted average of the age distribution of the population. The weights are unknown because the ratio of crimes among age groups attributable to otherwise-omitted variables is unknown. Thus, the study uses the portion of the population in this high murder-prone age group.

I = the percentage of the family population below an arbitrary cash income poverty line (1950 = $2000, 1960 = $3000).[42] The use of the nominal dollar statistic clearly produces an inefficient estimate of i, but it is not apparent that the error will be systematic.

M = the ratio of net non-white migrants in the previous ten years to total population.[43] Where net migration is negative, M is set equal to zero. M is offered as an estimator for the percentage of the population that consists of the displaced and rural poor who have moved to urban areas. Net total migration would not serve this purpose, since much of the population movement of the 1940's and 1950's consisted of suburban expansion and middle-class migration to the West. The estimate is relatively crude since it does omit poor white migrants and intra-state rural-urban migrants.

IV. Ordinary Least Squares (OLS) Estimates

A. *The Deterrent Effect of the Conditional Probability of Execution*

For the equation

$$Q/N = Q(P, T, E, A, I, M) \tag{3}$$

we would by hypothesis expect $\partial Q/\partial P < 0$, $\partial Q/\partial T < 0$, $\partial Q/\partial A > 0$, $\partial Q/\partial I > 0$, $\partial Q/\partial M > 0$.[44] If capital punishment serves as a deterrent, other factors held constant, we would expect $\partial Q/\partial E < 0$. In other words, for an estimate of a linear form for equation (3), the capital deterrence hypothesis would tend to be confirmed if the coefficient of E were negative, rejected if the coefficient of E were zero or positive.

Results. Ordinary least squares estimates of the constant term (a) and the coefficients (b)[45] for the simple linear form of equation (3) for 1950 and 1960 are shown as Table 1, equations (a1) and (a2) with t statistics given in parentheses.[46] With the exception of the execution variable coefficient and the coefficient of A in [a1]), all the estimated parameters are of the hypothesized sign and are significantly different than zero at the 90 percent confidence level.[47] The estimated coefficient of E, however, takes on a perverse sign and is not significantly different than zero:[48] no capital punishment deterrent is in evidence. Note too that the statistical significance of the other parameter estimates and the percentage of variance explained is virtually unchanged when E is excluded from the regression; results are shown as equations (b1) and (b2).[49]

40. Between 1959 and 1962 statistics on executions for murder are based on U.S. Dep't of Justice, Bureau of Prisons, Nat'l Prisoner Statistics, Executions (published annually) [hereinafter cited as Exec]. Exec No. 23, Feb. 1960, at 5, Table 4; Exec No. 26, March 1961, at 5, Table 4; Exec No. 28, April 1962, at 5, Table 4; Exec No. 32, April 1963, at 5, Table 4.

Between 1919 and 1952 statistics on executions for murder are based on Exec No. 5, April 1951, at 4, Table 4; Exec No. 6, Sept. 1952, at 5, Table 4; Exec No. 8, April 1953, at 5, Table 4.

41. Data for this variable are taken from U.S. Bureau of the Census, General Characteristics of the Population, U.S. Summary 167, Table 59 (1960); *id.* at 112, Table 62 (1950).

42. The statistics on the percentage of families below the poverty line are based on U.S. Bureau of the Census, County and City Data Book [hereinafter cited as County]. For 1960 I was calculated to be equal to the percentage of families with incomes below $3000 in 1959 as reported in County 1962 at 3, table 1, vol. 23. For 1950 I was calculated to be equal to the percentage of families with incomes below $2000 in 1949 as reported in County 1952 at 3, table 1, col. 21. Price deflators by state were not available.

43. Statistics for net non-white migration during the previous ten years as a percentage of the population for both 1950 and 1960 were based on U.S. Bureau of the Census, Statistical Abstract of the U.S. 90, Table 55 (1963).

44. Readers not familiar with calculus should note that the symbol $\partial Q/\partial E$ represents the partial derivative of Q (the murder rate) with respect to E (the execution rate). A partial derivative is a mathematical expression of the relationship between changes in an independent variable (here E) and changes in a dependent variable (here Q), all other independent variables (*i.e.*, P, T, A, I, M) being held constant. The symbol $\partial Q/\partial E$ represents the change in the murder rate that would result from a small change in the execution rate. The hypothesis that $(\partial Q/\partial E) < 0$ means that the murder rate would be expected to move in the opposite direction from changes in the execution rate, *e.g.*, if the execution rate rises (falls) the murder rate would be expected to fall (rise).

45. The Greek letter α is used here to refer to the constant term to be estimated in a regression; β refers to the coefficient vector (one or more coefficients) to be estimated in a regression.

46. The numbers presented in Table 1 represent econometric estimates of the constant term and coefficients of the murder equation. These numbers thus represent estimates of the relationship between the murder rate (dependent variable) and the various independent variables hypothesized to influence it. Estimates with positive signs support the hypothesis of a direct relationship between the murder rate (Q) and the independent variable in whose column the estimate is listed, *e.g.*, as the independent variable rises (falls) the murder rate rises (falls). Conversely, estimates with negative signs support the hypothesis of an inverse relationship between the murder rate and the independent variable. Therefore, to verify the hypothesis that increases in the execution rate result in decreases in the murder rate, the numbers in the column marked "Execution" must have negative signs. The greater the absolute value of the estimates, the greater will be the magnitude of the indicated relationship; in other words, for a given change in the independent variable there will be a larger change in the murder rate. The t-statistics given in parentheses provide indications of the degree of confidence that each estimate is significantly different from that which would be obtained by chance.

47. From the perspective of hypothesis testing or prediction, the value of statistical estimates of coefficients depends upon one's confidence that errors in data or misspecification of the model do not seriously affect the result. Given certain technical assumptions about the data and the model, it is possible to estimate confidence intervals around point estimates, *i.e.* a range of values in which the true coefficient lies. Hence the assertion here that the estimated coefficients are significantly different from zero at the 90 percent confidence level means that the probability that the true value takes on the opposite sign is less than 10 percent. For a discussion of confidence intervals and statistical significance, see Ehrlich, *supra* note 30, at 135-52.

48. Acceptance or rejection of an hypothesis (for example, "the coefficient of E is less than zero") depends upon the statistical standard one sets. By convention and common sense, it seems appropriate to accept the hypothesis that E is less than zero unless it is statistically significantly less than zero at the 90 percent confidence level. For a discussion of hypothesis testing with statistical methods see Ehrlich, *Forecasting and Analysis with an Econometric Model*, 52 Am. Econ. Rev. 104 (1962).

49. Addition of the Southern dummy variable (D_s) to the base form, as shown in Table 1, equations (c1) and (c2), makes little difference. Estimates of the coefficient of D_s imply that, other things being equal, Southern states have about 2½ extra murders per hundred thousand population

TABLE 1

ORDINARY LEAST SQUARES ESTIMATES OF MURDER EQUATION

Equation/Year	R^2	Constant	P	T	Execution	A	I	M	D_S
a1	.698	-9.48	-3.51	-.0161	8.48	7.44	.204	1.72	
1950		(-1.27)	(-3.12)	(-2.11)	(1.04)	(1.48)	(4.38)	(2.22)	
a2	.833	-2.18	-3.82	-.0140	2.98	1.86	.169	2.27	
1960		(-4.47)	(-2.14)	(-4.13)	(0.26)	(5.35)	(5.08)	(4.43)	
b1	.689	-9.14	-3.63	-.0163		.731	.207	1.93	
1950		(-1.23)	(-3.24)	(-2.14)		(1.46)	(4.43)	(2.59)	
b2	.833	-22.14	-3.79	-.0140		1.89	.169	2.32	
1960		(-4.77)	(-2.16)	(-4.18)		(5.72)	(5.14)	(5.02)	
c1	.720	-4.86	-3.04	-.0166	7.75	.496	.159	1.51	2.59
1950		(-0.62)	(-2.67)	(-2.18)	(0.96)	(0.96)	(2.97)	(1.97)	(1.60)
c2	.860	-15.1	-4.68	-.0134	4.87	1.45	.122	1.95	2.40
1960		(-2.90)	(-2.78)	(-4.27)	(0.45)	(4.06)	(3.41)	(3.97)	(2.66)

The coefficient estimates obtained in Table 1 are for the most part not surprising, since they largely confirm earlier cross-section regression results on murder rates.[80] The deterrent effect of the likelihood of punishment and the length of prison sentences is supported, as is the influence of environmental variables that meet common sense criteria. The contrast with Ehrlich's time series confirmation of the deterrent effect of capital punishment is, however, quite striking. This highlights the importance of testing the sensitivity of our linear cross-section estimates both for different formulations of the capital punishment variable and different mathematical forms of the variables in the linear least-squares fit.

B. *Legal or* De Facto *Existence of Capital Punishment*

Suppose potential murderers are not influenced in a simple linear fashion by the frequency of execution of convicted murderers, but by the mere presence of a capital punishment statute on the books. Or, suppose that the fact that influences potential murderers is *de facto* abolition: whether executions of convicted murderers actually take place. Some states in 1950 and 1960 had death penalty statutes, but records free of executions for many years.

To test these hypothetical forms of the deterrent, dummy variables D_{s1} and D_{s2} were substituted for E. For states that did not permit capital punishment in 1949–52, 1959–62, $D_{s1} = 0$; for states that did, $D_{s1} = 1$. For states in which no executions took place 1949–52, 1959–62, $D_{s2} = 0$; for states in which they did take place, $D_{s2} = 1$.[81] Hence the deterrent hypothesis would be confirmed by statistically significant estimates of the coefficient of D_{s1} and D_{s2} less than zero.

Results. Regressions showing the alternative specifications are shown in Table 2, equations (d1), (d2), (e1), (e2).[82] Either hypothetical form for the deterrence variable must be rejected. In none of the four cases do statistically significant estimates appear.[83]

...ically. Regressions with dummy variables for two other regions (New England, Northern industrial states) were also attempted, with and without the Southern dummy. Their coefficients, however, were statistically insignificant and they did not markedly change the estimates of the other coefficients. Note, too, that the inclusion of the Southern dummy does not increase the statistical significance of the execution variable.

80. *See* Ehrlich, *supra* note 29; Mathieson & Passell, *supra* note 25.

81. Information needed to determine the states in which the death penalty is not applicable for murder, and states in which the death penalty is not applied for murder is found in Ennis, *supra* note 42. D_{s1} for 1950 and D_{s2} for 1949–52 were obtained from Ennis No. 12, April 1955, at 3–4, 14–15; D_{s1} for 1960 and D_{s2} for 1959–62 were obtained from Ennis No. 32, April 1963, at 4, Table 3.

82. Note that the Southern dummy variable (D_s) is included in equations (d1), (d2), (e1), and (e2) because, as may be inferred from Table 1, the variable explained an additional portion of the variation in murder rates. When D_s is excluded, however, the results are much the same; neither the signs nor the statistical significance of the coefficient estimates for the execution dummies are changed.

83. At the 95 percent confidence level.

TABLE 1

ORDINARY LEAST SQUARES ESTIMATES OF MURDER EQUATION

Equation/Year	R^2	Constant	P	T	Execution	A	I	M	D_S
a1 1950	.698	-9.48 (-1.27)	-3.51 (-3.12)	-.0161 (-2.11)	8.48 (1.04)	7.44 (1.48)	.204 (4.38)	1.72 (2.22)	
a2 1960	.833	-2.18 (-4.47)	-3.82 (-2.14)	-.0140 (-4.13)	2.98 (0.26)	1.86 (5.35)	.169 (5.08)	2.27 (4.43)	
b1 1950	.689	-9.14 (-1.23)	-3.63 (-3.24)	-.0163 (-2.14)		.731 (1.46)	.207 (4.43)	1.93 (2.59)	
b2 1960	.833	-22.14 (-4.77)	-3.79 (-2.16)	-.0140 (-4.18)		1.89 (5.72)	.169 (5.14)	2.32 (5.02)	
c1 1950	.720	-4.86 (-0.62)	-3.04 (-2.67)	-.0162 (-2.18)	7.76 (0.96)	.496 (0.96)	.159 (2.97)	1.51 (1.97)	2.59 (1.60)
c2 1960	.860	-15.1 (-2.90)	-4.68 (-2.78)	-.0134 (-4.27)	4.87 (0.45)	1.45 (4.06)	.122 (3.41)	1.95 (3.97)	2.40 (2.66)

The coefficient estimates obtained in Table 1 are for the most part not surprising, since they largely confirm earlier cross-section regression results on murder rates.[80] The deterrent effect of the likelihood of punishment and the length of prison sentences is supported, as is the influence of environmental variables that meet common sense criteria. The contrast with Ehrlich's time series confirmation of the deterrent effect of capital punishment is, however, quite striking. This highlights the importance of testing the sensitivity of our linear cross-section estimates both for different formulations of the capital punishment variable and different mathematical forms of the variables in the linear least-squares fit.

B. *Legal or* De Facto *Existence of Capital Punishment*

Suppose potential murderers are not influenced in a simple linear fashion by the frequency of execution of convicted murderers, but by the mere presence of a capital punishment statute on the books. Or, suppose that the fact that influences potential murderers is *de facto* abolition: whether executions of convicted murderers actually take place. Some states in 1950 and 1960 had death penalty statutes, but records free of executions for many years.

To test these hypothetical forms of the deterrent, dummy variables D_{a1} and D_{a2} were substituted for E. For states that did not permit capital punishment in 1949-52, 1959-62, $D_{a1} = 0$; for states that did, $D_{a1} = 1$. For states in which no executions took place 1949-52, 1959-62, $D_{a2} = 0$; for states in which they did take place, $D_{a2} = 1$.[81] Hence the deterrent hypothesis would be confirmed by statistically significant estimates of the coefficient of D_{a1} and D_{a2} less than zero.

Results. Regressions showing the alternative specifications are shown in Table 2, equations (d1), (d2), (e1), (e2).[82] Either hypothetical form for the deterrence variable must be rejected. In none of the four cases do statistically significant estimates appear.[83]

...ately. Regressions with dummy variables for two other regions (New England, Northern industrial states) were also attempted, with and without the Southern dummy. Their coefficients, however, were statistically insignificant and they did not markedly change the estimates of the other coefficients. Note, too, that the inclusion of the Southern dummy does not increase the statistical significance of the execution variable.

80. *See* Ehrlich, *supra* note 29; Mathieson & Passell, *supra* note 25.

81. Information needed to determine the states in which the death penalty is not applicable for murder, and states in which the death penalty is not applied for murder is found in Ehrlich, *supra* note 4, at 3. D_{a1} for 1950 and D_{a2} for 1949-52 were obtained from Exec No. 12, April 1955, at 3-4, Table 3; D_{a2} for 1960 and D_{a2} for 1959-62 were obtained from Exec No. 32, April 1963, at 4, Table 3.

82. Note that the Southern dummy variable (D_S) is included in equations (d1), (d2), (e1), and (e2) because, as may be inferred from Table 1, the variable explained an additional portion of the variation in murder rates. When D_S is excluded, however, the results are much the same; neither the signs nor the statistical significance of the coefficient estimates for the execution dummies are altered.

83. At the 95 percent confidence level.

f1 1950 (10th root)	.705	.791 (.471)	-.606 (-2.75)	-.359 (2.73)	.0832 (2.42)	.107 (.08)	.930 (2.39)	.0208 (.57)	
f2 1960 (10th root)	.597	-1.41 (-.74)	-.692 (-2.18)	-.103 (-2.49)	.105 (3.18)	1.99 (1.34)	.536 (1.85)	.00179 (.05)	

C. *Sensitivity to Alternative Mathematical Forms*

A standard alternative to the simple linear form for regressions [$Y = a + \sum_i \beta_i X_i$] where X here indicates the right-hand-side variables, is to estimate a form that is linear in the natural logarithm of the variables [$\ln Y = \ln a + \sum_i \beta_i \ln X_i$]. Ehrlich used the log form exclusively. This is not possible for our cross-section sample because a large number of observations have $E = 0$, for which the log is undefined. Another possible method of testing the sensitivity of the result, and one which is arguably more general, is to estimate an equation linear in the nth power transformation of the actual variables ($0 < n \leq 1$) [$Y^n = a + \sum_i \beta_i (X_i)^n$]. For small values of n, this will approximate the log transformation; for $n = 1$, it is just the linear form shown above.

Results. Equations (f1) and (f2) show the parameter estimates for $n = .1$ (tenth root). Similar results, incidentally, hold for $n = 0.5$ (square root). Note that β_M is greater than zero, while the signs and significance of the other variables are not radically changed. Perhaps the most striking aspect to (f1) and (f2) is that the estimates of β_M are not merely positive, but statistically significant.[34] However, this is not taken to mean that executions cause murders; a more reasonable explanation is that the equations are misspecified. It does suggest that some systematic relationship between murder rates and execution rates may exist. Perhaps high murder rates cause high execution rates. One aspect of the question, the simultaneous determination of Q/N and E_2 is explored in the next section. Another aspect, the possibility that executions in no way affect murder rates, but that murder rates affect execution rates, is explored in Section VI.

V. Two Stage Least Squares ('TSLS) Estimates

A. *Value of TSLS Estimates*

It is well known that the ordinary least squares estimates derived in the previous section will be inconsistent if murder rates are determined simultaneously with one or more of the right-hand-side variables. Risking oversimplification, the estimated coefficients will be inconsistent if the direction of causality goes from left-hand-side to right-hand-side as well as the opposite. Ehrlich very explicitly develops a theoretical simultaneous system in which potential criminals respond to deterrents and society responds to criminal behavior by adjusting the magnitude of the deterrents.[35] Thus murder rates "feed back" on execution rates and conviction rates.

34. At the 95 percent confidence level.
35. *See* Ehrlich, *supra* note 8, at 405.

TABLE 2

STABILITY OF ORDINARY LEAST SQUARES ESTIMATES

Equation/Year	R^2	Constant	P	T	Execution	A	I	M	D_S

(10th root)									

C. *Sensitivity to Alternative Mathematical Forms*

A standard alternative to the simple linear form for regressions [$Y = a + \Sigma_r \beta_r X_r$] where X here indicates the right-hand-side variables, is to estimate a form that is linear in the natural logarithm of the variables [$\ln Y = \ln a + \Sigma_r \beta_r \ln X_r$]. Ehrlich used the log form exclusively. This is not possible for our cross-section sample because a large number of observations have $E = 0$, for which the log is undefined. Another possible method of testing the sensitivity of the result, and one which is arguably more general, is to estimate an equation linear in the nth power transformation of the actual variables ($0 < n \leq 1$) [$Y^n = a + \Sigma_r \beta_r (X_r)^n$]. For small values of n, this will approximate the log transformation; for $n = 1$, it is just the linear form shown above.

Results. Equations (f1) and (f2) show the parameter estimates for $n = 0.1$ (10th root). Similar results, incidentally, hold for $n = 0.5$ (square root). Note that $\hat{\beta}_n$ is greater than zero, while the signs and significance of the other variables are not radically changed. Perhaps the most striking aspect to (f1) and (f2) is that the estimates of $\hat{\beta}_n$ are not merely positive, but statistically significant.[54] However, this is not taken to mean that executions cause murders; a more reasonable explanation is that the equations are misspecified. It does suggest that some systematic relationship between murder rates and execution rates may exist. Perhaps high murder rates cause high execution rates. One aspect of the question, the simultaneous determination of O/N and E, is explored in the next section. Another aspect, the possibility that executions in no way affect murder rates, but that murder rates affect execution rates, is explored in Section VI.

V. Two Stage Least Squares (TSLS) Estimates

A. *Value of TSLS Estimates*

It is well known that the ordinary least squares estimates derived in the previous section will be inconsistent if murder rates are determined simultaneously with one or more of the right-hand-side variables. Risking oversimplification, the estimated coefficients will be inconsistent if the direction of causality goes from left-hand-side to right-hand-side as well as the opposite. Ehrlich very explicitly develops a theoretical simultaneous system in which potential criminals respond to deterrents and society responds to criminal behavior by adjusting the magnitude of the deterrents.[55] Thus murder rates "feed back" on execution rates and conviction rates.

54. At the 95 percent confidence level.
55. *See* Ehrlich, *supra* note 8, at 405.

A prima facie case can certainly be made for the use of alternative estimation procedures to OLS. It is very important to keep in perspective, however, the desirability of using OLS even when some degree of simultaneity is suspected. Virtually any equation to be estimated belongs in theory to a system of simultaneous equations with feedback mechanisms. Exogeneity (determination outside the system) is a relative, not an absolute, notion. The quantitative importance of the bias built into the OLS estimators will depend upon the specific characteristics of the system in question.

Consider equation (3). Surely A, I, and M are nearly perfectly exogenous, though one could argue that high murder rates might conceivably affect migration. The cases of the three deterrence variables are ambiguous. Prison sentences served by persons currently being released might be partly influenced by current crime rates, as more plausibly might execution rates and conviction rates. Hence, the importance of the feedback is unclear.

It is also useful to remember that the commonly used simultaneous equations procedures such as two stage least squares are designed to generate only consistent and asymptotically efficient (in the limited information sense) estimates of the model parameters. Stated less technically, this means that the estimators will have the desired properties only if the sample of observations is sufficiently large. There is no absolute definition of "large," but one might suspect that a sample as small as the one here is not very large. Finally, one should note that TSLS estimators of the endogenous variable coefficients may not have even asymptotically desirable properties if the endogenous variables are inherently bounded, and the variables often have observed values near the bounds. All of the potentially endogenous variables in our model are bounded at zero, there being no meaning for example to a negative execution or conviction rate. Approximately one-fourth of the observed values have $E = 0$. Alternative procedures to TSLS do exist, but they are computationally cumbersome and not currently available as computer algorithms.[56]

B. *Results*

The basic results for the murder equation are presented in Table 3. The exogenous variables included in the system but excluded in the structural equation are:

F = median nominal family income for the previous year,[57]

V = percentage of voting age population voting in national elections,[58]

H = percentage of residents living in the same house for at least the specified time period,[59]

W = the percentage of the resident population which is white,[60]

U = unemployment rate,[61]

L = percentage of persons 14 and over in the civilian labor force,[62]

Q^* = fractional change in murder rates over the past four years.[63]

These variables were chosen because we believe that they would belong in other equations, were it possible to specify the entire system of relationships determining variations in the endogenous variables. Note that the choice of these excluded exogenous variables is potentially important to the estimation procedure. For example, many of Ehrlich's[64] results may have depended upon the inclusion of the previous year's murder rate in a system explaining this year's murder rate.

Equations (g1) and (g2) in Table 3 are identical in form to (c1) and (c2), except an instrument ($\hat{E}$) is substituted for E in the regression. In other words, only the murder rate and execution rate are considered endogenous to the system. Once again, on the basis of the estimates one must reject the hypothesis that execution deter murders. As in (c1) and (c2) the estimated execution coefficients are positive and insignificant. In fact, the TSLS procedure appears to have very little impact on the regression coefficients in general; the equation seems to be insensitive to estimation procedure as well as to mathematical form.

Equations (h1) and (h2) go a step further, preserving the specification of the model but assuming P, T, and E to be determined simultaneously with Q/N. Again, there are few surprises. The execution coefficient remains statistically indistinguishable from zero. The significance levels of the coefficients of $\hat{P}$ and $\hat{T}$ are somewhat lower, but this would be expected in any event since the TSLS estimation procedure reduces the efficiency of the estimators.

Another indication of the relative stability of the relationship is found in (j1) and (j2). Here again, as an example of the power transformation discussed above, the 10th roots of the right-hand-side variables are regressed against 10th roots of murder rates, with execution rates assumed endoge-

nous. As in (f1) and (f2), the coefficients of $\hat{E}$ are positive and statistically significant.

VI. An Execution Equation

Sections IV and V provide evidence that capital punishment does not act as a deterrent. Among the regressions in Tables 1–3 there are no instances in which the execution variable is negative and statistically significant. There are, however, reasons to believe that execution rates and murder rates are not entirely independently determined. Certainly the major impetus for new capital punishment legislation has been public frustration with the explosive growth of murder rates in the past decade.

Perhaps a more testable hypothesis about the relationship is that execution rates—executions per conviction—are a positive function of murder rates because of the attitudes of prosecutors, juries and judges. Given the discretion built into the system at each level it is plausible that, other things being equal, more convicted murderers will be sentenced to death the higher the perceived murder rate.

A proper statistical evaluation of the explanation of variations in the execution rate between states is beyond the scope of this paper. Among other purely econometric problems, the execution rate is a limited dependent variable. As mentioned earlier, since E is frequently equal to the bound value, the estimated coefficients will be biased. It is possible and relevant, however, to explore the issue in a tentative fashion, ignoring these difficulties.

Only a few of a number of alternative regression formulations proposed are shown here. Equations (k1) and (k2) in Table 4 show the OLS estimators for E as a linear function of murder rates lagged by one year, $(Q/N)_{-1}$, and M, the non-white migration variable. Equations (m1) and (m2) are basically the same formulation, but are estimated using TSLS with current murder rates as an endogenous variable. Neither the (k) nor (m) equations provide much insight into the sources of variation in execution rates, though in all four equations the coefficient of M, as would be expected, is significantly positive.

The addition of I, the percentage of the population below the poverty line, and Q^*, the rate of change of murders in the previous four years (estimates not shown) adds no explanatory power. Nor—in seeming contradiction to conventional wisdom—does a Southern states dummy variable. If one eliminates executions for rape and burglary, the South shows no particular propensity to execute convicted criminals.

Equations (n1) and (n2) produce a more interesting result. The TSLS estimators on the 10th roots of the variables are significant and of the ap-

TABLE 4

ESTIMATES OF EXECUTION EQUATIONS

Equation/Year	R^2	Constant	O/N	$(O/N)_{-1}$	M
k1 1950 OLS	.112	.0164 (1.43)		-.000172 (-.24)	.0164 (2.26)
k2 1960 OLS	.171	.00201 (.30)		.00144 (1.53)	.0127 (2.70)
m1 1950 TSLS	.145	.00431 (.27)	.00182 (.86)		.0263 (2.41)
m2 1960 TSLS	.154	.00344 (.49)	.00113 (1.15)		.0123 (2.59)
n1 1950 TSLS — 10th root	.360	-1.94 (-3.25)	2.04 (4.09)		.193 (2.18)
n2 1960 TSLS — 10th root	.238	-2.02 (-2.63)	2.08 (3.31)		.155 (1.44)

propriate sign. Whether or not this comes close to capturing the true relationship between E and Q/N remains to be seen. These two equations do, however, suggest why equations (f) and (j) show perversely positive and significant signs for the execution coefficient. E is not an independent variable in the determination of murder rates, but perhaps murder rates do partially determine execution rates. Hence a misspecified form like (f) or (j) may produce a spurious least-squares statistical relationship.

VII. Conclusion

The purpose of the empirical work in this Article is to test the hypothesis that capital punishment deters murder. Two important qualifications to interpretation of the research are necessary. First, statistical techniques test hypotheses only in a limited sense of the word; they can only establish the likelihood that the available evidence is consistent with the hypothesis in question. Thus one might argue—I would not—that Ehrlich confirmed that the idea that extra executions deter murders was consistent with one set of observations. Other explanations that do not include capital punishment deterrence might also be found consistent with Ehrlich's data.

Second, the techniques used here (and those employed by Ehrlich) attempt to isolate the effect of executions on murders, *holding other factors constant*. Since other factors cannot be held constant in practice—changing execution rates might result in changes in arrests, convictions, and prison sentences as well—this study answers a different question than the one generally asked. This is not due to caprice on the part of the investigator, but to a lack of information about the criminal justice system.

Our analysis accounts for as many of the major, quantifiable factors as possible that explain state-to-state variations in murder rates, then tests whether state-to-state variations in execution rates also add explanatory power to the equation. Five variables—conviction rates, average prison sentences, poverty, age, and rural-urban migration—plus a special accounting variable for Southern states, do in fact explain a great deal of these state to-state murder rate variations. Variations in execution rates, however, add no explanatory power.

Estimates derived from regression analysis have value conditional upon the fulfillment of certain assumptions about relationships underlying the behavioral model, as well as assumptions about the sources of error in the data. Since one has relatively little information upon which to base a complete model of the criminal justice system or to analyze the source of errors in the data, it becomes imperative to test the sensitivity of the results to different assumptions.

The results displayed in Tables 1 and 2 establish insensitivity to assumptions about the mathematical form of the equation and to specification of the execution variable itself. For a reasonably broad set of mathematical forms and alternative estimators of the subjective probability of execution, one finds no evidence of an execution deterrent. Section V analyzes the potential bias introduced by simultaneous determination of murder rates with other variables in the system—conviction rates, execution rates, prison sentences. Again, under a range of plausible assumptions, there is no evidence that executions act as a deterrent. Section VI explores the possibility that murder rates may systematically influence execution rates. The results presented in Table 4 support such a hypothesis.

Just how the evidence presented here should influence one's view on the issue of capital punishment deterrence depends in part on one's perspective. It cannot be proven that executions do not serve as a deterrent to murder. Proof is simply beyond the capacities of empirical social science.

At a minimum, however, students of capital punishment must look elsewhere for evidence confirming deterrence. We know of no reasonable way of interpreting the cross-section data that would lend support to the deterrence hypothesis.

It is important to observe that the economic approach to studying crime has value beyond the capital punishment issue. Simply because the threat of execution does not deter murder does not mean that either the length of sentence or certainty of punishment does not influence would-be criminals. The deterrent effect of conviction rates and sentences stands up well in the cross-section regressions published here. Nor does the failure to find statistical support for capital punishment deterrence discredit the use of econometric techniques to formulate and test rigorously hypotheses about criminal behavior. Its purpose is not merely to provide an empirical buttress for specific policy positions on crime prevention, but also to define the dimensions of knowledge about crime and suggest ways of expanding them.

The Play's the Thing: An Unscientific Reflection on Courts Under the Rubric of Theater

Milner S. Ball*

The essay form is the fit instrument for a thinker whose chief concern is to lay bare the contending claims that seek the mediation and authority of society through law, and to give some indication, at least, of how these processes of mediation in fact operate. For the essay is tentative, reflective, suggestive, contradictory, and incomplete. It mirrors the perversities and complexities of life.[1]

The production of plays unlike the production of goods cannot be streamlined.[2] A performance of *King Lear* requires about as much time and labor now as it did in Elizabethan England. Output per man-hour could be significantly increased in the theater only by radically transforming its quality, dynamics and nature, as, for example, by abandoning the intimate medium of live performance for the quite different mass media of television or film. Productivity gains are precluded in live performance because what the performer does is an end in itself and not the means to production of some other good. Inasmuch as it is invulnerable to greater technological efficiency through mass production or speedier processes, theater cannot reduce its costs.

The same is true of the public functions of courts. Some aspects of judicial administration are undoubtedly subject to modifications which would increase its productivity, but there is little that can be done to cut the time and labor of trials and oral arguments. Their costs can only multiply. The question, which gathers urgency as court workloads and docket congestion

2. *See* W. Baumol & W. Bowen, Performing Arts—The Economic Dilemma 161–72 (1966), which explores the relationship of productivity gains and the technology of live performance. The emphasis in this opening paragraph is a pale, partial reflection of their suggestive formulation.

Statistical Evidence on the Deterrent Effect of Capital Punishment

Editors' Introduction

Sophisticated statistical evidence became important in the litigation over the constitutionality of the death penalty a decade ago. As part of its attack on capital punishment, the NAACP Legal Defense and Educational Fund sponsored a statistical study of racial discrimination in the sentences imposed for rape in the South.[1] Abolitionist lawyers have relied on evidence of discriminatory imposition of the penalty to argue that it violated the Fourteenth Amendment's guarantee of the equal protection of the laws and the Eighth Amendment's prohibition of cruel and unusual punishments.[2] Such evidence clearly influenced the decision in *Furman v. Georgia*, in which the Supreme Court, by a five-to-four margin, struck down as cruel and unusual punishment the imposition of the penalty at the discretion of the judge or jury.[3]

A more fundamental statistical attack was directed at one of the underlying legislative rationales for capital punishment—that it is a more effective deterrent to crime than life imprisonment. This attack goes to the very existence of the penalty rather than the manner in which it is imposed. The issue of deterrence received some attention in *Furman*, and is now before the Court in *Fowler v. North Carolina*,[4] which poses Eighth and Fourteenth Amendment challenges to capital punishment imposed under North Carolina's mandatory sentencing procedure.

1. The findings of this study are reported in Wolfgang, *Racial Discrimination in the Death Sentence for Rape*, in W. Bowers, Executions in America 111-29 (1974). This study confirmed earlier findings of the discriminatory imposition of the penalty reported in earlier investigations. See W. Bowers, *supra* at 18-19.

2. Brief for NAACP *et al.* as Amici Curiae at 13-22, Aikens v. California, 406 U.S. 813 (1972) (Eighth and Fourteenth Amendment challenges dismissed as moot after decision of California supreme court in People v. Anderson, 6 Cal. 3d 628, 493 P.2d 880, 100 Cal. Rptr. 152 (1972), that capital punishment violated the state constitution); Maxwell v. Bishop, 398 F.2d 138, 141-48 (8th Cir. 1968), *rev'd on other grounds*, 398 U.S. 262 (1970) (after thorough discussion, then Circuit Judge Blackmun rejected a Fourteenth Amendment challenge, based on the NAACP study of racial discrimination in rape sentencing, note 1 *supra*, to a death sentence imposed under an Arkansas rape statute); Brief for NAACP Legal Defense & Educational Fund, Inc. and National Office for the Rights of the Indigent as Amici Curiae at 51-53, Boykin v. Alabama, 395 U.S. 238 (1969) (Eighth Amendment challenge based in part on statistical evidence of racial discrimination in imposition of death penalty).

The prohibition of cruel and unusual punishments is applicable to the states through the Fourteenth Amendment. See Robinson v. California, 370 U.S. 660, 667 (1972).

3. 408 U.S. 238 (1972). Two of the five Justices who concurred in the judgment of the Court relied at least in part on statistical evidence of the racially discriminatory imposition of the penalty. *Id.* at 250 n.15 (Douglas, J., concurring), 364-65 (Marshall, J., concurring). Two of the dissenters recognized the importance of the evidence for a possible claim of denial of equal protection of the laws. *Id.* at 389-90 n.12 (Burger, C.J., dissenting) ("data of more recent vintage" essential for equal protection claim), 419 n.2 (Powell, J., dissenting). See White, *The Role of the Social Sciences in Determining the Constitutionality of Capital Punishment*, 11 Duq. L. Rev. 279, 281-85 (1973).

4. State v. Fowler, 285 N.C. 90, 203 S.E.2d 803, *cert. granted sub nom.* Fowler v. North Carolina, 419 U.S. 901 (1974), *argued*, 43 U.S.L.W. 3362 (U.S. Apr. 21, 1975), *restored for reargument*, 423 U.S. 809 (1975). See notes 17-18 *infra*.

Of the nine Justices writing separate opinions in *Furman*, Justice Marshall, who along with Justice Brennan would have found the penalty unconstitutional per se, gave the most weight to the statistical evidence on deterrence.[5] From prior cases construing the Eighth Amendment, he derived the principle that a punishment is cruel and unusual if it is "excessive and serves no valid legislative purpose."[6] Devoting more than half of his discussion of the purposes conceivably served by capital punishment to the "hotly contested issue . . . whether it is better than life imprisonment as a deterrent to crime,"[7] he stated that the deterrent effect of capital punishment rested on "logical hypotheses devoid of evidentiary support," and invoked the statistical studies of Thorsten Sellin, which for him "demonstrate that there is no correlation between the murder rate and the presence or absence of the capital sanction."[8] He quoted extensively from Sellin as "one of the leading authorities on capital punishment" and included as appendixes to his opinion several of Sellin's tables comparing homicide rates in neighboring abolitionist and retentionist jurisdictions.[9] After considering and rejecting other possible purposes for capital punishment, he concluded:

> [T]he death penalty is an excessive and unnecessary punishment that violates the Eighth Amendment. The statistical evidence is not convincing beyond all doubt, but it is persuasive. . . . [T]here is sufficient evidence available so that judges can determine, not whether the legislature acted wisely, but whether it had any rational basis whatsoever for acting. We have this evidence before us now. There is no rational basis for concluding that capital punishment is not excessive. It therefore violates the Eighth Amendment.[10]

The "excessive and unnecessary" standard of the Eighth Amendment is essentially equivalent to a substantive due process standard: the penalty is unconstitutional if it lacks a rational basis.[11] This due process analysis

5. 408 U.S. at 315-54 (Marshall, J., concurring). Justice Brennan stated that "the available evidence uniformly indicates, although it does not conclusively prove, that the threat of death has no greater deterrent effect than the threat of imprisonment." *Id.* at 301. Justice Stewart found the statistical evidence on deterrence "inconclusive." *Id.* at 307-08 & n.7. Chief Justice Burger characterized the evidence on deterrence as an "empirical stalemate." *Id.* at 395. Justice Powell observed that statistical studies "tend to support the view that the death penalty has not been proved to be a superior deterrent," but do not approach the showing required to find the penalty unconstitutional. *Id.* at 451, 456. *See* White, *supra* note 3, at 285-86.

6. 408 U.S. at 331. This principle was also put forth by Justice Brennan, *id.* at 279-80, but was sharply attacked by the dissenters, *id.* at 391-96 (Burger, C.J., dissenting), 451 (Powell, J., dissenting).

The other ground relied on by Justices Brennan and Marshall was that the penalty was "morally unacceptable to the people of the United States . . . ." *Id.* at 360 (Marshall, J., concurring); *see id.* at 295-300 (Brennan, J., concurring).

7. *Id.* at 345-54.

8. *Id.* at 347, 350.

9. *Id.* at 348-50, 373-74.

10. *Id.* at 356-59 (footnote omitted).

11. The principle that a punishment is cruel and unusual if it is excessively severe was suggested by Justice Goldberg [illegible]

requires that those challenging the death penalty overcome the "presumption of constitutionality accorded legislative acts."[12] Whereas in a traditional Brandeis brief[13] statistical evidence is used to support that presumption, in *Furman* the evidence was used to attack it.

If the Eighth Amendment does prohibit unnecessarily severe punishments, the findings of Professor Isaac Ehrlich on the deterrent effect of capital punishment, reported a year after *Furman* and published this spring,[14]

Alabama, 375 U.S. 889 (1963), and analyzed as a substantive due process standard in Packer, *Making the Punishment Fit the Crime*, 77 Harv. L. Rev. 1071 (1964). Justice Marshall recognized that his excessive severity principle under the Eighth Amendment "parallels in some ways" a substantive due process analysis:

> The concepts of cruel and unusual punishment and substantive due process become so close as to merge when the substantive due process argument is stated in the following manner: because capital punishment deprives an individual of a fundamental right (*i.e.*, the right to life), . . . the State needs a compelling interest to justify it. . . . Thus stated, the substantive due process argument reiterates what is essentially the primary purpose of the Cruel and Unusual Punishments Clause of the Eighth Amendment—*i.e.*, punishment may not be more severe than is necessary to serve the legitimate interests of the State.

408 U.S. at 359-60 n.111 (Marshall, J., concurring).

12. 408 U.S. at 359 (Marshall, J., concurring).

Justice Marshall did not make entirely clear his view of the strength of the presumption of constitutionality accorded to the legislative enactment of capital punishment. On the one hand, he stated that those challenging the penalty "bear a heavy burden of demonstrating that it is excessive," *id.* at 360 n.111, and on the other, that

> [d]espite the fact that abolitionists have not proved non-deterrence beyond a reasonable doubt, they have succeeded in showing by clear and convincing evidence that capital punishment is not necessary as a deterrent . . . .

Id. at 353.

In recent decades the Court has accorded a greater presumption to legislation restricting economic liberty than to that restricting noneconomic rights. *Compare* Ferguson v. Skrupa, 372 U.S. 726 (1963), Williamson v. Lee Optical Co., 348 U.S. 483 (1955), Lincoln Fed. Labor Union v. Northwestern Iron & Metal Co., 335 U.S. 525 (1949), *and* G. Gunther, Cases and Materials on Constitutional Law 576-96 (9th ed. 1975) *with* Roe v. Wade, 410 U.S. 113 (1973), Griswold v. Connecticut, 381 U.S. 479 (1965), *and* G. Gunther, *supra* at 616-56. Following this double standard, the Court would apply the greater scrutiny to punishments tested for a rational basis under the Eighth Amendment. *Cf.* Comment, *The Death Penalty Cases*, 55 Cal. L. Rev. 1268, 1271-73 (1958). It has been suggested that the double standard may be justified by a theory of judicial review which accords greater deference to legislation supported by instrumental policy considerations—reasons of social utility—than to legislation supported by moral judgments. Wellington, *Common Law Rules and Constitutional Double Standards: Some Notes on Adjudication*, 83 Yale L.J. 222 (1973). Under this analysis, the legislative purpose of deterrence for capital punishment might be subjected to less scrutiny than the other purpose most often advanced, retribution. For discussions of retribution as a justification for capital punishment, see, *e.g.*, Furman v. Georgia, 408 U.S. 238, 303-01 (Brennan, J., concurring), 308 (Stewart, J., concurring), 342-45 (Marshall, J., concurring), 391-95 (Burger, C.J., dissenting), 452-61 (Powell, J., dissenting) (1972); Packer, *supra* note 11, at 1078; Comment, *supra* at 1297-1301.

13. Before he was appointed to the Court, Louis Brandeis submitted a brief supplying extensive factual support from nonjudicial sources for an Oregon law regulating hours of work for women. His brief received favorable comment in Justice Brewer's opinion for the Court upholding the statute, Muller v. Oregon, 208 U.S. 412, 419-20 & n.1 (1908), and has become a classic example of the use of social science data in constitutional litigation. See P. Freund, On Understanding the Supreme Court 86-92 (1949).

14. I. Ehrlich, The Deterrent Effect of Capital Punishment: A Question of Life or Death, 1974 (Working Paper No. 18, Center for Economic Analysis of Human Behavior [illegible] Capital Punishment: A Time

bear importantly on the question now before the Court in *Fowler*. One of the two Justices who have thus far revealed themselves willing to declare the penalty unconstitutional per se has relied in large part on the statistical research of Sellin and others who have followed his approach. Ehrlich criticized the methods used by Sellin—graphical comparisons of homicide rates in neighboring states—and used a more sophisticated technique—multiple regression analysis.[15] He found a significant deterrent effect associated with the use of the death penalty in the United States over the period from 1935 to 1969, specifically that on average for the period studied each additional execution per year resulted in seven or eight fewer murders.[16] The Solicitor General of the United States, in his amicus brief in *Fowler*, called attention to the Ehrlich study as important empirical evidence that capital punishment serves the legitimate legislative purpose of deterring murder;[17] the petitioner, in his reply brief, sharply attacked

15. Multiple regression is a statistical technique for analyzing the relationship between a dependent variable, whose behavior is to be explained, and a set of independent or explanatory variables. The analysis uses a sample of data to estimate an equation in which the dependent variable is set equal to a weighted sum of the explanatory variables. The weights or "coefficients" associated with the explanatory variables are chosen to minimize the sum of the squared differences between the actual values of the dependent variable and the values computed using the regression equation (hence the term "least squares regression"). A graphical representation of a regression equation with only one explanatory variable would be a "least squares" line drawn through the scatter of points generated by plotting the dependent variable on the vertical axis and the explanatory variable on the horizontal axis. Econometrics is concerned with the use of regression analysis to measure and test economic relationships. See B. Wonnacott & T. Wonnacott, Econometrics 1-9 (1970); Finkelstein, *Regression Models in Administrative Proceedings*, 86 Harv. L. Rev. 1442, 1444-55 (1973) [hereinafter cited as *Regression Models*].

Regression analysis is being used with increasing frequency in legal commentary. *See, e.g.*, Brantman, Cohen & Trubek, *Measuring the Invisible Wall: Land Use Controls and the Residential Patterns of the Poor*, 82 Yale L.J. 483 (1973); Breyer & MacAvoy, *The Natural Gas Shortage and the Regulation of Natural Gas Producers*, 86 Harv. L. Rev. 941 (1973); Finkelstein, *A Statistical Analysis of Guilty Plea Practices in the Federal Courts*, 89 Harv. L. Rev. 293 (1975); Posner, Hirsch & Margolis, *Regression Analysis of the Effects of Habitability Laws Upon Rent: An Empirical Observation on the Tobriner-Kennedy Debate*, 63 Cal. L. Rev. 1098 (1975); Note, *Beyond the Prima Facie Case in Employment Discrimination Law: Statistical Proof and Rebuttal*, 89 Harv. L. Rev. 387 (1975). However there has been little discussion in legal journals of the wide range of results which regression studies of a given relationship may produce and the statistical controversies which often arise between authors of these conflicting studies. *But see Regression Models*, *supra* at 1455-75; Levin, *Education, Life Chances, and the Courts: The Role of Social Science Evidence*, 30 Law & Contemp. Probs. 217, 228 (1975) (conflicting statistical evidence on effects of racial integration and compensatory education programs on test scores of minority students). The economic literature reveals the extent of the disagreements provoked by econometric studies even of relationships on which there is considerable theoretical agreement among economists. *See, e.g.*, D. Patinkin, Money, Interest, and Prices 651-61 (2d ed. 1965); Jorgenson, *Econometric Studies of Investment Behavior: A Survey*, 9 J. Econ. Lit. 1111 (1971); Liviatan, *Tests of the Permanent-Income Hypothesis Based on a Reinterview Savings Survey*, in Readings in Economic Statistics and Econometrics 251-83 (A. Zellner ed. 1968); Friedman, *Note on Nissan Liviatan's Paper*, in *id.* at 284-87; Liviatan, *A Reply*, in *id.* at 287-90.

16. Ehrlich 1975, *supra* note 14, at 398, 414.

17. Brief for the United States as Amicus Curiae at 35-38. In the summary of his argument, the Solicitor General described the Ehrlich study in these terms:

HANS ZEISEL

THE DETERRENT EFFECT OF THE DEATH PENALTY: FACTS v. FAITHS

I. The Problem

Once again in the 1975 Term, the Justices of the Supreme Court found themselves unable to express a unified position on the validity of the death penalty. The problem is a complex one because of murky precedents, disputed facts, and strong emotional commitments. It is proposed here to address just one of the issues raised in the cases, the question of the data supporting or controverting the deterrent effect of the death penalty.

In one of the opinions in *Gregg v. Georgia*[1]—there was no opinion for the Court—Mr. Justice Stewart, speaking for himself and Justices Powell and Stevens, stated: "Statistical attempts to evaluate the worth of the death penalty as a deterrent to crimes by potential offenders have occasioned a great deal of debate. The results simply have been inconclusive."[2] The Justice went on to cite with approval the position of Professor Charles L. Black, that no conclusive evidence would ever be available on the question of deterrence:[3]

Hans Zeisel is Professor Emeritus of Law and Sociology, The University of Chicago; Senior Consultant, American Bar Foundation.

[1] 96 S. Ct. 2909 (1976).

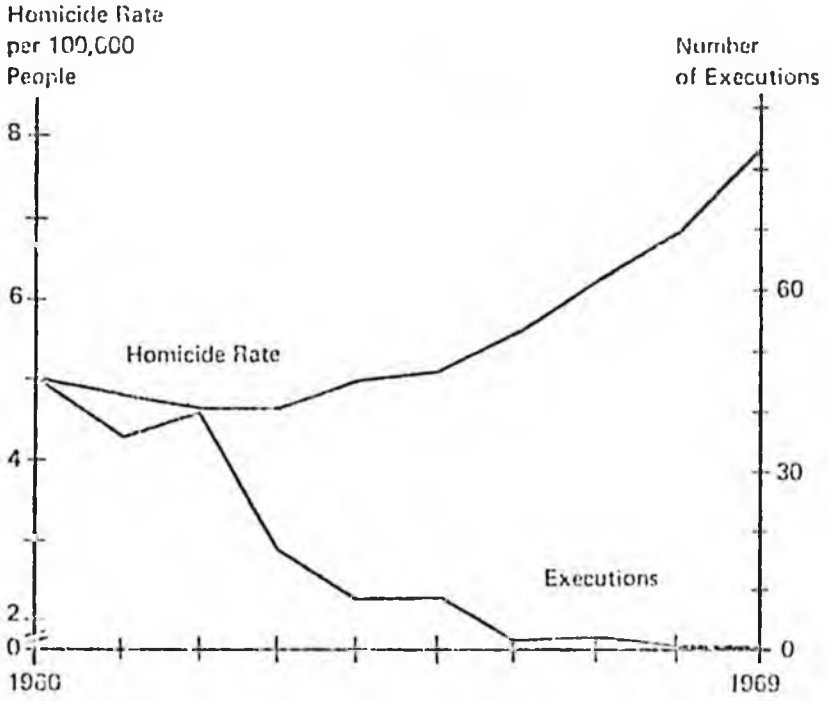
[2] *Id.* at 2930.

[3] *Id.* at 2931, quoting BLACK, CAPITAL PUNISHMENT: THE INEVITABILITY OF CAPRICE AND MISTAKE 25–26 (1974).

Please insert the following in your copy of *The Supreme Court Review*, [illegible], edited by Philip B. Kurland (University of Chicago Press, 1977):

In Hans Zeisel's article, "The Deterrent Effect of the Death Penalty," figures 5 and 8 (pp. 330 and 337) were transposed. They are given correctly below:

HB-140



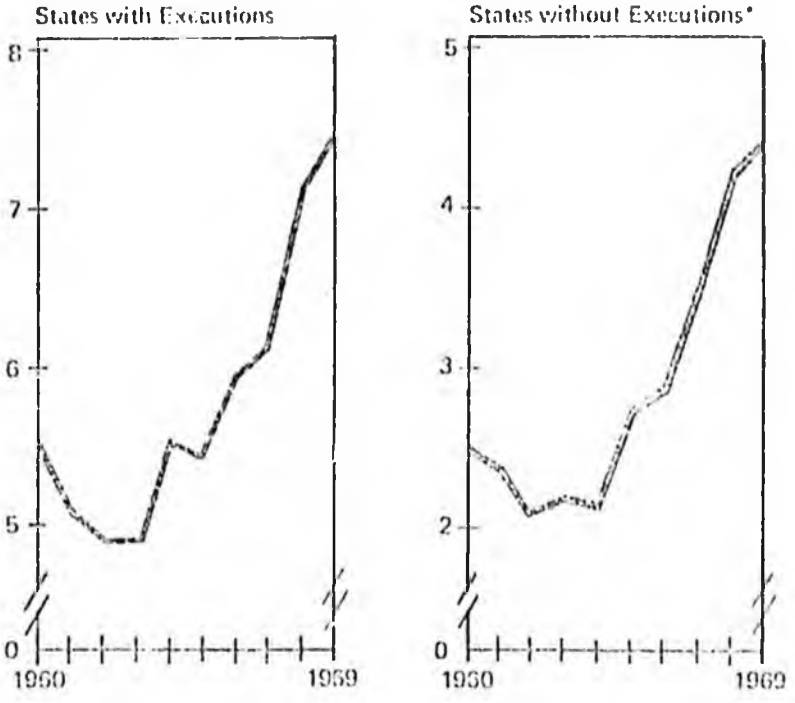


FIG. 5. United States homicide rate and number of executions, 1960–69.

* Abolition states and 6 states with no executions since 1948

FIG. 8. Homicide rates 1960–69 in states with and without executions.

> . . . after all possible inquiry, including the probing of all possible methods of inquiry, we do not know, and for systematic and easily visible reasons cannot know, what the truth about this "deterrent" effect may be. . . .
>
> . . . A "scientific"—that is to say, a soundly based—conclusion is simply impossible, and no methodological path out of this tangle suggests itself.

It is the purpose of this paper to show that both the Court's and Professor Black's views are wrong; that the evidence we have is quite sufficient if we ask the right question; and that the request for more proof is but the expression of an unwillingness to abandon an ancient prejudice.

II. The Structure of the Evidence

All studies that explore the possible deterrent effect of capital punishment are efforts to simulate the conditions of what is conceded to be an impossible controlled experiment. In such an experiment the population would be divided by some lottery process (randomly) into two groups. The members of one group, if convicted of a capital crime, would receive the death penalty; the members of the other group, if convicted of a capital crime, would receive a sentence of life in prison.

The random selection would assure all other conditions that could possibly affect the capital crime rate remain the same—within the calculable limits of the sampling error—in both groups, so that the "death penalty–life sentence" difference remains the only relevant difference between them.

Figure 1 shows the basic analytical structure of such an experiment. This hypothetical graph, denoting the constellation that would confirm the existence of a deterrent effect, begins with two populations of would-be murderers (X + Y + Z), equal in every respect except that the one lives under threat of the death penalty, the other does not. (X) is the number of would-be murderers in both groups deterred, even by the threat of prison; it can be read from the first bar and projected to the second. At the bottom end of each bar (Z) is the proportion of would-be murderers whom even the threat of the death penalty would not deter. It can be read from the second bar and projected to the first. The crucial test is whether a group (Y) can be found which would be deterred by the death penalty but

would not be deterred if there were only the life sentence. The statistical test that would establish the existence of group (Y) would reveal a significantly lower level of murders[1] under threat of the death penalty.

In principle, it should be possible to identify individual members in each of the three groups. As a practical matter one can identify only the murderers who have not been deterred.[2] Efforts have been

[1] The paradigm is limited to murder. See also, however, Bailey, *Rape and the Death Penalty: A Neglected Area of Deterrence Research*, in BOWERS & PIERCE eds. CAPITAL PUNISHMENT IN THE UNITED STATES 336 (1976).

[2] The task of tracing the effect of an experimental treatment through case histories of the persons who had been affected by it is less difficult if the treatment aims at a positive effect not a negative, deterrent one. See ZEISEL, SAY IT WITH FIGURES ch. II (1968 ed.).

made to identify members of the (Y) group. The Los Angeles Police Department, for instance, filed a report with the California legislature in 1960 to the effect that a number of apprehended robbers had told the police that while on their job they had used either toy guns or empty guns or simply simulated guns "rather than take a chance on killing someone and getting the gas chamber."[6] Quite apart from this being hearsay evidence reported by a very interested party, this is poor evidence, if any, on the issue. The unresolved and probably unresolvable difficulty is whether these robbers would not have minded "killing someone," if the risk had been no more than life in prison.

Figure 2 represents the paradigm diagram for proving the deterrent effect of increasing executions. Proof of deterrence would be established if groups (Y_1) and (Y_2) were found to exist.

III. The Impossible Controlled Experiment

Such diagrammed evidence would be cogent if derived from a controlled experiment. How morally and legally impossible such an experiment is can easily be seen if its details are sketched out. In one conceivable version a state would have to decree that citizens convicted of a capital crime and born on odd-numbered days of the month would be subject to the death penalty; citizens born on even-numbered days would face life in prison. A significantly lower number of capital crimes committed by persons born on uneven days would confirm the deterrent effect. The date of birth here is a device of randomly dividing the population into halves by a criterion that we will assume cannot be manipulated.[7]

The equally impossible experiment that would test the effect of differential frequencies of execution would require at least three randomly selected groups. In the first group everybody convicted of a capital crime would be executed. In the second, only every other such convict (again selected by lot) would be executed. In the third, nobody would be executed.

The data available to us for study of the deterrent effect of the death penalty are all naturally grown: none derive from a controlled

[6] Report of the California Senate on the Death Penalty 16-17 (1960).

[7] Worried, expectant mothers, of course, could demand Caesarian delivery on an even-numbered date. Such intervention, however, would affect the purity of the experiment only if these mothers were also farsighted, *i.e.*, if their artificial birth dates would comprise a higher rate of future murderers than the normal delivery

[*] Note 3 *supra*.

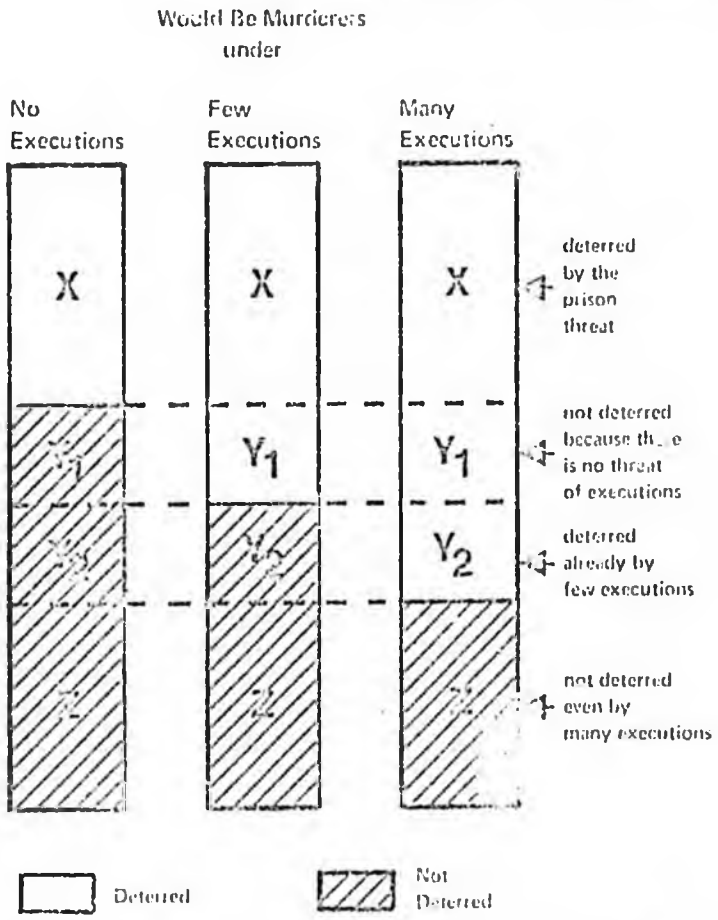

FIG. 2. Experimental paradigm showing a deterrent effect of increasing the rate of executions.

experiment. Yet they all are analyzed as if they had come from a controlled experiment. The structure of analysis is the same. What is missing is the prior randomization which insures comparability in all other respects. The analysis of naturally grown data must try to reproduce comparability by other means. Since none of these means is ever perfect, none of the studies based on naturally grown data ever completely simulates the impossible experiment.

It is this impossibility of the experiment and the unavoidable imperfection of nonexperimental data that account for despair of ever discovering "the truth about this 'deterrent' effect."[8] The despair is unwarranted. Even in the so-called natural sciences proofs that

[8] Note 3 *supra*.

are incomplete have nevertheless, for good reasons, been accepted by the scientific community.

Let us see then what proofs have been afforded by the many studies that have been done. They are stated here, not in their historical sequence, but in terms of the varying degree with which they approximate the ideal of the controlled experiment.

IV. Homicide Rates with and without the Death Penalty

The first approximation to the impossible experiment is the simple comparison of the capital crime rates in jurisdictions with and without capital punishment. The comparison could take two forms. Historically the first and most obvious comparison was made of the capital crime rate in one state before and after the abolition of the death penalty. If it showed no increase, it gave ground for the belief that the withdrawal of the death penalty had no ill effect.[9] The second form of simple comparison was between states that have the death penalty and states that do not have it.[10]

These early comparisons failed to show higher capital crime rates when there was no death penalty. But to take this as proof that the death penalty had no deterrent effect involved important assumptions. The before and after comparison implies that none of the other conditions that could have affected the capital crime rate had changed between the two periods. The state-by-state comparison implies that the states were identical with respect to the other conditions.

The first improvement on the simplistic structure of these comparisons was to put the before-and-after comparison side by side with developments in states which during that period had not changed their death penalty rule. Similarly, the comparison between

[9] The first comprehensive data on before-and-after comparison were presented by Thorsten Sellin to the Royal Commission on Capital Punishment. *The Determination of Value of Capital Punishment*, Report of the Royal Commission on Capital Punishment App. 6 (Cmd. 8932 1953). Sellin's memorandum is published in The Measures of the Expedient, 667. *Cf.* also Koestler, Reflections on Hanging, Ap. (1956); United Nations, Capital Punishment, Report (1960); Samuelson, *Was Capital Punishment Restored in Delaware?* 60 J. Crim. L.C. & P.S. 148 (1969).

states was improved by limiting it to contiguous states, for which the assumption of comparability seems more justified.

Table 1 provides an example of contiguous states comparison.[11]

Only in one of the five groups is the homicide crime rate in the no-death-penalty state (Maine) higher than in the other two states. In all others it is either the same or lower. This is neither evidence of a deterrent effect of the death penalty nor clear evidence of its absence. Even contiguous states are nor strictly comparable. Over a span of sixteen years, the period covered by this table, the conditions favoring crime in those states may develop in different directions.

The state-by-state analysis becomes more convincing if averages for a long time period are replaced by the annual figures from which these averages were computed. In figure 3, the homicide rate in Kansas is compared with that of its neighbor states, Missouri and Colorado. Kansas was an abolitionist state until 1935.[12]

Figure 3 allows several observations. First, that annual rates exhibit considerable random fluctuations. It suggests that changes from one

year to the next are unlikely to be significant. Figure 3 also shows that looking only at one state may lead to false conclusions. The Kansas homicide rate, except for the first two years, shows a sharp decline after 1935 and some early observers jumped to the conclusion that it was the restoration of the death penalty that did it. A glance at the homicide rates of Colorado and Missouri warns against this conclusion. The development of the Kansas rate does not noticeably differ from those of the two neighboring states, which had the death penalty throughout the entire span of years.

V. Improving Comparability

Comparing the development of the capital crime rate in contiguous states with and without the death penalty has been challenged on the ground that contiguity is not a sufficiently solid guaranty of likeness. Three responses to this challenge have been forthcoming. One was to show that the contiguous states were in fact alike with respect to a great variety of factors that could, if they had differed from state to state, independently affect the capital crime rate. Table 2 is an example of such efforts.[13]

TABLE 2

* State and local.

[13] From Babbus & Cole, note 10 *supra*, at 178.

Michigan, the state without a death penalty, had no higher homicide rate than neighboring Indiana, even though it had a lower probability of apprehension and conviction, a higher unemployment rate, a larger proportion of blacks in the population, greater population density—all factors which should tend to increase the capital crime rate. On the other hand, it had a higher per capita police expenditure. Ohio had a lower homicide rate and a higher apprehension rate. On most of the remaining characteristics Ohio was in an intermediary position.

The second analytical device for improving comparability was to replace the comparison of entire states by comparing more homogeneous subsections of these states, such as communities of comparable size or counties of comparable income levels.[14] The third, most sophisticated response to the problem of comparability was to apply to it a tool called regression analysis. This is an instrument designed mainly to resolve problems such as this which call for separating the effect of one particular variable from the possible effect of a multitude of others.

Before discussing regression analysis in more detail, I turn to two additional efforts to sharpen the analytic approach aimed at detecting the existence of a deterrent effect for the death penalty.

VI. Sharpening the Measure of Capital Crime

If the death penalty deters murder, the rate of wilful homicides should show the effect. There are, however, grades of wilfulness and some type of homicide will have a higher likelihood of resulting in the death penalty. These types of homicide should provide a more sensitive index for detecting deterrent effect, if one exists, than the overall homicide rate.[15]

The difficulty of developing such an index, of course, is the lack of adequate data. With one exception, namely, the killing of a police officer, records are not generally separated according to the type of homicide committed. An effort has been made to obtain counts of

[14] Cf. e.g., Sutherland, *Murder and the Death Penalty*, 15 J. Crim. L.C. & P.S. 520 (1925); Campion, *Does the Death Penalty Protect the State Police?* in Bedau, ed., The Death Penalty in America 361 (1967); Vold, *Can the Death Penalty Protect Police?* 12 Prison J. 4 (1932).

first degree murders from the country's prisons.[16] But these numbers are affected by regionally differing apprehension and conviction rates, and indirectly also by differential standards of plea bargaining and jury nullification. Suffice it to note that this effort too failed to detect a deterrent effect of the death penalty.

Killing a policeman is a genuine "high death penalty risk" category and it is well recorded and counted. Again it was Thorsten Sellin who investigated them; table 3 summarizes his findings.[17] Even this measure, rightly thought to be more sensitive than the general homicide rate, failed to reveal any difference between the threat of the death penalty and that of life imprisonment.

VII. The Effect of Executions

A sentence is likely to deter by the differential degree of fear it engenders in the would-be perpetrator. It has been argued, there-

[16] Bailey, *Murder and Capital Punishment: Some Further Evidence*, in BEDAU, note 4 *supra*, at 314.

[17] Sellin, *The Death Penalty and Police Safety*, in SELLIN, note 10 *supra*, at 138, 141, 145.

fore, that the dichotomy of jurisdictions with and without capital punishment is but a crude approximation to the reality of the threat. What matters was not the death penalty on the books but the reality of executions.

One response to this consideration was to transform the death penalty–life sentence dichotomy into the gradations provided by the number of executions carried out during any one year. I will return to this approach later. The other response was to try to find out whether publicized executions had a short-range depressing effect on the homicide rate.

Leonard Savitz recorded the homicide rates during the eight weeks before and after well-publicized executions in Philadelphia.[18] He found no depressing effect of these executions, although he used one of the potentially more sensitive measures of deterrence, the frequency of felony murders rather than the overall homicide rate.[19]

A similar effort with California data showed an effect, albeit an ambiguous one. William Graves compared homicide rates during execution weeks with non-execution weeks.[20] He had the weeks begin on Tuesday in order to keep Fridays, the execution day in California, at the midpoint. The comparison (fig. 4a) suggested a depressing effect during the days preceding the execution and an increase in homicides on the days following it. Graves was puzzled; others considered the data as proof of a counter-deterrent effect. Conceivably the data could be rearranged, as in figure 4b, with the week beginning on Friday, the execution day. The results would then suggest a reduction of homicides during the first three days following executions compensated by an increase during the rest of the week. In any event, Graves's data show, at best, a delaying rather than a deterrent effect, and the failure of the more sensitive Philadelphia data to show any effect casts doubt on the strength of the California result.

[18] Savitz, *A Study in Capital Punishment*, 49 J. Crim. L.C. & P.S. 338 (1958).

[19] A count of felony murders (for the non-lawyer: a homicide committed in the course of another felony such as robbery) can be made only with great difficulty and only in places, such as Philadelphia, where detailed police records are kept.

[20] Graves, *The Deterrent Effect of Capital Punishment in California*, in Bedau, The Death Penalty in America 322 (1967). (The rearrangement in figure 4b is not precise because the curves for Tuesdays through Thursdays will change under the redefinition.)

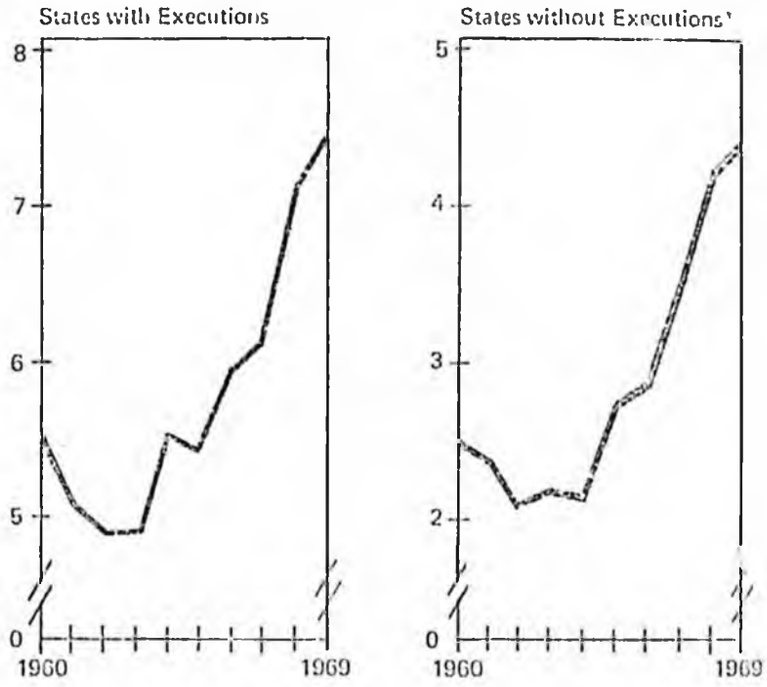
FIG. 4. Homicides during weeks with and without executions.

VII. THE CONTRIBUTION OF ISAAC EHRLICH

Isaac Ehrlich was the first to introduce regression analysis to efforts designed to determine whether the death penalty had a deterrent effect beyond the threat of life imprisonment.[21] This was a new, powerful way of coping with the task of isolating the death penalty effect, if it should exist, uncontaminated by other influences on the capital crime rate. Ehrlich's paper was catapulted into the center of legal attention even before it was published, when the Solicitor General of the United States cited it with lavish praise in his Amicus Curiae Brief in *Fowler v. North Carolina*,[22] and delivered copies of the study to the Court. The Solicitor General called it "important empirical support for the a priori logical belief that use of the death penalty decreases the number of murders."[23]



In view of the evidence available up to that time, Ehrlich's claim was indeed formidable, both in substance and precision: "[A]n additional execution per year . . . may have resulted in . . . 7 or 8 fewer murders."[24] The basic data from which he derived this conclusion were the executions and the homicide rates as recorded in the

[21] Ehrlich, *The Deterrent Effect of Capital Punishment: A Question of Life and Death*, Working Paper No. 18, National Bureau of Economic Research (1973). The paper was subsequently published under the same title in an abbreviated form in 65 AM. ECON. REV. 397 (1975).

United States during the years 1933 to 1969, the former generally decreasing, the latter, especially during the sixties, sharply increasing.[25] Figure 5 presents the crucial divergence between 1960 and 1969. Ehrlich considered simultaneously other variables that could affect the capital crime rate through calculations I shall discuss presently.[26]

IX. Regression Analysis

Regression analysis proceeds essentially in the following manner. Suppose one knew for certain that, aside from the possible

[25] Data on murders from *The Deterrent Effect of Capital Punishment: A Question of Life and Death*, Sources and Data, May 1975, Memorandum by I. Ehrlich. Data on executions from: National Prisoner Statistics, U.S. Bureau of Prisons.

[26] Ehrlich's analysis included the following variables: the arrest rate in murder cases; the conviction rate of arrested murder suspects; the rate of labor force participation; the unemployment rate; the fraction of the population in the age group 14 to 24; and per capita income.

The complete apparatus o

deterrent effect of executing murderers, there was but one other factor that influenced the capital crime rate: the proportion of men between the ages of 17 and 24 in the total population. The analysis would then begin by relating the capital crime rate in the various states to the proportion of young men in those states, as in figure 6.

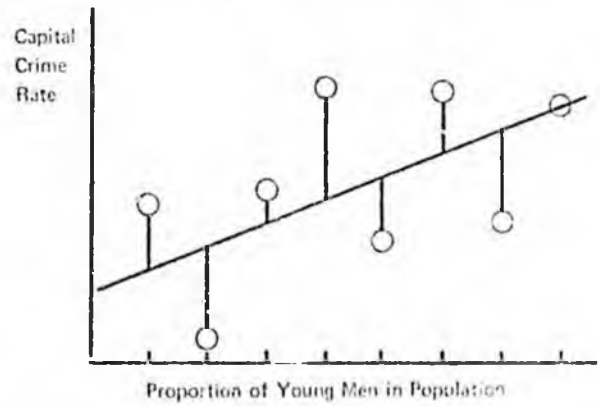

FIG. 6. Hypothetical relationship between the capital crime rate and the proportion of young men in the population.

The points in this graph may represent either different jurisdictions at one point of time, or different points of time in the same jurisdiction, or both. The straight line (the regression line) represents the best estimate of the relationship between the proportion of young men in the population and the capital crime rate. The vertical distance of each point from the regression line represents the residual part of the variations in the capital crime rate, the part that remains unexplained after the effect of the "proportion of young men" has been eliminated. One then proceeds to test whether these residuals are related to the frequency of executions, by plotting them against the number of executions in the respective states as in figure 7. If no relationship exists, a horizontal regression line will indicate that executions have no deterrent effect (a): No matter how executions vary, the capital crime rate remains the same. If a relationship exists (b), the downward slope of the regression line would indicate that as the frequency of executions increases, capital crime decreases. That graph, one will note in passing, is in appearance indistinguishable from the finding of a controlled experiment, if one could be made.

The complete apparatus of regression analysis is more compli-

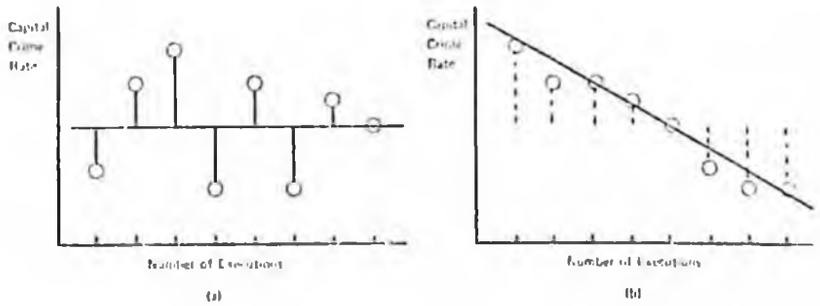

FIG. 7. Two hypothetical relationships between the frequency of executions and the residual capital crime rate.

cated, primarily by encompassing several control variables, not just one, as in our example. Many more problems must be resolved along the way. One requirement is to include all variables that affect the outcome. If one is omitted its effect could be erroneously attributed to one of the included variables. This danger of spurious correlation is particularly great if the analysis is concerned with so-called time series data, such as corresponding constellations of executions and capital crime over a series of consecutive years.

Another requirement is that the analysis account for feedback effects. Estimates of deterrent effects of punishment, for example, may be distorted if they fail to separate the simple statistical association between crime and punishment into its potential two components: the effect of punishment on crime, and the possible reverse effect of crime on punishment. For example, an increase in crime may overload the law enforcement system and thereby increase the defendant's chances of a lower sentence in the plea bargaining process.

All these and other technical refinements of the regression analysis have but one goal: to isolate, through a process of mathematical purification, the effect of any one variable upon the other, under conditions that exclude the interference from other variables. Regression analysis, thus, is but another effort to simulate with the help of nonexperimental data the experimental conditions outlined in figure 2 of this paper.[25] These examples suggest the sophistication

of this analytic instrument, but its sophistication is matched by a corresponding measure of delicacy. Applied to nonexperimental data, regression analysis is not a naturally robust instrument. Its results can be drastically affected by minor changes in the analytic pattern, for which the investigator has, as a rule, many options.

X. Ehrlich's Deterrence Claim Evaporates

Ehrlich's study, because it ran counter to all the hitherto available evidence except that of Graves, and because it was introduced into a litigation of historic import, received extraordinary attention from the scholarly community.

First, Peter Passell and John Taylor attempted to replicate Ehrlich's finding and found it to hold up only under an unusually restrictive set of circumstances.[28] They found, for example, that the appearance of deterrence is produced only when the regression equation is in logarithmic form; in the more conventional linear regression framework, the deterrent effect disappeared.[29] They found also that no such effect emerged when data for the years after 1962 were omitted from the analysis and only the years 1933–61 were considered.[30]

An effort to duplicate Ehrlich's findings from Canadian experience also failed.[31] Kenneth Avio of the University of Victoria, after analyzing the thirty-five-year span, concluded that "the evidence would appear to indicate that Canadian offenders over the period 1926–60 did not behave in a manner consistent with an effective deterrent effect of capital punishment."[32]

During 1975, the *Yale Law Journal* published a series of articles reviewing the evidence on the deterrent effect of capital punishment. Included in this series was a second attempt to replicate Ehrlich's result by William Bowers and Glenn Pierce.[33] In replicating Ehrlich's work, they confirmed the Passell-Taylor finding that

[28] Passell & Taylor, *The Deterrent Effect of Capital Punishment: Another View*, March 1975 (unpublished Columbia University Discussion Paper 74-7509), reprinted in Reply Brief for Petitioner, *Fowler v. North Carolina*, App. C, at 4a–6a.

Ehrlich's results were extremely sensitive to whether the logarithmic specification was used and whether the data for the latter part of the 1960s were included.[31] Bowers and Pierce also raised questions about Ehrlich's use of the FBI homicide data in preference to vital-statistics data.[35]

Ehrlich defended his work in this series in the *Yale Law Journal* by addressing some of the criticisms raised against his study.[36] He refuted some, but not the crucial ones. In his article he referred to a second study he made of the problem, basing it this time on a comparison by states for the years 1940 and 1950. Ehrlich claimed that the new test bolstered the original claim. But he described these findings as "tentative and inconclusive."[37] In the meantime, Passell made a state-by-state comparison for 1950 and 1960 but did not find what Ehrlich allegedly had found. Passell concluded: "We know of no reasonable way of interpreting the cross-section [*i.e.*, state-by-state] data that would lend support to the deterrence hypothesis."[38]

A particularly extensive review of Ehrlich's time series analysis was made by a team led by Lawrence Klein, president of the American Economic Association.[39] The authors found serious methodological problems with Ehrlich's analysis. They raised questions about his failure to consider the feedback effect of crime on the economic variables in his model,[40] although he did consider other feedback effects in his analysis. They found some of Ehrlich's technical manipulations to be superfluous and tending to obscure the accuracy of his estimates.[41] They, too, raised questions about variables omitted from the analysis, and the effects of these omissions on the findings.[42]

Like Passell-Taylor and Bowers-Pierce, Klein and his collaborators replicated Ehrlich's results, using Ehrlich's own data, which by

that time he had made available.[43] As in previous replications, Ehrlich's results were found to be quite sensitive to the mathematical specification of the model and the inclusion of data at the recent end of the time series.

By this time, Ehrlich's model had been demonstrated to be peculiar enough. Klein went on to reveal further difficulties. One was that Ehrlich's deterrence finding disappeared after the introduction of a variable reflecting the factors that caused other crimes to increase during the latter part of the period of analysis.[44] The inclusion of such a variable would seem obligatory not only to substitute for the factors that had obviously been omitted but also to account for interactions between the crime rate and the demographic characteristics of the population.

Klein also found Ehrlich's results to be affected by an unusual construction of the execution rate variable, the central determinant of the analysis. Ehrlich constructed this variable by using three other variables that appear elsewhere in his regression model: the estimated homicide arrest rate, the estimated homicide conviction rate, and the estimated number of homicides. Klein showed that with this construction of the execution rate a very small error in the estimates of any of these three variables produced unusually strong spurious appearances of a deterrent effect.[45] He went on to show that the combined effect of such slight errors in all three variables was likely to be considerable, and that in view of all these considerations, Ehrlich's estimates of the deterrent effect were so weak that they "could be regarded as evidence . . . [of] a counterdeterrent effect of capital punishment."[46] In view of these serious problems with Ehrlich's analysis, Klein concluded: "[W]e see too many plausible explanations for his finding a deterrent effect other than the theory that capital punishment deters murder." And further: "Ehrlich's results cannot be used at this time to pass judgment on the use of the death penalty."[47]

The final blow came from a study by Brian Forst, one of Klein's collaborators on the earlier study. Since it had been firmly established that the Ehrlich phenomenon, if it existed, emerged from developments during the sixties, Forst concentrated on that

[45] *Id.* at 17–19.
[46] *Id.* at 18.
[47] *Id.* at 33.

decade.[18] He found a rigorous way of investigating whether the ending of executions and the sharp increase in homicides during this period was causal or coincidental. The power of Forst's study derives from his having analyzed changes *both* over time and across jurisdictions. The aggregate United States time series data Ehrlich used were unable to capture important regional differences. Moreover, they did not vary as much as cross-state observations; hence they did not provide as rich an opportunity to infer the effect of changes in executions on homicides.

Forst's analysis is superior to Ehrlich's in four major respects: (1) It focuses exclusively on a period of substantial variation in the factors of central interest. (2) Its results are shown to be insensitive to alternative assumptions about the mathematical form of the relationship between homicides and executions. The results were also invariant to several alternative methods of constructing the execution rate, to alternative assumptions about the nature of the relationships between homicides, and other offenses, executions, and convictions and sentences, and to alternative technical assumptions. (3) By not requiring conversion of the data to logarithms, Forst's model does not require that false values be used when the true values of the execution are zero. (4) It incorporates more control variables.

Forst's study led to a conclusion that went beyond that of Klein: "The findings give no support to the hypothesis that capital punishment deters homicide."[19] "Our finding that capital punishment . . . does not deter homicide is remarkably robust with respect to a wide range of alternative constructions."[20]

XI. The Overlooked Natural Experiment

Forst saw that Ehrlich, by using aggregate data for the United States as a whole, was forced to disregard the differences between states that had capital punishment and executions, and states that had either abolished the death penalty or at least had ceased to carry it out. Ehrlich's model thus could not evaluate the natural experiment which legislative history had built into the data. If Ehrlich's thesis—that it was the reduction of executions during the

sixties that made the capital crime rate grow—were correct, then no such growth should obtain in the states in which there could be no reduction in executions because there had been none to begin with. Yet as figure 8 shows, the growth of the capital crime rate during the crucial sixties was as large in the states without executions as in states with executions.

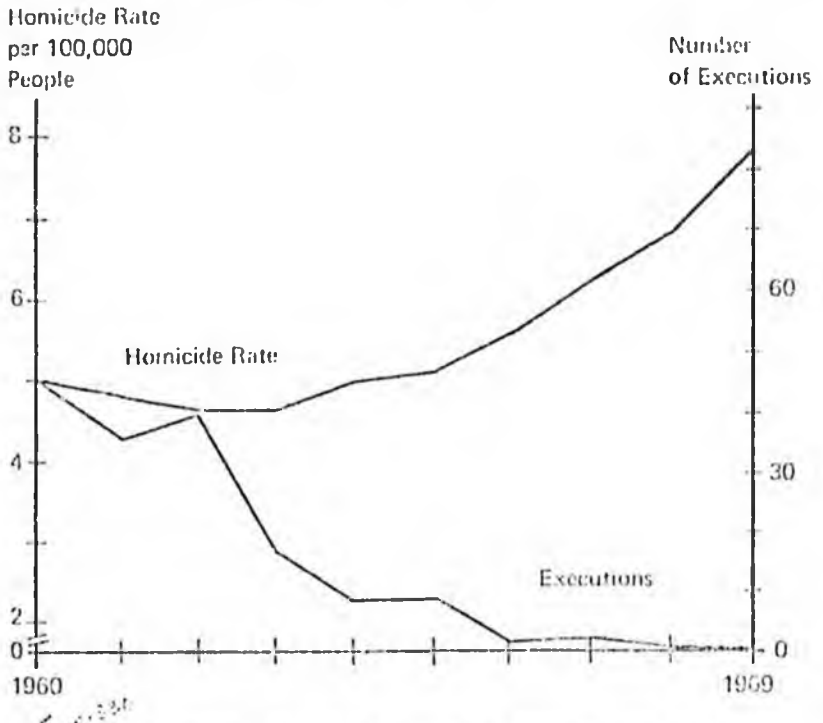

FIG. 8.—United States homicide rate and number of executions, 1960–69.

XII. Evidence versus Ancient Sentiment

The evidence on whether the threat of the death penalty has a deterrent effect beyond the threat of the life sentence, its normal substitute, is overwhelmingly on one side. None of the efforts to sharpen the measurement yardstick by replacing the overall homicide rate through more sensitive measures succeeded in discovering a deterrent effect. Nor did any effort to sharpen the analytical instruments of analysis help. Even regression analysis, the most sophisticated of these instruments, after careful application by the scholarly community failed to detect a deterrent effect.

This then is the proper summary of the evidence on the deterrent effect of the death penalty: If there is one, it can only be minute, since not one of the many research approaches—from the simplest to the most sophisticated—was able to find it.[51] The proper question, therefore, is whether an effect that is at best so small that nobody has been able to detect it, justifies the awesome moral costs of the death penalty.

I can only speculate why the question concerning the deterrent effect of the death penalty has always been posed in its unanswerable form: whether or not it has such an effect. I suspect that at the root of the resistance to the evidence is the very ancient and deeply held belief that the death penalty is the ultimate deterrent.

The Solicitor General has called it a "logical a priori" belief. The logic probably runs as follows: If punishment has any deterrent effect (and surely it often has) then the most severe punishment should deter more than all others. Confronted with the failure to detect such an effect, those who share the belief have narrowed the claim. Only certain types of capital crime, they say, not all, are likely to be deterred. The Court in *Gregg v. Georgia* gave two examples, the hired killer and the "free murder" by a life prisoner:[52]

> We may nevertheless assume safely that there are murderers, such as those who act in passion, for whom the threat of death has little or no deterrent effect. But for many others, the death penalty undoubtedly is a significant deterrent. There are carefully contemplated murders, such as murder for hire, where the possible penalty of death may well enter into the cold calculus that precedes the decision to act. And there are some categories of murder, such as murder by a life prisoner, where other sanctions may not be adequate.

If these are the best examples, the others must be poor indeed. The murderer for hire, knowing himself fairly safe from detection, is not likely to be concerned over the difference between death and prison

[50] The one exception pointing in the other direction, the dubious California finding that executions appear to postpone some homicides for a few days, is of small import. An effort to duplicate the finding in Philadelphia failed. See text *supra* at notes 18 and 20.

[52] 96 S. Ct. at 2951. Further examples are afforded in a footnote: "Other types of calculated murders, apparently occurring with increasing frequency, include the use of bombs or other means of indiscriminate killings, the extortion murder of hostages or kidnap victims, and the execution-style killing of witnesses to a crime." *Id.* at n.33.

Prison Killings and Death P

[55] 96 S. Ct. at 2930, quoting

for life. The "cold calculus" that moves the hired killer must surely tell him how small the probability is that he will be caught.[58] A good part of his careful contemplation goes to avoiding traces.

The life prisoner who kills is even a more interesting example. At first glance, the argument seems so irrefutable, that this type of homicide is occasionally the last capital crime on the statute books before the death penalty is abolished. It is a prize example because on "logical a priori" grounds his is by definition the "free murder" under the law. Again it is useful to look at the facts which Sellin was the first to illuminate. He found that, in 1965, the year for which he collected the data, sixteen prison homicides had been committed by men convicted of murder. Since not all murderers in prison are there with a life sentence, the true number of these "free murders" is likely to be even smaller.[59] In fact, of course, the "free murder" is probably altogether a figment because most life prisoners have some hope of being released before the end of their natural life, a hope that would be destroyed by a second murder. A prison, moreover, has ways of its own of punishing such a double murderer.

It is only fair, however, to take these examples of the Court for what they are, efforts to bolster with reasons the unwillingness to abandon the ancient sentiment. In that sentiment, the belief in deterrence plays but a small part. It is the belief in retributive justice that makes the death penalty attractive, especially when clothed in a functional rationalization. The belief has ancient roots, even if the rationale is modern. The Court in *Gregg* approvingly cites *Furman v. Georgia*:[60]

> The instinct for retribution is part of the nature of man, and channeling that instinct in the administration of criminal justice serves an important purpose. . . . When people begin to believe that organized society is unwilling or unable to impose upon criminal offenders the punishment they "deserve," then there are sown the seeds of anarchy.

[58] An interview comes to mind with a former warden of the Cook County Jail who did not believe in the death penalty. The interviewer asked him, "You mean, you would even hesitate to execute a hired killer?" The warden's answer, as I remember it was: "I shall cross that bridge when I come to it. In my many years here in the Cook County Jail, I have yet to meet the first hired killer. They are never caught, although Chicago would be a good place to catch them."

[59] Sellin, *Prison Homicides*, in SELLIN, note 10 *supra*, at 154, 156; see also Butler, *Prison Killings and Death Penalty Legislation*, 53 Prison J. 11 (1974).

[60] 96 S. Ct. at 2930, quoting 408 U.S. 238, 308 (1972).

The depth of this feeling was revealed in a strange interchange during oral argument between Mr. Justice Powell and Professor Anthony Amsterdam, counsel for the petitioners:[56]

> *Mr. Justice Powell:*
>
> Let me put a case to you. You've heard about Buchenwald, one of the camps in Germany in which thousands of Jewish citizens were exterminated. . . . If we had had jurisdiction over the commandant of Buchenwald, would you have thought capital punishment was an appropriate response to what that man or woman was responsible for?
>
> *Mr. Amsterdam:*
>
> . . . We all have an instinctive reaction that says, "Kill him." . . . But I think the answer to the question that your Honor is raising, . . . [to] be consistent with the 8th Amendment to the Constitution . . . my answer would be, "No."

Mr. Justice Powell asked the same question again, this time about a man who might destroy New York City with a hydrogen bomb. Amsterdam's answer, of course, was again no.

Significantly, both examples went to the issue of retribution, not deterrence. It is hard to think of any crime that would be less deterred by the difference between the death penalty and life imprisonment, for instance, in Spandau prison. The sentiment in favor of the death penalty does not stem from the belief in its deterrence and perhaps we overestimate altogether the importance of that issue.

Nowhere was the worldwide decline of the death penalty significantly connected with arguments about its effectiveness or the lack thereof. In some countries abolition became simply the logical end-point of a gradual decline in executions, probably accompanied by a parallel change in moral sentiments.

In other countries, abolition was clearly an expression of moral sentiment. The first de jure abolition of executions in czarist Russia goes back to A.D. 1020. Capital punishment reappeared in the fourteenth century but was again abolished when Elizabeth ascended the throne in 1742. On both occasions, the issue was one of morality not expediency.[57] In Germany, the 1946 Constitution abolished the death

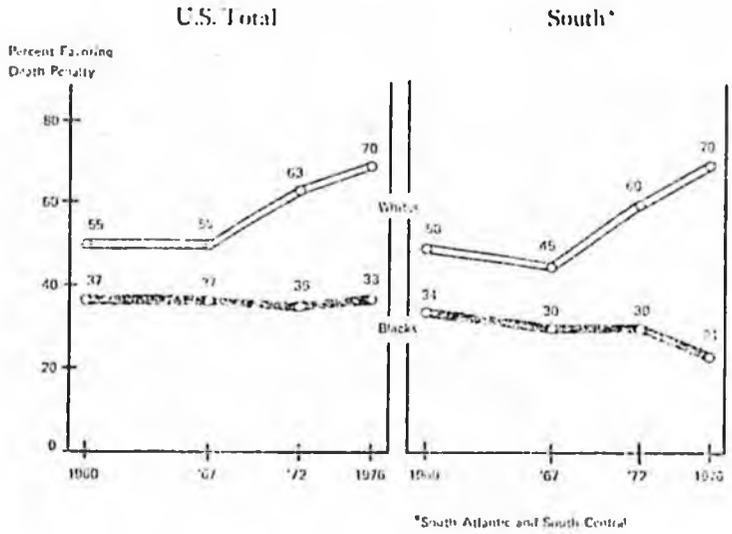
penalty as a deliberate act of repudiation of the Hitler era, when the death penalty, legally or illegally imposed, claimed millions of lives. In Great Britain, after a century of controversy, the abolitionists won when a man, protected by all the vaunted safeguards of British justice, was executed for a crime that he had not committed.



Ceylon abolished the death penalty when it acquired its independence, as an act of Buddhist faith. In Austria, the movement toward abolition reflected primarily moral sentiments. The parliament of the first Austrian republic unanimously abolished capital punishment as a renunciation of the monarchical past. In 1933, a semi-fascist chancellor restored the death penalty primarily as a political threat to the underground opposition. The second republic again abolished the death penalty, first in ordinary criminal cases and then also for cases triable under martial law, last used against the socialist political opposition in the civil war of 1934.

Abolition of the death penalty thus has reflected in the main a change in cultural sentiments, if not of the people, so at least of its legislators or its government. In the United States also capital punishment will end only when our cultural sentiments change. The people, a majority of whom now favor the death penalty, will be the last to change. The legislators will probably change before them; and our Supreme Court Justices conceivably may change even earlier.

Sentiment for the death penalty in the United States has grown during the last decade, stimulated by the unprecedented rise in violent crime during the second half of the sixties. In such times the demand for the death penalty grows because it is so easy to believe it will make law enforcement more effective. It is interesting to analyze the growth of this popular sentiment. In figure 9, four Gallup polls on the death penalty spanning sixteen years are analyzed. Sentiment for the death penalty did not rise until 1967, and then only among the white population. Black sentiment for the death penalty, always far below the corresponding figures for whites, remained unchanged. In the South, sentiment for the death penalty among whites and blacks has traditionally been below the average for the country. For the blacks, this is still true; their propor-

tion favoring the death penalty has been declining, reaching in 1976 a new low of 24 percent. Among the whites, sentiment in the South has caught up with that of the country as a whole, at 70 percent.

* South Atlantic and South Central.

FIG. 9. Proportion of whites and blacks favoring the death penalty, 1960-76 (Gallup Poll).

The petitioners in *Gregg* all came from the South. In the last analysis the Court held that it had no power to override legislation that was grounded in a belief that even some of the Justices must have shared.

Still, one must not give up hope. The realization that the deterrent effect, if it exists at all,[58] can be only minute, should force us to look

[58] Two of the best studies—those of Forst and Bassell—showed even a counter-deterrent balance for the death penalty. In both studies it was statistically insignificant. The possibility of a counterdeterrent effect does not come as a total surprise. It has theoretical support of long standing. There is the suicide through-murder theory advanced first by STEKEL & ALEXANDER, THE CRIMINAL, THE JUDGE, AND THE PUBLIC: A PSYCHOLOGICAL ANALYSIS (1931); see also H. von Weber, *Selbstmord als Mordmotiv*, MONATSSCHRIFT FÜR KRIMINALBIOLOGIE UND STRAFRECHTSREFORM 161 (1937). Then there is concern over the generally brutalizing effect of the death penalty which just adds one more killing in cold blood. Also, as long as some states still consider crimes other than murder (e.g., rape) to be capital offenses, the old argument that killing the victim-witness may somehow "improve" the

[60] 339 N.E.2d 676 (Mass. 1975)

once more at the balance sheet, and weigh against the, at best, minimal benefit, the awesome costs of the death penalty: the inhumanity of the act, the ever present danger of error, the ultimate impossibility to make a fair decision as to who is to die and who is to live.

For the committed who believe that there should be more search for the elusive deterrent effect, a new opportunity has arisen. By the grace of the Court we are in the midst of a new natural experiment. After a number of years during which, through *Furman*, the death penalty was held in abeyance throughout the land, some of our states will resume executions. There is thus another opportunity to see whether the capital crime rate in these states will decline compared to the states that still have no executions.

In the end one must remain skeptical as to the power of evidence to change ancient beliefs and sentiments. The greater hope lies in the expectation that with better times our sentiments will reach the "standards of decency that mark the progress of a maturing society."[59] Justices Brennan and Marshall thought—wrongly it appears—that we had already sufficiently matured.

The conclusion that the personal sentiments of the judges play a decisive role is strengthened by reading the decision of the Massachusetts Supreme Judicial Court in *Commonwealth v. O'Neal*,[60] which held a mandatory death sentence upon a conviction for rape-murder to be unconstitutional. That court had before it on the deterrence issue the very same evidence that was before the United States Supreme Court in *Gregg*. Yet the majority of the Massachusetts court accepted the evidence as proof of the inability of the death sentence to deter. The lack of proof of deterrent effect deprived the government of a "compelling state interest" to justify the death penalty.

Why did the Supreme Court and the Massachusetts court arrive at a different decision? The decisive factor was the simple fact that in the United States Supreme Court only two of the nine Justices felt that "the standard of decency" required abolition while on the Massachusetts court five out of seven felt that way.

---

criminal's situation is still valid. *Cf.* Bowe, *supra* note 20, at 264 n.7. Consider also the case of Gary Gilmore, the Utah convict who succeeded in his objective to be the first person executed in the post *Furman* period. See N.Y. Times, 18 Jan. 1977, p. 1.

[59] Chief Justice Warren, writing for the Court, in Trop v. Dulles, 356 U.S. 86, 101 (1958).

(2) To develop additional programs whereby the offenders may be afforded the opportunity to contribute to society and the support of their families through restitution programs; and

(3) To develop pilot programs of counseling, training and job placement whereby restitution may be accomplished; such programs may be residential or nonresidential as appropriate. (Acts 1980, No. 80-588, p. 928, § 13.)

Article 5.

Death Penalty.

§ 15-18-81. Confinement until execution; certain persons may visit condemned person.

Code commissioner's note. — Acts 1979, No. 79-426, p. 667, effective October 1, 1979, abolished the board of corrections and vested all its rights, duties, power, property, etc., in the governor, and authorized him to exercise such functions and duties himself or through designated administrators. See §§ 14-1-15 through 14-1-17, and also Acts 1979, No. 79-154, p. 253.

§ 15-18-82. Execution by electrocution; where and by whom executions conducted.

Code commissioner's note. — Acts 1979, No. 79-426, p. 667, effective October 1, 1979, abolished the board of corrections and vested all its rights, duties, power, property, etc., in the governor, and authorized him to exercise such functions and duties himself or through designated administrators. See §§ 14-1-15 through 14-1-17, and also Acts 1979, No. 79-154, p. 253.

§ 15-18-85. Return of execution warrant, certificate and statements; payment for transportation of body.

Code commissioner's note. — Acts 1979, No. 79-426, p. 667, effective October 1, 1979, abolished the board of corrections and vested all its rights, duties, power, property, etc., in the governor, and authorized him to exercise such functions and duties himself or through designated administrators. See §§ 14-1-15 through 14-1-17, and also Acts 1979, No. 79-154, p. 253.

CHAPTER 19.

YOUTHFUL OFFENDERS.

Nothing in the constitution or this chapter guarantees youthful offender treatment to all defendants under 21 years of age. Thompson v. State, 354 So. 2d 1128 (Ala.), rev'd on other grounds, 354 So. 2d 1132 (Ala. 1977).

Duty is upon trial judge, etc.

In accord with bound volume. See Rainer v. State, 398 So. 2d 771 (Ala. Crim. App. 1981); Bledsoe v. State, 409 So. 2d 924 (Ala. Crim. App. 1981).

Duty is upon the trial judge to call the Youthful Offender Act to the attention of the youthful offender, just as much as it is the duty of the trial judge to explain to a defendant his constitutional rights when he enters a plea of guilty. Logan v. State, 56 Ala. App. 425, 322 So. 2d 108 (1975).

Supreme court has placed the burden on the trial judge to call the benefits of the Youthful Offender Act to the attention of an eligible defendant, and has analogized that burden and duty to the duty of a trial judge to explain a defendant's constitutional rights before accepting his guilty plea. Whitfield v. State, 56 Ala. App. 653, 324 So. 2d 793, cert. quashed, 295 Ala. 428, 324 So. 2d 796 (1975); Thompson

426, p. 667, § 5, effective October 1,

lict with the act are repealed. Since this section ppears to be inconsistent with or in conflict with the act, it is treated as repealed. See § 14-1-15 through 14-1-17.

tions, and vested all its rights, duties, power, etc., in the governor, and authorized him to exercise such functions and duties himself or through such administrative divisions or such

officers or employees as he may designate. See §§ 14-1-15 through 14-1-17.

§ 14-1-15. Duties, authority, property, rights, etc., of board of corrections vested in governor.

All duties, responsibilities, authority, power, assets, liabilities, property, funds, appropriations, contractual rights and obligations, property rights and personnel, whether accruing or vested, by operation or by law and which are not in conflict with §§ 14-1-15 through 14-1-17 and which are presently vested in the board of corrections under Title 14, chapters 1 through 12, as amended, and by any other laws or parts of laws of this state, are hereby vested in the governor of the state of Alabama. (Acts 1979, No. 79-426, p. 667, § 1.)

This section and §§ 14-1-16 through 14-1-18 vest responsibility for the state prison system in the governor to represent the state's interests for judicial purposes. Graddick v. Newman, — U.S. —, 102 S. Ct. 4, 69 L. Ed. 2d 1025 (1981).

§ 14-1-16. Board of corrections abolished; rights, duties, powers, property, etc., vested in governor.

Effective October 1, 1979, the board of corrections of the state of Alabama is hereby abolished and all rights, all duties, responsibilities, powers, assets, liabilities, contractual rights and obligations and property rights, whether accruing or vested in the abolished agency, are hereby vested in the governor of the state of Alabama. (Acts 1979, No. 79-426, p. 667, § 2.)

Sections 14-1-15 through 14-1-18 vest responsibility for the state prison system in the governor who thereby represents the state's interests for judicial purposes. Graddick v. Newman, — U.S. —, 102 S. Ct. 4, 69 L. Ed. 2d 1025 (1981).

Cited in Mixon v. State, 407 So. 2d 588 (Ala. Crim. App. 1981).

§ 14-1-17. Governor authorized to exercise functions, designate administrator, set salary and designate duties.

All functions and duties of the department shall be exercised by the governor, acting by himself or by and through such administrative divisions or such officers or employees or individuals as he may designate. The governor is hereby further authorized to set the salary of such individual or individuals and make one such person responsible to him as administrator of the corrections institutions throughout this state. The governor is further authorized to set the salary of such administrator at the same level of any cabinet officer or at a reasonable level in excess thereof. Any administrator shall have the authority and the duties which the governor may designate and all of the power and authority incident to carrying out the functions and duties assigned. (Acts 1979, No. 79-426, p. 667, § 3.)

To be Recnacted by the General Assembly of the State of Colorado as the Statutory Law of Colorado of a General and P...

ance with subsection (2) of this section but submitted only a general verdict form on the violent offender count, the enhanced punishment imposed for having committed a violent crime was improper. People v. Stroup, ___ Colo. App. ___, 624 P.2d 913 (1980).

Requirement of specific findings not applied retroactively. Where defense counsel did not object to the verdict forms and there is no showing of harm from the form of the verdict, the requirement that the court submit special interrogatories to the jury will not be applied retroactively. People v. Swanson, ___ Colo. ___, 638 P.2d 45 (1981).

Penalty for first-degree assault committed in "heat of passion". Where a defendant charged with first-degree assault can establish that he acted in the "heat of passion", he cannot constitutionally receive a greater penalty than he would have received had he been convicted of manslaughter. People v. Grable, 43 Colo. App. 518, 611 P.2d 588 (1979).

Verdict of not guilty of "crime of violence" not inconsistent with guilty verdicts on other charges. Guilty verdicts on the charges of first-degree sexual assault, sexual assault on a child, and aggravated incest are not inconsistent as a matter of law with a jury finding of not guilty on a charge of "crime of violence". People v. Fierro, 199 Colo. 215, 606 P.2d 1291 (1980).

Fifteen to 20-year sentence was not excessive for aggravated robbery and a "crime of violence". People v. Colasanti, ___ Colo. ___, 626 P.2d 1136 (1981).

Applied in People v. Smith, 195 Colo. 404, 579 P.2d 1129 (1978); People v. Warren, 196 Colo. 75, 582 P.2d 663 (1978); People v. Girard, 196 Colo. 68, 582 P.2d 666 (1978); People v. Vigil, 43 Colo. App. 121, 602 P.2d 884 (1979); People v. Swain, 43 Colo. App. 343, 607 P.2d 396 (1979); People in Interest of R.R., 43 Colo. App. 208, 607 P.2d 1013 (1979); People v. Martinez, 43 Colo. App. 419, 603 P.2d 359 (1979); Watson v. District Court, 199 Colo. 76, 604 P.2d 1165 (1980); People v. Hardin, 199 Colo. 229, 607 P.2d 1291 (1980); People v. Cabral, ___ Colo. ___, 629 P.2d 575 (1981); People v. Lichtenstein, ___ Colo. ___, 630 P.2d 70 (1981); People v. Francis, ___ Colo. ___, 630 P.2d 82 (1981); People v. Valencia, ___ Colo. ___, 630 P.2d 85 (1981); People v. Jones, ___ Colo. ___, 631 P.2d 1132 (1981).

ion. Except as provided in section 7 of elating to the power of the governor to cerated person shall be unconditionally piration of his sentence, less the deduc 17, C.R.S. 1973.

; R & RE, L. 79, p. 666, § 10.

PART 4

DEATH PENALTY - EXECUTION

16-11-402. Appliances - sentence executed by executive director. The exec tive director of the department of corrections, at the expense of the sta of Colorado, shall provide a suitable and efficient room or place, enclos from public view, within the walls of the correctional facilities at Canon C and therein construct and at all times have in preparation all necessary app ances requisite for carrying into execution the death penalty by means the administration of lethal gas. The punishment of death in each case death sentence pronounced in this state shall be inflicted by the executi director or his designee in the room or place and with the appliances provid for inflicting the punishment of death by the administration of lethal gas.

Source: Amended, L. 79, p. 682, § 11.

16-11-403. Week of execution - warrant. When a person is convicted of class 1 felony, the punishment for which is death, and the convicted pers is sentenced to suffer the penalty of death, the judge passing such senten shall appoint and designate in the warrant of conviction a week of time with which the sentence must be executed; the end of such week so appoint shall be not less than ninety days nor more than one hundred twenty da from the day of passing the sentence. Said warrant shall be directed to t executive director of the department of corrections or his designee comman ing said executive director or his designee to execute the sentence impos upon some day within the week of time designated in the warrant and sh be delivered to the sheriff of the county in which such conviction is ha who, within three days thereafter, shall proceed to the correctional faciliti at Canon City and deliver the convicted person, together with the warra to said executive director or his designee, who shall keep the convict in co finement until infliction of the death penalty. No person shall be allow access to said convict, except his attendants, counsel, and physician, a spi tual adviser of his own selection, and members of his family, and then on in accordance with prison regulations.

Source: Amended, L. 79, p. 682, § 12.

16-11-404. Execution - witnesses. The particular day and hour of the exec tion of said sentence within the week specified in said warrant shall be fix by the executive director of the department of corrections or his design but shall not be made public by him, and he shall be present thereat or sh appoint some other representative among the officials or officers of the co rectional facilities at Canon City to be present in his place and stead. The shall also be present a physician and such guards, attendants, and other pe sons as the executive director or his designee in his discretion deems desi able, not to exceed fifteen persons. The executive director or his design shall notify the governor of the day and hour for the execution as soon it has been fixed.

Source: Amended, L. 79, p. 682, § 13.

(5) The jury, or the court if no jury trial is had, in any such case shall make a specific finding as to whether the accused did or did not use, or possessed and threatened to use, a deadly weapon during the commission of such crime or whether such serious bodily injury or death was caused by the accused. If the jury or court finds that the accused used, or possessed and threatened the use of, such deadly weapon or that such injury or death was caused by the accused, the penalty provisions of this section shall be applicable.

Source: L. 76, p. 547, § 5; L. 77, pp. 865, 888, 902, § § 11, 78, 4.

Editor's note: Amendments made to this section by House Bill No. 1589 of the 1977 Session, effective April 1, 1979, are contained in the supplement to this volume.

Cross reference. As to classification of felonies and the penalities for such, see § 18-1-105.

The general assembly intended that this section define sentencing standards rather than create a substantive offense by its placement in the criminal code among other sections relating to sentencing, in the article entitled "Imposition of Sentence". Brown v. District Court, ____ Colo. ____, 569 P.2d 1390 (1977).

No preliminary hearing is required for a charge under this section. Brown v. District Court, ____ Colo. ____, 569 P.2d 1390 (1977).

PART 4

DEATH PENALTY - EXECUTION

16-11-401. Death penalty inflicted by lethal gas. The manner of inflicting the punishment of death shall be by the administration of lethal gas within the time prescribed in this part 4, unless for good cause the court or governor may prolong the time.

Source: R & RE, L. 72, p. 250, § 1; C.R.S. 1963, § 39-11-401.

Am. Jur. See 21 Am. Jur.2d, Criminal Law, § 598; 40 Am. Jur.2d, Homicide, § § 552, 557.

C.J.S. See 24B C.J.S., Criminal Law, § § 2001-2003.

Law review. For article, "Criminal Procedure in Colorado — A Summary, and Recommendations for Improvement", see 22 Rocky Mt. L. Rev. 221 (1950).

16-11-402. Appliances - sentence executed by superintendent. The governing authority of the state penitentiary, at the expense of the state of Colorado, shall provide a suitable and efficient room or place, enclosed from public view, within the walls of the state penitentiary and therein construct and at all times have in preparation all necessary appliances requisite for carrying into execution the death penalty by means of the administration of lethal gas. The punishment of death in each case of death sentence pronounced in this state shall be inflicted by the superintendent of the state penitentiary maximum security unit in the room or place and with the appliances provided for inflicting the punishment of death by the administration of lethal gas.

Source: R & RE, L. 72, p. 250, § 1; C.R.S. 1963, § 39-11-402; L. 76, p. 530, § 3.

16-11-403. Week of execution - warrant. When a person is convicted of

a class 1 felony, the punishment for which is death, and the convicted person is sentenced to suffer the penalty of death, the judge passing such sentence shall appoint and designate in the warrant of conviction a week of time within which the sentence must be executed; the end of such week so appointed shall be not less than ninety days nor more than one hundred twenty days from the day of passing the sentence. Said warrant shall be directed to the superintendent of the state penitentiary maximum security unit commanding said superintendent to execute the sentence imposed upon some day within the week of time designated in the warrant and shall be delivered to the sheriff of the county in which such conviction is had, who, within three days thereafter, shall proceed to the state penitentiary and deliver the convicted person, together with the warrant, to said superintendent, who shall keep the convict in confinement until infliction of the death penalty. No person shall be allowed access to said convict, except his attendants, counsel, and physician, a spiritual adviser of his own selection, and members of his family, and then only in accordance with prison regulations.

Source: R & RE, L. 72, p. 250, § 1; C.R.S. 1963, § 39-11-403; L. 76, p. 531, § 4.

Am. Jur. See 21 Am. Jur.2d, Criminal Law, § 403.

C.J.S. See 24B C.J.S., Criminal Law, § 2002.

Annotator's note. Since § 16-11-403 is similar to repealed § 39-11-3, C.R.S. 1963, CSA, C. 48, § 538, and laws antecedent thereto, relevant cases construing these provisions have been included in the annotations to § 16-11-403.

Meaning of "week of time". The week of time which is required by this section to be appointed and designated in capital cases within which the sentence must be executed, is a period of time extending from 12 midnight Saturday until 12 midnight the following Saturday, but an error in the designation of the week is rendered immaterial when the execution is stayed by the supreme court pending review. Mora v. People, 19 Colo. 255, 35 P. 179 (1893).

Court fixes date of execution following stay. The court has authority to fix the date of execution in cases of affirmance, where the execution has been stayed upon appeal or supersedeas. Mora v. People, 19 Colo. 255, 35 P. 179 (1893).

But definite date set in order granting stay did not deny due process. The fact that the state supreme court set a definite execution date pending determination of post-conviction relief was not "suggestion of predetermination" in violation of due process and did not constitute an implied direction to deny petitioner relief. Bell v. Patterson, 279 F. Supp. 760 (D. Colo. 1968), aff'd, 402 F.2d 394 (10th Cir. 1968), cert. denied, 403 U.S. 955, 91 S. Ct. 2279, 29 L. Ed. 2d 865 (1971).

Procedure of delivery of prisoner by sheriff held not improper. See Agnes v. People, 104 Colo. 527, 93 P.2d 891 (1939).

Applied in Medley, Petitioner, 134 U.S. 160, 10 S. Ct. 384, 33 L. Ed. 835 (1890).

16-11-404. Execution - witnesses. The particular day and hour of the execution of said sentence within the week specified in said warrant shall be fixed by the superintendent but shall not be made public by him, and he shall be present thereat or shall appoint the deputy superintendent of the maximum security unit or some other representative among the officials or officers of the state penitentiary to be present in his place and stead. There shall also be present a physician and such guards, attendants, and other persons as the superintendent in his discretion deems desirable, not to exceed fifteen persons. The superintendent shall notify the governor of the day and hour for the execution as soon as it has been fixed.

Sec. 54-99. Period within which death penalty inflicted. Unless a reprieve or stay of execution is granted by competent authority, the penalty of death shall be inflicted within a period of not less than one month nor more than six months after conviction and sentence. All executions of the death penalty shall take place according to the provisions of this section and section 54-100 on the day, or within five days after the day, designated by the judge passing sentence.

(1949 Rev., S. 8815.)
Cited. 121 C. 197.

Sec. 54-100. Electrocution. The method of inflicting the punishment of death shall be by electrocution. The warden of the Connecticut Correctional Institution, Somers, is directed to appoint a suitable person to perform the duty of executing sentences of the court requiring the infliction of the death penalty. Such person shall receive, for such duty, such compensation as is determined by the directors of the Connecticut Correctional Institution, Somers. When any person is sentenced by any court of this state having competent jurisdiction to be electrocuted, he shall, within twenty days after final sentence, be conveyed to the Connecticut Correctional Institution, Somers, and such punishment shall be inflicted only within the walls of said institution in Somers, within an enclosure to be prepared for that purpose under direction of the warden of the Connecticut Correctional Institution, Somers, and the board of directors thereof, which enclosure shall be so constructed as to exclude public view. Besides the warden or deputy warden and such number of guards as he thinks necessary, the following persons may be present at the execution, but no others: The sheriff of the county in which the prisoner was tried and convicted, the board of directors, the physician of the Connecticut Correctional Institution, Somers, the clergyman in attendance upon the prisoner and such other adults, as the prisoner may designate, not exceeding three in number, representatives of not more than five newspapers in the county where the crime was committed, and one reporter for each of the daily newspapers published in the city of Hartford.

(1949 Rev., S. 8816; 1953, P.A. 28, S. 6; P.A. 74-84.)

Cited. 121 C. 197. Death penalty does not constitute cruel and unusual punishment and courts will not vitiate legislative determination of punishment for crimes. 158 C. 341.

Sec. 54-101. Disposition of person becoming insane after death sentence. When any person detained at the Connecticut Correctional Institution, Somers, awaiting execution of a sentence of death appears to the warden thereof to be insane, the warden may make application to the superior court for the judicial district of Tolland having either civil or criminal jurisdiction or, if said court is not in session, to any judge of the superior court, and, after hearing upon such application, notice thereof having been given to the state's attorney for the county or judicial district wherein such person was convicted, said court or such judge may, if it appears advisable, appoint three reputable physicians to examine as to the mental condition of the person so committed. Upon return to said court or such judge of a certificate by such physicians, or a majority of them, stating that such person is insane, said court or such judge shall order the sentence of execution to be stayed and such person to be transferred to any state hospital for mental illness for confinement, support and treatment until he recovers his sanity, and shall cause a mittimus to be issued to the sheriff of Tolland county, or either of his deputies, for such commitment. If at any time thereafter, the superintendent of the state hospital to which such person has been committed is

CHAPTER 27
EXECUTION

SECTION.
19-2716. Infliction of death penalty.

19-2701. Authority for execution of judgment.

Cross-ref. Stay of execution, I.C.R. 38.

19-2703. Execution of judgment of imprisonment.

Putting Affairs in Order.

If the trial courts intend to give a defendant time to get his affairs in order prior to commencing serving his sentence, the court should delay the imposition of that sentence until the end of the period of time that the defendant is allowed free to get his affairs in order. State v. Johnson, 101 Idaho 581, 618 P.2d 759 (1980).

19-2705. Death warrant and confinement thereunder.

Cross-ref. Procedure where death penalty authorized, I.C.R. 33.1, 33.2.

19-2706. Conviction of murder — Transmission of statement to governor.

Cited in: State v. Wagenius, 99 Idaho 273, 581 P.2d 319 (1978).

19-2708. Suspension of judgment of death.

Cross-ref. Stay of execution, I.C.R. 38.

19-2716. Infliction of death penalty. — The punishment of death shall be inflicted by continuous, intravenous administration of a lethal quantity of an ultra-short-acting barbituate in combination with a chemical paralytic agent until death is pronounced by a physician licensed under the provisions of chapter 18, title 54, Idaho Code, in accordance with accepted medical standards. The director of the department of corrections shall determine the substance or substances to be used and the procedures to be used in any execution; provided, however, that, in any case where the director finds it to be impractical to carry out the punishment of death by administration of the required lethal substance or substances for the reason that it is not reasonably possible to obtain expert technical assistance, should such be necessary to assure that infliction of death by administration of such substance or substances can be carried out in a manner which causes death without unnecessary suffering, the sentence of death may be carried out by firing squad, the number of members of which shall be determined by the director; and provided further, that any infliction of the punishment of death by

administration of the required lethal substance or substances in the manner required by this section shall not be construed to be the practice of medicine and any pharmacist or pharmaceutical supplier is authorized to dispense drugs to the director or his designee, without prescription, for carrying out the provisions of this section, notwithstanding any other provision of law. This act shall apply to all executions carried out on and after the effective date [March 31, 1982] of this enactment, irrespective of the date sentence was imposed. [Cr. Prac. 1864, § 467; R.S., R.C., & C.L., § 8020; C.S., § 9063; I.C.A., § 19-2616; am. 1978, ch. 70, § 1, p. 140; am. 1982, ch. 257, § 1, p. 668.]

Compiler's notes. Section 2 of S.L. 1982, ch. 257 declared an emergency. Approved March 31, 1982.

Delegation of Power.

The legislature did not improperly delegate the power to inflict the death penalty to the board of corrections under this section since the standards formulated for guidance, although general, are capable of reasonable application and it cannot be assumed that the director of the department of corrections will act in other than a reasonable manner. State v. Osborn, — Idaho —, 631 P.2d 187 (1981).

CHAPTER 28

APPEALS TO SUPREME COURT

19-2801. Criminal judgments and orders appealable — Time for taking appeals.

Cross-ref. Juvenile proceeded against as an adult, bail, § 16-1806A.

Cited in: State v. Wagenius, 99 Idaho 273, 581 P.2d 319 (1978).

19-2804. Criminal judgments and orders appealable — Time for taking appeals.

The Supreme Court had authority, under Art. 5, § 9, to review the decision of the district court which granted defendant's motion to dismiss criminal charges, even though an order granting a motion to dismiss was not listed in this section as one of the six orders or rulings from which appeal could be taken by the state. State v. Lewis, 96 Idaho 743, 536 P.2d 738 (1975), overruling State v. Ridenbaugh, 5 Idaho 710, 51 P. 750 (1897).

19-2827. Review of death sentences — Preservation of records.

Sec. to sec. ref. This section is referred to in I.C.R. 33.2.

Cited in: State v. Lindquist, 99 Idaho 766, 589 P.2d 101 (1979).

Failure to Object.

Where the defendant in a sentencing hearing following a guilty plea to a first-degree murder charge, acquiesced without objection to the use of the transcript of the preliminary hearing instead of introducing live witness testimony, such failure to object did not preclude the Supreme Court from considering an alleged error in using the transcript since this section mandates that the court examine not only the death sentence but also the procedure followed in imposing that sentence regardless of whether an appeal is even taken, and since the gravity of a death sentence and the infrequency with which it is imposed outweighs any rationale that might be proposed to justify refusal to consider errors not objected to below. State v. Osborn, — Idaho —, 631 P.2d 187 (1981).

Commission Notes

Source: [R.C.M. 1947, sections 94-8007, 94-8016 through 94-8018.]

This section does not change the law in any way but merely combines into one provision separate statutes dealing with execution of the death sentence. It should be noted that the commission has not considered the propriety of capital punishment, but has redrafted a law in conformity with what appears to be the present public policy of this state.

Cross-References

Execution of death sentence justified, 45-3-109.

Case Notes

Hanging Not Cruel and Unusual Punishment: There is no evidence that shows that death from hanging, when properly carried out, is anything other than swift and immediate or that hanging results in any more suffering than that associated with other modes of execution. The Supreme Court has no power to change the legislatively settled provisions of the sentence in the absence of constitutional violation. St. v. Coleman, ____M____, 605 P2d 1000 (1979).

Part 2

Suspension of Execution of Death

46-19-201. When and how mental fitness of defendant determined.

Commission Comments

Source: New.

This provision will replace R.C.M. 1947, sections 94-8009 and 94-8010 which set forth a special procedure for determining the sanity of the defendant. This special procedure is no longer necessary because the chapter dealing with competency of the accused provides for this determination.

Collateral References

Criminal Law ⇦ 981(2).

24 C.J.S. Criminal Law §§ 1569, 1619.

Remedy of one convicted of crime while insane. 121 ALR 267; 10 ALR 213.

that an illegal arrest could be resisted lawfully. That rule encouraged resistance and breaches of the peace. This section requires submission to arrest. If the arrest is illegal (a determination which few citizens can make while being arrested), the arrestee should pursue civil and criminal remedies rather than resort to self-help. In applying this section a number of caveats are in order: First, the section has no application to persons fleeing from a possible arrest or from a stop under the new Stop and Frisk statute (MCA, 46-5-401, 46-5-402). Second, the arresting officer must identify himself to the arrestee. If the arrestee does not know that the person making the arrest is authorized to do so, he may justifiably defend himself. Third, the section has been interpreted by the Illinois courts as not preventing an arrestee from protecting himself from unlawful and excessive force by the arresting officer. The wording for this section is identical to the Illinois source.

Cross-References

Use of force in defense of person, 45-3-102.
Resisting arrest, 45-7-301.
Method of arrest, 46-6-104.
Manner of arrest without a warrant, 46-6-106.

Case Notes

Prosecutor's Quasi-Judicial Immunity From Prosecution: Plaintiff's civil action against a County Attorney, based upon alleged unlawful arrest by certain policemen and challenging the legality of the criminal prosecution against him, must be dismissed because the County Attorney enjoys absolute immunity for prosecutorial actions done in a quasi-judicial capacity. Hall v. Lympus, 478 F. Supp. 644 (D.C. Mont. 1979).

In General: When a person is known to be a policeman in the performance of his lawful duties, it is the duty of persons being arrested by him to submit peacefully. People v. Gnatz, 8 Ill. App.3d 396, 290 N.E.2d 392, 395 (1972). Even if a probable cause for arrest is lacking, the arrestee has no right to resist. People v. Suriwha, 2 Ill. App.3d 384, 276 N.E.2d 490, 496 (1971). See also People v. Carroll, 133 Ill. App.2d 78, 272 N.E.2d 822 (1971); People v. Franks, 108 Ill. App.2d 438, 247 N.E.2d 811 (1969); People v. Fort, 91 Ill. App.2d 212, 234 N.E.2d 384 (1968), certiorari denied 393 US 1014 (1969); People v. Shinn, 5 Ill. App.3d 468, 283 N.E.2d 502 (1972).

Instructions: Refusal of an instruction on use of force in making an arrest is proper where such an instruction is not accompanied by an instruction on use of force in defense of person. People v. Shinn, 5 Ill. App.3d 468, 283 N.E.2d 502 (1972).

Burden of Proof: To sustain a charge of resisting arrest, the prosecution must show that the defendant knowingly resisted performance of an authorized act by a person known to the defendant to be a peace officer acting within his official capacity. People v. Royer, 101 Ill. App.2d 44, 242 N.E.2d 288, 290 (1968).

45-3-109. Execution of death sentence.

Criminal Law Commission Comments

Source: Ill. C. C. 1961, Chapter 38, § 7-10.

This section states an obvious aspect of justification for homicide. It is included for the sake of completeness, and because it is one of the more commonly described statutory instances of justification. Section 94-3-109 [now MCA, 45-3-109] is intended to state the essentials of the prior provision in language similar to that of the other sections of this chapter. However, in view of the deliberate nature of the homicide, the explicit legal instructions concerning the execution and the much more relaxed time element involved in an execution as compared with self-defense, arrest, or escape, no need exists for recognizing a reasonable but mistaken belief of the executioner as to his authority for or method of performing his duty.

Compiler's Comments

Annotator's Note [see preface to Title 45 for origin]: This section preserves the former Montana provision listed above. The wording is identical to the Illinois source.

45-3-115. Affirmative defense.

Criminal Law Commission Comments

Source: Ill. C. C., 1961, Chapter 38, § 7-14.

A defense based upon any of the provisions of this chapter is an affirmative defense, and if not put in issue by the prosecution's evidence, the defendant, to raise it as an issue, must present some evidence thereon.

Compiler's Comments

Annotator's Note [see preface to Title 45 for origin]: Montana law requires that the prosecution prove the defendant guilty of each element of the offense charged beyond all reasonable doubt (MCA, 46-16-601). But, the prosecution is not required to negate in the first instance all possible defenses which might be raised by the defendant. After the prosecution has developed a prima facie case, the defense has the burden of going forward with evidence to raise doubt as to the defendant's guilt. The amount of evidence which the defendant must submit in raising an affirmative defense is not stated in this section. Relatively recent Montana case law makes it clear that the Legislature can determine the amount of evidence required to raise a particular affirmative defense, whether only a "reasonable doubt" or a "preponderance of the evidence". The statutory burden imposed under the former insanity defense statute (former MCA, 46-14-201(1), repealed, L. 1979) was a "preponderance of the evidence. St. v. McKenzie, ___M___, 608 P2d 428 (1980). Where the Legislature is silent, the court can, and in some instances has, determined the extent of the defendant's burden of going forward with the evidence in establishing an affirmative defense. The defendant need only raise a reasonable doubt where the affirmative defense offered is self-defense (St. v. Grady, 166 M 168, 531 P2d 681 (1975)), but

the minimum mandatory sentence. St. v. Nelson, ___M___, 603 P2d 1050 (1979).

46-18-223. Hearing to determine application of exceptions.

Cross-References

Duty of court to advise at initial appearance, 46-7-102.

Court to advise defendant of rights, 46-12-202.
Right to counsel — parole hearing, 46-23-204.
Court to advise defendant of rights — extradition proceedings, 46-30-217.

Case Notes

Finding of No Mitigating Factors Supported in Record — Alcohol and Sexual Problems: Where the trial court considered defendant's drinking and sexual problems but concluded that those conditions did not excuse defendant from accountability for his acts, and the evidence presented at the hearing and in the presentence investigation report supported the trial court's conclusion, there was no abuse of discretion in sentencing defendant as a persistent felony offender. St. v. Metz, ___M___, 604 P2d 102 (1979).

Part 3
Death Penalty

Part Case Notes

Constitutionality of Former Death Sentence Statute: Section 94-5-105, R.C.M. 1947 (now repealed), which provided a procedure for the imposition of a sentence of death for a conviction of deliberate homicide, was constitutional on its face. St. v. Fitzpatrick, ___M___, 606 P2d 1343 (1980).

Increase of Sentence After New Trial — Due Process: The defendant, who had been sentenced to 100 years' imprisonment for deliberate homicide, was not denied due process of law when, after a new trial on the same charge, he was sentenced to death. The due process clause is not offended by all possibilities of increased punishment upon retrial after appeal, but only those that pose a realistic likelihood of vindictiveness. When the District Court Judge was replaced for the new trial and sentencing and the new judge stated his reasons for imposing the death penalty with clarity, the threat of vindictiveness was not a realistic likelihood. St. v. Fitzpatrick, ___M___, 606 P2d 1343 (1980).

Sentencing Under Statutes Amended After Date of Crime: The sentencing of the defendant to death for a conviction of aggravated kidnapping under statutes amended after section 94-5-304, R.C.M. 1947 (now repealed), was declared unconstitutional did not violate the constitutional prohibition against ex post facto laws. The amendments were ameliorative in nature and did not deprive defendant of a substantial right or immunity that he possessed at the time the crime was committed. St. v. Fitzpatrick, ___M___, 606 P2d 1343 (1980).

Review of Death Sentence — Disproportionate Application: The Supreme Court, in reviewing a death sentence to determine whether it is disproportionate, reviews the circumstances of the crime of which the defendant is accused and in light of those circumstances, the judgment and the sentence thereupon imposed. It examines cases involving similar crimes, for the single purpose, making certain that as far as the defendant in this particular case is concerned, there has been no discriminatory action on the part of the sentencing judge and no abuse of discretion by the sentencing judge and that the sentencing judge has considered and applied fairly and without discrimination the applicable law. The Supreme Court looks for the even-handed application of death sentences without regard to sex, color, creed, or race or any

other discriminating consideration. When this has occurred, as here, the death sentence must be upheld. St. v. Coleman, ____M____, 605 P2d 1000 (1979).

Retroactive Application of Death Penalty Provisions — No Ex Post Facto Violation: Where after the commission of the crime of homicide, the U.S. Supreme Court found the death penalty statute unconstitutional and the state Legislature took only the procedural step of redefining the punishment, not the crime, there is no ex post facto violation in upholding the previous death penalty imposed, since the defendant had "fair warning" of the consequences of homicide. St. v. Coleman, ____M____, 605 P2d 1000 (1979).

Constitutionality:

Montana's statutory scheme for imposing the death penalty meets the standards established by the U.S. Supreme Court. The penalty is not cruel and unusual simply because Montana's criminal statutes allow its imposition in this case for the crime of aggravated kidnapping but not for the crime, as committed here, of deliberate homicide. St. v. Coleman, ____M____, ____P2d____, 36 St. Rep. 1134 (1979).

In light of recent U.S. Supreme Court decisions (Woodson v. N. Carolina, 428 US 280 (1976); Coker v. Georgia, 433 US 584, 97 S Ct 2861, 53 L Ed 2d 982 (1977); Roberts v. Louisiana, 431 US 633, 97 S Ct 1993, 52 L Ed 2d 637 (1977)), section 94-5-304, R.C.M. 1947 (since repealed), as it existed at the time of the defendant's trial, was unconstitutional on its face as a mandatory death penalty statute. St. v. Coleman, ____M____, 579 P2d 732 (1978).

While the statutes did not provide for the jury in the bifurcated sentencing procedure, they were within the constitutional boundaries of recent U.S. Supreme Court cases. The sentence of death in this case was rested on a narrowly defined type of murder or kidnapping. The former statute provided for the sentencing judge to consider mitigating circumstances. In addition, appellate judicial review and other sentence review was provided. St. v. McKenzie, 171 M 278, 557 P2d 1023 (1976).

By an earlier decision of the U.S. Supreme Court, statutes allowing the sentencer discretion as to whether to impose the death penalty were unconstitutional; although the conviction would be upheld, a sentence of death made at the discretion of the court under a former statute was unconstitutional and would be commuted to life imprisonment. St. v. Rhodes, 164 M 455, 524 P2d 1095 (1974).

Requisites of a Valid Death Penalty: The U.S. Supreme Court seems to have established three general criteria that are requisite to a valid death penalty statutory scheme: (1) there must be at least one statutory aggravating circumstance before a death sentence may be considered; (2) the defense must be afforded the opportunity to bring before the sentencing body at a separate sentencing hearing any mitigating circumstances relating to the individual defendant; and (3) there must be available prompt judicial review of the sentencing decision by a court of statewide jurisdiction. The statutory scheme in existence at the time of commission of the crimes charged in the instant case met the above criteria. St. v. McKenzie, ____M____, 581 P2d 1205 (1978).

Prospective Juror's View of Death Penalty: Two prospective jurors were properly excluded under the exception to the general rule of Witherspoon v. Illinois, 391 US 510 (1968), because they were irrevocably committed to voting against conviction because of the possibility of a death penalty. St. v. Coleman, ____M____, 579 P2d 732 (1978).

MEMORANDUM

TO: Representative Barbara Lacher, Chair
Community and Regional Affairs Committee

FROM: Representative Al Adams AA

SUBJECT: House Bill 157 - An Act to expand the right to petition for a local option election

House Bill 157 amends the General Provisions Chapter of Title 4, Alcholic Beverages, by expanding the definition of "established village".

In 1981, the Legislature enacted legislation clarifying provisions in Title 4 so that alcohol local option elections could be held. As a result of these changes a municipality, as well as an established village, could hold an election.

In spite of the Legislature's best efforts to clarify the law, a question has arisen as to the ability of an unincorporated community within a borough to conduct an election. Three communities, Point Lay, Karluk and Tyonek, wanted to hold an election, but were unable to due to this defect in the law. HB 157 clarifies the language to ensure that all communities, regardless of status, may conduct an election.

Additional background information is attached.

I. INTRODUCTION

On June 19, 1981, Governor Hammond signed Senate Bill 65, which cleared up difficulties with the 1980 Title 4 alcohol local option law, AS 04.11.490-04.11.506. Pursuant to the statute "municipalities" may conduct their own alcohol local option elections. "Established villages" may also request alcohol local option elections. These latter elections are conducted by the lieutenant governor.

Under the law, municipality is defined as "an incorporated city, an organized borough, or a unified municipality established under AS 29.68." AS 04.21.080(b)(11). A Municipalit may hold a special election and vote upon one of the following four options:

1. Prohibition of the sale of alcoholic beverages. AS 04.11.490.

2. Community liquor license. AS 04.11.492.

3. Prohibition of the sale and importation of alcoholic beverages. AS 04.11.496.

4. Prohibition of the sale of alcoholic beverages except by selected licenses. AS 04.11.500.

An "established village" is defined under the statute as "an unincorporated area that

(A) is within the circumference of a circle described by drawing a five-mile radius around a post office station;

(B) has 25 or more permanent residents."

AS 04.11.080(b)(8). An established village may in a special election conducted for that purpose by the lieutenant governor, vote upon one of the following three options:

1. Prohibition of the sale of alcoholic beverages. AS 04.11.490.

2. Prohibition of the sale and importation of alcoholic beverages. AS 04.11.496.

3. Prohibition of the sale of alcoholic beverages except by selected licenses. AS 04.11.500.

Alcohol abuse constitutes a very serious problem in Alaska. The state Title 4 alcohol local option law, AS 04.11.490-04.11.506, has allowed individual communities to deal with the problem on a local level and thus choose a legal remedy which fits the local problem. The results have been largely successful both as a means of controlling alcohol abuse and as an experiment in pure democracy. As of this writing, forty-one communities have held alcohol local option elections and ten more are currently waiting to hold them. Moreover, over twenty other communities have expressed interest in holding alcohol local option elections to the Alaska Legal Services Corporation Alcohol Project. Of the forty-one communities which have already voted, thirty-seven have voted to prohibit the sale and importation of alcoholic beverages.

II. THE PROBLEM

Simply put, the problem is that communities within organized boroughs cannot utilize the state Title 4 alcohol local option law unless separately incorporated because the power of legislation in those communities rests

with virtual exclusivity in the borough government. AS 04.11.080(b)(8) defines "established village" as "an unincorporated area." Since a borough is incorporated, a village lying within a borough cannot be an unincorporated area.

Boroughs exercise certain powers, such as operating a school system and planning, platting, and zoning on an areawide basis, both inside and outside cities within the borough boundaries. AS 29.33.010-29.33.290. Pursuant to AS 29.38.020, second-class boroughs exercise certain municipal powers in areas of the borough outside the cities. These include such things as regulating fireworks, providing water pollution control, constructing local roads, etc. Boroughs can also acquire other powers outside cities by an election of the voters outside cities.

AS 29.48.035 gives municipalities certain regulatory powers. AS 29.48.035(10) provides that a municipality may regulate "alcoholic beverages as provided by 4.15.070." AS 4.15.070 is now repealed but there is a cross-reference to 4.21.010 "for present provisions concerning municipal regulation." AS 4.21.010(a) allows a municipality to adopt ordinances governing barter, sale, consumption of alcoholic beverages as necessary for orderly selling of alcohol within the municipality. AS 4.21.010(b) allows a municipality to adopt an ordinance making sale or importation a misdemeanor after a valid election on the option to prohibit the sale and importation of alcoholic beverages has been held.

The above provisions of Title 29, along with the definition of established village in Title 4, suggest that power to regulate alcohol in a borough in the area outside the borough's cities is given to the borough.

Nonetheless, at least one village, Karluk, in the Kodiak Island Borough, has evinced a desire to hold a local option election and cannot under present law.

An organized borough generally contains more than one community and often contains several. At the time of this writing, no organized borough has yet held an alcohol local option election. The difficulties involved in a multi-community election of this sort are evident. Should a borough hold an alcohol local option election, a strong vote for prohibition in the outlying villages and municipalities could impose that measure upon communities with no desire or need to embrace so draconian a resolution. Conversely, a strong vote to maintain the privilege of buying and consuming alcohol in the larger communities could prevent other communities within the borough from taking effective action to deal with a chronic local problem.

A preferable arrangement would allow the voters of each community in an organized borough to decide for that community and that community alone how the state Title 4 alcohol local option law can best be used. Voters in a community will probably be better informed as to local conditions than they will be to borough-wide conditions. A better informed electorate will naturally make more intelligent decisions at the polls. More importantly, their decision will only affect local conditions and not conditions in other communities within the borough of which they are much less likely to be adequately informed.

III. THE SOLUTION

The proposed legislation will allow villages within organized boroughs to hold an alcohol local option election subject to the same conditions

imposed upon villages outside organized boroughs. The proposed legislation accomplishes this essentially by enlarging the definition of "established village" to include those villages lying within organized boroughs.

The proposed legislation is designed to enlarge the powers of villages within organized boroughs only as regards to their ability to hold local option elections. Section 2 of the proposed legislation expressly limits itself to those purposes. Alaska already has a well established and complex municipal code by which the respective powers of various types of communities are delegated. The proposed legislation will have only a strictly limited effect on the municipal code. It is designed and intended only to allow communities not separately incorporated which lie within organized boroughs to hold alcohol local option elections pursuant to AS 04.11.490-04.11.506. No other impact upon the respective powers of the state, organized boroughs, organized communities, or unorganized communities is foreseen or intended.

MEMORANDUM

TO: Persons Interested in the Current Status of Rural Communities With Respect to the State Title 4 Alcohol Local Option Law

FROM: Alaska Legal Services Corporation Alcohol Project

RE: Statewide Village Status Report

DATE: January 14, 1983

The ALSC Alcohol Project was funded by the State Office on Alcoholism and Drug Abuse ("SOADA") to provide statewide on-site community legal education and technical legal assistance on the state Title 4 alcohol local option law. During its existence, the ALSC Alcohol Project worked closely with rural communities throughout Alaska. The ALSC Alcohol Project has terminated.

Approximately 130 rural communities were visited and 50 other rural communities were assisted in some fashion. "Assistance" means a community either requested a petition form, cover letter, and memorandum explaining the law, or a legal opinion of their local village ordinance concerning alcohol control. This Statewide Village Status Report from the ALSC Alcohol Project is a final attempt to provide an adequate profile of individual rural community activity with respect to the state Title 4 alcohol local option law.

Presently, 74 alcohol local option elections have been held. Some communities have now held two elections, with differing results. The present tally is: 1 community has voted for a community liquor license, 51 communities have voted to forbid the sale and importation of alcoholic beverages, 10 communities have defeated the sale and importation option, 2 communities approved and 1 defeated the no sale option, and 1 community defeated the private liquor license option. Several more elections are presently scheduled and many other petitions are being circulated.

If you have any additional information or questions on specific communities, please contact Vivian Kortie at the Alcoholic Beverage Control Board, 201 East 9th Avenue, Anchorage, Alaska, 99501, or call (907) 277-8638.

NOTE[1]: The four option choices for municipalities (first and second-class and homerule cities) are:

1. Selected liquor license;
2. Community liquor license;
3. Banning the sale of alcoholic beverages;
4. Banning the sale and importation of alcoholic beverages.

Established villages may choose option 1, 3, or 4.

NOTE[2]: For those villages which have chosen the option to ban sale and importation, a "yes" vote means that a voter wishes to stop the sale and importation of alcoholic beverages. A "no" vote means that a voter does not wish to stop the sale and importation of alcoholic beverages under the state alcohol local option law.

NOTE[3]: ALOL -- Alcohol Local Option Law.
ALOE -- Alcohol Local Option Election.
CRA -- Community and Regional Affairs; Division of Local Government Assistance.

NOTE[4]: As of May 18, 1982, the United States Department of Justice approved the Alaska State Title 4 alcohol local option law submission under Section 5 of the Voting Rights Act. The state of Alaska is a "Voting

Rights Act State," which means that when there is any "change in the standard practice or procedure" in voting, the state or other appropriate agency is required to obtain approval from the United States Department of Justice.

This approval means that the alcohol local option law elections already held by municipalities in the state of Alaska are valid. This approval also means that the established villages can hold alcohol local option law elections with the assistance of the Division of Elections.

This approval means that no objection under the Voting Rights Act can be raised with respect to the alcohol local option law elections held unless someone has actually been denied his or her right to vote, thus prejudicing the election.

NOTE[5]: After receiving encouragement from many rural Alaskan priests, religious organizations and residents, the Alaska House of Representatives and Senate passed a law, Senate Bill 765, dealing with the sacramental wine exception to the state Title 4 alcohol local option law.

The new law changed A.S. 04.11.496 (b), which is the law allowing communities to vote to prohibit the sale and importation of alcoholic beverages. The amendment of A.S. 04.11.496 (b) stated that if a majority of the people in a community vote to prohibit the sale and importation of alcoholic beverages, a person "may not knowingly send, transport, or bring an alcoholic beverage into the municipality or established village, unless the alcoholic beverage is sacramental wine to be used for bona fide religious purposes based on tenets or teachings of a church, is limited in quantity to the amount necessary for religious purposes, and is dispensed only for religious purposes by a person authorized by the church or religious body to dispense sacramental wine."

This language means that the only alcoholic beverages which can come legally into a community which has voted to stop sale and importation of alcoholic beverages is wine to be used only in a religious service. The wine is to be an amount to be used only in religious service. Only a priest or someone authorized by the priest can receive the wine and give it to people in a religious ceremony.

(2) the use of the premises for storage is authorized by local zoning ordinances; and

(3) the premises are accessible for inspection as provided in AS 04.11.630. (§ 4 ch 131 SLA 1980)

Sec. 04.21.070. Enforcement. Peace officers shall investigate and report to the board violations of this title. (§ 4 ch 131 SLA 1980)

Sec. 04.21.080. Definitions. (a) In this title

(1) a person acts with "criminal negligence" with respect to a result or to a circumstance described by a provision of law defining an offense when he fails to perceive a substantial and unjustifiable risk that the result will occur or that the circumstance exists; the risk must be of such a nature and degree that the failure to perceive it constitutes a gross deviation from the standard of care that a reasonable person would observe in the situation;

(2) a person acts "knowingly" with respect to conduct or to a circumstance described by a provision of law defining an offense when he is aware that his conduct is of that nature or that the circumstance exists; when knowledge of the existence of a particular fact is an element of an offense, that knowledge is established if a person is aware of a substantial probability of its existence, unless he actually believes it does not exist; a person who is unaware of conduct or a circumstance of which he would have been aware had he not been intoxicated acts knowingly with respect to that conduct or circumstance;

(3) a person acts "recklessly" with respect to a result or to a circumstance described by a provision of law defining an offense when he is aware of and consciously disregards a substantial and unjustifiable risk that the result will occur or that the circumstance exists; the risk must be of such a nature and degree that disregard of it constitutes a gross deviation from the standard of conduct that a reasonable person would observe in the situation; a person who is unaware of a risk of which he would have been aware had he not been intoxicated acts recklessly with respect to that risk

(b) In this title

(1) "alcoholic beverage" includes, but is not limited to, whiskey, brandy, rum, gin, wine, ale, porter, beer, and all other spirituous, vinous, malt and other fermented or distilled liquors intended for human consumption and containing more than one percent alcohol by volume;

(2) "board" means the Alcoholic Beverage Control Board;

(3) "bottling" means to put into a bottle, can, or other container;

(4) "designated premises" means any or all designated portions of a building or structure, rooms or enclosures in the building or structure, or real estate leased, used, controlled, or operated by a licensee for the

(5) "director" means the director of the Alcoholic Beverage Control Board;

(6) "distributing point" means a location where alcoholic beverages are distributed from a warehouse;

(7) "drunken person" means a person whose physical or mental conduct is substantially impaired as a result of the introduction of an alcoholic beverage into his body and who exhibits those plain and easily observed or discovered outward manifestations of behavior commonly known to be produced by the overconsumption of alcoholic beverages;

(8) "established village" means an unincorporated area that

(A) is within the circumference of a circle described by drawing a five-mile radius around a post office station;

(B) has 25 or more permanent residents;

(9) "licensed premises" means any or all designated portions of a building or structure, rooms or enclosures in the building or structure, or real estate leased, used, controlled, or operated by a licensee in the conduct of business for which he is licensed by the board at the specific address for which the license is issued;

(10) "local governing body" means, as appropriate, a city council, a borough assembly, or a traditional village council, but does not include a corporation established under the Alaska Native Claims Settlement Act;

(11) "municipality" means an incorporated city, an organized borough, or a unified municipality established under AS 29.68. (§ 4 ch 131 SLA 1980)

STATE OF ALASKA
PRELIMINARY STATEMENT OF FISCAL IMPACT

Bill No. HB 157 Date on Bill: 2/4/83
Title: An act to expand the right to petition for a local option election"
Sponsor: Adams
Requestor: House Community and Regional Affairs Committee

1. Estimated fiscal impacts on:

a. Expenditures:

(Thousands of Dollars)

			FY 83	FY 84	FY 85	FY 86		
Capital								
Operating								
Total				-0-	-0-	-0-		

b. Revenues:

Revenue							

2. Source of funds to offset fiscal impact of bill:

3. Assumptions: The Division does not expect an upsurge of petitions for local option elections as a result of this legislation, as it appears that the end of the "Alcohol Project" by Alaska Legal Services has contributed to a decrease of petition activity.

4. Disclaimer:
This statement has not been reviewed by the OMB in the Office of the Governor. It do not represent the policy of the Sheffield Administration or the final estimate of fis impact.

KENNETH STEPHEN BURNLEY
Superintendent of Schools

October 6, 1983

Mr. Richard Loeb
Alaska Distributors Co.
P. O. Box 549
Fairbanks, Alaska 99707

Dear Mr. Loeb:

On behalf of the Board of Education, I want to express my appreciation for your generous gift to the School District. "Preventing Alcohol Abuse" will be a vital curriculum resource for those developing classroom lessons on this important subject.

As I reviewed the brochure provided, I was very impressed by the emphasis on factual, nonjudgmental information. Moreover, the tailoring of learning units to specific age groups will greatly facilitate the use of the teaching materials.

Altogether, your contribution demonstrates the best traditions of corporate social consciousness and community involvement. Please accept my personal gratitude for this outstanding gift, and for your keen sense of public commitment.

Sincerely,

Kenneth S. Burnley
Superintendent

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM February 28, 1984

SUBJECT: Liquor licenses (HB 158)

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee

FROM: Russ Josephson
Legislative Counsel

In the committee discussions of CSHB 158(C&RA), there has been a fair amount of confusion about the language of AS 04.11.400, the statute setting population limitations for liquor licenses. In an attempt to clarify this section and, thus, the bill, I have rewritten this section in part. Although the concepts in this section remain complicated, I think that this rewrite is an improvement.

Please note that in this new draft subsection (k) has been eliminated, replaced by additional language inserted into subsections (a) and (b). Another change in this draft concerns the transfers of liquor licenses. There has been some confusion about transfers of licenses because there are two types, transfers of ownership and transfers of location. To clarify this distinction, I have changed the word "transfer" to "relocation" when referring to a transfer of the location of licensed premises. (If this change is acceptable, the references to transfers of this type throughout the title would be changed, as well, to read "relocation" rather than "transfer".)

Please let me know what you think of the following version of AS 04.11.400(a) and (b) and whether you would like a substitute bill drafted along these lines.

(a) Except as provided in (g)(2), (h), and (i) of this section, a new license may not be issued, and licensed premises may not be relocated, if the premises for the new license or if the relocated licensed premises would be located

(1) outside an incorporated city, a unified municipality, or an established village and, after the issuance or relocation, there would be within a radius of five miles of the licensed premises or location of premises sought to be licensed more than one beverage dispensary license and one package store license for each 3,000 population or fraction of 3,000 population and one license of each other type for each 1,500 population or fraction of 1,500 population; in determining the maximum number of a type of license allowed in a given area under this paragraph, the board shall include in its calculations the number of licenses of that type issued under (g) and (h) of this section for premises in that area;

(2) inside an incorporated city, a unified municipality, or an established village and, after the issuance or relocation, there would be inside the boundaries of the city, municipality or village more than one beverage dispensary license and one package store license for each 3,000 population or fraction of 3,000 population and one license of each other type for each 1,500 population or fraction of 1,500 population; in determining the maximum number of a type of license allowed in a given area under this paragraph, the board shall include in its calculations the number of licenses of that type issued under (g) or (h) of this section for premises in that area.

(b) If an application for a new license or for relocation of licensed premises is for premises to be located outside of an incorporated city, unified municipality, or established village and the radius described in (a)(1) of this section encompasses all of the city, municipality, or village and the population residing within the radius is less than

(1) 3,000, the board may deny the

(A) issuance of a beverage dispensary license or package store license;

(B) relocation of premises licensed as a beverage dispensary or package store;

(2) 1,500, the board may deny the issuance of any license or the relocation of any licensed premises.

If you have any questions or comments, please do not hesitate to call.

The Honorable Charlie Bussell, Chairman
House Judiciary Committee
Alaska State Legislature
Pouch V
Juneau, AK 99811

Re: CSHB 158 (C&RA)

Dear Representative Bussell:

During our testimony on the above bill at the committee meeting held on January 27, members of the committee requested that I submit a letter outlining the ABC Board's alternative or preference concerning population limitations for issuance of liquor licenses. Simply stated, the board would prefer merely amending present law to raise population from 1,500 persons for each type of license to 2,500 persons. The board believes there is currently a sufficient number of issued licenses to serve the needs of the public. If in the future an application warrants and public need is shown, the board may grant a license under AS 04.11.400(j), public convenience and necessity.

A draft bill showing the board's proposed amendment is attached. Thank you for extending additional time for the board to respond. If I can provide the committee with any additional information, please do not hesitate to call.

Sincerely,

Patrick L. Sharrock
Director

PLS:vk

cc: Representative Mike M. Miller, Sponsor
Robert D. Heath, Commissioner of Revenue
Members, ABC Board
Kay Gouwens, Asst. Attorney General

of all alcoholic beverage licenses; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 04.11.400(a) is amended to read:

(a) Except as provided in (g),(h), (i), and (j) of this section, a new license may not be issued or an existing license transferred to a new location

(1) outside an incorporated city, a unified municipality, or an established village if after the issuance or transfer there would be more than one license of each type for each 2,500 [1,500] population or fraction of 2,500 [1,500] population, including licenses which have been approved or issued under (g) or (h) of this section, in a radius of five miles of the licensed premises or location of premises sought to be licensed.

(2) inside an established village, an incorporated city, or a unified municipality if after the issuance or transfer there would be more than one license of each type for each 2,500 [1,500] population or fraction of 2,500 [1,500] population, including licenses which have been issued or approved under (g) or (h) of this section, inside the boundaries of the village, city or municipality.

* Sec. 2. AS 04.11.400(b) is amended to read:

(b) If the application is for a license outside of an established village, incorporated city, or unified municipality and the radius described in (a)(1) of this section encompasses all of the established village, incorporated city, or unified municipality and the population resident inside and outside the village, city, or municipality but inside the radius described in (a)(1) of this section is less than 2,500 [1,500], the board may deny the issuance or transfer of the license.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.-0.070.

NOTICE OF PROPOSED CHANGES IN THE
REGULATIONS OF THE ALCOHOLIC BEVERAGE CONTROL BOARD

Notice is hereby given that the Alcoholic Beverage Control board, under the authority of AS 04.06.100, proposes to amend certain current regulations and adopt new regulations as described below.

Application Periods for Licenses

The Board proposes to establish application periods for licenses and clarify when a license becomes available. The statutes to be interpreted and implemented are AS 04.06100, AS 04.11.010, AS 04.11.260, AS 04.11.320(a)(9), and AS 04.11.400(a).

Competing Applications

The Board proposes to:

(1) establish the procedure for choosing among competing applicants when there are more applicants than available licenses;

(2) establish criteria that will guide the board's choice among competing applicants;

(3) provide for random selection among competing applicants in some cases; and

(4) establish the procedure for local governing bodies to protest competing applications. The statutes to be interpreted and implemented are AS 04.06.100, AS 04.11.400(a), AS 04.11.010, AS 04.11.260, and AS 04.11.510.

Local Governing Body Protests

The Board proposes to adopt clarifying regulations when a local governing body protest may be determined to be arbitrary,

capricious, or unreasonable, and relating to government protests where there are competing applicants. The statutes to be interpreted and implemented are AS 04.06.100, AS 04.11.480, AS 04.11.510, and AS 04.11.520.

Determining Population

The Board proposes to establish how population will be determined in establishing the number of available licenses. The statutes to be interpreted and implemented are AS 04.06.100 and AS 04.11.400(a).

Denying, Suspending, and Revoking Licenses in the Public Interest

The Board proposes to establish criteria that will guide the Board in deciding when in the public interest a license will be denied, revoked or suspended, or a request for renewal or transfer will be denied. The statutes to be implemented and interpreted are AS 04.06.100, AS 04.11.320(a)(1), AS 04.11.330(a)(1), AS 04.11.340(2), AS 04.11.360(1), AS 04.11.370(2), and AS 04.11.370(2).

License Renewal

The Board proposes to clarify and establish procedures and deadlines for renewal of licenses. The statutes to be implemented and interpreted are AS 04.06.100, AS 04.11.270, AS 04.11.330, AS 04.11.540, AS 04.11.550, and AS 04.11.680.

Minors: Employment and Dining

The Board proposes to adopt criteria for designation of licensed premises for employment of minors and dining by minors. The statutes to be implemented and interpreted are AS 04.06.100 and AS 04.16.049.

Drinking Age

The Board proposes to amend several regulations to reflect that the drinking age has been statutorily raised from 19 to 21. The statutes to be implemented and interpreted are AS 04.06.100, AS 04.11.080, AS 04.11.110, AS 04.11.460, AS 04.16.049, AS 04.16.050, AS 04.16.051, AS 04.16.052, AS 04.16.060, AS 04.16.200, AS 04.21.020, and AS 04.21.050.

Employment of Parolees, Probationers, and Prisoners

The Board proposes to repeal a regulation prohibiting employment of parolees and probationers, and to adopt a regulation restricting employment on licensed premises of parolees, probationers, and prisoners. The statute to be interpreted and applied is AS 04.06.100.

Transfer of Licenses to Another Person

The Board proposes to adopt regulations:

(1) disallowing transfers within three years after initial issuance;

(2) requiring that a license be surrendered while an application to transfer the license to another person is pending;

(3) providing for temporary permits to operate while a transfer application is pending;

(4) requiring public notice to creditors of the proposed transfer;

(5) defining what creditors' claims may prevent the transfer;

(6) establishing a creditors' claim period after which creditors' claims may be denied;

(7) providing for hearings on certain creditors' claims;

(8) requiring escrow of the purchase price to protect creditors; and

(9) providing for a transfer application fee.

The statutes being implemented and interpreted are AS 04.06.100, AS 04.11.280, AS 04.11.360, and AS 04.11.040.

Special Conditions on Licenses

The Board also proposes to adopt regulations regarding when special conditions may be placed on a license, and what kinds of conditions may be imposed. The statute being implemented and interpreted is AS 04.06.100.

Any person interested may present oral or written statements or arguments relevant to any of the proposed action at a hearing to be held in Fairbanks at 10:00 a.m. on February 16, 1984, in the Fairbanks North Star Borough Assembly Chambers, 520 Fifth Avenue, Fairbanks, Alaska; or at a hearing to be held in Anchorage at 10:00 a.m. on February 24, 1984, at the Municipality of Anchorage Assembly Chambers, 3500 Tudor Road, Anchorage, Alaska; or at a hearing to be held in Juneau at 8:00 a.m. on March 6, 1984, in the City and Borough of Juneau Assembly Chambers, 155 South Seward Street, Juneau, Alaska. In addition, written statements or arguments may be sent to Alcoholic Beverage Control Board, 201 E. 9th Avenue, Anchorage, Alaska 99501, to be received no later than March 1, 1984.

Copies of the proposed regulations may be obtained by writing to the Alcoholic Beverage Control Board, 201 E. 9th Avenue, Anchorage, Alaska 99501.

These actions are not expected to require an increased appropriation.

The Alcoholic Beverage Control Board, upon its own motion or at the instance of any interested party, may adopt proposals after the hearing within the scope of this notice without further notice, or may decide to take no action on them.

DATE: February 8, 1984

Patrick L. Sharrock, Director
Alcoholic Beverage Control Board

ARTICLE ___

MUTUALLY EXCLUSIVE APPLICATIONS

15 AAC 104. . MUTUALLY EXCLUSIVE APPLICATIONS. (a) Applications are mutually exclusive when issuance of one or more new licenses or the transfer of one or more existing licenses will require the denial of one or more other applications based upon the population quota for licenses.

(b) Within an established village, incorporated city, and unified municipality, the board will give reasonable public notice of application for the last available license of each kind. All mutually exclusive applications received within 30 days after the date of the last notice, and all mutually exclusive applications received within 30 days before the date the application for the last available license was received, are competing applications.

(c) Outside an established village, incorporated city, and unified municipality, each mutually exclusive application received within 30 days after receipt of the immediately preceding mutually exclusive application is a competing application.

(d) All competing applications will be decided at the same time. All other mutually exclusive applications will be considered separately, in the order in which they were received. Applications received before the competing applications will be decided first. Applications received after the competing applications will be decided after the final decision on all the competing applications. If necessary, the same procedure for identifying and considering competing applications will be repeated for applications received after the first group of competing applications.

15 AAC 104. . PROCEDURE FOR DECISION ON COMPETING APPLICATIONS. (a) The board will initiate a consolidated administrative hearing on all competing applications by filing a statement of issues under the Administrative Procedure Act.

(b) If an applicant does not appear in the administrative hearing, the application will be denied and the denial is final.

(c) If a local governing body protests a competing application, the protest will be incorporated in the statement of issues. The local governing body must appear in the administrative hearing or its protest will be considered arbitrary, capricious and unreasonable.

(d) Upon hearing, the board will determine whether to deny any competing applications under AS 04.11.320 or AS 04.11.480.

(e) After determining whether to deny any applications under as 04.11.320 or AS 04.11.480, the board will in its discretion approve applications which are no longer mutually exclusive, and will conduct a drawing to determine which competing applications to approve. All other competing applications will be denied without prejudice.

PUBLIC INTEREST CONSIDERATIONS

15 AAC 104.___. DENIAL IN THE PUBLIC INTEREST. (a) Except for good cause shown, the board will, in its discretion, deny an application for a new license or transfer of an existing license if the board finds, after review of all the evidence, that:

(1) the application is incompatible with the character or public interests of the surrounding neighborhood;

(2) issuance would tend to create a law enforcement problem;

(3) there is, or issuance would result in, an excessive number of licenses in the area. In the absence of guidelines from the local governing body, it will be presumed that there is an excessive number of licenses in an area where there are more than ___ licensed premises within a one-half mile radius or more than ___ licensed premises within a two-mile radius of the premises;

(4) there is, or issuance would tend to result in, a high crime rate or a high incidence of alcohol-related accidents in the area. In the absence of guidelines from a local governing body, the board will generally assume that the crime rate or incidence of alcohol-related accidents is "high" if the frequency or severity of such events in the area significantly exceeds the city -, village -, or municipality-wide average;

(5) there are inadequate parking facilities to accommodate a reasonably expected increased demand for parking created by issuing or transferring the license;

(6) access to the premises will create an unreasonable traffic hazard;

(7) a reasonably expected increase in traffic will overtax existing road systems;

(8) the proposed premises are already constructed, and do not substantially comply with state and local fire, health, and safety codes, and cannot be made to comply without extensive structural modification;

(9) under the proposed management plan, the licensee will have insufficient control over the conduct of the proposed business;

(10) the applicant or the applicant's affiliates have had a liquor license revoked in the year preceding the application;

(11) the applicant or the applicant's affiliates have had a liquor license suspended in the six months preceding the application;

(12) the applicant or the applicant's affiliates have been criminally convicted, within 5 years before the application, of any felony, any violation of Title 04 of the Alaska Statutes; or any violation of the alcoholic beverage control law of another state, as a licensee of that state;

(13) the applicant or the applicant's affiliates have demonstrated that they are untrustworthy or unfit to conduct the operation of a licensed business, or are a potential source of harm to the public;

(14) the proposed premises or business is not financially feasible.

(b) The factors listed in (a) of this section are neither exclusive nor conclusive. The board will in its discretion find that a license should not be issued in the best interests of the public based on factors not identified in (a) of this section, and will in its discretion consider other factors that offset or moderate a negative factor identified in (a) of this section.

CONDITIONS OF LICENSES

15 AAC 104.___. CONDITIONS ON LICENSES. If grounds exist for the denial, revocation, suspension, or refusal to renew a license, and the licensee or applicant requests it, the board may place reasonable restrictions on a license if it finds the conditions are likely to remove or substantially moderate the grounds for denial, revocation, suspension, or refusal to renew. Conditions may include, but are not limited to, the following subjects:

(1) hours of sale;

(2) display of signs;

(3) employment of designated persons;

(4) entertainment permitted or prohibited on the premises;

(5) alcoholic beverages to be served only with food; and

(6) matters pertaining to the personal conduct of the licensee.

POPULATION

15 AAC 104.605 DETERMINING POPULATION CRITERIA. is amended as follows:

Subsection (a) is amended to read:

(a) The board will employ population figures generated by the Department of Community and Regional Affairs to establish a population figure for determining the quota of licenses available under AS 04.11.400(a)(2). The Department of Community and Regional Affairs figures, will be adjusted, however, in the following respects:

(1) prison populations will be excluded;

(2) the populations of colleges and universities will be discounted by the number of students who, according to best available information are domiciled in states other than Alaska. If not such information is readily available to the director, college and university populations will be discounted by ____%.

(3) the population of military bases and installations will be discounted by the number of military personnel and their families who, according to best available information, are domiciled in states other than Alaska. If no such information is readily available to the director, the population of military bases and installations will be discounted by ___%. Former subsection (b) is redesignated as subsection (d) and new subsections (b) and (c) as follows are added:

(b) The population of established villages, incorporated cities, and unified municipalities will be determined annually by the director, within a reasonable time after the figures generated by the Department of Community and Regional Affairs are made available to the director.

(c) If figures of the Department of Community and Regional Affairs are not available to the director by _____ of any year, the director shall employ the best available information to establish population figures in determining the quota of available licenses.

LOCAL GOVERNMENT PROTESTS

15 AAC 104.145 LOCAL GOVERNING BODY PROTEST. is amended by adding new subparagraphs (c), (d), and (e) as follows:

(c) A local governing body protest will generally be considered not to be arbitrary, capricious, or unreasonable where:

(1) the protest is pursuant to an ordinance, resolution, or statement of policy adopted by the governing body before it considered the application, or the applicant otherwise had reasonable notice before making application of the factors to be considered and the standards applied by the local governing body;

(2) the applicant was provided a reasonable opportunity to defend the application before a meeting of the local governing body; and

(3) the protest has a reasonable basis in fact and is not contrary to law.

(d) A local governing body protest may be based upon facts that render the particular application objectionable to the local body, or may be based upon a general public policy. If based on a general public policy, the policy must have a reasonable basis in fact, may not be contrary to law, and may not be patently inapplicable to the particular application being protested. The board will not substitute its judgment for that of the local governing body on matters of public policy that have reasonable factual support.

(e) If the application is denied because of the protest, and the applicant requests a hearing, the local governing body shall be a party to the hearing and to any subsequent appeals, and shall undertake the defense of its protest.

EMPLOYMENT OF PRISONERS, PAROLEES, AND PROBATIONERS

15 AAC 104.665 is amended to read as follows:

15 AAC 104.665. EMPLOYMENT OF PRISONERS, PAROLEES, AND PROBATIONERS. (a) A licensee shall not employ on licensed premises a prisoner convicted of a felony unless the prisoner is on a work furlough program from the prison or other incarceration facility, and the employment and duties of the prisoner on the licensed premises have been expressly approved in writing by authorized personnel of the prison or other facility. The licensee shall maintain the original or photocopy of the written approval on the licensed premises and allow inspection of the approval by agents and employees of the board.

(b) A licensee shall not employ on licensed premises a person on parole for a felony or a person on supervised probation for a felony unless the employee's parole or probation officer specifically approves the employment in writing. The licensee shall maintain the original or photocopy of the written approval on the licensed premises and allow inspection of the approval by agents and employees of the board. For purposes of this subparagraph a person is on "supervised probation" if a probation officer has been appointed to the person.

(c) A licensee shall not employ on licensed premises a person who is on unsupervised probation for a felony offense, unless the licensee has reviewed a copy of the probation conditions imposed by the sentencing court, and those conditions do not specifically prohibit the employment. The licensee shall maintain on the licensed premises a certified copy of the probation conditions imposed by the sentencing court and shall make it available for inspection by agents and employees of the board. For purposes of this subparagraph, a person is on "unsupervised probation" if no probation officer has been appointed to the person. (Eff. / / , Register).

Authority: AS 04.06.100

ALCOHOLIC BEVERAGE CONTROL BOARD

PROPOSED REGULATIONS

KEMG DRAFT 1-17-84

15 AAC 104 is amended by adding a new Article as follows:

ARTICLE 4. TRANSFER OF A LICENSE TO ANOTHER PERSON.

SECTION.

. No Transfer Within ___ Years

. Applications

. Escrow of Purchase Price

. Notice to Creditors

. Creditors' Claim Period

. Creditors' Claims

. Hearing on Disputed Claims

. Issuance of License to Transferee

. Termination of Operations; Temporary Permits

15 AAC 10.4____. NO TRANSFER WITHIN ( ) YEARS. No license applied for or transferred to the current holder after the effective date of this regulation may be transferred to another person until ___ years after the date it is issued.

15 AAC 104.____. APPLICATIONS. (a) An application to transfer a license to another person must be accompanied by:

(1) the license proposed to be transfered;

(2) any escrow agreement required by 15 AAC 104.___;

(3) a list of all the outstanding creditors of the licensed business, sworn to by the licensee (under penalty of perjury);

(4) proof of the publication required by 15 AAC 104.___ ;

(5) a transfer application fee of $500.00, unless the proposed transfer is to the licensee's spouse, to a bankruptcy trustee or receiver, to surviving partners of a partnership

licensee, or to a corporation whose oustanding stock are 100% owned by the licensee, in which case the application fee is $75.00.

15 AAC 104.___. ESCROW OF PURCHASE PRICE. If the proposed transfer involves a purchase price or other tangible consideration, the licensee and proposed transferee shall establish an escrow with some person, corporation, or association not a party to the transfer, and the proposed transferee shall deposit with the escrow holder the entire amount of the purchase price or consideration. The licensee and proposed transferee shall enter into an agreement deposited with the escrow holder, directing the escrow holder, in accordance with instructions received from the board, to either (1) pay the claims of all creditors of the licensed business as identified in a notice given by the Board to the escrow holder and acknowledged by the licensee to be bona fide creditors of the licensed business, with the balance to be paid to the licensee, or (2) return the purchase price to the proposed transferee.

15 AAC 104.___. NOTICE TO CREDITORS. The licensee shall give notice to its creditors that a transfer of the license is proposed. The notice must be mailed to all outstanding creditors known to the licensee, and must be published in a major newspaper of general circulation in this state, at least once a week for three consecutive weeks. The notice must state that the transfer will not occur until all bona-fide creditors of the licensed business are paid or satisfied, and must direct creditors to submit their claims to the board, in writing, by two months from the date of the first publication.

15 AAC 104.___. CREDITORS' CLAIMS PERIOD. Except for good cause shown, a creditor's claim will not bar a transfer if it is presented to the board more than two months after the first date the notice to creditors was published in accordance with 15 AAC 104.___.

15 AAC 104.___. CREDITORS' CLAIMS. (a) A creditor's claim will not prevent transfer of a license unless the claim arises from the conduct of the business licensed.

(b) A claim arises from the conduct of the business licensed to the extent that it arises from conduct that involved or was closely associated with the manufacture, distribution, sale, or service of alcoholic beverages. A claim does not arise from the conduct of the business licensed to the extent that it arises from conduct actually and reasonably distinct from and unassociated with the manufacture, distribution, sale, or service of alcoholic beverages.

(c) Creditors whose claims must be paid or satisfied to allow transfer under this section include, but are not limited to employees, suppliers, materialmen, consultants, banks and other financial institutions, attorneys, and accountants.

(d) The board will determine on a case by case basis what claims involve or are closely associated with the manufacture, distribution, sale, or service of alcoholic beverages. However, the following examples will guide the board's determinations:

(1) Conduct related to food service in a licensed restaurant will generally be deemed to be closely associated with the sale of alcoholic beverages. Conduct related to food service in a non-licensed cafe of a restaurant complex which also contains a licensed restaurant will not generally be deemed to be closely associated with the sale of alcoholic beverages.

(2) A bank loan for purchase of liquor inventory will generally be deemed to be closely associated with the sale of alcoholic beverages. A bank loan to renovate hotel guest rooms will generally not be deemed to be closely associated with the sale of alcoholic beverages.

(e) If it cannot reasonably be determined what portion of a claim arises from the conduct of the business licensed, if there is a reasonable basis on which the board can otherwise apportion the claim, it may do so.

15 AAC 104.___. HEARING ON DISPUTED CLAIMS. If any creditor presents a claim to the board within two months after the date of the initial publication required by 15 AAC 104.___, which is not acknowledged by the transferor to be bona-fide, a hearing shall be held to determine the validity and amount of the claim. The hearing will be conducted in accordance with AS 44.62.330-.650. Except for good cause shown, all disputed claims will be considered together at a single, consolidated hearing. The board will deny the claim of any creditor who, after notice, fails to appear at the hearing.

15 AAC 104.___. ISSUANCE OF LICENSE TO TRANSFEREE. (a) If there are no disputed creditors claims, and the board approves the transfer, the license will be issued to the transferee as soon as practicable after approval.

(b) If there were disputed creditors claims, and the board otherwise approves the transfer, the license will not be issued to the transferee until expiration of the time within which aggrieved parties may initiate an appeal. The license will be issued after such period unless the issuance is stayed by the board or by order of a court of competent jurisdiction.

15 AAC 104.___. TERMINATION OF OPERATIONS; TEMPORARY PERMIT. The licensee must cease to operate the licensed business [or must cease to sell, serve, or manufacture alcoholic beverages] upon applying for the transfer. However, the director may issue a temporary permit to allow the continued [sale, service, or manufacture of alcoholic beverages] operation of the licensed business if all the following terms and conditions are satisfied:

(1) the proposed transferee consents to the continued operation an agrees that, if the transfer occurs, the transferor will be jointly and severally liable for the bona fide creditors' claims of the business incurred while the business is operated under the temporary permit;

(2) the licensee presents to the director sworn statements from suppliers and other necessary creditors of the business that

they agree to continue to provide goods and services to the licensed business and that they have received security satisfactory to them for any and all obligations of the licensed business that may arise under the temporary permit;

(3) the licensed business has been operating for at least 90 consecutive business days prior to the application for transfer; and

(4) all other conditions reasonably required by the director for the protection of creditors, compliance with the laws pertaining to alcoholic beverages, and administrative convenience, have been met.

(b) A permit issued under this section shall authorize the permit holder to conduct the same business authorized under the license sought to be transferred, and no other.

(c) A permit issued under this section shall be for not more than sixty days. The permit may be renewed on application to the director provided there is continuous compliance with the conditions of this section.

RESTAURANT DESIGNATIONS

15 AAC 700.____ Minors born on or before December 31, 1964. [This provision expires on January 1, 1986.] Minors who were born on or before December 31, 1964, may enter and remain on licensed premises for purposes of dining and employment, notwithstanding AS 04.16.049. However, they shall not be regarded as adults for purposes of accompanying other minors on licensed premises under AS 04.16.049(a) and (c).

15 AAC 104.7___. APPLICATION FOR DESIGNATION. (a) A licensee desiring designation as a restaurant, hotel, or eating place under AS 04.16.049 must file with the director an application on prescribed forms, together with an application fee of $50.00.

(b) The application shall include:

(1) a statement of the type of designation requested, whether for employment of minors under AS 04.16.049(c), dining by minors unaccompanied by their guardians under AS 04.16.049(a)(2);

(2) a description of the location of the premises for which the designation is desired;

(3) if available, a copy of the menu, including lists of alcoholic beverages such as a wine list. If a menu is not available, the applicant shall state what the menu is expected to be;

(4) if the premises are constructed and decorated, photographs of each room for which the designation is requested. Each photograph must be taken from the center of the room, and the applicant must include at least one photograph of each quadrant of the room. The applicant must designate on the reverse of each photograph which quadrant is depicted;

(5) if the premises are not constructed and decorated, a blueprint or drawing of the proposed premises;

(6) a statement of the manner of food and beverage service offered or anticipated, whether table service, buffet service, counter service, or other;

(7) if the premises have operated for six months or more, a statement of the gross revenues of the business, and the percentages attributable to the sale of food and non-alcoholic beverages, to the sale of alcoholic beverages, and to entertainment, including cover charges;

(8) a statement whether an owner, manager, or assistant manager is always present on the premises during business hours;

(9) any other information required by the board

15 AAC 140.7___. DINING BY MINORS. (a) The board will designate a licensed premise for dining by minors unaccompanied by their parents, legal guardians, or adult spouses, only if it finds the premise is a bona fide restaurant, that there is adequate supervision on the premise to reasonably insure that minors will not obtain alcoholic beverages, and that it is unlikely minors will enter and remain on the premise for purposes other than dining.

(b) A licensed premise generally will be presumed to be a bona fide restaurant for purposes of this section if:

(1) it is licensed as a restaurant or eating place;

(2) at least _____ % of its gross revenue is from the sale of food and non-alcoholic beverages; or

(3) it is the only dining facility connected with a hotel or motel.

(c) The board generally will presume that premises are unlikely to be entered by minors other than for purposes of dining if no entertainment other than dining is provided or

available. "Entertainment" includes live music, dancing, pool and other table games, bowling and other sports, pinball, and video machines.

(d) The board generally will presume that there exists supervision sufficient to reasonably insure against consumption of alcoholic beverages by minors if alcoholic beverages [food and beverages?] are available by table service only, and an owner, manager, or assistant manager is present on licensed premises at all times.

(e) The presumptions in (b), (c), and (d) of this section are neither conclusive nor exclusive. On relevant facts, the board may find that a premises which satisfies the presumptions is not a bona-fide restaurant or does not provide adequate supervision. The board may find that premises not satisfying the presumptions are nonetheless bona-fide restaurants with adequate supervision.

(f) The consent required by AS 04.16.049(a)(3) must be in writing, must identify the minor to whom it applies, and must be signed and dated by the minor's parent or adult legal guardian. The consent may be particular or general. For example, the consent may be for a particular date or for an indefinite period of time. It may identify a particular premise or may apply to all designated premises. It may identify by name, one or more adults authorized to accompany the minor or may identify a category of authorized adults by title or position. For example, the consent may authorize a minor to enter a particular premise on a particular date in the company of a particular adult. For another example, the consent may authorize a minor to enter any designated premises at any time if accompanied by any adult teacher, coach, or administrative officer of the minor's school.

15 AAC 104.7___. PROTECTION OF MINORS. The board will not designate a premises as a restaurant, eating place, or hotel under AS 04.16.049 if the board believes that a minor's health, safety, welfare, or morals may be harmed by being present on the licensed premises. Without limiting the foregoing, the board will not designate premises that feature or allow erotic dancing or other erotic entertainment or which have a history of violations of Title 04 of the Alaska Statutes, or which have a history of incidents involving breaches of the peace.

15 AAC 104.7___. DESIGNATION OF PORTION OF PREMISES. The board will in its discretion designate only portions of a licensed premises.

ALCOHOLIC BEVERAGE CONTROL BOARD

PROPOSED REGULATIONS

(Miscellaneous)

15 AAC 104.105. is amended as follows:

15 AAC 104.105. APPLICATIONS. (a) Application for new licenses or permits and for renewals [or transfers] of existing licenses must be on prescribed forms and must contain the information required by AS 04.11.260. In addition the application must contain the following [information]:

(1) a statement of the criminal convictions of the applicant and the applicant's affiliates [, if the applicant is an individual, or officers and shareholders holding more than 10 percent of the applicant's outstanding common stock, if the applicant is a corporation, for a felony; and] for any felony, any violation of Title 04 of the Alaska Statutes, and any violation, as a licensee of another state, or the liquor laws of that state;

(2) written authorization for release of criminal and arrest records;

(3) a statement that no one other than the applicant has a financial interest in the licensed business; and

(4) if the applicant is a partnership or joint venture, a copy of its partnership or joint venture agreement, if any; if the applicant is a corporation, a copy of its certificate of incorporation, articles of incorporation, and bylaws.

(b) A fee in the amount required by AS 04.11.090 - 04.11.250 must accompany every application for a new license or for renewal of an existing license.

(c) An application which is incomplete may be returned to the applicant.

(d) A non-refundable [An] application fee of $150 [$50] must accompany all applications for licenses.

15 AAC 104.100. WHEN LICENSES BECOME AVAILABLE. Any application received by the board at a time when there are no available licenses of the kind applied for will be denied. In this chapter, a license becomes available:

(1) on December 31, where the license becomes available because of an increase in the population during the preceding year;

(2) ten (10) days after the period for renewing licenses has expired, where the license becomes available because a license has expired and not been renewed;

(3) on the conclusion of all appeals of the revocation, or on waiver of appeal by the licensee, whichever is later, where the license becomes available because of the revocation of another license;

(4) on the date determined by the board or the director in any other case.

PROPOSED REGULATIONS

ALCOHOLIC BEVERAGE CONTROL BOARD

(changing 19 to 21 throughout)

15 AAC 104.315 is amended to read:

15 AAC 104.315. BEVERAGE DISPENSARY LICENSE. The licensed premises of a beverage dispensary licensee [license] may include the designated lane area of a bowling alley if that area is adjacent to the main bar area. The licensee must show that he has authority and will exercise control over conduct of the licensed business in that area. Access to the lane area by persons under 21 [19] years of age is permitted only during designated periods when no alcoholic beverages are served or consumed there. The periods during which persons under 21 [19] years may be permitted access must be clearly posted on the premises and the board must give prior approval of that access upon application by the licensee. (Eff. / /84, Register).

Authority: AS 04.06.100
AS 04.11.090

15 AAC 104.335(a)(2) is amended to read:

(2) There is community support, which must be shown by a petition signed by a majority of the residents 21 [19] years of age or over within one mile of the proposed premises; and

15 AAC 104.435 is deleted (replaced with new Article 7 provisions).

15 AAC 104.445 is deleted (replaced with new Article 7 provisions).

15 AAC 104.645(a)(1) is amended to read:

(1) The order must be in writing and from a person known to the licensee to be at least 21 [19] years of age; and

Article ___ of 15 AAC 104 is amended by the addition of a new section 900 as follows:

15 AAC 104.900. DEFINITIONS. (a) As used in 15 AAC 104:

(1) "Affiliate" means an individual's general partners and joint venturers, and any corporation of which the individual owns ten percent (10%) of the stock or of which the individual is an officer or director; a partnership's partners or joint venturers and their affiliates, any corporation of which the partnership or any individual partner holds ten percent (10%) or more stock or of which any partner is an officer or director; a corporation's shareholders who hold ten percent (10%) or more of the corporation's stock, a corporation's officers and directors, a corporation's partners or joint venturers and their affiliates, and the other corporation of which the corporation owns ten percent (10%) or more of the stock, or of which the corporation appoints one or more directors, or of which ten percent (10%) or more of the stock is held by a shareholder holding ten percent (10%) or more of its own stock. The board may in its reasonable discretion find that persons not having any of the relationships described above are affiliated with one another.

(b) When used in Title 04,

(1) "Guardian" means legal guardian.

MEMORANDUM January 13, 1984

SUBJECT: Sectional Analysis of House Bill 158

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee

FROM: Russ Josephson
Legislative Counsel

You have requested a sectional analysis of HB 158. The analysis follows:

This bill consists of a single section that amends AS 04.11.320 (relating to the denial of new licenses and permits) by adding an additional ground for denial of an application for a new license. The proposed amendment would require applications for new alcoholic beverages licenses to be denied until the number of licenses per capita in this state no longer equals or exceeds the per capita rate for the rest of the United States. (Only those persons 21 years of age or older are included in the ratio, and community liquor licenses are excluded from the ratio.) In other words, under this amendment, no new licenses would be issued until the ratio of licenses to adults decreased to the level in the rest of the country.

MEMORANDUM February 4, 1983

SUBJECT: Liquor permits
(Work Order No. 13-0741)

TO: Representative M. Mike Miller

FROM: RJ Russ Josephson
Legislative Counsel

I have consulted the statutes further and have telephoned the Alcoholic Beverage Control Board for further information. The reason "permit" is used instead of "license" in a few situations is that permits are issued for unusual situations: caterer's permits, special events permits, and conditional contractor's permits (for construction sites outside a city and within a military or naval reservation). As I noted the other day, neither "permit" or "license" is defined in Title 4. There is no effect on your bill that I can see, however.

On the side issue of community liquor licenses, I would refer you to AS 04.11.190 in addition to AS 04.11.492 and AS 04.11.502. The latter section is the local option election procedure. Also, "municipality", a term used in the above-mentioned sections, is defined in AS 04.21.080 to suggest that not all villages can obtain a community liquor license. So, the possible numbers of community liquor licenses that might be excepted from the ratio referred to in your bill is unclear.

I am enclosing a copy of AS 04.11.400, Population Limitations. This section does not appear to affect your bill, but it is for your information as a means of limiting licenses that are presently in effect. If this section is of interest, you will also want to refer to 15 AAC 104.605, Determining Population Criteria.

If I can be of further assistance, please do not hesitate to call.

Martin's Retail Liquor License No. 1517, 15 Alaska 171 (1954).

"Grandfather clause" of statute or ordinance, 4 ALR2d 667.

Hearing before revocation or suspension of liquor license, 35 ALR2d 1067.

Sale of liquor to homosexuals or permitting their congregation at licensed premises as ground for suspension or revocation of liquor license, 27 ALR3d 1254.

Revocation or suspension of liquor license because of drinking or drunkenness on part of licensee or his associates, 36 ALR3d 1301.

Sale or use of narcotics or dangerous drugs on licensed premises as ground for revocation or suspension of liquor license, 51 ALR3d 1130.

Loss of liquor license as compensable in condemnation proceeding, 58 ALR3d 581.

48 C.J.S. Intoxicating Liquors §§ 174-180.

Article 5. Restrictions on Issuance and Transfer of Licenses.

Section		Section	
390.	Residence requirements	420.	Zoning limitations
400.	Population limitations	430.	Person and location
410.	Restriction of location near churches and schools	450.	Prohibited financial interest
		460.	Prior public approval

Sec. 04.11.390. Residence requirements. (a) A beverage dispensary license or package store license may not be issued to a person or association of persons who have not resided in the state for at least one year before the date of application.

(b) A beverage dispensary license or package store license may not be issued to either a domestic corporation which has not been issued a certificate of incorporation or a foreign corporation which has not been issued a certificate of authority to transact business in the state at least one year before the date of the application. (§ 2 ch 131 SLA 1980)

Personal qualification for liquor dealer not prescribed. — No law of Alaska prescribes any personal qualifications for a liquor dealer. What his qualifications must be, if any are required, are not set forth, but are, by inference, left entirely to the city council or the individuals residing out of incorporated towns. In re Kaye, 11 Alaska 556 (1948), decided under earlier statutes.

Am. Jur. 2d and C.J.S. references. — 45 Am. Jur. 2d Intoxicating Liquors § 148.

48 C.J.S. Intoxicating Liquors § 135.

Sec. 04.11.400. Population limitations. (a) Except as provided in (g), (h), (i), and (j) of this section, a new license may not be issued or an existing license transferred to a new location

(1) outside an incorporated city, a unified municipality, or an established village if after the issuance or transfer there would be more than one license of each type for each 1,500 population or fraction of 1,500 population, including licenses which have been issued under (g) or (h) of this section, in a radius of five miles of the licensed premises or location of premises sought to be licensed;

(2) inside an established village, an incorporated city, or a unified municipality if after the issuance or transfer there would be more than one license of each type for each 1,500 population or fraction of 1,500 population, including licenses which have been issued under (g) or (h) of this section, inside the boundaries of the village, city or municipality.

(b) If the application is for a license outside of an established village, incorporated city, or unified municipality and the radius described in (a)(1) of this section encompasses all of the established village, incorporated city, or unified municipality and the population resident inside and outside the village, city, or municipality but inside the radius described in (a)(1) of this section is less than 1,500, the board may deny the issuance or transfer of the license.

(c) In this section "unified municipality" means a unified municipality established under AS 29.68.

(d) In this section "radius" means the circular area or distance limited by the sweep of a straight line originating at the proposed licensed premises and extending outward.

(e) In (a)(1) of this section, "population" includes only those persons residing inside the radius but outside of an established village, an incorporated city, or a unified municipality as of December 31 of the year preceding the date of application.

(f) In (a)(2) of this section, "population" includes only those persons residing inside an established village, an incorporated city, or a unified municipality as of December 31 of the year preceding the date of application.

(g) The board may, in its discretion, approve the issuance or transfer of location of a beverage dispensary or restaurant or eating place license without regard to (a) of this section if it appears that the issuance or transfer will encourage the tourist trade by encouraging the construction or improvement of

(1) a hotel, motel, resort, or similar business relating to the tourist trade having

(A) a minimum of 10 rental rooms, and

(B) a dining facility, which requirement may be waived if most of the rental rooms have kitchen facilities; or

(2) an airport terminal

(h) A restaurant or eating place license may be issued or transferred notwithstanding (a) of this section if

(1) the premises of the restaurant or eating place are more than 18 miles from the corporate limits of a city or unified municipality;

(2) the premises will serve food to the traveling public; and

(3) the board finds that the public convenience will be served by the issuance or transfer.

(i) An application requesting a transfer of location of licensed premises shall be granted notwithstanding (a) of this section if the new location is less than one mile from the original location and

(1) no ground for denial exists under AS 04.11.340(1) or (3); and

(2) relocation of the licensed premises is necessary due to

(A) termination of a lease or rental agreement;

(B) condemnation of the premises;

(C) the substantial destruction of the premises by any cause.

(j) The board may issue a new license in a municipality notwithstanding the provisions of (a) of this section if the board finds that issuance of the license is necessary for the public convenience. (§ 2 ch 131 SLA 1980)

Population and zoning limits must be met. — The Alcoholic Beverage Control Board is prohibited by statute from issuing licenses except as meet population limitations and zoning limitations. Queen of N., Inc. v. Legrue, Sup. Ct. Op. No. 1670 (File No. 3512), 582 P.2d 144 (1978), decided under former AS 04.10.210.

Am. Jur. 2d and C.J.S. references. — 45 Am. Jur. 2d Intoxicating Liquors § 138.

48 C.J.S. Intoxicating Liquors § 136.

Sec 04.11.410. Restriction of location near churches and schools. (a) A beverage dispensary or package store license may not be issued and the location of an existing license may not be transferred if the licensed premises would be located in a building the public entrance of which is within 200 feet of a school ground or a church building in which religious services are regularly conducted, measured by the shortest pedestrian route from the outer boundaries of the school ground or the public entrance of the church building. However, a license issued before the presence of either cause of restriction within 200 feet of the licensed premises may be renewed or transferred to a person notwithstanding this subsection.

(b) If a beverage dispensary or package store license for premises located within 200 feet of a school ground or church building in which religious services are regularly conducted is revoked, expires or is transferred to another location, a beverage dispensary or package store license may not be issued or transferred to the formerly licensed premises until the cessation of either cause of restriction. (§ 2 ch 131 SLA 1980)

Legislative intent. — The intent of the legislature in enacting former AS 04.15.020, covering the subject matter of this section, must have been the desire to protect children attending school from direct exposure to some of the demoralizing circumstances which, by the authority of common knowledge, seem incident to the traffic in intoxicating liquor. Application of Wakefield, 10 Alaska 599 (1945), decided under former AS 04.15.020.

Am. Jur. 2d, ALR, and C.J.S. references. — 45 Am Jur. 2d Intoxicating Liquors §§ 140-146.

Measurement and computation of distances for purpose of statute or ordinance prohibiting license or sale of intoxicating liquor within given distance from certain institutions or property, 96 ALR 778.

Reasonableness of statutory or local regulation, prohibiting license for sale of intoxicating liquors within prescribed distance from church, school or other institutions, 119 ALR 643.

"School," "schoolhouse," or the like within statute prohibiting liquor sales within specified distance thereof, 49 ALR2d 1103.

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M April 13, 1983

SUBJECT: Liquor licenses
(HB 158)

TO: Representative M. Mike Miller

FROM: Russ Josephson
Legislative Counsel

CS HB 158 (C4RA)

Enclosed is a revised draft of SSHB 158. As requested, rather than repealing all of AS 04.11.400(g), only (g)(1) is repealed. The following is the sectional analysis that you requested with the above change.

Section 7 is the key to this bill. This section adds a subsection (k) to AS 04.11.400. The new subsection requires a ratio of 3,000 people in a given area for each new or transferred beverage dispensary (bar) or package store (liquor store) license.

Sections 1, 3, and 8 amend existing law by inserting a reference to the new language provided in Sec. 7, in three places where the limiters on the issuance of new licenses or the transfer of existing licenses are already mentioned. Inasmuch as Sec. 7 has added a new provision limiting licensing, these amendments simply reflect the existence of the new provision.

Sections 2, 4, and 5 are simple amendments to sections of existing law that refer to AS 04.11.400(j). To indicate that this section has been repealed, the amendments insert the word "former" before the statutory reference.

Section 6 contains a technical amendment reflecting the repeal of AS 04.11.400(g)(1) and (j).

Section 9 repeals AS 04.11.400(g)(1) and (j).

In summary, this bill limits bar and liquor store licenses by using the ratio of one license for each 3,000 persons

Draft 2 minimis

[illegible] minimals

instead of the ratio of one license for each 1,500 persons required under AS 04.11.400 now. In addition, the bill eliminates two exceptions to the license/population ratio. The tourist trade exception for hotels, motels, resorts, and similar businesses, and the public convenience exception have been repealed.

If I may be of further assistance please advise.

RE: HB 162

SPONSOR: Representative Ward

PROGRAM EFFECTS OF BILL

This bill allows municipalities to limit, by ordinance, the number of consecutive full terms that a person may serve as mayor or as a member of the assembly or council.

COMMENTS

This bill would give each municipality an option regarding whether or not inividual elected officials should be turned out of office not by the voters but by a limitation on the consecutive number of terms they may serve. There are advantages and disadvantages to limiting terms of office, but the Department will not debate them here. The overriding consideration is that this legislation provides for a local option on the question, a philosophy this Department generally favors.

DATE: April 6th, 1983

RE: House Bill 162

Under current statutes, municipalities do not have the authority to limit the number of terms elected officials may serve.

House Bill 162 provides that General Law Boroughs and cities may limit, by ordinance, the number of terms that may be served by assembly members, borough mayors, city council members, and city mayors.

Proposed CS HB 162 expands the provisions of HB 162 in that it is applicable to home rule as well as general law municipalities and, requires that limitations on the number of terms served by members of the governing bodies be ratified by the voters.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM March 31, 1983

SUBJECT: Limits on terms of municipal officials (CSHB 162 (C&RA))

TO: Representative Barbara Lacher
Chairman, House Community and Regional Affairs Committee

FROM: Tamara Brandt Cook
Legislative Counsel TBC

Here is the sectional analysis of the draft of CSHB 162 (C&RA) that you requested.

Section 1. This makes material added in secs. 3 - 5 of this draft applicable to home rule municipalities as home rule limitations. Since AS 29.23.050 is a home rule limitation now under AS 29.13.100(3), no addition is needed to include the material in sec. 2 as a home rule limitation.

Section 2. Unless ratified by the voters, no limit may be placed on the total number of terms or number of consecutive terms that a person may serve on the assembly of a home rule or general law borough.

Section 3. Unless ratified by the voters, no limit may be placed on the number of terms or number of consecutive terms a person may serve as mayor of a home rule or general law borough.

Section 4. Unless ratified by the voters, no limit may be placed on the number of terms or number of consecutive terms a person may serve as mayor of a home rule or general law city.

You have also asked me to compare this draft to HB 172. Under sec. 29.20.140 of that bill, no limit may be placed on the number of terms or number of consecutive terms a person may serve on the governing body. This applies to all home rule and general law municipalities. The section is made a

home rule limitation under sec. 29.10.200(4). Under sec. 29.20.230(c) of HB 172 no limit may be placed on the number of terms or number of consecutive terms a person may serve as mayor of a general law city or borough. That section does not apply as a home rule limitation. HB 172 differs from this draft in that the restrictions on limiting the terms of mayors do not apply to home rule municipalities. Otherwise, the restrictions on limiting terms are the same in that bill and in the draft of CSHB 162 (C&RA).

TBC:ljb

13/001

(b) If a proposed charter is rejected, the charter commission shall prepare another proposed charter to be submitted to the voters at a regular or special election to be held within one year after the date of the first charter election. If the second proposed charter is also rejected, the charter commission shall be dissolved and the question of adoption of a charter shall be treated as if it had never been proposed or approved. (§ 2 ch 118 SLA 1972; am § 9 ch 200 SLA 1972)

Effect of amendment. — The 1972 amendment, effective July 1, 1972, substituted "Department of Community and Regional Affairs" for "Local Affairs Agency" in paragraph (2) of subsection (a).

Sec. 29.13.080. Charter amendment. A municipal charter may be amended as provided in the charter or by initiative referendum as provided in AS 29.28.060—29.28.110, except that no amendment shall be effective unless ratified by the voters. (§ 2 ch 118 SLA 1972)

Article 2. Home Rule Limitations.

Section
100. Limitation of home rule powers

Sec. 29.13.100. Limitation of home rule powers. Only the following provisions of this title apply to home rule municipalities as prohibitions on acting otherwise than as provided. They supersede existing and prohibit future home rule enactments which provide otherwise:

(1) AS 29.13.080 (charter amendment)

(2) AS 29.18.140 (borough transition)

(3) AS 29.23.020—29.23.050 (city representation and vote on borough assembly)

(4) AS 29.23.250(a) (election and term of mayor)

(5) As 29.23.540 (prohibitions respecting appointment and removal of personnel)

(6) AS 29.23.560 (municipal reports)

(7) AS 29.23.580 (meetings public)

(8) AS 29.28.010, 29.28.020(b) — 29.28.030 (municipal elections)

(9) AS 29.28.130—29.28.250 (recall)

(10) AS 29.33.010(b) (areawide borough powers)

(11) AS 29.33.290(c) (acquisition of additional areawide powers)

(12) AS 29.43.020—29.43.040 (powers of cities outside boroughs)

(13) AS 29.48.033 (garbage and solid waste services)

(14) AS 29.48.035(b) (effect of areawide exercise of borough power).

(15) AS 29.48.035(c) (borough building code jurisdiction within cities)

(16) AS 29.48.037 (extraterritorial jurisdiction)

(17) AS 29.48.040—29.48.100 (utilities)

(18) AS 29.48.180 (codification)

(19) Repealed by § 8 ch 147 SLA 1972, effective September 10, 1972.

(20) AS 29.48.210 (expenditure of borough revenue)

(21) AS 29.48.220 (post audit)

(22) AS 29.53.010—29.53.350, 29.53.400 (borough and city property tax)

(23) AS 29.53.415(d) (interest on sales tax)

(24) AS 29.58.180(b) (security for bonds)

(25) AS 29.58.115 (bond attorneys, bond and financial consultants)

(26) AS 29.68.010 (annexation and exclusion)

(27) AS 29.68.030—29.68.110 (merger and consolidation)

(28) AS 29.68.500—29.68.580 (dissolution)

(29) AS 29.73.020 (eminent domain)

(30) AS 29.73.030 (adverse possession)

(31) AS 29.73.040 (taxation of municipalities)

(32) AS 29.73.050 (municipal name changes)

(33) AS 29.23.555 (conflict of interest). (§ 2 ch 118 SLA 1972; am §§ 2, 8 ch 147 SLA 1972)

Revisor's note (1972).—In ch. 118, SLA 1972, AS 29.48.035(b) was omitted from the list in AS 29.13.100. Since, by its own terms, it applies to home rule municipalities, it has been included here as AS 29.13.100(14); succeeding paragraphs (including the one added by § 2, ch. 147 SLA 1972) have been renumbered. For specific discussion of AS 29.13.100, see 1972 House Journal, p. 1720 or 1972 Senate Journal Supplement No. 3, p. 3.

Effect of amendment. — The 1972 amendment, effective September 10, 1972, added paragraph (33) and repealed paragraph (19).

Chapter 18. Incorporation.

Article
1. Requirements (§§ 29.18.010—29.18.030)
2. Procedures (§§ 29.18.050—29.18.150)
3. Transitional Assistance (§§ 29.18.180—29.18.200)
4. Development Cities (§§ 29.18.220—29.18.460)

Article 1. Requirements.

Section
10. First class cities
20. Second class cities
30. Organized boroughs

Sec. 29.18.010. First class cities. A community having 400 or more permanent residents may incorporate as a first class city. (§ 2 ch 118 SLA 1972)

in (b) of this section shall be tolled until a final judgment is rendered in an action brought under this subsection.

(g) This section applies to home rule and general law boroughs. (§ 2 ch 118 SLA 1972; am § 12 ch 118 SLA 1972; am § 9 ch 200 SLA 1972)

Cross reference.—See Editor's note to AS 29.18.120.

Effect of amendments. — The first 1972 amendment rewrote this section.

The second 1972 amendment, effective July 1, 1972, substituted "Department of Community and Regional Affairs" for "Local Affairs Agency" in the last sentence of subsections (c) and (d), and in the first sentence of subsection (f).

This section provides a convenient method for reapportioning whenever necessary. 1965 Op. Att'y Gen., No. 5.

It does not indicate what population data may be used by the reapportioning agency. 1965 Op. Att'y Gen., No. 5.

However, the agency may use population data other than official census figures in reapportioning seats or votes. 1965 Op. Att'y Gen., No. 5.

The only limit imposed by this section is that a reapportionment plan may not take effect until the next assembly election. 1965 Op. Att'y Gen., No. 5.

Sec. 29.23.030. Election and appointment.

Repealed by § 16 ch 118 SLA 1972.

Cross reference.—See Editor's note to AS 29.18.120.

Editor's note.—The repealed section derived from § 2, ch. 118, SLA 1972.

Sec. 29.23.040. Regular term of office. Assemblymen are selected for three-year terms and until their successors are selected and have qualified unless different terms not exceeding four years are prescribed by borough charter or ordinance. However, if under a borough apportionment city councilmen are appointed as assemblymen or elected to dual assembly-council seats, they may not be replaced until their assembly term expires as provided by city charter or ordinance, or they cease to be a member of either the assembly or council. The current term of incumbent assemblymen may not be altered under this section. This section applies to home rule and general law boroughs. (§ 2 ch 118 SLA 1972; am § 13 ch 118 SLA 1972)

Cross reference.—See Editor's note to AS 29.18.120.

Effect of amendment. — The 1972 amendment rewrote this section.

Editor's note.—Section 20, ch. 118, SLA 1972, provides: "The terms of elected officials who are incumbents on September 10, 1972, are not affected by this Act. Their terms expire as provided before enactment of this Act."

Sec. 29.23.050. Qualifications. A resident of the borough is eligible to be an assemblyman if he is a borough voter. An assemblyman who ceases to be a borough voter immediately forfeits his office. An assemblyman elected from or selected to represent a borough area less than the borough area at large and who becomes a resident of another area may continue to serve only until the next regular election. The assembly may by ordinance establish residence requirements for assemblymen not exceeding three years.

This section applies to home rule and general law boroughs. (§ 2 ch 118 SLA 1972; am § 14 ch 118 SLA 1972)

Cross reference.—See Editor's note to AS 29.18.120.

Effect of amendment. — The 1972 amendment rewrote this section.

Sec. 29.23.060. Procedure. (a) The assembly shall meet at least once every month, unless otherwise provided by ordinance. All meetings shall be public meetings. Special meetings may be held on the call of the chairman, the presiding officer, or one-third of the members, upon not less than 24 hours written or oral notice communicated to each member. In an emergency a special meeting shall be a legal meeting if all members are present or there is a quorum and all absent members have waived in writing the required notice. A waiver may be either before or after the time of the meeting. The waiver shall be attached to and made a part of the journal for that meeting.

(b) The assembly shall elect from among its members a presiding officer and a deputy presiding officer to serve at its pleasure, except that in manager plan boroughs the borough mayor serves as presiding officer. If the presiding officer is not present or disqualifies himself, the deputy presiding officer shall preside.

(c) The assembly shall determine its own rules and order of business and provide for keeping a journal of its proceedings.

(d) A majority of the membership authorized by law constitutes a quorum. In the absence of a quorum, any number less than a quorum may recess or adjourn the meeting to a later date. Actions of the assembly are adopted by a majority of the votes authorized on the question. All assemblymen present shall vote unless the assembly for special reasons permits a member to abstain, except no assemblyman may vote on a question in which he has a substantial direct or indirect financial interest.

(e) The final vote on each ordinance, resolution, or substantive motion is a recorded "yes" or "no", except that if the vote is unanimous it is necessary only so to state.

(f) Repealed by § 16 ch 118 SLA 1972.

(g) Repealed by § 16 ch 118 SLA 1972.

(h) Repealed by § 16 ch 118 SLA 1972.

(i) Repealed by § 16 ch 118 SLA 1972.

(j) Repealed by § 16 ch 118 SLA 1972. (§ 2 ch 118 SLA 1972; am § 16 ch 118 SLA 1972)

Cross reference.—See Editor's note to AS 29.18.120.

Effect of amendment. — The 1972 amendment repealed subsections (f), (g), (h), (i) and (j).

Sec. 29.23.070. Departments. (a) The assembly may establish departments and distribute administrative functions among them.

(b) Each department is administered by a department head. With the consent of the assembly, the borough mayor may serve as

the head of one or more departments or may appoint one person as the head of two or more departments. (§ 2 ch 118 SLA 1972)

Sec. 29.23.080. Assembly vacancies. The assembly shall provide by ordinance the manner in which a vacancy in assembly representation occurs. A vacancy is filled by the majority of the remaining assemblymen, who designate a voter and, if the assembly seat vacated is other than an at-large seat, a resident of the borough area to which the seat was apportioned, to serve until the next regular election. However, if under a borough apportionment city councilmen are appointed as assemblymen or elected to dual assembly-council seats, a vacancy in a councilman's seat on the assembly shall be filled by a councilman designated by a majority of the remaining membership of the council to serve until the next regular election. (§ 2 ch 118 SLA 1972; am § 15 ch 118 SLA 1972)

Cross reference.—See Editor's note to AS 29.18.120.

Effect of amendment. — The 1972 amendment rewrote this section.

Sec. 29.23.090. Reapportionment.

Repealed by § 16 ch 118 SLA 1972.

Cross reference.—See Editor's note to AS 29.18.120.

Editor's note.—The repealed section derived from § 2, ch. 118, SLA 1972.

Sec. 29.23.100. Borough sections.

Repealed by § 16 ch 118 SLA 1972.

Cross reference.—See Editor's note to AS 29.18.120.

Editor's note.—The repealed section derived from § 2, ch. 118, SLA 1972.

Article 2. Borough Executive and Administrator.

Section
130. Power generally
140. Powers and duties of borough administrator
150. Executive absence
160. Assembly participation
170. Veto
180. Filling a vacancy

Sec. 29.23.130. Power generally. (a) If the borough has not adopted a manager plan, the borough executive and administrative power is vested in an elected borough mayor. If the borough has adopted a manager plan, the administrative power is vested in an appointed manager and the executive power in an elected borough mayor who has the same functions as those of the mayor of a manager-plan city under § 240 of this chapter.

(b) A borough voter is eligible to be borough mayor.

(c) The borough mayor's regular term of office is three years and until a successor is elected and has qualified and begins on the first Monday following his election, which is held the first Tuesday of October, unless a different date of election is provided by ordinance. The assembly may provide by ordinance for a different term

not to exceed four years, except that the current term of an incumbent borough mayor may not be altered.

(d) A borough may adopt or abandon a manager plan at any time, as provided in §§ 410—480 of this chapter. The borough mayor may not veto an ordinance or resolution calling for an election on this question. The manager has all the powers and duties of the borough mayor as chief administrative officer. If the manager plan is adopted, it becomes effective following certification of the results of the first regular election occurring at least six months after adoption of the plan. The borough mayor then serves as borough executive. (§ 2 ch 118 SLA 1972)

Editor's note.—Section 20, ch. 118, SLA 1972, provides: "The terms of elected officials who are incumbents on September 10, 1972, are not affected by this Act. Their terms expire as provided before enactment of this Act."

Borough chairman cannot serve on borough assembly. — To permit the borough chairman to serve on the borough assembly would constitute a clear violation of this section, and would violate the common law prohibition against holding incompatible offices. 1963 Op. Att'y Gen., No. 27.

Sec. 29.23.140. Powers and duties of borough administrator. The borough mayor or manager as the case may be, as the chief administrative officer, is responsible for the proper administration of all borough affairs. The mayor or manager of the borough shall

(1) appoint borough employees and administrative officers, except as provided otherwise in § 360 of this chapter and AS 29.33.050; he may hire necessary administrative assistants and may authorize an appointive administrative officer to appoint, suspend, or remove subordinates in his department;

(2) suspend or remove by written order borough employees and administrative officers, except as provided otherwise in § 360 of this chapter and AS 29.33.050;

(3) supervise enforcement of borough law;

(4) prepare the annual budget and capital improvements program for the assembly;

(5) execute the budget and capital improvement program as adopted;

(6) make monthly reports to the assembly on borough finances and operations;

(7) report to the assembly at the end of each fiscal year on the finances and administrative activities of the borough;

(8) prepare and make available for public distribution an annual report on borough affairs;

(9) serve as borough personnel officer unless the assembly authorizes him to appoint a personnel officer;

(10) direct and supervise the administration of

Article 3. City Council.

Section
200. Composition, eligibility, election and term
210. Procedure
220. Filling a vacancy

Sec. 29.23.200. Composition, eligibility, election and term. (a) Each first class city has a council of six members elected by the voters at large. Each second class city has a council of seven members elected by the voters at large. The council of a first or second class city may by ordinance provide for election of members other than on an at-large basis for all members.

(b) A city voter is eligible to hold the office of councilman. A council member who ceases to be eligible to be a city voter immediately forfeits his office.

(c) An election is held annually on the first Tuesday of October, unless a different election date or interval of years is provided by ordinance, to choose councilmen for three-year terms and until their successors are elected and have qualified. The regular term of office begins on the first Monday following the election. The council may provide by ordinance for different terms not to exceed four years, except that the current term of incumbent councilmen may not be altered. (§ 2 ch 118 SLA 1972)

Editor's note.—Section 20, ch. 118, SLA 1972, provides: "The terms of elected officials who are incumbents on September 10, 1972, are not affected by this Act. Their terms expire as provided before enactment of this Act."

Sec. 29.23.210. Procedure. (a) The council shall meet at least once every month, unless otherwise provided by ordinance. Special meetings may be held on the call of the mayor or two councilmen upon not less than 24 hours written or oral notice communicated to each member.

(b) The council shall determine its own rules and order of business and provide for keeping a journal of its proceedings.

(c) Four councilmen constitute a quorum. Four affirmative votes are required for the passage of an ordinance, resolution, or motion.

(d) The final vote on each ordinance, resolution, or substantive motion is a recorded roll call vote. All councilmen present shall vote unless the council, for special reasons, permits a member to abstain. (§ 2 ch 118 SLA 1972)

Votes must be recorded. — To the extent that no vote is recorded in the minutes of the city council, there is a failure to comply with this section. Carr v. City of Anchorage, 17 Alaska 116, 243 F.2d 482 (9th Cir. 1957).

But requirement does not affect liability of city on fully performed oral contract. — While it is true that the recording of votes under this section serves a useful purpose, the requirement of the recording is no more designed to protect the public than to protect the party dealing with the public. It has no effect on the substance of a contract, and a municipality is as subject to liability where it has benefited from a fully performed oral contract as would be a natural person. Carr v. City of Anchorage, 17

11 Alaska 48, 66 F. Supp. 520 (D. Alas. 1946).

Since mayor may not direct officers contrary to council's will.—The mayor is without power to direct the actions of the city officers contrary to the lawfully expressed will of the council, which has the superior authority. Reherd v. Manders, 11 Alaska 48, 66 F. Supp. 520 (D. Alas. 1946).

And it is only the city council which can enact ordinances and resolves. Reherd v. Manders, 11 Alaska 48, 66 F. Supp. 520 (D. Alas. 1946).

Sec. 29.23.250. Election and term of mayor. (a) A voter of a home rule or general law city is eligible to hold the office of mayor, except that a home rule city may prescribe additional residency requirements by charter.

(b) The mayor of a first class city is elected at large for a term of three years and until a successor is elected and has qualified. The council may provide by ordinance for a different term not to exceed four years, except that the current term of an incumbent mayor may not be altered.

(c) The mayor of a second class city is elected by and from the council for a term equal in length to a councilman's term.

(d) The mayor's regular term begins on the first Monday following his election, which is held on the first Tuesday of October, unless a different date of election is provided by ordinance. The council of a second class city shall meet on the first Monday after the regular election date and elect a mayor who takes office immediately. (§ 2 ch 118 SLA 1972)

Editor's note.—Section 20, ch. 118, SLA 1972, provides: "The terms of elected officials who are incumbents on September 10, 1972, are not affected by this Act. Their terms expire as provided before enactment of this Act."

Sec. 29.23.260. Mayor's vote. (a) The mayor of a first class city is not a council member and may vote only in the case of a tie.

(b) The mayor of a second class city is a council member and may vote on all matters. (§ 2 ch 118 SLA 1972)

Tie allowing mayor to vote. — See In re Kaye, 11 Alaska 556 (1948).

Sec. 29.23.270. Veto. (a) The mayor of a first class city may veto any ordinance, resolution, motion, or other action of the council and may, by veto, strike or reduce items in appropriation ordinances except, in a city outside an organized borough, for school budget items. He shall submit to the council at its next regular meeting a written statement advising of his veto and giving his reasons. A veto is overridden by the vote of two-thirds of the authorized membership of the council.

(b) The mayor of a second class city has no veto power. (§ 2 ch 118 SLA 1972)

February 9, 1983

The Honorable Barbara Lacher, Chairman
Alaska State Legislature
House Committee on Community and Regional Affairs

Dear Representative Lacher:

In support of House Bill No. 162 which I have introduced, I have attached a copy of a letter from Fairbanks North Star Borough discussing the problem as well as a copy of a resolution passed by Fairbanks North Star Borough. The voters of both Fairbanks North Star Borough and Matanuska-Susitna Borough have passed advisory propositions on this matter.

Briefly, the legislation simply puts the power to limit the number of terms of elected officials back into the hands of the local governments where it belongs.

Yours very truly,

Jerry Ward
State Representative

Dear Representative Ward:

Enclosed please find the following resolutions which were adopted at the regular meeting of the Fairbanks North Star Borough Assembly on January 13, 1983, which was reconvened on January 19, 1983.

Resolution No. 83-2. A Resolution Relating To Limitation Of Terms For The Assembly And Mayor.

Resolution No. 83-3. A Resolution Requesting The Alaska State Legislature For Funding Of An Annual Spring Hockey Tournament.

Please note that Resolution No. 83-2 has been extensively discussed and we would certainly like to see some action during this 13th Session of the Legislature.

If you have any further questions, please feel free to contact me.

Sincerely

Gaye J. Patrick

RESOLUTION NO. 83-2

A RESOLUTION RELATING TO LIMITATION OF TERMS FOR THE ASSEMBLY AND MAYOR

WHEREAS, an advisory proposition on the question of limiting the terms of assemblymen and the mayor was placed on the October 5, 1982, ballot; and

WHEREAS, this advisory proposition was passed 11520 - 5197 by the voters of the Fairbanks North Star Borough; and

WHEREAS, this question was also passed 2700 - 1100 by the voters of the Matanuska-Susitna Borough on October 6, 1981; and

WHEREAS, an Attorney General's opinion has been rendered stating general law municipalities do not have the power to place such a limitation on elected officials:

NOW, THEREFORE, BE IT RESOLVED by the Fairbanks North Star Borough Assembly that the Twelfth Legislature of the State of Alaska is urged to revise Title 29 to allow general law municipalities the option of placing a limitation on the number of consecutive full terms a person may serve.

PASSED AND APPROVED THIS 13th DAY OF JANUARY, 1983.

HB

163

CSHB 163 (Resources) "An Act relating to harassment of persons engaged in hunting, fishing, or trapping."

SECTIONAL ANALYSIS

Section .925 would make it illegal to interfer with a person who is lawfully engaged in hunting, fishing or trapping; to disturb fish or game with the intent to interfer with their taking; or to enter or remain upon public or private land with intent to do one or the other of the above. A violation would be punishable by a fine of up to $500 or 30 days in jail, or by both.

Section .926 mandates that a wildlife protection agent shall order a person to desist from a violation of section .925, if he has observed the violation, or has probable cause to believe the person has engaged in or intends to engage in such activities. The officer shall inform the violator of penalties applicable to failure to desist - a fine of up to $1000 or 90 days in jail, or both.

Section .927 provides civil remedies allowing: a court injunction to stop the harassment; the aggrieved party to recover general damages for expenses rendered futile by the harassment; and the court to award punitive damages.

HB 407

January 24, 1983

Representative Dick Schultz
State Capitol Building
Juneau, Alaska 99801

Dear Dick:

On January 5, 1983 the Tok Cutoff-Nabesna Road Advisory Committee met in a general meeting to discuss hunting regulations. There were several things discussed with two of them pertaining to you.

#1 We would like to see legislation written and passed that would control or rather stop harrassment of hunters, trappers, and fishermen. We would be able to carry on our life-style without harrassment from the "greenies".

#2 We would like to see legislation written and passed that would eliminate the $25 trophy tag for resident grizzly/brown bear hunters. We believe the State is rich enough without charging its residents a $25 fee.

Our committee will be meeting within a few weeks and correspondence from you would be appreciated. I would like to able to tell the folks something about these two items.

Good luck and if there is anything I or this committee can do to help, please let me know.

Sincerely,

Bill Ellis, Chairman
Tok Cutoff-Nabesna Rd. Advisory Committee

TIPS FOR HUNT SABOTEURS

Fourteen million Americans will be shouldering their rifles and shotguns within the next few months, marching off to their annual offensive against our wildlife. These legions, which are more numerous, and generally better equipped than the entire Nazi armies of the Second World War, will take a bloody toll before the season ends. They will kill deer and rabbits, ducks, dogs, cats, a few children, and even a few hunters.

It is time for friends of animals to start organizing a defense that will serve to at least temper the wanton destruction. There are many ways that a friend of animals can become a forest partisan on behalf of our wildlife, and we offer here a few suggestions that range in effort, depending upon a person's abilities and commitment:

1. Deny the hunter the land to hunt on. Much hunting is done on private lands. To protect these animals, encourage your neighbors, especially those who own large tracts such as farms and ranches, to post their land and forbid hunting. Try to convince them that hunters invariably cause more damage to agriculture than the wild animals do.

2. Many areas have hunting restricted to a specified number of hunters who have special permits. Commonly, these permits allow the hunter to use a particular blind or hunt less common species, such as bear. Apply for these permits yourself. The permits are usually awarded by a simple lottery selection. If you're lucky, you'll win a permit and deny a hunter his kill.

3. Get into the woods yourself the day before the hunting season. If you're familiar with the most commonly hunted areas, try to drive wildlife away. A stroll through the forest with a nice loud radio and a dog on a leash, will serve to make wildlife more wary of humans. This is particularly important for younger animals that have not yet had the traumatizing experience of being hunted.

4. Certain substances, such as rotten eggs, when rubbed into hunting blinds, make these enclosures even more uncomfortable for the hunters. Uncomfortable hunters are irritable, and are also poorer shots. Plastering the floor of a hunting blind with cow dung is another good idea.

5. If you're familiar with wildlife habits in your neighborhood, try to encourage them to break these habits shortly before hunting season. For instance, many hunters like to stalk along deer tracks which are pretty well defined to a good woodsman. Placing deer repellent (available at many feed and hardware stores) along these tracks will encourage the deer to move away and leave the hunter with a route devoid of the species. If you want to save money, just scoop up a bag of human hair from a local barber shop and hang handfuls of it in little bags about two or three feet from the ground, along the deer track. The deer will soon get the message that there are humans in the area and will drift away.

6. If there is much hunting with dogs in your area, try to get hold of a female dog in heat and lead her, on a leash, through an area that is heavily hunted. Male dogs in the hunter's pack will "get wind" of the female and lose their enthusiasm for chasing rabbits or deer.

7. Hunters frequently like to ambush their prey by setting out food and then hiding in blinds. Commonly, bushels of apples are set out a few days before hunting season to encourage deer to browse in this area. When hunting season comes, the hunter merely comes to the site, climbs into a blind, and waits for the deer to come to him. To disrupt this, there are two alternatives. First, remove all apple piles immediately on finding them during the days preceding hunting season. Second, if there are just too many apples to carry away, give them a good spraying with deer repellent and spread barber shop hair clippings all over the area.

8. Encourage your municipality to pass an ordinance that bans, in the interest of public safety, the use of all weapons within its limits. Rifles, shotguns, bows and arrows have been known to kill people too.

9. If you have a portable tape recorder, get a cassette recording of wolf howls. Play this in the woods a few times in the days before hunting season. It will make wildlife wary.

10. Try to develop strong anti-hunting sentiment in your community by writing letters to the editor of your local newspapers, meeting with neighbors, getting on talk shows. Creating public awareness of the problem is a vital point. Let your neighbors know that the law recognizes wildlife as belonging to all people, and they are not the exclusive property of hunters until after they have been murdered.

11. Work on a project to get your State to pass a law that would require all hunters to carry written permission from the landowners of the places they hunt. This further curbs the hunter's battlegrounds because many farmers are reluctant to sign permits that would allow people to hunt on their lands. Also, much land is owned by summer residents, corporations, etc. that are nearly impossible to get hold of.

12. Approach your Congressperson and Senators with demands that hunting and trapping be prohibited on national wildlife refuges and all public land.

13. If you have any old, stuffed animal toys, set these around commonly hunted areas. Hunters often don't take the time to check if an animal is real. Better to have a hole in a cotton rabbit than a real one - and the noise of the gun going off might serve to scare away other wildlife.

14. We will be trying to put together a better activist's guide for next hunting season, so if you have any ideas or procedures you've found effective, please let us know. Mail them in to Bill Clark, Friends of Animals, 11 West 60th Street, New York, NY 10023.

Use your imagination. There are plenty of ways to frustrate the hunt, depending on your own abilities and enthusiasm. The main point here is to do something. By your work, you will be helping animals in two ways. First, you will be protecting them from the hunters and second, you will be letting the hunters know that friends of animals are in the woods. This serves to anger them, and angry hunters do not stalk so quietly, their aim is not so precise. Emotions can play heavily in the success of a hunt, and the most effective killers are cool and methodical. Disrupt!

ANTI-HUNTERS VS. HUNTERS: WAR IN THE WOODS

Greenpeace fanatics are harassing hunters in the field. It's a vicious and very dangerous movement, and you could be the next victim. Here's what to expect plus some very good advice on what not *to do about it.*

By Richard Starnes, Editor-at-Large

The lush alpine valleys and rugged highlands of northeastern British Columbia have witnessed the opening skirmishes in what threatens to become all-out war between big-game hunters and anti-hunting zealots who have sought to stop them by harassment, abuse, intimidation and—it is charged—physical violence.

How much violence has occurred to date is in dispute, but there have been several angry confrontations involving hunters and anti-hunting activists, one beating has already taken place, and feeling is running so high that Canadian provincial authorities are alarmed at the prospect of more violence when the big-game season opens this fall.

"It's only a question of time before some hothead loses his composure and someone gets hurt," said one hunter who was victimized by the anti-hunters.

Arrayed against each other in the conflict are the hunters, outfitters, and game-management officials of British Columbia, and a dedicated, well-financed, implacable organization of anti-hunters who call themselves Greenpeace.

Greenpeace is no collection of saloon conspirators content to crank out mimeographed anti-hunting diatribes and picket sporting-goods stores. It is slick, professional, worldwide, and growing rapidly. Its Vancouver chapter alone budgets nearly $500,000 a year for anti-hunting activities. Its tools are $1,000-a-day helicopters, expensive sound cameras, and self-confessed expertise at manipulating the press and television. Its tactics are harassment, confrontation, and attempts physically to restrain hunters. Its leader, Dr. Patrick Moore of Vancouver, made it clear in an interview with OUTDOOR LIFE that episodes of harassment and intimidation that took place in the rich hunting grounds of British Columbia in 1979 and 1980 were only the opening salvos in the conflict.

"We'll be back this year," he said. "They can't stop us. We intend to stop trophy hunting, first in British Columbia, ultimately all over the world."

How Greenpeace seeks to frustrate hunters is perhaps best told in the words of Richard A. Mielke, a 50-year-old Pontiac, Michigan, fire fighter who last year took a 21-day hunt-of-a-lifetime in the rugged, 1.6-million acre Spatsizi Wilderness Park in British Columbia. He and his partner, Darryl Hastings, 40, a computer broker from Rochester, Michigan, encountered the Greenpeacers on the first day of the hunt.

"They barged right into our camp," Mielke said. "They stuck sound cameras right in our faces. They harangued and abused us. One of them screamed at me, 'Is there something wrong with your sex life? Is that why you're up here killing animals?' When we tried to ride out of camp they locked arms across the trail to stop us. One of them grabbed the bridle of my horse. That was dangerous. That's rough country up there. If the horse had shied and fallen I could have been badly hurt."

Eventually the hunters and their guide broke free and continued the hunt, but on nearly every day of the hunt the harassment continued. On one day Mielke took his rifle—unloaded—to a dock on tiny Bug Lake to scope a wolf that had been howling near the camp.

"One of these Greenpeace guys crowded up against me, bumped me, and yelled, 'You're not going to shoot that animal while I'm here!' He grabbed my rifle, and then he fell into the lake."

"They would haunt you in every way they could," Hastings added. "You

couldn't even go to the john without one of them sticking a camera in. It's hard to keep your cool under those circumstances, yet I couldn't give them the satisfaction of bothering me."

Although the Greenpeacers scornfully characterize hunters such as Mielke and Hastings as "jet-set headhunters," both are men of modest means.

"I scrimped and saved and worked at odd jobs for two years to get the money for that hunt," Mielke said. "By the time I'd paid air fares, outfitters' fees, and license and trophy fees it cost me around $10,000."

Hastings put the cost of his hunt at near $12,500, and noted it would be a long time, if ever, before he could afford another hunt of that magnitude.

Both hunters report that attempts to reason with the anti-hunters were futile.

"We were after Stone sheep, principally," Hastings said. "But they kept alluding to them as 'bighorns.' I told one of them, 'You're such a phony; you don't even know what species you're talking about.' "

Both men got trophy sheep as well as other trophy specimens, but the Greenpeace activitists succeeded in blighting what would otherwise have been an idyllic hunt.

"There were several days when I didn't hunt because of them," Hastings said.

Complaints to provincial wildlife authorities were to no avail. "Early in the hunt a park ranger came into our camp," Hastings said. "We asked him why he wouldn't protect our right to carry on a lawful activity. I'd paid around $1,000 for licenses and tags, and these people were trying to deprive me of my right to hunt. The ranger replied that there was nothing he could do. 'It's a public park,' he told me. 'They can go anywhere they please.' "

Later, after the anti-hunter fell (Greenpeacer Moore says he was pushed) into the lake, four Royal Canadian Mounted Police officers and two B.C. Fish and Wildlife Department officials arrived at the Mielke-Hastings camp by helicopter. Again the two hunters repeated their plea for protection, again the officials said there was nothing they could do.

"They told us they were trying to figure out how to resolve the issue," Hastings told OUTDOOR LIFE. "But all they did was to tell us, 'We want you fellows to be patient and keep the peace.' " (There are indications, however, which we will come to later, that B.C. officials are preparing to abandon their policy of noninterference when the 1981 season opens.)

Illustration by Domenick D'Andrea

Violence against them would give Greenpeace "proof" that all hunters are thugs and violence-prone killers.

Even after Mielke and Hastings quit their camp to return home, the Greenpeace contingent pursued them. After alerting press and television, the anti-hunters continued their tactics of harassment. They followed the two hunters into the airport at Vancouver, taunting them, haranguing and vilifying them, and waving professionally-made anti-hunting placards for the benefit of news and television cameras. Several wore animal costumes, including horns or antlers. The Greenpeacers drove the two hunters to take refuge in the airport lounge, where the bartender did what the Royal Canadian Mounted Police and game department officials had been unable or unwilling to do. He chased the anti-hunters out of the place.

What was possibly an even uglier incident took place during the 1979 season in Spatsizi. Gary Zechel, an engineer with the Ford Motor Company, who lives in the Detroit area, was hunting Ranger Creek with his wife Jo-Carole, who is a hunter, but wasn't hunting on this occasion. Accompanied only by an Indian guide, the Zechels were traversing one of the wildest, most primitive areas in North America.

"We were six or eight hours by horseback from our base camp, staying in a spike camp," Zechel recalled, "when these Greenpeace people showed up. There were seven men and one woman. There was lots of taunting, harassment, and intimidation. They said they would do whatever they could to stop us. They said if they couldn't persuade us to abandon our hunt they would restrain us physically. When we rode out for a day of hunting, they locked arms in front of us. When I tried to go to my wife's aid, one of them grabbed my horse's reins. Eventually our guide broke through, and my wife and I got away from them. They chased us several hundred yards up the trail, and our guide's horse fell into a bog. That was very dangerous. Even a minor injury is serious in that remote wilderness."

Like Mielke and Hastings, Zechel is an experienced hunter and outdoorsman, clearly able to take care of himself. But some insight into the psychological impact of the Greenpeace tac-

In the fall of 1980, the Gary Zechel hunting party camped in the Spatsizi wilderness in British Columbia and ran into harassment by eight Greenpeace agitators (left). When Zechel and his wife rode out of their camp for a day of hunting with their guide, the Greenpeacers locked arms across the trail to block their way and screamed abuse. A female Greenpeacer grabbed Zechel's reins to hold him back. The guide broke through the human barrier, and the Zechels pulled away and rode around them. Gary Zechel stated that his greatest fear was that one of the horses would spook and injure or kill someone. The painting is based on a photograph supplied by the Greenpeacer organization! At right, Greenpeacers in animal costumes harass Richard A. Mielke and Darryl Hastings in the Vancouver airport after their successful hunt.

tics can be won when Zechel says, "One of those guys had an ice ax he kept waving in my face. I felt more fear than I have felt in a long time."

Zechel's wife seems to have been singled out for particular attention by the Greenpeacers.

"They ran raving and yelling at her," he reported. "It was like a riot. They came within five or ten feet of her."

Exercising what can only be described as saintly restraint, the Zechels and their guide did their best to ignore the anti-hunters.

"This drove them into a frenzy," Zechel said. "They acted nearly hysterical, obviously looking to cause some action or incident." Not surprisingly, the Greenpeace tactics finally wore down Jo-Carole's emotional reserves. "She was terrified and finally broke down crying and screaming for them to leave us alone. They refused and she ran into the tent, sobbing 'They're crazy—I'm afraid of them.' She spent the final days of the hunt in her tent."

When the Zechels broke camp and returned to Smithers, he filed an assault charge against the Greenpeace anti-hunters. Although technically the charge is still pending, it has been "stayed" and provincial authorities made it clear they have no plans to prosecute it.

Ralph Aldrich, chief conservation officer of the British Columbia fish and wildlife agency, undertook to explained why.

"From an enforcement point of view we can only follow the law," he said in an interview. "There is no law against yelling. It's just like picketing. Of course, if they threaten assault and take some overt action, that may be assault."

Is it illegal to impede hunters' horses? Aldrich's reply was something less than definitive. "It depends," he said. Thereupon he passed the buck to Peter Ewart, crown counsel (prosecuting attorney) for the Spatsizi district. From Prince George, B.C., Ewart indicated that, while still open, the charges laid by Gary Zechel against the Greenpeacers would likely never be prosecuted.

"We took a look at the evidence and the probable outcome of a trial and put a 'stay' on the case," Ewart said. But then, plainly choosing his words carefully, Ewart laid out what may be provincial officials' plan to end the threat to one of British Columbia's prime industries. "I would have been much happier," he said, "if the charge had been intimidation instead of assault." British Columbia, he said, has a statute making it illegal to "impede or attempt to impede any person from carrying out a lawful activity" by threats, harassment, or coercion.

"What he says is a crock," bluntly charged Ray Collingwood, whose firm outfitted both the Zechel and Mielke-Hasting parties. "They didn't prosecute because of the expense of getting witnesses back up here to testify. I've lost all respect for the government."

Collingwood revealed what apparently is not known by provincial authorities—real violence has already broken out.

"One of these [Greenpeace] guys tried to stop one of our pilots from taking off from an airstrip we maintain in the park," he told OUTDOOR LIFE. "He grabbed a wing strut of the Beaver and tried to force our pilot to abort his take-off. The plane got off anyway and later the pilot returned, landed the aircraft, and punched the guy out. He knocked him down and slapped him around some. He just hung a little licking on him."

Despite the degree of restraint exercised by Mielke, Hastings and Zechel, provincial authorities are acutely aware of the potential for violence. Like the hunters themselves, provincial officials see the tactics of Greenpeace as calculated provocations designed to spark violent reaction. All agree that would be counterproductive and, as one put it, "would give Greenpeace 'proof' that all hunters are thugs and violence-prone killers." Chief conservation officer Aldrich pointedly noted that there will be combined Royal Canadian Mounted Police and game department patrols in Spatsizi during the 1981 season.

Greenpeace's Moore airly dismissed the prospect of being prosecuted under the intimidation statue.

"The attorney general (of British Columbia) hired a man last summer especially to research the question," he said. "He concluded there was no law that could stop us. Our activities are as legal as the hunters'. All we're doing is occupying nonconsumptive space, competing for resources with the hunters. They can't say we're interfering with their rights. Those [game] animals don't belong to anyone until they're actually taken into possession."

It is clear that Patrick Moore is the architect, principal voice, and presiding genius of Greenpeace. He conceived and created the organization while a graduate student at the University of British Columbia (he is now a doctor of ecology) five years ago. His title is Canadian director of Greenpeace International, but plainly his sway extends to the worldwide branches of the organization. He is one of 12 salaried, full-time employees of Canadian Greenpeace, and he is paid $1,200 a month. There are offices in Vancouver,

"We intend to shut down trophy hunting in Spatsizi to show that it can be done."

Victoria, Toronto, and Montreal, as well as branches in the United States, the United Kingdom, the Netherlands, France, New Zealand, and Australia. A Greenpeace "secretariat" in Washington coordinates the activities of the international branches, and it has an annual budget of $120,000.

"Our forte," Moore said in an interview, "is organizing expeditions into remote areas in order to confront in a nonviolent manner acts that we consider environmentally detrimental. Our funding is entirely private—donations from individuals that are generally less than $50. We have no foundation or government grants. Our methods are too controversial to attract money from conservative quarters."

Greenpeace's first confrontation took place when Moore and others chartered an 85-foot vessel and sailed to the Aleutian island of Amchitka in an attempt to halt the testing of nuclear bombs. "We lost that battle but we won the war," he said. "They've stopped testing now and Amchitka is a wildlife preserve."

Later Greenpeace made expeditions to the South Seas in an attempt to stop nuclear testing by France (they failed), and they have conducted offensives against whalers and seal hunters.

"But we cut our teeth on nuclear testing," Moore said. "From it we learned how to deal with the media and how to understand international politics. We're fortunate in having people who understand the media—that's how you communicate with people in the modern world, knowing what sort of images appeal to the media."

Although Canadian authorities are tippy-toeing around the Greenpeace campaign of intimidation in Spatsizi, the government ended similar tactics that were attempted against commercial hunters of harp seals in Newfoundland.

"They enacted what they called 'seal protection regulations'," Moore said, "just to keep us out. It's ironic, and very undemocratic."

Moore insists that ending all hunting is not his goal. "Hunting can be part of a harmonious relationship with nature," he said. "Indian bowhunters lived in a balanced state with nature for

10,000 years. But what we're saying is that the relationship between man and animals has changed dramatically. These hunters are an extension of the Detroit urban-industrial ecosystem. They have no place in Spatsizi. In a park set aside for protecting these animals, we must stop thinking of them as a natural resource and think of them as a national treasure."

Moore's disclaimer notwithstanding, Greenpeace's program would effectively end hunting. It would totally rule out all trophy hunting, even under the rigidly controlled conditions prevailing in Spatsizi. It would prohibit hunting by all outsiders, insisting that only food hunters "that are part of the (local) environment be permitted to hunt." It would, in short, permit only subsistence hunting, and then only if the cessation of hunting would "dramatically affect" the life-style of the hunter, and only if subsistence hunting remained in "balance" with the environment.

Moore repeatedly insisted that the hunters who were assailed by the Greenpeacers were unthinking trophy freaks who habitually left the meat of their animals to spoil after removing horns, antlers, and capes. All three hunters heatedly denied the charge, noting that they had painstakingly packed all usable meat back to camp, either for shipment home or for use by the outfitter's crew. The outfitters confirmed this. In fact, British Columbia law requires that the meat of game animals be removed and used for food, and in its exhaustive investigation of the incidents, the provincial game department found no violations of the law by the hunters.

For the record, Moore denies any of the Greenpeace activists at Spatsizi committed assault by grabbing anyone's arm. He denies that Mielke's rifle was pushed, but he insists that either Mielke or his companion shoved one of the Greenpeacers into the icy waters of Bug Lake. He concedes that they tried to block progress of the hunters' horses, but denies any member of his group seized them by the bridles. "They ran their horses at us," he insisted.

"They're crazy—I'm afraid of them," Gary Zechel's wife said. She spent the final days of the hunt in her tent.

"Our intention is to be there again this year. We intend to shut down trophy hunting in Spatsizi to show that it can be done. They say we are intefering with them. We deny that. We're competing, as is our right, and they can't stop us."

Perhaps more philosophical than many hunters would be, Richard Mielke warns future hunters of Spatsizi that the Greenpeace anti-hunters "are trying to provoke you into taking a poke at them. And that's the last thing anyone should do. It's exactly what they want."

Unfortunately, however, it isn't the last thing that's likely to happen—unless British Columbia takes a page from Newfoundland's book and contrives a way to keep the Greenpeace people away from the hunters. There are some indications B.C. officialdom, perhaps belatedly, is now working hard to find a way to end the harassment of hunters. In reply to a letter of complaint from Mielke, B.C. Minister of Environment Stephen Rogers wrote:

"I wish to extend my personal apologies for the harassment you suffered (and) I also want to congratulate you and your hunting partner for the restraint you both showed under trying circumstances. The hunters in Spatsizi by their good behavior, as opposed to the conduct of Greenpeace, gained in general public stature while Greenpeace suffered.

"We are working with the Parks Branch to see what can be done to prevent situations such as you experienced from recurring."

The Force Behind Friends of Animals

Alice Herrington Raises the Hackles of Sportsmen in Her War on Hunting

Alice Herrington

By E. J. NILSSON
Gnt Staff Writer

Whether Alice Herrington is right or wrong, she is anything but a bore. As founder and president of Friends of Animals (FOA), Herrington arouses strong feelings among sportsmen and others in her crusade against hunting.

Herrington, who lives with eight cats in Little Silver, N.J., founded FOA in 1957 to try to reduce the numbers of stray dogs and cats. And that is still the major purpose of the organization, she said.

But the group's chief claim to fame is Herrington's verbal bouts with hunters and trappers.

"To call this a sport is just pure nonsense," she said about hunting. "It's a real cruelty. It can't be justified."

IN HERRINGTON'S view, the only people worse than hunters are trappers.

"Deer hunters are not nearly as bad as trappers," she said. "I can't imagine how hunters, who pride themselves on fine shooting, ally themselves with trappers, who practice sadism. Deer hunters are due a little credit for at least the speed of their kill."

Despite the fireworks that FOA ignites with its "full program of hunting and trapping disruption," Herrington wants to convince the public that there "are two cruelties."

Besides the killing of "free animals, which are called wildlife," she explained, she's concerned about man's treatment of all domesticated animals—including pets and livestock.

"It's an American syndrome to love kittens and puppies but then throw out dogs and cats," she said, adding that millions of dogs are killed "in American municipal dog pounds, but they were loved as puppies."

In 1970, Herrington organized low-cost spaying programs for 20,000 animals. By 1980, the number had risen to 60,000.

Last September in Neptune, N.J., she opened a low-cost spaying clinic, said to be "a model of its kind with room for 80 animals and two veterinarians." Across the nation, her group pays for part of the cost of spaying in cooperation with 750 participating veterinarians.

ONE OF the prime targets of Herrington and the FOA is the food business.

"Cruelty to animals is practiced on a larger scale by the food industry than by any other single sector of human activity," an FOA publication asserts.

And Herrington adds:

"If people want to support an industry that is destroying the land, then they can continue to eat these creatures. But if not they can eat vegetables."

Other institutions also are criticized by FOA, including zoos.

"Zoos must be phased out," said an FOA publication.

Herrington's concern for animals was heightened when she returned to the United States in 1954. Working as a War Department statistician, she had seen relatively few animals running loose in Europe.

In the United States, she said, "I was shocked to find stray animals everywhere."

HERRINGTON, a graduate of the University of Wisconsin in Madison, put her statistical talents to work calculating the rate of increase of dogs and cats. She said she realized that cutting the prolific birthrate was the only long-range solution.

This realization led to the founding of FOA, which worked with volunteers until 1967. Now the group has 12 full-time em-

Herrington was asked whether she would advise FOA members to take traps that were legally set.

"Yes! Why not? Certainly," she said.

But wouldn't the "solution" be stealing?

"You could say that it's stealing if you like," she replied, "but the Robin Hood approach to life is still a very nice way to go."

Humane Group To Seize Animal Leghold Traps

By STEVE GRANT

Friends of Animals Inc. said Friday it is going to trip up trappers by setting off their leghold traps when the season opens next week.

The organization said it will ask its 4,500 members in Connecticut to look for the traps, touch them off with a stick and remove them, because it believes the traps are inhumane.

"We can't as an organization advise people to remove legally set leghold traps. It wouldn't be a smart thing to do. What we're asking them to do is remove illegally set traps. Our guess is most of them are illegal," said Priscilla Feral, the organization's Connecticut director.

Game laws require all leghold traps to have the owner's name on them and they must be placed underwater or in an animal's burrow.

A spokesman for trappers questioned the new campaign, which will begin next Saturday, when the season opens.

"They're setting up a vigilante group. Vigilantes in any situation are not good. They don't know enough and they tend to break the law themselves," said Robert Crook of Madison, a member and former president of the Connecticut Trappers Association, which has about 800 members.

"I wouldn't object to anybody coming out and checking my traps, as long as they had the permission of the landowner, and as long as they didn't steal them, set them off or take animals out. But I really don't think that's their responsibility," Crook added.

He said the state Department of Environmental Protection is responsible for seeing that trapping is conducted legally and that he understood the group was told by DEP not to remove illegal traps but instead to report them to a game warden.

Ms. Feral said a trapper's name legally can be placed anywhere on a trap, so members would have to trip them to check. She said members would not be advised to reset legal traps.

"DEP can read the riot act to me if it wishes. But no way will we aid the trapper. Our object is to get rid of the leghold trap," she said.

The organization has argued that the trap, which has two steel jaws that slam shut when an animal touches a piece of bait, is barbaric because some animals die slowly or are left crippled. Ms. Feral said domestic animals also have been caught in the traps. There are other traps available that are more humane, she said.

Crook estimated that there are 8,000 trappers in Connecticut, with the average trapper placing 50 or 100 traps in the wild.

The most commonly trapped animal in the state is the muskrat, which can yield a pelt that will fetch up to $8. Raccoon, fox, mink, opposum, weasel, skunk and beaver also can be trapped legally, though the season for some of those animals does not begin fintil later.

Friends of Animals, which is based in New York, has waged other campaigns against hunters. Some members went into the Connecticut woods recently to play recorded wolf howls to alert animals of danger when the deer hunting season opened.

BACKGROUND IN SUPPORT OF HOUSE BILL 2291

During the past several years certain groups and individuals have appeared in hunting areas each fall with the expressed objective of disrupting a hunt. While their efforts were not notably successful, they did generate a lot of hostile reaction from hunters. Incidents of this kind have been increasing. They will likely produce a serious confrontation some day, and this situation poses a threat to the safety of all concerned, including state peace officers.

An example of this problem is the sheep hunt conducted annually in Unit 33, a portion of the Catalina Mountains near Tucson. What began a few years ago as a one-man protest against the hunt has recently drawn as many as 8-10 active participants who march through the area firing guns, blowing whistles and following hunters to frustrate their purpose of taking a sheep. Tempers run high; Arizona sheep hunting is often a once-in-a-lifetime experience which is the culmination of years of planning and can involve the expenditure of several thousand dollars. Someone is going to get injured if this interference continues.

The buffalo hunt conducted at Raymond Ranch near Flagstaff also has drawn protesters during past seasons. One year, a group of emotionally charged persons, apparently aroused by a television movie, actually threatened to stand in front of a buffalo herd in range of the gunners. The threat was not carried out but the hunt proceeded with assistance from a large contingent of DPS officers called in to keep the peace.

Now, one clear purpose of these demonstrators is attracting publicity to their cause. And though many of us deplore the irrationality we see in the anti-hunting crusade, we do not dispute the right of all persons to be heard. In fact, public forums abound where anti-hunting views can be expressed. Each year, for example, the buffalo and sheep seasons are discussed and then established in open, well publicized meetings of the Game and Fish Commission. The Commissioners themselves are citizens from all areas of the state who are readily accessible to anyone wanting to influence Game and Fish policy. For that matter, demonstrations could be conducted in the field without harassing others and would be appropriate.

The proposed legislation is designed only to prevent actual interference with hunters or disturbance of game in

public hunting areas. It will apply in certain, defined places where the Game and Fish Commission has found, after public hearing, that a hunt disruption is likely to occur. The law includes specific language excepting ranchers, miners and others on public lands who might inadvertently disturb a hunt. But it will allow the removal or arrest of demonstrators who do interfere, intentionally, with hunters. Moreover, such persons may be liable to the hunter for civil damages.

The law answers the problems experienced repeatedly on sheep and buffalo hunts. Should these incidents continue to happen, and recent history suggest that they will, the law can be used to preserve the peace before a serious incident does occur. But aside from the state's concern for order and safety, the law serves clear notice that the right of protest is not unlimited and that it ceases to exist when protesting citizens purposely interfere with the lawful activities of other citizens in a public place.

ANALYSIS OF CSSSHB165

General Overview: The purpose of this legislation is to clean up the Campaign Disclosure Laws without sacrificing their original intent. In order to accomplish this goal, the following changes are proposed: 1) raise reporting threshold relating to monetary transactions; 2) clarify the roles of campaign officers; 3) simplify required reports; and 4) more clearly contrast the applicability of statutes as to groups or candidates.

Specific amendments to existing statutes are as follows:

P. 1, l. 14: Raises yearly threshold for reporting campaign contributions to candidates from $100 to $250 in the aggregate.

P. 1, l. 18: Adds reference to revised section 60(a) which deals with certification of reports and statements.

P. 1, l. 21-28: This section deals with groups. It has been rewritten to parallel (a) which pertains to candidates. This section raises aggregate yearly threshold for reporting contributions made to the group to $250. It incorporates former section (c), which has subsequently been listed for repeal in section 19. Former subsection (1) has been omitted since it is duplicated in 60(b). This section references revised section 060(a) which delineates who may certify the reports and statements required by law to be filed with APOC.

P. 2, l. 1-3: Language added to clarify that section applies to groups which are not primarily organized for political purposes and are not raising funds for the purposes of influencing the outcome of an election.

P. 2, l. 6: Raises threshold for reporting total contributions made to a candidate or group in a year from $100 to $250.

P. 2, l. 7: Adds "independent" to expenditure. See new (g) which defines meaning of "independent".

P. 2, l. 10: Adds "or against any candidate, ..." This clarifies that the intent of the expenditure is to influence the outcome of the election either negatively or positively.

P. 2, l. 12-19: Definition section added to clarify that the transaction referred to in section 40(d)(2) is not made in cooperation with an affected entity.

P. 2, l. 21-29: Clarifies roles of campaign officers for groups and candidates. Requires groups to appoint chairman along with treasurer.

Specifies that candidate will be assumed to be officer if another's name has not been filed with APOC.

P. 3, l. 1-2: Specifically states that a candidate may perform function of treasurer even if campaign treasurer is another person.

P. 3, l. 4-6: Adds group campaign chairman to officers required to be on file with APOC.

P. 3, l. 7-11: This paragraph restricts persons from acting in the capacity of campaign chairman or treasurer for a candidate if their names and addresses are not on file with APOC. The candidate's assumption of responsibility for the treasurer's duties has been transferred to new section 60(a). Former section required candidate to file name of campaign treasurer with APOC within a specific time period.

P. 3, l. 13-18: Added language specifies that section pertains to groups and expands scope to include all officers whose appointment is required under new section 60(b). Penalties for non-compliance by candidates are removed from section.

P. 3, l. 20-25: Changes responsibility for filing name of deputy campaign treasurer from the candidate to the person responsible for appointing them (the treasurer). Explicitly bars deputy campaign treasurers from certifying reports or statements.

P. 3, l. 27-29: Delineation of responsibility. Candidate is responsible for the performance of the campaign treasurer who is responsible for the performance of the deputy campaign treasurer(s).

P. 4, l. 1-4: Removes language joining legal responsibility of candidate with treasurer.

P. 4, l. 5-11: New section specifies that only officers specifically mentioned within this chapter may receive or expend funds. Applies to both groups and candidates.

P. 4, l. 13: Raises threshold for cash contribution to $250.

P. 4, l. 17: Raises threshold for cash expenditure to $250.

P. 4, l. 28: Changes officer required to be stated in disclaimer on literature or communications from campaign chairman to campaign treasurer. Listing the campaign treasurer is more consistent with the actual duties of this officer as set forth by statute.

P. 5, l. 2: Adds reference to new section 60(a) relating to certification of reports.

P. 5, l. 13: Changes due date for year-end report from three days prior to December 31st to 15 days after December 31st. (See AS 15.13.110(a).)

P. 5, l. 17-22: Changes the Twenty-Four Hour Report. Expands period to 9 days, eliminates reporting of expenditures, raises threshold for

reporting contributions from $250 to $500, specifies that it is receipt of contribution which brings it under the purview of this reporting requirement (ref. l. 18 "made" to "received"), and expands report intervals from 24 hours to 48 hours. Specifies that this report applies to both candidates and groups.

P. 5, l. 24-25: Added language specifies campaign treasurer rather than candidate and expands scope of this paragraph to apply to treasurers of groups.

P. 6, l. 8-9: Added language refers specifically rather than generally to campaign treasurer of a group since new 60(a) mandates appointment of group treasurers who, then, are solely responsible for certifying reports and statements.

P. 6, l. 10: Repealers. 40(c) is incorporated in re-write of (b). Sections 70(f) and 70(g) are campaign expenditure ceilings and inflation adjustment clauses which were declared unconstitutional for national campaigns by the U.S. Supreme Court in Buckley v. Valeo. An Alaska Attorney General Opinion of 1976 subsequently declared sections void for enforcement purposes on state level.

P. 6, l. 11: Immediate effective date.

Prime Sponsor (First Legislator Named)

33-001 (Rev. 12/82)

Article 3 of the Bill appears to be the only portion that has fiscal impact on this Division. That Article "TRANSITIONAL ASSISTANCE" provides for organizational grants to newly formed and newly reclassified cities. These grants are $50,000 the first year and $25,000 the second year.

Additionally, the bill provides for organization grants to newly formed Boroughs in the following amounts:

$300,000 for the first fiscal year
$200,000 for the second fiscal year
$100,000 for the third fiscal year

Finally, it provides for the department to establish an initial sales tax structure and an initial property tax structure.

Assumptions: In estimating the fiscal impact of the bill the following assumptions were made.

1. There would be two incorporations or reclassifications each year. This would produce an FY 84 cost of $100,000 and an annual cost of $150,000 from that point forward.

2. There will be one Borough Incorporation in 1986. This incorporation would necessitate expenditure of the 3 step organization grant in 1986, 1987, and 1988. Based on this assumption it is also estimated that contractual costs for setting up the two tax systems would be $350,000 in contractual costs spread over a 2 year period.

Analysis for CSHB 172 (C&RA):

Section 11, 29.45.080, is a restatement of Section 29.53.045, which is currently on the books. There is no change.

Section 64 of the bill makes a technical amendment to the language of the section which shares tax revenues collected from taxes levied by AS 43.75 (Fisheries Business Tax). This would appear to be a technical amendment made necessary by the new definitions section which defines "unified municipality".

Section 89 repeals, among other things, AS 43.20.016 (Municipal Assistance). Since Section 91 provides for a right or liability of a municipality existing on July 1, 1984 (e.g. the right to receive a distribution from the municipal assistance fund) there would appear to be no administrative or fiscal impact on the Department of Revenue in fiscal year 1985. However, starting with fiscal year 1986 the municipal assistance fund and the distributions made therefrom would cease. The administrative effect of repealing the municipal assistance and the related distribution would be insignificant, in that the total effort expended by the Department of Revenue in distributing those funds takes a maximum of three working days for one accounting technician during the entire fiscal year.

TITLE 29 FACT SHEET

SUMMARY OF HB 172/SB 1 - TITLE 29 (MUNICIPAL CODE)

HB 172 and SB 1 are comprehensive bills that reorganize and clarify Title 29 (Municipal Code), but do not substantially change that part of the state statutes that direct the operation of local government in Alaska.

History: The current Title 29, last revised in 1972, is a hodgepodge of 13 years worth of amendments. It is very difficult for the average citizen to read and understand.

Recognizing the problem, the Legislature adopted SCR 66 in 1980, directing the rewrite of Title 29. A broadly representative policy committee, with the assistance of a technical committee, prepared a revised code after an exhaustive series of meetings, hearings, and public presentations.

HB 170 and SB 180 were introduced in 1981. More hearings were held during the 1981 legislative session, during the interim, and continuing through the 1982 session. SB 180 passed the legislature, but because of controversial floor amendments, Governor Hammond vetoed the bill.

In 1983, SB 1 was introduced by Senators Sturgulewski and Gilman; HB 172, by Governor Sheffield. Both bills are basically the same as the bill that had passed the previous year minus the controversial amendments. More committee work was done in both the House and Senate on the 204 page bill.

Changes: For the most part, these bills reorganize and reword Title 29 for clarity and flexibility. Policy changes of any substance are very few. The main changes are:

Third Class Boroughs: The existing third class borough, Haines Borough, continues in existence, but there is no provision for incorporating new third class boroughs in the future.

Home Rule Status: Second class cities and unincorporated areas are authorized to adopt home rule charters, which must be ratified by a vote of the people.

Municipal Powers: A general grant of municipal powers is given to municipalities, instead of a long list of enumerated powers. The difference is more semantic than actual, since the list includes almost every conceivable municipal power. There is no change in the manner in which boroughs acquire powers.

Organizational Grants/Feasibility Studies: The organizational grants are increased and expanded, depending on the category of local government. Studies for the feasibility of local government are authorized.

Incorporation Requirements: The minimum number of people required for incorporation as either a first class or home rule city is increased from 400 to 600.

Ordinance Violation: Penalties for ordinance violations are increased from a maximum $500 and 30-days to class B misdemeanor penalties, which are a maximum of $1000 and 90-days.

Extraterritorial Jurisdiction: Solid and septic waste disposal, utility services, wharves, harbors, and other marine services are added to the list of powers that may be exercised outside the boundaries of the municipality, if the municipality has the authority to exercise the power inside its boundaries.

Economic Development: Allow economic development as a non-areawide power for second class

boroughs, without requiring a vote of the people to exercise it.

Franchise: Requires a vote on franchises of more than 5 years; current law requires a vote on all franchises.

Eminent Domain: Removes the requirement that second class cities get permission from the Department of Community and Regional Affairs and the voters before exercising the power of eminent domain.

Planning, Platting, and Land Use: Updates the language, changing "zoning" to "land use".

Run-Off Elections: Allows run-off election procedures and requirements to be changed by ordinance.

Personal Property: Allows exemption of personal property from taxation.

Taxation of Boats: Removes the $5 and $15 property tax limit on boats if assessed on the basis of net tonnage.

Penalties and Interest: Increases the maximum penalty on delinquent property and sales tax from 10% to 20% and interest from 8% to 15%.

Revenue Bonds: Authorizes revenue bonds to be payable solely from the revenue and property of the project.

Municipal Assistance Fund: Moves the administration of the Municipal Assistance Fund from the Department of Revenue to the Department of Community & Regional Affairs.

Municipal Property Disposal: Requires municipalities to adopt formal procedures by ordinance; current law sets out procedures including requiring an election on the disposal of any property valued at more than $25,000.

The substantive differences between SB 1 and HB 172 are:

Hospital Definition: Proposed CSHB 172 (CRA) adds "special" hospitals to the definition section for revenue sharing eligibility.

Farm Use Greenhouses: Senate CRA amendment to SB 1 provides for the assessing of farm use greenhouses on the basis of full and true value for farm use.

Annexation and Detachment: Senate CRA amendment to SB 1 adds detachment language to the annexation sections and establishes a time deadline for Local Boundary Commission action.

Education Powers: Senate CRA recommends amending the powers section to provide for a double majority vote before a second class city or an unincorporated area in an REAA can assume the education power when incorporating as a first class or home rule city. The vote would be both in the proposed incorporating area and the rest of the REAA.

STATE OF ALASKA
THE LEGISLATURE

LEGISLATIVE AFFAIRS AGENCY

POUCH Y STATE CAPITOL
JUNEAU, ALASKA 99811
907 465-3800

MEMORANDUM March 1, 1984

SUBJECT: Proposed amendment to the municipal code revision bill (CSHB 172 C&RA))

TO: Representative Mike W. Miller
Chairman
House Community and Regional Affairs

FROM: Tamara Brandt Cook TBC
Deputy Director
Division of Legal Services

You have asked what the legal effect would be of adding language to Sec. 29.60.140(b) in CSHB 172 (C&RA) so that the subsection would read:

> (b) In this section "unincorporated community" means a place in the unorganized borough or within an organized borough that is not incorporated as a city and in which 25 or more persons reside as a social unit. (New language underlined)

That section provides for aid to unincorporated communities. It replaces the current program of aid to Native village governments contained in AS 29.89.050 to reflect the way the program has actually been administered. Under sec. 29.60.140 each unincorporated community in the unorganized borough may receive an annual entitlement of $25,000 if there is a qualified entity in the community to receive and spend the money. The amendment changes the definition of "unincorporated community" to include communities in boroughs as well as communities outside of boroughs. Under this amendment, an unincorporated community, no matter where it is located in the state, can qualify to receive a grant.

You have also asked whether this amendment would have any fiscal impact. Since under the section as it now appears, only certain communities may receive a grant (those in the unorganized borough), and since the amendment would have the effect of increasing the number of communities that would

qualify for a grant by including communities in all the organized boroughs, it seems that the number of grants awarded under the section could increase substantially. Assuming an effort is made to fully fund the program, the program as amended will probably be significantly more expensive than it would have been under the original section. I have no way to determine how much additional money would be needed to fully fund the program.

You have also asked whether this amendment will encourage the formation of municipalities. I can think of no legal reason that this amendment would have that effect. Granting money to communities would not remove the limitation on incorporation of a cities under sec. 29.05.020 of the bill. In addition, some communities that would qualify for a grant on the basis of population would not be able to incorporate as a city for lack of 25 voters required to sign an incorporation petition. This is the minimum number of voters necessary for incorporation of a city. (See 29.05.060 (12)). To receive a grant, all that is needed is 25 residents, including children and others who might not be voters.

MILO FRITZ

MEMORANDUM

TO: Representative Mike W. Miller
Chairman, House C & RA

FROM: Representative Milo H. Fritz
Interim Chairman, House C & RA Committee

DATE: January 17, 1984

SUBJ: HB 172 Problems

During the interim, my staff and I have studied HB-172 and its effects and implications. I have three changes to suggest that the Committee consider. I believe that current amendments #2 and #7 will not have the effect which is desired.

Amendment #2 eliminates the "legal grounds" for a recall election. Although this would remove the legal problem of determining the sufficiency of grounds, it leaves totally open the right to purse a recall. If any group has an inclination to start a recall, they state "a reason" and start collecting signatures. It would indeed be difficult to gather the amount of signatures necessary to have a recall election. However, the group will have received much media attention, the person who they are trying to recall has had his/her image tarnished and the whole political process put into a state of turmoil. This is not even considering the mental anguish caused by this action.

I do not want to see a group have the ability to singularly influence the destiny of a city or borough by the use of a threat of recalling one or more members of the governing body. If we do not have the "grounds" of a "recall", we will be allowing the recall system to be used for purely political/personal interest purposes.

Amendment #7 would eliminate the exemption of greenhouses from assessment at full valuation for tax purposes. The argument against this exemption was that "the purpose of the exemption was to allow farms to continue in spite of otherwise inflated land prices, and the corresponding taxes. I believe that the greenhouses in our state also need this help. If a greenhouse is to be successful, it must have the ability to get its produe to market, which is the urban population centers. The law is written so that a highly prosperous greenhouse, will be taxed at a high "true value of farm use". This exemption will allow our fledgling greenhouse industry a chance to grow.

The report to the 13th State Legislature examining court decisions and opinions of the Attorney General construing Alaska Statutes showed a problem with the local preference law. AS 04.11.490 states that one or "several questions" can be placed before the voters. The succeeding paragraphs which have been updated specifically state that only one question can be placed before the voters at a time. Correcting this oversight will only take a short amendment removing the words "or several questions". This action was suggested on page 78 of the report.

POSITION PAPER

RE: HB 172
SPONSOR: Rules by Request of the Governor

PROGRAM EFFECTS:

HB 172 is a bill that reorganizes and clarifies Title 29 of the Alaska Statutes, which is the Municipal Code.

COMMENTS:

HB 172 is the product of the work of the Community and Regional Affairs Committees of both Houses of the Legislature, the Alaska Municipal League, many of the League's affiliate organizations, and the Department of Community and Regional Affairs.

This bill clarifies the Municipal Code, better organizes it, and eliminates ambiguities and conflicts from existing law.

The Department supports passage of this legislation, as well as considers it one of its highest priorities.

RESOLUTION OF THE ALASKA MUNICIPAL LEAGUE

A RESOLUTION REQUESTING THE THIRTEENTH ALASKA STATE LEGISLATURE TO ADOPT THE REVISED TITLE 29

WHEREAS Title 29 of the Alaska Statutes deals with local governments and is badly in need of revision; and

WHEREAS a proposed revision of Title 29 has been prepared and was introduced during the First Session of the Thirteenth Alaska State Legislature; and

WHEREAS the North and Northwest Alaska Mayors' Conference has previously endorsed this revision on several occasions;

NOW, THEREFORE, BE IT RESOLVED that the Alaska State Legislature act on the proposed Title 29 as revised without controversial amendments.

Adopted November 5, 1983

JUNEAU, ALASKA 99801

1984 POLICY PRIORITIES

New Title 29 Adoption: The League urges the Alaska State Legislature to pass legislation adopting the proposed Title 29 as revised without controversial amendments. The League encourages the Governor and the Legislature to recognize the significance of the effort to revise Title 29, the Municipal Code, and the importance of insuring that the legislation contain only the fundamental elements and guidelines for a basic municipal code. The League requests other proposals which would constitute major policy revisions or innovations in the function of local government be considered in separate legislation, which, if approved, would be incorporated into Title 29 once the basic code has been adopted.

Full Funding for Municipal Assistance at the Statutory Level: The League supports the funding of the FY 85 Municipal Assistance Fund at the statutory level of an amount equal to or greater than 30% of the FY 84 corporate income tax proceeds so that communities can continue to provide important needed services while holding down local taxes.

Funding for Revenue Sharing: The League urges the Legislature to provide a stable and predictable level of funding for Revenue Sharing, Chapter 88 - Municipal Tax Resource Equalization, with annual increases to reflect population and inflation changes so that local officials can maintain an orderly continuation of operations. The League also urges full funding for Revenue Sharing, Chapter 89 - State Aid for Miscellaneous Municipal Purposes, which establishes entitlements for road maintenance, hospital and health facility operations, volunteer fire departments in the unorganized borough, grants for unincorporated communities, and cost-of-living adjustments.

Consolidation of Municipal Assistance and State Revenue Sharing Programs: The League endorses consolidation of the administration of the Municipal Assistance and Revenue Sharing Programs with the Department of Community and Regional Affairs in order to simplify the program process for municipalities and the state.

Revenue Sharing Task Force: The League requests the Governor to form a high-level commission composed of members of the State Administration, the Legislature, local government elected and appointed officials, and the academic and private sectors to study and make recommendations on the following:

1. What are the basic services mandated by state constitution, state statutes, and local charter?

2. Which entity has responsibility for providing these services?

3. What plan or method would best finance the provision of those services in Alaska?

4. What process would best ensure equity in the distribution of state resources among all communities and citizens in the state?

Full Funding of the Senior Citizen Property Tax Exemption Program: The League urges the Alaska State Legislature to adopt legislation to provide a supplemental appropriation for the FY 84 shortfall in funding for the Senior Citizens Homeowners Property Tax Exemption Program. The League also requests full funding of the program in FY 85 so that the taxpayers of those municipalities not receiving entitlements will not have to bear the burden of the shortfall in program funds.

State Compliance with Local Subdivision Ordinances: The League urges passage of legislation which requires the State of Alaska to comply with all local subdivision ordinances and regulations in connection with the state land disposal programs. The state should meet the same local requirements imposed on private citizens.

Local Prevailing Wage: The League urges the Legislature to adopt legislation to permit local governments the autonomy to administer local construction projects. Title 36, the Public Contracts Code, should be amended to permit local governments to establish their own notice, reporting, and prevailing wage requirements for local construction.

Adopted by the AML Board of Directors
January 31, 1984

ALASKA CONFERENCE OF MAYORS

WHEREAS, Title 29 of the Alaska Statutes, the Municipal Code, has not been revised since 1972; and

WHEREAS, eleven years of amendments to Title 29 have created a confusing patchwork that is very difficult to read and understand; and

WHEREAS, the proposed revision of Title 29 reorganizes and clarifies the Municipal Code without making major policy changes; and

WHEREAS, major policy changes to Title 29 should be considered in separate legislation in order to keep the Title 29 revision a "clean" bill;

NOW, THEREFORE, BE IT RESOLVED, that the Alaska Conference of Mayors respectfully requests the Alaska State Legislature adopt this session the revised Title 29, as proposed, without any controversial amendments.

Adopted by the Alaska Conference of Mayors on March 5, 1984 in Juneau, Alaska.

ANCHORAGE, ALASKA

AR NO. 84-65 (Amended)

A RESOLUTION OF THE ANCHORAGE MUNICIPAL ASSEMBLY URGING THE STATE LEGISLATURE AND THE GOVERNOR TO PROCEED EXPEDITIOUSLY WITH THE PASSAGE OF TITLE 29 REWRITE.

WHEREAS, the current Title 29, last revised in 1972, is a hodgepodge of 13 years worth of amendments, and

WHEREAS, it is very difficult for the average citizen to read and understand, and

WHEREAS, recognizing the problem, the legislature adopted SCR 66 in 1980, directing the rewrite of Title 29, and

WHEREAS, a broadly representative policy committee, with the assistance of a technical committee, prepared a revised code after an exhaustive series of meetings, hearings, and public presentations, and

WHEREAS, SB 180, the original bill, was passed by the legislature in the 1982 session but because of controversial floor amendments, Governor Hammond vetoed the bill, and

WHEREAS, HB 172, the rewrite of Title 29, is a number one priority of the Alaska Municipal League.

BE IT, THEREFORE, RESOLVED, the Anchorage Municipal Assembly hereby requests the State Legislature and the Governor to proceed expeditiously with the passage of HB 172.

RESOLUTION OF THE CITY AND BOROUGH OF JUNEAU, ALASKA

Serial No. 1027

A RESOLUTION URGING THE ALASKA LEGISLATURE TO TAKE IMMEDIATE ACTION TO ADOPT THE REVISED MUNICIPAL CODE.

WHEREAS, the present municipal code (Title 29 of the Alaska Statutes) was adopted in 1972 and was a consolidation of the former Title 29 that dealt with cities and the former Title 7 that dealt with boroughs, and

WHEREAS, such consolidation was the first effort at integrating the codes applying to these two forms of local government in Alaska, and

WHEREAS, local governments in Alaska have matured substantially since 1972 and now face different problems, and

WHEREAS, the Twelfth Legislature adopted a comprehensive revision of the municipal code, but the bill was vetoed by the governor because of certain controversial floor amendments that were added, and

WHEREAS, "clean" versions of the municipal code revision were introduced in each house by the Thirteenth Legislature during its first session, and

WHEREAS, the proposed municipal code revision reorganizes and clarifies Title 29 without making major policy changes, and

WHEREAS, the municipalities in Alaska need the proposed revisions to Title 29 to eliminate the existing confusion that exists within Title 29 and to provide municipalities in Alaska with a legal framework more suited to the 1980's;

NOW, THEREFORE, BE IT RESOLVED BY THE ASSEMBLY OF THE CITY AND BOROUGH OF JUNEAU, ALASKA:

That the Alaska State Legislature is urged to act immediately on the proposed Title 29 revision and to pass out a "clean" version without additional policy changes or controversial amendments.

Adopted this 22nd day of March, 1984.

RESOLUTION NO. 84-20-R

A RESOLUTION OF THE KODIAK ISLAND BOROUGH ASSEMBLY SUPPORTING SENATE BILL 1 AND HOUSE BILL 172 WHICH REVISE AND REORGANIZE ALASKA STATUTES TITLE 29.

WHEREAS, Alaska Statutes Title 29 is that portion of State Law which governs municipal government within the State of Alaska, and

WHEREAS, Title 29 has been in need of revision and reorganization for many years, and

WHEREAS, Senate Bill 1 and House Bill 172 were filed during the First Session of the 13th Legislature, and

WHEREAS, either one of these bills would accomplish the needed revision and reorganization, and

WHEREAS, the bills do not contain any of the provisions which were criticized by Governor Hammond in his July 15, 1982 veto, and

WHEREAS, the bills make many non-controversial improvements that are long overdue and necessary for the smooth working of municipal government in our state

NOW, THEREFORE, BE IT RESOLVED by the Kodiak island Borough Assembly that the Alaska State Legislature's urge to pass Senate Bill 1 and/or House Bill 172 during the Second Session of the Thirteenth Legislature.

BE IT FURTHER RESOLVED that the Legislature refrain from making controversial amendments to these bills.

AND BE IT FURTHER RESOLVED that copies of this resolution be sent to:

CITY OF KETCHIKAN, ALASKA

RESOLUTION NO. 1371

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF KETCHIKAN, ALASKA, SUPPORTING THE REORGANIZATION OF TITLE 29 FOR CLARITY AND FLEXIBILITY AND URGING PASSAGE OF HOUSE BILL 172 (CSHB 172), AND ESTABLISHING AN EFFECTIVE DATE.

WHEREAS, in 1980 the Legislature adopted SCR 66 which directed that Title 29 be reviewed and rewritten to provide clarity and readability; and

WHEREAS, a broadly representative policy committee representing rural and urban communities, with the assistance of a technical committee, prepared a revised code after an exhaustive series of meetings, hearing, and public presentations; and

WHEREAS, Title 29 as clarified was introduced as HB 170 and SB 180 in 1981; and

WHEREAS, more hearings were held during the First and Second Session of the Twelfth Alaska State Legislature and hearings were also held in the interim between sessions; and

WHEREAS, SB 180 passed the Legislature during the Second Session; and

WHEREAS, because of controversial floor amendments, the City of Ketchikan joined other local governments urging Governor Hammond to veto the bill; and

WHEREAS, Title 29 as clarified was again introduced as SB 1 and HB 172 during the First Session of the Thirteenth Alaska legislature; and

WHEREAS, both bills are basically a reorganization and rewording of Title 29 to enhance its clarity and flexibility; and

WHEREAS, the Council of the City of Ketchikan strongly feels that this clarification is in the best interests of all local governments in Alaska and that the content and intent of the bill is not controversial; and

WHEREAS, the City Council appreciates the hours of time and effort expended on this bill by Alaskans who harbor a great concern for the well-being of Alaska Local Government and believes those hours should not have been expended in vain.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Ketchikan, Alaska as follows:

Section 1: The Council of the City of Ketchikan supports the reorganization of Title 29 for clarity and flexibility and urges the State Legislature to pass House Bill 172 (CSHB 172).

Section 2: The City Council supports this bill in its basic form and requests other proposals which would constitute major policy revisions or innovations in the function of local government be considered in separate legislation.

Section 3: The Council further requests that all committees expeditiously consider House Bill 172 (CSHB 712) to assure action prior to adjournment of the Thirteenth Alaska Legislature.

Section 4: The City Clerk is hereby directed to send copies of this resolution to Representative McBride, Representative Wendte, Senator Ziegler, the House Community and Regicnal Affairs Committee, the House Judiciary Committee, and the House Rules Committee, the Senate Community and Regional Affairs Committee, the Senate Judiciary Committee, the Senate Finance Committee, the Senate Rules Committee, and the Alaska Municipal League.

Section 5: This resolution shall be effective immediately upon passage and approval.

Re: CS for HB 172 (CRA)

Dear Representative Bussell:

I am writing to urge a favorable vote and passage of HB 172.

As you may be aware, a number of members of both the House and the Senate, and also a wide spectrum of persons from many, if not most, of the rural and metropolitan communities, served on the joint legislative committee that devoted virtually hundreds of hours in reviewing and drafting language deemed necessary to clarify and reorganize existing Title 29 (government code) so as to be more understandable and workable for both the small as well as larger communities. In addition, a comprehensive technical committee, composed of bond, tax and other experts spent many hours reviewing and clarifying provisions to assure clarity and utility of the code.

We feel this clarifying bill is vitally needed and passage will greatly enhance the ability of local communities and municipalities to provide responsive local government.

We respectfully request a favorable vote and passage of this bill this session.

Yours very truly,

Russell W. Walker
Municipal Attorney

Juneau, AK 99811

Dear Chairman Bussell:

The Haines Borough, along with many other municipalities, has been working very closely with the Legislative committees re-writing the Municipal Code, Title 29.

We feel very strongly that this legislation (HB172 Rules) must be passed during the current legislative session. A new Legislature would require more public hearings going over the same material we've testified on so many times before.

We would appreciate any help that you could give us to get this bill out of committee and on to the floor of the House and then to the Senate.

Sincerely,

Bob Henderson

HB 172 SUMMARY

HB 172 is a comprehensive bill to clean up the language and reorganize the contents of Title 29, the State Municipal Code. Its primary purpose is to make necessary language and format changes to Title 29 to achieve a more clearly organized, simplified and more readily useable set of statutes. Although the bill is lengthy, for the most part it involves moving existing provisions of Title 29 from one part of the code to another or making changes in wording to clarify current law.

The Department of Community and Regional Affairs has worked extensively over the past five years to achieve passage of the legislation. Because of years of patchwork amendments to Title 29, there now exists a confusing and often controversial mass of state law dealing with municipalities. Most of the changes in the bill are necessary for this reason and are supported by the department. They are also supported by the Alaska Municipal League and, except for some disagreement with certain isolated specific language, by all local governments.

The following analysis summarizes some of the major changes to Title 29 which are included in the bill and how these changes will make program administration easier for the Department of Community and Regional Affairs.

ORGANIZATION AND FORMAT OF TITLE 29

One of the most difficult problems of working with the current law is that it is not always easy to ascertain with any degree of certainty whether a particular statute applies to all classes of municipalities or whether certain classes are governed by language found elsewhere in Title 29. HB 172 resolves this problem by organizing most sections by class of municipality, making it much easier to refer to specific sections and determine which classes of municipalities are affected.

In addition, language within the revisions has been modified so that the terms of reference to municipalities, governing boards, etc., are held constant. The term "municipality" refers to all local governments with a subsequent distinction drawn between "home rule" and "general law." This consistency now makes it possible, by checking general references alone, to ascertain whether or not a particular class and type of municipality is affected by specific statutes.

These changes in the organization of the statutes and the use of consistent and more precise terminology mark these revisions to Title 29 as a great improvement over existing statutes.

Mailed from Governor May + Mailed Worley - C+RA Dept.

CHANGES TO THE EXISTING LAW

Aside from effecting a better organization of the contents of Title 29 and improved terminology, HB 172 also proposes some important improvements to the current body of municipal law.

Certain powers and responsibilities are clarified in HB 172, particularly in the areas of extraterritoriality and land disposal. Other portions of the bill create new flexibility for local communities, particularly in the areas of reclassification, home rule and zoning. Some changes are of great benefit to the department in its administration of programs, such as revenue sharing for unincorporated communities. These are all worthwhile changes that argue in favor of the bill.

Municipal Incorporation and Reclassification

- HB 172 provides for second class municipalities to reclassify directly to home rule governments. Existing statutes restrict this reclassification to municipalities of the first class.

Extraterritorial Powers

- Extraterritorial power for all municipalities has been expanded to allow for the operation of additional facilities outside of municipal boundaries, including solid and septic waste facilities, wharfs, harbors and other marine facilities.

- A municipality which provides a facility outside its boundaries may regulate its use to the extent that the jurisdiction in which the facility is located does not regulate it. Under existing statutes, no right to regulate was provided for the municipality within which the facility was located.

Eminent Domain

- The exercise of eminent domain and declaration of taking is extended to second class cities. Under current law, second class cities must first receive the approval of the Department of Community and Regional Affairs before they can exercise this power in a specific instance.

Land Disposal

- Municipal land disposal provisions have been simplified, requiring only that the local governing body establish a set of formal procedures by ordinance.

Planning and Zoning

- Zoning laws have been broadened to allow for "land use regulations," thus providing a wider range of options for local governments to implement their local plans and programs.

All of these modifications must be viewed as important, positive and long sought after improvements to Title 29.

Revenue Sharing

- HB 172 would combine the state's two most important programs of shared revenues with municipalities -- State Revenue Sharing and Municipal Assistance. The effects of this consolidation would include simplified program administration, a streamlined application procedure, and predictability of funding.

- Cleans up an existing provision of Title 29 which makes revenue sharing funds available to "Alaska Native Village" governments, which an Attorney General's opinion ruled was unconstitutional. HB 172 would resolve this problem by making revenue sharing available to all unincorporated communities in the unorganized borough, not just those with Native village governments.

Incorporation and Transition Grants

- Raises the organization grant paid by the state to newly formed cities from $10 per voter to a $50,000 in the first year and $25,000 in the second year. Boroughs would be eligible to receive a grant of $300,000 in the first year, $200,000 in the second, and $100,000 in the third year following incorporation. Boroughs now receive $25,000 on incorporation or $10 per voter, whichever is higher. The increased organizational grants will make it much easier for communities or regions of the state to organize as municipalities.

Municipal Property Taxation

In the sections which deal with local property taxation, the bill clarifies several points which are confusing under current law. In addition, it allows municipalities more flexibility in the area of asssessment policy.

In the past, property taxes were required to be levied equally against both real and personal property. HB 172 allows municipalities to exempt property in either category if it wishes to do so, an option which has been badly needed in some communities.

In addition, the Office of the State Assessor responds to numerous questions each year which are caused by the inferior organization of assessment and taxation laws under the current Title 29. The improved arrangement of these laws in HB 172 will be helpful in reducing the number of inquiries that the office currently addresses.

Second Class Borough Powers

Mandatory Powers

1. Assessment and collection of taxes. AS 29.33.030.
2. Education. AS 29.33.050.
3. Planning, platting, and zoning. AS 29.33.070-245.

Optional Areawide Powers (by ordinance, without a vote of the people)

1. Transportation systems. AS 29.48.030(b).
2. Licensing, impounding, and disposal of animals. AS 29.48.035(a)(5).
3. Water pollution control. AS 29.48.035(a)(17).
4. Air pollution control. AS 29.48.035(a)(18).
5. Licensing of day care facilities. AS 29.48.035(a)(20).

Optional Non-areawide Powers (by ordinance, without a vote of the people)

1. Fireworks. AS 29.48.020(1).
2. Animal control. AS 29.48.020(2) & AS 29.48.035(a)(5).
3. Licensing & operation of motor vehicles & operators. AS 29.48.020(3) & Title 28.
4. Snow vehicles. AS 29.48.020(4) & AS 05.30.070.
5. Garbage & solid waste collection and disposal. AS 29.48.020(5).
6. Water pollution control. AS 29.48.020(6) & AS 29.48.035(a)(17).
7. Housing rehabilitation for energy conservation. AS 29.48.020(7).
8. Local service roads & trails. AS 29.48.020(8).
9. Emergency communications centers. AS 29.48.020(9).
10. Transportation systems. AS 29.030(b).
11. Licensing of day care facilities. AS 29.48.035(a)(20).

Changes in HB 172

1. Economic development. New nonareawide power authorized in HB 172.
2. Air pollution control. In current law, authorized just areawide; in HB 172, both areawide and nonareawide.
3. Day care facilities. In current law, authorized both areawide and nonareawide; HB 172, just nonareawide.
4. Snow vehicles. HB 172 deletes reference, but power remains the same because of authority in Title 5.
5. Motor vehicles. HB 172 deletes reference; grant of power remains in Title 28, but not as clearly as in current Title 29.

SUBJECT: Big game hunting by nonresidents (HB 188)

TO: Representative John Ringstad
Chairman, House Resources Committee

FROM: Edward H. Hein
Legislative Counsel

You have asked whether HB 188 raises any additional constitutional issues or problems not present in the existing law that the bill amends.

HB 188 repeals and reenacts AS 16.05.407. The only substantive change the bill makes is to allow an Alaska resident over 19 years of age to accompany his or her nonresident in-laws without a guide while hunting brown bear, grizzly bear, polar bear or sheep. Under existing law, the nonresident must be related to the resident by blood within the second degree of kinship in order to hunt without a guide. Under this bill, the relationship between the resident and the nonresident, whether by blood or marriage, would still have to be within the second degree of kinship. This includes the parents, grandparents, brothers and sisters, children and grandchildren of the resident or the resident's spouse.

The change proposed by this bill does not affect the constitutionality or unconstitutionality of AS 16.05.407.

EHH:ljb

Bill Analysis

HB 188

Under current law, blood relatives of resident Alaskans can hunt brown bear, grizzly bear, polar bear, or sheep without a guide if they are within and including second degree of kindred and are personally accompanied by their Alaska relative.

HB 188 would allow the same criteria to also apply to persons related by marriage.

Example: Your brother comes to Alaska to hunt Dall Sheep. You may legally take him without a guide.

However, you cannot legally take your brother-in-law on the same hunt.

HB 188: Under the changes proposed in this law, your brother-in-law would legally be able to participate in the hunt.

Second Degree of kindred includes, under present law:

1) Son, Daughter
2) Father, Mother
3) Grandfather, Grandmother
4) Grandchildren
5) Brother, Sister - their children

In addition, under HB 188, the following relatives would be included:

1) Son, Daughter of Spouse
2) Father-in-law, Mother-in-law
3) Grandfather, Grandmother of Spouse
4) Grandchildren of Spouse
5) Brother-in-law, Sister-in-law - their children

(B) Subunit 26(B) – that portion of Unit 26 lying east of Subunit 26(A) and west of the west banks of the Canning River and Marsh Fork of the Canning River between the Arctic Ocean and Carter Pass;

(C) Subunit 26(C) – that portion of Unit 26 lying east of Subunit 26(B). (In effect before 1980; am 7/4/80, Reg. 75; am 4/5/81, Reg. 78; am 9/3/81 – 9/12/81, Reg. 80; am 9/30/81, Reg. 79)

Authority: AS 16.05.255(a)(1),(2) and (7)

5 AAC 90.020. DEFINITIONS. In 5 AAC 81 – 5 AAC 90

(1) "airport" means an Alaska airport listed in the Federal Aviation Agency Alaska Airman's Guide and chart supplement;

(2) "bag limit" means the greatest number of game species permitted to be taken by any one person in the unit or portion of a unit in which the taking occurs; however, additional numbers of a species may be taken in another designated open unit or portion of a unit where a greater limit on that species is prescribed; in no case may the total or cumulative bag for one person exceed the limit set for the unit or portion of a unit in which the additional game was taken;

(3) "big game animals" includes black bear, brown and grizzly bear, polar bear, bison, caribou, Sitka blacktail deer, elk, mountain goat, moose, muskoxen, mountain or Dall sheep, wolf and wolverine;

(4) "camp" means a structure erected for the purpose of providing overnight shelter and equipped with bedding and eating facilities for occupants;

(5) "closed season" means the time during which game may not be taken;

(6) repealed 7/2/75;

(7) "cub bear" means a brown, grizzly or polar bear in its first or second year of life, or a black bear (including the cinnamon and blue color phases) in its first year of life;

(8) "fur animals" includes beaver, coyote, arctic fox, red fox, lynx, marten, mink and weasel, muskrat, land otter, sea otter, raccoon, red squirrel, flying squirrel, ground squirrel and marmot, wolf and wolverine, excepting domestically raised fur animals;

(9) "highway" means the driveable surface of any constructed road;

(10) repealed 7/2/75;

(11) "motorized vehicle" means a motor-driven land, water or air conveyance;

(12) "open season" means the time during which game may lawfully be taken; each period of time prescribed as an open season includes the first and last days of the period prescribed;

(13) "poison" means any substance which is toxic or poisonous upon contact or ingestion;

(14) "raw ivory" means a walrus tusk (upper canine tooth) which has not been endowed with functional, cultural or aesthetic qualities by altering its natural form or surface through carving, drilling, cutting, filing, or engraving; raw ivory is not altered, in the connotation of this definition, by surface polishing or for a head mount; the latter consisting of ivory (tusks) in a skull or part of a skull;

(15) "regulatory year" means July 1 to June 30, inclusive;

(16) "seal pup" means a seal that weighs less than 50 pounds;

(17) "second degree of kindred" means the relatives who are parents, grandparents, children, grandchildren and sisters or brothers of the person acting as a guide;

(18) "small game" means all species of grouse, hares, rabbits, ptarmigan and waterfowl, and Wilson or jacksnipe;

(19) "three-quarter curl horn" means the horn of a mature mountain sheep, the tip of which has grown through three-quarters of a circle (270°) described by the outer surface of the horn, as viewed from the side;

(20) "transport" means shipping, carrying, importing, exporting, or receiving or delivering for shipment, carriage or export;

(B) Subunit 26(B) – that portion of Unit 26 lying east of Subunit 26(A) and west of the west banks of the Canning River and Marsh Fork of the Canning River between the Arctic Ocean and Carter Pass;

(C) Subunit 26(C) – that portion of Unit 26 lying east of Subunit 26(B). (In effect before 1980; am 7/4/80, Reg. 75; am 4/5/81, Reg. 78; am 9/3/81 – 9/12/81, Reg. 80; am 9/30/81, Reg. 79)

ACTION NARRATIVE

TAPE #7, SIDE A
Number 006 Meeting called to order by Rep. Dick Shultz, Chairman for today's meeting.

Number 018 HB 188 was brought before the committee.

Number 021 Rep. John Ringstad, sponsor of HB 188: Basically, the intent of this legislation is

just to do some clean up of what a lot of people have assumed was already on the books. Currently, in order for a non-resident to hunt brown bear, grizzly bear and polar bear and sheep, they need to be accompanied by a guide or a relative of the second degree of kindred who is an Alaskan resident. The part that was left out on a lot of these was a second degree of kindred and it was suggested that we change it and put it as second degree of kindred by blood or marriage. The "or marriage" part would include the in-laws so that, on the sheet that is in your file, you can have your in-laws going hunting without requiring the guide.

The bill, the way it is physically written, is to repeal and re-enact and what our legal people did is restructure the (d), (b), (c) and the 1, 2, 3 part but the only real change is where it says "by marriage" on line 19, in the existing statute. There has been a question posted in our listing of which relatives are included. We had asked our legal people across the street to give us a list of who is included currently, and who would be included under the law if this bill is passed. They gave us the list on the bill analysis sheet before you. However, Rep. Larson was just pointing out that in the State Affairs Committee they were giving a different definition or giving different options for that definition. So, at this point, I am questioning what there actual definition is and maybe we should take a further look into that. Most of the people that I've spoken with have been under the assumption that that was the intent of the law all along and you could legally do that. My guess is that most of the in-laws that wanted to come up and go hunting have gone out and done it anyway, assuming that it was legal.

Number 063 Rep. Uehling made a point of clarification.

Number 067 Rep. Ringstad confirmed Uehling's statement.

Number 079 Bob Hinman, Deputy Director from the Division of Game: The Department's position on this bill is neutral and my only comments or reason for showing up here is just to answer questions. I certainly have no objection to this legislation.

Number 084 Rep. Ringstad: Mr. Hinman, do you have with you, a list of how the Fish and Game Regulations now lists second degree kindred? Is there a definition in there that would differ from what our attorneys gave us?

Number 089 Hinman: I'd have to try to recite it from memory. We do have it in regulations...of the person you're talking about; his father, mother, his son or daughter, grandfather, grandmother, grandson, granddaughter relationship would not include under the present definition in being related by marriage.

Number 097 Rep. Liska: Bob, I think you can recall several years ago, Ron Somerville was in Fish & Game self-central district at that time, why sheep got on there in the first place was because, if you recall we had a estimate in the Wrangell Mountains, we had a non-resident running around up in the mountains and was lost. The way this pertains to us in this particular issue, Mr. Chairman, is that most of us have hunted in Alaska, we've been up here a few years, and we know of the dangers experienced up here. I'm sure that most of us could guide our next of kin just about as good as a guide could. I think that's a good section to have in this, that at least gives us an opportunity to hunt with our kin, and give the Alaskans a break.

Number 122 Bob Hinman was excused.

Number 125 Ron Somerville, representing the Interior Wildlife Association (a trappers and sportsmen group in Fairbanks), also as Legislative Chairman for the Alaska Sportsmen Council: I haven't taken a position for or against it, I would like to comment briefly, pretty well pointing out the misconceptions as Rep. Ringstad has indicated of people feeling that they could probably do that anyway has been occurring. One thing they wanted me to point out was there was some concern for how many additional non-residents might be allowed to hunt.

Number 158 Rep. Cowdery: If they were a non-resident it would still require licensing.

Number 164 Rep. Liska made a point of clarification - it would still require the purchasing of a

license, but he wouldn't have to pay the expense of a guide.

Number 171 Ron Somerville was excused.

Number 173 Rep. Cowdery: In State Affairs they were addressing nepatism and we got a ruling that we might like to review before going on.

Number 178 Rep. Ringstad referred to the memo to the Chairman of the State Affairs Committee from our Committee Council, Lynn Asper. It says that "first degree of kindred to a person includes the parents and children of that person. Second degree includes brothers, sisters, grandparents and grandchildren. Third degree includes nephews, nieces, aunts and uncles. It says in the proposed CSHB 49 which is the nepatism bill which the committee was referring to; aunts and uncles are included within the definition of second degree of kindred, although they would normally be considered to be third degree of kindred. So, in this one condition, it would appear to me that they're being put into a different category. At this point I'm not sure what the intent of the other committee is to do. It should be pointed out since the definition of second degree of kindred is the proposed CSHB 49 only applies to the section in which it appears. So, it would not necessarily apply here. From that, my understanding would be that this definition that they provided us earlier would be proper.

Number 208 Rep. Ringstad: This is in our Fish & Game Regulations here; second degree of kindred is defined as "means of relatives who are parents, grandparents, children or grandchildren, sisters, or brothers of a person acting as the guide. What "by marriage" would do is to allow the in-laws there. What I might suggest that we do would be with the other idea here, go back and answer some of the questions on legal position, if we want to adjust that the way they are adjusting it here.

Number 226 Rep. Shultz: We will be holding this bill over for additional clarification.

ACTION NARRATIVE

TAPE #11, Side A
Number 006 Rep. Shultz, Chair, called the meeting to order at 3:08pm.

Number 011 HB 187 cancelled from today's meeting.

Number 012 Reason for cancellation: the two commissioners from DNR and DEC, who were to testify, but were not prepared at that time.

Number 019 Shultz: At this time we will hear testimony on HB 188.

Number 025 Ringstad: Last time we had this up, Rep Larson had mentioned that they were working in State Affairs; there was a memo sent to the State Affairs Committee dealing with the definition of kindred. In the last paragraph they point out that in defining in HB 49, that definition only applies to the section that that bill applied to. We have also been told, basically that there is nowhere in the statutes that's generally defined how it applies all the way across the board. In Fish & Game matters it's basically set up in regulation. It does not appear that there is a real problem with conflicting definitions. Our original analysis of who would be added to the list was

accurate, and that basically, would include your in-laws. The change is not necessarily defining anything in statute; what it is doing is changing or adding to the guidelines under which the definition is made in regulation.

Number 052 Ringstad: Basically, we have a guideline at this point, (second degree of kindred by blood), and have a regulation set out under that guideline and all this does is expand it by marriage to allow the in-laws.

Number 061 Shultz: If there are no additional questions, it is the intention of the Chair to move this out of committee today.

Number 063 Cowdery made a motion that HB 188 be moved out of committee with individual recommendations.

Number 065 Shultz: No objections,..it is so ordered.

Number 069 Ringstad: Rep. Shultz and I have been discussing the subject of confirmations. We have a list of commissioners and boards of commissions that the committee will be addressing for confirmation. We're hoping to get the subject on the table and working with it. We will have some more information; given resumes, names, etc. We're hoping to take the first look on Friday. Commissioner Wunnicke, Commissioner Neve and Commissioner Collinsworth will be coming up for that.

Number 107 Ringstad: I will get a list of who this committee confirms to all of the committee members in the next day or two.

Number 110 Vaska: Basically, we make recommendation to the full body.

Number 117 Larson: I think this, for further clarification, is the full body in joint session.....

Number 120 Ringstad: We will have a joint session, specifically to deal with confirmations at a date sometime in the future.

Number 129 Shultz: The work session on wednesday on the homestead bills..... As a result of the teleconference we had last Friday...we're going to go over some of the concerns that were raised.

Number 141 Ringstad: It is our intent, on Wednesday, to get different ideas on what is and isn't homesteading.

Number 148 Cowdery: Will it be your intention, before the next meeting on the homestead bill to do a one page summary

of the teleconference on the points, to refresh our minds?

Number 157 Shultz: We will have some of the major points itemized.

Number 162 Ringstad: There will be a committee substitute coming out.

Number 168 Shultz adjourned the meeting at 3:20p.m.

Re: House Bill 195

Attached is a substitute version of House Bill 195 which will be brought up before the House Judiciary Committee on Friday, April 15. The purpose of this substitute is to further clarify the original legislative intent of HB 195.

(c) A person who, either by himself or with another, wilfully deprives a member of the National Guard or Naval Militia of his employment or prevents his being employed by himself or another, or obstructs or annoys the member of the National Guard or Naval Militia or his employer in respect of his trade, business or employment, because the member of the National Guard or Naval Militia is a member, or in any way dissuades any person from enlisting in the National Guard or Naval Militia by threat or injury to him in respect of his employment, trade or business, if he so enlists, is guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $100.

(d) All matters relating to the organization, discipline and government of the National Guard or Naval Militia, not otherwise provided for by the laws of the United States, this chapter, or regulations issued by the president shall be governed by regulations issued by the adjutant general and approved by the governor, and the regulations when adopted, have the same force and effect as though enacted in this chapter. (§ 36 ch 150 SLA 1955; am §§ 18 — 20 ch 34 SLA 1973)

Sec. 26.05.345. Civil Air Patrol. The adjutant general shall make the necessary administrative arrangements for maintaining liaison between the state and the Civil Air Patrol and the expenditure of funds appropriated to the department for the state contribution toward the support of the authorized activities of the Alaska Wing, Civil Air Patrol, under its charter. (§ 3 ch 70 SLA 1965; Executive Order No. 33 (1968))

Revisor's note. — The following executive order, signed by Governor Walter J. Hickel, was transmitted to the legislature on January 23, 1968. It was not disapproved by the legislature during the 1968 session and therefore became law under the provisions of sec. 23, art. III of the Alaska Constitution and AS 24.30.130.

"EXECUTIVE ORDER NO. 33. Pursuant to the authority vested in me by Sec. 23, Art. III, Constitution of the State of Alaska, the State's responsibilities toward the Alaska Wing, Civil Air Patrol, as set forth in AS 44.33.110, are hereby transferred from the Department of Commerce to the Department of Military Affairs. The effective date of such transfer shall be July 1, 1968.

"Dated at Juneau, Alaska this 22nd day of January, 1968."

This section, except for the designation of the responsible official, formerly was AS 44.33.110.

Editor's note. — Chapter 70, SLA 1965, included the following: "Sec. 1. Purpose. The Civil Air Patrol is an auxiliary of the United States Air Force operating under charter from Congress, and it operates in all states and the District of Columbia and the Commonwealth of Puerto Rico. The Civil Air Patrol has as its purpose the organizing of public-spirited citizens in civil aviation into a volunteer semi-military organization to assist in civil defense efforts, train teen-age cadets in pre-flight instruction, conduct missing-aircraft search service, and assist in search and rescue missions, and special missions for state and federal agencies. It is the purpose of this Act to make formal provision for the administration of the financial support of the state's participation in the program of the Civil Air Patrol."

Sec. 26.05.350. Short title. This chapter may be cited as the Military Code of Alaska. (§ 1 ch 150 SLA 1955)

Representative John Ringstad
Chairman, House Resources Committee
State Capitol
Pouch V
Juneau, Alaska 99811

Dear Representative Ringstad:

I would like to present the following position which the Division of Fish and Wildlife Protection, Department of Public Safety holds with regard to the subsequent House Bill under proposal:

HB 195 - Neutral

This Bill should be carefully researched to insure Alaska constitutional provisions and procedures are not by-passed in the transfer of State property.

The majority of aircraft forfeited to the State are in the cub class, which may not be the appropriate plane for civil air patrol. Most aircraft that have been forfeited to the State in the past have needed extensive repair in order to be airworthy. This would require facilities or funds for putting an aircraft in an airworthy condition. The State should not be held liable for the condition of the aircraft at the time of transfer of ownership.

Sincerely,

Robert J. Sundberg
Commissioner

MEMORANDUM

TO: Representative John Ringstad, Co-Chairman
Representative Richard Shultz, Co-Chairman
House Resources Committee

FROM: Representative Mitch Abood

DATE: March 1, 1983

RE: HB 195
"An Act permitting transfer of forfeited aircraft to the Alaska Wing, Civil Air Patrol"

The Civil Air Patrol is providing a great service to the public in its search and rescue efforts, and the transfer of confiscated aircraft to the Civil Air Patrol would tremendously benefit this outstanding operation.

The Civil Air Patrol provides emergency search and rescue services to those individuals who wind up in trouble in the vast outlying areas of Alaska. Because of the age of the aircraft and the great number of hours the CAP spends on search and rescue efforts, it is imperative that the aircraft and equipment used in service be replaced periodically to insure the utmost in safety of the operations. The CAP is currently replacing its aircraft with funds of their own, and the process is quite lengthy in their efforts to procure new aircraft from Outside.

It is with this in mind that I highly recommend the passage of HB 195, "An Act permitting transfer of forfeited aircraft to the Alaska Wing, Civil Air Patrol".

200

TESTIMONY OF DEAN GUANELI
MARCH 3, 1983

My name is Dean Guaneli, Assistant Attorney General with the Department of law. My initial reaction in listening to the brief overview was that there was some problems with the way the bill was described. I think what I heard was that other states have laws that give peace officers similar rights to other persons and I guess that the suggestion is that this bill does that. I would take strong exception to that. I my view this bill gives peace officers a lot more protection than ordinary citizens have in ways that are completely unappropriate. This bill addresses a number of situations and addresses the situation of when a peace officer is accused of committing a crime, accused of taking some action that might subject him to some putative action, disciplinary action or done something that might subject him to civil liability. Under those circumstances, this bill gives peace officers a lot more rights than the ordinary citizens would have. Particularly as it relates to criminal investigations. There are eleven rights that this bill sets out that gives a peace officer accused of a crime, that ordinary citizens do not have.

The first I suppose would be the written notice of the charges. No defendant is entitled to written notice of the charges before he is interviewed. This gives the peace officer a right to have a witness participate in the interview. Ordinary citizens can have an attorney if they are in custody and other witnesses then can be present at the interview but they cannot participate in the interview. It limits the interviews to reasonable hours. It gives peace officers pay during the time of their interviews. It goes on and on and on. It in fact limits the way in which criminal investigation can be conducted when the subject of that investigation is a peace officer. And I really question whether that was the committee's intent in this legislation. It is completely inappropriate for peace officers to have greater rights as criminal suspects than anybody else in our society and I could invision a criminal defendant coming before a court and saying that I have been denied equal protection of the law, if I was a peace officer this kind of statement wouldn't have been taken from me without being given all these rights. It goes far beyond what ordinary citizens have and it is going to hamstring investigations. Peace officers are in a peculiar situation in our society. They are in a position of trust. They carry weapons, they carry concealed weapons. They are entitled to effect arrests and in some circumstances shoot people when ordinary citizens would not be able to. Under those circumstances, when they are accused of a crime, it's inappropriate to limit the investigation of that crime.

As for the other parts of the bill that relate to internal disciplinary matters. These rights that peace officers would be given, seems to me and I've discussed the matter with the Division of Labor Relations and also the Department of Public Safety, would inappropriately tie the hands of administrators in managing the internal affairs of their police department. In effect it would drive a wedge between employees, peace officers and the chiefs of police in local police departments. In many cases it would put prosecutors in the middle of some kind of dispute between policemen and their managers. Under state personnel rules, if

something goes in a personnel file that is grievable under the contract. But to give a person a right to have all these rights in an internal disciplinary matter, I think is going beyond what ought to be legitimate concern of this legislature. I understand that the Association of Alaska Chiefs of Police has reviewed the bill and is opposed to it. That's understandable, they are managers. They feel that as managers of police departments they have to have control over their officers. They have to be able to take disciplinary action and do it quickly without having to jump through a lot of hoops. For a number of reasons peace departments function as paramilitary organizations. The officers are given orders and they take orders. And like a paramilitary organization they seem to function better that way. And I think that a bill of this sort goes along way towards changing the way a police department functions and for those reasons we strongly oppose this legislation. We being, as far as I know, the Administration, the Department of Law, the Division of Personnel, the Division of Labor Relations and the Department of Public Safety and from that stand point I am not certain what other aspects the Administration would be interested.

PUBLIC EMPLOYEE POLITICAL RIGHTS

CALIFORNIA GOVERNMENT CODE

§ 3201. Legislative finding

The Legislature finds that political activities of public employees are of significant statewide concern. The provisions of this chapter shall supersede all provisions on this subject in the general law of this state or any city, county, or city and county charter except as provided in Section 3207.

§ 3202. Application of chapter; Definitions

This chapter applies to all officers and employees of a state or local agency.

(a) "Local agency" means a county, city, city and county, political subdivision, district other than a school district, or municipal corporation. Officers and employees of a given local agency include officers and employees of any other local agency whose principal duties consist of providing services to the given local agency.

(b) "State agency" means every state office, department, division, bureau, board, commission, superior court, court of appeal, the Supreme Court, the California State University and Colleges, the University of California, and the Legislature.

§ 3203. Restriction of political activities prohibited

Except as otherwise provided in this chapter, or as necessary to meet requirements of federal law as it pertains to a particular employee or employees, no restriction shall be placed on the political activities of any officer or employee of a state or local agency.

§ 3204. Unlawful use of influence

No one who holds, or who is seeking election or appointment to, any office or employment in a state or local agency shall, directly or indirectly, use, promise, threaten or attempt to use, any office, authority, or influence, whether then possessed or merely anticipated, to confer upon or secure for any individual promotion, or to aid or obstruct any individual person in securing, or to prevent any individual person from securing, any position, nomination, confirmation, promotion, or change in compensation or position, within the state or local agency, upon consideration or condition that the vote or political influence or action of such person or another shall be given or used in behalf of, or withheld from, any candidate, officer, or party, or upon any other corrupt condition or consideration. This prohibition shall apply to urging or discouraging the individual employee's action.

§ 3205. Solicitation from other officers or employees

An officer or employee of a local agency shall not, directly or indirectly, solicit political funds or contributions, knowingly, from other officers or employees of the local agency or from persons on the employment lists of the local agency. Nothing in this section prohibits an officer or employee of a local agency from communicating through the mail or by other means requests for political funds or contributions to a significant segment of the public which may include officers or employees of the local agency.

§ 3206. Participation in political activities while in uniform

No officer or employee of a local agency shall participate in political activities of any kind while in uniform.

§ 3207. Local rules and regulations

Any city, county, or city and county charter or, in the absence of a charter provision, the governing body of any local agency and any agency not subject to Section 19251 by establishing rules and regulations, may prohibit or otherwise restrict the following:

(a) Officers and employees engaging in political activity during working hours.

(b) Political activities on the premises of the local agency.

§ 3208. Further limitations prohibited

Except as provided in Section 19251, the limitations set forth in this chapter shall be the only restrictions on the political activities of state employees.

§ 3209. Solicitation or receipt of funds to promote passage or defeat of ballot measures

Nothing in this chapter prevents an officer or employee of a state or local agency from soliciting or receiving political funds or contributions to promote the passage or defeat of a ballot measure which would affect the rate of pay, hours of work, retirement, civil service, or other working conditions of officers or employees of such state or local agency, except that a state or local agency may prohibit or limit such activities by its employees during their working hours and may prohibit or limit entry into governmental offices for such purposes during working hours.

§ 3304. Protection of procedural rights

(a) No public safety officer shall be subjected to punitive action, or denied promotion, or be threatened with any such treatment, because of the lawful exercise of the rights granted under this chapter, or the exercise of any rights under any existing administrative grievance procedure.

Nothing in this section shall preclude a head of an agency from ordering a public safety officer to cooperate with other agencies involved in criminal investigations. If an officer fails to comply with such an order, the agency may officially charge him with insubordination.

(b) No punitive action, nor denial of promotion on grounds other than merit, shall be undertaken by any public agency without providing the public safety officer with an opportunity for administrative appeal.

§ 3305. Filing of adverse comments in personnel file

No public safety officer shall have any comment adverse to his interest entered in his personnel file, or any other file used for any personnel purposes by his employer, without the public safety officer having first read and signed the instrument containing the adverse comment indicating he is aware of such comment, except that such entry may be made if after reading such instrument the public safety officer refuses to sign it. Should a public safety officer refuse to sign, that fact shall be noted on that document, and signed or initialed by such officer.

§ 3306. Time for filing response to adverse comment

A public safety officer shall have 30 days within which to file a written response to any adverse comment entered in his personnel file. Such written response shall be attached to, and shall accompany, the adverse comment.

§ 3307. Polygraph examination

No public safety officer shall be compelled to submit to a polygraph examination against his will. No disciplinary action or other recrimination shall be taken against a public safety officer refusing to submit to a polygraph examination, nor shall any comment be entered anywhere in the investigator's notes or anywhere else that the public safety officer refused to take a polygraph examination, nor shall any testimony or evidence be admissible at a subsequent hearing, trial, or proceeding, judicial or administrative, to the effect that the public safety officer refused to take a polygraph examination.

§ 3308. Disclosure of financial status

No public safety officer shall be required or requested for purposes of job assignment or other personnel action to disclose any item of his property, income, assets, source of income, debts or personal or domestic expenditures (including those of any member of his family or household) unless such information is obtained or required under state law or proper legal procedure, tends to indicate a conflict of interest with respect to the performance of his official duties, or is necessry for the employing agency to ascertain the desirability of assigning the public safety officer to a specialized unit in which there is a strong possibility that bribes or other improper inducements may be offered.

§ 3309. Search of locker

No public safety officer shall have his locker, or other space for storage that may be assigned to him searched except in his presence, or with his consent, or unless a valid search warrant has been obtained or where he has been notified that a search will be conducted. This section shall apply only to lockers or other space for storage that are owned or leased by the employing agency.

§ 3309.5. Proceeding for violations of rights and protections

(a) It shall be unlawful for any local public safety department to deny or refuse to any local public safety officer the rights and protections guaranteed to them by this chapter.

(b) The superior court shall have initial jurisdiction over any proceeding brought by any local public safety officer against any local public safety department for alleged violations of this section.

(c) In any case where the superior court finds that a local public safety department has violated any of the provisions of this chapter, the court shall tender appropriate injunctive or other extraordinary relief to remedy the violation and to prevent future violations of a like or similar nature, including, but not limited to, the granting of a temporary restraining order, preliminary, or permanent injunction prohibiting the local public safety department from taking any punitive action against the local public safety officer.

(d) This section shall apply only to local public safety officers who are peace officers as defined in Section 830.1 of the Penal Code, and shall not apply to public safety officers who are peace officers as defined in subdivisions (a) and (b) of Section 830.2 of the Penal Code.

§ 3310. Exception as to public agencies providing protections of rights

Any public agency which has adopted, through action of its governing body or its official designee, any procedure which at a minimum provides to peace officers the same rights or protections as provided pursuant to this chapter shall not be subject to this chapter with regard to such a procedure.

§ 3311. Mutual aid agreements

Nothing in this chapter shall in any way be construed to limit the use of any public safety agency or any public safety officer in the fulfilling of mutual aid agreements with other jurisdictions or agencies, nor shall this chapter be construed in any way to limit any jurisdictional or interagency cooperation under any circumstances where such activity is deemed necessary or desirable by the jurisdictions or the agencies involved.

PUBLIC SAFETY OFFICERS BILL OF RIGHTS
CALIFORNIA GOVERNMENT CODE

§ 3300. Short title

This chapter is known and may be cited as the Public Safety Officers Procedural Bill of Rights Act.

§ 3301. Definition; Legislative finding and declaration

For purposes of this chapter, the term public safety officer means all peace officers, as defined in Section 830.1 and subdivisions (a) and (b) of Section 830.2 of the Penal Code, including peace officers who are employees of a charter city or county. The term public safety officer also means all persons employed by the State of California and designated by law as peace officers.

The Legislature hereby finds and declares that the rights and protections provided to peace officers under this chapter constitute a matter of statewide concern. The Legislature further finds and declares that effective law enforcement depends upon the maintenance of stable employer-employee relations, between public safety employees and their employers. In order to assure that such stable relations are continued throughout the state and to further assure that effective services are provided to all people of the state, it is necessary that this chapter be applicable to all public safety officers, as defined in this section, wherever situated within the State of California.

§ 3302. Political activity

(a) Except as otherwise provided by law, or whenever on duty or in uniform, no public safety officer shall be prohibited from engaging, or be coerced or required to engage, in political activity.

(b) No public safety officer shall be prohibited from seeking election to, or serving as a member of, the governing board of a school district.

§ 3303. Subjection to interrogation; Temporary reassignment

When any public safety officer is under investigation and subjected to interrogation by his commanding officer, or any other member of the employing public safety department, which could lead to punitive action, such interrogation shall be conducted under the following conditions. For the purpose of this chapter, punitive action is defined as any action which may lead to dismissal, demotion, suspension, reduction in salary, written reprimand, or transfer for purposes of punishment.

(a) The interrogation shall be conducted at a reasonable hour, preferably at a time when the public safety officer is on duty, or during the normal waking hours for the public safety officer, unless the seriousness of the investigation requires otherwise. If such interrogation does occur during off-duty time of the public safety officer being interrogated, the public safety officer shall be compensated for such off-duty time in accordance with regular department procedures, and the public safety officer shall not be released from employment for any work missed.

(b) The public safety officer under investigation shall be informed prior to such interrogation of the rank, name and command of the officer in charge of the interrogation, the interrogating officers, and all other persons to be present during the interrogation. All questions directed to the public safety officer under interrogation shall be asked by and through no more than two interrogators at one time.

(c) The public safety officer under investigation shall be informed of the nature of the investigation prior to any interrogation.

(d) The interrogating session shall be for a reasonable period taking into consideration gravity and complexity of the issue being investigated. The person under interrogation shall be allowed to attend to his own personal physical necessities.

(e) The public safety officer under interrogation shall not be subjected to offensive language or threatened with punitive action, except that an officer refusing to respond to questions or submit to interrogations shall be informed that failure to answer questions directly related to the investigation or interrogation may result in punitive action. No promise of reward shall be made as an inducement to answering any question. The employer shall not cause the public safety officer under interrogation to be subjected to visits by the press or news media without his express consent nor shall his home address or photograph be given to the press or news media without his express consent.

(f) The complete interrogation of a public safety officer may be recorded. If a tape recording is made of the interrogation, the public safety officer shall have access to the tape if any further proceedings are contemplated or prior to any further interrogation at a subsequent time. The public safety officer shall be entitled to a transcribed copy of any notes made by a stenographer or to any reports or complaints made by investigators or other persons, except those which are deemed by the investigating agency to be confidential. Affidavit Confidential

No notes or reports which are deemed to be confidential may be entered in the officer's personnel file. The public safety officer being interrogated shall have the right to bring his own recording device and record any and all aspects of the interrogation.

(g) If prior to or during the interrogation of a public safety officer it is deemed that he may be charged with a criminal offense, he shall be immediately informed of his constitutional rights.

(h) Upon the filing of a formal written statement of charges, or whenever an interrogation focuses on matters which are likely to result in punitive action against any public safety officer, that officer, at his request, shall have the right to be represented by a representative of his choice who may be present at all times during such interrogation. The representative shall not be a person subject to the same investigation. The representative shall not be required to disclose, nor be subject to any punitive action for refusing to disclose, any information received from the officer under investigation for noncriminal matters.

This section shall not apply to any interrogation of a public safety officer in the normal course of duty, counseling, instruction, or informal verbal admonishment by, or other routine or unplanned contact with, a supervisor or any other public safety officer, nor shall this section apply to an investigation concerned solely and directly with alleged criminal activities.

(i) No public safety officer shall be loaned or temporarily reassigned to a location or duty assignment if a sworn member of his department would not normally be sent to that location or would not normally be given that duty assignment under similar circumstances.

com- ion of on in peri- ion in or in posi- er pe- on in

police department, but with longer combined period of service in same position in police and fire departments. State ex rel. George v Seattle (1936) 184 Wn 560, 52 P2d 360.

In cases of tenure under civil service where policeman shall hold office until removed or retired, it is implied that he can be removed for cause only and then only after due notice and hearing or opportunity to be heard. Luellen v Aberdeen (1944) 20 Wn 2d 594, 148 P2d 849.

Aberdeen civil service ordinance contemplated that person was to

removed for cause, and was common rule that accused policeman was entitled to hearing on charges made against him after reasonable notice thereof had been given notwithstanding that ordinance was silent as to hearing, notice, or opportunity to be heard. Luellen v Aberdeen (1944) 20 Wn 2d 594, 148 P2d 849.

41.12.090 Procedure for removal, suspension, demotion or discharge—Investigation—Hearing—Appeal. No person in the classified civil service who shall have been permanently appointed or inducted into civil service under provisions of this chapter, shall be removed, suspended, demoted or discharged except for cause, and only upon written accusation of the appointing power, or any citizen or taxpayer; a written statement of which accusation, in general terms, shall be served upon the accused, and a duplicate filed with the commission. Any person so removed, suspended, demoted or discharged may within ten days from the time of his removal, suspension, demotion or discharge, file with the commission a written demand for an investigation, whereupon the commission shall conduct such investigation. The investigation shall be confined to the determination of the question of whether such removal, suspension, demotion or discharge was or was not made for political or religious reasons and was or was not made in good faith [f]or cause. After such investigation the commission may affirm the removal, or if it shall find that the removal, suspension, or demotion was made for political or religious reasons, or was not made in good faith for cause, shall order the immediate reinstatement of [or] reemployment of such person* in the office, place, position or employment from which such person was removed, suspended, demoted or discharged, which reinstatement shall, if the commission so provides in its discretion, be retroactive, and entitle such person to pay or compensation from the time of such removal, suspension, demotion or discharge. The commission upon such investigation, [in] lieu of affirming the removal, suspension, demotion or discharge may modify the order of removal, suspension, demotion or discharge by directing a suspension, without pay, for a given period, and subsequent restoration to duty, or demotion in classification, grade, or pay; the findings of the commission shall be certified, in writing to the appointing power, and shall be forthwith enforced by such officer.

All investigations made by the commission pursuant to the provisions of this section shall be had by public hearing, after reasonable notice to the accused of the time and place of such hearing, at which hearing the accused shall be afforded an op-

portunity of appearing in person and by counsel, and presenting his defense. If such judgment or order be concurred in by the commission or a majority thereof, the accused may appeal therefrom to the court of original and unlimited jurisdiction in civil suits of the county wherein he resides. Such appeal shall be taken by serving the commission, within thirty days after the entry of such judgment or order, a written notice of appeal, stating the grounds thereof, and demanding that a certified transcript of the record and of all papers on file in the office of the commission affecting or relating to such judgment or order, be filed by the commission with such court. The commission shall, within ten days after the filing of such notice, make, certify and file such transcript with such court. The court of original and unlimited jurisdiction in civil suits shall thereupon proceed to hear and determine such appeal in a summary manner: *Provided, however*, That such hearing shall be confined to the determination of whether the judgment or order of removal, discharge, demotion or suspension made by the commission, was or was not made in good faith for cause, and no appeal to such court shall be taken except upon such ground or grounds.

---

1. In General

Provision for removals, suspensions, demotions, and discharges is not applicable to cities and towns which prior to date statute was adopted, established civil service in police departments. Yantsin v Aberdeen (1959) 54 Wn 2d 787, 345 P2d 178.

Though police officer has no property rights in public employment which are protected by constitutional requirement of due process, his rights as civil service employee include, at least, procedure, prerequisites, and conditions set forth in applicable charter, statute or ordinance. Reynolds v Kirkland Police Com. (1963) 62 Wn 2d 720, 384 P2d 819.

Local ordinance attempting to implement provisions of this chapter failed to accomplish its purpose where it established single commission with inconsistent functions, namely, appointive, accusatory, investigative, and adjudicative functions with no separation within commission. Reynolds v Kirkland Police Com. (1963) 62 Wn 2d 720, 384 P2d 819.

2. Power to Remove, Suspend, Demote, or Discharge; Grounds

Power to remove or suspend municipal officer rests with governing body of municipality, and cannot be exercised by individual or inferior board unless specifically granted, and hence, under Spokane city charter, providing that police officers may be removed by board of police in certain cases, such board has no power to suspend. Bringgold v Spokane (1902) 27 Wn 202, 67 P 612.

Where police board, having power to suspend public officers, passed rule providing that any member of police force might be suspended by chief of police with approval of board, suspension by board without consent of chief was invalid. Bringgold v Spokane (1902) 27 Wn 202, 67 P 612.

In cases of tenure under civil service where policeman shall hold office until removed or retired, it

is implied that he can be removed for cause only and then only after due notice and hearing or opportunity to be heard. Luellen v Aberdeen (1944) 20 Wn 2d 594, 148 P2d 849.

Under Seattle Charter, art 16 § 12, permitting removal of officer or employee only on filing with civil service commission of statement of reasons therefor, and providing for review of removal on demand, order of commission, finding that patrolman was not guilty of charge on which he was removed by chief of police ("conduct unbecoming an officer, being in a compromising position with a respectable married woman"), but sustaining removal on ground that patrolman was guilty of conduct unbecoming an officer in cultivating acquaintance of woman, was not improper, as sustaining removal on ground not specified by chief of police. State v Seattle (1911) 65 Wn 645, 118 P 821.

3. Administrative Proceedings

Any defects as to sufficiency or timeliness of policeman's protest against discharge were waived when civil service commission proceeded to investigate charges made. Luellen v Aberdeen (1944) 20 Wn 2d 594, 148 P2d 849.

Chief of police and another member of police department, who served city manager's written accusation on certain other police officers who were being discharged by city manager, were not "plaintiffs" in the discharge proceeding as the term is used in RCWA 4.28.070 and civil service statutes and ordinances which require service of process to be made by person other than plaintiff, where persons making service had no right to claim, and did not seek, legal redress from officers being charged for any reasons stated in the written accusation. Vancouver v Jarvis (1969) 76 Wn 2d 110, 455 P2d 591.

4. — Notice and Opportunity to be Heard

Where member of city police force was discharged by commissioner of public safety, written notice of discharge signed by chief of police, though irregular in some respects, did not invalidate order of discharge. State ex rel. Miller v Tacoma (1934) 177 Wn 689, 33 P2d 88.

"Opportunity to be heard" required to be given civil service employee sought to be discharged consists of right to know seasonably charges preferred, right to meet charges with witnesses and evidence, and right to have aid of counsel. Luellen v Aberdeen (1944) 20 Wn 2d 594, 148 P2d 849.

If no statement of charges made against police officer are given him, nor any notice of any hearing having been given are accorded him, his removal is illegal and of no force or effect. Luellen v Aberdeen (1944) 20 Wn 2d 594, 148 P2d 849.

Where mayor wrote registered letter to police officer enclosing accusation and advising him he was suspended, and officer signed delivery receipt therefor, officer was not properly "served" within rules of civil service commission requiring service in manner prescribed for service of civil process. Schultz v Pasco (1951) 39 Wn 2d 262, 235 P2d 168.

Special appearance in which accused police officer objects to jurisdiction of civil service commission on ground that there has been no service of accusation on him, is not waived by subsequent defense on merits. Schultz v Pasco (1951) 39 Wn 2d 262, 255 P2d 168.

5. Judicial Review

Where there is some competent evidence to sustain action of civil service commissioners in discharging policeman, its weight and sufficiency cannot be inquired into on appeal. State ex rel. Boltin v Cotterill (1923) 125 Wn 533, 216 P 851.

Where civil service commission exonerates police officer from charge given by chief of police for his discharge, but sustains his dismissal "for the good of the service," courts cannot review action, where there was no arbitrary action in receiving or refusing to receive evidence. Bridges v Patterson (1925) 135 Wn 436, 237 P 998.

On removal of police officer within classified civil service, in which appointing power has filed written statement of reasons for removal, on charges that cannot be said to be utterly frivolous, after full opportunity to be heard, and in which there was competent evidence tending to prove charges, courts will not inquire into weight or sufficiency of evidence. State ex rel. Price v Seattle (1944) 20 Wn 2d 17, 145 P2d 286.

Neither trial court nor supreme court can substitute its judgment for independent judgment of civil service commission in dismissing policeman. State ex rel. Perry v Seattle (1966) 69 Wn 2d 816, 420 P2d 704.

6. — Specific Instances

4. — Notice and Opportunity to be Heard

Where member of city police force was discharged by commissioner of public safety, written notice of discharge signed by chief of police, though irregular in some respects, did not invalidate order of discharge. State ex rel. Miller v Tacoma (1934) 177 Wn 689, 33 P2d 88.

"Opportunity to be heard" required to be given civil service employee sought to be discharged consists of right to know seasonably charges preferred, right to meet charges with witnesses and evidence, and right to have aid of counsel. Luellen v Aberdeen (1944) 20 Wn 2d 594, 148 P2d 849.

If no statement of charges made against police officer are given him, nor any notice of any hearing having been given are accorded him, his removal is illegal and of no force or effect. Luellen v Aberdeen (1944) 20 Wn 2d 594, 148 P2d 849.

Where mayor wrote registered letter to police officer enclosing accusation and advising him he was suspended, and officer signed delivery receipt therefor, officer was not properly "served" within rules of civil service commission requiring service in manner prescribed for service of civil process. Schultz v Pasco (1951) 39 Wn 2d 262, 235 P2d 168.

Special appearance in which accused police officer objects to jurisdiction of civil service commission on ground that there has been no service of accusation on him, is not waived by subsequent defense on merits. Schultz v Pasco (1951) 39 Wn 2d 262, 255 P2d 168.

5. Judicial Review

Where there is some competent evidence to sustain action of civil service commissioners in discharging policeman, its weight and sufficiency cannot be inquired into on appeal. State ex rel. Boltin v Cotterill (1923) 125 Wn 533, 216 P 851.

Where civil service commission exonerates police officer from charge given by chief of police for his discharge, but sustains his dismissal "for the good of the service," courts cannot review action, where there was no arbitrary action in receiving or refusing to receive evidence. Bridges v Patterson (1925) 135 Wn 436, 237 P 998.

On removal of police officer within classified civil service, in which appointing power has filed written statement of reasons for removal, on charges that cannot be said to be utterly frivolous, after full opportunity to be heard, and in which there was competent evidence tending to prove charges, courts will not inquire into weight or sufficiency of evidence. State ex rel. Price v Seattle (1944) 20 Wn 2d 17, 145 P2d 286.

Neither trial court nor supreme court can substitute its judgment for independent judgment of civil service commission in dismissing policeman. State ex rel. Perry v Seattle (1966) 69 Wn 2d 816, 420 P2d 701.

6. — Specific Instances

Sufficiency of evidence on which chief of police of city discharged police officer for stated offense of offering to release from custody certain persons, whom he had arrested for gambling, on payment to him of certain sum of money, and evidence on which civil service commission confirmed act of chief of police, will not be reviewed by court on writ of error, where city vested in such officers exclusive authority to discharge employees, and reason for discharge being sufficient. Ford v Seattle (1921) 117 Wn 55, 200 P 568.

On certiorari to review discharge of patrolman by civil service commission of city, superior court had power to reverse discharge for offenses of supplying information to federal secret service agent concerning conduct of federal employee and of violation of rule of police department for which patrolman had been suspended, where record showed that commission acted arbitrarily, though city charter provided that its decision should be final. State ex rel. Mowre v Civil Service Com. (1934) 178 Wn 325, 34 P2d 873.

Judgment sustaining action of civil service commission in dismissing police officer will be affirmed, where it appears that he was charged with insubordination and offensive conduct toward his superior officers, he was granted hearing before commission at which time he was represented by counsel, he heard witnesses testify against him and introduced evidence on his own behalf, and evidence sustained charges and justified action of commission in dismissing him. State ex rel. Schussler v Matthiesen (1946) 24 Wn 2d 590, 166 P2d 839.

City police officer refusing to take advantage of offer by city's attorney to continue hearing before city civil service commission on charges against officer, so that he could meet new evidence of misconduct not referred to in bill of particulars furnished by city public safety commissioner, waived right to complain of intro-

Note 6

duction of such evidence on appeal from judgment sustaining his dismissal by commission. State ex rel. Schussler v Matthiesen (1946) 24 Wn 2d 590, 166 P2d 839.

NEW MEXICO STATUTES 1978

ANNOTATED

Chapter 29: Law Enforcement

Pamphlet 49: 29-1-1 through 29-12-4

1979 REPLACEMENT PAMPHLET

Pamphlet 49 includes laws enacted through the First Regular Session of the Thirty-Fourth Legislature (1979) and annotations through 590 P.2d 1391, 438 U.S. 421, 561 F.2d 1346, 464 F. Supp. 393, 80 F.R.D. 751 and 1979 Op. Att'y Gen. No. 79-13.

THE MICHIE COMPANY
Law Publishers
CHARLOTTESVILLE, VIRGINIA

of the section and made other minor changes.

29-2-9. Probationary period; length; permanent commission; salary.

All new appointments as members of the New Mexico state police shall be for a probationary period of two years. During such probationary period such new members may be removed or suspended at the discretion of the chief of the New Mexico state police. At the end of two years of satisfactory service and upon recommendation of the chief and with concurrence of the New Mexico state police board, the appointee may receive a permanent commission as a member of the New Mexico state police. However, the probationary period may be extended beyond a two-year period upon the recommendation of the chief with the concurrence of the board.

The salaries of all members of the New Mexico state police, probationary and permanent, and that of the chief shall be fixed by the board.

History: 1941 Comp., § 40-209, enacted by Laws 1941, ch. 147, § 9; 1953, ch. 80, § 2; 1953 Comp., § 39-2-9; Laws 1977, ch. 257, § 25; 1979, ch. 202, § 20.

The 1979 amendment substituted "chief" for "director" in three places, inserted "and with concurrence of the New Mexico state police board" and "as a member of the New Mexico state police" in the third sentence in the first paragraph, added the last sentence in the first paragraph, substituted "board" for "secretary" at the end of the section and made other minor changes.

29-2-10. Promotions.

All promotions in the New Mexico state police to the rank of sergeant shall be made after written examinations; provided, however, that on such examination for the rank of sergeant, the record of the party seeking promotion as a member of the New Mexico state police and his length of service shall be given a weight of forty percent in such examination. All promotions above the rank of sergeant shall be made by the chief after concurrence and approval by the New Mexico state police board. The ranks of sergeant, lieutenant and captain shall be permanent unless established as an exempt rank by the chief with the concurrence of the board. All promotions above the rank of captain are by executive appointment of the chief with concurrence of the board and such persons shall serve at the pleasure of the chief with the concurrence of the board.

History: 1941 Comp., § 40-210, enacted by Laws 1941, ch. 147, § 10; 1953 Comp., § 39-2-10; Laws 1979, ch. 202, § 21.

The 1979 amendment added the catchline, inserted "to the rank of sergeant" and "for the rank of sergeant" in the first sentence, inserted "New Mexico" preceding "state police" near the middle of the first sentence and added the second, third and fourth sentences.

29-2-11. Disciplinary proceedings.

No member of the New Mexico state police holding a permanent commission shall be removed from office, demoted or suspended except for incompetence, neglect of duty, violation of a published rule of conduct, malfeasance in office or conduct unbecoming an officer, and only on specific written charges filed with the New Mexico state police board with timely and adequate notice thereof to the person charged, and after a hearing on such charges by the board. The person so charged has the right to be represented by counsel at such hearings. A complete record of the hearing shall be made and, upon request, a copy thereof shall be furnished to the person charged. Such person may require that the hearing be public. In the event the board determines that the person charged shall be removed, hearing shall be made and, upon request, a copy thereof shall be furnished to the person charged. Such person may require that the hearing be public. In the event the board determines that the person charged shall be removed, demoted or suspended for a period in excess of thirty days, such person may appeal from the decision of the board to the district court of the district wherein the alleged cause or any one of the alleged causes for the proceeding arose. Such appeal shall be filed within twenty days after the decision of the board is rendered and the court shall determine promptly whether there is substantial

evidence to support the board's action and dispose of the appeal accordingly. Such determination shall be made on the basis of the record except that, for cause shown, the court shall permit either the board or the person charged to introduce new evidence; provided, however, that the chief of the New Mexico state police may suspend members of the New Mexico state police for disciplinary reasons for periods of not to exceed thirty days. Any member holding a permanent commission thus suspended by the chief shall have the right to have such suspension reviewed by the board, but no further review or appeal shall be allowed.

History: 1941 Comp., § 40-211, enacted by Laws 1941, ch. 147, § 11; 1953, ch. 80, § 3; 1953 Comp., § 39-2-11; Laws 1970, ch. 5, § 1; 1977, ch. 257, § 27; 1979, ch. 202, § 22.

The 1979 amendment inserted "New Mexico" preceding, and deleted "division" following, "state police" in the first sentence and preceding "may suspend" in the ninth sentence, substituted "New Mexico state police" for "advisory" preceding, and deleted "and the secretary" following, "board" near the middle of the first sentence, deleted "advisory" preceding, and "and the secretary" following, "board" at the end of the first sentence, substituted "board" for "secretary" in the fifth, seventh, eighth, ninth, and tenth sentences, substituted "chief" for "director" in the ninth and tenth sentences, substituted "New Mexico state police" for "division" preceding "for disciplinary reasons" near the end of the ninth sentence and made other minor changes.

Compiler's note. — The fifth and sixth sentences inadvertently repeat preceding and following provisions and first appeared in Laws 1970, ch. 5, § 1, which amended this section.

Incompetence includes physical inability to perform. — Incompetence includes physical inability to perform, which inclusion fits in with the pattern and purpose of the statutory plan. A termination or removal for physical unfitness is no less final than one for another form of incompetence. Tafoya v. New Mexico State Police Bd., 81 N.M. 710, 472 P.2d 973 (1970).

Physical inability to perform constitutes voluntary resignation not governed by section. — Request by officer injured in line of duty who had used all his sick leave for leave of absence which was improper under Rule 7, regulatory rule promulgated by state police board, issued pursuant to 29-2-22 NMSA 1978, and his physical inability to perform the functions of his job as a senior patrolman, constituted a voluntary resignation, not a termination governed by this section. Bundgher v. New Mexico State Police Bd., 82 N.M. 787, 487 P.2d 489 (1971).

Officer must first pursue administrative remedy. — Police officer who was wrongfully dismissed and who claimed salary and other benefits must first pursue them administratively. Tafoya v. New Mexico State Police Bd., 81 N.M. 710, 472 P.2d 973 (1970).

Transcript expense may be incurred by board. — Such expense as is necessary may be incurred to enable the board to make a factual determination in a disciplinary proceeding. It would be absurd to vest disciplinary power in the board and then hamstring such proceedings by refusing to pay the necessary expenses thereof. For this reason, if in their discretion the board feels a copy of the transcript is necessary, such expenditure is permissible. 1957-58 Op. Att'y Gen. No. 58-212.

No moneys expended for transcript expense in appeal. — If a transcript is necessary for the board to weigh disciplinary action, the transcript expense would be expendable in the same fashion as the board might incur a different type of expense for the same purpose. On the other hand, if the expense of the transcript is to be incurred wholly or partially to assist in the appeal of a judgment rendered personally against a state policeman, then and in that event such moneys cannot be expended either from the budgeted line item of "professional services" or from any other public moneys appropriated to the department. 1957-58 Op. Att'y Gen. No. 58-212.

Board is required to meet statutory procedures when it desires to terminate office, and if this is not done consequently the severance from service is short of statutory right. Tafoya v. New Mexico State Police Bd., 81 N.M. 710, 472 P.2d 973 (1970).

Where doubts as to right to procedural safeguards. — Any doubt as to the right to procedural safeguards should be resolved in the officer's favor unless the right to remove at will or pleasure is clearly expressed. Tafoya v. New Mexico State Police Bd., 81 N.M. 710, 472 P.2d 973 (1970).

No hearing required when reduction in rank. — The procedures of advancement, not a promotion, and reduction in rank resulting from regulation providing that all ranks above captain will be appointments and not permanent enable the chief to shift key personnel to positions where their interest and ability are used to best advantage, without the necessity of a hearing by New Mexico state police board. Wimberly v. New Mexico State Police Bd., 83 N.M. 757, 497 P.2d 968 (1972) (decided under former law).

C.J.S. reference. — 81A C.J.S. States § 110.

29-2-12. Oath.

All members of the New Mexico state police and the New Mexico state police board shall take the oath of office required of all state officials.

History: 1941 Comp., § 40-212, enacted by Laws 1941, ch. 147, § 12; 1953 Comp., § 39-2-12; Laws 1977, ch. 257, § 28; 1978, ch. 82, § 3; 1979, ch. 202, § 23.

The 1978 amendment deleted "and bond" at the end of the catchline, and "and the director and such other members of the state police or clerical employees of the state police division may direct shall give bond in such amount as the division shall direct for the faithful performance of their duties" at the end of the section.

The 1979 amendment inserted "New Mexico" preceding, and "and the New Mexico state police board" following, "state police" near the beginning of the section.

C.J.S. reference. — 81A C.J.S. States § 91.

29-2-21. Details.

The governor of New Mexico may from time to time detail all or any part of the New Mexico state police to such part of the state as in his judgment may be necessary to bring about proper law enforcement in the state to handle disturbances or to investigate specific law violations.

History: 1941 Comp., § 40-220, enacted by Laws 1941, ch. 147, § 20; 1953 Comp., § 39-2-20; Laws 1977, ch. 257, § 36; 1979, ch. 202, § 30.

The 1979 amendment deleted "order the secretary of the criminal justice department to" preceding "detail all or any part" near the beginning of the section.

29-2-22. Rule-making power; rules to establish standards of conduct.

The New Mexico state police board shall have authority to make and promulgate rules and regulations for the purpose of carrying out the provisions of Sections 29-2-1 through 29-2-29 NMSA 1978. The New Mexico state police board shall establish by rules, from time to time, standards of conduct for members of the New Mexico state police and a copy thereof shall be delivered to each such member and displayed at each station of the department. Such rules shall be filed pursuant to the State Rules Act [14-3-24, 14-3-25, 14-4-1 to 14-4-9 NMSA 1978].

History: 1941 Comp., § 40-221, enacted by Laws 1941, ch. 147, § 21; 1953, ch. 80, § 5; 1953 Comp., § 39-2-21; Laws 1977, ch. 257, § 37; 1978, ch. 82, § 5; 1979, ch. 202, § 31.

The 1978 amendment substituted "state police director, with the approval of the secretary of the criminal justice department" for "state police director" near the beginning.

The 1979 amendment substituted "board" for "director" and "29-2-29" for "29-2-28" in the first sentence, in the second sentence, substituted "board" for "division" preceding "shall establish," substituted "New Mexico state police" for "division" near the middle of the sentence and substituted "department" for "division" at the end of the sentence and made other minor changes.

Board's authority to make rules controlled by statute. — Authority of the police board to promulgate rules and regulations must be found in and is limited by statute. Such authority is not limited to those powers expressly granted by statute, but includes, also, all powers that may fairly be implied therefrom. Winston v. New Mexico State Police Bd., 80 N.M. 310, 454 P.2d 967 (1969).

Agency's authority includes express and implied powers granted. — It is a fundamental principle of administrative law that the authority of an agency is not limited to those powers expressly granted by statute, but includes, also, all powers that may fairly be implied therefrom. Wimberly v. New Mexico State Police Bd., 83 N.M. 757, 497 P.2d 968 (1972).

Temporary rank adjustments within scope of powers. — Where New Mexico state police board has adopted a regulation providing that "all ranks above captain will be appointments and not permanent," and the officers who hold these ranks are given additional salary and emoluments, but these ranks, according to the record, are considered by the board and the department to be temporary, plaintiff's adjustments in rank from captain to major and major to lieutenant colonel were not promotions as such but were temporary advancements within the framework of administration of the New Mexico state police and both chief of police and the board acted within the scope of their authority under the laws of the state of New Mexico in adjusting plaintiff's rank from lieutenant colonel to major and from major to captain. Wimberly v. New Mexico State Police Bd., 83 N.M. 757, 497 P.2d 968 (1972) (decided under former law).

As well as regulation allowing director to shift key personnel. — The procedures of advancement and reduction in rank resulting from regulation providing that all ranks above captain will be appointments and not permanent enable the chief of police to shift key personnel to positions where their interest and ability are used to best advantage. Wimberly v. New Mexico State Police Bd., 83 N.M. 757, 497 P.2d 968 (1972) (decided under former law).

No authority for rule requiring mandatory retirement after 30 years. — There is no delegated authority for the state police board to promulgate a rule requiring mandatory retirement after 30 years of service; such rule would be unreasonable, arbitrary and conflict with the retirement by age 65 requirement of 29-2-6 B NMSA 1978. 1967 Op. Att'y Gen. No. 67-72.

And such rule is invalid. — State police board regulation providing for involuntary retirement of all police officers who had completed 30 years of service, even where such officers had not reached mandatory retirement age, exceeded statutory authority of the board and therefore was invalid. Winston v. New Mexico State Police Bd., 80 N.M. 310, 454 P.2d 967 (1969).

Effect of using all of sick leave. — Rule 7 of regulation promulgated by state police board filed pursuant to this section makes it clear that under no circumstances can an officer who was injured in line of duty but who has used up all of his sick leave be granted a leave of absence from the police department, and request for such leave constitutes a voluntary resignation. Budagher v. New Mexico State Police Bd., 82 N.M. 787, 487 P.2d 489 (1971).

29-2-23. Repealed.

Repeal. — Laws 1979, ch. 202, § 53, repeals 29-2-23 NMSA 1978, relating to the transfer of powers and duties in the bureau of identification of the department of justice to the technical services bureau of the

MEMORANDUM March 18, 1983

SUBJECT: Individual rights of peace officers (HB 200)

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee

FROM: James H. Lear
Legislative Counsel JHL

Steve Cramer of your staff has asked our office for a sectional analysis of HB 200 ("An Act relating to individual rights of peace officers").

HB 200 addresses the rights of a peace officer when subjected to an investigation that can result in four different types of sanctions. Those sanctions are set out in descending order of severity starting with conduct of a peace of officer which would subject the peace officer to criminal prosecution (sec. 18.65.530); followed by sanctions in the form of punitive action (sec. 18.65.531) and disciplinary action (sec. 18.65.532) against a peace officer by the employer of the peace officer instead of criminal prosecution; and a final sanction in the form of civil liability of the peace officer (sec. 18.65.533).

The rights of a peace officer during an investigation with those four different possible outcomes may vary slightly according to the severity of the outcome. For example, under sec. 18.65.530, a peace officer subject to criminal action is entitled to all of the rights granted the accused under law, but is also granted specific rights set forth for the benefit of a peace officer subjected to punitive action.

Sec. 18.65.531 establishes specific rights for a peace officer subject to punitive action that might not otherwise be available because the peace officer would not be charged with a criminal offense entitling him to the full panoply of constitutional rights. The specific rights are set out in eleven paragraphs as follows:

(1) The peace officer has a right to be informed of the nature of the investigation if instituted by the employing agency, or a formal written complaint if instigated by a complainant. The peace officer must also be informed of his rights under this section.

(2) The peace officer is entitled to have a witness or other person present to participate on behalf of the peace officer.

(3) This paragraph ensures that the interrogation or interview would not be an extreme imposition on the peace officer.

(4) Under this paragraph the peace officer would be entitled to compensation if interviewed while not on duty.

(5) This paragraph ensures that the peace officer would be free from harrassment during the interview and establishes that punitive action may not be taken against the peace officer for failure to answer questions unless he is informed that such failure could result in punitive action. The peace officer can exercise the right to remain silent if the peace officer's alleged conduct would be criminal.

(6) The peace officer may record the interrogation or interview and have access to the employer's tape recording, if any is made.

(7) This paragraph guarantees access to transcripts and other relevant information, including information in the peace officer's personnel file, if not confidential.

(8) This paragraph addresses the right of the peace officer to review adverse material before it is placed in the peace officer's personnel file and affords the peace officer an opportunity to respond to such material and have the response included in the peace officer's personnel file.

(9) The peace officer may not be compelled to submit to a polygraph examination.

(10) Certain personal information may not be coerced from a peace officer.

(11) The peace officer's locker space or other space assigned to the peace officer is free from unlawful search and seizure.

Under sec. 18.65.532 a peace officer subjected to disciplinary action has the same rights specified for a peace officer subject to more severe penalties in the form of punitive action, as outlined in the above eleven paragraphs. In addition, the peace officer has the right to have the personnel file purged of disciplinary proceeding matters within one year and is presumed to be innocent unless proven otherwise.

Under sec. 18.65.533 if a peace officer is subject to possible civil liability, the peace officer may exercise those same rights set out in the above eleven paragraphs and is entitled to have an attorney present at the peace officer's expense during the investigation.

Under sec. 18.65.534 a peace officer may not be subjected to any reprisals for exercising rights specified in this bill.

Section 2 of HB 200 amends AS 23.10.037(b) to provide that a police department may polygraph an applicant for employment but may not require a polygraph of an employee.

" in addition to the rights specified in AS 18.65.531"

ANALYSIS OF SB 115 AND HB 200

Sec. 18.65.531(1) (a) When a person is arrested by warrant or summons, a copy of the complaint is given to suspect.

(b) If not, arraignment is held within 24 hours and at that time he/she is advised of charges against him/her.

(c) At a minimum, when placed under arrest, an individual is informed verbally of charges.

(d) At a bail hearing, immediately after arrest, circumstances surrounding alleged offense are told to a magistrate/judge in front of the accused and on tape.

(e) If suspect is being interviewed prior to arrest, person is advised of the nature of the offense which promulgated the interview.

(2) (a) Right to have an attorney as per mirandar.

(b) Right of an employee to have a representative present in an interview which could lead to punitive action as per Weingarten, 420 VS 251 (1975) and Material Research Corporation, 262 NLRB 122 (1982).

(3) (a) Unless seriousness of offense requires otherwise, it is standard procedure to conduct an interview with suspect during the day or directly after work.

(4) Any employer that calls an employee in to work is required to compensate him/her under the Federal and State Wage and Hour Laws (although the state and political subdivisions are currently exempt).

(5) All suspects are allowed to take the fifth amendment and employees are not required to answer questions put to them by an employer in an interview. This section gives peace officers less rights in that it allows for punitive action to be taken if the peace officer fails to answer questions unless the conduct would be criminal.

(6) Same as criminal rules of discovery of evidence.

(7) Same as criminal rules of discovery of evidence.

(8) If a person is a suspect in a case and is found to be innocent, no record is kept in the state law enforcement computer. A peace officer, on the other hand, can have allegations put into his/her personnel file before it is determined that he/she is innocent.

(9) No other persons are required to take a polygraph and polygraph results, if voluntarily given, are not admissible in court.

(10) A peace officer is granted less rights than an other person with regard to potential conflict of interests, otherwise, the rights are subject to rules of discovery of evidence, the same as any other individual.

(11) These rights for all other persons exist and cannot be abridged unless a valid search warrant is obtained.

Sec. 18.65.532 (3) All persons are presumed innocent until proven guilty.

TAX RULINGS

With Pocketbook Impact—

IRS powers. Taxpayers who take a "who will ever know" attitude in filling out tax returns need to note the awesome powers granted the Internal Revenue Service to protect federal income.

When the IRS denied many deductions claimed by Daniel Leimel and demanded $2,287 in added taxes, Leimel petitioned his case to the Tax Court. The IRS then proposed a conference to let him present his evidence. Leimel appeared but offered only a few miscellaneous receipts. He ignored other IRS requests for evidence and spurned a Tax Court order setting a deadline for production of proof. At trial recently, he tried to present evidence allegedly substantiating his deduction claims. Now, in a brief decision, the court has excluded that evidence and sided with the IRS.

Commuting. A worker may manage to deduct some of his cost incurred in driving to work in order to carry the tools of his trade, but only if he can prove costs that he would not have without the need to transport tools.

Alonzo McLaughlin, Jr., obviously needed to drive his car in order to take 75 pounds of tools. And in court he argued that, otherwise, he would have taken the Long Island Railroad to work. So he deducted the difference in cost. But now the Tax Court has ruled that McLaughlin failed to show that he drove to work only because of his need to carry tools.

Note: Even if he had convinced the court, his deduction would be limited to the difference between his driving cost with the tools and driving without them.

Pregnancies. Sick-leave pay during normal pregnancies is no longer exempt from Social Security payroll taxes, the IRS points out in a new ruling that implements tax amendments recently enacted by Congress. Effective January 1 of last year, such payments during the first six months of absence from work are taxable.

Court and Government Decisions With Impact on Business, Employes, Consumers

CHEMICAL HAZARDS to unborn children must be amply demonstrated before fertile women can be barred from certain jobs, decides a U.S. appeals court in remanding a case for further consideration. The policy of the Olin Corporation in excluding women of childbearing capacity from areas where hazards to fetuses may exist must be objectively justified, says the court. The company must show, it concludes, that support for its view is so considerable within the scientific community that an informed employer could not responsibly fail to believe that its opinion might be the accurate one.

A SEX-BIAS finding does not entitle a victim to automatic back pay or promotion, finds a U.S. appeals court. A female school administrator, not considered for an opening because of her sex, is denied back pay and promotion, because the Greenwood, S.C., school district shows that two other women would have been selected over her.

A COURT ORDER specifying how the Labor Department must carry out an affirmative-action program is denied because a U.S. district court says it cannot second-guess the department's discretionary conduct. The order was sought by black workers unhappy with government handling of an affirmative-action program for the Philadelphia construction industry. While not enforced to the degree the workers would have wished, the record does not justify judicial intrusion, holds the court.

DISABILITY BENEFITS may not be ended because an employe's union goes on strike, decides the National Labor Relations Board. Conoco's contract with employes ruled out disability payments during strikes. But the NLRB rejects this, determining that employes on disability before the strike are entitled to payments until their disability ends or benefits are exhausted.

DISCLOSURE LAWS requiring public access to family finances of nonpolicymaking city employes are unconstitutional, holds a U.S. district court. A challenge to a New York City disclosure law by firefighters and police officers is upheld. The court finds that "Americans do not lose their right to privacy by accepting public employment." It adds that at times reasons for the public to know may exist, but these must be stated before information is dispensed.

FAILURE TO REPORT that a hospital patient took the wrong medicine is not ground for a nurse's dismissal, finds an arbitrator. A patient nearly died after a nurse, who knew he had been given the wrong medication, failed to mention the mix-up. Noting favorable endorsements from three doctors, the arbitrator rules that the nurse be reinstated but that any subsequent serious error will justify her discharge.

PUNITIVE DAMAGES are recoverable from the estate of a dead person, decides the West Virginia Supreme Court of Appeals. While traditionally courts deny such damages because "the dead cannot be punished by earthly judgment," the state court finds punitive damages serve other important functions, for example, providing benefits to injured parties and serving as a deterrent to others.

REVISED PAY and work rules at federal projects are struck down by a U.S. district court. The changes ordered by the administration would have allowed 2 semiskilled "helpers" for every 3 journeymen at federal projects and excluded wage rates at federal work sites or adjacent metropolitan areas as factors in determining rates for rural areas. The court, however, allows a change in the criteria for "prevailing wage rates"—from wages being paid to at least 30 percent of workers to wages being paid to a majority of workers. The revisions had been designed to save 600 million dollars annually.

Conclusions expressed here are based on decisions of courts, government agencies and Congress. For reasons of space, these decisions cannot be set forth in detail. On written request, U.S.News & World Report *will refer readers to the basic material.*

Sec 18.65.530 If the complaint against the officer causes criminal action, the officer has all the rights afforded any other defendant in a criminal investigation

Sec 18.65.531a When the investigation is internal or criminal charges could evolve and punitive action may be taken then the following shall apply:

(1) The officer shall be informed of the allegation or given a copy of the complaint when first interviewed.

(2) The officer can have a person of their choice present at each state of the investigation.

(3) Interview will be during the officer's on duty time unless the seriousness demands otherwise.

(4) If the officer is called in when off duty, compensation will be given at the regular rate.

(5) If the allegation is criminal in nature the officer has the right to remain silent. If the allegation is not criminal and if founded would result in employing agency internal punitive action; days off, written letter, etc., the officer will be informed that to not cooperate with the investigation in itself could result in punitive action, but the officer will not be subject to adverse language.

(6) Either party has the right to tape record any interview and both will have access to those tapes.

(7) The officer can have a copy of all material within the investigation except that of confidential nature.

(8) Adverse information must be signed by the officer and a copy provided to the officer prior to that being placed in the officer's personnel file. The officer has 30 days to file a response. All unfounded complaints or information must be promptly removed from the officer's personnel file.

(9) If the officer declines a polygraph examination in any investigation, this cannot be used or held against the officer and no record of that can be kept.

(10) Personal matters of the officer's will remain so unless the employing agency is looking into possible conflict of interest with respect to official duties and all matters are subject to rules of discovery of evidence.

(11) The right of privacy and the expectation of such with regards to assigned lockers, briefcases and sole use areas is the same as assigned school lockers, gym lockers, and a student's book bag.

Sec 18.65.532b Action taken by the employing agency which is noncriminal in nature; days off, dismissal, reprimand, etc.

Sec 18.65.532a When a complaint filed if found to be true will result in only disciplinary action. No criminal.

(1) The officer has all the rights in Sec 18.65.531.

(2) Any record of disciplinary action must be removed after one year.

(3) The officer is presumed innocent until guilt is proven.

(3b) If the complaint is founded, disciplinary action may be taken by the employing agency against the officer but does not apply to minor on the spot admonishments.

Sec 18.65.533 If the officer under investigation may be subject to civil liability the officer can:

(1) Excerise the rights in Sec 18.65.531.

(2) Have at the officer's expense, an attorney present in all investigative steps.

Sec 18.65.534 No officer will suffer reprisals or be in anyway disadvantaged for exercising any rights in Sec 18.65.531 thru 18.65.533:

(1) As evidence against the officer in any proceedings.

(2) Cannot be used to change the officers work schedule, wages or working conditions.

Sec 2 AS 23.10.037b Excludes peace officers from polygraph examinations after being hired and employed by any agency. Still allows for preemployment polygraph examinations.

Individual Rights Under	Prisoner Rights Under

SEC 18.65.532.3	7AAC 60.455
SEC 18.65.533.2	7AAC 60.440e
SEC 18.65.534	7AAC 60.480 c & h -- No execution of punishment until appeals are complete.

The following items are taken from 7 AAC 60.400 - 480 which governs DISCIPLINE of a prisoner in a state institution:

7 AAC 60.400	Prohibited conduct Major infractions are listed as homicide, rioting, etc. High Moderate infractions are listed as fighting, stealing over $100 value, sexual acts, etc. Low Moderate infractions are listed as indecent exposure, stealing more than $50 less than $100 value, false statement, etc. Minor infractions are listed as gambling, stealing or damaging state property under $50 value. It should be noted that those infractions contained in Low Moderate and Minor are same as misdemeanor crimes.
7 AAC 60.405	States that any infraction must be reposted to the superintendent and that those of a Low Moderate or Minor nature may be handled by a staff member informally (non-criminal) or referred to the superintendent for formal action.
7 AAC 60.410	If formal disciplinary action is to be taken, a report is to be written citing the rule violated.
7 AAC 60.410 (c)	A copy of the disciplinary report must be given to the prisoner no later than five working days after the infraction occurred.
7 AAC 60.410 (e)	If no hearing is scheduled for the infraction, the prisoner is to be treated as not guilty and all reports are to be removed from his institutional file.
7 AAC 60.415	A prisoner must have 48 hour notice prior to his disciplinary committee hearing.
7 AAC 60.415 (c)	After the notice of a hearing, the prisoner must inform the committee in writing of any witnesses or evidence he wishes to introduce.
7 AAC 60.420 (b4c)	The accused prisoner or his advocate may call witnesses or introduce evidence.
7 AAC 60.420 (c2)	The disciplinary committee must consider the evidence the prisoner or his advocate present.

7 AAC 60.425 (b) The accused prisoner can postpone his appearance before the disciplinary committee for two working days.

7 AAC 60.430 (a) The accused prisoner can present witnesses or evidence at any hearing.

7 AAC 60.440 (b) The staff advocate may be from correctional offices, institutional counselors or probation officers.

7 AAC 60.440 (e) The accused prisoner has a right to counsel in any hearing where felony prosecution may result. The felony prosecution is eliminated if the district attorney indicates in response to an injury under Section 460 of this chapter that no felony complaint will be filed.

7 AAC 60.455 A prisoner is presumed innocent of the infraction and the institution has the burden of establishing guilt.

7 AAC 60.460 The superintendent will notify the district attorney of any infraction which if found true would constitute a violation of a felony criminal statute.

7 AAC 60.465 If the prisoner is found to have not committed the infraction, the disciplinary report and any other documentation which mentions the incident must be removed from the prisoner's file.

7 AAC 60.470 Punishment: The disciplinary committee will impose at least one and may impose any or all the penalties in this section. Some examples are:

1. Reprimand
2. Suspension of activities
3. Confinement to punitive segregation

The following items are taken from 7 AAC 60.485 - 505 which govern SEGREGATION in a state institution:

7 AAC 60.485 A prisoner may be temporarily assigned to administrative segregation under different reasons, one of which is, the prisoner represents a substantial immediate threat to the security of the institution or requires protective custody.

7 AAC 60.485 (b) Prisoners assigned administrative segregation must be immediately informed of the reason.

7 AAC 60.485 (c) The prisoner will be granted a hearing no later than three days after he is placed in segregation.

7 AAc 60.485 (e) The prisoner is entitled tc written notice at least 24 hours in advance of the hearing, can have a staff advocate at the hearing, offer evidence, present witnesses and cross examine witnesses.

Honorable Jan Faiks
Alaska State Senate
State Capitol, Pouch V
Juneau AK 99811

Dear Jan:

A couple of weeks ago I was seated next to Joe Hayes on a flight down from Fairbanks, and had a chance to discuss with him some ideas I have had about reinforcing the criminal justice system in Alaska, which is now in such disarray. I have followed up on the discussion by sending on to Joe some material I had prepared several years back on providing some legislative limitation on the courts' application of the so-called 'exclusionary rule', which bars the use of criminal evidence seized under circumstances which a court may later determine violated a defendant's right against 'unreasonable search and seizure'. The courts have been extremely restrictive in allowing use of emidence taken without a warrant, even though the officer may have been acting in good faith at the time it was taken. The time is long overdue for legislative bodies to take the matter in hand and provide some definition of what a 'reasonable search' is, and I submit that legislation along the lines suggested in Fritz Pettyjohn's SB 49 ought to be strongly supported. Since I don't have a copying machine at home, I would hope Joe Hayes could have any of the material I sent him made available for your use and that of other interested legislators.

My 15 years on the bench strongly persuaded me that the Indispensable component of an effective criminal justice system is a professional police organization. I feel that Anchorage is fortunate in having such an organization serving the community. Like any large organization there are morale and personality problems present in its continuing function, which Ifeel deserve attention. I have a good friend of many years' standing who is serving on the legislative committee of the Anchorage Police Officers Associaton, who tells me there is some dispute with management over a policy requiring officers to submit to a polygraph examination under certain circumstances, under pain of discharge from the force if he/she refuses. The Association is supporting a Peace Officers Bill of Rights which, if enacted by the Legislature, would bar such practise.

My experience judicially with the polygraph dictates my conclusion that the Association's anti-polygraph position is correct. I researched the question thoroughly several years ago when I was assigned for retrial the case of State v. Fageriak, in which refusal of a key witness to submit to a pre-trial polygraph became relevent. I found that only a few jurisdictions

permit any reference to the polygraph in any circumstances, and then, only under the most stringently controlled limitations. It is never allowed as evidence against a criminal defendant. Interpretation of polygraph results is a highly subjective matter with the individual operator, subject to widely swinging variations in results. It is patently unfair to require a police officer under investigation to submit involuntarily to a test like this, particularly after a highly stressful incident, such as shooting at a suspect, when the officer's emotions could substantially affect the result. I suspect that the APD policy requiring the test, in fact, may violate the 5th amentment of the U S Constitution. Any bold lawyer who suggests otherwise can't show an Alaska case supporting his position.

The polygraph does have useful functions, when voluntarily taken by suspects to assist in deciding if they should remain under suspicion, and also as a pre-hiring management tool in interviewing applicants for sensitive positions (including police officers). An officer under investigation might even wish to have a polygraph examination to assist with the investigation, and in clearing himself, but such uses involve no due process questions. I hope, if you have an opportunity to consider this question, you will give my comments careful consideration.

There are also other bills pending on other matters of concern to peace officers safety: HB 100 and companion SB 24, which includes causing physical injury to a public safety officer among the acts constituting (felony) third-degree assault. Also, HB 2, a sentence-enhancing proposal, provides for substantially increased sentence, without probation, if a person uses 'armor piercing' ammunition in a gun while committing any crime of violence. Badly needed legislation.

Shirley and I were delighted that your campaign was successful, and that you have the opportunity to serve our interests in Juneau. Best of luck!

Sincerely,

Eben H. Lewis

Dear Mr. Stirling:

The Anchorage Native Caucus supports and endorses HB 200 and SB 115. We believe that no person should be discriminated against because of race, religion, or occupation. Individual protection under the law should be equal for all people.

The above endorsement was passed by vote of our membership on March 2nd, 1983, during a regularly scheduled meeting.

Please keep us informed of the progress of these pieces of legislation and if we can be of further assistance please do not hesitate to call me at 278-4787.

Sincerely,

Clifford A. Black
President

801 W. Fireweed, #102
ANCHORAGE, ALASKA 99503

3-10-83

TO: Members of the House Judiciary Committee

Dear Legislators,

As president of the 270 person Anchorage Firefighters Union I wish to inform you of the total support of our union for House Bill 200.

We believe that Peace Officers and other emergency responders should enjoy the same rights as other citizens, and should not be subjected to interrogations of a type that are not admissible for the very people these officers protect, at great personal risk. It is interresting to note that the Anchorage Fire Department in a current review of their personnel rules and regulations is proposing polygraph examinations for firefighters and paramedics, as well as support personnel working for the department.

In the interest of protecting the rights of all citizens of our state, I would strongly urge your support for the passage of HB 200 into law.

Sincerely,

John Kiewik, President
Anchorage Firefighters Union
Local 1264, IAFF

Anchorage Crime Commission

Mr. James Stirling
Anchorage Police Department Employees' Association
701 West 58th
Anchorage, Alaska 99502

Dear Mr. Stirling:

The Anchorage Crime Commission is pleased to inform you that the Board of Directors, at their March 7, 1983 meeting, unanimously voted to support HB200 and SB115, an act relating to individual rights of peace officers.

It is our belief that the constitutional right of due process should be afforded to every citizen and not be denied to peace officers because of their occupation.

You may use this letter of support to communicate the Anchorage Crime Commission's position on this issue.

Sincerely,

I. "Ski" Olsonoski, Chairwoman
Anchorage Chamber of Commerce Crime Commission

Requestor: House Finance Committee

1. Estimated fiscal impacts on:

a. Expenditures:

(Thousands of Dollars)

				FY 83	FY 84	FY 85	FY 86		
Capital									
Operating									
Total									

b. Revenues:

Revenue									

2. Source of funds to offset fiscal impact of bill:

No information provided.

3. ASSUMPTIONS: This bill gives peace officers who are the subject of internal disciplinary investigations broad substantive and procedural rights, even during investigations of conduct which may constitute a crime. Passage of the bill will seriously impair a police agency's ability to conduct investigations of police officers who are accused of criminal behavior. Requirements such as advance written notice of the commencement of an investigation and giving the officer evidence as it is gathered during the course of the investigation would substantially interfer with the course of an investigation. It is estimated that passage of the bill would have little or no fiscal impact on the Department of Law, other than it would preclude criminal investigations in situations where an investigation would be instituted under current law.

4. Disclaimer:
This statement has not been reviewed by the OMB in the Office of the Governor. It therefore does not represent the final estimate of fiscal impact.

Dear Mr. O'Neill:

Thank you for your letter of March 17, 1983, inquiring about legislation regarding the uses of the polygraph.

During testimony taken at committee hearings in the House Judiciary Committee an operator of a polygraph testified, Richard Potter, Anchorage Police Department, 701 W. 58th Avenue, Anchorage, Alaska 99502, phone 561-1158, regarding the polygraph and its uses in the State of Alaska. He also remarked about its history.

If we can be of further assistance, please do not hesitate to contact us.

Very truly yours,

Representative Charlie Bussell

Dear Representative Bussell:

A recent Anchorage Times article indicates that there is some legislation pending concerning the Polygraph. Would you please send me a copy of the bill and/or any information relating to the Polygraph, Polygraph Examiners and use of the Polygraph.

I would like to be advised when any hearings are set on anything relating to Polygraph and may wish to testify.

Thank you for your attention to this inquiry.

Sincerely,

R. Michael O'Neill

PROFESSIONAL ENGINEERS IN PRIVATE PRACTICE

- Alaska Chapter -

11 March 1983

Dear Representative Charlie Bussell
Pouch V
Juneau, Alaska 99811

Dear Representative Charlie Bussell:

Our organization at its March 9 meeting voted to send you this letter requesting your support of HB No. 211. This bill provides for State agencies to award contracts for professional services on the basis of competence and qualifications rather than low bid. We feel that sufficient competition exists in Alaska due to the large number of qualified firms ready to do business that a low bid procedure will not increase competition.

Rather, we feel that bidding will drive all efforts to the lowest common denominator, which will result in the barest minimum contract documents being supplied to clients. This in turn will result in much larger costs 'downstream' when the construction contract is awarded and the Contractor must either bid high to cover himself for deficiencies in the contract documents, or apply for extras afterward to cover specified items just to finish the project.

Thus, more poorly engineered projects at higher total cost will result which are not in the best interest of the general public. We feel that the health, welfare and safety of the general public is best served by the passage of this bill and urge your support.

Sincerely,

Professional Engineers in Private Practice

Kenneth J. Huseby, P.E.
Chairman, PEPP

Subject: House Bill 211

Dear Mr. Furnace:

I want to thank you very much for the time that you spent with myself and Mitch Gravo last Thursday, March 17, working with House Bill 211. I believe that your interest and effort during the mark-up process will be helpful in the progress of the bill. After mark-up, the revised wording made the changed version a more palatable document than that which was originally proposed. However, the clarity of the bill's intent and the problems of some of the using agencies as imposed by the regulations built into the document, as we expressed to you, continue to make it awkward.

After more lengthy and rational study of the effect of the effort we put in on Thursday, I believe that some additional refinement, change in wording, and clarification, including the word flow in the bill, will be essential as it progresses through the legislative process with the ultimate objective to develope a final form that will be acceptable to the using agencies and the architects and engineers whose contracting-selection methods are directly affected by the bill.

Again, we appreciate very much your time and interest spent with us, and we look forward to the successful movement of the bill out of your committee.

Very truly yours,

Re: CS HB 211 (L&C)

Dear Charlie;

I must apologize for being remiss in acknowledging the hospitality you showed Vlad Paten and me on March 20th. It was appreciated.

I also want to thank you for the materials forwarded on the Labor and Commerce Committee hearings on HB 211, and the L&C Substitute. The info points out several areas in which there is a chance for misunderstanding by others who will be looking at the bill in committee and on the floor.

I do wish that I would have been able to attend the March 21st hearing when the question regarding the pending US DOJ suit was broached. With the research I've done and contacts with the NSPE Legal staff, it was evident that Mr. Barry was transmitting the information given him by the AG's office. That info is short on complete facts involved, with the latest case history omitted. It is understandable that the relation between the suit and HB 211 would come up. In my opinion, however, the DOJ suit is irrelavant to the purpose and importance of HB 211.

The form of CS HB 211 (L&C) forwarded to your committee is virtually the same as originally introduced, with the only change being made on page 1, line 12, by addition of "AS 36.98.010(3)". Without this change it would appear that the bill would have been a "catch 22" situation.

The only change I would suggest in the bill is on page 1, line 29, where it states, "(c) Subject to the criteria in (c) of this section..." I think that there was a typographical error and it should read, "(c) Subject to the criteria in (b) of this section,..."

Do you anticipate committee hearings on CS HB 211 (L&C) this session, or before the next session? If so, I would appreciate advance notice in order to schedule an appearance and to notify others.

Sincerely,

Don

File: Legislature - 1983 - House Bill 211
(Prohibition on Competitive Bidding
for Engineering, Architectural and
Surveying Services)

Ladies and Gentlemen:

Committee substitute for HB 211 (L & C) would prohibit municipalities from discussing with engineers, architects and surveyors the cost of their services prior to selection of the person or firm to do the work. In addition, it would require the municipality to select the person or firm "best qualified to perform the desired work" based on considerations of competence and qualifications.

If adopted, this Bill would have the effect of requiring municipalities (and the State of Alaska) to use the larger and more prestigious architectural and engineering consulting firms. These are the same firms which, because of their prestige are able to command a higher fee. When a municipality seeks the professional services of an engineer for a simple engineering job that can be done by anyone with a license, it will still be required to select the person or firm best qualified. This will only insure that our projects cost more as we will be hiring more expensive talent than is required to accomplish the job.

The idea that professionals, whether they be physicians, lawyers, or engineers, should not be permitted to compete with each other, particularly on price, has been thoroughly discredited in recent years. Even the United States Supreme Court in National Society of Professional Engineers v. U. S., 98 S.Ct. 1355 (1978) rejected out of hand the idea that this scheme was necessary to assure public safety or to avoid engineers submitting deceptively low bids. The municipality and the state are both charged with protecting the public health, safety and welfare. The legislature should permit municipalities to determine for themselves, in each case, how best to protect the public health, safety and welfare when it selects engineering and architectural professionals. Indeed, one should be very suspicious when the industry itself proposes that its contracting procedures be regulated for public safety, especially when the proposed regulation would have the effect of raising the price of those services and limiting the number of firms and persons that could provide those services to the state and municipalities. Not only is the Bill unjustified as a matter of public policy, it will probably create unnecessary work for attorneys. For lucrative

contracts, there are likely to be challenges of determinations by the state and municipality as to which firm is the "best qualified." In addition, once the "best qualified" has been selected, there are likely to be challenges of what is a "fair and reasonable price" for the work. This will probably be rather difficult to prove because the municipality is not permitted to inquire what others would charge for the work in the process of selecting the firm or person. It appears that the municipality and the state will merely be at the mercy of the "best qualified" architectural and engineering firms in the state.

The spector of liability both for inadequate or unsafe design work hangs over every architect, engineer and surveyor when he provides professional services. This probably provides more incentive to do safe and adequate work than the amount of compensation being received or the method by which that compensation is determined. In addition, it would seem that if there isn't, there should be a canon of ethics for such professionals that requires them to produce designs which are safe and adequate. Also, it would seem that the licensing process (which is controlled by the profession) should be structured to insure that only those who are competent are licensed. Problems of adequate performance should be solved by the profession at the licensing level, not at the contracting level.

We urge you not to pass this Bill out of committee.

Sincerely,

Lee Sharp

April 26, 1983

Mr. Charlie Bussell, Chairman
House Judiciary Committee
House of Representatives
State of Alaska
Pouch "V"
Juneau, AK 99811

Subject: House Bill 211

Dear Mr. Chairman:

You have before you House Bill 211 which has passed from Labor and Commerce Committee after considerable testimony and deliberation. The bill was altered measurably from its original version, and then realtered back to a form which is similar in nature to the original bill. The bill, as now represented, is acceptable to us with one recommended alteration. It is our suggestion that under Section 1., Paragraph C., Line 2 on Page 2, that the words "is not required" be deleted and the words "may be established" be added.

Twenty-one states have currently adopted laws calling for the selection of architect/engineers based on qualifications, and another twenty either prohibit or exempt architect/engineers from general bidding requirements.

We believe that architectural and engineering services should be obtained through a selection process that ascertains the qualifications and capabilities of interested A/E's to design public works projects. Fair and reasonable fees should be established by negotiation after selection and discussion of scope of work. It is not in the best interest of the public and, in some cases, public safety to obtain these services by price proposals or competitive bidding.

The procurement of professional services provided by members of the learned professions has traditionally been considered apart from technical and other tradespeople. The competitive bidding concept, which may work well for bidding work of the trades, cannot function properly for securing professional services The concept does not provide appropriate consumer safeguards.

PRESIDENT W.E. Sloan, CREWS, MACINNES & HOFFMAN/VITRO
VICE PRESIDENT C.W. Tryck, TRYCK, NYMAN & HAYES
SECRETARY A.R. Jacobs, ANDERSEN-BJORNSTAD-KANE-JACOBS
TREASURER S.E. Clark, ARCTIC ENVIRONMENTAL ENGINEERS

Rather, it encourages poor use of public funds, since the importance of "value received" is subjugated to "money spent." The risk of making any selection on the basis of a lowest common denominator when the stakes are the highest, as they are here in Alaska, seems to us to be just converse to the results that must be achieved when considering in projects design in Alaska.

Many of the benefits of A/E services must be measured against final construction and operating costs of the facility or structure. Costs that are not clearly determined until after the A/E services have been completed. Injecting price in an initial selection may lower the A/E fee and time spent, but it will also most likely lower the quality of the final product, since price competition can inhibit the ability of the A/E to provide full cost saving services due to inadequate compensation for innovative and thorough work. It may even cause more talented A/E firms not to offer their services, thus lowering the overall quality of the services available to the agency. Thus, the public is not well served.

We believe the process of competitive selection for architect/engineer firms in the State of Alaska makes even more sense than the same considerations in any of the other 49 states. As you are all aware, our state has more unique and diverse needs than any of the other 49. Alaska has many varied climatological zones and sensitive environmental factors that must be considered during the design of any project. The environmental problems are significant enough and are further complicated by the committee hearings, committee review, agency reviews, maintenance considerations, operation costs, maintenance complexities, and in many of the bush areas, a lack of qualified maintenance personnel. In order for these problems to be met effectively, the only rational method from which to make a selection of an A/E firm is by addressing the qualifications of the responding firms and selecting the highest ranked firm on the basis of those qualifications. Only then, based on the quality and experience of the selected A/E firm, can the project design objective be effectively met and the public resources most effectively protected.

We believe that House Bill 211 provides for those measures and protection, insuring that the public need, through the use of competitive selection, will be most successfully met. I urge your positive consideration of House Bill 211.

Respectfully Submitted,

Walter E. Steige, P.E.
CECA President

WES/wlf

HOUSE LABOR & COMMERCE
STANDING COMMITTEE MEETING
RE: HOUSE BILL NO. 211
March 18, 1983

TAPE #38 (Side A)

Number 003 Chairman Furnace: Today is 3/18/83. The present time is 8:50. The House Labor and Commerce is now in session. The legislation for consideration this morning is House Bill 211 and that's related to contracts for architectural, engineering and land surveying services and providing for an effective date. Let the record show that those members present are: Representative Wendte, Koponen, Ringstad, Cowdery and Chairman Furnace. Is Representative Uehling out of town?

Number 015 The reply is that he's in Anchorage today.

Number 017 Chairman Furnace: The purpose of the meeting this morning is to hold the initial hearing on House Bill 211. I understand that there is a number of persons to be heard. And I'd like for at this time ... let's see the list ... Jeff?

Number 022 Jeff Barry: Yes, Sir?

Chairman Furnace: Do you have the list of persons to be heard?

Jeff Barry: I'm getting it.

Number 027 Chairman Furnace: Okay, now let's see now. Okay, why don't you given me the first couple of names. Representative Bussell did you want to address this issue?

Number 028 Representative Bussell: No. Thank you, Mr. Chairman, no I don't. I'm here as an observer only. Thank you.

Number 030 Chairman Furnace: Thank you. ... The first person to be heard this morning is Mr. Walter Steige.

Number 046 Walter Steige: Steige.

Chairman Furnace: You want to come before us then? State your last your last name and for the record would you represent.

Number 050 Walter Steige: My name is Walt Steige. The last name is spelled S T E I G E. I represent the Consulting Engineers Council of Alaska. We are the persons most notably responsible for bill being considered today and as it is our thrust that prompted its introduction. I have beside me, and you may or may not have, the general copies of the testimony I have prepared for today and those of you that do not have copies of this document, and I understand some of you may, I would like to see that you do have a copy.

Number 064 There is discussion on the copies of Mr. Walter Steige's prepared testimony.

Number 068 Walter Steige: It's not my intent to review word-for-word from this document perhaps but I do want to highlight some of the principal areas that I mentioned here. In representing Consulting Engineers Council of Alaska I should tell you that that group currently represents 32 engineering firms within the State of Alaska and within those 32 firms approximately 500 employees. The bill we are considering today as introduced, House Bill 211, is referred to by many as Mini-Brooks Bill and that support that we're asking, and we represent for this particular bill as introduced, does not only comes from ourselves but the Alaska Chapter of the American Institute of Architects and other selected professionals who you may have heard from by way of telegram, telephone calls, letters, and so on. The bill today has reference to architects, engineering and land surveying; you will notice that in the amended draft for Section 1 that you will have perhaps seen, or will see this morning, the provision for land surveying has been removed from the place of that revision so that it only speaks to architectural and engineering services. In the definition of architect, engineering and land service taken from the Federal Brooks Bill that that action is defined in the last page of this amended version. And it's our intention only that the surveying be considered as a part of the design services that an architect or engineer might otherwise provide. So it's not spoken to directly and it's only our desire that that incidental services cover those portions of land surveying that fall within the general design requirements of the professional when he is performing his work.

Number 113 There is discussion on the amendment.

Number 127 Walter Steige: In the general sense for your background at this time 21 states have adopted laws calling for the selection of architects/engineers based on qualifications, and another 20 either prohibit or exempt architects/engineers from general bidding requirements. The thrust of this particular act is to select engineering and architectural services from the basis of qualification and not dollars, and we'll discuss that a little bit further. The remaining states, with the exception of Maryland, leave the selection procedure up to methods developed by various agencies within the states and the predominance of which makes selection by qualifications. The one state, Maryland, which has adopted bidding which makes price a basis for selection in that state that procedure is not proving to be overwhelming satisfactory. Of course, the score is not totally in yet; it's only been in operation in Maryland for about 6 years now, 6 to 7 years, but in any event it is not proving to be from their perspective the best way to proceed. Architectural engineering services we believe should be obtained through a selection process that highlights qualifications and capabilities as the number one priority. I think many of you

are probably familiar with but I'll review that architects and engineers are professionals from what's termed 'the learned profession' and to practice in this State the individual must be licensed through written examination, reviewed by their peers, in other words the Board of Registration, they must have minimum background of experience in the direction of qualified practitioners. Consequently, the members of these professions exercise judgments and make decisions only after thoroughal assessment, analysis, calculation, research and investigation of the problems. One of the areas, and I should point out and maybe you've already noticed in this material I've handed you, I have some attachments to that which you might find interesting reading which gives some view what others have done and some perspective from other areas on this particular problem we're addressing today. I want to add that the contracting authority, purchasing agent, individual owner, cannot in our opinion, without prior discussions of intended scope of work with an experienced architect or engineer, establish in detail the efforts that the professional must expend to achieve the required results in a project. The competitive bidding for professional services does not provide consumers safe guards. We believe it encourages poor use of public funds since the importance of the value received is subjugated to monies spent. You will notice in this particular attachment I've included an article written by a gentlemen, Mr. Charles Avara, who represented Baltimore City in the Maryland Legislature, and you might find his comments rather interesting. One of the comments that he makes, which I would like to share with you, which he says and I'm going to quote this: is inheriting AE services and not generally for other types of services is the extent to which quality can effect the ultimate efficiency, effecting the economy of the facility or structure. Consider the cost of the design portion of the project compared to the overall project costs. The report by the U.S. General Accounting Office states that design costs represent a very small portion, probably less than 1% of the cost that will be incurred over the life of a building. And I think I'm going to add that that's very key to this issue today, when they say the 'life of a building', in Alaska that's means the loss that goes into operation and that you're all aware of operating our facilities because of the high cost in this State are very germane to the issue. He also notes that the decision made during the expenditure of this, less than 1% determines pretty nearly all costs that follow. And, of course, we believe that's very true, more so in Alaska probably than any of the other states. We believe that that, of course, that price is definitely a factor in the cost in the competitive negotiation process, and by the time the number one rank firm reaches the negotiation table, and that's the thrust of this bill that you're looking at today, that selection by the person, the firm, that you're considering his ability to perform his qualifications being the foremost major of his ability to perform. So that by the time that first rank firm reaches the negotiation table with the representative agency that firm, as

well as the agency, can collectively define this scope of the project being requested. And, of course, at the end of that process then the selected firm has examined all the requirements that have, that he's been able to identify, and that then can provide a basis for which a fee can be determined, until that appropriate scope of work is accomplished with the agency and with the client there's no practical way that that price can really enter the picture until that process has been achieved with the client. The process in the bill says that whoever the agency is can if they're not successful in dealing with the first firm in terms of arriving at a fair and equitable cost, first ranked firm, then they can break off negotiations and go to the second firm, and then the third firm. And we believe that that in itself provides the sufficient competitive nature to see that fair and reasonable costs are achieved through this process. I would like to summarize, particularly at this point, that we believe the process of competitive selection for architect/engineer firms in the State of Alaska makes even more sense than the same considerations in any of the other 49 states. As you are aware, our State has more unique and diverse needs than any of the other 49. Alaska has many varied climatological zones, sensitive environmental factors, that must be considered during the design of any project. Environmental problems are further complicated by the problems of dealing with the many codes and regulations, we have budget constraints, and we have many, many, many hearings and processes which we use, we have to address life safety issues, multiple use, life cycle costs, alternate energy uses, operational costs, maintenance complexities. And, of course, maintenances, the maintenances, maintenance excuse me, and the ability to deal with those problems in many of the areas outside the main cities and metropolitan areas are a real concern to everyone in Alaska. And just that issue in itself as it is coupled with the operating costs is a major consideration why low dollar is the consideration for the selection of a firm just cannot work. In order then for these problems we believe to be met effectively, the only rational method from which to make the selection of a AE firm is by addressing the qualifications of the responding firms and selecting the highest rank firm on the basis of those qualifications. Only then, based on the quality and experience of the selected AE firm, can the project design objectively, effectively, meet and the public resources most effectively protected. We believe that House Bill 211, and as it's perhaps enhanced by the section marked 'a', would provide and insure that the public need is effectively meet through the competitive selection process utilizing the qualifications as a base, we believe that the State and the public can be satisfactorily protected. And I want to urge your positive consideration of House Bill 211. I want to add that it is our intent where the definition of state appears in this bill and that definition has been defined and it is defined the last page of the amended material called 'a', which it says in this section state includes political subdivisions of the state and agencies of the state and its

political subdivisions, to make sure that we all understand that statement is intended as far as we're concerned to mean municipalities, cities, boroughs, school districts, and REAAs, as well as appropriate state agencies. Thank you very much for your time.

Number 292 Chairman Furnace: Thank you, Mr. Steige. Let the record show that Representative Hugh Malone is present at this time. Two persons acknowledged to be, have some questions. Let me remind the committee, too, we'll have approximately 35 or 40 minutes, there are five persons to be heard this morning, we will want most of all to get those testimonies taken so ... Representative Cowdery and Ringstad.

Number 298 Representative Cowdery: Thank you, Mr. Chairman. Mr. Steige?

Number 299 Walter Steige: Steige. Yes?

Number 300 Representative Cowdery: In many cases in the recent past, I know being in the contracting business with their present help aid, economic climate that we've all been fortunate to experience has been many disputes between contractors and homeowners and architects and engineers. And I've been in this trade for over 30 years, and it seems to be just recently, or in the last 5 years, much more legal action has been required for settlement for disputes and interpretation of design or specifications. I know in one particular case, a school project, that the school project had something like a two million dollar legal case hanging over that project in addition to the original cost of the project. The question is do you think that the reason for maybe this, is it your belief the reason for this that the present system is not adequately designed to cover the administration and qualifications of the architects, engineers and people ... What do you think is the cause of this situation is?

Number 320 Walter Steige: I think principally the process, there's nothing wrong with the process and that the current process is pretty much follows the practices that we're advocating now. One of the problems, and that maybe highlighted by your example, is that we are seeing, at least the professional group is seeing, a greater than ever before thrust on accountability and I think, but within that accountability which has been somewhat brought back to us because of the lack of economic soundness in the South '48 and the competitive nature, but that;s been imposed on the contractors in Alaska perhaps to be more sensitive to the problems that come up on any project. We're not, no one is perfect, and none of the projects that is ever bid or designed is without problems. But in trying to address this accountability we have found in the professional area that we are expected now to virtually do our work without error and there are those who are looking for every area to drive their wedge in and put responsibility on someone. We found ourselves as being refocused against the professional

community more than it has ever occurred before. But to address your question, I don't think the processes that we've been working under from before are wrong, I think there will always be bad experiences even with the best process. The processes that are traditional that this bill addresses however, have generally been followed throughout the country ever since the use of professionals services have been used. And for the most part, by far the majority, they've been proven to be a very successful way to bring a project to final completion but that isn't to say that it works 100%.

Number 354 Chairman Furnace: Additional questions from Representative Cowdery? Representative Ringstad?

Representative Ringstad: I'll pass this time.

Chairman Furnace: Representative Koponen?

Number 355 Representative Koponen: Thank you. The alternative version which was handed in version 'a' excludes a registered land surveyor. I know that they have a method to arriving at a solution yet, but ...

Number 359 Walter Steige: It's my understanding that that there's been some problems with addressing the land surveying issue and in that draft it was purposely omitted so that there wouldn't be a controversy of professional nature of the survey work as it might be contrast with construction surveying which it falls out of the professional aspect which we are discussing today. The intent is that the surveying aspect, as they are required by the design process, and in fact that that could be construed to include all other services in the design process, perhaps even soil testing, that falls under the definition of incidental services that are necessary during the design process. And you will note that on the last page of that document is that definition which though not for architectural and engineering but it references incidental services. And we believe that it is satisfactory to work surveying, soil testing, perhaps other miscellaneous services, that are required within that incidental services definition without referencing that by name.

Number 377 Chairman Furnace: Representative Wendte?

Number 378 Representative Wendte: Should this legislation be adopted, and I am assume you are concerned for the members of your organization, how does the Alaska preference, is out the window then?

Number 381 Walter Steige: Well.

Number 382 Representative Wendte: I mean I hate to see this legislation used as bringing in a bunch of firms from outside.

Number 383 Walter Steige: Well, that particular issue in your 'a' version has been addressed. And if I can find the particular paragraph,

this version gives a basic outline of some evaluation procedures and limits to be used with the bill and on paragraph 'h', which is on Page 5, where it discusses how responses will be evaluated, one of those evaluation criteria states: points shall be awarded for being a qualified Alaskan firm. And that provides a vehicle to recognize Alaska preference in this draft.

Number 395 Representative Wendte: Okay, but the other existing situation that we're, or at least in the bid situation, refers specific with apparent legal with the same emphasis, or hopefully even greater emphasis, be placed by this? Or has this been research? Or did you prepare this? Or ...

Number 400 Chairman Furnace: Yes, we did. The recommendation did come from staff and as to working with Mr. Steige and other parties, we felt this was a better alternative to the original bill.

Number 403 Representative Wendte: Well, my concern is obviously is that we don't dilute the intent of that Alaska preference. It's, you know, very well established in the bidding process.

Number 406 Walter Steige: ... Our group has sometimes mixed emotions. If you were to take a vote from our group for whether or not that aspect is helpful or not necessarily to our needs in terms of looking at firms coming in from the South '48, which is a mad rush now in last couple of years because they see the golden apples on the trees up here and there's none down there and they've been trying to pluck some of our fruit so to speak. The emphasis on qualifications, in many cases from a professional's opinion, the qualifications exist here and those firms who don't deal with Alaskan conditions on a day-to-day basis just don't have the qualifications in a general sense as those who have been dealing with the problems day-in and day-out. So, I think in a practical nature we believe when you just look at qualifications, the firms here in Alaska are those which have and possess the greatest ability to solve the problems that we face up here, and the ones down south, outside as we use the term, may create more than they solve, but there are instances when specific technical expertise must come from outside, but 99% of it does remain in the State of Alaska.

Number 423 Representative Wendte: I assume it's that Alaska experience in this aspect of a project in creating estimates whether it's on the Tyee Projects or anywhere else, it's absolutely crucial in terms of planning for projects. That Alaskan experience is there ...

Number 428 Walter Steige: Well, the Alaskan experience comes into play in a lot of various estimates just as being one. Estimating is difficult at best and certainly understanding the conditions is one that estimating is necessary for those individuals in the estimating business. The problems which are more difficult to solve go far beyond estimating and that is solving the design

problems is caused by the environmental conditions that we must design under in Alaska. And the perspective of a firm in Washington or Oregon or even Northern Minnesota do not solve the problems that we have, it is really the different situation and those firms that don't deal with it day-in and day-out in many cases miss the subtle points that those working with those same problems day-to-day to here do not miss.

Number 440 Chairman Furnace: Additional questions Representative Wendte?

Representative Wendte: No, Mr. Chairman.

Number 441 Chairman Furnace: Thank you, Mr. Steige. We will go to the next person then. I would recommend to the committee at this time, let's just take the balance of the testimony, there are four other persons and I want to make sure we get those on the record ... We do have a floor session at 10.00 today. The next person is Wally DeBoff. Sir, again if you would state your name, spell the last name and who you represent for the record.

Number 446 Wally DeBoff: My name is Wallace DeBoff. My last name is spelled D E capital B O F F, and I will be very brief. I represent the Board of Engineers, Architects and Land Surveyors. And in my brief I will say that the Board of Engineers, Architects and Land Surveyors believe that the best process for obtaining any professional architect, engineer or land surveyor is through the process of selection and negotiation. And basically that's all I have, and most of things that Walt stated, you know mentioned, was something probably the Board is most agreeable to.

Number 454 Chairman Furnace: Thank you, Sir, for your testimony. The next person is Vernon Akin.

Vernon Akin: Akin. Right.

Number 456 Chairman Furnace: Again, Sir, if you will state your name.

Number 457 Vernon Akin: I'm Vernon Akin. The last name is spelled A K I N. I'm a mechanical engineer here in Juneau; been registered in the State for 28 years. I guess I'm also today going to represent the Alaska Society of Professional Engineers, being as the President did not get in from Anchorage. All right. I'm in favor of this bill; passage of the bill. The present system is selective; it's not the cons on this bill are saying well we want to bid it to make it competitive or we want to make it fair for everyone. It is fair for everyone as Mr. Steige said. The selection process, anyone can come in for selection, any firm that is qualified or wants to can come in for selection for a job. That is, we get down by the owner, or this case mostly state or municipal governments, it's we get down to where we get two or three primary people, the one that they feel is the most qualified. Then the owner goes to the

one that they think is the most qualified and tries to negotiate with him, fine if they find that they can come to an agreement on the scope of the work and what they want, and the last thing, of course, is price that they came to because you have to set the scope for the work first and what is required, what is desired in the building. If they can't do that they go to number two if they can't come to an agreement. So the owner has his selection of who he wants. All right. The bidding process, now, if you put it out for bids whoever gets the lowest bid on it is usally the one that has to do it because if you're a governmental agency if you don't pick the lowest bid you have to have a very good excuse as to why not you've picked. The, okay, the owner, the main reason or the main concern of the owner is to get what he wants at a reasonable price. Now, most of these jobs, most of the buildings, the owner doesn't know what he wants because he's not an expert in that field, he's not qualified. There have been clients that have come to an architect and said I want a building, I want it, I have so much money, I want it roughly so many square feet, but as for the layout of the building and what is in it and the quality or the type of mechanical system or the type of lights, he knows nothing about that that's why he comes to the expert for it, the owner or the architect on it or the design team. So, he doesn't know what he wants. So, if you put it out for bids there's no way you can pin down down to the last nut and bolt what quality you're going to get. You have to depend upon the judgment of the architect or the design team and his expertise as to what is best suited for this particular occasion. And so, if you put it out for bids, which is what this bill is trying to prohibit, you're going, the designer is if he doesn't get low, if he doesn't come in low, he's not going to get the job. So what the bidding process does is let's get the price way down as low as we can on here, in other words it might be an incompetent person or someone that doesn't know what he is doing but if he bids low on it or if he figures you're going to get a 'cheapy' job, he's going to get the bid and you're stuck with it; the owner's stuck with it. As Mr. Steige said, the cost of the design is, he said 1%, there have been other figures up to ranging 5 to 6% is what the cost of the design is; only cost. Now, you've all heard of life cycle cost in here a few years back, couple years back, there was a big push in the State on going to life cycle costing, which means how much is that building going to cost you over the total length of the building, and it's very minimal, the design portion is way down in the 1 to 5%. So, but yet all the push has been on these buildings to get the design costs down, yet well I beg your pardon, the design cost is probably 1%; the construction costs now, the cost of the construction of the building and life cycle costing runs I've heard about 7 to 8% that's the construction cost. So the actual cost of the building is a very small percentage of the total cost of that, the operating costs of that building for the life of it. So you're talking about a very minimum percentage of the total cost of what it's going to cost to the owner. Most people

don't realize what is involved in designing a building and as to the quality, the different things you can have in a building, different innovations. So, I would like to offer analogy of something that you can all relate to as a house. Let's say you as the owner are going to build a house. Now, at the present time you'd probably look around and find an architect that you liked to build that house; you would go to him and talk to him and tell him well I want this, I want that; you'd work together on the plans and try to get what you want in there in the certain price range, but there are a lot of things that you don't know you have to leave that to that architect as for the quality of the construction, the mechanical system, let's say the heating system, the plumbing system, the quality of fixtures, things like that, you have to rely on his judgment on that because you're not the expert on it. But anyway, you can pick the architect you want and you tell him what you want. Now, let's assume that you had to bid that, you were like a public entity and you had to bid that job, you could tell him all this but if then you, actually you'd have to have a program or in order to get what you actually want you'd have to write down every nut and bolt down there when you put it out to bids and say this is what I want in my house. Otherwise, if you didn't do that and low bidder comes in on it, let's say he is someone some contractor, I mean some architect, that you don't know anything about, you have no confidence in him maybe you've even had heard bad things about him, but nevertheless if you put it out for bid you're going to have to accept him and you're stuck with it whether you like him or not whether you want the product, the quality of product he turns out, you're stuck with it. You can't, an entity can't hardly backoff and take second low bid without as I said without a very good excuse. There's anything about it. Let's say that you get the low bidder on a job to design it. Now, naturally he is going to have to cut his costs to meet his bid; it's all based on dollar value. So, you have a very good chance of the drawings and the specifications that he turns out are going to be minimal. In other words, he can't spend, he can't give you pay an 'a' rated job for a class 'c' price on it in bidding anything. So, your drawings, your specifications, could be very vague and then if, as gentlemen sit over, you get into legal problems and you have change orders and by the time you end up you have paid more than you if you'd had gone to a person that you trusted, relied on, had a good reputation, had it designed for a certain agreed amount. So it can run into a lot of problems there; you can't pin down everything in a job. And the house now is more is very much more simple than a complicated building let's say a hospital, a school or something like that, there are innovations that you can design into that building that's going to cut down your life cycle cost in price on there; you could put in heat recovery systems if it's applicable; you can change your ventilation around, I'm talking mechanical now of course; you can change your ventilation around whether you use full outside air or mixed outside air. Now, it's cheaper probably to design a full outside air system,

very much simpler, but it's very expensive to operate. It costs the owner for now to 40 years down the line, it costs him a lot of money. So, it is just to us, to me, it doesn't make sense that you're bid anything. When the contractor bids a product or bids the specification he has it down in black and white supposedly; he has the plans well drawn out, detailed, he has the specifications are drawn out down to the general equipment, the actual installation you can't cover that, but you can cover what quality the materials you get in that job. There are clients, as I said in previous, they come they don't know what they want, they say build me a building, this much size, I have so much money to spend. So, there's no way you can pin down that design to the last nut and bolt. You can pin it down when the contractor on designed documents, when the contractor bids on it, so it's a different ball game altogether. Another typical example I might say is on this bidding, let's say you wanted a portrait done of yourself. Can you imagine trying to put that out for bid for someone to paint an oil painting of you? If you put out for bid, you know, if you're going to, you know you're going to get just what you pay for and maybe not that much. I think that's about all I have now.

Number 599 Chairman Furnace: Thank you sir, we appreciate your testimony this morning. The next person to be heard is Jon Scribner.

Number 604 Jon Scribner: Mr. Chairman, my name is Jon Scribner. I'm Acting Deputy Commissioner for the Southeast Region for the Department of Transportation and Public Facilities. I'm probably going to be the least popular guy here today. On this particular bill I haven't had a chance to review that draft that they have been circulating ... I have a copy of it, but I have not yet had an opportunity to do it ... From the testimony I can tell you that the Department that I represent shares very much the concerns about competitive bidding and about having people involved with the process that maybe aren't familiar with the way the consultants do their business. And from the testimony I was pleased. I think one good step has been taken to take out the land surveyors because that was one of our concerns, and so that seems to be a positive step toward resolving some of the concerns we have. I don't have some good answers at this point but I do have some concerns and I'll just share them with you briefly. I guess our primary concern is the fact that this bill it restricts the process entirely to just the qualifications and the capabilities of the firm. It doesn't allow any other possibilities to be used in the selection process. For example, if the scope is known and I would suggest that there are times when public agencies can have the capability to properly define the scope, there are times when that's not occurring but there are times when it does occur, and in those cases it would seem to us that there should the flexibility to consider other factors in the selection process. We've heard about price as being as, it's kind of an either or situation, either you're competitive bidding, and I think we all disagree with that concept, or you're not competitive

bidding. And I guess what I would suggest in behalf of the Department is that there may be something in between or to balance off the quality of the job that you're dealing versus the cost or effort that goes into it. And this is a hard concept to sell but that's the way we feel. At this point the bill does not allow cost in any manner whatsoever to enter into it or even not just talking about cost, maybe cost is not something we need to consider maybe it's just the percent of effort that goes into various parts of the job. If we were able to have that I think it would make the bill more something that we could better live with.

Number 641 Chairman Furnace: Would you expand upon that by what you mean by percent of effort.

Number 642 Jon Scribner: Okay, what I mean is in a particular, maybe it's a harbor project, and as part of that harbor project we have to go out and do some, we're going need large rocks to provide for the breakwater, for example. And so part of this scope of work would say that we have to analyze the soils to find proper rock. So there you're going to have to analyze soils and make some recommendations there, then you're going to have to design the breakwater. And so you're going to as the designer, you're going to have to say how much effort am I going to spend in determining where there's proper sized rock available. And so as you're reviewing the proposals that come in you may find that one consultant says well I'm going to go out there and just do one test hole that's what I have when you start negotiating with them you may only have one test hole, that's where his efforts going to be and the rest of the efforts going to be in the designing of the breakwater. Another consultant may come in and you find that he's going to put, he's going, really concerned about his legal liabilities and so he's going to be darn sure that he knows about that material out there where that rock is, and so he's going to go out and drill 200 holes and maybe that's a over, too much of a split, but to get the point across, 200 holes. So what we find is then all of our costs are going into to try to find the good rock source rather than the design of the facility ... (END OF TAPE)

TAPE#38 (Side B)

Number 000 Jon Scribner: So that's what I'm trying to ... We really don't think, we're not as concerned at all about this, interested in trying to create a competitive bidding atmosphere. We really think that there can and should be a better balance. We're concerned about if there is no price or no restrictions on the effort type of thing that we can and have often found ourselves in position of having I want to, probably not a very good term to use but a gold-plated design, where there was no, it was of high quality of the very best design that was provided, you know, so there was no question that that was the most qualified and capable person designing that facility, but we really don't have the funds to support that type of facility on capital expenditures. And so we're suggesting that, you know,

if we can include price or some other mechanism to get a balance to say yes that is the best but we don't have the funds to support that either through the capital expenditures or the life cycle cost of the facility. Some balancing mechanism to insert in there. And now, another point that the consultants bring up is that during negotiation is the time that we should get at our price. Say, you know, select them on quality and capabilities and then during the negotiation if you don't like the person's price go on to the next person. In practice from my experience with it in our Department I wonder an awful a lot of pressure to get these projects out quickly. We spend a awful lot of time negotiating with the selecting consultants. It takes us a minimum of two months for large consulting contracts to select those people. Two months is, can mean a whole season lost, and we have a tremendous amount of pressure from you all and the public to get these projects out on the street. So at two months time we've got our three consultants laid out and we start negotiating with that top consultant; what we're pretty certain we're going to with that consultant even if his price is not what we like. We really don't have the time to drop back down and start the ball going again with a new consultant, now that is often the case. Now sometimes, you know, it gets to the point where we do in fact go through that process. We simply can't live with the price or the way the negotiation is going and we do drop down to the next person but it causes further delays and those are the things that we have to wrestle with. And so that's one of the problems that we see with that and why we would again suggest that there be some kind of balancing mechanism. And unfortunately I can't suggest to you specifically what it is. I would hope that we could continue to meet with the consultants on this and try to arrive at some accommodations in it.

Number 068 Chairman Furnace: Thank you, Mr. Scribner. We have two other persons and time is running fast, so let's take those testimonies. Mr. Charlie Tryck.

Number 073 Charles Tryck: Mr. Chairman, my name is Charles Tryck, T R Y C K. I'm a backup for the Walt Steige and the Consulting Engineers Organization; also speaking on behalf of myself and our engineering firm which is in the business in Alaska for over 30 years. We have worked with all agencies of government, federal, local and state, so on, and all divisions I think of the federal government. This bill is patterned after the Mini-Brooks Bill under which the federal government procures its A and E services. They have some of the problems that Mr. Scribner has outlined which seem to exist very well within the frame work of their legislative authorization. One way they overcome the problem is recited, is their staff will prepare their own fair cost estimate for the project which delineates the scope of work which they expect to see done in various aspects of the project. Then when they select their most preferred consultant, you go in with your fair cost estimate of the work, they have their fair cost estimate of the work

itemized by man-hours and man-days depending on the size of the project, and you try to reach a meeting of the minds on what level of effort should go into what phases of the work. This seems to work out very well. If you have a wide divergents in opinion of what the work should consist of and you can't reach an accommodation on what should be done, you just thank each other and go your way and they go and talk to the next person. One other thing that I think that should be mentioned is that our engineering organizations had monitored A and E projects where price consideration is a factor in the bid process, and it is a bid process, and where the price consideration is submitted at the time the engineer's qualifications is submitted; it usually is the deciding factor of who gets the work which doesn't give you necessarily the people that you should have doing the project. I can go on and on on many things but I don't think that I can add much to what's been said. I think other than to say that we support the work, I mean support the project that it needs work. Thank you.

Number 128 Chairman Furnace: Thank you, Sir, for your testimony. The last person is Brian Emerich.

Brian Emerich: Emerich.

Chairman Furnace: Again, Sir, if you'd spell your last name and state who you represent.

Number 133 Brian Emerich: My name is Brian Emerich. E M E R I C H. I represent the American Institute of Architects, the Alaska Chapter. We support this effort in passing this bill. Some of the points that I would like to mention, I would like to address a couple that were brought up earlier as against this bill. It's the talk about the problem of directing a professional as to which way he should do his services, do tests holes over here or pour money into the design of the building, etc. One of the reasons and one of the intents of hiring a professional is to have his direction to tell you what you should, where you should go. If you know and you have a positive direction that you want them to take that can be included in the scope of services. And a professional can elect to either take that job or not take that job if he feels it's going to jeopardize the project. This is one of the aspects of a professional. Another part is the attitude of picking, afraid to pick a consultant or architect or a mechanical engineer because he's going to get gold-plated design and they can't afford to budget. One of the responsibilities and requirement of hiring a professional is there is a direction usually given to that person to keep the project within a specific budget. And that is one of the things that can happen and one of the qualifications that professional represents himself on, has projects that have come within budget, they've been within the scope of services, they've been delivered on time. The instance of part of the problem always seems to be around is the competitiveness to get the best price and that's

part of a serious problem that government agencies always face is to try to protect the public's interest so that they're not both getting 'ripped off'. Well, one of the things that's competitive here is you look at the price of a building like Vern Akin stated earlier, about the value of the building and the cost of the design stage is very minimal, the cost of the construction becomes more substantial, and the cost of operation becomes astronomical over a period of time, and Alaska is now facing that very serious problem with the cost of buildings or hiring a professional that understands that and knows that. The price difference you may pay for somebody is hard to determine one factor or another one. You can't always tell when you're hiring somebody whether you are going to get the longest range, best project over the life cycle. However, one of the things you are selecting a professional on is his past history and his past history reflects buildings that have been built and that are continually operating and the clients are happy with. The problem with competitive bidding and one of the things that the strongest competitive bid requirement, for instance in this State, is the construction bid, and by law they have to take the lowest bid unless there are some very, very strong reason why they can't take the lowest bid on a construction contract. Well, the purpose of that is obvious, but what happens is these professionals that you are hiring are designing those projects to get that lowest bid. And one of the problems the State has faced notoriously is if you have a bad project that goes out, you get a contractor that under bids it, and you have a series of change orders, a project can all of a sudden go from one million to two million dollars because the project wasn't properly designed. And what did you say, maybe 5,000, maybe 10,000, maybe even 100,000 dollars on the design fees? And you're giving a project that's not qualified and there is no real recourse for the State other than through the legal acts of putting that individual out of business, taking away his insurance to disqualify that bidder the next time he comes around to do a similar project just right down the street if he's licensed to do business in the State, and it's very difficult to take away a license from a professional like this. You're going to end up with the same, that same individual, and the same problems repeating itself. One of the statements was made earlier of in going after the lowest price and just accepting that as part of the criteria to hire a professional firm. It was stated earlier, and I want to repeat it, that when you put a price on any kind of a service within a state agency, a state government, you are just about bound and locked into that price. And even if they write-in the intent that the price is only to be a guideline, we feel that that guideline is going to be used as the number one choice to do the work. And we don't feel that's quite the way it should be. There was one last statement as to the, earlier, when you do bid, when you go to competitive or when you to ask for professional services, and you cannot negotiate a contract with the first profession you can go down the list until you get is the absolute lowest price of all the consultants, and one of the

things that you'll be faced with and you'll see it is that the amount of services that you require will continue to go down with the price of what you're getting. And I think that the quality of work in the profession and the end results will follow that same line, you will start losing the level. And I think that the intent of government here is on competitiveness or the spirit of a capitalistic society is to keep competitiveness alive. Maybe we should start and consider quality as a competitive aspect which it is and not just the price alone. Thank you.

Number 245 Chairman Furnace: Good. Thank you, Sir, for your testimony. Unfortunately because of the time we do have a floor session starting at 10:00. We'll have to conclude the meeting at this time.

Number 251 The meeting is adjourned at this time.

HOUSE LABOR & COMMERCE
STANDING COMMITTEE MEETING
RE: HOUSE BILL NO. 211
March 21, 1983

TAPE #39 (Side A)
Recording
Number 003 Chairman Furnace: The date is 3/21/83. The present time is 8:53, or somewhere in there. Those members present are: Representatives Koponen, Ringstad, Cowdery and Chairman Furnace. We do have quorum. We'll have some persons to be heard. Just stand at ease for a second. Let me get my file The meeting this morning is to continue work on the bill. You may note that we have what I call exhibit a that I handed out the other day and it was recommended new language in lieu of the language in the original bill. We have a couple of persons to be heard. Mr. Akin, you spoke the other day, is this a continuation or is it a different?

Number 024 Vernon Akin: It's regarding the amendment 'a' which we did not have a chance to read.

Number 025 Chairman Furnace: I see. Okay.

Number 026 Vernon Akin: It was passed out during the meeting last time.

Number 027 Chairman Furnace: All right, Sir. If you'd like to address the committee at this time we'll take your testimony.

Vernon Akin: Thank you.

Number 029 Chairman Furnace: We'll take your testimony. For the record if you'd state ...

Number 030 Vernon Akin: Right. My name is Vernon Akin. The last name is spelled A K I N. I'm an engineer, have an engineering firm here. I'm also speaking in behalf of the Alaska Society of Professional Engineers; a group of about 305 engineers in the State of Alaska. At the last meeting we received this amendment 'a' which was passed out I believe after the when the meeting started we did not have a chance to look at it or study it. After having a chance to study it I would like to comment on it a little bit. The original bill was mainly, the original bill I submitted, House Bill 211, was to prohibit the bidding of fees, engineering fees. The amendment the way I get it read it essentially throws this out the window. If you want to look on Page, let's see what is it, 2, no Page 1, this section of the chapter applies to contracts for architects and engineering services provided the State unless the total amount of the contract does not exceed 25 thousand dollars. Now, what that says to me is that if you have a contract from under 25 thousand

dollars you can bid it and that is not the intent of the original bill. The bill was to prohibit all fees from being bid and that's the subject of which I spoke at the last meeting. If you're going to bid anything over 25 well let's face it most of the contracts, the small contracts, are under 25 thousand dollars fee so that would mean that there would be very few that would be prohibited from bidding. There was another item in here. This bill was rewritten it looks like strictly for DOTPF because it refers in here to the commissioner; it pins down that you advertise it so many days, you would do this, you were, if the commissioner says that you can do this fine then you can deviate from it. The original bill was for multi-agency, use for the use of the State, for the use of the borough, for the use of city. If you're going to write a bill which pins it down and talks about commissioner I think you're going to have trouble forcing onto a borough or a city. It should be, the bill should be written in a general nature to say you do this, you do that, as far as the advertising of a bill whether it's three times, five times; if it's a borough public works they should be able to set how many times they want or at least within limits, not pin it down to the exact amount or how they would like to conduct their interviews and things like that, whether it'd be three primaries by that I mean they reduce it down to three or whatever amount they want. So I think the bill should be written generally. If the DOTPF passes specifics they could put it in their policies, they could enter other details in their policies. The other part of it seems to be all right except that I think that you have lost the true sense of the original bill by some of these items that they've put in this amendment. I think that's all I have.

Number 119 Chairman Furnace: Thank you, Sir. Representative Cowdery, then Representative Ringstad.

Number 120 Representative Cowdery: Yes, thank you, Mr. Chairman. Just this point of information on normal contracts, like small contracts or large ones, there's normally a fee, a negotiated fee or determined by some way of means, of charges for the design work and architectural work, but many times there's some the architectural firm they administer the contract. Now that is a separate, that's not what we're talking about?

Number 129 Vernon Akin: No.

Representative Cowdery: The total fee? Is that ...

Number 130 Vernon Akin: If they're going to administrate the contract, contract administration, that is it could be done as extra services in the contract or they could lump it together however the owner wants it.

Number 135 Representative Cowdery: But this is not addressed this possibility. I mean getting back to your 25 thousand dollar fee ...

Vernon Akin: Yes.

Number 137 Representative Cowdery: Sometimes the administration of the contract can be a large ...

Number 138 Vernon Akin: Oh, yes. Yes. You know, yes, that is very true ...

Number 140 Representative Cowdery: ... percentage. So this is the point I was making. I don't know if this addressed in this bill of, you stated earlier you was against this not to exceed 25 thousand.

Number 143 Vernon Akin: Correct.

Representative Cowdery: And so ...

Number 144 Vernon Akin: Because the only time or most the time on the bill, the contract administration in our particular phase of buildings, that usually only happens on the very large building but even at that contract administration again is, should not bid it should be negotiated on that. Now, we have a large, I have, I'm a member I mean a consultant on a large job here in Juneau, and it's contract administration; it's on a time and expense basis not to exceed, all the inspections and all the contract administration is the time and expense basis. So that's the way it is normally done. Contract administration on a job is a very, it's actually better if they can use it on a time and expense because a lot of times you're many trips involved or other expenses. So it can be done either way on jobs; either a lump sum or ...

Number 169 Representative Cowdery: I was just wondering if this was addressed in this amendment or should it be?

Number 171 Vernon Akin: Should it be as far as contract administration? I don't think it should be because the whole what we're trying to do is get a bid coming out, a job put out on a negotiated basis. Now, this particular job I was talking about, it was a negotiated basis for a lump sum but the contract administration was under the extra services part of the contract. So I think that it could be handled under, it could either be negotiated at the time at that time or it could be extra services.

Number 185 Chairman Furnace: Representative Ringstad?

Number 186 Representative Ringstad: Thank you, Mr. Chairman. I question here basically on the same point as the 25

thousand. The total amount of contract does not exceed 25 thousand. Are you saying that a lot of your contracts to, all your contracts are a total of 25 thousand dollars for the services or the fees you was talking about? Is the 25 thousand?

Number 194 Vernon Akin: 25 thousand the way I read it that's the amount of the contract to the AE, architect engineer.

Number 196 Representative Ringstad: So, basically let me run ...

Number 197 Vernon Akin: It says for architectural and engineering services.

Number 198 Representative Ringstad: So if I, so the State wants it to put up this building they'll come to you and offer you a contract of 12 thousand dollars to design this building. The contract even though the building, it's a million dollar building, the contract to you is 12 thousand.

Number 203 Vernon Akin: Right.

Representative Ringstad: That what you're saying ...

Vernon Akin: That's what I'm saying and that's would be what they're talking about here the 25 thousand.

Number 205 Chairman Furnace: Representative Uehling.

Number 206 Representative Uehling: Thank you, Mr. Chairman. Just to sort of follow up along those lines. So your main objection would be the 25 thousand dollar restriction put in there then from what you're telling ...

Number 208 Vernon Akin: My main objection is that as I've pointed out Friday, there should be no bidding of architectural and engineering services. Architectural and engineering services are and aren't the same as an artist. There are no two engineers or architects that will accomplish the purpose the same way. It's their, you're buying their services, their expertise to do that work and there will be no two the same; so it's not like a contractor where everything is tied down and you build it this way, that way, that way and the plan is ... It's an art; it's an awful lot like an artist painting a picture, no two do it the same. And so this is what I am saying.

Number 220 Chairman Furnace: ... Additional questions from the committee? I have a couple of questions to Mr. Akin.

Vernon Akin: Yes.

Chairman Furnace: You mention the work of the, speaking of the commissioner, you may recall under the original bill that it's stated here that not withstanding the provision of

39.36.98.040, the State shall select person or firm for the performance of architectural, engineering and land surveying services, so you're speaking of the State in the amendment, we're still speaking of the State and the commissioner. And I'd ask you is the person of the State that you'd normally be dealing with, so I this the commissioner is probably proper. On Page 4 there are two mentionings of the commissioner and it does not apply, let's see the contract agency demonstrates that there is a single source of expertise or knowledge required of that one person, firm clearly performs, and that it indicates here that the commissioner has the responsibility to make that determination which appears to be proper at that stage there ... Under 2, the commissioner may make a written determination that the public necessity will not permit delays incident to the proceeding of the work required by this chapter and it appears that the mentioning of commissioner does not hinder what you're proposing to do. It's supportive language as opposed to not supportive. Do you read it that way?

Number 248 Vernon Akin: The apprehension I have is the fact that that the borough is, boroughs and cities are going to say that this is not does not apply to them and because it's specifically written for the State agency. And if we could reword it some way so we could, in better language. We do not have commissioner in the definitions in the back.

Number 256 Chairman Furnace: I know. I know, I just noticed that. There's a definition of commissioner.

Number 258 There is discussion regarding the definition.

Number 262 Chairman Furnace: I believe commissioner is probably already defined in the statute. Commissioner means the commissioner of administration except that contracts entered into by commissioner of transportation and public facilities. It seems to me that the commissioner of transportation and public facilities, I don't understand it ...

Number 266 Vernon Akin: That, I don't think that applies then.

Number 267 Chairman Furnace: Okay, point's well taken. As we walk through this, we'll look, address that.

Number 268 Vernon Akin: I realize that down the line there will be a lot of changes, but we would wish that you'd keep this in mind as going back to the original concept of no bidding on anything as far as our services, architectural and engineering services.

Number 272 Chairman Furnace: Mr. Akin, while you're with us, I propose a couple of things today with the committee, is to walk through the original bill and then look at the draft substitute language. But there's other questions I think we may

get into and I'm not sure we'll be able to conclude that today. So I would like to perhaps enter that for the committee members you have a packet of information, some can perhaps make reference to a suit by the United States, some of the Department of Justice, outlining concern of the non-competitive, non-bidding policy. I'm reading through the information I understand that the Attorney General, on at least two occasions, have asked that the Board rescind its regulation having, what is it, to do with the non-competitive and the non-bid factor. How do you respond? Or how would you as an engineer respond to that and address the suit, the Federal suit?

Number 290 Vernon Akin: Are you referring ...

Number 291 Chairman Furnace: I'm referring to Rule 36.233 which provides that each architectural, engineering and land survey shall seek professional employment on the basis of qualifications, etc., etc. And that has been I guess challenged by ...

Number 295 Vernon Akin: DOJ.

Chairman Furnace: ... attorney.

Vernon Akin: Right. It's been challenged by DOJ based on some different suits that have happened there in various states. They had Supreme Court hearing, NSEP, of course, were rejected on this. According to the information I have received this rejection was essentially on a technicality or it wasn't on the main basic subject. In answer to your question, I would say I am very, we are very much in favor of leaving that clause, that restriction in. Right now it's under rules and regulations on that statute. There is a proposed bill, I think that is one that you are eluding to, that takes it out of there and puts it in a statute; and if they want that they would try to get that statute through the Legislature which under the, as I understand it, the Attorney General's Office said that if they would take it out of the regulation and put it in the statute it would mute the suit, the DOJ suit. And I believe this is one of the subjects that they wanted to discuss at this meeting. So is this not inflated to bring up at this meeting by talking on the proposed bill?

Number 318 Chairman Furnace: Yes. Well, in fact, let me just read, to address the question again. Just my brief reading of the packet here tells me that the Department of Justice is concerned with the restraining phrase that that particular statement, that particular rule in your, I guess, administrative procedure is a restraining phrase, and on how do you, Sir, the thing we're trying to do here is address the concern or whatever; I hope you realize that. We're aggressively moving forward on to do that. But where

there's a pending law suit and as I read the AG has said hold off and let us try and handle this legislatively, and it appears that one of the ways to handle this legislatively is to to do away either with the non-competitive nature of bidding or approach it in some other way. And that's what we're attempting to do here, is to address it. Perhaps I should pose that question to, let's see well, Mitch, can you answer that?

Mitch Gravo: Yes, Mr. Chairman. It is my understanding that the interpretation of our Attorney General is that if this legislation to have the Department of Justice to go away because the regulation will therefore become mute and the legislation will be the commanding, the commanding rule. And that the concern of the Department of Justice. There are other states that have what their, there are other states that have Mini-Brooks legislation, the kind of legislation what you're looking at, and they don't have a problem with the Department of Justice. The reason this State has the problem is because we don't have any legislation however we do have the regulation. And it is my understanding that the Department of Justice said passed legislation that is the same as your regulation and you can do it by legislation but you can't do it just by ... through regulation.

Number 347 Chairman Furnace: Does that answer your question?

Vernon Akin: Maybe I can explain it a little bit more. The Mini-Brooks law and this House Bill 211 what it does is says the State will not put the jobs out for bidding, that what this is written for, the State will not put the jobs out for bidding. And I understand from Mr. Barry that this is legal, they can do whatever they want, the State can do whatever they want to, put what restrictions on the money that they are spending. Now if this 211 passes, it will catch the State and borough and the cities; it will not affect, it will not prohibit bidding of private jobs, private owners that want to put a job out to bid. The proposed bill which the DOJ suit is against this clause, the prohibitive bidding in the regulations. The proposed bill moves it from the regulations to a statute. If that were passed, if that bill were passed, then that would prohibit it for everyone. What it does is it gets the other end of it; it prohibits the engineers and architects from accepting work for bids. In my estimation we need both bills. One of them is to prohibit the jobs from being put out on a bid basis by the governmental entities. The other one is to prohibit the people from accepting it. As I say, the 211 can only get the public works but they can still, unless we have this other bill, well they can still bid on privately.

Number 373 Chairman Furnace: Let me recognize Representative Koponen.

Number 374 Representative Koponen: Thank you, Mr. Chairman. I was wondering, I see that was the original language of the bill suggested by the Board or by the Attorney General?

Number 377 Chairman Furnace: Which original language?

Representative Koponen: The original version of 211.

Number 378 Chairman Furnace: I'm trying to think. I don't recall. Jeff, do you recall?

Number 379 Jeff Barry: Yes. Maybe I can clarify something on that. 211 has not really addressed by the Attorney General's Office for the simply reason ...

Number 382 Chairman Furnace: No, Jeff ...

Jeff Barry: Well ...

Chairman Furnace: No, wait a minute. The question was, where did this original language come from? Please address that ...

Number 383 Jeff Barry: Okay, the original language in 211 is the Mini-Brooks bill and it came from the Board and the members in the profession.

Number 385 There is discussion on where the original language came from with committee members and Wallace DeBoff.

Number 387 Chairman Furnace: Let me ask Mitch. Mitch, I think you, in turn can give us, where did you get this original language?

Number 388 Mitch Gravo: The original language came from the group that testified on Friday, the Consulting Engineers Council of Alaska which is a group of 32 principals in architectural and engineering firms in the State that represent 500 individual architects and engineers.

Number 392 Chairman Furnace: Was this gleamed from the Mini-Brooks Act?

Number 393 Mitch: It was ... The Mini-Brooks was used as a model. It's not exactly like the Mini-Brooks but very close to it.

Number 394 The question is asked, the Washington State legislative model?

Number 395 Mitch Gravo: The ABA model and the Mini-Brooks model, both of those. They're slightly different but that's the model that was used in drafting the original 211.

Number 398 Chairman Furnace: Okay. Representative Koponen?

Representative Koponen: The reason I raised the question is that the Attorney General Designate Gorsuch apparently replying to the U.S. District Court did indicate that they would be ...

Number 401 Chairman Furnace: Which document?

Representative Koponen: This is one of the ones in the law case ... Civil Act from filed November 12th, '82. ... And it doesn't include anything, it's merely the agreement that they would, move to the about the tenth one down in that pile we got, it essentially reviews the case. It's in support of the defendant's motion for state proceeding.

Number 408 Chairman Furnace: Okay, I'm still trying to find the same thing that you have.

Number 409 Representative Koponen: It begins on Introduction and Summary after the court has informed by letter, a new attorney general undertook a review of this status ... I was just wondering whether the Attorney General had reviewed the matter since he is now the defending attorney whether, you know, it's the matter that he had drawn up, whether he feels that this would satisfy the case or, you know, in other words since he is your and our lawyer in the case, and he feels that this would satisfy. That's the only reason why I raised the question. I'm curious. And whether we should ask his opinion on this. So that we do change, you know, put forth legislation that will satisfy the requirements, that's all.

Number 422 Chairman Furnace: Mitch, comment briefly.

Number 423 Mitch Gravo: Mr. Chairman. Representative Koponen. It is my understanding that the Attorney General's Office has taken a look at the initial 211. And correct me if I'm wrong Jeff, but has indicated that that would serve the purpose of making the DOJ suit ... that's their understanding.

Number 427 Jeff Barry: No. Well, no. They drafted up a specific bill to address the law suit. The 211 is the State as a consumer in its choice of what it wants to do in its contract and procedures. The Department of Justice suit is the State using its police powers through the regulation and the licensing of engineers, architects and land surveyors of saying that they shall not be allowed to continue in business if they give a price estimate or bid to anyone and the regulation is separate, it's totally separate. 211 addresses what the State as a consumer will do, it's perfectly legal, it's a choice for the State to make as to how they want to handle their own money. The law suit has to do with the regulatory power of the State delegated to the Board of saying that if a person, a member of the profession, responds

to a request for a price. If saying if an individual walks in and says how much will you survey my plot of land for and they give him the answer they may loose their license. That's using the police power and the allegation is that's in violation of Sherman Anti-Trust Act. And there were three suits brought that were settled that said yes it was. They proposed some other legislation, the Governor would not introduce that legislation and they sent the Board down here saying maybe you guys will introduce that particular legislation. The law suit this is totally separate and apart; this is a choice matter; it's perfectly legal and doesn't impact that at all; and it should be treated separately as that being ...

Number 450 Representative Koponen: Mr. Chairman, there was a reason I raised the question. I was wondering whether we were going to be looking at other legislation and that, you know, as a bundle to meet these questions.

Number 453 Chairman Furnace: It's quite possible, Representative Koponen. The one we have in front of us now, the one that I would like to resolve first, get that in place, is either go with the original version of 211 or go to the recommended amended which in turn would be a Committee Substitute.

Number 456 Representative Koponen: It's just in reading this and listening to the testimony made me realize that there are other matters pending that are not addressed by the bill.

Number 457 Chairman Furnace: It's going to be important now for committee members to read all of this material, get a good handle. And what I propose to do today again is to walk through this, try to mark it up and then let's make sure we do our homework. This is a substantial piece of legislation and we need to have a good handle on it. But let's get on with the business of the hearing. Mr. Akin, are there additional questions?

Number 462 Vernon Akin: I would like to correct one thing that Mr. Barry said. Using an example that you could not go, the engineer or the architect or land surveyor, anyway, could go in and give a price. This is not what the legislation, not the regulations, says, it says he may not knowingly solicit or submit proposals for professional services on the basis of competitive bidding. That's the way, that's what is prohibited. The fact that someone says how will you do this job for me that is essentially what we're doing now is we get the job, I mean the architect or engineer, they talk over the scope and then at the tail end of the negotiation is the how much do you want for doing this. That's not what we're objecting to, we're objecting to competitive bidding. This is the main crux of it. That you put it in and you're bidding against another professional man. And this we say is detrimental if you go on this basis, it's detrimental to

the owner because you're putting the services on a monetary basis rather than a expertise basis.

Number 477 Chairman Furnace: Good. Thank you, Mr. Akin. Let's go now to the next gentlemen to be heard ... Mr. DeBoff.

Number 479 Wallace DeBoff: Chairman Furnace, I wasn't really planning on testifying.

Chairman Furnace: For the record, Sir, would you again state your name and who ...

Number 480 Wallace DeBoff: My name is Wallace DeBoff. I'm Chairman of the Board of Engineers, Architects and Land Surveyors. My last name is D E capitol B O F F. I really wasn't planning on testifying for 211 today. I was really more interested in what we're going to do with the bill that the Board proposed. And I understand that you'd like to take one thing at a time. So I believe that I'm on the back burner again. Is that ...

Number 485 Chairman Furnace: Okay. Are you speaking of the original draft of 211?

Number 486 Wallace DeBoff: No, I'm speaking of a bill that was brought down and given to Jeff and asked, you know, we asked him if he'd ask you to introduce it for us.

Number 487 Chairman Furnace: I've not seen that, do you have that?

Number 488 Chairman Furnace calls an at ease.

Number 499 Chairman Furnace: ... let's now concentrate the energy, if we will. There are no other persons to be heard. We do have two potential pieces of legislation. What the Chair would propose we do is to go through these and make some determination of support. Jeff, would you take the seat down here, walk through an analysis on 211, and then we'll go through the recommendation.

Number 505 Jeff Barry: On 211 or also with 'a'?

Number 507 Chairman Furnace: Let's walk through 211 first, then we'll go through the recommend ...

Number 508 Jeff Barry: 211 basically is a change to chapter 36.98 which is professional services and that's this, and it fits within this as an exemption to the normal requirements for the professional services contracting, and I think it's helpful that way to see exactly how it fits in the whole scheme of things. Section 1 on architectural, engineering and land surveying contracts, as it would be straight 211 version, is language which defines how the architectural, engineering and land surveying contracts will be handled by

the State and it's political subdivisions. In the various methodology that's proposed in Section 1. Section 2 adds a new paragraph under 36.98.080 which is a definition that defines an emergency where under Section 1 the procedures would not apply. Section 3 amends AS 37.05.240 which is, with its sister portion AS 37.05.230, has to do with competitive bids, Alaska preference, definition of responsible and the competitive bid aspect and various other sections. And what it does is put a reference back to Section 1 in there that for contracts and architectural, engineering and land surveying shall be treated under Section 1 and not under 230 or 240. Section 4 is adding a new definition under the definitions; that just reiterates that 36.98.041 of Section 1 will be used in the architects, engineering and land surveying. Section 5 says that it will apply after the effective date. And Section 6 is the effective date clause. Did you ... In Section 1 did you want to go through what the methodologies are that are being proposed?

Chairman Furnace responds yes.

Number 541 Jeff Barry: Section A says not withstanding the provisions of AS 36.98.040, and 36.98.040 has to do with the evaluation of proposals and award of contract. The significant part in there it says that only on the basis of demonstrative competence and qualification, 040 provides for both for the competence qualification but it also, under Part C of 36.98.040, says the contract, well, it defines a number of specific criteria that have to be meet the evaluation, the contracting agency, and it requires the request for proposal which is part of the area of whether or not that constitutes a competitive bidding, and that's what this is clearly trying to get away from is competitive bidding or pricing. B is in awarding the contract and it's a selection that it shall be strictly on the basis of demonstrative competence and professional qualifications. C, and that is your basis criteria, is that C it says subject to the criteria in B of this section a particular procedure for the selection of architects, engineers or land surveyors or for the award of contract is not required. And it says the State may publicly rank proposes or offers received in response to a request for services. That's pretty well leaves it wide open, whereas in 36.98 there are some set procedures because of various problems that occurred in the past. D and E, D is an exemption to this procedures for emergencies and E a definition that in this section State includes political subdivisions of the State and agencies of the state and its political subdivisions. It's a straight definition. And basically, ...

Number 573 Chairman Furnace: Let's go through A, then ...

Number 575 Jeff Barry: A again goes back basically to 36.98 which was legislation that was passed last year and tries to bring and

set forth a procedure to be followed. And Part A is just stating that it's the policy of the State to publicly announce the requirements and to negotiate contracts only on the basis of demonstrative competence and qualification for the type of professionals services required and a fair and reasonable prices not withstanding the provisions of 36.98.040. Part B says the section this section chapter, applies to contracts for architectural and engineering services provided to a State agency unless one total amount of the contract does not exceed 25 thousand.

Number 587 Chairman Furnace: Jeff, where did that language come from?

Jeff Barry: That language comes from 36.98.010. It's the exact language ...

Number 588 Chairman Furnace: Statute?

Jeff Barry: Yes, Sir. It's on the small printout putting that in Session Laws '82. The 25 thousand dollar figure was a compromise reached among all parties. Last year when this, what was then House Committee Substitute for Senate Bill 156, was going through the process there were about four or five bills rolled into to clean up the abuses in the professional services area not aimed at architects, engineering and land surveying, but the consultants and across the board in those. The 25 thousand dollar figure was a compromised figure. There were components, the Ombudsman Frank Flavin, former Ombudsman, who it wanted zero, no exception. There were others saying well we have small contracts we need the flexibility to be able to sole source them if we want or anything else. So the 25 thousand figure was just a figure arrived at by compromise. That's saying that it goes over, this will apply, under 25 thousand basically do what you want.

Number 602 Chairman Furnace: Now that's total contract dollars as opposed to 25 thousand in fees?

Number 603 Jeff Barry: Well, it could be read either way. Quite honest ...

Chairman Furnace: ... Well, what was the intent there? What were they thinking? Are we talking contract dollars? ...

Number 604 Jeff Barry: The actual contract dollars to the individual or firm. So it, the interpretation that Mr. Akin had would be probably be correct. It would consistent with the history of 36.98 that the award or the contract to the individual firm would have to exceed 25 thousand.

Number 608 Chairman Furnace: Let me take Representative Ringstad, then Uehling.

Number 609 Representative Ringstad: My recollection was that, or my understanding was that, the intent here was for the larger contracts, contracts meaning or the interpretation I think was that the job was going to be more than 25 thousand, not necessarily the fee.

Number 613 Chairman Furnace: Okay, but that's just what he said, wasn't it?

Representative Ringstad: Well, I think it depends on how we look at it. Now, if we're going to give out a million dollar job, a million dollars is more than 25 thousand. Okay, that's a big job. We want, it would not qualify here as being under 25 thousand. But if the contract is written so that I'm contracting with you to do this million dollar, to oversee architectural million dollar project. The contract with you is only 20 thousand so it fars under this. It's two different contracts. I think that's where the misunderstanding was.

Number 621 Jeff Barry: It's ambiguous in the regard that basically the legislation was aimed at the consulting areas of which it would be a consulting contract, that's end of and in itself rather than a project where elements could be broken out. So it is ambiguous from that aspect.

Number 624 Chairman Furnace: I'm going to take a question here, Representative Uehling?

Number 625 Representative Uehling: Yes, maybe you can explain that further. What, well, what two types of contracts are you talking about? You said if there's a million dollar situation and then you've got 25 thousand what is the, I just don't understand at all.

Number 628 Jeff Barry: Well, it could read either way and that's what I think everyone is saying. That actually B should be changed in here, you know, applies to contracts unless and then under 1 the total amount of instead of putting in contract put in the word fee, in which case it would clearly designate that and then set whatever dollar amount you want or delete it. This was just taken from above but as specifically pertains to the profession would be appropriate to clarify that so that there is not ambiguity.

Number 636 Chairman Furnace: Rick, additional questions?

Representative Uehling: I just didn't see the difference between the fee and the contract. ...

Jeff Barry: Well, in the project contract if it were a building, the building itself in the total CIP may be two and a half million dollars, but the contract with the architect and engineer for that may be only 20 thousand.

Number 639 Chairman Furnace: ... Representative Koponen.

Jeff Barry: So which would be covered or not and that's ...

Representative Koponen: Thank you, Mr. Chairman.

Chairman Furnace: Representative Koponen.

Number 640 Representative Koponen: Mr. Akin's referred that it would open it up to competitive bidding if the low contract, it can also be read that under 25 thousand dollars that agency or department of the State is not required to inquire into the competency of the ...

Number 643 Chairman Furnace: Absolutely.

Representative Koponen: Which might be one of the things that we don't want to open up. Just grab somebody off the street.

Number 644 Chairman Furnace: Okay, thank you, Representative Koponen. Mr. Ringstad?

Representative Ringstad: I was just going to ...

Number 645 Chairman Furnace: I'm sorry. Let me, I think Mr. Cowdery was ...

Representative Cowdery: I'm going to be ...

Number 646 Chairman Furnace: Mr. Ringstad?

Representative Ringstad: No, I was just going to try and further explain the ...

Number 647 Chairman Furnace: Okay. Mr. Malone?

Representative Malone: I don't have any questions.

Number 648 Chairman Furnace: Let the record show that, did you note that? Continue. Suffice that number 1 under B needs some cleaning up if it is to ...

Number 650 Jeff Barry: Right. It should address B and then the figure amount is was just taken out of 010 and there's no rational basis. Whatever would be. In 2 is and it's bracketed because there's a question people wonder why that was the contract, is an employment contract for services to be performed under the direct supervision regardless of the existence. That basically has to do where people have brought in from outside right directly in-house whether it's to teach new techniques, to clean up, to work on the projects, specific because of a time crunch ... (END OF TAPE)

TAPE #39 (Side B)

Recording Number 002 — Chairman Furnace: Let's break at that point again. I wanted to adjourn the meeting unless there's some objection to it. And have a chance to work with Mr. DeBoff and Mr. Gravo, and Jeff and I to work out some things here. We do have a floor session that's coming up here in about 20 minutes. Give the committee, you a chance to get back to your offices to get prepared for that. Representative Ringstad?

Number 010 — Representative Ringstad: Can we get copies of these things so we can take them with us and play with them?

Number 012 — Chairman Furnace: Do you want to take your file with you?

Number 013 — There was discussion by the Chairman and committee members regarding the committee files. Chairman Furnace then spoke of the agenda for tomorrow's meeting regarding continuation of HB 211 and introduction of HB 197.

Number 031 — The meeting is adjourned.

HOUSE LABOR & COMMERCE
STANDING COMMITTEE MEETING
RE: HOUSE BILL NO. 211
March 22, 1983

TAPE #40 (Side A)
Recording
Number 005 Chairman Furnace: The Chairman has called the meeting to order. The day 3/22/83. Those persons present are: Representatives Wendte, Ringstad, Cowdery and Chairman Furnace present. The time is 8:50. The legislation for consideration today is the continuation of the discussion on House Bill 211, "An Act relating contracts for architectural, engineering and land surveying services; and providing for an effective date.". We have before you this morning an amendment that is recommended for substitution of the Section 1 of the bill. I'd like to walk through the amendment this morning and to see what the greatest importance here. Does everyone, do you have a copy of that?

Number 013 There is discussion regarding if committee members have a copy of the amendment.

Number 020 Chairman Furnace: All right, let's go to the amendment then.

Number 021 The question is asked, that's the one defined as 'a'?

Chairman Furnace: Yes, that's the one that's defined as 'a'. First of all, has each member had a chance to read the amendment? Are there particular sections of it that you have concerns with? If not, we'll start from the top and just walk through it. ... Section A then is the policy of the State to publicly announce all requirements for architectural and engineering service and to negotiate contracts architectural and engineering services only on a basis of demonstrated competency and qualification for the type of professional service required and that a fair and reasonable price not withstand the provision of chapter 40 the section 36. Any problems with that? Representative Ringstad.

Number 029 Representative Ringstad: I've just one question maybe I'm off base but that's stating that this is the policy. Are we accomplishing what we want to accomplish? In that just 'cause that's policy doesn't mean that necessarily they have to do it that way.

Number 032 Chairman Furnace: What are you suggesting or recommending? I don't follow you.

Number 033 Representative Ringstad: Are we better off to state that this is the way it will be done? Rather than to establish general policies that always have exceptions to the rules and this and that and the other?

Number 035 Chairman Furnace: Well, it might be in our legal terminology. It appears to be that this to understand the language, Representative Ringstad. Would you other suggest language you would like to insert there?

Number 037 Representative Ringstad: Well, you know, and if you're trying to accomplish something, most legislation that I have dealt with is this is the way we shall do it.

Number 039 Chairman Furnace: I think you should read more into the bill and to the amendment shall and ...

Number 041 Representative Ringstad: That type of language is there.

Chairman Furnace: Yes.

Number 042 Representative Ringstad: Your first paragraph is kind of coming across as ...

Chairman Furnace: This is an amendment to be inserted into ...

Number 043 Representative Ringstad: Well, the way I read it, you're taking out this whole thing here. It's starting out as a rewrite of the whole bill the way I read it.

Number 045 Chairman Furnace: The question, Representative Ringstad, do you have a problem with Section A? If so what is your recommendation?

Number 046 Representative Ringstad: Well, it was just a question. To me this would read as intent language ...

Number 048 Chairman Furnace: It's a policy statement.

Representative Ringstad: Okay. Fine.

Number 049 Chairman Furnace: Okay. Section B. This chapter applies to contracts for architectural and engineering services provided to a State agency unless the total amount, and there was a recommendation to change contract to fees. does not exceed 25 thousand dollars. Any problem with that statement? Representative Cowdery.

Number 052 Representative Cowdery: Yes. It seems to me in the real world that the fees out there, the interpretation of whatever the architect or engineering fee would be to a particular project could be in the administration of contracts and everything, this could all be in the fee that was tithed. And I just have problems with the 25 thousand dollars or putting a figure on this with due respect to the qualifications, some maybe think that if we don't put a fee that we're overlooking the small individual, but I still think that in top here it says here demonstrative competence of qualifications that that is the key to me of what the intent of this is to try to get competence

and qualification into this bill, 211. And I think that if we, with due respect to the small guy, I think that the 25 thousand dollar figure is not what unlike a person trying to getting into the contracting business and he builds himself a reputation to the bonding markets to deal with the bond jobs and that is the process through tries to work for large firms or out on your own and demonstrating your competence 'til finally you can get the competence of a bonding company to back you. And too, to the larger amount then I think that's probably, I just have a little problems with putting a fee into the price.

Number 072 Chairman Furnace: So is there a recommendation?

Representative Cowdery: I don't think that there should be a dollar amount.

Number 073 Chairman Furnace: Is there a motion to that effect then? To exclude that language?

Number 075 Representative Cowdery: Yes, I would make a motion that we ...

Number 076 Representative Ringstad: A point of inquiry here. I want to address this to Representative Malone because he's had a little more experience on these. Can we be amending and adopting a draft substitute before we adopt a substitute?

Number 079 Representative Malone: I think that's a decision the Chair should make, Representative Ringstad.

Number 080 Representative Ringstad: I didn't know if the Rules addressed that ...

Number 081 Representative Malone: Committee procedures are fairly informal so whatever the best way to handle something as far as ...

Number 082 Chairman Furnace: Representative Cowdery has the floor. Are you proposing a motion to delete Line 1 under Section B?

Number 084 Representative Cowdery: Yes. With, I would like, we have heard from many people here mainly the architects, we haven't heard from Associated General Contractors I don't believe and from the Department of Transportation, you know, that's maybe that would be in order to get input from them on this issue. But right now I would propose that we delete the sentenced total amount from the fee or contract does not exceed.

Number 089 Chairman Furnace: Is that a motion then, Representative Cowdery?

Representative Cowdery: Yes.

Number 090 Chairman Furnace: We have a motion to delete Line 1, Section B, all in favor of that motion?

Number 091 Representative Wendte: Mr. Chairman, I would like to call a discussion.

Chairman Furnace: Discussion? Let me recognize Representative Wendte, then Malone.

Number 093 Representative Wendte: I note that the entire section there B is in the existing statute. Why are we proposing another bill to put this exact language in the statute when it's already in there? ... Although you're putting it in another section. Verbatim that's taken out of the existing statutes.

Number 098 It was stated: Representative Wendte. The entire section of the statute you are referring to before does no longer applies to this particular rule, if this is adopted. So there would be absolutely no procedures and this is establishing procedures for that particular group. So you're exempting them from the requirements of 36.98 and ...

Number 103 Representative Wendte: You mean you're re-establishing the same procedures in this bill?

It was responded: Or some procedures, yes.

Number 104 Representative Wendte: In this case, exact verbatim word-for-word procedure.

Number 105 Chairman Furnace: Let's see ... Where did you find that in the statutes?

Representative Wendte: 36.98.010.

Number 107 Chairman Furnace: 010?

Representative Wendte: Yes.

Number 110 Representative Wendte: That's my concern and I don't see any reason in the statute to exempt them from one and then completely redraft the same.

Number 112 There is brief discussion.

Number 115 Representative Wendte: Well, I guess my concern is that directly to the point of your motion ... The wording that you're trying to get out is already in the statute for professional contracts, professional services contracts.

There is more brief discussion.

Number 118 Chairman Furnace: Okay, let's, Representative Wendte has the floor ...

Representative Wendte: Sections for everything from section, all of Section B is in the statute; down to the start of

Section C; and really Section C is a restating of 36.98.020 except you're adjusting it some, though it's not verbatim but it's model after that as well.

Number 124 Chairman Furnace: Okay, Representative Malone, do you a comment concerning that?

Representative Malone: I guess, do we have a motion pending?

Number 125 Chairman Furnace: There's a motion of the floor we have to handle it.

Representative Malone: It would delete this total amount of the contract does not exceed 25 is what basic ...

Number 127 Chairman Furnace: That's the extent of the motion.

Number 128 Representative Malone: And so it that it would require even in the case of small contracts under this section the State or local government agency to go through all the steps except I guess they wouldn't have to have at least six firms ... That's in fact ...

Number 133 Chairman Furnace: That's one portion of it. Now, be mindful that 36.98.010 applies to the professional services contract; the new section 36.98.041 applies to architects and engineers, so it is a new section of the statute. And so the process here would be to repeat certain existing language in this to make it more conclusive, unless this committee elects to take some of this out and once we go through and adjust this document. The question is, have we violated any statute requirements or whatever, and that would the second effort. We're still on discussion, Representative Malone.

Number 143 Representative Malone: Well, it just .. basically then you'd have no exemptions from 041. Might be ... state operations, might not be ...

Number 147 Chairman Furnace: Additional discussions? Representative Ringstad.

Representative Ringstad: I tend to agree with Representative Wendte about that whole Section B. I'm not sure what ...

Number 149 Chairman Furnace: Well, Representative Ringstad, we're dealing with Section B, Number 1, at this time. That is the motion on the floor.

Number 151 Representative Ringstad: Okay. ... We're all going to amend the motion or you want me to discuss it?

Number 152 Chairman Furnace: We're having a discussion right now.

Representative Ringstad: Well, that's what I'm trying to discuss ... If you want a motion, we can do that too.

Number 152 Chairman Furnace: Well, we have a motion on the floor to deal with Section B, Item 1.

Number 154 Representative Ringstad: Okay.

Chairman Furnace: To take out the total amount of the contract does not exceed 25 thousand. Additional discussion on that. Are you ready to vote to delete that?

Number 156 The response is discussion.

Number 157 Chairman Furnace: Representative Ringstad.

Representative Ringstad: Well, to me in addressing what Representative Wendte's point, I think we can do without the whole Section. Why go through line-by-line and leave out every line?

Number 159 Chairman Furnace: Then would you wish to amend the motion to take out the entire section? ... that amendment.

Number 160 Representative Ringstad: Yes, I would with Representative Cowdery's concurrence I would amend to move the original motion to leave out Section B here.

Number 163 Representative Cowdery: Okay.

Chairman Furnace: Well, then the amendment to the motion is to take out Section B in its entirety. Discussion on the amendment? No discussion? All in favor of taking out Section B in its entirety show by a raise of hand. All opposed? The motion carries. Section B is deleted. Section C. You gentlemen can read as good as I can. Any concerns with Section C? Representative Wendte.

Number 171 Representative Wendte: Mr. Chairman, I guess I ... We have a section that address professional services, and now we're creating a whole new section for a series of statutes that deal with contracts with architectural and engineering services. So I guess as a drafting concern Section B, Section C rather and throughout, we go back to describing as professional services contracts when you have a whole set of statutes that deal with professional services contracts. Well, I guess it's our intent, as I understand it, to take a section of professional services contract and call them architectural and engineering services. Although that doesn't mean that your professional any more but we are, I can see problems throughout where going back and referring to professional services contracts. Does that mean that professional services contracts for architects and engineers, does that apply to both? Existing statutes do we got and then this one as well?

Number 186 Chairman Furnace: I'll restate my comments from a minute ago. What we're doing now is adding a new section of statute covering architectural and engineering services. In essence, I would assume here that has the intent of taking architectural and engineering services out of the professional services statute and setting up a different sections governing that. That is the request that we've had and that is what we are dealing with now.

Number 191 Representative Wendte: So my concern is let's not take out the wording where they use professional services contracts in this bill. Continue to call it to be consistent with what you just stated. Architectural and engineering services contracts.

Number 194 Chairman Furnace: I believe that that has been done in the amendment.

Representative Wendte: Well, if you go through if you read through C you'll see regular reference to professional services contracts.

Number 197 Chairman Furnace: I don't think, you know, that's not awardable I believe, but let's read that. The State agency proposes to enter into a contract architectural and engineering services the agency shall give public notice soliciting a request for qualification for the professional service contract by qualification at least three times in one more newspapers in general circulation. Now, that particular instance, we have professional services contract and that covers, excuse me, a wide array of other practioneers. In this particular instance, we're speaking of principally to architects and engineering services, that contract is still called a professional services contract. And that is perhaps the distinction you have professional service contract to land surveyors for example. One of the recommendations is to not include land surveyors in this particular bill only to the extent that in they may interact with an architect or engineer. That's another adjustment that we'll have to make. Does that make it plainer?

Number 211 Representative Wendte: Well, the only I guess the point is that if you wanted to add a definitional section that says in every instance in this statue where they discuss professional services contract ...

Number 214 Chairman Furnace: ... statute ...

Representative Wendte: ... that you're ... that you are in effect, you need a definition of what you're talking about when you're talking about that, so that you don't have the conflict between the two sections of the statutes.

Number 218 Chairman Furnace: So noted. We can put that definition in the ...

Number 219 Representative Wendte: You have a definition for, in this section, architects and engineering services includes professional services, so you define it that way ... It is mostly just a drafting ...

Number 222 Chairman Furnace: ... as a recommendation. Let's go back now. Sec. 3 is there a motion concerning Sec. 3? Is there a desire to delete portions or all of Sec. 3? Section C, I'm sorry. Representative Ringstad.

Number 227 Representative Ringstad: We're requesting, let's see, the agency should give public notice soliciting a request for qualifications. Under current statue what we're doing is giving public notice, soliciting proposals. So the change here is that we're requesting qualifications and not proposals?

Number 232 Chairman Furnace: Well, perhaps let me explain that. In the engineering and architectural situation, the company is judged upon its ability and its qualification, and that qualification often times is spread upon two particular documents, Form 255 and 254. If an engineering firm wishes to bid on sewer job for example, on 255 they would list their history and involvement in sewer jobs. Often times they would pick based upon their qualifications first, and then negotiation as to price and other design characteristics is somewhat of a second phase, you see. So the first solicitation is a request for qualification, and that is probably unique to the engineering and architectural ...

Number 246 Representative Ringstad: Well, ... address that to me, part of your proposa., to make a proposal, well that's the basis they're going to determine it on your proposal will have that. That's if you don't submit your qualifications as, and all you give them is money, then you have half a proposal and your proposal's no good.

Number 250 Chairman Furnace: Perhaps what we need to do, Representative Ringstad, is to walk through again the process of solicitation of a job, an A and E job. Mitch, can you share that with us? Can you join us here?

Number 254 Mitch Gravo: Mr. Chairman, as I understand it how the process works, Representative Ringstad, is that the State first advertises for a request for qualifications for a job. For example, design a bridge, and they solicit responses from qualified architectural and engineering firms. And the only thing that the A and E firms submit are their qualifications or their experiences to do a design for a bridge. And then once the State gets all of those, what are called RFQs, they take a look at them and they see who the six best or three best qualified firms are. And then once they make that short list, they talk to the person, most qualified firm based on the request for qualification. And that at time they ask the most qualified firm to submit a proposal to design the bridge. And then in

that proposal they ask for a request for proposal at that time. So there is a distinction between a request for qualification which occurs initially and up to the point when they determine who the short list is. Once they determine what the short list is, then they ask the most qualified firm of, they request a proposal to do the project. They're terms of ... they have very firm definition within the AE field.

Number 272 Chairman Furnace: Thank you. Representative Ringstad.

Number 273 Representative Ringstad: So basically that's the way they're doing it now?

Number 274 Mitch Gravo: Yes.

Number 275 Representative Ringstad: Effectively what they're doing then is a majority of the people submitting for the job don't put in a bid?

Number 277 Mitch Gravo: No.

Representative Ringstad: Price bid.

Mitch Gravo: No. No. Not at all.

Number 278 Representative Ringstad: So by putting this in here basically you aren't changing anything in this paragraph? ...

Number 279 Mitch Gravo: That qualifies pretty much the standard procedures, at least the Department of Transportation. Now, how Fairbanks or how Unalakleet or how the Anchorage School District solicits paying services may vary a little bit. But that's the standard procedure at least for the Department of Transportation. That's the one that I am most familiar with.

Number 284 Chairman Furnace: Representative Ringstad.

Representative Ringstad: Okay, so the testimony we had the other day, they were trying to get to the local, the local areas too, so this may or may not apply to them at this point?

Number 287 Mitch Gravo: It would apply to them because in the substitute draft that you have before you states that it's defined to include political subdivisions.

Number 289 Chairman Furnace: At this point?

Mitch Gravo: Yes.

Chairman Furnace: It does not necessary apply, that's just the way DOT does i

Number 290 Mitch Gravo: Right.

Chairman Furnace: Representative Ringstad, one of the attempts here again is in this particular contracting there should be some predictability and some uniformity. Now, what we may be doing is asking other political subdivisions to comply with the statute if this indeed does go into statute. DOTPF has a pretty recognized and respected system and the burden would be upon the municipalities into coming to some type of compliance ... Is this section here okay? ... Representative Ringstad, additional questions? Representative Wendte?

Number 302 Representative Wendte: Mitch, would you, almost everything in this bill in fact aside from dropping out some sections in the existing statutes, would you go through and point out where this bill differs, is a difference from the existing statute? Which I understand was just adopted last year.

Number 306 Mitch Gravo: Representative Wendte, I didn't draft this Committee Substitute, so I'm not totally familiar with it. But I think that if you read it closely the first paragraph, if you turn back to the first paragraph, the only exception to 36.98 that is made here is the exception that 36.98.040, and that is the section in 36.98 that could allow price bidding. That's the only section in 36.98 accepted. So I think if you read it closely, the rest of 36.98 applies. Or could apply.

Number 315 Representative Wendte: I guess I get back to my original question. Why are we going through and putting all the same language back in?

Number 316 Chairman Furnace: How would you suggest handling that then, Representative Wendte?

Number 317 Representative Wendte: I would suggest that whoever drafted it go back and completely redoes it, the whole thing. All we're doing is duplicating statute.

Number 319 Chairman Furnace: Well, Representative Wendte, be mindful now, we're creating a new section of statute.

Number 320 Representative Wendte: I know that.

Chairman Furnace: New section to cover architectural and engineering. Now, I'm not totally positive on this but it appears when if you're going to do that I guess what you're saying, you want to reference back to professional contracts as opposed to making this a separate ... and section all of its own. Which means that you're going to repeat somethings which happens all the way through the statutes, if there is a redundancy here.

Number 326 Representative Wendte: I guess for all concerned I guess the present system isn't, is it working or does not properly apply to architectural and engineering services.

Number 328 Chairman Furnace: Perhaps the best statement is that it does not particularly address the concerns and the intent of codifying more specifically those contracts and the contractual relationship between architects and engineers in a State and political subdivision. I don't think it's a pertain question not necessarily working but an attempt to codify it.

Number 333 Representative Wendte: Well, as I understand it the intent of the bill is just to get competitive bidding out of the process in terms of the dollar figure going to essentially to inquire determinations be made on the basis of qualifications.

Number 336 Chairman Furnace: That is ...

Representative Wendte: If that's the case, it just seems to me that there would be a whole lot cleaner way to do that rather than going back and creating a whole new series of sections of statutes that repeats what's, you know, the previous section of statutes.

Number 339 Chairman Furnace: Yes, but do you have some recommendation for that, Representative Wendte.

Number 340 Representative Wendte: I guess my recommendation is we request whoever drafted this to start over again without doing that.

Number 342 Chairman Furnace: Well, you know we could request them to start over again without some specific direction; we've requested that and this is the information ... Now, without some specific recommendation as to what you'd like to see, going back to the drafters aren't going to accomplish what you want. Representative Ringstad.

Number 347 Representative Ringstad: Question to Mr. Gravo. Mitch, now you were saying that the first paragraph in our draft here exempts architects and engineers from section 040.

Number 351 Mitch Gravo: That's the only thing that architects and engineers are exempted for in this Title 36.98.

Number 353 Representative Ringstad: The way I read that that first paragraph that proposes scrutiny.

Number 354 Mitch Gravo: That's the section 36.98 that causes the A and Es some concern because that the section which could allow for question.

Number 356 Chairman Furnace: Which section is this again? Okay.

Representative Ringstad: 36.98.040 is what we're exempting then from. So I follow that one step further by exempting them only from the section, they're still under all the rest of this 36.98. And paragraph B matches up with 36.98.01, paragraph C matches up 36.98.030, and it kind just go back down, and as

Representative Wendte was saying, we're duplicating. So maybe what we need to do in drafting this thing is go back and only address 040, we're going to exempt from that, all we have to do is exempt from that and state specifically ...

Number 373 Mitch Gravo: Mr. Chairman?

Chairman Furnace: For the record, Mitch.

Mitch Gravo: Mr. Ringstad, I think that that is with original HB 211. It just addressed the issue of price bidding, precludes price bidding, and does not say anything about a procedure, and left that procedure up to DOT or the statutes that exist now or the local government or the local school district or whatever.

Number 379 Chairman Furnace: Representative Ringstad.

Representative Ringstad: So in leaving it up to the existing statues or whatever, this is the rest of this 36.98 is the existing statutes, the guideline that is already there. So what we need to do is just make sure that we exempt from 040 and it still by doing that it would still fall in to this and make sure that the State and all political subdivisions thereof fall into that.

Number 389 Chairman Furnace: Question? Continue.

Representative Ringstad: Mr. Chairman, in direction of where Representative Wendte was going is to how do we redraft this to address that. I think that that we are in fact duplicating in saying this still in the existing statute. Maybe what we ought to do is go back to the basis of addressing only the one section that we're exempting architects and engineers from. We don't have to address all the rest of this which we seem to be doing on several pages. I think we can leave to section page on that Page 1, 2, 3, and 4, or 5 out.

Number 401 Chairman Furnace: Are you putting that in motion, Representative Ringstad? Or is that simply ...

Number 401 Representative Ringstad: Well, let me keep working on it to make sure ... you know far we need to go here.

Number 403 Chairman Furnace: Let me recognize Representative Malone.

Number 404 Representative Malone: Well, Mr. Chairman, I understand that , I understand that the same way that we're duplicating a lot of the language and procedures set out in the earlier section, but we're also providing a new contracting mechanism different from 36.98.040 and when you do that you have to set out the procedures you're going to use. That's what this bill does. And I think on that basis it's properly drafted. I mean I suppose you can go in and say that the only section that doesn't apply under 36.98.010 to whatever the end of the chapter is, is 040,

but when you do that you're going to have to make some conformance changes to the rest of it and I think the cleanest way to do it is with a new section. Just from a procedural standpoint.

Number 421 Chairman Furnace: Representative Ringstad.

Representative Ringstad: Mr. Chairman, I would propose or if we so choose a motion form that we redraft this, have this redrafted for us basically so that we would include paragraph A and then paragraphs I, J, K and L. And if we need to we can state in there maybe ... that other procedures within this Title 36.98 would still apply. Something along that line. Within 36.98 it's stated in all these sections and then 36.98 is stated all over again. Perhaps what's already on the books all we have to do is, by implication I think it's there, but if not we can just refer back and say that A and E's still under the guidelines of other parts ...

Number 439 Chairman Furnace: Let's make sure what you're proposing to take out is. Your motion is to ...

Number 440 Representative Ringstad: Well, we've already taken out B, so ...

Number 441 Chairman Furnace: Your motion then addresses taking B through ...

Number 442 Representative Ringstad: Let me take on the positive form.

Chairman Furnace: Okay.

Number 443 Representative Ringstad: I would move to have this redrafted for us so as to include paragraph A, Section 1 on Page 1, Page 5, paragraph I, and all of Page 6. And I think once we get that and we get a chance to review that, we'll work with that and maybe we can see if we need to add something to reference it back to what's currently in statute or that's implied.

Number 453 Chairman Furnace: Okay, we have a motion on the floor. Discussion? Let's take a second to see ...

Number 468 Chairman Furnace: Additional time to review? Are you ready to handle the motion? Additional discussion? Are you ready for the vote on the motion? All in favor of the motion in its present state to adopt of this Section A ... Section 1 A and move to Page 5, Items A ... I, all of Page 6? That is ... A problem with that?

Number 480 Representative Ringstad: You're doing fine.

Chairman Furnace: All in favor of the motion show by a raise of hand. All opposed to the motion show by a raise of hand. The motion does carry. We'll redraft it to cover that. I want to have a chance again to read back between the two documents.

Number 484 Representative Ringstad: Mr. Chairman?

Chairman Furnace: Representative Ringstad.

Number 485 Representative Ringstad: I would suggest that in reviewing that, Billy can have ... for us and we can study that one a little bit and compare that to this one and compare it to existing statute, compare it to the original bill, and ...

Number 489 Chairman Furnace: Okay. Is there any more discussion on that? All right. We will have to reschedule this, I'll set a date. We've got a fairly heavy calendar ... we'll make it in relationship to another meeting. Are there persons to be heard on HB 211 at this time? Any other comments? If not, that ends discussion on 211.

Number 499 Chairman Furnace then brought the next item on the agenda, HB 19?, before the committee.

A/ HB 211 3/12/83

*Section 1. AS 36.98 is amended by adding a new section to read:

Sec. 36.98.041 ARCHITECTS AND ENGINEERS.

(a) It is the policy of the state to publicly announce all requirements for architectural and engineering services, and to negotiate contracts for architectural and engineering services only on the basis of demonstrated competence and qualification for the type of professional services required and at fair and reasonable prices notwithstanding the provisions of AS 36.98.040.

(b) This section chapter applies to contracts for architectural and engineering services provided to a state agency unless

(1) the total amount of the contract does not exceed $25,000;

[[[(2) the contract is an employment contract for services to be performed under direct supervision regardless of the existence of an employer-employee relationship and a written justification signed by the person responsible for awarding the contract is filed with the commissioner.]]]

(c) When a state agency proposes to enter into a contract for architectural and engineering services, the agency shall give public

notice soliciting a request for qualifications for the professional services contract by publication at least three times in one or more newspapers in general circulation in the state and, when appropriate, in a newspaper in local circulation where the work is to be performed. The first notice shall be published not less than 30 days before the date on which the agency expects to enter into the contract and each subsequent notice shall be published at intervals of no more than three days thereafter. The notice shall include

(1) a general description of the proposed project for which the agency is seeking professional services; and

(2) the procedure by which a person or firm interested in the professional services contract may submit its response to the agency for consideration for the contract.

(d) In addition to complying with the publication requirements of (c) of this section, when a state agency proposes to enter into a contract for architectural and engineering services it shall

(1) review the register of professional services contractors maintained by the commissioner under AS 36.98.020; and

(2) provide a notice of a request for qualifications for the proposed professional services contract to each prospective contractor who, after review of the register of professional services contractors under (1) of this subsection, the agency finds is qualified for consideration for the contract.

(e) Requests for qualification from at least six persons or firms with the required expertise shall be solicited for contracts equal to or greater than $100,000. Requests for qualification from at least three persons or firms with the required expertise shall be solicited for contracts of less than $100,000 if the expertise required is available. If the expertise required is not available to enable an agency to solicit the number of requests for qualification otherwise required under this subsection, the agency shall solicit requests for qualification

(1) from each person or firm listed on the professional services contractors register maintained under AS 36.98.020 who appears to possess the required expertise;

(2) from each person or firm responding to the public notice given under (a) of this section who appears to possess the required expertise.

(f) The provisions of this section do not apply if

(1) the contracting agency demonstrates that there is a single source of the expertise or knowledge required or that one person or firm can clearly perform the required tasks more satisfactorily because of the person's or firm's prior work; however, this exemption applies only if the head of the state agency has submitted a written request to the commissioner that details the reasons for the exemption and the commissioner or deputy commissioner has authorized in writing the state agency to enter contract negotiations with the single source;

(2) the commissioner makes a written determination that public necessity will not permit delay incident to the procedures otherwise required by this chapter; or

(3) the service is to be provided by another state agency, a federal agency, or a political subdivision of the state.

(g) The agency must provide a description of the work to be performed under the contract and the agency shall conduct discussions regarding anticipated concepts and the relative utility of alternative methods of approach for furnishing the required services. The state agency must provide a description of the factors that will be considered when it evaluates the request for qualifications received.

(h) After the responses are submitted, the state agency shall publically evaluate them. The evaluation shall consist of assigning point values to factors considered by the agency in evaluating each proposal. Points shall be awarded for being a qualified Alaska firm..

(i) The state shall negotiate a contract with the highest qualified firm for architectural and engineering services at compensation which the state determines is fair and reasonable to the state. In making such determination, the state shall take into account the estimated value of the services to be rendered, the scope, complexity, and professional nature of the services. Should the state be unable to negotiate a satisfactory contract with the firm considered to be the most qualified, the state shall undertake negotiations with

the second most qualified firm. Failing accord with the second most qualified firm, the state shall enter negotiations with other contractors, in order of ranking until an agreement is reached. The state may reject all or part of a proposal.

(j) This section does not apply to contracts awarded in an emergency if the person responsible for execution of the contract on behalf of the state certifies in writing that an emergency exists.

(k) In this section "state" includes political subdivisions of the state and agencies of the state and its political subdivisions.

(l) In this section "architectural and engineering services" includes those professional services of an architectural or engineering nature as well as incidental services that members of these professions and those in their employ may logically or justifiably perform.

ANALYSIS

One would be hard pressed to readily identify a cost of this Bill to the State, however, the prohibition against using price in any way to select consultants cannot help but impact the competition process with regard to the cost of the work done. The restrictive nature of this bill could conceivably increase the cost of capital projects as follows:

Assume:	Cost of Consultant fee for Design	=	7% of CIP
	Cost of Bill	=	5% of Consultant Fee
	CIP	=	$200 Million/year
	Cost of CSHB 211	=	0.05 X 0.07 X $200 Million
		=	$700,000 per year

CENTURY ENGINEERING, INC. CONSULTING ENGINEERS • PLANNERS

RECEIVED 3-22-83

March 17, 1983

Representative Mike Szymanski
Pouch V
Juneau, Alaska 99811

Dear Mike:

John and I have read over House Bill No. 211 concerning architectural and engineering services. The procedures outlined sound pretty much like the way things have been handled lately, at least as far as our recent experience is concerned.

I would think something in the bill giving guildlines as to how "fair and reasonable prices" are determined might be helpful. Most national professional organizations, such as the National Society of Professional Engineers or American Institute of Architects have booklets to help owners determine fee ranges for project types.

On page 2 of the bill, line 23 makes reference to "bids". A bid is usually a monetary figure and would then seem to conflict with other portions of the bill. Possibly "offers of or proposals for" would be more suitable language.

Thanks for allowing me the time to comment on this legislation which affects an area of direct impact on my profession..

Sincerely,

CENTURY ENGINEERING, INC.

Robert J. Peters, P.E.

John Ringstad
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Sir:

It has just come to my attention that committee revisions to H.B. 211 have the effect of deleting the profession of land surveying from the context of this bill.

As both a professional engineer and a professional land surveyor, I have supported this bill in its original form as introduced February 17, 1983 and strongly urge your support in passing it as such.

The deletion of land surveying and other amendments proposed in committee do a tremendous disservice to the land surveyor's profession, some two thousand strong in this State; also, its exclusion would have a deleterious effect on the quality of land surveys in the future by aiding in the degradation of this highly skilled profession into sub-professional status.

Sub-standard land survey work has already been a major problem in land title work in our State, one of the newest in the Union, and any regulation of land surveying out of professional status can only contribute to more disastrous results.

H.B. 211, as introduced, is a fine and much needed piece of legislation which brings State government procurement practices in line with professional standards in use in other States and by the Federal government.

Again, I urge you to support this bill in <u>original</u> form and resist any modifications thereto.

Very truly yours,

STUTZMANN ENGINEERING ASSOC., INC.

FAIRBANKS SOCIETY OF PROFESSIONAL LAND SURVEYORS

SR 30113
P.O. Box 2572
Fairbanks, Alaska 99701

March 24, 1983

Rep. Niilo Koponen
Pouch V
Juneau, AK 99811

MAR 24 1983

Dear Rep. Koponen:

The Fairbanks Chapter of the Alaska Society of Professional Land Surveyors wants to express strong support for HB 211 in its original form. We also wish to express our strong onjection and dismay at the Committee Substitute for HB 211 which eliminates Land Surveyors from this bill.

As a profession, we are classified under AS 48 in the same category as Architects and Enginners. We are registered by the same Board of Occupational Licensing and licenced by State of Alaska. Our Professional Certificates are signed by the "Board of Architects, Engineers, and Land Surveyors." Each Professional Land Surveyor receives a Professional License which must renewed annually by the the State of Alaska.

When a Registered Land Surveyor (RLS) signes and places his professional seal on a survey plat, his reputation and that of the entire profession are being offered as surety that the plat is correct and the land survey legal and complete. When a member of the profession is found guilty of unprofessional work, his license and professional status can be stripped by the State Board of Architects, Engineers, and Land Surveyors.

This attempt by the Committee Substitute to remove Professional Land Surveyors from the bill has the effect of removing one-third of the category which the bill addresses. We strongly urge you and others of the Fairbanks delegation, and members of the appropriate legislative committees, to re-instate Land Surveyors as a part of HB 211. It is a good bill, but the Committee Substitute must be rescinded.

Sincerely yours,

Patrick H. Kalen, RLS

§ 541. Definitions

As used in this subchapter

(1) The term "firm" means any individual, firm, partnership, corporation, association, or other legal entity permitted by law to practice the professions of architecture or engineering.

(2) The term "agency head" means the Secretary, Administrator, or head of a department, agency, or bureau of the Federal Government.

(3) The term "architectural and engineering services" includes those professional services of an architectural or engineering nature as well as incidental services that members of these professions and those in their employ may logically or justifiably perform.

June 30, 1949, c. 288, Title IX, § 901, as added Oct. 27, 1972, Pub.L. 92–582, 86 Stat. 1278.

Legislative History. For legislative history and purpose of Pub.L. 92-582, see 1972 U.S.Code Cong. and Adm.News, p. 4767.

Library References
United States ⇨35.
C.J.S. United States §§ 35, 37, 62 to 64.

§ 542. Congressional declaration of policy

The Congress hereby declares it to be the policy of the Federal Government to publicly announce all requirements for architectural and engineering services, and to negotiate contracts for architectural and engineering services on the basis of demonstrated competence and qualification for the type of professional services required and at fair and reasonable prices.

June 30, 1949, c. 288, Title IX, § 902, as added Oct. 27, 1972, Pub.L. 92–582, 86 Stat. 1279.

Legislative History. For legislative history and purpose of Pub.L. 92-582, see 1972 U.S.Code Cong. and Adm.News, p. 4767.

Library References
United States ⇨35.
C.J.S. United States §§ 35, 37, 62 to 64.

1. Grant-funded procurements

Architectural and engineering procurement procedures contained in sections 543 and 544 of this title, mandatory for federal procurements for such architectural and engineering services, were not per se applicable to procurements by the Licking County Regional Planning Commission, a grantee under a community development grant by the Department of Housing and Urban Development. 1980, 59 Comp.Gen. 251.

§ 543. Requests for data on architectural and engineering services

In the procurement of architectural and engineering services, the agency head shall encourage firms engaged in the lawful practice of their profession to submit annually a statement of qualifications and performance data. The agency head, for each proposed project, shall evaluate current statements of qualifications and performance data on file with the agency, together with those that may be submitted by other firms regarding the proposed project, and shall conduct discussions with no less than three firms regarding anticipated concepts and the relative utility of alternative methods of approach for furnishing the required services and then shall select therefrom, in order of preference, based upon criteria established and published by him, no less than three of the firms deemed to be the most highly qualified to provide the services required.

June 30, 1949, c. 288, Title IX, § 903, as added Oct. 27, 1972, Pub.L. 92–582, 86 Stat. 1279.

Legislative History. For legislative history and purpose of Pub.L. 92-582, see 1972 U.S.Code Cong. and Adm.News, p. 4767.

Library References
United States ⇨35.
C.J.S. United States §§ 35, 37, 62 to 64.

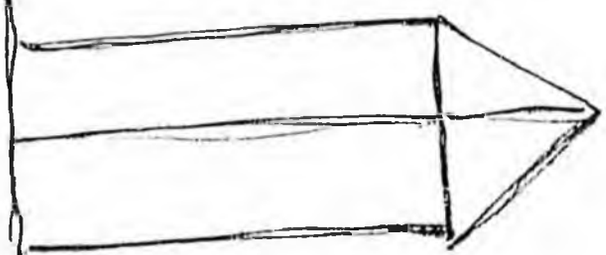
§ 544. Negotiation of contracts for architectural and engineering services

(a) The agency head shall negotiate a contract with the highest qualified firm for architectural and engineering services at compensation which

making such determination, the agency head shall take into account the estimated value of the services to be rendered, the scope, complexity, and professional nature thereof.

(b) Should the agency head be unable to negotiate a satisfactory contract with the firm considered to be the most qualified, at a price he determines to be fair and reasonable to the Government, negotiations with that firm should be formally terminated. The agency head should then undertake negotiations with the second most qualified firm. Failing accord with the second most qualified firm, the agency head should terminate negotiations. The agency head should then undertake negotiations with the third most qualified firm.

(c) Should the agency head be unable to negotiate a satisfactory contract with any of the selected firms, he shall select additional firms in order of their competence and qualification and continue negotiations in accordance with this section until an agreement is reached.



June 30, 1949, c. 288, Title IX, § 904, as added Oct. 27, 1972, Pub.L. 92–582, 86 Stat. 1279.

Legislative History. For legislative history and purpose of Pub.L. 92-582, see 1972 U.S.Code Cong. and Adm.News, p. 4767.

1. Factors considered

Factors which were used in fulfilling requirement to negotiate contracts for architectural and engineering services on basis of demonstrated confidence and qualifications for type of professional services required and which included institutional maturity, organizational framework, management plans and approach, management group experience, and availability of disciplines were not violative of this chapter as unduly stressing those factors most likely to yield selection of a large, established firm than a small minority one with individual rather than institutional competence and qualifications. Milkbilnent v. United Engineers & Constructors, Inc., D.C.Pa.1980, 485 F. Supp. 1292.

SUMMARY

1. a) Related Bills (Similar or Conflicting	1. b) Other Agencies Affected by Bill
SB 86 HB 104 SB 107	
2. a) Organizational Support for Bill	**2. b) Organizational Opposition to Bill**

3. Program Effects of Bill

This bill would add a new paragraph which would enable the Board to pay the provider directly for services provided as a result of the personal injury or death of the victim. The bill also provides a new paragraph which would enable the Board to deny a claim if the claimant refuses to give reasonable cooperation to law enforcement in their efforts to apprehend and convict the offender for the crime resulting in the personal injury, unless good cause for the refusal is shown the Board. The bill would also repeal the Section of the Act which now excludes relatives and victims living with offenders. The bill, under Section 18.67.130(c), deletes the sentence, "all payments must be made in a lump sum." (continued on page 2)

4. Fiscal Impact: ☐ None ☒ Fiscal Note Attached

5. Amendments Proposed:

6. Comments:

The Board supports adding the paragraph in Section 18.67.080(a)(4), as many times in the past the provider has not been paid because the service had to be paid in a joint warrant and this warrant did not always get sent to the provider. This would also be less of a hassle for the claimant. The Board supports the deletion of the lump sum payment requirement as they feel long term payments would insure the award was not exhausted before the dependent reaches majority or the claimant is able to return to work. The Board also supports adding paragraph (5) to Section 18.67.130(b), as they feel there are a few cases where the claimant is justified in fearing retribution from the offender. The Board also supports repealing the Section 18.67.130(b)(1) and (2), as they feel many people in the bush and outlying areas are truly innocent victims, but are not included in the present act because they are living in the same residence as the offender. This repeal would also mean innocent dependent children could receive loss of support when one spouse killed the other spouse and left the children homeless. (continued on page 2)

Program Effects (continued from page 1)

A new paragraph is added stating a person awarded compensation is ineligible for subsequent compensation for additional personal injuries inflicted by the same offender if the offender is a relative or member of the same household as the victim.

Comments (continued from page 1)

The Board supports the deletion of the lump sum payment requirement, as they feel long term payments would insure the award was not exhausted before the dependent reaches majority or the claimant is able to return to work. Section 18.67.135 would keep the offender from benefitting from his actions and speaks to this concern.

A manual for crime victims citizen associations, judges and prosecutors to provide due process for victims in the criminal justice system

Washington Legal Foundation

This Crime Victims Impact Statement Manual is prepared and distributed by the Washington Legal Foundation to State and Federal Judges and Prosecutors in all 50 States and the District of Columbia. The purpose of this manual is to help develop a system whereby the victim of crime participates in a constructive manner in the sentencing process of a criminal case.

The Washington Legal Foundation, a nonprofit public interest legal center with 80,000 members nationwide, has been a pioneer in the field of crime victims' rights. Besides the preparation of this manual, WLF has provided legal assistance to victims to enable them to file civil actions against the criminals and third parties for damages suffered by the victim. WLF has also submitted proposals with the United States Parole Commission that, if adopted, would require victim compensation as one of conditions for parole. WLF also has participated in many programs concerning victims' rights as part of WLF's commitment to educate the public on this important issue.

We encourage users of this manual to submit comments and suggestions to the Foundation on the use of the Victim Impact Statement as well as on other crime victims' rights issues.

The text which follows may be reprinted in whole or in part if credit is given. Please send one copy to the Washington Legal Foundation.

INTRODUCTION

A violent crime now occurs every 24 seconds somewhere in the United States. Every 23 minutes, a murder is committed. A woman is raped every 6 minutes. There's a robbery every 58 seconds, and an aggravated assault every 48 seconds.

The striking truth about crime is that we are all vulnerable to its random selection, and becoming increasingly vulnerable as America's crime clock continues to tick at a faster rate, with violent crime increasing 11% in 1980.

There has been much written and spoken of the pervasive fear of violent crime which threatens the American way of life. The Chief Justice of the U.S. Supreme Court has recently and poignantly spoken out on the subject of violent crime, noting the "reign of terror" which has made Americans "hostages within the borders of our own self-styled, enlightened, civilized country."

Fighting violent crime has been declared a high priority of the Reagan Administration's Justice Department.

The Washington Legal Foundation believes the victim of violent crime should be given the highest priority in America's continuing struggle to deal with the issue of violent crime.

The diligent efforts of progressive criminologists, jurists and legislators over the past two decades have borne fruit. Caught up on providing social justice for the criminal offender, the American taxpayer has been footing the bill for the millions of dollars being spent on programs for criminal offender-oriented rehabilitation and court reform. We now offer criminal offenders every conceivable right and legal service interpreted to be due them under the law.

Law enforcement officials, the courts and the entire criminal justice system have focused their efforts on the rights of the accused, providing to the offender "massive safeguards" in the words of Chief Justice Warren Burger.

Unfortunately, no one has made such a zealous effort on behalf of the innocent victims of crime, who have become the forgotten factor in the criminal justice equation.

For far too long, the words "Criminal Justice" have been interpreted to mean "Justice for the Criminal." We have forgotten that for every crime, there is at least one victim.

The initial shock and dismay felt by the victim of a violent crime is exacerbated by a criminal justice system that seems to care more for the offender than the victim. Perhaps the saddest commentary on America's criminal justice system is that the victim of a violent crime is not only victimized by the crime itself, but he or she can expect to be re-victimized again and again by an archaic process which is supposed to administer justice, to right the wrong the victim has experienced.

The process by which our society prosecutes the criminal is based on the theory of the law that the government itself, "society", is the victim of crime. The very manner in which criminal cases are titled provides an indication of the victim's status. No matter how severe the crime committed and the injury suffered by the victim, it is the State vs. Criminal, not Victim vs. Criminal. The victim of violent crime finds that he has become, at best, merely the State's witness in their case, a piece of evidence, his status collectivized by society.

The semantics of criminal prosecution would not be significant if the issue were merely one of how we title our court cases. However, the criminal justice system has failed to recognize that every person who commits a criminal act not only violates the law, but also violates a person. The victim of violent crime learns firsthand that America's law enforcement mechanisms are geared to apprehending, prosecuting, and allegedly punishing those who criminally offend society. In the process, the victim is neglected, his rights as an injured person subrogated.

As if it isn't bad enough that the victim of crime has been relegated to an observer status in the prosecution of the offender, the crime victim is further denied the right to even observe. It is well recognized that the crime victim does not even receive complete and timely information regarding the status of the case, from arrest on through to prosecution, plea bargaining, and sentencing, if any.

It is no wonder the victim feels detached from the criminal justice system.

The Washington Legal Foundation proposes that courts throughout the United States can and should assist in improving the rights of the victims of violent crime by establishing a system whereby the victim participates in a constructive manner in the sentencing process of a criminal case.

The Sentencing Process

In all states, criminal procedure laws require a pre-sentence investigation prior to the imposition of a sentence upon a defendant who has been found guilty. The primary focus of the investigation, which is usually conducted and presented to the court by a probation or corrections officer, is on the person to be sentenced, the criminal. The particular areas of pre-sentence investigation include the past delinquencies of the criminal, his employment history, family background, economic status, education and personal habits.

In theory, the court weighs these factors with the circumstances of the criminal offense to determine a just and proper sentence. The investigation report may also include a recommendation of an appropriate sentence. Although a judge is not bound by the report's findings and recommendation, he usually shows deference to the reporting officer's judgment. Thus, the pre-sentence investigation and report is an important element in the judge's decision on an appropriate sentence, including whether the offender should be released on probation or confined to prison, and, if imprisoned, the duration of the jail term.

It seems, then, that this is a crucial juncture along the road to justice, and it is exactly at this juncture that the victim's views should be considered. The use of a Victim Impact Statement provides a mechanism by which the crime victim may directly participate in the sentencing process.

What is a Victim Impact Statement?

Simply put, a Victim Impact Statement is a tool to be used by prosecutors and judges in an effort to make the criminal justice system more accountable to the victims of violent crime.

The "Statement" itself is a questionnaire intended to be voluntarily completed by the crime victim and included in

the information provided to the Court prior to the imposition of sentencing.

The answers to questions included in the Victim Impact Statement will provide the Court with the physical, psychological and economic effects which the crime has had on the victim and his or her family. The information is provided directly by the victim, who has an opportunity to also set forth his attitude and concerns as the victim of a violent crime.

The Washington Legal Foundation recognizes that the weight which the Court places on a Victim Impact Statement will depend on the particular circumstances of each case, taken on an individual basis. In no way does the Washington Legal Foundation wish to suggest that the Court should be necessarily bound by the contents of the Victim Impact Statement. Rather, the Victim Impact Statement is meant to provide the Court with additional assistance in the discretionary exercise of its sentencing powers.

At the same time, the solicitation of a Victim Impact Statement will demonstrate to the crime victim that the criminal justice system is concerned with the victim's plight.

CONCLUSION

This Victim Impact Statement Manual includes not only a sample Victim Impact Statement, but a thorough analysis of all State laws that relate to the input by the victim in the criminal justice system. The Foundation hopes that the information provided in this Manual will serve as a catalyst to advance the rights of all victims of violent crime.

The Foundation strongly suggests that members of the public and citizens' groups encourage their local judges and prosecutors to utilize Victim Impact Statements in the sentencing process. With a concerted effort by all concerned, we hope to advance the rights of victims and their families as well as to reduce the occurrences of violent criminal activity.

VICTIM IMPACT STATEMENT

STATE VS._____

CASE #_____

SENTENCING DATE_____

_____

_____

TO ASSIST THE COURT IN ITS EFFORT TO WEIGH ALL FACTORS PRIOR TO IMPOSING SENTENCE, WE REQUEST YOUR *VOLUNTARY* COOPERATION IN COMPLETING THIS FORM. THIS STATEMENT IS INTENDED TO BE SUBMITTED TO THE JUDGE IMPOSING SENTENCE HEREIN.

_____

_____

NAME OF VICTIM:_____

ADDRESS: _____
STREET CITY STATE ZIP CODE

DATE OF BIRTH:_____

1. Please describe the nature of the incident in which you were involved.

_____

_____

_____

2. As a result of this incident, were you physically injured?_____
If yes, please describe the extent of your injuries.

_____

_____

_____

3. Did you require medical treatment for the injuries sustained?_____

If yes, please describe the treatment received and the length of time treatment was or is required.

_____

_____

4. Amount of expenses incurred to date as a result of medical treatment received:

$_____

Anticipated expenses:

$_____

5. Were you psychologically injured as a result of this incident?_____
If yes, please describe the psychological impact which the incident has had on you.

6. Have you received any counselling or therapy as a result of this incident?_____
If yes, please describe the length of time you have been or will be undergoing counselling or therapy, and the type of treatment you have received.

7. Amount of expenses incurred to date as a result of counselling or therapy received:

$_____

8. Has this incident affected your ability to earn a living?_____
If yes, please describe your employment, and specify how and to what extent your ability to earn a living has been affected, days lost from work, etc.

9. Have you incurred any other expenses or losses as a result of this incident?_____
If yes, please describe.

10. Did insurance cover any of the expenses you have incurred as a result of this incident? If yes, please specify the amount and nature of any reimbursement.

11. Has this incident in any way affected your lifestyle or your family's lifestyle?_____
If yes, please explain.

12. Are there any other residual effects of this incident which are now being experienced by you or members of your family?

13. Please describe what being the victim of crime has meant to you and to your family.

14. What are your feelings about the criminal justice system? Have your feelings changed as a result of this incident? Please explain.

15. Do you have any thoughts or suggestions on the sentence which the Court should impose herein? Please explain, indicating whether you favor imprisonment.

THIS FORM IS SUBSCRIBED AND AFFIRMED BY THE VICTIM AS TRUE UNDER THE PENALTIES OF PERJURY. THE INFORMATION AND THOUGHTS YOU HAVE PROVIDED ARE VERY MUCH APPRECIATED.

STATE LAWS AND THEIR APPLICATION TO THE USE OF A VICTIM IMPACT STATEMENT

No state explicitly denies the right of the victim to be considered during the pre-sentence investigation and mentioned in the pre-sentence report. Only four states--Indiana, Connecticut, Illinois and Kansas--have statutes that explicitly require a statement from or concerning the victim in the pre-sentencing report. The text of these statutes is contained later in this publication.

Indiana provides an exemplary procedure for consideration of the victim in the sentencing process. The State of Indiana provides that a pre-sentence report must include any written statements submitted to the prosecuting attorney by the victim, and any written statements submitted to the probation officer by a victim. This concern for the victim, whom the law defines as "a person who has suffered harm as a result of an offense", was enacted by the Indiana Legislature in 1978. The statute also provides that if no written statements are submitted to the probation officer, the probation officer must certify to the Court that an attempt was made to contact the victim, and that if the victim was contacted, the probation officer offered to accept the victim's written statement or to reduce the victim's oral statements to writing concerning the sentence, including the acceptance of any recommendation, i.e., the victim has a say in the plea bargaining process.

The Connecticut and Kansas statutes call for an inquiry into the attitude of the complainant or victim, or in the case of the victim's death, the victim's immediate family.

The Illinois statute requires the pre-sentence report to set forth the effect of the crime upon the victim, as well as any sentencing scheme that would allow the victim to be compensated by his offender. Illinois is noteworthy in that it is the only state in the union which statutorily calls upon the probation officer to devise a restitutive scheme for the benefit of the victim.

The Oregon rules of criminal procedure allow for a post-conviction hearing to determine if an aggravation or mitigation of punishment is warranted. A victim may appear at this hearing and state his views for aggravating or mitigating the punishment, but the focus of the Oregon pre-sentencing report is primarily on the defendant.

The Minnesota statute alludes to the victim when it requires an account of "... the circumstances of the offense and harm caused thereby to others and to the community", but does not specifically mention or require anything of the nature of a victim impact statement, although it is clear that such a statement would not be unwelcomed.

Although most of the remaining state statutes are defendant-specific, there is room for a victim impact statement in nearly all of them. There are roughly three categories in which the remaining statutes are divided (with some overlap). The first category includes those statutes that require the gathering of information with respect to the circumstances attending the commission of the offense. On the surface, this would simply require the reporting officer to describe the nature of the offense. It seems, however, that the consequent or resultant circumstances of the offense can be included here; that is, a victim impact statement describing the effects of the crime on the victim and the victim's attitude toward sentencing, would seem to fall within the purview of the statutes having this requirement. Sixteen state statutes contain this requirement or one with language similar to it.

The second category includes those statutes that allow the reporting officer to include in his report any matter which he deems relevant to the question of sentence or those that allow the report to contain any information the court orders to be included. Thirteen states have statutes that contain this or similar language. Under these rules the reporting officer and the court are allowed a good deal of latitude in determining the contents of the report. If they deem it proper, they may include a victim impact statement.

The remaining sixteen statutes are predominantly defendant oriented, **with no mention of the victim.** Thirteen of those statutes simply require a pre-sentence investigation prior to the announcement of sentence with no specific guidelines, or are worded loosely enough to allow a victim impact statement. Four states--Alaska, Delaware, Missouri

and Utah--have specific guidelines that clearly exclude the victim. Additional or revised language would be required to allow such a statement in those states.

INDIANA

35-50-1A-10 SCOPE OF PRESENTENCE INVESTIGATION AND REPORT--SOLICITATION OF VICTIM'S STATEMENTS,--(a) The presentence investigation consists of the gathering of information with respect to the circumstances attending the commission of the offense, the convicted person's history of delinquency or criminality, social history, employment history, family situation, economic status, education and personal habits. Such investigation may also include any other matter which the probation officer conducting the investigation deems relevant to the question of sentence, and must include:

(1) Any matters the court directs to be included;

(2) Any written statements submitted to the prosecuting attorney by a victim under IC 35-5-6 (35-5-6-1 --35-5-6-5); and

(3) Any written statements submitted to the probation officer by a victim.

(b) If there are no written statements submitted to the probation officier, he shall certify to the court:

(1) That he has attempted to contact the victim; and

(2) That, if he has contacted the victim, he has offered to accept the written statements of the victim, or to reduce his oral statements to writing, concerning the sentence, including the acceptance of any recommendation.

(c) As used in this section, the terms "recommendation" and "victim" have the meanings set out in IC 35-5-6-1. [IC 35-4.1-4-10, as added by Acts 1973, P.L. 325, §4, p. 1750; 1978, P.L. 146, §5, p. 1331.]

35-5-6-1. DEFINITIONS.--AS USED IN THIS CHAPTER:

(a) "Prosecutor" means prosecuting attorney or deputy prosecuting attorney.

(b) "Recommendation" means a proposal by the prosecutor to a court that:

(1) A charge be dismissed; or

(2) A defendant, if he pleads guilty to a charge, receive less than the maximum penalty permitted by law.

(c) "Victim" means a person who has suffered harm as a result of an offense. [IC 35-5-6-1, as added by Acts 1975, P.L. 332, §1, p. 1768; 1978, P.L. 146, §1, p. 1331.]

35-5-6-1.5. NOTICE TO VICTIM OF PROSECUTOR'S RECOMMENDATION,--(a) In making a recommendation on a felony charge, a prosecutor must:

(1) Inform the victim that he has entered into discussions with defense counsel or the court concerning a recommendation;

(2) Inform the victim of the contents of the recommendation before it is filed; and

(3) Notify the victim so that he might be present when the court considers the recommendation.

(b) A court may consider a recommendation on a felony charge only if the prosecutor has complied with this section. [IC 35-5-6-1.5, as added by Acts 1978, P.L. 146, §2, p. 1331.]

CONNECTICUT

§ 54-109. WHEN INVESTIGATION OF DEFENDANT REQUIRED

No defendant convicted of a crime, other than a capital felony, the punishment for which may include imprisonment for more than one year, shall be sentenced, or his case otherwise disposed of, until a written report of investigation by a probation officer has been presented to and considered by the court, if (1) the defendant is so convicted for the first time in this state or (2) his record, as shown by the prosecuting official, discloses a conviction obtained prior to three years from the finding of guilty in the present prosecution; but any court may, in its discretion, order a presentence investigation for a defendant convicted of any crime or offense other than a capital felony. Whenever an investigation is required, the probation officer shall promptly inquire into the circumstances of the offense, the attitude of the complainant or victim, or of the immediate family where possible in

cases of homicide, and the criminal record, social history and present condition of the defendant. All local and state police agencies shall furnish to the probation officer and restitution specialist such criminal records as the probation officer and restitution specialist may request. When in the opinion of the court or the investigating authority it is desirable, such investigation shall include a physical and mental examination of the defendant. If the defendant is committed to any institution, the investigating agency shall send the reports of such investigation to the institution at the time of commitment. (1976, P.A. 76-336, §6; 1978, P.A. 78-188, §5, eff. July 1, 1978.)

KANSAS

62-2238. PRESENTENCE INVESTIGATIONS UPON REQUEST OF DISTRICT COURT; PROCEDURE. Whenever a defendant is convicted of a crime or offense, the court before whom the conviction is had may request a presentence investigation by a probation officer. Whenever an investigation is requested, the probation officer shall promptly inquire into the circumstances of the offense; the attitude of the complainant or victim, and of the victim's immediate family, where possible, in cases of homicide; and the criminal record, social history, and present condition of the defendant. All local and state police agencies shall furnish to the probation officer such criminal records as the probation officer may request. Where in the opinion of the court it is desirable, the investigation shall include a physical and mental examination of the defendant. If a defendant is committed to any institution, the investigating agency shall send a report of its investigation to the institution at the time of commitment. [L. 1957, ch. 331, §13; July 1.]

ILLINOIS

§ 1005-3-2. PRESENTENCE REPORT

(a) The presentence report shall set forth:

(1) the defendant's history of delinquency or criminality, physical and mental history and condition, family situation and background, economic status, education, occupation and personal habits;

(2) information about special resources within the community which might be available to assist the defendant's rehabilitation, including treatment centers, residential facilities, vocational training services, correctional manpower programs, employment opportunities, special educational programs, alcohol and drug abuse programming, psychiatric and marriage counseling, and other programs and facilities which could aid the defendant's successful reintegration into society;

(3) the effect the offense committed has had upon the victim or victims thereof, and any compensatory benefit that various sentencing alternatives would confer on such victim or victims;

(4) information concerning the defendant's status since arrest, including his record if released on his own recognizance, or the defendant's achievement record if released on a conditional pre-trial supervision program;

(5) when appropriate, a plan, based upon the personal, economic and social adjustment needs of the defendant, utilizing public and private community resources as an alternative to institutional sentencing; and

(6) any other matters that the investigatory officer deems relevant or the court directs to be included.

(b) The investigation shall include a physical and mental examination of the defendant when so ordered by the court. If the court determines that such an examination should be made, it shall issue an order that the defendant submit to examination at such time and place as designated by the court and that such examination be conducted by a physician, psychologist or psychiatrist designated by the court. Such an examination may be conducted in a court clinic if so ordered by the court. The cost of such examination shall be paid by the county in which the trial is held.

(c) Nothing in this Section shall cause the defendant to be held without bail or to have his bail revoked for the purpose of preparing the presentence report or making an examination. Amended by P.A. 80-1099, §3, eff. Feb. 1, 1978.

CATEGORIES OF STATE LAWS RELATING TO VICTIM INPUT ON SENTENCING

Category I : Statutes which specifically mention or allude to the victim.

Category II : Statutes requiring the gathering of information with respect to the circumstances of the crime.

Category III : Statutes allowing the reporting officer to include, or the Court to order, any matter considered relevant to the issue of sentencing.

Category IV : Statutes which merely call for a pre-sentence investigation.

Category V : Statutes which are defendant-specific and would require revised language in order to implement a Victim Impact Statement.

STATE	STATUTE	CATEGORY
Alabama	Ala. Stat. Ann. Tit. 42 §21	II
Alaska	Alaska Stat., Crim. §12.55.085	V

If a defendant is committed to any institution, the investigating agency shall send a report of its investigation to the institution at the time of commitment. [L. 1957, ch. 331, §13; July 1.]

ILLINOIS

§ 1005-3-2. PRESENTENCE REPORT

(a) The presentence report shall set forth:

(1) the defendant's history of delinquency or criminality, physical and mental history and condition, family situation and background, economic status, education, occupation and personal habits;

(2) information about special resources within the community which might be available to assist the defendant's rehabilitation, including treatment centers, residential facilities, vocational training services, correctional manpower programs, employment opportunities, special educational programs, alcohol and drug abuse programming, psychiatric and marriage counseling, and other programs and facilities which could aid the defendant's successful reintegration into society;

(3) the effect the offense committed has had upon the victim or victims thereof, and any compensatory benefit that various sentencing alternatives would confer on such victim or victims;

(4) information concerning the defendant's status since arrest, including his record if released on his own recognizance, or the defendant's achievement record if released on a conditional pre-trial supervision program;

(5) when appropriate, a plan, based upon the personal, economic and social adjustment needs of the defendant, utilizing public and private community resources as an alternative to institutional sentencing; and

(6) any other matters that the investigatory officer deems relevant or the court directs to be included.

(b) The investigation shall include a physical and mental examination of the defendant when so ordered by the court. If the court determines that such an examination should be made, it shall issue an order that the defendant submit to examination at such time and place as designated by the court and that such examination be conducted by a physician, psychologist or psychiatrist designated by the court. Such an examination may be conducted in a court clinic if so ordered by the court. The cost of such examination shall be paid by the county in which the trial is held.

(c) Nothing in this Section shall cause the defendant to be held without bail or to have his bail revoked for the purpose of preparing the presentence report or making an examination. Amended by P.A. 80-1099, §3, eff. Feb. 1, 1978.

WASHINGTON LEGAL FOUNDATION

The Washington Legal Foundation was established in 1977 as a nonpartisan public interest law institution organized to engage in litigation and the administrative process in matters affecting the broad public interest. An independent nationwide corporation not associated or affiliated with any other organization, the Foundation devotes a substantial portion of its resources to defending individual rights, aiding victims of violent crimes, challenging regulations which impede a free market economy, and supporting a strong national defense and internal security.

The Foundation is classified as a Section 501(c)(3) organization under the Internal Revenue Code of 1954. It is further classified as a "nonprofit" (i.e., "public") foundation under Section 170(b)(1)(A)(vi) and under Section 509(A)(2) of the Code. Individuals, corporations, companies, associations, and foundations are eligible to support the work of the Foundation through tax-deductible gifts. Background material will be provided to substantiate tax-deductibility. The Foundation neither solicits nor accepts government funding or court awarded (taxpayers') fees for its operations.

Additional information about any of the Foundation's programs and litigation may be obtained by contacting the Washington Legal Foundation, 1612 K Street, N.W., Suite 502 Washington, D.C. 20006. Tel. (202) 857-0240.

VICTIMS RIGHTS WEEK, 1981

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

A PROCLAMATION

For too long, the victims of crime have been the forgotten persons of our criminal justice system. Rarely do we give victims the help they need or the attention they deserve. Yet the protection of our citizens — to guard them from becoming victims — is the primary purpose of our penal laws. Thus, each new victim personally represents an instance in which our system has failed to prevent crime. Lack of concern for victims compounds that failure.

Statistics reported by the Federal Bureau of Investigation and other law enforcement agencies indicate that crime continues to be a very serious national problem. But statistics cannot express the human tragedy of crime felt by those who are its victims. Only victims truly know the trauma crime can produce. They have lived it and will not soon forget it. At times, whole families are entirely disrupted — physically, financially and emotionally. Lengthy and complex judicial processes add to the victim's burden. Such experiences foster disillusionment and, ultimately, the belief that our system cannot protect us. As a Nation, we can ill afford this loss of faith on the part of innocent citizens who have been victimized by crimes.

We need a renewed emphasis on, and an enhanced sensitivity to, the rights of victims. These rights should be a central concern of those who participate in the criminal justice system, and it is time all of us paid greater heed to the plight of victims.

Ronald Reagan
April 8, 1981

THE WASHINGTON LEGAL FOUNDATION
1612 K Street, N.W.
Washington, D.C. 20006

crowding is an epidemic-scale problem, but the only response now being considered is billions of dollars of new prison construction. If all the prisons proposed today are actually built, they would cost at least 5.6 billion dollars.[18] Finding better ways to deal with criminal offenders is not only timely; it is a matter of life and death. And fortunately, these better ways are readily available.

Alternative Punishments

There are several alternatives to incarceration which may well prove to be better measures of punishment, both for society and for the offender, than imprisonment. They could improve public safety, save taxpayers huge amounts, and offer far better hope for rehabilitation of offenders. These alternatives constitute "just punishment," often far more just than imprisonment. Let's briefly consider several of these alternatives.

A. Restitution

"Restitution" requires the offender to repay the crime victim for property loss or property or personal damages. Though an alternative to prison, a restitution sentence is not an "easy out." The offender's schedule is rigidly controlled, often through his/her return at the end of the work day to a half-way house. The offender's pay is diverted into channels beyond his/her control: repayment of the victim, compensation of the state, supporting the offender's family, and establishing a capital reserve which will help keep an offender from being impelled back toward crime by poverty after release.

Because of growing public concern for crime victims, the restitution concept holds great promise of gaining broad support. Many surveys, for example, indicate that a high percentage of Americans would prefer to have a nonviolent offender repay his victim rather than serve time in prison at public expense. Likewise, offender repayment is preferred over governmental compensation of crime victims through tax dollars.[19]

Several states have instituted restitution programs in which corrections staff may negotiate the amount of repayment, monitor the payment schedule and, in some instances, offer employment assistance to unemployed offenders to guarantee that the victim will be repaid.

Restitution has gone past the theory stage in dozens of communities across the country. Though problems inevitably arise, as with all new programs, the results have been encouraging. Programs in Florida, Saginaw, MI and Elkhart, IN, among others, show both the practicality and effectiveness of the restitution alternative.[20]

B. Community Service Orders

A criminal act is an offense against particular victims, of course, but it is also an offense against society. Both suffer loss: an individual is violated, and public safety is diminished; the offender is thereby said to incur a "debt to society." But as long as punishment and imprisonment are considered synonymous, neither the victim nor society is compensated; to the contrary, both then incur the additional heavy costs of imprisonment. We have discussed restitution by offenders to their individual victims. Is there a comparable approach to compensating society?

Too often offenders now pay their "debt to society" in prison. The resulting waste of valuable human resources is easy to document. For instance, the prisoner operating the washing machine next to Charles Colson at Maxwell Federal Prison had been a prominent doctor, convicted of stock fraud. There was no resident doctor in this particular prison, so the many inmates with medical needs had to rely on a paramedic while a qualified doctor spent his days putting dirty underwear into the washing machine each morning and taking it out each afternoon. Later he volunteered to help meet a shortage of doctors

A Perspective on American Prisons, 1981

Provided by: Rep. Mae Fischer

in the surrounding community by working nights, but his offer was refused. Such shortsightedness serves neither the victim, the offender nor society.

Instead of being sent to prison, offenders could be required to work for a period of years, either at a very modest pay or none at all, in ghettoes, hospitals, or other areas of public need. Such alternatives need not be limited to white-collar offenders. Present community service programs provide work opportunities for skilled and unskilled workers alike. California is operating some 50 Community Service Alternatives for offenders.[21] Similar Community Service Orders have been employed in England with dramatic success.[22]

C. *House Arrest*

This alternative is primarily for convicted felons whose probation reports indicate they are unlikely to be involved in further criminal behavior. Many of those sentenced to house arrest are first-time offenders with no record of prior criminal activity. In California, for example, a nurse in Berkeley was sentenced to house arrest for one year for the fatal shooting of her husband. (Mitigating circumstances were present.) The alternative was approved by a committee of Alameda County officials in response to prison overcrowding and the high cost of incarceration. The convicted woman was required to report each morning and evening, seven days a week, to the County's Probation Department. This sentence permitted her to maintain her nursing job and care for her child.[23]

D. *Probation and Contract Probation*

Probation is one of the most widely used alternatives. Offenders on probation are sentenced to obey specific behavior guidelines under the supervision of a Probation Officer. Violation of the guidelines can result in incarceration, so the offender

has every incentive to avoid that prospect.

Contract probation is usually offered as an alternative to incarceration by one of the lawyers involved (interestingly enough, often the prosecutor's office advocates the program). The judge is presented with a program of punishment, often including Community Service or restitution. Under the guidelines set down, the offender reports to an authority designated by the court throughout the term of the parole.

E. *Deferred Sentencing*

Offenders assigned this alternative to incarceration plead guilty to their charge, and undergo a pre-sentence investigation. The presiding judge then defers sentencing for several months, during which the offender is referred to service agencies—alcohol and drug treatment, for example. If the offender's response is positive, the judge may impose a sentence of probation with the stipulation of continued participation in rehabilitative programs.

F. *Suspended Sentencing*

This alternative involves establishment of a fixed sentence by the presiding judge, who then suspends the sentence for a specified period of time, subject to the offender's compliance with behavioral guidelines. If the guidelines are violated, the original sentence takes effect.

G. *Fines*

Assessment of fines is already a typical penalty for many crimes, but such sentences could be more widely used in place of imprisonment for nonviolent offenses. However, the amount of a fine should be based on both the seriousness of the offense and the offender's ability to pay. Only thus can the United States reduce the blatant discrimination which leads to incarceration of a disproportionate number of the poor—those unable either to pay fines or secure sophisticated legal representation.

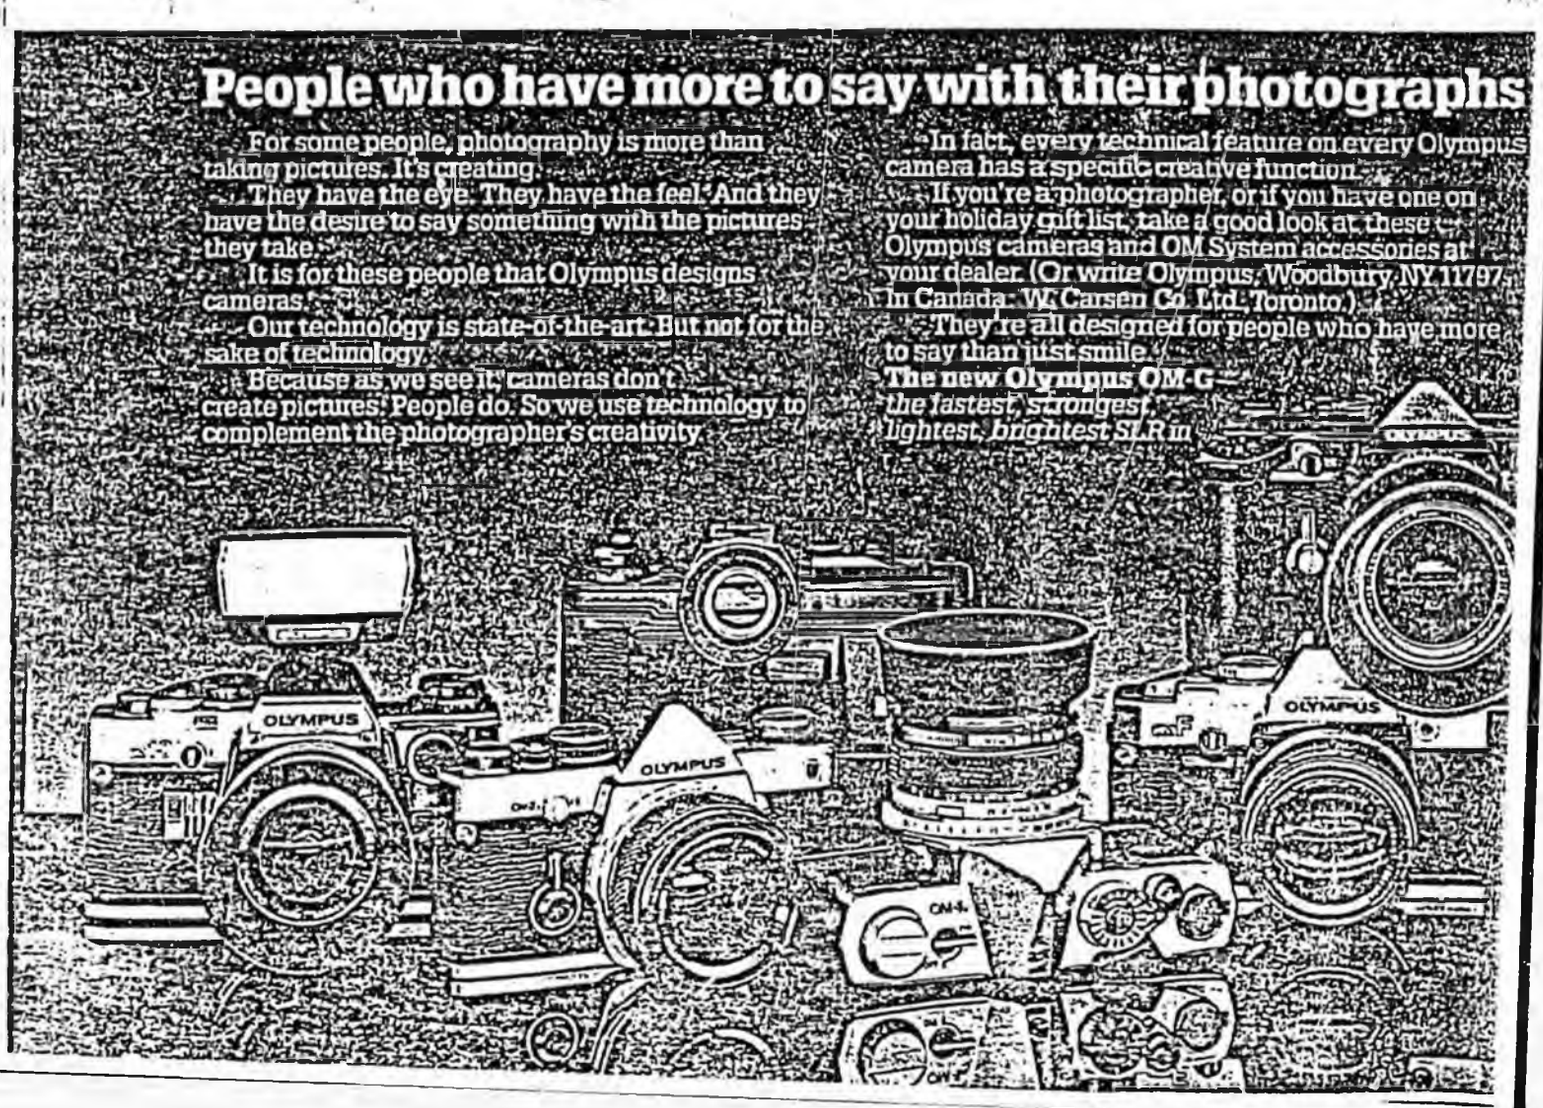
Paying My Debt to Society



MY TURN/MARCUS W. KOECHIG

The money looked good. There were tall stacks of it, mostly tens and twenties, just for the taking. There was no casing of the joint and no gunplay. The job was done in less than 60 seconds, and the total take came to $1,444. Not bad wages for one minute's work. Of course, it also cost me another two years in prison, as well as additional time for my parole violation. The fact that this is my third prison stint shouldn't pose any problem. But it gets harder, especially now that my wife has told me to make arrangements to have my things moved out of the house. She cannot take it any longer, and I do not blame her.

The cost of going to prison keeps going up, and not just for me. There is, of course, the victim's initial loss. In addition, his tax dollars paid for my defense and go toward my upkeep here in prison, to the tune of $10,000 to $15,000 per year. He will pay again if my family is forced to go on welfare and yet again if, when I am released, I am unable to find work. I will simply go on welfare, and he will foot the bill.

Victim: In the time I have spent in prisons, it has been repeatedly stressed to me that I must pay my debt to society. So society proceeds to feed, clothe and house me for however long I must remain behind bars and perhaps even beyond; this is not so much a repayment of debt as an abdication of responsibility. In fact, I owe nothing to society and society owes nothing to me. I owe my victim $1,444, and society owes him the opportunity to get that money back. Justice can only be served by my paying back what I have taken.

The average thief in here is "rehabilitated" by performing janitorial duties for a total of perhaps 30 minutes a day. Say an inmate has a two-year sentence: to rehabilitate himself, to pay his debt, he must spend 365 hours pushing a broom. Then he has paid for his crime. The institution perpetuates itself in this way. More inmates means that more cleaning needs to be done. One might spend one's time more fruitfully by sweeping out orphanages or hospitals. The way the system now works is enough to make even the most dour convicts laugh up

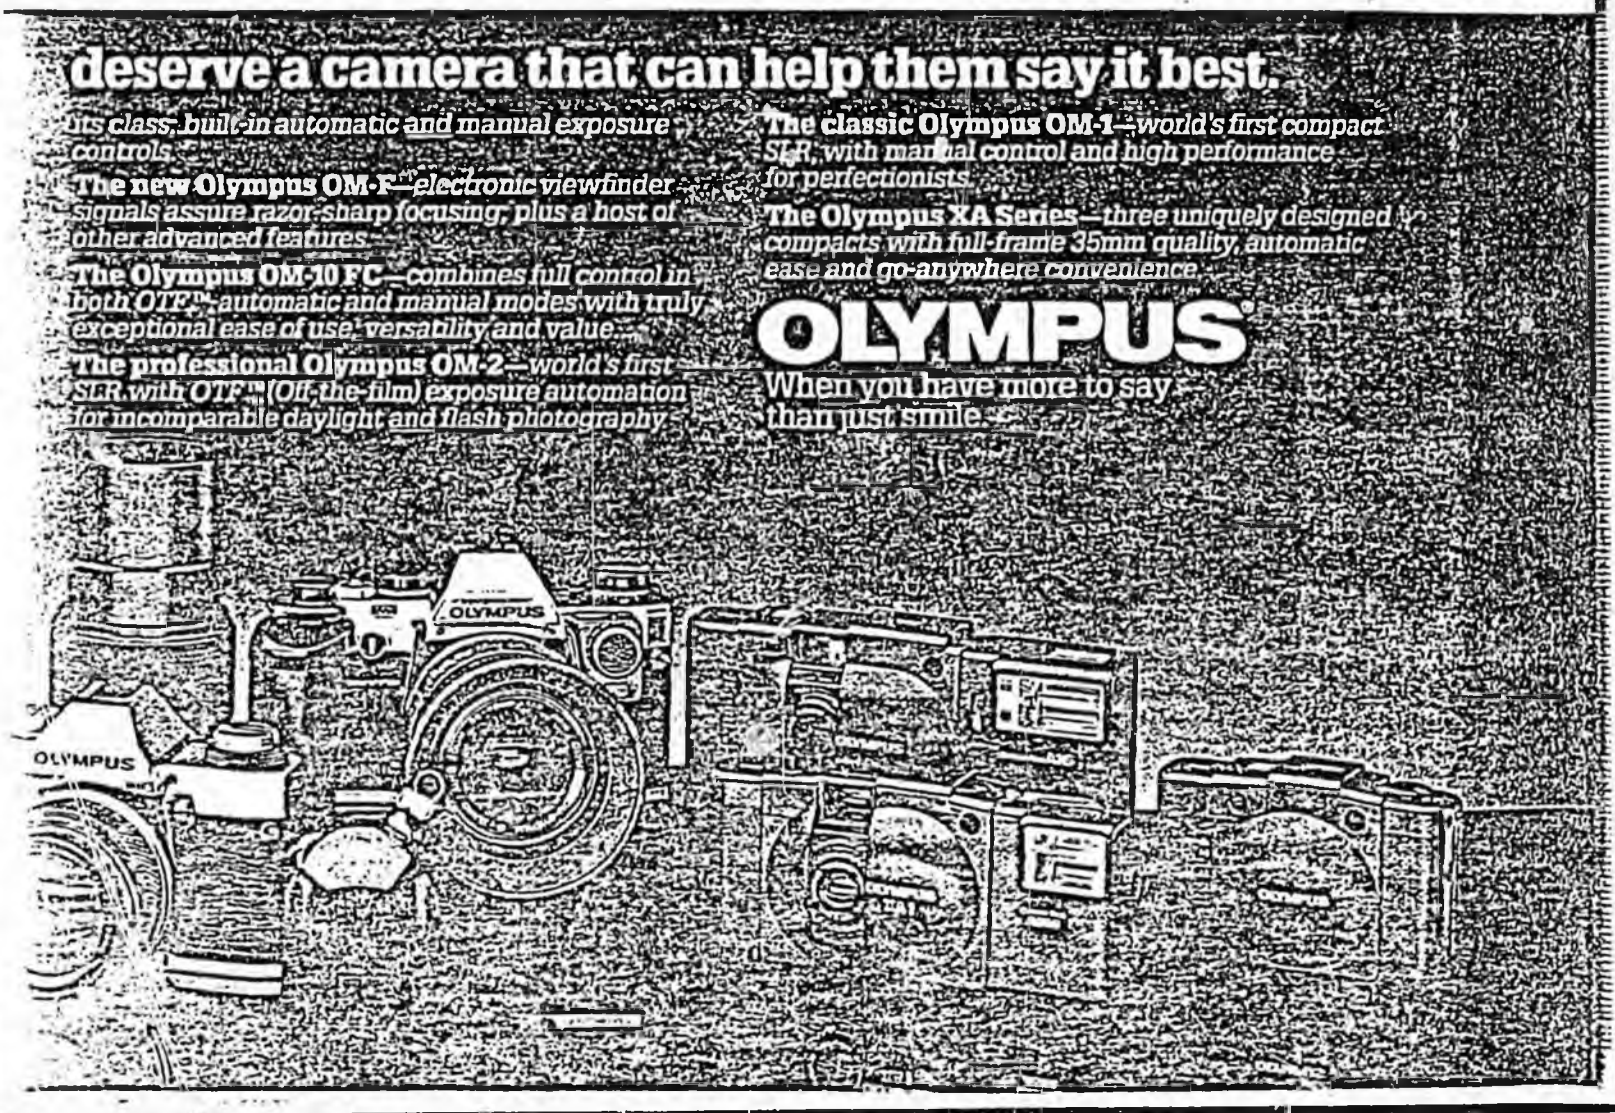
sleeves. For a man who has nothing, crime pays quite well.

It is difficult to find and implement solutions to this kind of problem—particularly in the bureaucratic morass that constitutes any department of corrections. (The name presumes that some correcting is going on.) Confining perpetrators of nonviolent property crimes and victimless crimes is of absolutely no use and may even be quite harmful. Rehabilitation is the act of pointing out the errors of an individual and then reinforcing that behavior which will lead to a successful reintegration into society. As it now stands, however, rehabilitation begins and ends with the convict adjusting to the prison routine, an eerie, Pavlovian system of bells, whistles and gross depersonalization of the individual.

Sitting: Rehabilitation does not and can not occur in existing penal facilities. There is nothing that frustrates a person more than sitting in a cell or dormitory 24 hours every day knowing that all he must do to pay for his crime is push a broom 30 minutes each day. What becomes of his sense of worth?

Why should anyone care about some convict's sense of worth? Because convicts get out of prison and go back to communities just like yours. People who have been convicted of crimes love, hate, hurt and feel good just as regular people do. They sometimes hurt so bad, though, that they are not able to handle it. In order to deal with their hurt, they will, most often unintentionally, do something to get themselves put back in the one place where they can be assured of some certainty in otherwise uncertain and frightening lives. It comes to the point where they decide that what the prison has been telling them all along must be true: that they are of no value to anyone, not even themselves. They then strike out and come back "home."

Our prisons make even a dour convict laugh up his sleeve. For a man with nothing, crime pays quite well.



You have a very large stake in seeing to it that convicts are rehabilitated in fact and not just on paper—if for no other reason than that it is your money that goes toward getting the job done. If the state legislature tells you that the prison system serves as anything other than a warehouse, then you are being told a blatant lie. You have every right to know that correctional officials, acting as agents of the courts and state legislatures, are freeing people who are no more equipped to function in the community than a rabid dog.

Respect: One solution may be mandatory restitution administered in a penal setting. Forcing the criminal to restore to his victim what he took in the first place has the potential of instilling in him not only respect for the property of others but also some shred of self-respect. He would learn that there is no such thing as a free lunch when it comes to paying his debt.

Programs of this type could pay for themselves. The convict could receive the minimum wage for necessary public-service work in the county in which he was convicted, with a percentage of his wages going directly to the victim and a percentage to the state for his upkeep. This approach is so simple that it just might work.

For my part, my victim will be paid back as soon as I am able. I have satisfied the requirements of the law. It is time to satisfy the requirements of conscience.

Koechig is an inmate at the Westville Correctional Center in Westville, Ind.

COMMENTS

COMPENSATION FOR VICTIMS OF CRIME—THE TEXAS APPROACH

by Paul M. Koning

During the 1979 session, the Texas Legislature enacted Senate Bill 21,[1] the Crime Victims Compensation Act (the Act),[2] placing Texas in the forefront of the rapidly growing trend to provide state administered programs for the financial compensation of individuals injured by violent crimes. Increased crime rates and welfare costs have focused concern on victims' rights.[3] In response, the Act establishes a compensation program that has the potential to equal or exceed the effectiveness of programs existing in other states.

Victim compensation is not a novel concept; the theory of state compensation to victims of crimes occurring within the state can be traced back at least 4,300 years to the Code of Hammurabi.[4] In modern times, however, the crime victim has been afforded relatively little aid. Apart from recovery under one of the recently formed state victim compensation programs, the victim is limited to three basic alternatives to the absorption of the loss.[5] The first alternative is a civil action brought against the offender. Since civil recovery requires both the apprehension of the criminal and his financial solvency, this device has been accurately described as impotent.[6] A victim may also recover his crime-related losses from his insurer, pro-

2. TEX. REV. CIV. STAT. ANN. art. 8309—1, §§ 1-18 (Vernon Supp. 1980).

3. A study of the diffusion pattern of state victim compensation programs has shown that the states most likely to enact victim compensation programs are those that experience the greatest increases in per capita welfare expenditures, violent crime rates, and median family income. Doerner, *The Diffusion of Victim Compensation Laws in the United States*, 4 VICTIMOLOGY 119 (1979).

4. Sections 22-24 of the Code of Hammurabi state:

> [§ 22] If a man has committed robbery and is caught, that man shall be put to death.
>
> [§ 23] If the robber is not caught, the man who has been robbed shall formally declare whatever he has lost before a god, and the city and the mayor in whose territory or district the robbery has been committed shall compensate him for whatever he has lost.
>
> [§ 24] If (it is) the life (of the owner that is lost), the city or the mayor shall pay one mana of silver to his kinsfolk.

6. McAdam, *supra* note 5, at 348.

vided that he has adequate coverage.[7] The most frequent victims of crime, however, are those who can least afford insurance, both because they are poor and because they live within the highest premium areas.[8] For this reason, insurance is hardly a choice for the average victim. The third alternative is restitution. Restitution programs allow criminal justice agencies to establish direct obligatory relationships between the offender and his victim, often as a condition of sentence modification.[9] Typically, a state restitution program encourages courts to condition probation on the repayment of the victim's losses by the performance of services or by cash payments.[10] Restitution forces the criminal to confront the problems caused by his actions; theoretically, this confrontation is rehabilitative.[11] Pragmatically, however, restitution is no more an alternative to the victim than a civil suit, because the majority of criminals are never convicted.[12] Victim compensation programs, on the other hand, offer hope to the victim because they are not linked to the apprehension of the criminal. Instead, these programs are generally based on one or more theories of state obligation[13] and are funded either from the general revenues or, as in Texas, from a pool of small fines collected from criminals upon conviction.[14]

New Zealand established the first modern victim compensation program in 1963,[15] immediately followed by Great Britain.[16] California initiated

the first program in the United States in 1965.[17] By the mid-seventies a definite trend had been established toward state victim compensation programs, a trend partially attributable to a series of federal bills aimed at subsidizing state programs.[18] At the present time, twenty-nine states have some form of victim compensation program.[19]

This Comment explores the significant provisions of the Texas Act and analyzes in greater depth two controversial restrictions: the financial stress requirement and the household exclusion. Finally, this Comment stresses the need for effective implementation of the Act's publicity provisions and discusses the intriguing "Son of Sam" sections in light of the constitutional problems that they present.

---

17. CAL. GOV'T CODE §§ 13959-13974 (West Supp. 1980).

18. Since the mid-sixties, a number of bills aimed at providing federal compensation to victims of violent crimes have been introduced before Congress, but as yet none has passed both Houses. The earlier bills were intended to establish a federally financed national crime victim compensation program. S. 2155, 89th Cong., 1st Sess. (1965); H.R. 11818, 89th Cong., 1st Sess. (1965). Since 1972, however, the most significant federal crime victim compensation bills have taken a two-pronged approach; these bills would provide for 100% compensation to victims of crimes subject to exclusive federal jurisdiction and a partial subsidization of state programs that qualify. *E.g.*, S. 2994, 92d Cong., 1st Sess. (1971). For a detailed history of the federal legislative attempts, see H. EDELHERTZ & G. GEIS, PUBLIC COMPENSATION TO VICTIMS OF CRIME 191-209 (1974).

One of the bills currently before the Judiciary Committee, H.R. 957, 96th Cong., 1st Sess. (1979), shows promise because it is a result of a conference committee compromise of the 1977 bill, H.R. 7010, 95th Cong., 1st Sess. (1977). If passed, H.R. 957 would authorize federal subsidization of 25% of the current cost of state programs that qualify. The Texas Act, TEX. REV. CIV. STAT. ANN. art. 8309—1, §§ 1-18 (Vernon Supp. 1980), meets all the criteria of H.R. 957, which include a right to judicial or administrative review, a requirement for cooperation with local law enforcement agencies, and state rights of subrogation. Several similar bills are before the Judiciary Committee. *See* S. 190, 96th Cong., 1st Sess. (1979); H.R. 4257, 96th Cong., 1st Sess. (1979); H.R. 1961, 96th Cong., 1st Sess. (1979); H.R. 1899, 96th Cong., 1st Sess. (1979); H.R. 99, 96th Cong., 1st Sess. (1979). It is probable that the pendency of federal legislation not only encourages states to adopt victim compensation programs, but influences the nature of state programs by establishing minimum criteria for subsidization.

19. ALASKA STAT. §§ 18.67.010-.180 (1974 & Supp. 1979); CAL. GOV'T CODE §§ 13959-13974 (West Supp. 1980); CONN. GEN. STAT. §§ 54-201 to -215 (1979); DEL. CODE ANN. tit. 11, §§ 9001-9017 (1979); FLA. STAT. ANN. §§ 52:4B-1 to -21 (West Supp. 1979-1980); N.Y. EXEC. LAW §§ 620-635 (McKinney 1972 & Supp. 1972-1979); N.D. CENT. CODE §§ 65-13-01 to -20 (Supp. 1979); OHIO REV. CODE ANN. §§ 2743.51-.72 (Page Supp. 1979); OR. REV. STAT. §§ 147.005-.365 (1977); PA. STAT. ANN. tit. 71, §§ 180-7 to -7.16 (Purdon Supp. 1979-1980); R.I. GEN. LAWS §§ 12-25-1 to -14 (Supp. 1979); TENN. CODE ANN. §§ 23-35-101 to -117 (Supp. 1979); TEX. REV. CIV. STAT. ANN. art. 8309—1, §§ 1-18 (Vernon Supp. 1980); VA. CODE §§ 19.2-368.1 to .18 (Supp. 1979); WASH. REV. CODE ANN. §§ 7.68.010-.910 (Supp. 1978); WIS. STAT. ANN. §§ 949.01-.18 (West Supp. 1979-1980). The Rhode Island statute does not become active until the enactment of federal crime victim legislation. The Nevada and Georgia statutes are limited to "good Samaritan" victims, those who are injured in an attempt to stop an ongoing crime or while aiding police officers.

I. THE TEXAS CRIME VICTIMS COMPENSATION ACT

The Act is a hybrid of provisions culled from various existing statutes as well as from the Uniform Crime Victims Reparations Act.[20] The purpose of the program,[21] like that of almost every compensation program in existence, is to compensate victims of violent crimes for the pecuniary losses[22] incurred as a result of their physical injuries. Neither property loss[23] nor pain and suffering[24] are compensable under the Act. Furthermore, a

20. This Act has been adopted in North Dakota and Ohio and represents an effort of the commissioners on Uniform State Laws to come to grips with the difficult issues involved in victim compensation legislation.

21. The formal purpose of the Act is declared in § 2:

> The legislature recognizes that many innocent persons suffer personal injury or death as a result of criminal acts. Crime victims and persons who intervene in crimes on behalf of peace officers may suffer disabilities, incur financial burdens, or become dependent on public assistance. The legislature finds and determines that there is a need for indemnification of victims of crime and citizens who suffer personal injury or death in the prevention of crime or the apprehension of criminals.

TEX. REV. CIV. STAT. ANN. art. 8309—1, § 2 (Vernon Supp. 1980).

22. The Act includes a typical definition of pecuniary loss, which defines the limits of financial compensation for each individual:

> (7) "Pecuniary loss" means the amount of expense reasonably and necessarily incurred:
> (A) regarding personal injury for:
> (i) medical, hospital, nursing, or psychiatric care or counseling, and physical therapy;
> (ii) actual loss of past earnings and anticipated loss of future earnings because of a disability resulting from the personal injury at a rate not to exceed $150 per week; and
> (iii) care of minor children enabling a victim or his or her spouse, but not both of them, to continue gainful employment at a rate not to exceed $30 per child per week up to a maximum of $75 per week for any number of children; and
> (B) as a consequence of death for:
> (i) funeral and burial expenses;
> (ii) loss of support to a dependent or dependents not otherwise compensated for as a pecuniary loss for personal injury, for as long as the dependence would have existed had the victim survived, at a rate of not more than a total of $150 per week for all dependents; and
> (iii) care of minor children enabling the surviving spouse of a victim to engage in lawful employment, where that expense is not otherwise compensated for as a pecuniary loss for personal injury, at a rate not to exceed $30 per week per child, up to a maximum of $75 per week for any number of children.
> (C) Pecuniary loss does not include loss attributable to pain and suffering.

Id. § 3(7).

23. No compensation program in existence today allows recovery for the loss of property, although some, such as Tennessee, expressly exclude hearing aids and eyeglasses from the definition of property. TENN. CODE ANN. § 23-35-106(5)(b) (Supp. 1979). The exclusion of property loss may be justified on three grounds: first, the economic infeasibility of such a program; secondly, the opportunity for fraud that such a program would present; and thirdly, "property damage does not destroy a person's only indispensable asset, that is, the ability to earn a living." Childres, *Compensation for Criminally Inflicted Personal Injury*, 39 N.Y.U. L. REV. 444, 460 (1964); *see* Fry, *Justice for Victims*, 8 J. PUB. L. 191, 193 (1959).

24. TEX. REV. CIV. STAT. ANN. art. 8309—1, § 3(7)(C) (Vernon Supp. 1980). Only one state, Hawaii, allows compensation for pain and suffering. HAWAII REV. STAT. § 351-33(4) (1976). The lack of criteria upon which to base awards is a difficulty faced by the Hawaii program, and other states have chosen to avoid this problem. Tennessee makes one exception, and allows recovery for pain and suffering in cases involving rape or sexual deviancy. TENN. CODE ANN. § 23-35-106(5)(C) (Supp. 1979).

number of restrictions and qualifications limit the class of eligible claimants and the recovery available to each. The Act directs the Industrial Accident Board (the Board), the agency normally in charge of workers' compensation, to administer the program.[25]

A. *Eligibility*

Before an individual can recover under the Act, the Board must be satisfied by a preponderance of the evidence[26] that the requirements of the Act have been met. The threshold requirement is that the individual is a "victim" within the meaning of the Act. Victims include Texas residents[27] who suffer personal injury[28] or death as a result of criminally injurious conduct,[29] intervenors,[30] dependents of deceased victims,[31] and those who, in

25. TEX. REV. CIV. STAT. ANN. art. 3309—1, § 10 (Vernon Supp. 1980). States have varied widely in their choice of administrative agencies. Many, such as New York and Connecticut, have established a compensation board unaffiliated with any existing agency. The Massachusetts and Tennessee programs are administered by state courts. Other states have allowed compensation programs to be subsumed by existing agencies in charge of workers' compensation (Texas, Washington), or public safety (Alaska). California had originally delegated control of its compensation program to the Department of Social Welfare, but transferred authority to the State Board of Control upon the realization that the compensation program had taken on the undesirable aura of welfare. *See* H. EDELHERTZ & G. GEIS, *supra* note 18, at 82-85.

26. TEX. REV. CIV. STAT. ANN. art. 8309—1, § 6(a) (Vernon Supp. 1980).

27. *Id.* § 3(9)(A). Not only must the victim be a Texas resident, but the criminally injurious conduct must have occurred in Texas as well. *Id.* § 3(4)(A). Other states that limit recovery to residents include California, Delaware, and Washington. States that do not limit recovery to residents include Illinois, Maryland, and Minnesota.

28. *Id.* § 3(9)(A). While the definition of "victim" requires *personal* injury, the Act requires that the victim suffer *physical* injury in order to recover. *Id.* § 6(b). The § 6(b) requirement of physical injury is the result of a house committee substitute amendment. Under S.B. 21, 1979 TEX. SESS. LAW SERV., ch. 189, §§ 1-19, at 402-10 (Vernon), as originally proposed, pecuniary loss incurred as the result of personal injury was compensable, including psychological counseling of rape victims who suffer mental, but not physical, injury. It is estimated that 25% of all rape victims seek no medical attention. SOURCEBOOK, *supra* note 12, at 346.

29. TEX. REV. CIV. STAT. ANN. art. 8309—1, § 3(9)(A) (Vernon Supp. 1980). *Id.* § 3(4) defines criminally injurious conduct:

> (4) "Criminally injurious conduct" means conduct that:
>
> (A) occurs or is attempted in this state;
>
> (B) poses a substantial threat of personal injury or death;
>
> (C) is punishable by fine, imprisonment, or death, or would be so punishable but for the fact that the person engaging in the conduct lacked capacity to commit the crime under the laws of this state; and
>
> (D) is not conduct arising out of the ownership, maintenance, or use of a motor vehicle, aircraft, or water vehicle except when intended to cause personal injury or death in violation of Section 38, Uniform Act Regulating Traffic on Highways, as amended (Article 6701d, Vernon's Texas Civil Statutes), or Article 6701l—1 or 6701l—2, Revised Civil Statutes of Texas, 1925, as amended.

The words "criminally injurious conduct" are used to avoid giving an artificial meaning to the word "crime." Not all crimes will give rise to compensation under the Act. *See* UNIFORM CRIME VICTIMS REPARATIONS ACT § 1, Comment. Some states, such as Hawaii, instead of using the broad brush approach chosen by Texas, use a list of crimes to describe the conduct that can lead to compensation. HAWAII REV. STAT. § 351-32 (1976). The Hawaiian practice risks penalizing innocent victims of crimes omitted by oversight.

30. TEX. REV. CIV. STAT. ANN. art. 8309—1, § 3(9)(B) (Vernon Supp. 1980) incorporates a "good Samaritan" statute within the Act. *Id.* § 3(8) provides:

the case of a deceased victim, legally or voluntarily assume the medical or burial expenses of the victim.[32] Once the Board determines that a claimant[33] is a victim, it must be satisfied that as a result of criminally injurious conduct, the victim suffered physical injury[34] or death, which in turn resulted in pecuniary loss.[35] The Board must be convinced that the victim is unable to recoup this pecuniary loss without suffering financial stress.[36] In addition, the victim's recovery may be denied or reduced to the extent that the victim's pecuniary loss is compensated from collateral sources.[37]

Three restrictions further narrow the eligible class. First, victims failing to file applications with the Board within 180 days after the crime,[38] or victims failing to report the crime to the appropriate local law enforcement agency within seventy-two hours,[39] must be denied recovery. Secondly,

---

(8) "Intervenor" means a person who goes to the aid of another and is killed or injured in the good faith effort to prevent criminally injurious conduct, to apprehend a person reasonably suspected of having engaged in such conduct, or to aid a police officer. Intervenor does not include a peace officer, fireman, lifeguard, or person whose employment includes the duty to protect the public safety acting within the course and scope of his or her employment.

31. *Id.* § 3(9)(C). Section 3(5) defines dependent by reference to I.R.C. § 152, with the addition of surviving spouses and posthumous children of deceased victims.

32. *Id.* § 3(9)(D).

33. *Id.* § 3(2) defines claimant as "a victim or an authorized person acting on behalf of any victim."

34. *Id.* § 6(b); *see* note 28 *supra*.

35. TEX. REV. CIV. STAT. ANN. art. 8309—1, § 6(b) (Vernon Supp. 1980); *see* note 22 *supra*.

36. TEX. REV. CIV. STAT. ANN. art. 8309—1, § 6(b) (Vernon Supp. 1980). For a discussion of the financial stress requirement, one of the major issues in victim compensation legislation, see notes 83-109 *infra* and accompanying text. For the statutory definition of financial stress, see note 88 *infra*.

37. TEX. REV. CIV. STAT. ANN. art. 8309—1, §§ 6(b), 6(d)(4) (Vernon Supp. 1980) both preclude recovery to the extent of compensation from a collateral source, which is defined in *id.* § 3(3):

(3) "Collateral source" means a source of benefits or advantages for pecuniary loss awardable other than under this Act which the victim has received, or which is readily available to him or her from:

(A) the offender under an order of restitution to the claimant imposed by a court as a condition of probation;

(B) the United States or a federal agency, a state or any of its political subdivisions, or an instrumentality of two or more states, unless the law providing for the benefits or advantages makes them in excess of or secondary to benefits under this Act;

(C) Social Security, Medicare and Medicaid;

(D) state-required temporary nonoccupational disability insurance;

(E) workers' compensation;

(F) wage continuation programs of any employer;

(G) proceeds of a contract of insurance payable to the victim for loss which he or she sustained because of the criminally injurious conduct; or

(H) a contract providing prepaid hospital and other health care services, or benefits for disability.

38. *Id.* § 6(c)(1). The 180-day period may be extended by the Board "for good cause shown." *Id.* § 4(c). States vary as to the time limit for filing a claim. MICH. COMP. LAWS ANN. § 18.355(2) (West Supp. 1967-1979), allows the shortest period, 30 days, while ALASKA STAT. § 18.67.130(a) (1974 & Supp. 1979); CONN. GEN. STAT. § 54-211(a) (1979); ILL. ANN. STAT. ch. 70, § 73(q) (Smith-Hurd Supp. 1979); and WIS. STAT. ANN. § 949.08(1) (West Supp. 1979-1980) allow two years in which to file a claim.

39. TEX. REV. CIV. STAT. ANN. art. 8309—1, § 6(c)(1) (Vernon Supp. 1980). The re-

recovery will be denied if the victim knowingly and willingly participated in the criminally injurious conduct.[40] Thirdly, if the criminal offender or his accomplice resided in the same household as the victim, no compensation may be awarded to the victim.[41] If, after consideration of the foregoing restrictions and requirements, the Board considers the victim eligible for compensation, recovery may still be denied or reduced if the victim has not "substantially cooperated" with law enforcement authorities,[42] or if the victim's behavior at the time of the incident giving rise to the claim was such that he or she bears responsibility for the criminal act or omission.[43]

Once the Board approves the victim's application, it may compensate the victim for his pecuniary loss by means of a lump-sum cash payment or by a series of payments,[44] which awards may not exceed $50,000 in the aggregate.[45] Alternatively, the Board may refer the claimant to state voca-

---

quirement for reporting the crime to police is intended to encourage aid and cooperation in law enforcement efforts. Section 4(b) allows the 72-hour period to be extended if the extension "is justified by extraordinary circumstances as determined by the board." Most states have either a 72- or 48-hour requirement, although New Jersey allows three months. N.J. STAT. ANN. § 52:4B-18 (West Supp. 1979-1980). Hawaii and Delaware have no police reporting requirement.

40. TEX. REV. CIV. STAT. ANN. art. 8309—1, § 6(c)(2) (Vernon Supp. 1980). All state compensation statutes contain a similar provision; it seems natural to prevent the criminal or his accomplice from benefiting from his crime. The statute denies recovery if the person whose injury or death gave rise to the application participated in the crime, thus disallowing recovery to the child or spouse of a slain criminal. *Id.*

41. *Id.* § 6(c)(4). For a discussion of the household exclusion, see notes 110-46 *infra* and accompanying text.

42. TEX. REV. CIV. STAT. ANN. art. 8309—1, § 6(d)(1) (Vernon Supp. 1980). Section 5(e)(1) authorizes the Board to request information from prosecuting attorneys and law enforcement agencies for the purpose of determining claimant cooperation. One of the anticipated benefits of the program is an increase in police cooperation engendered by § 6(d)(1). *See* Edelhertz, Geis, Chappell & Sutton, *Part II—Public Compensation of Victims of Crime: A Survey of the New York Experience*, 9 CRIM. L. BULL. 101, 103-05 (1973).

43. TEX. REV. CIV. STAT. ANN. art. 8309—1, § 6(d)(3) (Vernon Supp. 1980). The question of victim precipitation or responsibility plays a large role not only in victim compensation legislation, but in the nascent field of victimology. *See, e.g.*, Silverman, *Victim Precipitation: An Examination of the Concept*, in VICTIMOLOGY: A NEW FOCUS (I. Drapkin & E. Viano eds. 1974). Most state programs include such a provision, which is understandably difficult to administer. One of the most common applications of this provision occurs when the victim is criminally injured a short time after soliciting a prostitute. *See* COMMITTEE ON THE OFFICE OF ATTORNEY GENERAL, NATIONAL ASSOCIATION OF ATTORNEYS GENERAL, LEGAL ISSUES IN COMPENSATING VICTIMS OF VIOLENT CRIME 24-25 (1976) [hereinafter cited as ISSUES]. Other situations in which compensation may possibly be denied include illegal hitchhiking or wearing furs or jewelry in areas well-known for high crime rates.

44. TEX. REV. CIV. STAT. ANN. art. 8309—1, § 7(c) (Vernon Supp. 1980). Pecuniary loss accrued to the date of the award shall be paid in a lump sum, and future expenses are to be paid in installments unless the Board finds a lump sum payment will promote the interest of the claimant, or the present value of all future pecuniary loss does not exceed $1,000. *Id.* §§ 7(c)-(d).

45. *Id.* § 7(b). The $50,000 maximum is a limit on the aggregate compensation awarded to all claimants whose claim arises out of the injury or death of the same victim. *Id.* The Act establishes the highest maximum award of all the state programs, except for Ohio, which also allows $50,000. OHIO REV. CODE ANN. § 2743.60(E) (Page Supp. 1979) The lowest of the state limits is $10,000, shared by California, Connecticut, Delaware, Florida, Hawaii, Illinois, Massachusetts, New Jersey, Tennessee, Virginia, and Wisconsin. The

tional facilities or provide counseling services.[46] Upon the awarding of compensation, the state becomes subrogated to all the claimant's rights to receive or recover benefits from collateral sources to the extent that the state has awarded compensation.[47] The Act also provides that the Board shall award reasonable attorneys' fees to attorneys representing successful claimants.[48]

B. *Procedure*

After a victim submits an application to the Board, a clerk appointed by the Board reviews the application for completeness.[49] A complete application is then reviewed by one Board member who determines whether a hearing is necessary.[50] A hearing on the application must be held if the Board member deems it necessary or if either the attorney general or the claimant requests a hearing.[51] The Act gives the Board the special power to order the victim to submit to a mental or physical examination or to order an autopsy of a deceased victim "if the mental, physical, or emotional condition of a victim is material to a claim"[52] and if the order is "for

---

Texas maximum is commendable, for in many instances criminal injuries are permanently debilitating, and $10,000 is quickly exhausted.

Many states also have a minimum claim amount. These states include Connecticut and Delaware ($25), Illinois ($200), Kansas, Kentucky, Maryland, Michigan, Minnesota, New Jersey, New York, North Dakota, Tennessee, and Virginia (all $100). Commentators tend to view a minimum claim requirement with disfavor. *See, e.g.*, H. EDELHERTZ & G. GEIS, *supra* note 18, at 47.

46. TEX. REV. CIV. STAT. ANN. art. 8309—1, §§ 7(a)(2)-(3) (Vernon Supp. 1980). In addition to providing public counseling services the Board may contract with private entities to provide these services. *Id.*

47. *Id.* § 11(a). Section 11(a) is an unfortunately drafted section that is susceptible to the extreme interpretation that once a claimant has received any award from the Board, the state becomes subrogated to the *total* amount of collateral recovery available to the claimant, even if that amount is much greater than the compensation awarded by the Board. Section 11(a) provides: "If compensation is awarded, the state is subrogated to all the claimant's rights to receive or recover benefits for pecuniary loss to the extent compensation is awarded from a source which is or if readily available to the claimant would be a collateral source." *Id.*

Naturally, the state's right of subrogation should be limited to the amount awarded by the state to the claimant. The ambiguity of § 11(a) could be simply remedied by an amendment that moves the phrase "to the extent compensation is awarded" to a position immediately preceding "the state is subrogated."

48. *Id.* § 12 provides:

> As part of an order, the board shall determine and award reasonable attorney's fees, commensurate with services rendered, to be paid by the state to the attorney representing the claimant. Additional attorney's fees may be awarded by a court in the event of review. Attorney's fees may be denied on a finding that the claim or appeal is frivolous. Awards of attorney's fees shall be in addition to awards of compensation. It is unlawful for an attorney to contract for or receive any larger sum than the amount allowed. Attorney's fees may not be paid to an attorney of a claimant unless an award is made to the claimant.

49. *Id.* § 5(a).

50. *Id.* § 5(e).

51. *Id.* The attorney general shall be sent a copy of every application received by the Board, and may appear at hearings and present evidence either supporting or opposing approval of the application. *Id.* § 5(b).

52. *Id.* § 5(e)(3). Upon request the Board must give the person examined, or the claim-

good cause shown."[53]

At any time after the denial or award of compensation, the Board may, on its own motion or at the request of the claimant, reconsider its decision.[54] In addition, a claimant has the right to judicial review of a final ruling.[55] To preserve this right, the claimant must file a "notice of dissatisfaction" with the Board within twenty days of the ruling and bring suit in district court within twenty days of the filing of notice.[56] The district court will then determine the issues de novo.[57]

The costs of awards and administration are to be paid exclusively from the Compensation to Victims of Crime Fund, established in the state treasury.[58] This fund is solely comprised of additional court costs imposed on convicted criminals:[59] $15 in the case of a felony and $10 in the case of a

---

ant in the case of a deceased victim, a copy of the physician's or psychologist's report. *Id.* § 5(f).

53. *Id.*

54. *Id.* § 9(a).

55 *Id.* § 9(c). The right to judicial review has been a perennial qualification for federal subsidization in the series of federal victim compensation bills. *See, e.g.*, H.R. 957, 96th Cong., 1st Sess. § 4(a)(2) (1979).

56. TEX. REV. CIV. STAT. ANN. art. 8309—1, § 9(c) (Vernon Supp. 1980).

57. *Id.*

58. *Id.* § 14(a).

59. The funding of compensation programs through fining or imposing court costs on convicted criminals is a relatively recent development. California, Connecticut, Delaware, Florida, Maryland, and Washington also use this method of funding, although program appropriations are not limited to this source. One commentator has suggested that "[i]t is . . . an illusion to look to criminal fines, or subrogation, as a substantial source for financing reparations to crime victims." H. EDELHERTZ & G. GEIS, *supra* note 18, at 290. The Texas program will test the accuracy of this prediction.

The method of funding may give rise to a constitutional challenge. One problem arises from the fact that all convicted criminals, except those convicted of misdemeanors with fines less than $200, must pay the court costs irrespective of whether their offense was violent or nonviolent. Arguably, since the court costs are to be used solely for the purpose of compensating victims of violent crime, the statutory classification of those individuals who will pay the court costs is not reasonably related to the purpose of the legislation and contravenes the equal protection clause of the fourteenth amendment. *See, e.g.*, McLaughlin v. Florida, 379 U.S. 184, 190-91 (1964).

This equal protection argument was made before the Supreme Court of Florida in State v. Champe, No. 53,811 (Fla. Dec. 14, 1978). In *Champe*, the supreme court overruled the lower court's finding that the funding provisions of the statute were unconstitutional. Chief Justice England stated:

> Laws which classify violent and non-violent offenders together for purposes related solely to the prevention of violent crimes have consistently been upheld against equal protection attacks. *See* United States v. Brown, 484 F.2d 418, 423 (5th Cir. 1973), *cert. denied*, 415 U.S. 960 (1974). . . . It is not irrational for the legislature similarly to combine all lawbreakers for the purpose of remedying the consequences of violent crime.

Id., slip op. at 7. *Brown*, however, dealt with the constitutionality of a law proscribing the interstate transportation of firearms by convicted felons, regardless of the violent nature of the felony. The broad brush classification in *Brown* bears a far more rational relation to the purpose of the statute than does the *Champe* classification. The *Brown* classification can be viewed as based not only on the criminal offense, but on post-crime experience in prison, and can be justified by the high rate of crimes committed by ex-convicts. In *Champe* a shoplifter was fined to help pay for injuries suffered at the hands of rapists, murderers, and armed robbers. Unlike *Brown*, the statutory classification in *Champe* was not based on a reasonable attempt to protect the public, nor was it based on any harm directly caused by

misdemeanor punishable by imprisonment or by a fine greater than $200.[60] The legislature deleted a proposed provision that would have allowed courts to impose fines up to $10,000 on individuals convicted of violent crimes.[61] Legislative estimates project that under the current Act, the collection of additional court costs should yield approximately two million dollars annually.[62]

II. The Theoretical Justification for Victim Compensation

Commentators traditionally have advanced two theories to justify the state's assumption of the duty to compensate crime victims.[63] An examination of these theoretical justifications is essential to an analysis of the restrictions and qualifications embodied in the Act. The first theory is that of "state obligation."[64] The state obligation theory postulates that the state is under a duty to protect the citizenry and that when a person is criminally injured the state has failed in this duty; consequently, the state is obligated to compensate the victim.[65] The state's obligation further arises from the fact that the laws of the state prevent the victim from seeking personal retribution against the criminal and impede the victims' civil recovery by incarcerating the criminal.[66] The second theory, the social welfare theory,[67] is predicated upon moral considerations. This theory postulates that "an innocent victim ought to be entitled to aid, to maintain that degree of dignity, security, and comfort which he seeks to earn for himself and his family,"[68] and that the state should provide this aid.

At least one author has recognized that the provision for the general welfare is merely a motive behind victim compensation legislation, not a justification for it.[69] The social welfare theory begs the question; the state's power to provide for the general welfare offers no explanation for the state's exercise of the power in this particular instance. Yet for some, the state's moral obligation is sufficient reason for victim compensation pro-

---

the offender. Since the funding provisions of the Texas Act are similar to those of Florida, Texas should expect a challenge similar to that in *Champe*.

60. Tex. Rev. Civ. Stat. Ann. art. 8309—1, § 14b (Vernon Supp. 1980).

61. Proposed S.B. 21 was amended Apr. 26, 1979, to delete § 15. House Floor Amendments to S.B. 21, Tex. H.R.J. 1903 (1979). A remnant of old § 15 may be seen in § 3(10), which defines crimes of violence although there is no longer any reference to crimes of violence in the Act. Tex. Rev. Civ. Stat. Ann. art. 8309—1, § 3(10) (Vernon Supp. 1980).

62. Fiscal Note accompanying S.B. 21, Apr. 10, 1979.

63. *See* Galaway & Rutman, *Victim Compensation: An Analysis of Substantive Issues*, in Considering the Victim, *supra* note 10, at 421-22; Schafer, *Victim Compensation and Responsibility*, 43 S. Cal. L. Rev. 55, 58-59 (1970).

64. Schafer, *supra* note 63, at 58.

65. *See* McAdam, *supra* note 5, at 351.

66. The argument that the state impedes the victim's civil recovery by incarcerating the criminal is somewhat incongruous with the argument that the state is at fault for not apprehending the criminal; nevertheless, both are often advanced together. *See, e.g.*, Galaway & Rutman, *supra* note 63, at 421-22.

67. *See* Schafer, *supra* note 11, at 48.

68. Note, *The New Jersey Criminal Injuries Compensation Act*, 27 Rutgers L. Rev. 727, 728-29 (1974) (quoting N.J. Violent Crimes Compensation Board, First Annual Report 5 (1973)).

69. McAdam, *supra* note 5, at 351.

grams. The distinguished English jurist Rupert Cross stated, "If there is a widely recognized hardship, and if that hardship can be cheaply remedied by state compensation, I should have thought that the case for such a remedy was made out, provided the practical difficulties are not too great."[70]

The state obligation theory appears to provide a sounder basis for victim compensation programs than does the social welfare theory, but its premises are rather questionable. The state obligation theory is predicated upon the failure of the state to protect the victim; however, ascribing fault to the state is erroneous.[71] The criminal is at fault, and to place blame on the state is to engage in a fiction and to ignore the individual will of the criminal.[72] A state cannot protect all people at all times, and it is debatable whether a state should attempt to do so.

Other theories advanced in justification of compensation programs are often merely additional benefits of such legislation, not underlying justifications. Among these prospective benefits are the increased cooperation with law enforcement agencies engendered by eligibility requirements,[73] anti-alienation of the victim,[74] and even the political benefit accruing to sponsors of victim compensation who act because "this . . . is what the people want."[75]

If a primary justification for the state's assumption of the duty to compensate victims must be identified, perhaps it is that the state is in the best position to spread the severe losses incurred by a relatively small group of victims. The loss-spreading function of victim compensation programs has long been recognized,[76] but rarely suggested as a justification for state compensation.[77] A state's unique ability to spread these losses efficiently, combined with a state's general duty to provide for the public welfare, implicates a state duty to establish these programs. In a sense, victim compensation may be viewed as the statutory analogue of the common law doctrine of vicarious liability. In both cases, liability is not based on fault but is imposed with the belief that it is better to subject all of society to

70. Cross, *Compensating Victims of Violence*, THE LISTENER 815, 816 (May 16, 1963), *quoted in* Childres, *supra* note 23, at 448.

73. *See* McAdam, *supra* note 5, at 353.

74. For a discussion of the theory of victim anti-alienation, see text accompanying note 100 *infra*.

75. *See* MCADAM, *supra* note 5, at 353.

76. Margery Fry, the English penal reformer who is frequently given credit for the rebirth of victim compensation, spoke of the loss-spreading aspects of victim compensation in her seminal article. Fry, *Justice for Victims*, 8 J. PUB. L. 191, 192-93 (1959).

77. Robert Childres, an influential commentator during the nascent stages of state victim compensation stated:

> [A] sufficient, independent basis for compensation rests on common sense rather than the metaphysics of causation and responsibility. Endemic losses ought to be spread. That violence and damage criminally inflicted are endemic to American society cannot be disputed. This premise alone is a sufficient basis for the conclusion that the damage ought to be spread among all potential victims.

Childres, *supra* note 23, at 457.
