auditors commended Sandia's corrective actions and stated that it appeared that the problems had been solved. However, it would not pay those responsible for the laboratory to become complacent. Without continual policing, the problem will return. The auditors recommended periodic random sampling of computer files to check on unauthorized use of the system. #

For Sale: Credit Ratings

While evidence is still not clear, it seems possible that a data theft gang has been operating in southern California. It appears that the ring has allowed those with poor credit ratings to use someone else's good rating as the basis for opening charge accounts and obtaining loans.

The crime apparently involved unauthorized access to a credit bureau data base to obtain financial information about individuals with a clean credit history. Good credit ratings are sold to people who have problems obtaining credit. The bad credit risk purchases information that will allow him to assume for credit purposes the identity of someone who has the same name but a better financial record. Information supplied includes such things as social security number, bank account number, and driver's license number.

This suspected crime came to light when an individual with a good credit rating became aware that his identity was being used by another. He contacted a number of different law enforcement agencies and informed them about the alleged crime. To date, investigative efforts have been hampered by the fact that, although everyone acknowledges that a crime has indeed taken place, no one has been able to figure out who has jurisdiction. Meanwhile, a number of questions remain unanswered:

- How was the data obtained from the supposedly secure files of the credit bureau?
- Who obtained the data?
- Is it an inside job?

These questions will remain unanswered until jurisdiction problems can be ironed out and further information developed. #

Student Cracks School District's Computer System

A high school senior in Tucson, Arizona was successful in breaking into the school district's computer system. However, he is beginning to have regrets about his actions. Since his successful intrusion, security measures have been tightened, and his access to the computer has been reduced.

The student, Joel Snyder, first realized that he could break the system's security code when he was accessing the computer through a remote job entry terminal at his high school. He was quoted as saying that anyone with a knowledge of assembly language could easily circumvent the system's security features. The passwords protecting student grades and other information were unimaginative.

His attempt to gain access to another user's password was successful. As a result, Snyder felt he should inform the authorities about the security risks involved. However, officials tended to doubt that Joel Snyder had actually cracked the system. They were willing to acknowledge that he had obtained access to passwords, but they were never sure how he had done it.

In his attempt to publicize the security weakness, Joel appeared at a school board meeting and brought the matter to the attention of the board. This action had some results. System security was soon tightened. Students are now allowed to access the system only from RJE stations (not by dialing up from a modem), only during certain hours, and only while a teacher is present.

While he has proven that he has more than a passing knowledge of computers and their security features, Snyder does not plan a career in data processing. His first college choice is Stanford University, where he plans to major in liberal arts.

Although Joel Snyder's reasons for breaking security were not malicious, his action shows the ease with which intelligent students can circumvent security features in today's systems. Obviously, there are basic weaknesses in most security provisions. #

U.S. Charges Six Fixed Reports On Credit-Risk Buyers For Fee, Fed False Data Into Computers

Authorities Believe Plot May Have Led To Millions Of Dollars In Unpaid Bills

LOS ANGELES (AP) —With the aid of a file clerk, six men sought out persons with poor credit records and for fees of up to $1,500 improved their credit reports in the computer banks of the country's largest consumer credit bureau, a federal indictment charges.

The credit records were kept in the computers of TRW Credit Data in Anaheim, Calif. The company maintains credit files on about 50 million Americans living in 20 cities.

The files are used by banks, credit card companies, and other businesses seeking information concerning the credit worthiness of customers.

Authorities said the alleged scheme may have produced millions of dollars in unpaid bills and caused untold legal problems for firms that rely on credit information.

The six men are charged with conspiracy in the indictment returned Thursday by a grand jury. All six also are charged with at least one count of making false loan-application statements.

A TRW Credit Data file clerk, Kathleen Bennett, was named as an unindicted coconspirator. Federal authorities said she is to be a government witness.

According to the indictment, Miss Bennett was paid $50 each time she improved the computerized credit records of people solicited by the ring.

Some Information Deleted

This allegedly was done by deleting bad payment records, information about bankruptcies, and other unfavorable material. In some cases, material indicating a good credit history was inserted, authorities said.

The indictment listed 26 persons who paid between $300 and $1,500 to have their credit records altered, but authorities said as many as 150 persons may have paid for such falsifications between August, 1974, and March, 1975.

With their improved credit records, these people obtained banks loans, credit cards, and credit at retail stores, authorities said, and many of them subsequently defaulted on payments.

FBI agents uncovered the plot and broke up the ring 18 months ago, authorities said. It took the FBI, a Justice Department Organized Crime Strike Force, and the U.S. Attorney's office nearly 1½ years to obtain the evidence needed to present the case to a grand jury.

Seven Counts In Indictment

Charged in the seven-count indictment were Philip Kostoff, 31, the alleged ringleader; his brother, Paul Kostoff, 35; Ronald C. Rossi, 41; John R. Dubbs, 41; Kenneth L. Stevenson, 39, and Sean Shanahan, 35. All live in Orange County, where Anaheim is located.

The indictment alleged that Philip Kostoff hired the other defendants to locate persons who wanted their credit ratings improved and also recruited Miss Bennett.

Authorities said TRW Data Credit, a division of Cleveland-based TRW, Inc., cooperated in the investigation and is tightening its security.

Authorities seize stolen computer reports

7125

ORANGE — Detectives, armed with search warrants, last week seized several thousand credit reports that were allegedly stolen from TRW computers in Orange.

The records were seized by police during raids at three Los Angeles area companies — H.E.L.P. Locksmiths of Van Nuys, Searchers Investigations and Searchers Security Co., Los Angeles.

Police said entry into TRW's computer bank was made via telephone and teleprinters, using that company's codes.

No charges were filed against the officers of the three companies.

The search warrants served Thursday and Friday culminated a three-month investigation into what police said is "to the best of our knowledge, the first known reported crime of this particular type in California and the country."

Gil Hamblet, TRW's vice president of industry and public affairs, said the company first noticed the illegal access to their computer records six months ago.

He said the material relates to the pay habits of Southern California residents and does not include any other personal information, except their names, addresses and previous addresses.

The Van Nuys firm is an automobile repossession company and the two Los Angeles companies are private investigators who work for attorneys and corporations.

"Such records are used to obtain credit information on individuals," Detective John Carson said. "The records are also used in skip tracing."

Carson said the material is now being inventoried, and it will probably be a week before the police and the district attorney will be ready to file charges.

3 Firms Probed in Theft of TRW Computer Data

7125

Two Los Angeles private detective agencies and a Van Nuys vehicle repossession firm have been accused of massive electronic theft of credit information from a computer at TRW, Orange County authorities said Tuesday.

Police said the three firms gained access to the nationwide credit reporting agency's computer by obtaining codes issued to TRW subscribers. No dollar value has been set on the alleged theft.

Investigators said Tuesday that H.E.L.P. Locksmiths, the repossession company, had been using the code for six months. Searchers and Securities and Searchers Investigations, the detective agencies, had been using them since 1972, police said.

Orange police Detective Roger Braham said no charges have been filed, but investigators are examining thousands of records—mostly computer printouts—seized from the three firms in raids last week.

Gil Hamblet, vice president of public affairs for TRW's Information Services Division in Orange, said the firm's own security surveillance system first spotted the illegal information request entries in January.

Officials of the three companies that allegedly obtained the information illegally could not be reached for comment Tuesday.

FOR RELEASE: CONTACT:

TRW Information Services Division

Credit Data

A CAPSULE DESCRIPTION

TRW Information Services operates and markets one of the nation's largest, computerized consumer credit reporting services called Credit Data. TRW has credit information on more than 86 million consumers, and serves 24,000 subscribers at 35,000 locations.

TRW collects and stores factual credit information on consumers and provides that information to credit grantors that subscribe to the service including banks, retailers and finance companies. The TRW Updated Credit Profile contains credit account information provided by subscribers including positive and negative information about retail credit card accounts, bank charge card accounts, lines of credit, secured loans and finance company accounts. The Profile also includes selected public record information limited to tax liens, judgments and bankruptcies. TRW does not collect information on checking and savings accounts, race, religion, sex, salary, personal lifestyle or criminal records.

Open current credit accounts remain on the Profile indefinitely. Closed or paid accounts are removed within seven years. Adverse credit information remains on file for a maximum of seven years, with the exception of bankruptcies, which remain for a maximum of 10 years.

HISTORY

The development of consumer credit reporting agencies was a direct result of the rapid growth in the use of credit and need for consumer credit repayment information. As more and more businesses began extending credit to consumers, there was an increasing need for information on how those consumers repaid their credit obligations with other creditors. To meet this need, individual businesses began to collect their customer repayment information and exchange it within branches of their own company or within their industry. This credit information was kept in paper files in a central location. As the volume of credit information grew, the job became too large for individual businesses.

Credit bureaus soon developed, meeting businesses' need for a central repository of credit repayment information that provided credit grantors with a more complete picture of consumers' repayment habits. The Michigan Merchants Credit Assn. in Detroit was one such bureau, which was founded in 1932 by Norman Jordan, and taken over by his son, Harry ("Bud") Jordan, in 1956. The company was incorporated in Michigan in August of 1960 as the Credit Data Corp. and used file cabinets and 3" x 5" cards to store consumer credit information. In 1965 Credit Data initiated and installed the first computerized, on-line credit reporting system. It was acquired by TRW Inc. in November 1969 and became TRW Credit Data.

HOW CREDIT GRANTORS USE CREDIT REPORTS

TRW provides credit information to bona fide credit grantors who have a legitimate business need for the information. When consumers apply for

credit, they generally authorize a credit grantor to obtain information on their credit history. Credit grantors use TRW's service when considering applications for credit, or when reviewing their current accounts. Credit grantors apply their own evaluation criteria to the information TRW supplies in determining whether to grant or deny credit. In addition to the information on a Credit Profile, credit grantors also take into consideration information not supplied by TRW, such as the consumer's employment, income, other assets and outstanding debts. TRW does not make the decision to grant or deny credit.

HOW AUTOMATED CREDIT REPORTING WORKS

TRW provides credit information to credit grantors that assist them in the credit granting decision. In turn, they provide TRW with a record of their past and present credit account information. This is usually done on a monthly basis. Since the majority of TRW subscribers have their accounting function computerized, they typically provide the information via magnetic tape, copied directly from their billing records used to notify their customers. These tapes are sent to TRW's data center in Anaheim, Calif., where they are entered into the TRW computer system. This regular receipt of credit information provides TRW with an automatic updating of the credit account information in the files. Public record information is gathered directly from court records, converted to a computerized format and entered into the computer system in the same manner as credit information from credit grantors.

THE CREDIT PROFILE

The TRW Credit Profile contains up-to-date credit information on consumers' credit accounts, items of public record, inquiries, and a consumer's identifying information. (A sample Credit Profile is included in this package.)

--Identifying Information: the consumer identifying information is limited to the consumer's full name (including generation, such as "Junior" or "Senior"), address, social security number, age or year of birth, and spouse's initial. The consumer's place of employment, as indicated by the consumer on a credit application, may also be contained in the Profile.

--Credit Account Information: includes the name of the company reporting the account, the date the information was reported, the date the account was opened, the type of account, terms, the original balance or credit limit, current account balance, amount past due and the status of the account, such as "current account" or "30 days past due."

--Inquiries: whenever a request is made for a copy of the Profile, that request, or "inquiry," is automatically recorded on the Profile and is retained for a period of one year. Inquiries include the name of the inquiring company and the month, day and year of the inquiry.

--Public Record Information: includes the name and location of the court from which the data was obtained, a description of the item, such as "judgment" or "state tax lien," the docket number and/or page number where it was located, date and the status of the item, such as "judgment

of their Credit Profile from TRW, through TRW's 21 Consumer Relations offices across the country. They should include the following information in their request:

: Full name (including generation, i.e., Jr., Sr., III, etc.)
: Addresses for 5 years
: Social Security Number
: Year of birth
: Signature

If the consumer has been denied credit within the past 30 days, there is no charge for the Profile. Consumers should indicate the company that declined them credit or include a copy of the declination letter with their request. If they have not been denied credit within the past 30 days, there is a $8 fee. ($5 in Maryland). The request should be mailed to the TRW Consumer Relations office closest to their home (See list of TRW locations). Eighty-six percent of the consumers who request their Credit Profile from TRW do so by mail.

Consumers may also make a personal visit to TRW offices during business hours to receive a copy of their Credit Profile and speak to a trained representative, who will explain its contents. To make an appointment for a personal visit, consumers should call the TRW Consumer Relations office closest to their home. Fourteen percent of the consumers who contact TRW make a personal visit to TRW's Consumer Relations offices.

TRW reinvestigates any item on a consumer's Credit Profile that the consumer disputes. This is done by contacting the source of the information to verify its accuracy. If there is any item on the Credit Profile that

--Designations: each item of credit or public record information is assigned a general designation of "positive," "negative" or "non-evaluated," depending on the status of the account or public record item. A paid satisfactory account, for example, would be designated as a positive item. These designations -- selected through the consensus of credit grantors that use TRW's service -- are provided as a service to credit grantors. TRW does not provide a general credit rating -- such as "A-1" or "Triple-A Credit" -- on an individual

--Payment Profile: is another service to credit grantors that provides them with an immediate comprehensive picture of the consumer's payment history for the last 12 months. An account that has been current for the last 12 months, for example, would be indicated in the Payment Profile as a series of "C's," representing "current." A 30-day, or one month past due, would show on the Payment Profile as a "1" in the column for that month.

--Consumer Statement: if the consumer so chooses, a consumer statement of 100 words or less regarding any item that TRW has reinvestigated and with which the consumer is still dissatisfied may also be included on his or her Profile.

(A more extensive explanation of status comments, association codes, types of accounts, and items of public record is included on the back of the sample Credit Profile).

DISCLOSURE TO CONSUMERS

Consumers may obtain a copy of their Credit Profile anytime by writing to TRW directly. Approximately 500,000 consumers a year request a copy

Billing Act, summarized below, are the three most important laws for consumers to be aware of.

FEDERAL FAIR CREDIT REPORTING ACT

Gives you the right....

...to know what credit information is held that pertains to you, without charge if you've been denied credit within 30 days

...to know who has received a report on you in the past six months

...to have information pertaining to you, which you dispute, reinvestigated and corrected or removed if inaccurate or unverifiable

...to place a statement in the credit reporting company's records if you continue to dispute the accuracy of an item after reinvestigation

...to have an updated report sent to those credit grantors who have received a report pertaining to you in the last 6 months

...not to have adverse information pertaining to you over 7 years, or 10 years for bankruptcies, kept or reported

EQUAL CREDIT OPPORTUNITY ACT

Gives you the right...

...to be judged on an equal basis with all other credit applicants

the consumer disputes, the nature of the dispute should be indicated in the column provided on the Credit Profile and returned to TRW. TRW will reinvestigate the disputed item with the source of information. If the item cannot be verified, it will be deleted from the record. TRW notifies the consumer of the result of that reinvestigation by sending the consumer an updated copy of the Credit Profile. Of the approximately 500,000 consumers a year who request copies of their Credit Profile from TRW, less than one-third dispute information on the Profile.

Consumers may add a consumer statement to their Credit Profile regarding any item which TRW has reinvestigated and with which they are still dissatisfied. This statement will tell the consumer's side of the story in his or her own words, and will be included with all inquiries to the consumer's Credit Profile. TRW will work with consumers to formulate the statement, which should be limited to 100 words or less and should not include libelous comments.

SAFEGUARDS

TRW's contract with subscribers specifies the Credit Profiles be used only in accordance with the permissible purposes outlined in the Federal Fair Credit Reporting Act. TRW has extensive security procedures, including safeguards for protecting the computer equipment, computer center, information files, systems programming and access to the TRW system.

CREDIT AND FEDERAL LAW

There are a number of federal laws that pertain to credit. The Fair Credit Reporting Act, Equal Credit Opportunity Act, and Fair Credit

...to have joint accounts reported for both spouses separately after June 1977

...to have your income considered without regard to sex or marital status

...to have child support and alimony payments regularly received counted as income, if requested

...not to be asked questions about birth control or child bearing plans

...to obtain a credit card in your own name if you are a married woman

...to know the reasons you have been denied credit

FAIR CREDIT BILLING ACT

Gives you the right...

. .to file a written complaint with the credit grantor within 60 days after the bill you question was mailed to you

...to receive an acknowledgement from that credit grantor within 30 days after that, and a settlement within 90 days

...to forestall collection of the account until the dispute is resolved and

...to prohibit that credit grantor from reporting negative information regarding the disputed amount to credit reporting agencies until the dispute process is completed

OTHER CREDIT REPORTING AGENCIES AND INDEPENDENT BUREAUS

TRW is one of the largest of five major, U.S. computerized credit reporting agencies. The others are TransUnion (Chicago); Credit Bureau Inc., a division of Equifax (Atlanta); Chilton (Dallas); and Pinger (Houston).

There are many more smaller, independently owned credit bureaus nationwide that provide an important service to their communities. TRW has contractual agreements with 28 such bureaus to provide them with the latest data handling technology and enhancements, while at the same time allowing them to retain independent control of their operations, as well as access TRW's data.

"The 1980's will be to computer bandits what the days of Prohibition were to Al Capone - wide open with little fear of apprehension or prosecution." This analogy was offered by August Bequai, a Washington attorney and nationally recognized expert on computer crime. He went on to say that the legislative and criminal justice system "is throughly unprepared to deal with the problem of computer fraud." Its safe to say that the computer felons are at least a century ahead of the criminal justice system ostensibly designed to stop them."

Several issues are apparent in the information services industry that has led to this situation and the requirement for computer legislation.

The computer industry has created a consumer market that has put machines in the hands of hobbyists as well as reduced controls in the data processing industry thru time-sharing options and other productional facets. The computer industry starting with ENIAC in 1946 was projected to grow to 500,000 computers in 1990. By 1970 there were 140,000 computers. Little did anyone realize that the microcomputer boom would be producing 1,975,000 units in 1982. One of these home computers can be as powerful as that first computer. The home hobbyist has dial-up capability to many public data bases, mail services and other computers. The Government Services Administration has developed a community bulletin board to facilitate information exchange about microcomputers.

Today more than 50% of the U.S. labor force is engaged in some aspect of the information industry. Over 90% of business related jobs involve contact with a computer.

While we see "Hackers" invading systems in the news media and entertainment media, the point is being raised that it will not be long before true criminals are involved. Unfortunately they are already here! Little publicity is given to these cases because

they are not always turned over to law enforcement because computer legislation, for the most part, is either not present or insufficient to result in prosecution. With little chance of achieving successful prosecution, or even getting to court, it is not surprising that many companies do not report computer crime except as necessary. The cost benefit analysis of doing so is lop sided to provide only a negative image in the market place.

The types of computer-related crimes fall into the following catagories:

1) Theft of Data: Involves the misuse of confidential business or personal data

2) Unauthorized Use: Use of another's computer for personal use.

3) Vandalism: Involves both the computer and programs.

4) Sabotage: Involves the destruction (partially or in total) of an EDP system.

5) Economic Crimes: The computer is used for manipulating or misappropriating company assets; embezzelment; wire fraud; securities fraud and any other dishonest financial scheme.

6) Espionage: Use of the computer to gain valuable property or data.

No one really knows how much computer abuse there is. Donn Parker of SRI is probably the most knowledgeable on the subject. He has reviewed 849 reported cases over the last 11 years. He has observed that there is no general agreement as to the meaning of the

terms computer crime or abuse. His case analysis, on the attached chart, revealed a number of unreported cases. He found that few victims were willing to disclose the incident. His findings are based on reports by the news media and, as such, contribute to the leveling off effect. In the Spring 1983, Computer Security Journal he states: "We do not need statistics of total incidence and loss to motivate us to take prudent care of assets and to implement generally accepted safeguards and security practices. Let us get back to the job of protecting business and government from computer abuse, based on the fact that it is occurring and has changed the nature of business crime, that losses can be very large, and that reasonable scenarios of potential loss demonstrate the existence of serious vulnerabilities."

His analysis of losses show that the degree of loss is significantly different. In the area of bank fraud the manual perpetration averages $19,000 whereas the computer assisted crime nets $450,000. While accurate statistics involving dollar amounts and the number of crimes are impossible to obtain most law enforcement experts say they are increasing at an alarming rate and expect these statistics to grow. This premise is apparent as automation in every sector of business and government increases. K. Lydon in "Security World," Sept. '82, stated "Computer crime losses are estimated at between $300 million to $3 billion per year. It is difficult to detect and unpopular to report. The average computer crime is $400,000 to $500,000. About 85 to 95 percent goes unreported." For this reason it is imperative that computer legislation be established. After unsuccessful attempts at the national level it has become necessary to have progressive state legislatures implement legislation on an individual basis.

The record for prosecution of computer crime cases is poor. A. Bequai at the "Compacs '83" conference in England stated that fewer than 5% of all securities-related frauds in the U.S. are referred by the police for prosecution. Law enforcement has adopted many programs to train themselves in this new technology, but have been confronted with laws that leave them ill-equipped to prepare a prosecutable case. Our criminal statutes were designed for another era dominated by paper.

The laws presently being applied in computer crime cases are:

- o Wire Fraud Statutes: These acts relate primarily to transmittals by "means of wire, radio or television" in interstate or foreign commerce. They are difficult to apply to electronic transmissions.

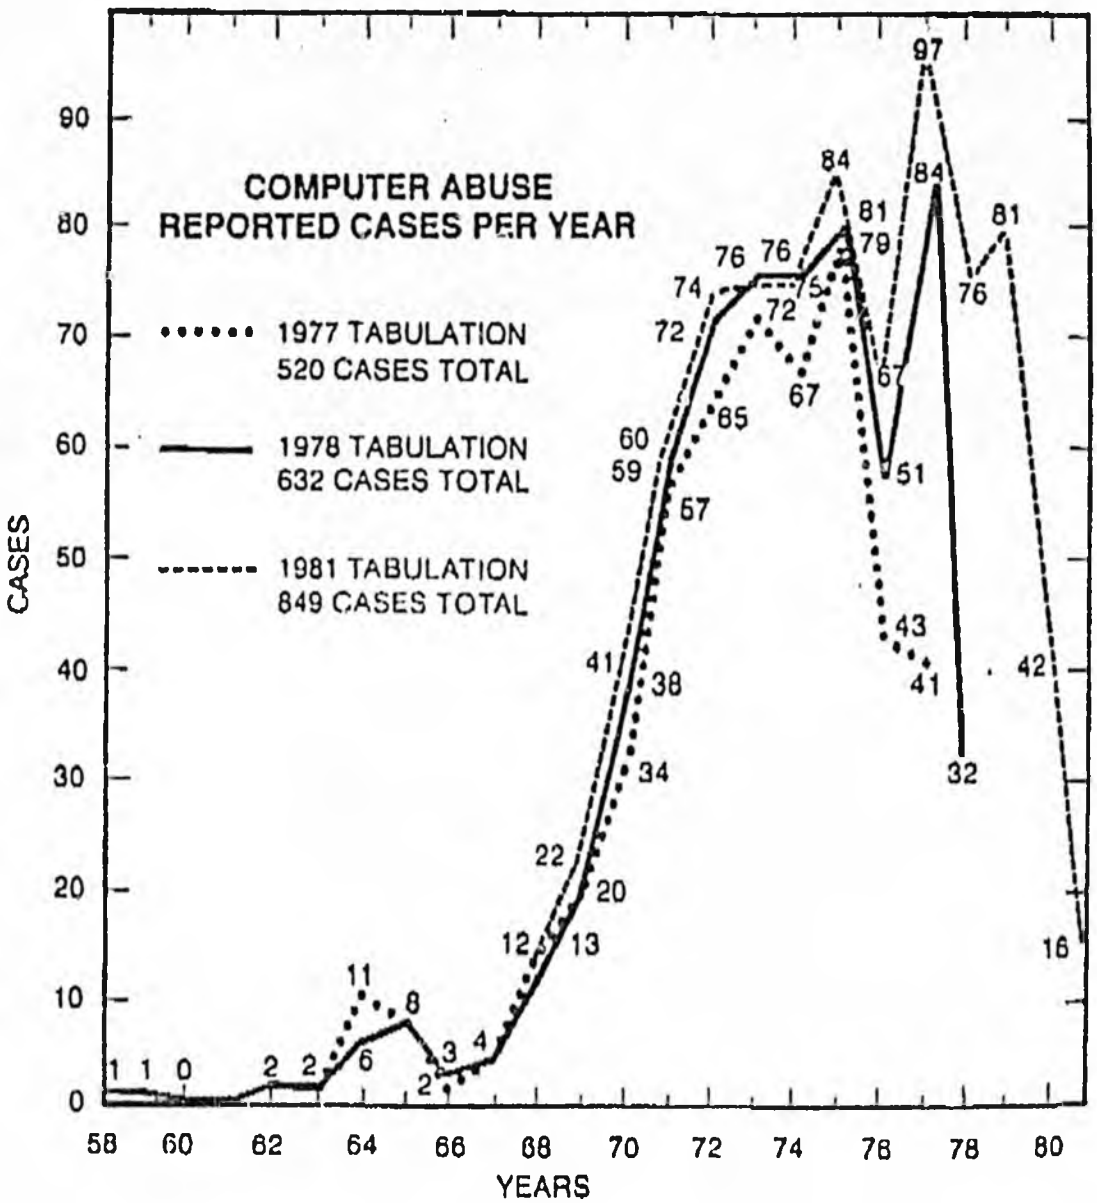
- o Bank Fraud Statutes: These statutes pertain only to bank "insiders" and the taking or concealment of funds. It is difficult to extend the definition to electronic formats.

- o Mail Fraud Statutes: The perpetrator must use the paper based U. S. Postal System. Most criminals use electronic access.

- o Title III of the Omnibus Crime Control Act: This Act is aimed at the interception of wire or oral communications. Data communications is probably not applicable under the Acts definition.

- o Counterfeiting & Forgery Statutes: These statutes are of limited value since a paper format is rarely made or forged.

- o Robbery Statutes: Application is to forcible attempts to steal property from Federally insured or regulated institutions.



- o Extortion Statutes: These statutes can be used if force or fear is used to obtain property. It could be applied to terrorists.

Although computer criminals have been prosecuted under the statutes, more definitive law is required. Such legislation has been enacted under California PC502 and New York.

The California law has resulted in several arrests in the last law year with prosecutions pending. Law enforcement has found no difficulty in applying the law since it relates to computer technology.

In relation to my initial statement, regarding hackers in the newspaper and entertainment media, the Computer Security Institute analyzed this phenomenon in their latest conference. It was stated that"Hackers begin with the perception of information as a public asset and use it freely when and where it is available." It was pointed out that they are not deterred by raising the cost of penetration. The hacker is perfecting his skill. The CSI newsletter points out "The lesson we must learn from the hackers is that "it" can be done and is being done today." What we in the business and legislative arena must learn is that there must be updated and effective legislation to cope with the issues of a computer age.

COMPUTER CRIME FACT SHEET

1. The manipulation of and unauthorized access to sensitive computerized data has become increasingly widespread, particularly with the advent of the home computer. Multiple news articles and Congressional hearings have highlighted the problem.

2. Computer crime has grown in scope and severity to the point that many American businesses now carry related insurance protection.

3. Unauthorized access to computer data can have far-reaching effects beyond those encountered by the actual recordkeepers. Consumers, especially, may be unwitting victims in the possible manipulation of medical, bank, education and credit records.

4. Technology has moved more quickly than legislation creating laws to punish manipulators of computer data. State statutes outlining stiff penalties for manipulation of or unauthorized access to computer data are necessary to help protect business and consumers.

Associated Credit Bureaus, Inc.

1984 STATE LEGISLATIVE PROGRAM PARTICIPANTS

Computer crime, ACB Members, ATTN: TONY PFISTER

has become increasingly prevalent, especially with the growth in popularity of home computers. The U.S. Congress has already shown an interest in the subject by holding a series of hearings featuring computer "hackers" and security experts as witnesses. In addition, a great deal of publicity has appeared on the subject.

For those reasons, our 1984 State Legislative Program, in which your state association's leadership has elected to participate, takes on a new dimension. In previous years we have concentrated on explaining credit reporting and collections to your legislators. That remains an important and necessary task, but this year we're encouraging you to go a step further and assume an advocacy role in the area of computer data security. Specifically, you should promote the passage of legislation establishing strong penalties for tampering with computerized records.

The need for this type of legislation is twofold. First, in most states no options exist for prosecuting employees or others who tamper wit' credit or other computerized records. Second, by recognizing and acting on the problem we further establish our industry as one which is willing to utilize proper legislative channels to bring about change necessary to protect the millions of consumers affected by our industry. By supporting legislation to further secure all types of computerized data, you can anticipate building a strong coalition of support with other industries which depend upon safe data storage.

With or without our industry's participation you can anticipate that there will be computer crime legislation introduced in your state. We think an active, positive approach will serve your interests far more effectively than a reactive approach.

The enclosed material will be of help to you in explaining this important issue to your legislators, either by mail or in person. Please let us know about your success in this endeavor.

Best personal regards.

Very truly yours,

D. Barry Connelly
Senior Vice President

Computer-Fraud Coverage Grows As Insurers Solve Policy Problems

By Joanne Lipman
Staff Reporter of The Wall Street Journal

An oil company paid millions of dollars to gather highly confidential geophysical information and then fed the data into a computer. Now it wants insurance against electronic theft of the data by competitors or damage to its storage system by teen-age computer hackers. Is such coverage available?

The answer is yes, some insurers say. But the kinds of coverage available vary widely, and most insurance companies are still at work developing their policies. A few insurers cover theft of trade secrets and such items as customer lists. Others cover only the cost of reproducing erased or damaged information. All agree there are problems to overcome: Losses are hard to calculate and potentially staggering, for example, and premiums can be very high. But everyone also agrees that once the problems are solved, business will be hot.

Computer-fraud coverage "is the most sought-after insurance in the crime area these days," says Christopher Barr, vice president of National Union Fire Insurance Co. "The computer is the fad of the 1980s—and computer insurance is the fad topic of the insurance world."

So far, only about $20 million of electronic-crime policies have been sold and most of them cover transfers of money and securities, according to Dean P. Felton, a vice president of Marsh & McLennan Cos. But he figures that amount will increase geometrically, reaching $100 million in the next three years.

Demand is already rising. Shand, Morahan & Co., a subsidiary of Alexander & Alexander Securities Inc., says inquiries about its policy have doubled in the past six months, to 75 a week. Applications for the coverage have risen 20% to 30%, says Grant R. Hubbard, a Shand Morahan vice president. St. Paul Fire & Marine Co., Fireman's Fund Insurance Cos., Chubb & Sons Inc. and others report a similar increase in interest.

A New Twist in Coverage

Insuring computer data against theft and damage is a new twist in electronic-crime coverage. One of the first computer-crime policies, introduced by Lloyd's of London in 1981 and quickly copied by several American insurers, applied only to financial institutions and covered only money and securities transferred by electronic means.

That kind of policy was inspired by the exploits of Stanley Mark Rifkin, who was charged with swindling Security Pacific Bank of Los Angeles out of $10.2 million in 1978. According to prosecutors, he posed as an international bank officer, got the computer codes required to transfer money to a Swiss bank, and then bought 19 pounds of Russian diamonds with the proceeds. Back then, the case was hailed as the ultimate electronic scam.

But a new type of computer crime is drawing attention now, and its immediate target is information rather than money. Insurers can reel off tales of computer treachery. There's a company, for example, whose client file was pilfered electronically by a competitor. In another case, a prankster gained access to computerized motor-vehicle records, wiping out penalties given poor drivers. Recently, the Federal Bureau of Investigation has arrested teen-agers who allegedly broke into computers belonging to the Defense Department, a New York City hospital and an electronic-mail service.

Crimes like these make companies very nervous. Chubb, for instance, says it has sold computer-fraud policies to an aerospace company worried about piracy of its designs and a book publisher concerned that an outsider could steal unpublished books. Shand Morahan says travel agencies, county governments, department stores and stockbrokers have shown interest in its policy.

> ***Insuring computer data against theft and damage is "a new area, and there are no hard and fast decisions on who is liable for what," says a State Farm executive.***

Computer-data coverage varies from insurer to insurer. St. Paul Fire & Marine covers the cost of reproducing erased or damaged information, including footwork or research. That means that if a client list is erased, the insurer will pay for the extra time and work required to recreate it. But "snooping" isn't covered. As a result, if a competitor steals the client list electronically without damaging the data, no payment is made.

Chubb's policy does cover snooping. If information is stolen and used by someone, the policy covers the full amount spent to develop the data. Thus, if a new automobile design is stolen from a manufacturer's computer and the new car becomes uncompetitive as a result, Chubb will cover such costs as research and promotion. If the car is still marketable but sales are hurt because the design is no longer exclusive, a smaller payment will be negotiated.

Shand Morahan may offer the most ambitious policy. It promises to cover all computer-fraud-related costs, up to $30 million for a single incident. It will even cover the cost of inventory stolen by electronic means. Such cases have occurred in the past. In the early 1970s, Jerome Schneider was convicted of procuring more than $200,000 of telephone equipment from Pacific Telephone & Telegraph Co. in Los Angeles.

But many insurers are still trying to devise formulas for insuring computerized data. "It's a new area, and there are no hard and fast decisions on who is liable for what," says Wesley Ooms, assistant vice president of State Farm Mutual Insurance Co., which doesn't offer any computer-fraud coverage.

One problem is that insurers like to stick with quantifiable losses. That makes them reluctant to cover less-concrete costs, like loss of confidentiality and confidence among customers.

There are other problems. While no claims have been made yet, they may be devastating when they come. "We don't expect them to be numerous," says Ralph W. Wheeler Jr., an executive at Aetna Casualty & Surety Co., "but we expect a catastrophe when it happens." Mr. Hubbard of Shand Morahan believes losses among his company's customers will "always be in excess of seven figures."

With the potential for losses like these, premiums can be enormous. They tend to run between $25,000 and $100,000 a year, depending on the size of the business and how secure its computer system is. But coverage can cost a large bank as much as $4 million over three years, according to Mr. Wheeler of Aetna. If the company has a backup computer or other alternate system, insurance costs are usually lower.

Giving Hackers Ideas

Most companies are reluctant to talk about their computer-crime coverage for fear of giving hackers and competitors ideas. "Nobody's going to admit carrying this coverage," says Mr. Hubbard, of Shand Morahan. "It's the same thing as kidnap coverage."

But law firms, which computerize data about cases, and airlines, which computerize everything from accounts receivable to reservations, are among the kinds of companies looking into coverage. "Anyone who uses information-systems technology is going to have to look at this type of insurance," says Don Karmazin, vice president of computer and communications services at United Airlines.

United is self insured, but it plans to study coverage carefully as it becomes more readily available. "It has been talked about in the industry," Mr. Karmazin says, "especially with all the notoriety that these teen-age computer whiz kids have been getting."

McGraw-Hill Inc. has computer-crime coverage, but it says all its risks still aren't covered. Its policy covers the cost of recreating damaged information, but if an electronic trespasser reads—but doesn't damage—an unpublished stock appraisal from McGraw-Hill's Standard & Poor's Index or an unreleased article from its BusinessWeek magazine, no payment is made.

"We hit the stumbling block," says John J. Bott, corporate risk manager. "It's a gray area. We're going round and round on this at least once a month."

For Fun or Foul, Computer Hackers Can Crack Any Code

* * *

Many Just Like the Challenge, Others Like to Show Off; The Cookie Monster Caper

By Erik Larson
Staff Reporter of The Wall Street Journal

SAN FRANCISCO—When their computer started talking dirty, the computer staff members at U.S. Leasing International Inc. knew they had a problem.

The company's typically well-behaved machine had this to say to one of the machine's operators: "The Phantom, the system cracker, strikes again. . . . Soon I will zero (delete) your disks and your backups on System A. I have already crashed your System B. Have fun trying to restore it, you (obscenity)." Some other suggestions were made about what the operator could do with various pieces of computer equipment.

The culprit turned out to be a brigh' 20-year-old man who had secretly fiddled with the company's machine by telephone fron Los Angeles to show off his computer knowledge.

That is the darker side of "hacking," as computer fiddling is known. At the Massachusetts Institute of Technology, where the term is said to have originated, hacking usually has a lighter side. Richard Stallman, a professional programmer at MIT, says a hacker originally was one who knew computers inside out, got a nonprofessional amount of fun out of them and could appreciate the irony and the beauty of a program He refers to himself as a professional hacker.

'Electronic Vandalism'

Outsiders now use the term to describe all kinds of computer yahoos who electronically invade other people's computers, usually just for the challenge. "I call it electronic vandalism or technological trespassing," says Donn B. Parker, a computer-security consultant with SRI International in Menlo Park, Calif.

For business it's a growing problem, thanks to the proliferation of home computers and computer expertise. "People don't realize the extent to which their systems are being broken into," says Clifton H. Garrott, the Los Angeles deputy district attorney for electronic crimes, who prosecuted the U.S. Leasing case.

At the lighter end of the hacking spectrum are those computer jokesters who use such hacker classics as the "Cookie Monster" program. A San Francisco programmer's version went like this: At brief intervals his program would interrupt another user's work and flash "Cookie" on his screen. The machine would then grow more frantic, sending whole lines of "Cookie" across the unsuspecting user's terminal, finally letting loose with a primal screen: "Gimme Cookie!" If the user tried to stop the program, the machine would bristle: "Don't do that, Monster not like that." The only way to stop the Monster was to feed it a cookie—that is, type the word "cookie."

The Nixon Variation

At MIT, hackers once substituted former President Richard Nixon for the Cookie Monster; the alleged Mr. Nixon demanded immunity from prosecution.

Many hackers just like to browse the electronic byways of the country, exploring a digital never-never land entered through the telephones beside their computers or terminals they aren't supposed to have access to. Recently, the University of Michigan and Ann Arbor, Mich., police captured an electronic peeping Tom, who for about a year had wandered among the files on one university computer system out of curiosity. He was a former student. "We decided to prosecute because we take this very seriously," says Aaron Finerman, the director of the university's computing center. University policy says a student can be expelled and a staff member fired for that kind of thing. The culprit pleaded guilty to a misdemeanor.

To satisfy a need to browse, Geoffrey Goodfellow, now a part-time systems analyst for SRI, once broke into a major computer time-sharing network. "I like to see how things work," he says. "In order to see things work, you have to have carte blanche to look around." Browsing, in fact, helped him get his job at SRI. While loitering once in an SRI computer, he says, he left an electronic note saying he would do some programming free if SRI would give him a computer account that would let him use the computer. SRI gave him an account, and the affiliation grew from there, he says.

Browsing hackers get help from the underground network of electronic bulletin boards suspended in computer circuits around the country. By leaving messages at these, hackers can swap passwords, identification numbers and computer phone numbers to help them get into forbidden systems. Last year, one such bulletin board carried detailed instructions for getting into a key computer system operated by Pacific Telephone & Telegraph Co. in Los Angeles.

"TAP," an underground newsletter with a mailing address on 42nd Street in New York, also offers hacking tips. Its March 1983 issue gives the telephone number and other entry details for a Princeton University computer. It also tells how to get free credits on certain arcade video games including Pac-Man, using none-too-subtle methods, such as smacking the machines. TAP got started in 1971 to help "phone phreaks" crack phone-company security. But computer hacking is "getting to be more and more" a part of the publication, says an editor who calls himself Cheshire Catalyst.

"If people have the hardware and the general expertise and they've somehow connected with this gray market, all they lack is the motivation," says Doug DeVries, the manager of computer security at Hewlett-Packard Co.'s corporate data center.

To patch into other people's computers, some hackers use such high-technology techniques as looking over the shoulder of a legitimate user to get his password, or rummaging in a company's trash barrels for computer printouts bearing valuable access codes, a tactic called "trashing." "You'd be surprised what you can find in the trash bins," says Mr. Garrott, the deputy district attorney.

Guessing the Password

Computer passwords, which let you into particular accounts, are often easy to guess. They tend to be wives' names, dogs' names, first names and birthdays. Some computers come with standard passwords, which their owners neglect to change. A common one is "SYSLIB," for system library.

"It isn't hard to get lucky," says Michael Chastain, 20, a senior at the University of California at Berkeley, studying math and computer science.

He got lucky when he was 15. A friend gave him a password to an account on a Berkeley computer. "It happened at the right time. "All I wanted to do in life was get access to one of the university's systems. Once I got it, all I wanted to do was beat the Adventure game," in which the player electronically seeks treasure in a cave. "Then all I wanted to do was beat their security." He did, illicitly gaining "super-user" status—computer privileges typically only given to a few key staff members. He didn't go any further. "I turned myself in," he says. "I didn't want to go on to bigger and better security violations and get caught doing something serious."

Die-hard hackers say there isn't any harm in any of this, provided data never get destroyed and no one gets hurt. The malicious hackers, says MIT's Mr. Stallman, may simply be rebelling against antisocial "fascist" computers that seek to keep users out. "I call him a person who has been alienated by the hostile atmosphere he perceives in most computer systems," he says "He reacts to it with anger, which is perfectly justifiable, in my opinion."

Occasionally, a hacker goes on to do obvious damage, as in the U.S. Leasing case. Profanity was sprinkled throughout its system. Important inventory files, which allowed a leasing subsidiary to keep track of its equipment, were destroyed. And the company spent thousands of dollars restoring the computer to operation.

The culprit was Lewis De Payne, who went by the code name "Roscoe." He led a kind of computer-access gang in Los Angeles that included a woman and a couple of youngsters. With the help of telephone officials, police captured Mr. De Payne, who pleaded no contest in Los Angeles municipal court to reduced charges of computer fraud and conspiracy to commit computer fraud. He spent about six months in the county jail.

To get the computer's phone number and a key password, Mr. De Payne used a terribly sophisticated technique: He asked for them. Posing as a software trouble-shooter, he called the company and said he needed to do some program maintenance over the phone. His repair was supposed to correct a problem that other computers had, in fact, been having. An unsuspecting computer operator gave Mr. De Payne what he wanted.

Although Mr. De Payne won't discuss the case, he says: "You can basically extract any information from a person if they're ignorant of what that can do." Improperly trained people, he says, "are the weakest link."

Mr. De Payne continued the ruse and made the repair. When it didn't work, U.S. Leasing called the local offices of the computer manufacturer and learned the firm had no such employee. U.S. Leasing immediately ordered its legitimate users to change their passwords. Some didn't, leaving an open window for Mr. De Payne.

Early the next morning, the computer left messages that would make a sailor blush, such as: "I just wanted to tell you to go take a flying (obscenity)."

"At that point, we knew we had a *very* serious problem," says John Whipple, the company's vice president for data-processing services.

The company quickly sealed its computers from outside access. It wasn't worried about the lost data because it had complete backup tapes. Its main fear was that somehow the intruders had devised a program that would let them back into the machine even after all the passwords had been changed. That kind of software sleight of hand is called a "trap door." U.S. Leasing spent about 24 hours of valuable computer and staff time reconstructing its files, Mr. Whipple says.

Why had Mr. De Payne done it? In the court records, a written statement by his psychiatrist says in part: "He wanted to demonstrate that he had a profound knowledge of computers and their functions." In Mr. De Payne's own statement, he says: "It gave us a sense of pride to be able to show each other that we could 'crack the security' of the computer . . . ."

Playing the Game

For some hackers, security means only challenge. "It's as if you're playing a game," says MIT's Mr. Stallman. "When they (security people) start playing that game, they shouldn't be surprised when other people play the other side."

Partly as a result, companies are about as willing to talk about the specifics of computer security as families are to discuss incest. They don't want to throw down a challenge for some wise guy. They don't want stockholders or bankers to know that some kid busted into their files. SKK Inc., of Rosemont, Ill., one of a growing number of companies selling computer-security products, plays to this fear in a brochure for its ACF2 software-protection package: "When some sharpie makes a fool out of your computer . . . whose face appears on the news?"

But no system can ever be fully secure, security experts say. SRI's Donn Parker likes to quote "Jackson's Law": "With a big enough hammer, you can break anything." Steven E. Weiland, the principal research manager for the Center for Bank Data Security in Rolling Meadows, Ill., says, "If someone really wants to get in, they get in."

Which can give you a nightmare. Consider "WarGames," an MGM/UA Entertainment Co. film to be released in June. Here's the plot: A kid likes to tap into the computers of a video-game maker so he can play the games before they hit the market. One day he unwittingly patches into a Defense Department doomsday computer and starts the world on its way to World War III, all the while thinking he is playing some neat new game.

We won't say how the movie ends.

Crime on a chip

Beware the logic bombs, data diddlers and hackers

BY MURIEL DOBBIN
© 1983, Baltimore Sun

LOS ANGELES — Logic bombs, data diddling, obscene messages and illegal access to defense secrets are just the tip of a computer crime iceberg that federal and California officials are working full time to control.

Already established in the annals of computer crime are the Phantom, who cost a San Francisco corporation $250,000 by feeding obscene messages into its machines, a teen-ager who acquired computer access to secret Defense Department information, and Cap'n Crunch, one of the original "phone phreaks" from whom today's electronic pirates are descended.

"The magnitude of the problem of computer vulnerability is only now being realized. What we are seeing is the tip of a nasty iceberg," said Clifton Garrott, an assistant district attorney who heads the electronics crime division in Los Angeles.

The U.S. Justice Department has commissioned a team of electronics experts at Stanford Research International, a California foundation, to carry out a study of computer crime in 18 states.

Rep. Ronald Wyden, D-Ore., introduced this month a computer crime prevention bill, said to be the first of its kind, as an initial step to combating the problem.

The Wyden bill would set up a task force to assess the dimensions of computer crime nationally. It also would create a clearing house to provide guidelines and aid for small businesses that are especially sensitive to computer criminals.

Charles Wood, management systems consultant at Stanford Research International, pointed to the timeliness of the movie *WarGames*, in which a teen-ager accidentally keys into a Pentagon computer and puts the world on nuclear alert.

"It is conceivable," he said. "The question is whether it is reasonably possible."

Garrott, who in three years of heading California computer crime-fighters has seen such offenses rise sharply, recalled that it was a teen-age boy who was reported recently to have used a computer at the University of Southern California to gain access to a Defense Department system. The extent of the youth's success, said Garrott, had not been established because nobody at the Pentagon would talk about it.

"What we must remember," said Garrott, "is that a computer is no more than an electronic filing system, which will do what anyone tells it to do."

A so-called intelligent computer, which could draw on its own experience when dealing with different sets of facts, is still at least seven years away, according to Garrott.

Meanwhile, he said, not only corporations but people have to learn to cope with the growing threat of computer abuse.

"Our credit ratings, our taxes, our bank accounts, our telephone bills are all to be found on computers, and there is evidence that increasing access is being gained to credit bureau machines where ratings are listed. New personalities can be built over existing ones, but it is the real person who gets the bill," he said.

He classified hackers, as computer criminals are called, as the successors of phone phreaks such as Cap'n Crunch, who used to use a device called the "blue box" to make long-distance calls without paying for them.

Hackers, he said, are "brilliant in a very limited way. They are not sociable. They flunk out of school and they can communicate only through the world of electronics," he said.

They are people like Lewis DePayne, whose computer name was "Roscoe" or "the Phantom." He led a criminal computer gang in Los Angeles that included two teen-age boys and a woman known as "Susan Thunder."

"Susan Thunder loved computers so much that she would prostitute herself to get money to buy computer equipment," said Garrott.

DePayne eventually spent five months in jail for computer fraud after he had planted obscenities in the computers of a California company.

An even darker side of computer abuse was uncovered at a hospital, where it was found that hackers had gained access to the computerized records of patients in intensive care and had doubled the dosage of their medications.

"If a nurse had not noticed the difference, we could have been dealing with a case of mass murder," Garrott said.

What worries the computer crime fighters is that such offenses often are discovered by accident.

"It's too often a fluke that it's found out at all," Garrott said.

He told of the bank employee who decided use a computer to triple the withholding for state and federal taxes o the bank staff and apply for the refund to be paid to himself. He was unsuccessful only because an auditor wondered if the withholding was too high and investigated.

There was also the case of Sarah the bank teller who programmed the bank computer to pay her unearned overtime and was successful for months until it occurred to a bank official that an enormous amount of overtime was being paid to a low-level employee.

What was significant about the case of Sarah was that after she had made restitution of the money, she was not fired. She was given a better job at a higher salary on the condition that she told nobody how she had diddled the data.

"That attitude on the part of corporations is passing," said Garrott, who explained that it originally stemmed from reluctance on the part of many firms to admit their own management inefficiency. "It does point up the need for new and tougher computer safeguards," he emphasized.

But until computer precautions are improved, he said, there will continue to be cases where data is changed or "diddled," and corporations risk financial disaster as a result of the planting of "logic bombs" which result in a computer erasing all the information in its records on a given time and date.

"The trouble is that people think computer crime is funny when it can be both disastrous and tragic," Garrott said.

Yet even the official admitted computer crime can be funny. As in the classic case of the cookie monster in the computer. That took place in San Francisco, where interference by hackers led to repeated interruption of a firm's programming with the word "cookie" appearing on the screen.

It would wind up with "gimme cookie." And it turned out that the only way to appease the electronic monster was to "feed" it by typing in the word it wanted, which was "cookie."

Criminal Use Of Computers Seen Growing

By Robert E. Taylor
Staff Reporter of The Wall Street Journal

WASHINGTON – Richard Shanklin has found another use for the versatile home computer: credit-card fraud.

From his parents' home in Fairfax, Va., the 30-year-old Mr. Shanklin used his computer to get into the files of Credit Bureau Inc. in Atlanta. Authorities say he used information about other people's credit-card accounts to order about $50,000 worth of computer and electronic gear from mail-order businesses.

A grand jury indicted Mr. Shanklin on 15 charges. After plea bargaining, the prosecutors dropped all but one charge of credit-card fraud. Mr. Shanklin pleaded guilty, and he faces a jail term.

The ease with which he gained access to the files is alarming to Assistant U.S. Attorney Loren Hershey, who prosecuted the case. He calls the home computer "the burglary tool of the electronic age." Several computer experts consider that an exaggeration, saying they haven't heard of another case like Mr. Shanklin's. But while computer pranks gain far more attention, experts expect the use of home computers in fraud and similar criminal activity to grow.

"The rip-offs are likely to be more frequent and larger," says Arthur Gillis, a computer-security specialist who is president of Computer Based Solutions Inc. of Atlanta. "The numbers are against us," he says, because people are learning about computers faster than adequate security precautions are being developed.

Danger From Insiders

The most serious threats of misuse, most experts say, come not from outsiders, but from insiders. Most computer thefts are embezzlements. In one case, a consultant, Stanley Mark Rifkin, used computer codes to transfer $10.2 million from the Security Pacific Bank of Los Angeles to his account in Switzerland. He served three years in jail.

Computer buffs have shown that they can use their wits, their terminals and their telephone lines to gain unauthorized access to private data banks. The most dramatic examples have been carried out by a group of youths in Milwaukee who call themselves the 414's, after the city's telephone area code.

They have penetrated dozens of computer systems, including a data base at the U.S. nuclear-weapons research laboratory in Los Alamos, N.M., and the radiation-therapy records at Memorial Sloan-Kettering Cancer Center in New York.

While computer intrusions are generally ascribed to sport rather than greed, the case of Mr. Shanklin shows the possibilities of financial gain.

Computers' Weak Point

Mr. Shanklin apparently broke into the computer data bank by exploiting a weak point common to most systems: human carelessness. Federal authorities believe he posed as a Credit Bureau employee to obtain from a J.C. Penney clerk the codes used to enter the computer's credit files.

Dan P. Miller, a vice president at the Credit Bureau's Maryland subsidiary, says anyone who gets inside the computer's data base can read the company's files on about 90 million people from 24 states—including their credit account numbers, credit histories and unused balances.

Authorities say Mr. Shanklin, in ordering electronic gear by telephone, used credit accounts of people who had recently died. Investigators also say he obtained credit histories of Hollywood personalities, including actress Linda Blair. The grand jury charged that Mr. Shanklin obtained credit reports on at least 80 individuals.

When federal investigators went to Mr. Shanklin's home, they say they found seven antennas on the roof. The amount of computer and electronic gear packed into his bedroom was reminiscent, Mr. Hershey says, of the movie-set bedroom of the youth in "WarGames," a movie that raises the specter of a home-computer penetration of the U.S. missile defense system.

Deliveryman Grows Suspicious

According to the government, Mr. Shanklin picked up some of the goods he ordered at a freight depot, but he had other purchases shipped to his home. A United Parcel Service deliveryman grew suspicious, according to the prosecutor, after taking packages for several individuals to the home in a few days and seeing Mr. Shanklin sign for all of them.

Thomas Maloy, the Credit Bureau's director of public relations, says the company has "taken the appropriate steps" to prevent a similar unauthorized foray into its records, but, citing security concerns, he won't explain what they are.

Mr. Gillis, the computer-security expert, says security can be provided in several ways. Software can require a user to give a series of codes before getting access to data. It also can limit the amount of computerized information that is open to each authorized user. The central computer can be linked only to private telephone lines or programmed to give access to only specific computer terminals.

The most sophisticated safeguards identify authorized users by scanning their fingerprints, voiceprints or even the blood vessels in the retinas of their eyes, says Jim Schweitzer, Xerox Corp.'s manager of system security technology.

But such safeguards may be too expensive or cumbersome for some users. A private phone line to a computer is likely to cost at least $1,000 a month. Mr. Gillis says so it isn't practical for most low-volume users.

In the absence of the more sophisticated security measures, Mr. Gillis says, "it doesn't take a genius" to break in to a data bank. All it takes, he says, is an understanding of how computers work. Computer users can beat the simpler safeguards by trying random variations of codes and passwords until they find the right ones.

But even the best security is vulnerable to human frailty. A common problem, says Mr. Schweitzer, is that authorized users don't safeguard their passwords and access codes. Theode C. Langevin, working in a New York brokerage house, used the password assigned to a former colleague at the Federal Reserve Bank to tap into the Fed's secret money-supply files. Mr. Langevin has pleaded guilty and faces a sentence of up to five years and a $1,000 fine.

Many crimes that rely on computers, though, could have been committed with old-fashioned tactics. Mr. Schweitzer contends, for instance, that Mr. Shanklin could have found enough information in a credit-bureau or department-store trash bin to charge his purchases to someone else's credit card.

Audit concludes state computers are vulnerable

By KARIN DAVIES
Daily News reporter

JUNEAU — The state computer system is poorly protected against tampering by unauthorized individuals, a recently released state audit says.

Because the computer security system is inadequate, someone who puts his mind to it could play with state records — including personnel, payroll and permanent fund dividend files, said James Shea, Department of Administration deputy commissioner of information resource management.

The Department of Administration's lack of policies, procedures and standards for computer operations "leaves the system open to errors and inefficiencies," the Legislative Audit Division said.

"In the worst case, the absence of adequate access controls over production files could expose application systems to errors, fraud and sabotage," the audit said.

Anyone with a current state computer account can change, replace or delete backup programs for the central accounting system, the report said.

The department has asked the legislature for $280,000 in the 1984-85 budget year to beef up security systems for central state computers in Juneau and Anchorage, Shea said. The money would pay for a security system and two people to maintain it.

Shea said computer tampering has become a concern nationwide as "computer literacy" increases. Recently, a state employee was disciplined for gathering the information that would have allowed him to enter files that were off limits to him.

House Speaker Joe Hayes, R-Anchorage, recently introduced legislation making it a felony to use computers to illegally obtain or alter information, steal money or to defraud or deceive someone.

A better computer security system would cut down on the number of checks and audits of records that the state would have to perform, Shea said.

The department also plans to comply with suggestions that rules for operating the state computer system be written, distributed and enforced, Shea said.

Several other procedural corrections will be made as well, according to a department response to the audit.

Computer meddling leads state to ask for more security

ADN 12/23

The Associated Press

JUNEAU — Allegations that a state employee tampered with a computer in an effort to gain access to the names of permanent fund dividend recipients has prompted officials to request a new, $240,000 computer security system, a spokeswoman said Thursday.

Frances Rose, a public information officer with the state Department of Administration, said the employee's name would not be released because he was not charged with any crime.

"He was suspended for 15 days, reduced two steps in rank and had his security clearance lifted," she said.

"If he had been successful, I presume he would have been fired straight out."

The employee is accused of trying to "get information he did not need," or the names of permanent fund dividend recipients, she said.

"I guess he thought he would solicit things from people after they got their checks," Rose said.

"This is the first time this kind of thing has happened. . . . It's straight out of 'War Games' (a film about computer tampering)."

A system of "passwords" had been used by the state to safeguard computer information, "but I guess it's not foolproof," she said.

"There's a recognized need that we have to beef up our security," she said.

"We have a proposal in the fiscal '85 budget that would fund the installation of a new computer security system.

"The one they have in mind would cost $240,000 and include creating a data security office and an officer to monitor computer use," Rose said.

Gayle Horetski, an assistant attorney general, said Thursday the case was not referred to the Department of Law so there was no criminal prosecution.

"Computer tampering is something of a gray area and we're working now on legislation that would tighten it up," she said.

MEMORANDUM January 30, 1984

SUBJECT: Sectional analysis of HB 524

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee

FROM: Keith B. Levy KBL
Legislative Counsel

You have requested a sectional analysis of HB 524, "An Act relating to the constitutional spending limit; and providing for an effective date."

Section 1 of the the bill provides the method for adjusting the annual spending limit (AS 37.07.075), as required by art. IX, sec. 16 of the state constitution.

The $2,500,000,000 limit is to be cumulatively adjusted annually by the Office of Management and Budget as follows: The percentage of the federal consumer price index for Anchorage for the fiscal year two years before the fiscal year for which the spending limit is being figured is to be added to the percentage of the rate of change in the population of the state as determined by the previous two decennial censuses. Using the resulting percentage, the spending limit is to be adjusted for the period beginning July 1, 1981 through the last day of the fiscal year before the fiscal year for which the spending limit is being determined.

To give an example, the spending limit for fiscal year 1986 would be figured as follows:

> The percentage of the consumer price index for 1984 would be added to the percentage change in population as determined by the 1970 and 1980 censuses. For fiscal year 1986, the spending limit of $2,500,000,000 would be increased by this percentage for the period

from July 1, 1981 through the end of fiscal year 1985 (June 30, 1985).

Section 2 provides that the Act takes effect immediately.

FROM: Representative Al Adams AAA

RE: Proposed Letter of Intent for HB 524

LETTER OF INTENT HB 524

It is the intent of the Legislature that for the purposes of calculating the spending limit in HB 524 the following equation be used:

Base x 1 + (rate of growth in population + inflation adjustment) = Limit

The base is $2,500,000 for fiscal year 1982. For each succeeding fiscal year the base shall be adjusted by the rate of change in population and the Anchorage Consumer Price Index-Urban (CPI-U).

The rate of change in population shall be calculated as the continuously compounded annual rate of change between 1970 and 1980 (April 1) estimates of population established by the U.S. Census Bureau in their decennial censuses. For example, the rate of change for the 1980's is computed as follows:

$$\text{Population}_{1980} = \text{Population}_{1970}\ e^{rt} \text{ or}$$

$$\text{Rate of change} = r = \frac{\ln(\text{population } 1980/\text{population } 1970}{t} \text{ or}$$

$$\text{Rate of change} = .0284 = \frac{\ln(401851/302583)}{10}$$

The rate of change in the Anchorage CPI-U computed as the July to July change in the index as published in the U.S. Department of Labor, Bureau of Labor Statistics.

MEMORANDUM State of Alaska

TO: John Shively, Chief of Staff
Office of the Governor

DATE: January 4, 1984

FILE NO: 84B-1

TELEPHONE NO: 465-3568

FROM: Gordon S. Harrison
Associate Director
Office of Management and Budget

SUBJECT: Appropriation Limit

This memorandum discusses the complexities of interpreting the State's constitutional limit on appropriations (Article IX, Section 16). It recommends an explicit method of calculating the limit. This method would be used to calculate the limit for fiscal year 1985 and subsequent years as well, provided legislation is not enacted which specifies a different method. Dr. Tom Chester of this office has provided much of the background information in this memo, and he has made the actual mathematical computations.

The constitutional language that creates a problem of interpretation is "appropriations . . . shall not exceed $2,500,000,000 by more than the cumulative change, derived from federal indices as prescribed by law, in population and inflation since July 1, 1981." The Legislature has not passed a law prescribing which Federal indices are to be used and how. Several major ambiguities, complications and issues stand in the way of an easy, straightforward interpretation of this language. These are discussed below, and a recommended approach to each of them is suggested.

Period of Adjustment to Base

The law states that the limit of $2.5 billion is to be adjusted for the cumulative change in population and inflation since July 1, 1981. Does this mean that $2.5 billion is the limit for fiscal year 1982 (July 1, 1981 - June 30, 1982) or that it is the base for calculating the limit for FY 82? In other words, should the adjustment for population and inflation be made to the beginning of the fiscal year to which it applies, or through the end of it? The longer the period of time for which adjustments are made, the higher the allowable appropriations will be in future years.

The intent of the limit is to permit per capita spending levels to remain constant over time. In my opinion the adjustment should include the year in which the spending is to take place, so the population growth and inflation that occurs during that year does not result in an actual decrease of government services in per capita terms. The only contrary argument I see is simply that making the adjustment through the end of the

02 001A(Rev. 10/79)

fiscal year may give the appearance to some that the Governor and Legislature are manipulating the law to give them a higher, less restrictive limit. To avoid the appearance of any trickery in this sensitive matter, I suggest that the adjustment for population and inflation be made only to the beginning of the fiscal year.

Indices

The most complex question in interpreting the appropriation limitation language is which index of the many available should be used for making adjustments to the $2.5 billion base for population and inflationary changes.

Population

Table 1 presents population information for Alaska. This information suggests three plausible measures of population growth that could be used for purposes of interpreting the spending limit: (1) the average annual population growth that occurred during the decade 1970-1980; (2) population change based on current estimates by the Alaska Department of Labor (ADOL); (3) population change based on current estimates by the U.S. Census Bureau (published by the Bureau of Economic Analysis [BEA]).

TABLE 1

Various Population Measures for Alaska

		Population Estimate	
Year	Population Census	Alaska DOL (% change)	U.S. Census Bureau (% change)
1970	308,500.0		
1980	419,700.0		
1981		435,000.0	416,000.0
1982		461,000.0 (5.98)	443,000.0 (6.49)
1983		N/A	N/A

The advantage of using the 1970-1980 annual rate of change[1] is that the numbers are based on the Federal decennial census and are not now subject to significant revision. Also, derivation of the number is simple and easy for people to understand. The disadvantage of this number, on the other hand, is that it may

not reflect actual population changes that are occurring in the 1980s. As a result, it may overstate or understate current growth.

The Alaska Department of Labor, Research and Analysis Section, makes population estimates of Alaska for purposes of Federal programs. The estimates are derived from methods approved by the U.S. Census Bureau, which certifies the State numbers. Because of this link with U.S. standards and estimating methodology, I believe the State estimates of population change could satisfy the constitutional requirement that the adjustment factors be "derived from federal indices." However, recent departmental changes have undermined the ability of the State to make timely and accurate population estimates. The professional demographer employed by the Department of Labor recently resigned, and no replacement has been hired at this time. Also, a reorganization within the Department of Health and Social Services has reduced the ability of the Department to make vital statistics available in a timely fashion to the Department of Labor. These statistics are necessary for estimating the natural increase component of population growth. As a result of this situation, and because we would need to stretch somewhat the phrase "federal indices" to use the State population estimates, I suggest that Federally-published estimates of population change be used.

Federal population estimates for 1981 and 1982 are shown in Table 1. While the Federal estimates are lower than the State estimates, and presumably less accurate, the Federal rate of change between 1981 and 1982 is somewhat higher. For purposes of calculating an appropriation limit, changes between July 1 and July 1 of each year should be used.

Inflation

Several different indices of inflation could plausibly be used for calculating the constitutional limit for a particular fiscal year. Most commonly discussed are the Federal consumer price indices. Currently the Bureau of Labor Statistics (BLS), U.S. Department of Labor, produces two basic consumer price indices: the All Urban Consumers (CPI-U) and the Urban Wage Earners and Clerical Workers (CPI-W). CPI-U is a more inclusive definition. CPE-W primarily measures changes in prices of goods typically purchased by urban workers while CPI-U measures changes in price of items typically bought by all urban dwellers irrespective of their attachment to the labor force. CPI-U covers approximately twice as many persons and in general produces an inflation rate higher than that for CPI-W.

BLS produces an Anchorage CPI-U and CPI-W. While the cost of living in Anchorage is higher than the U.S. average, the CPI

indices are higher than the national CPI indices. However, the rate of change in cost of living (inflation) is lower in Anchorage than in the U.S. because economies of scale are being realized in the transportation and distribution of goods. It is not known to what extent the Anchorage CPI indices reflect statewide changes. Inflationary change may be slower in Anchorage than the U.S. average, but that may not be so in Juneau or the bush where many government services are provided.

One serious drawback to using the consumer price indices is a change made by the BLS in measuring the shelter component of these indices.[2] This change creates an inconsistency in the series from July 1, 1981 to the present, with the result that the published inflation rate takes a significant dip in 1983. The effect of this change is especially dramatic in the Anchorage consumer price indices because of a related change made in measuring housing costs.[3]

The major problem with the CPI series for our purposes, however, is that it measures changes in the cost of a market basket of goods purchased by consumers, not of goods and services purchased by the State government.

There is a Federally-computed inflation index for the cost of services provided by state and local governments. The government purchase index is published monthly by the Bureau of Economic Analysis in a publication titled Current Business Trends. Even though this is a measure of price changes at the national level, the government purchase index seems to be the most logical for our purposes. I recommend that we adopt this index, using the annual point-to-point percentage change between July 1 and July 1 of each year.

Table 2 presents rates of change measured by the various indices. The low rates shown for the Anchorage CPI series in 1983 reflect the problem of definitional change discussed above.

TABLE 2

Various Rates of Inflation

Rate of Change	Fiscal Year 1980	1981	1982	1983
U.S.A.				
CPI-U	13.20	10.73	7.7	2.43
CPI-W	13.47	10.25	6.29	2.19
Government Purchase Index	9.77	5.70	6.81	6.34
Anchorage				
CPI-U	10.10	7.75	7.11	.83*
CPI-W	8.91	7.52	7.2	-.62

*Due to change in definition of shelter component.

Estimating in the Absence of Data

Calculation of the appropriation limit requires a value for population and inflationary change that is not available at the time it is needed. Note in Table 1 that population estimates are not yet available for 1983. We actually need an estimate of population change for 6 months in the future (to July 1, 1984) to calculate an FY 85 limit. While the publication of inflation indices does not lag as much as the publication of population figures, the problem still exists. There are several options for obtaining the missing data; among them are the purchase of an estimate from a national economic forecasting firm, and the production of an estimate in-house by OMB with an econometric model. Our recommendation, however, is to simply use for the missing number the trend since July 1, 1981. That is, the average of the annual point-to-point changes since July 1, 1981 becomes the missing value. This approach has the advantage of not being subject to manipulation. To avoid the erosion of public credibility, it is important that the Governor and Legislature use a method which is easily understood and reproducible by everyone.

Revised Indices

Federal indices of population and inflation are subject to revision by the agency that issues them. This is because the figures they release are typically based on survey data, and

additional information invariably becomes available, or new benchmarks are used, or errors are discovered, etc. For purposes of computing the spending limit, the most current published estimate available should be used, and a mid-year adjustment in the spending limit should not be made even if revised indices are issued.

FY 84 Precedent

When the Sheffield Administration took office in December, 1982, former Governor Hammond's administration had prepared an executive budget for FY 84. This executive budget contained a spending limit calculation of $2.98 billion. The only written explanation of this number is a footnote on page 3 of the Executive Budget Book that states "...according to the spending limit, the FY 84 budget ceiling could exceed the FY 82 figure of $2.5 billion by the estimated rate of inflation and population growth. For FY 83 our estimate is 10%, hence the FY 83 base is $2,750.0. The $2.98 billion limit for FY 84 is estimated to be 8.4% over the FY 83 base level." Since there is no explanation of the assumptions or method used, I do not see why this Administration is bound by whatever those may have been, nor bound to $2.98 billion as a base for calculating the FY 85 limit. It seems to me that Governor Sheffield and the Legislature may adopt a method that best comports with the intent of the law and with logic, even if the method produces a different number from that used in FY 1984.

Appropriation Limit Options

From the foregoing discussion it should be clear that there are theoretically a large number of possible limit calculations. This section presents several options that suggest the range of possible outcomes. It also includes the recommended calculation, which is Option 4. In accord with our earlier recommendation regarding the period of adjustment to the base, all of the options shown here assume that the adjustment for population and inflation are made for three years rather than four. A fourth year of adjustments would add approximately $250 million to the numbers shown. The options are:

Option 1 = ADOL Population and Alaska CPI-U
Option 2 = ADOL Population and Government Services
Option 3 = BLS Population and Alaska CPI-U
Option 4 = BLS Population and Government Services
Option 5 = Census* Population and Alaska CPI-U
Option 6 = Census* Population and Government Services

*1970-1980 compound average

The appropriation limits that result from these options are:

FY	Option 1	Option 2	Option 3	Option 4	Option 5	Option 6
84	3.041	3.199	3.062	3.220	2.871	3.020
85	3.356	3.618	3.390	3.654	3.079	3.319
86	3.704	4.092	3.753	4.147	3.301	3.648
87	4.087	4.630	4.156	4.707	3.539	4.010
88	4.509	5.238	4.602	5.343	3.795	4.406

We have analyzed these spending limits in terms of maximum allowable appropriations and available revenue, and the results of that analysis are available. However, the focus of this memo has been the methodological issues surrounding the calculation of a limit.

GSH/mm

FOOTNOTES

1. This change can be expressed, and calculated, in three ways: as one-tenth the decennial change; as the continuous annual change; and as the compound annual change. The latter (3.126%) is the best measure for the purposes at hand.

   One-tenth the decennial change: $\left(\frac{419,700}{308,500} - 1\right) / 10 = 3.6045$

   Continuous annual change: $P_{1980} = P_{1970}E^{rt} = 3.0782$

   Annual compound change: $P_{1980} = (1+r)^{t}P_{1970} = 3.1260$

2. The change involved a measure of shelter from the cost of mortgages and the selling price of homes to the cost of rental units.

3. In Anchorage, the BLS began for the first time in 1983 to measure Anchorage costs. Prior to this, they simply used the costs of housing in west coast cities of a size similar to Anchorage. In describing the effect of the new measure, the Alaska Department of Labor has written:

   > From January to July of this year the Anchorage Consumer Price Index registered increases below historical levels. During the last five months, the index's over-the-year change did not exceed 1% and, in fact, fell in May. This decline in inflation is misleading because of methodology changes causing inconsistency between 1983 and 1982 data. Because of this the BLS has recommended that in the short term, users of the CPI use either 1) a 12 month annual average, or 2) the U.S. rate; or 3) compare 1983 data only. Looking at the Anchorage CPI this way the index has risen 3.2% from January through July. If the CPI continues this same trend it will increase between 5.0% and 6.0% for the 1983 average.

   (Alaska Economic Trends, Alaska Department of Labor, November, 1983, p. 13.)

Why was the change made? The Commissioner of the U.S. Department of Labor provides the following reasons. First, the former method combined investment and consumption effects upon price. The new approach is an attempt to measure only the changing cost of consumption. Second, the old method was based upon the assumption of a fixed rate mortgage. Recently, a variety of alternatives to a fixed rate mortgage have become

available. The former method did not take them into account. Third, the appearance of seller financing distorted the measure since there is no accurate way to detect it. Finally, the Federal Government will be using the index, starting in 1985, to index tax brackets. Thus, the most accurate index possible is desired.

SUBJECT: Spending Limit/HB 524

Adoption of HB 524 will result in the following spending limits:

Fiscal Year	Limit [a]	=	Prior Limit	X	(R1 [b]	+	R2 [c])
82	$2,500						
83	2,765	=	$2,500	X	(1 + .02837	+	.07750)
84	3,040	=	2,765	X	(1 + .02837	+	.07111)
85	3,151	=	3,040	X	(1 + .02837	+	.00835)

[a] Rounded to nearest million.
[b] Rate of population change.
[c] Rate of inflation.

Estimation of rate of population change (lines 20 - 23).

.02837 = 1/10 X ln (401,851/302,583)

Estimation of rate of inflation (lines 15 - 19)

Month	Year	CPI-U	Rate of Change
July	80	228.4	-
July	81	246.1	(246.1/228.4) - 1 = .07750
July	82	263.6	(263.6/246.1) - 1 = .07111
July	83	265.8	(265.8/263.6) - 1 = .00835

TO: Rep. Al Adams, Chairman
House Finance Committee

FROM: Mike Creany, Director
Legislative Finance Division

SUBJ: Spending Limit

Legislative Finance Division (P.S. Dhillon) has reviewed your draft legislation for the spending limit.

This is to confirm that it produces precisely the same spending limit as SB 326 (Ferguson): $3151.4 for FY 85.*

The only difference between the two versions is that your's removes unnecessary language in Section 1(2).

---

*

	Limit ($ Millions)
FY 82	$2500.0
FY 83	$2764.7 = $2500.0 X (1 + (0.0284 + 0.0775))
FY 84	$3039.8 = $2764.7 X (1 + (0.0284 + 0.0711))
FY 85	$3151.4 = $3039.8 X (1 + (0.0284 + 0.0083))

SS SB 326 -- Appropriations Limit

	Limit ($ millions)		Population Rate of Change	Anchorage CPI-U Rate of Change
FY 82	$2500.0			
FY 83	$2764.7 = $2500.0	X (1 + (0.0284	+	0.0775))
FY 84	$3039.8 = $2764.7	X (1 + (0.0284	+	0.0711))
FY 85	$3151.4 + $3039.8	X (1 + (0.0284	+	0.0083))

Note 1. The population adjustment used above is the continuously compounded annual rate of change between the 1970 and 1980 (April 1) estimates of population established by the U.S. Census Bureau in their decennial censuses. It is computed as follows:

$$\text{Population}_{1980} = \text{Population}_{1970} \cdot e^{rt}$$

or $$\text{Rate of Change} = r = \frac{\ln(\text{population } 1980/\text{population } 1970)}{t}$$

or $$\text{Rate of Change} = .0284 = \frac{\ln(401851/302583)}{10}$$

Note 2. The rate of change in the Anchorage CPI-U is computed as the July to July change in the index as published by the U. S. Department of Labor, Bureau of Labor Statistics.

ANALYSIS

A. Assumptions:

Based on FY 1982 Juvenile arrest data and the Department of Law's estimate that 45-50 juveniles will be waived into Adult Court, it is estimated that 72.75 additional beds will be needed by the Adult Corrections Agency,. A detail of this estimate is given in Attachment 1.

B. Program Summary:

1. In FY85, funds would be required to begin planning and design for construction of medium security beds. Because of the serious nature of the offenses, however, it is assumed that a significant number of the offenders would spend some time in a maximum security setting. Capital costs for medium security beds are estimated to be $146,000 per bed.

72.75 beds @ $146,000 = $10,621,500

2. Full operating costs would not occur until FY87. It is estimated that twenty-nine (29) positions will be required to provide security and support for these beds: One (1) Correctional Officer III, twenty-six (26) Correctional Officers II and two (2) Probation Officers II. Costs for these positions will occur in FY87, the anticipated opening date for the new beds. Estimated costs are as follows:

100	Personal Services	$1,520,100
200	Travel	7,100
300	Contractual Services	218,800
400	Commodities	223,400
500	Equipment	6,400
700	Inmate Gratuities	36,000
	Total	$2,011,800

Operating cost for FY85 and FY86 are for inmate cost of food, clothing, medical, etc., for the estimated persons coming into existing facilities before the new beds can be completed.

Inflation of 6% for all expenditure object groups was assumed for subsequent fiscal years.

Attachment 1

Estimated Annual Frequency of Convictions	Presumptive Sentence	Estimated Average Sentence for 16 and 17 Year Olds Convicted as Adults	Actual Time to Serve With Credit for Good Time
*Unclassified felony (automatic waiver)			
2 murder I	20 years	15 years	11.25 x 2 = 22.5 years
1 murder II	5 years	4 years	3.0 x 1 = 3 years
1 sexual assault 1st (with firearm)	10 years	7 years	5.25 x 1 = 5.25 years
5 sexual assault 1st (without firearm)	8 years	5 years	3.75 x 3 = 11.25 2 probation
3 Class A felonies (with firearm)	7 years	6 years	4.5 x 2 = 9 years 1 probation
5 Class A felonies (without firearm)	5 years	4 years	3 x 4 = 12 years 1 probation
	Non-presumptive Range		
6 Class B felonies	0-10 years	3 years	2.25 x 4 = 9 2 probation
2 Class C felonies	0-5 years	1 year	.75 x 1 = .75 years 1 probation
			TOTAL: 72.75 person-years

Re: SCS CSHB 109(HESS) am S - waiver of children's proceedings for felonies
Our file: 388-108-83

Dear Governor Sheffield:

As Emil Notti requested on your behalf, we have reviewed SCS CSHB 109(HESS) am S, which is commonly referred to as a "juvenile waiver" bill. The bill provides that a person 16 or 17 years of age who is charged with an unclassified felony must be tried as an adult. It also alters the legal standard for deciding whether a juvenile offender charged with any other felony offense should be handled in juvenile court or whether the court should "waive" its juvenile jurisdiction in favor of handling the case in adult court.

The criminal division of the Department of Law has been seeking changes in the existing juvenile waiver law for several years, and testified in favor of HB 109 throughout the committee process during this last legislative session. However, last minute Senate amendments have so seriously flawed the bill that we are compelled to advise you to veto it.

To understand the problems in the bill which require a veto, it is necessary to briefly review its legislative history. Early this legislative session, HB 109 and SB 127 were introduced to amend existing laws relating to juvenile waiver. Based on several years of first-hand experience by state prosecutors, the criminal division of the Department of Law suggested numerous changes in both bills during testimony before legislative committees. Most of the suggestions were adopted in committee substitutes for both HB 109 and SB 127.

By late April, the portions of HB 109 and SB 127 which dealt with juvenile waiver were virtually identical. Both contained provisions requiring an "automatic" waiver of juveniles

aged 16 or 17 who were charged with serious felony offenses. Both also altered the legal standard for waiver to make it easier for the prosecution to obtain a discretionary judicial waiver of offenders who were not automatically waived.

The major difference in the two bills was that CSHB 109(Jud) automatically waived juveniles charged with both unclassified 1/ and class A felonies, 2/ while CSSB 127(Jud) automatically waived only those charged with unclassified felonies. The House bill also provided that a juvenile offender tried in adult court would be sentenced as an adult, even if convicted of an offense less serious than the one originally charged. The Senate version allowed a person convicted of a class A, or less serious, offense to petition the court to return him to juvenile court for disposition rather than to be sentenced as an adult.

CSHB 109(Jud) was passed by the House on April 29, 1983. On reconsideration the next day, the bill was amended to come closer to the Senate version and provided that a juvenile offender convicted in adult court of only a lesser included offense, other than an unclassified or class A felony, must be "sentenced" (the proper term would be "disposed of") as a delinquent minor in juvenile court. H. Jour. at 1108-1110 and 1133-1135.

On June 25, one day before adjournment, the Senate Health, Education, and Social Services Committee recommended a committee substitute for CSHB 109(Jud) am which radically altered crucial portions of the bill, and which disregarded comparable provisions in CSSB 127(Jud). The Senate HESS committee substitute provided automatic waiver only for those persons aged 16 or 17 who were charged with unclassified offenses, and required a return to juvenile court for "sentencing" of an offender who was ultimately convicted of an offense less serious than an unclassified felony. The Senate HESS committee substitute also required a discretionarily waived juvenile offender who was convicted in adult court and sentenced to a period of incarceration to be confined to a juvenile facility until age 18. Other language in the bill continued to require that

---

1/ Unclassified felonies include murder in the first degree, murder in the second degree, kidnapping, sexual assault in the first degree and misconduct involving controlled substances in the first degree.

2/ Class A felonies include manslaughter, assault in the first degree, robbery in the first degree, arson in the first degree, escape in the first degree, solicitation (to commit an unclassified offense), and misconduct involving controlled substances in the second degree.

juvenile offenders held in custody following either an automatic or discretionary waiver be transferred to adult facilities upon indictment.

The HESS committee substitute was the result of a thirteen minute committee meeting held on June 24, 1983. No testimony was taken during the hearing. Since the Department of Law was not notified of the meeting, no representative from the department was present. Referral of the HESS committee version of the bill to the Senate Judiciary and Finance committees was waived, and the bill was considered by the Senate on June 26, the final day of the session. Section 7 of the bill, dealing with confinement of minors, was amended on the floor to provide that juvenile offenders automatically waived to adult court must be held in juvenile facilities until convicted. The section dealing with discretionarily waived offenders was not amended. SCS CSHB 109(HESS), as amended, was then adopted. S. Jour. 1555-57, 1578-79. The House concurred in these amendments on the same day. H. Jour. at 2106-2109.

The Senate HESS committee substitute and the amendments made on the floor so altered the original intent and procedures included in the bill that its enactment into law would weaken rather than improve the laws relating to juvenile waiver. In addition, in its present form, SCS CSHB 109(HESS) am S contains insurmountable equal protection and due process problems and procedures that do not make sense.

The most serious problem in the bill is a procedural scheme which denies equal treatment under the law to persons who have been convicted of identical offenses. As previously noted, the bill automatically waives juvenile offenders charged with unclassified felonies to adult court. Under the bill, if an offender charged with an unclassified felony is convicted of a lesser included offense, such as a class A felony, he must be transferred back to juvenile court for "sentencing" (disposition). However, a juvenile charged with a class A felony who is discretionarily waived after a hearing, and is convicted in adult court of the class A felony, must be sentenced as an adult. There is no provision authorizing the court to transfer the discretionarily waived person back to juvenile court, and there is no provision allowing the adult court to retain jurisdiction over an automatically waived offender convicted of an A felony, regardless of the nature of the crime or the lack of rehabilitative potential of the offender.

What this means is, for example, that an offender who is waived into adult court because he is charged with first degree murder, but who is ultimately convicted for the lesser offense of manslaughter, a class A felony, must be treated as a juvenile. He will spend two or at most three years in a juvenile facility and then must be released. But an offender who was originally charged with manslaughter, because the facts of the killing did not justify a murder charge, and who was

waived into adult court and convicted, will be sentenced as an adult, and faces up to 20 years in prison. Thus, two offenders, both convicted of manslaughter, will receive vastly unequal treatment. One who was automatically waived because there were good reasons to believe that a more serious offense was committed, will go back to juvenile court for disposition. The other who was discretionarily waived for a less serious offense will be treated and sentenced as an adult. This result cannot be justified on any legal, logical, or public policy grounds.

A second major problem with the bill is found in section 7, which now provides that a juvenile offender who is discretionarily waived to adult court must be transferred from a juvenile facility to an adult jail at the time of the waiver until after trial, but requires that the offender then be returned to a juvenile facility upon conviction to serve his sentence until he reaches the age of 18.

The confinement of persons who have been tried, convicted, and sentenced as adults with juvenile offenders is directly contrary to one of the primary purposes of the bill, which was to remove hardened or untreatable juveniles from treatment programs designed for younger, less sophisticated, children. Older offenders convicted of murder, kidnapping or forcible rape should not be confined with youngsters who have committed minor property offenses or are having disciplinary problems.

At the recommendation of the Department of Health and Social Services, divisions of corrections and family and youth services, both bills originally provided that a juvenile offender would be held in a juvenile facility until waived and indicted for a felony offense. At that point the person would be transferred to an adult facility, where he would await trial and serve his sentence if convicted. This procedure is the one followed under present law and makes good policy sense. Shuffling a young defendant back and forth between juvenile and adult facilities makes no sense at all. Additionally, now that the division of corrections is a state agency independent of the Department of Health and Social Services, the transfer of an offender from a juvenile to an adult facility would require a transfer from the custody of one department to another, and then back again.

Another legal problem arises because the Senate changed the House version of the bill to provide that the only juveniles to be automatically waived were those convicted of unclassified felonies. The Senate did so, however, without changing the title, which describes: "An act relating to persons 16 or 17 years of age who are charged with unclassified or class A felonies; . . . ." As you know, Rule 41(b) of the Uniform Rules of the Alaska State Legislature prohibits a change in the title of a bill which originated in the other house. In

order to get around this rule, the Senate added subsection AS 12.05.020(b), which states that a person 16 or 17 years of age who is charged with a class A felony is subject to juvenile court jurisdiction. This was done so that the bill would "relate to" persons charged with class A felonies, as the title requires.

However, the addition of the language now contained in subsection AS 12.05.020(b) means that a juvenile court adjudication of delinquency for a class A felony would constitute a "prior conviction" for presumptive sentencing purposes on subsequent adult offenses. See, section AS 12.55.145. This result was probably not intended and the policy implications not considered. Juvenile court adjudications have never been treated as "prior convictions," and that treatment is probably inconsistent with the whole concept of the juvenile justice system.

Enactment of this bill into law would actually leave prosecutors less able to effectively prosecute juvenile offenders who have committed serious felony offenses. Those indicted for the most serious offenses such as murder, sexual assault in the first degree (forcible rape), or kidnapping, would be automatically returned to juvenile court for disposition if convicted of a lesser, but still serious, offense. Currently, it is difficult to obtain waiver of a juvenile offender. But once waiver is obtained under the present law, the offender stays in adult court, even if convicted of a lesser offense such as manslaughter or attempted sexual assault. Under this bill, if a prosecutor believes that a 17 year old offender has committed murder, he must choose between charging the offender with murder, and risking the person's automatic return to juvenile court if he is convicted for manslaughter, or charging him only with manslaughter so that he may be sentenced in adult court if convicted. Both of these alternatives are unacceptable.

Because the bill denies equal treatment under the law to persons convicted of identical offenses, because the provisions regulating the place of confinement of juvenile offenders are illogical, and because the bill would render prosecutors less able to effectively deal with 16 and 17 year olds charged with the most serious and violent felonies, CSC CSHB 109(HESS) am S should be vetoed. We have attached a draft veto message for your consideration.

Sincerely,

Norman C. Gorsuch
Attorney General

BILL SHEFFIELD
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

July 27, 1983

The Honorable Joe L. Hayes
Speaker of the House
Alaska State Legislature
Pouch V
Juneau, AK 99811

Re: SCS CSHB 109(HESS) am S -- Relating to persons 16 or 17 years of age who are charged with unclassified or class A felonies; and amending the children's proceedings waiver provisions.

Dear Mr. Speaker:

Under the authority granted by art. II, sec. 15, of the Alaska Constitution, I have vetoed Senate Committee Substitute for Committee Substitute for House Bill No. 109 (HESS) am S, commonly referred to as a "juvenile waiver" bill. I have vetoed this bill because it weakens rather than improves existing laws relating to juvenile waiver. If this bill were enacted into law it would leave prosecutors less able to effectively prosecute juvenile offenders who have committed serious felony offenses.

The bill contains insurmountable equal protection and due process problems. It denies equal treatment under the law to persons who have been convicted of identical offenses. The bill automatically waives juvenile offenders charged with unclassified felonies to adult court. If an offender charged with an unclassified felony were convicted of a lesser included offense, such as a class A felony, he would be transferred back to juvenile court for "sentencing" (disposition). However, a juvenile charged with a class A felony who was discretionarily waived after a hearing, and was convicted in adult court of the class A felony, would be sentenced as an adult.

If the bill became law, it would mean that an offender who was waived into adult court because he was charged with first degree murder, but who was ultimately convicted for the lesser offense of manslaughter, a class A felony, would be treated as a juvenile. He would "serve" two or at most three years in a juvenile facility and then must be released. But an offender who was originally charged with manslaughter, because the facts of the killing did not justify a murder charge, and who was waived into adult court and convicted, would be sentenced as an adult, and faces up to 20 years in prison. Thus, two offenders, both convicted of manslaughter, would receive vastly unequal treatment. One who was automatically waived because there were good reasons to believe that a more serious offense was committed would go back to juvenile court for disposition. The other who was discretionarily waived for a less serious offense would be treated and sentenced as an adult.

If this bill were to become law, a prosecutor who believes that a 17 year old offender has committed murder must choose between charging the offender with murder, and risking the person's automatic return to juvenile court if he is convicted for manslaughter, or charging him only with manslaughter so that he may be sentenced in adult court if convicted. A prosecutor should not have to make such a choice. The jury should be the one to decide of which crime, if any, a defendant is guilty.

The bill also provides that a juvenile offender who is discretionarily waived to adult court must be transferred from a juvenile facility to an adult jail at the time of the waiver until after trial, but requires that the offender then be returned to a juvenile facility upon conviction to serve his sentence until he reached the age of 18. This shuffling back and forth between juvenile and adult facilities makes no sense at all.

Persons who have been tried, convicted, and sentenced as adults should not be confined with juvenile offenders. Hardened or untreatable juveniles do not belong in treatment programs designed for younger, less sophisticated, children. If this bill were to become law, older offenders convicted of murder, kidnapping or forceable rape would be confined with youngsters who have committed minor property offenses or are having disciplinary problems. I cannot accept that result.

The bill presents other legal and public policy problems, but the two factors discussed above are themselves serious enough to require veto of the bill. As you are aware, my Administration worked closely with the Legislature on Senate Bill No. 127, which would have rationally strengthened existing law and would have enabled the courts to deal more effectively with juvenile offenders charged with serious, violent felonies. This bill, unfortunately, reaches an exactly opposite result, and that is why I have vetoed it.

Sincerely,

Bill Sheffield
Governor

Fiscal Note
Analysis
HB 530

February 6, 1984

This bill provides that persons 16 or 17 years of age who are charged with unclassified felonies and Class A felonies will be prosecuted as adults. The bill makes the waiver of these persons from juveniles to adult court automatic; there is no need for a hearing in juvenile court prior to the waiver.

Juveniles of any age charged with felony offenses below Class A may be waived to adult court upon motion by the prosecutor and after a hearing in juvenile court.

It is estimated that approximately 45-50 persons a year will be waived into adult court under this bill. This figure includes those persons who are now waived, in the judge's discretion, under existing standards. It is estimated that 20-25 additional felony prosecutions will be required to implement this bill, necessitating the hire of one full-time prosecutor.

FISCAL ANALYSIS - HB 530

The bill will require the addition of one full-time Attorney IV prosecutor in the Third Judicial District in Anchorage. Costs beyond FY 85 include a 6% annual inflation factor.

JUSTIFICATION

This full-time Attorney position will be needed to handle the estimated 20 to 25 additional felony cases that will occur as a result of the automatic hearing waivers from juvenile to adult court if HB 530 becomes law. The Attorney IV, or full working level of Attorney will be required because those cases to be tried will be either Class A or unclassified felonies, which are the most serious criminal offenses.

POSITION PAPER/Department of Health & Social Services

POSITION PAPER
HOUSE BILL 530

"An Act relating to persons 16 or 17 years of age who are charged with unclassified or class A felonies; and amending the children's proceedings waiver provisions."

This Bill would make several changes in the manner of dealing with juveniles accused of felony offenses. It would:

1) Require prosecution within the adult criminal system of 16 and 17 year old juveniles accused of unclassified or class A felonies;
2) Change the standard for judicially waiving juveniles who would not be subject to automatic exclusion from juvenile jurisdiction, and define factors which the court must consider in making waiver decisions; and
3) Define sentencing and confinement procedures relating to juveniles who are waived to adult jurisdiction.

PROBLEMS ADDRESSED BY THE BILL

Recent highly publicized and unpopular court decisions regarding specific juveniles who have committed violent crimes but were not waived to adult jurisdiction have led to a misperception on the part of some segments of the public. Many have concluded from these isolated cases that juvenile crime, particularly violent juvenile crime, is widespread and increasing and that the existing waiver mechanism and the juvenile justice system as a whole are ineffective. The further conclusion has been reached that wholesale changes are necessary. The facts, however, do not substantiate these conclusions.

Juvenile crime, as measured by arrests, decreased by 15.8% during the most recent period for which data is available, 1982. This is below even 1979 in absolute numbers and represents a significant decrease in the rate of arrest since the juvenile population has risen by nearly twenty thousand youths or 15%. There has, unfortunately, been an increase in the numbers of juveniles arrested for the most highly publicized violent crime - murder. However, these arrests comprise only slightly more than one tenth of one percent of the total number of juvenile arrests, and are not indicative of the extent and nature of juvenile crime. They nonetheless receive the most media attention and guide public opinion.

In general juvenile crime may be characterized as property crime - simple thefts account for nearly one third or 28% of juvenile arrests. Liquor law violations result in 26% of all juvenile arrests. Although arrest data is the most comprehensive data available to represent the extent of crime, limitations of these data and some general research findings about juvenile crime must be kept in mind when drawing conclusions from arrest data. First, arrest data do <u>not</u> accurately represent the number of crimes committed since more than one person may

POSITION PAPER/Department of Health & Social Services

be arrested for a single crime. For instance, if three persons burglarize a store and are arrested, the arrest data seem to indicate that three separate burglaries occurred although only one crime was committed. Second, juveniles tend to commit crimes in groups while adults tend to commit crimes alone. Thus, juvenile arrests seem to indicate a disproportionate number of crimes when in fact they represent a smaller number of crimes but a disproportionate number of participants. Last, juveniles tend to be arrested more frequently than are adults. Juveniles are less sophisticated and are more likely to be caught committing crimes and there is a greater tendency of law enforcement personnel to arrest juveniles.

The public misperception in Alaska follows a national trend which has been reflected in legislation in a number of states to lower the age of criminal responsibility and/or enact broad waiver laws which bring large numbers of juveniles under the jurisdiction of the adult criminal system. These approaches have begun to be discredited recently as there has been an increasing understanding of the fact that those juveniles who have committed violent crimes or have repeatedly committed serious offenses are extremely small in number. National studies have concluded that the most cost effective and efficient approach is to carefully and selectively identify those juveniles and treat them differentially from the vast majority of youth.

The existing judicial waiver mechanism in Alaska has been more thoughtfully criticized, primarily by prosecutors, as one which makes waiver of juveniles to the adult system difficult to achieve. Although this criticism is not entirely justified, the existing mechanism does have a standard of proof which is inadequately defined and therefore open to broad interpretation. In addition, the court is not required to consider specifically defined factors in making waiver determinations. Thus, little guidance is given to the court on the basis for making waiver decisions. Despite the shortcomings of the existing waiver mechanism, fourteen of fifteen waivers attempted from 1979 through 1982 were granted. Waived juveniles were charged with offenses ranging from Murder (3), to Sexual Assault (3), to Burglary (5) to Criminal Mischief (1).

AUTOMATIC WAIVER

House Bill 530 would institute an automatic or legislative waiver of certain juveniles based on age and the offense alleged. Under the provisions of the Bill, the only method for dealing with juveniles 16 and 17 years of age who are accused of unclassified or class A felonies would be through criminal proceedings under the adult jurisdiction of the Superior Court. Any such youth suspected by police of having committed an unclassified or class A felony would be subject to arrest, prosecution, and pretrial confinement in precisely the same way as would an adult.

Automatic or legislative waiver mechanisms can be effective in identifying youths who cannot be adequately dealt with in the juvenile justice system. However, because such mechanisms as those proposed in HB 530 are essentially unreviewable, irreversible, and carry consequences of extreme significance to both the individual youth and society, they should be very narrowly applied.

The Department of Health and Social Services opposes the inclusion of class A felony offenses within the category requiring automatic waiver. Inclusion of these offenses makes the category of automatically waivable offenses too broad and would require the waiver of a number of juveniles who could be effectively controlled and rehabilitated within the juvenile justice system. Narrowing the category to include only unclassified felonies is preferable for several reasons: 1) it would be more economical - the fiscal impact of the bill would be reduced; 2) though serious in nature, class A felony offenses also include offenses which differ significantly from unclassified offenses in the degree of violence or harm done to victims; and 3) the strengthened judicial waiver mechanism proposed in HB 530 would allow for adequate protection of the public by selectively identifying those juveniles accused of class A felonies who should be dealt with in the adult criminal system. The strengthened judicial waiver would allow for differentiation among juveniles based on the actual seriousness of the offense and prior behavior of the youth, rather than relying solely on the classification of offenses and age of the juvenile. Those juveniles who do not present a danger to the public could be retained within the juvenile justice system.

JUDICIAL WAIVER

Change in Standard

In addition to instituting an automatic waiver, HB 530 would significantly alter the existing judicial waiver mechanism. The existing judicial waiver mechanism would be strengthened by a change in the standard necessary for making waiver determinations under the provisions of HB 530. The court would be required to find only that there is no substantial likelihood that a juvenile could be successfully rehabilitated under children's court proceedings. The standard of proof required would be a preponderance of the evidence.

Factors Establishing Likelihood of Rehabilitation

The Bill also establishes nine (9) specific factors which must be considered by the court in determining the probability of a juvenile's success or rehabilitation under juvenile court jurisdiction. Although these factors relate in large part to the specific offense alleged and the circumstances surrounding the offense, they also include factors relating to the individual juvenile including age, maturity, the outcome of previous attempts to rehabilitate the juvenile, the adequacy of time

POSITION PAPER/Department of Health & Social Services

available to the children's court to allow for rehabilitation and the resources for treatment of a juvenile under juvenile court jurisdiction.

The Department recommends that other factors which have a significant bearing on the likelihood of a juvenile's rehabilitation be considered as well. These are:

1) the physical and mental health of the juvenile;
2) his or her intellectual capacity;
3) the alleged role of the juvenile in the offense; and
4) the attitudes exhibited and expressed by the juvenile toward authorities, society, the victim or victims if any, and him or herself.

Failure to require consideration of such factors as these would allow decisions about the likelihood of rehabilitation of juveniles to be made without consideration of some of the most important factors contributing to the success or failure of rehabilitative efforts.

SENTENCING OF WAIVED JUVENILES

Referral For Juvenile Disposition

Under the provisions of HB 530, 16 and 17 year old juveniles automatically waived to adult jurisdiction would be sentenced within the adult system unless they were convicted of a lesser included offense that was not an automatically waivable offense. In such cases the juveniles would be referred to juvenile court jurisdiction for disposition. This provision is intended to guard against error and preclude discriminatory or punitive overcharging by prosecutors in order to make certain juveniles subject to the more stringent sanctions of the adult system.

An alternative and preferable approach to providing these safeguards would be to allow a discretionary "transfer back" to juvenile court jurisdiction based on a hearing applying the same standard of "likelihood of successful rehabilitation" used in making judicial waiver decisions. In this way safeguards would be maintained while older juveniles convicted of serious, though not automatically waivable offenses would be held to the same standard for waiver to adult jurisdiction that would have been applicable had an automatically waivable offense been charged. Unless the "transfer back" provision is discretionary, older juveniles accused of automatically waivable offenses would be immune from waiver to adult jurisdiction if convicted of lesser though still serious offenses. This would give these persons special protections not afforded to other youth.

Exemption from Mandatory Sentences

Although juveniles waived to adult criminal jurisdiction would be sentenced as adult offenders and confined within the adult correctional system, under the provisions of HB 530 they would not be subject to mandatory minimum or presumptive sentences for a first felony conviction. This allows the Bill not only to achieve its purpose in holding older juvenile offenders more accountable for their offenses but also affords adequate discretion to the court in fashioning appropriate sentences for these juveniles. Judicial discretion is needed to allow for the significant differences in levels of maturity and sophistication among waived juveniles and between the juveniles and adult offenders.

Since exclusion from juvenile jurisdiction under the automatic waiver provision is based solely on the offense committed and the age of the juvenile, judicial discretion in sentencing would be appropriate. Studies show that all serious offenses are not the culmination of lengthy delinquent careers and that disparity in the sophistication and history of delinquent behavior among waived juveniles must be expected. Sentencing discretion such as is provided under the provisions of HB 530 is necessary to justly address this disparity. It would also allow for consideration of the differences in the specifics and seriousness of the offenses committed by juveniles.

CONFINEMENT OF WAIVED JUVENILES

Under this Bill, all juveniles subject to criminal jurisdiction under either the automatic or judicial waiver provisions would, if confined to custody, be confined in adult correctional facilities. These provisions are straightforward but unfortunately do not provide sufficient procedural protections. Since automatically waived juveniles would be housed in adult facilities from the time of arrest, the decision about where these juveniles should be housed would, then, essentially be made at the discretion of the arresting officer based on the crime the officer chose to allege. Youths would be subject to the unreviewed judgment of police officers and could be housed in adult facilities based on police officer error, punitive overcharging, or discrimination in alleging a more serious charge than can be proven from the facts. It is likely that errors would occur, juveniles arrested and booked into adult facilities and that upon review by the District Attorney or Court it may be found that the offense alleged by the police officer at the time of booking was not supported by the facts. Thus, a juvenile would have been unjustly and unjustifiably placed in an adult facility.

These problems could be avoided and a more equitable and certain system provided by requiring that juveniles be housed in juvenile facilities until procedural reviews had occurred. Such reviews would include a grand jury or preliminary hearing before the court from which an indictment or finding of probable cause had been found to believe that the juvenile had committed an automatically waivable offense or a

POSITION PAPER/Department of Health & Social Services

judicial waiver. This would avoid not only inequities arising from error, but also the possibility that juveniles were charged with waivable offenses simply to allow their incarceration in an adult facility. It would also avoid a variety of difficulties in the already overburdened adult correctional system.

EFFECTS OF THE BILL

The effect of HB 530 would be to increase the number of juveniles subject to prosecution under the adult criminal statutes and increase the liability of these juveniles to sanctions more severe both in nature and duration than those to which they would have been liable under the juvenile code. With the suggested narrowing of the automatic waiver to include only those juveniles accused of unclassified felonies, the Bill would appropriately focus the liability of adult prosecution on older violent juvenile offenders and other juveniles who had committed particularly heinous crimes or who had records of repetitive delinquent behavior.

DEPARTMENT POSITION

The Department strongly supports the concepts embodied in HB 530. Though few in number, older juveniles accused of violent crimes require sanctions qualitatively and quantitatively different from those available under the jurisdiction of the juvenile court.

With the suggested changes - limitation of automatic waiver to unclassified felonies, consideration of additional factors in determining likelihood of successful rehabilitation within the juvenile justice system, confinement of juveniles in juvenile facilities until judicial procedural reviews had occurred, and discretionary rather than mandatory "transfer back" - HB 530 would adequately address the problem of dealing with older, violent or repetitive juvenile offenders by holding them accountable in the same manner as adults. This would focus directly on the highly publicized problem which is the cause of much public misperception of juvenile crime and juvenile offenders. It would also allow the juvenile justice system to focus on those youths for whom the likelihood of rehabilitation is much greater.

POSITION PAPER/Department of Health & Social Services

The changes suggested are merely refinements which provide necessary procedural protections to guard against abuses or human error and to appropriately narrow the focus and reduce the fiscal and social impacts.

Re: House Bill No. 530
Waiver of Juvenile Court Jurisdiction

Dear Representative Bussell,

Alaska Youth and Parent Foundation (commonly known as Alaska Youth Advocates, Inc.) is opposed to the proposed amendments to Alaska Statutes 12.05.020, 12.55, 12.80, and 47.10.060 waiving juvenile court jurisdiction. We propose a case-by-case determination regardless of the minor's age as one viable alternative.

There is not time or space to cite the long, costly, involved and ultimately useless battle fought over juvenile waiver legislation in other jurisdictions.

Legislative enactments similar to proposed House Bill No. 530:

1) have forced taxpayers to spend an ever increasing amount of their tax dollars on maximum security prisons,
2) have allowed minors to be warehoused for many years past their majority,
3) have not solved the problem of juvenile street crimes and,
4) have not solved the problem of increased juvenile participation in serious felonies.

Waiver bills pave the way for minors of any age to be confined as adults without benefit of treatment, rehabilitation, or consideration of their special, (yes special) status and in violation of their procedural due process rights.

In formulating removal procedures as part of the overall plan for treatment of juvenile offenders/delinquents, it must be presumed that the legislature had studied and considered potential confusion inherent in this bifurcated system as well as any threats to an accused juvenile's procedural due process rights created thereby. Thus it can only be concluded that the legislative intent was to incorporate certain well-defined safeguards into the removal process so that it might jealously protect those constitutional rights readily recognized, and nothing less than strict adherence to these statutory procedures would violate the legislature's purpose and intent. These constitutional safeguards are conspiciously missing.

Sec 47.10.060 (2)(b) fails to mention other factors the juvenile judge should properly consider such as:

1) the availability of an appropriate environment,
2) the possibility of rehabilitation,
3) the family relationship and control,
4) the history of abuse (sexual and physical),
5) the persistency and seriousness of past adjudicated criminal offenses,
6) the safety of the community and,
7) the best interests of the child.

The public, and certainly the child, will be placed in greater jeopardy by warehousing these youth for a large portion of thir adult lives. We need only look to New York, Illinois, and California, to name a few, to realize violent juvenile crime is on the increase in spite of similar legislative waiver provisions. We will be placing troubled youth in a job training environment, learning to become vicious, dangerous adult members of society.

Sincerely,

Louis C. Jacobs
Executive Director

FAMILY CONNECTION

A counseling agency for youth and their families

204 E. 5th Ave., Suite 215, Anchorage, Alaska 99501 (907) 279-0551

JAN 19 1983

January 17, 1983

Representative Joe L. Hayes
Pouch V
Juneau, Alaska 99811

Dear Mr. Hayes:

As staff members of Family Connection, Inc., a non-profit family counseling agency, we would like to share and articulate some serious, but correctable difficulties we have observed within the State's juvenile justice system.

Family Connection has provided Family Therapy services to a variety of youth institutionalized at McLaughlin Youth Center for the past three years. We are contracted to join the treatment team for a particular youth by either McLaughlin staff or Juvenile Probation staff. We have worked primarily with youth and their families prior to release from McLaughlin. Our goal has been to facilitate a smooth transition for the youth back into the family and community and to reduce the rate of recidivism. We specifically look at how the family functions and the interactional process that produces delinquent behavior.

We have been impressed with the expertise and professionalism of both McLaughlin staff and Juvenile Probation staff. They work with dedication to treat, rehabilitate and return youth to the community. However, present legalities place great limitations on the expertise of these professionals.

We support the Waiver of Jurisdiction Statute, Section 47.10.060 of the Alaska Statutes. The waiver allows for a procedure that determines if a minor is amenable to treatment, and if so, the minor is sent to McLaughlin Youth Center for rehabilitation, rather than to the Adult Justice System. We believe that if there are indications that a youth is amenable to treatment, society is better served by providing treatment services along with punishment. Unfortunately, our experience has shown us that the waiver statute has been abused in two ways.

First, the waiver is not used enough. Clearly, there have been youth who should have been waived to adult status for committing atrocious, violent crimes. This sentiment has been expressed by many in the past year. Why isn't the waiver being used effectively? How could this process be changed to facilitate more frequent use?

Secondly, the present statute contains serious limitations that has made the members of the juvenile justice system appear ineffective. As an example, if a youth is amenable to treatment but after an intensive course of treament the youth is still unchanged and dangerous, according to State law the youth must still be released. There is no other recourse. This has been a difficult moral and ethical dilemma for professionals within the Juvenile Justice System. How can we ethically release a youth into the community knowing the youth is a danger to society.

Another problem involves the length of institutionalization. A youth cannot be held longer than two years or until their 19th birthday. We have observed a youth who committed a violent murder receive a sentence of less than one year. In this case the youth simply refused to participate in treatment. Therefore, he is not adequately treated or punished. Again, treatment staff are put in a bind by the court as they are given an impossible task to perform with no recourse to protect either the treatment process or the community.

The State of Alaska has done well in providing rehabilitation for youth, while at the same time protecting the safety of our people. However, there are serious handicaps in Alaska's Juvenile Law that we feel need immediate attention, particularly with the present climate of overreaction. We would be greatly discouraged to see the State lose the flexibility in our laws to rehabilitate and punish by giving way to oversimplified, reactionary solutions.

We hope this letter will initiate a process of change. We are willing to devote our time to this issue and would like your feedback as to where we might direct our energies. Also, we would like to know what the role of your office will take in initiating change.

Sincerely,

HB109
HB103

Judiciary Referral

the north pacific rim

April 4, 1983

Representative Charlie Bussell
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Bussell:

I am writing to inform you of our opposition to certain parts of the CSHB 103 (Jud.), "An Act establishing a Department of Corrections...". We are also opposed to CSHB 109 which you will be hearing later this month. It proposes to amend the children's proceedings waiver provisions, and relates to the criminal prosecution of minors. Please consider the concerns of The North Pacific Rim (TNPR) as you deliberate and decide on these bills.

While TNPR agrees that establishing a separate Department of Corrections is a positive move, we object to the inclusion of juveniles in this bill. Juveniles who commit crimes can be better served by remaining under the jurisdiction of the Department of Health & Social Services. It is through a rehabilatative approach, such as that offered by DHSS, that juveniles can gain the needed insight, resources, and skills to lead more socially acceptable lives.

With the great demand for resources within each Department, the needs of juvenile offenders risk becoming secondary to the needs of adults. This is especially true when one considers 1) the larger adult caseload, 2) the new focus on developing a correctional industries program, and 3) the high cost of rehabilatative treatment needed by both adults and juveniles.

903 W. Northern Lights Blvd., Suite 203 / Anchorage / Alaska 99503 / Ph. (907) 276-2121

The Non-Profit Corporation Serving The People Of The Chugach Native Region

TNPR is also concerned that the inclusion of juvenile offenders under the Department of Corrections would adversely affect the quality of services they receive. In the villages and rural areas, the same Probation Officer would most likely have both adults and minors on their caseloads. The attitude that one develops after working with adult offenders would not generally serve the best interest of the minor. In working with minors, even those determined "criminal", it is important that the Probation Officer retain some faith in the human spirit and in the person's ability to change.

Finally, we are fearful that the combination of youth with adult corrections will result in less diverson for youth, as well as a decreased emphasis on youth facilities. Of the 6,128 juvenile arrests in 1981, only 648 were adjudicated delinquents, and only 95 were sentenced to a closed youth facility such as McLaughlin. This means that over 6,000 youth were diverted from closed institutions, thereby keeping costs down and preventing the less dangerous youth from entering the criminal system.

Of course, there are those minors who are "unamenable to treatment", or who commit certain types of felonies such as murder and rape. These are the youth who are dealt with in CSHB 109 (Jud.). Section 9 of CSHB 109 outlines quite adequately the circumstances under which a waiver of children's court jurisdiction should be used. We think that Section 1 of CSHB 109 (Jud.) should be deleted entirely from the bill. A decision to try a 16 year old as an adult should be made on a case by case basis. The waiver as it stands in the current law can be used in this way; and yet its use in past years has been minimal. I would like to see an investigation of the reasons for the lack of use of the waiver before it is established as a general policy for all 16 and 17 year old suspected felons.

In addition, the presumptive sentences outlined in Sections 3 and 4 are too harsh for minors. Without treatment, the youth sentenced to such long terms will have little hope of leading normal, well-adjusted lives upon release. Two to three years in McLaughlin would serve the offender, society, and the State much better. If the youth is not amendable to treatment, it is unnecessary to pass this law if the goal is to have an effective system for treating criminal youth. The waiver in the current law is quite adequate.

In sum, The North Pacific Rim strongly opposes passage of CSHB 109 (Jud.), and we oppose inclusion of juveniles in the proposed new Department of Corrections. Thank you for your time and consideration of our concerns.

Sincerely,

The North Pacific Rim
Richard A. Rolland
Director
Health & Social Services

FOR IMMEDIATE RELEASE
FEBRUARY 13, 1983
PLEASE CREDIT "ABC NEWS"

One out of five Americans has been a crime victim in the past year, according to a new ABC News poll, and 13 percent of the adult population - nearly 22 million people - have been victims of violent crime.

The results of a special ABC News crime poll on the perceptions and realities of crime will be broadcast nationally during two weeks of special ABC News programming on "Crime in America," beginning Sunday, February 13.

The poll also revealed that three out of 10 Americans living in cities were victims of crime last year, along with nearly one quarter of all suburbanites and about one in seven Americans living in small towns and rural areas.

The ABC News poll also found that:

- Blacks are two-and-one-half times more likely than whites to be confronted by violent criminals. Twenty-six percent of all Blacks say they have been violent crime victims, compared to 10 percent of all whites.

- One in 12 Americans has had a close relative murdered, and one in eight knew someone in their neighborhood who was slain. Blacks are more than three times as likely as whites to have had a relative murdered. Twenty percent of blacks have had a relative slain, compared to six percent of whites.

- Twenty-six percent of those surveyed said they worried at least a "good deal of the time" about being murdered. Forty-three percent of victims of crime worry about being murdered, compared to 23 percent of people who never have been victims of violent crime.

- Nearly half of the women polled - 46 percent - said they worry about rape either a good deal or a great amount. Three percent report that they have been raped.

MORE MORE MORE

- Fifty-eight percent of those polled said unemployment, poverty, and related problems are the factors more responsible for crime in the U.S. Eighteen percent blamed drugs and 15 percent blamed breakdowns in family, society, morals, etc.

- A majority of 56 percent feels most judges have more sympathy for criminals than for their victims. Nearly two-thirds think judges have been giving shorter sentences in the last few years, and 88 percent said that is not the way they want it.

- Seventy-six percent want the death penalty for murderers. Seventy percent approve of building more prisons so that longer sentences can be given to criminals and 88 percent of these people are willing to have their taxes raised to pay for the new prisons.

- Seventy percent felt prisons mainly should be places that "teach criminals how to be useful, law-abiding citizens when they get out" rather than places to "punish criminals."

- Most people - 65 percent - disagree that armed citizen patrols are the only way to solve the crime problem. Forty-seven percent believe the best protection against crime is a strong police department.

- More than two-thirds of the gun owners polled said they would use their firearms if a burglar broke into their home. Nearly half of the American households - 47 percent - have firearms.

- Eighty percent said there would be less crime if more parents strictly disciplined their children. Exactly half of those polled said juveniles between the ages of 14 and 18 should be punished as adults if they commit a crime, and 46 percent said they should not be punished as adults.

Some 2,500 people were interviewed for the ABC News poll between December 7 and 18. The margin of error is plus or minus three percent.

(EDITOR'S NOTE: ABC News' two-week programming effort on "Crime in America" will focus on the myths and realities of crime, law enforcement, criminal justice and the prison system in the U.S. It will begin Sunday, February 13 with a special edition of "This Week with David Brinkley," with guests William Webster, FBI Director and William French Smith, Attorney General. The two weeks of programming (February 13 to February 25) will continue on "World News This Morning," "Good Morning America," World News Tonight," "Nightline," "20/20," "The Last Word" and "Viewpoint."

Kids may be tried as adults

by Jeff Berliner
Times Writer

District Attorney Victor Krumm on Thursday unveiled an administration proposal to try 16- and 17-year-old accused murderers in adult court.

Other juveniles accused of violent felonies also would have their cases moved to adult court under the proposal.

Krumm said it is "intolerable that a juvenile who commits a murder is held for two or three years" in McLaughlin Youth Center in Anchorage.

He unveiled the new juvenile waiver bill at the opening of a two-day conference on the connection between child abuse and juvenile delinquency, co-sponsored by the state Division of Family and Youth Services.

Division research shows that up to 20 youths every year are accused of committing crimes serious enough to bump them up to adult court, if prosecutors petition the court to accept them. In the past several years only a fraction of these cases actually ended up in state superior court.

Krumm, the Anchorage district attorney, cited the "soaring" rate of violent crimes committed by juveniles.

Although Gov. Bill Sheffield vetoed a juvenile waiver bill passed last legislative session, this bill satisfies his concerns and has the backing of the Department of Law, said assistant attorney general Gayle Horetski, who is putting the finishing touches on the proposal.

Charges of murder, rape or kidnapping would automatically put 16-and 17-year-old youths in adult court, Horetski said.

Younger defendants and teenagers charged with other crimes also could have their cases moved to adult court after a hearing.

But, Horetski said, this bill "makes it easier" for prosecutors to prove that those under 16 or those charged with felonies other than murder, rape and kidnapping should be taken out of the juvenile justice system.

Under current law, a juvenile may be placed in adult court at a judge's discretion following a hearing.

Delinquency expert attacks proposal

Continued from page A-1

This proposal, Horetski said, for the first time establishes nine standards for taking the teens out of juvenile court. The standards include seriousness of the crime, prior offenses, previous rehabilitation efforts, the amount of time required to rehabilitate the youth, and protection of the public.

The proposal Krumm unveiled came under immediate attack by the conference's keynote speaker, New York attorney and delinquency expert Andrew Vachss.

"How many 16-year-old kidnappers did you have in Alaska last year?" he asked, noting that such a law has "political utility" but will not bring needed change to the guilty youth or society.

"I don't think we had any," Horetski said, "but we sure had a lot of (under-age) murderers."

Vachss, who ran a prison for teens in Massachusetts, said in an interview later he would neither put the violent young offenders in a "soft" setting for youths nor put them in an adult prison.

He said he opposes mixing the violent teens with runaways in McLaughlin and said placing a 16-year old murderer in a state jail would likely transform him into an involuntary homosexual and a better criminal.

The answer, Vachss said, is a prison just for these violent youngsters, even if it is part of McLaughlin.

Teen-age murderers are released from McLaughlin when they become adults and most spend no more than two or three years in state custody, Krumm said.

Most violent teen-age offenders are not brought to the district attorney's attention "unless the crime is a triple murder in front of a lot of people," Horetski said. As a result, they end up in McLaughlin for a couple of years with little or no fanfare.

Serious cases that do come to prosecutors' attention often are ignored without any attempt to move them into adult court, Horetski said, because it is so difficult to do under current law.

The answer, Vachss said, is a prison just for these violent youngsters, even if it is part of McLaughlin.

Teen-age murderers are released from McLaughlin when they become adults and most spend no more than two or three years in state custody, Krumm said.

Most violent teen-age offenders are not brought to the district attorney's attention "unless the crime is a triple murder in front of a lot of people," Horetski said. As a result, they end up in McLaughlin for a couple of years with little or no fanfare.

Serious cases that do come to prosecutors' attention often are ignored without any attempt to move them into adult court, Horetski said, because it is so difficult to do under current law.

LETTERS FROM THE PEOPLE

Suggestions for juvenile justice

As staff members of Family Connection, Inc., a non-profit family counseling agency, we would like to share and articulate some serious, but correctable difficulties we have observed within the state's juvenile justice system.

Family Connection has provided family therapy servic- to a variety of youth institutionalized at McLaughlin Youth Center for the past three years. We are contracted to join the treatment team for a particular youth by either McLaughlin staff or juvenile probation staff. We have worked primarily with youth and their families prior to release from McLaughlin. Our goal has been to facilitate a smooth transition for the youth back into the family and community and to reduce the rate of recidivism. We specifically look at how the family functions and the interactional process that produces delinquent behavior.

We have been impressed with the expertise and professionalism of both McLaughlin staff and juvenile probation staff. They work with dedication to treat, rehabilitate and return youth to their community. However, present legalities place great limitations on the expertise of these professionals.

We support the Waiver of Jurisdiction Statute, Section 47.10.060 of the Alaska Statutes. The waiver allows for a procedure that determines if a minor is amenable to treatment, and if so, the minor is sent to McLaughline Youth Center for rehabilitation, rather than to the adult justic system. We believe that if there are indications that a youth is amenable to treatment, society is better served by providing treatment services along with punishment.

Unfortunately, our experience has shown us that the waiver statute has been abused in two ways.

First, the waiver is not used enough. Clearly, there have been youths who should have been waived to adult status for committing atrocious, violent crimes. This sentiment has been expressed by many in the past year. Why isn't the waiver being used effectively? How could this process be changed to facilitate more frequent use?

Secondly, the present statute contains serious limitations that has made the members of the juvenile justice system appear ineffective. As an example, if a youth is amenable to treatment but after an intensive course of treatment the youth is still unchanged and dangerous, according to state law the youth still must be released. There is no other recourse. This has been a difficult moral and ethical dilemma for professionals within the juvenile justice system. How can we ethically release a youth into the community knowing the youth is a danger to society?

Another problem involves the length of institutionalization. A youth cannot be held longer than two years or until their 19th birthday. We have observed a youth who committed a violent murder receive a sentence of less than one year. In this case the youth simply refused to participate in treatment. Therefore, he is not adequately treated or punished. Again, treatment staff are put in a bind by the court as they are given an impossible task to perform, with no recourse to protect either the treatment process or the community.

The State of Alaska has done well in providing rehabilitation for youth, while at the same time protecting the safety of our people. However, there are serious handicaps in Alaska's juvenile law that we feel need immediate attention, particularly with the present climate of overreaction. We would be greatly discouraged to see the state lose the flexibility in our laws to rehabilitate and punish by giving way to oversimplified, reactionary solutions.

SUBJECT: Harassment of hunters, fishers and trappers (CSHB 546 (Resources)(draft)

TO: Representative John Ringstad
Chairman, House Resources Committee

FROM: Edward H. Hein
Legislative Counsel

Enclosed is a draft of Resource Committee Subsitute for HB 546 requested by Dave Stancliff.

I have rewritten sec. 16.05.925(a) and (b) in an effort to address the problems raised in the second paragraph of Governor Sheffield's veto letter relating to HB 163 last year.

Also, I have attached copies of the laws relating to harassment of hunters, fishers and trappers in seven other states. Note that every one of the laws uses the term "interfere" without defining it. Despite this, it is my opinion that the words "obstruct" and "hinder" are slightly more precise and therefore preferable.

Feel free to contact me at your convenience if I may be of further assistance.

DEPARTMENT OF PUBLIC SAFETY

POSITION PAPER - HB 546

Support

"HB 546 - An Act relating to harassment of persons lawfully engaged in hunting, fish ng, or trapping."

The Department of Public Safety supports passage of HB 546.

This bill adequately addresses conduct that is illegally aimed at interfering with lawful hunting, fishing or trapping.

British Columbia has had severe problems between legal hunters and anti-hunting groups that have led to armed confrontations. The potential for that to occur in Alaska is evident and I think enacting a law to address this problem would be a good start toward prevention.

§ 648. Definitions

As used in this Subpart, the following definitions shall apply:

(1) "Wild animal" means any wild creature, including fish, wild birds, and wild quadrupeds, the taking of which is authorized by the provisions of this Title.

(2) "Process of taking" means any act directed at the lawful taking of a wild animal, including the acts of travel, camping, or other activity occurring in preparation for the taking which occurs on state-managed lands or waters governed by the provisions of R.S. 56:781–R.S. 56:787 or which occurs on private lands or waters with the permission of the owner or his agent.

Added by Acts 1982, No. 376, § 1.

§ 648.1. Harassment and disturbance prohibited

No person shall engage in any of the following activities on lands or waters managed by the state pursuant to R.S. 56:781–R.S. 56:787, or upon private lands or waters where a hunter, trapper, or fisherman has been given permission by the owner or his agent to take wild animals:

(1) Interfere with the lawful taking of a wild animal by a hunter, trapper, or fisherman or interfere with the process of taking, with intent to prevent the taking.

(2) Disturb a wild animal, or engage in any activity or place any object or substance that will tend to disturb or otherwise affect the behavior of a wild animal, with intent to prevent or hinder its lawful taking.

(3) Disturb any hunter, trapper, or fisherman who is engaged in the lawful taking of a wild animal or who is engaged in the process of taking, with intent to dissuade or otherwise prevent the taking, or to prevent such person's enjoyment of the outdoors.

(4) Enter or remain upon state-managed lands or waters or upon private lands or waters with intent to violate the provisions of this Section.

Added by Acts 1982, No. 376, § 1.

On authority of R.S. 24:253, subsection designations A to D as found in Acts 1982, No. 376 were changed to paragraph redesignations (1) to (4).

§ 648.2. Remedies, damages, and penalties

A. The secretary may seek injunctive relief to restrain and prevent violations of R.S. 56:648.1, upon request by the person affected or who reasonably may have been affected by such conduct.

B. Any person adversely affected by a violation of R.S. 56:648.1 shall be entitled to recover actual damages, including expenditures of the affected person for license and permit fees, travel, guides, special equipment and supplies, to the extent that such expenditures were rendered futile by the actions of the person violating the provisions of this Section.

C. Violation of the provisions of R.S. 56:648.1 constitutes a class two violation.

Added by Acts 1982, No. 376, § 1.

§ 648.3. Failure to obey order; violation

A. It shall be unlawful for any person to continue any conduct in violation of R.S. 56:648.1 when ordered to desist by an enforcement officer who has observed such conduct or who has reasonable grounds to believe that the person has engaged in such conduct on that day or plans or intends to engage in such conduct that day on a specific property.

B. Violation of the provisions of R.S. 56:648.3(A) shall constitute a Class three violation.

Added by Acts 1982, No. 376, § 1.

ARIZONA

§ 17-316. Interference with rights of hunters; violation; classification

A. The commission may, by rule, establish designated hunting areas on public lands if it finds that a significant interference or disruption of a hunt is likely to occur on those lands.

B. It is a class 2 misdemeanor for a person while in a designated hunting area to intentionally interfere with the lawful taking of wildlife by another or to intentionally harass, drive or disturb any game animal for the purpose of disrupting a lawful hunt.

C. It is a class 3 misdemeanor for a person to enter or remain in a designated hunting area on any state lands including state trust lands with the intent to interfere with the lawful taking of wildlife.

D. The commission or any person properly licensed to take wildlife who is directly affected by a violation of this section may bring an action to restrain conduct declared unlawful in this section and to recover damages.

E. A peace officer who reasonably believes that a person has violated this section may order the person to desist or to leave the area or arrest such person upon refusal to desist or leave.

F. The conduct declared unlawful in this section does not include any incidental interference arising from lawful activity by public land users, including ranchers, miners or recreationists.

Added by Laws 1981, Ch. 239, § 1.

MICHIGAN

312.10. Unlawful hunting

Sec. 10. (1) Unless otherwise specified, a person shall not do any of the following:

(s) Intentionally interfere in any manner with the lawful hunting, pursuing, or taking of a wild bird or a wild animal by another person.

HB 407

January 24, 1983

Representative Dick Schultz
State Capitol Building
Juneau, Alaska 99801

Dear Dick:

On January 5, 1983 the Tok Cutoff-Nabesna Road Advisory Committee met in a general meeting to discuss hunting regulations. There were several things discussed with two of them pertaining to you.

#1 We would like to see legislation written and passed that would control or rather stop harrassment of hunters, trappers, and fishermen. We would be able to carry on our life-style without harrassment from the "greenies".

#2 We would like to see legislation written and passed that would eliminate the $25 trophy tag for resident grizzly/brown bear hunters. We believe the State is rich enough without charging its residents a $25 fee.

Our committee will be meeting within a few weeks and correspondence from you would be appreciated. I would like to able to tell the folks something about these two items.

Good luck and if there is anything I or this committee can do to help, please let me know.

Sincerely,

Bill Ellis, Chairman
Tok Cutoff-Nabesna Rd. Advisory Committee

TIPS FOR HUNT SABOTEURS

Fourteen million Americans will be shouldering their rifles and shotguns within the next few months, marching off to their annual offensive against our wildlife. These legions, which are more numerous, and generally better equipped than the entire Nazi armies of the Second World War, will take a bloody toll before the season ends. They will kill deer and rabbits, ducks, dogs, cats, a few children, and even a few hunters.

It is time for friends of animals to start organizing a defense that will serve to at least temper the wanton destruction. There are many ways that a friend of animals can become a forest partisan on behalf of our wildlife, and we offer here a few suggestions that range in effort, depending upon a person's abilities and commitment:

1. Deny the hunter the land to hunt on. Much hunting is done on private lands. To protect these animals, encourage your neighbors, especially those who own large tracts such as farms and ranches, to post their land and forbid hunting. Try to convince them that hunters invariably cause more damage to agriculture than the wild animals do.

2. Many areas have hunting restricted to a specified number of hunters who have special permits. Commonly, these permits allow the hunter to use a particular blind or hunt less common species, such as bear. Apply for these permits yourself. The permits are usually awarded by a simple lottery selection. If you're lucky, you'll win a permit and deny a hunter his kill.

3. Get into the woods yourself the day before the hunting season. If you're familiar with the most commonly hunted areas, try to drive wildlife away. A stroll through the forest with a nice loud radio and a dog on a leash, will serve to make wildlife more wary of humans. This is particularly important for younger animals that have not yet had the traumatizing experience of being hunted.

4. Certain substances, such as rotten eggs, when rubbed into hunting blinds, make these enclosures even more uncomfortable for the hunters. Uncomfortable hunters are irritable, and are also poorer shots. Plastering the floor of a hunting blind with cow dung is another good idea.

5. If you're familiar with wildlife habits in your neighborhood, try to encourage them to break these habits shortly before hunting season. For instance, many hunters like to stalk along deer tracks which are pretty well defined to a good woodsman. Placing deer repellent (available at many feed and hardware stores) along these tracks will encourage the deer to move away and leave the hunter with a route devoid of the species. If you want to save money, just scoop up a bag of human hair from a local barber shop and hang handfuls of it in little bags about two or three feet from the ground, along the deer track. The deer will soon get the message that there are humans in the area and will drift away.

6. If there is much hunting with dogs in your area, try to get hold of a female dog in heat and lead her, on a leash, through an area that is heavily hunted. Male dogs in the hunter's pack will "get wind" of the female and lose their enthusiasm for chasing rabbits or deer.

7. Hunters frequently like to ambush their prey by setting out food and then hiding in blinds. Commonly, bushels of apples are set out a few days before hunting season to encourage deer to browse in this area. When hunting season comes, the hunter merely comes to the site, climbs into a blind, and waits for the deer to come to him. To disrupt this, there are two alternatives. First, remove all apple piles immediately on finding them during the days preceding hunting season. Second, if there are just too many apples to carry away, give them a good spraying with deer repellent and spread barber shop hair clippings all over the area.

8. Encourage your municipality to pass an ordinance that bans, in the interest of public safety, the use of all weapons within its limits. Rifles, shotguns, bows and arrows have been known to kill people too.

9. If you have a portable tape recorder, get a cassette recording of wolf howls. Play this in the woods a few times in the days before hunting season. It will make wildlife wary.

10. Try to develop strong anti-hunting sentiment in your community by writing letters to the editor of your local newspapers, meeting with neighbors, getting on talk shows. Creating public awareness of the problem is a vital point. Let your neighbors know that the law recognizes wildlife as belonging to all people, and they are not the exclusive property of hunters until after they have been murdered.

11. Work on a project to get your State to pass a law that would require all hunters to carry written permission from the landowners of the places they hunt. This further curbs the hunter's battlegrounds because many farmers are reluctant to sign permits that would allow people to hunt on their lands. Also, much land is owned by summer residents, corporations, etc. that are nearly impossible to get hold of.

12. Approach your Congressperson and Senators with demands that hunting and trapping be prohibited on national wildlife refuges and all public land.

13. If you have any old, stuffed animal toys, set these around commonly hunted areas. Hunters often don't take the time to check if an animal is real. Better to have a hole in a cotton rabbit than a real one - and the noise of the gun going off might serve to scare away other wildlife.

14. We will be trying to put together a better activist's guide for next hunting season, so if you have any ideas or procedures you've found effective, please let us know. Mail them in to Bill Clark, Friends of Animals, 11 West 60th Street, New York, NY 10023.

Use your imagination. There are plenty of ways to frustrate the hunt, depending on your own abilities and enthusiasm. The main point here is to do something. By your work, you will be helping animals in two ways. First, you will be protecting them from the hunters and second, you will be letting the hunters know that friends of animals are in the woods. This serves to anger them, and angry hunters do not stalk so quietly, their aim is not so precise. Emotions can play heavily in the success of a hunt, and the most effective killers are cool and methodical. Disrupt!

ANTI-HUNTERS VS. HUNTERS: WAR IN THE WOODS

Greenpeace fanatics are harassing hunters in the field. It's a vicious and very dangerous movement, and you could be the next victim. Here's what to expect plus some very good advice on what not *to do about it.*

By Richard Starnes, Editor-at-Large

The lush alpine valleys and rugged highlands of northeastern British Columbia have witnessed the opening skirmishes in what threatens to become all-out war between big-game hunters and anti-hunting zealots who have sought to stop them by harassment, abuse, intimidation and—it is charged—physical violence.

How much violence has occurred to date is in dispute, but there have been several angry confrontations involving hunters and anti-hunting activists, one beating has already taken place, and feeling is running so high that Canadian provincial authorities are alarmed at the prospect of more violence when the big-game season opens this fall.

"It's only a question of time before some hothead loses his composure and someone gets hurt," said one hunter who was victimized by the anti-hunters.

Arrayed against each other in the conflict are the hunters, outfitters, and game-management officials of British Columbia, and a dedicated, well-financed, implacable organization of anti-hunters who call themselves Greenpeace.

Greenpeace is no collection of saloon conspirators content to crank out mimeographed anti-hunting diatribes and picket sporting-goods stores. It is slick, professional, worldwide, and growing rapidly. Its Vancouver chapter alone budgets nearly $500,000 a year for anti-hunting activities. Its tools are $1,000-a-day helicopters, expensive sound cameras, and self-confessed expertise at manipulating the press and television. Its tactics are harassment, confrontation, and attempts physically to restrain hunters. Its leader, Dr. Patrick Moore of Vancouver, made it clear in an interview with OUTDOOR LIFE that episodes of harassment and intimidation that took place in the rich hunting grounds of British Columbia in 1979 and 1980 were only the opening salvos in the conflict.

"We'll be back this year," he said. "They can't stop us. We intend to stop trophy hunting, first in British Columbia, ultimately all over the world."

How Greenpeace seeks to frustrate hunters is perhaps best told in the words of Richard A. Mielke, a 50-year-old Pontiac, Michigan, fire fighter who last year took a 21-day hunt-of-a-lifetime in the rugged, 1.6-million acre Spatsizi Wilderness Park in British Columbia. He and his partner, Darryl Hastings, 40, a computer broker from Rochester, Michigan, encountered the Greenpeacers on the first day of the hunt.

"They barged right into our camp," Mielke said. "They stuck sound cameras right in our faces. They harangued and abused us. One of them screamed at me, 'Is there something wrong with your sex life? Is that why you're up here killing animals?' When we tried to ride out of camp they locked arms across the trail to stop us. One of them grabbed the bridle of my horse. That was dangerous. That's rough country up there. If the horse had shied and fallen I could have been badly hurt."

Eventually the hunters and their guide broke free and continued the hunt, but on nearly every day of the hunt the harassment continued. On one day Mielke took his rifle—unloaded—to a dock on tiny Bug Lake to scope a wolf that had been howling near the camp.

"One of these Greenpeace guys crowded up against me, bumped me, and yelled, 'You're not going to shoot that animal while I'm here!' He grabbed my rifle, and then he fell into the lake."

"They would taunt you in every way they could," Hastings added. "You

couldn't even go to the john without one of them sticking a camera in. It's hard to keep your cool under those circumstances, yet I couldn't give them the satisfaction of bothering me."

Although the Greenpeacers scornfully characterize hunters such as Mielke and Hastings as "jet-set headhunters," both are men of modest means.

"I scrimped and saved and worked at odd jobs for two years to get the money for that hunt," Mielke said. "By the time I'd paid air fares, outfitters' fees, and license and trophy fees it cost me around $10,000."

Hastings put the cost of his hunt at near $12,500, and noted it would be a long time, if ever, before he could afford another hunt of that magnitude.

Both hunters report that attempts to reason with the anti-hunters were futile.

"We were after Stone sheep, principally," Hastings said. "But they kept alluding to them as 'bighorns.' I told one of them, 'You're such a phony; you don't even know what species you're talking about.' "

Both men got trophy sheep as well as other trophy specimens, but the Greenpeace activitists succeeded in blighting what would otherwise have been an idyllic hunt.

"There were several days when I didn't hunt because of them," Hastings said.

Complaints to provincial wildlife authorities were to no avail. "Early in the hunt a park ranger came into our camp," Hastings said. "We asked him why he wouldn't protect our right to carry on a lawful activity. I'd paid around $1,000 for licenses and tags, and these people were trying to deprive me of my right to hunt. The ranger replied that there was nothing he could do. 'It's a public park,' he told me. 'They can go anywhere they please.' "

Later, after the anti-hunter fell (Greenpeacer Moore says he was pushed) into the lake, four Royal Canadian Mounted Police officers and two B.C. Fish and Wildlife Department officials arrived at the Mielke-Hastings camp by helicopter. Again the two hunters repeated their plea for protection, again the officials said there was nothing they could do.

"They told us they were trying to figure out how to resolve the issue," Hastings told OUTDOOR LIFE. "But all they did was to tell us, 'We want you fellows to be patient and keep the peace.' " (There are indications, however, which we will come to later, that B.C. officials are preparing to abandon their policy of noninterference when the 1981 season opens.)

Violence against them would give Greenpeace "proof" that all hunters are thugs and violence-prone killers.

Even after Mielke and Hastings quit their camp to return home, the Greenpeace contingent pursued them. After alerting press and television, the anti-hunters continued their tactics of harassment. They followed the two hunters into the airport at Vancouver, taunting them, haranguing and vilifying them, and waving professionally-made anti-hunting placards for the benefit of news and television cameras. Several wore animal costumes, including horns or antlers. The Greenpeacers drove the two hunters to take refuge in the airport lounge, where the bartender did what the Royal Canadian Mounted Police and game department officials had been unable or unwilling to do. He chased the anti-hunters out of the place.

What was possibly an even uglier incident took place during the 1979 season in Spatsizi. Gary Zechel, an engineer with the Ford Motor Company, who lives in the Detroit area, was hunting Ranger Creek with his wife Jo-Carole, who is a hunter, but wasn't hunting on this occasion. Accompanied only by an Indian guide, the Zechels were traversing one of the wildest, most primitive areas in North America.

"We were six or eight hours by horseback from our base camp, staying in a spike camp," Zechel recalled, "when these Greenpeace people showed up. There were seven men and one woman. There was lots of taunting, harassment, and intimidation. They said they would do whatever they could to stop us. They said if they couldn't persuade us to abandon our hunt they would restrain us physically. When we rode out for a day of hunting, they locked arms in front of us. When I tried to go to my wife's aid, one of them grabbed my horse's reins. Eventually our guide broke through, and my wife and I got away from them. They chased us several hundred yards up the trail, and our guide's horse fell into a bog. That was very dangerous. Even a minor injury is serious in that remote wilderness."

Like Mielke and Hastings, Zechel is an experienced hunter and outdoorsman, clearly able to take care of himself. But some insight into the psychological impact of the Greenpeace tac-

In the fall of 1980, the Gary Zechel hunting party camped in the Spatsizi wilderness in British Columbia and ran into harassment by eight Greenpeace agitators (left). When Zechel and his wife rode out of their camp for a day of hunting with their guide, the Greenpeacers locked arms across the trail to block their way and screamed abuse. A female Greenpeacer grabbed Zechel's reins to hold him back. The guide broke through the human barrier, and the Zechels pulled away and rode around them. Gary Zechel stated that his greatest fear was that one of the horses would spook and injure or kill someone. The painting is based on a photograph supplied by the Greenpeacer organization! At right, Greenpeacers in animal costumes harass Richard A. Mielke and Darryl Hastings in the Vancouver airport after their successful hunt.

Illustration by Domenick D'Andrea

tics can be won when Zechel says, "One of those guys had an ice ax he kept waving in my face. I felt more fear than I have felt in a long time."

Zechel's wife seems to have been singled out for particular attention by the Greenpeacers.

"They ran raving and yelling at her," he reported. "It was like a riot. They came within five or ten feet of her."

Exercising what can only be described as saintly restraint, the Zechels and their guide did their best to ignore the anti-hunters.

"This drove them into a frenzy," Zechel said. "They acted nearly hysterical, obviously looking to cause some action or incident." Not surprisingly, the Greenpeace tactics finally wore down Jo-Carole's emotional reserves. "She was terrified and finally broke down crying and screaming for them to leave us alone. They refused and she ran into the tent, sobbing 'They're crazy—I'm afraid of them.' She spent the final days of the hunt in her tent."

When the Zechels broke camp and returned to Smithers, he filed an assault charge against the Greenpeace anti-hunters. Although technically the charge is still pending, it has been "stayed" and provincial authorities made it clear they have no plans to prosecute it.

Ralph Aldrich, chief conservation officer of the British Columbia fish and wildlife agency, undertook to explained why.

"From an enforcement point of view we can only follow the law," he said in an interview. "There is no law against yelling. It's just like picketing. Of course, if they threaten assault and take some overt action, that may be assault."

Is it illegal to impede hunters' horses? Aldrich's reply was something less than definitive. "It depends," he said. Thereupon he passed the buck to Peter Ewart, crown counsel (prosecuting attorney) for the Spatsizi district. From Prince George, B.C., Ewart indicated that, while still open, the charges laid by Gary Zechel against the Greenpeacers would likely never be prosecuted.

"We took a look at the evidence and the probable outcome of a trial and put a 'stay' on the case," Ewart said. But then, plainly choosing his words carefully, Ewart laid out what may be provincial officials' plan to end the threat to one of British Columbia's prime industries. "I would have been much happier," he said, "if the charge had been intimidation instead of assault." British Columbia, he said, has a statute making it illegal to "impede or attempt to impede any person from carrying out a lawful activity" by threats, harassment, or coercion.

"What he says is a crock," bluntly charged Ray Collingwood, whose firm outfitted both the Zechel and Mielke-Hasting parties. "They didn't prosecute because of the expense of getting witnesses back up here to testify. I've lost all respect for the government."

Collingwood revealed what apparently is not known by provincial authorities—real violence has already broken out.

"One of these [Greenpeace] guys tried to stop one of our pilots from taking off from an airstrip we maintain in the park," he told OUTDOOR LIFE. "He grabbed a wing strut of the Beaver and tried to force our pilot to abort his take-off. The plane got off anyway and later the pilot returned, landed the aircraft, and punched the guy out. He knocked him down and slapped him around some. He just hung a little licking on him."

Despite the degree of restraint exercised by Mielke, Hastings and Zechel, provincial authorities are acutely aware of the potential for violence. Like the hunters themselves, provincial officials see the tactics of Greenpeace as calculated provocations designed to spark violent reaction. All agree that would be counterproductive and, as one put it, "would give Greenpeace 'proof' that all hunters are thugs and violence-prone killers." Chief conservation officer Aldrich pointedly noted that there will be combined Royal Canadian Mounted Police and game department patrols in Spatsizi during the 1981 season.

Greenpeace's Moore airly dismissed the prospect of being prosecuted under the intimidation statue.

"The attorney general (of British Columbia) hired a man last summer especially to research the question," he said. "He concluded there was no law that could stop us. Our activities are as legal as the hunters'. All we're doing is occupying nonconsumptive space, competing for resources with the hunters. They can't say we're interfering with their rights. Those [game] animals don't belong to anyone until they're actually taken into possession."

It is clear that Patrick Moore is the architect, principal voice, and presiding genius of Greenpeace. He conceived and created the organization while a graduate student at the University of British Columbia (he is now a doctor of ecology) five years ago. His title is Canadian director of Greenpeace International, but plainly his sway extends to the worldwide branches of the organization. He is one of 12 salaried, full-time employees of Canadian Greenpeace, and he is paid $1,200 a month. There are offices in Vancouver,

"We intend to shut down trophy hunting in Spatsizi to show that it can be done."

Victoria, Toronto, and Montreal, as well as branches in the United States, the United Kingdom, the Netherlands, France, New Zealand, and Australia. A Greenpeace "secretariat" in Washington coordinates the activities of the international branches, and it has an annual budget of $120,000.

"Our forte," Moore said in an interview, "is organizing expeditions into remote areas in order to confront in a nonviolent manner acts that we consider environmentally detrimental. Our funding is entirely private—donations from individuals that are generally less than $50. We have no foundation or government grants. Our methods are too controversial to attract money from conservative quarters."

Greenpeace's first confrontation took place when Moore and others chartered an 85-foot vessel and sailed to the Aleutian island of Amchitka in an attempt to halt the testing of nuclear bombs. "We lost that battle but we won the war," he said. "They've stopped testing now and Amchitka is a wildlife preserve."

Later Greenpeace made expeditions to the South Seas in an attempt to stop nuclear testing by France (they failed), and they have conducted offensives against whalers and seal hunters.

"But we cut our teeth on nuclear testing," Moore said. "From it we learned how to deal with the media and how to understand international politics. We're fortunate in having people who understand the media—that's how you communicate with people in the modern world, knowing what sort of images appeal to the media."

Although Canadian authorities are tippy-toeing around the Greenpeace campaign of intimidation in Spatsizi, the government ended similar tactics that were attempted against commercial hunters of harp seals in Newfoundland.

"They enacted what they called 'seal protection regulations'," Moore said, "just to keep us out. It's ironic, and very undemocratic."

Moore insists that ending all hunting is not his goal. "Hunting can be part of a harmonious relationship with nature," he said. "Indian bowhunters lived in a balanced state with nature for

10,000 years. But what we're saying is that the relationship between man and animals has changed dramatically. These hunters are an extension of the Detroit urban-industrial ecosystem. They have no place in Spatsizi. In a park set aside for protecting these animals, we must stop thinking of them as a natural resource and think of them as a national treasure."

Moore's disclaimer notwithstanding, Greenpeace's program would effectively end hunting. It would totally rule out all trophy hunting, even under the rigidly controlled conditions prevailing in Spatsizi. It would prohibit hunting by all outsiders, insisting that only food hunters "that are part of the (local) environment be permitted to hunt." It would, in short, permit only subsistence hunting, and then only if the cessation of hunting would "dramatically affect" the life-style of the hunter, and only if subsistence hunting remained in "balance" with the environment.

Moore repeatedly insisted that the hunters who were assailed by the Greenpeacers were unthinking trophy freaks who habitually left the meat of their animals to spoil after removing horns, antlers, and capes. All three hunters heatedly denied the charge, noting that they had painstakingly packed all usable meat back to camp, either for shipment home or for use by the outfitter's crew. The outfitters confirmed this. In fact, British Columbia law requires that the meat of game animals be removed and used for food, and in its exhaustive investigation of the incidents, the provincial game department found no violations of the law by the hunters.

For the record, Moore denies any of the Greenpeace activists at Spatsizi committed assault by grabbing anyone's arm. He denies that Mielke's rifle was pushed, but he insists that either Mielke or his companion shoved one of the Greenpeacers into the icy waters of Bug Lake. He concedes that they tried to block progress of the hunters' horses, but denies any member of his group seized them by the bridles. "They ran their horses at us," he insisted.

"They're crazy—I'm afraid of them," Gary Zechel's wife said. She spent the final days of the hunt in her tent.

"Our intention is to be there again this year. We intend to shut down trophy hunting in Spatsizi to show that it can be done. They say we are intefering with them. We deny that. We're competing, as is our right, and they can't stop us."

Perhaps more philosophical than many hunters would be, Richard Mielke warns future hunters of Spatsizi that the Greenpeace anti-hunters "are trying to provoke you into taking a poke at them. And that's the last thing anyone should do. It's exactly what they want."

Unfortunately, however, it isn't the last thing that's likely to happen—unless British Columbia takes a page from Newfoundland's book and contrives a way to keep the Greenpeace people away from the hunters. There are some indications B.C. officialdom, perhaps belatedly, is now working hard to find a way to end the harassment of hunters. In reply to a letter of complaint from Mielke, B.C. Minister of Environment Stephen Rogers wrote:

"I wish to extend my personal apologies for the harassment you suffered (and) I also want to congratulate you and your hunting partner for the restraint you both showed under trying circumstances. The hunters in Spatsizi by their good behavior, as opposed to the conduct of Greenpeace, gained in general public stature while Greenpeace suffered.

"We are working with the Parks Branch to see what can be done to prevent situations such as you experienced from recurring."

The Force Behind Friends of Animals

Alice Herrington Raises the Hackles of Sportsmen in Her War on Hunting

Alice Herrington

By E. J. NILSSON
Grit Staff Writer

Whether Alice Herrington is right or wrong, she is anything but a bore. As founder and president of Friends of Animals (FOA), Herrington arouses strong feelings among sportsmen and others in her crusade against hunting.

Herrington, who lives with eight cats in Little Silver, N.J., founded FOA in 1957 to try to reduce the numbers of stray dogs and cats. And that is still the major purpose of the organization, she said.

But the group's chief claim to fame is Herrington's verbal bouts with hunters and trappers.

"To call this a sport is just pure nonsense," she said about hunting. "It's a real cruelty. It can't be justified."

IN HERRINGTON'S view, the only people worse than hunters are trappers.

"Deer hunters are not nearly as bad as trappers," she said. "I can't imagine how hunters, who pride themselves on fine shooting, ally themselves with trappers, who practice sadism. Deer hunters are due a little credit for at least the speed of their kill."

Despite the fireworks that FOA ignites with its "full program of hunting and trapping disruption," Herrington wants to convince the public that there "are two cruelties."

Besides the killing of "free animals, which are called wildlife," she explained, she's concerned about man's treatment of all domesticated animals—including pets and livestock.

"It's an American syndrome to love kittens and puppies but then throw out dogs and cats," she said, adding that millions of dogs are killed "in American municipal dog pounds, but they were loved as puppies."

In 1970, Herrington organized low-cost spaying programs for 20,000 animals. By 1980, the number had risen to 60,000.

Last September in Neptune, N.J., she opened a low-cost spaying clinic, said to be "a model of its kind with room for 80 animals and two veterinarians." Across the nation, her group pays for part of the cost of spaying in cooperation with 750 participating veterinarians.

ONE OF the prime targets of Herrington and the FOA is the food business.

"Cruelty to animals is practiced on a larger scale by the food industry than by any other single sector of human activity," an FOA publication asserts.

And Herrington adds:

"If people want to support an industry that is destroying the land, then they can continue to eat these creatures. But if not they can eat vegetables."

Other institutions also are criticized by FOA, including zoos.

"Zoos must be phased out," said an FOA publication.

Herrington's concern for animals was heightened when she returned to the United States in 1954. Working as a War Department statistician, she had seen relatively few animals running loose in Europe.

In the United States, she said, "I was shocked to find stray animals everywhere."

HERRINGTON, a graduate of the University of Wisconsin in Madison, put her statistical talents to work calculating the rate of increase of dogs and cats. She said she realized that cutting the prolific birthrate was the only long-range solution.

This realization led to the founding of FOA, which worked with volunteers until 1967. Now the group has 12 full-time em-

Herrington was asked whether she would advise FOA members to take traps that were legally set.

"Yes! Why not? Certainly," she said.

But wouldn't the "solution" be stealing?

"You could say that it's stealing if you like," she replied, "but the Robin Hood approach to life is still a very nice way to go."

Humane Group To Seize Animal Leghold Traps

By STEVE GRANT

Friends of Animals Inc. said Friday it is going to trip up trappers by setting off their leghold traps when the season opens next week.

The organization said it will ask its 4,500 members in Connecticut to look for the traps, touch them off with a stick and remove them, because it believes the traps are inhumane.

"We can't as an organization advise people to remove legally set leghold traps. It wouldn't be a smart thing to do. What we're asking them to do is remove illegally set traps. Our guess is most of them are illegal," said Priscilla Feral, the organization's Connecticut director.

Game laws require all leghold traps to have the owner's name on them and they must be placed underwater or in an animal's burrow.

A spokesman for trappers questioned the new campaign, which will begin next Saturday, when the season opens.

"They're setting up a vigilante group. Vigilantes in any situation are not good. They don't know enough and they tend to break the law themselves," said Robert Crook of Madison, a member and former president of the Connecticut Trappers Association which has about 800 members.

"I wouldn't object to anybody coming out and checking my traps, as long as they had the permission of the landowner, and as long as they didn't steal them, set them off or take animals out. But I really don't think that's their responsibility," Crook added.

He said the state Department of Environmental Protection is responsible for seeing that trapping is conducted legally and that he understood the group was told by DEP not to remove illegal traps but instead to report them to a game warden.

Ms. Feral said a trapper's name legally can be placed anywhere on a trap, so members would have to trip them to check. She said members would not be advised to reset legal traps.

"DEP can read the riot act to me if it wishes. But no way will we aid the trapper. Our object is to get rid of the legnold trap," she said.

The organization has argued that the trap, which has two steel jaws that slam shut when an animal touches a piece of bait, is barbaric because some animals die slowly or are left crippled. Ms. Feral said domestic animals also have been caught in the traps. There are other traps available that are more humane, she said.

Crook estimated that there are 8,000 trappers in Connecticut, with the average trapper placing 50 or 100 traps in the wild.

The most commonly trapped animal in the state is the muskrat, which can yield a pelt that will fetch up to $8. Raccoon, fox, mink, opposum, weasel, skunk and beaver also can be trapped legally, though the season for some of those animals does not begin until later.

Friends of Animals, which is based in New York, has waged other campaigns against hunters. Some members went into the Connecticut woods recently to play recorded wolf howls to alert animals of danger when the deer hunting season opened.

NEVADA

Section 1. Chapter 503 of NRS is hereby amended by adding thereto a new section which shall read as follows:

1. It is unlawful for a group of people, acting together, intentionally to interfere with a person who is lawfully hunting or trapping. For the purpose of this subsection, hunting or trapping is "lawful" only if permitted by the owner or person in possession of the land, other than the government, in addition to any requirement of license or permit from a public authority.

2. The provisions of subsection 1 do not apply to any incidental interference arising from lawful activity by users of the public land, including without limitation ranchers, miners or persons seeking lawful recreation.

MAINE

§7541 Harassment prohibited.

1. Interference with taking. No person may willfully interfere with the lawful hunting, fishing or trapping of a wild animal, wild bird or fish.

2. Disturbing wild animals, wild birds or fish. No person may willfully disturb or attempt to disturb a wild animal, wild bird or fish with the intent to interfere with the hunting, fishing or trapping of them.

3. Violation. A violation of this section is a civil violation for which a forfeiture of not less than $100 nor more than $500 may be adjudged.

4. Property rights otherwise provided by law. This chapter shall not be construed in any way to limit the ownership use, access or control of property rights otherwise provided by law.

§7542 Injunction; damages.

1. Injunction. The District Court or Superior Court may enjoin conduct which would be in violation of section 7541 upon notification by a person affected or who reasonably may be affected by the conduct, upon a showing that the conduct is threatened or that it has occurred on particular premises in the past and that it is not unreasonable to expect that under similar circumstances it will be repeated.

(d) enters or remains upon public lands, or upon private lands without permission of the owner or his agent, with intent to violate this Section.

[S.H.A. ch. 61, ¶303]

Section 3. Any person who knowingly performs any of the following acts is guilty of a Class B misdemeanor;

(a) fails to obey the order of a peace officer to desist from conduct in violation of Section 2 of this Act if the officer observes such conduct, or has reasonable grounds to believe that the person has engaged in such conduct that day or that the person plans or intends to engage is such conduct that day on a specific premises.

[S.H.A. ch. 61 ¶304]

Section 4. (a) Any court may enjoin conduct which would be in violation of Section 2 of this Act upon petition by a person affected or who reasonably may be affected by such conduct, upon a showing that such conduct is threatened or that it has occurred on a particular premises in the past and that it is not unreasonable to expect that under similar circumstances it will be repeated.

(b) A court may award damages to any person adversely affected by a violation of Section 2, which may include an award for punitive damages. In addition to other items of special damage, the measure of damages may include expenditures of the affected person for license and permit fees, travel, guides, special equipment and supplies, to the extent that such expenditures were rendered futile by prevention of the taking of a wild animal.

SOUTH DAKOTA

Section 1. No person may intentionally interfere with any person or group of persons lawfully engaged in the process of taking or attempting to take any game or fish. No person may engage in any activity specifically intended to harass or otherwise prevent the lawful taking of any game or fish. No person may engage in any activity to scare or disturb any game with specific intent to prevent their lawful taking. This section may not be construed to prohibit a landowner from revoking a prior grant of permission to hunt on his land. A violation of any provision of this section is a Class 2 misdemeanor.

Section 2. Any person who fails to obey the order of a peace officer to desist from conduct in violation of section 1 of this Act, if the officer observes such conduct, or has reasonable grounds to believe the person was engaged in such conduct that day or intends to engage in such conduct that day on a specific premises, is guilty of a Class 1 misdemeanor.

Section 3. The court may enjoin conduct which is in violation of section 1 of this Act upon petition by a person affected or who reasonably may be affected by such conduct, upon a showing that such conduct is threatened or that it has occurred on a particular premises in the past and may reasonably be expected to be repeated. The court may award damages to any person adversely affected by a violation of section 1 of this Act. Damages may include an award for punitive damages, license fees, travel or other expenses which were rendered futile by preventing the licensee from taking game or fish.

Signed March 12, 1983.

ILLINOIS

[S.H.A. ch. 61, ¶301]

Section 1. Definitions. As used in this Act:

a. "wild animal" means any wild creature the taking of which is authorized by the fish and game laws of the State.

b. "Taking", means the capture or killing of a wild animal and includes travel, camping, and other acts preparatory to taking which occur on lands or waters upon which the affected person has the right or privilege to take such wild animals.

[S.H.A. ch.61, ¶302]

Section 2. Any person who knowingly performs any of the following is guilty of a Class C misdemeanor;

(a) interferes with the lawful taking of a wild animal by another with intent to prevent the taking.

(b) disturbs or engages in an activity that will tend to disturb wild animals, with intent to prevent their lawful taking.

(c) disturbs another person who is engaged in the lawful taking of a wild animal or who is engaged in the process of taking, with intent to dissuade or otherwise prevent the taking.

(d) enters or remains upon public lands, or upon private lands without permission of the owner or his agent, with intent to violate this Section.

[S.H.A. ch. 61, ¶303]

Section 3. Any person who knowingly performs any of the following acts is guilty of a Class B misdemeanor;

(a) fails to obey the order of a peace officer to desist from conduct in violation of Section 2 of this Act if the officer observes such conduct, or has reasonable grounds to believe that the person has engaged in such conduct that day or that the person plans or intends to engage is such conduct that day on a specific premises.

[S.H.A. ch. 61 ¶304]

Section 4. (a) Any court may enjoin conduct which would be in violation of Section 2 of this Act upon petition by a person affected or who reasonably may be affected by such conduct, upon a showing that such conduct is threatened or that it has occurred on a particular premises in the past and that it is not unreasonable to expect that under similar circumstances it will be repeated.

(b) A court may award damages to any person adversely affected by a violation of Section 2, which may include an award for punitive damages. In addition to other items of special damage, the measure of damages may include expenditures of the affected person for license and permit fees, travel, guides, special equipment and supplies, to the extent that such expenditures were rendered futile by prevention of the taking of a wild animal.

2dSCS CSHB 163(Jud)

The following letter dated July 25, 1983, was received:

Re: 2d SCS CSHB 163 (Jud) -- Relating to harassment of persons lawfully engaged in hunting, fishing, camping, or trapping.

Dear Mr. Speaker:

Under the authority granted in art. II, sec. 15, of the Alaska Constitution, I have vetoed 2d Senate Committee Substitute for Committee Substitute for House Bill 163 (Jud) which makes it a misdemeanor to interfere with hunting, fishing, camping and trapping activity. Existing law, particularly the disorderly conduct, assault, criminal mischief, and general harassment statutes provide adequate penalties for criminal acts that interfere with these activities.

This legislation also presents a constitutional problem because it fails to define what constitutes "interference" with the protected activities. Conceivably, a person who talks too loud near a salmon stream may be subject to arrest and 30 days imprisonment under this bill for interfering with a sport fisherman's ability to catch a salmon. Criminal statutes must be sufficiently precise for the ordinary citizen to know what conduct is prohibited. Because the coverage of this statute is so vague, and since existing criminal statutes provide adequate coverage for physical interference with hunting and fishing activities, I have vetoed this bill.

Sincerely,

/s/ Bill Sheffield
Bill Sheffield
Governor

SCS CSHB 109(HESS) amS

The following letter dated July 27, 1983, was received:

Re: SCS CSHB 109(HESS) am S -- Relating to persons 16 or 17 years of age who are charged with unclassified or class A felonies; and amending the children's proceedings waiver provisions.

HB
537

BILL SHEFFIELD
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

January 31, 1984

The Honorable Joe Hayes
Speaker of the House
Pouch V
Juneau, AK 99811

Dear Representative Hayes:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill that will authorize a court to order the forfeiture to the state of a deadly weapon possessed or used by a defendant during the commission of a crime. As used in the bill, "deadly weapon" means any firearm (including a pistol, revolver, rifle, or shotgun) or anything designed for and capable of causing death or serious physical injury, including a knife, an axe, a club, metal knuckles, or an explosive.

Although current law authorizes the forfeiture of weapons used to commit fish and game offenses (AS 16.05.195) or offenses involving controlled substances (AS 17.30.110), there is no statutory provision that expressly allows a court to order, as part of a defendant's sentence, the forfeiture of a weapon used to commit crimes such as assault, robbery, or murder. AS 11.61.200 prohibits a felon, during the five years immediately following his "unconditional discharge" (i.e., release from custody or parole or probation) for a felony, from knowingly possessing "a firearm capable of being concealed on his person," and AS 12.55.080 gives a court broad powers to determine and impose reasonable probation conditions (such as no possession of firearms during the period of probation); however, neither of these statutes specifically authorizes a court to order the forfeiture of a weapon used to commit a crime.

To address this surprising omission in existing law, this bill adds a new paragraph to the general sentencing provisions in AS 12.55.015(a) to authorize a court to order the forfeiture of a weapon as part of a defendant's sentence following conviction. Forfeiture is not required in every case, but may be imposed at the court's discretion.

It is important that the elected officials in this state do as much as we can to decrease the number of violent crimes committed against innocent citizens. This bill will allow a court to remove a weapon used to commit a crime from the hands of the convicted criminal, and will prevent the convicted person from using that weapon to commit another crime in the future. I urge your prompt action on this bill.

Sincerely,

Bill Sheffield
Governor

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF PUBLIC SAFETY

POUCH N
JUNEAU, ALASKA 99811
PHONE: 465-4322

OFFICE OF THE COMMISSIONER

February 9, 1984

The Honorable Charlie Bussell, Chairman
House Judiciary Committee
Alaska State Legislature
Pouch V
Juneau, AK 99811

RE: Disposal of
Stolen Property
(Weapons)

Dear Chairman Bussell:

It has always been the policy of the Department of Public Safety that every effort will be made to return stolen property to its rightful owner.

If stolen property has been used in the commission of a crime, the weapon or property is returned to the rightful owner once the case has been adjudicated. That is, if the owner has reported the property stolen, or the Department, through its records or other means, can locate the respective owner.

Property that cannot be traced back to its rightful owner is held for a period of time until a Court order is issued disposing of same.

Customarily, the victim of theft reports the item or items to law enforcement, who in turn enters it into the computer system. This computer system is used as a tracking point in identifying stolen property and its rightful owner. It is important, of course, to be able to identify the stolen property specifically by a serial number of other specific identifier.

Sincerely,

Robert J. Sundberg
Commissioner

ANALYSIS

This bill amends AS 12.55.015(a) to give the court the discretionary power to order the forfeiture of a weapon as part of a defendant's sentence following conviction. Although prosecutors will have the added responsibility of advocating forfeiture, when appropriate, this advocacy duty can be accomplished without additional expense.

DEPARTMENT OF PUBLIC SAFETY

POSITION PAPER

Support

HOUSE BILL 557

This legislation adds a new paragraph to the general sentencing provisions statute which would authorize a court to order the forfeiture, as part of a defendant's sentence upon conviction, of a deadly weapon which was possessed or used by a defendant during the commission of a crime.

It is common to encounter persons who are convicted of violent crimes repeating similar offenses. By being able to hinder such individuals from obtaining the "tools" to commit such crimes an added degree of safety for the public can thus be provided.

Law enforcement agencies often spend a considerable effort returning knives, clubs, axes, etc. from evidence storage back to individuals who have committed violent crimes. Certainly this effort can be better expended if the weapons can be disposed of at the discretion of the State.

Robert J. Sundberg
Commissioner

incorporated into the criminal code as this section. Nell v. State, Ct. App. Op. No. 77 (File No. 5565), 642 P.2d 1361 (1982).

Legislative intent reflected. — The presumptive sentencing provisions contained in AS 12.55.125 and 12.55.155 reflect the legislature's intent to assure predictability and uniformity in sentencing by the use of fixed and relatively inflexible sentences, statutorily prescribed, for persons convicted of second or subsequent felony offenses. Juneby v. State, Ct. App. Op. No. 72 (File No. 5606), 641 P.2d 823 (1982), modified on other grounds and aff'd on rehearing, Ct. App. Op. No. 259 (File No. 5606), P.2d (1983).

The comprehensive and highly regimented provisions of the presumptive sentencing statute were enacted to assure that sentencing would become a predictable process and that disparity in sentencing between similarly situated offenders would be eliminated. Lacquement v. State, Ct. App. Op. No. 85 (File No. 5741), 644 P.2d 856 (1982).

Criteria enumerated in this section must be given primary significance in the sentencing of first offenders under the Alaska Revised Criminal Code. Kimbrell v. State, Ct. App. Op. No. 101 (File No. 5944), P.2d (1982).

Adjustment of presumptive sentence. — When applied to the adjustment of a presumptive sentence, the State v. Chaney, 477 P.2d 441 (Alaska (1970), analysis, as stated in AS 12.55.005, should not be broadened into a consideration of all circumstances of the offense, as if the sentence were being imposed anew, without regard for the presumptive term. Instead, consideration of the Chaney criteria should focus specifically on the aggravating and mitigating conduct in the particular case. The presumptive term should remain as the starting point of the analysis, and the Chaney criteria should be employed for the limited purpose of determining the extent to which the totality of the aggravating and mitigating factors will justify deviation from the presumptive term. Juneby v. State, Ct. App. Op. No. 72 (File No. 5606), 641 P.2d 823 (1982), aff'd, Ct. App. Op. No. 259 (File No. 5606), 665 P.2d 30 (1983).

Nature of offense is relevant factor in sentencing. — Throughout the supreme court's review of sentences, the degree of physical or psychological violence involved in the offense has been an important factor. Kelly v. State, Sup. Ct. Op. No. 2268 (File Nos. 4097, 4529), 622 P.2d 432 (1981).

In attempting to eliminate consideration of the nature of the offense from its consideration of relevant factors at sentencing, the superior court was clearly mistaken and the sentences in the case had to be reversed. Kelly v. State, Sup. Ct. Op. No. 2268 (File Nos. 4097, 4529), 622 P.2d 432 (1981).

Applied in Hartley v. State, Ct. App. Op. No. 153 (File No. 5737), P.2d (1982); Peetook v. State, Ct. App. Op. No. 178 (File No. 6630), P.2d (1982); Weston v. State, Ct. App. Op. No. 183 (File No. 5734), P.2d (1982); Tazruk v. State, Ct. App. Op. No. 195 (File No. 6954), P.2d (1982).

Quoted in Kelly v. State, Ct. App. Op. No. 251 (File No. 6311), P.2d (1983).

Stated in Erhart v. State, Ct. App. Op. No. 185 (File No. 6244), P.2d (1982); State v. Rastopsoff, Ct. App. Op. No. 228 (File No. 6295), P.2d (1983).

Cited in Nukapigak v. State, Ct. App. Op. No. 90 (File No. 5820), 645 P.2d 215 (1982); Howard v. State, Ct. App. Op. No. 260 (File Nos. 6027, 6123), P.2d (1983); Martin v. State, Ct. App. Op. No. 261 (File No. 6665), P.2d (1983).

Sec. 12.55.015. Authorized sentences. (a) Except as limited by AS 12.55.125 — 12.55.175, the court, in imposing sentence on a defendant convicted of an offense, may singly or in combination

(1) impose a fine when authorized by law and as provided in AS 12.55.035;

(2) order the defendant to be placed on probation under conditions specified by the court which may include provision for active supervision;

(3) impose a definite term of periodic imprisonment;

(4) impose a definite term of continuous imprisonment;

(5) order the defendant to make restitution as provided in AS 12.55.045;

(6) order the defendant to carry out a continuous or periodic program of community work as provided in AS 12.55.055;

(7) suspend execution of all or a portion of the sentence imposed as provided in AS 12.55.080;

(8) suspend imposition of sentence as provided in AS 12.55.085.

(b) The court, in exercising sentencing discretion as provided in this chapter, shall impose a sentence involving imprisonment when

(1) the defendant deserves to be imprisoned, considering the seriousness of his present offense and his prior criminal history, and imprisonment is equitable considering sentences imposed for other offenses and other defendants under similar circumstances;

(2) imprisonment is necessary to protect the public from further harm by the defendant; or

(3) sentences of lesser severity have been repeatedly imposed for substantially similar offenses in the past and have proven ineffective in deterring the defendant from further criminal conduct.

(c) In addition to the penalties authorized by this section, the court may invoke any authority conferred by law to order a forfeiture of property, suspend or revoke a license, remove a person from office, or impose any other civil penalty.

(d) A court, in imposing sentence on a defendant convicted of misconduct involving a controlled substance in the first, second, third, fourth, fifth, or sixth degree, may, in addition to any mandatory minimum sentence required by law, order the defendant to participate in a program for treatment of drug abusers if the court determines that the defendant is a drug abuser. Participation in such a program may be imposed as a condition of probation, a condition of suspended execution of sentence, or a condition of suspended imposition of sentence. Nothing in this subsection shall be construed to reduce any mandatory minimum sentence. (§ 12 ch 166 SLA 1978; am § 37 ch 102 SLA 1980; am § 3 ch 45 SLA 1982).

Cross references. — As to offenses relating to controlled substances, see AS 11.71.010 — 11.71.080.

Effect of amendments. — The 1982 amendment, effective January 1, 1983, added subsection (d).

Editor's notes. — For declaration of legislative purpose, see § 1, ch. 45, SLA 1982 in the 1982 Temporary and Special Acts and Resolves.

NOTES TO DECISIONS

Sec. 12.55.025. Sentencing procedures. (a) When imposing a sentence of imprisonment exceeding 90 days or upon a conviction of a violation of AS 04, a regulation adopted under AS 04, or an ordinance adopted in conformity with AS 04.21.010, the court, shall prepare, as a part of the record, a sentencing report which includes the following:

(1) a verbatim record of the sentencing hearing and any other in-court sentencing procedures;

(2) findings on material issues of fact and on factual questions required to be determined as a prerequisite to the selection of the sentence imposed;

(3) a clear statement of the terms of the sentence imposed; and

(4) recommendations as to the place of confinement or the manner of treatment.

(b) The sentencing report required under (a) of this section shall be furnished within 30 days after imposition of sentence to the Department of Law, the defendant, the division of corrections, the state Board of Parole if the defendant will be eligible for parole, and to the Alcoholic Beverage Control Board if the defendant is to be sentenced for a conviction of a violation of AS 04, a regulation adopted under AS 04, or an ordinance adopted under AS 04.21.010.

(c) Except as provided in (d) and (e) of this section, when a defendant is sentenced to imprisonment, his term of confinement commences on the date of imposition of sentence. A defendant shall receive credit for time spent in custody pending trial, sentencing, or appeal, if the detention was in connection with the offense for which sentence was imposed. A defendant may not receive credit for more than the actual time he spent in custody pending trial, sentencing, or appeal. The time during which a defendant is voluntarily absent from official detention after he has been sentenced may not be credited toward service of his sentence.

(d) A sentence of imprisonment shall be stayed if an appeal is taken and the defendant is admitted to bail. If an appeal is taken and the defendant is not admitted to bail, the Department of Health and Social Services shall designate the facility in which the defendant shall be detained pending appeal or admission to bail.

adoptions, child in need, domestic violence if child custody is an issue, or guardianship of a minor. By accelerating steps in the appellate process, which are explained in detail in the recommendations, final decisions would be obtainable in these cases within not more than 170 days from judgment.

G. District Court Jurisdiction

The personal injury and commercial task forces concluded that the monetary jurisdiction of the District Court is unrealistically low and would appreciably reduce the number of cases in the Superior Court if increased. This in turn would presumably expedite the processing of cases in the Superior Court. The task forces therefore recommended increasing District Court jurisdiction to include actions involving up to $25,000. (or higher limit - $$$.) As both recommendations are virtually identical, the recommendation is included in this report in the personal injury recommendations only at page 33.

H. Civil Rule 41: Voluntary Dismissal

Both the personal injury and the commercial task forces have recommended changes to Civil Rule 41 to assure that cases are not voluntarily dismissed to avoid court control of caseflow. The personal injury task force recommends that a case governed by its proposed new Civil Rule 16.2 may not be dismissed without approval by the court. The commercial task force recommends additional language to Civil Rule 41 requiring certification of the reasons for dismissal.

V. PERSONAL INJURY TASK FORCE RECOMMENDATIONS

The task force recommends the following addition to existing Civil Rule 16 to provide for status conferences.

A. New Civil Rule 16.2: Status Conference

(a) A status conference shall occur in each action filed in the Third District in which any party seeks damages for injury to person or property. The Judge in whose court the action is pending shall schedule and conduct the conference not more than 30 days following the last day on which a response to the complaint could have been filed. If service of process has not been completed the parties shall notify the court and the conference shall be continued until 30 days after service is completed.

(b) Each party shall funish to the other parties the following items or information and shall do so not later than the fifth day preceding the status conference:

1) photographs
2) statements
3) diagrams
4) investigative reports
5) contracts
6) medical reports and bills
7) tax returns
8) insurance policies
9) expert witness reports

The documents to be produced are examples of those which would be subject to discovery under Civil Rule 34.

(c) Each party shall attend the status conference in person or by counsel and shall be prepared to specify the discovery planned by that party. It is the intention that this Rule and the conference held herein be held after the parties have produced as much discoverable information about the incident complained of as possible in order to permit realistic evaluation of the case for possible settlement purposes or to draft a realistic litigation schedule to bring the case to conclusion within one year.

(d) The Judge shall enter an order at the conclusion of the conference (1) setting a date not more than 180 days following the conference by which discovery shall be completed by all parties; (2) setting a date not more than 120 days following the conference for a second status conference if the Judge is persuaded for good cause that discovery cannot be completed within 180 days; (3) scheduling a pretrial conference, as provided in this Rule, not more than 30 days following the date set, if any, for completion of discovery.

33

(e) In all cases where it appears to the court that the case should be considered as a complex case, then the court shall issue an order exempting the case from the time constraints of this Rule. The request for exemption shall be by motion under Civil Rule 77.

(f) The Judge in whose court the action is pending shall order a party or counsel who fails to comply with any order issued pursuant to this Rule to pay $200 for the first, $300 for the second, and $500 for each subsequent act of noncompliance. The Judge by written order may reduce, suspend, or eliminate an otherwise required payment upon a written and verified showing of good cause filed with the Court by which a party or counsel establishes that noncompliance was excusable.

(g) All sanctions for violations of this Rule shall be considered under the provisions of Civil Rules 37 and 95.

(h) A case assigned under this rule may not be dismissed under Civil Rule 41 without approval of the Court. Any stipulations between the parties or attorneys as to anything scheduled under this rule are invalid until approved by the court and the parties may not rely on such stipulation as an excuse to fail to comply with time limits, etc. unless the court has approved the same.

B. <u>District Court Jurisdiction</u>

Jurisdiction of the District Courts should be increased to encompass actions in which the amount of monetary damages involved does not exceed $25,000. (or the jurisdictional limit).

FROM: David Teal
Legislative Analyst

RE: Inflation Rates in Alaska

The following pages from the Alaska Department of Labor's publication entitled Alaska Planning Information describe the Anchorage Consumer Price Index (CPI). Although the reader is cautioned against use of the CPI as a measure of inflation, the index is frequently used for that purpose. The Anchorage CPI from 1969 through September of 1982 is listed on page 78. More recent figures are presented in the attached article published by the Institute of Social and Economic Research. The article also discusses some problems with the index and its use as a measure of the rate of inflation in Alaska.

* * *

If you have additional questions on this subject, we would be pleased to help. You may also wish to speak with John Boucher of the Research and Analysis Section of the Department of Labor. He can be reached at 465-4500.

Attachmenss

The new method for calculating homeownership prices is named *rental equivalency.* BLS will estimate homeownership prices on the basis of what it costs to rent similar houses. This method will solve the problem caused by the exclusion of AHFC-financed houses from the survey. During 1983 and 1984 the CPI-U and CPI-W will use differing methodologies, which will probably result in significant divergence in the 2 measures. The effect of the methodology change in slowing or speeding the rate of change in the CPI cannot be predicted with any assurance.

COMPARISON OF ANCHORAGE TO UNITED STATES

The Anchorage CPI rose less rapidly than the national CPI from October 1967 through October 1973. This trend reversed during the pipeline buildup, reflecting the inflationary impact of drastic economic expansion. Price increases slowed once the pipeline work force and related infrastructure were in place. During the peak pipeline years, 1976 and 1977, Anchorage prices increased at roughly the national rate. A new trend began after completion of the pipeline with Anchorage prices increasing less rapidly than the rest of the nation. Decreased population and consumer spending, and overbuilding during the pipeline era caused this shift.

Following the 1980 domination of residential lending by AHFC an accurate comparison of Anchorage

1/ Series began March 1978.

and U.S. price trends is not possible. It appears that Anchorage prices are actually increasing somewhat faster than the national rate, although it cannot be proven that this is the case. The rapid economic expansion in 1981 and 1982 could be expected to result in faster price increases than would otherwise occur.

URBAN FAMILY BUDGET

While the rate of change of the Consumer Price Index for Anchorage can be compared to the rate of change of CPI's in other areas, actual price comparisons to other areas are not possible based on CPI data. Other data available do allow interarea cost comparisons. U.S. Department of Labor, Bureau of Labor Statistics produces *Urban Family Budgets and Comparative Indexes for Selected Urban Areas* which provide a comparison of costs for Anchorage, 28 other areas outside Alaska and an urban U.S. average. It contains estimated income required to support low, medium and high budget standards of living for a hypothetical family of 4. Budgets do not represent how families actually spend their money, nor are they intended to represent a minimum level of adequate income. The budgets are only intended

CHAPTER VII COST OF LIVING MEASURES

INTRODUCTION

This section summarizes several cost of living measures which are frequently requested. Because there are several different measures, the user of these types of data needs to carefully evaluate different available measures to determine which is most useful for a particular application. Outlined in Table VII-1 is a description of the various measures discussed in detail.

CONSUMER PRICE INDEX

The Consumer Price Index (CPI) is a commonly misunderstood economic statistic despite frequent reports in the media. Following is a brief explanation of how the CPI is used, how it is computed, what it does and does not measure, and how to use it. Changes in CPI methodology and use are also considered. The U.S. Department of Labor, Bureau of Labor Statistics (BLS) produces a CPI for the United States and for selected urban areas. There are no CPI's for an entire state. In Alaska, a CPI is currently produced bimonthly for Anchorage.

USES

The CPI has 3 major uses. It measures the change in prices over time of a constant market basket of goods. This measure is an important economic statistic, and is crucial in evaluating government policy and private investment decisions. To convert the CPI from the actual index number to a percentage, use the following procedure:

INDEX POINT CHANGE

CPI current index	263.4
Less previous index	250 5
Equals index point change	12.9

Percentage change

Index point difference	12.9
Divided by previous index	250.5
Equals change	0.0515
Multiplied by 100	0.052 x 100
Equals percentage change	5.2%

This example illustrates that market basket prices for ***all urban consumers*** in Anchorage increased 5.2% between September 1981 and 1982.

The CPI is also used as a deflator of other dollar-denominated economic indexes. Time series data in ***real***, or inflation-free dollars are produced in this manner. To adjust (discount) dollars for the effect of inflation from any given year, use the following procedure:

CPI for past time	250.5
Divided by CPI for current time	263.4
Equals	0.951
Multiplied by current dollars	x$1,000.00
Equals past dollars	$951.03

The above example illustrates that $1,000.00 dollars in Anchorage in September 1982 would be the equivalent of $951.03 in September 1981.

A third use of the CPI is to escalate income and transfer payments. Many union contracts, government entitlement programs such as social security and food stamps, and private contractual agreements such as leases and child support contain escalation clauses based on the CPI. BLS estimates that a 1% increase in the national CPI results in a $2.5 increase in government expenditure.

Although the CPI is frequently reported in the media as the *inflation rate* or *cost of living increase*, this is technically not correct. The CPI is based on a constant market basket of goods which was last revised in 1972. For this reason, it is *prices* which are measured, not the *cost of living*. To measure the actual *cost of living*, the market basket would have to be revised more frequently to account for changing consumption patterns. It would also have to take into account living costs such as income taxes, which are not a component of the CPI market basket.

METHODOLOGY

The CPI market basket includes all types of expenditures that typical consumers make, from medical

services and fuel, to food and entertainment. Each month, Bureau of Census employees check actual prices in all surveyed urban areas.

Survey results are given to BLS and the CPI is computed by assigning weights to each good, depending on the importance of the good in the average consumer's expenditures. An index is available for individual components as well as a total for all items.

There are 2 sets of weightings, one for *all urban consumers,* and the other for *wage and clerical workers* which result in 2 CPI's for each urban area. The *all urban consumer* CPI (CPI-U) approximates the buying habits of 80% of the noninstitutional civilian population. The *wage and clerical* CPI (CPI-W) approximates the buying habits of 40% of noninstitutional civilian population. The *all urban consumers* CPI was begun in 1978. Previously only the *wage and clerical* CPI was available.

The form the CPI takes is a number rounded to one decimal place comparing the current cost of the market basket to the cost in an arbitrary base year. The base year currently being used is 1967. Rebasing of the index was scheduled for 1980 but has been indefinitely postponed due to federal budget constraints.

HOMEOWNERSHIP METHODOLOGY REVISION

Beginning in January 1983 for the CPI-U and January 1985 for the CPI-W, the method for calculating the homeownership component will be changed. Currently, BLS surveys house sale prices and mortgage prices to calculate the homeownership component. In Anchorage, the housing component is about 50% of the total for both CPI's, with homeowhership constituting a large portion of housing. BLS does not include Alaska Housing Finance Corporation (AHFC)-financed houses or loans in its survey. AHFC finances almost all house sales in Anchorage. BLS, lacking sufficient sample in Anchorage, uses prices from similar-sized cities in the Western region as a substitute. While this procedure is satisfactory in many instances, in this case the result is a seriously flawed CPI, as Anchorage housing and mortgage prices have changed differently than the prices which are used as a substitute.

Legislative Analyst

RE: Inflation Rates in Alaska

The following pages from the Alaska Department of Labor's publication entitled Alaska Planning Information describe the Anchorage Consumer Price Index (CPI). Although the reader is cautioned against use of the CPI as a measure of inflation, the index is frequently used for that purpose. The Anchorage CPI from 1969 through September of 1982 is listed on page 78. More recent figures are presented in the attached article published by the Institute of Social and Economic Research. The article also discusses some problems with the index and its use as a measure of the rate of inflation in Alaska.

* * *

If you have additional questions on this subject, we would be pleased to help. You may also wish to speak with John Boucher of the Research and Analysis Section of the Department of Labor. He can be reached at 465-4500.

Attachmenss

The new method for calculating homeownership prices is named *rental equivalency*. BLS will estimate homeownership prices on the basis of what it costs to rent similar houses. This method will solve the problem caused by the exclusion of AHFC-financed houses from the survey. During 1983 and 1984 the CPI-U and CPI-W will use differing methodologies, which will probably result in significant divergence in the 2 measures. The effect of the methodology change in slowing or speeding the rate of change in the CPI cannot be predicted with any assurance.

COMPARISON OF ANCHORAGE TO UNITED STATES

The Anchorage CPI rose less rapidly than the national CPI from October 1967 through October 1973. This trend reversed during the pipeline buildup, reflecting the inflationary impact of drastic economic expansion. Price increases slowed once the pipeline work force and related infrastructure were in place. During the peak pipeline years, 1976 and 1977, Anchorage prices increased at roughly the national rate. A new trend began after completion of the pipeline with Anchorage prices increasing less rapidly than the rest of the nation. Decreased population and consumer spending, and overbuilding during the pipeline era caused this shift.

Following the 1980 domination of residential lending by AHFC an accurate comparison of Anchorage

and U.S. price trends is not possible. It appears that Anchorage prices are actually increasing somewhat faster than the national rate, although it cannot be proven that this is the case. The rapid economic expansion in 1981 and 1982 could be expected to result in faster price increases than would otherwise occur.

URBAN FAMILY BUDGET

While the rate of change of the Consumer Price Index for Anchorage can be compared to the rate of change of CPI's in other areas, actual price comparisons to other areas are not possible based on CPI data. Other data available do allow interarea cost comparisons. U.S. Department of Labor, Bureau of Labor Statistics produces *Urban Family Budgets and Comparative Indexes for Selected Urban Areas* which provide a comparison of costs for Anchorage, 28 other areas outside Alaska and an urban U.S. average. It contains estimated income required to support low, medium and high budget standards of living for a hypothetical family of 4. Budgets do not represent how families actually spend their money, nor are they intended to represent a minimum level of adequate income. The budgets are only intended

CHAPTER VII COST OF LIVING MEASURES

INTRODUCTION

This section summarizes several cost of living measures which are frequently requested. Because there are several different measures, the user of these types of data needs to carefully evaluate different available measures to determine which is most useful for a particular application. Outlined in Table VII-1 is a description of the various measures discussed in detail.

CONSUMER PRICE INDEX

The Consumer Price Index (CPI) is a commonly misunderstood economic statistic despite frequent reports in the media. Following is a brief explanation of how the CPI is used, how it is computed, what it does and does not measure, and how to use it. Changes in CPI methodology and use are also considered. The U.S. Department of Labor, Bureau of Labor Statistics (BLS) produces a CPI for the United States and for selected urban areas. There are no CPI's for an entire state. In Alaska, a CPI is currently produced bimonthly for Anchorage.

USES

The CPI has 3 major uses. It measures the change in prices over time of a constant market basket of goods. This measure is an important economic statistic, and is crucial in evaluating government policy and private investment decisions. To convert the CPI from the actual index number to a percentage, use the following procedure:

INDEX POINT CHANGE

CPI current index	263.4
Less previous index	250.5
Equals index point change	12.9

Percentage change

Index point difference	12.9
Divided by previous index	250.5
Equals change	0.0515
Multiplied by 100	0.052 x 100
Equals percentage change	5.2%

This example illustrates that market basket prices for *all urban consumers* in Anchorage increased 5.2% between September 1981 and 1982.

The CPI is also used as a deflator of other dollar-denominated economic indexes. Time series data in *real*, or inflation-free dollars are produced in this manner. To adjust (discount) dollars for the effect of inflation from any given year, use the following procedure:

CPI for past time	250.5
Divided by CPI for current time	263.4
Equals	0.951
Multiplied by current dollars	x$1,000.00
Equals past dollars	$951.03 .

The above example illustrates that $1,000.00 dollars in Anchorage in September 1982 would be the equivalent of $951.03 in September 1981.

A third use of the CPI is to escalate income and transfer payments. Many union contracts, government entitlement programs such as social security and food stamps, and private contractual agreements such as leases and child support contain escalation clauses based on the CPI. BLS estimates that a 1% increase in the national CPI results in a $2.5 increase in government expenditure.

Although the CPI is frequently reported in the media as the *inflation rate* or *cost of living increase*, this is technically not correct. The CPI is based on a constant market basket of goods which was last revised in 1972. For this reason, it is *prices* which are measured, not the *cost of living*. To measure the actual *cost of living*, the market basket would have to be revised more frequently to account for changing consumption patterns. It would also have to take into account living costs such as income taxes, which are not a component of the CPI market basket.

METHODOLOGY

The CPI market basket includes all types of expenditures that typical consumers make, from medical

services and fuel, to food and entertainment. Each month, Bureau of Census employees check actual prices in all surveyed urban areas.

Survey results are given to BLS and the CPI is computed by assigning weights to each good, depending on the importance of the good in the average consumer's expenditures. An index is available for individual components as well as a total for all items.

There are 2 sets of weightings, one for *all urban consumers,* and the other for *wage and clerical workers* which result in 2 CPI's for each urban area. The *all urban consumer* CPI (CPI-U) approximates the buying habits of 80% of the noninstitutional civilian population. The *wage and clerical* CPI (CPI-W) approximates the buying habits of 40% of noninstitutional civilian population. The *all urban consumers* CPI was begun in 1978. Previously only the *wage and clerical* CPI was available.

The form the CPI takes is a number rounded to one decimal place comparing the current cost of the market basket to the cost in an arbitrary base year. The base year currently being used is 1967. Rebasing of the index was scheduled for 1980 but has been indefinitely postponed due to federal budget constraints.

HOMEOWNERSHIP METHODOLOGY REVISION

Beginning in January 1983 for the CPI-U and January 1985 for the CPI-W, the method for calculating the homeownership component will be changed. Currently, BLS surveys house sale prices and mortgage prices to calculate the homeownership component. In Anchorage, the housing component is about 50% of the total for both CPI's, with homeowhership constituting a large portion of housing. BLS does not include Alaska Housing Finance Corporation (AHFC)-financed houses or loans in its survey. AHFC finances almost all house sales in Anchorage. BLS, lacking sufficient sample in Anchorage, uses prices from similar-sized cities in the Western region as a substitute. While this procedure is satisfactory in many instances, in this case the result is a seriously flawed CPI, as Anchorage housing and mortgage prices have changed differently than the prices which are used as a substitute.

adoptions, child in need, domestic violence if child custody is an issue, or guardianship of a minor. By accelerating steps in the appellate process, which are explained in detail in the recommendations, final decisions would be obtainable in these cases within not more than 170 days from judgment.

G. District Court Jurisdiction

The personal injury and commercial task forces concluded that the monetary jurisdiction of the District Court is unrealistically low and would appreciably reduce the number of cases in the Superior Court if increased. This in turn would presumably expedite the processing of cases in the Superior Court. The task forces therefore recommended increasing District Court jurisdiction to include actions involving up to $25,000. (or higher limit - $$$.) As both recommendations are virtually identical, the recommendation is included in this report in the personal injury recommendations only at page 33.

H. Civil Rule 41: Voluntary Dismissal

Both the personal injury and the commercial task forces have recommended changes to Civil Rule 41 to assure that cases are not voluntarily dismissed to avoid court control of caseflow. The personal injury task force recommends that a case governed by its proposed new Civil Rule 16.2 may not be dismissed without approval by the court. The commercial task force recommends additional language to Civil Rule 41 requiring certification of the reasons for dismissal.

V. PERSONAL INJURY TASK FORCE RECOMMENDATIONS

The task force recommends the following addition to existing Civil Rule 16 to provide for status conferences.

A. New Civil Rule 16.2: Status Conference

(a) A status conference shall occur in each action filed in the Third District in which any party seeks damages for injury to person or property. The Judge in whose court the action is pending shall schedule and conduct the conference not more than 30 days following the last day on which a response to the complaint could have been filed. If service of process has not been completed the parties shall notify the court and the conference shall be continued until 30 days after service is completed.

(b) Each party shall furnish to the other parties the following items or information and shall do so not later than the fifth day preceding the status conference:

1) photographs
2) statements
3) diagrams
4) investigative reports
5) contracts
6) medical reports and bills
7) tax returns
8) insurance policies
9) expert witness reports

The documents to be produced are examples of those which would be subject to discovery under Civil Rule 34.

(c) Each party shall attend the status conference in person or by counsel and shall be prepared to specify the discovery planned by that party. It is the intention that this Rule and the conference held herein be held after the parties have produced as much discoverable information about the incident complained of as possible in order to permit realistic evaluation of the case for possible settlement purposes or to draft a realistic litigation schedule to bring the case to conclusion within one year.

(d) The Judge shall enter an order at the conclusion of the conference (1) setting a date not more than 180 days following the conference by which discovery shall be completed by all parties; (2) setting a date not more than 120 days following the conference for a second status conference if the Judge is persuaded for good cause that discovery cannot be completed within 180 days; (3) scheduling a pretrial conference, as provided in this Rule, not more than 30 days following the date set, if any, for completion of discovery.

(e) In all cases where it appears to the court that the case should be considered as a complex case, then the court shall issue an order exempting the case from the time constraints of this Rule. The request for exemption shall be by motion under Civil Rule 77.

(f) The Judge in whose court the action is pending shall order a party or counsel who fails to comply with any order issued pursuant to this Rule to pay $200 for the first, $300 for the second, and $500 for each subsequent act of noncompliance. The Judge by written order may reduce, suspend, or eliminate an otherwise required payment upon a written and verified showing of good cause filed with the Court by which a party or counsel establishes that noncompliance was excusable.

(g) All sanctions for violations of this Rule shall be considered under the provisions of Civil Rules 37 and 95.

(h) A case assigned under this rule may not be dismissed under Civil Rule 41 without approval of the Court. Any stipulations between the parties or attorneys as to anything scheduled under this rule are invalid until approved by the court and the parties may not rely on such stipulation as an excuse to fail to comply with time limits, etc. unless the court has approved the same.

B. District Court Jurisdiction

Jurisdiction of the District Courts should be increased to encompass actions in which the amount of monetary damages involved does not exceed $25,000. (or the jurisdictional limit).

Legislative history reports. — For report on ch. 71, SLA 1972 (HCSSB 383 am H), see 1972 House Journal, p. 898.

Sec. 22.20.110. Duty of the commissioner in the court of appeals, the superior court and district courts. When required by the supreme court, the commissioner shall serve and execute all process issued by the court of appeals, the superior court and the district courts, attend to and wait upon grand and petit juries, maintain order, attend the sessions of the courts, and exercise the power and perform the duties concerning all matters within the jurisdiction of the courts as may be assigned. The commissioner is the executive officer of the court of appeals, the superior court and district courts. (§ 3 ch 95 SLA 1960; am § 3 ch 24 SLA 1966; am § 17 ch 12 SLA 1980)

Effect of amendments. — The 1980 amendment inserted "the court of appeals" following "issued by" near the beginning of the section and following "executive officer of" near the end of the section.

Editor's notes. — This section was redrafted by the revisor of statutes to remove personal pronouns in conformity with AS 01.05.031(c) and § 4, Chapter 58, SLA 1982.

Sec. 22.20.120. General authority and duty of the commissioner. The authority necessary for the lawful performance of the duties of execution of service of process, seizure and detention of property, the sale of property forfeited or levied upon, and arrest of persons, in connection with civil matters, is vested in the commissioner. Any court of the state issuing any process may direct the process for execution of service to the commissioner or the designee of the commissioner. (§ 4 ch 95 SLA 1960; am § 22 ch 71 SLA 1972)

Editor's notes. — This section was redrafted by the revisor of statutes to remove personal pronouns in conformity with AS 01.05.031(c) and § 4, Chapter 58, SLA 1982.

Legislative history reports. — For report on ch. 71, SLA 1972 (HCSSB 383 am H), see 1972 House Journal, p. 898.

Sec. 22.20.130. Assistance for commissioner. (a) The commissioner shall be assisted in the execution of the authority and duty vested by AS 22.20.100 — 22.20.140 by such members of the division of state troopers or Alaska state constabulary as the commissioner designates. The commissioner is responsible on official bond for the acts of all persons so designated. The persons so designated have the same authority and duty granted to the commissioner and are subject to orders of the courts of the state in the same manner as the commissioner. They are responsible to the commissioner and to the courts, and shall be executive officers of the courts.

(b) The commissioner has the responsibility of providing sufficient personnel to effectively execute the authority and duty vested by AS 22.20.100 — 22.20.140, and shall adopt the necessary rules and regulations within his department for the efficent direction, control and

Revisor's notes. — Formerly AS 09.55.610. Renumbered in 1983.

Effect of amendments. — The 1982 amendment substituted "20 days" for "10 days" in the third sentence of subsection (c) and "three days" for "two days" near the beginning of subsection (e).

Sec. 25.35.030. Forms for filing petition. (a) The Alaska court system, in cooperation with interested persons and organizations, shall prepare forms and instructions for the use of persons seeking an order for relief under AS 25.35.010 or 25.35.020, including forms for waiving filing fees on the basis of indigency. The forms shall conform to the requirements of AS 25.35.010 and 25.35.020 and the Alaska Rules of Civil Procedure, except that information on the forms may be filled in by legible handwriting. The office of the clerk of each superior and district court shall make the forms and instructions available to the public.

(b) *[Repealed, § 16 ch 61 SLA 1982.]* (§ 1 ch 139 SLA 1980; am § 16 ch 61 SLA 1982)

Revisor's notes. — Formerly AS 09.55.620. Renumbered in 1983.

Cross references. — For related court rules on filing fees, see Admin. R. 9 (f)(1) and Admin. R. 10.

Effect of amendments. — The 1982 amendment repealed subsection (b), which read "The form for petition prepared under (a) of this section shall include a notice that a false statement made in it stating that the respondent has subjected the petitioner to domestic violence constitutes the crime of unsworn falsification under AS 11.56.210, which is punishable by a maximum term of imprisonment of one year and a $5000 fine."

Sec. 25.35.040. Service of process. Process issued under AS 25.35.010 or 25.35.020 shall be promptly served and executed. If a state peace officer is not available, a superior court, district court, or magistrate may designate any other peace officer to serve and execute process issued under AS 25.35.010 or 25.35.020. A peace officer shall use every reasonable means to serve process issued under AS 25.35.010 or 25.35.020. (§ 7 ch 61 SLA 1982)

Revisor's notes. — Formerly AS 09.55.625. Renumbered in 1983.

Sec. 25.35.050. Notification to law enforcement agencies. If a superior court, district court, or magistrate issues an order under AS 25.35.010 or 25.35.020 restraining a respondent from subjecting a petitioner to domestic violence, the superior court, district court, or magistrate shall transmit a copy of the order to the appropriate local law enforcement agency. Each law enforcement agency shall establish procedures to inform their peace officers of copies of the orders received by the law enforcement agency under this section. Peace officers shall use every reasonable means to enforce an order issued under AS 25.35.010 or 25.35.020. (§ 1 ch 139 SLA 1980)

and to be heard either in person or by attorney. If, at the hearing, the superior court finds that the petitioner has been subjected to domestic violence by the respondent, the superior court may issue any order it determines to be necessary for the protection of the health, safety or welfare of the petitioner or of a minor child in the care of the petitioner. An order under this subsection may include provisions which

(1) restrain the respondent from subjecting the petitioner to domestic violence;

(2) direct the respondent to vacate the home of the petitioner;

(3) restrain the respondent from communicating directly or indirectly with the petitioner;

(4) direct the respondent to pay support for the petitioner or for a minor child in the care of the petitioner if there is an independent legal obligation of the respondent to support the petitioner or the child;

(5) award temporary custody of a minor child to the petitioner;

(6) direct the respondent to pay medical expenses incurred by the petitioner as a result of the domestic violence;

(7) direct the respondent to engage in personal or family counseling;

(8) restrain the respondent from entering a propelled vehicle in the possession of or occupied by the petitioner.

(c) An order issued under this section remains in effect for a period of time not to exceed 90 days. However, the petitioner may petition the superior court for an extension of a provision of the order if the provision is described in (b)(1), (b)(2), (b)(3), (b)(7), or (b)(8) of this section. If the superior court, after notice to the respondent of and a hearing on the petition for the extension in accordance with the procedures described in (b) of this section, finds that an extension of the provision of the order is necessary to protect the petitioner or a minor child in the care of the petitioner from domestic violence, the superior court may extend the provision of the order for a period of time not to exceed 45 days. The court may not grant more than one extension under this subsection.

(d) Proceedings under this section do not preclude any other available civil or criminal remedies. (§ 1 ch 139 SLA 1980; am §§ 3, 4 ch 61 SLA 1982)

Revisor's notes. — Formerly AS 09.55.600. Renumbered in 1983.

Cross references. — For release before trial in cases involving domestic violence, see AS 12.30.025; for related provisions concerning criminal trespass, see AS 11.46.320 — 11.46.350; for related provisions concerning harassment, see AS 11.61.120(a)(6).

Effect of amendments. — The 1982 amendment added paragraphs (7) and (8) to subsection (b), and in subsection (c), substituted "90 days" for "45 days" at the end of the first sentence, substituted "an extension" for "extensions" and "(b)(1), (b)(2), (b)(3), (b)(7) or (b)(8) of this section" for "(b)(1), (b)(2) or (b)(3) of this section" in the second sentence, inserted "or a minor child in the care of the petitioner" in the third sentence, and added the last sentence.

THE BILL WILL TRANSFER PRIMARY RESPONSIBILITY FOR THE SERVICE OF PROCESS FOR DOMESTIC VIOLENCE INJUNCTIONS FROM THE STATE TROOPERS TO LOCAL POL CE DEPARTMENTS. CURRENT LAW PLACES PRIMARY RESPONSIBILITY FOR SERVICE OF THESE COURT ORDERS ON THE STATE TROOPERS, BUT PROVIDES THAT A COURT MAY ORDER ANY OTHER PEACE OFFICER TO SERVE THEM IF A STATE TROOPER IS NOT AVAILABLE. AS 25.35.040. THIS BILL WOULD REQUIRE LOCAL OFFICERS TO SERVE THE ORDERS IF THE PERSON TO BE SERVED IS PRESENT OR RESIDES WITHIN THE LOCAL DEPARTMENT'S JURISDICTION. IF A LOCAL OFFICER IS NOT AVAILABLE, THE COURT MAY DIRECT A STATE TROOPER TO SERVE THE COURT ORDER.

THIS CHANGE IN THE LAW IS NEEDED BECAUSE THE NUMBER OF DOMESTIC VIOLENCE ORDERS ISSUED BY COURTS EACH YEAR HAS 'NCREASED DRAMATICALLY SINCE AS 25.35.010 -- 25.35.060 (FORMERLY AS 09.55.600 -- 09.55.640) TOOK EFFECT IN SEPTEMBER OF 1980. IN ANCHORAGE ALONE, THE NUMBER OF DOMESTIC VIOLENCE ORDERS THAT MUST BE SERVED HAS CLIMBED FROM AN AVERAGE OF 15 TO AN AVERAGE OF 80 A MONTH. THE VAST MAJORITY OF THESE ORDERS (APPROXIMATELY 90 PERCENT) IS DIRECTED TO PERSONS WHO RESIDE WITHIN MUNICIPALITIES THAT HAVE LOCAL POLICE DEPARTMENTS.

IN MANY CASES, A LOCAL POLICE OFFICER WAS CALLED TO THE DOMESTIC DISTURBANCE WHICH GAVE RISE TO THE NEED TO OBTAIN A DOMESTIC VIOLENCE INJUNCTION. THE OFFICER MAY EVEN HAVE TRANSPORTED THE VICTIM OF THE ASSAULT TO THE LOCAL MAGISTRATE OR JUDGE TO OBTAIN THE ORDER. TO

REQUIRE THAT THE RESULTING COURT ORDER BE SERVED BY A STATE TROOPER WHOSE PRIMARY PATROL AREA IS OFTEN OUTSIDEOF THE CITY OR BOROUGH AND WHO HAS HAD NO PREVIOUS CONTACT WITH THE VICTIM OR THE CASE IS NOT AN EFFICIENT USE OF LAW ENFORCEMENT RESOURCES, AND MAY CAUSE A DELAY IN THE SERVICE OF THE ORDER. IN THE LARGER CITIES, SERVICE OF THESE INJUNCTIONS IS MADE BY OFFICERS IN THE JUDICIAL SERVICES SECTION OF THE STATE TROOPERS. THE NEED TO ENSURE ADEQUATE SECURITY IN COURTROOMS, TRANSPORT PRISONERS, AND SERVE CRIMINAL ARREST WARRANTS AND SUBPOENAS SEVERELY LIMITS THE AMOUNT OF TIME AND EFFORT A JUDICIAL SERVICES OFFICER MAY DEVOTE TO SERVICE OF DOMESTIC VIOLENCE INJUNCTIONS.

IN THE INTERESTS OF PROVIDING THE QUICKEST AND BEST POSSIBLE PROTECTION FOR VICTIMS OF DOMESTIC VIOLENCE, AND OF MAKING THE WISEST POSSIBLE USE OF AVAILABLE LAW ENFORCEMENT RESOURCES, I URGE YOUR PROMPT PASSAGE OF THIS BILL.

DEPARTMENT OF PUBLIC SAFETY

POSITION PAPER - HB 562

Support

During the last two years the tremendous increase in the number of domestic violence orders to be served has placed a severe drain upon the manpower of the Alaska State Troopers and has caused some delay in the services of these orders. This legislation transfers the primary responsibility for the service of these injunctions from the State Troopers to local police departments. State Troopers would continue to serve these orders when local officers are not available.

Domestic violence injunctions are served by Troopers assigned to the Judicial Services section of the Alaska State Troopers. This section is also responsible for courtroom security, prisoner transportation and the service of subpoenas and warrants. The Alaska State Troopers have never received funding to cover the costs associated with the service of domestic violence orders. Thus this increased work load falls on an already overloaded unit and the service of these orders must sometimes be subordinated to other law enforcement demands.

The majority of domestic violence orders are served within the boundaries of political subdivisions which have their own police agencies. The local police are often more familiar with the locations and individuals involved in domestic violence situations and therefore can more safely and efficiently serve orders.

Fiscal Note
Analysis
HB 571

March 8, 1984

The net effect of HB 571 is to increase the number of judges in the Third Judicial District by one superior court judge and two district court judges, at Anchorage. This increase has been requested by the courts because of substantial increases in both felony and misdemeanor cases and because of a a growing backlog of both criminal and civil cases. During the last 15 months, the Anchorage area has grown by approximately 30,000 residents. This increase in itself exceeds the total population served by the criminal justice system in Juneau which is made up of 2 superior court judges, 1 district court judge and a District Attorney's Office consisting of three attorneys, one paralegal assistant and three legal secretaries. By comparison, no additional judicial or prosecution positions have been authorized to handle the increased caseload in Anchorage during this period.

Included in this population growth is a disproportionate number of young, highly transient males who tend to account for a considerable portion of the increase in serious criminal cases in the Anchorage area. Although many of the presently backlogged cases consist of minor offenses, there has also been a disturbing increase in the number of sexual assault cases involving children and in the number of complex homicide cases which require substantial additional judicial and prosecution resources in order to ensure that they are properly handled.

Historically, there has been a direct correlation between the number of judges in a particular district and the number of prosecutors required in order to meet court calendars. This correlation has in the past and should equal one prosecutor for each full-time judge. This balance is required in order to ensure that cases are effectively and efficiently processed. Over the past few years the balance between judges and prosecutors in the Third Judicial District has tipped towards the judicial side of the scales. There are currently 14 authorized superior court judges and 9 district court judges in the Third Judicial District. In addition, there are 4 full-time magistrates in the district who also have authority to serve as district judges, thus bringing the number of full-time judges to 27, as opposed to 23 prosecuting attorneys. The number of prosecutors has not kept pace with the number of judges due to legislative authorized increases in the last five to six years which have not included additional prosecuting attorney resources. To an extent, the Department of Law has been able to handle most case settings as a result of economies of scale realized over the past several years. However, we are rapidly falling behind in our ability to adequately cover present court calendars, particularly in the rural areas. This problem will become particularly severe if these additional judicial positions are added without an increase in prosecuting attorney positions.

The Criminal Division of the department will not be able to continue to handle all of the cases and court calendars, particularly with the addition of these new judges, without additional prosecution resources. This imbalance between judges and prosecutors will be particularly severe at the district court level because of the higher volume of cases, although there will also be substantial impact at the superior court level because of the need to assign the new superior court judge in Anchorage to criminal cases.

In his State of Judiciary message to the Legislature on February 28, 1984, Chief Justice Burke anticipated that the new superior court judge would be assigned to the criminal division. See Senate and House Joint Journal Supplement No. 20 at pages 7-8. The administrative office of the Court System has indicated, however, that the new superior court judge will be expected to devote half of his time to criminal cases and half to civil cases. Regardless of the actual breakdown of the duties assigned to the new judge, in order to meet the speedy trial requirements of Criminal Rule 45 in the face of the increased number and complexity of felony criminal trials, it is certain that civil division judges will continue to handle a substantial percentage of the criminal case load.

Recognizing that the three new judges will devote some proportion of their time to civil cases, we are requesting that the District Attorney's Office at Anchorage be increased by two (rather than three) attorneys, one paralegal assistant and one legal secretary. One attorney will be assigned to the superior court to handle major felony prosecutions with emphasis on sexual assault and homicide cases. The second attorney will be assigned to district court cases and handle misdemeanor cases exclusively. The Criminal Division believes that it can, for the present, adequately cover the caseload through the addition of two attorneys, rather than three, through an additional paralegal assistant at substantially lesser cost to assist in case preparation and the coordination of witnesses. A single legal secretary position will be needed to provide support services in the processing of these cases and to handle the work that will be generated by the two attorneys and the paralegal. The total costs associated with these positions is $292,800. Attached is a summary sheet which breaks this cost down by each position and relevant budgetary object code.

4A KEY NUMBER ___ ___ - ___ ___ - ___ ___ - ___ ___ - ___ ___

This is one of two attorney positions that are being requested to provide the additional prosecution services that will be needed to handle an expanded court calendar when the number of judgeships in Anchorage is increased. This position will handle sexual assault cases in the superior court, particularly those involving children, and the position will also handle misdemeanor cases in the district court. Allocation to the full working level of Attorney IV is recommended because of the requirement to handle sensitive crimes independently.

JUSTIFICATION

This is the second of two attorney positions being requested to handle the expanded court calendar that will occur when three new judges are added in the Third Judicial District at Anchorage. This position will be assigned to district court matters and handle the growing backlog of misdemeanor cases that has been caused by a rapidly growing population. Allocation to the Attorney III grade is recommended because of the level of criminal violations to be prosecuted by the position.

JUSTIFICATION

This paralegal position is requested to provide victim/witness assistance services to the victims of child sexual abuse. A part of the growing case backlog that caused by the courts to seek additional judges at Anchorage has been a disturbing increase in the number of child sexual abuse cases. The victims of this abuse often have the additional ordeal of appearing in court as witnesses against the persons who have abused them. Paralegal assistants have proven invaluable in interviewing and assisting these victims in a manner that assures their well-being as witnesses.

CSHB 571

FISCAL NOTE ANALYSIS (Cont'd)

In his State of the Judiciary message, Chief Justice Burke pointed out a need for an additional two district court and two superior court judges. In the original version of HB 571, the Court System had asked for only one superior court judge and two district court judges, with the assumption that an additional superior court judge could be requested next year or at least in the near future. Since the State of the Judiciary message, the caseloads of the Anchorage Court System have continued to grow and this growth strongly supports the need for two district court and two superior court judges. If two district court and two superior court judges were authorized, the cost in fiscal year '85 would be approximately $890,000.

The Court System takes no position regarding the Committee Substitute which increases the district court level by four additional judges.

Dear Chairman Bussell and Rep. Clocksin:

At your hearing on Saturday, March 17, 1984, regarding House Bill 571, Representative Clocksin asked if the number of cases superior court judges were taking under advisement had changed over the past two to three years.

In reviewing the data compiled by the technical operations division of the administrative director's office, it appears the number of cases taken under advisement for FY 82 compared with FY 83 were relatively constant, 125 and 114 respectively.

If you have any questions regarding the above, please feel free to contact my office.

Sincerely,

Albert H. Szal

Re: House Bill 571

Dear Chairman Bussell:

I regret that I am unable to personally attend and testify at the hearing regarding the pending legislation seeking authorization for additional District Court and Superior Court judges (House Bill 571). With this letter, I wish to summarize the comments and testimony I would have provided at the hearing in Anchorage on March 17, 1984.

By way of background, I have been serving as a Superior Court Judge in Anchorage for over three years. I am, and have been, assigned to the Civil Division of the Court during all of this time.

I earnestly support the Alaska Court System's application for at least one additional Superior Court position -- and ideally more than one -- for the Anchorage Superior Court Bench.

Since coming to the Bench three years ago, I have seen my civil case load (meaning non-domestic, non-criminal cases) increase from approximately 600 cases in April of 1981 to approximately 1100 cases at the present time.

In addition to an absolute increase in the number of cases, it is also my impression that there is an increase in the complexity, length, and expense of the civil

cases that are now being litigated. Thus, for example, I have spent the last four months trying two cases: a prisoners' class action case that lasted 7 weeks, and a securities litigation case that lasted 11-12 weeks. In the latter case alone, the parties filed 50-60 volumes of pleadings (exclusive of certain discovery documents), presented in excess of 3,000 documentary exhibits at trial, filed innumerable motions before and during trial, and took at least 15 petitions for review (interlocutory appellate review attempts) to the Alaska Supreme Court. Although this latter case may be an extreme example, it is my impression that in the last year or so, the Court System has experienced a relative increase in complex civil litigation.

Besides, the cases mentioned above, during the last year I have also tried a class action civil rights case that lasted 5-6 weeks and a wrongful death action that lasted 4-5 weeks. During the next 12-14 months, I have currently scheduled for trial 4 cases which are expected to last one month or more in duration, including a condemnation action of approximately 4 weeks; a personal injury action of approximately 4-5 weeks; a wrongful death action of approximately 5 weeks; and a commercial insurance litigation case of approximately 8 weeks.

The impact of larger case loads, as well as lengthier and more complex civil litigation on the trial calendar is obvious. The four months of trial time I spent on the two cases mentioned above consumed nearly 40% of the total available trial time on this year's calendar, thereby making it impossible for other cases to be tried during that period. Further, delays in obtaining trial setting conferences, and trial dates, are increasing at a substantial rate. Currently, a trial which would require more than 2 weeks could not be set on my trial calendar until mid-April, 1985 -- a 12-14 month delay. I am informed that most of the other civil judges' calendars are in approximately the same circumstance.

Additionally, it is my impression that more cases, including the complex cases, are proceeding to trial, rather than settling, or being disposed of by some other means. This means that the judges will tend to "overset" fewer cases per week. Several years ago, when fewer cases were proceeding to trial, I was oversetting 3-4 cases per week. Now that more cases appear to be going through trial, I am oversetting only 1-2 cases a week -- and in some instances, not oversetting at all. This, of course, means still further delays between the commencement of an action and the trial date in the action.

The increase in cases and trials also impacts adversely on the Court's time and resources available for non-trial matters which require judicial attention. Thus, for example, during a typical day, a civil judge would hold trial from 8:30 a.m. through 1:30 p.m. During the "luncheon" break (1:30 - 2:30), the judge will typically meet with his or her law clerk and review emergency matters which must be considered that day. Then, for the remainder of the afternoon, the judge typically would have scheduled settlement conferences, trial setting conferences, oral argument hearings or motions, oral argument hearings on agency appeals, evidentiary hearings on injunctions, hearings on domestic violence petitions, and other emergency matters. In view of the foregoing hearings, it is not uncommon for a judge to run well into the early evening before completing the day's activities.

In addition to trial matters, hearings and conferences scheduled during the typical day, the judge must also deal with numerous matters submitted to the Court on motions or briefs, without requests for oral argument or hearing. A rough estimate of a typical day in my chambers is that we receive, and are required to give attention to, as many as 2-3 dozen matters per day. These matters would include motions on the briefs (including discovery motions, dispositive motions, motions for sanctions, motions to amend pleadings, and the like), stipulations, emergency motions, and appeals on the briefs from administrative agencies or entities. The Court must also deal with, as a matter of priority, domestic violence petitions. Such petitions are typically being handled through hearing time in the Courtroom, although the judges are on call 24 hours a day.

Given the increase in cases, and increase in complex cases, the number of matters submitted to the Court on the briefs has also dramatically increased. And, consistently, the delays in issuing rulings on such matters have likewise increased. For example, it may take months to issue rulings on summary judgment motions or agency appeals that have been submitted to the Court on the briefs, without oral argument.

In order to perform all of the foregoing tasks, the Court has an extremely limited staff, consisting of one full-time law clerk, one secretary, and the judge. In my view, substantially additional assistance is, and will be, absolutely necessary in order to process the increased work load in a prompt and professional manner. At a minimum, it seems to me that additional Superior Court judges are immediately required. Ideally, additional support staff,

including further law clerk positions and/or externship positions would be extremely useful.

In the absence of additional judicial manpower, it seems to me quite realistic to expect that the already substantial delays in processing cases through trial will become even greater. Ultimately, I suppose, it becomes a policy question of how much delay is too much delay? I respectfully submit that for Alaska's population, and particularly for the population of the Southcentral area embodied in the Third Judicial District, delays of ½ to 2 years to get cases to and through trials are unacceptable. Longer delays are, obviously, more unacceptable.

Accordingly, the thoughtful attention of you and your Committee to the pressing need for additional judicial manpower will be greatly appreciated.

Thank you sincerely for your consideration of these remarks.

Very truly yours,

Douglas J. Serdahely
Judge of the Superior Court

Analysis:

Section 1 of the bill provides for two changes to the current law. First, it provides that convicted felons are ineligible for a permanent fund dividend for any year, when during all or part of that year as a result of their felony conviction, the individual was:

a. incarcerated
b. on probation
c. on parole
d. under a suspended imposition of sentence.

Secondly, it provides that an amount equal to the foregone dividend would be transferred to the crime victim compensation fund.

There are several major factors which make the provisions of this section, as written, difficult to administer:

1. The permanent fund dividend program is designed by statute to make payments for the same given year for which applications are filed. For example, the 1983 dividend was declared on September 1, 1983, and largely paid by December 31, 1983, based on applications received during the filing period April 1 - June 30, 1983. Assuming the Department of Revenue was able to sort out applications filed by convicted felons who met the requirements of Section 1, we would have to hold all payments until the end of the dividend year, in order to review all applications for "felon status" through the whole year including December. This would not necessarily change the filing period or the declaration date, but would mandate payments being made no sooner than January or February of the year following the dividend year. After the department makes one last massive cross examination of all applications filed, probably in January following the dividend year. The department would still attempt to make all payments by April 30 of the year following the dividend year.

2. The second problem is determining which PFD applicants are convicted felons who meet the statutory test (i.e. incarcerated, on probation, etc.). For the department to identify those persons would require a one-time matching of the PFD master file for a given year against a currently non-existent data base of all Alaskans who met the prescribed condition during the preceding dividend year. This cross match is the one described above as taking place in January following the dividend year. Creating the needed data base would involve two steps:
   a) Using the OPSIS data base recently established by the Corrections Department, Health & Social Services would need to build a file of all convicted felons who as a result of their felony conviction were, at any time during the dividend year:
      1) incarcerated (in or out of Alaska)
      2) on probation (in or out of Alaska)
      3) on parole (in or out of Alaska).

   It should be noted that Corrections has no control over, or records of, convicted felons under suspended imposition of sentence, nor does Corrections have any record of, or knowledge of, Alaska residents who

Analysis (cont.)

are convicted of felonies outside Alaska and are still outside Alaska imprisoned, on parole, on probation, or under suspended sentence. Roger Lang, Deputy Commissioner of Administration for Corrections expressed the opinion that the incidences of the latter would be negligible.

b) Literally building a tracking system of those felons under suspended sentence. Apparently, individual courts keep these records separately, in a non-computerized fashion. If it is the Legislature's final decision that such a system be created, I think a great deal of study and research, probably by a consultant, would be needed before even an estimate of cost could be arrived at. Deputy Commissioner Lang suggests that the number of convicted felons under suspended sentence in Alaska might be so low as to render the search cost-ineffective.

3. Transfering an amount equivalent to the dividend that is denied the felon applicant to the crime victim compensation fund indirectly funds the crime victim compensation fund (previously strictly a general fund appropriation) from the earnings of the Permanent Fund. Since the number of felons filing will very shortly drop off sharply (when they realize they won't be paid), a more direct appropriation to the crime victims compensation fund would appear to be more beneficial.

In summary, to the extent that a data base is available which identifies the subject felons, and to the extent that they file applications, the Department of Revenue will be able to deny their applications. The cost of doing so, with the exception of suspended sentences, will be very low. The Enforcement Division will need one full-time investigator as reflected on the attached analysis. The postponment of all payments by several months will obviously irritate the general public. For this reason, the department recommends that lines 13, 14 and 15 of the bill be changed to read " . . . permanent fund dividend for a year when, during all or part of the eligibility period for that year's dividend, [that year] as a result of the conviction the individual is incarcerated, on probation, on parole or under a suspended imposition of sentence." This would enable the department to process applications against a fixed file of subject felons and to make payments as soon as the dividend amount is declared.

Enforcement Division Analysis of HB 575
February 10, 1984

A. Assumptions

1. The PFD program is retained and there are no other substantive changes to the program.

2. It would be possible and practical to obtain information on individuals convicted of a felony. (Please see the discussion under C.)

B. Program Summary

This bill would require one full time PFD Investigator who would be assigned felons on a project basis. In addition, there would be associated contractual services, supply costs, and equipment costs.

		FY '84	
Personal Services (100)			
PFD Investigator II (R13)	12 months @ $2,800/mo.	$33,600	(1)
Contractual Services (300)			
Telephone			
Telephone purchase	1 phone @ $60	60	(2)
Installation	1 phone @ $90	90	(2)
Local Centrex	12 months @ $46/mo.	552	
Long Distance	12 months @ $150/mo.	1,800	
Computer Terminal			
Installation	1 terminal @ $2,000	2,000	(2)
Total Contractual Services (300)		4,502	
Supplies (400)			
General Office Supplies		200	
Equipment (500)			
Computer Terminal		1,600	(2)
Desk		575	(2)
Chair		175	(2)
File		275	(2)
Partitions	2 @ $300/ea.	600	(2)
Total Equipment (500)		3,225	
Total Enforcement		$41,527	

(1) In FY '85 the cost of the salary and benefits for the investigator is estimated to increase by the negotiated 3.8% salary increase. Accordingly, the FY '85 and subsequent year costs are projected to be $34,877.

(2) Several items in contractual services and all equipment items are one time and are not included in FY '85 and subsequent year cost projections.

C. Additional Comments on the Legislation

This legislation is likely to be difficult to administer. The preceding cost analysis was based on the assumption that we would be able to obtain information from several federal, state, and local law enforcement agencies, court systems, and corrections agencies which would have information on the status of felons. Because the bill declares a convicted felon ineligible if at any time during the year he/she was incarcerated, on probation, on parole, or under a suspended sentence the number of ineligibles would grow with each passing day. Since there is not one comprehensive criminal justice system within the United States, it would be a difficult task, at best, to try to obtain and keep that information updated.

Under current law PFD payments could be made in calendar year 1984 for the 1984 program. If subsequent to receiving a PFD payment an applicant became ineligible due to felony conviction, Enforcement would be faced with the task of trying to recover from the felon.

The appeals process may also be impacted as any person who applies and is denied has the right to appeal. It is conceivable that some incarcerated convicted felons, although ineligible by law, may file appeals for the lack of anything else better to do.

TCW/dlr

MEMORANDUM State of Alaska

TO: Bruce Botelho
Deputy Commissioner
Department of Revenue

DATE: February 15, 1984

FILE NO: 366-424-84

TELEPHONE NO: 465-3600

Attorney General

SUBJECT: Review of HB 575, relating to PFD payments to prisoners

By: Diane T. Colvin DTC
Assistant Attorney General
Commercial-Juneau

You asked us to review House Bill 575, relating to payment of permanent fund dividends to convicted felons, for possible legal problems. Based on our review, we conclude that the bill, if enacted, could be challenged on a number of grounds. The provisions most vulnerable to legal challenge are summarized below.

HB 575 makes a convicted felon ineligible for a permanent fund dividend. The prohibition is applied not only to a felon who is in prison, but also to one who is on probation, on parole, or under a suspended imposition of sentence (Sec. 1).

There are other state laws that impose similar disabilities on convicted felons. Art. V, § 2, Alaska Constitution, implemented by AS 15.05.030, suspends the right to vote of a person convicted of a felony of moral turpitude. The disability continues until the individual's civil rights are restored by unconditional discharge. Unconditional discharge covers conviction and sentence, including, by definition (AS 15.60.010(32), probation and parole, and, according to an opinion of this office, suspended imposition of sentence. 1980 Inf. Op. Att'y. Gen. (Nov. 7).

Statutes imposing disabilities relating to suffrage have traditionally been upheld as necessary to preserve the purity of elections. The presumption is that one rendered infamous by conviction of a felony is not fit to exercise the privilege of voting. State ex rel. Barrett v. Sartorious, 351 Mo. 1237, 175 S.W.2d 787 (1943). See, also Annot., 36 A.L.R.2d 1238 (1954).

Other statutory provisions affect prisoners' civil rights. AS 33.30.310 provides as follows:

> A judgment of imprisonment in the penitentiary for a term less than for life suspends the civil rights of the person sentenced, and forfeits all public offices and all private trusts, authority, or power during the term or duration of imprisonment.

AS 33.30.320 relates to the civil rights of a person sentenced for life.

AS 33.30.310 was found unconstitutional by the Alaska Supreme Court to the extent the statute denied a parolee the right to initiate a civil suit in court. Bush v. Reid, 516 P.2d 1215 (1973). The court held that the statute denied the parolee the right to due process and equal protection. In its equal protection analysis, the court recognized that the state may have a reasonable basis for denying convicts while imprisoned access to the civil courts. Id. 1221. But, the court found, the administration of a parole system differs substantially from the administration of a prison. The reasons that support imposition of disabilities on prisoners cannot logically support the same restrictions on parolees. Id. Thus, the court concluded that although the state has a legitimate interest in restricting some activities of parolees, prohibiting a parolee from initiating a civil action has no logical connection with that interest. Therefore, the court held parolees were denied the right to equal protection.

We believe the court would make a similar finding in regard to the right to a permanent fund dividend while on parole. There may be a legitimate state interest in precluding a person incarcerated from receiving a permanent fund dividend. 1/ It is difficult, however, to construct a logical basis for denying a dividend to a parolee. The purpose of parole, recognized by the court in Bush v. Reid, is the parolee's constructive development and restoration into normal society. Cutting a parolee off from receipt of a permanent fund dividend does not further that purpose, but rather restricts it. We believe the same argument would apply to persons given a suspended imposition of sentence and placed on probation. The broad objectives sought by

---

1/ HB 575 does not indicate what the legitimate state purpose is. It would be advisable for the legislature to make that determination, and to embody the purpose or purposes in a letter of intent to accompany the bill.

probation are education and rehabilitiation. These objectives are not furthered by restricting the right to receive a permanent fund dividend. Therefore, we believe that revising the bill to restrict receipt of a dividend only to convicted felons who are incarcerated would make the bill much less vulnerable to attack on equal protection grounds.

Another point on which the bill is vulnerable is the period of time for determination of ineligibility. Section 1 of the bill now makes a convicted felon ineligible for a dividend for a particular year if, during all or part of that year, the person is incarcerated, on probation, etc. AS 43.23.005 requires only six months of residency to qualify for a permanent fund dividend. We believe in order to be legally supportable the period of incarceration must coincide with at least some portion of the period of eligibility. 2/

Finally, section 1 of the bill provides that the money that would have been paid to persons made ineligible by the bill be transferred from the dividend fund to the crime victim compensation fund. This may raise problems under Art. IX, § 13, of the Alaska Constitution, relating to expenditures of state funds. A better approach would be for the bill to provide that the legislature may appropriate the amount that would have been paid to the crime victim's compensation fund. In order to effect the transfer, the amount that would otherwise have been paid must be set out in an appropriation bill to the crime victim's compensation fund.

We hope this information is helpful to you. If you have further questions, please contact us.

NCG:DTC:eja

cc: The Honorable Charlie Bussell
Alaska State House of Representatives

2/ 15 AAC 23.615(a) establishes for 1983 dividends an eligibility period from October 3, 1982 through March 31, 1983. This period will probably differ in 1984 and subsequent years because of changes in the statute.

Legislature '84

Barnes' bill would put stop to inmates' dividend checks

Associated Press

Juneau — Although bars do a prison make, prisoners are not barred from receiving Permanent Fund dividend checks, a situation that House Majority Leader Ramona Barnes wants to correct with a bill she will introduce Monday.

Barnes, R-Anchorage, said Thursday she has readied a measure that should put a stop to dividend money going to Alaska prison inmates.

Although she said she wasn't sure how many prisoners were receiving the checks, a number of constituents told her that "felons were getting Permanent Fund dividend checks while behind bars.

"I was told that one of them was playing the stock market with his (money)," she said. "And one inmate a year ago got a $6,000 student loan for a real estate course that no longer existed. The course only cost $225, but luckily he didn't get ahold of the check.

"The intent of the bill is not to compensate inmates while they're paying their debt in prison," Barnes said, indicating that the Department of Law believed the measure was constitutional. "We have a victim's compensation fund and that (dividend) money would be better spent on victims than criminals."

Kerry Romesburg, executive director of the Postsecondary Education Commission, confirmed the report about an inmate getting a loan approved for a real estate course.

That person was in minimum security and cleared to take classes, Romesburg said, adding that he "had signed up for a course that didn't exist.

"We will not grant a loan to a person who is incarcerated," he said. "In fact, one of the first things we do to people who process loans is make sure they know the addresses of our correctional institutions," he said. "We get a lot of them (requests) — around 10 a year."

The Alaska Permanent Fund, the state's oil wealth savings account, was established by constitutional amendment in 1976.

It requires that at least 25 percent of all mineral lease rentals, royalties, royalty sale proceeds, federal mineral revenue sharing payments and bonuses received by the state shall be placed in a permanent fund.

Dear Mr. and Mrs. Holland

RE: Holland Foster Home

You are hereby notified that the enclosed Accusation has been filed with the Department of Health and Social Services, Division of Family and Youth Services. The Division of Family and Youth Services will conduct a hearing, if requested, to decide the issues presented in the Accusation.

Notice of Defense and Request for a Hearing

The enclosed accusation was prepared pursuant to AS 44.62.360 and sets forth the issues that will be decided by the Department of Health and Social Services, Division of Family and Youth Services. This letter constitutes notice as required by AS 44.62.380 that you may request a hearing on the issues set forth in the Accusation.

Unless a written request for a hearing signed by you or on your behalf is delivered or mailed to the Division of Family and Youth Services within 15 days after receipt of the enclosed Accusation, the Division of Family and Youth Services pursuant to AS 44.62.530 will decide in your absence the issues presented in the Accusation. The request for a hearing may be made by delivering or mailing the enclosed Notice of Defense to the Division of Family and Youth Services in the enclosed envelope, postage prepaid. Mailing of the Notice of Defense signed by you or on your behalf and returned to the Division of Family and Youth Services within 15 days in the enclosed addressed envelope, postage prepaid, acknowledges receipt of the enclosed Accusation and constitutes a notice of defense pursuant to AS 44.62.390.

Sincerely,

Lew Reece

In the matter of Bernie and Mary Holland, a Licensed Child Foster Home,

Respondent.

Facility No. 4190

ACCUSATION
(AS 47.35.040, AS 44.62.360)

Petitioner Lew Reece, Regional Administrator, Division of Family and Youth Services, Alaska Department of Health and Social Services, alleges:

1. This is a proceeding authorized by AS 47.35.040(b) and AS 44.62.360 to condition child foster home license 4190, held by Bernie and Mary Holland, hereinafter "respondents."

2. The respondents were issued License No. 4190 on May 23, 1982 authorizing them to operate a child foster home at 707 West 10th Street, Juneau, Alaska.

3. On or about July 15, 1982 the Division of Family and Youth Services received complaints from two youths who had been placed in the respondents' home. The allegations consisted for the most part of charges that respondents had been physically or erbally abusive, had taken inappropriate disciplinary measures, had failed to exercise restraint over their own children, had provided day care services, and had adult boarders in the home without division approval.

4. The division immediately initiated an investigation. The investigation included interviews with respondents and several youths who had been in respondent's care. Respondents refused to discuss most allegations with the division, claiming that the division had harrassed them and declaring:

> "In regard to your expectations of receiving a telephone call from me. . . to discuss those "allegations;" As I expressed during our meeting on July 23, 1982, these "allegations" will not be addressed by me . . ."

5. On July 27, 1982 the division again urged respondents to reply to the allegations. No reply was received.

6. In the succeeding weeks the division, through the Department of Law, attempted to conciliate with respondents, to no avail.

7. On September 27, 1982 the division finally closed its investigation and, because of the summary failure of respondents to address the complaints, concluded that most allegations were uncontradicted. (Accordingly, the division referred the matter to the Department of Law for further action.) Lie. They recommended revocation.

8. The Department of Law again initiated steps to reconcile the differences between respondents and the division, including scheduling of a meeting with Helen Beirne, Commissioner of Health and Social Services.

9. Respondent Bernie Holland has consistently refused to formally respond to the allegations, making it difficult, if not impossible, for the development of on-going professional relationships between the division and the licensed home, a prerequisite to determinations of compliance with state law.

10. Respondents' failure to cooperate, as set forth above, is a basis for conditioning of respondents' license under AS 44.62.360.

ACCORDINGLY, Accuser requests that

1. Foster Home Care License No. 4190 be amended to include the following conditions:

a. licensees will notify the department of all non-related adults living in the home for more than 21 days;

b. licensees will seek department approval of all day care services provided in the home;

c. licensees will provide the department a written description of their behavior management and discipline techniques (including any planned use of corporal punishment or family trials) within 30 days of issuance of the license with conditions; and

d. licensees will cooperate with all department requests for information related to the operation of their child foster home, license 4190.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF HEALTH AND SOCIAL SERVICES
DIVISION OF FAMILY AND YOUTH SERVICES

515 Willoughby Avenue
Juneau, Alaska 99801
Phone: (907) 586-1861

September 27, 1982

Bernie and Mary Holland
P.O. Box 67
Juneau, Alaska 99802

Dear Mr. and Mrs. Holland:

This is to inform you that the Division's investigation of complaints regarding your foster home has been concluded. You have responded to allegation #10 that foster children have been relocated from the basement to the upstairs bedroom. With that exception, no response or corrective action plan to the allegations which were delivered to you on July 23, 1982 has been received by the Division. You have continued to be unwilling to discuss the allegations, therefore the findings in this letter are based solely on the Division's investigation without any information provided by either of you.

INVESTIGATION FINDINGS

1. Allegation: Bernie and Mary Holland yell and direct vulgar and abuse language towards foster children.

   Findings: 75 percent of the foster children interviewed stated that verbal and vulgar language had been directed at them, or other foster children, in the home.

   Required: "..... in no event may any child in care be subjected to verbal abuse...." 7 AAC 50.450,(2).

   Conclusion: This allegation is found to be valid. Valid means that the evidence shows that the standard was violated.

2. Allegation: Bernie Holland frequently hits foster children with a stick, ruler, yard stick and his hands.

   Findings: 87 percent of foster children interviewed stated they had been hit by Mr. Bernie Holland with either a stick or his hand. A majority of foster children interviewed stated that they witnessed Mr. Holland hitting other foster children.

Required: ".....in no event may a child in care be disciplined by shaking or by delivering a forceful blow with hand or weapon..." 7 AAC 50.450,(5).

Conclusion: This allegation is found to be valid. Valid means that the evidence shows that the standard was violated.

3. Allegation: Mr. Bernie Holland squirted lemon juice into a resident's mouth as punishment, and in the process of the resident resisting, used force to open the resident's mouth by holding the jaw and applying pressure.

Findings: Although this allegation is an isolated incident with the alleged victim graphically describing what happened, there is no corroborating evidence to support the allegation.

Required: ".... In no event may a child in care be subjected to unusual, severe, cruel, capricious, humiliating, or unnecessary punishment;" 7 AAC 50.450,(1).

Conclusion: This allegation is found to be unsubstianted. This means that the violation could have occurred as alleged, but the evidence is not conclusive, or sufficient evidence is not available to make a determination.

4. Allegation: Mr. Bernie and Mrs. Mary Holland are providing day care in their home for 2-5 children.

Findings: 100 percent of the foster children interviewed stated that they observed day care being provided in the Holland home.

Required: Number of foster children permitted in home, ".... no more than eight children in all are permitted in any one home..." ".... no more than five children of any age who are unrelated to the foster parents are permitted." 7 AAC 50.430(b)(d).

Day care of children and commercial care for the aged, or maternity, or convalescent patients may not be combined with foster care of children without prior approval of the Division representative. 7 AAC 50.440(a).

Conclusion: This allegation is found to be valid. Valid means that the evidence shows the standard was violated.

5. Allegation: There is not sufficient space for each foster child to have specific place to keep his/her own personal possessions.

Findings: This allegation deals specifically with the female residents who lived in the basement and shared a room with an alleged boarder. All female residents interviewed stated that they did not

have enough room for their possessions due to the alleged boarder using up most of the available space.

Required: "..... there must be a sufficient space and a specific place for each child to keep his own clothing and personal possessions." 7 AAC 50.450(c).

Conclusion: This allegation is found to be valid. Valid means that the evidence shows that the standard was violated.

6. Allegation: The Holland children have played with, destroyed, broken or lost the foster children's personal possessions.

Findings: 85 percent of the foster children interviewed stated that they had either had lost, or had destroyed or had broken personal possessions due to the Holland children. They also stated that even though they complained to the Holland's about the situation, it was never corrected.

Required: ".....foster parents must show evidence of being responsible, mature individuals of reputable character who exercise sound judgement and display the capacity to provide good care for children." 7 AAC 50.410(a).

Conclusion: This allegation is found to be valid. Valid means that the evidence shows the standard was violated.

7. Allegation: The Holland children are allowed to annoy and "bug" the foster children. When a conflict arises over this issue, that the foster children are verbally abused, and the "foster children are always wrong, and the Holland children are always right."

Findings: 80 percent of the foster children interviewed stated that they felt "bugged" at times by the Holland children, and when the issue was confronted the foster children were yelled at for causing a disturbance.

Required: "..... in no event may a child in care be denied treatment equal to that of the foster parents' own children as a method of discipline;..." 7 AAC 50.450(7).

Conclusion: This allegation is found to be valid. Valid means that the evidence shows that the standard was violated.

8. Allegation: Adult boarders are living in the Holland foster home and they are sharing sleeping quarters with foster children.

Findings: That there are two additional adults living in the Holland foster home without proper knowledge of the Division.

Required: "Foster parents shall report to the Division representative any significant changes in the household....that would affect the ability to care for foster children." 7 AAC 50.420(a).

Conclusion: This allegation is found to be valid. Valid means that the evidence shows the standard was violated.

9. Allegation: Adult boarders participate in the family meetings and trials and are allowed to vote on foster children's punishment.

Findings: A majority of foster children interviewed stated they had been subject to or observed alleged boarders participating in family meetings or trials.

Required: "Foster parents must show evidence of being responsible, mature individuals of reputable character who exercise sound judgement and display the capacity to provide good care for children." 7 AAC 50.410,(a).

Conclusion: This allegation is found to be valid. Valid means that the evidence shows that the standard was violated.

10. Allegation: Three foster children and one adult boarder sleep in a bedroom with no windows.

Findings: By personal observation from myself, Carolyn Touvinen, CCS II, and personnel admission from Mr. Holland, this was found to be true.

Required: ".....each foster home must have one or more windows which are large enough for emergency exit and rescue in each sleeping room."

Conclusion: This allegation was found to be valid upon inspection. However, Mr. Holland agreed to move the foster children to another room, which was accomplished within a 24-hour period. Therefore, at this date, the allegation is found to be invalid as long as that particular room is not used for foster children, or until the room is brought up to standards.

11. Allegation: Family meetings are held late at night and often last from 11:00 p.m. to 2:00 a.m., and that foster children do not get enough sleep because of this and that one foster child fell asleep at a meeting and was punished for it.

Findings: A majority of foster children interviewed stated that family meetings and trials could and would last until all hours of the night, and also stated punishment was dealt out for falling asleep.

Required: "Foster parents must show evidence of being responsible, mature individuals of reputable character who exercise sound judgement and display the capacity to provide good care for children." 7 AAC 50.410,(a).

Conclusion: This allegation is found to be valid. Valid means that the evidence shows that the standard was violated.

12. Allegation: Bernie Holland has belittled and used cruel and derogatory remarks when describing a foster child to other foster children, and to other persons who have entered the foster home.

Findings: All foster children interviewed in regard to the allegation stated they had been subject to or witnessed another foster child be subjected to belittlement or derogatory remarks.

Required: ".....in no event may a child in care be subjected to verbal abuse, derogatory remarks about himself or members of his family...." 7 AAC 40.450,(2).

Conclusion: This allegation is found to be valid. Valid means that the evidence shows that the standard was violated.

13. Allegation: Bernie Holland patted a female resident on the bottom, grabbed a female resident around the waist and while "wrestling, grabbed her legs to get a cheap feel".

Findings: A female foster child made this complaint (patting on bottom) in writing. She stated that it happened and that she did not like it. The wrestling incident was observed by another foster child, who thought that Mr. Holland's behavior was inappropriate. This incident (wrestling) is also in a written statement.

Required: "The foster parents must show evidence of being responsible, mature individuals of reputable character who exercise sound judgement and display the capacity to provide good care for children." 7 AAC 50.410,(a).

Conclusion: This allegation is found to be valid. Valid means that the evidence shows the standard was violated.

In addition to the July 23, 1982 allegations, the Division became aware of additional non-compliance items when a standard-by-standard evaluation was conducted on your home from August 4, 1982 to August 6, 1982 for consideration of your application to operate a residential child care facility. The following areas would be in non-compliance under 7 AAC 50.310 to 7 AAC 50.620:

1. 7 AAC 50.410(1) - "An annual license may not be issued without written evidence that all members of the household 16 years of age or older are free from active tuberculosis;"

According to the standard-by-standard evaluation there was no record of written evidence that this requirement has been met. On September 21, 1982 tuberculin clearances dated September 16, 1982 were received for both of you. If there are any other adult, members of the household, additional tuberculin clearances are required.

2. 7 AAC 50.560(b) - "A 5-lb ABS dry chemical fire extinquisher or its equivalent must be charged at all times and strategically located; more than one is required for multi-level homes."

   The standard-by-standard states that there is only a 2 1/2 lb. ABC extinguisher in the basement area which has been previously used as living space for foster children. While the Division has interpreted and implemented the above requirement as meaning that there must be a 5lb. extinguisher on every level of a multi-level home, the Division concedes that your home has two acceptable extinguishers and therefore, meets the requirement for more than one for multi-level homes. Correction is advised, but not required.

3. 7 AAC 50.570(f) - "Firearms must be unloaded and stored in a place inaccessible to young children. Ammunition must be stored separately in a place inaccessible to children."

   It was reported in the standard-by-standard that one hand gun was accessible to children while loaded and that the gun was unloaded in front of the licensing worker. There is no issue with compliance at this time as the gun was unloaded. However, in the future all guns must remain unloaded and ammunition stored separately and inaccessible to children.

EVALUATION AND RECOMMENDATION

All of the above allegations are of a serious nature and all except #3 were found valid upon investigation. The three additional findings in the recent standard-by-standard evaluation are also serious. You have demonstrated a total lack of cooperation with the Division in dealing with the allegations. If corrections have occurred, you have failed to inform the Division. For example, at least six telephone calls to your attorney were necessary to obtain the tuberculin clearances.

Given the pattern of violations, and your refusal to respond or to formulate a corrective action plan, the Division is referring your case to the Department of Law for consideration of license modification, license suspension, or revocation. You will be informed of the Department of Law's recommendation to this Department.

Sincerely,

Lew Reece

In the matter of Bernie and Mary Holland, a Licensed Child Foster Home, Respondents.	)	NO. 4190

CHRONOLOGICAL SUMMARY

1972	Mary and Bernie Holland begin accepting foster children into their home in Juneau, Alaska
1972-1981	H&SS consistently evaluates Holland foster home as one of the best in Alaska.
October 1978	H&SS/DFYS adopts regulations governing foster child care
September 16, 1981	Artie J, a foster child placed by the State at the Holland's home, sexually molests the Holland's 8 year old son. Hollands request State remove AJ from their home and obtain psychological counseling for him.
Mid-October, 1981	Rumors circulate at DFYS that BG Holland will complain to Ombudsman about State's "mishandling" of AJ case. Rumors circulate at DFYS that Bernie Holland uses drugs, beats his wife, molests female employees.
October 31, 1981	AJ, placed in Gisel foster home, rapes and sodomizes young daughter of foster parents. State had obtained no psychological counseling for AJ. H&SS' worries escalate regarding possible complaint to Ombudsman by Mr. Holland.
October 23 - November 9, 1981	Dr. Lobo investigates Holland House, finds rumors unsubstantiated. H&SS Pugh telephones BG Holland and states: "You won't get a license for your group foster home; no money in the budget this year, or next year."

P.O. BOX 1150 PHONE (907) 586-2210
JUNEAU, ALASKA 99802-1150

November 1, 1981	H&SS employee Danneker tells Father Lobo "If it wasn't for those goddam Hollands this would never have happened." (AJ's rape incident of 10/81 at Gisel home)
November 13, 1981	BG Holland makes formal complaint to Ombudsman re H&SS failures on AJ case.
November-December, 1981	Alaska Foster Parent Association tells BG Holland "If you file a complaint, DFYS will lay formal allegations against you. That's their standard operating procedure in Anchorage."
December, 1981	All foster children removed from BG Holland home. H&SS explains this as merely coincidental and "natural attrition."
June 4, 1982	Holland House group home provisional license signed by Kay Smith, H&SS (license # 235005)
June 4, 1982	Highly laudatory personnel evaluation for Father Lobo received.
June 8, 1982	Father Lobo attends H&SS meeting to discuss Holland group home application. Lobo speaks favorably of Hollands. All administrators opposed to granting Hollands a group home license.
June 10, 1982	H&SS, Mr. Pugh, calls meeting with BG Holland, Reece, Hansen, Monroe, & Walker to reject Holland group home application.
June, 1982	H&SS, Mrs. Borkowski hears Mr. Reece at Regional Office, call BG Holland ("that son of a bitch...".
July, 1982	H&SS, Mrs. Borkowski, hears Reece and Smith say about BG Holland "We'll shut him up and he'll never get his hearing..." (to appeal denial of group foster home license).
July 13 (or 16?), 1982	DFYS decides to suspend Father Lobo
July 14, 1982	Danny H. and Mickey H. accuse BG Holland of bad actions.
July 15, 1982	Evening meeting: H&SS Olson, BG Holland, Dr. Brandaman, Dr. Horchover, Mickey H. Mickey H.

admits allegations against BG Holland were lies by her and Danny H; only an attempt to show anger, frustration.

July 16, 1982 — H&SS, Mr. Reece, receives written and oral reports from Probation Officers Olson and Anderson clearing BG Holland. Reece orders Danneker to investigate and "get Holland, I've got my orders."

July 16, 1982 — DFYS orders highly unusual investigative procedure: Holland file removed from "Family" side of DFYS (Father Lobo) and permanently given over to "Youth Services" side of DFYS (Danneker, Reece and AJ's Probation Officer, Mr. Wild).

July 23, 1982 — H&SS, Danneker and Tuovinen arrive unannounced at BG Holland home, make allegations against BG Holland of child molestation; call BG Holland "asshole"; threaten to remove all foster children from Hollands. Danneker and Tuovinen present a formal written document accusing the Hollands of thirteen allegations, including child molesting/sexual abuse.

July 28, 1982 — Danneker receives phone call tipping him off that BG Holland is aware of Danneker's misbehavior in Wrangell (sleeping with foster mother, smoking marijuana in ~~State~~ foster parents vehicle while on duty; being caught smoking marijuana in ~~State~~ foster parents vehicle by child he was assigned to supervise as the child's probation officer).

August 5, 1982 — Laurie Vaughn conducts Standard by Standard evaluation of Holland House. Hollands cooperate fully.

August 6, 1982 — H&SS, Mr. Reece, asks Alaska State Troopers to investigate BG Holland to see if BG Holland had access to AJIS system. AST later reports Holland has no access to AJIS.

August 11, 1982 — Alaska State Troopers respond to H&SS Monroe's request for criminal history information on Mary and BG Holland. AST later reports no criminal history exists.

JUNEAU, ALASKA 99802-1150

August 17, 1982	Investigator Danneker makes final report directly to Mr. Pugh. Report was approved by Reece and finds all allegations uncontradicted. Recommends license revocation.
August 20, 1982	Danny H files affidavit with H&SS stating all charges made 7/15/82 against BG Holland false
September 27, 1982	DFYS officially closes its "investigation" of Hollands. DFYS concludes "most allegations were uncontradicted." Notifies Hollands of conclusions.
November 11, 1982	BG Holland requests and receives meeting with Commissioner Beirne, H&SS to seek settlement. Botelho tells Holland "Danneker bungled the investigation." Botelho tells Holland "Reece doesn't think you have been punished enough."
December 1, 1982	H&SS, Mr. Reece, files formal accusation of BG Holland incorporating by reference thirteen allegations of 7/23/82.
December 2, 1982	H&SS, Mr. Reece, receives letter from Danny H. admitting falsity of charges against Hollands; DH explains reasons for making false charges.
December 3, 1982	BG Holland requests meeting with Mr. Reece to discuss settlement.
December 15, 1982	H&SS, Mr. Reece, receives letters from Mickey H. and Kathy S. admitting falsity of charges against BG Holland.
Dec 20, 1982.	AST investigates BG Holland upon insistance of Lew Reece for interferring with an investigation and divulging confidential information to another foster parent.
JAN 19, 83	Botelho & Pugh ask Holland to meet with them.

JUNEAU, ALASKA 99802-1150

This paper is a "Chrono" of events that have happened since September 1981

1. In September 1981 we put in an application for a group home license for teenagers.
2. On September 23, 1981 we had a fourteen year old child removed from our home as my wife caught him trying to molest our eight year old son.
3. Mid-October 1981--- Rumors began to spread around the Regional office about our over-reacting towards having that child removed from our home that was trying to molest our son. The P.O. Bob Wild wrote a report to Dr. Tony Mander and called us over-reactors for having the child removed when we did.
4. Further rumors were spreading in the division-- I beat my wife, drink excessively, use drugs, and molest my female children.
5. Dr Alinio Lobo "informally checked" on these rumors from Oct 1981 through November 1981 and found no wrong doing, in fact just the oposite.
6. October 30, 1981---m there was a meeting in the Regional office that was called by Ms. Kay Smith. The meeting was about my proposed group home proposal. In attendance was Dr. Lobo, Ms Kay Smith, Mr. Lew Reece and Myself. During the meeting, my proposal was rejected for group home application and an improved version was asked for.
7. October 31, 1981---m The same 14 year old boy who we had removed from our home was arrested by the Alaska State Troopers for rape and sodomy on a 6 year old girl who was a member of the household the boy was placed in by his P.O. Wild.
8. November 12, 1981-- I recieved a telephone call from Mr. John Pugh the Director of Family & Youth Services while I was at work at the Alaskan Coin connection located at 723 West 10th Street. He called to tell me that no funds existed in the budjet to support my group home. I informed him that I have never asked the department for money and he stated that the department suffered a huge budjet cut and that funds would not be available for the next year for my group home. His conversation than got around to Art Johnson and the incident in our home and he said to me " We've had staff meetings concerning that incident and we've got our asses covered."
9. November 13, 1981-- I filed a written complaint with the State Ombudsman's office of Gross Negligence against the P.O. Bob Wild. I also stated in that same corresspondance that I was told about the no funds for the group home.
10. When Ms. Smith learned of my filing a complaint she stated to Helen Borkowski that " His name is shit in my book" And when Ms. Borkowski asked her who she was talking about she said "That Bernie Holland""He filed a complaint with the Ombudsman's office and now he can't be trusted, he'll probably go running to the Ombudsman every chance he gets".

6-82

→ Investigated by Lobo.

11. Between the dates of November 13, 1981 and December 15, 1981 all the children were removed from our home. Ms Smith testified under oath that this was due to "natral attrition".

12. December 11, 1981--- Mr. Lew Reece wrote a confidential memo to Mr Dave ARnold with a copy to Mr John Pugh telling him of my meeting with them on October 30, 1981 and my group home proposal.

13. January 13, 1982 --- Submitted my new group home proposal and when Ms Smith saw this she stated in from of Ms Helen Borkowski " The nerve--- he'll get his license ~~xxx~~ over my dead body.

14. In March 1982 the division began sending hard core cases to our home as they were then under investigation by the Ombudsman's office.

15. In May 1982 the Ombudsman sent a copy of his findings to Mr. John Pugh and on June 7, 1982 Mr Pugh acknowledged the Ombudsman's report with a letter dated June 7, 1982. By this acknowledgement he was aware of my group home plans.

16. June 4, 1982 Ms Kay Smith signed the license approval form and then went to Central Office and had a meeting with Ms Yvonne Walker concerning my group home license, and in fact gave her a copy of my Program Evaluation & Licensing Recommendation. A meeting was held in the C.O. and my license was denied that day. The same day as approval. Everyone denied this meeting except the secretary Ms Helen Borkowski who stated she recieved a telephone call from Ms Smith who stated she was in Walkers office.

17. June 8, 1982-- a meeting was held in Central Office with John Pugh, Yvonne Walker, Connie Hansen, Alinio Lobo and Pat Monroe. My License was discussed and denied at that meeting. Connie Hansen stated under oath that it was denied at this meeting and Dr Lobo left this meeting with the same feeling. At 11:30 am that same date I was in Dr Lobo's office when he recieved a phone call from Yvonne Walker telling him of the meeting and to bring the important documents for this case. Dr Lobo had my file at that time as it was on his desk because he copied my Standard-By-Standard Evaluation, Program Evaluation & Licensirg Recommendation as well as the CWS 80A for me. Pugh stated he read my file and program evaluation before that June 8, 1982 meeting and had questions for Dr Lobo and Connie Hansen. It's impossible because my file never left the Regional Office until the 9th of June 1982. Pat Monroe called me the afternoon of June 8th and wanted ameeting with me on the morning of the ninth to discuss my license. I set up a meeting for the 10th of June and during that meeting John Pugh denied my license three times. Pat Monroe stated she took my file ' home the night before to study it upon orders from John Pugh and found too

18. June 8, 1982-- at approx. 7:30 pm I saw Dr Lobo at the Juneau Airport and he stated to me that he thought my license was going to be denied from what went on at the meeting he was at earlier that day in C.O. He further stated my license was pulled from the clerks desk.
19. Dr Lobo testified he had possesion of my file untill 5:00 pm on June 8, 1982 because he put pertinant documents back into my file upon his return from C.O.
20. June 7, 1982 John Pugh wrote a letter to the Ombudsman acknowledging reciept of his report.
21. June 14, 1982--- I telephoned Ms. Pat Monroe in the C.O. and asked her for a written denial based upon her office's verbal denial on June 10,1982.

~~XXXXXXXXXXXXXX~~

22. Written denial done by Pat Monroe on June 15, 1982--- Signed by Ms Walker.
23. Late June 1982--- The secretary Ms Helen Borkowski overheard [illegible], talk between Mr. Lew Reece and Ms Kay Smith, once it was learned I filed for a hearing concerning this denial of licensure,---- to thwart my hearing by counteracting made up allegations that would silence me once and for all.
24. July 14, 1982-- Danny Joe Harrison was sent back to jail for violation of his probation. He was contacted by Robert Danneker and then was helped to make allegations against us. w/ Danneker
25. July 15, 1982-- Mickey Horschover made complaints against us to her P.O. marlyn Olson--- A meeting x was held that evening with her father Dr. Robert Horschover, her psychologist Dr Sonya Brandaman, myself and P.O. Olson. At that meeting she stated that the only reason she was complaining was because she was tired of being punished by the state. And that "Being at Bernie & Mary Holland's house was probably the best thing that ever happened to her because she would probably be dead from drugs or something else". Mr Olson stated he would write his report reflecting we were clear from any wrong doing.
26. During that week the probation department interviewed all residents in my home and on the 16th of July 1982 Mr. Norm Anderson and Mr Marlyn Olson's report to their superior Mr Lew Reece showed no wrong doing in my household and that collusion existed between Mr Danny Harrison and Ms Mickey Horschover. Mr Reece told his P.O.'s that these reports were bullshit and that he had his orders from upstairs and he was going to get that bastard meaning me.

27. I recived a telephone call from an individual telling me even tho I was cleared of any wrong doing, Reece had his orders to get me and that allegations, and this individual told me what they were, would be laided upon me within two weeks.
28. July 23, 1982--- Mr Robert Danneker and Ms Carolyn Touvenen came to my residence and served my wife and I with thirteen allegations. For 1 ½ hours they harrassed us into trying to answer them with thrates of removing the children and at one point Danneker said to me "Just answer the allegations asshole.
29. At 10;42 p m Robert Danneker (friday night) called my house to tell me they had completed part of there investigation and that he would be serving them on me the next morning at 9:00 am . That evening at 6:00 pm two of my foster children walked down to the office at 515 willoughby ave and Danneker told them they had new homes for them.
30/ On Junly 24, 1982 I wrote a letter to Mr Danneker telling him I would not answer his allegations.
31. On July 27, 1982 Mr. Danneker wrote me a letter telling me I was impeeding his investigation and thereby violated three statutes and that I had ten days to answer him in regards to these allegations..

AUG 7 letter

32. On September 27, 1982 the Division found that all these allegations except one was true. It was referred to the Attorney General's office.
33. On September 23, 1982 the Asst A G informed me that no evidence exists confirming these allegations and that he would take no action on my license when the regional office sent it to him and he called Fred Baxter to tell him of this.
34. I attended a meeting with the Commisioner Helen Beirne with the Asst A G and all she wanted me to do was answer the allegations. She stated that Pugh had really trying to get ahold of me. I refused to sit down with him as he lied at the Oct 4-7 hearing about not knowing about my license application and reading the files, on June 8, 1982.
35. On Oct 11, 1982 I filed purjury charges against Pugh and Monroe with the D A's office with documentation against Pugh.

MEMORANDUM State of Alaska

TO: Mr. Lew Reece
Regional Administrator
Southeast Region
Youth Services

DATE: July 16, 1982

FILE NO:

TELEPHONE NO:

FROM: N.L. Anderson
Probation Officer II
Youth Services
Juneau

SUBJECT: Abuse Allegations

On July 14, 1982, I received a phone call from Bernie Holland, foster parent, about Danny Harrison, one of my clients placed in the Holland home. Mr. Holland said he was about have Harrison removed. Harrison was: (1) lying; (2) failing to perform chores; (3) associating with people he had been restricted from; (4) ripping off other foster children in the house; (5) trying to "scam" Mr. Holland on an unemployment check ploy. I asked Mr. Holland to have Harrison report to me at 11:00 a.m.

Harrison called me at 9:30 a.m. to say he could not come at 11:00, that he had a State Office Skills test scheduled at that time. I instructed Harrison to report at 1:00 p.m. instead.

Upon returning to the office after lunch break, there was a note in my box that Harrison had come in at 12:25 p.m. to see me. At 1:15 p.m Mr. Holland called to ask if I had seen Harrison. I told him of the test conflict and that Harrison was a no-show for the new time. Mr. Holland said Harrison was in his room playing his guitar.

I drove to the Holland residence to take Harrison for a urine sample, per court order. One of the people he had been associating with is a rather well known (to this office) cocaine user.

On the way to the testing center, Harrison denied allegations Mr. Holland had made earlier of violating the foster home rules and/or Conditions of Release. Upon arriving at the urine testing center, Harrison would not produce a urine sample, saying the timing was bad and he could not urinate. After 15 minutes, I took him to the Johnson Center. Upon threat of being detained, Harrison produced a more than ample urine sample within 5 minutes. Returning to the Holland residence Harrison continued to deny any wrong doing on his part. I decided to have a meeting with Mr. Holland, Harrison and myself to resolve the matter.

I explained to Mr. Holland that Harrison was denying any wrong doing. Mr. Holland, in Harrison's presence, outlined the problems he was having with Harrison. Harrison then admitted to most of the charges, but tried putting the blame on other foster children in the home or saying "I'm trying to be good, you can't expect me to change overnight". He continued to deny the unemployment check "scam". Mr. Holland then called Officer McCracken, JPD, to whom Harrison had boasted of the "scam". With the three of us listening, McCracken outlined the conversation he had with Harrison:

Harrison had gone to the Unemployment Office and changed his mailing address from Hollands' to General Delivery. Harrison's plan was to put two of the anticipated checks into his restitution savings fund and hold one back, telling Mr. Holland he had not received it. He planned on blowing the money from the third check.

After this conversation, Harrison admitted it was originally his plan to run the "scam", but since hadn't received the checks yet, and therefore, hadn't pulled of the scam, he hadn't done anything wrong.

Mr. Holland I spoke at length with Harrison about the wrongness of this "scam", whether he had pulled it off or not. Harrison maintained that he had done no wrong. At this point, Mr. Holland left the room. I spoke with Harrison for about 5 minutes and then I left. During that 5 minues, Harrison had completely changed his story and, in Mr. Holland's absence, was again denying any of his wrong acts. As I left, I saw Mr. Holland and asked him to call me the next day if he decided he no longer could work with Harrison. Mr. Holland asked me to remove him immediately, that he felt he could no longer work with Harrison.

Since the Juneau Receiving Home in the past has refused to accept Harrison and he has no relatives in Juneau, I transported him to the Johnson Center for detention. The staff at Johnson was busy with adult prisoners, so Harrison and I had to wait in the lobby for 30 minutes.

During this wait, Harrison became more and more agitated about being detained. He started by saying the only reason for detention was a "personality conflict" between he and Mr. Holland. Then he said that he "was going to blow the whistle on Bernie tomorrow in Court". He explained that Mr. Holland had physically abused him saying that Mr. Holland had hit him in the arm with a stick on several occasions. In the most recent, Harrison said he shoved Mr. Holland onto the kitchen table after Mr. Holland struck him, breaking the table. Mr. Holland then jumped up and challenged him to fight. The matter diffused with no further blows. Harrison said Merick Habon, another foster child with the Hollands, could verify this.

On July 15, I conducted a low key interview with Habon. Bob Dannecker, Foster Care Coordinator, was present. Habon said he was quite happy at the Holland home, that he had not been subject to any verbal or physical abuse. (This is significant, since Habon comes from a very abusive natural home and was fearful upon placement that the foster home would function the same way). He said he had never seen Mr. Holland hit Harrison, either with a stick or a fist. He did say the two have engaged in "friendly" wrestling matches and shadow box with one another.

Habon said the kitchen table was replaced with a more sturdy picnic-type table several days ago because the other table was starting to sag towards the middle. (I was in the Holland house 10-14 days ago for a reception for Lt. Governor Miller and can verify the old table was rather wobbly).

In conjunction with allegations Twiggy Horchover made about Mrs. Holland using foul or abusive language, Habon said this had never happened. That it was his experience she was rather quiet. He did say that Mr. Holland does use foul language in the house occassionally.

Habon volunteered that Harrison had been in trouble at the house recently for failing to do chores and for being caught in the girls living area.

At 2:30 p.m. on July 15, a detention hearing was held on Harrison. Following the hearing, I asked Harrison in his attorney's presence to give me a taped statement about the physical abuse. I explained to the attorney that I had an obligation towards the other children placed there if an abusive situation existed. Harrison immediately went into private counsel with the attorney. The attorney then advised me that Harrison's only complaint was of a "personality conflict" between Harrison and Mr. Holland. He explained the "conflict" as being Mr. Holland calling Harrison a "shitbag" and "worthless" in front of the other children.

I told the attorney Harrison had alleged he had been hit with a stick and physically roughed up by Mr. Holland. The attorney again conferred with Harrison and returned to report that Harrison said he had never been hit or otherwise assaulted. Further, Harrison declined to give any taped statement about the "personality conflict".

#12

Complaint registered to: Division of Family & Youth Services
515 Willoughby Avenue
Juneau, Alaska 99801

000239

Regarding: Bernie & Mary Holland Foster Home (Name of Facility) [X] Licensed [ ] Unlicensed

Address: P.O. Box 67, Juneau, AK

Phone: 586-1724

Date complaint received: July 15, 1982

The following complaints were received by the Division of Family and Youth Services regarding the above facility:

1. Allegation that Bernie and Mary Holland yell and direct vulgar and abusive language towards foster children. [7AAC 50.450,(2)]

2. Allegation that Bernie Holland frequently hits foster children with a stick, ruler, yardstick and his hands. [7AAC.50.450,(1)(5)]

3. Allegation that Bernie Holland squirted lemon juice into a resident's mouth, as punishment, and in the process of the resident resisting, used force to open the resident's mouth by holding the jaw and applying pressure. [7AAC 50.450,(1)]

4. Allegation that Bernie and Mary Holland are providing Day Care in their home for from 2-5 children. [7AAC 50.430(b)(d)]

5. Allegation that there is not sufficient space for each foster child to have specific place to keep his/her own personal possessions. [7AAC 50.540(c)]

6. Allegation that the Holland children have played with, destroyed, broken or lost the foster childrens personal possessions. [7AAC 50.420(e)]

7. Allegation that the Holland children are allowed to annoy and "bug" the foster children. When a conflict arises over this issue, that the foster children are verbally abused, and that "the foster children are always wrong, and the Holland children are always right". [7AAC 50.450,(2)(5)]

8. Allegation that adult boarders are living in the Holland foster home and that they are sharing sleeping quarters with foster children. [7AAC 50.420]

NOTIFICATION OF COMPLAINT

Complaint registered to: Division of Family & Youth Services
515 Willoughby Avenue
Juneau, Alaska 99801

000249

Regarding: Bernie & Mary Holland Foster Home [X] Licensed
(Name of Facility)
[ ] Unlicensed

Address: P.O. Box 67, Juneau, AK

Phone: 586-1724

Date complaint received: July 15, 1982

The following complaints were received by the Division of Family and Youth Services regarding the above facility:

9. Allegation that adult boarders participate in the family meetings and trials and are allowed to vote on foster childrens punishment [7AAC 50.410(a)]

10. Allegation that three foster children and one adult boarder sleep in a bedroom with no windows. [7AAC 50.560(e)(3)]

11. Allegation that family meetings are held late at night and often last from 11:00 p.m. to 2:00 a.m., and that foster children do not get enough sleep because of this and that one foster child fell asleep at a meeting and was punished for it. [7AAC 50.410]

12. Allegation that Bernie Holland has belittled and used cruel and derogatory remarks when describing a foster child to other foster children, and to other persons who have entered the foster home. [7AAC 50.450(2)]

13. Allegation that Bernie Holland patted a female resident on the bottom, grabbed a female resident around the waist and while "wrestling, grabbed her legs to get a cheap feel." [7AAC 50.410

ANALYSIS FOR FISCAL NOTE

It is not possible to accurately predict the future fiscal impact of this bill with any certainty. The problems in predicting is that there is no certainty on the number of proceedings that will occur; there is no way of predicting the number wherein the respondent prevails; and there is no way of predicting the amount of fees that would be awarded.

A review of the 283 ATC proceedings that would appear to be covered by this legislation that were initialed in 1983 indicates that four cases might have justified the awarding of costs and attorney fees to the respondent. It should be noted that some of these proceedings are still open.

MEMORANDUM

TO: John B. Chenoweth, Ombudsman

THRU: Duncan C. Fowler, Ombudsman Regional Representative

FROM: Bruce Aronson, Ombudsman Assistant

SUBJ: Ombudsman Complaints J82-0689, J82-0728, J82-1136, and J82-1188

DATE: January 28, 1983

Four complaints, J82-0689, J82-0728, J82-1136, and J82-1188, direct the attention of the office to investigatory and licensing practices of the Southeast Regional Office of the Division of Family and Youth Services. Due to the interrelationship of the four, they were examined at the same time by this investigator.

Throughout this memorandum, the names of minors involved in these complaints have not been used, rather initials were substituted for their names.

A summary of my investigation of each complaint is provided below:

J82-0689

Bernie and Mary Holland filed a complaint with this office on July 26, 1982, alleging that the Division of Family and Youth Services (DFYS) is failing to conduct a proper investigation of their foster home license, and is harassing them. Investigation of their complaint has focussed on whether the agency had sufficient reason to initiate an investigation, and whether the investigation was properly conducted.

The Hollands are Juneau residents with a decade of experience in foster care involving Juneau youth. Their complaints were filed with the Juneau office after they were served a NOTIFICATION OF COMPLAINT by officials of the Division's Juneau regional office. The officials advised that the notification, containing 13 allegations, was served in conjunction with information received by division personnel during the preceding 10 day period. Investigation of the allegations was a prerequisite to a decision by division officials to modify or revoke the Hollands' foster home license.

A copy of the notification is attached to this memorandum.

Background:

On July 14, 1982, Norm Anderson, Probation Officer II, transported a minor, D.H., to the Johnson Human Services Center for detention purposes. In a memorandum from Mr. Anderson to Lew Reece, Regional Administrator, DFYS, dated July 16, 1982, Mr. Anderson states:

> During this wait, D.H. became more and more agitated about being detained. He started by saying the only reason for detention was a "personality conflict" between he and Mr. Holland. Then he said that he "was going to blow the whistle on Bernie tomorrow in court". He explained that Mr. Holland had physically abused him saying that Mr. Holland had hit him in the arm with a stick on several occasions. In the most recent, D.H. said he shoved Mr. Holland onto the kitchen table after Mr. Holland struck him, breaking the table. Mr. Holland then jumped up and challenged him to fight. The matter diffused with no further blows. D.H. said M.H. (male), another foster child with the Hollands, could verify this.

Mr. Anderson also reports in this memorandum that M.H. (male) said the kitchen table was replaced with another table, since the older table was sagging. Mr. Anderson confirms that "the old table was rather wobbly." M.H. described Mary Holland as a quiet person, and that she did not use "foul or abusive language." M.H. does indicate that Bernie Holland has used foul language. No written statement from M.H. was taken by DFYS. .

In a memorandum from Candace Canfield, YCIII, Johnson Human Services Center to Marlyn Olson, Probation Officer III, dated July 14, 1982, it was reported that D.H. told both Ms. Canfield and Margaret Pugh, Program Director, Johnson Human Services Center, that Bernie Holland hit him, and that Mr. Holland uses a stick to hit people, including D.H. Also, D.H. and Bernie Holland, on more than one occasion, stayed up late arguing. D.H. closed by saying that M.H. (female) was also hit with a stick, and would confirm this information. Ms. Pugh then called Marlyn Olson and requested Mr. Olson immediately visit the Johnson Human Services Center.

Mr. Olson indicates in his file notes of July 14, 1982, that when Mr. Olson met with D.H., D.H. had already contacted his attorney. Mr. Olson reported that D.H. said his attorney advised D.H. to remain silent. Mr. Olson wrote in his notes that, "He did elude [sic] however two serious problems..." Mr. Olson also indicates that D.H. felt that M.H. (male) and M.H. (female) could corroborate his statements.

In his July 16, 1982 memorandum, Mr. Anderson states:

> On July 15, I conducted a low-key interview with M.H. (male). Bob Danneker, Foster Care Coordinator, was present. M.H. said he was quite happy at the Holland home, that he had not been subject to any

> verbal or physical abuse. (This is significant, since M.H. comes from a very abusive natural home and was fearful upon placement that the foster home would function the same way). He said he had never seen Mr. Holland hit D.H., either with a stick or a fist. He did say that the two have engaged in "friendly" wrestling matches and shadow box with one another.

The last two paragraphs of Mr. Anderson's memorandum describe a meeting with Mr. Anderson, D.H. and D.H.'s attorney. The meeting took place at 2:30 p.m. on July 15, 1982. The attorney (after conferring with D.H.) advised that D.H. had only one complaint, regarding a "personality conflict" between D.H. and Bernie Holland. Anderson also wrote that the attorney said the conflict was that Bernie Holland called D.H. a "shitbag" and "worthless" while other children were present. When the attorney was asked about D.H.'s allegation that Bernie Holland had hit D.H. with a stick, the attorney stated (after conferring with D.H.), "that D.H. said he had never been hit or otherwise assaulted. Further, D.H. declined to give any taped statement about the 'personality conflict'."

Robert Danneker's notes of July 20, 1982, describe a meeting with D.H. At that time, D.H. agreed to give a written statement to Danneker by Thursday, July 22, 1982. A statement was provided by D.H. on July 22, 1982, which said Bernie Holland and D.H. got into a scuffle, and Bernie challenged D.H. to fight. D.H. also said:

> Bernie was sitting on the couch next to M.H. (female) and I was sitting at the table when Bernie and M.H. started wrestling sort of and Bernie was grabbing M.H. around the waste [sic] and her leg's [sic] and it looked more like Bernie was trying to get a cheap feel off her he does this all the time and he has this stick that is about two and a half feet long that he smack's [sic] us with and it hurt's [sic] several times' [sic] I asked him not to smack me but he still does.

D.H.'s assertion is deserving of independent verification. A psychological evaluation (a copy of which is in the DFYS files) prepared by Carol C. Greenough, Ph.D., and dated June 23 and June 25, 1982, cautions:

> . . .
>
> D.H. admits to being very good at lying and convincing himself as well as others of his lies.
>
> . . .
>
> D.H. is very manipulative, using people and situations to create gratification for himself.
>
> . . .

D.H.'s probation officer, Norm Anderson, told this office, on January 3, 1983, that D.H. thought Bernie Holland was mad at him, thus causing D.H. to be sent to the Johnson Human Services Center for detention purposes on July 14, 1982. D.H. became very upset at the prospect of detention, and that he was going to get back at Bernie Holland. On July 15, 1982, Anderson said, he believed that D.H. was lying.

Since D.H.'s credibility is called into question, corroboration of his statements by the two foster children he named, is important. There was no written statement by M.H. (male). However, Mr. Anderson's memorandum indicates that M.H. can only verify that Bernie Holland used foul language on occasion. Notes prepared by Marlyn Olson say that on July 14, 1982, M.H. (female) a foster child at the Holland home, volunteered information to Mr. Olson. A synopsis of Mr. Olson's notes includes the following incidents, as described by M.H. (female):

- Bernie Holland told her to get out of bed, using vulgar language,

- Mary Holland has called her names,

- M.H. was preparing guacamole, and to quiet J.H., M.H. squirted lemon juice into J.H.'s mouth. Mary Holland cursed at M.H. for this,

- Mary Holland cursed at M.H. for being late when called to the main floor of the house, from the basement, and

- Bernie Holland used coarse language upon M.H.'s return to the Holland home, after having run away from the Holland home.

Mr. Olson's notes for July 15, 1982, include the following:

> We [Sonja Brandman, Counselor, and Mr.Olson] discussed M.H.'s (female) behavior over the past three weeks, the fact that it has been very difficult for her having violated curfew, run, caught in several lies, and being on restriction much of the time. Sonja and I agreed that it was difficult to tell when M.H. is being truthful or not.

Shortly thereafter, M.H. (female) provided a handwritten statement of her allegations against the Hollands. M.H.'s statement includes descriptions of the following episodes:

- When M.H. was moving to another room, Mary Holland cursed at her,

- During a family meeting, Mary Holland described M.H.'s performance as a dishwasher, in vulgar terms,

- Mary Holland cursed at M.H. during an incident involving a television,

- Mary Holland, in vulgar terms, told M.H. to be quiet, when M.H. was slow in coming to the main floor of the house from her bedroom,

- When M.H. was making guacamole, one of the Holland children was irritating M.H., so M.H. squirted lemon juice into the child's mouth, and the child started screaming. Mary Holland then cursed at M.H.,

- When M.H. was slow in getting out of bed one morning, Bernie Holland cursed at her to get up,

- Bernie Holland hits D.H. with a stick during family trials and meetings, and

- "When I have my but [sic] up in the air reaching for something and I [have] been hit for no reason twice with [a] stick once with [a] hand and last night befor [sic] he hit me with his hand I caught him first a[nd] said don't hit me what's the reason. he [sic] said boy you [are] lucky I couldn't resist."

Mr. Olson said in his notes of July 15, 1982:

. . .

> I reviewed her statement and found that several of the things she told me yesterday were not addressed and that some of the incidents she wrote about that we talked about yesterday were or so what watered down. . . .
>
> Most of what she put in writing seemed to be directed towards conflicts that she was having with Mary instances in which she says Mary directed fould [sic] language towards her, telling her to shut up, calling her asshole, etc.

Mr. Olson also reported that M.H.'s (female) mother said M.H. seemed to be using vulgar language, and that the Holland home "...was the best placement for her."

The next day (July 15, 1982) a meeting was held with Mr. Olson, M.H. (female) and her father, Bernie Holland and Ms. Brandman. During this meeting, they reviewed the allegations M.H. had made regarding the Hollands. Mr. Olson noted that M.H. lied when discussing what she did one Sunday. Mr. Olson also wrote:

. . .

> We note that the conflicts she brought up involved she [M.H.] and Mary. I think we have to recognize the fact that there could be a great deal of transference going on here, meaning that a lot of the hostility, the anger, the hurt M.H. feels in her relationship with her mother are under difficult circumstances transferred to Mary, her foster mother.

. . .

> Before we closed the meeting and while M.H. was still meeting with us we questioned her in several different ways about whether or not the problems she told us about at the Hollands were so serious that they couldn't be worked out, that perhaps this difficult time will soon pass and once again, things will level out for her. Her response was that things could probably be worked out.
>
> . . .

M.H. (female), during a deposition taken on December 30, 1982, told me that she felt that her problems with Mary and Bernie Holland were resolved during the above described meeting.

From records retained by DFYS, staff then gathered statements from the following people:

- D.H. gave a statement on July 22, 1982, and signed it on August 2. D.H. later retracted this statement, in a written statement dated December 1, 1982.

- M.H.(female) gave a statement on July 22, 1982, and signed it on July 29, 1982. An unsigned statement given on July 23, 1982, was also given by M.H.

- K.S. signed a statement on July 29, 1982, which was originally given on July 20, 1982.

- A.J. gave a statement on July 22, 1982, and signed it July, 29, 1982.

- A.M. gave a statement on July 22, 1982, which was later signed on July 29, 1982.

- M.F. gave a statement on July 23, 1982, which was not signed.

- Gil Lucero gave a signed statement on July 28, 1982.

Allegations against the Hollands:

Based upon the statements that division personnel had received as of July 23, 1982, DFYS prepared a NOTIFICATION OF COMPLAINT. The notification included a description of 13 allegations against the Hollands. Each of the 13 allegations was reviewed by me to determine if there was adequate factual basis for the allegation, and adequate basis to begin and continue investigation of the allegation.

Since an administrative hearing regarding modification of the Holland foster license is being scheduled in the near future, the truthfulness of the allegations is not a matter within the jurisdiction of this office.

Summarized, the allegations provide as follows:

1. This allegation was that the Hollands "yell and direct vulgar and abusive language towards foster children." DFYS officials cited 7 AAC50.450(2).

Information provided by some of the foster children as of July 23, 1982, indicates this allegation had an adequate factual basis and was properly the subject of investigation.

2. This allegation was "that Bernie Holland frequently hits foster children with a stick, ruler, yardstick and his hands," and was presented with a cite to 7 AAC 50.450(1) and 7 AAC 50.450(5).

Information provided by some of the foster children, as of July 23, 1982, indicates this allegation had an adequate factual basis and was properly the subject of an investigation.

3. It was alleged that "Bernie Holland squirted lemon juice into a resident's mouth, as punishment, and in the process of the resident resisting, used force to open the resident's mouth by holding the jaw and applying pressure." The notification referenced 7 AAC 50.450(1).

Information provided by one foster child, as of July 23, 1982, provided sufficient basis for the allegation, and the matter was properly the subject of an investigation.

4. "Allegation that Bernie and Mary Holland are providing Day Care in their home for from 2-5 children," accompanied by reference to 7 AAC 50.430(b) and 7 AAC 50.430(d). As of July 23, 1982, six different sources reported that day care services were being provided for as many as four children.

The two regulations cited by DFYS provide:

> 7 AAC 50.430. NUMBER OF FOSTER CHILDREN PERMITTED IN THE HOME.
>
> . . .
>
> (b) No more than eight children in all are permitted in any one home.
>
> . . .
>
> (d) No more than five children of any age who are unrelated to the foster parents are permitted.

Read together, these two regulations do not appear to have any direct relationship to the issue of day care services. Rather, the regulations seem to describe the maximum number of foster children and other unrelated children a foster home may have (five), and the total number of children, including foster and natural children that may live in a foster home (eight).

Since the allegation mentions day care as well as number of children, DFYS may have been relying on 7 AAC 50.440(a):

> (a) Day care of children and commercial care of the aged, or maternity, or convalescent patients may not be combined with foster care of children without prior approval of the division representative.

As of July 23, 1982, there was not sufficient basis for the allegation that the Hollands were providing day care services for up to and including five children. Pat Monroe, Licensing Coordinator, told me that DFYS always requires foster homes to secure a day care license, when day care services are going to be provided, in addition to divisional approval. Since it appears that a day care license is required only if day care services are provided in the home to more than four children, it does not appear that the Hollands would be required by law to secure a day care license. AS 47.35.020(2). In addition, providing day care services in a foster home, per se, does not appear to violate the foster care regulations cited by DFYS.

There is confusion concerning day care licensing obligations within a licensed foster home, and it is not at all clear that, in citing 7 AAC 50.430, the division made the point it had intended. Taking the cite provided as the basis of my review, it does not appear that the allegation has a sufficient basis. The Hollands might have admitted the truth of the allegation but it is far from certain that the admission or the finding will support revocation of the license.

5. The fifth allegation held that there was not sufficient space for foster childrens' personal possessions. As of July 23, 1982, there appeared to be sufficient basis for the allegation, and there appeared to be an adequate amount of information to warrant the investigation of the allegation.

6. Allegation 6 stated that "the Holland children have played with, destroyed, broken or lost the foster childrens[']] personal possessions." The notification in which the allegation was contained included a reference to 7 AAC 50.420(e), a provision which states:

> (e) The foster parents shall allow the child to bring personal possessions into the foster family home, and allow him to acquire possessions of his or her own, within reason with regard to space and comfort, and safety.

The above cited regulation only directs that personal possessions of foster children may be brought into the home, with certain limitations. That the regulation supports an investigation of the allegation is at best arguable.

7. It was alleged that children of Mr. and Mrs. Holland annoy the foster children, that, when a dispute arises, the foster children are always wrong and the natural children right, and that the foster children are verbally abused. The allegation referred to 7 AAC 50.450(2) and 7 AAC 50.450(5).

The "verbal abuse" portion of this allegation is identical to the one included in allegation number 1 above. The applicable regulation for it appears to be found in 7 AAC 50.450(2).

The other regulation, 7 AAC 50.450(5), states:

> 7 AAC 50.450. DISCIPLINE.
>
> (5) disciplined by shaking or by delivering a forceful blow with a hand or a weapon, however, controlled hand spankings of one to three slaps on the buttocks are allowed when appropriate;

Allegation 7 appears to be partially redundant with the first allegation. In addition, the second regulation cited, 7 AAC 50.450(5), bears no direct relationship to any part of allegation 7. Accordingly, it is not possible to conclude that the allegation is supported by any part of the regulations cited, and I question whether it ought to have been the basis for subsequent investigation and finding.

8. Citing 7 AAC 50.420, it was alleged that "adult boarders are living in the Holland foster home and that they are sharing sleeping quarters with foster children." The applicable portion of this regulation is part (a):

> 7 AAC 50.420 RESPONSIBILITIES OF FOSTER PARENTS
>
> (a) The foster parents shall report to the division representative any significant changes in the household such as employment, housing, or serious illness, that would affect the ability to care for foster children.

There was sufficient evidence from foster children that, in addition to Mary and Bernie Holland, other adults may have been living at the home. Although the allegation refers to these adults as "boarders," the regulations cited do not appear to prohibit boarders, and the use of the term is of no impact on the allegation.

The main point of the allegation is that the Hollands failed to notify the DFYS that additional adults were staying at their home. DFYS apparently believes that the addition of the residents is a significant change impairing the ability of the Hollands to properly care for foster children. As the regulation is written, it is not clear who is to determine, for purposes of reporting, what constitutes "a significant change." In this instance, DFYS should have identified the impairment resulting from the additional adults. The failure to provide this in the allegation suggests that the allegation is flawed, and should not have been investigated.

9. This allegation was that "adult boarders participate in the family meetings and trials and are allowed to vote on foster childrens [sic] punishment." 7 AAC 50.410(a) was cited.

Although there appears to be sufficient evidence for this allegation to be included and investigated, the cited regulation does not clearly indicate such activity is improper. The cited regulation, a provision that describes the qualities of a good foster parent, says:

> 7 AAC 50.410. QUALIFICATIONS OF FOSTER PARENTS AND OTHERS IN THE HOUSEHOLD.
>
> (a) The foster parents must show evidence of being responsible, mature individuals of reputable character who exercise sound judgement and display the capacity to provide good care for children.

If DFYS is concerned about discipline aspects in the Holland home, the applicable regulation seems to be 7 AAC 50.450, which describes standards for discipline.

10. It was alleged that "three foster children and one adult boarder sleep in a bedroom with no windows," citing 7 AAC 50.550(e)(3). This regulation states that each bedroom used by foster children must have a large window exit for emergency use. It does not mention boarders.

Based upon statements from two foster children, there appeared to be sufficient basis for the allegation that foster children were sleeping in a bedroom without a window large enough for emergency use. In addition, there appeared to be enough evidence to warrant investigation of this allegation. The allegation, as prepared by DFYS is poorly stated.

11. It was alleged that family meetings were conducted until late in the evening, and because of the late meetings, foster children were not able to get sufficient sleep, citing 7 AAC 50.410 as authority.

Statements from two foster children indicate there was sufficient basis for this allegation, and that it should have been investigated.

12. The next to the last allegation was that "Bernie Holland has belittled and used cruel and derogatory remarks when describing a foster child to other foster children, and to other persons who have entered the foster home." Reference followed in the notification to 7 AAC 50.450(2), which states:

> 7 AAC 50.450. DISCIPLINE.
>
> The foster parents must be able to show evidence of ability to work with children without recourse to physical punishment or psychological abuse and must be positive in their approach to discipline. Any discipline or control must be appropriate to the child's age and developmental level, but in no event may a child in care be:

> (2) subjected to verbal abuse, derogatory remarks about himself or members of his family, or threats to expel the child from the foster home;

Four foster children gave information which provided the basis for this allegation and the need to investigate it. One of these four foster children indicated the remarks by Mr. Holland were not intentional.

13. The last allegation was "that Bernie Holland patted a female resident on the bottom, grabbed a female resident around the [illegible] and while 'wrestling, grabbed her legs to get a cheap feel.'" The [illegible]ation was supported in the notification by reference to 7 AAC 50.410. (Presumably, the agency meant to cite subsection 410(a) in support of this allegation.)

The applicable portion of D.H.'s July 22 written statement, on which this allegation is based, states:

> Bernie was sitting on the couch next to M.H.(female) and I was sitting at the table when Bernie and M.H. started wrestling sort of and Bernie was grabbing M.H. around the waste [sic] and her leg's [sic] and it looked more like Bernie was trying to get a cheap feel off her he does this all the time . . .

In the course of my investigation, Robert Danneker told me the quoted portion of this allegation came from D.H. He acknowledged, however, that he had provided the phrase regarding sexual contact to D.H. On July 22, 1982,. D.H. provided a second written statement, signed on August 2, 1982, which says in part:

> Danneker: Read a quote from written statement regarding Bernie wrestling with M.H.(female)
>
> D.H.: Said that Bernie grabs her from behind under the arms. Stated that he didn't think Bernie should do this. M.H. got up to go somewhere and was bending over to pull down her pants (said she wears tight pants and had to pull them down when she got up). This was when Bernie swatted her (hit her on the bottom).
>
> Danneker: Have you seen him do this with any other girl in the house?
>
> D.H.: No.
>
> Danneker: What was M.H.'s reaction?
>
> D.H.: Walked away. It appeared to be done in fun but ...

In addition to the obvious inconsistencies in the two statements provided by D.H., the incorrect quotation provided by Mr. Danneker, and the phrase regarding sexual contact which had been provided by Mr. Danneker, there is the July 15, 1982 written statement of M.H. (female), which says in part:

> When I have my but [sic] up in the air reaching for something and I have been hit for no reason twice with [a] stick once with [a] hand and last night before he hit me with his hand I caught him first a[nd] said don't hit me what's the reason. he [sic] said boy you are lucky I couldn't resist.

Read together, the three statements do not seem to accurately describe the same or similar incidents. In addition, M.H. (female) is reported to have had the following conversation with Robert Danneker on July 23, 1982:

> Danneker. Have you ever wrestled with Bernie?
>
> M.H.: He likes to tickle us and stuff like this.
>
> Danneker: When he hugs you is it from behind or from the front?
>
> M.H.: Front. It's mostly when I'm feeling down.
>
> Danneker: Is he sexual towards you?
>
> M.H.: No. He told us he'd never do anything like that. If he wanted to bad enough he has a wife.

When asked if the incident she described in her July 15, 1982 statement included any sexual connotation, M.H. (female) told me on December 30, 1982, "not even, Bernie's not that way." Marlyn Olson, told me on January 4, 1983, that when he took the first written statement from M.H. (female) that although there appeared to be physical contact between M.H. and Bernie Holland, it was probably not of a sexual nature. Finally, Robert Danneker told me on January 10, 1983, that, "There's no sexual connotation in there. I am just saying it's inappropriate behavior." Mr. Danneker also said this allegation did not concern any illegal activities.

From the information provided by D.H., M.H. (female), Marlyn Olson, and Robert Danneker, investigation of allegation 13 should have been terminated after preliminary inquiries by DFYS.

Presentation of the allegations to the Hollands:

The NOTIFICATION OF COMPLAINT was given to the Hollands on July 23, 1982, during a home visit by Robert Danneker, and Carolyn Tuovinen, a Community Care Licensing Supervisor. Both Bernie and Mary Holland have

stated to me that Mr. Danneker and Ms. Tuovinen were pushy and rude during the meeting. As an example of this, Mary Holland recalled that "they pushed themselves through the front door." Another example given by the Hollands, was that Mr. Danneker told Bernie Holland, "hey asshole, just answer the allegations." In addition, the Hollands stated that Mr. Danneker and Ms. Tuovinen threatened to remove the foster children if the Hollands refused to answer the allegations.

Both Mr. Danneker and Ms. Tuovinen denied; that they were pushy, that Mr. Danneker used the language described above, and that they threatened to remove the children if the allegations were not answered. However, Ms. Tuovinen did admit there may have been a discussion about removing foster children, but this was not a threat.

Before leaving the Holland home, Ms. Tuovinen and Mr. Danneker examined the sleeping quarters for the foster children. He told the Hollands that children could not sleep in the basement bedroom if it did not have had an adequate fire escape. As reported in DFYS notes, Ms. Tuovinen and Mr. Danneker also told the Hollands DFYS would be in touch. Ms. Tuovinen told me that DFYS hoped to be in touch the same day as the visit (July 23, 1982).

Later that night, at approximately 10:30 p.m. a call was placed by DFYS to the Hollands to tell them that DFYS would be in touch the next day (July 24, 1982) regarding the allegations, and to inquire if the foster children sleeping in the basement bedroom had been moved to an bedroom with an adequate fire escape. Bernie Holland believes this telephone call was a form of harassment, especially considering the time the call was placed.

The following morning (July 24, 1982), Mr. Danneker visited the Holland home to deliver a letter (detailing three of the thirteen allegations, and having the NOTIFICATION OF COMPLAINT and foster care administrative regulations attached) signed by Ms. Tuovinen and Mr. Danneker and dated July 23, 1982. Mr. Holland claims that Mr. Danneker told him, "I've got my ass covered, so I'm not sweating it." Danneker admitted to me on January 10, 1983, that during this visit of July 24, 1982, he did say that to Bernie Holland.

Refusal to respond to the allegations:

In a letter dated July 24, 1982, Mr. Holland advised Mr. Danneker that the foster children formerly in the basement bedroom, had been assigned to an upstairs bedroom. Mr. Holland refused to answer the allegations, and encouraged DFYS to investigate the allegations. Mr. Danneker responded to the above correspondence by stating in a letter dated July 27, 1982:

> By not responding you have interfered with the Division's authority to supervise and enforce standards as allowed by Alaska Statutes 47.35.010, (1) (2) (3) in regard to facilities. Also, by not replying, the Division may be forced to make a

> determination of the allegations based soley [sic] on the information gathered by the Division without having your input. If this becomes necessary, it will be done.
>
> I am again requesting that a reply to the allegations be submitted. You and your wife, and/or your legal counsel, are requested to reply within ten (10) days of the date of this letter. I look forward to hearing from you.

A person violating any of the statutes or regulations regarding foster care "is guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $200". AS 47.35.070. In light of the criminal penalty, the reluctance of the Hollands to further discuss the 13 allegations appears understandable. Although DFYS presented the 13 allegations as a licensing issue, any information gathered by DFYS through discussions with foster children and or the Hollands could nevertheless provide the basis for a criminal prosecution.

I briefly reviewed the legal basis for a person suspected of violating a licensing law, to refuse to answer questions during the investigation for fear of self-incrimination. A discussion of this issue is found in State of Alaska, Department of Revenue v. Oliver, 636 P.2d 1156(1981), and several other cases. This review leads me to believe there is no clear answer to the question of when a person may invoke the right against self-incrimination during an investigation, particularly when the investigation initially appears to be non-criminal in nature. As to DFYS saying that refusing to answer allegations is interference of an investigation -- such a belief does not appear to be well founded.

Investigation of allegations completed:

On August 17, 1982, Danneker completed his report on the investigation of the 13 allegations. Danneker found that allegations 1, 2, 4, 5, 6, 7, 8, 9, 11, 12, and 13, are valid. He also found that allegation 3 was not substantiated by the evidence and allegation 10 was valid upon inspection, but had since been resolved.

The report included three problems noted during a standard-by-standard inspection of the Holland home during August, 1982. In closing his report Danneker states:

> EVALUATION AND RECOMMENDATION
>
> All of the above allegations are of a serious nature. Since they were found valid through investigation of the available information, they require immediate correction for the foster home to remain in operation. A serious matter is the Holland's refusal to respond to the allegations. Refusal to respond, either from the Hollands or their legal counsel, has not only interfered with the Division's

> authority to supervise and enforce standards for foster care allowed by statute, but also has demonstrated a lack of responsibility on the part of the Hollands and placed those children entrusted to their care at an unacceptable risk level.
>
> The Hollands have repeatedly violated the foster home regulations and have made no attempt to correct some of the violations, or if they have corrected them have failed to inform the Division. Foster parents who are seriously concerned about the welfare of children would normally be willing to cooperate with the Division to resolve any problems of [sic] misunderstandings that may arise. The Hollands have demonstrated a total lack of co-operation with the Division in dealing with the allegations.
>
> It is therefore recommended that the foster home license for Bernie and Mary Holland be revoked.

Though the report determined that "The Hollands have repeatedly violated the foster home regulations...", identification or explanation of these previous violations was not given in the report.

In a letter dated September 27, 1982, Lew Reece, Regional Administrator, DFYS, told the Hollands that the investigation of the 13 allegations had been completed, and, with the exception to allegation 10, the Hollands had failed to respond to the allegations. The letter notes allegations 1, 2, 4, 5, 6, 7, 8, 9, 11, 12, and 13 are valid. Mr. Reece also said that allegation 3 was not supported by the evidence, and that allegation 10 although true at the time of inspection(July 23, 1982), is now not valid since the foster children have been moved. Mr. Reece closes the letter by telling the Hollands:

> Given the pattern of violations, and your refusal to respond or to formulate a corrective action plan, the Division is referring your case to the Department of Law for consideration of license modification, license suspension, or revocation. You will be informed of the Department of Law's recommendation to this Department.

Related incident:

Mr. Holland also alleges that the DFYS was harassing him by asking the Troopers to investigate an incident involving him and another foster parent. Mr. Holland believes he was the focus of this investigation, and that the investigation centered on Mr. Holland's alleged obstruction of an investigation conducted by DFYS. The relevant facts on this matter are that Mr. Reece, via a memorandum dated December 10, 1982 to 1st Sgt. John Murphy, requested the Troopers investigate how information (concerning another DFYS investigation) from Reece's office was transmitted to Bernie Holland. Mr. Reece was concerned that a state employee was illegally leaking confidential information.

On December 28, 1982, the Troopers concluded that, "...investigation indicated the information regarding the investigation was passed from #6, M.H. (female), to #4, Holland, who called C. and advised him he was being investigated."

M.H. (female) was the source of the information DFYS was investigating in the other matter. Therefore, one person not a state employee (M.H.) gave the information to another person who was not a state employee (Bernie Holland). Because of this, the final report indicates there was no "leak" from the offices of DFYS. Also, the focus of the investigation was not Holland, rather, it was to determine if there was a state employee leaking confidential information. This has been confirmed by 1st Sgt. Murphy.

FINDING:

As to the allegations that the Division of Family and Youth Services failed to conduct an investigation properly, and is harassing the Hollands, the following problems are noted:

1. The referenced regulations in allegation 4 (7 AAC 50.430(b),(d)) do not appear to directly relate to the issue of providing day care services in a home licensed for foster care. Therefore this allegation lacks sufficient legal basis and should not have been investigated;

2. Allegation 6 indicates that 7 AAC 50.420 is the applicable regulation regarding destroyed, lost or broken personal possessions of foster children. However, the regulation only addresses the ability of the foster child to bring possessions into the home, not what happens to these possessions after arrival in the foster home. The allegation does not appear to have sufficient legal basis;

3. At best allegation 7 appears to restate the essence of allegation 1 and therefore is redundant, and the second regulation cited, 7 AAC 50.450(5) bears no known relationship to any portion of the allegation;

4. The Division used the word "boarders" in allegation 8, yet the cited regulation does not prevent boarders from living in a home that is licensed for foster care. Rather, the Division seems to be concerned that the Hollands failed to report "any significant changes in the household". The DFYS should have identified any impairment in the care of foster children resulting from additional adults at the Holland home. This allegation lacks sufficient specificity, and should not have been investigated;

5. Regulation 7 AAC 50.410(a), as cited in allegation 9 (that "adult boarders participate in the family meetings and trials and are allowed to vote on foster childrens [sic] punishment") is not directly related to the allegation. The regulation regarding discipline, 7 AAC

50.450, describes the applicable discipline standards, which should have been used to measure conduct against;

6. The Division used the word "boarder" in allegation 10, yet the regulation only talks about fire safety, and does not mention boarders. Therefore, one has to question the reason for using the word, and the allegation is poorly stated;

7. Based upon the information available to the Division as of July 23, 1982, investigation of allegation 13 should have been terminated after preliminary inquiries and the Hollands so notified in the letter given them on July 24, 1982;

8. Robert Danneker used vulgar language when transmitting a letter to Bernie Holland on July 24, 1982.

Of the above noted problems, numbers 1, 2, 3, 4, 5, and 7, appear to constitute harassment of the Hollands.

The secondary allegation, relating to the later investigation undertaken by the Alaska State Troopers initiated by Lew Reece is not supported.

J82-1136

Bernie Holland filed a complaint with this office on November 18, 1982, alleging that an official of the DFYS improperly ordered employees not to place children in the Holland home for foster care purposes. In a letter from Lew Reece, Regional Administrator, to Mr. Holland dated December 1, 1982, Reece said:

. . .

> On August 25, a certified letter of license non-compliance was sent to you and again you failed to contact us. On September 27, 1982, the investigation was concluded and a copy of the findings was sent to you and the Attorney General's office for further action.
>
> It was only after the investigation was concluded and you had been given approximately 2 months to respond to the Division that I instructed the Juneau District Office to suspend juvenile placements until the alleged licensing violations in your foster home had been resolved.
>
> I would be more than happy to meet with you at your convenience, with our licensing specialist, to assist you in developing a corrective action plan for your foster home. Without this meeting I cannot recind [sic] the instructions I have given the Juneau District Office not to place children in your foster home. [Emphasis added]

At the time of this letter, Holland held a valid foster care license which had not been suspended, modified, denied or revoked.

There is no known regulation which permits the state to "suspend juvenile placements" when "alleged licensing violations" in a foster home holding a valid foster license (which has not been suspended, modified, denied or revoked) have not been resolved to the satisfaction of the Division of Family and Youth Services. State law provides that a foster license may be revoked or modified "if it [the Division] determines that a facility is not in compliance with AS 47.35.010 - 47.35.080 or the regulations adopted under AS 47.35.010 - 47.35.080." AS 47.-35.040(b).

On September 27, 1982, the Hollands were told in a letter from Mr. Reece that several of the allegations were found to be true, yet their license was not modified or revoked at that time. The agency determined the Hollands failed to meet several of the regulations found in 7 AAC 50.310 - 7 AAC 50.620, and because of this the Holland license should have been revoked at that time (see 7 AAC 50.390(a)).

> 7 AAC 50.390. DENIAL OR REVOCATION.
>
> (a) If the division finds that a foster home does not comply with the provisions of 7 AAC 50.310 - 7 AAC 50.620, or the specific terms of a license which has been issued, it shall deny or revoke the license. [Emphasis added]

In addition to 7 AAC 50.390(a), a statutory provision states the following:

> AS 47.35.040. LICENSING.
>
> (e) The department shall give written notice of revocation or modification under (b) of this section 30 days before the effective date of the action. However, if the health or well-being of children or dependent adults is in jeopardy, the revocation or modification action is effective immediately upon the issuance of written notice by the department.

This complaint presents the unusual situation in which the agency has determined the Hollands do not comply with the regulations for foster homes, then their foster home license should have been revoked (per 7 AAC 50.390(a)) and they should have been given 30 days notice of the effective date of the revocation of their license (per AS 47.-35.040(e)). None of this was done. If the Holland's license had been revoked, the agency would not have been able to place children there (See AS 47.35.020).

On this subject, Mr. Reece in a letter to this office, dated January 10, 1983, notes the following regulation:

7 AAC 50.360. SCOPE OF LICENSING.

> The licensing of a foster home by the division does not create an obligation for the state or any child placement agency to support the foster home financially, nor obligate the state or any child placement agency to place or maintain any child in the home. The issuance of a license means only that the home, the family, the physical environment, and services have been evaluated and determined to meet required standards.

Mr. Reece said in the letter:

> Respondents, Bernie and Mary Holland, refused, on numerous ocassions [sic], to respond to the allegations against them, made it difficult, if not impossible, for the development of ongoing professional relationships between the Division and the licensed home, a prerequisite to determine compliance with State law.

FINDING:

Based upon the available evidence, the Division of Family and Youth Services acted without the benefit of clear legal authority when it suspended placement of foster children in the Holland home. For reasons discussed in the report of a later complaint, the agency apparently should have acted to revoke the Holland license, a procedure that would have prevented placement of foster children in the Holland home.

Still, the regulation cited above entails no obligation on the part of the Division to place foster children in an approved home. Placement is discretionary with division personnel. Though the division appears to have been in error in basing its decision on the events preceding Mr. Reece's September 27 letter, the decision to direct no further placements in the Holland home until licensing violations were corrected was one that the division could properly make.

J82-1188

A complaint was filed with this office on December 12, 1982, alleging that the Division of Family and Youth Services erred in either determining the Holland foster home was not safe, or in leaving foster children in their unsafe home. This complaint concerns the Hollands' foster home license.

Since the DFYS did not immediately revoke or modify the foster home license as provided by AS 47.35.040(e), when the health or well-being of the children is in jeopardy, division personnel apparently concluded that the violations found during its investigation were not serious. The notice to the Hollands that they were not in compliance was given on September 27, 1982. The Hollands had 14 days to correct the compliance problems (7 AAC 50.370(2)). If at the end of the period corrective

action had not been taken, any foster child would be removed from the foster home.

As of October 28, 1982, the Hollands had not corrected problems identified in the letter to them dated September 27, 1982. In the case at hand, K.S., a foster child, remained at the Holland home until October 28, 1982, which is approximately two weeks beyond the time allowed for either satisfactory corrective action(s), or removal from the home.

FINDING:

Based upon the available evidence, the Division of Family and Youth Services incorrectly left K.S. in the Holland foster home more than 14 days after the agency determined the home failed to meet the applicable standards.

J82-0728

Ombudsman Complaint J82-0728 was filed with this office on August 11, 1982. The complainant, Jan Still, alleged that DFYS wrongfully took a statement from his 14-year-old daughter concerning allegations involving the foster home where she was living. Mr. Still also alleged that his daughter was not able to have an attorney, nor her parents present, during the interview by the DFYS and that the agency refused to give a copy of the statement to him.

The child at the center of this complaint provided a statement during the later part of July, 1982, to the DFYS concerning the investigation of the Holland foster home license by the DFYS. At that time she was under the custody of the DFYS. The child admitted to this office the statement was given voluntarily to the DFYS, and that she was not coerced. She also said that at the time of the interview she did not request either her parents or an attorney be present. Since the subject of the interview was the foster home where she lived and not possible illegal activities on her part, there was no apparent reason for her to have an attorney or her parents present while being interviewed.

Based upon conversations with Linda Scoccia, Assistant Attorney General, Department of Law, and staff at the DFYS, it appears that the child was initially refused access to the written statement given to DFYS. Only after a subsequent consultation with Ms. Scoccia was the statement released. The child refused to give her parents access to the statement at the time she received it from DFYS. Ms. Scoccia also advised that the statement should not be released to Mr. Still because the statement is considered confidential in nature. When I asked Ms. Scoccia if the statement could be released at the time the parents regained full custody of the child, she said no.

The child in this complaint was considered a "child in need of aid" at the time of the request for the statement. The rights of the parents of a child in need of aid are stated under AS 47.10.084(c):

> When there has been a transfer of legal custody or appointment of a guardian and parental rights have not been terminated by court decree, the parents shall have residual rights and responsibilities. These residual rights and responsibilities of the parent include, but are not limited to, the right and responsibility of reasonable visitation, consent to adoption, consent to marriage, consent to military enlistment, consent to major medical treatment except in cases of emergency or cases falling under AS 09.65.100, and the responsibility for support, except if by court order any residual right and responsibility has been delegated to a guardian under (b) of this section.

From this statute, it seems the parents may not have had the legal right to examine statements provided by a child when the child is in state custody. I checked with Lt. Roger McCoy, Alaska State Troopers, and inquired as to their procedures in this type of case. Lt. McCoy told me that the Troopers will give a child a copy of a statement taken by the Troopers, as well as to the legal custodian of the child. Also, if the parents of a child do not have custody of the child, a copy of the statement will not be given the parents until they regain legal custody.

The anxiety of the father in not being able to examine the statement provided by his daughter is described in his letter to this office, dated October 4, 1982:

. . .

> On about August 10th (9-11) I questioned Mr. Danniker [sic] (social worker) who stated that he had obtained the statement from [Still's daughter] and that I could have a copy. I arrived at Mr. Dannikers [sic] office about 10 minutes after talking to him on the phone and was ushered into an office by Mr. Danniker [sic] and Mr. Reese [sic], his supervisor. Mr. Danniker [sic], who seemed excited, then informed me that he had signed statements from 6 children concerning mental, physical and sexual abuse and that he had told [Still's daughter] that she could move out of the Holland foster home anytime she wanted to. Mr. Danniker [sic] also mentioned an after hours meeting at H&SS with [Still's daughter]. He reported that she was visibly shaking as the result of questioning and pressure from Mr. Holland.

. . .

FINDING:

Based upon the available evidence, the Division of Family and Youth Services did not wrongfully take a statement from a child while investigating allegations of violations of foster home laws. The child in question did not request to have either an attorney or her parents present when giving the statement, and the investigation was not directed at any possible illegal activities of the child. The agency did refuse to give a copy of the statement to Jan Still, and apparently did so properly. (However, the agency could have handled the request in a more sensitive manner, and if the allegations were in fact serious, the child should have been removed from the foster home immediately, and or the license should have been revoked or modified. (See 7 AAC 50.370 and AS 47.35.040(e)). Also, based upon the procedures of the Troopers, the agency could have given a copy of the statement to Still when legal custody of the child was regained.)

RECOMMENDATIONS:

By way of immediate personal remedy to the complainants in J82-0689, I recommend:

Recommendation 1. The Division of Family and Youth Services should prepare and send a written apology to the Hollands concerning the harassment aspects to these complaints, and the foul language used by Mr. Danneker.

The following recommendations should be made to the Division of Family and Youth Services to prevent recurrence of the problems found during the investigation of these complaints:

Recommendation 2. The Division should state as clearly as possible any allegation regarding a foster home. The allegation should have sufficient basis to be stated, and be directly related to a standard established by statute and/or regulation.

Recommendation 3. The Division should refrain from demanding that a foster home secure a day care license unless and until it is clear that the law so requires.

Recommendation 4. The Division should notify the subject of an investigation, at the earliest opportunity, when investigation of an allegation has terminated because the allegation lacks sufficient legal basis or proof, or is shown to be false.

Recommendation 5. In its revision of its office manual, the Division should examine, with the Department of Law, the issue of self-incrimination by a licensee in the course of a licensing investigation, and prepare and include discussion of this issue in the policy and procedures manual.

Recommendation 6. The Division, with the assistance of the Department of Law, should revise the applicable portions of the policy manual and Alaska Administrative Code to guarantee to persons providing statements to the DFYS a copy of that statement upon request.

Recommendation 7. The Division, with the assistance of the Department of Law, ought to examine the legal basis for denying information retained in DFYS files to the parents and legal custodians of children receiving services from the DFYS. A definitive policy on this matter appears to be in order. The policy adopted ought to be included in the policy manual and Alaska Administrative Code.

Recommendation 8. Division personnel should strive to handle matters as identified in Ombudsman Complaint J82-0728 in a sensitive manner. The Division may wish to consider sending a letter of apology to Mr. Still.

Recommendation 9. The Division should review current policy regarding employee discipline and should; if warranted, consider appropriate disciplinary measures for the employee(s) involved with the harassment matters and the use of vulgar language by one employee.

STATE OF ALASKA

DEPARTMENT OF HEALTH AND SOCIAL SERVICES
DIVISION OF FAMILY AND YOUTH SERVICES

In the Matter of the Application for Licensure as a Residential Child Care Facility by B.G. HOLLAND Respondent.	License No. 235005 (Denied)

RECOMMENDED DECISION

This proceeding involves the issue of whether the Department of Health and Social Services, Division of Family and Youth Services (DHSS) acted properly in denying respondent Bernie G. Holland's application for a license to operate a residential child care facility in Juneau. The proceeding was initiated by the filing of a statement of issues by DHSS on June 15, 1982. On June 25, 1982, respondent submitted his notice of defense, and on August 9, 1982, DHSS filed an amended statement of issues. The hearing briefs were filed and evidence was taken during a hearing held between October 4th and October 7, 1982. At the conclusion of the hearing, respondent presented an oral closing argument and DHSS, by its attorney, and with the approval of the hearing officer and respondent, submitted a written closing argument.

I. FACTS

While there is disagreement among the parties as to the inferences to be drawn from the facts, there appears to be little disagreement as to most of the primary facts. In September of 1981, Mr. Holland submitted an application for a license for a "foster family group home," to be known as "Holland House." Document 66. On November 19, 1981, respondent was notified by Alinio Lobo, licensing specialist at the Southeast Regional Office (SERO) in Juneau, that the office was looking forward to respondent's submission of an "improved final version of the proposal." Document 16.

On January 12, 1982, respondent submitted to the SERO Office of DHSS at least two copies of a document entitled "Family Group Home Proposal." Document 403. That document was intended by respondent to be the expanded program description requested by SERO in the letter of November 19, 1981. For some inadequately explained reason, SERO had numerous problems handling the document. The testimony indicated that some of the recipients of the document at SERO thought it was merely a proposal for a program being considered by respondent that was unrelated to the September 30, 1981 application for a license. Consequently, at least one of the copies of the proposal was passed on to the Central Office for informational purposes only. At least one other copy of the proposal was retained in respondent's license application file at SERO. At some time between its submission on January 12, 1982 and June 8, 1982, the proposal disappeared from respondent's application file. Testimony indicated that this disappearance was merely an accident in that the document fell out of respondent's file and into the back of a drawer in a desk at SERO.

In April of 1982, Alinio Lobo, the licensing specialist responsible for reviewing respondent's license application, began a series of on-site visits to the proposed facility. These visits were in furtherance of the completion of a standard by standard evaluation of the proposed facility, the satisfactory completion of which was necessary prior to issuance of a license by DHSS.

On May 20, 1982, new regulations for residential child care facilities in Alaska became effective. This was prior to completion of the standard by standard evaluation by Mr. Lobo. On June 4, 1982, Ms. Kay Smith, supervisor of the Southeast Regional Office, reviewed the Facility Information Summary (CWS 80) presented to her by Mr. Lobo. Document 22. That CWS 80 recommended that respondent be issued a provisional license for the facility applied for, with the license to run from June 15, 1982 to December 15, 1982. On the same date that she reviewed it, Ms. Smith signed off on the document. According to the language next to her signature block, her signature confirmed that she had reviewed the study and that she concurred that "the facility meets specified requirements." According to the testimony

of Ms. Smith and Ms. Connie Hansen of the SERO Office, Ms. Smith left town that same day and instructed Ms. Hansen to sign the program evaluation and licensing recommendation for her as soon as the document was typed. On June 8, 1982, Ms. Hansen in fact did sign the typed version of the program evaluation and licensing recommendation. Document 41. In that document, Mr. Lobo recommended that the application submitted by respondent in September of 1981 be approved and a license issued. By the signature of the Acting Regional Manager, Ms. Hansen, SERO concurred with Mr. Lobo's recommended approval. However, Ms. Smith testified that she actually never read any of the back-up documents supporting the licensing recommendation. Further, Ms. Hansen testified that she also did not read any of the back-up documentation and merely signed the document recommending licensure because Ms. Smith had instructed her to do so.

According to the testimony of Mr. Pugh, the licensing for Holland House came to his attention on June 8, 1982 when Ms. Yvonne Walker informed him that she had received a monthly report from Ms. Smith which indicated, among other things, that SERO was in the process of finalizing the license. According to Mr. Pugh, because he wished to be involved in the licensing of any new facilities, he met on the afternoon of June 8th with Yvonne Walker, Pat Monroe, Alinlo Lobo and Connie Hansen to discuss licensing of Holland House. Also according to Mr. Pugh, the licensing file and proposal of Mr. Holland were brought to him prior to that meeting at his request. (There appears to be some confusion as to when Mr. Holland's file actually was brought to Central Office for Ms. Hansen testified the file was brought to Central Office on June 9th.) On that same day, at Mr. Pugh's request, Ms. Monroe and Ms. Walker searched for and located the license which was about to be issued for Holland House, and that license was thereafter held in abeyance pending a complete review of the licensing file by Central Office.

At the June 8th meeting it was discovered that the file did not contain a completed standard by standard evaluation. Mr. Pugh therefore asked Ms. Monroe to review the file and determine whether the facility complied with

LAW OFFICES

320 FOURTH STREET, SUITE B
JUNEAU, ALASKA 99801
(907) 586-3011

the new regulations for residential child care facilities which became effective on May 20, 1982. Ms. Monroe completed her review and reported back to Mr. Pugh on June 9th. Her conclusion, concurred in by Mr. Pugh, was that the proposed facility was not in compliance with the new regulations and that the license should not be issued until the facility was brought into compliance.

Mr. Holland was called into the Central Office for a meeting on the morning of June 10th, at which time Mr. Pugh and Ms. Monroe informed Mr. Holland that they could not issue a license for Holland House at that point because it was not in compliance with the new regulations. That same day Ms. Monroe informed him that she would be willing to work with him and assist in bringing his facility and application into compliance with the regulations. After a meeting with Ms. Monroe at which she began to explain what Mr. Holland would have to do before DHSS could issue Holland House a license, Mr. Holland indicated he would have to think about it. A few days later he called Ms. Monroe and requested that DHSS grant or deny his application. Central Office complied with that request and the license application for Holland House was denied. By letter of June 15, 1982, Mr. Holland was informed of the denial and presented with a statement of issues setting forth the reasons for the denial.

At some time after Alinio Lobo's return to Juneau on June 14, 1982, there appeared a completed standard by standard evaluation for the Holland House facility. Testimony as to when this document had been completed was contradictory. It was the testimony of Ms. Monroe and Mr. Pugh that the document was not in the file as of June 9, 1982 and that the only standard by standard evaluation in the file at that time was far from complete. They also testified that Mr. Lobo had stated on June 8th that he was still working on the standard by standard evaluation. Mr. Lobo, however, testified that he had completed the standard by standard evaluation and placed it in the file on or before June 8, 1982.

In August of 1982, Mr. Holland and Mr. Botelho met with me to discuss procedures to be followed in bringing this case to a hearing. At that time

Law Offices
FINDLEY & BURNHAM
A Professional Corporation

Juneau, Alaska 99801
(907) 586-3611

Mr. Botelho indicated that it was the position of DHSS that no complete standard by standard evaluation assessing the facility's compliance with the new residential child care facility regulations had been done for the facility, and that that in itself was sufficient to justify denial of the license application. It having been my view that it made little sense to go through a long and costly hearing in this case only to reach the conclusion that the license could be denied because a standard by standard evaluation had not been done, I recommended to Mr. Holland that he allow DHSS to conduct a new standard by standard evaluation of his facility. Mr. Holland agreed. At Mr. Holland's request, Ms. Laurie Vaughn of the Fairbanks Regional Office of DHSS performed the standard by standard evaluation. Her conclusion was that the facility was not in compliance with the May 20, 1982 residential child care facility regulations and that the license should not be issued. Document 183.

At some time in August, the "proposal" submitted to SERO by Mr. Holland on January 12, 1982, which, inexplicably, had not found its way to Mr. Holland's licensing file, was brought to the attention of DHSS. According to the testimony of Ms. Hansen, she had seen the document sometime prior to May of 1982, but for some unknown reason, had not considered it part of Mr. Holland's application. She became aware sometime during the summer of 1982 that the document was not in Mr. Holland's licensing file, and she ultimately obtained a copy of it by driving out to Mr. Lobo's home. Evidently, the copy so obtained was an extra copy Mr. Lobo had for his personal use for he testified that there were two other copies which he had placed in Mr. Holland's licensing file. Mr. Lobo was certain that he had placed those two copies in the file, clipping one of them into the file and placing the other one loosely in the file. According to the testimony, a couple of days after obtaining the document from Mr. Lobo at his home, another copy was found in the back of a drawer in Ms. Hansen's desk at SERO. The explanation given by Ms. Smith for this occurrence was that Ms. Hansen has a very messy desk and that the document had plastic covers and must have slipped out of the file and into the back of Ms.

Juneau, Alaska 99801
(907) 586-3011

Hansen's desk drawer. According to Ms. Hansen, she had discussed this document with Ms. Smith sometime prior to May of 1982.

Upon discovery of the group home proposal of January 12, 1982, a copy of the document was sent to Ms. Vaughn for her assessment to determine whether the document changed the conclusion she had reached in her standard by standard evaluation. She then assessed the Holland House application in view of the new document. Her conclusion, however, remained that the Holland House did not satisfactorily meet the new residential child care facility regulations and that the license should be denied.

CONCLUSIONS OF LAW

Each of the parties argues that the other bears the burden of proof in this proceeding. Mr. Holland has cited no support for his assertion. The State has cited Fields v. Kodiak City Counsel, 628 P.2d 927 (Alaska 1981); Thornton v. Commissioner of Department of Labor and Industry, 621 P.2d 062 (Montana 1980), and Country Club Home, Inc. v. Harder, 620 P.2d 1140 (Kansas 1980). None of these cases is instructive on the point. In Fields, the court applied the standard rule that one seeking a variance to zoning requirements has the burden of proof, and the ordinance at issue specifically set forth what one seeking a variance was required to show to be successful. In Thornton and Country Club Home, Inc., the courts were reviewing a final order emanating from an administrative hearing, and in each case the court concluded that the order was presumed to be correct and the burden was on the one challenging the order. In the case at bar, we are not dealing with a final order of an agency following a hearing. Instead, we are trying to derive that order.

A case which Mr. Holland might have cited in support of his position is that of Alaska Alcoholic Beverage Control Board v. Malcolm, Inc., 391 P.2nd 441 (Alaska 1964). There, the court concluded that since under the Administrative Procedure Act the party filing a statement of issues is the moving party and the party seeking the issuance or re-newal of a license is the respondent, the party filing the statement of issues bears the burden of

Juneau, Alaska 99801
(907) 586-3811

proof on the issues raised therein.

In my view, none of the above authorities are very helpful. It is my conclusion that in this case, DHSS has the burden of presenting a prima facie case in support of the claims set forth in the statement of issues. Once it has done so, the burden of proof falls upon Mr. Holland to prove by a proponderance of the evidence that the requested license should be issued. See Mezines, Stein & Gruff, 4 Administrative Law, § 24.02 (1982). This approach seems to me to give proper recognition to both the fact that DHSS cannot arbitrarily refuse to issue a license on the one hand, while on the other hand, given the importance of DHSS' licensing function in protecting society, a presumption of some magnitude in favor of the State's licensing decision should apply.

The arguments of Mr. Holland in support of his case appeared to be as follows. First, because of an incident at his home and his subsequent complaint to the Ombudsman, as well as a number of rumors at the SERO Office concerning occurences at Mr. Holland's facility, DHSS intended to deny Mr. Holland's application regardless of whether his proposed facility complied with applicable regulations. In support of this part of his argument, Ms. Borkowski testified that Ms. Smith had stated, upon reviewing the January 12, 1982 proposal, that Mr. Holland would be licensed over her dead body. Furthermore, Ms. Borkowski testified that Ms. Smith had indicated that she was dissatisfied because of Mr. Holland's complaint to the Ombudsman and that he was essentially a troublemaker.

With the foregoing premise established, Mr. Holland proceeded to argue that someone in DHSS had removed the completed standard by standard evaluation performed by Mr. Lobo and the January 12, 1982 Group Home Proposal from his licensing file for the purpose of assuring that the application would be denied. In response to the fact that DHSS' denial of the license was maintained even after review of those two documents, Mr. Holland argued that the deficiencies which remained in his application were rather minor, DHSS had the authority to waive adherence to those provisions with which Mr. Holland had not complied, and DHSS had exercised that

Law Offices
Findley & Burnham
A Professional Corporation
329 Fourth Street, Suite B
Juneau, Alaska 99801
(907) 586-3611

discretion in approving the applications of certain other facilities. In Mr. Holland's view, DHSS should have issued him a provisional license for his new facility allowing him a reasonable amount of time within which to bring his facility into compliance with those portions of the new residential child care facility regulations with which he had not yet complied.

The position of DHSS was that, notwithstanding all that occurred prior to August of 1982, once all of the proper documents were in Mr. Holland's file and a standard by standard evaluation was performed, his facility was found not to be in compliance with the new residential child care facility regulations, and therefore the denial of the license application was proper. While provisional licenses have been issued in the past, DHSS' position is that given recent amendments to AS 47.35.055, a provisional license is only appropriate for on-going facilities, not for new facilities, the difference being that denial of a license to an existing facility would cause great hardship for the residents of that facility because it would require closing the facility, while any delay in starting a new facility would not have such an affect. According to DHSS, a waiver of regulation requirements could only be given in certain cases, and then only if an applicant applied in writing for a waiver. In those cases in which field workers addressing other facilities exercised discretion and did not require that certain documents called for in the regulations be submitted with a facility's application the field workers were not complying with the policies of DHSS. I find the argument of DHSS to be persuasive.

No person may operate a residential facility without first obtaining a license to do so from DHSS. AS 47.35.020; 7 AAC 50.003. To obtain a license for a new residential child care facility, an applicant must satisfy the requirements of 7 AAC 50.001 - 7 AAC 50.073. AS 47.35.040. A facility in operation at the time new regulations are passed may continue in operation despite not being in compliance with some of the new regulations if it submits an acceptable plan of correction for those items of the regulations with which it is not in compliance. A new facility may not begin operation until it has satisfied all of the applicable regulations. 7 AAC 50.05(a)(2).

Law Offices
FINDLEY & BURNHAM
A Professional Corporation
320 Fourth Street, Suite B
Juneau, Alaska 99801
(907) 586-3811

DHSS is required to issue a provisional license to a new facility "if the facility submits to the Department an acceptable plan for operation that is in conformity with" applicable statutes and regulations. AS 47.35.055(a); 7 AAC 50.013. Under that statute and regulation, a new facility which does not meet all of the regulatory requirements is not entitled to a provisional license. While under 7 AAC 50.023 DHSS possesses the authority to waive certain of the regulatory requirements under certain conditions, an applicant desiring a waiver must make application therefor to DHSS in writing.

The facility for which Mr. Holland is seeking a license is a new facility, and he is therefore required to satisfy all of the regulations applicable to residential child care facilities. He is not entitled to a provisional license while he is bringing his facility into compliance with the regulations. He is also not entitled to a waiver of any of the regulations for he did not apply to DHSS in writing for any such waivers.

A number of witnessess testified that one reason for denying Mr. Holland's license application was that DHSS did not recognize a category of provider called a foster family group home. This reason for denial, however, was not included in the amended statement of issues in support of denial of the license. Furthermore, it appears that DHSS construed the application of Mr. Holland to be for a residential child care facility and evaluated the facility using residential child care facility regulations. For these reasons, this recommended decision will not address the question of whether the absence of a category of care provider specifically matching the title set forth in Mr. Holland's application would, in itself, justify denial of his application.

Turning to the reasons for denial set forth in the first amended statement of issues, DHSS has met its burden of making a prima facie showing that the inadequacies set forth therein did in fact exist. Mr. Holland put on no evidence to the contrary. He also failed to present evidence showing that a provisional license had been provided for any other new residential child care facility in Alaska which had failed to satisfy those regulations set forth in the first amended statement of issues. Furthermore,

LAW OFFICES
FINDLEY & BURNHAM
A PROFESSIONAL CORPORATION

JUNEAU, ALASKA 99801
(907) 586-3011

he failed to put on any evidence tending to show that any other new residential child care facility in Alaska had obtained a waiver of any regulatory requirements without submitting a written waiver request. Consequently, Mr. Holland failed to prove that the denial of his license was arbitrary or capricious, or that he was treated differently than other applicants in a similar situation.

While Mr. Holland may consider some or all of the deficiencies in his application identified by DHSS to be of minor significance, I do not intend to pass judgment on either the wisdom or importance of the regulations he failed to satisfy. DHSS is clearly authorized by law to set forth by regulation standards with which care providers in this state must comply and Mr. Holland has not challenged that authority. Mr. Holland having failed to satisfy those standards, I recommend that the denial of his application be upheld. DHSS, at least as of June 10, 1982, appeared willing to assist Mr. Holland in bringing his facility into compliance with the regulations. Mr. Holland chose not to follow this route, and instead demanded that DHSS take action on his license, notwithstanding that it certainly should have been clear to Mr. Holland that the only action DHSS could take at the time was to deny his license.

Though I recommend that the license denial be upheld, something must be said of DHSS' very poor handling of Mr. Holland's application. Were the results not so costly to the State in time and money, and to Mr. Holland both in time and emotional distress, one could refer to the handling of his application as a comedy of errors. The application was submitted by Mr. Holland in September of 1981 and yet no decision was made on the license until June of 1982. Furthermore, the amended version of his group home proposal which SERO had specifically requested in November of 1981, upon receipt by SERO, was not even recognized as being related to his application, notwithstanding the fact that the document bore the exact same title and appearance as did the plan attached to his original application. SERO then evidently lost the document. When SERO finally got around to considering Mr. Holland's application, the Regional Director recommended

Law Offices

Juneau, Alaska 99801
(907) 586-3811

that it be approved, without even reviewing any of the documentation in support of the license. The Acting Regional Director then signed the approval recommendation, also without reviewing any back-up documentation. As it turns out, the kind of facility for which Mr. Holland was applying, and for which SERO recommended licensure, did not even exist in DHSS regulations.

Mr. Holland assigns sinister purposes to all of these events and interprets them in some manner to be a conspiracy against issuance of his license. I do not agree with that conclusion. While Mr. Holland argued that SERO was dead set against issuing him a license, it was in fact SERO which recommended issuance of the license. It appears that all of the events to which Mr. Holland pointed as evidence of a sinister conspiracy were evidence of nothing more than a very poor performance by the employees at SERO. Had the license application been properly handled, it is doubtful this matter would have ever gone to a hearing, and a care provider who has provided high quality services for the State in the past would not be so disillusioned with continuing to serve the State in the future. It would seem to be most beneficial for the State to make every reasonable effort to assist quality care providers in continuing to provide services on behalf of the State. Sadly, no such effort appears to have been made in this case until it was too late.

DATED this 3rd day of December, 1982.

TO: Judiciary Committee

FROM: Representative John J. Liska

REFERENCE: HB 593, "An Act relating to fines imposed in criminal cases"

A. Copy of HB 593

B. Reference Section 2 of HB 593.
We felt it essential to the bill to include this section. President has been set in many places in Alaska Statutes where there are direction or instructions as to the use of funds, even though we can not designate what the funds shall be used for. Reference is made to Sec. 16.05.130 attached.

C. Program Review of other States.
Showing -

1. Funding Source
2. Total Revenues
3. Specific Provisions
4. Experienced insufficient funds
5. Changes in Costs and Funding

D. Letter of support from Violent Crimes Compensation Board.

JJL/tm

Sec. 16.05.120. Disbursement of funds. Upon authorization of the commissioner, disbursements from the fish and game fund shall be paid by the proper state officer on presentation of vouchers signed by the commissioner or an authorized representative, and approved by the proper state officer. (§ 17 art I ch 94 SLA 1959)

Sec. 16.05.130. Diversion of funds prohibited. Funds accruing to the state from sport fishing, hunting, and trapping licenses or permit fees may not be diverted to a purpose other than the protection, propagation, investigation, and restoration of sport fish and game resources and the expenses of administering of the sport fish and game divisions of the department. (§ 18 art I ch 94 SLA 1959; am § 2 ch 41 SLA 1979)

Effect of amendments. — The 1979 amendment substituted "sport fishing, hunting, and trapping licenses" for "sport fishing and hunting licenses."

Opinions of attorney general. — The primary, if not the sole, purpose of this section is to make possible the procurement of federal matching money. A provision for nondiversion of funds is a condition precedent to obtaining federal assistance under 16 U.S.C. §§ 669, 777. 1959 Op. Att'y Gen., No. 10.

A temporary use of money in the fish and game fund under particular circumstances, wherein repayment is to be made pursuant to a contract with the federal government, is not a diversion within the meaning of this section. 1959 Op. Att'y Gen., No. 10.

Sec. 16.05.140. Assent to provisions of federal aid acts. The state assents to the Federal Aid to Wildlife Restoration Act of September 2, 1937 (16 USC, 669-669j), to the Federal Aid in Fish Restoration Act of August 9, 1950 (16 USC, 777-777k), to any amendment, revision or modification of either act, and to any other federal aid act which may be enacted to benefit the state. It is desired that the department participate in the federal aid programs on the same basis as other states. (§ 20 art I ch 94 SLA 1959)

Sec. 16.05.150. Enforcement authority. The following persons are peace officers of the state and they shall enforce this chapter:

(1) an employee of the department authorized by the commissioner;

(2) a police officer in the state;

(3) any other person authorized by the commissioner. (§ 21 art I ch 94 SLA 1959)

Opinions of attorney general. — Where the military does not assign sufficient personnel to enforce fish and game laws on military reservations, state game officials as well might enforce them, possibly by deputizing state game officials as federal marshals, since 10 U.S.C. 2671(c) makes violation of state fish and game laws a federal offense. 1964 Op. Att'y Gen., No. 2.

Since state fish and game laws operate on a federal military reservation, not only as federal law but also as state law, both the federal and state officers may enforce these laws. 1964 Op. Att'y Gen., No. 2.

State officers should have full access to military reservations in Alaska, subject to safety and military security requirements, to enforce laws and manage and harvest fish and game resources. 1964 Op. Att'y Gen., No. 2.

There is no provision in the Alaska Statutes or the Alaska Constitution which would operate to deprive the commissioner

PROGRAM REVIEWS

Funding Source	Total Revenues	Specific Provisions	Experienced Insufficient Funds	Changes in Costs & Funding
ALASKA				
•General Revenues	$ 339,300[1]	None	Yes	•Because of increasing medical costs, inflation and more claims, benefits are increasing but admin. costs are remaining stable.
CALIFORNIA				
•Penalty Assessment	17,075,379	•All felonies and most misdemeanors are assessed a $4 penalty for every $10 fine; 24.38% of these monies go to the victim compensation; the balance goes to victim witness and rape crisis centers	Yes	•This is the first year that the program received no general fund support and was funded solely from fines & penalties. •$2,620,860 worth of claims were carried over from previous year, leaving $10,149,281 for payment of claims in '81-82. Additional spending authority granted to cover $2.5 million shortfall this year.
CONNECTICUT				
•Fines	1,100,000	Fines are assessed as follows: •$15 on all motor vehicle and DUI offenses & misdemeanors •$10 on all felony convictions	No	•Bill pending to allow program to invest funds in short term interest-bearing accounts (presently remains in general fund with interest reverting to that fund).
DELAWARE				
•Fines & penalties •Forfeitures •Restitution	343,317[2]	[redacted] (including traffic violations)	Yes	•Surcharge increased from 10% in 1982.
FLORIDA				
•Fines & penalties	2,200,000[3]	$10 additional court cost and surcharge on all criminal penalties	No	•Court costs & surcharges now will be assessed on criminal traffic offenses. Program estimates that this will provide 50% more revenue.
HAWAII				
•General Revenues	598,000	None	No	•Asked legislature for a $300,000 revolving fund in 1981 but it did not pass.
ILLINOIS				
•General Revenues •Supplemental Approp.	2,300,000	None	Yes	None

These are 1981 figures or rather Program reviews —

PROGRAM REVIEWS

Funding Source	Total Revenues	Specific Provisions	Experienced Insufficient Funds	Changes in Costs & Funding	
•General Revenues •Fines & penalties	$0,000 (Administration) 900,000 (Benefits)	•$15 on class A misdemeanors & all felonies (no traffic violations) •10% of salaries of prisoners on work release	No	•Indiana has had a rollercoaster history of funding: 1978 Appropriation - $200,000 1979 " $1 1980 " $0 1981 - Changed affiliation $1 •Under new legislation, effective July 1982, the program will be self-supporting without any general appropriation. •Also under the new law, interest on the victim compensation fund will revert to that fund rather than to the general fund as in the past.	INDIANA
•General Revenues	259,452	None	No	•Bill pending to assess a penalty fee of $25 on all felonies & $10 on all misdemeanors to augment revenues from the general fund. The state made a projection as to the amount that would be collected & subtracted that much from the general appropriation so that funding remains stable.	KANSAS
•General Revenues •Fines & penalties	366,000	$10 for all offenses for which imprisonment may be imposed	Yes	Legislation establishing fines effective July 15, 1982.	KENTUCKY
•General Revenues •Court Costs	$2,004,763 (only $318,230 was collected thru court cost)	$10 on all conviction	Yes	None	MARYLAND
•General Revenues	903,987	None	Yes	•Legislation pending to allow for payment of some or all of any fine imposed on a convicted offender to the victim of that crime. •Bill also pending to allow for monies collected under Son of Sam provision to revert to the victim compensation fund if no civil action is brought by victim.	MASSACHUSETTS
•General Revenues •Supplemental Approp.	1,900,800	None	Yes	None	MICHIGAN

PROGRAM REVIEWS

Funding Source	Total Revenues	Specific Provisions	Experienced Insufficient Funds	Changes in Costs & Funding	
•General Revenues •Restitution •Refunds •Fines & Penalties	573,089	See "changes"	Yes	•Anticipate that funding will decrease due to state government cutbacks. •Legislature passed surcharge provision stipulating that 10% of a fine (or $40, whichever is greater) on every misdemeanor, gross misdemeanor & felony conviction should be collected & divided up among victim services. An additional $5 is assessed for traffic violations. These funds will, however, be used to reimburse the general fund & thus only those monies in excess of the appropriation will go directly to victim compensation. •Program would like to mandate minimum monetary penalties on offenders. •Would also like to see a % of wages earned by prisoners go to victim compensation.	MINNESOTA
•Fines & Penalties •Restitution	$ 370,814	[illegible]-of fines & bail forfeitures assessed by highway patrol on all motor vehicle violations	No	Established new penalty assessment procedure in 1981 - Prior to that date the victim comp. fund received 6% of all fines for moving traffic violations (local cities & towns).	MONTANA
•General Revenues •Supplemental Approp.	115,000	None	Yes	•Program was set up in 1979 with a 3-year test period established before appropriation would be raised, but there has been no problem in getting supplemental appropriations as needed. •However, because of state fiscal crunch governor requested 3% decrease in victim compensation budget last year and will probably affect similar decreases in the future.	NEBRASKA
•Bond Forfeitures •"Son-of-Sam" monies	70,000	•Bond forfeitures on all felony cases •Half the earnings from "Son-of-Sam" provisions	—	None	NEVADA

PROGRAM REVIEWS

Funding Source	Total Revenues	Specific Provisions	Experienced Insufficient Funds	Changes in Costs & Funding
NEW JERSEY				
•General Revenues •Fines & Penalties	$2,300,000 Approx.	•Court costs of $25 assessed on any simple assault or any crime; in cases of injury or death to a victim the judge can impose any fine up to a max. of $10,000. Money comes directly to victim comp. office & is deposited in treasury account.	Yes	•Court costs imposed effective Feb 6, 1980 but because of problems in collecting fines they did not begin to come in until 1981. Program has hired a court monitor to oversee collection of the penalties; so far in 1982, $600,000 has accumulated. •Proposal pending also to assess a fine of $10 on juvenile convictions, as well as $25 on all convictions for disorderly conduct. •Budget increased by $1 million in 1979 (appropriation).
NEW MEXICO				
•General Revenues	$1,800,000	None	—	None
NEW YORK				
•General Revenues	6,800,000[9]	None	—	•Legislation was proposed in 1982 to allow for the proceeds of sale of abandoned property held by law enforcement to be paid into victim compensation fund. •Also proposed in 1982 a more rigorous restitution statute. •Have also proposed minimum mandatory monetary penalties on persons convicted of crimes. •Also proposing that 1/2 of all monies earned by convicted arsoners be used for victim compensation.
NORTH DAKOTA				
•General Revenues	$311,068[10]	None	No	None
OHIO				
•Fines & Penalties •Supplemental Approp.[11]	5,310,189	•Additional court costs of $3 (see "Changes") are assessed on any person who is convicted of or pleads guilty to any offense other than a non-moving traffic violation.	Yes	•Legislation eff. Nov. 15, 1981 provided that court cost be raised to $10 until June 30,1983 at which time it will revert back to $3 unless action is taken to keep it at higher rate. •In 1980 the legislature specified that court costs apply also to juveniles & that defendant out on bail is required to pay.

PROGRAM REVIEWS

Funding Source	Total Revenues	Specific Provisions	Experienced Insufficient Funds	Changes in Costs & Funding	
•General Revenues (Almin) for period 10/14/81 to 6/82 •Fines & Penalties (Collected thru 2/82) •Restitution Fund	$ 50,000 44,022	•Fines & Penalties are to be assessed on pleas & convictions as follows: $5 - misdemeanors (excluding traffic) $25-non-violent felonies $25-$10,000 (judicial discretion) on violent felonies Project that these assessments will bring in $250,000/year •Restitution fund-statute provides that any monies left in the fund over 3 years will revert to victim compensation fund; expecting to receive $30,000 to $35,000/year	—	None	OKLAHOMA
•General revenues •Restitution	1,761,000 ...	•$1,480,000 benefits, 281,000 admin. •Program is running on $45,000/month less than appropriated •Unique restitution statute allows program to recoup costs from third parties, such as drinking establishments, who may be held responsible for the criminal acts of its patrons & must carry liability insurance	—	None	OREGON
Fines & penalties	$1,861,397 (collected) $1,311,000 (budget)	• $10 fine is assessed on any Title 18 criminal conviction. While this $ goes into the general fund from which the victim compensation receives an appropriation the program is really self-supporting through deposition of court costs.	No	• Anticipate that their revenues will increase because the crime rate is going up.	PENNSYLVANIA

PROGRAM REVIEWS

Funding Source	Total Revenues	Specific Provisions	Experienced Insufficient Funds	Changes in Costs & Funding	
Fines & penalties	$970,723	• Court costs are imposed on criminal convictions as follows: 1. $10 on misdemeanors with penalty of less than 1 year incarceration; 2. $30 on felonies w/ penalty up to 5 years; 3. $50 on felonies w/penalty of more than 5 years	No	None	RHODE ISLAND
Fines & penalties	$1,141,631	• Offenders on parole pay $5/month • Court costs: (1) $21 in Circuit Court; (2) $10 Sessions Court	Yes	• 1980 legislature included convictions in Sessions Court (less severe crimes) in court costs levies. • Taxing provision used to be "crimes against person or property"; now reads any criminal conviction except $500 fine and no incarceration (eff. 1981).	TENNESSEE
Fines & penalties	$1,129,520	• Court costs are assessed as follows: 1. $15 on all felony convictions & 2. $10 on all Class A & B misdemeanors (penalties of more than $200 fine or incarceration)	Yes	• Legislature does not meet again until 1983--at that time they will probably pass bill including Class C misdemeanors in levying fines.	TEXAS
General revenues	$125,000	• Benefits only	Yes	• Considering possibility of setting up special rates; no formal action yet.	VIRGIN ISLANDS
Fines & penalties	$450,673[16]	• $15 court cost assessed on individuals convicted of any felony or Class 1 & 2 misdemeanor (not including drunken driving, disorderly conduct, or traffic offenses)	Yes	• Fee raised to $15 from $10 in 1981. • Have go-ahead from legislature to propose that interest from victim comp. fund revert to that special fund rather than general fund.	VIRGINIA

PROGRAM REVIEWS

Funding Source	Total Revenues	Specific Provisions	Experienced Insufficient Funds	Changes in Costs & Funding
• General revenues • Fines & penalties	$2,500,000	• $50 felony or gross misdemeanor convictions • $25 misdemeanor • Includes juveniles • Need not be convicted of victim-involved crime	Yes	• Old legislation provided for $25 fine or 10% of other fine (whichever is greater) to be assessed on victim-involved felony or gross misdemeanor. • New legislation contains monitoring & enforcement provisions. • New legislation is predicated on proposition that program will be self-supporting.
Fines & penalties	$318,000	• $3 court cost imposed on any felony or misdemeanor conviction, including moving traffic violations. • Anticipate that they will be collecting between $30,000 & $40,000/ month.	—	None
General revenues	$1,788,000	• $1,583,000--benefits $205,000--admin.	No	• 1980 passed victim/witness bill of rights adding separate additional appropriation of $572,000 in '81 for v/w services to be administered by victim comp. program.

DEPARTMENT OF PUBLIC SAFETY

VIOLENT CRIMES COMPENSATION BOARD

POSITION PAPER - HB 593

SUPPORT

February 17, 1984

This bill would impose a 20% penalty on any court fine a defendant is sentenced to pay. An amount equivalent to the 20% penalty collected would be appropriated annually to the crime victim compensation fund.

The Violent Crimes Compensation Board supports this bill. This is similar to legislation passed in other states and in effect makes offenders pay for compensation to innocent victims.

SUBJECT: Retirement benefits for administrative director of courts (Work Order No. 13-1894)

TO: Representative Charlie Bussell

FROM: LHA Linn H. Asper
Legislative Counsel

I have redrafted the above-referenced work order to delete section 3 of the original draft, as you have requested. That section made the Act apply only to an administrative director employed after the effective date of the Act. I included the section for informational purposes because the result indicated in the section is the result that is dictated by the case of Hammond v. Hoffbeck, 627 P.2d 1052 (Alaska, 1981). In that case it was held that an employee's retirement benefits are guaranteed as a matter of contract and constitutional right and that the employee's retirement plan may not be changed in a way that disadvantages the employee without providing offsetting additional advantages. Thus, under the law, the benefits due an incumbent administrator of courts or an administrator who takes office before the Act becomes effective may not be changed in the way that this bill indicates, whether or not the bill contains a section similar to the one that you have requested be removed.

Sec. 22.25.012. Retirement benefits of administrative director. (a) An administrative director of the Alaska court system appointed under art. IV, sec. 16 of the state constitution is entitled to retirement benefits under this chapter on the terms and conditions applicable to a superior court judge appointed after July 1, 1978, except that an administrative director may receive retirement benefits only with service as administrative director for 10 or more years.

(b) An administrative director who vacates the office of administrative director for any reason and who has not at that time accrued 10 years of credited service under this chapter is entitled to a refund of contributions to the judicial retirement system together with interest.

(c) An administrative director who withdraws from the judicial retirement system under (b) of this section is eligible for membership in the public employees' retirement system (AS 39.35) and shall receive credited service in that system for service rendered as administrative director. To be eligible for membership in the public employees' retirement system under this subsection, the administrative director must contribute to the public employees' retirement system

(1) the amount that would have been contributed if the administrative director had been a member during the period of the membership in the judicial retirement system; and

(2) any contributions for service as administrative director refunded from the public employees' retirement system at the time the administrative director became a member of the judicial retirement system. (§ 7 ch 146 SLA 1980)

Editor's notes. — This section was redrafted by the revisor of statutes to remove personal pronouns in conformity with AS 01.05.031(c) and § 4, Chapter 58, SLA 1982.

Section 50, ch. 146, SLA 1980 provides: "A person who is serving as administrative director of the Alaska court system on the effective date of AS 22.25.012 as enacted in sec. 7 of this Act [July 1, 1980] may receive prior service credit under AS 22.25 for service rendered as administrative director of the Alaska court system before the effective date of AS 22.25.012 if he withdraws from the public employees' retirement system (AS 39.35), receives a refund of his contributions made under AS 39.35, elects to receive service credit under AS 22.25 for prior service as administrative director and makes retroactive contributions for prior service as administrative director including service before July 1, 1978. Retroactive contributions made under this section are calculated at seven percent of the base annual salary of a superior court judge in effect during the period for which contributions are made."

Sec. 22.25.020. Retirement pay. A retired justice or judge eligible for retirement pay shall receive from the date of eligibility until death monthly compensation equal to five percent per year of service, to a maximum of 75 percent, of the monthly salary authorized for justices and judges, respectively, at the time each retirement payment is made. (§ 1 ch 102 SLA 1963; am § 11 ch 83 SLA 1967)

Editor's note. — The obsolete section was derived from § 4, ch. 52, SLA 1979.

Sec. 39.35.158. Administrative director of courts. An administrative director of the Alaska court system who withdraws from the judicial retirement system under AS 22.25.012 is eligible for membership in the system and shall receive credited service in the system for service rendered as administrative director. To be eligible for membership in the system under this subsection, the administrative director must contribute to the system

(1) the amount he would have contributed if he had been a member during the period of his membership in the judicial retirement system; and

(2) any contributions for services as administrative director refunded to him by the system at the time he became a member of the judicial retirement system. (§ 30 ch 146 SLA 1980)

Article 3. Contributions by Employees.

Section
160. Amount of employee contributions
170. Employment contributions mandatory
180. Voluntary contributions by employee
190. [Repealed]
200. Refund upon termination of employment for reason other than death
210. [Repealed]
220. [Repealed]
230. Refund upon death of retired employee
240. Withdrawal of voluntary contributions

Sec. 39.35.160. Amount of employee contributions. (a) While participating in the system each peace officer and each fireman shall contribute five per cent and every other employee shall contribute four and one-quarter per cent of his compensation to the public employees' retirement system.

(b) Repealed by § 6 ch 135 SLA 1980 and § 39 ch 146 SLA 1980. (§ 8a ch 143 SLA 1960; am § 2 ch 235 SLA 1968; am § 3 ch 35 SLA 1969; am § 5 ch 109 SLA 1970; am § 5 ch 159 SLA 1972; am § 2 ch 58 SLA 1979; § 6 ch 135 SLA 1980; § 39 ch 146 SLA 1980)

Effect of amendments. — The 1979 amendment substituted the language beginning "be considered to have agreed" for "pay the appropriate social security contribution" in subsection (b).

The first and second 1980 amendments, retroactive to January 1, 1980, repealed subsection (b).

Editor's note. — Section 2, ch. 123, SLA 1976, purported to amend subsection (a) of this section. Section 25, ch. 123, SLA 1976, provided: "Sections 2 and 3 of this Act become effective on July 1, 1976 if approved by a majority of the votes cast in a special election conducted by the Public Employees Retirement Board to be held among active members of the retirement system. During the conduct of this election, the division shall remain impartial and take no position on the question." The amendment was rejected by the public employees.

Section 1, ch. 58, SLA 1979, purported to amend subsection (a) of this section. Section 9 of ch. 58 provided that the amendment take effect on January 1, 1980, if approved by a majority of the votes cast in a special election conducted before

Sec. 39.35.680. Definitions. In this chapter, unless the context otherwise requires,

(1) "active member" means an employee who is employed by an employer, is receiving compensation for seasonal, permanent full-time, or permanent part-time services, and is making contributions to the system;

(2) "actuarial adjustment" means equality in value of the aggregate expected payments under two different forms of pension payments, considering expected mortality and interest earnings on the basis of tables adopted from time to time by the board;

(3) "administrator" means the person appointed by the commissioner of administration under AS 39.35.050;

(4) "average monthly compensation" means the result obtained by dividing the compensation earned by an employee during a considered period by the number of months, including fractional months, for which compensation was earned; the considered period consists of the three consecutive calendar years during the period of credited service which yields the highest average, or if the employee does not have three consecutive calendar years, his period of credited service; an employee must have at least 115 days of credited service in the last calendar year in order to be used as part of the three consecutive calendar years;

(5) "beneficiary" means a person designated by an employee to receive benefits that may be due from the system upon the employee's death;

(6) "board" means the Public Employees Retirement Board;

(7) "calendar year" means the period beginning on January 1 and ending on December 31;

(8) "compensation" means the total remuneration earned by an employee for personal services rendered, including cost-of-living differentials, but does not include retirement benefits, welfare benefits, per diem, expense allowances, or medical leave or annual leave not used by the employee;

(9) "credited service" means the number of years, including fractional years, recognized for computing benefits that may be due from the system;

(10) "deferred vested member" means an inactive member who meets the five-year credited service requirement to qualify for a retirement benefit;

(11) "dependent child" means an unmarried child of an employee, including one adopted, who is dependent upon the employee for support and who is either (A) under 19 years old or (B) under 23 years old and registered at and attending on a full-time basis an accredited educational or technical institution recognized by the Department of Education; age restrictions set out in this paragraph do not apply to a chil

(13) "early retirement" means retirement for a member who is at least 50 years old and has a minimum of five years credited service;

(14) [Effective until January 1, 1981] "elected official" means a member whose compensation results from personal services rendered as an elected representative and who elects coverage under AS 39.35.125;

[Effective January 1, 1981] "elected official" means a person whose compensation results from personal services rendered to an employer as an elected representative;

(15) "employee contribution account" means the account maintained by the system to record the mandatory contributions of each employee, including interest and adjustments to the account in accordance with AS 39.35.100;

(16) "employee savings account" means the account maintained by the system to record the voluntary contributions of each employee, including interest and adjustments to the account in accordance with AS 39.35.100;

(17) "employer" means the State of Alaska or a political subdivision or public organization of the state which participates in the system;

(18) "fiscal year" means the period beginning on July 1 and ending on June 30 of the following calendar year;

(19) "former member" means an employee who is terminated and who has received a total refund of the balance of his employee contribution account, or who has requested in writing a refund of the balance in his employee contribution account, or who is eligible for a refund under AS 39.35.200(b);

(20) "inactive member" means an employee who is terminated and who has not received a refund from the system or an employee on leave-without-pay status or layoff status;

(21) "member" or "employee"

(A) means a person eligible to participate in the system and who is covered by the system;

(B) includes

(i) active member;

(ii) inactive member;

(iii) vested member;

(iv) deferred vested member;

(v) non-vested member;

(vi) disabled member;

(vii) retired member;

(C) does not include

(i) former members;

(ii) persons compensated on a contractual or fee basis;

(iii) casual or emergency workers or nonpermanent employees as defined in AS 39.25.200;

(iv) persons covered by the Alaska Teachers' Retirement System;

(v) employees of the division of marine transportation engaged in operating the state ferry system who are covered by a union or group retirement system to which the state makes contributions; and

(vi) justices of the supreme court or judges of the court of appeals or of the superior or district courts of Alaska;

(vii) the administrative director of courts appointed under art. IV, sec. 16 of the state constitution unless he becomes a member under AS 39.35.158;

(D) may include employees of the division of marine transportation excluded under (C)(v) of this paragraph provided that

(i) the State of Alaska formally agrees to their inclusion through the process of collective bargaining; and

(ii) no collective bargaining agreement has the effect of obligating contributions made by the state under AS 39.30.150 in the event the state resumes participation in the federal social security system;"

(22) "military service" means active duty service in the armed forces of the United States;

(23) "nonoccupational disability" means a physical or mental condition which, in the judgment of the administrator, presumably permanently prevents an employee from satisfactorily performing his usual duties for his employer or the duties of another position or job which his employer makes available and for which the employee is qualified by training or education, not including a condition resulting from a cause which the board, in its regulations has excluded;

(24) "non-vested member" means an active or inactive member who does not meet the five-year credited service requirement to qualify for a retirement benefit;

(25) "normal retirement" means retirement for a member who is at least 55 years old and has a minimum of five years credited service, or who is any age and has 30 years or more of credited service, or a peace officer or fireman who is any age and has 20 years or more of credited service;

(26) "occupational disability" means a physical or mental condition which, in the judgment of the administrator, presumably permanently prevents an employee from satisfactorily performing his usual duties for his employer; however, the proximate cause of the condition must be a bodily injury sustained, or a hazard undergone, while in the performance and within the scope of the employee's duties and not the proximate result of the wilful negligence of the employee;

(27) "peace officer" [illegible]

House Bill 595
Fiscal Note Analysis
Prepared by Division of Retirement & Benefits
Department of Administration

February 22, 1984

IV Analysis: This bill will replace the administrative director of the Alaska Court System in retirement coverage under the Public Employees' Retirement System (PERS). Even though the bill will take effect immediately, the incumbent would be entitled to continued coverage under the Judicial Retirement System (JRS).

We have assumed that the incumbent would remain in his position until June 30, 1988 when he would have approximately 15 years of JRS service. We have assumed that the present annual salary of $79,600 will increase at a rate of 8% per year and that the contribution rates for the PERS and the JRS will remain constant through 1989 at the FY 85 level (13.80% PERS and 109.14% JRS).

The savings shown represent the savings to the State under the JRS less the cost to the State under the PERS.

Position Paper

HB 595

The Department of Administration supports passage of this legislation which would remove the position of Administrative Director of the Alaska Court System from the Judicial Retirement System and replace it in the Public Employees' Retirement System.

Even though it would not affect the status of the incumbent, the bill would ensure that, in future, only judges would enjoy the superior benefits of the judicial system.

J.K. Humphreys, Director, Division of Retirement & Benefits — Date 2/22/84

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM February 16, 1984

SUBJECT: Sectional Analysis of HB 619
Office of Litigation Counsel

TO: Representative Mitch Abood
Chariman, House State Affairs Committee

FROM: Billy G. Berrier
Director
Division of Legal Services

You have requested a sectional analysis of House Bill 619 establishing an office of Litigation Counsel in each house of the legislature.

Sec. 24.20.580 establishes two offices of litigation counsel, one in each houses as permanent staff agency of the legislature. Each is headed by a director appointed by the Legislative Council.

Sec. 24.20.590 provides the directors are appointed for a four year term and may be removed only for cause. It specifies the vote in the legislative council required for removal. It establishes qualification required of each director consisting of five years admission to practice of law in Alaska and admission to the United States District Court for Alaska.

Sec. 24.20.600 prescribes the duties of each office. Each shall represent the house, its members staff and agencies before courts or other tribunals as directed by the presiding officer of the house. They shall jointly represent central agencies and staff as directed by the legislative council.

Sec. 24.20.610 provides the legislative council shall establish the compensation of each director who employs and establishes the compensation of other staff of the office within limits of the budget. It also prohibits partisan political activities of the director and other staff. It

expressly provides that this prohibition does not include expressing private opinions or voting.

Sec. 24.20.620 provides that each director shall make a formal request for funds to the legislative council and the council shall include the amount it decides is needed in the budget it submits to each finance committee under AS 24.20.130.

Sec. 24.20.630 defines the term "council" as used in the bill to mean the Alaska Legislative Council.

*Sec. 2 provides for immediate effective date.

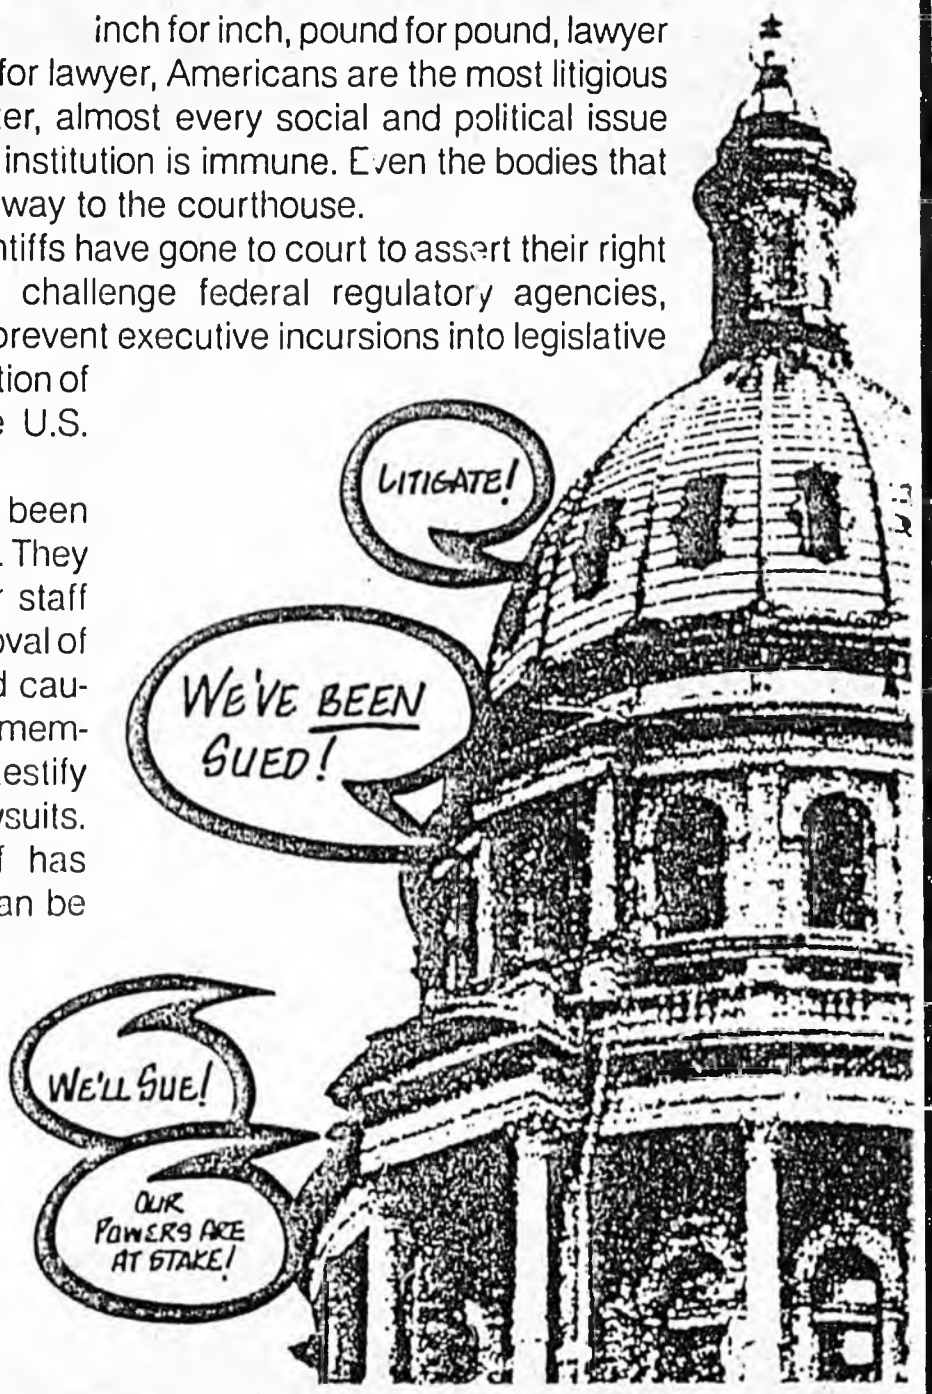
2 sets statutes ---------- $ 900	
TOTAL FURNITURE & EQUIPMENT $12,150	$ 12,150
TOTAL COST FY85	$299,960



Litigation has become a part of legislative life. In the past, legislatures have relied exclusively on the state attorney general to represent them—as the law often says they must. Now, some of them are hiring their own legislative counsels. That trend is likely to grow.

The State Legislature in Court

inch for inch, pound for pound, lawyer for lawyer, Americans are the most litigious people on earth. Sooner or later, almost every social and political issue ends up in court. No person or institution is immune. Even the bodies that write the laws are finding their way to the courthouse.

State legislatures as plaintiffs have gone to court to assert their right to appropriate federal funds, challenge federal regulatory agencies, regulate the initiative process, prevent executive incursions into legislative prerogatives, and seek clarification of the process for amending the U.S. Constitution.

Legislatures have also been hauled into court as defendants. They have been told to explain their staff hiring practices and justify removal of legislators from committee and caucus positions. Legislative staff members have been subpoenaed to testify before grand juries and in lawsuits. The legislative process itself has been assaulted. No tradition can be taken for granted.

Lanny Proffer

The State Legislature

Legislators have always believed that what was said or done in the legislature could not be questioned elsewhere, and their view was supported by a tradition of immunity that can be traced back to the 17th century. Yet in 1980 the U.S. Supreme Court held that immunity did not apply when the federal government was investigating a state legislator (*U.S.* v. *Gillock* 445 U.S. 360 [1980]). Legislators also believed that their power to raise and appropriate money was absolute. Today, federal judges instruct legislatures under threat of contempt to appropriate whatever sums are necessary to implement judicial decrees.

It is clear from a reading of the state statutes governing the operation of the legislatures and the attorneys general of the states that legislatures were not considered potential litigants. This seems incongruous, since American political theory relies so heavily on the notion of carefully calculated checks and balances. From a contemporary perspective, it seems inevitable that arguments between branches of government occasionally ripen into lawsuits.

Many states have absolute prohibitions against any state agency, institution or individual representing the state or its officials. Arizona statutes designate the attorney general as the only legal counsel for the state. Outside counsel can be retained only with the attorney general's consent. The Connecticut attorney general is specifically directed to defend members of the legislature if any of their official acts are challenged.

In 1966, the Utah Legislature passed a bill that authorized the legislature to retain its own counsel. The attorney general challenged the statute, and it was declared unconstitutional by the state supreme court. Not until 1972, when the legislative article of the state constitution was amended, could the Utah Legislature hire its own attorney.

Six state legislatures have statutory authority to litigate issues of concern to them: California, Georgia, Kansas, Nevada, Oregon and Utah.

Exclusion of the legislatures as litigants may have been based on the assumption that disputes between branches of government should be resolved by the political process rather than the courts. It may also have seemed that any sort of enforcement role, even if only to enforce a legislative prerogative, was inconsistent with the legislative function. Whatever the reason, the courts still have difficulty with legislatures as litigants.

Robert Coldsnow, legislative counsel for the Kansas Legislature, argues that without its consent the legislature has no existence for purposes of litigation. Individual members may sue or be sued; the legislature may not. Certain entities within the legislature have a legal existence; the legislature does not.

This lack of a clear party in interest causes confusion in the courts. When the Colorado General Assembly entered a suit against the Environmental Protection Agency, the U.S. Court of Appeals for the Tenth Circuit ruled that the named members of the legislature could not speak for the state and they lacked the requisite interest or "standing" in the case to be heard as individuals (*Mountain States Legal Foundation* v. *Costle* 630 f. 2d 754 [1980]). To quote the court: "Even if state law permitted the petitioner legislators to press the state's constitutional claims . . . this court should not allow the legislators standing to raise claims that the state itself declines to raise and in fact opposes."

In that case, the legislature and the governor took contradictory positions. Governor Richard D. Lamm instructed Attorney General John D. MacFarlane to enter the case as his advocate. The court ruled that "the attorney general has the exclusive right to represent the state in actions to enforce its interest." It held that the legislators could not represent the interests of the state because to do so would be to pre-empt the power of the attorney general and the governor.

The court either did not understand or chose to ignore the claim that uniquely *legislative* powers were being threatened. Legislatures may not have standing to compel enforcement of the statutes they pass, but they definitely have the requisite interest in preserving legislative authority. Issues that fall into this category include confirmation of certain state officials, ratification of constitutional amendments, and the legislature's investigatory and information-gathering functions.

In *Coleman* v. *Miller* (307 U.S. 433 [1939]), the U.S. Supreme Court made it clear that state legislators challenging the procedure for ratification of constitutional amendments had sufficient interest in the outcome of the case to have their claim resolved. Similarly, U.S. Senator Edward Kennedy (D-Mass.) successfully argued before the

U.S. Court of Appeals for the District of Columbia that an allegedly improper Presidential veto sufficiently infringed the power of the Senate, and his rights as a senator, to establish his standing to sue.

Aside from its opinion in *Coleman* v. *Miller*, the Supreme Court has not ruled on the question of legislator standing. And although the *Coleman* ruling has been cited repeatedly, it has limited value as precedent, since the standing of the legislature was not directly at issue when the Supreme Court decided the case. Their comments on the legislators' right to sue were superfluous to the decision.

Traditionally, legislatures have relied on the state attorney general for legal assistance. There are only a handful of states where the attorney general is not specifically directed to give legal opinions to the legislature when asked to do so. In some states, such as Oklahoma and South Carolina, the attorney general is available as a bill drafter for the legislature. In New Hampshire, the attorney general can be asked for legal advice in addition to drafting assistance.

In some cases, however, relying on the attorney general to advocate and defend legislative priorities is unwise. Worse still, the attorney general may be confronted with a conflict of interest. In the Colorado case cited above, where members of the legislature challenged the Environmental Protection Agency, and in Pennsylvania, where the legislature challenged the power of the governor to spend federal funds without a legislative appropriation (*Shapp* v. *Sloan* 391 A.2d 602), the attorney general opposed the legislature. In both cases, the legislature retained outside counsel and was ably represented. Nevertheless, these examples show that legislatures cannot rely on the state attorney general to represent their interests in all cases.

Congress has encountered similar problems in disputes with the executive branch. A case now on appeal to the Supreme Court (*Chada* v. *Immigration and Naturalization Service* [No.-1932]) tests the validity of the legislative veto. The U.S. Department of Justice, on behalf of President Reagan, argues that the legislative veto is an unlawful intrusion by Congress into an executive function. The recently established Office of Legal Counsel in the Senate is arguing the Senate position.

From time to time, every legislature faces an issue that requires it to assert its position in court. If these occasional lawsuits were the only basis for legislative counsel, it might be economic to retain outside counsel on a case-by-case basis. But many legislatures have found that legal questions now arise almost daily.

Legislatures have become big enterprises with large budgets, broad powers and extensive responsibilities. They operate in a highly charged, contentious atmosphere. One would have to search to find any official legislative action that did not raise one or more legal questions. In similar circumstances, a private concern would have a battalion of lawyers. To be effective, the legislature must not only defend its prerogatives from all sides, but also exercise them to the fullest extent. A power not asserted is abdicated.

The legislative power to investigate, which lies at the heart of the lawmaking function, has been the subject of entire texts and innumerable court cases. The legislatures of Kentucky, Montana, Nebraska, and other states without statutory authority to litigate, *do* have express authority to go to court to enforce their subpoena power.

Not all threats to the legal authority of a legislature necessarily arise in the state or federal courts of the home state. Federal precedent applies in all cases under the federal system. A decision in a distant federal court may have profound effects beyond the parties to the litigation.

As mentioned earlier, the power of the Congress to veto certain administrative rules of federal agencies is before the U.S. Supreme Court. The same concerns that prompted Congress to provide for review of agency rules and regulations have been apparent in state legislatures, some of which have established procedures to review the administrative rules of state agencies. If the Supreme Court curtails congressional power in this area, attacks on similar state statutes are inevitable. Thus it will be important for the legislature to be heard even when it is not a party to the litigation.

The law recognizes the importance of such third parties and provides for their participation as *amicus curiae* or

In some cases, relying on the attorney general to advocate and defend legislative priorities is unwise. Worse still, the attorney general may be confronted with a conflict of interest.

"friend of the court." An institution, group or person with an interest in the outcome of a case may file a brief with the court, explaining its point of view and bringing to the court's attention the potential effects of the decision.

State attorneys general regularly join their colleagues in other states as *amici* in lawsuits when the outcomes might affect them. A recent Supreme Court case raised the question whether a local government might be subjected to punitive damages under a U.S. civil rights law (*City of Newport* v. *Fact Concerts, Inc.* 49 USLW4860 [1981]). Many states intervened in the case as *amicus curiae* and the Court ruled that punitive damages could not be imposed upon the city. Because few legislatures have offices set up to handle such tasks, their participation in such cases is limited.

In states where the legislature has no legal counsel of its own, the main difficulty is that an outside counsel, who has been retained for a limited time and purpose, may not understand the nuances of the legislative process. Legislatures with legal counsels are able to accumulate legislative

States with In-House Legislative Counsels

State	Statutory Authority	Agency Approving Litigation	Scope of Litigating Authority	Other Duties	Authority to Retain Outside Counsel
California	Annotated California Code 10200 et. seq.	Joint Rules Committee or legislature by resolution.	No specific limitation other than authorization by Joint Rules Committee.	Bill drafting; and advice and counsel to legislature, drafting and advice for governor and state judges, code revision, preparation of initiative measures; statutory indexing and codification.	Yes
Georgia	Georgia Code Annotated 46-1203	Legislative Services Committee.	"Represent the interests of the Legislative branch in matters involving litigation."	Bill drafting; assist committees, advisory opinions; statutory and code revision; research.	Yes
Kansas	Kansas Statutes Annotated 46-1224	Legislative Coordinating Council when legislature is out of session. Either house by resolution when legislature is in session.	May represent legislature in "any cause or matter." Legislative Council has same mandamus and quo warranto powers and standing as attorney general.	Advisory opinions, counsel to special committees of legislature; provide investigative assistance upon request of committee chairpersons.	Legislative Coordinating Council may provide legal, investigative and clerical assistance to legal counsel as needed.
Nevada	Nevada Revised Statutes 218.690 et. seq.	Legislative Commission.	"To protect the official interests of the legislature or one or more legislative committees."	Bill drafting; advisory opinions; code revision; digest and annotate Supreme Court opinions; service on Commission on Uniform State Laws.	May contract for necessary services.
Oregon	Oregon Revised Statutes 173.111 et. seq.	Legislative Counsel Committee.	"To protect the official interests of the legislative Assembly, one or more committees, or one or more members."	Bill drafting, research; assist in preparation of initiative measures; code revision.	Yes
Utah	Utah Revised Statutes 36-12-14	Legislative Management Committee.	"Represent the legislature, any of its committees or subcommittees, or the professional legislative staff in cases or controversies before courts, administrative agencies and tribunals.	Bill drafting; advice and counsel to legislature; code revision; bill status.	No statutory authority.

experience and knowledge to complement legal experience. This experience and knowledge can be brought to bear in litigation even if outside counsel is retained for the actual trial.

Six state legislatures have statutory authority to litigate issues of concern to them: California, Georgia, Kansas, Nevada, Oregon and Utah. In each case, the selection of the legal counsel is nonpartisan and professional. The Kansas statute describes the qualifications and the selection process in detail. The Nevada statute requires membership in the state bar and expertise in "political science, parliamentary practice, legislative procedure, and the methods of research, statute revision and bill drafting."

Before the counsel in any state can initiate an action or enter his appearance in a lawsuit, the legislature must consent. In most states, the legislative counsel is a part of the legislative service agency and the supervising committee of legislators must give its consent before any action can be brought.

The legislatures have given their counsels broad power to litigate. The Oregon statute is typical: Legal action may be brought "when deemed necessary or advisable to protect the official interests of the legislative assembly, one or more legislative committees, or one or more members of the legislative assembly." The authorizing legislation for the Georgia counsel is broad and succinct: "to represent the interests of the legislative branch in matters involving litigation." Georgia and Oregon specifically provide for outside counsel as necessary; presumably the other states would permit such counsel as well if the particular litigation called for it.

Legislatures with offices of legal counsel have managed to get a lot of mileage out of them. Their duties, as spelled out in each state's enabling legislation, include far more than litigation. All are asked to provide legal counseling to legislators and legislative committees. Most are involved with bill drafting and service to investigative committees. The Nevada legislative counsel works with the National Commission on Uniform State Laws. In Oregon and California, the counsels are involved in the initiative processes. California, Utah and Nevada specifically assign code revision duties, including the development of recommendations for improvement and reform. Other states, such as Georgia and Nevada, assign "such other authority and duties as the committee may provide."

The office of legal counsel in the legislature is essentially analogous to that of the general counsel in a large corporation. Although there may be lawyers in many divisions, the ultimate responsibility in legal matters resides in the office of the general counsel. All litigation is channeled through that office.

Some states have stopped short of creating an official legislative counsel but have assured that they have other knowledgeable counsel on legislative issues. New Jersey is an example. The New Jersey Senate and General Assembly retain majority and minority counsel who spend a substantial portion of their time representing the respective legislative bodies. During the remainder of their time they carry on the private practice of law. Their legislative responsibilities keep them current on legislative issues and the private practice gives them regular and continuous courtroom experience. These counsels do not, however, handle bill drafting and other legislative chores assigned to in-house counsels.

This kind of legal representation provides more flexibility for the leadership, according to Robert Smartt, deputy director of the New Jersey General Assembly. "Issues sometimes arise where only the majority has a substantial interest at stake," he said. "In those instances, counsel to the majority can respond quickly and effectively." Lawrence Marinari, majority counsel to the General Assembly, sees litigation as a growth industry in the state. "The more modernized and co-equal the legislature becomes," Marinari said, "the more often it is likely to be drawn into lawsuits. Representing the legislature could become a full-time job."

Perhaps the most important function of the legal counsel in a legislature is also the most subtle. Creation of the office signals to the other branches of state government and to the public at large that the legislature is prepared to defend its prerogatives and assert its powers to the fullest extent possible.

The legislature must be prepared to defend itself as an institution when it is challenged in a court of law. As a co-equal branch of government, the legislature must be prepared to use the courts as a sword as well as a shield. When necessary, legislatures must bring actions as well as defend them. They must also extend their vision beyond their own states to federal courts throughout the nation, and, as issues warrant, to let those courts know how their rulings might affect the states.

If there was ever a time when the legislature was a cloistered institution, that time has passed. In tomorrow's state legislatures, there may be fewer cries of "there oughta be a law"—and more of "I'll see you in court."

Lanny Proffer is counsel to NCSL.

A SURVEY OF STATES
LITIGATION TECHNIQUES SUMMARY

OREGON

Legislative litigation is handled by The Legislative Counsel Committee composed of 12 attorneys. None are specifically or exclusively assigned to this function or to particular factions in the legislature. The committee spends the majority of its time drafting legislation (80%) and writing advisory opinions. The committee budget for 1983-85 is $2,229,711.00 which covers all functions of the office. Only twice in the past ten years has there been occasion to act in a litigious capacity; however, in both cases the committee only did the research and outside counsel was retained to argue the case in court at a cost of $5,000.00.

UTAH

The Office of Legislative Research and General Counsel is a professional staff office that provides support to the legislative committees and individual legislators on a non-partisan basis. The staff is composed of a diversified group of both attorneys and non-attorneys including an economist, a statistician, etc. The 11 full-time attorneys in the force have as their primary purpose drafting legislation. At the time of writing the office had very infrequently been involved in actual litigation on behalf of the legislature, as there had been no demand. Outside counsel has been retained in all instances of major litigation (at a cost of $20,000.00 for the last one), despite statutory authority for the Counsel. The operating budget for the office is around $1.3 million.

GEORGIA

The Office of Legislative Counsel was created under the jurisdiction of the Legislative Services Committee in 1959 to take the place of the old bill-drafting unit of the Attorney General's office. The office is duty-bound by statute to provide bill-drafting and to advise and counsel all members of the legislative body on legislative matters with no regard to party ties. Furthermore, it is authorized to provide for Code revision, to perform research, and to provide legal services for the legislative branch and represent the interests of that branch in matters involving litigation. The provision for legislative litigation has only been exercised twice since its creation, it having been put in more as a safe-guard than anything else. Therefore, the majority of its work does not involve litigation.

SEE APPENDIX I.

KANSAS

The Legislative Counsel is composed of one attorney who performs litigation services and others duties as directed by the Legislative Coordinating Council (a bi-partisan council of the legislative leadership--President of the Senate, Speaker of the House, and Majority and Minority leaders of both Houses). The LCC supervises the Counsel in representing all factions of the legislature. When political conflicts arise, as they sometimes do, the office of Legislative Counsel is not involved. Most of the cases, however, involve the Legislature as an institution and its prerogatives as the legislative branch of the state government. (Many of the matters arise out of the legislative-executive conflicts which have occurred in great frequency in the past few years.) The annual budget is $65,000.00 and one secretary is employed on a full-time basis. No outside counsel is ever retained. Just the existence of the office has resulted in a more professional and cooperative attitude of the Office of the Attorney General. By having its own counsel, the Legislature has independence from the AG's office, thus avoiding possible adverse consequences from almost inherent conflicts.

SEE APPENDIX II.

NEVADA

The State of Nevada Legislative Counsel Bureau consists of 12 attorneys and 24 staff people. Although the bureau does work on litigation cases, only four of the present staff is experienced in the practice. None of the attorneys are specifically designated to legislative litigation cases, and never has outside counsel been retained for this purpose. At the most only the equivalent of eight days per year has been spent in dealing with the practice in question. Much more time is spent counseling legislators and committees and drafting legislation. Although the bureau works with all factions in the legislature and is required to keep inviolate the secrets of all these opposing factions, no problem has yet developed involving conflict of interest. Whether the bureau takes part in litigation is determined by the Legislative Commission, an agency composed of equal representation from both Houses, as well as almost equal representation from both parties. The recorded expenditures of the bureau from 1981-1983 is $29,316.50. No preceding period of that measure has exceeded that figure.

February 27, 1984

MEMORANDUM

TO: Representative Mitch Abood

FROM: Deb Pomeroy, Administrative Assistant

RE: Lawsuits Involving the Alaska Legislature
Research Request 84-042

Anne Williams of your staff requested information regarding the number of lawsuits the Alaska Legislature has been involved in since 1981. Specifically, she requested information on:

- the nature of the lawsuit;
- the attorneys involved;
- the current status; and
- the cost of the lawsuit.

I contacted Tamara Brandt Cook with Legislative Affairs Division of Legal Services, and Ron Lorenson, Deputy Attorney General, who provided a listing of the lawsuits of which they were aware. It is difficult to ascertain whether or not this is a complete listing. Legal Services keeps a file of the main cases involving the legislature; however, there are a variety of additional cases in which the legislature is an "amicus curiae"[1] or that involve minor housekeeping issues.[2] Ron Lorenson stated that the Attorney General's office keeps a file of only those cases in which the Department of Law has represented the State Legislature.

---

[1]Amicus curiae translates literally to "friend of the court." In these cases, the legislature is not directly named in the lawsuit, but since they are indirectly involved, may suggest or state some matter of law for the assistance of the court.

[2]For example, the legislature recently ordered some computer equipment from a firm on the East coast. This firm went bankrupt before completing delivery. As a result, a claim was filed in bankruptcy court to recover payment.

The Legislature, or some part of it, has been named in eleven civil lawsuits filed from 1981 to date and has been an amicus curiae in two cases. In three of the cases, the legislature, or a portion of it, has sued the Executive Branch; six cases have involved an outside party suing the legislature, or the Legislative Council; and two cases have involved members of the legislature suing other members, or the Legislative Council. Of these eleven lawsuits, six are pending in Superior Court or are under appeal. The remaining five have either been resolved or the legislature was dropped from the case. In addition to these eleven lawsuits, there are a number of cases filed in previous years which are still pending (e.g. Sharmon Haley vs. State of Alaska). In addition, two legislators have been named in criminal proceedings in the past four years (State of Alaska vs. Hohman, and State of Alaska vs. Dankworth).

I have attached for your information a summary of the lawsuits in which the legislature has been involved. This summary includes a brief description of the case, the attorneys involved, the status of the case, and, where possible, the costs. In addition to the above cases, I have included three of the major lawsuits which were filed in 1980.

We were not able to get total costs for any of the cases. In some cases the Department of Law represents the legislature. The department does not bill the legislature for this representation. The only way to estimate the possible costs would be to request each attorney to provide an estimate of hours he spent on each case and apply a standard hourly fee. The Department of Law does not keep records of the amount of time spent.[3] Lauren Smith, Manager of the Division of Administrative Services with the Legislative Affairs Agency provided a listing of payments which have been made by the legislature to private law firms who represented the legislature. I have included this data on the attached pages. In some cases, I was not able to identify all of the attorneys involved. Where possible, the names and addresses of the attorneys are listed.

I hope this information is useful to you. If you have any questions, or would like additional information, please call us.

DP

Attachments

---

[3]These costs are considered "sunk costs" as the attorneys are paid a salary and receive that salary whether they are involved in representation or not.

Alaskans for Nuclear Arms Control Political Action Committee, a nonprofit corporation

vs.

1JU-84-14 Civil

Myrton R. Charney, Executive Director of the Legislative Affairs Agency, et. al.

Year Filed: 1984

Description:

The Nuclear Arms Control Political Action Committee signed up to use the legislative teleconference network. In the application, the purpose of the meeting was described as "campaign planning." The Legislative Affairs Agency denied use of the network saying that a political action committee could not use a State system for this purpose. The committee replied that they were no longer a political action committee and that they wanted to use the network for a board meeting. This request was also denied.

This suit is over the right of the committee to use the State teleconference network.

Status

The case is currently pending in Superior Court.

Joe Hayes, et. al.

vs. 1JU-83-46 Civil

M.R. Charney, et. al.

Year Filed: 1983

Description

Plaintiffs asked for action to enjoin performance of a contract to televise the first session of the Thirteenth Legislature. They also requested the court to declare AS 24.20.140 (allowing Legislative Council to direct the Executive Director to transfer amounts from one appropriation to another if considered necessary to accomplish the work of the Council) unconstitutional as an improper delegation of legislative authority. They also questioned whether or not the Legislative Council had conformed to the public meeting law.

Status

The court declared the case to be non-judicable (it was not a matter appropriate for court action).

The case is currently under appeal.

Moore

vs. 3AN-83-5405

Orsini Associates and
State of Alaska

Year Filed: 1983

Description

Moore was a subcontractor on a contract between Orsini Associates and the State of Alaska. Orsini Associates did not pay the subcontractor, who sued for payment.

Decision

The State has been dropped from the suit due to a "hold harmless" clause in the contract between the State and Orsini Associates.

Robert Dupere & Associates

vs.

1JU-82-115 Civil

State of Alaska, et. al.

Year Filed: 1982

Description

In 1981, there was a delay in the organization of the House of Representatives. Senator Hohman who had been the Chairman of Legislative Council for the previous legislature, entered into various contracts, stating that since the new Legislative Council was not yet formed, he still had the authority to enter into contracts.

An Attorney General opinion stated that he had no such authority. Dupere & Associates sued the Legislative Council for payment of a contract which they had entered into with Senator Hohman.

Status

The case is currently pending.

Malone

vs.

Meekins

Year Filed: 1981

Description

Representative Malone was seeking a declaration that former Speaker of the House, Jim Duncan, was illegally removed.

Decision

650 P_2d 351 (Alaska 1982)

The Supreme Court ruled that this was non-judicable (not appropriate for court action). They stated that under the State Constitution, each house has the exclusive power to remove its own officers and a majority vote of the members is all that is required. The Court would not declare the election of the new speaker invalid even if the representative who convened the meeting at which the election was held was without authority to do so, since such a declaration would be an unwarranted intrusion into the business of the House. There is no judicially enforced requirement of subject-matter notice with respect to a vote considering organization or reorganization of one house of the State Legislature.

Ramona Barnes

vs. 3AN-81-5935

State of Alaska

Year Filed: 1981

Description

The plaintiffs questioned whether or not ch 120, SLA 1981 (SB 162) dealing with a grain facility had been duly enacted. Later in the case, questions regarding some contracts for the Seward grain terminal were raised. The State claimed that these questions could not be raised in this lawsuit.

Decision

Court held that SB 162 became law pursuant to Senate adoption of the House version of the bill and the Governor's signing of the bill.

The lawsuit was appealed; the parties settled out of court and dropped the appeal.

Attorneys

Alaska State Legislature

vs. 1JU-80-1163 Civil

Jay S. Hammond

Filed: 1980

Description

Plaintiffs claimed that Governor Hammond, before signing certain appropriation bills vetoed entire line items; reduced appropriation amounts; and deleted individual words and phrases removing recipient names, conditions or limitations to appropriations or otherwise altering the purpose of an appropriation. The Legislature contended that the latter was beyond the scope of the governor's item veto authority.

Governor Hammond, in a counter claim, challenged certain appropriations in justifying his changes.

Decision

The court found that: 1) appropriations challenged as violative of the separation of powers doctrine did not violate that doctrine; 2) appropriations challenged for failure to state a public purpose failed to state a public purpose and were invalid; 3) appropriations challenged for providing direct aid to a private educational institution did not do so and were not invalid; 4) most of the appropriations challenged for violating the confinement requirement of Act II, §13 of the State Constitution did violate that section, some didn't; and 5) the appropriation challenged as an invalid delegation of legislative powers to the executive branch was an invalid delegation.

Marine View Chapter, Juneau Tenants Association, et.al.

vs. 1JU-80-1037 Civil

Alaska State Housing Authority (ASHA) and Department of Administration, State of Alaska

Year Filed: 1980

Decription

ASHA was converting floors of the Marine View apartments into commercial space. The tenants association claimed that ASHA could not evict tenants and convert floors of one of the few low income apartments in downtown. The plaintiffs also claimed that ASHA had not received legislative approval for the lease as required by AS 37.05.280 for leases over $25,000 and, therefore, could not rent the commercial space.

Decision

The court decided that AS 37.05.280 (leasing of space by Dept. of Administration) was an unconstitutional intrusion by the legislature into the sphere of the executive branch violating the principle of separation of powers.

The remainder of the case was recently dismissed at the request of the tenants association.

MICHAEL DAVIDSON
COUNSEL

M. ELIZABETH CULBRETH
DEPUTY COUNSEL

CHARLES TIEFER
MORGAN J. FRANKEL
ASSISTANT COUNSEL

United States Senate
OFFICE OF SENATE LEGAL COUNSEL
WASHINGTON, D.C. 20510

PHONE: 202-224-4

September, 1983

OFFICE OF SENATE LEGAL COUNSEL

The Office of Senate Legal Counsel was created by Title VII of the Ethics in Government Act of 1978, 2 U.S.C. § 288 (Supp. V 1981). It was the product of several years of legislative work in the Senate, both by the Committee on Governmental Affairs and the Subcommittee on the Separation of Powers of the Committee on the Judiciary. As originally conceived, the legislation would have created an Office of Congressional Legal Counsel. The House conferees on the Ethics Act stated that the House was not prepared to agree to a joint office, but the conferees agreed to a Senate amendment to establish an Office of Senate Legal Counsel.1/

The Counsel and Deputy Counsel are appointed by the President pro tempore of the Senate upon the recommendation of the Majority and Minority Leaders. The appointments of

---

1/ The interests of the House in litigation are represented by General Counsel to the Clerk of the House, and private counsel retained under the auspices of the House Committee on Administration. Senate Counsel and House Counsel cooperate in litigation pursuant to the direction of the conference report on the Ethics Act that "the Senate Legal Counsel shall, whenever appropriate, cooperate and consult with the House in litigation matters of interest to both Houses." H.R. Rep. No. 1756, 95th Cong., 2d Sess. 80 (1978).

the Counsel and Deputy Counsel are made effective by resolution of the Senate, and the term of appointment for each is two Congresses. Ethics Act, § 701(a)(3)(A); 2 U.S.C. § 288(a)(3)(A). The appointment of the Counsel and Deputy Counsel and the Counsel's appointment of Assistant Senate Legal Counsels are required to be made without regard to political affiliation. Ethics Act, §§ 701(a)(2) and (b)(1); 2 U.S.C. §§ 288(a)(2) and (b)(1).

The office is responsible to the Joint Leadership Group. Ethics Act, § 702(a); 2 U.S.C. § 288a(a). The Joint Leadership Group is comprised of the Majority and Minority Leaders, the President pro tempore, and the chairman and ranking minority members of the Committees on the Judiciary and Rules and Administration. In the 98th Congress the members of the Joint Leadership Group are Senators Baker, Byrd, Thurmond, Biden, Mathias, and Ford.

The statute provides for four major activities of the office: (1) defending the Senate, its committees, members, officers, and employees; (2) representing committees of the Senate in proceedings to aid their investigations; (3) appearing for the Senate when it intervenes or appears as amicus in a lawsuit to protect a power or responsibility of the Congress; and (4) advising committees and officers of the Senate. The Senate may adopt resolutions to assign other responsibilities to the office.

1. Defense of the Senate, its committees, members, officers, and employees.

Two kinds of defensive representation are authorized. The first is when the Senate, a committee, member or officer is named as a party defendant in a civil lawsuit which concerns the validity of a proceeding or action undertaken by them in an official or representative capacity. Ethics Act, §§ 703(a), 704(a)(1); 2 U.S.C. §§ 288b(a), 288c(a)(1). In some of these cases the plaintiffs seek to impose monetary liability on members, officers, and employees: e.g., claims by congressional employees of sex discrimination, Davis v. Passman, 442 U.S. 228 (1979), and Hanson v. Hoffmann, 628 F.2d 42 (D.C. Cir. 1980); a claim by a congressional employee that she was dismissed in violation of the First Amendment for seeking a clarification of an office maternity leave policy, Hanson v. Hoffmann, supra; a claim for damages for an alleged violation of the First, Fourth, and Fifth Amendments in the conduct of a Senate investigation, McSurely v. McClellan, 553 F.2d 1277 (D.C. Cir. 1976)(en banc), cert. dismissed, 438 U.S. 189 (1978); or a defamation action by a government assisted researcher against a member and Senate employee for statements in a news release, Hutchinson v. Proxmire, 443 U.S. 111 (1979).

In other cases plaintiffs have named Senate parties in challenges to the constitutionality of congressional practices or actions: e.g., a claim by taxpayers that the payment

of compensation to the chaplains of the Senate and House violates the Establishment Clause of the First Amendment, Murray v. Buchanan, 674 F.2d 14 (D.C. Cir. 1982), vacated and reargued by order of the Court en banc; a claim by members of the House of Representatives that the Tax Equity and Fiscal Responsibility Act of 1982 was passed in violation of Article I, Section 7, Clause 1 of the Constitution which requires that all bills for raising revenue shall originate in the House of Representatives, W. Henson Moore v. The United States House of Representatives, 533 F. Supp. 267 (D.D.C. 1982), appeal docketed, No. 83-1077 (D.C. Cir.)(the Senate is also a defendant); and a claim by a senator that he was entitled to examine witnesses on the floor of the Senate during consideration of an expulsion resolution, Williams v. Bush, No. 81-2839 (D.D.C. Feb. 3, 1982)(the senator had been accorded the right to subpoena and examine witnesses before the Select Committee on Ethics).

The second kind of defensive representation the Counsel may undertake is when the Senate, its committees, members, officers, employees are subpoenaed to produce documents or provide testimony relating to official or representative functions. While the authority to represent members, officers, and employees when they are defendants is limited to civil proceedings, the authority to represent them when they are subpoenaed as witnesses extends to criminal pro-

ceedings as well. The representation of members, officers, and employees, when their documents or testimony are subpoenaed relates to the power of the Senate over the disposition of Senate documents and the attendance of its members while the Senate is in session. The Office of Senate Legal Counsel advises members, officers, and employees when they receive subpoenas or requests for documents or testimony, and assists them in determining whether a congressional privilege should be asserted. The office also assists in preparing Senate resolutions to permit the production of documents and to authorize members, officers, and employees to testify on matters not subject to a congressional privilege.

The representation of the Senate, its committees, members, officers, or employees, whether as defendants or as subpoenaed witnesses, may be authorized by either a resolution of the Senate or a vote of two-thirds of the members of the Joint Leadership Group. The defense of a member, officer, or employee may only be undertaken with the consent of the individual involved.

2. Proceedings to aid investigations by Senate committees.

The Senate Legal Counsel may represent committees in proceedings to obtain evidence for Senate investigations. Two specific proceedings are authorized.

18 U.S.C. § 6005 provides that a committee or subcommittee of either House of Congress may request an immunity order from a United States district court when the request has been approved by the affirmative vote of two-thirds of the members of the full committee. The Senate Legal Counsel may be directed by a vote of two-thirds of the members of a full committee to represent it or a subcommittee in an application for an immunity order. Ethics Act, §§ 703(d)(2), 707; 2 U S.C. §§ 288b(d)(2), 288f. The Attorney General is entitled to ten days' notice of the intention of the committee or subcommittee to apply for the order, and on the request of the Attorney General the district court is required to defer action on the immunity application for up to twenty days. The district court must grant the application for an immunity order if it determines that these procedural requirements have been satisfied. The witness may not refuse to testify on the basis of his privilege against self-incrimination after the order is communicated to the witness by the chairman of the committee or subcommittee.

The Senate Legal Counsel may also be directed to represent a committee or subcommittee of the Senate in a civil action to enforce a subpoena. Prior to the Ethics in Government Act of 1978, subpoenas of the Senate could be enforced only through the cumbersome method of a cor mpt proceeding .

before the bar of the Senate or by a certification to the United States attorney and a prosecution for criminal contempt of Congress. The Ethics Act authorizes a third method to enforce Senate subpoenas, a civil action in the United States District Court for the District of Columbia. Ethics Act, § 705(f)(1); 28 U.S.C. § 1364. See, In the Matter of the Application of the United States Senate Permanent Subcommittee on Investigations, 655 F.2d 1232 (D.C. Cir.), cert. denied, 454 U.S. 1084 (1981). The House chose not to avail itself of this procedure and the new enforcement method applies only to Senate subpoenas.

The new civil action has important advantages both for investigating committees and witnesses. For committees, it establishes an expeditious procedure to test the objections offered by a witness and, if those objections are insufficient, to obtain by a judicial proceeding an order directing the witness to testify. A failure to comply with the order is contempt of court and may lead to the imposition of coercive sanctions. For the witness who asserts in good faith a legal objection to a congressional inquiry, the civil proceeding provides a neutral forum to determine the validity of his objection.

The statute details the procedure for directing the Senate Legal Counsel to bring a civil action to enforce a subpoena. In contrast to an application for an immunity

order, which may be authorized by a committee, only the Senate by resolution may authorize an action to enforce a subpoena. The Senate may not consider a resolution to direct the Counsel to bring an action unless a majority of the committee reports it. The statute specifies the contents of the committee report; among other matters, the committee must report on the extent to which the subpoenaed party has complied with the subpoena, the objections or privileges asserted by the witness, and the comparative effectiveness of a criminal and civil proceeding.

There is a significant limitation on the new civil enforcement remedy. The statute excludes from its coverage actions against officers or employees of the federal government acting within their official capacities. Its reach is limited to natural persons and to entities acting or purporting to act under the color of state law. However, the office has been directed to appear as amicus curiae in the name of Senate committees to support their claim to documents in the possession of an executive department.

3. Representing the interests of the Senate as intervenor or amicus.

The Senate by resolution may direct the Counsel to intervene or appear as amicus curiae in the name of the Senate, or an officer, committee, subcommittee, or chairman of a committee or subcommittee, in any federal or state pro-

ceeding in which the powers or responsibilities of the Congress are placed in issue. Ethics Act, §§ 706, 713(a); 2 U.S.C. §§ 288e, 2881(a).

This authorization permits the Senate to advocate an interest of the Congress in cases in which the Department of Justice aligns itself with the executive branch against the Congress. Utilizing this authority, the Senate appeared as amicus curiae or intervenor in the defense of statutes which have provided that one or two Houses of Congress may disapprove by resolution executive actions or agency rules. In Immigration and Naturalization Service v. Chadha, 51 U.S.L.W. 4907 (U.S. June 23, 1983), the United States Supreme Court held that such legislative vetoes are unconstitutional.

The office has also appeared for the Senate as amicus curiae in support of a statute which confers certain powers on committees of the Congress. The Federal Land Policy and Management Act of 1976 authorizes the House Committee on Interior and Insular Affairs and the Senate Committee on Energy and Natural Resources to notify the Secretary of the Interior that an emergency exists on designated federal lands. Upon receiving a committee notification the Secretary is required to withdraw the lands from development for a period of not more than three years. The United States District Court for the District of Montana upheld the statute after accepting the Senate's interpretation that the statute

conferred on the Secretary the power to determine the duration and scope of the withdrawal. Pacific Legal Foundation v. Watt, 529 F. Supp. 982 (D. Mont. 1981), and 539 F. Supp. 1194 (D. Mont. 1982).

In several cases the office has appeared as amicus curiae in the name of committees of the Senate in support of requests or subpoenas to obtain information in the possession of the Department of Justice. United States v. Dorfman, No 81 CR 269 (N.D. Ill. 1981)(appearance on behalf of Senate Select Committee on Ethics to obtain wiretap evidence relating to alleged conspiracy to bribe member of the Senate); In re Grand Jury Impaneled October 2, 1978 (79-2), 510 F. Supp. 112 (D.D.C. 1981)(appearance on behalf of Senate Committee on the Judiciary to obtain Department of Justice documents relating to Robert Vesco).

The Senate or its committees have also appeared as amicus curiae in cases in which the interests of the executive and legislative branch are in harmony but where there is still a special interest in separate Senate representation. The Senate appeared in an action to defend the congressional frank which had been challenged on the theory that it unfairly advantages incumbents over challenges. The district court dismissed the complaint. Common Cause v. Bolger, C.A. No. 1887-73 (D.D.C. Sept. 7, 1982), aff'd, 51 U.S.L.W. 3784 (U.S. May 2, 1983 (No. 82-1141). The Committee

on Governmental Affairs appeared as amicus curiae in a successful appeal concerning oversight investigations of executive departments. Peter Kiewit Sons' Co. v. U.S. Army Corps of Engineers, No. 82-1461 (D.C. Cir. August 9, 1983).

4. Advice to committees and officers of the Senate.

The Ethics Act details a number of advisory functions of the Office of Senate Legal Counsel. Principal among these are the responsibility of advising officers of the Senate with respect to subpoenas or requests for the withdrawal of Senate documents, and the responsibility of advising committees about the promulgation and revision of rules and procedures for congressional investigations. The office also provides advice about questions which arise during the course of investigations. Ethics Act, §§ 708(a)(5,6); 2 U.S.C. §§ 288h(a)(5,6).

5. Other duties as directed by the Senate.

Section 708(c) of the Ethics Act, 2 U.S.C. §288h(c), provides that the Counsel shall perform such other duties consistent with the purposes and limitations of Title VII as the Senate may direct.

When the office was changed in conference from an Office of Congressional Legal Counsel to an Office of Senate Legal Counsel, no specific provision was made for the representation of Senate interests concerning agencies which serve the entire Congress. One such entity is the Congressional

Research Service. When an administrative law judge at the Federal Trade Commission issued a subpoena to CRS, at the request of oil company respondents in an FTC antitrust proceeding, the Senate used the catchall authority of section 708(c) to direct the Office of Senate Legal Counsel to represent the CRS in order to protect the confidentiality of communications from CRS to the members and committees of Congress.

Another use of section 708(c) was in the investigation relating to Billy Carter and Libya when the Senate directed the Counsel and Deputy Counsel to work under the direction of the chairman and vice chairman of the subcommittee charged with the conduct of that investigation. The Senate turned to the Office of Senate Legal Counsel as a nonpartisan office; the office became the nucleus of the investigating staff, and continued in that role under the direction of Judge Philip Tone, when he was appointed to be Special Counsel to the subcommittee. In the Senate's investigation of Abscam and other undercover activities, the office detailed an Assistant Senate Legal Counsel to work on the committee staff.

B. Congressional Legal Counsel

1. Need for a congressional counsel

It is not widely known that Congress presently relies on the Justice Department for representation in litigation arising out of the exercise by Congress of its constitutional powers. Although Congress has been the object of litigation throughout its existence, such litigation has been more frequent and particularly threatening in recent years. Meanwhile, the reliance of the legislative branch on the Department continues despite an increasing conflict of interest in the Department providing this representation.

Although this conflict of interest has not resulted in any charges of corruption, failure by Congress to remedy this conflict may have consequences which will seriously affect the vitality and independence of Congress. In order to assure that Congress will have the capacity for vigorous and effective representation before the courts, Congress should establish its own Office of Congressional Legal Counsel to represent Congress and congressional interests in litigation. The Justice Department supports the establishment of such an office and the bill has been modified in certain respects to meet all objections raised by the Department.

The need for creating an Office of Congressional Legal Counsel is clear. It is not surprising that the exercise by Congress of its constitutional powers is frequently challenged in and affected by various court proceedings. As Alexis de Tocqueville observed during his travels in America in 1831, "Scarcely any political question arises in the United States that is not resolved, sooner or later, into a judicial question." Democracy in America, volume I—Vintage Books: page 280. Congress can no longer ignore this fact.

Unlike the executive branch of Government, Congress does not generally attempt to effectuate its will and perform its duties by initiating lawsuits in the courts. With a few notable exceptions, Congress should rely on its legislative, oversight, and impeachment powers—rather than initiate lawsuits—to fulfill its constitutional responsibilities. However, through no choice of the Congress, many matters vitally affecting Congress end up in the courts. Most of these cases arise where lawsuits have been brought against Congress to challenge an official action of the Congress, a Member or employee of Congress, or a committee or agency of Congress. In cases where Congress is not named as a party, the powers of Congress are often at issue and are interpreted by a court.

For example, Congress has not been named as a party in the Common Cause franking privilege case, but Congress has an interest in the case even more substantial than that of the Postmaster, who is the named defendant. Indeed, the House has recently intervened in this case.

In each of these types of cases, the vital interests of Congress will be affected whether or not Congress chooses to advocate its position to the court. Because our judicial system relies on adverse parties to sharpen the issues in order for the court to make the best decision, it is essential that the courts have the opportunity to evaluate congressional interests based upon the vigorous and effective presentation of

these interests to the court by an attorney representing the Congress.

At present, representation of Congress and congressional interests in these cases is provided on an ad hoc basis by the Justice Department and private legal counsel. Because no permanent office has ever been given the responsibility to monitor and defend these interests, Congressional interests are often inadequately represented or are not represented at all.

The Justice Department's practice of defending Members, officers, and committees of Congress in civil cases has developed gradually, until at present the Congress is almost wholly dependent on the Department for such representation. This practice began as far back as December 29, 1818, when the House adopted a resolution authorizing the Speaker to hire private counsel to defend the Sergeant at Arms in the landmark case of *Anderson* v. *Dunn*, the first case upholding Congress contempt power. Acting as a private citizen, the Attorney General argued the case on behalf of Congress and was paid a fee of $500. Since 1818 the Attorney General and—after its creation in 1870—the Justice Department have frequently served as defense counsel to Congress.

The only direct statutory basis for the practice is 2 U.S.C. 118, enacted in 1875, which requires that upon request the Department defend an "officer" of either House of Congress for acts performed in the "discharge of his official duty." This statute was enacted after the Speaker of the House, James Blaine, had been sued for having enforced an order of the House. See 86 Congressional Record 2016–2017 (March 1, 1875); *Representation of Congressional Interests in Court*, Hearings before the Subcommittee on Separation of Powers, 1976 (hereafter "Representation") at 38. The Department does, however, represent Members and committees of Congress as well, but there is no direct statutory basis for the practice. Of course, the Department handles congressional cases only when requested to do so.

On occasion, Congress has chosen instead to retain private counsel to defend itself; for example, in the civil action brought against Congress by former Congressman Adam Clayton Powell—see 113 Congressional Record 6040–6049 (March 9, 1967) and in connection with the subpenas issued to Members and staff in the Common Cause franking privilege case. See 120 Congressional Record H9682–H9370; (September 30, 1974); 120 Congressional Record H11497–H11498 (December 10, 1974); 120 Congressional Record H12291–H12292 (December 18, 1974); 121 Congressional Record H11377–H11373 (December 4, 1975); 122 Congressional Record H1699–H1702 (March 9, 1973). Committees sometimes defend themselves using existing staff counsel, such as did the Senate Watergate Committee when three cases were brought to restrain its probe of corruption in the executive branch and as has the General Counsel to the House Clerk in a number of recent cases involving the Clerk's supervisory functions.

In recent years, Congress has involuntarily been subjected to extensive litigation to defend its constitutional powers. Indeed, in the last 6 years the Justice Department alone has defended Members, officers and committees of Congress in at least 70 cases. Representation at 20. This total does not even include the 60 legal matters before the courts in which the Senate Watergate Committee became involved

(Senate Report 93-981), Final Report of the Senate Select Committee at 1079) nor at least ten other recent cases in which private counsel has been retained, nor numerous other legal proceedings in which subpoenas for Congressional documents have been issued. All told, Congress has been involved in no less than 200 legal proceedings in recent years.

These cases include civil actions brought to enjoin enforcement of committee subpoenas or issuance of committee reports; civil actions related to the enforcement of the campaign finance laws by officers of Congress; civil actions related to attempts to hold demonstrations on the Capitol Grounds; a civil action to invalidate the seniority system; a civil suit to recoup salaries paid to Members while absent from Congress; and a civil suit to invalidate the qualifications for membership in the Senate Press Gallery. The court papers of the Watergate Committee alone run almost 8,200 pages. Legal Documents Relating to the Select Committee Hearings, appendix to the hearings of the Senate Select Committee—June 28, 1974—two parts.

Not included in this number are actions involving allegations of criminal conduct, abuse of the franking privilege by an individual Member or contested elections, which the Department and the proposed Congressional Legal Counsel will not handle.

Not only is the number and variety of these lawsuits impressive, but many of them have been so complex that it has required years to resolve them in the courts.

However, more significantly, the importance of the precedents being established in these cases cannot be ignored. In *Powell* v. *McCormack*, 395 U.S. 486 (1969), the Supreme Court limited the right of the Congress to judge the qualifications of its Members; in *United States* v. *Gravel*, 408 U.S. 606 (1972), and in *Doe* v. *McMillan*, 412 U.S. 306 (1973), it limited the ability of Congress to inform the public; in *Buckley* v. *Valeo*, 424 U.S. 1 (January 30, 1976), it limited Congress' ability to appoint officers to the Federal Election Commission. Indeed, Senator Ervin warned that the *Gravel* decision alone poses "a clear and present threat to the continued independence of Congress as a coordinate branch of Government and constitutes a further deterioration of its power and prerogatives in relation to the executive and judicial branches." 59 *Virginia Law Review* 175 (1973).

In each case, the precedents established by the courts have an impact on Congress as an institution, not just on the specific Members, officers, or committees involved. Therefore, Congress as an institution cannot be indifferent to the legal precedents which are established in these cases, even if Congress may have no interest in their effect on individual parties involved. By representing the individual Member in a case involving his performance of official duties, in a very real sense Congress represents itself.

Court challenges to the exercise by Congress of its constitutional power will continue to occur. For example, officers of Congress have been named defendants in a suit by Ramsey Clark to invalidate the congressional veto over regulations of the Federal Election Commission. This lawsuit may determine the constitutionality of literally hundreds of such provisions in existing statutes.

Similarly, criminal defendants recently have issued various subpenas to congressional committees demanding access to documents, raising the issue of the constitutional power of Congress to control access to it papers. These types of subpenas have been and will be issued to the new Intelligence Committee in attempts to declassify information. The executive branch threatened to issue subpoenas for House travel records, until the House voluntarily turned over the materials. The nature and novelty of other challenges to Congress power cannot be predicted, but these challenges are sure to occur with regularity.

In cases of interest to Congress where Congress is not a party, the Department of Justice will not intervene or file an amicus brief on behalf of Congress. In such cases, however, congressional interests have occasionally been represented by private counsel retained on an ad hoc basis. For example, the Senate retained private counsel to represent it as amicus curiae in *Gravel* v. *United States*, where the scope of legislative immunity was at issue. See 119 Congressional Record 9902–9931 (March 28, 1973). Private counsel has also been retained to intervene on behalf of a subcommittee of the House of Representatives in *Ashland Oil* v. *FTC*, a case where the subcommittee is opposing an attempt by Ashland Oil to bar the FTC from complying with the subcommittee's subpena. See 121 Congressional Record H12918–19 (December 19, 1975); Representation at 404. Private counsel is now representing a House subcommittee in the case of *United States* v. *A.T.T.* See House Report 94–1422; 122 Congressional Record H9123–9137 (August 28, 1976). Private counsel is representing Senator Proxmire in a case involving important issues regarding Congress' function of informing the public. See 122 Cong. Rec. S12935–S12975 (August 9, 1973). Private counsel appeared on behalf of the Congress in the *Lovett* case as far back as 1943. See Representation at 330–331, 412–414.

The variety and importance of this litigation demonstrates that the interests of Congress as an institution make its present reliance on the ad hoc services of the Justice Department and private counsel wholly unsatisfactory. These institutional interests make it inappropriate as a matter of principle and of the constitutional separation of powers for the legislative branch to rely upon and entrust the defense of its vital constitutional powers to the advocate for the executive branch, the Attorney General.

Despite its long history in representing Congress in court, the Department of Justice supports the establishment of an Office of Congressional Legal Counsel. This support for Congress defending itself in litigation before the courts recognizes that Congress, as a co-equal branch of government, should represent itself in court. The Department recognizes also the legitimacy and constitutionality of vesting the functions and powers in title II with a Congressional Counsel Office.

In testimony during the 94th Congress before the Senate Government Operations Committee and the Senate Judiciary Committee's Subcommittee on the Separation of Powers, representatives of the Department of Justice have unequivocally stated the obvious: The

Department of Justice is a part of the executive branch and its first and foremost responsibility is to represent the interests of the President and the executive branch. Where the interpretation of the powers of the Congress before the courts is entrusted to the executive branch, the Congress relies on a branch of government with which Congress has, under the constitutional system of checks and balances, an adverse relationship. Without in any way questioning the good will or intentions of the Department, it is clear that the integrity and independence of Congress as a coequal branch of government requires that Congress defend itself through its own counsel.

More specifically, the Department of Justice acknowledges that it is placed in an untenable conflict of interest situation when called upon to handle certain cases on behalf of Congress. In such cases, the Department states that it will decline to provide representation and will assist in the hiring of outside private counsel. However, the Department's position as to what constitutes a conflict of interest is very limited and covers only those situations where the Department is taking a position in one case which is directly inconsistent with a position the Department simultaneously is advocating in another matter then also in litigation in the same court.

The Department also acknowledges a conflict where the substantive position of Congress in the case would in the Department's view result in an infringement of a power of the President. However, it is clear that a conflict may also exist whenever the Department of Justice is in the position of defending a congressional power which may in the future be exercised by Congress against the executive branch. Most cases presently being handled by the Department on behalf of Congress involve precisely such powers and precisely this conflict of interest.

When the Department is able in advance to perceive a conflict in representing Congress, it will, of course, not commence such representation. It is, however, sometimes difficult to determine in advance exactly when the Department will decline to handle a congressional case. Other than in thoughts expressed by the Department in correspondence with various Members and committees, there are no written or formal guidelines applied by the Department in making this determination. The determination is subjective, is made on a case-by-case basis, and requires in essence that the Department prejudge whether the congressional defendant was acting within the scope of his official duty. Because of this uncertainty, Congress already must make ad hoc provisions for retaining private counsel when the Department perceives a conflict.

Unfortunately, in three recent cases the conflict did not become apparent to the Department until after the Department had entered its appearance on behalf of Congress. In fact, in *Doe v. McMillan* and *Eastland v. United States Serviceman's Fund*, the Department withdrew its representation of congressional committees just as the litigation reached the Supreme Court, after having represented Congress in the district court and court of appeals. As a result, Congress then had to hire private counsel at this advanced and crucial stage of the litigation. See Representation at 67 and 675. In the *McMillan* case, the Supreme Court remanded the case back to the district court, at which

time the Department determined that the conflict had ceased to exist and defended the remaining defendants. Although the Department will normally withdraw when a conflict arises, in the case of *Buckley v. Valeo* the Department did not formally withdraw its appearance as counsel to the Secretary of the Senate and the Clerk of the House even when it proceeded to argue that the statute creating the Federal Election Commission—on which the Secretary and Clerk served—was unconstitutional. The Department has recently been forced to withdraw as Congressional Counsel in *Pressler v. Simon.*

Because of the wide range of responsibilities which are assumed to the Department, there are many ways in which such a conflict can suddenly arise for the Department in the midst of defending a congressional client. The conflict which arose in the *Harvishmon's Fund* case occurred when the Department of Justice voluntarily chose to appear as amicus curiae in opposition to the suit by the Senate Watergate Committee to enforce its subpoena for the White House tapes. See Representation at 874. The Department's narrow definition of what constitutes a conflict of interest did, however, enable the Department to continue representing other congressional defendants in cases pending in other courts in which speech and debate clause immunity was also a defense. But the point remains, one cannot predict when a conflict will arise which will force the Department to terminate its services.

The problem of anticipating conflicts is compounded by the fact that it is the Department's official position that even though it has undertaken to represent Congress, if an agency of the executive branch subsequently asks the Department for representation which will create a conflict of interest with the Department's representation of Congress, the Department will automatically force the congressional client to obtain other counsel. With a law firm, such conflicts are easily avoided because the firm will simply refuse to take on the new client. However, the executive branch is always the priority client of the Department. When a conflict arises in representing a congressional defendant, it is clear that the Department does not and can not continue to represent its congressional clients and, as importantly, when a conflict arises, it is in Congress' best interest to obtain other counsel.

As a result of these experiences in a number of congressional cases, committees which were or are being represented by the Department have also retained counsel to protect themselves in the event the Department suddenly feels compelled to withdraw. There is obvious waste when taxpayers must pay for Justice Department attorneys to handle a congressional case and pay as well for a private lawyer to insure that the Department vigorously defends congressional interests and to be ready to undertake the representation of Congress if the Justice Department should choose to withdraw from the case. However, faced with the policy of the Department of Justice with respect to conflicts of interest, it is prudent for Congress to retain these private attorneys.

Further compounding the inherent conflict of interest when the Department serve as the advocate for the Congress, the Department "insists on retaining control of the litigation and making the litigation decisions." Representation at 21. The Department asserts the same

degree of control over congressional cases as it asserts over its own executive branch cases. The Department's position on control of the litigation was dramatically illustrated at hearings before the Subcommittee on Separation of Powers. The following exchange occurred between the subcommittee and Irving Jaffe, Deputy of the Civil Division:

> Senator. If the Justice Department has no authority to take a congressional case unless it is requested to do so, why does it have, at that point when it is requested, complete control over the case?
>
> Mr. JAFFE. Because we do it in the interest of the United States. That interest is vested in us.
>
> Senator. Even to the distinction of the interest of the client?
>
> Mr. JAFFE. In many instances, yes.
>
> Senator ANDERSON. Then it is a matter of definition between you and the client as to what is in the interest of the United States.
>
> Mr. JAFFE. Except that we have the ultimate determination.
>
> Senator ANDERSON. Your definition overrides his. (Representation at 77.)

The result of this Department policy is that when Congress wishes to make arguments with which the Department is in disagreement, the Department will take the position that Congress must retain private counsel if it wants to make such arguments. This position can have the effect of inhibiting congressional defendants from asserting proper control over their Department attorney, except on crucial issues.

This description of the conflicts of interest for the Department of Justice when it represents congressional interests is not intended as a criticism of the Department. The Department only represents congressional interests at the request of its congressional clients. In turn, Congress makes these requests of the Department because there is no adequate alternative but for Congress to do so. Indeed, when Members or committees are faced with litigation, the Members or committees may place substantial pressures on the Department to handle the case despite possible long-term disadvantages for Congress as an institution. In its efforts to maintain cordial relations between the branches, the Department will make every effort to honor congressional requests. The conflicts of interests which inevitably arise are of an institutional nature.

Although no conflict of interest is involved, serious problems also arise with congressional reliance on the use of private counsel when Department representation is not available. First, the use of private counsel is very expensive. One reason for this expense is that few if any private counsel have experience or expertise with the unique substantive and procedural legal issues which arise in congressional cases. It can be very expensive repeatedly to subsidize private counsel for the time it takes for them to gain this expertise. Even then private counsel will lack invaluable experience.

Second, the retention of different private counsel to handle different cases provides for little if any consistency among the legal posi-

tions and approaches taken in the different cases. A private attorney will only be intimately knowledgeable about the case he is handling—and not with the full range of litigation involving Congress. One attorney might, therefore, inadvertently make an argument or concede a point in one case which has an adverse precedential impact on another case involving Congress. Similarly, individual private attorneys are likely to have little perspective or interest in how the long-range interests of Congress may be affected by any given litigation. They may have little sensitivity to any political implications of a given law suit. They will not have inclination or the ability to establish contacts with the broad spectrum of congressional views which may exist on various issues. They will have no ongoing relationships with the leadership.

Finally, when faced with a law suit, Members, officers and committees often have no time to locate, interview, and retain private counsel. This is why in such cases there is little alternative but to request Department of Justice representation, even when they may be aware that retaining private counsel would be preferable. A simple phone call from a committee chairman to the Department, for example, often suffices to arrange for the Department to handle a case. If, however, private counsel is to be employed, an attorney must be found who is willing and able to handle the case, a fee arrangement must be negotiated and arrangements must be made for payment of the fee. Furthermore, to compensate private counsel it will often be necessary for the congressional parties to request appropriations from the contingent fund, a time-consuming and unpredictable process. A committee or Member must, therefore, be willing to endure substantial additional inconvenience if they choose not to rely on the Department of Justice.

In addition to mitigating these conflicts and practical problems resulting from reliance on the Department or private counsel, there are substantial benefits which would result from the establishment of an Office of Congressional Legal Counsel which cannot otherwise be achieved. A first-class litigating office in Congress will make available to Congress advice on how to avoid or anticipate litigation and continuous monitoring of congressional interests in cases where Congress is not a party. Increasingly, the prospect of litigation must be considered whenever Congress exercises its constitutional powers. The adverse consequences of failing to consider the possibility of litigation has been most notable when criminal contempt of Congress charges are dismissed by the courts on technicalities. This occurred in the recent perjury case of then Lieutenant Governor of California Edward Reinecke—*United States* v. *Reinecke*, 524 F. 2d 435 (D.C. Cir. 1975)—because a committee had not published its rules in the Congressional Record. Neither the Department nor private counsel can, will, or should perform these advisory functions. The Department acknowledges that this function is quite properly lodged in the Congress itself.

Similarly, when a committee undertakes an investigation, there is a constant need for advice on how properly to frame and issue subpoenas and how to utilize other congressional investigative powers so that the committee's actions will, if necessary, be sustained by the courts. Again, it would not be constitutionally proper for the Justice Department or feasible for private counsel to provide such an advisory service.

Existing legislative and staff counsel readily admit that they do not have the time or training to litigate or to provide advice in anticipation of litigation. Staff of one committee might gain some litigation experience but then will be unavailable to assist the next committee in need of counsel. Other than the Clerk of the House, the Secretary of the Senate, and the Permanent Investigations Subcommittee of the Senate Governmental Affairs Committee, no one body in Congress has developed any litigation expertise.

The Congressional Legal Counsel would also continuously monitor congressional interests in cases where Congress is not a party. For example, in the litigation concerning the custody of former President Nixon's tapes and papers, the Justice Department is defending an act of Congress which denies Mr. Nixon custody of these materials even though the Justice Department, at the time of the Nixon pardon, issued a written legal opinion that Mr. Nixon had the legal right to custody of the materials. Congress has not chosen to intervene or appear amicus curiae in this law suit. However, the testimony submitted to the Government Operations Committee by Senator Nelson concerning the conduct of the case—1973 Hearings, part II, page 142—illustrates the need for an office of Congress with the ability to represent Congress in a legal action, if necessary, and to closely monitor such legal actions. Again, neither the Department nor private counsel can or should perform this role. To the extent that existing legislative or staff counsel presently monitor the course of such litigation, it would still be necessary to retain counsel if congressional interests were being adversely affected.

Finally, if the Congress adopts the jurisdictional statute, discussed in detail below, to enable Congress to enforce its subpenas by civil court actions, attorneys will be necessary to bring the actions. Neither the Justice Department nor private attorneys should be given this responsibility.

2. NEED FOR CIVIL ENFORCEMENT OF SUBPENAS

Presently, Congress can seek to enforce a subpena only by use of criminal proceedings or by the impractical procedure of conducting its own trial before the bar of the House of Representatives or the Senate. However, if the Congress or a committee is interested in compelling compliance with a subpena rather than merely punishing the subpenaed party, civil subpena enforcement will often be preferable to certifying a criminal contempt complaint. Unlike a civil enforcement action, in a criminal contempt action the defendant cannot purge himself of the contempt by finally producing the documents. In addition, with a criminal contempt action, expediting the litigation is more difficult than in a civil enforcement action, committee compliance with its procedures is more strictly reviewed, and the subpenaed party's rights are given greater weight. The Justice Department has supported a civil enforcement mechanism in 1982 and has reiterated that support this session. The Department has stated also that Congress may bring the subpena enforcement actions without infringing on any Executive Branch powers.

The reluctance of Congressional committees to enforce their subpoenas under the criminal contempt statute was graphically demonstrated by debate in the Senate Judiciary Committee in 1962.

The Subcommittee on Antitrust and Monopoly had subpoenaed cost data from the 12 largest steel companies. Four of these companies refused to produce the subpoenaed data or even to appear before the Subcommittee. The Subcommittee then voted 5 to 2 to report a criminal contempt citation to the full Judiciary Committee.

In the debate before the Subcommittee all parties agreed that the steel companies refusals were based on a good faith belief that the cost data was confidential. Senator Hart stated that what all parties were seeking was "to establish a priority among principles." The steel companies declared their unwillingness to comply "until required to do so through established Judicial procedures." One member of the committee speculated that—contrary to the law of criminal contempt—if the companies were held in contempt "the steel company executives (could) produce the records * * * (and) purge themselves from contempt."

At the request of the steel companies, the Judiciary Committee held 3 days of hearings on the events before the full committee. Steel Companies (Subpoena), Hearings before the Committee on the Judiciary, September 12, 14, and 20, 1962. It was again clear that the companies' refusal was their "instrument or * * * approach of testing which of these two principles—of Congressional power and business confidentiality—ultimately would prevail." Id. at 38 (Senator HART). Senator Keating stated his preference for a civil contempt statute (id. at 55), a preference shared by Senator Ervin. (Id. at 75). Senator Keating declared flatly that it was "wrong in cases in which there is no criminal intent to be forced to resort to a criminal prosecution in order to test the validity of a committee's questions or requests for documents." (Id. at 77.)

The dilemma facing the committee was made apparent by the subcommittee chairman, Senator Estes Kefauver, who said:

> I would like to make perfectly clear that the subcommittee has no interest in punishing individuals. What we want is the subpoenaed material. (Id. at 35).

It is apparent from the committee debate that the availability of a civil enforcement statute could have alleviated the dilemma. Ultimately no criminal contempt citation was voted.

During this same period the U.S. Court of Appeals for the District of Columbia was reviewing the conviction of Austin J. Tobin, the executive director of the Port Authority of New York, under the criminal contempt statute. *Tobin* v. *U.S.*, 303 F.2d 270 (D.C. Cir.) cert. denied 371 U.S. 903 (1963). Tobin had been cited for contempt in refusing to produce certain documents subpoenaed by the House Judiciary Committee in an investigation of the 1921-22 interstate compacts between the States of New York and New Jersey. The Port Authority argued that after having approved the compact Congress did not have the constitutional power to rescind it. The Governors of both affected States instructed Tobin not to respond to the subpoena. Tobin did not

prevail in his constitutional argument about the committee's jurisdiction but his conviction was nonetheless reversed on the grounds that the Judiciary Committee had been given no power to issue subpenas for the internal memos of the authority.

When the district court considered the case, Judge Youngdahl pleaded for Congress to provide an alternative to criminal contempt. The Court of Appeals in reversing Tobin's conviction quoted Judge Youngdahl's plea and added its own. It specifically noted that—

> A contempt of Congress prosecution is not the most practical method of inducing courts to answer broad questions broadly.

At the end of its opinion the court made an extraordinary appeal to Congress:

> Especially do we say this in view of the unusual nature of the present case, where we are asked to decide essentially civil and jurisdictional issues at the same time that we establish criminal precedent. The conflicting duality inherent in a request of this nature is not particularly conducive to the giving of any satisfactory answer, no matter what the answer should prove to be. Should this controversy be resumed, it is hoped that Congress will give sympathetic consideration to Judge Youngdahl's eloquent plea. 306 F. 2d at 275–276.

Eight years later the same court renewed this appeal in *United States* v. *Fort*, 443 F. 2d 670, 677–678 (D.C. Cir. 197), cert. denied, 403 U.S. 932 (1971).

Congress should be able to enforce its subpenas expeditiously and with due respect for the constitutional rights of a witness. The criminal contempt statute is inflexible, giving a party no incentive to comply with a subpena. Enactment of the civil subpena enforcement statute will give Congress the option of punishing recalcitrant witnesses or bringing a civil action to secure compliance with the subpena. This flexibility will reduce the reluctance of Congress to take action when a subpena is not complied with.

PAST CONGRESSIONAL CONCERN WITH OFFICE OF CONGRESSIONAL LEGAL COUNSEL AND CIVIL ENFORCEMENT OF SUBPENAS

Office of Congressional Legal Counsel

Congressional concern with the need to establish an Office of Congressional Legal Counsel has often been expressed over the last decade. In 1965 the Joint Committee on the Organization of Congress considered the litigation needs of Congress and recommended that a Joint Committee on Congressional Operations be established and given the "continuing responsibility for determining, with the approval of the leadership of both Houses, whether Congress should be appropriately represented" in cases of vital interest to Congress. The Joint Committee found that "representation of the Congress with respect to its vital interests is unsatisfactory and the effect upon Congress of court decisions should be a matter of continuous concern for which some agency of Congress should take responsibility."

Building on this proposal, on March 23, 1967, Senator Vance Hartke introduced S. 1384, a bill to establish an Office of Congressional Gen-

eral Counsel. Then on May 3, 1967, Senator Vance Hartke attempted to offer his bill, S. 1384, as an amendment to S. 355, the Legislative Reorganization Act of 1967. S. 355 already included a provision which authorized the proposed Joint Committee on Congressional Operations, with the approval of the President Pro Tempore, Speaker, and majority and minority leaders, "to provide for appropriate representation on behalf of Congress or either House thereof in any proceeding or action" which, "in the opinion of the Joint Committee, is of vital interest to Congress, or to either House of the Congress." The principal objection to Senator Hartke's bill and amendment was that it authorized the Congressional General Counsel to be the "authoritative source for interpretation of legislative intent." The Senate considered it to be unwise to establish a quasi-legal office of Congress having the power to issue binding legal opinions whether or not requested by a committee to do so. Accordingly, Senator Hartke's amendment was tabled by a vote of 66 to 16. When the Joint Committee on Congressional Operations was finally established in 1970, it was given the power only to "identify" court proceedings of vital interest to Congress.

In July of 1967 one of the subjects of the Subcommittee on Separation of Powers' first hearings under the chairmanship of Senator Sam Ervin was the Hartke proposal, S. 1384.

In 1973 the Joint Committee on Congressional Operations held 4 days of hearings on the "Constitutional Immunity of Members of Congress." In these hearings the Joint Committee explored the Justice Department's policy in representing Congress and in particular the conflict of interest faced by the Department of Justice when it defended Congress in *Doe* v. *McMillan*. The Senate's decision to file an amicus brief in *Gravel* v. *United States* was also discussed. In 1973, hearings by the Subcommittee on Separation of Powers on "Removing Politics From the Administration of Justice" again focused on the Council for Congress proposal.

The Senate Select Committee on Presidential Campaign Activities participated in over 60 different matters before the courts during the course of its Watergate investigations in 1973 and 1974. The court filings, which comprise most of the "Legal Documents Relating to the Select Committee Hearings," run to over 2,100 pages. As a result of its experience, the Select Committee recommended that the Congress give careful consideration to a bill then pending before the Senate (S. 2969) that would establish a Congressional Legal Service and thus give Congress "a litigation arm that would allow it to protect its interest in court by its own counsel." As Senator Baker, Vice Chairman of the Select Committee, stated: "There are numerous instances in which the interests of Congress and Congressional committees are divergent from those of the President and the various departments, and in which the existence of a permanent Congressional litigating staff would be both helpful and appropriate. The Select Committee on Presidential Campaign Activities certainly was engaged, albeit unsuccessfully, in extensive litigation; and a Congressional Legal Service would have been of great utility to the Committee." S. 2969 had been introduced by Senator Walter Mondale on October 11, 1973. Similar proposals to establish an Office of Congressional Legal Counsel had been introduced by Senator Jacob K. Javits, including S. 3377 on June 4, 1974.

On December 11, 1974, Senator Ervin introduced S. 4377 which was based upon the recommendations of the Watergate Committee and which contained Senator Mondale's proposal.

In the fall of 1975 and the spring of 1976, the Subcommittee on Separation of Powers held hearings on "Representation of Congressional Interests Before the Courts." The chairman of the subcommittee, Senator James Abourezk, had earlier introduced S. 2731 which refined previous proposals for an Office of Congressional Legal Counsel. The subcommittee compiled a detailed hearing record, focusing specifically on the conflict of interest which occurs when the Justice Department represents Congress and generally on the inadequacy from Congress' institutional point of view of the present ad hoc provisions for representation of Congress.

Civil enforcement of subpoenas

Historically Congress has made various provisions for enforcing its subpenas and orders. The contempt power of Congress was affirmed in the 1821 case of *Anderson* v. *Dunn*, 19 U.S. 204 (1821). During its early period Congress brought contumacious witnesses for trial before the House and Senate and confined those found in contempt in the Capitol guard house. Variations of this practice continued until 1945.

In 1857 Congress grew dissatisfied with the fact that it could imprison a person only until the end of a legislative session. In that year Congress passed a statute, still in effect in amended form as 2 U.S.C. 192, making it a criminal offense to refuse to divulge information demanded by Congress. Even after passage of the 1857 statute, Congress preferred to enforce its own punishment rather than turn a witness over to the United States attorney. However, as courts more frequently began to review Congressional contempt trials, Congress came to rely entirely on the criminal sanction. Using both procedures, Congress has held approximately 400 person in contempt since 1789, most of the contempts having occurred since 1945.

While investigating the contested election of Senator William S. Vare in 1928, a Senate committee sought to enforce a subpena for certain ballot boxes and various documents by bringing a civil suit. The Supreme Court held that the Senate did not intend or authorize the committee to bring suit. (*Reed* v. *the County Commissioners of Delaware County*, 277 U.S. 376 (1928)). The day the Supreme Court decision was rendered, the Senate enacted a standing order authorizing all Senate committees to "bring Suit . . . if the Committee is of the opinion that the suit is necessary to the adequate performance of the powers vested in it." (69 Cong. Rec. 10598 (May 29, 1928)). That Order has, however, been held not to confer jurisdiction on the courts to hear a subpena enforcement action. *Senate Select Committee* v. *Nixon*, 366 F. Supp. 51 (D.D.C. 1973)

The original proposal for enacting a jurisdiction statute for civil enforcement of Congressional subpenas was introduced on May 4, 1953, by then Congressman Kenneth Keating. Four days of hearings were held on H.R. 4675 on June 3, July 19, 26, and 31, 1954. The bill passed the House on August 4, 1954 and again the next session of Congress on March 15, 1955. The Senate took no action on either occasion.

The Congress has had recent experience in court enforcement of a committee subpena. Confronted by President Nixon's refusal to honor

its subpena for certain White House tape recordings, the Senate Watergate Committee brought a civil action for a declaratory judgment that President Nixon's claim of executive privilege was unlawful. The committee found the prospect of criminal contempt or trial before the Senate inadequate and inappropriate remedies. Judge Sirica, however, held that the court had no jurisdiction to hear the action. *Senate Select Committee* v. *Nixon*, 366 F. Supp. 51 (D.D.C. 1973). Senator Ervin then introduced and the Congress soon passed a statute (Public Law 93–190) giving district court jurisdiction over that suit and others the Watergate Committee might bring to enforce subpenas issued by it to the executive branch. The original version of this statute would have confined jurisdiction on the courts to hear suits by all congressional committees to seek subpena enforcement. This provision was deleted prior to passage of the law. Eventually the court of appeals dismissed the Committee's suit due to the pending House Impeachment inquiry.

C. Title III—Financial Disclosure

1. Reasons for public financial disclosure

Existing financial disclosure requirements vary throughout the Federal government. Under rules recently adopted by the House of Representatives and the Senate, full and complete financial disclosure is required for Members and certain officers and employees of those bodies. Executive branch regulations require confidential disclosure of the financial interests of certain high-level employees to those employees' agencies. Members of the judiciary are subject to voluntary confidential disclosure requirements which call for the disclosure of very limited financial information. Some top government officials, such as the President, Vice President, and Justices of the Supreme Court, are not required to make any financial disclosures whatsoever.

It was the opinion of the majority of witnesses who testified before the Committee on this subject that any requirements for public financial disclosure should apply uniformly across-the-board to high-level officials in the executive, judicial and legislative branches of the government.

Some of the reasons for public financial disclosure stated by witnesses who appeared before the Committee during consideration of S. 555 this year and its predecessor, S. 495, in the 94th Congress, are summarized below:

(1) Public financial disclosure will increase public confidence in the government. Numerous national polls of voter confidence in officials of the Federal government, and the low turnout of voters in recent elections, were cited for the proposition that public confidence in all three branches of the Federal government has been seriously eroded by the exposure, principally in the course of the Watergate investigation, of corruption on the part of a few high-level government officials. Public financial disclosure was seen as an important step to take to help restore public confidence in the integrity of top government officials, and, therefore, in the government as a whole.

(2) Public financial disclosure will demonstrate the high level of integrity of the vast majority of government officials. Only a very

THOMAS G. CLIFFORD
LEGISLATIVE COUNSEL

5101 STATE CAPITOL
SALEM, OREGON 97310
AREA CODE 503
378-8148

STATE OF OREGON
LEGISLATIVE COUNSEL COMMITTEE

Rcd 9-19-83

September 9, 1983

Representative Charlie Bussell
Pouch V
Juneau, Alaska 99811

Dear Representative Bussell:

Speaker Kerans has asked me to answer your recent letter concerning staff attorneys responsibilities for litigation involving the Legislative Assembly.

The following are responses to the questions you posed:

(1) The Legislative Counsel staff includes 12 attorneys. None are specifically or exclusively assigned to litigation.

(2) There were two instances in the past approximately 10 years. The first instance involved alleged violation of the open meeting law by a House committee. The second involved the constitutionality of a statutory provision subjecting certain appointees of the Governor to Senate confirmation. In both cases, the Legislative Counsel staff did the background research and consultation with outside counsel retained to argue the matter in court.

(3) Legislative Counsel staff attorneys represent the whole Legislative Assembly. On occasion, the various caucuses or leadership officers will hire attorneys to work in their offices to assist in issue analysis, etc, but they have not necessarily had a role in any litigation being considered.

(4) None

(5) None. The Legislative Counsel Committee general fund budget for 1983-1985 is $2,229,711.00 which covers all functions of the office, including lawyer time spent involved in litigation, if any.

(6) The Senate confirmation suit voted in (2) above was litigated by outside counsel. The total bill for services was $5,000.

(7) There is no established pattern. In the Senate confirmation case, Legislative Counsel attorneys interviewed several private attorneys and retained one of them after consultation with Senate leadship.

(8) We write over 150 advisory opinions for legislators during each biennium. We often discuss legal ramifications with legislators who request drafting service. We draft approximately 80 percent of all measures and amendments. We are precluded by statute from discussing the merits (advisability) of any issue.

I hope the above information assists you as you consider legislation similar to ORS 173.111 et seq. You might wish to discuss the Oregon situation with Dave Dierdorff, who is with Bill Barrier's office. Dave was counsel to the Senate President when the confirmation suit was brought.

Very truly yours,

THOMAS G. CLIFFORD
Legislative Counsel

TC:dfw

cc: Speaker Grattan Kerans

173.050 [Amended by 1953 c.625 §4; repealed by 1953 c.492 §16]

173.055 Contracts to provide fiscal data. The Legislative Fiscal Officer and Legislative Revenue Officer are authorized to contract with other agencies or persons to provide fiscal data necessary to carry out the provisions of ORS 173.025 to 173.055. [1977 c.414 §4]

LEGISLATIVE COUNSEL COMMITTEE

173.110 [1953 c.492 §1; repealed by 1969 c.256 §1 (173.111 enacted in lieu of 173.110)]

173.111 Legislative Counsel Committee and office of Legislative Counsel created. The Legislative Counsel Committee, referred to in ORS 173.111 to 173.240 and 171.275 to 171.315 as the committee, is established as a joint committee of the Legislative Assembly. The committee shall select a Legislative Counsel to serve as its executive officer. [1969 c.256 §2 (enacted in lieu of 173.110); 1971 c.638 §4]

173.120 Legislative Counsel to be in attendance upon legislative sessions. The Legislative Counsel shall be in attendance upon all sessions of the Legislative Assembly. [1953 c.492 §2]

173.130 Performance of legislative services; charges. (1) The Legislative Counsel shall prepare or assist in the preparation of legislative measures when requested to do so by a member of the Legislative Assembly.

(2) Upon the written request of a state agency, the Legislative Counsel may prepare or assist in the preparation of legislative measures that have been approved for preparation in writing by the Governor or the Governor's designated representative. The Legislative Counsel may also prepare or assist in the preparation of legislative measures that are requested in writing by the Secretary of State, the State Treasurer, the Attorney General, the Commissioner of the Bureau of Labor and Industries or the Superintendent of Public Instruction. In accordance with ORS 283.110, the Legislative Counsel may charge the agency or officer for the services performed.

(3) The Legislative Counsel shall give such consideration to and service concerning any measure before the Legislative Assembly as circumstances permit, and which is in any way requested by the House of Representatives or Senate, or any committee of the Legislative Assembly having the measure before it for consideration.

(4) The Legislative Counsel, pursuant to the policies and directions of the Legislative Counsel Committee and in conformity with any applicable rules of the House or Senate, shall perform or cause to be performed, as circumstances will permit, research service requested by any committee of the Legislative Assembly in connection with the performance of its functions. Research assignments made to the Legislative Counsel Committee by joint or concurrent resolution of the Legislative Assembly shall be given priority over other research requests received or initiated by the committee. The research service to be performed includes the administrative services incident to the accomplishment of the research requests or assignments. [1953 c.492 §3; 1959 c.295 §2; 1973 c.226 §1; 1979 c.237 §1]

173.135 Participation in legal proceedings to protect legislative interests. When deemed necessary or advisable to protect the official interests of the Legislative Assembly, one or more legislative committees, or one or more members of the Legislative Assembly, the committee may direct the Legislative Counsel and his staff, or may retain any member of the Oregon State Bar, to appear in, commence, prosecute or defend any action, suit, matter, cause or proceeding in any court or agency of this state or of the United States. Expenses and costs incurred pursuant to this section may be paid by the committee from any funds available to the committee. [1961 c.167 §32]

173.140 Preparation of initiative measures. The Legislative Counsel shall cooperate with the proponents of an initiative measure in its preparation when:

(1) Requested in writing so to do by 50 or more electors proposing the measure; and

(2) In the judgment of the committee there is reasonable probability that the measure will be submitted to the voters of the state under the laws relating to the submission of initiative measures. [1953 c.492 §4]

173.150 [1953 c.492 §5; 1961 c.279 §1; repealed by 1981 c.517 §10 (171.275 enacted in lieu of 173.150)]

173.152 [Formerly 171.272; amended by 1963 c.420 §1; 1965 c.372 §1; 1981 c.517 §21; renumbered 171.315]

173.155 [1959 c.295 §1; repealed by 1963 c.292 §1 (173.310 to 173.340 enacted in lieu of 173.155)]

173.160 Powers and duties of Legislative Counsel in preparing editions for publication. In preparing editions of the statutes for publication and distribution, the Legislative Counsel shall not alter the sense, meaning, effect or substance of any Act, but, within such limitations, may renumber sections and parts of sections of the Acts, change the wording of head-notes, rearrange sections, change reference numbers to agree with renumbered chapters, sections or other parts, substitute the proper subsection, section or chapter or other division numbers, strike out figures or words which are merely repetitious, change capitalization for the purpose of uniformity, and correct manifest clerical or typographical errors. [1953 c.492 §6]

173.170 [1953 c.492 §7; 1961 c.167 §28; 1981 c.517 §22, renumbered 171.285]

173.180 [1953 c.492 §8; 1981 c.517 §23; renumbered 171.295]

173.190 [1953 c.492 §9; 1961 c.167 §29; repealed by 1969 c.256 §3 (173.191 enacted in lieu of 173.190)]

173.191 Membership; term; vacancies; chairman; advisory committees. (1) The Legislative Counsel Committee shall consist of the Speaker of the House of Representatives, the President of the Senate, five members of the House appointed by the Speaker, and four members of the Senate appointed by the President. The Speaker of the House of Representatives and the President of the Senate may each designate an alternate from time to time from among the members of his house to exercise his powers as a member of the committee. The appointing authorities shall appoint members of a new committee within 30 days after the convening of the Legislative Assembly in regular session.

(2) The term of a member of the committee shall expire upon the convening of the Legislative Assembly in regular session next following the member's appointment. Vacancies occurring in the membership of the committee shall be filled by the appointing authority.

(3) The committee has a continuing existence and may meet, act and conduct its business during the sessions of the Legislative Assembly or any recess thereof, and in the interim period between sessions but the committee has no authority to affect the rules of either house.

(4) The committee shall select its own chairman who may, in addition to other acts authorized, approve disbursements for indebtedness or expenses.

(5) The committee may appoint advisory committees or subcommittees. Except as otherwise provided in this subsection, individuals other than members of the Legislative Assembly may serve on such advisory committees or subcommittees. A member of such committee or subcommittee who is not a member of the Legislative Assembly shall be compensated and reimbursed in the manner provided in ORS 292.495. An advisory committee or subcommittee appointed to assist the committee in review of state agency rules may consist only of two or more members of the Legislative Assembly. [1969 c.256 §4 (enacted in lieu of 173.190); 1971 c.638 §5; 1975 c.136 §6; 1975 c.530 §4; 1977 c.344 §5]

173.196 [1975 c.136 §8; repealed by 1977 c.344 §7]

173.200 Legislative Counsel. (1) The committee shall select the Legislative Counsel, who shall serve at the pleasure of the committee. The Legislative Counsel shall be a person authorized to practice law in the highest court of one of the states of the United States.

(2) The committee shall fix the annual salary of the Legislative Counsel. Subject to and in the manner otherwise provided by law, the Legislative Counsel shall be reimbursed for actual and necessary expenses incurred or paid by him in the performance of his duties. [1953 c.492 §10]

173.210 Employment of staff. Subject to the approval of the committee, the Legislative Counsel may employ and fix the compensation of such professional assistants and clerical and other employes as he deems necessary for the effective conduct of the work under his charge. [1953 c.492 §11; 1973 c.735 §8]

173.215 Effect of expiration of terms of committee members. (1) The expiration of the terms of members of the Legislative Counsel Committee upon the convening of the Legislative Assembly in regular session next following the commencement of their terms, as provided by ORS 173.191, does not affect the employment of any individual filling a position previously approved by the committee.

(2) After the convening of the Legislative Assembly in regular session and until such time as the newly appointed committee provides otherwise:

(a) The Legislative Counsel may employ and fix the compensation of individuals he deems necessary for the effective conduct of the work under his charge.

(b) Notwithstanding ORS 173.111 and 173.200, the President of the Senate and the Speaker of the House of Representatives, in case of a vacancy in the position of Legislative Counsel, may jointly select a Legislative Counsel having the qualifications set forth in ORS 173.200 to serve at their pleasure at a salary they jointly fix, not exceeding that last fixed by the committee. The President and Speaker may act in lieu of the committee under ORS 293.335 in designating the Legislative Counsel they select to approve voucher claims and in filing the statement of designation, and the provisions of ORS 293.335 shall apply as if the Legislative Counsel they select and so designate had been so designated by the committee.

(c) Nothing in paragraph (b) of this subsection limits the authority of the committee during its term of office over the matters described in paragraph (b) of this subsection. [1965 c.113 §1; 1967 c.5 §1; 1975 c.136 §10]

173.220 Location of Legislative Counsel's office. The permanent office of the Legislative Counsel shall be in the State Capitol, where he shall be provided with suitable and sufficient offices convenient to the chambers of the House and Senate. [1953 c.492 §12]

173.230 Confidential nature of matters handled by committee's staff. Neither the Legislative Counsel nor any employe of the committee shall reveal to any person not an employe or a member of the committee the contents or nature of any matter before him in his official capacity, if the person bringing the matter before the committee or employe designates the matter as confidential. Matters not designated as confidential may only be revealed as prescribed by the rules of the committee. [1953 c.492 §14; 1961 c.167 §30]

173.240 Committee's staff prohibited from influencing legislation. Neither the Legislative Counsel nor any employe of the committee shall oppose, urge or attempt to influence legislation. [1953 c.492 §14]

173.250 [1953 c.492 §15; 1957 c.60 §1; subsection (4) enacted as 1961 c.159 §2; 1969 c.256 §5; 1981 c.517 §24; renumbered 171.305]

173.310 [1963 c.292 §2 (173.310 to 173.340 enacted in lieu of 173.155); 1969 c.314 §10; 1971 c.638 §7; 1977 c.186 §1; repealed by 1979 c.472 §2]

LAW IMPROVEMENT COMMITTEE

173.315 Law Improvement Committee created; duties; membership; chairperson. (1) The Legislative Counsel Committee shall cause to be conducted a continuous substantive law revision program and shall establish the Law Improvement Committee to supervise the conduct of the program.

(2) The Law Improvement Committee shall consist of:

(a) The cochairpersons of the Legislative Counsel Committee;

(b) The deans of Oregon's accredited law schools, or their designees;

(c) A person designated by the Board of Governors of the Oregon State Bar;

(d) The Attorney General or the Attorney General's designee; and

(e) The chairpersons of the legislative committees having jurisdiction over judicial matters in the preceding regular session.

(3) The Law Improvement Committee shall elect its chairperson and vice-chairperson with such powers and duties as the committee shall determine. [1981 c.813 §1]

173.320 [1963 c.292 §3 (173.310 to 173.340 enacted in lieu of 173.155); repealed by 1979 c.472 §2]

173.325 Compensation and expenses of members. A member of the Law Improvement Committee who is not a member of the Legislative Assembly shall receive no compensation for services as a member but, subject to any other applicable law regulating travel and other expenses for state officers, may receive actual and necessary travel and other expenses incurred in the performance of official duties, providing funds are appropriated therefor in the budget of the Legislative Counsel Committee. Subject to the availability of funds, any member of the committee who is a member of the Legislative Assembly shall be entitled to compensation and expenses as provided in ORS 171.072 (4) or (5) for service on the committee. [1981 c.813 §2]

173.330 [1963 c.292 §4 (173.310 to 173.340 enacted in lieu of 173.155); repealed by 1979 c.472 §2]

173.335 Committee staff; duties. (1) With the approval of the Law Improvement Committee chairperson, the Legislative Counsel shall designate a staff attorney whose primary duty shall be to assist the committee to carry out its functions as provided by law.

STATE OF UTAH
OFFICE OF LEGISLATIVE RESEARCH AND GENERAL COUNSEL

JON M. MEMMOTT
Director/General Counsel

September 14, 1983

Representative Charlie Bussell
Chairman
Committee on Judiciary
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Bussell:

Speaker Norman H. Bangerter has referred your inquiry of August 11 to our office for response. Hopefully an outline of our office organization will address some of your questions.

The Utah legislature presently has three full-time professional staff offices: (1) The Legislative Fiscal Analyst or budget office, (2) The Legislative Auditor General which conducts performance audits on state agencies, etc., and (3) The Office of Legislative Research and General Counsel. The professional offices provide professional staff support to legislative committees and individual legislators on a non-partisan basis. The Office of legislative Research and General Counsel employs both attorneys and non-attorneys on its professional staff. The other professional staff members include economists, statisticians, and other professionals in varied areas. The objective of the office is to provide an integrated professional team for specific legislative committees and a broad professional staff for individual legislative requests. Under the office's statutory authority, the director of the office may also be the legislative general counsel. Currently, that is the situation where Jon Memmott is both director and general counsel. However, in the future a separation of those functions could occur, although the office would still function as a single entity.

We presently have 11 full-time attorneys who provide general legal assistance to the legislature. In addition to their responsibilities to provide legal advice to the legislature, a primary function of the attorneys is to draft legislation. Utah's legislature meets in limited sessions, however, so the drafting requirements tend to be highly concentrated. There are no attorneys specifically designated to represent the legislature in the event of litigation. Rather, litigation needs are examined on an as-need basis and personnel resources allocated accordingly. As for back-up staff, we have approximately ten clerical people that assist the entire office professional staff. This includes computer operators whose primary responsibility centers on bill drafting and the preparation of other session-related documentation.

Candidly, this office has infrequently been involved in actual litigation on behalf of the legislature.This is not because we have declined to represent our clients, but there simply has been very little demand. In those instances where major litigation has occurred we have retained the services of outside legal counsel. However, it is likely that more opportunities will arise in the future and our office is developing the capacity to address those litigation needs.

Your inquiries also addressed how our office deals with controversies between political interests in the legislature. Our office is strictly non-partisan which requires us to represent all political interests in the legislature. Often this means that we are providing legal advice on the same issue for different political interests. This situation does require a high degree of professionalism and a concerted effort to insulate the staff from involvement in partisan political issues. To date we have been successful in handling these situations. We have not had a situation of having to represent different political parties in the legislature in actual litigation.

The operating budget of the office is approximately $1.3 million. This figure is include salaries for both the legal and non-legal staff. No specific appropriation for litigation needs was made. The last major piece of litigation required the expenditure of $20,000 for outside counsel which came from certain carry-over funds.

I hope this general information is of some assistance to you. If you have any further questions, I would be happy to answer them for you.

Sincerely,

Roger D. Tew

Roger D. Tew
Assistant General Counsel

ROT/jp

(g) To maintain a legislative research library containing analytical, statistical, legal, and descriptive data relative to current and potential governmental and legislative subjects.

(h) To appoint and develop a professional staff within budget limitations.

(i) To prepare and submit the annual budget request for such office.

History: L. 1975, ch. 109, § 12.

36-12-13. Legislative fiscal analyst — Qualifications — Powers, functions and duties. (1) The legislative fiscal analyst shall have a master's degree in public administration, political science, economics, accounting, or the equivalent in academic and practical experience.

(2) The powers, functions, and duties of the legislative fiscal analyst shall be:

(a) To analyze in detail the executive budget before the convening of each legislative session and make recommendations to the legislature on each item or program appearing in the executive budget.

(b) To prepare cost estimates on all proposed bills which anticipate government expenditures.

(c) To prepare a review and analysis of revenue estimates for existing and proposed revenue acts.

(d) To report instances in which the administration may be failing to carry out the expressed intent of the legislature.

(e) To direct attention to each new proposed service contained in the governor's budget.

(f) To direct attention to each budget item previously denied by the legislature.

(g) To propose and analyze statutory changes for more effective operational economies or more effective administration.

(h) To prepare, after each session of the legislature, a summary showing the effect of the final legislative program on the financial condition of the state.

(i) To conduct organizational and management improvement studies.

(j) To prepare and deliver upon request of any study committee or the legislative management committee, reports on the finances of the state and on anticipated or proposed requests for appropriations.

(k) To recommend areas for research studies by the executive department or the study committees.

(l) To assist in prescribing the format for the presentation of the governor's budget to facilitate program review of state expenditures.

(m) To appoint and develop a professional staff within budget limitations.

(n) To prepare and submit the annual budget request for such office.

(3) In carrying out the duties provided for in this section, the legislative fiscal analyst shall have the authority to obtain access to all records, documents, and reports of the departments, agencies, and other units of the state government, necessary to the scope of his duties, including the power to subpoena records and agency officials, when necessary for this purpose.

History: L. 1975, ch. 109, § 13.

36-12-14. Legislative general counsel — Qualifications — Powers, functions and duties. (1) The legislative general counsel shall be a lawyer admitted to practice law in this state and shall be selected without reference to party affiliation and solely on the grounds of fitness to perform the duties of his office.

(2) The powers, functions, and duties of the legislative general counsel shall be:

(a) To exercise the constitutional authority provided in Article VI, Sec. 32, of the Constitution of Utah.

(b) To serve as legal counsel to the legislature, any of its committees or subcommittees, or the professional legislative staff and to represent the legislature, any

of its committees or subcommittees, or the professional legislative staff in cases and controversies before courts and administrative agencies and tribunals.

(c) To prepare and assist in the preparation of legislative bills, resolutions, memorials, amendments, and other documents or instruments required in the legislative process and give advice and counsel regarding them to the legislature, any of its members or members-elect, any of its committees or subcommittees, or the professional legislative staff.

(d) To keep on file records concerning all legislation and proceedings of the legislature with respect to this legislation and subject indexes of bills introduced at each session of the legislature.

(e) To formulate plans for the revision, clarification, classification, arrangement, codification, annotation, and indexing of Utah statutes, and submit to each general session of the legislature a report concerning these matters, including proposed legislation to effectuate the recommendations.

(f) To appoint and develop a professional staff within budget limitations.

(g) To prepare and submit the annual budget request for such office.

History: L. 1975, ch. 109, § 14.

36-12-15. Legislative auditor general — Qualifications — Deputy — Powers, functions and duties. (1) The legislative auditor general shall be a licensed certified public accountant or certified internal auditor with at least five years' experience in the auditing or public accounting profession, or the equivalent, prior to appointment.

(2) The legislative auditor, with concurrence of the audit subcommittee of the legislative management committee, shall appoint a deputy legislative auditor general. The legislative auditor general shall also appoint and develop a professional staff within budget limitations.

(3) The legislative auditor general shall exercise the constitutional authority provided in Article VI, Sec. 33 of the Constitution of Utah. He shall conduct comprehensive and special purpose audits and prepare and submit a written report on each audit to the legislative management committee, the audit subcommittee and to all members of the legislature within 75 days after the completion of the examination. The audit shall include any or all of the following:

(a) An examination to determine the honesty and integrity of fiscal affairs, the accuracy and reliability of financial statements and reports, and the adequacy and effectiveness of financial controls to properly record and safeguard the acquisition, custody, and use of public funds;

(b) An examination to determine whether administrators have faithfully adhered to legislative intent;

(c) An examination to determine whether the operations of the departments, agencies, and other units of the state have been conducted in an efficient and effective manner;

(d) An examination to determine whether state programs, administered by the departments, agencies, and other units of the state, have been effective in accomplishing intended objectives;

(e) An examination to determine whether management control and information systems are adequate and effective in assuring that state programs are administered faithfully, efficiently, and effectively.

(4) The legislative auditor general shall have the following additional powers, functions, and duties:

(a) To obtain access to all records, documents, and reports of the departments, agencies, and other units of the state government, necessary to the scope of his examination, including the power to subpoena records and agency officials, when necessary for this purpose;

ROBERT A. COLDSNOW

STATE OF KANSAS

(913) 296-3014

LEGISLATIVE COUNSEL
STATE CAPITOL—ROOM 449-N
TOPEKA, KANSAS 66612

August 23, 1983

Representative Charlie Bussell
Chairman, House Committee on Judiciary
Pouch V
Juneau, Alaska 99811

Dear Representative Bussell:

Your August 11 letters to Senator Doyen and Speaker Hayden have been referred to me for a response to your questions.

You indicate you have a copy of the Kansas statutes for the office of legislative counsel. Please be sure your copy of K.S.A. 46-1224 in its "History:" reflects it is the version as amended by Laws 1975, ch. 278, §1; May 3. I also enclose a copy of the Duty Assignments adopted for this office by the Legislative Coordinating Council.

My responses are numbered to correspond to your questions.

1) One attorney serves as the legislative counsel and works for both the House and the Senate in matters involving litigation, and such other duties as the Legislative Coordinating Council may direct.

2) The office of legislative counsel averages three or four instances a year with direct involvement in litigation by way of amicus curiae briefs, intervention or direct representation of individual legislators who have been named defendants or subpoenaed as witnesses, and in some instances the Legislature as a body, or the House and the Senate have been named. This office continuously monitors litigation involving agencies where there is a particular and more direct interest on the part of the Legislature in the litigation, e.g., nursing home reimbursement litigation, legislative appropriation of federal grants, legislatively-imposed restrictions on uses of appropriation items. Counsel for the involved agencies frequently in such matters

consult with this office and keep us informed in the event new legislation might be indicated as a possible way of settlement or in case aid might be requested by way of an amicus brief to reflect the Legislature's special interest in the matter.

3) The attorney represents the entire Legislature under the direction of the Legislative Coordinating Council. Yes, situations may arise where there is political conflict. Generally, then, this office is not involved in the matter. Most of the time, however, the matters are concerned with the Legislature as an institution and its prerogatives as the legislative branch of government. Many of the matters arise out of the legislative-executive conflicts which have been arising with greater frequency the last few years.

4) One secretary is employed on a full-time basis. Law clerks are hired by the office on a temporary, as-needed basis. This arrangement is practical by reason of the location of Washburn University Law School in Topeka (the Capital) and the Kansas University Law School in Lawrence (25 miles away).

5) The office has an annual budget of about $65,000. It is not practical to break down the figures into litigation and other, since almost everything is involved with litigation directly or on the fringes of litigation. As an example, this office helps staff the Joint Committee on Special Claims Against the State. This Committee serves as the screening or processing committee for what in most states would be considered private bills. These are claims for damages where governmental immunity prevents direct litigation, or requests for other relief where there is no administrative remedy, etc. The Committee in effect sits somewhat like the old chancellory courts to do equity. All claims against the state arising out of implied contract have to be processed by the committee. This office investigates the larger and more serious of these claims and all of the claims which may have questions of law and unusual fact circumstances or involve a potential for possible litigation.

6) None

7) The procedure for selection of the legislative counsel is set forth in K.S.A. 46-1222. It involves bi-partisan action by two members each of the House and Senate Judiciary

Committees and the Chief Justice of the Kansas Supreme Court, as well as the final decision of the Legislative Coordinating Council (which is a bi-partisan council of the legislative leadership--President of the Senate, Majority and Minority Leaders of the Senate, Speaker of the House, Speaker-Pro Tem of the House, Majority and Minority Leaders of the House). This procedure has been satisfactorily used three times since the office was created in 1974.

8) This is difficult to differentiate for this office because most of the work is on the fringes of litigation if not directly involved in litigation. The best estimate would be--about 50-50 for litigation and non-litigation. The office has in the past spent considerable time with four or five legislative investigation committees which were using compulsory process (see assignments for this office). These investigating committees have probably involved at least 15-20 percent of the time alone. Relatively small amount of time is spent with individual legislators, outside of the leadership, unless they are named in litigation or as a witness or a potential witness. The exception is that frequently legislators inquire as to the scope and coverage of legislative immunity. Activities of certain committees such as those involved with reapportionment or redistricting are monitored because of litigation potentials and special assistance is given, e.g., preparing a special committee report for submission to the respective house of the Legislature and inclusion in the journal as part of the legislative history and explanation. Conscious continuous effort is maintained to not get involved with advice on the advisability of any particular policy issue or matter. Each year at tax time a good deal of time is spent with individual legislators on advice as to the income tax treatment of the legislators' per diem expense allowances. I have been involved with this issue since it first arose in 1975 and cooperated with and assisted NCSL in its efforts to reach a permanent solution.

You should be aware that some will challenge the idea of a legislative litigation attorney as an affront to or unnecessary competitor with the Attorney General. I am sure, however, your Legislature has experienced situations where the Attorney General had a conflict by reason of being a part of the executive department and a primary duty and obligation to the executive department in the particular matter. Sometimes this conflict may be politically inspired, sometimes it arises from purely philosophical differences;

and, on other occasions, it is simply unavoidable. Having its own counsel authorized to represent the Legislature in court gives the legislative branch some independence from the Attorney General to avoid possible adverse consequences from these conflicts. I have had people also tell me that just the existence of this office has resulted in an overall more professional attitude on the part of the Office of the Attorney General and other agency counsel when dealing with matters which might involve the legislative branch in a more or less direct way.

I have been fairly active the last few years in the Legal Services Staff Section of NCSL. Increasingly, during the last three years, the discussion has turned to the problems and conflicts which are arising with the executive branch and the general dissatisfaction and frustration which arises because of the conflicts with the Attorney General. More and more legislative leaders from other states have been addressing the section on encouraging the states to establish some arrangement to be in a position, if desired, to be independent of any other branch when it came to independent representation in litigation.

This gets to a point which may be somewhat personal, but I hope you will consider it in the light of an effort to make a point. You will note that the Kansas statutes contemplate that the person occupying this office have at least five years practice and at least some trial or court experiences. I had twenty-four years in private practice with a fairly reasonable amount of trial and appellate court experience. I also had the fortune of having the experience of serving six years in the Kansas House of Representatives during the 1960's. This familiarity with legislative procedure, etc., has been invaluable.

The point has been made at the Legal Staff Section meetings that most legislative staff attorneys are not familiar or competent enough with trial practice to adequately represent the Legislature in court. These staff lawyers are good people and very competent in their fields of bill drafting, statute publications, general subject matter research, etc.; but, it is apparently true that by far the large percentage of them have spent most, if not all, of their professional lives in this limited professional environment.

A response made to this was that if you were not willing to fund and hire counsel in-house competent in trial work,

the Legislature should have in-house counsel authorized to represent the legislature (to avoid standing questions) and the ability to hire outside counsel for the actual trial work. The point was made that most competent trial attorneys know very little about the Legislature and the legislative process, as the competent legislative staff attorney may know little about trial work. Working together, however, they can make a very adequate presentation on behalf of the Legislature.

You may wish to contact Representative Ed Jackamonis of Wisconsin (Speaker of the House in 1982) who has had considerable experience as a legislator and was the target for considerable litigation while Speaker. Also, the Minnesota Senate Counsel's office may be of help. The Minnesota Senate Counsel was established unilaterally by Senate Resolution when (as I understand it) the Minnesota House was unwilling to participate in establishing a legislative attorney authorized to represent the Legislature in court. The U.S. Supreme Court in the early 1970's recognized the Office of Minnesota Senate Counsel as a proper entity to represent the Minnesota Senate in litigation. I understand the Minnesota Senate Counsel has handled a good volume of litigation for the Senate. Incidentally, the Kansas office of legislative counsel was passed over the Governor's veto.

I hope I have given you adequate answers to your questions and some background and thoughts of others in this area. While it appears the executive-legislative conflicts will be ongoing for some time, I would stress that the establishment of a legislative attorney authorized to have standing to represent the legislature in court does not necessarily have to heighten or sharpen the possibility of conflict. With the proper professional attitude of the respective attorneys (legislative versus executive), much cooperation and problem solving can be accomplished. Under such a situation, both branches can be better served and those issues requiring litigation can be better and more professionally presented to the courts. This, however, does seem to come about only after the Legislature takes a stand and duly establishes someone with authority to represent it in court.

Sincerely,

Robert A. Coldsnow

DUTY ASSIGNMENTS FOR LEGISLATIVE COUNSEL

The Legislative Coordinating Council has established the following duties and priority of duties for the office of Legislative Counsel:

1. In the event any legislative committee, legislator, or legislative staff member is served with any summons or any court order in any court proceeding, as a result of their official duties in the discharge of legislative business, the committee chairman, or individual legislator or staff member should immediately advise Legislative Counsel and furnish him a copy of the papers. Legislative Counsel will make appropriate pleadings and appropriate appearances in court on behalf of the committee or persons so served.

2. The legislative leadership, the appropriate committee chairmen, or any of the committees' staff should notify Legislative Counsel, as soon as possible, when they think a particular study, inquiry or investigation may require the use of compulsory process. Where compulsory process is being utilized by any legislative committee, Legislative Counsel should give assistance to the committee as follows:

(a) Where a particular study, inquiry or investigation has been authorized or directed by a concurrent resolution or statute of the legislature and exercise of compulsory process is specifically authorized by said concurrent resolution or statute or by the Legislative Coordinating Council.

(b) Where any standing committee or the Legislative Coordinating Council is authorized to exercise the powers of compulsory process without further authorization.

(c) Where any standing committee by statute and authority of either the Speaker of the House or President of the Senate is authorized to exercise the powers of compulsory process.

(d) Where any study committee is authorized by the Legislative Coordinating Council to exercise the powers of compulsory process.

3. The committee chairman of any committee holding extensive hearings and desiring extensive questioning of any witnesses to be made by staff members may request Legislative Counsel to prepare and administer such questioning under supervision of the committee chairman.

4. When specifically authorized by the Legislative Coordinating Council, Legislative Counsel may render unofficial advisory opinions upon legal questions concerning pending legislative matters.

Kansas

unable to enter into a contract for the required audit services, the federal audit committee shall request the post auditor to provide another list of firms to be negotiated with by the federal audit committee and, upon receipt of such list, the federal audit committee shall proceed in accordance with the provisions of K.S.A. 46-1123 to 46-1125, inclusive.

History: L. 1980, ch. 153, § 6; April 30.

46-1126. Contracts for financial-compliance audits; professional liability insurance; responsibilities of selected firm. (a) Each contract for a financial-compliance audit of a state agency negotiated under K.S.A. 46-1123 to 46-1125, inclusive, shall be entered into between the post auditor and the firm selected to perform the financial-compliance audit. Each such contract shall require the firm selected to perform the financial-compliance audit to submit evidence which is satisfactory to the federal audit committee that the firm has general professional liability insurance or specific professional liability insurance which is adequate for such audit.

(b) In addition to the requirements in subsection (a), each such contract for financial-compliance audit services shall specify the responsibilities undertaken by the firm selected to perform such audit and that such firm shall be responsible for all material errors and omissions in the performance of such contract.

(c) Such contracts shall not be subject to the provisions of K.S.A. 1980 Supp. 75-3739 and amendments thereto.

History: L. 1980, ch. 153, § 7; April 30.

46-1127. Federal audit committee to monitor conduct of financial-compliance audit; written audit report; duty of confidentiality. (a) The federal audit committee shall monitor the performance of the firm or firms conducting a financial-compliance audit pursuant to a contract entered into under K.S.A. 46-1126 to insure that such audit is performed in accordance with the specifications developed for the conduct of such audit. The firm or firms selected to perform such audit shall submit a written audit report at the conclusion of the audit to the governor, the director of accounts and reports, the director of the budget, the secretary of administration, the state agency which is audited, the post auditor, each member of the legislative post audit committee and other persons or agencies as may be required by the specifications.

(b) In the performance of such audit, the officers and employees of the firm or firms performing the audit shall be subject to the same duty of confidentiality applicable to the post auditor and officers and employees of the division of post audit under the legislative post audit act and shall have access to all books, accounts, records, files, documents and correspondence, confidential or otherwise, of any person or state agency subject to the financial-compliance audit.

History: L. 1980, ch. 153, § 8; April 30.

Article 12.—LEGISLATIVE COORDINATING COUNCIL

Law Review and Bar Journal References:

"1971 Legislative Synopsis," Robert F. Bennett, 40 J.B.A.K. 307, 357 (1971).

46-1201. Legislative coordinating council; membership; officers; meetings; notice of meetings to members of legislature and certain legislative officials; copies of minutes. (a) There is hereby established the legislative coordinating council which shall have seven (7) members. Such members shall be the president of the senate, the speaker of the house of representatives, the speaker pro tem of the house of representatives, the majority leader of the senate, the majority leader of the house of representatives, the minority leader of the senate, and the minority leader of the house of representatives.

(b) In even-numbered years, the speaker of the house of representative shall be chairman of the legislative coordinating council, and the president of the senate shall be vice-chairman thereof. In odd-numbered years, the president of the senate shall be chairman of the legislative coordinating council, and the speaker shall be vice-chairman thereof.

(c) The legislative coordinating council shall meet at least once each month in the interim between legislative sessions. Such council shall meet on the call of its chairman or any three members of the council. The director of legislative administrative services, director of legislative research, revisor of statutes and each member of the legislature shall be given notice of each meeting of the council by its chairman, except in cases

or existing joint committee on legislative services and facilities shall become officers and employees of the office of revisor of statutes, legislative research department or of the legislature, as the case may be, and shall retain all retirement benefits which such officers or employees had before such transfer under the laws of this state, and their services shall be deemed to have been continuous.

History: L. 1971, ch. 184, § 17; May 1.

46-1218. Same; transfer and continuation of revisor of statutes; transfer not to affect rules and regulations. (a) The office of revisor of statutes established by this act shall be the successor in every way, with respect to the powers, duties and functions of the revisor of statutes in which the same were vested prior to the effective date of this act, except as otherwise provided by this act. Every act performed in the exercise of such powers, duties and functions by or under the authority of the revisor of statutes established by this act to which such powers, duties and functions are transferred by this act, shall be deemed to have the same force and effect as if performed by the revisor of statutes in whom such functions were vested prior to the effective date of this act. Whenever the revisor of statutes is referred to or designated by law, contract or other document, such reference or designation shall be deemed to apply to the revisor of statutes provided for by this act.

(b) All rules and regulations of state agencies lawfully filed with the revisor of statutes before the effective date of this act shall continue to be effective and shall be deemed to be duly filed with the revisor of statutes provided for by this act until revised, amended, repealed, or nullified pursuant to law.

(c) The office of revisor of statutes created by this act shall be a continuation of the office of revisor of statutes established under K.S.A. 77-301 and the revisor of statutes appointed in accordance with said section 77-301 shall be and continue as revisor of statutes under this act, until the legislative coordinating council exercises its appointing authority hereunder.

History: L. 1971, ch. 184, § 18; May 1.

46-1219. Same; abolition and transfers relating to Kansas legislative council. Whenever the Kansas legislative council or the secretary of the Kansas legislative council is referred to or designated by law, contract or other document, such reference or designation shall be deemed to mean and apply to the legislative coordinating council created by this act. Whenever any such statute provides for submission of recommendations or reports, such council may refer the matter submitted to appropriate committees. Whenever the research department of the Kansas legislative council is referred to or designated by law, such reference or designation shall be deemed to mean and apply to the legislative research department established by this act.

History: L. 1971, ch. 184, § 19; May 1.

46-1220. Same; transfer of records and property of Kansas legislative council. The legislative research department shall succeed to all records of the existing Kansas legislative council and shall also succeed to the file cabinets containing such records. The office of revisor of statutes shall succeed to all property and records of the existing revisor of statutes, except records held by the revisor of statutes as secretary of the Kansas legislative council. The office of revisor of statutes shall succeed to the equipment of the Kansas legislative council located in the office of revisor of statutes, except the file cabinets mentioned above. Any conflict as to the proper disposition of such property or records arising under this section, and resulting from the reorganization under this act, shall be determined by the legislative coordinating council.

History: L. 1971, ch. 184, § 20; May 1.

46-1221. Nonapplication of act in certain cases. The provisions of this act [*] shall not apply to the state finance council, the Kansas commission on interstate cooperation, the advisory committee to the Kansas commission on interstate cooperation, the motor vehicle reciprocity commission, the legislative post-audit committee or the Kansas judicial council, nor to any committee, delegate, member, officer or employee of any of the foregoing specified in this section when acting for or under authority thereof.

History: L. 1971, ch. 184, § 21; May 1.

* "This act," see, also, 45-116, 45-313, 46-150, 46-152, 46-153, 46-1001, 46-1004, 46-1005, 46-1015, 46-1201 to 46-1220, 75-2537, 75-3215, 75-3717, 75-3762 to 75-3765, 75-3769 and 75-3772.

46-1222. Office of legislative counsel;

46-1222. Office of legislative counsel; nomination, appointment, removal, qualifications, compensation and expenses of legislative counsel. There is hereby established the office of legislative counsel. The legislative counsel shall be appointed by the legislative coordinating council for a term of four (4) years, and may be removed by the legislative coordinating council for cause. The appointment and removal of the legislative counsel shall be made by a vote of five (5) members of the legislative coordinating council. The legislative counsel shall be appointed from a panel of three (3) persons selected by a nominating committee composed of the chairman of the senate standing committee on judiciary, a minority member of said senate committee having seniority thereon, to be appointed by the minority leader of the senate, the chairman of the house standing committee on judiciary, a minority member of said house committee having seniority thereon, to be appointed by the minority leader of the house, and the chief justice of the supreme court. Of the panel of three (3) persons selected by the nominating committee, not more than two (2) of such persons shall be members of the same political party. No person shall be eligible for nomination or appointment as legislative counsel unless:

(a) He has been admitted to practice law in Kansas for not less than five (5) years prior to his nomination.

(b) He is admitted to practice in the federal court.

In addition to the foregoing qualifications, in considering persons for nomination, the nominating committee shall investigate their experience in legal research, trial and appellate practice and related areas in order that nominees shall possess the experience and judgment deemed necessary to fulfill the duties and responsibilities of the office. The nominating committee shall further make such investigation of persons considered for nomination as will insure that such nominees are of high professional standing. The legislative counsel shall be in the unclassified service of the Kansas civil service act and shall receive compensation fixed by the legislative coordinating council, and such compensation shall not be subject to approval of the state finance council. The legislative counsel shall receive expenses as provided by law for non-legislator officers of the legislative branch. Such compensation and expenses shall be paid from appropriations for the legislature.

History: L. 1974, ch. 211, § 1; March 20.

46-1223. Same; legal investigative and clerical personnel; expenditures. The legislative coordinating council shall provide to the office of legislative counsel legal, investigative and clerical personnel as required to carry on the duties, functions and responsibilities of such office. Expenditures provided for in this act shall not be subject to approval of the state finance council nor to approval under any other statute, and shall be paid from appropriations for the legislature.

History: L. 1974, ch. 211, § 2; March 20.

46-1224. Same; duties of legislative counsel; powers and standing in courts; representation of legislature, when. As directed by the legislative coordinating council, the legislative counsel shall represent the legislature, or either house thereof, in any cause or matter. In cases of quo warranto and mandamus the legislative counsel shall have the same powers and standing in all courts of this state as any county attorney or district attorney has in his or her county or in the supreme court and as the attorney general has in any court. When the legislature is in session, either house thereof by its resolution, or both houses by concurrent resolution may authorize the legislative coordinating council to direct the legislative counsel to bring or participate in any cause or action by representing the legislature or either house thereof or the legislative coordinating council in any court of this state or of the United States. When the legislature is not in session, the legislative coordinating council may direct the legislative counsel to bring or participate in any cause or action by representing the legislature or either house thereof or the legislative coordinating council in any court of this state or of the United States in accordance with directions of said council. The legislative counsel shall render unofficial advisory opinions upon such legal questions as are submitted to him or her by any member or any standing or special committee of the legislature, all in accordance with policies to be established by the legislative coordinating council. Upon direction of the legislative coordinating council, the legislative counsel shall act as counsel to special committees of the legislature and shall provide investigative assistance, conduct examination of witnesses and participate in committee hearings and deliberations as deemed necessary by the committee chairpersons. The legislative counsel shall perform such other duties as are directed by the legislative coordinating council.

History: L. 1974, ch. 211, § 3; L. 1975, ch. 278, § 1; May 3.

nomination, appointment, removal, qualifications, compensation and expenses of legislative counsel. There is hereby established the office of legislative counsel. The legislative counsel shall be appointed by the legislative coordinating council for a term of four (4) years, and may be removed by the legislative coordinating council for cause. The appointment and removal of the legislative counsel shall be made by a vote of five (5) members of the legislative coordinating council. The legislative counsel shall be appointed from a panel of three (3) persons selected by a nominating committee composed of the chairman of the senate standing committee on judiciary, a minority member of said senate committee having seniority thereon, to be appointed by the minority leader of the senate, the chairman of the house standing committee on judiciary, a minority member of said house committee having seniority thereon, to be appointed by the minority leader of the house, and the chief justice of the supreme court. Of the panel of three (3) persons selected by the nominating committee, not more than two (2) of such persons shall be members of the same political party. No person shall be eligible for nomination or appointment as legislative counsel unless:

(a) He has been admitted to practice law in Kansas for not less than five (5) years prior to his nomination.

(b) He is admitted to practice in the federal court.

In addition to the foregoing qualifications, in considering persons for nomination, the nominating committee shall investigate their experience in legal research, trial and appellate practice and related areas in order that nominees shall possess the experience and judgment deemed necessary to fulfill the duties and responsibilities of the office. The nominating committee shall further make such investigation of persons considered for nomination as will insure that such nominees are of high professional standing. The legislative counsel shall be in the unclassified service of the Kansas civil service act and shall receive compensation fixed by the legislative coordinating council, and such compensation shall not be subject to approval of the state finance council. The legislative counsel shall receive expenses as provided by law for non-legislator officers of the legislative branch. Such compensation and expenses shall be paid from appropriations for the legislature.

History: L. 1974, ch. 211, § 1; March 20.

46-1223. Same; legal investigative and clerical personnel; expenditures. The legislative coordinating council shall provide to the office of legislative counsel legal, investigative and clerical personnel as required to carry on the duties, functions and responsibilities of such office. Expenditures provided for in this act shall not be subject to approval of the state finance council nor to approval under any other statute, and shall be paid from appropriations for the legislature.

History: L. 1974, ch. 211, § 2; March 20.

46-1224. Same; duties of legislative counsel; powers and standing in courts; representation of legislature, when. As directed by the legislative coordinating council, the legislative counsel shall represent the legislature, or either house thereof, in any cause or matter. In cases of quo warranto [illegible] shall have the power and standing in all courts of this state as any county attorney or district attorney of his or her county, or in the supreme court the attorney general has in any court when the legislature, or either house thereof, requests it, unless the attorney general resists the request. Either house by concurrent resolution may authorize the legislative coordinating council to direct the legislative counsel to [illegible] participate in any cause or proceeding representing the legislature or either house thereof or the legislative coordinating council in any court of this state or of the United States. If the attorney general is not in action, the legislative coordinating council may direct the legislative counsel to bring, participate in any cause or action by or representing the legislature or either house thereof or of the legislative coordinating council in any court of this state or of the United States, and with directions of said council. The legislative counsel shall render unofficial advisory opinions upon such legal questions as are submitted to him or her by any member or any standing or special committee of the legislature, all in accordance with policies to be established by the legislative coordinating council. Upon direction of the legislative coordinating council, the legislative counsel shall act as counsel to special committees of the legislature

and shall provide investigative assistance, conduct examination of witnesses and participate in committee hearings and deliberations as deemed necessary by the committee chairpersons. The legislative counsel shall perform such other duties as are directed by the legislative coordinating council.

Article 13.—RETIREMENT BENEFITS

46-1301.

History: L. 1972, ch. 300, § 2; Repealed, L. 1973, ch. 329, § 9; July 1.

Revisor's Note:
New act, see 74-4991 to 74-4998.

Article 14.—LEGISLATIVE PETITION FOR SPECIAL SESSION

46-1401. Legislative petition for calling of special session by governor; form. Whenever any legislator wishes to petition the governor to call a special session of the legislature as provided in section 5 of article 1 of the constitution of the state of Kansas, he shall subscribe the form prescribed in this section, completed by insertion of the name of the governor and the date of the commencement of the special session. Such form shall be sworn to (or affirmed) before an officer authorized to administer oaths. Such form shall be substantially as follows:

State of Kansas, County of _____:

PETITION

To The Honorable _____, Governor
State Capitol, Topeka, Kansas

You are hereby petitioned to call the Legislature into Special Session, such Special Session to commence at 10:00 a.m., _____, 19____.

_____ _____
Signature Title and District Number

Subscribed and sworn to before me this _____ day of _____, 19____.

_____
Notary Public

(SEAL)
My commission expires: _____

History: L. 1974, ch. 212, § 1; July 1.

46-1402. Same; duty of governor to call special session, when. Whenever the governor receives petitions, in the form provided in K.S.A. 46-1401, properly executed by two-thirds of the members elected to each house of the legislature, petitioning him to call the legislature into special session at a particular time, and all being at the same particular time, he shall call the petitioned for special session to commence at the time so specified.

History: L. 1974, ch. 212, § 2; July 1.

46-1403. Same; convening of special session notwithstanding governor's failure to call special session upon legislative petition; session deemed properly called, when. Whenever petitions have been delivered to the governor, or to his official office in the state capitol, in accordance with K.S.A. 46-1402, and the governor fails to properly make the call required by K.S.A. 46-1402 and section 5 of article 1 of the constitution of the state of Kansas, the legislature shall convene at the time specified in such petitions. The first order of business of each house shall be to consider a concurrent resolution declaring the special session to be duly called. If two-thirds of all the members elected to each house shall approve such resolution, the special session shall be deemed to be duly called, notwithstanding the failure of the governor to properly make the required call.

History: L. 1974, ch. 212, § 3; July 1.

Article 15.—LEGISLATIVE INFORMATION SYSTEM

46-1501. Legislative information system; supervision and operation by revisor of statutes; function and scope of system. In accordance with any instructions given by the legislative coordinating council and as provided in this act, the revisor of statutes shall introduce in phases and supervise or operate, or both supervise and operate as may be appropriate, a comprehensive legislative information system. Such system shall initially be operated to accomplish computer search of existing statutes of Kansas and computer preparation of legislative bills and resolutions. In succeeding years, as may be convenient, such system shall encompass computer preparation of the following:

(a) Statutory search,

(b) search of other documents,

(c) bill and resolution preparation,

(d) printing (outside the office of revisor of statutes) of bills, resolutions and other documents within the legislative branch,

(e) preparation of such legislative documents as journals, calendars, bill locators, bill indexes and research materials,

August 22, 1983

Representative Charlie Bissell
Chairman of the Committee on Judiciary
Pouch V
Juneau, Alaska 99811

Dear Mr. Bissell:

Both Senator Ashworth and Speaker Vergiels have referred to me your letter asking about legal representation for the legislature. I shall combine some of the answers as I believe a clear explanation of our practice requires.

We have a staff of 12 lawyers, including me. None is assigned specially to litigation, but at least four of the present staff have worked on litigated cases to some extent, often in helping each other informally. There are 24 other employees in the legal division. Only my personal secretary does much work with litigation, but other typists sometimes do briefs or pleadings from a model and the lawyer's manuscript. We have never to my knowlege employed an attorney for litigation on private contract. (Questions 1, 4 and 6.)

We usually have no more than two or three matters pending, often none. At the most, I would say we spend the equivalent of eight days in court in a year, and perhaps an equal amount of time conferring with legislators on these matters. From this it is evident that the lawyers on our staff who do litigate--I do the majority of it personally--spend much more time counseling legislators and committees than litigating. Our records show no reliable division between counseling and the other aspects of drafting legislation, which is the primary task of us all. (Questions 2 and 8.)

My fellow lawyers and I represent the legislature as a whole: in litigation, in drafting legislation, and in every other respect. There are no separate lawyers for parties, houses or committees. This requires us to keep inviolate the secrets of opposing factions when, as often, we are privy to both. We have not encountered any problem of conflict of interest in litigation. As you are aware from NRS 218.697, whether we take part is determined by the legislative commission, on which both houses are equally, and both parties almost equally, represented. (Question 3.)

We do not budget in advance for litigation as a separate item, because it is by its very nature unpredictable, but we do keep account of time spent. Our records of the cost of this for the last biennium show:

1981-82	$19,210.00
1982-83	$10,106.50

None of the preceding biennia would exceed this. (Question 5.)

The legislative commission must approve the appointment of the legislative counsel. I in turn employ the other lawyers without reference to any political consideration, and retain, promote or discharge them on the basis of performance. The legislators could say better than I whether it has been successful, but I have been for just under 18 years chief deputy, special counsel for sessions, or legislative counsel (the last eight years), so either they like it or they are long suffering. (Question 7.)

Very truly yours,

Frank W. Daykin

Frank W. Daykin
Legislative Counsel

FWD:ct
cc: Speaker John Vergiels
Senator Keith Ashworth

Nevada

of any question or matter upon which he may be required to act in his official capacity, shall be punished by imprisonment in the state prison for not less than 1 year nor more than 10 years, or by a fine of not more than $10,000, or by both fine and imprisonment.

[Part 1911 C&P § 47; RL § 6312; NCL § 9996]—(NRS A 1979, 1463)

218.605 Contracts in which legislator has interest: Prohibitions; exception; penalties.

1. Except as provided in subsection 2, it is unlawful for any member of the legislature to:

(a) Become a contractor under any contract or order for supplies or any other kind of contract authorized by the legislature of which he is a member for the state or any of its departments, or the legislature or either of its houses, or to be interested, directly or indirectly, as principal, in any kind of contract so authorized.

(b) Be interested in any contract made by the legislature of which he is a member, or be a purchaser or interested in any purchase or sale made by the legislature of which he is a member.

2. Any member of the legislature may sell, or enter into a contract to sell, to the state or any of its departments any item or commodity if he is the only source of supply of that item or commodity within the state.

3. Any contract made in violation of subsection 1 may be declared void at the instance of the state or of any other person interested in the contract except the member of the legislature prohibited in subsection 1 from making or being interested in the contract.

4. Any person violating subsection 1 is guilty of a gross misdemeanor and shall forfeit his office.

(Added to NRS by 1977, 1110)

LEGISLATIVE COUNSEL BUREAU

218.610 "State departments" defined. [Effective until July 1, 1982.] As used in NRS 218.510 to 218.890, inclusive, "state departments" means all state offices, departments, boards, commissions, institutions, or agencies, and the Nevada industrial commission.

[1:205:1949; A 1953, 169]—(NRS A 1979, 67)

218.610 "State departments" defined. [Effective July 1, 1982.] As used in NRS 218.610 to 218.890, inclusive, "state departments" means all state offices, departments, boards, commissions, institutions, or agencies, and the state industrial insurance system.

[1:205:1949; A 1953, 169]—(NRS A 1979, 67; 1981, 1517, effective July 1, 1982)

218.620 Legislative counsel bureau: Creation and composition; director and deputy director; divisions and division chiefs; compensation and expenses.

1. There is hereby created the legislative counsel bureau, which

consists of a legislative commission, an interim finance committee, a director, an audit division, a fiscal analysis division, a legal division, a research division, and an administrative division.

2. The legislative auditor is chief of the audit division. The legislative counsel is chief of the legal division. The research director is chief of the research division. The director shall designate from time to time one of the fiscal analysts to be responsible for the administration of the fiscal analysis division.

3. The legislative commission shall:

(a) Appoint the director.

(b) Fix the compensation of the director, each of the other division chiefs, and each fiscal analyst.

4. The director shall appoint the fiscal analysts and the chiefs of the other divisions with the approval of the legislative commission, and may serve as the chief of any division.

5. The director may, with the consent of the legislative commission, designate one of the other division chiefs or an employee of the legislative counsel bureau as deputy director, who shall serve as deputy director without additional compensation.

6. The director, officers and employees of the legislative counsel bureau are entitled to receive, when engaged in official business for the legislative counsel bureau, travel expenses and subsistence allowances as provided by law.

[1:134:1953]—(NRS A 1963, 1014; 1967, 1371; 1969, 1014; 1973, 1352, 1659; 1975, 1395; 1977, 344; 1979, 67; 1981, 559)

218.625 Officers, employees of legislative counsel bureau not to oppose or urge legislation; restrictions upon disclosure; public inspection of records of travel expenses.

1. The director, other officers and employees of the legislative counsel bureau shall not:

(a) Oppose or urge legislation, except as the duties of the legislative auditor, the legislative counsel, the research director and the fiscal analysts require them to make recommendations to the legislature.

(b) Except as provided in this section, disclose to any person outside the legislative counsel bureau the contents or nature of any matter, unless the person entrusting the matter to the legislative counsel bureau so requests or consents.

2. Except as the legislative auditor and his staff are further restricted by this chapter, the nature or content of any work previously done by the personnel of the legislative counsel bureau may be disclosed to a legislator or public agency if or to the extent that such disclosure does not reveal the identity of the person who requested it or include any material submitted by the requester which has not been published or publicly disclosed.

3. When a bill or resolution drafted at the request of any person who is not a legislator, is delivered to a legislator, the legislative counsel shall disclose the identity of the requester to the recipient, and when the bill or resolution has been introduced he shall upon request disclose the identity of the requester to any legislator.

4. When a statute has been enacted or a resolution adopted, the legislative counsel shall upon request disclose to any person the state or other jurisdiction from whose law it appears to have been adopted.

5. The records of the travel expenses of legislators and officers and employees of the legislative counsel bureau are available for public inspection at such reasonable hours and under such other conditions as the legislative commission may prescribe.

(Added to NRS by 1977, 340; A 1979, 1[illegible])

218.635 Limitations on studies, investigations by divisions of legislative counsel bureau; work priorities.

1. The legislative commission shall, between sessions of the legislature, fix the work priority of all studies and investigations assigned to it by concurrent resolutions of the legislature within the limits of available time, money and staff. The legislative commission shall not make studies or investigations so directed by resolutions of only one house of the legislature.

2. Between sessions of the legislature no study or investigation may be initiated or continued by the fiscal analysts, the legislative auditor, the legislative counsel or the research director and their staffs except studies and investigations which have been specifically authorized by concurrent resolutions of the legislature or by an order of the legislative commission. No study or investigation may be carried over from one session of the legislature to the next without additional authorization by a concurrent resolution of the legislature, except audits in progress, whose carryover has been approved by the legislative commission.

(Added to NRS by 1963, 1027; A 1967, 839; 1969, 131; 1973, 1660; 1977, 344)

218.640 Appropriation of funds for legislative counsel bureau. Funds to carry out the functions of the legislative counsel bureau shall be provided by legislative appropriation from the general fund to the legislative fund, and shall be paid out on claims as other claims against the state are paid. All claims shall be approved by the director of the legislative counsel bureau or his designee before they are paid.

[1:134:1953] + [Part 4:205:1949; A 1953, 171]—(NRS A 1963, 1015; 1971, 222; 1973, 1117)

218.642 Petty cash account. A petty cash account of the legislative counsel bureau is hereby created in the sum of $500 for the minor expenses of the legislative counsel bureau. The account must be kept in the custody of an employee designated by the director of the legislative counsel bureau and must be replenished periodically from the legislative fund upon approval of expenditures and submission of vouchers or other documents to indicate payment.

(Added to NRS by 1979, 290)

218.644 Checking account. The legislative counsel bureau shall maintain a checking account in any qualified bank for the purposes of providing advance money to legislators for travel expenses during a regular session of the legislature, paying the salaries of persons on the payroll of the legislative branch of government, related payroll costs and any other expenses directed by the legislative commission. The account must be secured by a depository bond to the extent the account is not insured by the Federal Deposit Insurance Corporation. All checks written on this account must be signed by the chairman of the legislative commission and the director of the legislative counsel bureau or his designee, except that during a regular session of the legislature, the majority leader of the senate and the speaker of the assembly shall sign the checks.

(Added to NRS by 1979, 290; A 1981, 5, 17)

218.645 Sales of studies, reports, materials of legislative counsel bureau; fixing and disposition of fees. The legislative commission may fix reasonable fees for the sale of studies, audit reports, bulletins and miscellaneous materials of the legislative counsel bureau, and those fees must be deposited with the state treasurer for credit to the legislative fund.

(Added to NRS by 1963, 1031; A 1971, 1545; 1973, 1117; 1979, 291)

218.646 Manuals, handbooks containing selected portions of NRS: Compilation, publication and sale. With the approval of the legislative commission, the legislative counsel may compile and publish manuals or handbooks containing selected portions of Nevada Revised Statutes. Such manuals and handbooks shall be sold at a price fixed by the legislative commission and all moneys received for the sale of such publications shall be deposited in the legislative fund in the state treasury.

(Added to NRS by 1967, 841; A 1971, 1545; 1973, 1117)

218.647 Compilation, publication of legislative manual; payment of costs.

1. The legislative counsel bureau shall compile and publish a legislative manual containing information concerning the legislature and the offices, departments, institutions and agencies of the state government and other information appropriate for legislators.

2. The costs of compilation and publication shall be paid from the legislative fund.

(Added to NRS by 1965, 1461; A 1971, 1545; 1975, 1395)

218.650 Administrative services for legislature; costs; custody and inventory of legislative supplies, equipment, furniture and artwork.

1. All administrative services necessary to the operation of the legislature during and between sessions shall be provided by the legislative counsel bureau at the expense of the legislative fund.

2. The legislative counsel bureau shall be responsible for the care, custody, acquisition and inventory of legislative supplies, furniture, artwork and equipment between sessions of the legislature.

3. At the beginning of each session, the director of the legislative counsel bureau shall submit a report to the legislature detailing all supplies, furniture and equipment acquired to meet the needs of the current session and detailing all supplies, furniture and equipment on hand.

[9:134:1953]—(NRS A 1965, 1456; 1971, 1545)

218.660 Legislative commission: Creation; regular and alternate members; vacancies.

1. There is hereby created in the legislative counsel bureau a legislative commission consisting of 12 members.

2. At each regular session of the legislature held in odd-numbered years, the senate shall, by resolution, designate six senators as regular members of the legislative commission and six senators as alternates, and the assembly shall, by resolution, designate six assemblymen as regular members of the legislative commission and six assemblymen as alternates.

3. The legislature shall determine by joint rule at each regular session of the legislature in odd-numbered years:

(a) The method of determining the majority party and the minority party regular and alternate membership on the legislative commission.

(b) The method of filling vacancies on the legislative commission.

(c) The terms of office of members.

(d) The method of selecting the chairman.

(e) The term of office of the chairman.

[2:134:1953; A 1955, 68]—(NRS A 1957, 387; 1961, 457; 1963, 1029; 1969, 1412; 1975, 705)

218.670 Meetings of legislative commission; attendance of alternate members; quorum; secretary.

1. The members of the legislative commission shall meet at such times and at such places as shall be specified by a call of the chairman or a majority of the commission. The director of the legislative counsel bureau shall act as the nonvoting recording secretary. The commission shall prescribe rules and regulations for its own management and government. Seven members of the commission shall constitute a quorum, and a quorum may exercise all the power and authority conferred on the commission.

2. If any regular member of the legislative commission is unable to attend a scheduled meeting of the commission, and notifies the secretary of the commission, the secretary shall notify the proper alternate member. Such alternate member may then replace the regular member at that meeting, only with all the duties, rights and privileges of the replaced member.

[3:134:1953]—(NRS A 1961, 9, 251; 1963, 1030; 1967, 1397; 1969, 1413)

STATE LEGISLATIVE DEPARTMENT

218.680 Salaries, per diem and travel expenses of legislative commission members, alternates.

1. Except during a regular or special session of the legislature, for each day's or portion of a day's attendance at each meeting of the commission or its audit subcommittee, if a member of the subcommittee, or if engaged in the official business of the legislative counsel bureau, the members of the legislative commission are entitled to receive the compensation provided for a majority of the members of the legislature during the first 60 days of the preceding session, and the per diem allowance and travel expenses provided by law.

2. An alternate member of the legislative commission who replaces a regular member at a meeting of the commission or on official business of the legislative counsel bureau is entitled to receive the same salary and expenses as a regular member for the same service. An alternate member who attends a meeting of the commission but does not replace a regular member is entitled to the travel expenses provided by law.

[4:134:1953]—(NRS A 1961, 205; 1965, 1461; 1967, 1397; 1975, 296; 1977, 1569; 1979, 612; 1981, 1178)

218.681 General objectives, functions of legislative commission.

1. The general objectives and functions of the legislative commission are to:

(a) Assist the legislature in retaining status coordinate with the executive and judicial branches of state government.

(b) Investigate and inquire only into subjects upon which the legislature may act by the enactment or amendment of statutes.

(c) Assure that the most effective use is made of the auc , fiscal, legal and research services and facilities provided by the legislative counsel bureau to the legislature and its members.

2. In addition to the powers and duties elsewhere conferred and imposed upon the legislative commission in this chapter, in order to carry out its general objectives and functions the legislative commission:

(a) Shall receive recommendations and suggestions for legislation or investigation from:

(1) Members of the legislative commission and other members of the legislature; and

(2) Any board, commission, department or officer of the state government or any local government.

(b) May receive recommendations and suggestions for legislation or investigation from:

(1) Bar associations, chambers of commerce, labor unions and other organized associations and groups; and

(2) Individual citizens.

(c) May hold hearings on any subject or matter which is a proper subject for legislative action whenever it considers such hearings necessary or desirable in the performance of its duties.

(Added to NRS by 1965, 1463; A 1973, 1660; 1975, 1395)

218.682 Powers of legislative commission. The legislative commission may:

1. Carry forward the participation of the State of Nevada as a member of the Council of State Governments and the National Conference of State Legislatures, and may pay annual dues to such organizations out of the legislative fund. The legislative commission is designated as Nevada's commission on interstate cooperation.

2. Encourage and assist the government of this state to develop and maintain friendly contact by correspondence, by conference, and otherwise, with the other states, with the Federal Government, and with local units of government.

3. Establish such delegations and committees as official agencies of the legislative counsel bureau as may be deemed advisable to confer with similar delegations and committees from other states concerning problems of mutual interest. The membership of such delegations and committees shall be designated by the members of the legislative commission and may consist of legislators and employees of the state other than members of the commission. Members of such delegations and committees shall serve without salary, but they shall receive out of the legislative fund the per diem expense allowance and travel expenses as provided by law.

4. Endeavor to advance cooperation between this state and other units of government whenever it seems advisable to do so by formulating proposals for interstate compacts and reciprocal or uniform legislation, and by facilitating the adoption of uniform or reciprocal administrative rules and regulations, informal cooperation of governmental offices, personal cooperation among governmental officials and employees, interchange and clearance of research and information, and any other suitable process.

5. Establish such subcommittees and interim or special committees as official agencies of the legislative counsel bureau as may be deemed advisable to deal with governmental problems, important issues of public policy and questions of statewide interest. The membership of such subcommittees and interim or special committees shall be designated by the members of the legislative commission and may consist of members of the legislative commission and legislators other than members of the commission, employees of the State of Nevada or citizens of the State of Nevada. Members of such subcommittees and interim or special committees who are not legislators shall serve without salary, but they shall receive out of the legislative fund the per diem expense allowances and travel expenses as provided by law. Except during a regular or special session of the legislature, members of such subcommittees and interim or special committees who are legislators are entitled to receive out of the legislative fund the compensation provided for a majority of the members of the legislature during the first 60 days of the preceding session for each day or portion of a day of attendance, and the per diem expense allowances and travel expenses as provided by law.

6. Supervise the functions assigned to the divisions of the bureau in this chapter.

[10:134:1953]—(NRS A 1957, 386; 1961, 253; 1963, 1014; 1965, 1455; 1971, 2206; 1973, 119, 1118; 1975, 296; 1979, 612)

218.6821 Subpena power of legislative commission; witnesses' fees and mileage.

1. In the discharge of any duty imposed by this chapter, the legislative commission shall have the authority to:

(a) Administer oaths, issue subpenas, compel the attendance of witnesses and the production of any papers, books, accounts, department records, documents and testimony; and

(b) Cause the deposition of witnesses, either residing within or without the state, to be taken in the manner prescribed by rule of court for taking depositions in civil actions in the district courts.

2. In case of disobedience on the part of any person to comply with any subpena issued in behalf of the legislative commission, or on the refusal of any witness to testify to any matters regarding which he may be lawfully interrogated, the district court of any county, or the judge thereof, shall, on application of the chairman of the legislative commission, compel obedience by proceedings for contempt, as in the case of disobedience of the requirements of a subpena issued from such court or a refusal to testify therein.

3. Each witness who appears before the legislative commission by its order, other than a state officer or employee, shall receive for his attendance the fees and mileage provided for witnesses in civil cases in courts of record, which shall be audited and paid upon the presentation of proper claims sworn to by such witness and approved by the secretary and chairman of the legislative commission.

(Added to NRS by 1965, 1462)

218.6823 Audit subcommittee of legislative commission: Creation; composition; chairman, secretary; meetings; quorum.

1. There is hereby created in the legislative commission an audit subcommittee consisting of three members.

2. The subcommittee must be composed of:

(a) The chairman of the legislative commission or a member of the legislative commission appointed by him; and

(b) Two other members of the legislative commission.

3. The person serving on the subcommittee pursuant to paragraph (a) of subsection 2 shall serve as chairman and the legislative auditor or a member of his staff appointed by him shall serve as secretary of the subcommittee.

4. The subcommittee shall meet at the times and places specified by a call of the chairman. Two members of the subcommittee constitute a quorum, and a quorum may exercise any power or authority conferred on the subcommittee.

(Added to NRS by 1981, 1176)

218.6825 Interim finance committee: Creation; regular and alternate members; duties; manner of voting; compensation.

1. There is hereby created in the legislative counsel bureau an interim finance committee composed of the members of the assembly standing committee on ways and means and the senate standing committee on finance during the current or immediately preceding session of the legislature. The immediate past chairman of the senate standing committee on finance shall be the chairman of the interim finance committee for the period ending with the convening of the 56th session of the legislature. The immediate past chairman of the assembly standing committee on ways and means shall be the chairman of the interim finance committee during the next legislative interim, and the chairmanship shall continue to alternate between the houses of the legislature according to this pattern.

2. If any regular member of the committee informs the secretary that he will be unable to attend a particular meeting, the secretary shall notify the speaker of the assembly or the majority leader of the senate, as the case may be, to appoint an alternate for that meeting from the same house and political party as the absent member.

3. The interim finance committee, except as provided in subsection 4, may exercise the powers conferred upon it by law only when the legislature is not in regular or special session. The membership of any member who does not become a candidate for reelection or who is defeated for reelection continues until the next session of the legislature is convened.

4. During a regular session the interim finance committee may also perform the duties imposed on it by NRS 353.220, 353.224 and 353.335 and chapter 621, Statutes of Nevada 1979. In performing those duties, the senate standing committee on finance and the assembly standing committee on ways and means may meet separately and transmit the results of their respective votes to the chairman of the interim finance committee to determine the action of the interim finance committee as a whole.

5. The director of the legislative counsel bureau shall act as the secretary of the interim finance committee.

6. A majority of the members of the assembly standing committee on ways and means and a majority of the members of the senate standing committee on finance, jointly, may call a meeting of the interim finance committee if the chairman does not do so.

7. In all matters requiring action by the interim finance committee, the vote of the assembly and senate members must be taken separately. An action must not be taken unless it receives the affirmative vote of a majority of the assembly members and a majority of the senate members.

8. Except during a regular or special session of the legislature, each member of the interim finance committee and appointed alternate is entitled to receive the compensation provided for a majority of the members of the legislature during the first 60 days of the preceding

regular session for each day or portion of a day during which he attends a committee meeting or is otherwise engaged in committee work plus the per diem allowance and travel expenses provided by law. All such compensation must be paid from the contingency fund in the state treasury.

(Added to NRS by 1969, 1013; A 1971, 1545; 1977, 165, 1569; 1979, 613; 1981, 228, 522, 2042)—(Substituted in revision for NRS 218.6822)

218.683 Director of legislative counsel bureau: Supervision of administrative and technical activities of bureau; employment, salaries and leave of bureau employees.

1. The director of the legislative counsel bureau, as executive head of the legislative counsel bureau, shall direct and supervise all its administrative and technical activities. The fiscal analysts, legislative auditor, research director and legislative counsel shall perform the respective duties assigned to them by law under the administrative supervision of the director.

2. Except as otherwise provided in this chapter, the director of the legislative counsel bureau shall, consistent with the budget approved by the legislative commission and within the limits of legislative appropriations and other available funds, employ and fix the salaries of or contract for the services of such professional, technical, clerical and operational personnel and consultants as the execution of his duties and the operation of the legislative counsel bureau may require.

3. All of the personnel of the legislative counsel bureau are exempt from the provisions of chapter 284 of NRS. They are entitled to such leaves of absence as the legislative commission shall prescribe.

[6:134:1953]—(NRS A 1963, 485, 1016; 1965, 1456; 1971, 1546; 1973, 1352; 1977, 345, 753)

218.685 Director of legislative counsel bureau: Employment of personnel for legislative duties between sessions; payment of salaries, costs. Notwithstanding the provisions of NRS 218.150 and 218.180, between sessions of the legislature, the director of the legislative counsel bureau, with the approval of the legislative commission, may appoint such technical, clerical and operational staff as the functions and operations of the legislature may require. Salaries and the costs of any contract services shall be paid from the legislative fund.

(Added to NRS by 1963, 40; A 1963, 1009; 1971, 1546)

218.6851 Administrative division: Composition; duties.

1. The administrative division consists of the chief of the division and such staff as he may require.

2. The administrative division is responsible for:

(a) Accounting;
(b) Communication equipment;
(c) Control of inventory;
(d) Janitorial services;
(e) Maintenance of buildings, grounds and vehicles;
(f) Purchasing;

(g) Security;
(h) Shipping and receiving;
(i) Utilities; and
(j) Warehousing operations.

3. The legislative commission may assign any other appropriate function to the administrative division.

(Added to NRS by 1979, 68; A 1981, 560)

218.6853 Administrative division: Duties of chief as legislative fiscal officer.

1. The chief of the administrative division is ex officio legislative fiscal officer. As such officer, he shall keep a complete, accurate and adequate set of accounting records and reports for all legislative operations, including any records and reports required by the Federal Government for the administration of federal revenue and income tax laws.

2. The chief shall withhold from the pay of each legislator, employee of the legislature and employee of the legislative counsel bureau the amount of tax specified by the Federal Government and shall transmit the amount deducted to the Internal Revenue Service of the United States Department of the Treasury.

3. The chief may provide for the purchase of United States savings bonds or similar United States obligations by salary deduction for any legislator, legislative employee or employee of the legislative counsel bureau who submits a written request for these deductions and purchases. The chief shall provide forms authorizing deductions for and purchases of these United States obligations.

4. The chief may withhold from the pay of a legislator, employee of the legislature or employee of the legislative counsel bureau such amount as the claimant specifies in writing for payment to his credit union. Any money which is withheld must be transmitted by the chief in accordance with the claimant's written instructions. The chief may adopt regulations necessary to carry out the provisions of this subsection.

(Added to NRS by 1981, 558)

218.686 Fiscal analysis division: Composition; duties.

1. The fiscal analysis division consists of the senate fiscal analyst, the assembly fiscal analyst and such additional staff as the performance of their duties may require.

2. The fiscal analysis division shall:

(a) Thoroughly examine all departments of the state government with special regard to their activities and the duplication of efforts between departments;

(b) Recommend to the legislature any suggested changes looking toward economy and the elimination of inefficiency in government.

(c) Ascertain facts and make recommendations to the legislature concerning the state budget and the estimates of the expenditure requirements of the state departments.

(d) Make projections of future public revenues for the use of the legislature.

(e) Analyze the past history and probable future trend of the state's financial position in order that a sound fiscal policy may be developed and maintained for the State of Nevada.

(f) Analyze appropriation bills, revenue bills, and bills having a fiscal impact upon the operation of the government of the State of Nevada or its political subdivisions.

(g) Advise the legislature and the members and committees thereof regarding matters of a fiscal nature.

(h) Perform such other functions as may be assigned to the fiscal analysis division by the legislature, the legislative commission or the director of the legislative counsel bureau.

(Added to NRS by 1977, 339)

218.687 Information, records concerning public funds to be made available to fiscal analyst upon request. Upon the request of a fiscal analyst or his duly authorized representative, every elective state officer in the State of Nevada, every board or commission provided for by the laws of the State of Nevada, every head of each and every department in the State of Nevada, and every employee or agent thereof, acting by, for, or on account of any such office, board, commission or officer receiving, paying or otherwise controlling any public funds in the State of Nevada, in whole or in part, whether the same may be funds provided by the State of Nevada, funds received from the Federal Government of the United States or any branch, bureau, or agency thereof, or funds received from private or other source, shall make available to the requester all books, papers, information and records of a public nature under their control necessary or convenient to the proper discharge of the duties of the fiscal analysis division under this chapter.

[8:134:1953]—(NRS A 1963, 1030; 1977, 345)

218.690 Legislative counsel: Qualifications; duties. The legislative counsel shall:

1. Be an attorney licensed to practice law in the State of Nevada and shall be versed in some or all of the following: Political science, parliamentary practice, legislative procedure, and the methods of research, statute revision and bill drafting.

2. Perform the duties required by this chapter and chapter 220 of NRS.

[5:134:1953]—(NRS A 1963, 484, 1015; 1971, 1546; 1975, 344)

218.695 Legislative counsel: Powers and duties; opinions. The legislative counsel shall:

1. Have the powers and duties assigned to him in this chapter and chapters 219 and 220 of NRS, and such other powers and duties as may be assigned to him by the legislature and the legislative commission.

2. Upon the request of any member or committee of the legislature or the legislative commission, give his opinion in writing upon any question of law, including existing law and suggested, proposed and pending legislation which has become a matter of public record.

(Added to NRS by 1963, 1016; A 1965, 1456)

218.697 Commencement of actions, proceedings by legislative counsel; when directed by legislative commission; payment of costs; appearances.

1. When deemed necessary or advisable to protect the official interests of the legislature or one or more legislative committees, the legislative commission may direct the legislative counsel and his staff to appear in, commence, prosecute, defend or intervene in any action, suit, matter, cause or proceeding in any court or agency of this state or of the United States.

2. Expenses and costs incurred pursuant to this section may be paid by the legislative commission from the legislative fund.

(Added to NRS by 1965, 1461; A 1971, 1346)

218.698 Copyright of legislative counsel bureau publications by legislative counsel. The legislative counsel is authorized to secure copyright under the laws of the United States in all publications issued by the legislative counsel bureau, the copyright to be secured in the name of the State of Nevada.

(Added to NRS by 1971, 155)

218.731 Duties of research director. The research director shall:

1. Provide the legislature and the members and committees thereof with comprehensive and accurate research reports and background papers on subjects of legislative interest.

2. Analyze and evaluate the long-range planning activities and programs of the State of Nevada and its political subdivisions when authorized by the legislature, the legislative commission or the director of the legislative counsel bureau.

3. Analyze and evaluate the public policies of the State of Nevada and its political subdivisions and make appropriate recommendations regarding such policies when authorized by the legislature, the legislative commission or the director of the legislative counsel bureau.

4. Serve as the Nevada legislative federal-state coordinator.

5. Advise the legislature and the members and committees thereof regarding matters of a research nature.

6. Perform such other functions as may be assigned to the research division by the legislature, the legislative commission or the director of the legislative counsel bureau.

(Added to NRS by 1973, 1658; A 1977, 345)

218.740 Legislative auditor: Qualifications. The legislative auditor shall:

1. Be a certified public accountant or public accountant qualified

LEGISLATIVE COUNSEL

LEGISLATIVE SERVICES COMMITTEE

OFFICE OF LEGISLATIVE COUNSEL
316 STATE CAPITOL
ATLANTA, GEORGIA 30334

September 14, 1983

Representative Charlie Bussell
Chairman, Committee on Judiciary
Alaska State Legislature
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Bussell:

Both the Lieutenant Governor and the Speaker have requested me to reply to your letter of August 11, 1983, to each of them relative to the Office of Legislative Counsel with particular emphasis on representation of the legislative branch in litigation.

On November 1, 1982, the new Official Code of Georgia Annotated became effective. Consequently, the law relative to the Legislative Services Committee and the Office of Legislative Counsel has a new citation. Enclosed find a copy of Chapter 4 of Title 28 of the O.C.G.A. which takes the place of the Annotated Code of Georgia which you cite in your letter. That chapter contains Code Sections 28-4-1 through 28-4-9. Code Section 28-4-1 was amended at the 1983 session to make a change in a committee name and the enclosed section supersedes that section of the same Code number which is contained in the main volume.

You request the answers to several questions and I will answer them by number as they are listed in your letter.

(1) We have not employed attorneys for the specific purpose of representing the General Assembly in litigation.

(2) Rarely.

(3) Our office represents no particular political faction but represents and offers services to the entire General Assembly. Our office is nonpartisan and is strictly impartial and we serve all factions, all political parties, etc., equally.

(4) No back-up staff.

(5) None.

(6) None.

(7) Has never been utilized.

(8) When we draft legislation for members of the General Assembly, we advise them as to whether we think the bill being requested would be constitutional. I know of no way we can say how much time we spend on that particular matter because that is just a part of our bill drafting process. Standing committees and interim study committees are assigned to a member of our staff and this staff member is available for consultation or legal advice all through the year. Frankly, I have no idea how much time is spent on that particular function.

As you see, I have made the answers to your questions very brief and for that reason I thought I would make a few general comments. The Office of Legislative Counsel was created in 1959 and is an outgrowth of the old bill drafting unit which was in the Attorney General's office. The bill drafting unit was abolished when this office was created. As you will note, our office is authorized to perform numerous functions, but we consider our most important function the drafting of legislation for members of the Senate and the House for introduction in our legislative sessions. As mentioned previously, if we have doubts about the constitutionality of a request we so inform the legislator making the request. I will not burden you with going over the other duties because they are mostly contained in Code Section 28-4-3.

The provision in which you are particularly interested--representing the interests of the legislative branch in litigation--was added in 1976. We could see the possibility of some conflicts arising between the executive

and legislative branches and thought perhaps it would be wise to specifically authorize our office to represent the interests of the legislative branch. Upon request, the Attorney General's office is authorized to represent the legislative branch. There is, however, no requirement that he represent the legislative branch or that he be requested to do so. Our office has actually been in litigation only twice since its creation. The first time was when a suit was filed against some members of the Appropriations Committees of the Senate and the House under the "sunshine law." A conference committee had held executive sessions and it was alleged that this was a violation of the sunshine law. In that case, we were assisted by the Attorney General's office and, as a matter of information, the Georgia Supreme Court held that the sunshine law did not apply to the legislative branch of government. The second time had to do with separation of powers. Members of the General Assembly served on various executive boards, commissions, etc., and the Governor directed the Attorney General to file suit to attempt to remove the members of the General Assembly from those boards, commissions, etc. In that case the Attorney General represented the Governor's office and we represented the legislative defendants. We lost that case with the Georgia Supreme Court saying that it was a violation of the separation of powers provision of the Constitution for legislators to serve on executive boards, commissions, etc.

The legislative branch is rarely in court. As you are aware, most suits against the state are brought against some executive branch official and only in some rare instance would the legislative branch be sued. Also, the Georgia legislature to my knowledge has never sued anybody. As I indicated, that portion of our Act authorizing our office to represent the legislative branch was put in more as a safeguard than anything else. I might add, however, that there is a possibility that a trend is developing where our legislative branch might be involved in litigation much more than it has been in the past. As a matter of fact, this has taken place in a number of states including, as you stated, Alaska. My personal view is that it would be a wise idea for you to enact a statute somewhat similar to ours or similar to some of the other states. We made ours purposely rather broad and believe it would cover most any conceivable situation that might arise. The part about using outside counsel was placed in there because

our other duties keep us rather busy, particularly during the months before and during sessions, and we want to be able to carry on those duties and litigation at the same time if necessary.

I note from your letter that the news media has lambasted your legislature and, if it is any consolation, as far as the Georgia news media is concerned the legislature can do no right. I can think of no reason why your legislature should not have the right to litigate on its behalf, but of course the news media does not think the legislature has any right. I hope this rather rambling letter has given you the information you desired, but if you have any specific questions I shall be glad to try to answer them for you.

Sincerely yours,

Frank H. Edwards

28-4-1. Legislative Services Committee — Creation; membership; allowances of members; meetings.

28-4-1. Legislative Services Committee — Creation; membership; allowances of members; meetings.

(a) There is created the Legislative Services Committee, hereinafter called the committee, to be composed of the Speaker of the House of Representatives, the President of the Senate, the chairman of the Appropriations Committee of the Senate, the chairman of the Appropriations Committee of the House of Representatives, the chairman of the Judiciary Committee of the Senate, the chairman of the Judiciary Committee of the House of Representatives, the chairman of the Banking and Finance Committee of the Senate, the chairman of the Ways and Means Committee of the House of Representatives, the Clerk of the House of Representatives, and the Secretary of the Senate; provided, however, that the President of the Senate shall be allowed to designate in writing that the President Pro Tempore of the Senate shall serve in place of the President of the Senate with all the rights, privileges, and duties of the President of the Senate and shall so serve until the appointment is withdrawn in writing by the President of the Senate or until the end of the term of the President of the Senate. The Speaker of the House of Representatives shall be chairman of the committee, and the Secretary of the Senate shall be secretary of the committee.

(b) The members of the committee shall receive no additional allowances for service on the committee while the General Assembly is in session; but, for each day spent in the performance of their duties under this chapter between sessions, the members shall receive the allowances authorized by law for legislative members of interim legislative committees.

(c) The committee shall meet on call of the chairman. Six members of the committee shall constitute a quorum and the affirmative vote of a majority of those members present at a meeting of the committee, provided such members present constitute a quorum, shall be necessary to transact business of the committee. The chairman shall be entitled to vote on all matters requiring a vote of the committee. (Ga. L. 1959, p. 152, § 1; Ga. L. 1961, p. 230, § 1; Ga. L. 1976, p. 176, § 1; Ga. L. 1979, p. 795, § 1; Ga. L. 1983, p. 722, § 1.)

The 1983 amendment, effective March 16, 1983, substituted "Banking and Finance Committee" for "Banking, Finance, and Insurance Committee" in the first sentence of subsection (a).

C.J.S. — 81A C.J.S., States, §§ 47, 55.

28-4-2. Same — Powers generally.

(a) The committee is empowered to:

(1) Study and adopt methods and procedures to operate more efficiently the General Assembly and each house thereof;

(2) Study and adopt methods and procedures to make more uniform the operations of the Senate and the House of Representatives;

(3) Exercise general supervision of the operation of the legislative branch of government and act for and enter into contracts on behalf of agencies of the legislative branch, the General Assembly, and each house thereof;

(4) Provide for services for the legislative branch of government; and

(5) Delegate such of its powers and authority as it deems advisable.

(b) The committee shall have complete control, authority, and jurisdiction over the rooms, chambers, offices, and other areas on the third and fourth floors of the state capitol building and on the mezzanine between the third and fourth floors. All assignments for the use of such rooms, chambers, offices and other areas by the General Assembly, the Senate, the House of Representatives, committees of the Senate and the House, members of the Senate and the House, and agencies, officials, and employees of the legislative branch of government shall be made by the committee or under such procedure as the committee shall provide. Any assignment shall be subject to change by the committee. Use of any such room, chamber, office, or other area, other than as provided above, shall be under such procedure as the committee shall provide.

(c) The committee is authorized to provide for maintaining, repairing, constructing, reconstructing, furnishing, and refurbishing of such rooms, chambers, offices, and other areas.

(d) The committee is authorized to provide for such procedures as it deems advisable for the purpose of carrying out this Code section. (Ga. L. 1959, p. 152, § 2; Ga. L. 1964, p. 459, § 1; Ga. L. 1976, p. 176, § 2.)

28-4-3. Legislative counsel — Creation of office; qualifications; powers and duties.

(a) There is created the Office of Legislative Counsel. The legislative counsel shall be an attorney skilled and experienced in legislative matters and bill drafting.

(b) It shall be the duty of the legislative counsel to:

(1) Provide bill-drafting services which shall be equally available to every member of the General Assembly; and

(2) Advise and counsel members of the General Assembly on legislative matters.

(c) The legislative counsel is authorized to:

(1) Provide for statutory and Code revision, render opinions, assist standing and interim committees, and perform similar legislative functions;

(2) Perform research, issue reports, and make recommendations as a result thereof;

(3) Exchange information, data, and material with similar agencies in other states;

(4) Provide legal services for the legislative branch of government and, with the approval of the committee or the chairman, to represent the interests of the legislative branch in matters involving litigation; and

(5) With the approval of the committee, provide for advisory committees relative to statutory and Code revision. He is authorized to seek the advice and assistance of the State Bar of Georgia, law schools, and individuals and organizations knowledgeable in this field.

(d) Any other provisions of law to the contrary notwithstanding, he is authorized to engage the services of others, including private counsel, by contract or otherwise, to assist him in the performance of his duties and is authorized to provide for the payment of fees, compensation, and expenses therefor from legislative funds.

(e) The legislative counsel shall have such other authority and duties as the committee may provide. (Ga. L. 1959, p. 152, § 3; Ga. L. 1965, p. 270, § 1; Ga. L. 1966, p. 586, § 1; Ga. L. 1969, p. 635, § 1; Ga. L. 1976, p. 176, §§ 3, 5.)

Cross references. — As to duties of legislative counsel with regard to summary of general amendments to Constitution of Georgia, see § 21-1-2.

JUDICIAL DECISIONS

This section neither authorizes nor prohibits representation of legislators by a Deputy Assistant Attorney General. Coggin v. Davey, 233 Ga. 407, 211 S.E.2d 708 (1975).

28-4-5. Attorney General to serve as advisor to legislative counsel.

The Attorney General shall serve as an advisor to the legislative counsel. (Ga. L. 1959, p. 152, § 10.)

28-4-6. Employment, duties, etc., of legislative fiscal officer and legislative budget analyst.

(a) The Legislative Services Committee is authorized to employ a legislative fiscal officer for the legislative branch of government, and the fiscal officer and personnel to assist him shall be a part of the Office of Legislative Counsel. The fiscal officer shall act as the bookkeeper-comptroller for the legislative branch of government and shall maintain an account of legislative expenditures and commitments. He shall maintain an inventory of the equipment, furnishings, and nonexpendable items belonging to the legislative branch. He shall prepare and sign vouchers pertaining to the expenditure of legislative funds. He shall prepare and sign all warrants for the expenditure of funds appropriated to and available to the legislative branch of government. Such warrants shall be paid by the fiscal officer, and it shall not be necessary that they be countersigned by the Comptroller General. All payments from funds appropriated to the legislative branch of government shall be made by the fiscal officer, and reference in any other law to any other official or person in connection with any duties pertaining to such payments shall be deemed to refer to the fiscal officer; all duties of any such other official or person in connection therewith are transferred to the fiscal officer. The fiscal officer shall be under such bond as the Legislative Services Committee shall prescribe, and the premium thereon shall be paid from funds appropriated to the legislative branch of government. The fiscal officer shall have such other duties as shall be prescribed by the committee.

(b) The Legislative Services Committee is authorized to employ a legislative budget analyst to assist the General Assembly and its committees in connection with appropriations and budgetary matters. The legislative budget analyst shall render assistance and give advice to the appropriations committees of the Senate and the House of Representatives. He is authorized to request information and material from all state departments, boards, bureaus, commissions, committees, authorities, and agencies in connection with his duties; and all such departments, boards, bureaus, commissions, committees, authorities, and agencies are directed to furnish such information and material as he shall request. The legislative budget analyst shall perform such other duties as the General Assembly, the Legislative Services Committee, and the appropriations committees shall prescribe. (Ga. L. 1959, p. 152, § 5; Ga. L. 1961, p. 230, § 1; Ga. L. 1969, p. 232, § 1; Ga. L. 1971, p. 67, § 1; Ga. L. 1976, p. 176, § 4.)

28-4-7. Employment, compensation, etc., of personnel to assist legislative counsel, legislative fiscal officer, and legislative budget analyst; provision of supplies, materials, furniture, etc.

(a) Personnel to assist the legislative counsel, the legislative fiscal officer, and the legislative budget analyst shall be employed under such procedure as the committee shall provide. Such personnel shall be subject to the supervision of the respective three officials with reference to the duties of their employment.

(b) The legislative counsel, the legislative fiscal officer, the legislative budget analyst, and such personnel shall be compensated under such procedure as the committee shall provide.

(c) The committee shall provide office space for such officials and personnel; and they shall be furnished with supplies, materials, furniture, furnishings, books, equipment, and services. (Ga. L. 1959, p. 152, § 5; Ga. L. 1976, p. 176, § 4.)

28-4-8. Merit system for and retirement for personnel; payment of contributions.

(a) The committee is authorized to promulgate a merit system of employment under which personnel shall be selected on a basis of merit.

(b) All personnel and the legislative counsel are authorized to be members of the Employees' Retirement System of Georgia, as established in Chapter 2 of Title 47. All rights, credits, and funds in said retirement system which are possessed by any personnel of the Office of Legislative Counsel, including the legislative counsel, at the time of employment in said office are continued.

(c) It is the intention of the General Assembly that any such personnel and the legislative counsel shall not lose any rights, credits, or funds to which they were entitled prior to being employed in the Office of Legislative Counsel. There shall be paid from the funds appropriated for the operation of the legislative branch of the government all contributions required by Chapter 2 of Title 47, and all such payments shall be in addition to the regular compensation authorized to the legislative counsel and other personnel in said office. (Ga. L. 1959, p. 152, § 6.)

GEORGIA

CHAPTER 47-12. LEGISLATIVE SERVICES COMMITTEE

Sec.
47-1201 Committee created; membership; officers; compensation; quorum
47-1202 Powers and authority of committee
47-1203 Legislative Counsel; office created; qualifications; duties and authority
47-1204 Same; election; term of office; compensation
47-1205 Employment of personnel; compensation; office quarters; supplies, books, materials and furniture
47-1206 Merit system and retirement for employees; payment of contributions
47-1207 Funds for operation of Chapter
47-1208 Attorney General as advisor to Legislative Counsel; compensation
47-1209 Authority of Legislative Counsel relative to statutory and Code revision

Editorial Note
Acts 1959, p. 152, which forms the basis for this Chapter, provides at Section 7 thereof: "An Act creating the Bill Drafting Unit as a part of the State Law Department approved February 20, 1951 (Ga. L. 1951, p. 351), is hereby repealed in its entirety. If, in any other Act or Resolution, reference is made to the Deputy Director of said Unit it shall be construed to mean and is hereby declared to refer to the Legislative Counsel." Acts 1951, p. 351, was formerly codified as §§ 40-1621 through 40-1628.

47-1201 Committee created; membership; officers; compensation; quorum

There is hereby created the "Legislative Services Committee," hereinafter called the committee, to be composed of the Speaker of the House of Representatives, the President of the Senate, the chairman of the Appropriations Committee of the Senate, the chairman of the Appropriations Committee of the House of Representatives, the chairman of the Judiciary Committee of the Senate, the chairman of the Judiciary Committee of the House of Representatives, the chairman of the Banking, Finance and Insurance Committee of the Senate, the chairman of the Ways and Means Committee of the House of Representatives, the clerk of the House of Representatives, and the secretary of the Senate. The Speaker of the House of Representatives shall be Chairman of the committee and the secretary of the Senate shall be secretary of the committee. The members of the committee shall receive no additional allowances for service on the committee while the General Assembly is in session but for each day spent in the performance of their duties hereunder between sessions, the members shall receive the allowances authorized by law for legislative members of interim legislative committees. The committee shall meet on call of the chairman. Six members of the committee shall constitute a quorum and the affirmative vote of a majority of those members present at a meeting of the committee, provided such members present constitute a quorum, shall be necessary to transact business of the committee. The chairman shall be entitled to vote on all matters requiring a vote of the committee.
(Acts 1959, p. 152; 1961, p. 230; 1976, pp. 176, 177, eff. Feb. 3, 1976.)

Editorial Note
Acts 1961, p. 230, changed the name of the committee from "Joint Committee on the Operations of the General Assembly" to "Legislative Services Committee."
Acts 1976, pp. 176, 177, entirely superseded the former section.

47-1202 Powers and authority of committee

The committee is hereby empowered to study and adopt methods and procedures to operate more efficiently the General Assembly and each House thereof. It is empowered to study and adopt methods and procedures to make more uniform the operations of the Senate and the House of Representatives. It shall have general supervision over the operation of the Legislative Branch of Government and is empowered to act for and to enter into contracts on behalf of agencies of the Legislative Branch, the General Assembly and each House thereof. It is empowered to provide for services for the Legislative Branch of Government. It is empowered to delegate such of its powers and authority as it deems advisable.

The committee shall have complete control, authority and jurisdiction over the rooms, chambers, offices and other areas on the third and fourth floors of the State capitol building and on the Mezzanine between such third and fourth floors. All assignments for the use of such rooms, chambers, offices and other areas by the General Assembly, the Senate, the House of Representatives, Committees of the Senate and the House, members of the Senate and House, and agencies, officials and employees of the Legislative Branch of Government shall be made by the committee or under such procedure as the committee shall provide. Any such assignment shall be subject to change by the committee. Use of any such room, chamber, office or other area, other than as provided above, shall be under such procedure as the committee shall provide. The committee is authorized to provide for the maintenance, repairing, construction, reconstruction, furnishing and refurnishing of such rooms, chambers, offices and other areas. The committee is authorized to provide for such procedures as it deems advisable for the purpose of carrying out the provisions of this section.

(Acts 1959, pp. 152, 153; 1964, p. 459; 1976, pp. 176, 178, eff. Feb. 3, 1976.)

Editorial Note
The Act of 1964 entirely superseded the former section.
Acts 1976, pp. 176, 178, again entirely superseded the former section.

47-1203 [illegible] qualifications; duties and [illegible]

There is hereby created the Office of Legislative Counsel. The Legislative Counsel shall be an attorney skilled and experienced in legislative matters and bill drafting. It shall be the duty of the Legislative Counsel to provide bill drafting services equally available to every member of the General Assembly. He shall advise and counsel with members of the General Assembly on legislative matters. He is authorized to provide for statutory and Code revision, render opinions, assist standing and interim committees and perform similar legislative functions. He is authorized to perform research and to issue reports and make recommendations as a result thereof. He is authorized to exchange information, data and material with similar agencies in other States [illegible] provide legal services for the Legislative [illegible] and with the approval of the committee on the [illegible] Legislative Branch in matters [illegible] litigation. [illegible] notwithstanding, he is authorized to engage the services of others, including private counsel [illegible] or otherwise, to assist him in the performance of his duties, and is authorized to provide for the payment of fees, [illegible] and expenses therefor from legislative funds. The Legislative Counsel shall have such other authority and duties as the committee may provide.

(Acts 1959, pp. 152, 153; 1965, pp. 270, 271; 1976, pp. 176, 179, eff. Feb. 3, 1976.)

Editorial Note
Acts 1965, p. 270, entirely superseded the former section.
Acts 1976, pp. 176, 179, again entirely superseded the former section.

ANNOTATIONS

Representation by Attorney General
Statute neither authorizes nor prohibits representation of legislators by Deputy Assistant Attorney General. 233/407 (211 S. E. 2d 709).

47-1204 Same; election; term of office; compensation

The committee shall elect the Legislative Counsel subject to the approval of the Senate and the House of Representatives meeting in joint session, except that the present Legislative Counsel shall serve until time as a new Legislative Counsel is elected by the committee and approved by both branches of the General Assembly as hereinbefore provided. The committee shall fix the compensation of the Legislative Counsel.

(Acts 1959, pp. 152, 154; 1965, pp. 270, 271.)

Editorial Note
Acts 1965, p. 270, entirely superseded the former section.

47-1205 Employment of personnel; compensation; office quarters; supplies, books, materials and furniture

Personnel to assist the Legislative Counsel, the Legislative Fiscal Officer and the Legislative Budget Analyst shall be employed under such procedure as the committee shall provide. The Legislative Counsel, the Legislative Fiscal Officer, the Legislative Budget Analyst and such personnel shall be compensated under such procedure as the committee shall provide. Such personnel shall be subject to the supervision of the respective three officials with reference to the duties of their employment. The committee shall provide office space for such officials and personnel and they shall be furnished with supplies, materials, furniture, furnishings, books, equipment and services.

The Legislative Services Committee is hereby authorized to employ a legislative fiscal officer for the Legislative Branch of Government, and the fiscal officer and personnel to assist him shall be a part of the Office of Legislative Counsel. The fiscal officer shall act as the bookkeeper-comptroller for the Legislative Branch of Government, and shall maintain an account of legislative expenditures and commitments. He shall maintain an inventory of the equipment, furnishings and nonexpendable items belonging to the Legislative Branch. He shall prepare and sign vouchers pertaining to the expenditure of legislative funds. He shall prepare and sign all warrants for the expenditure of funds appropriated to and available to the Legislative Branch of Government. Such warrants shall be paid by the fiscal officer, and it shall not be necessary that they be countersigned by the Comptroller General. All payments from funds appropriated to the Legislative Branch of Government shall be made by the fiscal officer and reference in any other law to any other official or person in connection with any duties pertaining to such payments shall be deemed to refer to the fiscal officer and all duties of any such other official or person in connection therewith are hereby transferred to the fiscal officer. The fiscal officer shall be under such bond as the Legislative Services Committee shall prescribe, and the premium thereon shall be paid from funds appropriated to the Legislative Branch of

Government. The fiscal officer shall have such other duties as shall be prescribed by the committee.

The Legislative Services Committee is hereby authorized to employ a legislative budget analyst to assist the General Assembly and its committees in connection with the appropriations and budgetary matters. The legislative budget analyst shall render assistance and give advice to the Appropriations Committees of the Senate and the House of Representatives. He is hereby authorized to request information and material from all State departments, boards, bureaus, commissions, committees, authorities and agencies in connection with his duties, and all such departments, boards, bureaus, commissions, committees, Authorities and agencies are hereby directed to furnish such information and material as he shall request. The legislative budget analyst shall perform such other duties as the General Assembly, the Legislative Services Committee and the Appropriations Committees shall prescribe.

(Acts 1959, pp. 152, 155; 1961, p. 230; 1969, p. 323; 1971, pp. 67, 68; 1976, pp. 176, 179, eff. Feb. 13, 1976.)

Editorial Note

Acts 1971, pp. 67, 68, struck a former second paragraph relating to the employment of a fiscal officer, and added the present second and third paragraphs relating to the employment of a legislative fiscal officer and a legislative budget analyst.

Acts 1976, pp. 176, 179, rewrote the first paragraph of this section.

47-1206 Merit system and retirement for employees; payment of contributions

The committee is hereby authorized to promulgate a merit system of employment under which personnel shall be selected on a basis of merit. All personnel and the Legislative Counsel are hereby authorized to be members of the Employees Retirement System of Georgia, as established by Chapter 40-25. All rights, credits and funds in said retirement system which are possessed by any personnel of the office of Legislative Counsel, including the Legislative Counsel, at the time of employment in said office are hereby continued, and it is the intention of the General Assembly that any such personnel and the Legislative Counsel shall not lose any rights, credits or funds to which they were entitled prior to being employed in the office of Legislative Counsel. There shall be paid from the funds appropriated for the operation of the legislative branch of the Government all contributions required by the Retirement Act (Chapter 40-25) and all such payments shall be in addition to the regular compensation authorized to the Legislative Counsel and other personnel in said office.

(Acts 1959, pp. 152, 155.)

Cross References

Merit system for departments, see Chapter 40-22.

47-1207 Funds for operation of Chapter

The funds necessary to carry out the provisions of this Chapter shall be paid from the funds provided for the Legislative Branch of Government.

(Acts 1959, pp. 152, 156; 1976, pp. 176, 180, eff. Feb. 3, 1976.)

Editorial Note

Acts 1976, pp. 176, 180, entirely superseded the former section.

47-1208 Attorney General as advisor to Legislative Counsel; compensation

The Attorney General, having served as the Director of the Bill Drafting Unit since its creation, shall serve as an advisor to the Legislative Counsel and for such service shall be compensated in the same amount, from the same appropriation, he received for his services as Director of the Bill Drafting Unit.

(Acts 1959, pp. 152, 156.)

Cross References

Bill Drafting Unit, see Editorial Note at beginning of this Chapter.

Editorial Note

According to Acts 1951, p. 351 (former § 40-1521), the Attorney General received $200 per month for his service as Director of the Bill Drafting Unit. But see § 89-723.

47-1209 Authority of Legislative Counsel relative to statutory and Code revision

The Legislative Counsel, with the approval of the committee, is hereby authorized to provide for advisory committees relative to statutory and Code revision. He is authorized to seek the advice and assistance of the State Bar of Georgia, law schools and individuals and organization knowledgeable in this field.

(Acts 1966, p. 686; 1969, p. 635; 1976, pp. 176, 180, eff. Feb. 3, 1976.)

Editorial Note

Acts 1976, pp. 176, 180, entirely superseded the former section.

CHAPTER 47-13. BILLS RELATIVE TO RETIREMENT, PENSION, OR EMERITUS SYSTEMS, AND EXPENDITURE OF STATE FUNDS

Sec.

47-1301 Georgia Fiscal Note Act, short title
47-1302 Same; "retirement bill" defined
47-1303 Same; time of introduction of retirement bills and bills having significant impact on anticipated revenues or expenditures; fiscal notes
47-1304 Same; actuarial investigations with regard to retirement bills
47-1304.1 Same; distribution of fiscal notes
47-1304.2 Same; personnel
47-1305 Bills changing compensation of State officials to be introduced during first 10 days of session
47-1306 Fiscal notes to be prepared and furnished for bills changing compensation of State officials

47-1301 Georgia Fiscal Note Act; short title

This law [§§ 47-1301 through 47-1304.2] shall be known and may be cited as the "Georgia Fiscal Note Act."

(Acts 1976, p. 1668.)

Editorial Note

Acts 1976, p. 1668, which enacted §§ 47-1301 through 47-1304.2, repealed former §§ 47-1301, 47-1302, 47-1302.1, 47-1303, and 47-1304, which were based upon Acts 1966, p. 573, 1967, p. 711; 1969, pp. 670, 671; 1974, p. 1414.

47-1302 Same; "retirement bill" defined

As used in this law [§§ 47-1301 through 47-1304.2], "retirement bill" means any bill relative to any retirement, pension or emeritus system or any other similar system by whatever name called, whether such system provides for membership therein for State, county, municipal or any other political subdivision officials or employees or any other persons.

What conduct amounts to an overt act or acts done toward commission of larceny so as to sustain charge of attempt to commit larceny, 76 ALR3d 342.

Robbery, attempted robbery, or assault to commit robbery, as affected by intent to collect or secure debt or claim, 88 ALR3d 1309.

property or in attempting to escape, rather than in taking property, as element of robbery, 93 ALR3d 643.

What constitutes attempted bank robbery under 18 USCS §§ 2113(a), making it offense to take or attempt to

any property, money, or other [illegible] value from bank, 37 ALR Fed. 255.

Criminal responsibility under 18 USCS § 2(b) of one who lacks capacity to commit an offense but who causes another to do so, 52 ALR Fed. 769.

Sec. 11.31.100. Attempt. (a) A person is guilty of an attempt to commit a crime if, with intent to commit a crime, the person engages in conduct which constitutes a substantial step toward the commission of that crime.

(b) In a prosecution under this section, it is not a defense that it was factually or legally impossible to commit the crime which was the object of the attempt if the conduct engaged in by the defendant would be a crime had the circumstances been as the defendant believed them to be.

(c) In a prosecution under this section, it is an affirmative defense that the defendant, under circumstances manifesting a voluntary and complete renunciation of the defendant's criminal intent, prevented the commission of the attempted crime.

(d) An attempt is a

(1) class A felony if the crime attempted is an unclassified felony;

(2) class B felony if the crime attempted is a class A felony;

(3) class C felony if the crime attempted is a class B felony;

(4) class A misdemeanor if the crime attempted is a class C felony;

(5) class B misdemeanor if the crime attempted is a class A or class B misdemeanor.

(e) If the crime attempted is an unclassified crime described in a state law which is not part of this title and no provision for punishment of an attempt to commit the crime is specified, the punishment for the attempt is imprisonment for a term of not more than half the maximum period prescribed as punishment for the unclassified crime, or a fine of not more than half the amount of the maximum fine prescribed as punishment for the unclassified crime, or both. If the crime attempted is punishable by an indeterminate or life term, the attempt is a class A felony. (§ 2 ch 166 SLA 1978; am § 1 ch 102 SLA 1980; am § 10 ch 45 SLA 1982)

Cross references. — For legislative purpose of ch. 45, SLA 1982, see § 1, ch. 45, SLA 1982 in the Temporary and Special Acts.

Effect of amendments. — The 1980 amendment added subsection (e).

The 1982 amendment, substituted "an unclassified felony" for "murder in any degree or kidnapping" in subsection (d)(1).

Legislative history reports. — For a report on Chapter 102, SLA 1980 (HCS CSSB 511), see 1980 Senate Journal Supplement, No. 44, May 29, 1980, or 1980 House Journal Supplement, No. 79, May 28, 1980.

Editor's notes. — Many of the cases [illegible] in the note below were decided under former AS 11.05.020.

The word "attempt," generally means [illegible] or physical effort to do a particular thing. Wooldridge v. United States, [illegible] F. 775 (9th Cir. 1916).

Where attempt complete under former law. — See Lemke v. United States, 14 Alaska 587, 211 F.2d 73 (9th Cir. 1954); Wooldridge v. United States, [illegible] F. 775 (9th Cir. 1916).

In the area of attempt, criminality was present under former AS [illegible] where there was the formation of criminal attempt, a preparation to commit the crime, and a direct unequivocal act toward its perpetration. Braham v. State, Sup. Ct. Op. No. 1522 (File No. [illegible]), 571 P.2d 631 (1977), cert. denied, [illegible] 910, 98 S. Ct. 2246, 56 L. Ed. 2d [illegible].

Mere preparation to commit a crime, not followed by an overt act done toward its commission, did not constitute an attempt under former AS 11.05.020. There were borderline cases where it was sometimes difficult to determine whether preparation to commit a crime has come near enough to the accomplishment of the act as that an attempt had been committed. Gargan v. State, Sup. Ct. Op. [illegible] (File No. 773), 436 P.2d 968 [illegible].

Mere preparation to commit a crime, not followed by an overt act done toward its commission, did not constitute an attempt. Lemke v. United States, 14 Alaska 587, [illegible] F.2d 73 (9th Cir. 1954).

When acts were of such a preliminary nature so as to constitute mere preparation for the contemplated crime, there was no crime of attempt. Braham v. State, Sup. Ct. Op. No. 1522 (File No. 2558), 571 [illegible] (1977), cert. denied, 436 U.S. 910, [illegible] 2246, 56 L. Ed. 2d 410 (1978).

Question of degree. — Whether acts went so far in contemplation of the commission of a crime were merely preparatory and did not constitute attempt, or whether they were sufficiently close to the consummation of the crime to amount to attempt, was a question of degree and depended upon the facts and circumstances of a particular case. Braham v. State, Sup. Ct. Op. No. 1522 (File No. [illegible]), 571 P.2d 631 (1977), cert. denied, [illegible] 910, 98 S. Ct. 2246, 56 L. Ed. 2d [illegible].

Inadequacy of former statute. — Former AS 11.05.020 was apparently inadequate to codify effectively as a crime the situation involving the single act of contracting for another to perform a criminal act. Braham v. State, Sup. Ct. Op. No. 1522 (File No. 2558), 571 P.2d 631 (1977), cert. denied, 436 U.S. 910, 98 S. Ct. 2246, 56 L. Ed. 2d 410 (1978).

Where defendant contracted with someone to kill another, when he instructed the killer to visit the victim, his intention being that there would be fostered a relationship of trust and confidence between the killer and the victim, thus placing the killer in a position where he would be closer to the victim and could more readily kill him, the killer's visit with the victim, at defendant's direction, was the doing of a direct, unequivocal act toward the commission of the crime of murder, which followed the formation of a criminal intent and a preparation to commit this crime. Braham v. State, Sup. Ct. Op. No. 1522 (File No. 2558), 571 P.2d 631 (1977), cert. denied, 436 U.S. 910, 98 S. Ct. 2246, 56 L. Ed. 2d 410 (1978).

Factual impossibility not apparent to actor. — A factual impossibility which was not apparent to the actor at the time should not, as a matter of policy, insulate him from conviction for attempting the commission of the offense. Gargan v. State, Sup. Ct. Op. No. 452 (File No. 773), 436 P.2d 968 (1968).

"Empty pocket doctrine". — See Gargan v. State, Sup. Ct. Op. No. 452 (File No. 773), 436 P.2d 968 (1968).

Attempt statute applied to attempted violation of narcotic drug statute. — Persons attempting to commit the crime defined by AS 17.10.010 of the Alaska Uniform Narcotic Drug Act (now repealed) were not exempted or excepted from the provisions of the attempt statute. Simpson v. United States, 13 Alaska 635, 195 F.2d 721 (9th Cir. 1952).

An attempt was necessarily included in an indictment for statutory rape. Sekinoff v. United States, 283 F. 38 (9th Cir. 1922).

Indictment need not specify intent to be proved for attempted rape. — There is authority for the proposition that a specific intent must be proved for the crime of attempted rape. But there is no authority supporting the proposition that the indictment must specify that intent. State v. Thomas, Sup. Ct. Op. No. 1077 (File No. 2234), 525 P.2d 1092 (1974).

THE NEW MAFIA

JUSTICE

How the Mob Really Works

They are the criminals Americans have loved to fear. For 60 years, the barons of organized crime have lived off the nation's thirst for vice: first liquor, then women, gambling, drugs and usurious cash. At the same time, they have become legends in their own land, hyperbolized in the press and pop culture as figures of Evil and Honor, concepts that mean little to the hoodlum on the street. Today, in its middle age, the mob finds itself in a difficult period of transition. Its top leadership is aging. Its young bloods chafe at traditional hierarchies. Its forays into the straight economy are increasingly risky. Most worrisome of all, it faces unprecedented efforts by law-enforcement agencies, which have finally found ways to disrupt, if not destroy, criminal networks. Still, the mob is hardly a declining industry. Its principal commodities—lust, greed and blood—remain very much in fashion.

1980 was not a good year for the underworld. About 600 mobsters were convicted in Federal courts. They include bosses Frank Tieri of New York, Nicholas Civella of Kansas City and the entire top echelon of the Los Angeles crime family, who were convicted of racketeering, and former New York boss Joseph Bonanno, who was convicted of conspiracy to obstruct justice. (All of the bosses are appealing.) Tieri and members of southern California's "Mickey Mouse Mafia" were fingered by the most important informer in two decades, Jimmy (The Weasel) Fratianno, who now wields his memory the way he once used a garrote (page 36). "These prosecutions illustrate that organized crime is penetrable," says Attorney General Benjamin Civiletti. "It is not, as we sometimes hear, an organization which has such a strong oath of silence that it is immune from Federal investigation."

The FBI has learned the value of going undercover to beat the mob on its own turf. In the Brilab case, two FBI agents and an informant masqueraded for a year as crooked insurance agents to record conversations with Carlos Marcello, the reputed boss of the New Orleans crime family. The 70-year-old Marcello was indicted last June for racketeering, fraud and conspiracy. He was accused of agreeing to help the agents bribe Louisiana officials, they were to get state contracts and he was to receive a piece of their action. In courtrooms along the Gulf and East coasts, evidence gathered during a five-year investigation into dock corruption has brought the convictions of more than a hundred union officials and shippers on bribery and extortion charges. Despite all this, lawmen say they are only containing the mob. "Organized crime is powerful," says Francis M. Mullen, executive assistant FBI director of investigations. "We do not really hope to eliminate it. We hope to diminish its influence."

Within their traditional markets the mob's influence—and profits—keep climb-

Lawmen are making things tougher, but organized crime is finding new ways to make crime pay.

Mafia informants concealed at Senate hearing: "[Mobsters] are like cockroaches. You step on them one place and they turn up somewhere else."

ing. Heroin smuggling is again a growth industry. Agents from the Federal Drug Enforcement Administration seized 488 pounds of heroin in the first eleven months of 1980, up one third from all of 1979. The police are not suddenly better; they're just skimming the foam off a flood tide. Professional fences can barely keep up with the loads of hijacked goods they wash clean through burgeoning flea markets and street peddlers. And, says Dominic Amorosa, chief of the Organized Crime Strike Force in Manhattan, "the amount of loan-sharking on the street has never been higher." Inflation has driven hordes of businessmen and bill payers to loan sharks for money borrowed at up to 200 to 800 percent annual interest, using their firms—and their bodies—as collateral.

The mob has also moved into new enterprises. "These people are like cockroaches," says one veteran investigator. "You step on them one place and they turn up somewhere else." Record and tape pirates working with underworld backing now sell enough counterfeit albums to shake rock stars weep. Not only legitimate chemical companies dump toxic wastes illegally now the mob does too. Last April an allegedly Mafia-connected chemical waste warehouse in New Jersey exploded; the lethal mess still hasn't been completely disposed of. Gangsters were also quick to observe that coal mining seems profitable again. They are not only stealing expensive heavy equipment from the sites, but they sell shares in nonexistent or nonproductive mines. The gangs have become so successful that seven states have joined investigative resources to fight the crime.

The Reagan Justice Department is expected to maintain the new pressure. Attorney General-designate William French Smith inherits a national group of tough, aggressive prosecutors and a reformed but still controversial Witness Security Program (page 42).

Pizza. Why should the ordinary citizen care about any of this? Because like it or not, the mob has become a fact of everyday life. If you buy clothes, eat at restaurants with linen napkins, shop in stores that use private garbage services, gamble in casinos, invest in high-flying stocks, have a yen for dirty books, can't start the day without a fresh bagel or finish it without a pizza pie, the mob is there to help. And if you are afraid to venture out at night lest some junkie-mugger will be lurking, it's the mob that feeds his habit. "Organized crime is draining millions of dollars—tax-free dollars—from our nation's economy," says FBI director William H. Webster. "Its impact is felt throughout our society."

At the same time, it's important to understand what the mob isn't. The Mafia is not the principal source of economic crimes—price-fixing or shaving work- and product-safety standards. Those are the provinces of conniving businessmen. The kickbacks or other favors that some corporations give politicians often rival anything the mob provides. "Organized crime is a serious problem, but one which is sometimes exaggerated and sometimes minimized for political purposes," says Deputy Assistant Attorney General Irvin Nathan.

Harvard sociologist Daniel Bell once wrote that the underworld serves as one of America's "queer ladders of social mobility." Some criminals climb and get off, others can't wait to get on, and some never leave. The Italian syndicate, called La Cosa Nostra by some gangs and by the FBI, and the Mafia by everyone else, fits the last category. So much has been written about this group that it's difficult to separate myth from fact. This at least seems true: the Mafia is a loose confederation of gangs spread around the country. They work together on projects such as Las Vegas gambling, and operate independently on local affairs such as protection rackets or labor racketeering (chart, page 38).

Shakedown: Organized crime, however, is by no means an Italian monopoly. Jewish and Irish hoodlums have long cooperated with the Mafia. "Guys that hate each other will sit down for money," says a New York police detective. But now new groups have begun to climb Bell's curious ladder. Black outfits in Philadelphia and New York run—in concert with the Mafia—much of the gambling and narcotics action. Chinese gangs shake down San Francisco merchants, the self-proclaimed Israeli Mafia (page 40) extorts money in Los Angeles. Colombian and Cuban drug rings have flooded Florida with their products—and

Even though there is no question that the crime of attempt requires a specific intent, it seems equally beyond dispute that a charge of attempt to commit a specific crime clearly advises the defendant of the offense with which he is charged. State v. Thomas, Sup. Ct. Op. No. 1077 (File No. 2234), 525 P.2d 1092 (1974).

Indictment charging attempted rape and citing only the rape statute held sufficient. — See State v. Thomas, Sup. Ct. Op. No. 1077 (File No. 2234), 525 P.2d 1092 (1974).

Defendant may be found guilty though attempt not expressly charged. — Jury could find defendant guilty of the attempt to commit the crime of possessing narcotic drugs despite the fact that the attempt was not expressly charged. Simpson v. United States, 13 Alaska 635, 195 F.2d 721 (9th Cir. 1952).

Substantial evidence of attempt. — In a prosecution for possession of narcotic drugs, although there was no substantial evidence that defendant committed the crime charged in the information, there was substantial evidence that she attempted to commit the crime charged. Simpson v. United States, 13 Alaska 635, 195 F.2d 721 (9th Cir. 1952).

Same offense for sentencing purposes. — Assault with intent to rob and attempted robbery constituted the "same offense" for sentencing purposes. Brookins v. State, Sup. Ct. Op. No. 1336 (File No. 3972), 600 P.2d 12 (1979).

Sentence upheld. — See Bowie v. State, Sup. Ct. Op. No. 769 (File No. 1[illegible] 494 P.2d 800 (1972); Spearman v. State, Sup. Ct. Op. No. 1210 (File No. 2529), 542 P.2d 202 (1975); Braham v. State, Sup. Ct. Op. No. 1522 (File No. 2558), 571 P.2d [illegible] (1977), cert. denied, 436 U.S. 910, 98 S. Ct. 2246, 56 L. Ed. 2d 410 (1978); Johnson v. State, Sup. Ct. Op. No. 1656 (File No. 3424), 580 P.2d 700 (1978); Ferguson v. State, Sup. Ct. Op. No. 1791 (File No. 3890), 590 P.2d 43 (1979); Morris v. State, Sup. Ct. Op. No. 1830 (File No. 4132), 592 P.2d 1244 (1979); Ramil v. State, Sup. Ct. Op. No. 2217 (File No. 4944), 619 P.2d 722 (1980).

Sentence held excessive. — See Hansen v. State, Ct. App. Op. No. 218 (File No. 6965), 657 P.2d 862 (1983).

Applied in Nicholson v. State, Ct. App. Op. No. 193 (File No. 6192), 656 P.2d 1209 (1982).

Stated in State v. Silas, Sup. Ct. Op. No. 1851 (File No. 4237), 595 P.2d 651 (1979); Coleman v. State, Sup. Ct. Op. No. 2190 (File No. 4416), 621 P.2d 869 (1980); Ramil v. State, Sup. Ct. Op. No. 2217 (File No. 4944), 619 P.2d 722 (1980); Clark v. State, Ct. App. Op. No. 96 (File No. 5658), 645 P.2d 1236 (1982); Tazruk v. State, Ct. App. Op. No. 195 (File No. 6954), 655 P.2d 788 (1982).

Cited in Handley v. State, Sup. Ct. Op. No. 2155 (File Nos. 3946, 4935), 615 P.2d 627 (1980); Walker v. State, Ct. App. Op. No. 234 (File No. 6304), 662 P.2d 948 (1983).

Sec. 11.31.110. Solicitation. (a) A person commits the crime of solicitation if, with intent to cause another to engage in conduct constituting a crime, the person solicits the other to engage in that conduct.

(b) In a prosecution under this section,

(1) it is not a defense

(A) that the defendant belongs to a class of persons who by definition are legally incapable in an individual capacity of committing the crime that is the object of the solicitation; or

(B) that a person whom the defendant solicits could not be guilty of the crime that is the object of the solicitation;

(2) it is an affirmative defense that the defendant, under circumstances manifesting a voluntary and complete renunciation of the defendant's criminal intent, after soliciting another person to engage in conduct constituting a crime, prevented the commission of the crime.

(c) Solicitation is a

(1) class A felony if the crime solicited is an unclassified felony;

(2) class B felony if the crime solicited is a class A felony;

(3) class C felony if the crime solicited is a class B felony;

(4) class A misdemeanor if the crime solicited is a class C felony;

(5) class B misdemeanor if the crime solicited is a class A or class B misdemeanor.

(d) If the crime solicited is an unclassified crime described in a state law which is not part of this title and no provision for punishment of a solicitation to commit the crime is specified, the punishment for the solicitation is imprisonment for a term of not more than half the maximum period prescribed as punishment for the unclassified crime, or a fine of not more than half the maximum fine prescribed as punishment for the unclassified crime, or both. If the crime solicited is punishable by an indeterminate or life term, the solicitation is a class A felony. (§ 2 ch 166 SLA 1978; am § 2 ch 102 SLA 1980; am § 11 ch 45 SLA 1982)

Cross references. — For legislative purpose of ch. 45, SLA 1982, see § 1, ch. 45, SLA 1982, in the Temporary and Special Acts; for legal accountability based on the conduct of another and complicity, see AS 11.16.110.

Effect of amendments. — The 1980 amendment added subsection (d).

The 1982 amendment, substituted "an unclassified felony" for "murder in any degree or kidnapping" in subsection (c)(1).

Legislative history reports. — For a report on Chapter 102, SLA 1980 (HCS CSSB 511), see 1980 Senate Journal Supplement, No. 44, May 29, 1980, or 1980 House Journal Supplement, No. 79, May 28, 1980.

NOTES TO DECISIONS

Former law construed. — See McConkey v. State, Sup. Ct. Op. No. 855 (File No. 1464), 504 P.2d 823 (1972); Cassell v. State, Ct. App. Op. No. 91 (File No. 5138), 645 P.2d 219 (1982), decided under former AS 11.10.070.

One contracting with another to kill a third person was guilty of attempted first-degree murder, not solicitation. — See Braham v. State, Sup. Ct. Op. No. 1522 (File No. 2558), 571 P.2d 631 (1977), cert. denied, 436 U.S. 910, 98 S. Ct. 2246, 56 L. Ed. 2d 410 (1978), decided under former AS 11.10.070 and 11.15.010.

Cited in Hoover v. State, Ct. App. Op. No. 73 (File No. 6223), 641 P.2d 1263 (1982); P.S. v. State, Ct. App. Op. No. 194 (File No. 6870), 655 P.2d 1319 (1982).

Sec. 11.31.140. Multiple convictions barred. (a) It is not a defense to a prosecution under AS 11.31.100 or AS 11.31.110 that the crime that is the object of the attempt or solicitation was actually committed pursuant to the attempt or solicitation.

(b) A person may not be convicted of more than one crime defined by AS 11.31.100 or AS 11.31.110 for conduct designed to commit or culminate in commission of the same crime.

(c) A person may not be convicted on the basis of the same course of conduct of both (1) a crime defined by AS 11.31.100 or AS 11.31.110; and (2) the crime that is the object of the attempt or solicitation.

(d) This section does not bar inclusion of multiple counts in a single indictment or information charging commission of a crime defined by AS 11.31.100 or AS 11.31.110 and commission of the crime that is the object of the attempt or solicitation. (§ 2 ch 166 SLA 1978)

NOTES TO DECISIONS

Conspiracy is separate offense. — The crime of conspiracy is generally regarded as a separate offense from the substantive crime that is the object of the conspiracy. Unlike the other preliminary offenses of attempt and solicitation, conspiracy does not merge into a conviction for the substantive crime. Lythgoe v. State, Sup. Ct. Op. No. 2235 (File No. 4497), 626 P.2d 1082 (1980).

The no-merger rule means that a defendant can be convicted of both conspiracy and the object of the conspiracy. One reason advanced for this special treatment of conspiracy as a separately punishable offense is that conspiracy has been regarded as a serious crime in itself. Lythgoe v. State, Sup. Ct. Op. No. 2235 (File No. 4497), 626 P.2d 1082 (1980).

Sec. 11.31.150. Substantive crimes involving attempt or solicitation. Notwithstanding AS 11.31.140(d),

(1) a person may not be charged under AS 11.31.100 if the crime allegedly attempted by the defendant is defined in such a way that an attempt to engage in the proscribed conduct constitutes commission of the crime itself;

(2) a person may not be charged under AS 11.31.110 if the solicitation in question is defined as a specific crime under other provisions of law. (§ 2 ch 166 SLA 1978)

Chapter 35. Abandonment and Nonsupport.

[Repealed, § 1 ch 39 SLA 1970 and § 21 ch 166 SLA 1978. For current law on desertion and nonsupport of a minor, see AS 11.51.100 — 11.51.120.]

Chapter 36. Failure to Permit Visitation with Minor Child.

[Repealed, § 21 ch 166 SLA 1978. For current law, see AS 11.51.125.]

Chapter 40. Crimes Against Morality and Decency.

[Repealed, § 21 ch 166 SLA 1978. For current law, see AS 11.51.130, 11.51.140, 11.61.110, 11.61.130, 11.61.140 and 11.66.100 — 11.66.150.]

Homicide by wanton or reckless use of firearm without express intent to inflict injury, 5 ALR 603; 23 ALR 1554.

Homicide or assault in attempting to prevent elopement, 8 ALR 660.

Wife's confession of adultery as affecting degree of homicide in killing her paramour, 10 ALR 470.

What amounts to participation in homicide on part of one not the actual perpetrator, who was present without preconcert or conspiracy, 12 ALR 275.

Intoxication as reducing homicide from murder to manslaughter, 12 ALR 888; 79 ALR 897.

Responsibility of persons participating in jail delivery for homicide committed by one of their number, 15 ALR 456.

Recommendation for mercy, 17 ALR 117; 55 ALR 639.

Homicide by unlawful act aimed at another, 18 ALR 917.

Criminal responsibility of peace officers for killing or wounding one whom they wished to investigate or identify, 18 ALR 1368; 61 ALR 321.

Homicide as affected by time elapsing between wound and death, 20 ALR 1006; 93 ALR 1470.

Humanitarian motives, homicide as affected by, 25 ALR 1007.

Discharge of firearm without intent to inflict injury as proximate cause of homicide resulting therefrom, 55 ALR 921.

DEPARTMENT OF PUBLIC SAFETY

POSITION PAPER

Support

March 3, 1984

HB 626 - "An act relating to the crime of [illegible]."

This legislation would facilitate the arrest and prosecution of those individuals who historically are positioned in the upper levels of criminal organizations but who never enter the areas of "hands on" physical criminal activity and therefore avoid being charged, despite their clear responsibility. The most important impact of passage of this legislation would be in prosecutions of those criminal elements involved in narcotics trafficking in Alaska.

We can see a potential for conflict between 11.31.140 (c) and (e). The former prohibits conviction for both conspiracy and the crime which is the object of the conspiracy. 11.31.140 (e) indicates that if multiple crimes are the object of a conspiracy only one count of conspiracy is charged. If two people conspire to commit four similar crimes, under (e) this is one conspiracy count. If, in fact, three crimes are committed, the fourth to occur at a later date and arrests are made before the fourth crime is attempted, under (c) conspiracy could not be charged for the fourth crime because (e) defines one conspiracy count for all four planned crimes and (c) prohibits conviction for both conspiracy and the criminal act itself.

those differences can be resolved."

Well, those differences are differences in Government structure and philosophy. The common interests have to do with the things of everyday life for people everywhere.

Just suppose with me for a moment that an Ivan and an Anya could find themselves, oh, say, in a waiting room or sharing a shelter from the rain or a storm with a Jim and Sally. And there was no language barrier to keep them from getting acquainted.

Would they believe the differences between their respective Governments? Or would they find themselves comparing notes about their children and what each other did for a living? Before they parted company, they would probably have touched on ambitions and hobbies and what they wanted for the children and problems of making ends meet.

And as they went their separate ways, maybe Anya would be saying to Ivan: "Wasn't she nice. She also teaches music." And Jim would be telling Sally what Ivan did or didn't like about his boss. They might even have decided they were going to get together for dinner some evening soon.

Above all they would have proven that people don't make wars. People want to raise their children in a world without fear and without war. They want to have some of the good things over and above bare subsistence that make life worth living. They want to work at some craft, trade or profession that gives them satisfaction and a sense of worth. Their common interests cross all borders.

If the Soviet Government wants peace, then there will be peace. Together we can strengthen peace, reduce the level of arms and know in doing so that we have helped fulfill the hopes and dreams of those we represent and, indeed, of people everywhere.

Let us begin now.

Combating Organized Crime

PUBLIC AWARENESS AND SUPPORT

By WILLIAM FRENCH SMITH, *Attorney General of the United States*

Delivered at the Town Hall of California, Los Angeles, California, December 19, 1983

I WOULD like to discuss a subject that affects all of us every day, even though it stays generally hidden from public view. It causes our taxes to go up. It adds to the cost of what we buy. And, worst of all, it threatens our personal safety and that of our families — indeed our very freedom. Its trafficking causes untold damage to human lives and human health, yet its revenues are estimated to exceed the net profit of all the Fortune 500 corporations combined. I am speaking of organized crime.

Although combating organized crime is a difficult undertaking, it is not impossible. Indeed, as I will later explain, many successes are now being achieved in that battle. Unfortunately, the public is little aware of the problem or of what the government is doing to combat it. With greater public awareness of the nature and the threat of organized crime, and with greater citizen participation, we could make substantially more headway.

First, in order to provide the context for our efforts today, some history is in order. During the first years of this century, organized crime was a local enterprise. A gang worked a city, often just a neighborhood. The local police were alone in trying to stop organized crime, and the task proved beyond their powers. There was no federal government involvement. And with the ratification of the Eighteenth Amendment, organized crime began a significant expansion in power and influence.

During Prohibition, organized crime groups vied for shares of a market attracting more and more bootleggers, and frequently fought each other as they tried to expand beyond their once limited turfs. Nonetheless, ethnic animosities and gang rivalries gradually abated during Prohibition as cooperation became necessary in the effort to control larger and larger markets. At a 1929 meeting, leading organized crime figures from major cities recognized the need for a national body to mediate differences among groups and formulate a national policy.

The year 1929 is also notable for the federal government's first substantial appearance in the history of organized crime. It was an inauspicious entry. Disturbed by the lawlessness of Prohibition, President Hoover established that year the National Commission on Law Observance and Enforcement. Named after its chairman, George Wickersham, the Commission urged an "immediate, comprehensive, and scientific nationwide inquiry into organized crime" in order to "make possible the development of an intelligent plan for its control."

No such inquiry took place, however, and no intelligent plan for the control of organized crime was developed. The FBI did what it could against the gangsters, arresting a few such as Al Capone, who served time for income tax evasion. But the FBI lacked statutory authority to investigate most of the activities of the crime syndicates. During the Thirties and Forties, despite laudable law enforcement efforts by some local and state authorities, organized crime prospered as the federal government generally failed to make a response.

Alcohol provided the major source of income for criminal groups from 1920 until the end of Prohibition in 1933. But organized crime had by then already learned how to diversify. The syndicates easily renewed and increased previous involvements in gambling, prostitution, and narcotics. They began investing in legitimate businesses, and also infiltrated labor unions. Organized crime extended its reach nationwide — establishing operations on the West Coast, including Los Angeles.

Not until 1950 did the federal government finally begin to make a systematic inquiry into organized crime. A special Senate committee directed by Estes Kefauver investigated gambling and racketeering activities in interstate commerce. The committee uncovered a national pattern of bribery and protection payments to law enforcement officials and payoffs to local and state political figures to ensure protection from prosecution. The committee determined that a national criminal organization which it referred to as "The Mafia" did exist, and recommended the creation of a rackets squad within the Justice Department.

The Kefauver hearings stimulated local investigations in cities where the committee had exposed organized crime oper-

ations and public corruption. But even with the knowledge obtained from the hearings, the federal government itself still did not take sustained action. The Department of Justice initiated a drive against the leading racket figures identified in the Senate hearings, but while some convictions and deportations resulted, no permanent investigative or prosecuterial units were established until 1954. Even then, only three lawyers in the department were assigned to the Organized Crime and Racketeering Section, which consequently enjoyed only limited success. Again, the federal government failed to see the immediate and growing threat presented by organized crime — a national threat requiring a national response.

The lack of an effective government response was costly. During the Fifties the syndicates continued to grow and consolidate. Organized crime became more deeply involved in white collar crime and in politics. Mobsters more frequently appeared in respectable places and with respectable people.

Not until the early Sixties did the federal government begin to make a substantial enforcement effort against organized crime. Under Attorney General Robert Kennedy, the FBI began monitoring the activities of 400 of the nation's leading organized crime figures. The number of attorneys in the Organized Crime Section jumped to 17 in 1961, and 68 in 1962. Gradually, too, the number of convictions per year began to increase — from 45 in 1960, to 546 in 1964.

Several years later a commission created by President Johnson made numerous recommendations for changes in the criminal law — each of them designed to challenge organized crime. The Omnibus Crime Control and Safe Streets Act of 1968 and the Organized Crime Control Act of 1970 incorporated all eight of the commission's recommendations regarding proof of criminal violations. The 1968 Act was the first federal law to define the term "organized crime" and included a provision for electronic surveillance under a carefully detailed warrant procedure and strict court supervision. The 1970 Act strengthened the government's legal tools in the evidence-gathering process. One provision — the Racketeer Influenced and Corrupt Organizations Act, or RICO — is arguably the most powerful statute available to federal law enforcement officials, because among other things it allows government to seize the illicit profits of organized crime.

Another important initiative at this time was the creation of the first Organized Crime Strike Force. In 1966, the Department of Justice placed a five-man team of attorneys and supervisory personnel from federal investigative agencies in Buffalo, N.Y. Within a short time, the group, dubbed the "Strike Force," convicted the mob underboss and several syndicate figures. In 1969, the Department of Justice began an expansion of the Strike Force program.

In retrospect, the federal law enforcement and legislative initiatives of the Sixties mark a turning point in the history of the government's response to organized crime. To be sure, during the past 20 years there have been periods when the government has not been as effective as it could have been. At times the effort has been confused and misdirected. Even so, it is in the past two decades that the federal government finally has organized a serious law enforcement response and devised mechanisms such as the Strike Forces that have proved so valuable in combatting organized crime.

In the past three years, the Strike Force program has been augmented in order to better lead the fight against traditional organized crime. Specialized cadres of experienced trial attorneys coordinate the activities of criminal investigators from all the major federal law enforcement agencies, as well as the local police.

The strike forces have indicted and convicted many of the principal leaders of the traditional crime families in many of our major cities. They have successfully brought major cases in New York, Boston, Cleveland, Chicago, Denver, Kansas City, Miami, Detroit, Philadelphia, San Francisco, Milwaukee, New Orleans — and Los Angeles. During the past three years, in large part because of the efforts of the Strike Forces, the Department of Justice has indicted, tried, and convicted more than 2,600 members and associates of organized crime.

The use of important enforcement mechanisms developed in the Sixties and Seventies have proved immensely helpful. Electronic surveillance under a carefully detailed warrant procedure and strict court supervision has enabled us to gather information on the very secretive crime families. So has the Witness Security Program, which provides protection for informants willing to testify against former underworld associates. In addition, federal officials have successfully gone undercover, posing as members of organized crime, and also set up undercover operations designed to ferret out members of organized crime.

One of our most successful undercover operations occurred here in Los Angeles. The FBI knew that members of the Mafia regularly extorted pornographers and bookmakers, but no extortion victim was willing to testify. So, the FBI set up its own pornography enterprise, named Forex. Forex was located in Van Nuys and ostensibly sold pornography to South America and Mexico.

Forex waited to be extorted, but organized crime kept its distance, apparently suspicious of the legitimacy of the new business. So after three months, the FBI used an informant to spread the word on the street that the government was looking into Forex. That helped establish the company's bona fides with organized crime. Still, however, there was no extortion attempt. Next an undercover agent with the new name of Vince Lombard put the word out that the company was being extorted.

That tactic worked. The mobsters moved in. They told Lombard never to extort a pornography business again and to leave the country. They gave Forex the choice of making payments to them or never again doing business anywhere in the United States. At this point we moved in. As a result of our effort which was called "Pornex," the entire ruling heirarchy of the Los Angeles organized crime family was convicted of RICO charges.

With the help of operations such as Pornex, the Organized Crime Strike Forces have destroyed the myth that the leadership of organized crime is "untouchable." One reason the syndicates gained such a foothold in American society is just this myth, which made it easier for them to recruit new members and enforce loyalty. Now that we have more knowledge of how organized crime works, we have been able to decimate the top ranks in many areas.

Although the Strike Force program is an important part of the effort against organized crime, other new approaches have been undertaken in the past three years. Today, organized crime is heavily involved in drug trafficking. Indeed, the drug trade is now our nation's number one crime problem — especially when one considers the criminal activities spawned by drug trafficking. For example, a recent study done of the Baltimore area found that 243 addicts committed a total of almost a half million crimes over an 11-year period — or an average of 2,000

each — one every other day.

The Posse Comitatus law, passed after the civil war, prevents the armed forces from engaging in law enforcement activities. We have sought and obtained an amendment to this law which now permits us to utilize the resources and intelligence gathering capability of the military — for the first time. This has already been enormously valuable in the fight against drug trafficking.

And for the first time, too, we have brought the FBI into the drug enforcement effort by consolidating the Drug Enforcement Administration with the FBI. The FBI has a sophisticated understanding of the organizational and financial aspects of the organized crime cartels. It has unique knowledge of, and ability to follow, the flow of money. This expertise is essential to combatting the highly sophisticated activities of modern organized crime, and it is now being put to work in the fight against drug trafficking. Our departmental reorganization has been highly successful, resulting currently in 765 FBI cases and almost 600 joint DEA/FBI cases.

South Florida has long been the hot spot for drug trafficking. In response, the South Florida Task Force was established in 1982. For the first time, all of the agencies of the federal government dealing with this problem were brought together within a single entity.

The success of this Task Force guided us in formulating the major eight-point initiative against organized crime and drug trafficking announced by President Reagan last year. The centerpiece of the program was the creation of 12 new task forces patterned on the South Florida model and deployed throughout the country. These Task Forces are now fully operational. Already more than 100 indictments against more than 1,000 defendants have been brought. And more than 200 individuals have been convicted.

Of the 4,75 cases now under investigation by the Drug Task Forces, only a small number involve traditional organized crime. Most involve new or emerging groups attracted to the lucrative profits of drug trafficking. Some names you will recognize but most you will not. They include the Hell's Angels, the Outlaws, the Pagans, the Bandidos, La Nuestra Familia, the Mexican Mafia, the Aryan Brotherhood, the Black Guerrilla Family, the Japanese Yakuza, the Chinese Triad Societies, the Israeli Mafia, and the Cocaine Cowboys.

These modern cartels are involved in the importation and distribution of drugs, the financing of drug trafficking, and money laundering schemes. As is also true of traditional organized crime, they are also engaged in continuing criminal enterprise, abuse of the bank secrecy laws, narcotics conspiracy, and public corruption. Employing the law enforcement weapons developed to fight traditional organized crime, we are making an assault on these organizations even as they are developing.

Today, as organized crime is developing new and different forms, it is also experiencing another evolution — from national in focus to international, a change mostly related to drug trafficking. Of the three drugs that most trouble us from a law enforcement perspective, two — heroin and cocaine — come exclusively from abroad, and one, marijuana, comes predominantly from abroad. Because of the drug trade, the relationships between organized crime families in New York and Palermo are strikingly similar to those historically existing between organized criminals in New York and Chicago.

It is essential that we develop close working relationships at the highest levels with the governments of countries that are the source of illegal drugs or through which drugs travel. It is equally important that we understand the problems faced by those countries and that they understand our concerns. Cooperation on procedural matters is an essential step. To this end, we have negotiated, and are continuing to negotiate, mutual assistance law enforcement and extradition treaties with the various countries involved.

Already we have been successful in crop control and eradication programs — notably in Turkey and Mexico. And we are working — however slow the results — with other countries to control the supply and processing of opium and coca plants and their derivatives.

As we proceed with enforcement programs at home and cooperative efforts abroad, we must also keep our knowledge of organized crime up to date. In the past we did not recognize organized crime for the problem that it was. High government officials and some academies often treated the threat of organized crime, and even its existence, with skepticism. For decades organized crime grew because it was not stopped from growing. We — all of us — have paid for the fact that for many years there was no organized response to organized crime. History counsels the wisdom of learning as much as we can about the new and emerging crime cartels so that we can attack them before they become as entrenched as the Mafia did.

At the end of November the President's Commission on Organized Crime, held its first meeting in Washington. As part of the President's eight-point program against organized crime and drug trafficking, the Commission will study organized crime as it exists today, giving special attention to the emerging drug cartels. The Commission will focus public attention on and further define the nature of the evil that affects us all.

Another part of the President's program calls for strengthening the federal criminal laws that touch organized crime. These include sentencing, bail, forfeiture, and numerous other reforms that would measurably improve our law enforcement ability.

I cannot underestimate the importance of congressional action on the crime bill. Instances abound of cases where current law simply fails to serve the interests of justice. For example, federal sentencing law permits so much judicial discretion that a convicted organized crime figure — facing up to 40 years in prison — was instead sentenced — if you can call it that — to a year in a local community treatment center followed by five years of probation. This criminal must spend only his nights at the treatment center — by day he will be free to do as he pleases. This is the astonishing result, after thousands of hours of effort by investigators, prosecutors, and other law enforcement officials.

In the last Congress, the Senate passed a crime bill containing sentencing and other reforms by a vote of 95 to 1. We hope that both the Senate and the House of Representatives will similarly act before the end of the current session in 1984.

Organized crime is a force *Americans* will have to contend against. The Department of Justice — the federal government — cannot do the job alone. Public knowledge about organized crime and support of the government's law enforcement efforts are key to future success.

With greater public awareness of organized crime, and greater public support of the federal law enforcement effort, we can achieve a future different from our past — a future in which the cancer of organized crime is finally brought under our control.

THE NEW MAFIA

A Squealer's Secrets

Federal investigators call Jimmy (The Weasel) Fratianno the most informative and reliable witness they have ever dealt with. Over the past three months Newsweek's *Ron Laliberte spent hours with Fratianno, following him coast to coast, listening to his testimony in court and his bluster in private. Laliberte's report:*

Jimmy Fratianno remembers the pleasant evening in 1948 that he drove his new Cadillac to a Los Angeles winery. In a dingy, vat lined workroom, 10 men awaited him around a long wooden table on which a gun and a dagger lay crossed. The men joined hands and one of them recited the rules of the group in a Sicilian dialect that Fratianno did not know. Fratianno did understand *omerta*, the code of silence which dictates that a man leaves the organization only when he is dead—at the hands of his colleagues if he reveals their secrets. Fratianno's finger was pricked with the dagger. Then, after kissing each of his new brothers on the cheek, he became a "man of respect," a "made" member of La Cosa Nostra.

For the next three decades Fratianno engaged in a series of criminal schemes—including murders on contract—that alternately landed him in prison or boosted him in the Mafia hierarchy. But in 1977 the guns seemed about to turn on him. The Los Angeles family believed incorrectly he was ready to launch a rival faction. Acting as always out of self-interest, he sold himself to the government for protection. Now, with the same passionless conscience that made him a successful murderer, he regales investigators with a richly detailed expose of Mafia life, from petty jealousy killings to high-council business transactions. Fratianno's testimony has helped convict a Teamsters official in San Francisco and Mafia bosses in Los Angeles and New York, and his out-of-court reminiscences have prompted invaluable intelligence on the mob.

Fratianno began to learn the ropes in Cleveland, where he earned the nickname "Weasel" after he threw a rotten tomato at a cop who couldn't catch him. The son of immigrant parents, he attended Catholic schools until he learned as a teen-ager to shave dice and started operating profitable crap games in the neighborhood on Sunday mornings. "I was a good hustler. I always had money, so I just went on to organized crime," Fratianno says. "You grow into it because of your environment."

Charmer: Fratianno first went to jail after he and his partners beat up a bookmaker who didn't pay off on a 1937 Indians-Red Sox game. But eight years in Ohio prisons only hardened his survival skills. "I ain't out a week and I gotta get even right away," he says. "I'm looking to rob somebody. There's no thought at all about going back to jail." The target was a West Virginia gambling hall. His share was $20,000. He parlayed postwar black-market sales into $80,000 in just a few months, then, looking for bigger prey, took his wife and daughter to Los Angeles. Soon he met Johnny Rosselli, a dapper charmer with show-business friends and a hidden foothold in Las Vegas. Rosselli liked Fratianno and sponsored him for membership in the L.A. family.

One of his first assignments as a made mobster was the assassination of Mickey Cohen, a splashy gambler who headed a rival syndicate. Fratianno planted a bomb beneath Cohen's bedroom and lit the fuse—but it fizzled out. A few months later Fratianno helped make another attempt on Cohen's life. With his wife and daughter, Jimmy dropped by the mobster's Hollywood clothing store, then signaled to gun-toting colleagues that Cohen was inside and vulnerable. The setup ended in failure when the target fortuitously went to the bathroom. But Fratianno eventually made his first hit—on a friend. Frank Nicoli was a Cohen hit man, a loyalist who scorned the pleas of the Italians to defect. Not knowing that Fratianno and his friends were the ones trying to kill his boss, Nicoli visited Fratianno's home one night. "We just took a rope around him and choked him," Jimmy remembers. "It took three minutes, you know, didn't take long."

'Juice': Fratianno also helped dispatch Los Angeles family member Frank Borgia. "They just told me to do this, and that's it," he says. "A lot of guys get killed for nothing. If I get into an argument with a guy and I have more juice with the boss, then he gets killed. If he has more juice, then I get killed." It took Fratianno more than a year to track down Louis (Russian Louie) Strauss on a contract from a Las Vegas casino owner. Finally Fratianno lured Strauss to a Palm Springs house where he was efficiently strangled. Fra-

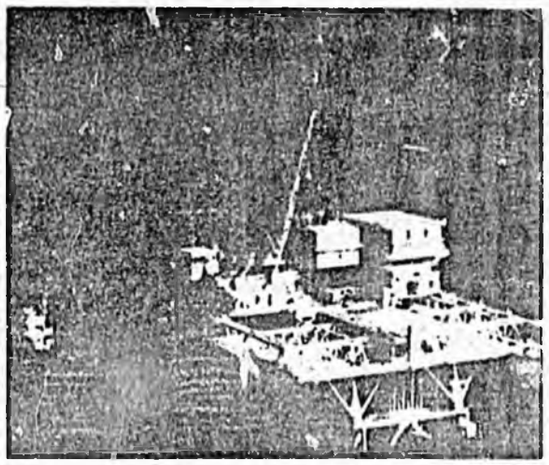
RICO THE ENFORCER

NEWSWEEK



JUSTICE

J. Ray McDermott & Co., a major builder of oil platforms, paid $508,615 in bribes to the vice chairman of Tenneco Oil Co. to undertake lucrative construction projects in the Gulf of Mexico. But the cost of doing business jumped unexpectedly last year after the firm pleaded guilty on seven criminal counts. A Federal judge in New Orleans not only fined McDermott $103,000, but confiscated its $897,000 in illegal profits from the Tenneco deals.

While serving as mayor of Lansing, Ill., for sixteen years, Jack O. McNary shook down real-estate developers and invested his booty in two private businesses. Convicted last year of extortion, McNary was sentenced to three years in prison. He will also have to ransom his businesses, which the government now effectively controls.

Charles Pugh—Atlanta Journal Constitution

Bob Sherman—Camera 5

A new spoils system: The government could not seize a private mansion, but it could take profits from an oil rig, and possibly a used-car lot

These cases share a dubious distinction. The Justice Department prosecuted them—and other button-down crimes—with a law designed specifically to convict Mafia capos. Known as RICO (Racketeer Influenced and Corrupt Organizations), the nine-year-old law allows the government to seize legitimate businesses if they have been used for illegal schemes or as investments for dirty money. Says Chicago attorney Sherman Magidson, "RICO can reach out and castrate people."

The RICO law frightens many lawyers and judges. They worry about language so loosely drawn that it lets the government sweep even small-time white-collar defendants and public officials into the same pit as underworld hit men. While Justice officials concede the law must be applied cautiously, they see no need to sheath their weapon. "This is a valuable tool," says Attorney General-designate Benjamin Civiletti. "We will not shy away from using it to pursue corrupt enterprises which do not fit the layman's view of organized crime." With about 200 RICO cases already filed, and the government increasing its use of the statute, the American Bar Association has scheduled a special seminar on how to deal with RICO at its convention this week.

RICO is one of the broadest criminal statutes Congress has ever passed. The law first enumerates 24 Federal and eight state crimes such as murder, extortion or mail fraud; then it states that anyone found to have participated in two of them within a ten-year period has undertaken a pattern of racketeering. If prosecutors can link such patterns to an interstate "enterprise"—loosely defined as virtually any personal association or business—the defendants become subject to imprisonment for up to twenty years, fines of $25,000 per count and forfeiture. "Taking away businesses from these guys is like taking away tools from a burglar," says New Jersey Federal prosecutor George Wilson.

RICO is an extremely potent weapon for prosecutors. In plea bargaining, when most cases are settled, the potential RICO penalties often lead defendants to make a deal with the government rather than take their chances with a jury. In Chicago, for instance, the fear of forfeiting their businesses led seven nursing-home owners and three pharmacists to plead guilty and pay fines of $1 million.

The law also gives prosecutors extraordinary latitude to trace crime back to the otherwise insulated kingpin. "The statute allows a prosecutor to paint a broader picture than could be normally seen by a jury," says Jeremiah T. O'Sullivan, chief of the Organized Crime Strike Force in Boston. For instance, John Christopher was tried in Tampa, Fla., in 1975 for masterminding a ring that kidnapped women and forced them into prostitution. Normally, the scope of the evidence would have been limited to the specific kidnapping; at the RICO trial, however, the judge permitted 50 witnesses to describe Christopher's criminal behavior over thirteen years.

The government has used RICO in several important prosecutions against reputed mobsters. In Chicago, two alleged organized-crime hit men were sent to prison for 30 years after RICO convictions. And in Boston, after convicting four extortionists, the government seized the contents of five massage parlors—including 5 gallons of massage lotion and a Christmas tree.

VICTORY: Much of the controversy about RICO has focused on white-collar and government corruption cases. Federal officials won an important victory last month when the U.S. appeals court in New York upheld a guilty verdict in a complicated RICO hospital-fraud prosecution. Prosecutors established that Karl R. Huber, a Phi Beta Kappa Princeton graduate and Harvard law-school-trained attorney, had

helped rescue his father's failing business empire by overcharging hospitals for equipment. Convicted last year on 30 criminal counts, Huber now faces four years in jail and a fine of $108,000. He does have one choice: he can pay a fine of an additional $100,000 or forfeit his corporate holding company to the government.

RICO charges against public officials have a particularly odd twist: the "enterprise" usually involved is the government. A jury convicted five Macon, Ga., police detectives who took money and "carnal" bribes to overlook prostitution and other illegal activities. The criminal enterprise with which they were connected was the vice squad. Florida state judge Samuel Smith was tried for selling acquittals; his judicial district was named as the enterprise.

FORFEIT: Some judges are uncomfortable with this creative use of RICO. In May, U.S. Judge Ross Sterling in Texas dismissed Federal indictment of five Texans accused of an oil swindle. "RICO was designed to keep racketeers out of business, not to make racketeers out of businessmen," Sterling said. Last week, Atlanta Federal Judge Harold Murphy dismissed part of a RICO indictment against porn king Michael Thevis. It would have forced Thevis to forfeit $1 million in cash and jewelry and his $4 million mansion if convicted. The law does not extend to what a criminal might have bought with illicit profits, Murphy ruled.

RICO appears flawed in several ways. One is its broad language, which allows the government to collect a batch of minor crimes and call it general racketeering. "We have a joke that if you have a job and send out two letters, the government is going to confiscate your property," says prominent Washington defense lawyer William Hundley. The forfeiture provision—not often used—also causes trouble. The statute does not state precisely what happens when profits from racketeering are mixed with legitimate funds to operate a business.

CHIEFTAINS: Nor is it clear how closely tied property need be to the criminal enterprise before it can be confiscated. In Miami, two alleged chieftains of the "Black Tuna" gang—accused of smuggling 500 tons of marijuana into the U.S.—are arguing that the government has no right to seize a used-car business, three houses or a houseboat listed in the indictment.

Whatever its weaknesses, RICO gives government an effective threat against sophisticated crime. Justice officials, who must approve RICO prosecutions, insist they study every case carefully before proceeding. But they find white-collar criminals especially elusive. "The psychology of these business types is that they're not going to get caught, and if they are, they'll find a way around it," says New York lawyer Jerrey Ullman. At the least, for white-collar criminals as well as gangsters, RICO appears to be evening up the odds.

NEWSWEEK

"First of all," intones the speaker, "let me say that the United States is not a failure. I recognize that it's foolhardy to unilaterally disarm, but ..." So begins an upbeat, let's-look-at-the-record foreign-policy speech that could well be the kickoff of the 1980 primaries. The speaker, however, is not Jimmy Carter, Ted Kennedy or even Howard Baker, but a fresh political voice from the Midwest. The name? IBM-370.

The slick-tongued computer-orator is the brainchild of two communications professors who believe that getting elected to public office is becoming more a matter of manipulating campaign symbols than dealing with substance. To prove their thesis, they set out to program the IBM-370 to write the "perfect" foreign-policy speech—one guaranteed, that is, to appeal to the most and offend the fewest in any given audience. "We figured that if we did the proper market-type research and programed the computer to write a speech reflecting the findings, the speech would end up sounding pretty much like the genuine article churned out by a pack of poll-watching speechwriters," says John Cragan of Illinois State University.

DRAMA: To begin with, Cragan, 35, and partner Donald Shields, 34, of the University of Missouri-St. Louis, theorized that all a politician need do to get elected is recognize that voters generally subscribe to one of three "dramatic" views of the world, then play to the most widespread of the views. Set in a foreign-policy context, these three attitudes translated into cold-war, neo-isolationist and power-politics mind-sets. On the Panama Canal, for instance, the cold-war view held that the U.S. ought not to surrender the Canal Zone, the neo-isolationist view dictated that the U.S. get out of Panama and the power-politics view supported the negotiation of a new treaty to protect U.S. interests in the zone.

The professors picked twenty such issues to be covered by the speech. They culled newspapers and magazines for months, jotting down quotes that reflected all three positions on all twenty issues, then transferred the quotes onto 60 index cards. Finally, they went to—where else?—Peoria, Ill., to see how the opinions played. Sixty Peorians were asked to sort the cards in order of preference, from those most reflective of their views to those least reflective. Then the subjects rearranged the cards to show how important each issue was to them.

Jeff Lowenthal—Newsweek

Cragan and computer: 'My fellow Americans . . .'

1984-ISH: Cragan and Shields fed the results into the computer and instructed it to write a speech based on the most prevalent opinions, complete with adverbs and adjectives. They pushed a button and out came the hypothetical candidate's carefully considered opinion on how best to handle U.S. foreign policy—for Peorians. "The point," says Cragan, "is that you can take any idiot, parade him around the country for twelve months, and get him elected."

But the ultimate purpose behind this slightly 1984-ish project, say the two professors, is to force politicians out of the business of manipulating symbols and back into the business of governing. To that end, their IBM-370 is about to churn out perfect speeches on energy, foreign policy and domestic policy. "When we publish these speeches in 1980," says Cragan, "we hope it will spark enough controversy for someone to ask the candidates why their speeches sound so much like our computer's. Maybe that will get them to say what they really think for a change."

So far, that message hasn't got through. Instead of coming clean, six political aspirants, including a candidate in a gubernatorial primary and a mayoral contender, have already called on Cragan and Shields for a little help from their computer. All were turned down—and lost their races.

DIANE K. SHAH with RICHARD MANNING in Chicago

Flocks of holiday travelers won't be enough to get the major airlines on an uptrend.

AVIATION

A bleak new year for airline profits

A 2-ft. snowfall grounded planes in Denver on Christmas Eve, but elsewhere most airlines reported holiday traffic heavy enough to bring a moment of cheer to even the gloomiest executives. "I don't take much solace out of that," says Randall Malin, senior vice-president for marketing at USAir Inc. "It just means people who are working have a little more money and are still doing the traditional things. I see no change in the basic underlying problems."

Despite lower fuel bills, lower interest rates, and a slowing in labor-cost increases, 1982 is likely to be the third straight year of record losses for the 11 largest airlines, which lost $447 million on operations in 1981. What is more, total revenues are expected to drop for the first time in the industry's history.

'An insane probability.' The outlook for 1983 is not encouraging. "As empty as we're flying," says one airline president, "there's an insane probability of sharply increased capacity." Spurred by lower fuel prices, the increased availability of landing slots at large airports, and the major airlines' determination to hold market share against aggressive smaller competitors, carriers are expected to increase flights by nearly 10% in 1983. By adding more seats to planes, industry capacity, in available seat miles, could be up by 15% or more. Northwest Airlines, Frontier Airlines, United Airlines, and Delta Air Lines will be showing some of the heftiest increases.

Although Trans World Airlines Inc. says it is trying to exercise "capacity restraint," the restructuring of its route system is adding capacity at its St. Louis hub. Other airlines have been making similar moves to strengthen their operations, thus increasing the likelihood of an all-out war as carriers slash fares to bring connecting traffic to their hubs. Dallas' will become an especially bloody battleground next spring if PSA Inc. launches a proposed new venture in that city with 30 planes leased from failed Braniff International Corp. Industry sources also fear that the death throes of weak carriers could spark a repeat of the havoc caused when Braniff slashed fares systemwide in its final days.

Permanent discounts? With the economy recovering only in fits and starts, at best, overcapacity is already chronic. All those empty seats, as well as the cash squeeze at weaker airlines, have led to never-ending fare wars. More than 80% of tickets were sold at discounts averaging 53% in October, the latest month for which figures are available. Revenue per passenger mile was 5.7% lower than in October, 1981. "There'll be this kind of pricing so long as any carrier feels the need to look at things on a short-term basis because of its own situation," says Eva Davis Holman, vice-president at Donaldson, Lufkin & Jenrette Inc.

This year's traffic growth—4.7% in the first 11 months for the major carriers—came almost totally from deeply discounted prices. Travelers are becoming so accustomed to rock-bottom fares," says Julius Maldutis, a vice-president at Salomon Bros., that "we could find the industry establishing itself in a permanent discount structure."

Managements cling to the hope that prices will rise when demand revives, but even the staunchest believers are wavering. Says Morton Ehrlich, senior vice-president for planning at Eastern Air Lines Inc.: "There's something very compelling about very large red bracketed numbers quarter after quarter. I hope I turn out to be right in terms of a little bit of sanity coming back into the business. Unfortunately, logic isn't what brought us to this state." ■

INVESTMENTS

Can a racketeering law be applied to brokers?

Six investors in California, Nevada, and Virginia bought large amounts of Levitz Furniture Corp. stock on margin in 1981, allegedly on the recommendation of a Smith Barney, Harris Upham & Co. account executive who claimed he knew the furniture warehouse chain was a takeover target. But no takeover occurred, Levitz stock dropped precipitously, and the investors lost $2.6 million. Now the investors are about to file a joint complaint in Manhattan federal court against Smith Barney. Their stockholder suit will probably be the largest yet to attempt to wield a relatively old legal weapon—the Racketeering Influenced & Corrupt Organizations Act of 1970 (RICO)—in a new way. Under RICO's treble-damages allowance, the investor group will seek amounts totaling $65.8 million.

"Investing is not like playing blackjack," says Arthur M. Schwartzstein, a Washington lawyer representing four of the six plaintiffs. "If you feel you've been wronged, you don't have to swallow it. There may be avenues of recourse," including RICO.

Aimed at crime. Courts and lawyers remain divided over RICO, which outlaws the use of income received from a "pattern of racketeering" and was aimed at eradicating organized crime. But, says Peter H. Morrison, former chief of the fraud section of the U. S. attorney's office in Manhattan, the law's "reach extends considerably beyond that." Thus, while violations of securities laws are not usually viewed as racketeering, Congress defined the term to include "any offense involving . . . fraud in the sale of securities." And a pattern is defined as two violations of a number of laws, including securities laws, over 10 years.

To date, no court has upheld a claim against a broker under RICO. Future use of the racketeering statute may depend on the Smith Barney case, which is likely to wend its way to the Supreme Court. Smith Barney refused to comment until a complaint is filed.

Schwartzstein and other lawyers who believe RICO applies in securities fraud were heartened by a recent federal court ruling. It dismissed a claim by Shearson/American Express that Congress never intended the law to overlap with the antifraud provisions of the federal securities acts. Says Schwartzstein: "RICO gives David a little negotiating power with Goliath." ■

Life in Hiding

Frank Calimano came home from the Korean War to find his brother a heroin addict and vowed to get revenge from the mobsters who peddled dope. By the mid-'70s he was a successful heating and air-conditioning contractor in New York, where hoods as common as hammers in the construction trade. Calimano volunteered to feed information to local authorities. Eventually, he penetrated the Mafia's highest circles and became pals with the late gangland chief Carlo Gambino. In 1978 Calimano told his story to a Federal grand jury investigating labor racketeering. Then, to protect him and his family, the government placed the Calimanos in its Witness Security Program and sent them off to Houston with fresh identities.

Almost immediately, Calimano ran into trouble. Because he had no credit record, Calimano had difficulty starting a new business. Old friends recognized him on the street. And Federal prosecutors back in New York did not offer any further help. Calimano fell into a depression; last June he was found hanged in a hospital room, an apparent suicide. Says his widow, Vivian: "I don't want anyone to go into this program the way it is now. You can get better protection from the Mafia."

New York Post

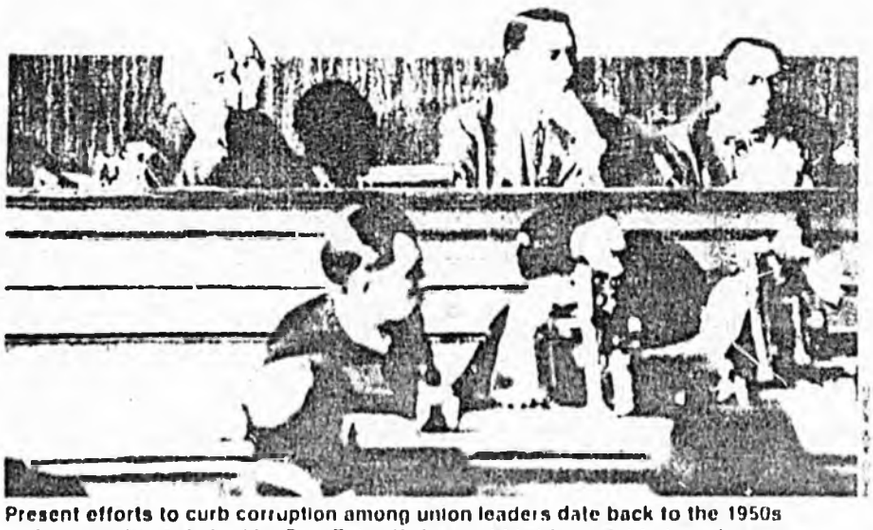
Cantalupo with a friend: A new start for his kids

Born-Again Lives: Calimano was a victim of what had seemed a good idea. The government believed that it owed something to witnesses who provided information about organized crime but feared retaliation from mobsters. It started its assistance in 1970 with "safe houses." When they proved inadequate, Federal authorities agreed in 1975 to do much more: they would move informants and their families to different communities and help them begin completely new lives. But the execution of the plan has always been flawed. At U.S. Senate hearings this month, a string of "protected witnesses," hidden behind a screen and guarded by Federal marshals, confirmed that their born-again lives have been filled with poorly delivered promises, erratic assistance and, sometimes, tragedy.

The program is unusual enough that other government agencies seem unable to cope with it. One thing a protected witness needs at once is a new social-security card so that he can get a job, but the Social Security Administration has been painfully slow in issuing new numbers or transferring old accounts. Fourteen states refuse to provide new birth certificates; some state officials contend that if a witness committed a fraud after they had given him the new identification, they might be held liable.

The U.S. marshals assigned to help the witnesses are often not properly trained for the job and their efforts can be sadly comic. One marshal booked a witness on an airplane under the name "T. Kennedy" and another gave a witness the alias "John Philip Sousa"—ploys guaranteed to attract unwanted and possibly deadly attention. Marshals have given away the new locations of their charges during casual courtroom conversations or in idle barroom chatter. In one Catch-22 incident, the marshal service refused to give a witness a copy of his own agreement with the government because it included his old name; another marshal told a veterinarian treating the man's dog that the animal was part of the Federal witness-protection program.

Most of the informants in the program are not innocent bystanders. They tend to be either former hoods who fell out of favor with their gangs or convicted felons who decided to trade information for better treatment. The reward that the authorities offer is a chance at a fresh start, at least for the informants' families. "I did not want my children to grow up in that environment, because they would have become a part of organized crime," says Joe Cantalupo, who has testified against his former mob colleagues in Brooklyn. But many of these crooks do not know how to live anywhere except in the underworld; they have few skills to sell in straight society.



Informants still in prison can pose special problems. Security in many Federal jails is poor, and protected witnesses suspect that other inmates often can get access to supposedly secret records disclosing their true identities. Fearful that some other prisoner may have a contract to kill them, they fight to stay in isolation. Several witnesses have sued the government to prevent their transfers into the general prison population. These prisoners are effectively cut off from their families as well: even these visits are considered a security risk and are usually limited.

Not Easy: The worst problems, however, occur when the government tries to help law-abiding citizens such as Calimano who have agreed to help the police. Only about 5 per cent of the witnesses fall into this category, but they have the most to lose. It is not easy for a business executive or an accountant to erase his history and start from scratch. Usually, the witness must sacrifice his career, his friends and, for a while at least, a comfortable standard of living. Vivian Calimano's problems continue. Her oldest son cannot establish a line of credit, and she has not received any social-security benefits because her husband's old account has not been transferred to his new number.

Yet no one wants to eliminate the program. "An efficient and effective Federal witness-security program is a vital tool in the fight against organized crime," says Sen. Sam Nunn, whose investigating committee conducted the recent hearings. Some steps have been taken to make the program more efficient. Witnesses now sign a 21-page memorandum of understanding that spells out what they can expect. Prosecutors must brief marshals before handing witnesses into their custody. One hundred and thirty marshals have been trained as "security specialists," and the remainder of the marshal corps is receiving instruction in how to cope with the witnesses' needs. More than 150 major companies now participate in a job pool for protected witnesses. The revamped program seems to be working for some. Still, says Howard Safir, chief of the marshals' protection operation: "Witnesses should only enter when there is no other alternative."

ARIC PRESS with ELAINE SHANNON in Washington

Bad News for Labor Racketeers . . .

Present efforts to curb corruption among union leaders date back to the 1950s and a committee chaired by Sen. Estes Kefauver (third from right at rear).

THE CHARACTERS change, but it is the same old story, and a disturbingly frequent one. It was recited again a few months ago. A Labor Department official told a Senate committee about the activities of a labor union official, this one a Floridian.

As president of one local, manager of another, president of a district labor council and trustee of a workers' benefit plan, he had access to union workers' funds and embezzled from six labor organizations. Although convicted, he remained in office pending appeals and siphoned off another $1 million.

Congress now seems determined to close off such opportunities. The vehicle is the Labor-Management Racketeering Act. Already passed unanimously by the Senate, it will be taken up this fall by the House Education and Labor Committee. The bill's sponsor, Sen. Sam Nunn (D-Ga.), says it is a signal to "organized crime and corrupt union leaders that Americans will no longer tolerate" criminal influence and activity in organized labor.

In effect, the bill would amend three existing acts—the Labor Management Reporting and Disclosure Act, the Labor-Management Relations Act and the Employment Retirement Income Security Act.

A key provision would provide stronger incentives for unions to purge criminal elements from their ranks. For example, it would be a felony instead of a misdemeanor for employers and unions to engage in payoffs or kickbacks and for a union or workers' benefit fund to hire or employ a convicted criminal.

In addition, the bill doubles to 10 years the period during which a criminal is disqualified from employment with such organizations after conviction or imprisonment.

The bill extends the disqualification to all positions with a union or benefit fund by eliminating the current exemption for "clerical" or "custodial" employes. Thus unions could no longer employ otherwise disqualified criminals as highly paid "clerks" or "custodians."

To prevent convicted criminals from continuing to work for unions or trust funds during lengthy appeals, the bill provides that disqualification for conviction begins on "the date of the judgment of the trial court," regardless of whether the judgment is appealed.

The bill would, however, protect the interests of an individual whose conviction is overturned. His salary would be placed in escrow upon his conviction. If the verdict is reversed, the individual is paid the accrued salary; if the verdict is upheld, the funds are restored to the union.

LABOR DEPARTMENT attitudes would be important to the success of such legislation. The department's role in investigating organized crime within unions in years past—specifically, its reluctance in some instances to initiate probes—has been criticized.

The bill therefore amends previous acts by assigning not merely the authority to investigate but also the responsibility

[illegible] proceedings," says Nunn, "[w]e [illegible] witnesses [illegible] during our hearings, testified that the Department of Labor [in the past] had failed to act against labor racketeering.

"And we heard from both federal prosecutors and the FBI that the Department of Labor had taken no role in the [government's] fight against criminal corruption on the New York/New Jersey waterfront."

That fight with the International Longshoremen's Association, dating back to the 1950s, was the genesis of the present bill. At the time the nation was shocked by revelations of massive kickbacks and payoffs to Longshoremen's union leaders uncovered by the Senate crime committee chaired by the late Sen. Estes Kefauver (D-Tenn.). The late Sen. John L. McClellan (D-Ark.) later made a stir as chairman of the Senate Permanent Subcommittee on Investigations when it exposed criminal activities by Teamsters union officials.

ACCORDING TO Sen. Don Nickles (R-Okla.), one of the cosponsors of the bill, the fact that corruption has existed within labor's ranks for so many years is due in part "to the enactment of laws that seem to encourage crime." The fact that a convicted union official has been able to remain in office until appeals are exhausted is one example.

"It is time that we change the course of this country's labor laws—time that the laws reflect the high standards Americans expect of us," Nickles says.

In a letter to Nickles, the Justice Department put its weight behind the bill. It wrote:

"Recent convictions involving labor-management corruption on the waterfront and in other industries have demonstrated the continuing need for strong federal legislation to deter the use of extortion, bribery and payments involving conflicts of interest among the parties to collective bargaining."

According to Sen. Warren B. Rudman (R-N.H.), a former attorney general in his state, "Larceny, sabotage and labor disruption have become so prevalent in some union areas that they are included as part of the cost of doing business."

Labor Secretary Raymond J. Donovan has assured the Senate Labor and

Sen. Sam Nunn (D-Ga.) believes that unions need the help of Congress to rid themselves of corruption.

. . . and good news for union members is a Senate-passed bill that awaits action in the House.

The Senate antiracketeering bill, says Sen. Don Nickles (R-Okla.), is a long-awaited change in the course of this country's labor laws.

Human Resources Committee that his department would do what was expected of it.

"Our department has an unwavering commitment to protect workers and benefit plan participants. We will use every tool presently available to us to safeguard the integrity of labor organizations and benefit plans . . . and we would welcome the additional tools that would be given by the proposed legislation."

The bill would require Donovan's department to investigate abuses of a criminal, not merely a civil, nature. This section of the bill has been opposed on the ground that it encroaches on the crime-fighting authority of other federal investigative and prosecuting agencies. To allay concerns, the bill says that nothing in it should be construed as precluding other agencies from conducting their own probes into both civil and criminal violations.

One aspect of the bill that is due for scrutiny by the House is the proposed immediate disqualification of union officers on conviction. Considering that punishment would be meted out before appeals have run their course, the proviso raises "troubling civil liberties issues," says AFL-CIO President Lane Kirkland.

Two other portions of the bill also concern Kirkland. One is a section referring to employer contributions to union-managed trust funds. Kirkland explains that a union official can make an honest error "that has nothing to do with under-the-table employer payment" and that he fears the section's misapplication.

Kirkland also contends that the 10-year disqualification from office could be too severe. "I can't persuade myself that all cases are alike," he says. He has suggested that trial judges be authorized instead to impose disqualification periods of not more than 10 years at the time of conviction.

DESPITE THESE reservations about the bill, Kirkland has endorsed it. His endorsement, he says, stems from organized labor's recognition that it "simply does not have the resources—the trained manpower, the subpoena, the grand jury, the authority to uncover and punish perjury, the due process trial procedures . . . and the effective sanctions to punish the guilty."

Understandably, Kirkland feels the bill puts the spotlight too harshly on union officials. "Unlike bankers, businessmen and politicians, union officers are judged according to their worst examples," he told the senators.

Nunn believes that the bill does not harass organized labor but provides the extra assistance needed for unions "to finally rid themselves" of corrupt officials. "The unions have labored to rid themselves of these people," the senator says, "but in many cases they have been unable to do so alone. I believe the unions need the help of Congress."

—Del Marto

Organized labor does not have "effective sanctions to punish the guilty" on its own, says AFL-CIO President Lane Kirkland

...pulling hard on one end of the rope. What the hell, what can I tell you," he calls. "The guys I killed were killers themselves."

In prison for extortion from 1954 to 1961, he came out finding little honor in his blood brothers. The family refused to turn the money he had left behind from his sharking and gambling operations, restricted by parole from living in Los Angeles, Frattianno moved to northern California. Combining the construction skills learned from his father, Teamsters contacts and a questionable San Francisco bank loan, he built a million-dollar trucking business in Sacramento. But by 1970 his money was gone, spent to pay debts, partner and fines levied by a state administration intent on separating bookmakers from state contracts.

Bosses: Frattianno, who had transferred his official allegiance to the Chicago family, was asked in the mid '70s by his L.A. colleagues to come back and help run their operations. The following years are the most important to government prosecutors. Frattianno mingled in the often impenetrable realm of crime bosses. He was friendly with Sam Giancana of Chicago. He met Santos Trafficante in Florida. He sat with Genovese family boss Frank Tieri in a back-room session at which the old man pointed thumbs down while saying "hit," giving the order to kill a family debtor. And he helped the Los Angeles family set up Frank Bompensiero, who was discovered to be an FBI informer.

What the family did not know was that by then Frattianno himself had begun selling information to the Feds, who tempted him with cash when he ended still another prison term in 1973. To the ever-hustling Weasel, the information seemed insignificant—another way of making some money. But the contact turned out to be life-saving. Some members of the Los Angeles family thought Frattianno was using his position as an acting boss to aggrandize himself—perhaps to lift his northern California operation into competition with the L.A. mob. Before long he discovered that a contract was out on his life. Since he was facing several new indictments for gambling and racketeering, it was not a difficult choice for him to graduate from part-time tipster to star informant.

Scalping: He testified first at the trial of ten men accused of fraudulently bankrupting the Westchester Premier Theater in Tarrytown, N.Y. As legitimate investors were losing money in the operation, Mafia members and associates were skimming the profits and scalping their own tickets for extra unrecorded income. One of the theater's stars was Frank Sinatra, who performed several concerts there and is now the subject of a New York Federal grand jury investigation for allegedly receiving $50,000 of the skimmed profits.

Now 67 and silver haired, Frattianno talks to exhaustion about his past. He cannot risk losing his security. In all his now regular court appearances, his credibility is attacked by defense attorneys who point to a well-documented history of lying under oath. Jimmy's response is that in the past he lied because he had to; now only the truth keeps him alive. There is profit in it, too: a book recounting his adventures will be published next month.* "Why should I get paid for writing about the things I've done?" he muses. "I see the point. But I don't want to make a million. I just want something in the bank, to leave something for my wife and kids. I think

AP

Long arrest: From shaved dice to murder

it's a service to the country, what I did."

The government agrees, up to a point, but that may no longer be good enough. Soon the testimony will be over, his official protection will end and Frattianno will live by his hit man's wits. In a Salt Lake City hotel room this fall, watched over by two Federal marshals, he bellowed over the telephone to a Justice Department official in Washington: "I wanta be someplace where there's no mad guys. Where you're taking me, there's a hundred." Then he hung up the phone and chewed stoically on a long Mexican cigar. "Nothin' bothers me. What do I give a damn? If it comes, it comes. I ain't gonna age myself on account of it."

* "The Last Mafioso: The Treacherous World of Jimmy Fratianno," By Ovid Demaris. Times Books.

its banks with their profits. La Nuestra Familia grew out of local Hispanics with a flair for organization thrown together in a California prison; now about 1,000 members work the West Coast. As sociologists Dwight C. Smith Jr. and Richard D. Alba have written, organized crime must be "recognized as a part of American society, nurtured and shaped by American circumstances, not simply as an alien, parasitic force."

After decades of books and movies, the gangster is more than a creature of the mean streets; he is a fixture in the American imagination. But his role and symbolic value keep changing, and with it the nation's perception of the underworld. In the 1931 movie "Little Caesar," Edward G. Robinson portrayed the paradigmatic mobster, Rico Bandello, an unredeemed hood who deserved killing. By 1954, the focus had shifted to the victim, exemplified by Marlon Brando's Terry Malloy, a broken-down pug left to work on the waterfront after his gangland brother forced him to throw a fight. "I coulda been a contenda," was Terry's complaint, if only the mob hadn't intervened. His recourse to strike back, first with testimony against a corrupt union boss, then with his fists in a triumphant climax where good whips evil on the docks. Only in the movies. Finally, there is the latter-day Brando as The Godfather, Vito Corleone, the gangster as hero, who makes people offers that they cannot refuse.

Warnings: The real-life mob hasn't forgotten how to persuade people. When Peter Salerno, a former Mafia thug who now testifies for the FBI, began his enforcement career, his principal job was simply to stand menacingly, with his broad shoulders and bulging biceps, while his superiors issued warnings to welshing numbers runners or other shaky operatives. Once, he says, during the construction of New York's World Trade Center, he saw a mobster threaten to shove a union foreman down an elevator shaft because the foreman was complaining about phony time cards being punched for nonworking mob members—a modest scam that netted the family $100,000 in one year.

Sometimes Salerno got more involved. "I've burned big warehouses so people can collect insurance," he says. "We shot up people's houses. I beat up a lot of people. I picked up money from restaurants and businesses that had to pay protection." But always Salerno managed to rationalize his activities—by reminding himself that his victims were bad guys, after all, and by insisting that his heart wasn't in it. "I did it because it was a job, but I got no enjoyment out of it," he claims. "I know one guy, he'd get great enjoyment. I've seen him hit a guy with a bat and put his arm on the curb and break it, then put his leg up and break that too."

To their surprise, however, police have

controlled a pile of union funds that he was willing to deposit, even in low interest accounts. All he wanted in return were personal, and usually unsecured, loans for himself, for relatives and for friends who couldn't pass a credit check that wasn't lined. Some bankers readily took the bait. Robert Prudan, who was then president of the Bank of Bloomfield, N.J., later testified that he would not have made the loans had it not been for the union deposits. Predictably, the loans soon turned sour. According to the Organized Crime Strike Force in Newark, the Bloomfield bank was out $389,000 in loans made through Palmeri when it collapsed; he was convicted of racketeering and is appealing. Two other New Jersey banks, the State Bank of Chatham and the Springfield State Bank, also folded, in part because of similar Teamster deals.

Bankers aren't the only people who prove that business schools grant degrees and not halos. In the case of the Magic Marker stock manipulation, for example, the president of the New Jersey pen company, the chief executive of a Philadelphia brokerage house, Delphi Capital Corp., and a stock promoter named Jack Silberger conspired to artificially pump up the company's stock. Yiddy Bloom, a longtime associate of Meyer Lansky, provided Silberger with more than $100,000 and helped arrange a bank loan for him; with this seed money, Silberger set up a command post in his Miami Beach apartment, with a bank of telephones and a WATS line, and began to make purchases in Magic Marker through different accounts at different brokerages in a dozen cities.

Bubble: Silberger quickly drove the price from $6.50 to $31 a share. He used a variety of techniques, bribing a stock-exchange professional for inside information, paying a $1 bonus to brokers for each share they bought for their clients, and giving $20,000 to a New York analyst to write a favorable article on the company. When the bubble finally burst, brokers tried to shore up the stock's price by making spot purchases, sometimes without notifying their clients. By then, of course, Bloom had sold out. Lawyers for the Organized Crime Strike Force in Philadelphia say that he pocketed a $50,000 profit. Scores of innocent investors lost perhaps as much as $30 million.

The mob also loves to operate, or at least get a piece of, a "bust-out," which is a scheme to defraud creditors. In the early '70s, Kenneth Weiner and some associates opened discount stores along the South Shore of Massachusetts that sold everything from clothing to calculators. The owners stocked the stores with merchandise

Joel Cowen—Camera 5

New York's Galante, hit in a cafe: The old must give way

[illegible] quickly [illegible] the [illegible] declared bankruptcy. Although the stores lasted eight months, neither the suppliers nor the cops caught on. But Raymond Patriarca Jr., son of the Patriarca crime family, did. He told Weiner that the family controlled stolen goods in New England and that fences would stop handling Weiner's trade unless he paid the family 10 per cent of the gross. Weiner agreed, crossing the murky line between rogue retailer and mobster partner. Then, fearing for his life, Weiner told his story to the FBI. Fourteen people were convicted of participating in the scam.

Waste: Some analysts see organized crime as a group of entrepreneurs taking advantage of opportunities as they arise. Nowhere does that seem more evident than in the toxic-waste industry. For decades, the mob has controlled private garbage hauling in many urban areas. And what is chemical waste but fancy trash?

When William Carracino ran the Chemical Control Corp. of Elizabeth, N.J., he held down costs by occasionally disposing of his lethal wares in a nearby dump. Although Chemical Control was in bankruptcy, Carracino claims that he refused help from the mob. But one day, Carracino recently told a New York crime committee, a reputed Tieri family member named John Albert came to his office and ordered him out. In the parking lot, Albert pushed Carracino against his car, pulled a gun and asked, "Do you want it now or later?" Carracino never went back to his office, and Albert took effective control of the company. Last April 60,000 55-gallon drums, stockpiled in Chemical Control's Elizabeth warehouse, exploded; it took firemen ten hours to control the blaze and only favorable winds kept the enormous clouds of toxic smoke from floating over New York City. In November a Federal grand jury indicted Albert and others for fraudulently assuring chemical firms that they would dispose of their wastes.

Philadelphia's Bruno, killed outside his home: Revenge was quick

Gerard C. Benone—Philadelphia Inquirer

The mob also makes money from cleaner, small-time crime. At the moment, police say, these are the favored new schemes:

- Minting phony credit cards, then running up false bills with a cooperating merchant who

JUSTICE

subsequently gets victimized by a bunco

- selling package complete with faked driver's licenses and matching checks waiting to be forged
- Running custom auto repair shops that install stereo equipment and burglar alarms. While the car is being advertised, copies of the keys are made and then passed to thieves who later steal the cars

While authorities may have some ideas about what the mob does, underworld income remains a mystery. Official guesses usually begin at $120 billion—about three-

the organized Mafia annual take with narcotics accounting for about one-third of the revenue. Those figures are dubious at best; gangsters don't keep careful ledgers and cops have been known to pyramid the figures. The FBI's Wattier admits he doesn't know how much money the underworld takes in. "I don't know," he says drily. "It's a large amount."

'Head Start': The money began to flow freely during Prohibition, when criminals organized to develop complex distribution networks for illegal whisky and to buy the required political and police protection. Ever since, law enforcement has always lagged behind the mob. "They've been in business almost since the turn of the cen-

here [illegible] special agents in charge of the FBI's Los Angeles field office. We don't subscribe to the position until the early '60s. They've got a big head start."

Some of the problem can be blamed on the government. For decades FBI director J. Edgar Hoover denied that organized crime existed. Federal statutes did not adequately address the special complexities of underworld crime. Law enforcement agencies jealously guarded their turf, refusing to share information—a condition that still occasionally prevails. Finally, in the '50s Sen. Estes Kefauver turned his investigating committee's spotlight on the national gambling syndicate. Six years later, Robert Kennedy, chief counsel to Sen. John L. McClellan's labor-racketeering investiga-

And Now, the 'Israeli Mafia'

Not long ago some men dropped by a store owned by a Jewish merchant on Fairfax Avenue in Los Angeles and strongly hinted that the businessman should pay them for protection. If he didn't, they suggested, his store and his merchandise might be damaged—or some harm might come to his family. The shopkeeper declined, and within 48 hours he received word that a grenade had exploded at his father's house. No one was hurt, but the merchant was convinced that the thugs meant business; his father lived in Tel Aviv.

It was a typical ploy of a group calling itself the "Israeli Mafia." A gang of ex-cons and former commandos who began as black marketeers in the Israeli seaside city of Bat Yam, they have migrated to America—some by lying on their immigration forms, others simply by entering as tourists and staying illegally—and have established a sophisticated crime ring that trades in extortion, insurance fraud, narcotics and murder. They have neither the breadth nor depth of the Cosa Nostra, they lack its hierarchical structure and the protection it gains from political corruption. But, says one investigator, "they've managed in five years what the Italians took 40 years to do."

From its start in shaking down Jewish merchants in Los Angeles, the Israeli Mafia quickly built its first big-money base: insurance fraud. Members are said to maintain a network of businesses in the Southwest. In a variation of what is known as a "bust-out," they establish a good credit rating for one of the businesses, report a mysterious fire or burglary and collect on insurance claims. Then the supposedly lost merchandise reappears in another store owned by another gang member. Though the scam has yielded millions to the gang, few insurance companies have challenged the claims because of the cost involved and the difficulty in proving fraud.

'Code of Silence': In the past year, the Israeli Mafia has channeled its energies into the even more profitable field of narcotics trafficking. "They supply half the cocaine in L.A.," one lawman says. Some gang members have contacts with known dealers in Israel and West Germany, and a series of murders has led authorities to tie the group to drug deals in Mexico City and Miami. The most recent killing was discovered in October 1979, when a drifter named Dan Van Meter, rummaging through trash bins outside a liquor store in Van Nuys, Calif., came across a plastic bag containing a woman's leg. Police soon found more parts of a young woman identified as Esther Ruven and of her husband, Eliahu. Charged with their murder are three men, Joseph Zakaria, Jehuda Avital and Eliahu Kometchetto, whom police link to the Israeli Mafia. Officials speculate that the Ruvens were cocaine dealers who fell into a dispute over a $70,000 payment; they were apparently lured to a meeting at the Bonaventure Hotel in Los Angeles, where they were hacked to bits with meat cleavers and knives and stuffed into bags and suitcases.

The savagery, savvy and cross-continental reach of the Israeli Mafia makes the gang increasingly worrisome to law-enforcement officials, who have had little success penetrating it. "Their code of silence is more rigidly enforced than the Italians'," complains one investigator. The government has deported some members, but no one believes those efforts are sufficient to shut down the gang. A federal grand jury looking into narcotics trafficking is expected to begin hearing testimony soon on the Israeli Mafia—a step toward the kind of painstaking investigation that will surely be needed to keep the gang from becoming even more like its namesake.

DENNIS A. WILLIAMS with ROSS LAIRD COLE in Los Angeles

Van Meter, police with the remains of Mrs. Ruven: 'Managing in five years what the Italians took 40 years to do'

how, exposed the rampant corruption in the Teamsters union. Then, as his brother's Attorney General, Kennedy stepped up the assault on organized crime.*

The Justice Department has now made organized crime a top priority. Federal laws have also strengthened its hand both in prosecuting individual mobsters and chasing down their assets. Special strike forces in 26 cities concentrate specifically on organized crime. They combine the resources of Justice lawyers, the FBI, the Drug Enforcement Administration, the Bureau of Alcohol, Tobacco and Firearms, the Department of Labor, and the Internal Revenue, the Customs and Postal services so that the bad guys do not manage to slip between the law-enforcement cracks.

Dirty-Movie Dealers: FBI director Webster has committed more than one-fifth of the bureau's money and manpower to fighting organized crime. The bureau now relies heavily on underworld informants such as Fratianno and undercover "sting" operations run by its own agents. Agents Pat Livingston and Bruce Ellavsky, for instance, spent two years and $400,000 posing as dirty-movie dealers. They traveled the country, having a drink in Las Vegas, buying films in Miami, attending movie conventions in Los Angeles, making contacts with the mob. "It puts law enforcement face to face with the criminals," says one top FBI agent. "They are so well insulated and so sophisticated that there is no other way to do it." The Livingston-Ellavsky sting led to the indictment of 47 alleged members of a national pornography network, many with strong links to mobsters.

The biggest haul by far came from an operation called Unirac, for union racketeering. Started in 1975, after a Miami shipper named Joseph Teitelbaum tired of paying off International Longshoremen's Association leaders and complained to the cops, the daring investigation turned up corruption on docks from New Orleans to New England. By 1980, 150 government agents had infiltrated the waterfront, developed informants and planted three dozen electronic bugs. So far, Unirac has produced 128 indictments and 110 convictions of union and waterfront-company officials. Among those found guilty of racketeering (their cases are now on appeal): Michael Clemente and Tino Fiumara, top members of New York's Genovese crime family who had effectively controlled crime in the port of New York; snazzy Anthony Scotto, president of ILA Local 1814 in Brooklyn, and a power in New York politics, who took his bribes in posh restaurants, and George Barone, president of Miami Local 1922, who investigators believe also served as a bagman for New York gangsters.

Unirac was unusual because it relied not just on undercover agents but on electronic surveillance devices. The bugging evidence often was sensational: one bug planted in Scotto's bleached bull desk recorded him complaining that the payoffs weren't coming in on schedule. Then, on tape, Scotto conceded his error. "I figured it wrong. I must have gotten screwed up when you did a double one at Christmas." As dramatic as such testimony may prove in court, the government no longer relies heavily on recording devices, simply because it is difficult to obtain a warrant to use them. Under a 1968 Federal law, an investigator must convince a judge in advance that a particular phone or room is being used for criminal purposes, and that there is no other way to obtain evidence. That's a simple standard to meet when pursuing bookmakers, but more difficult in complicated economic crimes. One compromise has been for agents to wear recording devices to meetings. This doesn't require a warrant, but if they are caught, they may be killed.

Cocaine (above) and toxic wastes: Two growth industries for the underworld

John Ficara—Newsweek

Seized Assets: Frustrated lawmen know that putting big-time mobsters in jail will not break up the underworld; when a gang's head is cut off, it merely grows a new one. To fight the entire apparatus, Congress passed in 1970 the Racketeer Influenced and Corrupt Organizations Act (called RICO, an apt echo of the character in "Little Caesar"). This law allows prosecutors to charge gangsters with the crime of running criminal enterprises and to seize assets illegally used or gained. Before RICO, "we had put a lot of people in jail, and some big people, but that's all we did," says Ed Sharp, FBI agent in charge of the Brooklyn-Queens field office. "Now, instead of going after individuals, we're attacking organizations. We've got to take

*At the same time, according to recent reports, the CIA was negotiating with Mafia hit men to arrange the assassination of Fidel Castro.

he assets . . . and get rid of the incentive."

Unfortunately RICO has promised more than the government has delivered. It has been a marvelous tool to obtain convictions—prosecutors can enthrall jurors with criminal histories and gangland ties—but getting the assets has proven far more difficult. For instance, in the ten years since RICO and a similar narcotics-forfeiture law were passed, only $675,000 has been forfeited in narcotics cases. "The Justice Department's record in attacking the financial foundations of organized crime has been very nearly nonexistent," says Sen. Joseph R. Biden Jr. of Delaware. "Indeed, I believe it is a major reason [that] illicit drug trafficking continues to flourish in this country." Other parts of the 1970 statutes also lie fallow. Federal prosecutors have seldom sought civil penalties under RICO or the long prison terms they may ask for under the companion Dangerous Special Offenders Act. "Ultimately this record is a failure of imagination and will," says Prof. G. Robert Blakey of the Notre Dame Law School, an authority on organized crime. "The law is there, but they haven't used it."

Turning Point: The government has, however, used RICO in a novel way this year in two significant cases against top mafiosi. It has contended that Mafia families themselves are "illegal enterprises." In one case, a jury convicted Frank Tieri, head of New York's Genovese crime family, of extortion and fraud—and of being a Mafia boss. In the other trial, Dominick Brooklier, Louis Tom Dragna, Samuel Sciortino, Jack Locicero and Michael Rizzitello of the Los Angeles gang were convicted on racketeering and conspiracy charges. The government has not moved to seize assets in either case—and if it did, it might never find any.

Well-placed Federal sources say that they are preparing another round of important cases. Grand-jury investigations aimed at mobsters are under way in Chicago, Detroit, Milwaukee, Kansas City, Philadelphia, Miami and Las Vegas. Significant labor-racketeering cases against officials of the Laborers' International Union in Florida, New England and Illinois are also expected to surface soon. And FBI agents are buzzing that another hot undercover sting is afoot.

The first big mob test for the Reagan Administration may not come in a courtroom at all, but in negotiations between the Internal Revenue Service and the Teamsters Union's Central States Pension Fund. The pension fund—with assets of $2.2 billion—has long been known as "the mob's bank," providing funds for casinos and speculative real-estate deals. In 1977, after the IRS threatened to lift the fund's tax exemption, the trustees resigned and outside managers were hired for five years. No one believes that all the mobsters have lost their influence—especially not under the lackluster Carter Labor Department—and what happens when the managers' contract expires in 1982 is unclear. But the Teamsters union hopes to have positioned itself to block new restrictions; it was one of two major unions to support Reagan.

FBI's Webster, Justice's Margolis: First get the gangsters, then their profits

Agents Ellavsky, Livingston in Las Vegas: Living face to face with the criminals

Handicap: Lawmen have few illusions about what their year of success means; they are in no danger of jailing all the mobsters and having to find other work. Some of the new strategies are obviously promising. Retiring Attorney General Civiletti, for example, favors industry-wide investigations, rather than the piecemeal headhunting of the past. But the government always starts with a handicap. "For all our talks about goals and strategies, law enforcement in a free society is primarily reactive," says David Margolis, chief of Justice's Organized Crime section. "No matter how effective we are, one kind of crime or another is not going to be stamped out."

Margolis is right; there is no quick fix for any sort of crime. The government could make a small dent, perhaps, by legalizing such "victimless crimes" as pornography or gambling. But there are obviously limits beyond which the statutory line cannot be nudged.

It has become conventional wisdom, in some circles, to look on the Mafia as something of a service industry: loan sharks serve people the banks won't touch; corrupt labor leaders serve "legitimate" bosses who don't want to negotiate with an honest union. Certainly there would be less business for the mob if there were fewer people in desperate want or more who could control their greed. But the new Mafia, like the old, is not about to be stamped out by a few social improvements, or anything else short of unforeseeable changes in the human animal. At this point, the criminals Americans love to fear have become the criminals they often do business with, the mobsters who won't disappear when the lights go up.

ARIC PRESS with ELAINE SHANNON, RON LaBRECQUE and bureau reports

A new ploy to fight takeovers

During the nine trading days between last Jan. 30 and Feb. 1, New York investor Carl C. Icahn and companies he controls purchased some 1 million shares of Marshall Field & Co. common stock. Together with stock of the Chicago retailer that it already owned, the sudden transactions boosted the Icahn group's holdings to 4.5 million shares, about 15% of total Field stock outstanding.

The company's reaction was predictable. It hired a law firm to fight the threat that Icahn would seek control and possibly liquidate the company to sell off its large real estate holdings.

But the legal claim was novel. Skadden, Arps, Slate, Meagher & Flom, the New York law firm well known for its corporate takeover department, charged Icahn and his group on Field's behalf with "racketeering," although there has never been any suggestion that Icahn or his companies are in any way affiliated with organized crime, the usual target of the racketeering laws.

The racketeering charge could deter investors from making hostile tender offers

Cynical judges. The legal claim was based on an interpretation of the federal Racketeering Influenced & Corrupt Organizations Act of 1970 (RICO) that has caused considerable comment within corporate legal circles in the past year. Some lawyers believe that the racketeering charge, which causes legitimate businesses considerable embarrassment and may work to deter professional investors from making hostile tender offers, could become more common in the coming months.

RICO outlaws the use of income received from a "pattern of racketeering" to acquire a business. A pattern of racketeering is defined, in turn, as any two violations of a number of different laws, including the securities laws, during a 10-year period.

Citing a consent decree that Icahn had just signed with the Securities & Exchange Commission in connection with his acquisition of Hammermill Paper Co. shares, as well as other Icahn activities that had been drawn into question by federal and state agencies, Field insisted that the allegations, if proved, amounted to a pattern of racketeering.

Although RICO has been the law for 12 years, it has surfaced in civil suits only during the past year or so. The reasons given by securities lawyers who refuse to be quoted by name, are twofold. One is that federal judges, especially those on the U. S. District Court in Manhattan that hears a large percentage of the nation's takeover cases, are becoming increasingly cynical about the usual claims made by a target company's lawyers. The judges view many cases as legally unjustified attempts by entrenched management to fight off an acquisition justifiable on business or financial grounds.

The second reason is that in 1977 the Supreme Court threw doubt on the right of a target company to sue for fraud under the securities laws. By law, whoever acquires more than 5% of a company's stock must submit to the SEC in a Schedule 13D a statement of his intentions. Defense lawyers have traditionally alleged that the 13D filing is false or misleading because the acquirer did not disclose his true purposes. But now "the courts are divided over whether a target company has standing to sue," says Martin Lipton, a New York takeover lawyer not connected to the Field case. Under RICO, however, a target company has the explicit right to sue.

In his Schedule 13D, Icahn denied that he and his group had formed any plans to liquidate Field, sell off its assets, merge it with another company, or make any other major change in its corporate structure. The claim was greeted with some skepticism. Since 1975, Icahn had purchased large positions in a number of companies and gained a reputation of seeking control, merger, and sale of assets. Often he ultimately sold the shares back to the companies at a considerable profit.

Severe sanctions. On Feb. 8, Field sued Icahn in Manhattan federal court, charging that he had failed to disclose a plan to acquire 35% of the stock, seize control, and engage in "extraordinary corporate transactions." At the same time, Field laid the groundwork for its racketeering charge.

Beyond the publicity value, a racketeering charge can be worrisome because of the severe sanctions open to judges to impose. RICO allows treble damages, attorneys' fees, and an injunction that theoretically could prevent an investor from attempting future takeovers for a period as long as 10 years.

In the Field case, Skadden Arps attorneys persuaded District Judge Pierre N. Leval to issue a temporary restraining order while Icahn made fuller disclosure of his plans, giving Field 10 days to set up a "white knight" to counter Icahn's acquisition bid. Icahn cured the defects. Judge Leval lifted the restraining order, and Icahn continued to buy, ultimately acquiring some 30% of Field shares. Within three weeks, however, Field arranged through Goldman, Sachs & Co. a merger with BATUS Inc. at $60 per share. It is expected to be completed this summer.

Vulnerability. Litigation between Icahn and Field was dropped on Mar. 30, before Judge Leval could rule on the racketeering charges. Had the suit continued, however, Field's lawyers would likely have pressed for documents from Icahn that might have proved their racketeering claims. Under RICO, it is unnecessary to show a conviction, only that the alleged violations of law actually occurred. Most of what was discovered during the two months of litigation was sealed by agreement of the parties, who will not comment publicly on the case.

Lawyers may paint investors as racketeers

Some corporate lawyers privately condemn the use of RICO in takeover suits as "sewer tactics," "just a diversionary tactic," and "silly." But many agree that the fear of being labeled a racketeer could influence future takeover strategy. And, says one, "those especially vulnerable are professional investors, like Icahn, with a track record."

Whether RICO charges will catch on remains to be seen, but a few attorneys think that their use in the Field case was an important psychological turning point. Says one well-regarded takeover lawyer: "I don't think the racketeering charge is of any moment, but don't quote me because I may have to use it in a case tomorrow." ■

House of Representatives

John J. Liska

May 11, 1984

M E M O R A N D U M

TO: Rep. Bussell, Chairman - House Judiciary Committee

FROM: Rep. John J. Liska

SUBJECT: HB 631, "An Act relating to runaway children."

The purpose of this bill is three fold.

a. Section 1 - is an attempt to require by law a minor to be accountable to either parents at home or a guardian at a foster home or be placed in an appropriate institution.

Presently, if a minor runs away from home, and he is not breaking any laws, he is free to do as he wishes. The intention behind our bill is - The child does not have the maturity to exist in todays society without becoming a subject of prey for a variety of undesirable types of people. If you will refer to item D, Article number 1 - in your packet, it clearly describes what happens to these run away children.

While it is not the intention to violate the rights of any child, we feel it is the responsibility of either the parents or the State to be in control of the minor because at this stage in their life they are not mature enough to be able to function in society on their own.

And the last section of the bill states that a peace officer shall make a reasonable effort to locate a minor who is evading his guardian. Presently the police can, if they want to but they don't have to, try to locate a run away child.

Additionally, it is essential in my opinion that these children not be allowed to remain on the streets, even for a couple of days or long enough to decide at a court hearing whether or not they are to be picked up.

I refer to item D, Article number 2, the longer they are on the streets the more likely they will become involved in situations that will have a life long effect on them. We feel they are incapable of protecting themselves from this involvement and therefor it is the states responsibility to protect them.

In your packet you will find the following for your information:

A. Copy of HB 631 and committee substitute.

B. Memorandum from Jos Mapranath, Director-Division of Administrative Services, Department of Public Safety.

C. Article regarding runaway children.

1. From USA Today March 1979, Life in America, "The Adolescent Runaway: A national Problem"

2. Newsweek Oct. 18, 1982, Life/Style, "A Nation of Runaway Kids"

3. "A second look at the National Program for Runaway and Homeless Youth." By Caroline Croft and Mary Jolly.

MEMORANDUM State of Alaska

JAN 11 1984

TO: Jay Hogan, Associate Director
Division of Budget Review
Office of Management and Budget
Office of the Governor

DATE: January 6, 1984

FILE NO:

TELEPHONE NO: 465-4322

FROM: Jos Mapranath, Director
Division of Administrative Services
Department of Public Safety

SUBJECT: Criminally Exploited Children

We have reviewed the materials submitted on criminally exploited children in Alaska and wish to express our support for the formation of a special law enforcement unit in Anchorage to deal with this serious problem. The unit would be a joint State and local cooperative effort similar to the successful Anchorage Metro Drug Unit. The cost is estimated at $375.0 for FY 85 and would include one Anchorage P.D. Sergeant, one Anchorage Police Officer, one Anchorage clerical position, and one State Trooper Sergeant.

While we recognize the seriousness of criminal exploitation of children and that this is a growing problem, it is not feasible at this time for either the Anchorage Police Department or the Division of Alaska State Troopers to divert limited existing resources to form the proposed special unit. We would, however, be pleased to participate in such an effort if funding is provided. Therefore, I urge your support of an appropriation in the amount of $375.0 to fund a special investigative unit on criminally exploited children.

Further details are available upon request. Your consideration of the requested appropriation to deal with this problem is appreciated.

FROM: LAW ENFORCEMENT OFFICER KNOWLEDGABLE IN THE FIELD OF CHILD EXPLOITATION. OFFICERS NAME DELETED AS A POLICY OF THE ANCHORAGE POLICE DEPARTMENT

DATE: October 20, 1981

SUBJECT: Criminal Activities of Juveniles in Anchorage

The purpose of this brief letter is to state my opinion of the status of current criminal activity involving juveniles in the Anchorage area. As you know I have been a police officer for the past five plus years in the Anchorage area and have worked for two different periods as a counselor at McLaughlin Youth Center. What I am stating here is strictly my opinion and does not represent in any way the viewpoint of my employer, the Anchorage Police Department.

During recent years Anchorage, as well as other communities within the State of Alaska, has experienced a tremendous increase in the level and depth of juvenile criminal activity. I believe that this is in part due to the tremendous growth that this community and this State have experienced in recent years and also because of the ineffectiveness of the criminal justice system to deal with the problem. My opinion of the current status of this activity has developed because of my involvement with juveniles in the community and as a result of my involvement in numerous investigations dealing with some of these problems.

What has developed in this community, as is characteristic of other communities in other States, is a network of criminal activity of which juveniles play a substantial part. This has developed to the extent that many of our young persons so exposed actually are a part of a sub-culture existing in the same space but at different times within the mainstream of our society. This subculture has a set of values and morals that are substantially different than those of the mainbody of our society and paramount within this set of values is the belief that youth equates to victimization. When a young person in our community is, for a variety and combination of reasons, forced out of the home environment and onto the "streets" (so to speak), he is subjected to an elaborate system of victimization on the part of adults within the community who, in essence, use youth to their advantage in the perpetuation of their criminal activities and personal desires.

A young person finding himself/herself within this position is necessarily forced to first, survive. In order to do this, the youth must engage in activities which an adult can support. These activities extend from theft to drug usage/sales and prostitution. Adults involved in these activities will promote the involvement of juveniles to the advantage of the adult while at the same time providing for the juvenile, as a minimum, the basic needs of food, clothing and shelter needed by the juvenile to survive. Juveniles within this community are extensively involved in theft, drugs and prostitution and these activities are promoted and supported by adults within the community. The extent of the

problem is largely unseen, even by many persons within the criminal justice system who deal with these juveniles daily as a part of their jobs, because the juvenile does not often talk about depth of involvement to anyone, other than his/her peer group and in some cases, not even to them. The system tends to look at each individual act by itself, failing to realize that there is a much greater problem, individually and collectively, lurking below the surface of the individual act.

As an example of what I have previously stated, I would estimate that about 50% of all the boys admitted to McLaughlin Youth Center have had some contact with adults of a homosexual nature. I would further estimate that in excess of 25% of these have had what could be termed deep involvement with more than one adult. Often, this kind of activity, develops in relation to other types of activity including the adult using the juvenile for drug sales and to provide merchandise for fencing operations of small and large scale. It is not surprising then, that when the juvenile so involved is picked up for a property crime or drug related offense, the depth of his involvement is never revealed to those professionals within the system that later deal with him.

Any juvenile who, for whatever reasons, spends more than a short amount of time living away from a home and on the "streets" will become involved to a greater or lesser degree in the kind of activity I have just described. Since the adult(s) involved use the juvenile for their purposes, the normal role of adult guidance in the maturing process is severely distorted which in turn perpetuates the problem as the juvenile grows older and changes from being the victim to the user. Over a period of time of involvement in these kinds of activities the youth gradually begins to believe that the only thing that will change his being used to another's advantage is age and that when that age is attained the role can be reversed.

It is virtually impossible for a young person to survive away from home without becoming involved in these kinds of activities because of the inability of a young person to legitimately obtain the basic necessities of food, clothing and shelter necessary for survival. It is further, virtually impossible, for that young person to steal enough through burglary, robbery or theft to attain these necessities. As such, the young person in that position, must turn to other more profitable activities. These activities involve drugs and prostitution. The problem is further compounded, in most cases, because of th emotional problems that the youth is experiencing as the result of his necessity to leave the home or to replace the home needs with persons met outside the home and his resultant turn towards drug useage. Drugs are expensive and not within the reach of the average young person through legitimate earnings. Adults desiring use of juveniles for sexual purposes are well aware of the juvenile's problems and will frequently provide, either the basic needs of survival, or drugs or both in return for sexual favors. In many cases, the juvenile can provide sexual favors for a much higher than could be obtained through other types of criminal activity. Adults desiring these kind of favors are very perceptive in being able to identify those juveniles that are in a position to which they would be susceptable to such propositions.

All this exists on a large scale in the Anchorage area. The extent of this existence increases steadily because of the inability of the Criminal Justice System and the community to control it. I would estimate that the extent of the

problem in Anchorage is proportionately greater than it is in other comparable communities in the United States, again for a variety of reasons. It is common knowledge that large scale fencing operations exist within the Anchorage area as is evidenced by the very small percentage of stolen property that is recovered and the relatively high frequency of recovery of stolen property from Alaska in other states. The extent of drug sales operations and drug useage amongst juveniles in the Anchorage area, again, is particularly high to the extent that it is virtually impossible for any young person not to be exposed to drugs, and not just marijuana, beginning in junior high school. The extent of juvenile prostitution activities, particularly as it involves males, is also extremely high in the Anchorage area to the degree that virtually all juveniles living out of the home are exposed and many still living at home are exposed.

There exists, in Anchorage, houses where juveniles on the run can find temporary shelter. These houses are provided either directly or indirectly by an adult. Unfortunately, there are strings attached to the use of the house by the juvenile. There have been commercial pornography operations involving sexual involvement of juveniles in the most perverted kinds of sexual activity operating in the Anchorage area. These operations have been directed by organizations from without the State of Alaska. There have been commercial prostitution operations within the Anchorage area in which juveniles were the merchandise and in which the fees paid were extremely high. There have been large scale drug operations in which juveniles, many of them going to school and living at home, were involved as the primary pushers. There have been large scale fencing operations in the Anchorage area in which merchandise stolen by juveniles was fenced by adults to create huge profits.

The depth of this whole problem is really seen when one realizes what becomes of the juvenile that is involved in these kinds of activities. All young persons growing up need adult guidance and emotional support in order that a moral and value system can develop. If the child receives, for this need, guidance and "emotional support" from persons that only wish to use him, it is understandable how we are developing a subculture of increasing size within the mainstream of our primary culture, in which the value system is as foreign as one would be from a far Eastern country. The use of youth for personal gain is as foreign to the basis of our culture as is the crime of murder and yet we are allowing this to exist, and to in fact grow, within the Anchorage area to a massive degree. Much of this problem is a criminal problem and must be solved through enforcement means. To this end we are sorely lacking.

LIFE IN AMERICA

The Adolescent Runaway:

A NATIONAL PROBLEM

"No one seems willing to accept clear responsibility for the thousands of children over 15 who stand outside the jurisdiction of family courts, criminal courts, and, in large part, the child welfare system."

by Bruce Ritter, O.F.M.

OVER a decade ago I became involved almost against my will with one of the major problems of any large metropolitan area when 10 runaway children from the ages of 14-17 sought my help, asking to sleep on the floor of my apartment in the East Village of New York City. I was exercising at that time a ministry of service to the poor. These particular 10 children had been sexually abused by some junkies in the neighborhood had been burned out of the abandoned building in which they were living and before that had been forced to make a pornographic movie in order to pay for their room and board.

Because I could not find any place for them in the child welfare system I kept them — they simply moved into my apartment. So many hundreds of homeless young people began knocking on my door that I and my friends were forced to begin a new child care agency. Since that time, over 10 years ago, Covenant House has sheltered many thousands of runaway and self-emancipated kids, returning many to their homes and keeping many for long-term care. Hundreds upon hundreds were victims of child abuse.

Many people are unaware of the enormous dimensions of the problem of runaways and homeless children in our society — of what can happen to them. Over 1,000,000 juveniles run away every year in this country. According to a New York City Police estimate, there are at least 20,000 runaways under 16 in New York City at any one time. If you add to that number the many thousands of *self-emancipated* youngsters between the ages of 16-18 and even the greater number between 19 and 21, the numbers of children on the streets are staggering.

These numbers are not just pulled out of a rhetorical hat. In the first year after the Covenant House crisis center, Under Twenty One, was opened (April 1, 1977), well over 4,000 children have sought out help, over 500 of them were 15 and under, another 900 were between 16 and 17, and over 1,500 between 18 and 20. Covenant House expects to serve about 5,000 walk-in children under 18 at its Eighth Avenue center this year who should not be on the streets, but for whom no effective programs exist. As a result, these children are frequently subjected to the grossest kind of abuse. Almost 2,000 children under the age of 21 have come to Under Twenty One for help during 1978.

A question of responsibility

The very complex issues raised by these thousands of homeless young people cross a dozen different jurisdictions: states' rights, parents' rights, children's rights, family and criminal court questions, the nature of the child care system, etc. The thinking and practice regarding the rights of juveniles has been evolving so quickly over the past 10 years that legislators have had great difficulty keeping up with the changing status of juveniles in our country. The ambiguity and confusion and differences in statutes between one state and another and within the same state make it almost impossible on occasion to resolve the legal status of a runaway or homeless child. Until recently, the problem of runaways was always considered essentially a police matter. The juveniles were to be found and returned home. Yet, an overburdened New York City police force can not begin to cope with the huge numbers (there is a seven man unit assigned for that purpose) and the police do not have any jurisdiction over children 16 and older.

Father Bruce Ritter is the Executive Director of Covenant House and Under Twenty One, a child care agency in New York City that specializes in caring for runaway and homeless children and infants with drug addiction.

...problem is especially acute for ...16 and over since the law simultaneously permits a child of 16 to ...separate himself and then effectively ...disenfranchises that child. For the most ...a child can not get the medical ...he or she needs, can not easily ...ply for public assistance, can not ...into contracts, and can not find a ...eat job. Children are free to wander ...streets, panhandling, exploiting, ...being exploited. LIFE/STYLE

A Nation of Runaway Kids

Louis L.'s homelife has long been no better than many a street bounced among a drug addict mother, an indifferent father and a savage stepmother who repeatedly bit the 15-year-old boy and tried to choke him to death. Nevertheless, Louis is a most reluctant runaway. His macho mask crumples as he sits in a cheerful Houston shelter—somewhat incongruously called Family Connection—and speaks softly of those he still loves. "I didn't want to leave her, but she said to get out and don't come back," he quavers, near tears whenever he mentions the mother who finally pushed him aside. Then, as other teen-agers return within earshot, Louis recoups his cool. "I learned the hard way," he says. "Ain't nobody going to do nothing for me but myself."

A new generation of American youngsters is on the run—often at a desperate pace. They resemble less their romantic predecessors, from Huck Finn to the flower children, than refugees fleeing the wreckage of their families. Many are more truly castaways than runaways, forced from their homes by neglect, abuse or abandonment. "These kids are running *from* something, not *to* something," says Russell Frank, director of The Runaway Place, a Boston shelter. As many as 50 percent may be fleeing physical abuse, including sexual assaults. A growing number are economic refugees, evicted by jobless parents who can no longer support them. "This is one of the first times we've seen people voluntarily bringing their kids in," says Carol Frank of the Child Welfare League. "It's a dust-bowl kind of thing."

Others, without being told to leave home, may be driven out by violent arguments, drinking bouts, and other recession-related strains in the family. "A 14-year-old can't understand fully that his father may be depressed over losing his job," says Washington social worker Robbie Callaway. "As economic conditions get tougher, more and more kids are going to be out on the street."

'Meat Rack': The thoroughfares they travel include the likes of the infamous Minnesota strip located near Times Square—so named for the many blond nymphets from out of town who sell themselves there—and the "meat rack" on Hollywood's Santa Monica Boulevard where boy hookers are on display. Too young to work legally, a significant number support themselves by stealing, drug dealing or peddling sex. Like apprentice derelicts they huddle in abandoned buildings, on park benches or in the warm breeze from subway gratings. Many runaway kids display a pathetic ingenuity, fearful of pimps and muggers as well as policemen; one Philadelphia youth burned himself to his chin every night in a playground sandbox. But for most of the young nomads, there may be no place to hide: some 500,000 runaways simply disappeared last year.

There's no telling where they went, since the United States does not keep computerized track of missing children as it does missing cars. By the most conservative estimates, however, each year more than 1 million kids between 10 and 17 leave home. Until 1974 the government's main helping hand was an arrest for juvenile delinquency. Then Congress—disturbed by reports of deaths and maltreatment in jails, reform schools and other institutions—passed the Runaway and Homeless Youth Act, to establish federally funded telephone hot lines and temporary teen-age shelters. But the 166 shelters—with their hopeful names like Halcyon House or Stepping Stone—serve only 45,000 kids in a year, roughly 5 percent of the runaway population, for a maximum stay of between two weeks and 30 days—and proposed Federal budget cutbacks threaten to cramp the space still more.

Way station: Seeking aid at New York bus terminal

Fortunately for their survival, odds are most runaways are relatively found. According to juvenile welfare experts, most flee no further than a relative or friend, and 90 percent return home within 48 hours. The remainder, however, seem singularly ill-equipped for even a temporary life on the loose. A recent report from the U.S. Department of Health and Human Services, based on shelter admissions, indicates the average runaway is 15. That's a dramatic one-year drop from the 1976 average—and kids as young as nine are now turning up with alarming regularity. Most of the kids are white (70 percent) and female (56.7 percent, although the gap is closing). Forty percent are school dropouts, many of whom can barely read and have minimal self-esteem. They are scarcely a cadre of hardened criminals. HHS estimates that 68 percent have never been in any kind of trouble with the authorities before they run.

'Flirters': Left to their own devices, kids develop a distinctive subculture. Turf is scrupulously observed around Boston's male prostitute area—spots like the bus terminal, while females work the notorious Combat Zone. Hard-core street kids are supposed to congregate on Boston Common, where the leader-of-the-pack trophy is "Burt's" initials hanging out in Harvard Square. Some runaways try to preserve the communality of the bus-station pad, where one kid's score is split among many, with food and money for a communal meal. Others, hoping to avoid splitting the windfall on wine, dope and food. In one northeast suburb of Philadelphia, teen transients even built their own haven in the woods with lumber stolen from construction sites, complete with escape tunnels. Survival lessons are willingly shared, to score a free restaurant meal with a minimum of fuss (a gambit sometimes known as "chew and screw"): leave the waitress a tip before you walk out without paying the check.

Time seems to be the greatest divider, determining which runaways can be salvaged. "If a kid has lived in the street for a month or so, it becomes very hard to reach him," says Father Bruce Ritter, founder of New York City's Covenant House for runaway youths. "If it's been six months, we've almost lost him, and if it's a year, he's gone. The poison works very, very quickly." In many cases, it takes only two days; beyond the 48-hour mark, one in 10 teen-agers is likely to become a prostitute. Incoming naifs are quickly spotted at such entry points as New York's Port Authority Bus Terminal by pimps or their scouts, sometimes called catchers. Blue-jeaned Marcia R., 13, remembers that she was barely off the bus from Ohio before a "man in one of those hats" approached her. He was headed off by a man and woman, two self-professed "good Samari-

Do you know someone with ALS? (Lou Gehrig's disease)

If you do, then you know how devastating ALS can be. But, you may not know that throughout the country, friends and relatives of ALS patients are doing something about ALS by setting up Local Chapters of the National ALS Foundation.

Local Chapters are resource centers—places where ALS patients and their families can find out what services are available. They can get together for rap sessions, to share and ease the burden of ALS, and to find out that they are not alone.

Local Chapters can generate public awareness—raise money for the all important research—and bring us one step closer to finding a cure for ALS.

To learn how you can help set up a Local Chapter and to be part of a growing, nationwide organization that's doing something about ALS, contact the National ALS Foundation, 185 Madison Avenue, New York, NY 10016, or call (212) 679-4016.

Back home: Darcy Reeves (front) with mother and sister

tans" who offered to take her to their house. The Port Authority police were also converging on her and won the contest: she was soon on a plane headed home. "You soon find out that all those 'good people' who want to 'help you' want something in return," says a Philadelphia 16-year-old who was not so lucky—and is now pregnant by her newfound "friend."

Pimps: Hustlers operate in a netherworld all their own. In Hollywood, for instance, there's a wage scale of sorts. Attractive new arrivals can earn top dollar ($250 or so, on up) from the homosexual "chicken hawks" who cruise Santa Monica Boulevard in search of young boys. "Everyone knows the regulars, so when they see a new face, they have to try you," explains one young denizen. "After they get to know you, though, you have to do more and more to earn your money." Times can be even tougher for girls, who usually have pimps to support, and staying straight is often well-nigh impossible. L.A. police detective Larry Broadhurst still shudders over one young victim from two years ago. "She was a real good-looking blond girl," he recalls. "A pimp approached her to work for him, and she refused. Told him she didn't want to have anything to do with his business." The pimp didn't give up; he followed her and pounded on her motel door. "When she opened it, this guy just stuck a knife right through her head."

Authorities are trying to provide more effective refuge. In Boston, the vans from Bridge Over Troubled Waters roll right up to the kids on the streets, offering dentists, doctors and drug therapy. At many shelters the rules are stricter than those at the homes the kids have left: at Houston's Family Connection, residents must rise at 8:30 a.m., cook all their own meals, clean their rooms and request permission to stay out after 5:30. Generally, the shelters' goal is to identify family problems, begin counseling and return the runaways—except to parents who abuse them. The success rate runs anywhere from 50 to 70 percent. "We desperately need more places like this," says Sandra Reeves of Houston, whose 15-year-old daughter, Darcy, has run away three times, only to be reunited through family counseling. "Please tell mothers and fathers that their children *can* come home."

To help those children who resolutely won't—or can't—go home again, states and municipalities have also been changing their juvenile laws. At least 40 states now allow courts to "emancipate" minors, so that they may hold jobs and apartments on their own; in Connecticut, a 16-year-old can effectively "divorce" abusive parents and be treated as an adult. Some law-enforcement officials are less than enthusiastic about the liberalization trend, claiming they're now unable to step in and aid troubled runaways. But some frustrated parents are saying "good riddance" to incorrigible adolescents. Toughlove, the Pennsylvania-based parents organization, suggests families lock the doors behind difficult runaways until they promise to change—while providing them with a list of other Toughlovers who will act as caretakers. In several states, wits-end parents can also ask the courts to designate perennial troublemakers "persons in need of supervision"; they can then be picked up for running away, and a judge can impose psychiatric care or other treatment.

Rebels: To be sure, not every vagabond child can be classified as either innocent or incorrigible. Some classic rebels without cause still take off from pure pique or boredom. Beth, 16, showed up at a shelter in Prince Georges County, Md., claiming she had been maltreated by her mother, the "abuse" turned out to be a failure to provide designer jeans. But many experts say such cases represent a declining minority. "There *is* the child who is just 'too big' for his britches," concedes Alice O'Shea, chief of the child-advocate unit in Philadelphia's Office of the Public Defender. "But they are the minority." Experts say only 10 percent of runaways qualify as "spoiled brats."

facilities won't be able to handle an influx of teen agers who jump, or are pushed out on their own. Financing for shelters is precarious, although Congress authorized more than $20 million, the administration proposed only $6.6 million in the current budget. Several senators managed to boost the figure to $18 million. Even that amount would provide less than $18 per runaway — and the budget battle must be fought again when the current funding expires Dec. 15. "The private sector cannot and will not pick this program up," says Rep. Pat Williams of Montana. "This is a bedpan program, the kind that no one wants to get involved in, and that is why the Feds got into it in the first place."

Ultimate Rejection: Yet even if sufficient money could be found to put counselors on every street corner, more fundamental questions would remain. One's own home is, after all, supposed to be the place where they have to take you in, no matter what. Being forced to leave it can be the ultimate rejection. Sister Dolores Gattanutti of New York's Noah's Ark shelter deplores "the Kleenex mentality" that brings most young charges to her door. "We live in a society where we use things and just throw them away," she says. "I swear, a lot of people have this attitude toward kids." And so the throwaway children pile up, from New York to California, lob, exploited and brutalized. Sooner or later, those who cast them off must realize that children are not so easily disposable. The longer they remain on the streets, the less chance they can ever be reclaimed — and the more they will cost everyone.

A Second Look at the National Program for Runaway and Homeless Youth

By Caroline J. Croft and Mary K. Jolly

Introduction

Before legislative action by Congress and the President in 1974, it had been estimated that more than a million youth a year left their homes without parental permission — a finding later corroborated by *The National Statistical Survey of Runaway Youth*, completed in 1976 by the Department of Health, Education and Welfare (HEW) under a Congressional mandate.[1] The 1976 study revealed that as many as 1.3 million juveniles ran from their own or foster homes each year, with 773,000 of these juveniles remaining at large overnight. This was creating a substantial law enforcement problem for the inundated communities and significantly endangering the runaway youth on the streets who were exposed to criminal, physical, sexual and drug abuse and exploitation. The tragedy in Houston which cost the lives of 28 children, all reported missing from home, aggravated the problem and heightened the concern of federal, state and local government leaders as well as private sector youth advocacy agencies.

In response to the growth and pervasiveness of the runaway problem, the Runaway Youth Act was signed into law by President Gerald R. Ford. Also known as Title III of the larger Juvenile Justice and Delinquency Prevention Act of 1974, the Runaway Youth Act enabled HEW to establish a national program for the care of runaway youth. That law authorized the HEW secretary to award grants-in-aid to eligible agencies seeking to establish or to continue operating shelters for runaway youth.

This article details the salient aspects of the National Runaway Youth Program from its inception to the present. In addition to identifying the prominent features of the program from an historical perspective, it reports on an evaluation of the program performed by an independent contractor, a demographic profile of runaway and homeless youth and the future directions for the program. In addition, a new publication, entitled *The Legal Status of Adolescents*, is summarized at the end of this article.

Runaway Youth Program: Historical Notes

Congress, in passing the initial Runaway Youth Act, placed the responsibility for locating, detaining and returning runaway youth outside overburdened police and juvenile justice agencies. Congress also defined the problem as one of an interstate nature and concluded that federal intervention was needed as well as a more reliable reporting system for runaway (not until 1977) youth and a more effective temporary shelter care system outside the law enforcement structure.

In addition to the funding of shelter facilities for runaway youth, the Runaway Youth Act provided funds for counseling and aftercare services, for the provision of technical assistance to grantees, for the conduct of a National Statistical Survey of Runaway Youth in the nation and for the yearly submission of an annual report to Congress by the secretary of HEW on the status and accomplishments of the shelters (funded under the provisions of Section 315 of the Act). Other provisions included the setting of a maximum authorization level of $10 million per year for the 1974, 1975 and 1976 fiscal years.[2]

In providing grants, Congress stipulated that priority consideration be given those applicants which could demonstrate each of the following factors: grant requests of less than $100,000, documentation of a successful experience in serving runaway youth and applicants with program budgets smaller than $150,000.

Congress delineated four goals in the initial law which remain unchanged and upon which the Department of Health and Human Services (HHS) has based its administration of the national program. These Congressional objectives for funded runaway programs, Section 315 of the Act, are set forth as follows:

(1) their effectiveness in alleviating the problems of runaway youth;
(2) their ability to reunite children with their families and to encourage the resolution of intrafamily problems through counseling and other services;
(3) their effectiveness in strengthening family relationships and encouraging stable living conditions for children; and
(4) their effectiveness in helping youth decide upon a future course of action.

In October 1977 the 95th Congress reauthorized the Runaway Youth Act, adding states and coordinated networks of runaway service providers to the list of eligible agencies. The 1977 legislation also expanded the service population for funded programs to homeless youth and provided for support of short-term training to Title III grantees. Congress raised the authorization level for each of the three years of the extended life of the Act from $10 million to $25 million.

In November 1980 the 96th Congress enacted P.L. 96-509, the Juvenile Justice Amendments of 1980, which President Carter signed into law on Dec. 8, 1980.[3] Title III of this legislation retitled the Runaway and Homeless Youth Act, reauthorized the runaway and homeless youth program administered by HHS for an additional four years, retained the annual authorization level at $25 million and mandated that HHS alter its formula for distribution of appropriated funds for the support of programs for runaway and homeless youth on the statutory basis of the number of youth under 18 years of age in each state jurisdiction.

The program received $11 million for each fiscal year 1981 and 1982. The Administration has allocated only $6.6 million for fiscal year 1983, which begins Oct. 1, 1982. However, it is likely that Congress will not approve the budget by that date, and that the program will operate with $11 million under a Continuing Resolution.

The 1980 Amendments, along with a revised formula for allocation of funds and new approaches with regard to the consolidation of social services administered by HHS, will impact the future nature and development of the National Program for Runaway and Homeless Youth. In its reauthorization decision in November 1980, the Congress expressed unanimous bipartisan support for continuation of the program until 1984. Major problems, issues and needs remain, however, which are identified and discussed below. A more detailed review and analysis of these issues is available in HHS' Annual Report to the Congress for Fiscal Year 1980.[4]

Program Evaluation — Major Findings

In August 1979, HHS undertook the task of evaluating the National Program and published results of this assessment by an outside contractor.[5] The evaluation has provided the basis for requesting the President and Congress for reauthorization of the program in the spring of 1979 and, as already reported, Congress and the President then extended HHS' authority for continuation of the pro-

gram, with several amendments, in the fall of 1980.

In the official report to HHS the *National Evaluation of the Runaway Youth Program* contained the major findings below:

- The National Runaway Youth Program has successfully operationalized the goals of the Runaway Youth Act cited above;
- In addition to addressing the legislative goals, the projects funded under the RYA have developed a number of additional goals;
- The projects funded under the RYA are extremely diverse both in terms of their structures and their client populations;
- A growing "professionalism" was found among the projects funded under the RYA;
- The most serious service limitations with the National Runaway Youth Program are the provisions of follow-up or aftercare services mandated in the Act;
- The National Runaway Youth Program is serving a widely diversified client population;
- The National Runaway Youth Program is achieving substantial positive client impact levels;
- In general projects funded under the RYA achieve similar success with a wide variety of clients;
- The National Evaluation found that a positive relationship exists between goals operationalization and positive client impact;
- The projects funded under the RYA are expanding their fiscal capabilities by generating new funding sources and developing volunteer programs;
- A variety of service, client and fiscal concerns are giving way to emerging new service models within the area of runaway youth services.

The evaluation was most encouraging to HHS, the National Council of Juvenile and Family Court Judges, Congress and many other organizations which support the National Program. However, a great disservice would be done if readers of this article conclude that this major social problem has been reduced in scope and an acceptable solution found. Another section of this article identifies major needs, concerns and issues which must be understood and addressed if a full decade of federal intervention with regard to runaway and homeless youth is to achieve success. Not all funded programs have succeeded. Some have closed because of financial, management or program shortcomings. Since several areas of the nation are underserved, the 96th Congress included in the reauthorized legislation a provision for distribution of appropriated funds on the basis of a state's youth population under the age of 18. This will generate a definite impact on the funding process. Unless larger appropriations are forthcoming, some programs will receive less than $10,000 in grant funds from HHS for a year's program support.

Extent to Which National Program for Runaway and Homeless Youth has Reduced Involvement of Youth in Law Enforcement and Juvenile Court Systems

While the reduction of the involvement of runaway youth in police-juvenile court processes are not a primary objective of the Runaway Youth Act, HHS found that one of the positive byproducts reported by many of the HHS-funded Title III programs has been a pronounced reduction in the number of runaway youth involved directly in community law enforcement and court processes. Not only has the number of youth handled by the police been substantially reduced in some communities, but the number of these youth who appear in court and undergo adjudication has decreased. The most successful programs are those in which police, court and runaway staff work together in a cooperative and coordinated way. Rather than taking a boy or girl into a detention facility they are taken instead to a runaway shelter by the local police. If the runaway programs did not exist the traditional pattern would be followed which would involve the issuance of a warrant and appearance in court for a series of jurisdictional, adjudicatory and dispositional procedures. An increasing number of runaway and homeless youth are being referred by the police and court officials to the runaway centers. In a few cases the centers have not won the confidence of police and court agencies, and have had difficulty devel-

oping the type of program and services which merit community support and respect. HHS is most sensitive to allegations that federally funded shelter-type programs are below standard. In its monitoring of the programs HHS stressed sanitation and other regulations which apply at either state or federal levels. A few programs have been closed and federal support withdrawn as a result of failure to operate on the basis of acceptable fiscal, licensing and regulatory practices.

Program Growth and Development Since 1974

Since the first 66 runaway houses were funded by HEW in 1975, the program has grown to 160 programs funded in 48 states, the District of Columbia, Guam and Puerto Rico. A National Switchboard, located in Chicago, has proved to be a vital element in the National Program. Congress recognized this importance by amending the legislation in 1980 to specifically authorize funding of a National Toll-Free Communications System. The number of youth served in HHS-funded programs approximated 43,000 a year as of 1980. In addition more than 200,000 calls were made to the National Switchboard in 1980 by runaway and homeless youth, parents and relatives.[6]

A new, four-year funding cycle was conducted in 1981 under the reauthorized legislation and HHS expected the demand for grant funds to be higher than the previous appropriation of $11 million. Many worthy programs cannot be funded by HHS because of the severe limit on funds. Some geographic areas are underserved, thus creating concern at a time when federal grant funds are dwindling. One of the most encouraging developments since the passage of the Act in 1974 has been the success enjoyed by many of the Title III programs in securing financial support from local public and private sources. Modest successes have been achieved with the organization in some of the states of coordinated networks of runaway service providers, authorized by the 96th Congress in its 1977 amendments to the Runaway Youth Act. These networks or coalitions have improved the intra and interstate need for speedy communications regarding the immediate care of runaway and homeless youth. They have led in some cases to more effective coordination of effort and expansion of services without additional expense, as agencies have pooled their limited resources.

Programs have actively sought non-federal financial support from a variety of sources. Their success in diversifying their funding base while reducing dependence on federal funds has had a stabilizing and strengthening effect.

A National Profile of Runaway Youth

A summary profile of runaway youth derived from the client forms submitted to the Youth Development Bureau by the programs funded under the Runaway Youth Act revealed that the types of youth who received services were diversified as to age, sex, ethnicity, school status, family-type problem and related case characteristics.[7] One major finding since the passage of the initial Runaway Youth Act in 1974 which the profile presents is that 45.2 percent of the youth in the national distribution were runaways in the legal-administrative definition of the term, 19.3 percent were youth involved in non-runaway crises, 15.5 percent were cases where youth and parents had mutually agreed to separate and the remaining cases were in the potential runaway or other categories. Females made up 59.7 percent of the population served, 40.6 percent were boys. The age range was from 4 to 20 years of age with the critical range 10-18 years. Eighty percent of the youth served were in this 10-18 age range with model age being 16 years. As to racial-ethnic distributions, 74 percent of the youth served were white, 15.5 percent were black, not of Hispanic origin; 6 percent were Hispanic; with the remainder American Indian, Asian or unknown. Youth living with the parents or legal guardian before the runaway episode made up 82.4 percent of the population served; 4.1 percent were living in foster homes; the remainder with relatives, friends or unknown. In terms of school status before the runaway episode, 60.1 percent were attending school; 17.3 percent were drop outs; 10.5 percent were listed as truant; while the

remainder were shown as expelled, suspended or graduated. A final but important segment of the profile disclosed the reasons for seeking services by runaway youth. Eighteen percent of the runaway youth reported that their parents were too strict; 9.6 percent reported that truancy was the cause for seeking services; 9.8 percent felt that their parents had neglected them emotionally; 7.9 percent stated that they had been pushed out of their homes by the parent; 7.7 percent felt that the runaway was preceded by an inability to communicate with the parents. Among the remaining causes were peer problems, parental conflicts, bad school grades and youth emotional problems.

Future Directions for National Program

With the change in administrations in Washington, a number of scenarios developed with regard to youth services administered by federal executive branch agencies. No definitive reorganization of these services has been announced but the various transition teams created by President Reagan have reviewed a wide range of human service programs. In his budget message to Congress, the secretary of HHS proposed the consolidation into one block grant of 12 social service programs, including runaway and homeless youth. The secretary also supported continued support for the National Program for Runaway and Homeless Youth Act at the $10 million level for fiscal year 1982.

In its future planning for the National Program the Youth Development Bureau has established the following goals:

1. consolidation of the gains made to date by the runaway and homeless youth centers in further improving their services. This includes creating more effective systems of case and class advocacy for runaway and homeless youth; and the development of networks and coalitions for maximum coordination of effort at federal, state and local-private sector levels.
2. administration of the reauthorized Runaway and Homeless Youth Act until 1984 on the basis of Congressional and HHS goals. Regional and state jurisdiction will play a more prominent role in the process of administering the program.
3. development of a national policy for youth development. In this connection the Bureau is playing an active role in the planning of national, state-local and private sector conferences, seminars and workshops which deal with runaway and homeless youth.
4. the bureau will concentrate in the years ahead on the further diversification of services provided by the centers for runaway and homeless youth. Emphasis on family factors and processes, and the development of a more effective national system of aftercare services for runaway and homeless youth, will be integral parts of this endeavor.
5. the Bureau will continue to actively support the Federal Coordinating Council on Juvenile Justice and Delinquency Prevention under the chairmanship of the attorney general. It will intensify its efforts to achieve more effective interagency and intragency collaboration at the federal level in areas such as substance abuse, youth employment, adolescent abuse and teen pregnancy. It will seek more active working relationships with federal agencies such as the departments of Justice, Labor and Education in the efforts being made to maximize federal resources available for youth programs.
6. within the funds available the Bureau will continue to fund service demonstration projects in the areas of adolescent health, family dysfunction, pregnancy, youth employment and substance abuse. It will continue to conduct studies of youth needs within HHS and will endeavor to develop a more comprehensive approach to the delivery of services to vulnerable youth and their families.
7. in its technical assistance and training initiatives for Title III grantees the Bureau will stress the development, at the program level, of maximum capability for service delivery, the accessing of non-federal funding sources and the further managerial improvements in the operation of these centers. An annual Youth Service Institute was planned in 1981 for selected Title III and federal agency staff with the

emphasis on skills building and problem-solving training.

8. the Bureau will continue to fund a National Toll-Free Communication System to serve runaway and homeless youth and their families. Some expansion of this system is planned with one objective being a more efficient operation and wider geographic coverage of the nation.
9. a primary objective for the 1980s is the continuation of the effort to further develop positive roles for youth at all levels of the program. A specific publication titled *Youth as a Resource* was made available in the summer of 1981.

The Legal Status of Adolescents[8]

In late 1980 HHS published a 500-page compendium and discussion of the laws and court decisions affecting minors titled *The Legal Status of Adolescents.* It is an updated and expansion of a 1975 publication *The Legal Status of Runaway Youth,* which members of the National Council of Juvenile Court Judges and a wide range of juvenile justice and youth-serving agencies and officials found extremely useful.

This document contains summary tables of laws affecting minors in each state with regard to emancipation, employment, hitchhiking, medical consent, truancy and other legal considerations which are important to juvenile and family courts, attorneys, youth agency officials, parents and guardians as well as the runaway and homeless youth themselves. *The Legal Status of Adolescents* was prepared for HHS under a contract with the Scientific Analysis Corp. of San Francisco and the Regional Institute of Social Welfare, Athens, Ga. This report clearly shows that the legal rights of juveniles are defined differently in different states and that the recognized capabilities of youth to make important legal decisions also varies considerably from state to state.

Until recently, the report notes, the law treated childhood as "an homogenous state," making no distinction between the capacities of younger and older children. According to the report, progress with respect to the rights of young people has frequently come through the courts. The authors point to a series of court decisions in the past 10 years that have affirmed the Constitutional rights of children and carved out areas in which they can make decisions on their own. Among the Supreme Court cases cited are *In re Gault, Carey v. Population Services Int'l* and *Bellotti v. Baird* which concern, respectively, due process protection for juveniles in court proceedings, availability of contraceptives to minors and the right of a minor to have an abortion without her parents' consent.

In expanding children's rights, the report says state legislatures have often responded to court decisions or to mandates in federal legislation, such as the requirement in the child abuse and neglect law that an abused or neglected child be assigned a *guardian ad litem* to represent his interests in court.

Legislatures, the report says, have been slow in some areas to initiate changes to reflect "the progressively developing capacity of minors." In some states, changes have occurred largely in areas of high public health concern — venereal disease, pregnancy, drug abuse — areas in which the report says "the community benefits from having the child free to seek help on his own.

"As a society, we pay lip service to the idea that children are growing up faster than ever," the report says, but state legislatures and the federal government "have been reluctant to match that observation with statutory changes.

"A more worthwhile world for adolescents," the report concludes, "means more equity for them as a group vis a vis other age groups and at the same time more special recognition of their needs as a group facing the challenge of leaving childhood and becoming adults."

M E M O R A N D U M

FROM: Rep. John J. Liska

REFERENCE: HB 647, "An act relating to the possession of concealed weapons."

The purpose of HB 647 is to give the citizens of Alaska a method to apply for a permit to carry a concealed weapon.

Presently, Alaska Statutes permit only Police Officers to carry concealed weapons. There may be instances when a citizen would be justified in carrying a concealed weapon.

I feel this is an issue which needs to be addressed and HB 647 is a vehicle for that discussion.

Anchorage has the highest rape rate of any city - Nation wide. More criminals are incarcerated in Alaska per population than any other state. The fact that the police do not have to protect the individual, as shown in Warren vs. District of Columbia.

The above are just some of the facts that should be considered while discussing this bill.

Enclosured is the following:

A. Alaska Statutes 11.61.200 and 18.67.162

B. Model Concealed Weapons legislation.

C. Warren vs Dist. of Columbia. Police not required to protect individual citizen.

D. Oregon Statute 166.240 carrying of Concealed Weapons

E. Utah - carrying Concealed Weapons

F. Washing ton - 9.41.050 carrying pistol

G. House Research Information - 33 states allow citizens to carry concealed weapons in some circumstances.

H. Letter from office of District Attorney Las Vegas, Nevada.
Population 463,087/Permits issued 639
.0013% of their population received permits

I. Letters regarding body guard from Commissioner Sundberg and Mr. Berrier.

J. Letters of support in Rep. Liska's File.

JJL/tm

Effect of amendments. — The 1983 amendment, in subsection (a), added the paragraph (1) and (2) designations, added paragraph (3), and made minor word changes. In subsection (b), the amendment repealed paragraphs (1) and (2) and inserted "by the offender while intoxicated or" in paragraph (4). In subsection (c), the amendment deleted the former last sentence and made a minor word change.

Sec. 18.67.162. Crime victim compensation fund. There is created a crime victim compensation fund which shall be administered by the Violent Crimes Compensation Board. The fund consists of money appropriated to it by the legislature. The fund shall be administered in accordance with the provisions of this chapter. Money distributed from the fund shall be in addition to other sources of compensation provided in this chapter. (§ 7 ch 96 SLA 1983)

New Section 18.67.010

Chapter 80. State Commission for Human Rights.

Article
1. Creation and Organization of Commission (§ 18.80.060)

NOTES TO DECISIONS

Alaska's civil rights statute should be broadly construed to further the goal of eradication of discrimination. Alaska USA Fed. Credit Union v. Fridriksson, Sup. Ct. Op. No. 2478 (File No. 5230), 642 P.2d 804 (1982).

Article 1. Creation and Organization of Commission.

Section
60. Powers and duties of the commission

Sec. 18.80.010. Creation.

NOTES TO DECISIONS

Cited in McDaniel v. Cory, Sup. Ct. Op. No. 2383 (File Nos. 4793, 4794), 631 P.2d 82 (1981).

Sec. 18.80.050. Regulations.

NOTES TO DECISIONS

Quoted in Perkowski v. State, Sup. Ct. Op. No. 2658 (File No. 6541), P.2d (1984).

(b) It is an affirmative defense to a prosecution under (a)(1) of this section that

(1) the defendant took reasonable steps to remove the [illegible] from the highway; and

(2) no person suffered physical injury as a result of the presence of the substance on the highway.

(c) Obstruction of highways is a class B misdemeanor. (§ 7 [illegible] SLA 1978)

29A C.J.S., Highways, §§ 217-231.

Article 2. Weapons and Explosives.

Section	Section
200. Misconduct involving weapons in the first degree	230. Possession of burglary tools
210. Misconduct involving weapons in the second degree	240. Criminal possession of explosives
220. Misconduct involving weapons in the third degree	250. Unlawful furnishing of explosives

---

Collateral references. — Validity and construction of gun control laws, 28 ALR3d 845.

Sec. 11.61.200. Misconduct involving weapons in the first degree. (a) A person commits the crime of misconduct involving weapons in the first degree if the person

(1) knowingly possesses a firearm capable of being concealed on one's person after having been convicted of a felony by a court of this state, a court of the United States, or a court of another state or territory;

(2) knowingly sells or transfers a firearm capable of being concealed on one's person to a person who has been convicted of a felony by a court of this state, a court of the United States, or a court of another state or territory;

(3) manufactures, possesses, transports, sells, or transfers a prohibited weapon;

(4) knowingly sells or transfers a firearm to another whose physical or mental condition is substantially impaired as a result of the introduction of an intoxicating liquor or drug into that other person's body;

(5) removes, covers, alters, or destroys the manufacturer's serial number on a firearm with intent to render the firearm untraceable; or

(6) possesses a firearm on which the manufacturer's serial number has been removed, covered, altered, or destroyed, knowing that the serial number has been removed, covered, altered, or destroyed with the intent of rendering the firearm untraceable.

(b) It is an affirmative defense to a prosecution under (a)(1) or (2) of this section that

(1) the person convicted of the prior offense on which the action is based received a pardon for that conviction;

(2) the underlying conviction upon which the action is based has been set aside under AS 12.55.085 or as a result of post-conviction proceedings; or

(3) a period of five years or more has elapsed between the date of the person's unconditional discharge on the prior offense and the date of the possession, sale, or transfer of the firearm.

(c) It is an affirmative defense to a prosecution under (a)(3) of this section that the manufacture, possession, transportation, sale, or transfer of the prohibited weapon was in accordance with registration under 26 U.S.C. 5801-5872 (National Firearms Act).

(d) The provisions of (a)(3) of this section do not apply to a peace officer acting within the scope and authority of the officer's employment.

(e) As used in this section,

(1) "prohibited weapon" means any

(A) explosive, incendiary, or noxious gas

(i) mine or device that is designed, made, or adapted for the purpose of inflicting serious physical injury or death;

(ii) rocket, other than an emergency flare, having a propellant charge of more than four ounces;

(iii) bomb;

(iv) grenade;

(B) device designed, made, or adapted to muffle the report of a firearm;

(C) metal knuckles;

(D) switchblade or gravity knife;

(E) firearm that is capable of shooting more than one shot automatically, without manual reloading, by a single function of the trigger; or

(F) rifle with a barrel length of less than 16 inches, shotgun with a barrel length of less than 18 inches, or firearm made from a rifle or shotgun which, as modified, has an overall length of less than 26 inches;

(2) "unconditional discharge" has the meaning ascribed to it in AS 12.55.185.

(f) Misconduct involving weapons in the first degree is a class C felony. (§ 7 ch 166 SLA 1978)

Editor's notes. — The cases cited in the notes below were decided under former AS 11.55.080 and 11.55.040.

Constitutionality of former statute prohibiting possession by a convict. — See United States v. Farwell, 11 Alaska 507, 76 F. Supp. 35 (D. Alaska 1948).

Legislative intent. — The purpose of the felon in possession statute was to prevent the concealment and use of firearms in violent crime. Davis v. State, Sup. Ct. Op. No. 816 (File Nos. 1428, 1436), 499 P.2d 1025 (1972), cert. granted, 410 U.S. 925, 93 S. Ct. 1392, 35 L. Ed. 2d 586 (1973), rev'd on other grounds, 415 U.S. 308, 94 S. Ct. 1105, 39 L. Ed. 2d 347 (1974).

Former section included crime committed in another state. — See United States v. Farwell, 11 Alaska 507, 76 F. Supp. 35 (D. Alaska 1948).

The term "concealed" means that the weapon is not discernible through ordinary observation by persons coming into proximity with the person carrying it, as persons do in the ordinary and usual associations of life. McKee v. State, Sup. Ct. Op. No. 721 (File No. 1273), 488 P.2d 1039 (1971).

A weapon is concealed if it is hidden from ordinary observation. It need not be absolutely invisible to other persons. McKee v. State, Sup. Ct. Op. No. 721 (File No. 1273), 488 P.2d 1039 (1971).

Actual possession was not required under former statute. — See Davis v. State, Sup. Ct. Op. No. 816 (File Nos. 1428, 1436), 499 P.2d 1025 (1972), cert. granted, 410 U.S. 925, 93 S. Ct. 1392, 35 L. Ed. 2d 586 (1973), rev'd on other grounds, 415 U.S. 308, 94 S. Ct. 1105, 39 L. Ed. 2d 347 (1974); Gordon v. State, Sup. Ct. Op. No. 1126 (File No. 2204), 533 P.2d 25 (1975).

A revolver need not be fully assembled or immediately capable of firing in order to qualify as a weapon. Davis v. State, Sup. Ct. Op. No. 816 (File Nos. 1428, 1436), 499 P.2d 1025 (1972), cert. granted, 410 U.S. 925, 93 S. Ct. 1392, 35 L. Ed. 2d 586 (1973), rev'd on other grounds, 415 U.S. 308, 94 S. Ct. 1105, 39 L. Ed. 2d 347 (1974).

And it is [illegible] whether the gun is loaded and ready for immediate use. — See Davis v. State, Sup. Ct. Op. No. 816 (File Nos. 1428, 1436), 499 P.2d 1025 (1972), cert. granted, 410 U.S. 925, 93 S. Ct. 1392, 35 L. Ed. 2d 586 (1973), rev'd on other grounds, 415 U.S. 308, 94 S. Ct. 1105, 39 L. Ed. 2d 347 (1974).

Furnishing ammunition included under former statute. — See In re Robson, Sup. Ct. Op. No. 1573 (File No. 3448), 575 P.2d 771 (1978).

It was necessary to show a prior conviction in order to prove one essential element of the crime of possession of a firearm by a person previously convicted of a felony. Mead v. State, Sup. Ct. Op. No. 502 (File No. 804), 445 P.2d 229 (1968), cert. denied, 396 U.S. 855, 90 S. Ct. 117, 24 L. Ed. 2d 104 (1969).

Conviction may be based on circumstantial evidence. — Conviction of "felon in possession" may be based on circumstantial evidence of possession. Davis v. State, Sup. Ct. Op. No. 816 (File Nos. 1428, 1436), 499 P.2d 1025 (1972), cert. granted, 410 U.S. 925, 93 S. Ct. 1392, 35 L. Ed. 2d 586 (1973), rev'd on other grounds, 415 U.S. 308, 94 S. Ct. 1105, 39 L. Ed. 2d 347 (1974).

It was error to refuse to give an instruction defining the term "concealed." McKee v. State, Sup. Ct. Op. No. 721 (File No. 1273), 488 P.2d 1039 (1971).

Sentence for possession by convict upheld. — See Deveroux v. State, Sup. Ct. Op. No. 1259 (File No. 2636), 548 P.2d 1296 (1976); Ozenna v. State, Sup. Ct. Op. No. 2269 (File No. 4748), 619 P.2d 477 (1980).

Applied in McManners v. State, Ct. App. Op. No. 123 (File No. 6065), 650 P.2d 414 (1982); Fry v. State, Ct. App. Op. No. 197 (File No. 6810), 655 P.2d 789 (1983).

Cited in Kampe v. State, Sup. Ct. Op. No. 2242 (File No. 4993), 620 P.2d 678 (1980); Bell v. State, Ct. App. Op. No. 216 (File No. 6707), 657 P.2d 787 (1983).

Collateral references. — 79 Am. Jur. 2d, Weapons and Firearms, §§ 7-34.

94 C.J.S., Weapons, §§ 3-23.

Sec. 11.61.210. Misconduct involving weapons in the second degree. (a) A person commits the crime of misconduct involving weapons in the second degree if the person

(1) possesses on the person a firearm while under the influence of an intoxicating liquor or drug;

(2) discharges a firearm from, on, or across a highway; or

(3) discharges a firearm with reckless disregard for a risk of damage to property or a risk of physical injury to a person.

(b) For purposes of (a)(1) of this section, a person is under the influence of an intoxicating liquor or drug when, as a result of the introduction of an intoxicating liquor or drug into the person's body, physical or mental abilities are impaired so that the person no longer has the ability to possess a firearm with the caution characteristic of a sober person of ordinary prudence under the same or similar circumstances.

(c) Misconduct involving weapons in the second degree is a class A misdemeanor. (§ 7 ch 166 SLA 1978; am §§ 21, 22 ch 102 SLA 1980)

Revisor's notes. — Subsection (b) of this section was adopted in ch. 102, SLA 1980, as subsection (c). However, the subsections have been rearranged to conform with the format of AS 11 as revised in 1978.

Effect of amendments. — The 1980 amendment rewrote paragraph (1) of subsection (a), and added present subsection (b).

Legislative history reports. — For a report on Chapter 102, SLA 1980 (HCS CSSB 511), see 1980 Senate Journal Supplement, No. 44, May 29, 1980, or 1980 House Journal Supplement, No. 79, May 29, 1980.

NOTES TO DECISIONS

Separate punishment where defendant fired at cabin and truck. — Separate punishment upon conviction of two counts of misconduct involving weapons in the second degree, and two counts of criminal mischief in the third degree, where the evidence established that defendant had fired a rifle at a cabin and a pickup truck did not violate the double jeopardy provisions of this section since there were different and significant differences between the intent in the two firings. [illegible] v. State, Ct. App. Op. No. 165 [illegible] P.2d [illegible] (1982).

For cases construing former statute prohibiting careless use of firearms, see Giles v. United States, 10 Alaska 455, 144 F.2d 800 (9th Cir. 1944); Burke v. United States, 242 F.2d 763 (9th Cir. 1960).

For case construing former statute prohibiting flourishing, pointing or discharging firearm in a public place, see Woods v. State, Sup. Ct. Op. No. 1408 (File No. 2166), 530 P.2d 751 (1975).

Quoted in Zinn v. State, Ct. App. Op. No. 180 (File No. 6230), 656 P.2d 1206 (1982).

Cited in Dyer v. State, Ct. App. Op. No. 268 (File No. 6133), P.2d (1983).

Collateral references. — Use of the [illegible] without intent to inflict injury, 5 ALR 1554; 23 ALR 1554.

Death from discharge of firearms, 55 ALR 921.

Sec. 11.61.220. Misconduct involving weapons in the third degree. (a) A person commits the crime of misconduct involving weapons in the third degree if the person

(1) knowingly possesses a deadly weapon, other than an ordinary pocket knife, that is concealed on the person;

(2) knowingly possesses a loaded firearm on the person in any place where intoxicating liquor is sold for consumption on the premises;

(3) being an unemancipated minor under 16 years of age, possesses a firearm without the consent of a parent or guardian of the minor.

(b) In a prosecution under (a)(1) of this section, it is an affirmative defense that the defendant, at the time of possession, was

(1) in the defendant's dwelling or on land owned or leased by the defendant appurtenant to the dwelling; or

(2) actually engaged in lawful hunting, fishing, trapping, or other lawful outdoor activity that necessarily involves the carrying of a weapon for personal protection.

(c) The provisions of (a)(1) and (2) of this section do not apply to a peace officer acting within the scope and authority of the officer's employment.

(d) In a prosecution under (a)(2) of this section, it is a defense that the defendant, at the time of possession, was

(1) on business premises owned by or leased by the defendant; or

(2) on business premises in the course of the defendant's employment for the owner or lessee of those premises.

(e) For purposes of this section, a deadly weapon on a person is concealed if it is covered or enclosed in any manner so that an observer cannot determine that it is a weapon without removing it from that which covers or encloses it or without opening, lifting, or removing that which covers or encloses it.

(f) For purposes of (a)(2) of this section, a firearm is loaded if the firing chamber, magazine, clip, or cylinder of the firearm contains a cartridge.

(g) Misconduct involving weapons in the third degree is a class B misdemeanor. (§ 7 ch 166 SLA 1978; am § 23 ch 102 SLA 1980)

Effect of amendments. — The 1980 amendment substituted "land owned or leased by him" for "property" preceding "appurtenant to" near the middle of paragraph (1) of subsection (b).

Legislative history reports. — For revision of 1978 legislative committee report on AS 11.61.220, see 1979 House Journal, pp. 632 — 633. For a report on Chapter 102, SLA 1980 (HCS CSSB 511), see 1980 Senate Journal Supplement, No. 44, May 29, 1980, or 1980 House Journal Supplement, No. 79, May 29, 1980.

Opinions of attorney general. — Because AS 11.55.020 (now this section) excepts only "peace officers" from the general prohibition against carrying concealed weapons, other persons, including state employees charged with limited law enforcement duties unless a peace officer within the meaning of AS 01.10.060(6), may not carry concealed weapons. December 22, 1977, Op. Att'y Gen.

A comparison of the language of AS 18.65.010(b), which describes the general powers and duties of a specially commissioned officer, with that of AS 18.65.030, which describes the powers and duties of commissioned officers of the Department of Public Safety with particular reference to "member" of the state troopers, supports the conclusion that a specially commissioned officer is a "peace officer" for purposes of both AS 01.10.060(6) and AS 11.55.020 (now this section) when performing law enforcement duties within the limitations set forth on the face of a special commission and fur-

thermore, may carry concealed weapons without violating AS 11.55.010 (now this section) while performing these duties to the extent permitted by the commission itself. December 22, 1977, Op. Att'y Gen.

NOTES TO DECISIONS

Ordinance prohibiting concealment of weapons in automobiles not prohibited. — This section does not imply a legislative intent to create a privilege to conceal a weapon in an automobile, nor does it implicitly require statewide uniformity of weapons regulations; thus, municipal ordinances interpreted as forbidding concealing of weapons in automobiles was not prohibited by this section. City of Anchorage v. Richards, Ct. App. Op. No. 173 (File Nos. 6387, 6459, 6504, 6540), 654 P.2d 797 (1982).

Sentence for carrying a concealed weapon upheld. — See Ozenna v. State, Sup. Ct. Op. No. 2209 (File No. 4745), 619 P.2d 477 (1980) (decided under former AS 11.55.010).

Collateral references. — Offense of carrying weapon on person as affected by place where defendant was at the time, 73 ALR 539.

Offense of carrying concealed weapon as affected by manner of carrying or place of concealment, 43 ALR2d 492.

Scope and effect of exception, in statute forbidding carrying of weapons, as to person on his own premises or at his place of business, 57 ALR3d 948.

Sec. 11.61.220. Possession of burglary tools. (a) A person commits the crime of possession of burglary tools if the person possesses a burglary tool with intent to use or permit use of the tool in the commission of

(1) burglary in any degree;

(2) a crime referred to in AS 11.46.130(a)(3); or

(3) theft of services.

(b) As used in this section, "burglary tools" means

(1) nitroglycerine, dynamite, or any other tool, instrument, or device adapted or designed for use in committing a crime referred to in (a)(1)-(3) of this section; or

(2) any acetylene torch, electric arc, burning bar, thermal lance, oxygen lance, or other similar device capable of burning through steel, concrete, or other solid material.

(c) Possession of burglary tools is a class A misdemeanor. (§ 7 ch 166 SLA 1978)

Collateral references. — 13 Am. Jur. 2d, Burglary, §§ 74-77.

12 C.J.S., Burglary, §§ 43-45.

Validity, construction and application of statutes relating to burglars' tools, 33 ALR3d 708.

Sec. 11.61.230. Criminal possession of explosives. (a) A person commits the crime of criminal possession of explosives if the person possesses or manufactures an explosive substance or device and intends to use that substance or device to commit a crime.

(STATE CARRYING FIREARM PERMIT STATUTE)

STATE OF MONTANA

MAR 2 7 1984

101.01 (a) Upon the filing of an application pursuant to Section 101.01 (b), a permit to carry a concealed weapon shall be issued by the chief law enforcement officer of the applicant's place of residence unless the applicant:

1. has had a judgement of conviction entered, by a court of Montana, another state or of the United States, against him for: murder, non-negligent manslaughter, forcible rape or sodomy, mayhem, kidnapping, robbery, burglary, aggravated assault, arson, or attempt to conspiracy to commit such a crime; and the applicant has not been pardoned for such con iction or had his civil rights restored or such conviction has not been expunged or set aside;
2. is a fugitive from justice;
3. has been adjudicated, by a court of Montana, another state or the United States, an alcoholic, unless such adjudication has been withdrawn or reversed;
4. is an unlawful user of narcotics;
5. has been adjudicated, by a court of Montana, another state or the United States, a mental defective, unless such adjudication has been withdrawn or reversed;
6. is committed to any mental institution;
7. has renounced his United States citizenship and his United States citizenship has not been restored;
8. is an alien illegally in the United States;
9. is under 21 years of age;
10. has, within the past three years, been convicted of a violation of Section 101.04 or 101.05; or

11. is otherwise prohibited by law from transporting, receiving, or possessing such a weapon.

101.01 (b) An application shall be made in writing on a form provided by the chief law enforcement officer. Such form shall include only the applicant's name, address, height, weight, race, color of hair, color of eyes, date of birth, and a certification, signed by the applicant, that he is not disabled from receiving a permit pursuant to Section 101.01(a).

101.01 (c) Permits shall be issued or denied in writing within 45 days of the date the application is received by the chief law enforcement officer. If the chief law enforcement officer fails to issue or deny the permit within 45 days, the applicant may file a petition for a writ of mandamus in the (trial court) of the (county or city) in which he resides to compel the chief law enforcement officer to issue the permit. If the court mandates the chief law enforcement officer to issue the permit, it shall award attorney's fees and costs to the applicant. If the permit is denied, the chief law enforcement officer shall state, in writing, the specific reason(s) for the denial.

101.02 In the event of a denial or revocation, the applicant may, within 60 days of the date of denial or revocation is received by the applicant, file a petition for judicial review in the (trial court) which shall make a de novo determination whether the applicant is disabled, pursuant to section 101.01(a), from being issued a permit, and may consider evidence presented by either party whether to not considered by the chief law enforcement officer. If the court mandates the chief law enforcement officer to issue the permit, it shall award attorney's fees and costs to the applicant.

101.03 A permit shall be valid throughout the state and shall be valid until revoked pursuant to Section 101.04.

101.04 If, subsequent to the issuance of the permit, a permit holder should become disabled from being issued a permit pursuant to the provisions of Section 101.01(a), the chief law enforcement officer shall, after notifying the permit holder in writing of such disability, revoke the permit. The permit holder may seek judicial review of such a revocation pursuant to the provisions of Section 101.02.

101.05 Carrying a faked, altered, or revoked permit, or a permit belonging to another, shall be punishable as a misdemeanor.

106.06 Knowingly and willfully providing false information on an application filed pursuant to Section 101.01(b) shall be punishable as a misdemeanor. Upon conviction, if a decision on the application is pending, the application shall be denied; if the permit has been issued, it shall immediately be revoked.

OFFICE OF THE
GENERAL COUNSEL

MEMORANDUM

TO: Louis Brune

FROM: Bob Dowlut

DATE: March 12, 1984

RE: Alaska House Bill 557

The bill would allow a court to "order the forfeiture to the state of any deadly weapon possessed or used by the defendant during the commission of the offense."

The use of the term "or" means that a weapon may be forfeited under two separate sets of circumstances:

1. The deadly weapon was used by the defendant during the commission of the offense.

2. The deadly weapon was possessed by the defendant during the commission of the offense.

The conduct sought to be proscribed in the first set of circumstances is typically proscribed in forfeiture statutes. It focuses on the misuse of a firearm.

The conduct targeted in the second set of circumstances need not involve the misuse of a firearm. For example, a firearm could be forfeited if it was possessed by the defendant during the commission of a traffic offense. To remedy this potential problem, I recommend the following language:

> (9) order the forfeiture to the state of any deadly weapon (A)used by the defendant during

the commission of the offense or (B)any deadly possessed by the defendant during the commission of arson, burglary, robbery, manslaughter, murder, kidnapping, rape, attempted rape, assault with intent to commit a felony, riot, jail break, or unlawful delivery or sale of a controlled substance; as used in this paragraph, "deadly weapon" means a deadly weapon as defined in AS 11. 81. 900.

law existing at the time of the commission of the offense in the same manner as if this Act had not become law."

Sec. 12.55.005. Declaration of purpose. The purpose of this chapter is to provide the means for determining the appropriate sentence to be imposed upon conviction of an offense. The legislature finds that the elimination of unjustified disparity in sentences and the attainment of reasonable uniformity in sentences can best be achieved through a sentencing framework fixed by statute as provided in this chapter. In imposing sentence, the court shall consider

(1) the seriousness of the defendant's present offense in relation to other offenses;

(2) the prior criminal history of the defendant and the likelihood of his rehabilitation;

(3) the need to confine the defendant to prevent further harm to the public;

(4) the circumstances of the offense and the extent to which the offense harmed the victim or endangered the public safety or order;

(5) the effect of the sentence to be imposed in deterring the defendant or other members of society from future criminal conduct; and

(6) the effect of the sentence to be imposed as a community condemnation of the criminal act and as a reaffirmation of societal norms. (§ 12 ch 166 SLA 1978)

Cross reference. — For discussion of sentencing goals, see note to AS 12.55.120.

Legislative history report. — For report on ch. 166, SLA 1978 (HB 661), see 1978 Senate Journal Supplement No. 47 (June 12, 1978).

Sec. 12.55.010. Imprisonment on judgment for payment of fine.

Repealed by § 21 ch 166 SLA 1978.

Cross references. — As to fines, see AS 12.55.035. As to enforcement of fines, see AS 12.55.051.

Editor's note. — The repealed section derived from § 8.01, ch. 34, SLA 1962.

Sec. 12.55.015. Authorized sentences. (a) Except as limited by AS 12.55.125 — 12.55.175, the court, in imposing sentence on a defendant convicted of an offense, may singly or in combination

(1) impose a fine when authorized by law and as provided in AS 12.55.035;

(2) order the defendant to be placed on probation under conditions specified by the court which may include provision for active supervision;

(3) impose a definite term of periodic imprisonment;

(4) impose a definite term of continuous imprisonment;

(5) order the defendant to make restitution as provided in AS 12.55.045;

(6) order the defendant to carry out a continuous or periodic program of community work as provided in AS 12.55.055;

(7) suspend execution of all or a portion of the sentence imposed as provided in AS 12.55.080;

(8) suspend imposition of sentence as provided in AS 12.55.085.

(b) The court, in exercising sentencing discretion as provided in this chapter, shall impose a sentence involving imprisonment when

(1) the defendant deserves to be imprisoned, considering the seriousness of his present offense and his prior criminal history, and imprisonment is equitable considering sentences imposed for other offenses and other defendants under similar circumstances;

(2) imprisonment is necessary to protect the public from further harm by the defendant; or

(3) sentences of lesser severity have been repeatedly imposed for substantially similar offenses in the past and have proven ineffective in deterring the defendant from further criminal conduct.

(c) In addition to the penalties authorized by this section, the court may invoke any authority conferred by law to order a forfeiture of property, suspend or revoke a license, remove a person from office, or impose any other civil penalty. (§ 12 ch 166 SLA 1978; am § 37 ch 102 SLA 1980)

already in state law!

Effect of amendment. — The 1980 amendment rewrote paragraph (3) of subsection (b).

Editor's note. — The cases cited in the note below were decided under former AS 11.05.140.

Legislative history report. — For report on ch. 102, SLA 1980 (HCS CSSB 511), see 1980 Senate Journal Supplement, No. 44, (May 29, 1980) or 1980 House Journal Supplement, No. 79, (May 29, 1980).

There is no authority which would sanction the expansion of the superior court's jurisdiction to pass sentence into a realm of review and modification which is statutorily vested in either the supreme court or the executive branch of government. Therefore, the superior court lacks jurisdiction to review its own sentence, after it has entered a judgment on the matter, more than 60 days after it has imposed sentence. Davenport v. State, Sup. Ct. Op. No. 1218 (File No. 2202), 543 P.2d 1204 (1975); Szeratics v. State, Sup. Ct. Op. No. 1525 (File No. 3390), 572 P.2d 63 (1977).

Test to be used in determining whether multiple offenses can be punished separately. — See State v. Occhipinti, Sup. Ct. Op. No. 1405 (File No. 3084), 562 P.2d 348 (1977).

Separate sentences were called for where defendant's conduct in kidnapping and raping his victim and assaulting her with a deadly weapon constituted the commission of three distinct offenses, each of which violated a different societal interest. State v. Occhipinti, Sup. Ct. Op. No. 1405 (File No. 3084), 562 P.2d 348 (1977).

Sec. 12.55.020. Enforcing judgment to pay money.

Repealed by § 21 ch 166 SLA 1978.

(10) "culpable mental state" means "intentionally", "knowingly", "recklessly", or with "criminal negligence", as those terms are defined in (a) of this section;

(11) "dangerous instrument" means any deadly weapon or anything which, under the circumstances in which it is used, attempted to be used, or threatened to be used, is capable of causing death or serious physical injury;

(12) "deadly force" means force which the person uses with the intent of causing, or uses under circumstances which he knows create a substantial risk of causing, death or serious physical injury; "deadly force" includes intentionally discharging or pointing a firearm in the direction of another person or in the direction in which another person is believed to be and intentionally placing another person in fear of imminent serious physical injury by means of a dangerous instrument;

(13) "deadly weapon" means any firearm, or anything designed for and capable of causing death or serious physical injury, including a knife, an axe, a club, metal knuckles, or an explosive;

(14) "deception" means to knowingly

(A) create or confirm another's false impression which the defendant does not believe to be true, including false impressions as to law or value and false impressions as to intention or other state of mind;

(B) fail to correct another's false impression which the defendant previously has created or confirmed;

(C) prevent another from acquiring information pertinent to the disposition of the property or service involved;

(D) sell or otherwise transfer or encumber property and fail to disclose a lien, adverse claim, or other legal impediment to the enjoyment of the property, whether or not that impediment is a matter of official record; or

(E) promise performance which the defendant does not intend to perform or knows will not be performed;

(15) "defense", other than an affirmative defense, means that

(A) some evidence must be admitted which places in issue the defense; and

(B) the state then has the burden of disproving the existence of the defense beyond a reasonable doubt;

(16) "drug" has the meaning ascribed to it in AS 11.71.900(9);

(17) "dwelling" means a building that is designed for use or is used as a person's permanent or temporary home or place of lodging;

(18) "explosive" means a chemical compound, mixture, or device that is commonly used or intended for the purpose of producing a chemical reaction resulting in a substantially instantaneous release of gas and heat, including dynamite, blasting powder, nitroglycerin, blasting caps, and nitrojelly, but excluding salable fireworks as defined in AS 18.72.050, black powder, smokeless powder, small arms ammunition, and small arms ammunition primers;

1600 Rhode Island Avenue, NW
Washington, D.C. 20036

Dear Lou:

Attached is a copy of HB 557, a bill relating to forfeiture of weapons used to commit a crime. Statutes that would be affected by this bill are also attached.

The House Judiciary Committee has no immediate plans for hearing this bill.

I will be sure to let Mike know that you called.

Best Regards,

Jane Press
for Mike Szymanski

P.S. Perhaps you can help me too? A while back Mike had asked me to get the names and addresses of the NRA representatives in Alaska. Could you please provide us with this information?

Thanks.

Carolyn WARREN, et al., Appellants,

v.

DISTRICT OF COLUMBIA, et al., Appellees.

Wilfred NICHOL, Appellant,

v.

DISTRICT OF COLUMBIA METROPOLITAN POLICE DEPARTMENT, et al., Appellees.

Nos. 79-6, 79-394.

District of Columbia Court of Appeals.

Argued En Banc April 13, 1981.

Decided Dec. 21, 1981.

Suits against District of Columbia and individual members of metropolitan police department for negligent failure to provide adequate police services were dismissed by the Superior Court, Joseph M. Hannon and William C. Pryor, JJ., and plaintiffs appealed. The Court of Appeals, Nebeker, J., held that: (1) fact that police answered call and arrived outside premises which were scene of burglary and assaults did not give rise to special duty on part of police toward victims therein, and police officers were not answerable in damages for failing to ascertain that assaults were continuing upon victims therein, or for leaving premises without so ascertaining, and (2) where unknown occupants in vehicle which rear-ended another proceeded to beat operator of foremost vehicle, duty of officer arriving on scene was directly related to his official and general duty to investigate offenses, and his directing companion of assault victim to cease efforts to identify assailants, and thus to break off violent confrontation, related solely to his duty to public generally and possessed no additional element necessary to create overriding special relationship and duty to particular persons, and gave rise to no liability.

Affirmed.

Kelly, J., filed opinion concurring in part and dissenting in part in which Mack, J., joined.

Newman, C. J., filed statement concurring in part and dissenting in part.

1. District of Columbia ⇐7

Government and its agents are under no general duty to provide public services, such as police protection, to any particular individual citizen, but, rather, duty to provide public services is owed to public at large, and, absent special relationship between police and individual, no specific legal duty exists.

2. District of Columbia ⇐7

That police answered call and arrived outside premises which were scene of burglary and assaults did not give rise to special duty on part of police toward victims therein, and police officers were not answerable in damages for failing to ascertain that assaults were continuing upon victims therein, or for leaving premises without so ascertaining.

3. District of Columbia ⇐7

Where unknown occupants in vehicle which rear-ended another proceeded to beat operator of foremost vehicle, duty of officer arriving on scene was directly related to his official and general duty to investigate offenses, and his directing companion of assault victim to cease efforts to identify assailants, and thus to break off violent confrontation, related solely to his duty to public generally and possessed no additional element necessary to create overriding special relationship and duty to particular persons, and gave rise to no liability.

Stephen A. Friedman, Washington, D. C., for appellants.

Charles L. Reischel, Deputy Corp. Counsel, with whom Judith W. Rogers, Corp. Counsel, and David P. Sutton, Asst. Corp. Counsel, Washington, D. C., were on the petition, for appellees.

Before NEWMAN, Chief Judge, and KELLY, KERN, NEBEKER, HARRIS, MACK and FERREN, Associate Judges.

OREGON

POSSESSION AND USE OF FIREARMS

166.180 Negligently wounding another. Any person who, as a result of his failure to use ordinary care under the circumstances, wounds any other person with a bullet or shot from any firearm, or with an arrow from any bow, shall be punished by imprisonment in the county jail for a period not to exceed six months, or by a fine not to exceed $500, or both. In addition, any person so convicted shall forfeit any license to hunt, obtained under the laws of this state, and shall be ineligible to obtain a license to hunt for a period of 10 years following the date of his conviction. [Formerly 163.310]

Note: 166.180 to 166.340 were enacted into law by the Legislative Assembly but were not added to or made a part of the Oregon Criminal Code of 1971 by legislative action. See Preface to Oregon Revised Statutes for further explanation.

166.190 Pointing firearm at another; courts having jurisdiction over offense. Any person over the age of 12 years who, with or without malice, purposely points or aims any loaded or empty pistol, gun, revolver or other firearm, at or toward any other person within range of the firearm, except in self-defense, shall be fined upon conviction in any sum not less than $10 nor more than $500, or be imprisoned in the county jail not less than 10 days nor more than six months, or both. Justices of the peace and district courts have jurisdiction concurrent with the circuit court of the trial of violations of this section. When any person is charged before a justice of the peace with violation of this section, the court shall, upon motion of the district attorney, at any time before trial, act as a committing magistrate, and if probable cause be established, hold such person to the grand jury. [Formerly 163.320]

Note: See note under 166.180.

166.210 Definitions for ORS 166.250 to 166.470. As used in ORS 166.250 to 166.270, 166.280, 166.290 and 166.410 to 166.470:

(1) "Firearm" means a weapon, by whatever name known, which is designed to expel a projectile by the action of black powder or smokeless powder and which is readily capable of use as a weapon.

(2) "Pistol," "revolver" and "firearms capable of being concealed upon the person," apply to and include all firearms having a barrel less than 12 inches in length.

(3) "Machine gun" means a weapon of any description by whatever name known, loaded or unloaded, from which two or more shots may be fired by a single pressure on the trigger device. [Amended by 1977 c.769 §1; 1979 c.779 §3]

Note: See note under 166.180.

166.220 Attempting to use dangerous weapon; carrying dangerous weapon with intent to use it. (1) Any person who attempts to use, or who with intent to use the same unlawfully against another, carries or possesses a dagger, dirk, dangerous knife, razor, stiletto, or any loaded pistol, revolver or other firearm, or any instrument or weapon of the kind commonly known as a blackjack, slung shot, billy, sandclub, sandbag, metal knuckles, nunchaku sticks, bomb or bombshell, or any other dangerous or deadly weapon or instrument, commits a Class C felony.

(2) The carrying or possession of any of the weapons specified in subsection (1) of this section by any person while committing, or attempting or threatening to commit a felony or a breach of the peace or any act of violence against the person or property of another is presumptive evidence of carrying such weapon with intent to use the same in violation of subsection (1) of this section.

(3) For the purpose of subsection (1) of this section, any knife with a blade longer than three and one-half inches when carried concealed upon the person, is a dangerous weapon. [Amended by 1975 c.700 §1]

Note: See note under 166.180.

166.230 [Repealed by 1979 c.779 §7]

166.240 Carrying of concealed weapons. (1) Except as provided in ORS 166.260, 166.290 and subsection (2) of this section, any person who carries concealed about his person in any manner, any revolver, pistol, or other firearm, any knife, other than an ordinary pocketknife, or any dirk, dagger, slung shot, metal knuckles, or any instrument by the use of which injury could be inflicted upon the person or property of any other person, shall be punished upon conviction by a fine of not less than $10 nor more than $200, or by imprisonment in the county jail not less than five days nor more than 100 days, or both.

(2) Nothing in subsection (1) of this section applies to any sheriff, constable, police or other peace officer, whose duty it is to serve process or make arrests. Justices of the peace have concurrent jurisdiction to try any person charged with violating any of the provisions of subsection (1) of this section. [Amended by 1977 c.464 §1]

Note: See note under 166.180.

166.250 Unlawful possession of weapons. (1) Except as otherwise provided in this section, ORS 166.260, 166.270, 166.280, 166.290 or 166.410 to 166.470, any person who possesses or has in his possession any machine gun, or carries concealed upon his person or within any vehicle which is under his control or direction any pistol, revolver or other firearm capable of being concealed upon the person, without having a license to carry such firearm as provided in ORS 166.290, is guilty of a misdemeanor, unless he has been convicted previously of any felony or of any crime made punishable by this section, ORS 166.260, 166.270, 166.280, 166.290 or 166.410 to 166.470, in which case he is guilty of a felony.

(2) This section does not prohibit any citizen of the United States over the age of 18 years who resides in or is temporarily sojourning within this state, and who is not within the excepted classes prescribed by ORS 166.270, from owning, possessing or keeping within his place of residence or place of business any pistol, revolver or other firearm capable of being concealed upon the person, and no permit or license to purchase, own, possess or keep any such firearm at his place of residence or place of business is required of any such citizen.

(3) Firearms carried openly in belt holsters are not concealed within the meaning of this section. [Amended by 1979 c.779 §4]

Note: See note under 166.180.

166.260 Persons not affected by ORS 166.250. ORS 166.250 does not apply to or affect:

(1) Sheriffs, constables, marshals, policemen, whether active or honorably retired, or other duly appointed peace officers.

(2) Any person summoned by any such officer to assist in making arrests or preserving the peace, while said person so summoned is actually engaged in assisting the officer.

(3) The possession or transportation by any merchant of unloaded firearms as merchandise.

(4) Members of the Army, Navy or Marine Corps of the United States, or of the National Guard, when on duty.

(5) Organizations which are by law authorized to purchase or receive weapons described in ORS 166.250 from the United States, or from this state.

(6) Duly authorized military or civil organizations while parading, or the members thereof when going to and from the places of meeting of their organization.

(7) Members of any club or organization, for the purpose of practicing shooting at targets upon the established target ranges, whether public or private, while such members are using any of the firearms referred to in ORS 166.250 upon such target ranges, or while going to and from such ranges.

(8) Licensed hunters or fishermen while engaged in hunting or fishing, or while going to or returning from a hunting or fishing expedition.

(9) A corrections officer while transporting or accompanying an individual convicted of or arrested for an offense and confined in a place of incarceration or detention while outside the confines of the place of incarceration or detention. [Amended by 1977 c.207 §1]

Note: See note under 166.180.

166.270 Certain exconvicts forbidden to possess arms. (1) Any person who has been convicted of a felony under the law of this state or any other state, or who has been convicted of a felony under the laws of the Government of the United States, who owns, or has in his possession or under his custody or control any pistol, revolver, or other firearms capable of being concealed upon the person, or machine gun, commits the crime of exconvict in possession of a firearm.

(2) For the purposes of this section, a person "has been convicted of a felony" if, at the time of his conviction for an offense, that offense was a felony under the law of the jurisdiction in which it was committed. Provided, however, that such conviction shall not be deemed a conviction of a felony if:

(a) At the time of conviction, and pursuant to the law of the jurisdiction in which the offense occurred, the offense was made a misdemeanor by the type or manner of sentence actually imposed; or

(b) The offense was for possession of marijuana.

(3) Subsection (1) of this section shall not apply to any person who has been convicted of only one felony under the law of this state or any other state, or who has been convicted of only one felony under the laws of the United States, which felony did not involve the possession or use of a firearm, and who has been discharged from imprisonment, parole or probation for said offense for a period of 15 years prior to the date of alleged violation of subsection (1) of this section.

(4) Exconvict in possession of a firearm is a Class C felony. [Amended by 1975 c.702 §1]

Note: See note under 166.180.

166.275 Possession of weapons by inmates of penal institutions. Any person committed to any penal institution who, while under the jurisdiction of any penal institution or while being conveyed to or from any penal institution, possesses or carries upon his person, or has under his custody or control any dangerous instrument, or any weapon including but not limited to any blackjack, slingshot, billy, sand club, metal knuckles, explosive substance, dirk, dagger, sharp instrument, pistol, revolver or other firearm without lawful authority, is guilty of a felony and upon conviction thereof shall be punished by imprisonment in the penitentiary for a term not more than 20 years. [1953 c.533 §1]

Note: See note under 166.180.

166.280 Seizure of concealed weapons; destruction; exception; sale by auction. (1) The unlawful concealed carrying upon the person or within the vehicle of the carrier of any machine gun, pistol, revolver or other firearm capable of being concealed upon the person, or any firearm used during the commission of any felony or misdemeanor is a nuisance. Any such weapons taken from the person or vehicle of any person unlawfully carrying the same are nuisances, and shall be surrendered to the magistrate before whom the person is taken, except that in any city, county, town or other municipal corporation the weapons shall be surrendered to the head of the police force or police department.

(2) The officers to whom the weapons are surrendered, except as provided under subsection (4) of this section or upon the certificate of a judge of a court of record or of the district attorney of the county that their preservation is necessary or proper to the ends of justice, shall have authority and be responsible, subject to applicable laws, for selling such weapons or shall destroy the weapons to such extent that they are wholly and entirely ineffective and useless for the purpose for which they were manufactured.

(3) Upon the certificate of a judge or of the district attorney that the ends of justice will be subserved thereby, such weapon shall be preserved until the necessity for its use ceases, at which time, except as provided under subsection (4) of this section, the court shall order that the weapons be delivered to the officials having responsibility under applicable laws and subsection (2) of this section for selling such weapons, or destroying the weapons to such extent that they are wholly and entirely ineffective and useless for the purpose for which they were manufactured.

(4) In the event any such weapon has been stolen and is thereafter recovered from the thief or the thief's transferee, it shall not be destroyed but shall be restored to its lawful owner as soon as its use as evidence has been served, upon identification of the weapon and proof of ownership.

(5) The sale of any weapons under this section shall be by public auction. The agency holding the weapons shall conduct the auction annually. The agency shall publish notice of the time and place of the auction in the principal local newspaper no less than 20 nor more than 30 days before the date of the auction. Written or printed notice of the auction shall also be posted in three public places of the county where the sale is to take place, not less than 10 days successively. The agency shall permit public inspection of the weapons to be auctioned. Items shall be sold individually unless there is no interested bidder, in which case they may be sold in lots. [Amended by 1981 c.767 §1]

Note: See note under 166.180.

166.290 Issuance of license to carry weapon concealed; fees; liability. (1) The sheriff of a county, upon proof before him, that the person applying therefor is of good moral character, and that good cause exists for the issuance thereof, may issue to such person a license to carry concealed a pistol, revolver or other firearm for a period of one year from the date of the license, upon payment of the fee established under subsection (3) of this section. The fees shall be turned over to the treasurer of such county and credited to the general fund thereof.

(2) All applications for licenses shall be filed in writing, signed by the applicant, and shall state the name, occupation, residence and business address of the applicant; his date of birth, height, weight, color of eyes and hair, and reason for desiring a license to carry the weapon. The sheriff shall require that the applicant submit to fingerprinting at the time of applying for issuance or renewal of a license under this section. Any license issued upon the application shall set forth the foregoing data and shall, in addition, contain a description of the weapon authorized to be carried, giving the name of the manufacturer, the serial number and the caliber thereof. The record of each license issued or renewed under this section shall be kept in the office of the county clerk. The applications and licenses shall be uniform throughout the state, upon forms to be prescribed by the Attorney General.

(3) Fees for the issuance and renewal of licenses under this section shall be set by the governing body of each county at an amount estimated to provide for the administration of this section, but the fees shall not exceed:

(a) $10 for the issuance of a license.

(b) $2.50 for the renewal of a license.

(4) Neither a sheriff nor any authorized representative of a sheriff who is engaged in the receipt and review of any application for or in the issuing or denial of any license under this section shall incur any civil or criminal liability as the result of the lawful performance of his duties under this section. [Amended by 1973 c.391 §1]

Note: See note under 166.180.

166.300 Killing another as cause for loss of right to bear arms. (1) Any person who has committed, with firearms of any kind or description, murder in any degree, or manslaughter, either voluntary or involuntary, or who in a careless or reckless manner, kills or injures another with firearms, and who, at any time after committing murder or manslaughter or after said careless or reckless killing or injury of another, carries or bears firearms of any kind or description within this state, shall be punished upon conviction by a fine of not more than $500, or by imprisonment in the county jail not to exceed one year, or both.

(2) Subsection (1) of this section does not deprive the people of this state of the right to bear arms for the defense of themselves and the state, and does not apply to any peace officer in the discharge of his official duties or to a member of any regularly constituted military organization while on duty with such military organization.

(3) Justices of the peace, district courts, county courts and all other courts having jurisdiction as justices of the peace, shall have concurrent jurisdiction with the circuit courts of all prosecutions under subsection (1) of this section.

Note: See note under 166.180.

166.310 Concealed weapon found on arrested person; information to be filed. Whenever any person is arrested and it is discovered that he possesses or carries or has possessed or carried upon his person any loaded pistol, revolver or other firearm, or any weapon named or enumerated in ORS 166.220, in violation of ORS 166.220, 166.510 or 166.520, the person making the arrest shall forthwith lay an information for a violation of the section against the person arrested, before the nearest or most accessible magistrate having jurisdiction of the offense, and the magistrate must entertain and examine the information and act thereon in the manner prescribed by law.

Note: See note under 166.180.

166.320 Setting springgun or setgun. (1) Any person who places or sets any loaded springgun, setgun, or any gun, firearm or other device of any kind designed for containing or firing explosives, in any place where it may be fired, exploded or discharged by the contact of any person or animal with any string, wire, rod, stick, spring or other contrivance affixed to or connected with it, or with its trigger, shall be punished upon conviction by a fine of not less than $100 nor more than $500, or by imprisonment in the county jail for not less than 30 days nor more than six months, or both.

(2) Subsection (1) of this section does not apply to any loaded springgun, setgun, firearm or other device placed for the purpose of destroying gophers, moles or other burrowing rodents, and does not prevent the use of a coyote getter by employes of county, state or federal governments engaged in cooperative predatory animal control work.

Note: See note under 166.180.

166.330 Use of firearms with other than incombustible gun wadding. Any person who uses in any firearms discharged on lands within this state, not his own, anything other than incombustible gun wadding, shall be punished upon conviction by a fine of not less than $5 nor more than $100, or by imprisonment in the county jail for not less than two days nor more than 60 days.

Note: See note under 166.180.

166.340 [1965 c.20 §§2, 3; 1969 c.351 §1; repealed by 1981 c.41 §3]

POSSESSION OF DESTRUCTIVE DEVICE OR FIREARM IN PUBLIC BUILDING

166.360 Definitions for ORS 166.360 to 166.380. As used in ORS 166.360 to 166.380, unless the context requires otherwise:

(1) "Capitol building" means the Capitol, the Supreme Court Building, the State Office Building, the State Library Building, the Labor and Industries Building, the State Highway Building, the Agriculture Building or the Public Service Building and includes any new buildings which may be constructed on the same grounds

UTAH - pocket part

PART 3

EXPLOSIVES

76-10-301. Unlawful handling of explosives in city or town.

Cross-References.

Bus Passenger Safety Act, bombing buses or terminals, carrying explosives into terminal or aboard bus, 76-10-1505, 76-10-1507.

PART 5

WEAPONS

Section
76-10-504. Carrying concealed dangerous weapon.
76-10-513. License to carry concealed weapon — Requirements for issuance.
76-10-514. License — Application form.
76-10-515. License — Fingerprints transmitted to bureau of criminal investigation — Report from bureau.

76-10-501. Definitions.

Cross-References.

Bus Passenger Safety Act, offenses related to dangerous weapons or firearms, 76-10-1504, 76-10-1505, 76-10-1507.

76-10-503. Possession of dangerous weapon — Persons, etc.

Constitutionality.

Conviction of an alien under this section for possession of a firearm was not unconstitutional. State v. Vlacil (1982) 645 P 2d 677 (two justices concurring, one justice concurring with separate opinion, and two justices concurring in the result).

Aliens.

State regulation of the possession of firearms by aliens has not been preempted by federal law. State v. Vlacil (1982) 645 P 2d 677 (two justices concurring, one justice concurring with separate opinion, and two justices concurring in the result).

Parolees.

Testimony by a Colorado parole officer that defendant was under his supervision did not permit inference that the parole was from a felony conviction since parole officer had no personal knowledge of the conviction; copies of Colorado court records certified by a notary public who had no custody of the documents were not properly authenticated and could not be received in evidence as proof that defendant had been convicted of a felony. State v. Lamorie (1980) 610 P 2d 342.

76-10-504. Carrying concealed dangerous weapon. (1) Any person, except those persons described in section 76-10-503 and those persons exempted under section 76-10-510, carrying a concealed dangerous weapon, as defined in this part 5, is guilty of a class B misdemeanor, except that a firearm that contains no ammunition and is enclosed in a case, gun box, or securely-tied package shall not be considered a concealed weapon, but:

(a) If the dangerous weapon is a firearm and contains no ammunition, he shall be guilty of a class B misdemeanor;

(b) If the dangerous weapon is a firearm and contains ammunition, he shall be guilty of a class A misdemeanor; or

(c) If the dangerous weapon is a sawed-off shotgun, or if the dangerous weapon is a firearm and is used to commit a crime of violence, he shall be guilty of a felony of the third degree.

(2) Nothing in this part 5 shall prevent any person, except persons described in section 76-10-503, from keeping within his place of residence, place of business, or any vehicle under his control any firearm, except that it shall be a class B misdemeanor to carry a loaded firearm in a vehicle.

History:C. 1953, 76-10-504, enacted by L. 1982, ch. 17, § 1.

Compiler's Notes.

Laws 1982, ch. 17, § 1 repealed old section 76-10-504 (C. 1953, 76-10-504, enacted by L. 1973, ch. 196, § 76-10-504), relating to carrying concealed dangerous weapons, and enacted new section 76-10-504.

Title of Act.

An act relating to concealed weapons; providing for a cross reference to relevant statutes; allowing an exemption from the statute when a firearm contains no ammunition and is enclosed in a case, gun box or securely-tied package; exempting from the statute firearms kept in a home, place of business, or vehicle; prohibiting a loaded firearm from being kept in a vehicle; and providing an effective date.

This act repeals and reenacts section 76-10-504, Utah Code Annotated 1953, as enacted by chapter 196, Laws of Utah 1973. — Laws 1982, ch. 17.

Effective Date.

Section 2 of Laws 1982, ch. 17 provided that the act should take effect upon approval. Approved February 19, 1982.

"Carrying."

A person will be deemed to be "carrying" a concealed weapon where such weapon is shown to be under the person's control and within his immediate, easy or ready access; it is not required that the weapon be upon one's person to constitute "carrying" within the meaning of this section. State v. Williams (1981) 636 P 2d 1092.

Lesser included offenses.

The offense of carrying a loaded firearm in a vehicle, 76-10-505, is not a necessarily included offense of carrying a concealed dangerous weapon. State v. Williams (1981) 636 P 2d 1092.

76-10-505. Carrying loaded firearm in vehicle or on street.

Cross-References.

Registered private security officer exempt during performance of duties, 58-45-20.

Lesser included offense.

The offense of carrying a loaded firearm in a vehicle is not a necessarily included offense of carrying a concealed dangerous weapon, 76-10-504. State v. Williams (1981) 636 P 2d 1092.

76-10-506. Threatening with or using dangerous weapon, etc.

Aggravated assault.

Aggravated assault, 76-5-103, committed by use of a deadly weapon is not the same crime proscribed by this section, and a person convicted of aggravated assault is not entitled to receive the misdemeanor penalty provided by this section, but is to be sentenced under 76-5-103. State v. Verdin (1979) 595 P 2d 862.

76-10-513. License to carry concealed weapon — Requirements for issuance. (1) The sheriff of a county, commissioner of public safety, chief of police, city marshal, town marshal, or other head of the police department of any city or county, upon proof that the person applying is of good character, and upon a showing that good cause exists for the issuance, may issue to such person a license to carry a concealed weapon within their jurisdiction for any period of time not to exceed one year from the issuance date of the license.

(2) A license may include reasonable restrictions which the issuing authority deems warranted including, but not limited to, time, place, or circumstances under which the applicant may carry the weapon.

History: C. 1953, 76-10-513, enacted by L. 1973, ch. 196, § 76-10-513; L. 1979, ch. 76, § 1.

Compiler's Notes.

The 1979 amendment designated the former section as subsec. (1); substituted

WASHINGTON

9.40.120 Incendiary devices——Penalty. Every person who possesses, manufactures, or disposes of an incendiary device knowing it to be such is guilty of a felony, and upon conviction, shall be punished by imprisonment in a state prison for a term of not more than twenty-five years. [1971 ex.s. c 302 § 4; 1969 ex.s. c 79 § 3.]

Severability——1971 ex.s. c 302: See note following RCW 9.41.010.

9.40.130 Incendiary devices——Exceptions. RCW 9.40.120, as now or hereafter amended, shall not prohibit the authorized use or possession of any material, substance, or device described therein by a member of the armed forces of the United States or by firemen, or peace officers, nor shall these sections prohibit the use or possession of any material, substance, or device described therein when used solely for scientific research or educational purposes or for any lawful purpose. RCW 9.40.120, as now or hereafter amended, shall not prohibit the manufacture or disposal of an incendiary device for the parties or purposes described in this section. [1971 ex.s. c 302 § 5; 1969 ex.s. c 79 § 4.]

Severability——1971 ex.s. c 302: See note following RCW 9.41.010.

Chapter 9.41
FIREARMS AND DANGEROUS WEAPONS

Sections

9.41.010 Terms defined.
9.41.025 Committing crime when armed——Penalties——"Inherently dangerous" defined——Resisting arrest.
9.41.030 Being armed prima facie evidence of intent.
9.41.040 Unlawful possession of a short firearm or pistol——Certain persons not precluded from ownership of firearms.
9.41.050 Carrying pistol.
9.41.060 Exception to restriction on carrying pistol.
9.41.070 Issue of licenses to carry——Fee——Revocation——Renewal.
9.41.080 Delivery to minors and others forbidden.
9.41.090 Commercial sales regulated——Requirements for delivery——Hold on delivery.
9.41.093 Exemptions.
9.41.095 Denial of application——Appeal.
9.41.097 Supplying information on persons purchasing pistols or applying for concealed pistol licenses.
9.41.098 Forfeiture of firearms, order by courts——Return to owner——Confiscation by law enforcement officer.
9.41.100 Dealers to be licensed.
9.41.110 Dealer's licenses, by whom granted and conditions thereof——Wholesale sales excepted——Permits prohibited.
9.41.120 Certain transfers forbidden.
9.41.130 False information forbidden.
9.41.140 Alteration of identifying marks——Exceptions.
9.41.150 Exemptions.
9.41.160 General penalties.
9.41.170 Alien's license to carry firearms——Exception.
9.41.180 Setting spring gun.
9.41.185 Coyote getters.
9.41.190 Machine guns prohibited——Exception.
9.41.200 Machine gun defined.
9.41.210 Penalty.
9.41.220 Machine guns and parts contraband.
9.41.230 Aiming or discharging firearms.
9.41.240 Use of firearms by minor.
9.41.250 Dangerous weapons——Evidence.
9.41.260 Dangerous exhibitions.
9.41.270 Weapons apparently capable of producing bodily harm, carrying, exhibiting, displaying, or drawing unlawful——Penalty——Exceptions.
9.41.280 Students carrying dangerous weapons on school premises——Penalty——Exceptions.
9.41.290 Consistency of local laws.

Carrying loaded shotgun or rifle in vehicle: RCW 77.16.250.

Explosives: Chapter 70.74 RCW.

Rifles and shotguns, purchasing out-of-state and by nonresidents: Chapter 19.70 RCW.

Shooting firearm from, across, or along public highway: RCW 77.16.260.

9.41.010 Terms defined. (1) "Short firearm" or "pistol" as used in this chapter means any firearm with a barrel less than twelve inches in length.

(2) "Crime of violence" as used in this chapter means:

(a) Any of the following felonies, as now existing or hereafter amended: Any felony defined under any law as a class A felony or an attempt to commit a class A felony, criminal solicitation of or criminal conspiracy to commit a class A felony, manslaughter in the first degree, manslaughter in the second degree, indecent liberties if committed by forcible compulsion, rape in the second degree, kidnapping in the second degree, arson in the second degree, assault in the second degree, extortion in the first degree, burglary in the second degree, and robbery in the second degree;

(b) Any conviction for a felony offense in effect at any time prior to July 1, 1976, which is comparable to a felony classified as a crime of violence in subsection (2) (a) of this section; and

(c) Any federal or out-of-state conviction for an offense comparable to a felony classified as a crime of violence under subsection (2) (a) or (b) of this section.

(3) "Firearm" as used in this chapter means a weapon or device from which a projectile may be fired by an explosive such as gunpowder.

(4) "Commercial seller" as used in this chapter means a person who has a federal firearms license. [1983 c 232 § 1; 1971 ex.s. c 302 § 1; 1961 c 124 § 1; 1935 c 172 § 1; RRS § 2516-1.]

Severability——1983 c 232: "If any provision of this act or its application to any person or circumstance is held invalid, the remainder of the act or the application of the provision to other persons or circumstances is not affected." [1983 c 232 § 14.]

Severability——1971 ex.s. c 302: "If any provision of this act, or its application to any person or circumstance is held invalid, the remainder of the act, or the application of the provision to other persons or circumstances is not affected." [1971 ex.s. c 302 § 35.]

Severability——1961 c 124: "If any part of this act is for any reason declared void, such invalidity shall not affect the validity of the remaining portions of this act." [1961 c 124 § 13.]

Preemption and general repealer——1961 c 124: "All laws or parts of laws of the state of Washington, its subdivisions and municipalities inconsistent herewith are hereby preempted and repealed." [1961 c 124 § 14.]

Short title——1935 c 172: "This act may be cited as the 'Uniform Firearms Act.'" [1935 c 172 § 18.]

Severability——1935 c 172: "If any part of this act is for any reason declared void, such invalidity shall not affect the validity of the remaining portions of this act." [1935 c 172 § 17.]

Construction——1935 c 172: "This act shall be so interpreted and construed as to effectuate its general purpose to make uniform the law of those states which enact it." [1935 c 172 § 19.]

9.41.025 Committing crime when armed——Penalties——"Inherently dangerous" defined——Resisting arrest. (Effective until July 1, 1984.) Any person who shall commit or attempt to commit any felony, including but not limited to assault in the first degree, rape in the first degree, burglary in the first degree, robbery in the first degree, riot, or any other felony which includes as an element of the crime the fact that the accused was armed with a firearm, or any misdemeanor or gross misdemeanor categorized herein as inherently dangerous, while armed with, or in the possession of any firearm, shall upon conviction, in addition to the penalty provided by statute for the crime committed without use or possession of a firearm, be imprisoned as herein provided:

(1) For the first offense the court shall impose a sentence of not less than five years, which sentence shall not be suspended or deferred;

(2) For a second offense, or if, in the case of a first conviction of violation of any provision of this section, the offender shall previously have been convicted of violation of the laws of the United States or of any other state, territory, or district relating to the use or possession of a firearm while committing or attempting to commit a crime, the offender shall be imprisoned for not less than seven and one-half years, which sentence shall not be suspended or deferred;

(3) For a third or subsequent offense, or if the offender shall previously have been convicted two or more times in the aggregate of any violation of the law of the United States or of any other state, territory, or district relating to the use or possession of a firearm while committing or attempting to commit a crime, the offender shall be imprisoned for not less than fifteen years, which sentence shall not be suspended or deferred;

(4) Misdemeanors or gross misdemeanors categorized as "inherently dangerous" as the term is used in this statute means any of the following crimes or an attempt to commit any of the same: Simple assault, coercion, vehicle prowling, escape in the third degree, obstructing a public servant, theft in the third degree, resisting arrest, and communication with a minor for immoral purposes.

(5) If any person shall resist apprehension or arrest by firing upon a law enforcement officer, such person shall in addition to the penalty provided by statute for resisting arrest, be guilty of a felony and punished by imprisonment for not less than ten years, which sentence shall not be suspended or deferred. [1982 1st ex.s. c 47 § 1; 1981 c 258 § 1; 1969 ex.s. c 175 § 1.]

Severability——1982 1st ex.s. c 47: See note following RCW 9.41.190.

9.41.030 Being armed prima facie evidence of intent. In the trial of a person for committing or attempting to commit a crime of violence, the fact that he was armed with a pistol and had no license to carry the same shall be prima facie evidence of his intention to commit said crime of violence. [1935 c 172 § 3; RRS § 2516-3.]

9.41.040 Unlawful possession of a short firearm or pistol——Certain persons not precluded from ownership of firearms. (1) A person is guilty of the crime of unlawful possession of a short firearm or pistol, if, having previously been convicted in this state or elsewhere of a crime of violence or of a felony in which a firearm was used or displayed, the person owns or has in his possession any short firearm or pistol.

(2) Unlawful possession of a short firearm or pistol shall be punished as a class C felony under chapter 9A-.20 RCW.

(3) As used in this section, a person has been "convicted" at such time as a plea of guilty has been accepted or a verdict of guilty has been filed, notwithstanding the pendency of any future proceedings including but not limited to sentencing, post-trial motions, and appeals. A person shall not be precluded from possession if the conviction has been the subject of a pardon, annulment, certificate of rehabilitation, or other equivalent procedure based on a finding of the rehabilitation of the person convicted or the conviction has been the subject of a pardon, annulment, or other equivalent procedure based on a finding of innocence.

(4) Except as provided in subsection (5) of this section, a person is guilty of the crime of unlawful possession of a short firearm or pistol if, after having been convicted of any felony violation of the uniform controlled substances act, chapter 69.50 RCW, or equivalent statutes of another jurisdiction, or after any period of confinement under RCW 71.05.320 or an equivalent statute of another jurisdiction, or following a record of commitment pursuant to chapter 10.77 RCW or equivalent statutes of another jurisdiction, he owns or has in his possession or under his control any short firearm or pistol.

(5) Notwithstanding subsection (1) of this section, a person convicted of an offense other than murder, manslaughter, robbery, rape, indecent liberties, arson, assault, kidnapping, extortion, burglary, or violations with respect to controlled substances under RCW 69.50.401(a) and 69.50.410, who received a probationary sentence under RCW 9.95.200, and who received a dismissal of the charge under RCW 9.95.240, shall not be precluded from ownership, possession, or control of a firearm as a result of the conviction. [1983 c 232 § 2; 1961 c 124 § 3; 1935 c 172 § 4; RRS § 2516-4.]

Severability——1983 c 232: See note following RCW 9.41.010.

9.41.050 Carrying pistol. (1) Except in the person's place of abode or fixed place of business, a person shall not carry a pistol concealed on his or her person without a license to carry a concealed weapon.

(2) A person who is in possession of an unloaded pistol shall not leave the unloaded pistol in a vehicle unless the unloaded pistol is locked within the vehicle and concealed from view from outside the vehicle.

(3) A person shall not carry or place a loaded pistol in any vehicle unless the person has a license to carry a concealed weapon and: (a) The pistol is on the licensee's person, (b) the licensee is within the vehicle at all times that the pistol is there, or (c) the licensee is away from the vehicle and the pistol is locked within the vehicle and concealed from view from outside the vehicle. [1982 1st

ex.s. c 47 § 3; 1961 c 124 § 4; 1935 c 172 § 5; RRS § 2516-5.]

Severability——1982 1st ex.s. c 47: See note following RCW 9.41.190.

9.41.060 Exception to restriction on carrying pistol. The provisions of RCW 9.41.050 shall not apply to marshals, sheriffs, prison or jail wardens or their deputies, policemen or other law enforcement officers, or to members of the army, navy or marine corps of the United States or of the national guard or organized reserves when on duty, or to regularly enrolled members of any organization duly authorized to purchase or receive such weapons from the United States or from this state, or to regularly enrolled members of clubs organized for the purpose of target shooting or modern and antique firearm collecting or to individual hunters: *Provided*, Such members are at, or are going to or from their places of target practice, or their collector's gun shows and exhibits, or are on a hunting, camping or fishing trip, or to officers or employees of the United States duly authorized to carry a concealed pistol, or to any person engaged in the business of manufacturing, repairing, or dealing in firearms or the agent or representative of any such person having in his possession, using, or carrying a pistol in the usual or ordinary course of such business, or to any person while carrying a pistol unloaded and in a secure wrapper from the place of purchase to his home or place of business or to a place of repair or back to his home or place of business or in moving from one place of abode or business to another. [1961 c 124 § 5; 1935 c 172 § 6; RRS § 2516-6.]

9.41.070 Issue of licenses to carry——Fee——Revocation——Renewal. (1) The judge of a court of record, the chief of police of a municipality, or the sheriff of a county, shall within thirty days after the filing of an application of any person issue a license to such person to carry a pistol concealed on his person within this state for four years from date of issue, for the purposes of protection or while engaged in business, sport or while traveling. However, if the applicant does not have a valid permanent Washington driver's license or Washington state identification card or has not been a resident of the state for the previous consecutive ninety days, the issuing authority shall have up to sixty days after the filing of the application to issue a license. Such citizen's constitutional right to bear arms shall not be denied to him, unless he:

(a) Is ineligible to own a pistol under the provisions of RCW 9.41.040; or

(b) Is under twenty-one years of age; or

(c) Is subject to a court order or injunction regarding firearms pursuant to RCW 10.99.040, 10.99.045, or 26.09.060; or

(d) Is free on bond or personal recognizance pending trial, appeal, or sentencing for a crime of violence; or

(e) Has an outstanding warrant for his or her arrest from any court of competent jurisdiction for a felony or misdemeanor.

The license shall be revoked immediately upon conviction of a crime which makes such a person ineligible to own a pistol or upon the third conviction for a violation of this chapter within five calendar years. The license shall be in triplicate, in form to be prescribed by the department of licensing, and shall bear the name, address, and description, fingerprints and signature of the licensee, and the licensee's driver's license number or state identification card number if used for identification in applying for the license. The original thereof shall be delivered to the licensee, the duplicate shall within seven days be sent by registered mail to the director of licensing and the triplicate shall be preserved for six years, by the authority issuing said license.

(2) The fee for the original issuance of a four-year license shall be twenty dollars: *Provided*, That no other additional charges by any branch or unit of government shall be borne by the applicant for the issuance of the license: *Provided further*, That the fee shall be distributed as follows:

(a) Four dollars shall be paid to the state general fund;

(b) Four dollars shall be paid to the agency taking the fingerprints of the person licensed; and

(c) Twelve dollars shall be paid to the issuing authority for the purpose of enforcing this chapter.

(3) The fee for the renewal of such license shall be twelve dollars: *Provided*, That no other additional charges by any branch or unit of government shall be borne by the applicant for the renewal of the license: *Provided further*, That the fee shall be distributed as follows:

(a) Four dollars shall be paid to the state general fund; and

(b) Eight dollars shall be paid to the issuing authority for the purpose of enforcing this chapter.

(4) A licensee may renew a license if the licensee applies for renewal within ninety days before or after the expiration date of the license. A license so renewed shall take effect on the expiration date of the prior license. A licensee renewing after the expiration date of the license must pay a late renewal penalty of ten dollars in addition to the renewal fee specified in subsection (3) of this section.

(5) Notwithstanding the requirements of subsections (1) through (4) of this section, the chief of police of the municipality or the sheriff of the county of the applicant's residence may issue a temporary emergency license for good cause pending review under subsection (1) of this section.

(6) A political subdivision of the state shall not modify the requirements of this section. A civil suit may be brought to enjoin a wrongful refusal to issue a license. The prevailing party is entitled to reasonable costs, including attorneys' fees. [1983 c 232 § 3; 1979 c 158 § 1; 1971 ex.s. c 302 § 2; 1961 c 124 § 6; 1935 c 172 § 7; RRS § 2516-7.]

Severability——1983 c 232: See note following RCW 9.41.010.

MEMORANDUM

TO: Representative John Liska

FROM: Heidi Borson HHB
Legislative Analyst

RE: Concealed Weapons
Research Request 83-217

Mary Witman of your staff requested that we provide information on concealed weapons laws and handgun training programs in Alaska and other states. Specifically, she asked us to research the following topics:

- Can Alaska residents obtain permits to carry concealed weapons?
- Which states allow citizens to carry concealed weapons? What are the consequences, i.e., how is the crime rate affected?
- What handgun training programs exist in other states, especially for women? How have these programs affected the crime rate?

In collecting data to respond to this request, I contacted law enforcement and public safety officials in several states, and the National Rifle Association headquarters in Washington, D.C.; I also used information on concealed weapons compiled by our agency for a previously released research request.

CONCEALED WEAPONS LAWS IN ALASKA AND OTHER STATES

Alaska law provides that citizens may purchase and possess firearms; however, under AS 11.61.220, carrying a concealed weapon constitutes a class B misdemeanor. Furthermore, no statutory provision exists for obtaining a permit to carry a concealed weapon under any circumstances.

Fifteen other states and the District of Columbia also prohibit carrying concealed weapons. Those states are listed below:

Arizona	Kentucky	Ohio
Arkansas	Missouri	Oklahoma
Hawaii	Nebraska	Tennessee
Illinois	New Mexico	Texas
Kansas	North Carolina	Wisconsin

The remaining 33 states permit citizens to carry concealed weapons in some circumstances. Each of those states, except Vermont, requires citizens to obtain permits to carry concealed weapons; however, permit policies vary greatly. Some states, like Washington, issue permits upon demand, while other states, like Deleware and West Virginia, have such stringent permit policies that permits are seldom issued. A list of states which allow citizens to carry concealed weapons and a description of their concealed weapons laws follow:

- Alabama allows its county sheriffs to issue permits for carrying concealed weapons. The penalty for carrying a concealed weapon without a permit varies according to county.

- In California, permits to carry concealed weapons are issued by local sheriffs or police departments. Illegal possession of a concealed weapon is a misdemeanor.

- State law in Connecticut authorizes first selectmen, chiefs of police, and state police to issue permits for the possession of handguns. No distinction is made between concealed and unconcealed weapons. Violation of the statute is a felony with a maximum penalty of a $1,000 fine and/or five years in prison.

- Deleware has a system of permits for carrying concealed weapons; however, few permits are actually issued. To obtain a permit, the applicant must show cause such as a demonstrated threat to his or her life or a job which involves transporting large sums of money. Permits are issued by state courts and the Attorney General's office. Carrying a concealed weapon without a permit is a felony.

- County commissions in Florida may issue permits for the possession of firearms, concealed or unconcealed. Carrying a concealed weapon without a permit is a felony, while carrying an unconcealed weapon without a permit is a misdemeanor. Counties set their own criteria for the issuance of permits.

Re: Carrying Concealed Weapon permits

Dear Representative Liska:

District Attorney Robert J. Miller has asked me, as his Assistant, to send you copies of our Carrying Concealed Weapon laws which I am hereby enclosing. The main law that could be of interest is 202.350 which covers more of the area that you are concerned with. The other statutes we have enclosed are simply for your information.

The Sheriff of our County has issued 639 Concealed Weapon permits to date. During this year he has pulled three (3) of these. The three were pulled generally on the basis that the individuals abused their privilege by flashing the weapon but not pulling it on anybody. In my experience, it is very unusual for us to pull any permits. Before a Concealed Weapon permit is issued, the persons are very carefully screened and we are very selective as to who gets a permit.

I hope that this information will be of help to you and if there is anything further that we can do for you, please contact me.

Sincerely,

Rex A Bell

SUBJECT: Permit for armed bodyguard

TO: Representative John Liska

FROM: Billy G. Berrier
Director
Division of Legal Services

You have asked whether in our opinion AS 18.65.500 gives the Commissioner of Public Safety the authority to issue permits for armed bodyguards.

In my opinion it does not.

The section provides:

> Sec. 18.65.500
>
> USE OF ARMED BODYGUARDS.
> A person who, in this state, hires another person to guard a person in this state with arms or deadly weapons, or a person who comes into this state armed with deadly weapons for the purpose of guarding a person, without a written permit from the commissioner of public safety, is guilty of a misdemeanor and upon conviction is punishable by imprisonment for not more than 60 days, or by a fine of not more than $1,000, or by both.

It could be argued that the commissioner by implication is granted the power to issue permits because of the term "without a written permit from the Commissioner of Public Safety".

The more plausible argument is that the language is for the purpose of recognizing the possibility that other law may give the commissioner authority to issue permits and therefore this language prevents inconsistency.

This is strengthend by the context in which the section was adopted. It was part of Chapter 59 Session Laws of Alaska 1976. The title was "Relating to the licensing of security guards and security guard agencies and providing for an effective date". The security guard provisions are Article 4 of AS 18.65 (Sec. 18.65.400-490) and the section involved is Article 5 of that chapter.

The context of the Act makes it clear the question of licensing was before the legislature so it appears the intent to restrict the use of armed bodyguards was controlling and the choice not to give power here to issue permits was intentional.

JUNEAU, ALASKA 99811
PHONE: 465-4322

April 2, 1984

The Honorable John J. Liska
Representative
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Liska:

This is in response to your inquiries about the relationship of issuing concealed weapon licenses by the Department as it relates to AS 18.65.500 "Use of Bodyguards."

This Department does not issue concealed weapon licenses under any circumstances. There is no provisions for doing so and the Department wishes it to remain that way.

Since the enactment of AS 18.65.500, there has been no known request for "a written permission," nor has anyone been arrested for violation of the statute. The statute makes reference to any arms or deadly weapon, but does not mention concealed.

Sincerely,

Robert J. Sundberg
Commissioner

HB 647

Fiscal Note Analysis

This fiscal note is based upon the Alaska State Troopers experience with Security Guard Licensing and upon the Seattle Police Department's licensing experience for concealed weapons permits.

Processing of a security guard license requires approximately 45 minutes to 1 hour by an experienced clerk. Concealed weapons permit application processing should require at least this amount of time. The Seattle Police Department issues concealed weapons permits to approximately 1.6% of the city's population. These permits cover a two-year time period. Because of the more independent nature of Alaska's population, we estimate that approximately 2% of our state's population will request permits in the first year and 1.5% each year thereafter. A figure of 560,000 is used for our current population. Thus, it is estimated that approximately 11,200 permits will be processed during the first year and 8,400 in each succeeding year. Since it will require one hour to process each of the 11,200 permit requests received in the first year and there are 1,950 working hours in each State employee straight-time year, it will require 5.7 employees to implement the program. It is felt that four full-time employees and two six-month project employees can efficiently implement the program.

The costs in future years reflect the reduced work load and the project employees will not be required after the first year nor will any equipment be needed after the first year.

Other assumptions used in these calculations include a 6% cost increase in each year after FY 85, a $50 permit cost to the applicant, that office space can be provided in Alaska State Troopers headquarters at no cost (dependent upon construction of the new Crime Lab and the resulting space availability), a two year permit period, that the legislation is enacted immediately thus allowing for the positions to be established effective 7/1/84 and a steady population count of approximately 560,000.

The Honorable John J. Liska
Alaska State House of Representatives
Pouch V
Juneau, AK 99811

Re: Opinion on Article I, Section 19, Alaska Constitution

Dear Representative Liska:

The Attorney General has requested that I respond to your March 23, 1984, letter making inquiry about constitutional provisions addressing the right to bear arms. Specifically, you requested our opinion comparing the Alaska language pertaining to the right to bear arms with constitutional language found in the Washington State Constitution. Additionally, you wondered whether the provision in the United States Constitution protecting the right to bear arms conveys identical rights to the people as the provision in the Alaska Constitution.

The relevant provisions found in each constitution are as follows:

> A well-regulated militia being necessary to the security of a free state, the right of the people to keep and bear arms shall not be infringed.

Alaska Const. art. I, § 19.

> The right of the individual citizen to bear arms in defense of himself, or the state, shall not be impaired, but nothing in this section shall be construed as authorizing individuals or corporations to organize, maintain or employ an armed body of men.

Wash. Const. Art. I, § 24.

> A well-regulated militia, being necessary to the security of a free state, the right of the people to keep and bear arms, shall not be infringed.

U.S. Const. amend. II.

The language embodied in Alaska's constitution pertaining to arms is virtually identical, save for two changes in punctuation, to language found in amendment II to the U.S. Constitution. Amendment II to the U.S. Constitution was proposed by the congress on September 25, 1789, and became the law of the United States on December 15, 1791. The Washington constitutional provision was adopted in 1889 and the Alaska provision became operative with the formal proclamation of statehood on January 3, 1959.

During the intervening years since adoption of the United States, Washington, and Alaska constitutional arms provisions, numerous court cases have interpreted the constitutional language which establishes the right to bear arms. The Alaska Supreme Court has not had occasion to pass judgment on the exact nature of the rights contained in the Alaska Constitution, however the Washington Supreme Court has opined that the "constitutional guarantee of certain rights to certain individual citizens does not place such rights entirely beyond the police power of the state." State v. Gohl, 90 P. 259 (Wash. 1907). More specifically, the Washington Supreme Court found that the provision pertaining to the right to bear arms was "subject to reasonable regulation by the state under its police power." State v. Krantz, 164 P.2d 453 (Wash. 1945).

The contemporary judicial view in many jurisdictions does not regard amendment II to the United States Constitution as prohibiting or limiting the legislature's power to regulate the ownership or control of firearms. Whatever the scope of any common law or constitutional right to bear arms, it is not absolute and does not guarantee to individuals the right to carry weapons abroad at all times and in all circumstances. Application of Atkinson, 291 N.W. 2d 396 (Minn. 1980).

Because of the lack of case law in Alaska, we are unable to ascertain with any great certainty how the Alaska Supreme Court would construe article I, section 19, of the Alaska Constitution. It is possible that the Alaska courts would follow case law from other jurisdictions, which has held that the right to bear arms is subject to reasonable regulation under the state's police power.

Please contact us at your earliest convenience if we can answer additional questions.

Sincerely,

NORMAN C. GORSUCH
ATTORNEY GENERAL

HB 653
Fiscal Note Analysis
Prepared by Division of General Services & Supply
Department of Administration
February 23, 1984

Currently, affected combined facilities in twelve (12) communities (see attached) are under A.S.H.A. Lease Agreements with the Department of Administration. Costs and Occupancy ratios as follows:

Costs under A.S.H.A. (per year) = $2,963,100.94

Percentage of Costs:

Court System 70% = $2,072,219.80.
Other Agencies 30% = $890,881.14

Occupancy Status: (net 342,151 square feet)

Court System 71.7% = 245,365 square feet
Other Agencies 28.3% = 96,786 square feet

Passage of this bill will probably result in a need to replace approximately 100,000 square feet of Office space. At an estimated replacement cost of $3.00 per square foot this represents an initial increase in lease costs (budget) of $3,600,000 per annum, with an estimated $300,000 as a one time cost to cover moving expenses.

[100,000 square ft. x 3.00 x 12] + 300,000 = $3,900,000.00

A six percent (6%) adjustment factor was used for estimating subsequent fiscal year costs.

As many of the affected facilities are in Bush areas, other space may not be readily available, resulting in loss of service to the public, or requiring construction of additional facilities. Cost estimates for construction are not known.

The Court System's past actions indicate the probability that they will expand into space now occupied by other agencies, i.e.:

1. ASHA #755 - Fairbanks Court and Facility
   Court System occupancy over a five (5) year period:

   1970 = 49.40% - 1975 = 84.57%, indicating:

   a. an increased use of 35.07% of total space available
   b. a growth of 70.85% in area required.

   Currently, the Court System is attempting to evict the State Recorder's Office which occupies 2,237 square feet.

3/BDGSF3/0223-02/2

Position Paper

HB 653

This bill will effectively give the Supreme Court control over all Court facilities in combined Court and office buildings. Historically the Court has evicted Executive branch agencies from Court-controlled facilites.

This department has a neutral position on this bill as long as the legislature realizes that when the Court evicts Executive branch agencies funds must be provided to procure alternate space. We expect the Court to begin to expel Executive branch agencies beginning with the Recorder's Office in Fairbanks as soon as the bill is passed. In order to allow sufficient time to budget for the procurement of alternate space the following amendment is suggested:

> Add Section 1, AS 22.05.025(b): The Supreme Court must provide a one (1) year notice prior to requiring an Executive branch agency to vacate a Court facility.

2. ASHA #765 - Anchorage Court and Office Building (old)
Court System occupies 62.69% of total space available.

In 1980 the Court System ousted both:

a. The State Recorder's office (3,752 square feet)
b. The Public Defender office (5,900 square feet)

Currently, the Court System requires additional space in Anchorage, Ketchikan, Kodiak, Kotzebue, Fairbanks and Nome.

BUILDING	COMMUNITY	TOTAL SQ. FT.	TOTAL COST/YR.	ACS SQ. FT.	ACS COST/YR.

FACT SHEET - ANCHORAGE COURTHOUSE EXPANSION

I. Why Expansion is Needed.

A. Present facility is overcrowded:

- The court offices and related justice agencies listed below have been forced to relocate outside of the existing Court complex. These offices and agencies will be relocated into the expanded Anchorage Courthouse.

Office/Agency	Square Feet Occupied	Annual Rental Cost
Administrative Office	7,440	$ 125,280
Technical Operations	2,045	50,304
Storage in Old PIP Bldg.	4,000	-0-
Attorney General/District Attorney	31,345	789,894
Public Defender	7,035	171,372
Judicial Council	1,340	35,376
Adult Corrections - Presentence Unit	1,710	46,170
Youth Corrections	4,200	65,520
	59,115	$1,283,916

- Existing Court facility has only 1 courtroom/chambers available, which is currently being used by pro tem and visiting judges. Remodeling of this building has been completed and no additional courtroom or chambers can be built.

- Clerk's Office is crowded to the point of inefficiency; other ancillary offices, jury assembly room, and other spaces have reached their maximum utilization.

- The existing situation in which agencies and offices are separated from the Court facility are inefficient in terms of communication and access. This creates additional operating costs to these offices.

B. Projections for Future Growth and Space Demands:

- The population in Anchorage has grown from 178,000 in 1975 to 230,000 in 1983, an increase of 30%.

- From 1975 to FY 83, superior court filings increased from 6,646 to 9,960, a 50% increase.

- From 1975 to FY 83 district court filings (non-traffic) increased from 12,726 to 16,464, a 30% increase and total filings increased from 45,590 to 65,272, a 43% increase.

- The Institute of Social and Economic Research projects Anchorage population increasing from 230,000 in 1983 to 362,000 by the year 2005, an increase of 57%.

- It is anticipated that superior and district court caseloads will increase approximately, if not more than, this amount over that time period.

- In addition to increases in population, the Court system caseloads are impacted by new legislation such as domestic violence, increased penalties for drugs or DWI's, etc.

II. Development of Anchorage Court Complex.

- 1964 to 1973: the Court System occupied the old court building, approximately 64,000 square feet.

- November 1973 to present: the Court System occupied the old building and the Boney Memorial Court Building, which added 158,000 square feet for a total of 222,000 square feet in the Court Complex.

- In 1982 the Court System received an appropriation of $9,969,000 for planning and design, land acquisition, and remodeling of existing space.

- In the following year the Court System purchased the land across "I" Street from the Court complex, selected an architect to design the new building, and completed the programming for the new building.

- This programming determined that the space requirements for the year 2005 would amount to approximately an additional 270,000 square feet.

- By 1988 (earliest year that building could be built and occupied) the Court System will need approximately 170,000 to 180,000 additional square feet, leaving approximately 100,000 square feet for other State uses.

- The projected growth from 1988 to the year 2005 will require the expansion of the Court into the full capacity of the building.

III. Costs:

- The cost estimates for construction of the Courthouse expansion were provided by John McCool, Project Architect.

- Construction cost of the Court offices, courtroom, and related spaces will be approximately $185 per square foot. For 270,000 square feet this cost equals approximately $49,495,000.

- Approximately 117,500 square feet of parking area will be built at an estimated cost of $85 per square foot for an additional $9,987,000.

- The total estimated construction cost is approximately $59,482,000.

- Architectural and other administrative costs are already budgeted in the 1982 appropriation.

HB

667

BILL SHEFFIELD
GOVERNOR

5667

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

February 13, 1984

The Honorable Joe Hayes
Alaska House of Representatives
Pouch V
Juneau, AK 99811

Dear Representative Hayes:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill relating to child support enforcement. As described in sec. 1, this bill is intended to improve the efforts of and increase the remedies available to those persons who seek to enforce the obligations of noncustodial parents to support their children through the payment of court-ordered child support.

Sections 2 and 10 amend AS 09.65.132(g) and AS 47.23.-250(i), respectively, to bring those statutes into conformance with the federal guidelines concerning restrictions on garnishments (15 U.S.C. sec. 1673). This revision is done by making a percentage of an employee's "disposable earnings," rather than "gross wages," subject to attachment. Because of the amendments in secs. 2 and 10, it will be simpler for employers and their bookkeepers to comply with a garnishment order; they will not have to do any further computation or research in determining the amount of money to withhold. The primary function of the amendments is to reduce the burden on employers and thereby increase their cooperation.

Under 15 U.S.C. sec. 1673, the child support enforcement agency (organized as a division in the Department of Revenue) could, under certain circumstances, garnish as much as 60 percent of an obligor's disposable earnings. The agency would, however, have to devote much investigatory time to determining whether those circumstances apply to an obligor before ordering the maximum garnishment. The agency has determined that it would be more productive to establish a set percentage for all garnishments. Although in a small percentage of cases the child support enforcement agency will be collecting less than previously permitted under state law, an advantage is gained through the

amendments in that the obligor will have an increased incentive to continue working and thereby continue paying the child support owed. Under existing statutory language, the agency is allowed to garnish 50 percent of the gross wages which, after mandatory deductions, leaves the obligor with little disposable income and little incentive to work.

Section 3 of the bill amends AS 25.20.050(a), regarding the legitimation of children. In almost all states, the process of legally establishing parentage has been greatly enhanced by scientific progress in blood testing, tissue typing, cell makeup testing, and protein comparisons. Alaska and many other states routinely use the results of these scientific procedures as legal evidence to exclude a person as a possible parent or to prove that a given person is the parent of a child to a degree of certainty well in excess of 90 percent. The use of these methods increases the reliability of parentage determinations and greatly reduces the cost to individuals and the public by shortening and eliminating litigation of parentage disputes. The amendment to AS 25.20.050(a) acknowledges the current use of and requires the admission of the results of modern scientific methods for determining the parentage of children; it also aligns Alaska statutes with current judicial determinations throughout the states. The amendment also creates a presumption of parentage when the blood testing results indicates a 95 percent or higher probability of parentage.

Sections 5 and 7, which amend AS 25.25.250 and AS 47.23.-080(c), respectively, make clear that custody, visitation, and property rights are not to be adjudicated in support enforcement proceedings when the child support enforcement agency is representing the obligee.

Section 6 of the bill, adding new AS 47.23.065, is a clarification of what constitutes an effective waiver of child support by the child's custodial parent. The issue has been addressed by the supreme court of this state in a recent decision, Malekos v. Yin, 655 P.2d 728 (Alaska 1982), in which the court recognized the right of parents to waive child support. In conjunction with this right, it must be stressed that there is an obligation to ensure that the children are supported by the parents themselves and that they do not allow the obligation of support to fall upon the public.

Court recognition of the right to waive past-due child support has been used by some noncustodial parents to complicate the issue; these parents claim the existence of a waiver agreement not known to the court or the agency. The process of disproving these claims results in extensive delays in judicial enforcement and waste of judicial time. New AS 47.23.065 recognizes the right of parties to make agreements without the necessity of court intervention, but also gives some assurance that the waivers embody the current intent of the parties by requiring the agreement to be in writing and to be signed by both parties at the time it is made. The bill also requires that in a divorce or dissolution the court may not accept a waiver without proof that the custodial parent can adequately support the child.

To prevent abuse of this system of waivers, the amendment includes language that will allow the state to recover an amount equal to any public assistance such as AFDC (aid to families with dependent children) payments from the noncustodial parent notwithstanding any waiver agreement that has been recognized by the agency and is made before an assignment of the support obligation to a governmental agency.

Section 8 adds AS 47.23.085 which will allow the child support enforcement agency, with the concurrence of the commissioner of revenue, to issue subpoenas to gather information regarding a parent's financial assets.

Section 9 of this bill adds AS 47.23.225 as another clarification of the effects of court orders of support. This section is based on an Alaska supreme court decision, Young v. Williams, 583 P.2d 207 (Alaska 1978), which suggested that unpaid and accrued installments of child support become judgments in favor of the custodial parent. The amendment would allow the custodial parent or the child support enforcement agency to collect those judgments with reduced court intervention; however, it would protect the noncustodial parent's right to contest the matter before the court. The procedure set out in the amendment should reduce judicial time spent in hearing routine matters by limiting the hearing to contested cases and by focusing the proceeding on narrow issues. This procedure would allow for prompt and more efficient enforcement of child support orders in a way similar to the income assignment order provision passed by the Twelfth Legislature in 1981 (AS 09.65.132).

The new AS 47.23.265, in sec. 11 of the bill, is an implementation of Civil Rule 67(b) and Civil Rule 5(b). Civil Rule 67(b)(2) requires that orders to pay child support through the child support enforcement agency contain a provision that the parties inform the agency, in writing, of any change of address. Civil Rule 5(b) allows for service by mail; service is effective upon mailing. New AS 47.23.265 makes it clear that the burden of notification of change of address is upon the person who is ordered to pay child support and thereby relieves the department of extraordinary efforts to attempt to locate the obligor when any subsequent papers must be served.

The enforcement of child support obligations is often very difficult, and I believe that the amendments in this bill will substantially improve the situation. Therefore, I urge your favorable action on it.

Sincerely,

Bill Sheffield
Governor

Press Release No. 84-7

PRESS RELEASE

FOR IMMEDIATE RELEASE
MARCH 23, 1984

UNITED STATES SENATE
COMMITTEE ON FINANCE
SD-219 Dirksen Senate
Office Building

FINANCE COMMITTEE REPORTS CHILD SUPPORT ENFORCEMENT AMENDMENTS

The Honorable Robert J. Dole (R., Kans.), Chairman of the Committee on Finance, announced that the Committee today unanimously reported amendments in the nature of a substitute to H.R. 4325, "The Child Support Enforcement Amendments of 1983." The amendments agreed to by the Committee during it's Executive Session on March 22, 1984, are described below.

1. Statement of Purpose

The Committee agreed to a proposal which amends the "Statement of Purpose" in present law by adding language to ensure that child support enforcement assistance is available to all children whether or not they are eligible for benefits under the Aid to Families with Dependent Children (AFDC) program.

Effective date.--On enactment

2. Federal Matching of Administrative Costs

Under current law, the Federal Government pays 70 percent of State and local administrative costs for services to both AFDC and non-AFDC families, on an open-end entitlement basis.

The Committee agreed to an amendment which would reduce the Federal match as follows: For fiscal year 1987 to 69 percent; for fiscal year 1988 to 68 percent, for fiscal year 1989 to 67 percent, for fiscal year 1990 to 66 percent, and for fiscal year 1991 and years thereafter, to 65 percent.

Effective date.--October 1, 1986

3. Federal Incentive Payments

The Committee agreed to an amendment which repeals the present law 12-percent incentive payment based on AFDC collections. New incentives would be established based on collections made on behalf of both AFDC and non-AFDC families. The Secretary of the Department of Health and Human Services would be required to make incentive payments as follows: Each State will receive incentive payments equal to 6 percent of its

AFDC collections and 6 percent of its non-AFDC collections, as a guaranteed minimum payment. Additionally, for fiscal year 1986 and fiscal year 1987, a State would be eligible to receive the higher of the amount due them under the new incentive and match provisions or 80 percent of what they would have received under the existing 12-percent incentive formula and 70-percent match.

To the extent AFDC or non-AFDC collections exceed combined administrative costs for both AFDC and non-AFDC, higher incentives will be paid on a sliding scale up to 10 percent of AFDC and 10 percent of non-AFDC collections, according to the following cost/collection ratios:

AFDC INCENTIVE

Ratio of AFDC collections to combined AFDC/non-AFDC administrative costs	Incentive equal to this percent of AFDC collections
1.4:1	6.5%
1.6:1	7.0%
1.8:1	7.5%
2.0:1	8.0%
2.2:1	8.5%
2.4:1	9.0%
2.6:1	9.5%
2.8:1	10.0%

NON-AFDC INCENTIVE

Ratio of non-AFDC collections to combined AFDC/non-AFDC administrative costs	Incentive equal to this percent of non-AFDC collections
1.4:1	6.5%
1.6:1	7.0%
1.8:1	7.5%
2.0:1	8.0%
2.2:1	8.5%
2.4:1	9.0%
2.6:1	9.5%
2.8:1	10.0%

Incentive cap.--The total dollar amount of incentives paid for non-AFDC collections will be capped at an amount equal to the State's incentive payment for AFDC collections.

Paternity costs.--At State option, the laboratory costs of determining paternity may be deducted from combined administrative costs for purposes of computing incentive payments.

Pass-through to localities.--Under a pass-through requirement, States must assure that localities which participate in the costs of collecting support will receive their appropriate share of any incentive payments.

Annual projections.--Incentive funds must be estimated and projected on an annual basis so that States will know in advance what their payments will be, subject to later adjustment.

Interstate collections.--Amounts collected in interstate cases will be credited, for purposes of computing the incentive payments, to both the initiating and responding States.

Effective date.--October 1, 1985

4. Matching for Computerization Costs

The Committee agreed to an amendment which expands and clarifies current law regarding the 90-percent Federal match for State costs of establishing automatic data processing and information retrieval systems. The amendment specifies that if a State meets the requirements in present law, matching funds may be used for the development and improvement of the income withholding and other procedures required in the legislation (described below) through the monitoring of child support payments, the maintenance of accurate records regarding the payment of child support, and the provision of prompt notification to appropriate officials with respect to any arrearages that occur. The amendment also specifies that the 90-percent matching rate is available to pay for the acquisition of computer hardware.

Effective date.--October 1, 1984

5. Required State Procedures

The current Federal child support statute generally does not specify the types of procedures States must use in operating their programs. The States are required to comply with such requirements and standards as the Secretary determines to be necessary to the establishment of an effective program.

The Committee agreed to several amendments that require the States to enact laws establishing the following procedures with respect to their IV-D cases:

(1) Mandatory wage withholding.--In the case of each absent parent against whom a support order is or has been established or

modified by the State, the State must provide for withholding wages, in accordance with the following conditions:

(a) Withholding must occur without amendment of the order.

(b) The amount withheld must be the amount of current and past-due support that is owed. The total amount withheld must be subject to sec. 303(b) of the Consumer Credit Protection Act which establishes limits in cases of garnishment for child support.

(c) Withholding procedures must begin the earlier of (a) when the arrearage reaches an amount equal to one month's support payment, or (b) when an absent parent requests withholding. States retain the discretion which they have under current law to begin withholding at any earlier time.

(d) Withholding must be administered by an entity designated by the State and provision must be made for expeditious distribution of amounts withheld.

(e) An individual must be given advance notice of withholding and the procedures to be followed in contesting the action.

(f) The State must give the employer notice of the amount to be withheld and any amount to be retained by the employer as a fee.

(g) The State must fine an employer who discharges, refuses to hire, or disciplines an individual because of withholding.

(h) States must establish methods to simplify the withholding process for employers to the extent possible, including permitting the employer to combine all withholding amounts into a single payment to the State.

(i) The employer must be held liable for the amount he fails to withhold, following the receipt of proper notice.

(j) Provision must be made for withholding in interstate cases.

(k) Provisions must be made for the priority of support collections under this procedure over any other legal process under State law against the same wages.

(l) States must make provisions for terminating withholding.

(m) The State may make income other than wages subject to withholding.

(2) Liens.--States will be required to have procedures for imposing liens against real and personal property for amounts of past-due support owed by a State resident or an individual who owns property in the State. However, States are given discretion to apply this procedure only in certain cases.

(3) Federal and State Income Tax Refund Offsets.--The current law Federal income tax refund offset for AFDC cases is extended to non-AFDC cases. Additionally, States that have State income taxes must provide for the withholding of any State tax refunds payable to a noncustodial parent who owes past-due child support payments. These tax refund withholding procedures must be applicable to AFDC cases and to non-AFDC cases. The withholding procedure must be used for interstate as well as intrastate cases.

(4) Fees for Services.--States will be required to charge an application fee for non-AFDC cases not to exceed $25. This fee may be adjusted periodically by the Secretary to reflect changes in administrative costs. The State may charge fees of varying amounts to reflect ability to pay.

Additionally, a State must have in effect a law under which a late payment fee is charged to the noncustodial parents of AFDC and non-AFDC families on support that is past due. The fee will be an uniform amount established by the State equal to 3 to 10 percent of the past due support owed for months beginning the month following the enactment of this bill. The State may not take any action which would have the effect, directly or indirectly, of reducing the support paid to the child and will collect the fee only after the full amount of the past-due support has been paid to the child. The current law provision for optional State recovery of costs for services to non-AFDC families will remain unchanged.

(5) Providing Information to Credit Agencies.--States must make available to consumer credit agencies, at the request of such agencies, information regarding child support arrearages. The State must make available information on arrearages in excess of $1,000 and may make available information on smaller arrearages. The State may charge a fee to the credit agencies who request and receive this information which cannot exceed the cost to the State of providing the information.

(6) Security or Bond in Certain Cases.--States will be required to have in place procedures to require in appropriate cases that an individual give security, post a bond, or give some other type of guarantee to secure support obligations of noncustodial parents who have a pattern of past-due support.

(7) Expedited Processes.--States will be required to have in effect expedited processes within the State judicial system for establishing paternity and obtaining and enforcing support

orders. Decisions or recommendations resulting from the expedited process must be reviewed (i.e., ratified or overturned) by judges of the court. In addition, appellate review of child support decisions or actions resulting from the expedited processes would be conducted by the regular court system at the request of either party.

The Secretary's authority to waive required State practices would apply to political subdivisions of States due to variations within States in the effectiveness and timeliness of current processes. States that currently use administrative processes would qualify for a waiver on the same basis as States or political subdivisions using regular court processes.

(8) Notification to AFDC Recipient of Child Support Collected.--States would be required to notify AFDC recipients, at least once each year, of the amount of child support collected on behalf of that recipient.

(9) Exemption Authority.--The Secretary may grant an exemption to a State from the required procedures, subject to later review, if the State can demonstrate that such procedures will not improve the efficiency and effectiveness of the State IV-D program.

Effective date.--October 1, 1984.

If a State agency administering a plan approved under part D of Title IV of the Social Security Act demonstrates, to the satisfaction of the Secretary of Health and Human Services, that it cannot, by reason of State law, comply with the requirements of a provision mentioned above, the Secretary may prescribe that the provision will become effective beginning with the fourth month beginning after the close of the first session of such State's legislature ending on or after October 1, 1984.

6. Periodic Review of State Programs; Modification of Penalty

The Committee agreed to an amendment which retains the general present law requirement for Federal oversight of State child support enforcement programs through standards of performance and audits by the Office of Child Support to assure compliance with those standards. The amendment does, however, provide a more flexible penalty structure for instances where States are not in compliance, and it permits triennial rather than annual audits for States which have been found to meet Federal standards. Under the amendment, the present law penalty of a 5-percent loss of AFDC funds for nonconformity would be changed to a variable 2, 3, or 5 percent (for the first, second, or subsequent years of noncompliance). In addition, the Federal agency would not be required to impose the penalty in cases where noncompliance was not substantial and thus did not significantly impair the effectiveness of the State program. Moreover, the

Committee amendment would allow the penalty to be waived even in cases of substantial noncompliance if the Secretary finds that the State is actively pursuing a corrective action plan which will remedy the noncompliance.

Effective date.--October 1, 1984

7. Special Project Grants

Under current law, there is no special provision for funding of interstate activities. The Committee agreed to an amendment to provide special project grants on interstate enforcement projects. In fiscal year 1985, $5 million will be authorized to be appropriated to the Secretary to fund special projects developed by the States with the objective of using innovative techniques or procedures for, and otherwise improving, child support collections in interstate cases. In fiscal year 1986, the amount will be $10 million. In fiscal year 1987 and thereafter, the special projects fund will be authorized at $15 million.

Effective date.--October 1, 1985

8. Extension of Sec. 1115 Demonstration Authority

The Committee agreed to an amendment which modifies the provision in current law which authorizes the Secretary to grant waivers to States conducting experimental, pilot, or demonstration projects.

Under the amendment, the demonstration authority would be expanded to include the child support enforcement program under the following conditions: (a) the intent of the requested waiver must be to test modifications that will improve the financial well-being of children, or otherwise improve the operation of the program; (b) a waiver will not be allowed for any modification that would disadvantage children in need of support; and (c) the requested waiver will not result in an increase in Federal AFDC costs.

Effective date.--October 1, 1984

9. Modification in Content of Annual Report by the Secretary

Under current law, within three months after the end of each fiscal year, the Secretary must submit an annual report to Congress on child support program activities. The statute specifies certain data which must be included in the report.

The Committee agreed to a proposal modifying the content of the annual CSE report to include the following information:

(1) The total number of cases in which a support obligation has been established in the past year and the total amount of such obligations for these cases;

(2) the total number of cases in which a support obligation has been established and the total amount of such obligations for these cases;

(3) those cases described in (1) in which support was collected during such fiscal year and the total amount of such collections; and

(4) those cases described in (2) in which support was collected during such fiscal year and the total amount of such collections.

The information is to be separately stated for current and for past AFDC cases and for non-AFDC cases. Additionally, the annual report shall include information on the child support cases filed and the collections made in each State on behalf of children residing in another State or cases against parents residing in another State.

Finally, the annual report shall detail how much in administrative costs are spent in all functional categories (including paternity) of expenditures.

Effective date.--October 1, 1985

10. Child Support Enforcement for Children in Foster Care

There is no specific authority in the law for collection of child support on behalf of children who are placed in foster care under title IV-E of the Social Security Act. This authority was deleted when the foster care program was transferred from title IV-A to title IV-E.

The Committee agreed to an amendment which would require the State child support agencies to undertake child support collections on behalf of children receiving foster care maintenance payments under title IV-E, if an assignment of rights to support to the State has been secured by the foster care agency.

The States would be required to take steps, where appropriate, to secure an assignment to the State of any rights to support on behalf of each child receiving foster care maintenance payments under the title IV-E foster care program. The child support collections would be credited to the State as AFDC collections.

Effective date.--On enactment

11. Continue Child Support Services For Families Losing AFDC Eligibility

Under current law, there is no special provision requiring States to continue support collection activities automatically on behalf of families when they lose eligibility for AFDC.

The Committee agreed to an amendment which would require States to provide that AFDC recipients whose eligibility for AFDC is terminated due to the receipt of (or an increase in) child support payments will be automatically transferred from AFDC to non-AFDC status under the State IV-D program, without requiring reapplication.

Effective date.--October 1, 1984

12. Increased Availability of Federal Parent Locator Services to State Agencies

Federal law requires operation by the Federal Government of a Parent Locator Service (PLS) to assist States in locating absent parents. Under current law, States may use the Federal PLS only after there has been a determination that the absent parent cannot be located through procedures under the control of the State child support agency.

The Committee agreed to an amendment which would repeal the requirement that the States exhaust all State child support locator resources before they request the assistance of the Federal PLS to assist States in locating absent parents.

Effective date.--On enactment

13. Availability of Social Security Numbers for Child Support Enforcement Purposes

Through the Parent Locator Service, the Secretary of HHS is authorized to furnish the most recent address and place of employment of absent parents whose whereabouts are unknown. The Internal Revenue Service is also authorized to release certain information to Federal, State and local child support enforcement agencies concerning absent parents to aid in the establishment and enforcement of support obligations.

The Committee agreed to an amendment which would add the absent parent's social security number (SSN) to the items of information which the Secretary can disclose through the PLS and which the IRS can disclose to child support enforcement agencies.

Effective date.--On enactment

14. Limitation on Discharge in Bankruptcy of Child Support Obligations

In general, support obligations that have been assigned are discharged in bankruptcy. An exception is made for support due to a family receiving AFDC when that support has been assigned to the State. However, even when this exception applies, it does so only where there is a "separation agreement, divorce decree, or property settlement agreement." Support derived from a paternity determination is usually not protected because the above conditions do not apply.

The Committee agreed to an amendment which would broaden the class of cases for which bankruptcy does not discharge the support obligations to include all child support obligations collected through the IV-D agency. Also, it would provide the same protection against discharge to cases for which support is established on the basis of a paternity determination.

Effective date.--On enactment

15. Waiver Authority for Wisconsin Child Support Project

The Committee agreed to an amendment which would require the Department of Health and Human Services to approve requests from the State of Wisconsin for waivers of Federal IV-D CSE and IV-A (AFDC) requirements. The waivers will allow the State to continue to receive Federal CSE and AFDC matching funds while testing modifications in both programs contained in the State's "Child Support Initiative", if the requested waivers meet certain conditions defined in the amendment.

Effective date.--On enactment

16. State Study of Child Support, Child Custody, and Visitation Rights

The Committee agreed to an amendment which adds "sense of the Congress" language expressing the view that State and local governments must focus on the vital issues of child support, child custody, visitation rights, and other related domestic issues that are properly within the jurisdictions of such governments.

Effective date.--On enactment

17. Guidelines for Child Support Awards

The Committee agreed to an amendment which would require each State to develop a set of guidelines to be considered by judges in the State in determining support orders. The exact nature of the guidelines would be determined by each State and could be established by law or by a judicial conference or other mechanism

as may be appropriate in that State. The Federal Office of Child Support Enforcement would be directed to maintain information about State guidelines and to provide a source of technical assistance and information exchange among States on this topic.

Effective date.--October 1, 1986

Alaska State Legislature
HOUSE OF REPRESENTATIVES

REPRESENTATIVE
CHARLIE BUSSELL
CHAIRMAN

Committee on Judiciary

M E M O R A N D U M

TO: Representative Bussell

FROM: Craig Lovell
Committee Staff

RE: H.R. 4325

DATE: 22 March, 1984

At your request, I contacted various individuals concerning the content, focus, and impact of H.R. 4325, the federal legislation now pending passage in Washington, D.C.

As to the impact to Alaska -- to current policies of state child support enforcement agencies and to the state legislation subject to the committee's review (HB 667 and HB 668) -- I spoke with Mr. Dan Copeland, Director of the Division of Child Support Enforcement of the Department of Revenue. Fortunately, Mr. Copeland was a wealth of information since, as former President of the National Association of State Administrators, he was instrumental in the drafting of the proposal that was the original version of the bill. Also, in light of his position, he contributed significantly to the state legislation as well.

Mr. Copeland revealed that the federal legislation had little bearing on Alaska policies, as Alaska was already in compliance with the regulations set out in the bill. H.R. 4325, it appears, is geared at inconsistent and uncooperative policies in states that are lax in enforcing interstate and intrastate judgments.

Mr. Copeland forwarded to the Committee a copy of his Memorandum to Deputy Commissioner Bruce Botelho, which in part addresses the effects and progress of the legislation and the concerns of the state enforcement agency.

TELEPHONE NO: 276-3441

FROM: Dan R Copeland
Director, CSED
Dept. of Revenue

SUBJECT: Performance Report
a) FY83: 7-1-82 to 6-30-83
b) First Half FY84:
7-1-83 to 12-31-83

The Child Support Enforcement Division is charged with the enforcement responsibility of collecting payments from the parents who are separated from their children. When the obligation to support the children has not been established, the Division is responsible for establishing an obligation. This will include establishing paternity as needed. To obtain Division services, an application from the custodial parent is required by federal and state statute. State statute expands upon the availability of service and allows the noncustodial parent to apply for service.

The collections are transmitted to either (a) the parent having custody of the children, or (b) to the state and federal government if the custodial parent is receiving welfare in the form of Aid to Families with Dependent Children (AFDC). This creates two groups of cases for which the Division will provide services. The non-AFDC cases are the group for which the Division will collect the money and send it to the custodial parent. The AFDC cases are the group for which the Division will collect the money and send it to the state and federal government. This partially reimburses the state and federal government for the original and ongoing funding of the AFDC program.

One of the most significant factors in maintaining an overall successful child support program is a positive attitude towards child support by both the community and the separated parents. This attitude takes several years to develop, and the ultimate goal of the Child Support Enforcement Division is to have the community at large enforce an ongoing ethic in which all responsible parents provide the needed support to their minor children without any governmental intrusion. All child support collections made by the Division or paid through a voluntary process, relieve or minimize the need for public assistance. This reduces the taxpayer's burden through direct recovery for the custodial parent or repayment of AFDC to the state and federal government.

One of the most encouraging notes about the program came in this month's State of the State speech. Governor Sheffield made it clear that he supported the program and would be asking the legislature for tougher enforcement power in this area. A copy of excerpts from the speech is attached.

OPERATIONS

General Organization:

During FY83 the Division was located in Anchorage, Fairbanks and Juneau with 76 employees. They are organized into five enforcement teams, three establishment teams, an intake unit, a locate specialist, and an accounting unit with two sections to handle cash control and AFDC processing.

All casework is completed within the assigned team, and the section supervisor's involvement is limited to the procedural or policy areas. A current organization chart and several from previous years are attached.

Team Concept:

The team concept was introduced in March 1979 with minimal staff. By 1981 the entire Division had reorganized to take full advantage of the team approach. Each collection team has approximately 1,200 cases to control. These cases are distributed among the teams based upon the first two letters of an obligor's last name. With this type of distribution, there is no case transfer when an obligor moves, and each team has a similar mix of tough and easy collection cases. With sufficient staff to monitor all correspondence and actions both coming and going on all cases, the officer can assign routine collections work to one section of the team. The paraprofessional can then handle the next level of difficult cases. The officer in charge is able to handle the more difficult cases while supervising the team as a whole. The officer is close enough to both the caseload and the work performance of the team members on a daily basis to plan and direct the team's resources.

The officer works toward making the routine collection work the major part of the team's workload. This would mean that all cases are paying regularly and only need a reminder on an occasional missed payment. Unfortunately, some cases have a tendency to lean towards nonpayment even after reminders. This requires the officer to apply an appropriate collection action which could be an attachment of wages or assets, liens upon property, or referral to the Department of Law for legal action. In all cases the officer is responsible to see that the action is done correctly and that the end results are steady payments.

The establishment teams follow a similar pattern where responsibility for all actions on a case are assigned to one team. The case does not leave the team until an order has been established or the officer has determined that the case should be closed.

The team approach has greatly improved the agency's ability to manage the caseload and the related activity. As a direct result of the team concept, collections have risen significantly. Additional positions are being requested in this budget to establish a new collection team in response to the need of women and children to further increase the collection rate and reliability of their child support payments.

Prior to using the team concept in organizing the work effort, a function to function approach was in place. This did not provide for any accountability, and in most cases the functions were done without regard to collections. Often case files were lost, and it was impossible to tell who was responsible. On a similar note, it was difficult to determine who was responsible when something good happened to a case. When the team concept was brought on board, the people wanted accountability with regard to the Division's primary objectives made it clear that this concept was excellent.

Not everyone liked the concept, and numerous complaints have been presented to a variety of people in Juneau. The accusations have not changed and are presented in an indirect manner to people other than the management staff within the Division. While each of the questions have been fully answered and explained several times, the same items of complaint are repeated. To respond to this the Federal Office of Child Support Enforcement (OCSE) did an independent review of the caseload and the team concept. Their conclusion was that the approach was well organized and designed for positive results. A copy of their report is attached.

As the Division Director, I plan to continue with the team concept.

Computer Support:

The Division has been implementing and consistently improving an on-line data base computer system. The on-line system provides a good accounting network that has greatly enhanced the amount of work and the number of cases upon which the Division can do active collection work. It is the major case management tool, providing an automatic case by case suspense and tracking mechanism with full automated correspondence capacities. The system will streamline the clerical burdens while providing near instant notice and appropriate correspondence upon delinquency to help keep greater portions of the caseload current with less effort. Thus more time is made available for the more difficult collection cases.

During the development of the on-line system, new technological advances have been made in the computer industry. Some are improvements for ongoing production while others provide for faster development. The development tools are now referred to as "fourth generation" languages. One of the companies that is working in this area is Sperry/UNIVAC, Inc.. Through contacts with a consultant firm, Sperry and the previous Director of the Washington State Child Support Agency came to Anchorage to look at the Alaska data processing system. They experimented with Sperry's development programs and provided a third party review of the Alaska Child Support data processing development. With regard to the present status of the development, the report stated the following:

> "The development plan of providing a data base backend to an existing batch process along with related extraction, inquiry, update and form generation functions is classic design, a good use of resources and provides a sound migration path.
>
> The development has been thoughtful and professional in that all required functions are allowed for and demonstrated where feasible.
>
> The quantity and quality of work produced by the two person development team is a compliment to their energy, creativity and dedication, and the state has every right to take pride in the fruits of their labor. The system, however, at its present stage of evolution does not provide full benefits to the user. The limited number of terminals now available further inhibits the utility of the present system.

The real benefits of the system will be increased revenue via intercept programs, locate interfaces to IV-A, Employment Security and licensing and case prioritization and management functions as well as reduced costs associated with case record automation, automated case accounting, case processing and forms generation."

Three recommendations were made, and each was already in process at the time of the report. A copy of the report from the consultant company, Miller and Associates, is attached.

IRS Refunds Intercept:

From a national perspective one of the most effective arrearage collection tools has been the IRS refund intercept process. In some cases the intercept will lead to ongoing payment, but the target is an arrearage collection. Another aspect of the IRS intercept is that it is one of the few collection tools that is effective for interstate cases. Unfortunately, federal law requires each state Child Support Agency to go through this process for AFDC cases and does not allow any state to provide this service for the non-AFDC caseload. In spite of this inequity, the following significant results have been noted at the state and national level.

NATIONAL

Fiscal Year	Cases Submitted	Arrearages Submitted	Number of Collections	Dollars Collected	Average per Case
82	561,000	$2,163,679,400	273,090	$168,915,280	618
83	872,320	$3,053,150,000	323,130*	$169,353,500*	524

ALASKA

Fiscal Year	Cases Submitted	Arrearages Submitted	Number of Collections	Dollars Collected	Average
82	227	$1,582,500	99	$85,000	858
83	927	$6,092,500	211*	$186,000*	881
84	1,148	$6,741,500	-	-	-

*Collections through 8-31-83.

The success of the project has attracted considerable national, state and local attention. There are many people who support making this process available for the non-AFDC area while the Reagan Administration and IRS have provided serious opposition to this change. Here in Alaska the Senate Advisory Council has expressed interest in this area and has prepared Joint Resolution 30 urging Congress to adopt this change. A letter providing information about the process, various federal bills which include the process, and a brief discussion of the other factors involved was sent to the Council. A copy of that letter is attached.

Permanent Fund Dividend (PFD) Intercept:

Much like the IRS refund intercept process, the PFD project starts with arrearages as the primary target. The major difference between the two projects is that the PFD intercept effort applies to both AFDC and non-AFDC cases. While the results from the effort have been significant, the ongoing collection work has continued. For example, during FY83 the PFD collection total accounted for $1,454,645 but this was only 12.4% of the $11,700,000 total. The project for the two PFD programs have produced the following results.

Year	PFD Amount	Collection Period	Number of Checks	Total Collections
1982	$1,000	Jul 82 to Dec 83	1,763	$1,639,060
1983	$386.15	Oct 83 to Dec 83	932	$ 348,390

The ongoing collection totals are increasing. For example, a comparison of December collection total in 1982 and 1983 reveals the following:

	1982	1983	Increase	
Total December	$909,656.54	$1,257,160.03	$347,503.49	38.2%
Less: PFDs				
1982 payments	41,818.53	41,684.16	--	
1983 payments	-0-	243,103.80	--	
Total w/o PFD	$867,828.01	$972,372.07	$104,544.06	12.1%

Public Service Announcements (PSAs):

As activity at the national level started to ease up, the Division started developing a PSA effort via the radio media. The name, address, and contact person for each of the 50 radio stations in the state were identified. The PSA message will be sent to each one monthly and will be about 30 seconds in length. Two general themes have been identified at this point. A general advertisement of the services available and the consequences of nonpayment will be the topics. The initial messages began just prior to the Christmas holidays and have been running consistently since that time. Response in some areas has been good while in others there has been no reaction. The radio stations are being surveyed to get a better understanding of the varied results.

Jail Sentences for Non-Support:

The use of jailing as a deterrent measure in the child support area is an item that creates considerable controversy. In many respects it is an excellent tool to encourage people to pay their support. Others argue that freedom from jailing for nonpayment of debt is one of the founding principles in the establishment of the United States as a country. While recognizing the sensitive nature of the issue, the Division also sees the positive potential in expanding the pursuit of jail sentences for nonsupport.

A major factor in this area is the day to day handling of child support's routine legal matters by the Attorney General's (AGs) office. For a considerable period of time much of their work was backlogged due to a lack of sufficient staff. The legal work they provided was excellent, but their attorneys were spread so thin that looking at casework for jailing was nearly impossible. Contracts with private legal firms were arranged, and additional staff within the AG's office have been able to change this. In early 1984 a special RSA was set up to establish an additional attorney within the Human Services Section to handle child support work. One part of this new attorney's function will be to relieve the work of each of the other attorneys. This will allow each attorney to review their caseloads for potential jailing type situations. The new attorney will then handle each of these cases. Once this project is well underway, it is anticipated that both routine legal matters and special prosecutions will be handled quicker.

Male and Female Payers:

One of the questions that is asked frequently deals with the number of women that are required to pay child support. The Division's records do not specifically identify the payer as a man or woman so the collection teams did a quick manual count. At the time the count was taken, the Division had 210 payers that were women and 6,943 men as payers.

FEDERAL ISSUES

Program Direction:

For the past several years the emphasis from the Federal Government through the Office of Child Support Enforcement (OCSE) has been to redirect the program to the AFDC or governmental reimbursement area. The non-AFDC casework would have been eliminated and cooperation among states for interstate work would have been discouraged. The legislation necessary to make this change was rejected by Congress in 1982. The National Council of State Child Support Enforcement Administrators had opposed the change. To help explain that position, the Council prepared the attached Status Report on the program. It was distributed to every U.S. Senator, Representative, each state's governor and the news media.

In spite of the significant flaws, the proposal was introduced again in 1983. After considerable pressure from a multitude of places, the Secretary of Health and Human Services, Margaret Heckler, withdrew the proposal at a Ways and Means subcommittee hearing on July 14, 1983. The replacement was vague and lacking in detail in every aspect except for the major reduction in the basic funding structure.

Several Congressional leaders collected ideas and concepts from various practitioners. These ideas were worked back and forth with the staff in the Ways and Means Public Assistance and Unemployment Compensation Subcommittee. After considerable debate the proposal was reduced to bill language. The bill, HR 4325, moved through the House quickly and in November was passed on a voice vote 422 to 0. On January 24/26, 1934 the Senate held hearings on the bill with a mark-up session scheduled for January 31, 1984. The bill does provide for a number of

enforcement improvements, but one of the most significant aspects about the bill is that it encourages states to improve collections for non-AFDC cases as well as AFDC cases. Senator Dole as the chair of the Finance Committee is quoted in a Press Release #83-205 as saying, "This is one of the most important features of the various reform bills." A copy of the bill summary and Press Release is attached.

The following is a brief listing of the items addressed by HR 4325:

Purpose Statement:	Make it clear that services are available to all children.
Income Withholding:	Requires the state to provide for income withholding after delinquency occurs.
Procedure to improve upon the establishment and enforcement of orders:	Original concept was to mandate administrative procedures.
State Income Tax Refunds Intercept:	Requires the intercept process for AFDC cases and allows it for non-AFDC cases.
Liens Against Property:	Requires states to provide for liens for real and personal property.
Paternity Statute of Limitations:	Requires states to permit paternity establishment until a child's 18th birthday.
Imposition of Security or Bond:	Requires states to provide imposition of security or bonds to secure payment.
Reporting to Credit Bureau:	Requires states to make delinquency information available to credit bureaus.
Tracking and Monitoring System:	Requires the states to provide a tracking and monitoring system to the absent parent for $25.00 per year
Continuation of Service After AFDC Termination:	Eliminates the requirement for non-AFDC applications after the termination of Public Assistance AFDC grants.
Enforcement of Child and Spousal Support:	Where child and spousal support are included in the same order, both must be pursued by the state.
Publicizing the Services:	Requires states to publicize the services available.
Incentive Payments:	Provides for incentive payments to the states for both AFDC and non-AFDC cases in interstate and domestic work. Currently incentives are paid only on AFDC domestic cases.

Creation of a Special Fund to Improve Interstate Work:	Provides the Secretary with $15 million to fund state projects in the interstate area.
Administrative Match Held at 70%:	The states would continue to receive a match rate of 70% of their operating costs.
Audit Penalties Changed to a Graduated Percentage and Placed on a Three Year Cycle:	This provides for a corrective action period and eliminates the required annual audit.
Medical Support Requirements:	Requires states to petition for medical support with each order.
Medicaid Extension:	Provides for four months of Medicaid after AFDC termination.
Federal Parent Locate Service (FPLS):	Eliminates requirement to exhaust all other remedies prior to checking with FPLS.
Contents of Annual Report to Congress:	Requires the Secretary's report to Congress to include the following: a. Number of cases with obligations. b. Dollar amount of the obligations. c. Number of cases with collections. d. Dollar amount collected on the obligation. e. Number of cases 33/66% delinquent. f. Data regarding interstate collections.
Foster Care Collections:	Provides for the assignment of the support rights for children under Title IV E.
Expands Certain Waiver Rights of the Secretary:	Provides for waivers to allow some experiments in various pilot programs.
Required Waiver for the State of Wisconsin:	Wisconsin is experimenting with combining the Child Support and AFDC program into a straight child grant arrangement.
State Commissions:	Requires each state Governor to appoint a Child Support Commission to consider all aspects of the system to include but not be limited to: a. Visitation. b. Support Standards. c. Interstate Work. d. Additional state or federal legislation.

Other Federal Legislation:

In early January 1983, Congressman Long of Maryland introduced HR 216 to provide for intercepting IRS refunds for non-AFDC cases. Since that time a number of bills have been introduced with regard to child support. Most people are of the opinion that none of these bills will see any further movement until HR 4325 is finalized. Some of the significant differences in these bills and HR 4325 are as follows:

HR 2090 - Pat Schroeder HR 2374 - Barbara Kennely S 888 - David Durenburger	These bills are the Economic Equity Act. They include provisions for non-AFDC IRS intercept.
HR 3546 - Administration Bill	a. No change in the purpose statement. b. Reduces federal match to 60%. c. Repeals incentive payment, no details on replacement funding. d. Requires non-AFDC fees to both parents.
HR 3354 - Marge Roukema	Requires wage withholding prior to delinquency in every case where an individual is obligated to pay support.
HR 3545 - C. Campbell S 1708 - C. Grassley HR 926 - F. Stark	Requires all states to submit quarterly wage reports to their unemployment compensation agencies and the Child Support Program.
S 1398 - M. Wallop	Creates the Child Support Tax Act for benefit payments to children.
HR 1014 - M. Biaggi	Establishes a National Bipartisan Commission to study factors causing the high rate of nonpayment on support orders.

Federal Compliance Audit:

Each year federal requirements mandate a Code of Federal Regulations (CFR) compliance audit. The audits take up a considerable amount of time and generally do not indicate whether or not an agency is running efficiently. This is one point upon which the State Directors Council and OCSE agree. While the two organizations have continuously disagreed on funding issues, the audit process has been an area that each side has worked to change. Numerous joint work sessions have taken place with tentative agreement on a set of standards of effectiveness. Unfortunately, the attention required by the funding issues has temporarily stopped progress in this area.

A listing of all of the audits and their conclusion is attached.

STATE ISSUES

Program Direction:

For the past several years the emphasis from the State of Alaska has been to oppose the federal attempt to redirect the program to the AFDC or governmental reimbursement area. This effort was coordinated through the Offices of the Governor, the Commissioner of Revenue, and included the State Director taking an active role in the National State Director's Council. This began in November, 1981 when the federal proposal was first discussed. The State Director, at that time, was the vice president of the Council and on October 1, 1982 started a one year term as President. Activity during this period included numerous trips to Washington, D.C. to testify before various Congressional committees. Copies of the written testimony are attached. Congressional members and staff aides frequently called upon members of the Council to answer questions about the impact of legislation. Towards the end of 1983, the federal proposal was scrapped; President Reagan signed a proclamation declaring August as National Child Support Month, and legislation recognizing non-AFDC work is now the only legislation that is moving in Congress.

A personal high point for Dan Copeland, the State Director and the Council President, was the invitation from the White House to attend President Reagan's signing of the August Child Support Proclamation. Governor Sheffield joined the President and declared August as Alaska's Child Support Month.

Budget Items:

With strong support from the Governor and the Commissioner, the Division has been able to consistently expand the program with budget increases. Since FY 80, the annual budgets have increased each year to include additional staff. Total collections have increased at about twice that level of staff increases. The following is a presentation of the annual increases in staff and collections:

Fiscal Year	Staff	Percent Increase	Collections	Percent Increase
80	55	-	$5,600,000	-
81	62	12.7%	$6,800,000	21.4%
82	67	8.0%	$8,700,000	27.9%
83	76	13.4%	$11,700,000	34.5%
84	83	9.2%	$13,400,000*	14.5%

*Projected

FY 85 Budget:

The FY 85 budget proposal continues with the same projected increases in staff, authorized expenditure and collections. The most significant and indicative statement about the FY 85 budget proposal is that it is a continuation and expansion of the team concept approach to running the Division. An additional collection team is part of the increase in staff, and for the first time in six

years additional staff to support the enforcement unit are included in the request. The projected collection increase of $1,300,000 is a conservative 10% estimate.

New Legislation:

Early during the 1984 Legislative session, the Governor will ask for tougher enforcement powers for the Child Support Program. The legislation will be aimed at expediting the enforcement process and expanding the negative consequences of nonpayment. Particular emphasis shall be directed to the more difficult cases. A detailed report on the legislation will be prepared when the Governor introduces the bills.

Service Level Measures:

One of the biggest problems in judging the effectiveness of the Child Support Program is that while the Division provides service to an entire caseload, the individual involved only sees what happens in their particular case. In additiion to this, there are a multitude of ways to count cases, collections, delinquencies, actions or lack of action. Another area that is difficult is in determining how big the problem is or what percentage of the state's child support work the Division handles. The following statistical data provides a general picture of what the Division has accomplished.

Total Child Support Cases in the State:

One of the more difficult questions to answer is what part of the state's child support caseload does the Division handle. To begin with the Division generally handles only those cases where the two parents are having a rpoblem. Many people take care of their support obligations on a voluntary basis, and the Division frequently does not get involved in these cases.

Using information from the 1980 Alaska Planning Information book as prepared by the Department of Labor, the Division estimates that their caseload represents 50% of the child support work in the state. This percentage was developed using two computations based upon information in Tables IX 13 and 15 on page 105 of this book and a Division caseload of 6500 cases. A copy of the tables from this document are attached.

According to Table IX-13 there are 30,050 separated or divorced adults in the state. Assuming two separated or divorced adults for each of the 6500 court ordered cases and 1000 cases in the establishment process less 2300 (1800 men and 500 women) adults for the reciprocal cases where only one parent is in Alaska, the Division is working with 12,700 adults. Using this computation, 12,700 or 42% of the state's 30,050 separated or divorced adults are in the Division caseload.

According to Table IX-15 there are 8540 female households with no husband present and with one or more persons under 18 years of age. Assuming the Division's caseload of 6500 cases, less the 1800 men in the reciprocal type case, the Division is working with 4700 single parent women. Using this computation, 4700 or 55% of the state's single female parent families are in the Division caseload.

Annual Collection Comparison

Fiscal Year	Collections	Staff	Collections per Employee	Population Census	Caseload
79	$ 5,100,000	54	$ 94,444	413,700	5,947
80	5,600,000	55	101,818	419,700	6,774
81	6,800,000	62	109,677	435,200	6,511
82	8,700,000	67	129,850	460,800	6,266
83	11,700,000	76	153,947	unpublished	6,887

(See attached for the monthly collection and caseload statistics.)

Interstate Work:

One of the main problems in doing interstate child support work is the imbalance of absent and custodial parents in the various states. The theory is that the collection work done between the states will balance out. In many states the domestic work (both absent and custodial parents in the state) contains the largest group of cases. The other two categories, initiating URESAs (custodial parent instate with the absent parent out of state) and the Responding URESAs (custodial parent out of state and absent parent instate) are substantially different in each state. The problem is complicated further by the federal reporting process. The federal quarterly reports do not acknowledge 34% of Alaska's AFDC collections and 15.5% of the non-AFDC work.

The state of Alaska does substantially more collection work for other states than is returned. The following chart shows a comparison for FY 83 for the three categories in both AFDC and the non-AFDC area.

	AFDC	Non-AFDC	Total
Domestic (made by AK for AK)	$1,650,439	$7,002,157	$8,652,596
Initiating (made by other states for AK)	249,731	476,066	725,797
Totals by Federal Definition	$1,900,170	$7,478,223	$9,378,393
Responding (made by AK for other states)	972,278	1,367,682	2,339,960
Total Activity	$2,872,448	$8,845,905	$11,718,353

Comparison of the State and Federal Revenues and Expenditures:

One of the factors that drives many other state child support programs is the potential to create a profit for the state. During FY 83 Alaska did receive a net profit of $585,800 via $1,564.600 in expenditure reimbursements and AFDC collections while being required to provide $978,800 to support the program. The federal government paid out a net total of $2,245,400 via $868,000 in AFDC collections while providing for $3,113,400 to support the Alaska program. The following chart displays these computations.

Child Support Enforcement Division
Revenue/Expenditure Report FY 83

	Federal Funds	State Funds	Total
Expenditures for FY 83	$2,376.0	$978.8	$3,354.8
Incentives Paid to Alaska	239.4	(239.4)	-0-
FY 83 Estimated Expenditure Cost	$2,615.4	$739.4	$3,354.8
Other Funds:			
Personal Service Allowance (29.3%)	468.7	(468.7)	-0-
AFDC Recoupment	(850.5)	(349.0)	(1,699.5)
Incentives to Other States for Alaska	29.3	-0-	29.3
Interest Income	(17.5)	(7.5)	(25.0)
Total Cost of the Child Support Program	(1) $2,245.4	(2) $(585.8)	$1,659.6

(1) FEDERAL EXPENDITURES -

This represents the total expenditures required on a federal level to fund Alaska's Child Support Enforcement Program.

(2) STATE NET PROFIT -

This represents the direct cash recieved over the costs to run the program.

THE CHILD SUPPORT ENFORCEMENT PROGRAM
A STATUS REPORT - FEBRUARY, 1983

EXECUTIVE SUMMARY

The National Council of State Child Support Enforcement Administrators has prepared this report to present its views regarding the support enforcement problem that exists for the many children affected by divorce, separation, or the lack of established paternity. A brief history has been included to aid the reader in understanding the scope of the problem and the program accomplishments. Recommendations for the future of the program must include the establishment of a national ethic that children have a right to be supported by both parents. The need is basic . . . children need their child support!

It is important for the reader to understand that practitioners in the field of support enforcement believe that the wrong approach has been used in the attempt to address the issue of poverty among children. Although well meaning, the vast network of social legislation addresses the symptom of the problem rather than the cause. The system provided welfare first, and later as an afterthought . . . child support enforcement. This course of action was taken in spite of the fact that at least 80% of the reasons for eligibility for Aid to Families with Dependent Children (AFDC) has been insufficient child support from the absent parent.

It is obvious to practitioners that if the national effort to try to fix the AFDC and other related welfare programs had instead been invested in curing the disease (lack of support), the nation would not be paying an estimated $30 billion annually for public entitlements. The primary reason for the 30 billion dollar problem was and still is caused by the lack of child support. The problem is not isolated to children receiving public assistance. Regardless of the income level, millions of America's children are being economically deprived and cannot achieve true potential if financial support is withheld by one or both parents.

In 1975, when Congress established the Child Support Program (Title IV-D of the Social Security Act), the establishment of a comprehensive support enforcement system was envisioned. In mandating states to provide AFDC and non-AFDC related services, it appeared the purpose of the program was to provide an opportunity for all children to receive support from their parents through more effective enforcement of state and federal child support laws. While the primary objective was to directly reduce the increasing burden on the taxpayer of maintaining the AFDC program, the law also required states to provide child support enforcement services for all applicants that were not in the AFDC program.

Child support practitioners are of the opinion that the program's focus from the federal perspective has changed. Instead of encouraging states to collect child support for children, AFDC collections for governmental reimbursements are now emphasized. The law created two

programs to address the one issue of non-payment of child support. However, the federal government began to concentrate more than ever on the public assistance aspect of the Child Support Program by consistently recognizing only the AFDC related accomplishments. Faced with this situation, states are placed in a position of either following the letter of the law while ignoring the operational directives of the federal government, or deemphasizing regulatory requirements to adhere to the federal directives.

Actual collection history indicates that states vary considerably in their approach to the two services. Some states concentrate on AFDC collections while others focus on non-AFDC services. In FY 81, the program collected $1,628,894,466 at a cost of $512,517,943. This 3.18 to 1.00 ratio is obviously successful. A total of $958,256,541 was collected in the non-AFDC portion of the program and $670,637,925 in the AFDC portion.

Several studies done by individual states indicate that the non-AFDC child support program is responsible for saving millions of dollars each year in welfare costs avoided. The non-AFDC portion of the program encourages independent child support payments. This reduces the need for governmental dependency while helping to curtail financial deprivation in general. Federal law allows states, at their option, to charge a fee for these services. However, fees are not universally charged and experience has shown that when they are, they do not cover the cost of the non-AFDC portion of the program.

Decision makers need to realize that both portions of the program are cost effective and vitally important. Sufficient funding must be retained to adequately address both AFDC and non-AFDC child support cases. The establishment of paternity, interstate collections, and the many facets of the total problem of child support enforcement are common to both caseloads. In the final analysis, there is no substantial difference; it is a matter of children and their right to be supported by their parents. Decision makers need to redirect their priorities to address this vital root cause of poverty among children. Both parents, not governmental aid programs, need to be responsible for their children. The current Child Support Program is in the infant stage of returning this responsibility of all children to the parents.

HISTORICAL PERSPECTIVE

The first question to be answered was, "Whose obligation is it to support children?". Common law has historically failed to impose on absent parents a civil obligation to support their children. Although custody of children has traditionally been given to the mother, and the absent parent was the father, common law had not expanded much past that point. As late as 1953, the Supreme Court of New Jersey had difficulty finding a legally enforceable support obligation which bound the father to his children. The need was so basic -- but the remedy only referenced "natural law."

Viewed as a state and local problem for many years, federal attention was attracted as costs in the Aid to Families with Dependent Children (AFDC) program continued to escalate. Inadequate laws and a lack of funding were producing low child support collections while over 80% of those receiving AFDC were eligible due to the non-payment or insufficient payment of child support obligations. Contributing to the problem was the prevailing attitude that government, rather than the absent parent, should support abandoned children by means of the AFDC program. Unfortunately, this gave more credence to the concept that it was the custodial parent's responsibility (usually the mother's) to support the children. Due to the social acceptance of this trend, thousands of single parent families (even those not reliant on AFDC benefits) were left without a viable means of support.

To address this problem, Senator Russell Long, then Chairman of the Senate Finance Committee, and Representative Martha Griffith, then Chairwoman of the Subcommittee on Fiscal Policy of the Joint Economic Committee, developed and published an analysis of the welfare system. Both were dedicated to improvement of child support enforcement laws and practices. Changing social mores and the complexity of the problem helped to convince Congress to relieve the plight of the single parent by creating a federal office with oversight responsibility; the Office of Child Support Enforcement, (OCSE) was created effective August 1, 1975. The Title IV-D amendments to the Social Security Act created a funding mechanism to address this chronic national problem.

In their deliberations on the creation of the Federal Child Support Enforcement Program, the Senate Finance Committee stated:

> "The Committee believes that all children have the right to receive support from their fathers. The Committee bill, like the identical provision (H.R. 3153) is designed to help children attain this right, including the right to have their fathers identified so that support can be obtained. The immediate result will be a lower welfare cost to the taxpayer but, more importantly, as an effective support collection system is established fathers will be deterred from deserting their families to welfare and children will be spared the effects of family breakup." (Emphasis added).

Federal Involvement Was Necessary

Since the late 1950's, the number of single parent families has increased dramatically. That growth is directly attributable to the escalating numbers of divorce, marital separation and out-of-wedlock births. Then as well as now, the custodial parent, usually the mother, faced with a financial crisis often seeks financial assistance through governmental outlets. Since most heads of single parent households enter the work force at an inadequate wage level, they find their incomes insufficient to meet ordinary household expenses, day care, clothing and the transportation expenses related to working. The combination of the burdens of daily work, which provides an inadequate income, and the complete responsibility for rearing the children, often overwhelms the custodial parent. These factors, coupled with the lack of financial support from the absent parent, often place the custodial parent in a position of financial dependency upon governmental programs.

Current national estimates indicate one out of every three marriages in the United States ends in divorce. There is an obvious correlation between the increasing divorce rate and the increase in the number of welfare families with single parents heading the household. Seventy-eight percent of all welfare households consist of a single parent, usually a woman, who is providing the basic needs for her family through an assistance grant because the father withdrew or never provided financial support. When absent parents default and avoid their financial responsibilities, the chance of their children being supported by a governmental aid program is much higher. A study presented to the Senate Finance Committee by M. Winston and T. Forsher, "Non-Support of Legitimate Children by Affluent Fathers as a Cause of Poverty and Welfare Dependence", stated that non-support of legitimate children by affluent fathers was often a cause of poverty and welfare dependence. Another conclusion in the study was that many attorneys and public officials found child support issues boring and in some instances were even hostile to the concept of fathers being responsible for their children.

The Scope of the Non-support Problem

How serious is this problem of non-support of families by absent parents? Over seven million children are presently receiving public assistance in the United States through the various federal and state welfare programs. Of greater concern is the possibility that the very existence of the welfare program has caused some of the absent parents to conclude that if they have marital difficulties, they need not worry about the consequences of financially abandoning their families. From their perspective, the government will provide assistance for their children while they establish new lifestyles and often become parents of more children.

The number of children in single parent households is growing at a rapid rate. The 1970 census figures showed 8,265,500 children living with only one parent. By 1980, the number had grown to 12,163,600, nearly a 50% increase! The problem from a financial perspective is that nationally less than half of these custodial parents received the money due to them.

In the early stages of the welfare program, little was done to recoup the welfare dollars expended. As a result of this lack of action, many absent parents who may have been capable of paying became remiss in their obligation to support their children. For a considerable period of time, they were not made to bear the costs of supporting their children. Society simply "picked up the tab." The cost of the tab, however, has become incredible. In 1956, the total cash benefits expended in assistance to children was just over $617 million. By 1982, that figure increased to an astounding $12 billion annually -- a 2000% increase in 22 years. As staggering as that figure may be, it is not all inclusive. Additional billions were spent on food stamps, medicaid benefits, foster care, juvenile institutions, and other related programs.

THE CHILD SUPPORT ENFORCEMENT (IV-D) PROGRAM

Because of the immensity of the problem, in 1975 Congress enacted Public Law 93-647. Maintaining a child support program became an individual state eligibility requirement to receive federal match funding in Aid to Families with Dependent Children (AFDC). The Federal Office of Child Support Enforcement (OCSE) promulgated regulations covering the maintenance of case records, the establishment of paternity, the locating of absent parents, the enforcement of support, and the use of cooperative agreements among the states. The administration of the program was left to the state child support units, which are required to function within the parameters of federal regulations, local and state laws, county, and/or judicial prerogatives.

Originally, federal financial participation provided for 75% of the administrative costs of operating a child support program. The remaining 25% was provided by the state and or local government. With the 1982 changes in federal law, effective 10/1/82 financial participation is now a 70% - 30% split.

To encourage cooperation between states, local governments, other political jurisdictions, and to increase AFDC collections, the federal government also provided for a 15% incentive payment on AFDC collections. This 15% payment is deducted from the federal share of the AFDC distribution. However, the 1982 legislation provides that as of October 1, 1983, the 15% payment rate will be reduced to 12%. Lowering the incentive percentage rate will actually provide a disincentive to state programs.

A financial commitment is necessary to begin reversing the trend toward lack of cooperation between states that has developed. Continued and expanded support at the national level will result in future growth and success in the program. At the same time, the individual families will move toward less dependence upon the federal and state government for financial support.

There are two categories of cases; AFDC and non-AFDC. For children receiving AFDC, collections are distributed back to the state and federal governments. These collections are distributed between the two based upon the matching grant rate which the federal government provides to each state for their medicaid and AFDC programs. For families who are not receiving AFDC, collections are sent directly to the custodial parent. Neither the state nor the federal government receives any portion of non-AFDC collections (except fees), but both directly benefit because the collections do significantly reduce the potential for AFDC eligibility.

In FY 81, 1.6 billion dollars in child support payments were recovered from absent parents. This recovery effort represents a step in the right direction, but many barriers still exist which inhibit effective and efficient child support collections. The major barriers have been the lack of enforceable laws and resources to handle the immense nature of the problem. The difficulty is compounded by the large number of absent parents who cross state lines in an attempt to avoid payment of support. Nationally, only 11.3% of the absent parents whose children are on welfare are actually paying child support. Reliable data now exists which indicates that this figure can be greatly increased. A number of states are already receiving payments on over 20% of their cases.

The most current information available to the states demonstrates continuous progress in program effectiveness. The data below has been extracted from the 6th Annual Report to Congress, published by the Department of Health and Human Services, Office of Child Support Enforcement.

TABLE I

	1976	1977	1978	1979	1980	1981
Total Child Support	$512 mil.	$864 mil.	$1,048 mil.	$1,333 mil.	$1,478 mil	$1,629 mil
AFDC Collections	204 mil.	423 mil.	472 mil.	597 mil.	603 mil.	671 mil
Non-AFDC Collections	308 mil.	441 mil.	576 mil.	736 mil.	875 mil.	958 mil
Paternities Estab.	14,706	68,263	110,714	117,402	144,467	163,554

Non-AFDC Collections

It is worthwhile to note, in reference to the figures on the graph below, that the funds collected in the non-AFDC category are distributed directly to families not on public assistance. Several independent state studies have estimated that 15% to 25% of these families would be on public assistance if the child support collection service were not in place. This translates into substantial savings in AFDC, food stamp, and medical assistance expenditures.

Table II depicts annual collection totals for the non-AFDC portion of the program. Collections increased nearly 117% during the five year reporting span and the effect from this collection effort is a reduction in individuals receiving AFDC assistance. While termed "cost avoidance", the AFDC reduction reflects a substantial savings in all welfare program expenditures. There would be a significant increase in the number of AFDC applicants if the non-AFDC collection program were allowed to diminish.

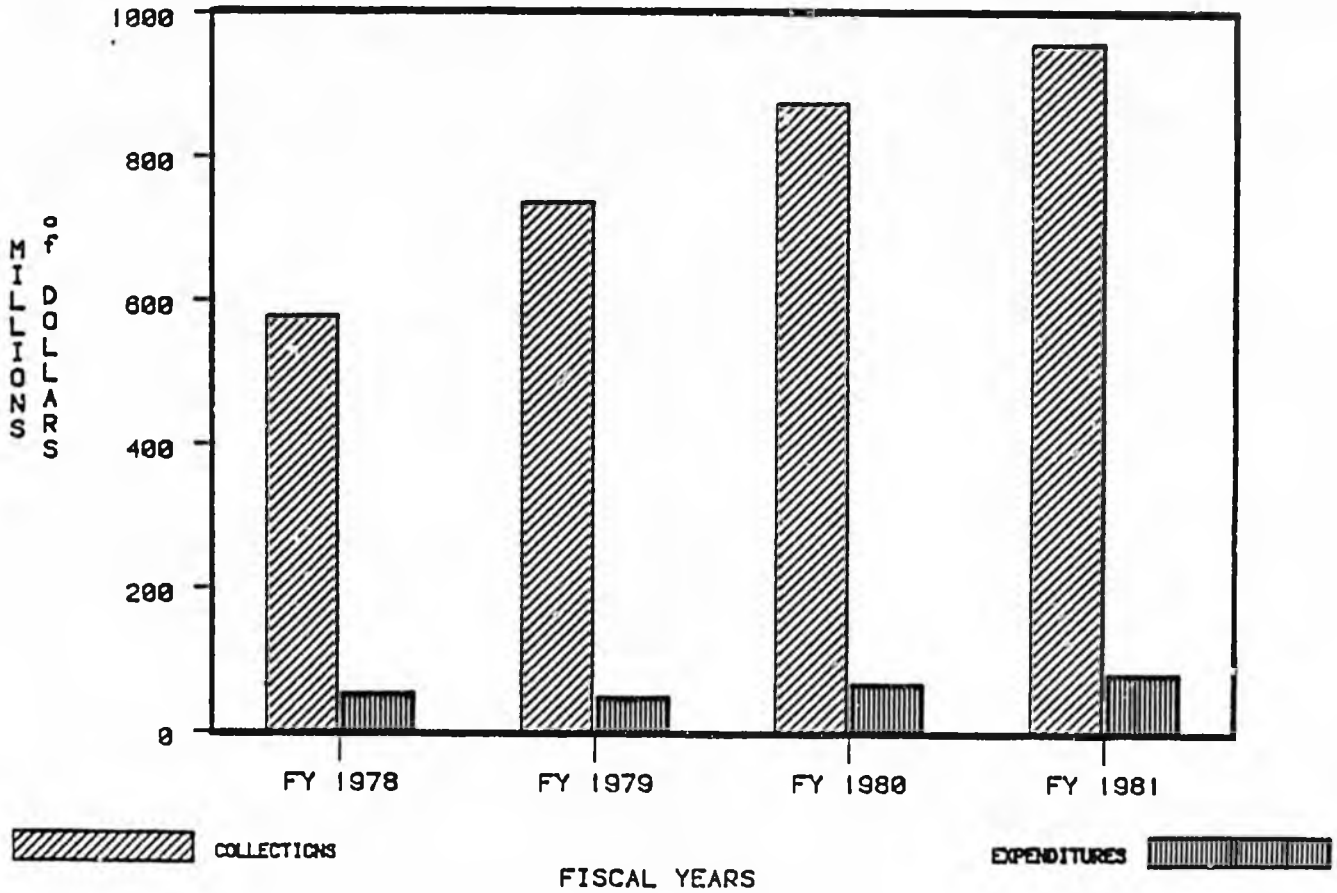

TABLE II

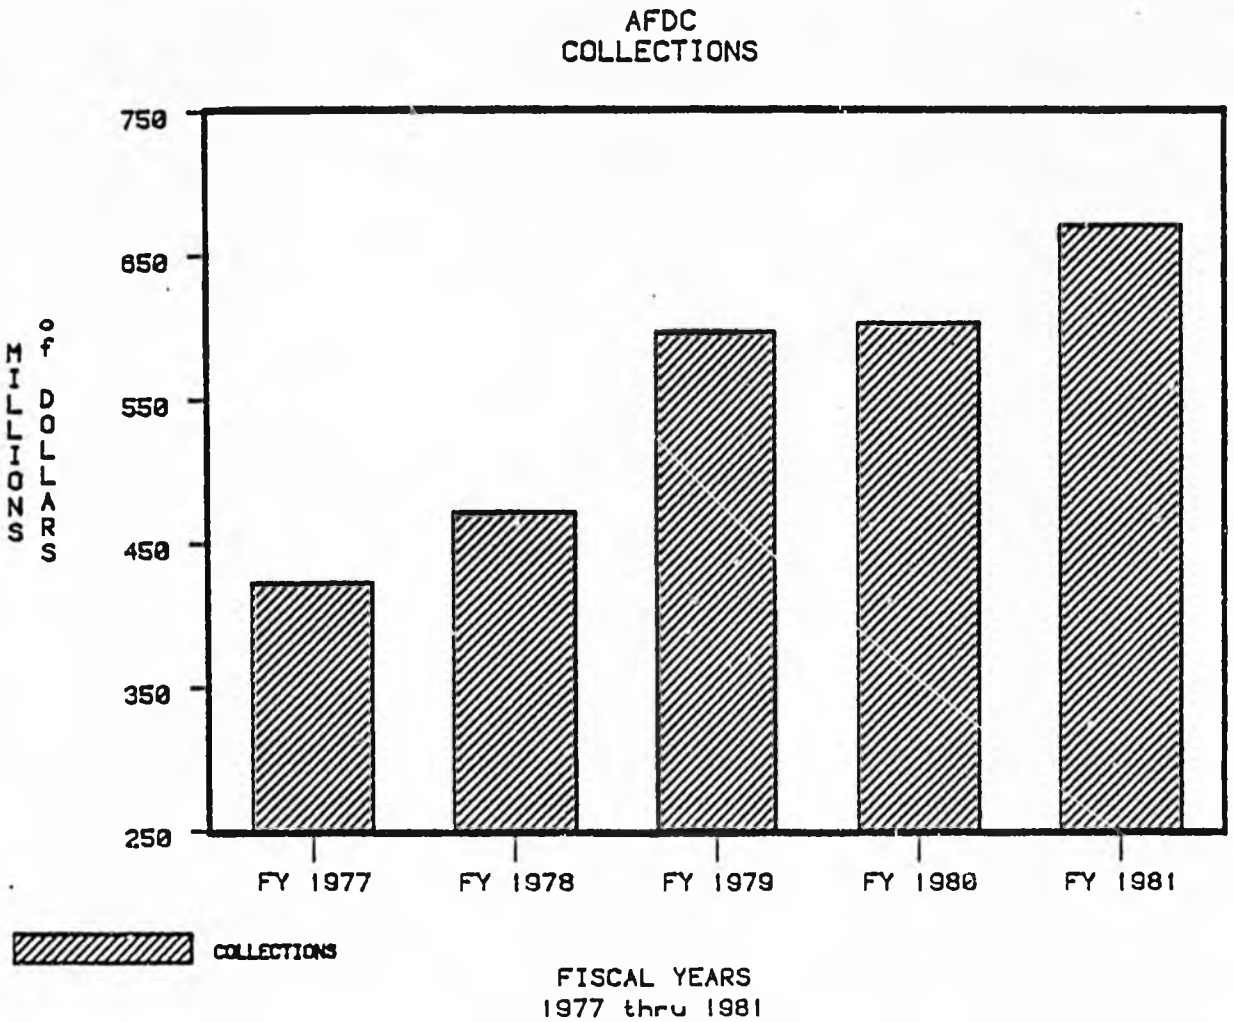
Non-AFDC collections indirectly offset the costs of the public assistance program. Table III shows the costs compared to collections in the non-AFDC program. It is significant to note that while the non-AFDC collection total is now one billion dollars annualy, this collection figure has not been used in the evaluation of the program's achievement. On the other hand, the cost of operations has been used as an integral part of the program evaluation. Practitioners are concerned about this and puzzled by the lack of compliance with congressional intent.

TABLE III



NON-AFDC CHILD SUPPORT
COLLECTIONS COMPARED TO EXPENDITURES

AFDC Collections

AFDC collections directly offset the costs of the public assistance programs. Table IV reflects significant annual AFDC collection increases during the periods FY 77 to FY 81. The program has experienced a 59% increase in funds recovered. Favorable legislative action or improved enforcement techniques at the federal, state, and local level, are directly attributable to this trend.

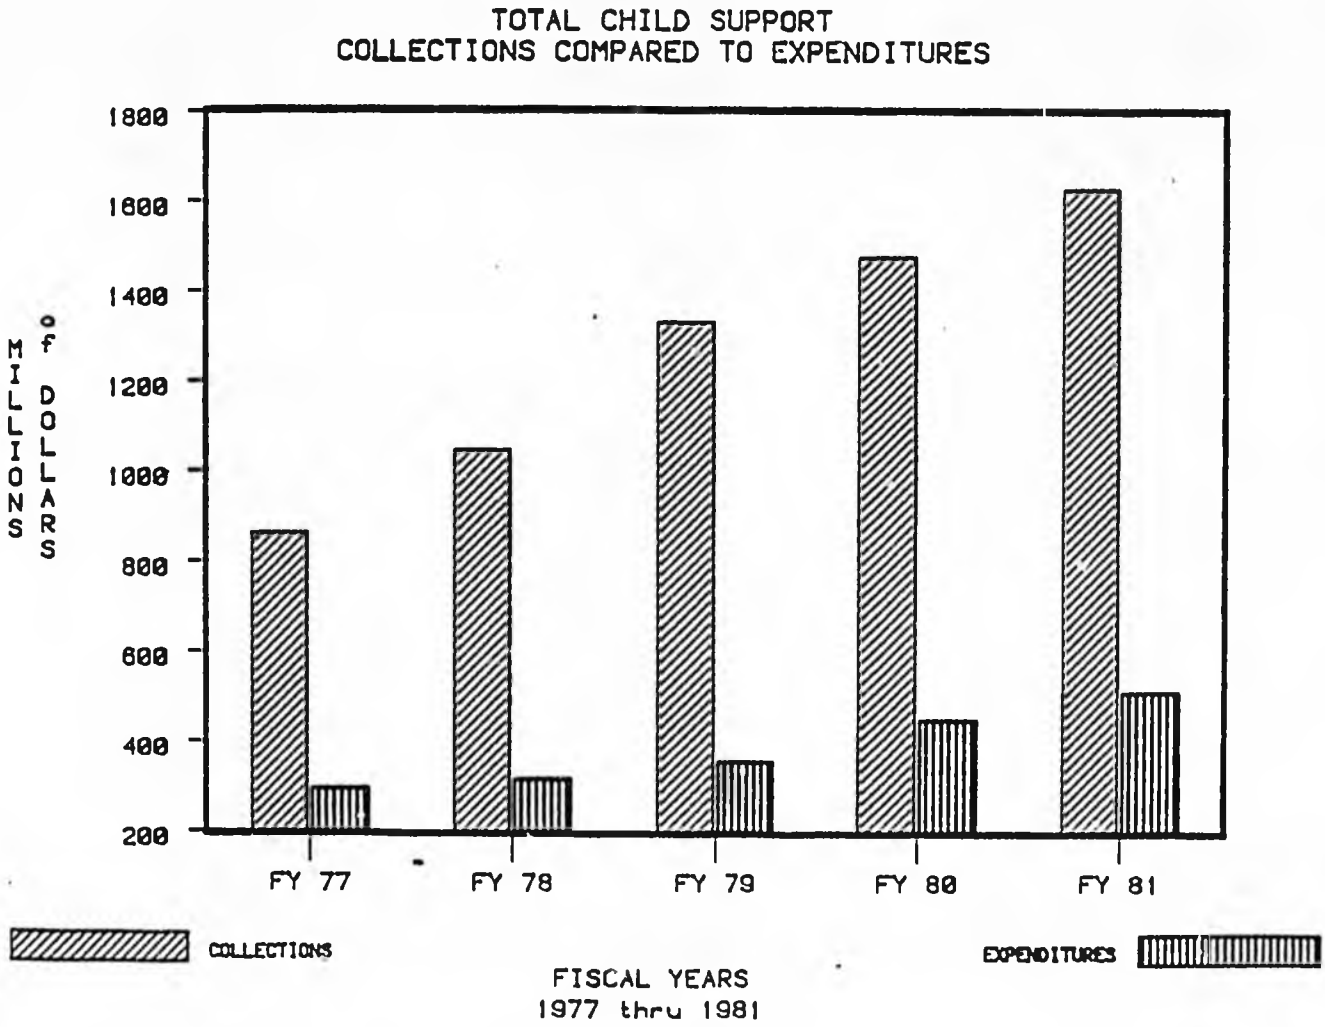


TABLE IV

AFDC and Non-AFDC Collections

A combined chart (Table V) showing the effectiveness of the AFDC and non-AFDC initiatives provides dramatic illustration of the program's success. This shows the difference between collections and expenses. Clearly, collections are running ahead of expenses by a 3 to 1 ratio. From FY 77 to FY 81, annual collections have increased by more than 750 million dollars, while the corresponding figure for expenses shows an increase of about 200 million.

TABLE V

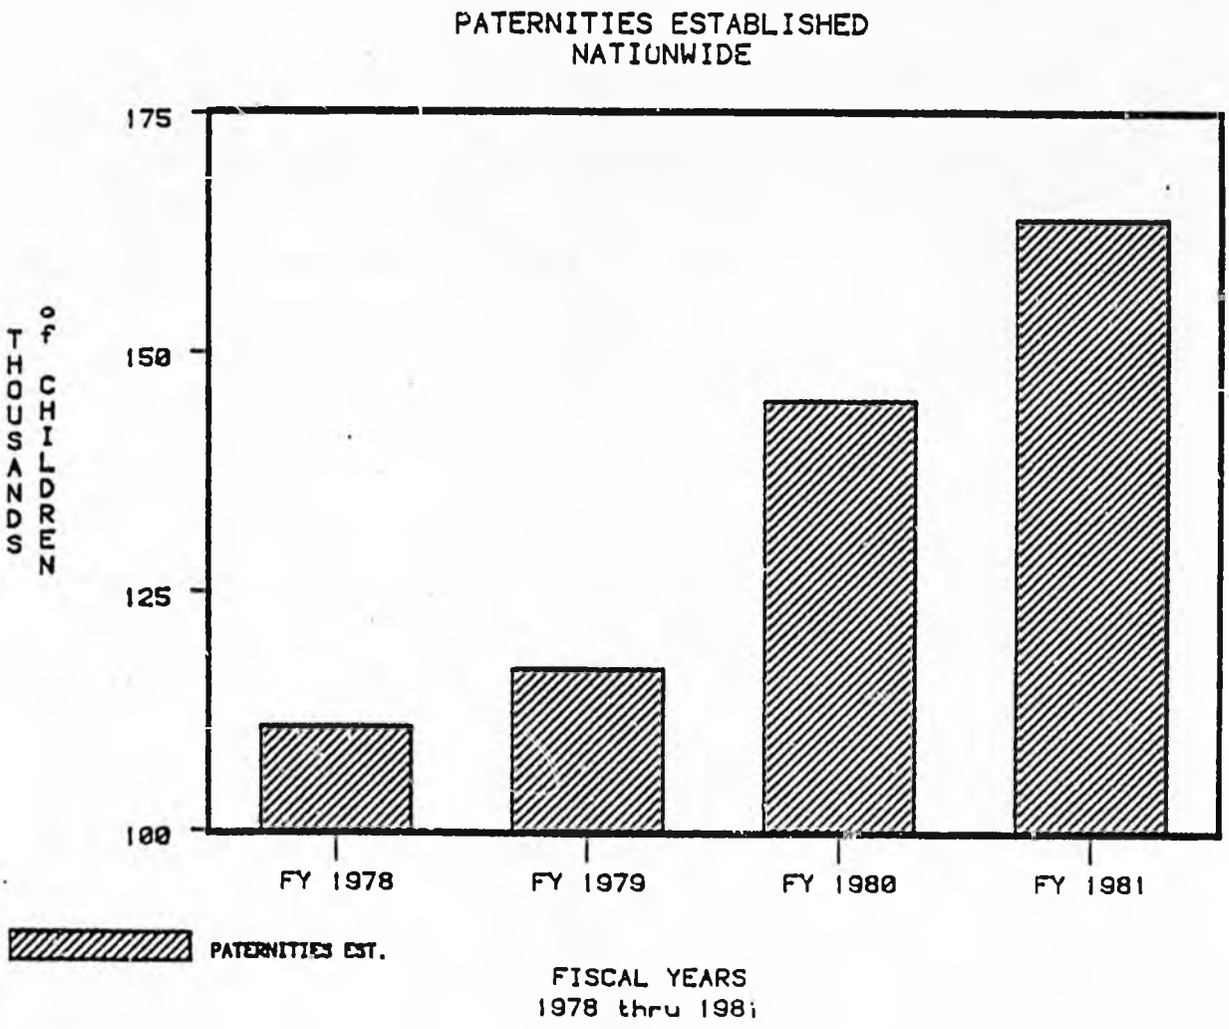
Interstate Collection Difficulties

Due to the Nation's transient population, some states are experiencing a large influx of absent parents. These states are collecting an increasing amount of child support which is sent to another state where the custodial parent and children are living. In many cases there is a considerable difference in the amount that is sent out of state as opposed to what is returned. The local jurisdictions within the states are experiencing similar problems.

The state and local jurisdictions that actively pursue collection work on behalf of others, must deal with a distorted and often negative collection to expenditure ratio. This problem is complicated even further by the lack of uniform laws and legal requirements. It is imperative for the absent parent population to recognize that moving to another state does not eliminate their child support obligation.

Currently OCSE has initiated a contract to the National Institute of Child Support Enforcement (NICSE) to survey and study the interstate collection problem. This will include contact with approximately 10,000 jurisdictions and/or organizations which perform child support services nationwide. Work on this contract will start in early 1983.

Establishing Paternity



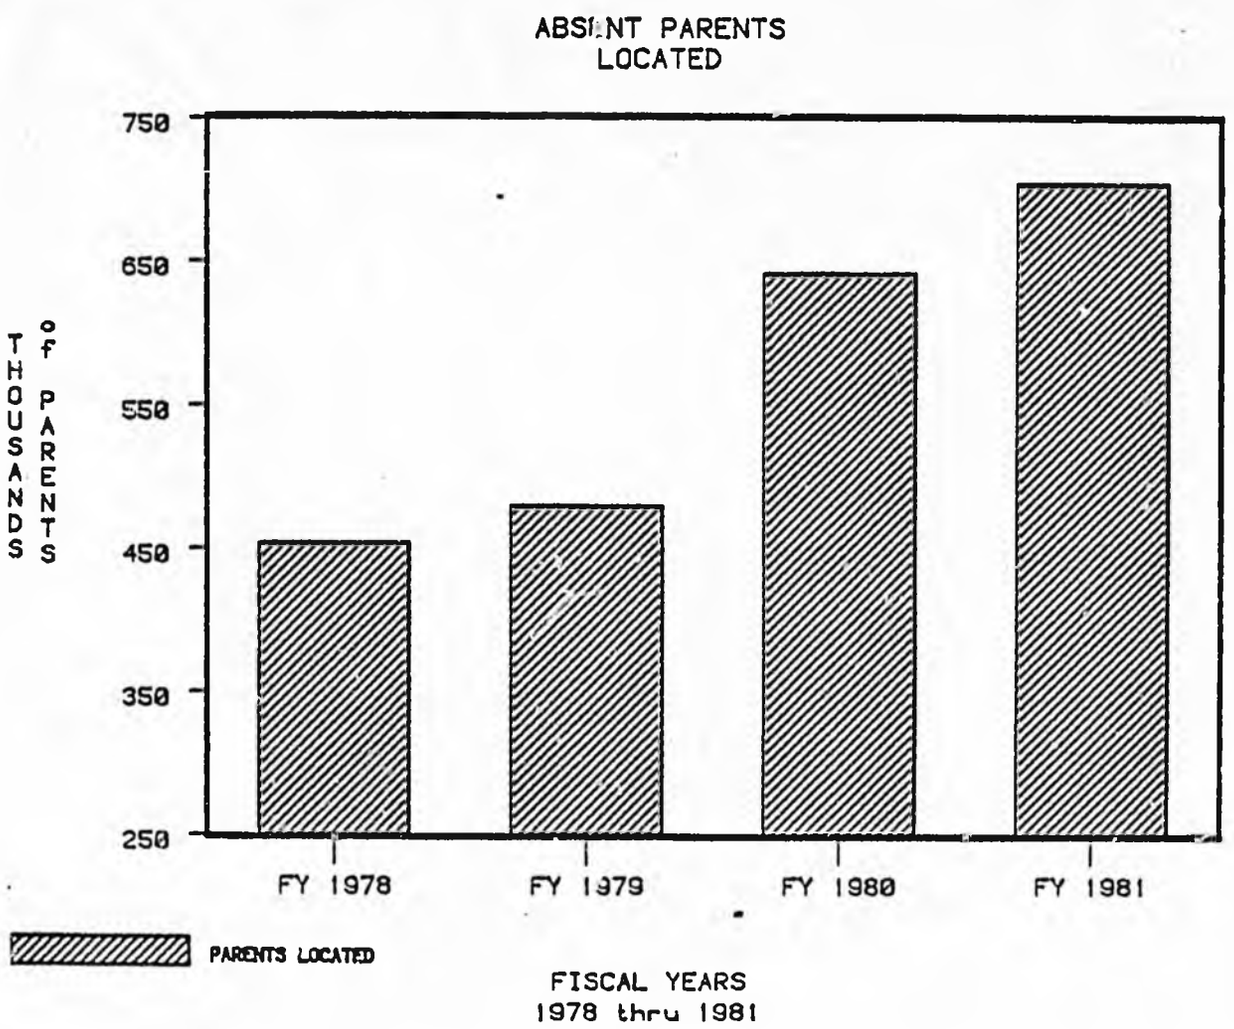
A significant factor which has contributed to the increased growth of the welfare program (AFDC) is the number of children born out-of-wedlock. According to statistics maintained by the National Health Center in 1979, there were an estimated 597,800 out-of-wedlock babies born in America. This was approximately 17% of all births, but is even more striking when compared to statistics of a decade ago. In 1970, unwed mothers had 399,000 babies, or 10.7% of all births for that year. OCSE reports that the large increase in the non-marital birth rate has brought a corresponding increase in the cost of AFDC funding.

The "inherent right" of the child starts with paternity establishment. Legally identifying the father establishes potential Social Security, veteran's assistance benefits, insurance benefits, and potential inheritance rights. It is the first step in shifting the burden of support from a government program back to both parents.

Currently, OCSE has initiated two contracts to study the cost effective aspects of doing paternity establishment. Work on these contracts will start in early 1983.

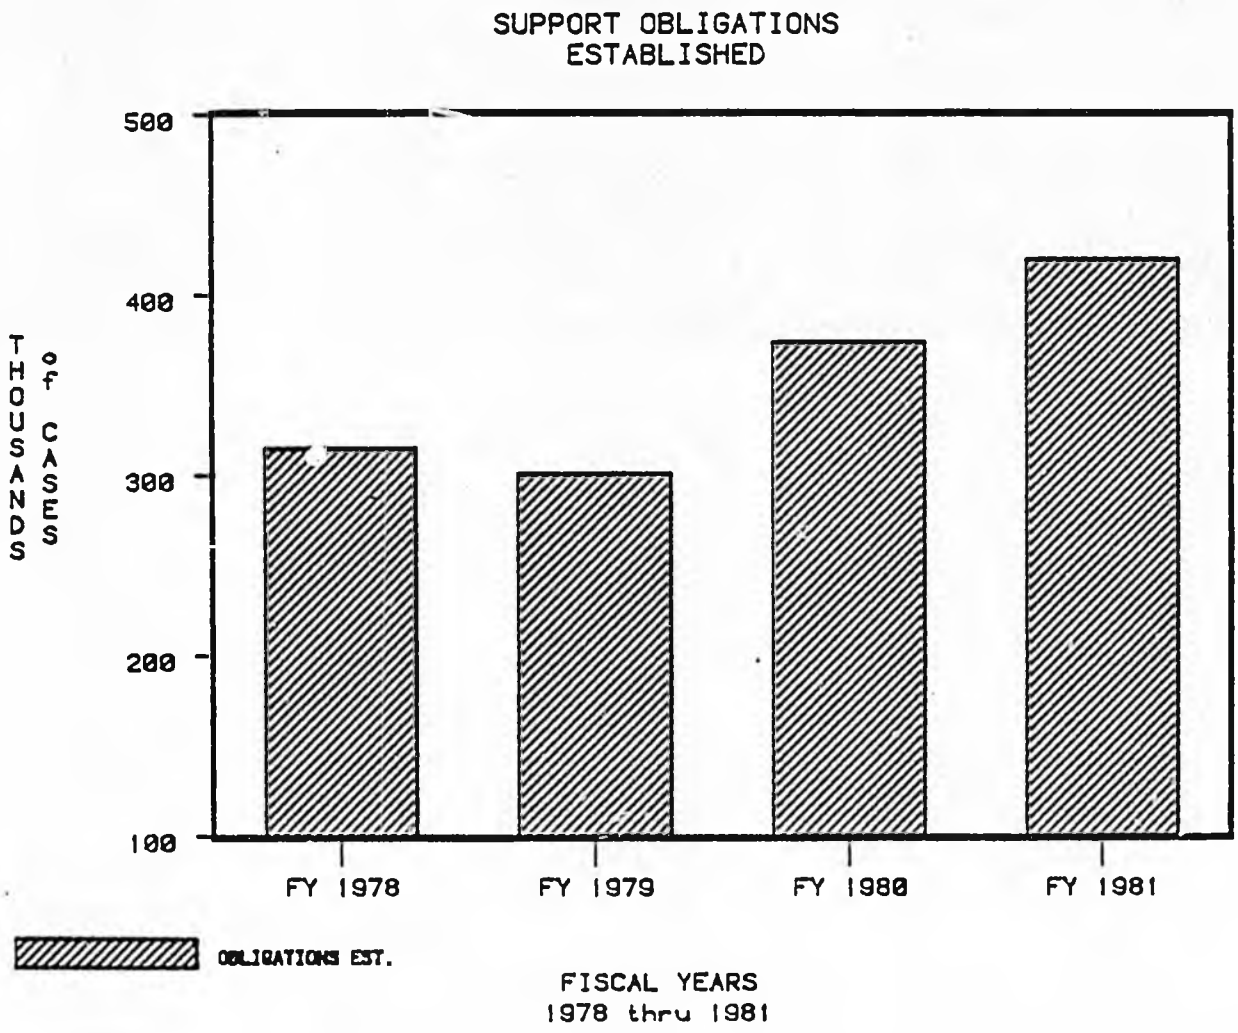
Table VI indicates a 68% increase in paternity determinations during the four year period ending 1981. This demand for paternity establishment should be paramount in every child support unit, however, the task is extremely expensive. These costs are immediate while the benefits are of a long term nature.

TABLE VI



Locating Absent Parents and Establishing Support Obligations

In order to increase collections during the short history of the program, states have had to work on locating absent parents and establishing support orders.

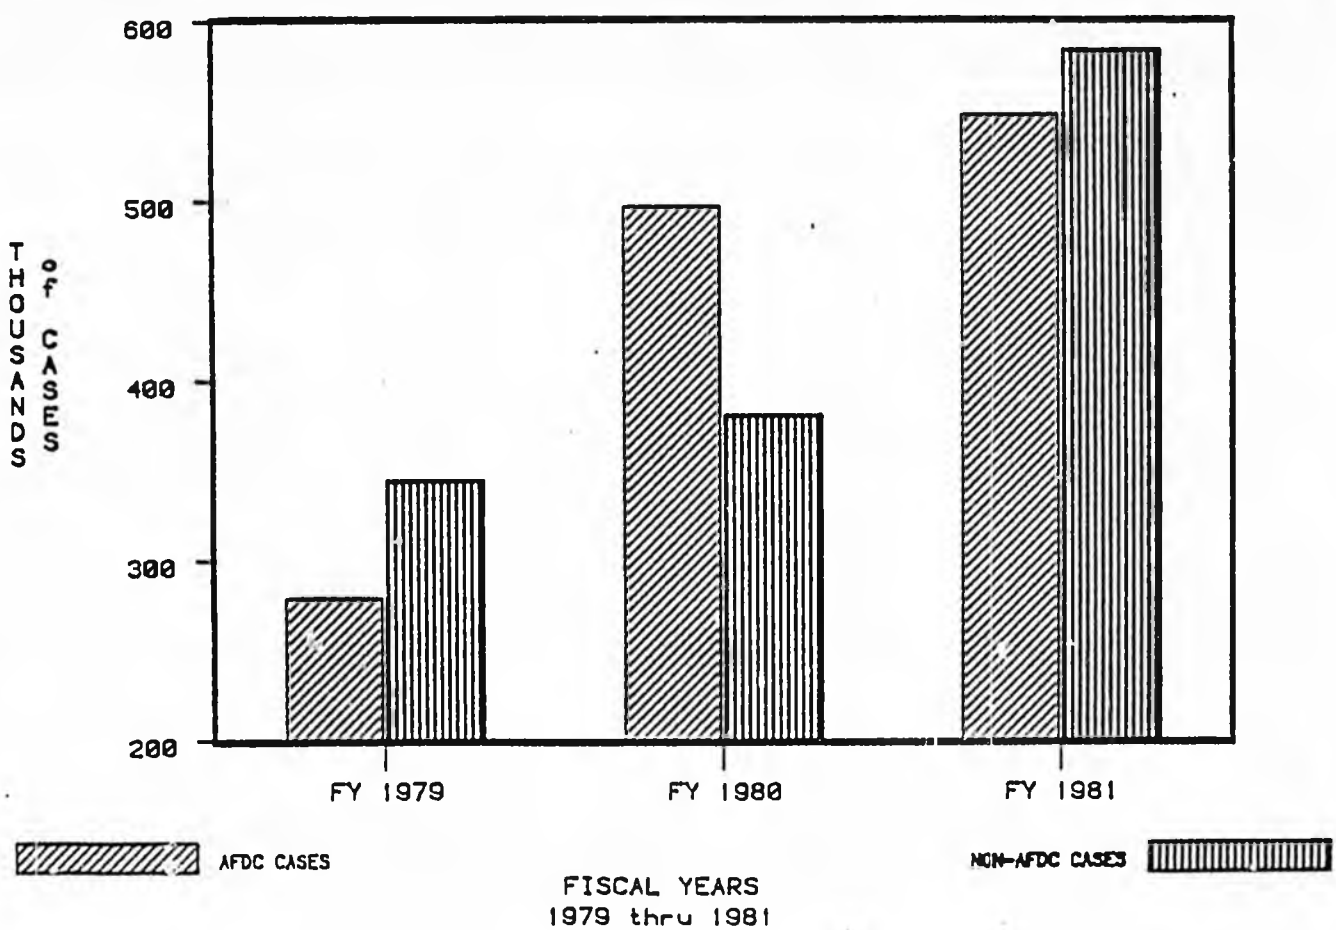


Before a case can be established as an enforceable order, the absent parent must be located. Table VII indicates the number of absent parents located for the establishment or enforcement of a child support obligation.

TABLE VII

Once the absent parent is located, a legally binding child support obligation must be established. Table VIII indicates the number of obligations that have been established.

TABLE VIII



Increase In Cases Paying

The combined factors of locating the absent parent and establishing an obligation to pay has lead to a significant increase in the number of cases paying each month. Table IX illustrates this trend for both AFDC and non-AFDC cases over a three year period.

This chart points out the number of AFDC and non-AFDC cases paying and should be compared with amounts of money collected as indicated in Tables II and IV.

TABLE IX

AVERAGE NUMBER OF CASES
PAYING EACH MONTH

RESTRUCTURING

In 1982, operating under the premise that the program could be made more effective, "financial restructuring" was sought by OCSE within the Reagan Administration. There was, however, a considerable difference of opinion with regard to "Restructuring" between OCSE and the practitioners involved in the work. OCSE believed that "Restructuring" provided an incentive requirement that would force states to improve their child support programs. The practitioners in this field were convinced that "Restructuring" had major operational deficiencies that would hurt the program and set it back to pre-1975 levels. Although the dramatic restructuring sought by OCSE was not implemented, it is mentioned here since a modified version is currently before Congress.

Federal funding for the Child Support Program should be provided to ensure services for all needy children. The costs of establishing paternity cases should be recognized for their immediate nature as compared to their long range benefits. The AFDC cost avoidance aspect and other services provided in doing non-AFDC work as well as the transient or interstate nature of the absent parent should be considered as major factors in operating the child support network.

Instead of restructuring, the federal funding participation was reduced from 75% to 70% effective October 1, 1982. Effective October 1, 1983, "incentive payments" will be reduced from 15% to 12%. The concern of practitioners in the field is that these reductions will cause program atrophy. The program may dwindle because state and county budgets are, in many instances, not able to carry the load. This reduction in the federal portion conveys a message to all absent parents that non-payment of debts, like child support, is acceptable. Rather than crippling the program by changing the financial structure, emphasis should be placed on enhancing program efficiency through improved program direction. Better laws for the rights of the child, stronger recognition of exisiting laws by the judicial branch, and improved enforcement will bring the savings needed to continue a very effective program.

THE DILEMMA OF NON-AFDC PROGRAM DIRECTION

A major problem facing all states at this time is how vigorously to pursue the non-AFDC program. The regulations which provide for federal financial participation require the states to provide child support service to both the AFDC and non-AFDC families. However, emphasis is on AFDC collection. Caseload comparisons indicate that the states vary considerably in their approach to working both caseloads. Some states concentrate their main effort in the AFDC area, while others focus on the non-AFDC caseload. Reasons for this vary widely; some states react to state statutes which provide their guidance, while others operate from administrative direction. The paradox each state must face is whether to follow the letter of the law or the direction from the Office of Child Support Enforcement.

The wide variance in the state programs is illustrated by the fact that in one state only 0.9 percentage of their cases are non-AFDC. At the opposite extreme, another state has 81.3 percentage of its cases in the non-AFDC category. The dilemma is highlighted by the fact that both states are apparently meeting federal compliance requirements.

It appears that the reason AFDC has been emphasized over the non-AFDC work has been the difficulty in measuring the cost avoiding aspects of the non-AFDC program. It is noteworthy that a federal contractor, Maximus Corporation, in their first year study of the Child Support Program, concluded that approximately $323 million a year in costs of AFDC assistance were avoided through the states' pursuit of non-AFDC collections. Conversely, in their second year study as published in February 1982, they denied the existence of this cost avoiding aspect and indicated that any savings obtained were essentially lost through increased participation by marginal income households in food stamps and medicaid benefits. Based on the contradictory nature of their reports from year-to-year, it must be concluded that their data at this point is certainly inconclusive.

Currently, OCSE is preparing a contract to determine the cost avoiding aspects of the non-AFDC program. Work on this contract is scheduled to start during the summer of 1983.

One of the primary groups affected by the non-AFDC program are former AFDC recipients who are working in marginal income jobs. Obviously, if child support can be collected for these individuals, then very frequently even minimum wage jobs will preclude their need for assistance. Therefore, the need for strong non-AFDC collection efforts has never been greater or more beneficial.

While both programs are funded at the 70% FFP rate, many states are unsure as to how vigorously to pursue the non-AFDC effort given the current federal philosophy of emphasizing AFDC. Practitioners believe that some direction should be initiated by the U.S. Congress in this area.

Several options are available:

- Increase federal funding for expansion of non-AFDC and interstate services. Required with this is a clear statement that this is the direction to be pursued and that non-AFDC services are important and necessary.

- Continue federal funding at the current level for non-AFDC and interstate services with optional state fees for recovery of costs. Required with this is a clear statement that this is the direction to be pursued and that non-AFDC services are important and necessary.

- Limit program participation to some prescribed level of income. Required with this is a clear statement that service is limited to low income individuals.

- Mandate recovery of costs by some uniform deduction from collections. Required with this is a clear statement that the custodial parent is to bear part of the costs in operating the program.

- Separate federal funding for the AFDC program from the non-AFDC and interstate portion of the program. Each segment should stand alone.

Problems Within the Present System

The present child support enforcement system lacks reliability and is very slow to react to children's needs. It takes months after a family has separated to procure a child support order and in over 50% of the cases the court order produces little or no results for the child. In comparison, when someone applies for AFDC, rules and regulations ensure that within a 45-day processing period, the eligible applicant will receive money. The AFDC grant is reliable; it comes in monthly and generally the amount is consistent. Thus, the child's subsistence is assured. On the other hand, the custodial parent will often find that the child support order and the enforcement efforts may not produce a payment in time to do any good. Private legal representation is available but most custodial parents find it difficult to meet their basic needs, much less afford legal services.

At first both the child support and AFDC systems appear complicated and intimidating. However, the AFDC system is easier to learn while allowing the client to function independently. This system also provides food stamps and medical care. On the other hand, a lay person has difficulty functioning within the child support system and often has to depend upon legal representation with no guarantee of payment where their children are concerned. It is hard for the custodial parent to understand the delays involved in enforcement and due process for the absent parent. Thus, the child's immediate needs often supercede allowing the child support system a chance to work.

The Child Support Program does offer some relief from these complications for the custodial parent. All the deficiencies and delays are still there but the program does assist the custodial parent with the enforcement process. The practitioners recognize that a child support system that speaks to these problems must be developed so the AFDC Program does not appear to be so attractive.

Strengths and Accomplishments Within the Present System

More children than ever before receive child support and a larger number of paternity establishments are occurring. Simply stated, the program has created substantial results. States are recognizing the positive influences and are trying to enhance their programs by passing more effective legislation. Wage assignments, chemical analysis to establish paternity, enforcement of support orders through administrative processes and intercepting state/federal tax refunds are improving the efficiency of the system as a whole. Steps have been taken in the area of paternity to reduce blood testing costs and legal fees. Performance measures are being initiated to focus on collection goals.

POLICY DECISIONS

Considerable progress has been made in the seven year history of the program. Still, challenges remain and basic questions need to be addressed.

- Should the Child Support Program be viewed as a service or revenue generation oriented program?
- Should child support, coupled with an employment readiness and placement program, become the safety net for custodial parents and children who experience financial deprivation when the absent parent leaves the home, or should they depend on AFDC?
- Should a complete system reform occur?

For purposes of discussion, when giving consideration to any type of system reform, it is important to recognize two factors. State administration, resources and environmental factors will vary to such extremes that development will vary within each state. At this point in time, the Title IV-D Child Support Enforcement Program does not represent all children. When reviewing the system as a whole, the variances in each state should be recognized and all children must be considered.

RECOMMENDATIONS

- A congressional oversight committee should be established to study the ongoing needs of children deprived of child support.

- Initiation of congressional hearings to provide an opportunity for an analysis of the nation's child support network and recommendation for program enhancement.

- The system must obtain initial support payments for the child in less than 45 days.

- National guidelines should be established to determine the child's support needs and allowance.

- A stronger interstate system needs to be developed.

- Legislation must be passed requiring states to have mandatory wage assignments for child support payments.

- Legislation must be passed requiring states to provide for an administrative or quasi-judicial system.

- Legislation must be passed requiring states to provide for offset of state income tax refunds.

- There must be a move from a passive to an active system.

- The emphasis needs to be on collections.

- All employers must be required to provide locate and employment information.

SUMMARY

In the past, federal, state and local governments have not placed enough emphasis on child support enforcement programs. It cannot be overlooked that this lack of emphasis was attributable to the fact that recoupment programs were not compatible with the existing social philosophy. As those times have changed, it may be helpful to refer back to a quote that is well over 100 years old and is still true today.

> "If we first knew where we are and whither we are attending, we would better know what to do and how to do it."
>
> -Abraham Lincoln

It should be the policy of this Administration and Congress that the federal government be actively involved in working with the states to develop more effective and efficient programs. With increased national emphasis, the Child Support Program will get the additional support and recognition so greatly needed at the state and local levels.

Over 13 million children need a system they can depend on. The vast nature of the problem requires attention at the national level. Absent parents cannot be allowed to ignore the most basic obligation -- that of supporting and caring for their children.

NATIONAL COUNCIL OF STATE CHILD SUPPORT ENFORCEMENT ADMINISTRATORS

Purpose

The Council was formed to promote the development of legislation and/or policies which would have a positive effect upon the state and national Child Support Enforcement program. The Council provides a forum for the State Child Support Enforcement Administrators to discuss common problems and solutions associated with program administration. It also provides a structured medium for continuous communication with the Federal agencies as to the views, consensus and professional opinions of state practitioners.

Membership

Membership in this Council is open to each state's Child Support Enforcement Administrator.

Information

For additional information about the Child Support Program in a particular state, please contact that state's program administrator.

For more information about this report, contact one of the Council Officers listed below or the State Administrators within your region as listed on the next page.

Analysis:

This bill will enhance the ability of all interested parties to enforce the duty of support upon all non-custodial parents by expanding current collection statutes while also adding new amendments. The changes will expedite some of the enforcement procedures and eliminate parts of the potential delay from unnecessary litigation.

Substantial delays often take place when the non-custodial parent claims that payment has been waived verbally or counter claims dealing with custody, visitation or property rights are presented in delinquency court hearings. This bill will create a situation such that when the Child Support Division makes an appearance in the superior courts, counter claims for custody, visitation or property rights may not be adjudicated, and any waivers of support would be required in writing. In these waiver situations, the court would be required to satisfy itself that the custodial parent could adequately support the needs of the child.

The scientific parentage testing procedures are now developed to a point that they are reliable past any reasonable doubt. This bill would require the courts to accept test results of this nature when proof of parentage was in excess of 95 percent. This presumption of parentage could be rebutted only by clear and convincing evidence.

In many instances the Child Support Division must operate without complete information about the non-custodial parent or face significant delays in obtaining the information. This bill would provide subpoena powers to the Division under strict control through the Commissioner of Revenue. Use of the subpoena powers would require a 45 day delinquency on an existing child support order.

The current statute exemption standards for wage or earning attachments deal with a percentage of gross income or $100 a week. This causes frequent delays from the employer's payroll department. The bill would change the exemption to 50% of net wages as defined by statute, and this would reduce the time it takes to get the wage collection.

The current Civil Rules of Court require the parties in a child support order to inform the Child Support Division in writing of any change of address and provides for service of process by U.S. mail. This bill simply reduces this to statute language.

The Supreme Court decision Young vs. Williams suggested that unpaid child support installments would become judgments in favor of the custodial parent upon delinquency. This bill would provide for this by statute language and allow for collecting these judgments with reduced court intervention. The non-custodial parent's rights to contest in court would be maintained.

This bill would greatly enhance the collection possibilities while reducing certain time and processing requirements. In addition to this improvement, a number of payors will choose to pay rather than fight the issue in court. The combination of this impact would be a more efficient process for handling delinquent support for all of Alaska's children

Legislator Charlie Bussell
Chair, Judiciary Committee
State Capitol
Pouch V
Juneau, AK 99811

Dear Representative Bussell:

The Alaska Women's Commission strongly supports HB 667 and 668 which deal with Child Support Enforcement. As the legislation points out "the harmful effects of unpaid child support touch not only the poor but reach far beyond to diminish the overall quality of life for all Alaskans." We urge you to take action on these two bills as soon as possible.

Sincerely,

Kathy Marshall

Analysis:

One of the most difficult type of child support delinquency problems involves the self-employed. There are many legal enforcement techniques that may be used in this type of case, but the nature of the self-employed individual makes each of them expensive and subject to frequent delays. This bill provides payment information on delinquent payors to the credit bureaus and various lending institutions. This will create one of the most effective ways to deal with a particularly difficult part of the delinquent child support payor group.

Dear Representative Bussell:

The Alaska Women's Commission strongly supports HB 667 and 668 which deal with Child Support Enforcement. As the legislation points out "the harmful effects of unpaid child support touch not only the poor but reach far beyond to diminish the overall quality of life for all Alaskans." We urge you to take action on these two bills as soon as possible.

Sincerely,

Kathy Marshall

BILL SHEFFIELD
GOVERNOR

HB 668

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

February 13, 1984

The Honorable Joe Hayes
Alaska House of Representatives
Pouch V
Juneau, AK 99811

Dear Representative Hayes:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill relating to child support enforcement. This bill authorizes the Department of Revenue's child support enforcement agency, organized as a division within the department, to release to credit bureaus or lending institutions payment history information concerning persons who are delinquent in their court-ordered child support payments.

Existing statutes provide the authority to order an employer to withhold and deliver part of a delinquent employee's earnings. This tool is obviously not effective against a self-employed parent who owes child support. The new tool provided in sec. 2 of the bill is both a deterrent and a collection tool against those who are self-employed. The knowledge that delinquency in paying child support could be reflected in a person's credit history should serve as a deterrent to becoming delinquent and as a powerful incentive to those who are delinquent to bring their child support payments current.

The language of new AS 47.23.273(a) will ensure that the information provided by the division to credit bureaus and lending institutions will be only payment history information, without any reference to the personal characteristics or the reputation of the obligor. New AS 47.23.273(b) provides for immediate notification to credit bureaus and lending institutions when an obligor ceases to be delinquent in his payments.

As proposed, new AS 47.23.273 is in compliance with the Fair Credit Reporting Act, 15 U.S.C. sec. 1681. Under that Act, specific information regarding transactions or experiences between the division and an individual may be released without requiring that the division be considered a "consumer reporting agency."

Sincerely,

Bill Sheffield
Governor

MEMORANDUM February 27, 1984

SUBJECT: Sectional Analysis of HB 671 (Crimes committed against a dependent person)

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee

FROM: Russ Josephson
Legislative Counsel

You have asked for a sectional analysis of HB 671. The analysis and related comments follow.

AS 12.55.155(c) is a listing of 26 factors that may be considered in aggravating a presumptive sentence under AS 12.55.125. This bill consists of a single section that amends AS 12.55.155(c) by adding a new paragraph containing a new aggravating factor: the victim of the crime is a dependent person, as described in the bill.

It is my understanding that you may want to change the penalties for a number of theft offenses, including embezzlement, if the victim of the crime is a dependent person. If you wish to do this, another approach may be taken. Each provision in the statutes that describes a theft offense and sets out the penalties for its commission would be amended. In order to give you a "vehicle" for that approach just before the personal bill introduction deadline, and not knowing what penalties you would like for each of the several theft offenses, I drafted the general provision described above.

I would note, too, that at this time there are several aggravating factors in AS 12.55.155(c) that might accomplish the purposes behind your request. The possible penalties that had been proposed with your request, incidentally, were actually less harsh than those existing in this state now for the theft offenses involved. Accordingly, being unable to reach you to consult further about your wishes under those circumstances, I used my best judgment. If I know

what penalties you would propose for the various theft offenses, I can draft a sponsor substitute. Or, you may decide that the present penalties and available aggravating factors are sufficient.

If I may be of further service please do not hesitate to call.

POSITION PAPER/Department of Health & Social Services

POSITION PAPER

House Bill No. 671

"An Act relating to crimes against a dependent person."

This bill would include crimes committed against mentally disabled persons (disabled by reason of birth defect, physical disorder, or advanced age) as an aggravating factor for purposes of sentencing criminal defendants under A.S. 12.55.125 (c) (1), (c) (2), (c) (3), (d) (1), (d) (2), (e) (1), or (e) (2).

The purpose of this bill is to authorize the imposition of additional criminal sanctions for defendants who prey upon persons who are disabled as defined above. We believe this to be an appropriate additional safeguard for our disabled citizens, many of whom are unable to protect themselves and their property.

We do, however, recommend that all substantially developmentally disabled persons as well as chronically mentally ill persons be included under this proposed amendment. The following language is offered for possible inclusion in the bill in order to further protect these equally disabled or equally helpless individuals:

> Beginning on line 13 add the following underlined language, "...a mental or physical disability attributable to a chronic emotional disorder, developmental disability, a birth defect, physical disorder, or advanced age,..."

In our opinion, the addition of this language will more adequately define those individuals that should be guarded against exploitation by criminals under this section of the Alaska Statutes.

The purpose of expanding the definition of "mentally disabled" under House Bill 671 is to offer additional protection for the substantially developmentally disabled and chronically mentally ill that are able and willing to reside in the community rather than in our institutions. As our policy has been to develop programs offering community alternatives to institutionalization for these handicapped citizens, this bill, with our proposed amendments, will further that endeavor by adding more criminal sanctions and increased protection for those who perpetrate crimes against these handicapped citizens.

The Division of Mental Health and Developmental Disabilities, in the Department of Health and Social Services, supports the passage of House Bill 671 with the addition of the language proposed above.

Representative John J. Liska

April 11, 1984

M E M O R A N D U M

FROM: Rep. John J. Liska

REFERENCE: HB 678, "An act prohibiting removal of WW II artifacts from State land."

The purpose of this bill is to insure World War II artifacts are included in the State Statutes under the Alaska Historic Preservation Act.

Presently, we have a major problem in the State of Alaska with the removal of World War II artifacts. These historical items are being removed either in tact, for museums in the lower 48, or disassembled to supply a very lucrative demand for spare parts for these vintage planes.

Your packet contains:

A. Pages 30, 31 and 32 from a publication entitled "The Historical "Battle of Alaska" remains." These pages refer to various types of aircraft that crashed in Alaska and where they have been removed to:

1. Douglas - O - 38F - removed to Air Force Base Museum in Dayton Ohio in 1968.

2. Stinson - A Trimotor - to Wisconsin in 1972 by J.D. Berry.

3. P - 51H and P - 40 - Steve Myers, Washington.

4. U.S. Navy Vough OS 2U King Fisher - removed to the Smithsonian Institute.

5. P - 39 Airacobras, on display in Seattle.

Additionally, page 73 shows Japanese artifacts from World War II.

In addition in your packets, but not nearly as interesting, are letters from CAVPAC supporting HJR 66 and HB 678 and a copy of a letter from General Talley who was involved in the Alutian Campaign.

Another piece of back up material has been submitted by the North Star Chapter Pearl Harbor Survivors Association. I have made copies of the first three pages - which may or may not be the same artifacts as previously submitted in your packet.

JJL/tm

Besides the public museums such as the Smithsonian Institute and the Anchorage Historical and Fine Arts Museums, there are many small or private collections which display items of Alaskan history. Unfortunately, in many cases, Alaskans have no say in how the collections are handled.

History is repeating itself in the area of aviation history. It is seen in many examples of aircraft downed during World War II which are leaving the state.

A Douglas 0-38F had engine problems and crashed in 1941. It was removed to the Air Force Museum in Dayton, Ohio in 1968.

In 1972 a Stinson 'A' Trimotor which crashed in 1947 was removed to Wisconsin by J.D. Berry. Berry wrote to Wien Air Alaska and followed it up with a phone call to try and get the airline to purchase the plane for the cost of its removal, but there was no interest, so it was sent Outside in order to pay the costs for its removal.

Two P-51H's were pulled out near Stevens Village. Two more were found near Kotzebue, and three were removed from across Cook Inlet. One P-40 was removed from Amchitka Island in the Aleutians. All of these aircraft were removed by Steve Myers of Washington.

Another P-40 was removed from a site near Fairbanks in 1977 and was sold to a buyer at an unknown Lower 48 destination.

A United States Navy Vough OS2U Kingfisher which crashed during WW II on one of the small islands near Kodiak, was removed in the early summer months of 1979 for removal to the Smithsonian.

There have been numerous other cases. An ad in Flying Magazine's June '80 issue states that sale of "P-39 Airacobras. Recently recovered from a fresh water lake in the Alaskan Peninsula. Russian armament, 117 hour totals hours each. Make offer, would like aviation museum or same to purchase...Yakima, Washington..." A call from the United States Historical Aircraft Preservation Museum in Anchorage brought no response.

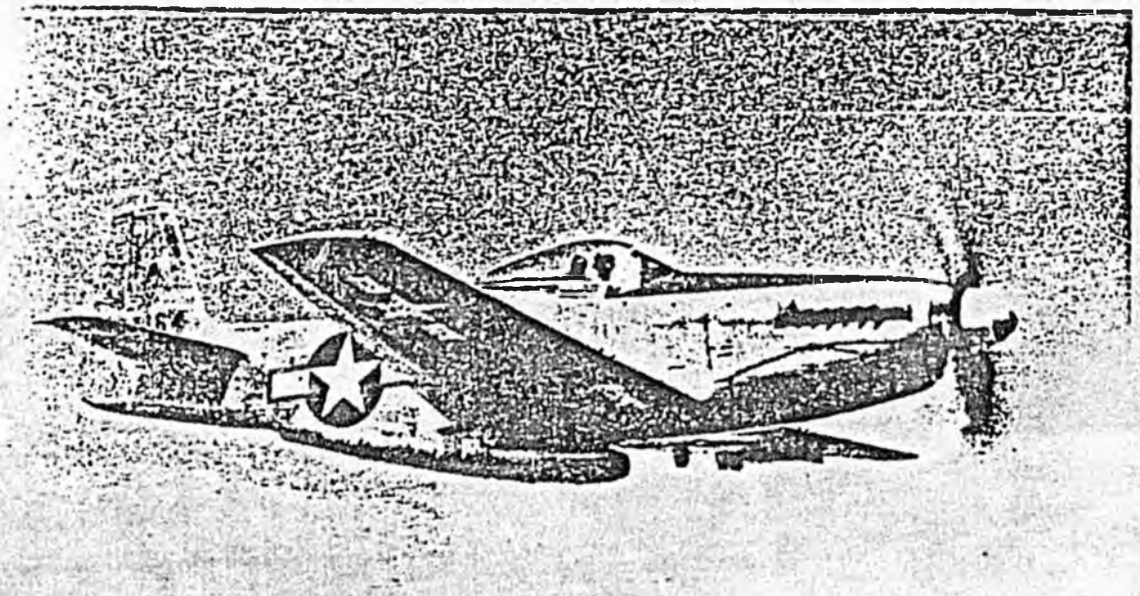
Three B-25 Mitchell bombers have left the state in the past two years, in flyable condition, headed for the Outside.

The United States Historical Aircraft Preservation Museum has been trying for several years to open a museum facility located at Merrill Field, but has been blocked from doing so because it has no planes to put into the facility. At the same time, the Planes of Fame Museum from Chino, California has been soliciting donations of Alaska aircraft on a a promise of opening an alaskan branch museum at some undetermined later date.

It has successfully acquired an A-26 from Dr. Donald Rogers, an H-21 helicopter from Bill Swift to help in removing aircraft downed in Alaska, a B-25 from Fairbanks. A wing insignia was donated to the Air Force Museum by Ted Spencer - the insignia coming from the wing on an

aircraft downed at Nome which was to have been used in reconstructing a P-63 Airacobra.

The Committee contends that Planes of Fame has an established reputation for flying, crashing and destroying one-of-a-kind aircraft, and of selling aircraft and aircraft parts in the Lower 48 and abroad in order to keep itself solvent.



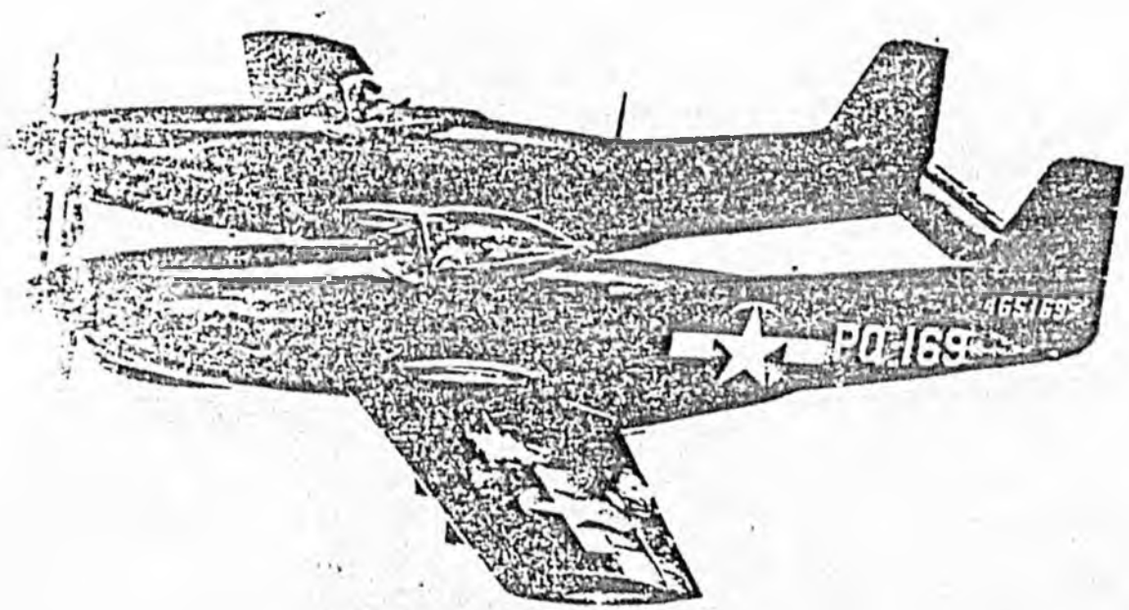
Flying in races and demonstrations for trophies and prize money has taken its toll on the vintage military aircraft.

The Committee feels that if it can adhere to those goals, Alaska will have one of the finest aviation museums in the U.S., preserving that part of Alaskan history.

The United States Historical Aircraft Preservation Museum is currently conducting negotiations for several planes of significant historical value, as well as parts and planes to be retrieved from bush areas.

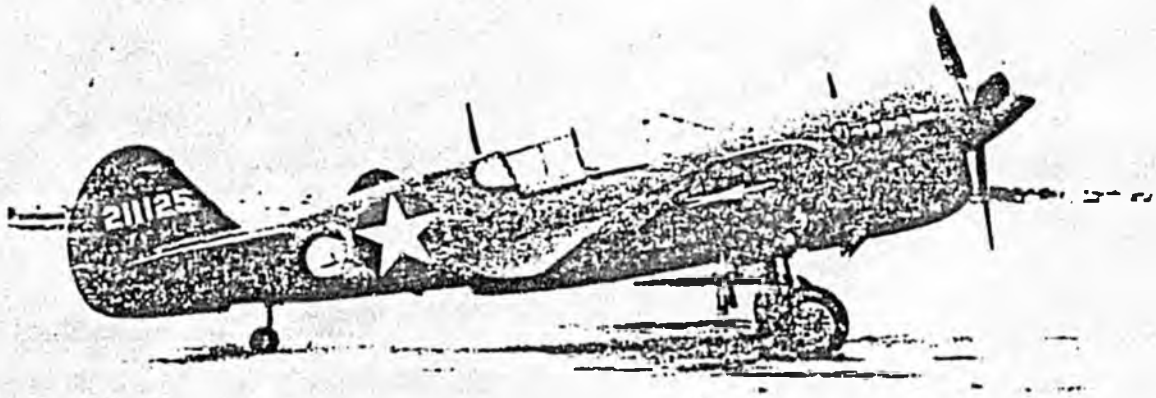
Access to battlefields in the Aleutians is difficult because of the expense and weather conditions involved, but the area promises to be a fertile area to search.

If the museum has had a difficult time collecting actual aircraft for its displays, there has been no shortage of donations of other treasures. Photographs, blue prints from the Bell Factory which



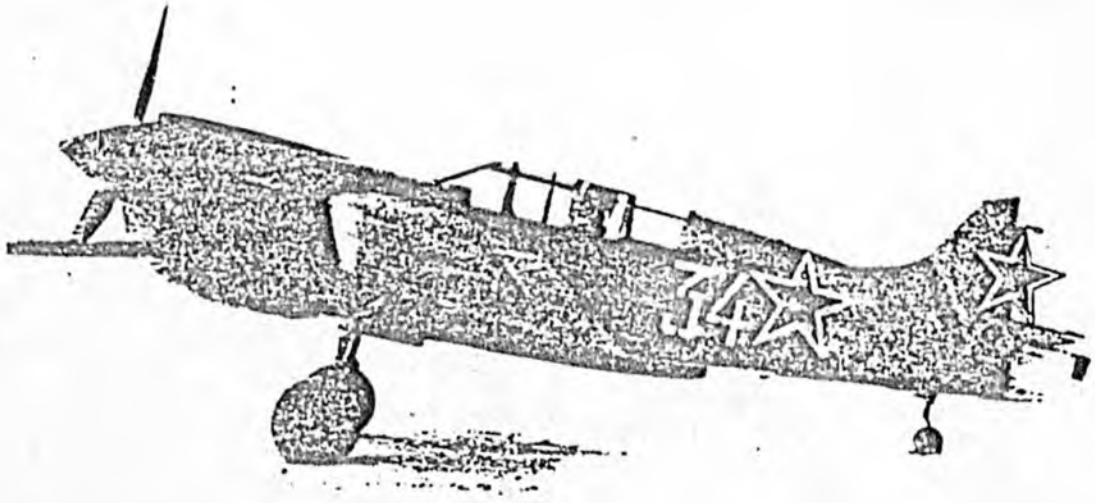
These fighters, P-51's Mustang, were used toward the end of WW II in Alaska. They did not see combat in the Aleutian Campaign. Three downed P-51's were located.

AAHS

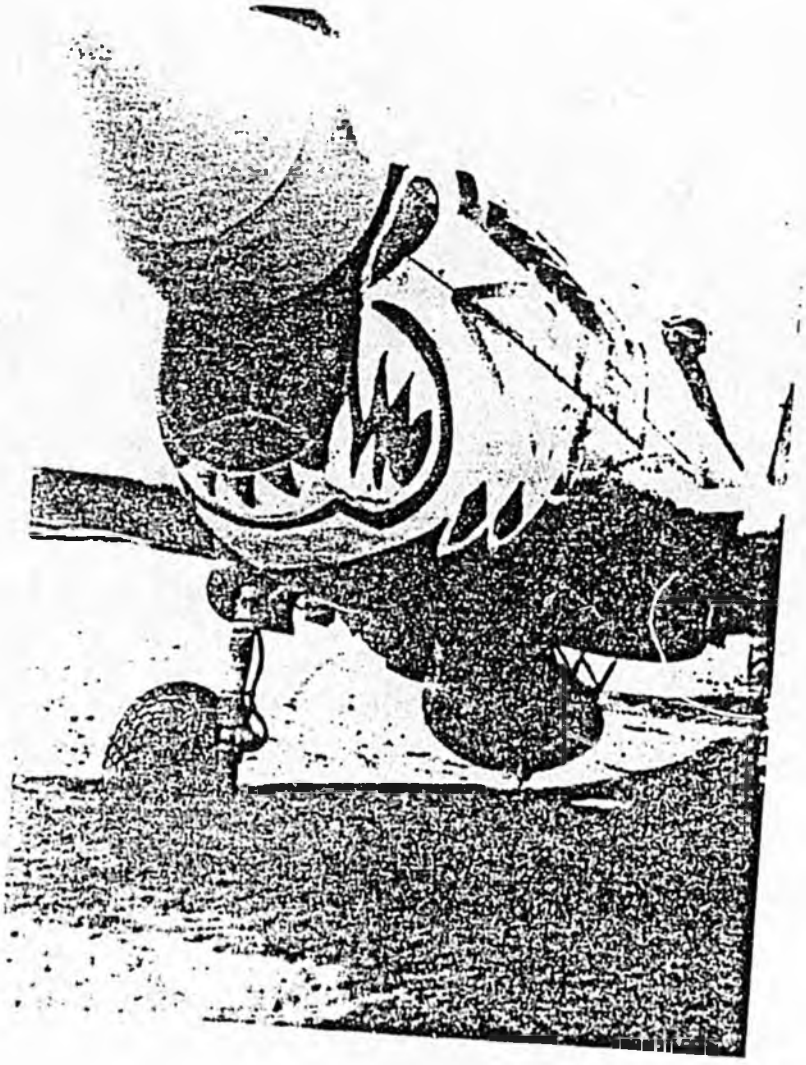


The P-82 Twin Mustang was based in Alaska after WW II. One was located that bellied in and is intact in the Interior.

USAF

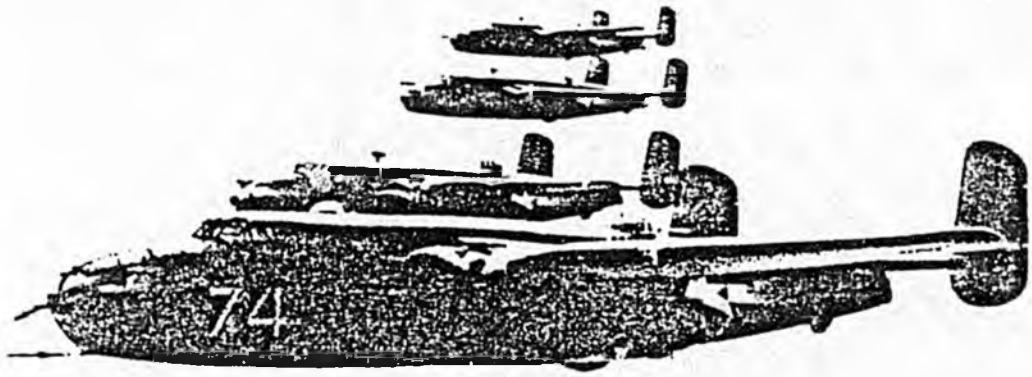


Curtiss P-40 was used by the USAF during the Aleutian Campaign. Eight P-40's were located: Five of them were abandoned, two were downed, and one is in the bottom of a fresh water lake. Also several brand new P-40's were buried in crates in the Aleutians.



RWT

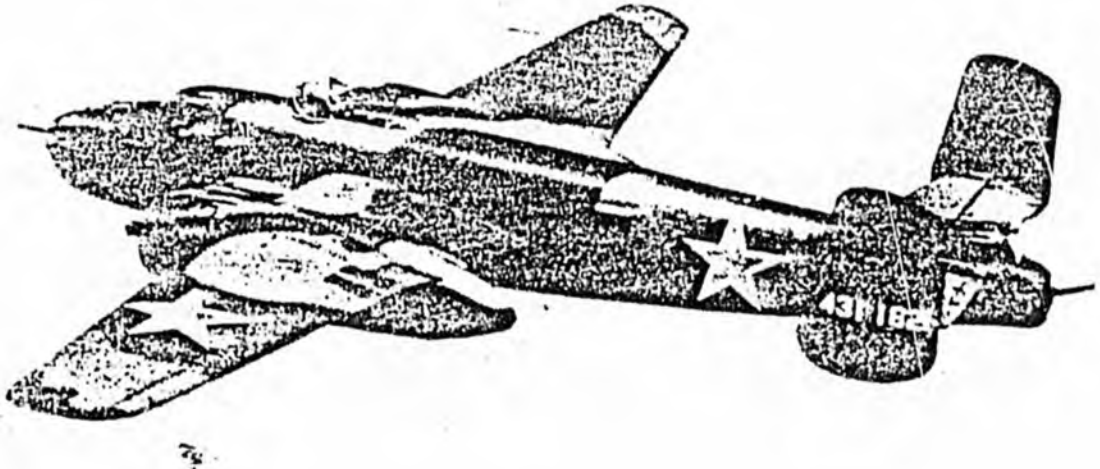
Approximately 48 Lend Lease P-40's came through Alaska on their way to Siberia. At present Moscow is the only place in the world that has one of the Lend Lease P-40's. Two more were located in the Interior.

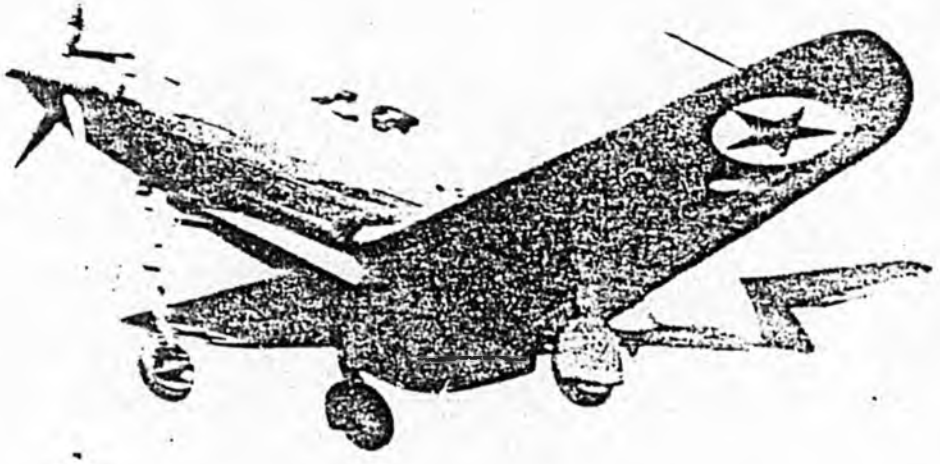


GFP

This is a Curtiss P-40 called the "Aleutian Tiger." It was used in combat by the United States during the Aleutian Campaign. Four of them were located.

USAF

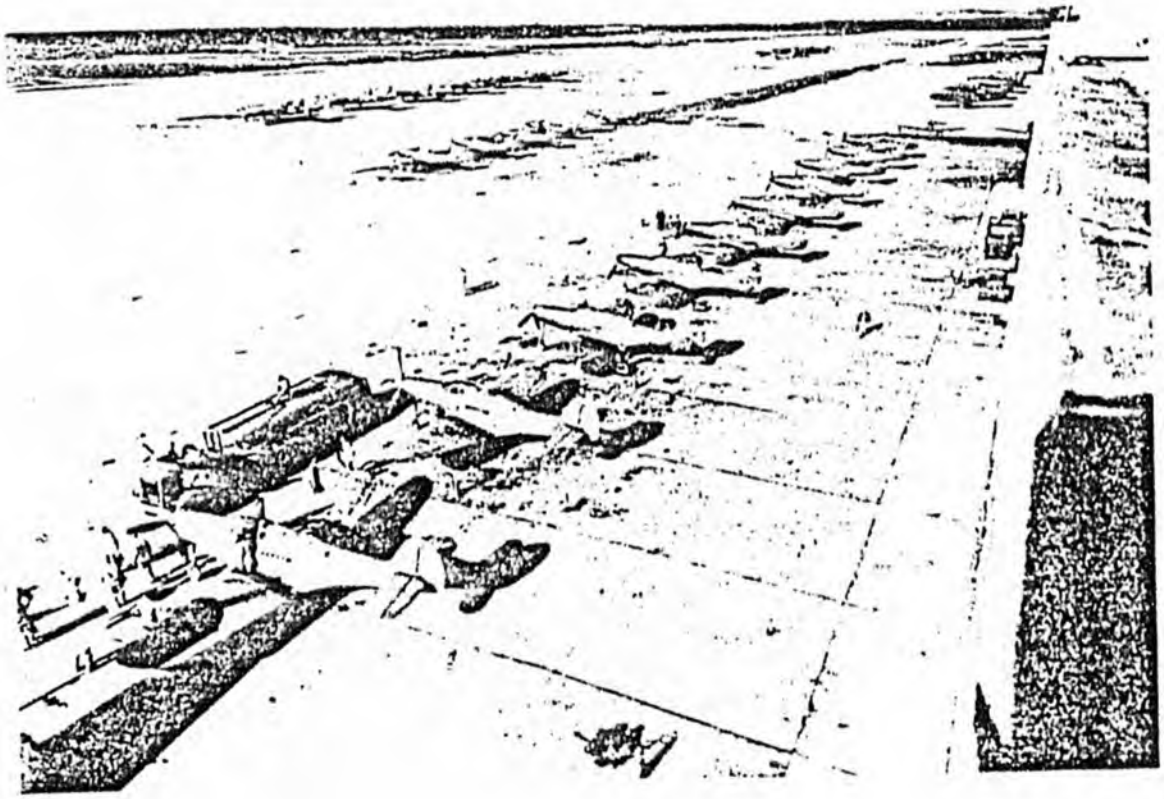




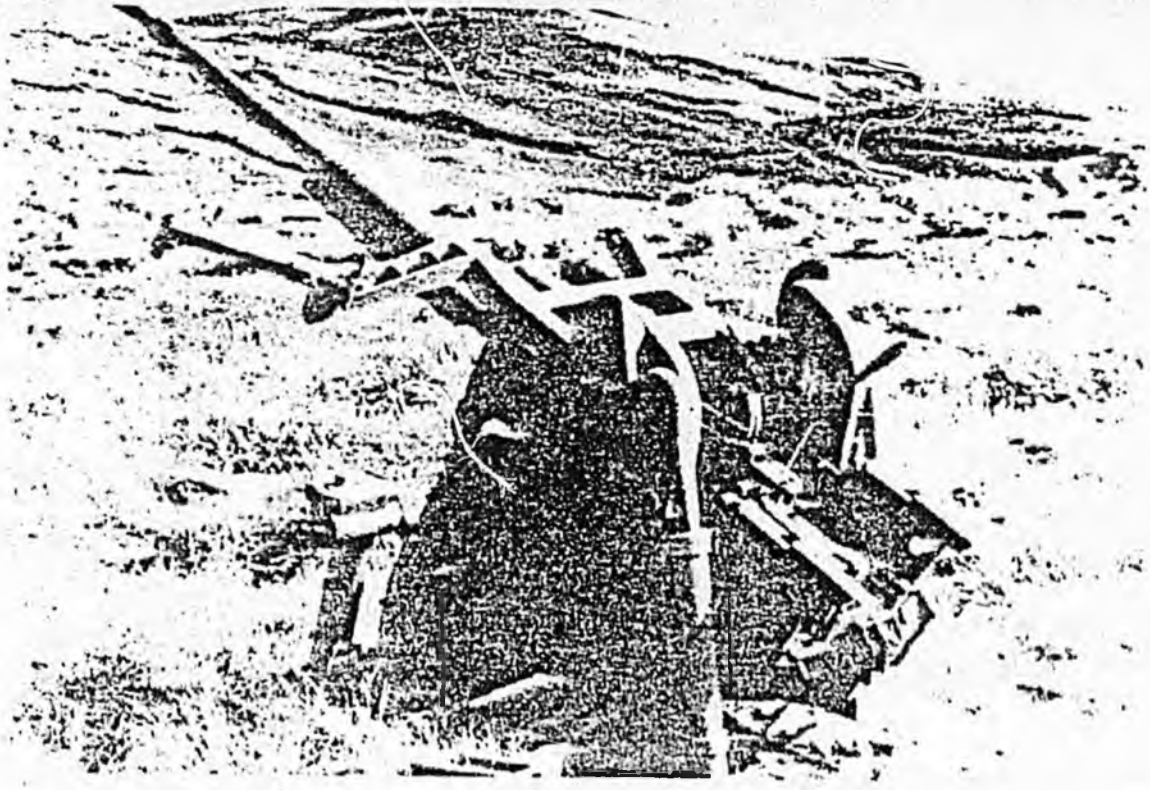
Two of these B-25 Medium Bombers went down in the Aleutians during the Aleutian Campaign.

USAF

Approximately 732 of these Lend Lease B-25 Mitchell Bombers were ferried from Great Falls, Montana, Whitehorse to Fairbanks to Siberia, Russia to be used against the Germans during WW II. Three of these aircraft went down in the Interior Alaska.

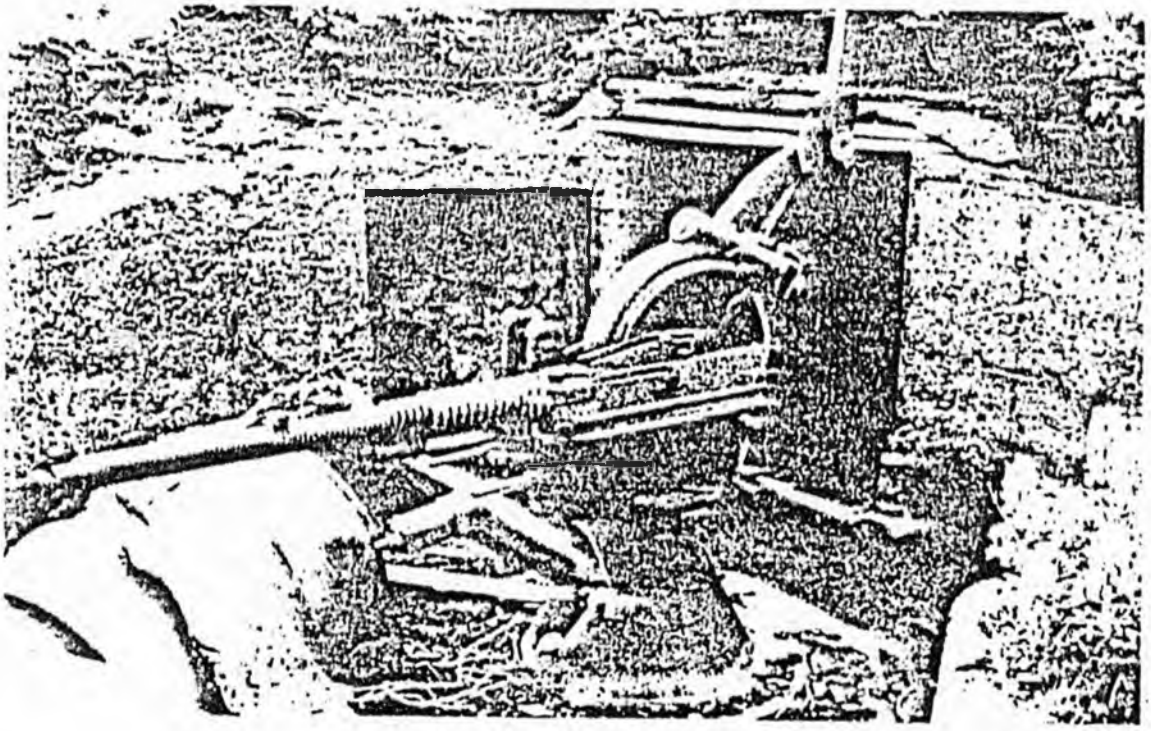


NAA



Approximately 2,618 P-39 Airacobra came through Alaska on their way to Siberia under the Lend Lease Program. Eleven of the P-39's went down in the Interior, and six of these are in fresh water lakes.

USAF



Japanese Model 96 (1936), Type 2, 25 mm Anti-aircraft Gun and Mount. This gun is very rare and was not extensively used by the Japanese.

COE

Japanese Model 93 Heavy Machine Gun, 13.3 mm on an Anti-Aircraft Mount.

Anchorage, Alaska 99508

POLITICAL ACTION COMMITTEE

HJR66 and HB678 BACKUP INFORMATION

The Alaska Historical and Transportation Museum and other interested non-government organizations are focusing on long range planning, development, and preservation of pioneer, transportation and military history throughout the State and especially on the Aleutian Island Chain.

The projects of the organizing committees are to: (1) Survey and inventory significant relics, artifacts, and related historical material pertaining to transportation (surface, maritime, and with major emphasis on aviation); (2) Develop plans for the historic preservation and interpretation of these artifacts; (3) Recommend an appropriate museum site(s); (4) Coordinate with other public and private sector museums to insure that all groups interested in aircraft recovery can participate in recovery and restoration of aircraft, and that the restored aircraft will remain in Alaska; and (5) Prepare a presentation for submittal to the Governor and the Legislature in 1985 on a statewide program of cultural and historical preservation, including programs on pioneer, transportation, military, and the historically related areas, which are either not currently included in existing museum services or are inadequate in scope.

These projects and assessments will supplement the existing Statewide Museum Plan and will include recommendations for future museum development in the State of Alaska.

There has been no comprehensive statewide assessment or inventory of Alaska's historical artifacts that are constantly being removed from the State. Although many agencies have worked with each other on various aspects of preservation, an overall coordinated appraisal of the most critical needs in this area has never been possible.

Alaska's military history covers a wide range of topics: the Alaska Purchase to World War II era, aviation, maritime, World War II Aleutian campaign, DEW Line, and post-WW II history, etc. A number of agencies have shown an interest and have done limited statewide planning to locate historical Alaskan artifacts, but have discovered that big money in the lower 48 is stealing many of our WW II aircraft from federal and state land without any interference and are selling them to museums and making a fortune. It's big business. Many of these U.S. and Japanese aircraft have been salvaged almost intact.

It is hoped that HJR66 and HB678 will assist, when implemented, to retain valuable artifacts in Alaska and in 1985 some funds can be made available to improve our historical museums. The Army, Air Force, and National Guard have already assisted in salvaging and restoring some of these artifacts.

The historically significant relics, artifacts and other materials are part of Alaska's history and should be preserved before it is too late. Many WWII aircraft, both friendly and enemy, have been literally stolen from the Aleutian Chain and are now in museums in the States of Ohio, Tennessee, Washington and California that we know of. They are a part of Alaska's wartime history and should remain here. They will also be of tourist interest.

Draft prepared by B. B. Talley
with contribution by
Col. Evan J. Griffith, USAF

BACKGROUND MATERIAL IN SUPPORT OF HB _____
APPROPRIATING FUNDS FOR A COMPREHENSIVE DOCUMENTARY FILM
OF WWII IN ALASKA

There exist several books and papers, some official, which purport to document the history of WWII in Alaska. In addition, the military services have extensive motion pictures of their operations in Alaska. In recent years there has been a rebirth of interest on the part of individuals and organizations, particularly veterans organizations, in this part of Alaska's history. These individuals and groups have many important visual records which can be obtained for a comprehensive documentary film of WWII in Alaska.

In 1980, on the 40th anniversary of its arrival in Alaska, the veterans of the 11th US AF held a reunion in Alaska. It included a visit to the Aleutians as far out as Shemya. Weather prohibited their going to Attu. Extensive motion pictures and video tapes were made of this celebration, including interviews and oral history from many of the veterans present.

In 1982 extensive motion pictures and video tapes were made by individuals, organizations and by TV stations of the ceremony in dedication of a memorial on Unalaska Island to all those who lost their lives in the Aleutians during WWII. This included the Armed Forces of the United States and Canada, the Aleuts, and the Japanese Armed Forces. The two Japanese officers, now retired, who led the first and second waves of bombers in the attack on Dutch Harbor on 4 June 1942 participated in this dedication. The dedication was preceded by a flight from Unalaska Island to the Umnak Air Base, and to the position of the Japanese carrier from which the attack was launched, thence following the course of the planes to the rendezvous point and returning to Dutch Harbor. The plane was piloted by the Japanese officer who led the attack, flying

in reverse the course flown in the attack. From the rendezvous point, the plane flew the course at the same altitude flown in the actual attack. In the plane were Admiral James S. Russell, USN-Ret. who commanded the US Navy Catalinas in Alaska during WWII, BG B. B. Talley, Corps of Engineers, retired, who was responsible for building the secret air base on Umnak Island from which the US AF P-40s broke up the Japanese aerial attack on Dutch Harbor, and Admiral Hiroichi Samejima, JMSDF (Ret.) who led the first wave of Japanese bombers, and Colonel Zenji Abe, JMSDF (Ret.) who led the second wave which consisted of dive bombers. (Then Lieutenant Commander Abe later transferred to the army, as the reconstituted Naval defense force did not have dive bombers.) Also in the plane were Mr. Ted Spencer who arranged the dedication ceremony and the aerial flight here described. There was also a motion picture camera crew aboard who recorded the flight on film.

In view of the advancing age of the still living participants in WWII in Alaska, delay in the production of this visual history might preclude their participation in this important chapter in Alaska's history.

Inasmuch as the State of Alaska would be the primary beneficiary, the State should be the primary sponsor of the project. Such a project is within the purview of the Alaska Historical Commission of the Department of Education.

The project would include, but not necessarily be limited to, bringing together into a single compilation the best of the existing film, editing it into a single comprehensive historical document. There should be included in this compilation such additional footage as may be appropriate, with commentary by selected veterans who took part in the action.

Upon being instructed to carry out this project and being provided with the necessary funds for its accomplishment, the Alaska Historical Commission formed by AS Title 44, Article 3,

would have power to prepare or to authorize and coordinate the preparation and production by others of a documentary film covering this important portion of Alaska's history. Such a history should include but not be limited to the stills and motion pictures already in existance, but should include additional visual components as may be appropriate. Such a project should be completed by June 30, 1986.

A conceptual organizatic structure for executing this project is shown in Figure 1.

Page 22. A letter to Paul Caulkett regarding two B-25 aircraft that were to be used as static display within the state of Alaska.

Page 23 and 24. A letter from the Alaska Department of Transportation in Fairbanks showing that one of the B-25 aircraft (paragraph 4) was sold to Mr. John C. Morgan by one of the aviation societies in Anchorage.

Page 25. Two photographs of the B-25 that one of them was sold to Calif.

Page 26. Alaska Magazine Dec. 1980 article on a Stearman that was in Alaska and is now in the Lower 48. (If interested, a copy of the article can be provided.)

Page 27. Three photographs of P-38 Lightning which was removed from Alaska and is now in California.

Page 28. A letter from State of Alaska, Dept. of Natural Resources regarding the attempts of Castle AFB in California to remove the remains of a P-38 from the Aleutians

Page 29. Air Classics Magazine April 1981 article on A-26 Invader that was given to California as a donation.

Page 30. Two photos of the A-26 flyable aircraft that was donated to Calif.

Page 31. Top - photo of the three B-25's which two of them left the state of Alaska. Destination unknown. Bottom - another photo of the A-26 that was donated to California.

Page 32. Picture of a B-25 flyable aircraft that is now in California.

Page 33. A Lockheed Constellation that was donated to City of Kenai, later was sold for $30,000 and is now in Florida.

Part II. Aircraft and artifacts that had left the state of Alaska which cannot be stated as illegally been salvaged. Records at the Air Force Rescue Coordination Center at Elmendorf AFB show these WW II aircraft are no longer in their crash sites, there are no indication of their present whereabouts, or who retrieved them. Reports from bush pilots, who spotted the aircraft earlier, show that the same aircraft are no longer in their crash sites.

C O N T E N T S

Part II. Continued

1. Buldir Island in the Aleutians: The crashed P-38 Lightning's complete booms (two) and vertical stabilizer were removed two years ago. Can be verified thru Dept. of Fish and Wildlife.

2. A Lend Lease P-40, which crashed in 1944 in Nome area, was found in 1978. The aircraft was no longer there in 1982. Verified through bush pilots.

3. A Canadian P-40 that was located in 1968 was not there in 1976. The aircraft was completely removed. Only a few remaining parts are there. Verified through bush pilots.

4. P-51 Mustang, which crashed in 1944 at Broad Pass, was removed in early 1970's by an Anchorage resident couple and was shipped to the Lower 48. Also the husband removed P-40 parts of four aircraft that are on Unalaska in the Aleutians. This can be verified through U.S. Hist. Aircraft Preservation Museum.

5. WW II aircraft parts from Nome, Fairbanks and Northway that were removed three years ago and are now in Lower 48. Can be verified through USHAPM.

6. A vintage aircraft that crashed in Ketchikan: Its parts were removed for souvenier and are still in Alaska. Can be verified through USHAPM.

7. There are numerous stories told by state agencies, the local military, bush pilots and individuals that know, had seen, and have been involved in the removal of WW II aircraft, aircraft parts, and artifacts out of the state of Alaska.

   If at the present time there were laws protecting the WW II aircraft and artifacts, these individuals and groups of people in the state of Alaska can be checked out and their residences be searched to prove the statements. The USHAPM knows several of these people.

   It is difficult to prove that there is illegal salvaging of WW II aircraft, aircraft parts, and artifacts because the individuals who are involved are never caught. The only way we can prove that such a thing is happening is when these aircraft and aircraft parts come to surface in private hands and/or in the Lower 48 when the serial numbers and tail numbers can be verified that they came out of the state of Alaska. This takes time of hours and years. Alaska is slowly being stripped of its WW II aircraft, aircraft parts and materials that the average persons do not realize it till they are actually involved in the research of the WW II artifacts and materials in the state and in the Aleutians.

Attorney General

By: Joseph W. Geldhof
Assistant Attorney General

SUBJECT: Ownership of abandoned airplanes located on state land

You have requested our counsel with respect to the disposal of property located on state land. This inquiry arose because of competing ownership claims to a Consolidated PBY/OA-10 "Catalina" flying boat (PBY) of World War II vintage abandoned at Dago Lake approximately 30 flying minutes south of King Salmon, Alaska. The PBY has remained at Dago Lake since 1947. During the intermittent years the PBY has been stripped of the engines, certain components and slightly vandalized. The plane is located on land which belongs to the State of Alaska. Several organizations claim title to the aircraft and seek removal of the aircraft from state property. The aircraft is listed on the Alaska Heritage Resource Survey (#UGA-037).

The essential question in this situation is who owns the aircraft. A secondary question is answered involving the means by which the state may dispose of the aircraft assuming the state owns the aircraft and elects to pursue a disposal of the plane.

We believe the State of Alaska, through the Department of Natural Resources, has a colorable claim of ownership to the PBY located on state property near Dago Lake. The source of this ownership claim is found at AS 41.35.020(a) which states in relevant part that:

> The state reserves to itself title to all historic, prehistoric and archaeological resources situated on land owned or controlled by the state ....

While the PBY is neither a prehistoric nor an archaeological resource, the aircraft is probably a historic resource according to AS 41.35.230(4) which defines "historic resources" as including:

> deposits, structures, ruins, sites, buildings, graves, artifacts, fossils or other objects of antiquity which provide information pertaining to

> the historical or prehistorical culture of people in the state as well as to the natural history of the state.

(Emphasis added.) The PBY is probably a historic resource because it is an artifact or ruin located on state property which provides information pertaining to the historical culture of the people in the state. The plane is a type used during the Second World War during the Aleutian campaign, a campaign which saw the only land battles fought on North American soil during that war and which made extensive use of PBY's.

In the alternative, the aircraft is probably a historic resource because it is an object of antiquity which provides information pertaining to the historical culture of the people in the state. There can be no specific definite time limit as to when an object becomes an "antiquity." United States v. Diaz, 368 F. Supp. 856, 858 (D.C. Ariz. 1973). The Diaz case is instructive for the antiquity analysis. In that case, a Magistrate made a finding pursuant to a prosecution for appropriation of Indian artifacts on government land. The Magistrate ruled that artifacts less than five years old were objects of "antiquity." In light of testimony as to the significance and the importance of the artifacts to the Indian culture and heritage, as well as the uniqueness of such artifacts, and the fact that the case was one of first impression, the court held that the findings of the Magistrate were not clearly erroneous. Id. at 857.

Our inquiry on the question of ownership does not rest with the determination that the state has a legitimate claim to the aircraft in question. Because the state was not the original owner of the PBY, the possibility exists that a superior claim may be asserted with respect to the aircraft.

While in possession of the aircraft, the state has certain rights, including the right to continue possession against everyone except those who have a better right; the right to recover the plane if it is wrongly taken; and the right to recover for damages to the aircraft. See generally, C. Smith & R. Boyer, Survey of the Law of Property (2d ed. 1971). In addition, the state may elect to bring criminal charges against an individual that removes, destroys or injures the PBY or other historic, prehistoric or archaeological resources in the state's possession based on AS 41.35.200.

At common law, property for which an owner was not known, was classified in the following ways:

a) lost property; b) treasure trove; c) mislaid goods.

The characterization of lost property, treasure trove or mislaid property is dependent on the situation or location of the property in question. Lost property is property unintentionally lost by the true owner. Treasure trove consist of coin, money or other precious commodities concealed in the earth or other private place. A finder of lost property acquires title to the found property against all but the true owner. Generally, in the United States treasure trove is treated as lost property and belong to the finder in the absence a superior claim by the true owner. Misplaced goods are those which were intentionally placed by the owner where they were found, and then forgotten or left there. The finder of misplaced or mislaid goods does not obtain title to right to possession of the property. The owner of the property on which misplaced goods are found is deemed to hold the goods for the true owner. See generally, id. at 456-457; see also, 1 Am.Jur.2d Abandoned, Lost, Etc., Property §§ 18-26 (1962). In Alaska, unclaimed property is governed by AS 34.45.010, et seq., a statutory provision which is not particularly helpful for our analysis.

The PBY in question does not have any of the characteristics of lost property or misplaced goods. The PBY is certainly not treasure trove within the classic definition, although some of the competing aviation groups seeking possession of the plane treat the plane as a "treasure."

Because one of the organizations seeking possession of the aircraft has a certificate of title filed with the United States Government which gives them a claim against the PBY, we have reviewed the doctrine of abandonment in order to ascertain whether that organizations claim of title to the aircraft is still valid. Abandonment divests a former owner of title to property, as if the owner never had any right or interest in the property. The burden of proof is upon one alleging abandonment and the evidence in support of a charge of abandonment must be clear and convincing. Burr v. House, 3 Alaska 641 (Alaska 1909). Abandonment is a matter of intention. Harkrader v. Carroll, 76 F. 474 (D.C. Alaska 1896). Accord Loeser v. Gardiner, 1 Alaska 641 (Alaska 1902), and Whites Guardian v. Martin, 2 Alaska 495 (Alaska 1905). But cf. Gurgel v. Nichol, 429 P.2d 47, 48 (Utah 1967), for the proposition that nonuse and lapse of time are proper considerations for determining abandonment.

In the current situation, the actual act of relinquishment accompanied by an intention to abandon the PBY by the true owner has not been shown. Absent intention to abandon and given the difficulty of convincing a jury that the planes circumstantial neglect constituted abandonment, the interest asserted by the individual with the certificate of title is probably superior to the state's general claim based on legislation found at AS 41.35.020. This of course assumes the deed of title to the PBY is valid. A claim supported by a valid title is also superior to a general claim of ownership based on a previous owners letter of disinterest in the property or a quit claim to the property in question exercised subsequent to a valid conveyance.

Once the determination of who has a superior ownership claim to the PBY is sorted out, the state may be faced with a question of how the Department of Natural Resources might dispose of aircraft or other personal property located on state lands. 1/

Under article IX, section 6, of the Alaska Constitution, public property can only be transferred to promote a public purpose. 2/ Consequently, the Department of Natural Resources may not make a gift of state property to any entity absent showing that it would promote a public purpose. See 1983 Op. Att'y Gen. (Nov. 2). Accord 1980 Op. Att'y Gen. (May 28).

Assuming there is a legitimate public purpose for disposing of historic, prehistoric or archaeological resources, statutory authority must exist for a particular department to dispose of property. See generally 1969 Op. Att'y Gen. (Mar. 27). As it happens, the Department of Natural Resources, Division of Lands has such authority in AS 38.05.035(14) which provides in relevant part that the director of the Division of Lands may:

1/ In passing we note that if the state ever locates or attempts to dispose of historic, prehistoric or archaeological resources on state land, caution should be exercised to comply with provisions of AS 41.35.020 which protect aboriginal Alaskan interests in historic, prehistoric and archaeological resources.

2/ Alaska Constitution article 9, section 6, provides that "[n]o tax shall be levied or appropriation of public money made or public property transferred, nor shall the public credit be used except for a public purpose."

> with the consent of the commissioner, approve contracts for the sale, lease, or other disposal of available lands, resources, property or interest in them, and in addition to the condition and limitations imposed by law, [the director] may impose additional conditions or limitations in the contracts ... [which] will best serve the interest of the state ....

(Emphasis added.)

There is no constitutional requirement for a competitive sale in a situation like this. Such requirements as exist are to be found in the statute. Cf. Libby v. City of Dillingham, 612 P.2d 33, 40-41 (Alaska 1980).

In this situation, it is the best interest of the state which must be served. If the Department of Natural Resources finds that it owns a resource like the PBY and finds that disposal to an entity would best serve the public, we would recommend that the department make a formal written finding and commence work on a transfer agreement in conjunction with the Department of Law and the individual or the entity which seeks possession of the resource. Transfer of an aircraft or other valuable cultural resources owned by the state should be conditioned upon completion of an agreement which adequately protects the state and public interest. At a minimum this agreement should contain a provision for display and access to the resource for the citizens of the state. In addition, any agreement transferring property like an airplane should allocate responsibility for damages to persons or property associated with the movement, storage or display of the aircraft.

In conclusion, we believe the state has a legitimate ownership claim to the aircraft now resting near Dago Lake. This ownership claim is not absolute however, and is probably inferior to the assertion of ownership claimed by the Alaskan Historical Aircraft Society (AHAS). If, after inspection of the title documents presented by the AHAS, it appears that AHAS has an unbroken chain of title following the original conveyance from the United States Government to the first private citizen owner via a surplus sale in 1948, then we would recommend that you accede to the request of the AHAS and allow that organization access to the PBY for purposes of removal. If you are at all concerned about the AHAS's chain of title, a title search by any firm conducting such reviews may be warranted. The Department of Law is available to inspect or otherwise assist your agency in a

review of any title documents pertaining to the various ownership claims.

Please call if we can be of additional assistance on this matter.

The Honorable Charlie Bussell
Pouch V
Juneau, AK 99811

Dear Mr. Bussell:

I write to solicit your support for the passage of the following pieces of legislation:

		House	Senate
1.	Renunciation of Rights in Decedent's Estates	HB 695	SB 513
2.	Administration of Decedent's Estates	HB 694	SB 512
3.	Uniform Disposition of Community Property Rights at Death	HB 697	SB 515
4.	Married Person's Rights in the Family Home	HB 696	SB 514
5.	Uniform Principal and Income Act	HB 693	SB 511

I am an attorney practicing in Anchorage, Alaska. My practice is largely devoted to estate planning, estate and gift tax analysis, and probate and trust administration. I am therefore quite familiar with the contents of each of the proposed measures. None of the proposed bills have the glamour associated with larger issues dealt with by your Committee. Nonetheless, I would encourage you to give active consideration to passing each of these measures. The enactment into law of each of these measures will result in a far higher degree of certainty in various areas covered by the proposed legislation than is now the case. It is also my opinion that any lingering uncertainty in these areas can only result in additional expense to our clients.

Thank you very much for your consideration. Please do not hesitate to call or write if you have any questions.

Very truly yours,

KEMPPER, HUFFMAN & GINDER

HB 693

March 13, 1984

This bill was requested by the Code Revision Commission so that the state may adopt the Uniform Principal and Income Act. The act has been adopted by 37 other states, making it one of the more widely accepted uniform acts. The proposed act codifies rules a trustee shall follow when the document that established the trust does not provide instructions to cover all circumstances, which frequently is the case. It directs how the trustee shall credit a receipt or charge an expenditure in a variety of fact situations. Because this bill only deals with private sector financial transactions, it will not have a fiscal impact on state government operations.

RE: (1) a bill relating to principal and income of trusts; (HB 693/SB 511)
(2) a bill relating to administration of decedents' estates; (HB 694/SB 512)
(3) a bill relating to renunciation of of rights in decedents' estates; (HB 695/SB 513)
(4) a bill relating to married persons' rights in a family home; and (HB 696/SB 514)
(5) a bill relating to the uniform disposition of certain property rights at death (HB 697/SB 515)

Dear Senator Ray:

Pursuant to AS 24.20, the Alaska Code Revision Commission has prepared the enclosed bills and respectfully asks that they be introduced in the legislature.

They are technical bills the commission has been working on with the probate committee of the Alaska Bar Association. They relate generally to rights at death and to property arrangements that usually have their inception in death.

At its last meeting, the Legislative Council agreed to introduce the bills.

One of the bills, the bill on disposition of certain property rights at death, was previously in the legislature but received little notice. It is revived at the request of the probate committee of the Alaska Bar Association, and that

committee has advised the commission that it will actively support the bill.

A commentary on each bill is enclosed.

ALASKA CODE REVISION COMMISSION
COMMENTARY TO ACCOMPANY BILL TO ADOPT
THE UNIFORM PRINCIPAL AND INCOME ACT

Many private trusts now are being established in Alaska, both by living persons and pursuant to the last will and testaments of deceased Alaskans.

The Uniform Principal and Income Act codifies rules a trustee shall follow when the document that established the trust does not provide instructions to cover all circumstances, which frequently is the case. It directs how the trustee shall credit a receipt or charge an expenditure in a variety of fact situations.

Thirty-seven states have adopted either the 1931 or 1962 version of the Uniform Principal and Income Act. Therefore, what is proposed for adoption is one of the more widely accepted uniform acts.

A trustee may be a sophisticated trust department of a bank or a wholly unsophisticated family member or friend. There are many trustees in each of these categories and others. They all have a need for the guidance this Act provides.

Customarily, a trustee has duties to someone who receives income from the trust and corresponding duties to someone else who will receive the principal assets of the trust (the principal) at some future time, often at a time far in the future. From day to day the trust has expenses and receipts. The trust document seldom if ever tries to answer all the questions the trustee must decide about how to allocate between principal and income.

The Act sets the rules that apply <u>in the absence</u> of rules in the trust instrument. The Act does not supersede directions to the trustee that are set out in the trust instrument. The intent of the person who established the trust is to control when that intent can be determined. The Act will fill in only when the trust instrument is silent.

Nor does the Act supersede a provision in a trust instrument that gives a trustee absolute discretion in how to allocate. Even in that case, however, the Act is a ready source of guidance to a trustee on the choices that must be made.

<u>The Act follows the so-called "Massachusetts Rule" of awarding cash dividends on corporate stock to income and stock</u>

dividends to principal, thereby rejecting the Pennsylvania Rule or some variation of it requiring apportionment between the two funds. Provision is made for corporate distributions pursuant to a court decree such as a divestiture order in an antitrust suit. Provision is also made for treatment of the distributions of a regulated investment company or real estate investment trust. In recent years, the discount type of bond such as the Series E bond of the United States government and the zero coupon bond have become common. Provision has been made in the Act for allocating the increment in value between principal and income.

Because of the difficulty of apportioning receipts from extraction of natural resources among the income and principal beneficiaries it is provided in the Act that an arbitrary allocation should occur, that is, 27-1/2% of the gross receipts shall be added to principal as a "depletion reserve," and the balance is payable to the income beneficiary. Attempts to apportion the receipts on the relation of the amount of minerals extracted to the amount of minerals remaining in the ground have proved difficult of calculation and this method of allocation was accordingly rejected in favor of simplicity.

The Act contains a "catch-all" providing for disposition of receipts where there is no specific section in the Act dealing with the allocation. A form of "prudent man" rule has been adopted to handle this situation. Receipts from cutting of timber are covered only by this "prudent man" rule since the effect cutting of timber has on the value of land varies too much to apply the general rule on "depletion reserve."

The form of the Act is straightforward. The initial section, AS 13.38.010, establishes the relationship between the trust instrument and rules in the Act: As noted above, the trust instrument (that is, the creator's intent as expressed in the trust instrument) always prevails if it conflicts with the rules in the Act.

The second section, AS 13.38.020, defines the terms "principal" and "income" and contains cross references to the sections where the definitions are refined in the balance of the Act.

In a practical sense, the entire bill is a refinement of the definitions of principal and income set out in proposed AS 13.38.020.

The first two sections, therefore, are the key to the Act. The remainder of the Act is accounting principles applied to the listed kinds of property, kinds of receipts and expenditures and times of receipts and expenditures, as set out in the section headings of the Act:

AS 13.38.010.	Duty of Trustee as to Receipts and Expenditures.
AS 13.38.020.	Income and Principal Defined.
AS 13.38.030.	When Right to Income Arises; Apportionment of Income.
AS 13.38.040.	Income Earned During Administration of a Decedent's Estate.
AS 13.38.050.	Corporate Distributions.
AS 13.38.060.	Bond Premium and Discount.
AS 13.38.070.	Business and Farming Operations.
AS 13.38.080.	Disposition of Natural Resources.
AS 13.38.090.	Timber.
AS 13.38.100.	Other Property Subject to Depletion.
AS 13.38.110.	Underproductive Property.
AS 13.38.120.	Charges Against Income and Principal.
AS 13.38.130.	General Definitions.
AS 13.38.140.	Application of Chapter.

Various small substantive departures from the uniform act were considered by the code revision commission in the drafting process. However, after review with the Alaska Bar Association's Probate and Trust Committee and after unofficial but careful review by the leadership of the Alaska Association of Certified Public Accountants, the bill is almost verbatim the uniform act.

The only substantive changes from the Uniform Principal and Income Act are two relatively minor changes in section AS 13.38.110 on Underproductive Property.

The main aim of the Act is simplicity and convenience of administration of the estate. A second aim, of course, is fairness to all beneficiaries both present and future. Because simplicity and convenience are a primary aim of the Act, the Act is made applicable to all trusts and estates whether in existence at the time the Act becomes law or not.

Because the rules in the Act dictate choices that are standard in accounting practice, there is little reason to believe the rules in the Act will differ, in significant ways, from the present practices of most trustees. Therefore, no problems of transition are anticipated.

In brief, the Act, therefore, sets forth simple and workable rules of administration which are believed to be consistent with the wishes of creators of trusts upon the subject treated unless the creator specifically provides for a different treatment in the trust instrument.

Analysis
HB 694

March 13, 1984

This bill was requested by the Code Revision Commission to adjust for inflation the dollar amounts in certain neglected sections of the Uniform Probate Code. This is the first such adjustment since the Code was adopted in 1972. It is estimated that the CPI will have risen 146% from 1972 until the bill would take effect in January 1, 1985. Because this bill only deals with private financial transactions, it will not have a fiscal impact on state government operations.

ALASKA CODE REVISION COMMISSION COMMENTARY TO ACCOMPANY BILL ON ADMINISTRATION OF DECEDENTS' ESTATES

This bill has a single purpose--to adjust for inflation the dollar amounts in certain neglected sections of the Uniform Probate Code.

The code was enacted in Alaska in 1972. From July, 1972 to November, 1983 the "Consumer Price Index for All Urban Consumers for the Anchorage Metropolitan Area" moved from 1.159 to 2.704. The CPI has been erratic the past several months. However, a reasonable guess is that the CPI on January 1, 1985, the effective date set in the bill, will be 2.856, an increase of 146% over 1972. The dollar figures in the bill are adjusted roughly consistent with that percentage. Broadly rounded figures are used.

In the first section of the bill, the figures used for the homestead allowance are those of the homestead exemption in the Alaska Exemptions Act, AS 09.38. That is a recent Act, ch. 62, SLA 1982. It is desirable, but not necessary, that the homestead allowance in the Probate Code and the homestead exemption in the Exemptions Act be the same.

The other changed figures in the bill are tied to nothing but changes in the cost of living that have already occurred.

An alternative to setting fixed figures would be indexing figures to the consumer price index, such as is provided in section 09.38.115 of the Alaska Exemptions Act. If that approach were taken, the Revisor of Statutes could be required to change figures under the formula adopted. The formula could be adjusted so a figure would be determined a year in advance of its effective date, and the change would appear in the supplement to Alaska Statutes. The indexing alternative could readily be adopted for this bill. It is not adopted, however, since it may be advisable to let the indexing provisions in the Exemptions Act be tested before they are adopted elsewhere.

Fiscal Note
Analysis
HB 695

March 13, 1984

This bill was requested by the Code Revision Commission to amend the Uniform Probate Code to provide that:

(1) the right to renounce would survive the death of the person having it;

(2) the permissible disclaimer period would be extended from six to nine months after a death; and

(3) accepting one interest in property would not prevent renouncing another interest in the same property.

Renunciation of rights in decedents' estates is a valuable option for estate planning to avoid the taxable transfer of estates. Because this measure deals only with an individual's right to renounce an estate interest, it will not have a fiscal impact on state government operations.

(2) a bill relating to administration of decedents' estates; (HB 694/SB 512)
(3) a bill relating to renunciation of of rights in decedents' estates; (HB 695/SB 513)
(4) a bill relating to married persons' rights in a family home; and (HB 696/SB 514)
(5) a bill relating to the uniform disposition of certain property rights at death (HB 697/SB 515)

Dear Senator Ray:

Pursuant to AS 24.20, the Alaska Code Revision Commission has prepared the enclosed bills and respectfully asks that they be introduced in the legislature.

They are technical bills the commission has been working on with the probate committee of the Alaska Bar Association. They relate generally to rights at death and to property arrangements that usually have their inception in death.

At its last meeting, the Legislative Council agreed to introduce the bills.

One of the bills, the bill on disposition of certain property rights at death, was previously in the legislature but received little notice. It is revived at the request of the probate committee of the Alaska Bar Association, and that

committee has advised the commission that it will actively support the bill.

A commentary on each bill is enclosed.

Very truly yours,

John W. Abbott

ALASKA CODE REVISION COMMISSION COMMENTARY TO ACCOMPANY BILL ON RENUNCIATION OF RIGHTS IN DECEDENTS' ESTATES

This bill deals with refusal to accept property or an interest in property from a decedent's estate. Referred to as "renunciation" or "disclaimer", it is a valuable option for estate planning to avoid a taxable transfer.

The right to renounce is provided for in AS 13.11.295 (Section 2-801 of the Uniform Probate Code). This bill would make three changes to facilitate estate planning:

(1) The right to renounce would survive the death of the person having it;

(2) The permissible disclaimer period would be extended from six to nine months after a death; and

(3) Accepting one interest in property would not prevent renouncing another interest in the same property.

The concept of the changes proposed by this bill is in the Uniform Disclaimer of Transfers by Will, Intestacy or Appointment Act (1978). Because Alaska has already adopted the Uniform Probate Code contained in AS 13, minimal changes to AS 13.11.295 will give Alaska the main benefits of the uniform disclaimer statute. The bill does not extend beyond disclaimer of transfers resulting from death. Disclaimer of other kinds of transfers could be the subject of another bill.

The changes in (b) extend the time for renunciation to the nine months period in which renunciation is permitted under the Internal Revenue Code, 26 U.S.C., Sec. 2518. The current version of the Uniform Probate Code recommends that states conform their laws to the nine month period. Failure to do so may deny to Alaskans the full period the federal law permits for taking advantage of a tax planning tool.

Sometimes an heir with a right to disclaim will die within this nine month period. For example, an elderly husband and wife may not outlive each other by nine months. In that situation, a disclaimer would avoid an extra taxable transfer before property is inherited by their children. The changes in (a) would allow a personal representative (executor of the estate

of the second to die) to exercise the right of disclaimer. However, the period for disclaimer would not be extended: the personal representative of the second to die would have ot act within nine months of the first death.

The changes in (d) would permit disclaiming one interest in property without forfeiting the right to accept another interest in the same property. Under federal Internal Revenue law, it is possible for a beneficiary to refuse to accept an income interest in property while accepting transfer of the principal asset, or to refuse a transfer of a principal asset while accepting an income interest in the asset. The change in (d) would delete language that infers that the acceptance of any interest in property would totally bar a renunciation of any other interest in the same property.

AS 13.11.295(f) is deleted as obsolete law. A similar section is not needed as temporary law in this bill because the changes in AS 13.11.295 liberalize renunciation, do not restrict it.

ALASKA CODE REVISION COMMISSION
COMMENTARY TO ACCOMPANY BILL RELATING TO
MARRIED PERSONS' RIGHTS IN A FAMILY HOME

This bill would remove certain anachronisms and would repeal certain statutory provisions that cause uncertainty in titles to Alaska real property. The principal provisions to be repealed are AS 34.15.010(b), (c) and (d), subsections that deal with conveyances of "the family home or homestead".

The other two sections to be repealed by the bill deal with dower, a common law concept that has not been recognized in Alaska in its pure form since 1900 (Bechtol v. Bechtol, 2 Alaska 397 (1905)). Its altered, statutory form was removed from Alaska law in 1963 (sec. 30, ch. 38, SLA 1963). The protections once afforded a widow by the right of dower are now afforded by various options under the Uniform Probate Code adopted in Alaska in 1972, as are the protections afforded a widower under the related "curtesy" right. The official comment to the Uniform Probate Code includes:

> "The provisions of this Code replace the common law concepts of dower and curtesy and their statutory counterparts."

The main subjects of this bill, AS 34.15.010(b), (c) and (d), are subsections enacted over a period of time, apparently in a patchwork effort to approach some of the protections once afforded a married person under common law dower and curtesy.

Common law dower was a life estate given a widow in one-third of the lands her husband owned at any time during the marriage. Her husband could not transfer away her right. But Alaska's statutory dower only applied to real property owned by the husband at the husband's death. Common law curtesy was similar to dower but was a right given a husband in lands of his wife. In its statutory form (sec. 482, Compiled Laws of Alaska 1913, since repealed) it applied only to lands owned by the wife at the wife's death.

To compensate for the lesser protection afforded in the statutory forms of dower and curtesy, the legislature required the signature of both spouses on every deed to "a family home or homestead" (ch. 107, SLA 1933; now AS 34.15.010(b)).

Unless both spouses' names appear on the title

documents, a purchaser down the chain of title usually will have no way of knowing whether a precedessor was married and usually will have no way of knowing whether real property was a married couple's "home or homestead". Therefore, the 1953 legislature (ch. 145, SLA 1953) engrafted further provisions on the statute in an effort to clear titles clouded by what now is AS 34.15.010(b).

The confused and contradictory state of these subsections of AS 34.15.010 can best be shown by setting them out in full:

> (b) In a deed or conveyance of the family home or homestead by a married man or a married woman, the husband and wife shall join in the deed or conveyance.
>
> (c) The requirement that a spouse of a married person join in a deed or conveyance of the family home or homestead does not create a proprietary right, title or interest in the spouse not otherwise vested in the spouse.
>
> (d) Failure of the spouse to join in the deed or conveyance does not affect the validity of the deed or conveyance, unless the spouse appears on the title. The deed or conveyance is sufficient in law to convey the legal title to the premises described in it from the grantor to the grantee when the deed or conveyance is otherwise sufficient, and (1) no suit is filed in a court of record in the judicial district in which the land is located within one year from the date of recording of the deed or conveyance by the spouse who failed to join in the deed or conveyance to have the deed or conveyance set aside, altered, changed, or reformed, or (2) the spouse whose interest in the property is affected does not file, within one year in the office of the recorder for the recording district where the property is situated, a notice of his interest in the property.

Inconsistencies in the subsections make them extremely difficult to interpret. All that is clear is that there are title problems whenever only one person is record owner of real property, and that person conveys an interest in the property by a document that does not show whether he or she is a single person. At best, the title is clouded during the year of limbo provided under AS 34.15.010(c) and (d).

By proposing this bill, the code revision commission is suggesting (1) that any worthwhile purpose there may be in retaining AS 34.15.010(b), (c) and (d) in the law is far outweighed by the uncertainty in land titles the subsections cause, and (2) that the options afforded a married person under the Uniform Probate Code provide adequate protection.

AS 09.45.480(a)(1) relates to determining value of an "estate in dower". AS 09.45.720 relates to "actions to recover possession by a tenant in dower". The sections should be repealed because the dower right no longer exists in Alaska, as noted above.

HB 697

March 13, 1984

This bill was requested to prescribe the rights, at death, of a married person who has community property acquired prior to a change in domicile to Alaska, or which is traceable to community property, where the spouses have not indicated an intention that their community rights be severed.

The Act codifies what the Code Revision Commission believes is now common law in Alaska. The Act should help eliminate the necessity of stating that common law through litigation, thus saving private parties some litigation expense and reducing court costs. Because the bill deals only with private estate interests, it will not have a fiscal impact on state government operations, other than slightly reducing crowded court calendars.

ALASKA CODE REVISION COMMISSION
COMMENTARY TO ACCOMPANY BILL ON
UNIFORM DISPOSITION OF CERTAIN PROPERTY RIGHTS AT DEATH ACT

The Act is intended to prescribe the rights, at death, of a married person who has community property acquired prior to a change in domicile to Alaska, or which is traceable to community property, where the spouses have not indicated an intention that their community rights be severed.

The Act codifies what the code revision commission believes is now the common law in Alaska. The Act is intended to eliminate the necessity of stating that common law through litigation.

AS 13.41.005 defines the property which is subject to disposition under chapter 41. Subsection (1) covers all personal property acquired by the spouses while domiciled in a community property state to the extent that property would have been treated as community property at the time of acquisition under the laws of that state and in which the spouses have expressed no intent to sever their community rights. Also included would be property which the spouses have agreed to treat as community property. Subsection (2) covers real property in the state (real property located in other states would be treated under the laws of those states) to the extent that it can be traced to a community source (e.g., was purchased with the proceeds of community property).

AS 13.41.010 establishes rebuttable presumptions intended to assist a court in applying the definitions of sec. 5. The presumptions are that (1) property acquired by a married person while domiciled in a community property state is and remains community property, and (2) property acquired by a married person while domiciled in a common law state, title to which included a right of survivorship, is not community property.

AS 13.41.015 requires that one-half of a deceased married person's property to which the chapter applies, i.e., community property or property traceable to it, becomes the property of the surviving spouse and is not subject to testamentary or intestate disposition. The other half is subject to the applicable manner of disposition. The one-half of the property to which the chapter applies is made not subject to the surviving spouse's elective share.

//

AS 13.41.020 provides a method for the perfection, by means of a court order, of the title to property passing to the surviving spouse under the provisions of this chapter. It is intended to protect the personal representative from liability for failing to search the decedent's estate for property to which the chapter applies. The personal representative's duty may be reinstated by written demand of the surviving spouse or that spouse's successor in interest.

AS 13.41.025 provides a method whereby the personal representative, heir, or devisee may institute an action to perfect the surviving spouse's title to property to which the chapter applies. It is a corollary to sec. 20.

AS 13.41.030 protects purchasers and lenders taking a security interest, who acquire such interest for value, after the spouse's death, from liability to a person who appears to have title to property to which the chapter applies. It is intended to permit reliance upon apparent title and to facilitate both ascertainment of title and disposition of assets where adequate consideration is paid.

AS 13.41.035 merely states that the rights of creditors in property to which the chapter applies is not affected.

AS 13.41.040 makes clear that the rights of spouses to sever their community property interests or to create a form of ownership not subject to this chapter are in no way limited by the chapter.

AS 13.41.045 provides that the chapter does not authorize the testamentary disposition of property which is otherwise prevented from such disposition.

AS 13.41.050 and 13.41.055 provide for uniform construction and application and for citation for short title, respectively.

Nine states have adopted the 1971 uniform Act.

Drug Abuse Newsletter

Issue No. 15
January 1984

LOOK-ALIKE DRUGS

A NEW PROBLEM

Historically, abusers of illicit substances have been faced with the possibility that what they bought may contain various kinds and quantities of adulterants, contaminants, and substitutes. For example, quinine and other substances have traditionally been used to "cut" or adulterate heroin and cocaine. Oregano and catnip have been used to dilute street-level quantities of marijuana.

In recent years, however, new products (the legality of which is still to be determined) have entered the market. Their easy availability as well as their potential health dangers pose a unique and significant problem to health and enforcement agencies as well as to the users and their parents.

WHAT ARE LOOK-ALIKE DRUGS?

Look-alike drugs are pills (tablets and capsules) and powders containing non-controlled, over-the-counter ingredients whose physical appearance mimics various prescription drug products which contain popular substances of abuse and are regulated under the provisions of the Controlled Substances Act.

Look-alike drugs are available in a variety of forms: powders, various colored or speckled capsules, as well as various forms of tablets. Their users and street-level sellers give these drugs the same street names as their controlled counterparts. Look-alikes usually contain varying mixtures of caffeine (the equivalent of about two cups of coffee per pill), and two other non-prescription chemicals: ephedrine sulphate (a nasal decongestant), and phenylpropanolamine hydrochloride (an appetite suppressant). It has also been noted that on occasion the contents of a given kind of capsule has varied, indicating that some manufacturers may use whatever ingredients are available at the time of production.

There are a number of different white granular substances similar to cocaine being sold as a substitute for cocaine. Some dealers will tell the buyer that it is a substitute. However, in the case of naive buyers the substance is pawned off as the real thing and is sold at very high prices. This deception can be the cause of many problems for the users.

WHAT ARE ACT-ALIKE DRUGS?

Act-alike drugs are those not manufactured to closely resemble controlled substances, but which are promoted in the same way and contain the same ingredients as look-alike drugs.

INFORMATION FROM THE FOOD AND DRUG ADMINISTRATION (FDA)

The principle ingredients commonly found in look-alike drugs are caffeine, ephedrine sulfate and phenylpropanolamine hydrochloride. These chemicals are found in many legitimate drug preparations and are safe when used in accordance with approved labeling. In August of 1982, FDA decided that while the individual ingredients were approved for over-the-counter marketing, triple combinations of the three ingredients were not. Such combinations were then made subject to the FDA approval process, subjecting manufacturers of such combinations to much greater FDA regulation and monitoring than that to which most over-the-counter manufacturers are subjected. This enabled FDA to take various actions against violative manufacturers and their products. In November 1983, FDA took the same action with respect to double combinations. This latest action will even affect such legitimate over-the-counter products as "Dietac." It will, of course, also cut off the escape route taken by the shady manufacturers who changed their formulations from three ingredients to two in response to the earlier FDA action.

People having information on continued violations of the FDA Act and regulations should bring such information to the attention of:

The Associate Commissioner for Regulatory Affairs
Food & Drug Administration
5600 Fishers Lane
Rockville, Maryland 20857

LOOK-ALIKE DRUGS AS A MEDICAL AND SOCIAL HEALTH PROBLEM

Although the ingredients used in look-alike drugs are legitimately used as decongestants, analgesics, cold, allergy, or asthma relief medications and as appetite suppressants, these same ingredients may also produce mild stimulant or depressant side effects. When taken for their intended, legitimate medical purpose (in recommended doses and in accordance with FDA labeling), these look-alike ingredients are generally safe and produce only minor side effects. However, through deceptive advertising or because the substance is represented as a controlled substance, the user of look-alikes may be deceived into believing that the pills he or she has purchased will produce effects equal to those of the controlled substance that they imitate.

Equally serious adverse physiological reactions are possible and have occurred when look-alike drugs have been taken in large quantities. This generally occurs when the user wants a high or wants to come down from one and takes several dosage units. These reactions may range from episodes of acute nervousness and irritability, periods of sleep disorder, general drowsiness, temporary hypertensive episode, cerebral hemorrhage, stroke and even death.

A related but perhaps greater health hazard is the extreme danger that those who have become accustomed to ingesting look-alikes may one day knowingly or unknowingly ingest an apparently equal quantity of an actual controlled substance. The risk of adverse physical reactions increases greatly, especially when depressant substances are involved. An overdose can result in death.

The FDA has received reports of twelve deaths associated with injecting or sniffing these substitute white powders, many of which contain local anesthetics

such as lidocaine, procaine and tetracaine. The main dangers of these substitutes, according to the FDA, are that they can collapse blood vessels, depress heart muscle strength and cause low blood pressure.

The FDA has advised that the diversion and misuse of these cocaine substitutes is an emerging public health problem with deadly consequences. The FDA has asked "all manufacturers and distributors to help stop this diversion to these relatives of cocaine."

We are advising all parents and others involved in our battle against drug abuse to become informed about these look-alikes and to be on the lookout for their use among our teenagers. Tell everyone about the existence and dangers of these look-alike drugs.

Note: Portions of this paper are copies from a document that is a joint publication of the Air Force Office of Special Investigations (AFOSI) and the Air Force Office of Drug and Alcohol Abuse Control (AF/MPXHD).

WHAT IS BEING DONE

The Subcommittee on Alcoholism and Drug Abuse (Senator Gordon Humphrey (R-NH), Chairman) held a hearing on July 14, 1983, to hear testimony on look-alike drugs regarding Federal, state and local efforts to ban them through regulation, legislation, community programs and school policies. Witnesses described the way in which the problem is changing to include "act-alike" drugs and discussed the need for Federal legislation.

Senator Humphrey has introduced two bills in the 98th Congress:

S-503 - Bans the manufacture, distribution and advertisement of look-alike drugs and act-alike drugs.

S-497 - Amends the Postal Statute to make drug abuse-oriented advertisements and shipments in response to these ads non-mailable.

WHAT YOU CAN DO

Write your legislators.

Ask them to support Look-Alike Legislation Bills S-503 and S-497.

MISCELLANEOUS INFORMATION

The Committees is still operating on a yearly subscription basis, renewals due in January. The National Federation of Parents for Drug-Free Youth (NFP) Newsletter, Vol. 2, #3, erroneously stated that we were not going to be a subscription operation. We will plan to do four newsletters per year on specific drug-abuse subjects and then provide additional mailings on current issues that need letter-writing action.

Cindy Cleary has joined our staff as Administrative Assistant. Office hours are Monday through Friday, 9 a.m. to 3 p.m. The answering machine is on at other times. In order to keep bookkeeping and typing at a minimum, we request that all orders for material be PREPAID. Emergency situations are different.

A new King Features syndicated column called STRIKING BACK, written by Sue Rusche, on the subject of drug and alcohol abuse and featured twice a week will begin on February 1, 1984.

Write a letter to the Managing Editor of your local newspaper stating that you would like to read this column in your newspaper and would they subscribe to have it. If you need further support or information, contact:

NEWS UPDATE ON MODEL DRUG PARAPHERNALIA LAW

The United States Supreme Court has clearly indicated that the Model Law is constitutional. The Court issued guidelines favorable to all drug paraphernalia laws. The Model Law can be enforced. It has been enforced.

Many headshop owners have been arrested and convicted, and many headshops have been seized. The first, and one of the best handled prosecutions, occurred in Webster Groves, Missouri. The prosecutor, Thomas Newmark, has agreed to provide advice to any prosecutor who has never handled a Model Act Case.

Drug Abuse Issue of the Month

Vol. 1 No. 3

DRUG PARAPHERNALIA

Concerned parents all over the country are banding together to put a stop to the sale of drug paraphernalia -- the toys, gadgets, tools, and devices sold to enhance the use of illicit drugs. Paraphernalia is most often sold in head shops, described as "little learning centers for drug abusers" by the director of the nation's largest residential drug treatment center, Dr. Mitchell Rosenthal.

Since 1975, the number of high school seniors who smoke marijuana daily has doubled. Today, 1 in 10 seniors smokes an average of 3½ marijuana cigarettes a day; and 13% of these smoke more than 7 joints a day. Moreover, nearly one-third (31 percent) of the nation's 12 to 17 year old children have now tried pot -- up from 14 percent in 1972, the year the drug paraphernalia industry first emerged on a national scale.

During the same period of time, cocaine use among youngsters nearly quadrupled and the number of kids who tried inhalants and hallucinogens -- two additional kinds of drugs "pushed" by paraphernalia products and publications -- also increased dramatically. At paraphernalia hearings conducted by the U. S. Select Committee on Narcotics Abuse and Control last fall, Dr. Rosenthal said: "There is no question in my mind that the great increase in adolescent drug abuse can be blamed on the proliferation of head shops. And so can the nature of that abuse, the sophistication kids have about how and what to smoke or sniff or swallow."

At the same hearing Sue Rusche, President of Families in Action, (a Georgia-based parents' group whose community education efforts resulted in the nation's first statewide drug paraphernalia laws), added: "What we are seeing is the emergence of an industry that glamorizes and promotes the use of illicit drugs, an industry that, in the time-honored tradition of American free enterprise, is developing a new market of drug users -- our 12 to 17 year old children."

With products like "Star Wars" space guns and pirated "frisbee" pot pipes, "Candy Quaaludes," cocaine comic books, and "Practice Grass" kits for fifth graders, it is little wonder that children exposed to such materials come away thinking that drugs are normal. In the words of one youngster, "Marijuana isn't a drug; it's just around--like blue jeans." And children's exposure to drug paraphernalia is now virtually unavoidable in most communities. Head shops have now spread from adults-only zones to far more lucrative locations in suburban shopping malls, in record stores, and, as some community surveys show, in clusters around high schools, middle schools and even elementary schools.!

HISTORY OF THE PARAPHERNALIA INDUSTRY

The growth of the drug paraphernalia industry parallels the growth of drug use among college students of the 1960's.

As the use of drugs spread from the "counterculture" to the "mainstream" of university students and American G.I.'s in Vietnam, a sizeable market of drug users emerged. The economic power of this market steadily increased as the students of the 60's became the wage earners of the 70's.

The first paraphernalia product evolved from cigarette rolling papers. The U.S. Tobacco Company's Zig Zag Papers, for example, is one of many brands which had been sold for years in drug stores and tobacco shops. By the mid-1960's, however, rolling papers found their way into "hippie" boutiques which offered counterculture clothing, wood-carved pipes, and cigarette papers for "rolling your own" marijuana. In 1972 Burt Rubin of Robert Burton Associates, capitalized on h bservation that pot smokers often stuck two papers tog er to accomodate enough marijuana to make a good-sized joint. He developed double-wide paper ("E-Z Wider") which revolutionized the rolling paper industry. Rubin's company parlayed an initial investment of $6,000 into a $9,000,000 conglomerate with an annual advertising budget of half a million dollars in just six years. Other paper manufacturers followed suit, developing variations of the double-wide concept and enjoying corresponding sales increases. Not only has the number of brands mushroomed, but also the distribution of rolling papers designed specifically for marijuana has expanded out of boutiques and into 24-hour convenience stores, most major drug store chains, supermarkets, and even cigarette vending machines. When confronted with attempts to regulate rolling papers, manufacturers insist the papers are for tobacco. Advertisements they place in drug magazines, however, make clear that the reverse is true. "Careful not to offend any constituency, Rubin calls his wrappers cigarette papers' to the business establishment while winking at potheads who turn them into joints."
(Circus Weekly, 12/19/78).

The phenomenal success of rolling papers adapted for marijuana led both new and established companies like Rubin's to diversify, inventing other products to enhance drug use. One such diversification centered around a "bong," a verticle bamboo device brought back from Vietnam by U.S. veterans. A hole in the bong enables cold air to be drawn in on top of hot smoke, pressing a volume of concentrated marijuana smoke into the lungs and producing a quicker, more intense high. A variety of bongs soon

Continued from page 1

entered the market, as well as other products to facilitate marijuana use. As cocaine became available in this country and as its use became more frequent, the paraphernalia industry developed and sold cocaine accessories as well -- from measuring scales and cocaine testing kits to "cute" cocaine spoons, earrings and necklaces displayed in many posh boutiques and department stores.

By 1974, organized distribution of paraphernalia remained a problem for manufacturers -- and this fact had a great deal to do with the birth of **High Times**, the first of the drug magazines. **High Times**, according to Andrew Kowal, the magazine's original publisher, came about because, as he pointed out, although a lot of people were smoking and getting high, and rolling papers and pipes were being sold, -- there was still no way for this paraphernalia industry to **market** its products to the public.(emphasis added) **(Hustler, 12/77. High Times** did not have an easy start. Many printers refused to print it and no distributor would touch it, forcing **High Times** to develop it own distribution network. This began, according to Kowal, by offering the first issue "to marijuana dealers who bought hundreds and distributed it to clients. **(The Journal,** Addiction Research Foundation of Ontario, 2/1/77). **High Times** currently claims 4,000,000 readers. Like the paraphernalia industry, **High Times** has also diversified and presently publishes a line of drug pamphlets, the **High Times Encyclopedia Recreational Drugs**, a magazine index, and the "High Times Newsflash," a monthly summary of the magazine's contents which is distributed as a "wire service" to college newspapers and AM/FM radio stations throughout the nation.

Soon after the publication of **High Times** in 1974, other drug magazines appeared on the market including **Head, Flash,** and **Rush.** In 1977, the publishers of **High Times** brought out a second magazine oriented to the trade called **Dealer** and in January, 1979, two more mass audience drug magazines appeared: **Hi Life** and **Stone Age.** By connecting paraphernalia manufacturers, distributors, and retailers with consumers, these magazines have greatly stimulated the industry. This can be seen in the proliferation of head shops in major cities over the past few years (estimates range as high as 30,000), their shift in location from urban commercial districts to suburban shopping centers, and the sale of paraphernalia in other retail outlets such as record stores, supermarkets, 24-hour convenience stores, book stores and gift shops. Furthermore, the success of the drug magazines has stimulated the publication of a number of drug books and pamphlets. **The Whole Drug Manufacturers Catalogue, The Anarchist Cookbook,** and **The Cocaine Consumer's Handbook** are a few examples.

INDUSTRY TRENDS

1. MORE DRUGS

Several disturoing trends in the drug paraphernalia industry can be identified. First is the expansion of the concept of "recreational drugs." Initially, the industry focused on marijuana and cocaine. As paraphernalia sales escalated, however, so did the number of drugs the industry deemed acceptable enough to design products around and to promote in the drug magazines. These fall into general categories such as "legal" drugs (isobutyl nitrite, nitrous oxide, psilocybin mushroom spores, and others); prescription drugs (Valium, Quaaludes); and "kiddie practice drugs" such as lettuce opium; practice grass (alphalfa, etc.); "Candy Quaaludes" and "Hash" Oil, a fake product sold to kids as the real thing.

2. FALSE INFORMATION

A second trend is to falsely "debunk" medical research that indicates harmful effects from drug use. **High Times,** for example, replied to a letter from a reader worried about pot damaging his lungs that "seriously, you don't have to worry about tars in grass. top doctors at the National Institute on Drug Abuse and the American Cancer Society have **privately** assured us." (Emphasis added.) The directors of both agencies sent letters to the editor strenously objecting to such false statements and the blatant misuse of their agencies' names, but **High Times** ignored their letters.

3. PRODUCTS FOR KIDS

A third trend is the sale of products specifically designed for children. These include bongs "for Tots who Toke", "Baby Toker T-Shirts" in infant and toddler sizes, and fake I.D. Cards, all advertised in **High Times.** There are also Christmas stockings decribed by their designer, Jeff Kaplan of Adams Apple, as containing a "pipe, **Everything You Always Wanted to Know About Marijuana,** a rolling machine, papers, clips, incense, screens, and Zots candy, so you know, if somebody's parents should see it, they'll say, 'Oh, it's a candy-filled stocking'". **(Rolling Stones, 1/27/77)**

4. GLAMORIZING DRUG DEALING AND SMUGGLING

A fourth trend is the industry's attempt to equate the "right" to use drugs with constitutionally guaranteed rights and its insistence that the government therefore has no right to regulate or control the use of **any** drug. This leads, logically enough, to a tendency to ridicule drug laws and law enforcement efforts. Illustrations of this trend range from **High Times'** full page feature **Trans-High Market Quotations,** (monthly listings of the current cost of illicit drugs from nations around the world) to advertisements for "Night Vision Goggles, ideal for driving vehicles, piloting airplanes helicopters and boats without lights." Ad carried in both **High Times** and **Hi-Life Magazines.**

One of the many magazines and books published for drug users, dealers and promoters. Every type of ad can be found including the above source for fake I.D.s. More examples of ads and features can be found on page 7.

Above left: A small sampling of the hundreds of paraphernalia products available. Clockwise: Power Hitter which glows in the dark; Fan Can containing a motorized fan; Razor Gun, all of these items are used to force more smoke into the lung. Also shown, a child's toy as a smoking device and a mask to intensify the high associated with pot-smoking.

Above right: A tee shirt popular with pot smokers (also made in childrens and infant sizes) and a Christmas stocking filled with an assortment of paraphernalia.

THE PARAPHERNALIA LAWS

Georgia parents were among the first to recognize the motivational impact of drug paraphernalia upon children and the first to insist that something be done to put a stop to such nonsense. The Georgia paraphernalia laws were passed in early 1977 and were initially upheld (they are currently under appeal) by Federal courts in response to constitutional challenges brought by the paraphernalia industry. Because Georgia's laws resulted in the closing of some 30 head shops in metropolitan Atlanta, they became the model for similar legislation in communities across the country.

As other communities and states adapted Georgia's laws to suit their own needs, a body of legislation accumulated which resulted in a decision by the U.S. Department of Justice, prompted by the White House, to draft a uniform drug paraphernalia act. The task to research and draft such a law fell to the U. S. Drug Enforcement Administration (D.E.A.) which created the Model Drug Paraphernalia Law. D.E.A.'s Model Law has since been passed by hundreds of towns and cities as well as several states. **By November, 1980 eight Federal District Courts had upheld the Model Law as constitutional.** Moreover, five additional District Courts have struck down other paraphernalia laws, and four of these have recommended the Model Law as more appropriate -- and constitutional -- legislation. In at least one important case, the paraphernalia industry appealed a District Court decision which found the Model Law constitutional -- but has since **withdrawn** its appeal, presumably because they felt they did not have a good enough case to win an appeal.

The drug paraphernalia industry's response to the Model Law includes offering its own "model law" which, in a thinly-veiled effort to keep doing business, prohibits sales of its own products to children. Even if such a law could be enforced, the message still remains: Legal drug paraphernalia implies that drugs themselves must be O.K.; moreover, paraphernalia would still be available to kids through mail order ads in drug magazines, or through head shop purchases made by older friends.

Publicly, the paraphernalia industry insists its products have many other uses and therefore cannot be banned from sale. Privately, industry representatives caution manufacturers to avoid **labeling** their products as "drug paraphernalia". The proposed technique.

As Andy Kowl advised in **Accessories Digest (1/80)**, a paraphernalia trade publication, "Anybody who is smart will not be affected by laws banning drug paraphernalia -- just don't sell it, (Meaning anything labeled paraphernalia). You can still sell bongs and clips and all sorts of other novelties and accessories, of course, just no drug paraphernalia". His advice to head shop owners continues, "Pull back now; lay low; and we will weather the storm. It may be peaking now, or soon, and when it blows over, be proud that you did your part to protect the guaranteed rights of Americans."

The industry's legal counsel Michael Pritzker, writing in **Accessories Digest (6/79)** strongly advises paraphernalia manufacturers to disassociate any **mention** of illicit drug use in connection with their products. Such an approach attempts to absolve the paraphernalia industry of any responsibilities for its product.

In spite of the well-financed defense being mounted by the multimillion dollar drug paraphernalia industry, it is encouraging to note that ordinary moms and dads, pooling "grocery money", have already had a sizeable impact in curtailing paraphernalia sales in their communities. It is generally felt that the D.E.A. Model Law is the best one to pass because it is most likely to withstand constitutional challenges. It is a law which has been and is being passed in local communities as well as cities and states throughout the nation. And it is a law which has been "sponsored" by parents.

WHAT YOU CAN DO

A step by step procedure which has been used successfully by individuals and groups throughout the country:

1. Visit a head shop in your community. Ask questions. Buy some samples, particulary "Kiddie Paraphernalia". Educate yourself about drug paraphernalia. Read a copy of **High Times Magazine.**

2. Organize your community. Educate other parents and concerned adults. (See below for publications list to help you get started.)

3. Take your "Bong Show" (your paraphernalia items), plus the **High Times** paraphernalia ads, **plus** the Model Paraphernalia Law to a sympathetic **State Legislator.** Ask him or her to sponsor this law in your state.

Note: This can be just as easy and far more effective, than trying to get the law through at the local level. The community-level law can prove to be wasted energy if, with the same energy and effort, the Model Paraphernalia Law can be passed to cover all communities in your state.

Also send a request to your governor to ask him for his backing for this Model Law. This may be easier than you think. For example, in January 1980 a reporter who regularly covers the Maryland State Legislature said, "In all my 20 years of covering the legislature, I have never seen such enthusiastic support for any bill." (The Maryland State Senate passed this Model Law 47-0. It was signed into law in May 1980.)

Also, it has been proven that the State Senator who introduced this bill received very positive attention in the Press and from the public for doing so. The Senator who introduced the bill in Maryland, for example, said, "I received so much positive attention from sponsoring this bill that if I'd done this when I was a younger, struggling politician, I wouldn't have needed a campaign committee for re-election. This bill received the most enthusiastic public response I've ever had." You can get help from the Drug Enforcement Administration, including a free packet of supplemental materials (briefs prepared to defend the Model Law and various Federal court opinions handed down to date). Be sure to give copies **at once** to the attorney who will be defending the law case. Write or call:

William Lenck, Chief Counsel (202-633-1276) or
Harry Myers, Attorney (202-633-1404)
Drug Enforcement Administration
1405 Eye Street NW
Washington DC 20537

4. In addition, write for materials. Several parent groups have published what they did to fight drug paraphernalia sales in their town, cities and states. These include:

A. How to Form A Families In Action Group In Your Community. 164 page manual tells how to organize your community to do something about paraphernalia, kids, and drugs. Includes copies of Georgia's laws. $10 single copies, $9 each for 2 to 5 copies, $8 each for 6 or more copies. Send check or money order to Families in Action, P.O. Box 15053, Atlanta, GA 30333. Also available at the same address: Quarterly Newsletter, $3 for four issues.

B. Stop the Drug Epidemic In Your Community with Effective Practical Action.
Pamphlet tells how to organize to fight paraphernalia. $3 each. Send check or money order to Interstate Movement Against Dangerous Drugs, P.O. Box 6272, Silver Spring, MD 20906

C. Paraphernalia Information Packet. $1.00
Send check or money order to Millburn Conference of Parents and Teachers, 23 Audubon Court, Short Hills, NJ 07078

D. Anne Arundel Drug & Alcohol Program
Brochure & Newsletter Free. Write to Ann Arundel Drug & Alcohol Program, 4112 Arundel Center, Annapolis, MD 21401.

The National Federation of Parents for Drug-Free Youth (N.F.P.), a coalition of some 600 parents groups throughout the nation, was formed last Spring. Additional information about children and drugs, and what **you** can do to reduce drug use by children, can be found in N.F.P.'s publication list.

You might also want to contact Gerri Silverman, N.F.P.'s Drug Paraphernalia Committee Chairman, and N.F.P.'s attorney, Jill Gerstenfield, for additional information and a copy of an Amicus Curiae brief filed in behalf of the Federation in a Federal Court test of Maryland's drug paraphernalia law. Write to the National Federation of Parents, P.O. Box 57217, Pennsylvania Ave., Washington, D.C. 20037

5. At least two United States Congressional Committees have held hearings on drug paraphernalia. These are:

The U.S. Select Committee on Narcotics Abuse and Control
(November 1979)
Room 3287
House Office Building Annex 2
Washington DC 20515
Write for a free copy of the transcript.

The U.S. Senate Criminal Justice Subcommittee
Committee on the Judiciary
Washington DC 20510
Write to Senator Charles Mathias, Chairman of the Committee, for a free copy of the transcript.

6. By November 1980 nine states passed the Model Law: Connecticut, Delaware, Indiana, Louisiana, Maryland, Nebraska, New Jersey, New York, Florida. **Note:** If your state has passed the Model Law, this does not mean that drug paraphernalia is not being sold in your community. Because paraphernalia is such a profitable business, the paraphernalia merchants have a large legal fund, and all anti-drug paraphernalia laws are routinely challenged in Federal Court to delay their implementation. Thus far, only Delaware has completed it's court proceedings under the Model Law. (Georgia is also closing down head shops under a law which predates the Model Law.)

If you are in one of the remaining eight states where the law has passed both houses and has been signed by the Governor: (a) Phone the State Attorney General's office and find out the "progression" of the law suit. Frequent calls and numerous letters will encourage the State Attorney General to aggressively defend the legislation in court. For example,

MODEL DRUG PARAPHERNALIA LAW

The Uniform Controlled Substances Act, drafted by the National Conference of Commissioners on Uniform State Laws, has been enacted by all but a handful of states. The Uniform Act does not control the manufacture, advertisement, sale or use of so-called "drug paraphernalia." Other state laws aimed at controlling drug paraphernalia are often too vaguely worded and too limited in coverage to withstand constitutional attack or to be very effective. As a result, the availability of drug paraphernalia has reached epidemic levels. An entire industry has developed which promotes, even glamorizes, the illegal use of drugs by adults and children alike. Sales of drug paraphernalia are reported to be more than a billion dollars a year. What was a small phenomenon at the time the Uniform Act was drafted has now mushroomed into an industry so well entrenched that it has its own trade magazines and associations.

This Model Act was drafted, at the request of state authorities, to enable states and local jurisdictions to cope with the paraphernalia problem. The act takes the form of suggested amendments to the Uniform Controlled Substances Act. The Uniform Act is extremely well organized. It contains a definitional section, an offenses and penalties section, a civil forfeiture section, as well as miscellaneous sections on administration and enforcement. Instead of creating separate, independent paraphernalia laws, it seems desirable to control drug paraphernalia by amending existing sections of the Uniform Controlled Substances Act.

Article I provides a comprehensive definition of the term "drug paraphernalia" and includes particular descriptions of the most common forms of paraphernalia. Article I also outlines the more relevant factors a court or other authority should consider in determining whether an object comes within the definition.

Article II sets out four criminal offenses intended to prohibit the manufacture, advertisement, delivery or use of drug paraphernalia. The delivery of paraphernalia to a minor is made a special offense. Article II clearly defines what conduct is prohibited, and it specifies what criminal state of mind must accompany such conduct.

(TEAR OFF AT PERFORATION)

Article I

(Definitions)

SECTION (insert designation of definitional section) of the Controlled Substances Act of this State is amended by adding the following after paragraph (insert designation of last definition in section):

"( ) The term 'drug paraphernalia' means all equipment, products and materials of any kind which are used, intended for use, or designed for use, in planting, propagating, cultivating, growing, harvesting, manufacturing, compounding, converting, producing, processing, preparing, testing, analyzing, packaging, repackaging, storing, containing, concealing, injecting, ingesting, inhaling, or otherwise introducing into the human body a controlled substance in violation of this Act (meaning the Controlled Substances Act of this State). It includes, but is not limited to:

(1) Kits used, intended for use, or designed for use in planting, propagating, cultivating, growing or harvesting of any species of plant which is a controlled substance or from which a controlled substance can be derived;

(2) Kits used, intended for use, or designed for use in manufacturing, compounding, converting, producing, processing, or preparing controlled substances;

(3) Isomerization devices used, intended for use, or designed for use in increasing the potency of any species of plant which is a controlled substance;

(4) Testing equipment used, intended for use, or designed for use in identifying or in analyzing the strength, effectiveness or purity of controlled substances;

(5) Scales and balances used, intended for use, or designed for use in weighing or measuring controlled substances;

(6) Diluents and adulterants, such as quinine hydrochloride, mannitol, mannite, dextrose and lactose, used, intended for use, or designed for use in cutting controlled substances;

(7) Separation gins and sifters used, intended for use, or designed for use in removing twigs and seeds from, or in otherwise cleaning or refining marijuana

(8) Blenders, bowls, containers, spoons and mixing devices used, intended for use, or designed for use in compounding controlled substances;

(9) Capsules, balloons, envelopes and other containers used, intended for use, or designed for use in packaging small quantities of controlled substances;

(10) Containers and other objects used, intended for use, or designed for use in storing or concealing controlled substances;

(11) Hypodermic syringes, needles and other objects used, intended for use, or designed for use in parenterally injected controlled substances into the human body;

(12) Objects used, intended for use, or designed for use in ingesting, inhaling, or otherwise introducing marijuana, cocaine, hashish, or hashish oil into the human body, such as:

(a) Metal, wooden, acrylic, glass, stone, plastic, or ceramic pipes with or without screens, permanent screens, hashish heads, or punctured metal bowls;
(b) Water pipes;
(c) Carburetion tubes and devices;
(d) Smoking and carburetion masks;
(e) Roach clips: meaning objects used to hold burning material, such as a marijuana cigarette, that has become too small or too short to be held in the hand;
(f) Miniature cocaine spoons and cocaine vials;
(g) Chamber pipes;
(h) Carburetor pipes;
(i) Electric pipes;
(j) Air-driven pipes;
(k) Chillums;
(l) Bongs;
(m) Ice pipes or chillers;

In determining whether an object is drug paraphernalia, a court or other authority should consider, in addition to all other logically relevant factors, the following:

(1) Statements by an owner or by anyone in control of the object concerning its use;
(2) Prior convictions, if any, of an owner, or of anyone in control of the object, under any State or Federal law relating to any controlled substance;

Continued from page 5

(3) The proximity of the object, in time and space, to a direct violation of this Act;
(4) The proximity of the object to controlled substances;
(5) The existence of any residue of controlled substances on the object;
(6) Direct or circumstantial evidence of the intent of an owner, or of anyone in control of the object, to deliver it to persons who he knows, or should reasonably know, intend to use the object to facilitate a violation of this Act; the innocence of an owner, or of anyone in control of the object, as to a direct violation of this Act should not prevent a finding that the object is intended for use, or designed for use as drug paraphernalia;
(7) Instructions, oral or written, provided with the object concerning its use;
(8) Descriptive materials accompanying the object which explain or depict its use;
(9) National and local advertising concerning its use;
(10) The manner in which the object is displayed for sale;
(11) Whether the owner, or anyone in control of the object, is a legitimate supplier of like or related items to the community, such as a licensed distributor or dealer of tobacco products;
(12) Direct or circumstantial evidence of the ratio of sales of the object(s) to the total sales of the business enterprise;
(13) The existence and scope of legitimate uses for the object in the community;
(14) Expert testimony concerning its use."

Article II
(Offenses and Penalties)

SECTION (designation of offenses and penalties section) of the Controlled Substances Act of this State is amended by adding the following after (designation of last substantive offense):

"SECTION (A) (Possession of Drug Paraphernalia)

It is unlawful for any person to use, or to possess with intent to use, drug paraphernalia to plant, propagate, cultivate, grow, harvest, manufacture, compound, convert, produce, process, prepare, test, analyze, pack, repack, store, contain conceal, inject, ingest, inhale or otherwise introduce into the human body a controlled substance in violation of this Act. Any person who violates this section is guilty of a crime and upon conviction may be imprisoned for not more than ( ), fined not more than ( ), or both."

"SECTION (B) (Manufacture or Delivery of Drug Paraphernalia)

It is unlawful for any person to deliver, possess with intent to deliver, or manufacture with intent to deliver, drug paraphernalia, knowing, or under circumstances where one reasonably should know, that it will be used to plant, propagate, cultivate, grow, harvest, manufacture, compound, convert, produce, process, prepare, test, analyze, pack, repack, store, contain, conceal, inject, ingest, inhale, or otherwise introduce into the human body a controlled substance in violation of this Act. Any person who violates this section is guilty of a crime and upon conviction may be imprisoned for not more than ( ), fined not more than ( ), or both."

"SECTION (C) (Delivery of Drug Paraphernalia to a Minor)

Any person 18 years of age or over who violates Section (B) by delivering drug paraphernalia to a person under 18 years of age who is at least 3 years his junior is guilty of a special offense and upon conviction may be imprisoned for not more than ( ), fined not more than ( ), or both."

"SECTION (D) (Advertisement of Drug Paraphernalia)

It is unlawful for any person to place in any newspaper, magazine, handbill, or other publication any advertisement, knowing, or under circumstances where one reasonably should know, that the purpose of the advertisment, in whole or in part, is to promote the sale of objects designed or intended for use as drug paraphernalia. Any person who violates this section is guilty of a crime and upon conviction may be imprisoned for not more than ( ), fined not more than ( ), or both."

Article III
(Civil Forfeiture)

SECTION (insert designation of civil forfeiture section) of the Controlled Substances Act of this State is amended to provide for the civil seizure and forfeiture of drug paraphernalia by adding the following after paragraph (insert designation of last category of forfeitable property):

"( ) all drug paraphernalia as defined by Section ( ) of this Act."

Article IV
(Severability)

If any provision of this Act or the application thereof to any person or circumstance is held invalid, the invalidity does not affect other provisions or applications of the Act which can be given effect without the invalid provision or application, and to this end the provisions of this Act are severable.

This reprint of **The Model Drug Paraphernalia Law** has been sponsored by The Committees of Correspondence which is a national group of citizens concerned about drug abuse.

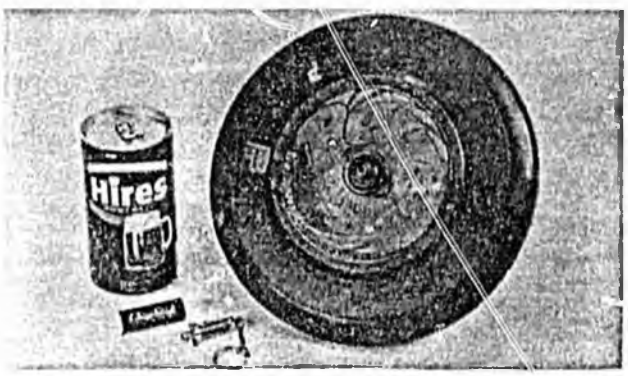
In the days of our nation's youth, the Committees of Correspondence was formed to exchange information and ideas and to build Colonial unity. Today, the health and strength of our nation's youth are being threatened by the pervasive drug abuse pandemic. And the Committees of Correspondence has been revived to help effect a turnaround.

Growth of Drug Paraphernalia Industry And Growth of Illicit Drug Use

LIFETIME PREVALENCE -- THOSE WHO HAVE EVER USED:	YOUTH ‡ Age 12 to 17		HIGH SCHOOL SENIORS ‡ Age 17 and 18		YOUNG ADULTS ‡ Age 18 to 25	
	1972	1979	1975*	1979	1972	1979
MARIJUANA	14%	30.9%	47.3%	60.4%	47.9%	68.2%
COCAINE	1.5%	5.4%	9%	15.4%	9.1%	27.5%
INHALANTS	6.4%	9.8%	-	18.7%	-	16.5%
HALLUCINOGENS	4.8%	7.1%	16.3%	18.6%	-	25.1%
TRANQUILIZERS	3%	4.1%	17%	16.3%	7%	15.8%
SEDATIVES	3%	3.2%	18.2%	14.6%	10%	17%
STIMULANTS	4%	3.4%	22.3%	24.2%	12%	18.2%
HEROIN	6%	.5%	2.2%	1.1%	4.6%	3.5%



Categories of drugs are listed in descending order **in relationship to the number of paraphernalia products designed for specific drugs.** For example, the largest number of drug paraphernalia products are designed to augment marijuana use, the second largest number of products for cocaine use, etc. At the other end of the spectrum, devices to assist heroin use are infrequent among industry products.

The beginning of the drug paraphernalia industry can be traced to the invention of "E-Z Wider" Rolling Papers, the first rolling paper to be specifically designed for marijuana. A $6,000 investment by "E-Z Wider's" inventor in 1972 grew to a $9,000,000 conglomerate in just six years. Two years later, **High Times Magazine** began publication and advertised paraphernalia products to a mass audience of consumers.

‡ From **A Drug Retrospective: 1962 to 1980** and **Drugs and the Nation's High School Students, 1979 Highlights,** both published by the National Institute on Drug Abuse, (U.S. Department of Health and Human Services), 5600 Fishers Lane, Rockville, MD 20857

There's been a lot of confusion about marijuana. Many years ago, exaggerated stories of the drug's bizarre effects, including tales of violence, amnesia, and sexual frenzy, began to circulate widely. When scientists found no evidence to confirm these rumors, many people began to reject reports of any bad effects of marijuana —and what was considered the "devil's weed" gained a reputation for being a "safe" drug.

This section examines the myths and facts about marijuana. Some of the information may surprise both you and your children. We still do not know everything we would like to know about this controversial drug. But as you will see, our present evidence clearly indicates that it is not a "safe" substance.

Marijuana: What It Is and What It Does

What Exactly Is Marijuana?

Marijuana (also called pot, grass, reefer, or weed) comes from a plant, with the botanical name of *Cannabis sativa*, that grows wild and is cultivated in many parts of the world. Containing over 400 chemicals, this plant has the ability to intoxicate its users, primarily because of the psychoactive or mind-altering ingredient called delta-9-tetrahydrocannabinol, or THC. It is the THC content, found at various concentrations in different parts of the plant, which determines the potency. And the THC content is controlled by plant strain, climate, soil conditions, and harvesting.

Typically, the marijuana used in cigarettes (joints) is made from dried particles of the whole plant except the main stem and roots. In 1975, the average confiscated sample of marijuana contained 0.4 percent THC; in 1979, the average THC content was about 4 percent—a tenfold increase. Sinsemilla, a cultivated form of marijuana which is becoming more frequently available in this country, may contain as much as 7 percent THC.

Hashish (hash) is a green, dark brown, or black resin extracted from the *Cannabis sativa* plant and smoked to produce a high. In the past, hashish, which averages about 2 percent THC, contained more THC than marijuana. However, with the increased potency of marijuana on the streets, it now frequently is stronger than hashish.

Hash oil is an extract of the *Cannabis sativa* plant. It may contain up to 30 percent THC, many times the amount found in marijuana. Hash oil is a tarlike substance usually smoked in small amounts on tobacco or marijuana cigarettes or in small glass pipes.

How Do People Feel When They Smoke Marijuana?

Feelings of euphoria and relaxation are commonly reported as the result of smoking moderate amounts of marijuana. Physically, users experience an increase in heart and pulse rate, a reddening of the eyes, a dryness in the mouth and throat, a mild decrease in body temperature, and, on occasion, a sudden appetite. High doses may result in image distortions and hallucinations.

Many users claim that marijuana enhances their hearing, vision, and skin sensitivity, but these reports have not been confirmed by researchers. Studies of marijuana's mental effects have shown that the drug temporarily impairs short-term memory, alters the sense of time, and reduces the ability to perform tasks requiring concentration, swift reactions, and coordination.

Do People Ever React Badly to Marijuana?

Yes. The most common adverse reaction to marijuana is a state of anxiety, sometimes accompanied by paranoid thoughts; these can range from general suspicion to a fear of losing control and going crazy. Acute anxiety reactions are usually experienced by novice users, and the symptoms generally disappear in a few hours as the drug's effects wear off. While anxiety reactions can usually be quieted by simple reassurance, some marijuana users may need professional help. Over 11,000 emergency room visits relating to marijuana use were reported in 1979.

Can Marijuana Cause Mental or Psychological Problems?

Marijuana does not directly cause mental problems, but like many other drugs, it appears to bring to the surface emotional problems and can even trigger more severe disorders, particularly schizophrenia. People suffering from depression or other emotional disturbances who use marijuana to treat their symptoms often cause a worsening of the problem. An estimated 5,000 people seek professional treatment every month for problems related to marijuana.

How Can Marijuana Affect Your Child?

In addition to the physical effects described later, a very real danger in marijuana use is its possible interference with growing up. As research shows, the effects of marijuana can interfere with learning by impairing thinking, reading comprehension, and verbal and arithmetic skills.

Scientists also believe that the drug may interfere with the development of adequate social skills and may encourage a kind of psychological escapism. Young people need to learn how to make decisions, to handle success, to cope with failure, and to form their own beliefs and values. By providing an escape from "growing pains," drugs can prevent young people from learning to become mature, independent, and responsible.

How Much Is Heavy Marijuana Use?

For the purposes of this booklet, heavy use is defined as smoking at least once a day. However, many young

people when asked to define heavy use say that it means smoking three or more times a day.

What Is Marijuana "Burn Out"?

"Burn out" is a term first used by marijuana smokers themselves to describe the effect of prolonged use. Young people who smoke marijuana heavily over long periods of time can become dull, slow moving, and inattentive. These burned-out users, also referred to as "vegged out" or "space cadets," are sometimes so unaware of their surroundings that they do not respond when friends speak to them. Such youngsters, however, do not consider themselves to be burned out. Scientists believe that burn out may be a sign of drug-related mental impairment that may not be completely reversible, or is reversible only after months of abstinence.

Can Marijuana Cause Addiction?

While increasing numbers of people are reporting problems associated with their marijuana use, and many are having problems stopping after heavy or long-term use, there is little evidence that the drug is physically addicting. Animal studies have shown, however, that a tolerance to THC can develop. This means more and more marijuana must be used over time to achieve the high once experienced by using smaller amounts.

Does Marijuana Lead to the Use of Other Drugs?

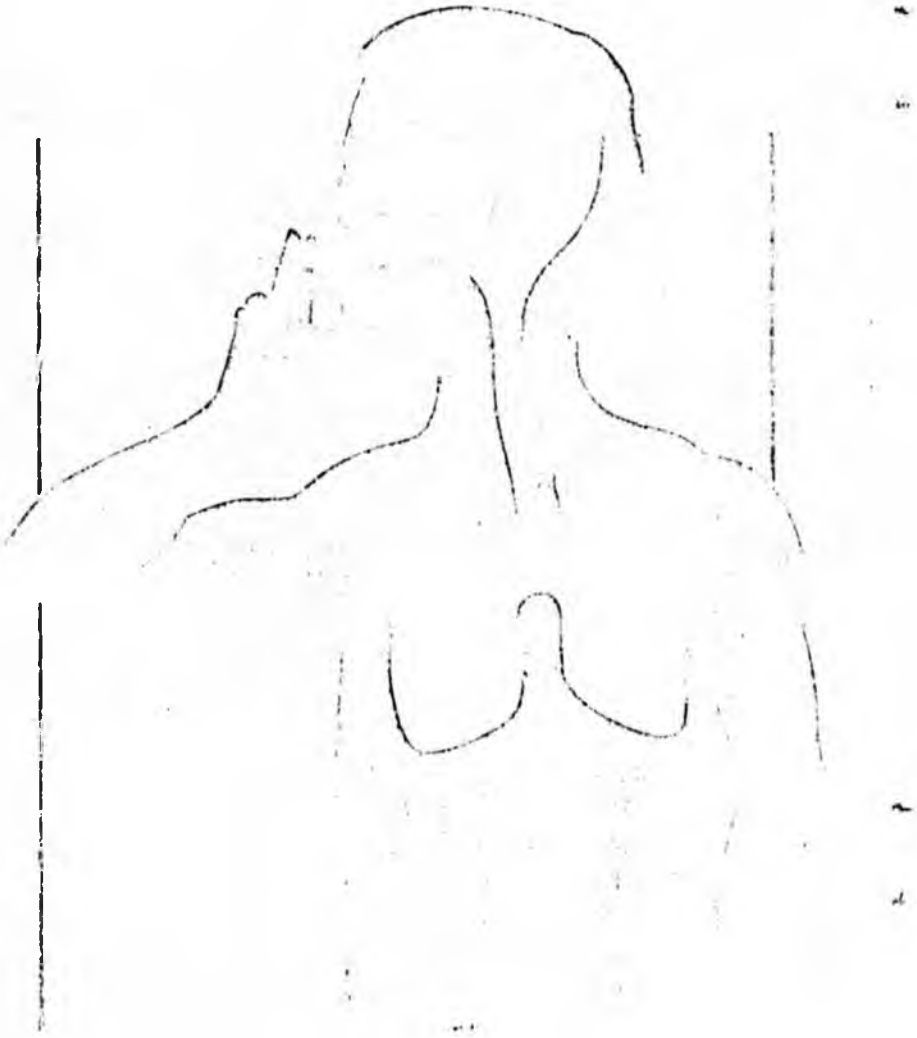
There is nothing in marijuana itself that causes people to use other drugs. While studies have shown that the use of tobacco and alcohol often precedes marijuana use, the overwhelming majority of marijuana smokers do not go on to use other drugs. But some do; surveys show that the earlier marijuana use begins, the more likely it is that the use will be heavy. Early use also increases the likelihood of subsequent experimentation with other drugs such as hashish, hallucinogens, cocaine, amphetamines, and occasionally barbiturates and heroin.

How Are People Introduced to Marijuana?

Most people are introduced to marijuana by their peers—that is, by people their own age, usually acquaintances or friends. Pushers are rarely involved when a person first smokes marijuana.

How Many People Smoke Marijuana?

Over 50 million Americans have tried marijuana at least once. Approximately 22 million were considered current users at the time of the last national survey in 1979—"current" because they reported smoking marijuana during the month preceding the survey.



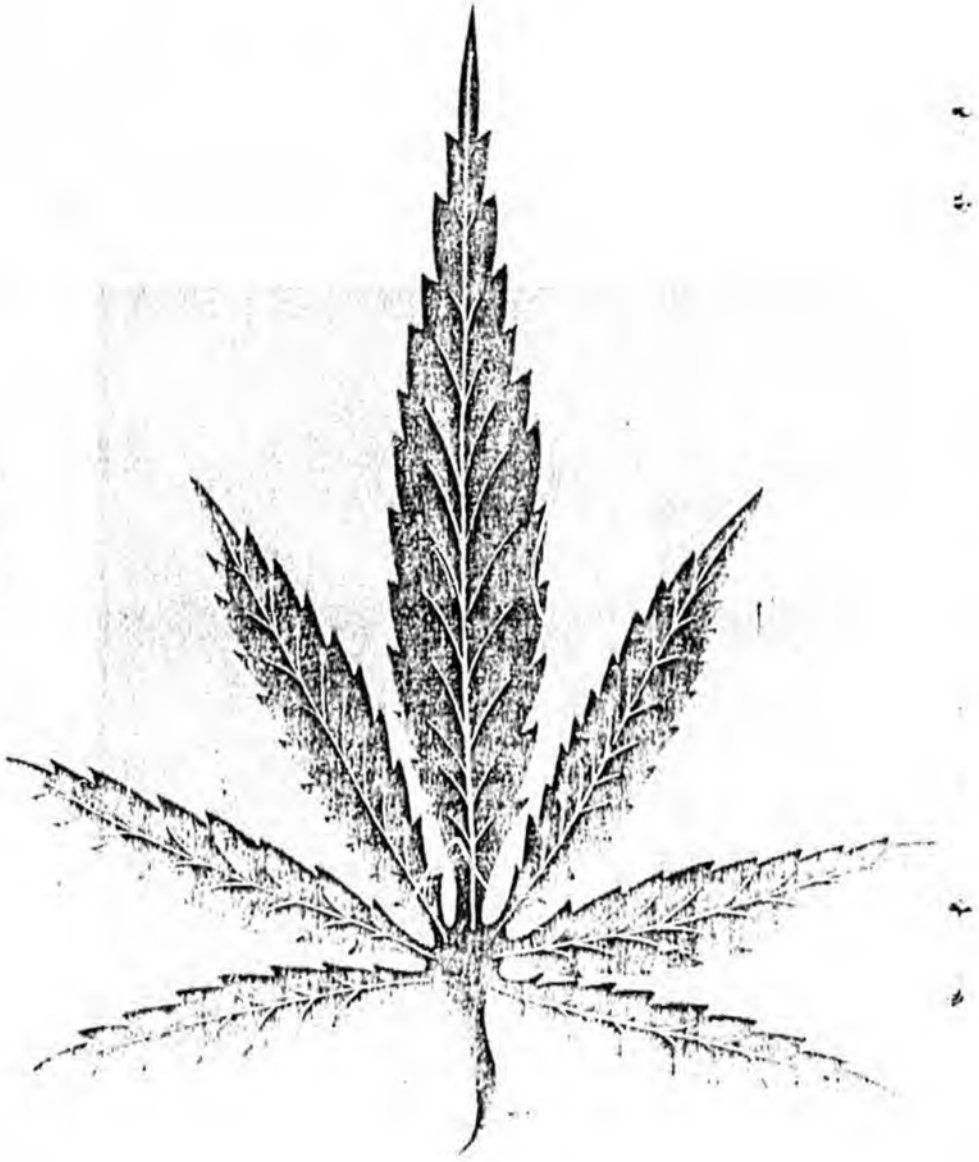
A breakdown of teenage marijuana use shows that—

60 percent of high school seniors had tried it, and one out of nine was a daily user;

8 percent of the 12- to 13-year-olds reported that they had smoked marijuana at least once, and half of this group were current users; and

32 percent of the 14- to 15-year-olds had tried it, and 17 percent were still using it.

While children under the age of 12 were not surveyed, many in the 12-to-17 age group report that they first tried marijuana, and even started smoking it regularly, while they were still in grade school—and probably before their parents even suspected they knew about the drug.



What Happens if You Drive After Smoking Marijuana?

Marijuana delays a person's response to sights and sounds—so that it takes a driver longer to react to a dangerous situation. The ability to perform sequential tasks can also be affected by smoking marijuana. As a result, a marijuana smoker's biggest driving problems occur when faced with unexpected events, such as a car approaching from a side street or a child running out from between parked cars. The greater the demands of a driving situation, the less able the marijuana user will be to cope. The driver who doesn't feel high may still be under the influence of marijuana since its effects may last for several hours after the high has passed.

The combined use of marijuana and alcohol is more hazardous than the use of either alone. But combined use is becoming widespread; one researcher reported that nearly half of regular marijuana users combine

alcohol with marijuana use. Surveys have indicated that from 60 to 80 percent of marijuana users sometimes drive while high.

Marijuana's Effects on the Body

Most of the information on marijuana's effects on the body has been established through studies on both humans and animals, some only by research on animals. Stringent U.S. drug-testing laws require that most research be conducted on men over 18; very few studies have involved women, and none have used adolescents.

Marijuana research is relatively new by scientific standards. Many more years and additional studies will be needed before the long-term effects of marijuana use are fully known.

How Long Does Marijuana Stay in the Body After It Is Smoked?

When marijuana is smoked, THC, its active ingredient, is absorbed by many tissues and organs in the body. The body, in its attempt to rid itself of the foreign chemical, chemically transforms the THC into metabolites. Human tests on blood and urine can detect THC metabolites up to a week after marijuana is smoked. Tests involving radioactively labeled THC have traced these metabolites in animals for up to a month.

Can Marijuana Cause Brain Damage?

To date, no definitive neurological study of humans has turned up evidence of marijuana-related permanent brain damage. However, in a recent study of rhesus monkeys, the animals were trained to smoke a marijuana cigarette 5 days a week for 6 months. The researcher reported that persistent changes in the structure of the monkeys' brain cells followed.

This and other studies have led researchers to conclude that the possibility of subtle and lasting changes in brain function from heavy and continuous marijuana use cannot be ruled out.

How Does Marijuana Affect the Heart?

Marijuana use increases the heart rate as much as 50 percent and can bring on chest pain in people already experiencing a poor blood supply to the heart. For this reason, doctors believe that people with heart conditions, or those who are at high risk for heart ailments, should not use marijuana.

How Does Marijuana Affect the Lungs?

Scientists believe that marijuana can be particularly harmful to the lungs because some users inhale the unfiltered smoke deeply and hold it in their lungs as long as possible, thereby keeping the smoke in contact with lung tissue for prolonged periods. Repeated inhalation of smoke, whether marijuana or tobacco, inflames the lungs and affects pulmonary functions. In one study on humans, it was found that smoking five joints a week over time is more irritating to the air passages and impairs the lungs' ability to exhale air than smoking almost six packs of cigarettes a week. Another study on animals using THC levels similar to daily human use found that extensive lung inflammation developed after 3 months to a year of use.

Can Marijuana Cause Cancer?

While marijuana smoke has been found to contain more cancer-causing agents than tobacco smoke, there is no direct evidence so far that marijuana can cause cancer in humans. However, biopsies of human lung tissue

chronically exposed to marijuana smoke in a laboratory showed cellular changes called metaplasia that are considered precancerous. In laboratory tests, the tars from marijuana smoke have produced tumors when applied to animal skin.

Does Marijuana Affect the Body's Ability To Fight Infection?

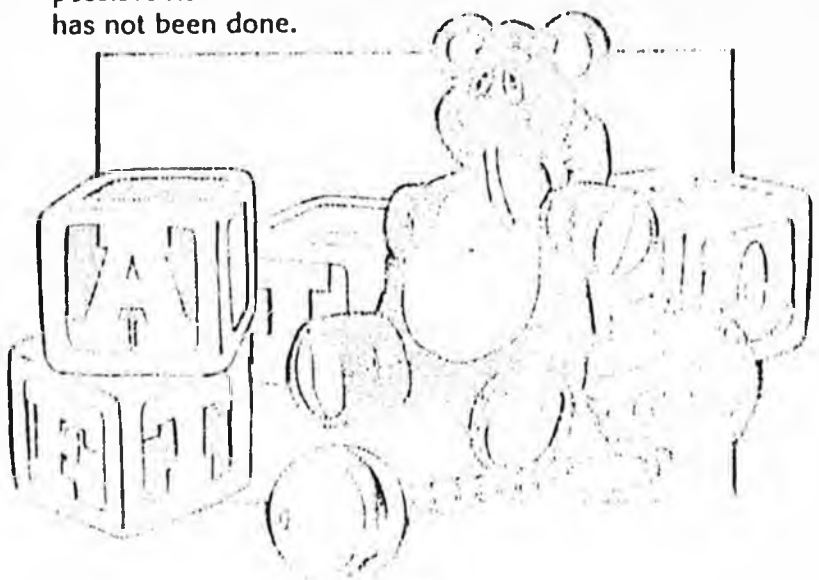
This question remains unresolved. Some reports suggest that white cell formation central to the body's immune response is affected by heavy marijuana smoking. Some laboratory animal studies have found that the immune response is significantly suppressed in mice and rats subjected to high doses of marijuana. Other studies have not confirmed these findings. Because the immune response is so important to good health, long-term studies are essential to determine if marijuana users become more susceptible to disease.

How Does Marijuana Affect the Hormonal and Reproductive Systems?

MEN

A few studies of adult males have found that chronic marijuana users had lower levels of testosterone (the principal male sex hormone) than nonusers, and that abstention from marijuana after heavy use produced a reversal of this condition. Other research has shown that the sperm count in young adult males diminishes as marijuana use increases. Still other studies have shown that some of the sperm of chronic marijuana users are defective and nonfunctional. On the basis of these findings, scientists feel that those with marginal fertility or endocrine functioning should avoid marijuana. In addition, marijuana has been shown to affect the growth hormone from the pituitary. These findings indicate that marijuana may be particularly harmful during adolescence, a period of rapid physical and sexual development.

WOMEN



Information about the reproductive effects of marijuana on women is scarce; marijuana research on women of childbearing age is not permitted because of possible reproductive risks. But one recent study of marijuana use and human female endocrine functioning with 26 women using street marijuana for 6 months or more found they had defective menstrual cycles three times more frequently than a similar group of nonusers. These defective cycles involved either a failure to ovulate or a shortened period of fertility—findings which suggest that regular marijuana use may reduce fertility in women. Many female animal studies have been completed and show that marijuana influences levels of estrogen, the principal female sex hormone, and progesterone, another reproductive hormone, as well as the growth hormone from the pituitary. These studies suggest that heavy use should be avoided by the physically and sexually developing adolescent girl.

Is It OK To Smoke Marijuana if You Are Pregnant?

Definitely not. As stated earlier, research on women is limited because of possible risks to the unborn child. Laboratory animal tests, however, have shown that THC-treated female monkeys were four times more likely than untreated monkeys to abort or have stillborn infants. And males born of the THC-treated monkeys were lighter than usual in birth weight. Scientists believe that marijuana, which crosses the placental barrier in the pregnant mother's womb, may have a toxic effect on embryos and fetuses. Use of marijuana or any other drug during pregnancy is an unnecessary risk.

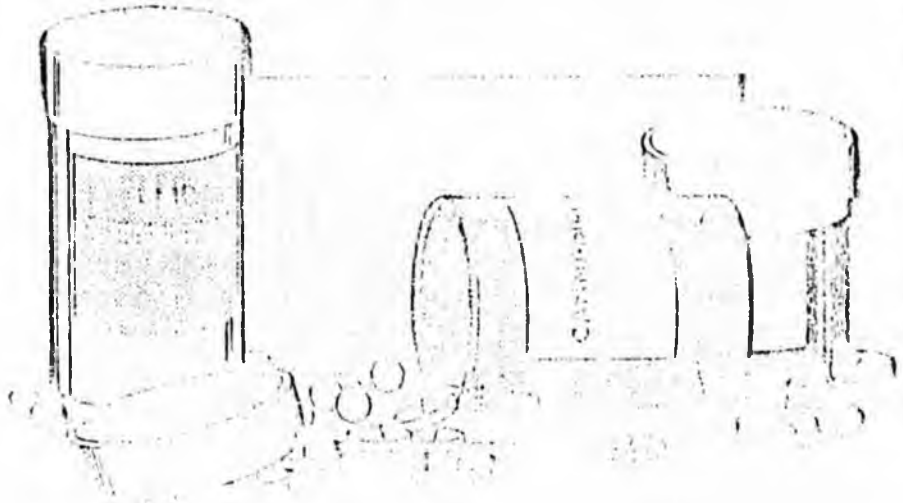
What About Breast Feeding?

Animal studies have shown that THC from marijuana can be transmitted to a baby through the mother's milk and that traces of THC have been found in the baby's urine and feces after nursing. Scientists have no doubt that THC is also transmitted in human milk, but because of possible risks to the mother and child, human research has not been done.

Possible Medical Uses of the Chemicals in Marijuana

Research on marijuana has led to findings which indicate that some of the plant's chemicals, particularly THC, may have medical value. The following summarizes those areas currently being investigated.

Open-Angle Glaucoma



One of the first potential medical uses of marijuana to be explored was the treatment of open-angle glaucoma. This disease, which often leads to blindness, is caused by pressure within the eye. Marijuana cigarettes, often in combination with standard eye medication, have sometimes reduced this pressure. Synthetically made THC eye drops are also being tested on patients. However, mounting evidence suggests that tolerance (the need to increase amounts to achieve the effects produced by initial doses) develops and that ultimately little or no effect may be realized from the drug.

Use of marijuana does not prevent glaucoma or any other eye disorder, or improve vision.

Nausea

One of the more promising uses of THC is as a means of controlling the overwhelming nausea and vomiting which cancer patients experience during chemotherapy. These side effects sometimes force patients to discontinue necessary treatment. Because the available substances that control these symptoms are not effective for all patients, several research projects are now being sponsored by the Federal Government and a number of States and independent researchers to further investigate THC's anti-nausea effects.

But marijuana does not prevent cancer. As discussed earlier, marijuana smoke contains more cancer-causing agents than tobacco smoke.

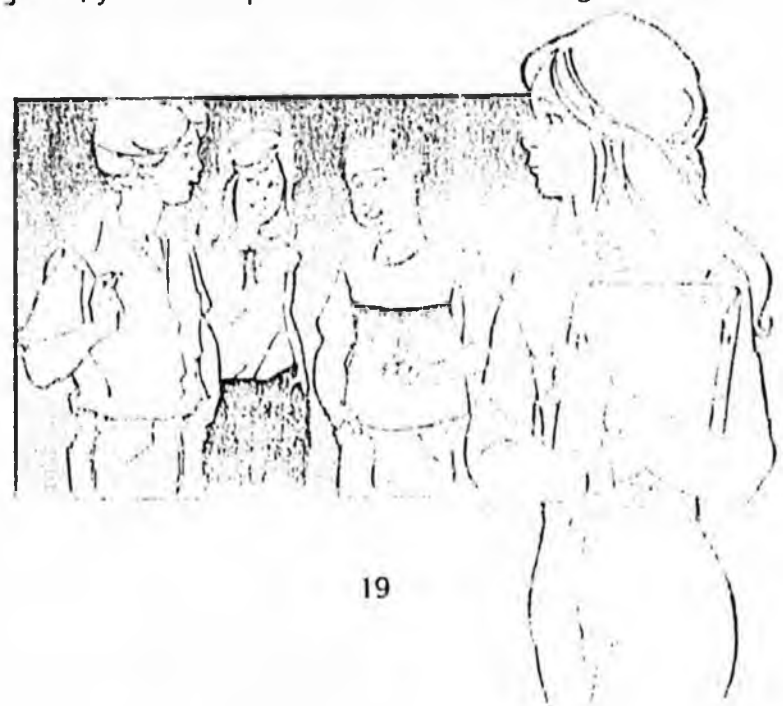
Multiple Sclerosis

Some small studies are being conducted to test whether THC has any effect on reducing spasticity or involuntary muscle contractions in patients with multiple sclerosis. While the results are not conclusive, some patients have shown lowered spasticity after taking the drug. Whether this reduction will make any difference in the patients' ability to function is not yet known.

Epilepsy

A number of human and animal studies have been done to determine if marijuana or any of its ingredients has an effect on epileptic seizures. Some research on THC has shown that it may actually trigger convulsions in epileptics. Scientists hypothesize that this occurs when the drug stimulates high voltage brain waves, and that the likelihood of its happening is determined by the amount of THC in marijuana and the amount inhaled.

Another marijuana ingredient, cannabidiol, has been shown in limited studies to reduce or control seizures. It should be pointed out, however, that cannabidiol is dominant in only one strain of marijuana and that this particular "fiber" strain contains little of the mind-altering THC. This means that the marijuana available for sale on the street contains only trace amounts of cannabidiol. Cannabidiol has been synthesized and is administered orally or by injection to patients involved in studies.



What's a Parent To Do?

Sooner or later, nearly all youngsters find themselves in situations in which they must decide whether or not to take drugs. These decisions are especially hard to make in the midst of conflicting information, peer pressure, curiosity, and the many other influences that are part of adolescence.

If your child has not tried marijuana, consider yourself fortunate, but do not discount the possibility that it could happen sometime in the future. Learn the facts and be prepared to answer questions or deal with the situation if it should occur.

If you think your child has tried marijuana and may even be smoking it regularly, remain calm. Outbursts of anger and emotion are not going to help. They will only interfere with the dialog that is now essential. If you find yourself unable to control your feelings, consider bringing in a third party whose advice and counsel will be respected by both you and your child.

If your child was the one who told you about using marijuana, you should praise him or her for being honest.

and be proud that you created the atmosphere that encouraged your child to confide in you. As you discuss marijuana with your son or daughter, try to find out why s/he smokes and how often. The reasons most often cited are, "Because everybody else does" or "It makes me feel good." A closer look may reveal that your child smokes marijuana to avoid rejection by the other kids, to overcome shyness, or to cope with boredom or feelings of failure.

If you suspect your child may be smoking marijuana to get your attention, take a look at your relationship. Perhaps spending more time with your child is called for. Consider planning activities together away from home, school, and business pressures. Try listening and becoming sensitive to your child's feelings and problems, no matter how trivial they seem.

If your child smokes heavily, you might point out the dangers of heavy use and consider seeking help from a doctor or other health professional even if you have to do this without the youngster's consent.

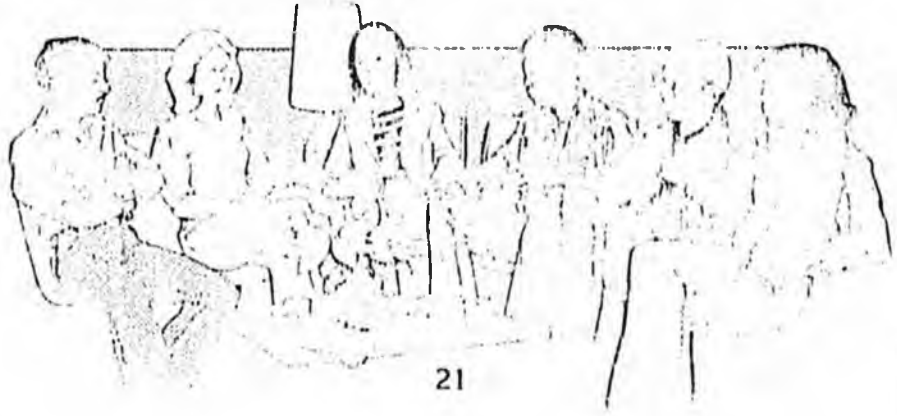
Saying "No"

A recent study with adolescents has shown that teaching them how to say "no" may actually be more important than giving them the reasons for saying it. Since peer pressure is so important in drug use, you might consider teaching your child how to handle the time when s/he will be faced with making a decision about marijuana or other drugs.

Guilt Doesn't Help

Don't feel guilty or ashamed about your child's marijuana use. Even children of loving parents who have set a good example and taught moderation can become caught up in drug use. Peer group pressure is often strong enough to override the best parental influences.

As you try to cope with the "hows" and "whys" of marijuana, it is important to remember that children are not the only ones who have peers. Your own friends, your neighbors, and the parents of your child's friends are facing the same problems and asking the same questions.



In fact, parents all over the country—of every race, ethnic background, and social class, in cities and suburbs and small towns—are waking up to the dangers of marijuana and other drugs.

Talk About Drugs With Other Parents

If you know your child's friends are smoking marijuana and you would like to do something to stop it, start by inviting their parents to your home one evening. Tell them of your concerns and share all the information you have. Some will probably report similar experiences and may be relieved to find someone who shares their troubles and will work with them to look for solutions.

Some parents may become defensive and insist that marijuana use is not a problem in their families. This is a natural reaction for people who are frightened and confused. For many, a stigma is still attached to marijuana use. They believe that drugs are used only by "bad" children of "unfit" parents.

At any parent meeting try to avoid accusations and blame—"your child does this," "well, *your* child does that." Remember that the purpose of a parent group is cooperation and sharing.

Establish Uniform Rules for the Peer Group

An approach some parents have tried is establishing uniform rules to make access to drugs harder. If you and the parents of your child's friends can agree on appropriate curfews, limits on spending money and use of the family car, and other guidelines, the young people in your community will not be able to justify or excuse their behavior by saying, "But all the other kids are allowed to!" This will also help develop a sense of an extended family in the community where the parents cooperate and the young people are treated alike.

Parent groups that have tried this approach report that:

> Their children seem more active and attentive, and their grades improve.
>
> Their youngsters are now voluntarily following rules that they used to think were unreasonable.
>
> The parent-child relationship is better than ever.
>
> Younger children are not falling into the same drug-oriented culture which influenced their older brothers and sisters.

Develop Alternatives to Drug Use

There are any number of healthy activities which can show your child how to have a good time without being high on a drug. Whenever possible, do them together. Here are some examples:

Remember, what is most important is not the activity but that you are taking a personal interest and that your child is developing a focus on things other than drugs.

Marijuana Jargon

Parents today are trying to cope not only with marijuana but also with the drug's vocabulary. While drug terms are continually changing and are often different in various parts of the country, this list may help you decipher the most popular marijuana jargon.

Acapulco Gold—a potent strain of marijuana with gold or yellow highlights.

Bong—a cylindrical water pipe used to smoke marijuana.

Burn out—a slang term for a state of apathy and deadened perceptions which can result from habitual use of marijuana.

Buzz—slang term for a high or a drug-induced euphoria.

Colombian—a potent strain of marijuana.

Decriminalization—process of reducing penalties for personal use of marijuana from prison sentences to civil fines.

Dime—a quantity of drugs which sells on the streets for $10.

Dope—slang term for marijuana and other drugs.

Duster—cigarette made of tobacco, mint leaves, marijuana, or parsley sprinkled with phencyclidine (PCP), also known as Angel Dust.

Ganja—a potent form of *Cannabis* obtained from the flowering tops and leaves of the plant. It may also be used to refer to marijuana in general.

Grass—slang term for marijuana.

Hashish—a form of *Cannabis* made either from the *Cannabis sativa* plant or its resin.

Hash oil—a form of *Cannabis* which is extracted or distilled from the *Cannabis sativa* plant.

Head shops—stores which specialize in the sale of drug paraphernalia and drug-related items.

High—a widely used slang term for euphoria and intoxication.

Hit—a single drag or inhalation of marijuana smoke.

Joint—a hand-rolled marijuana cigarette.

Killer weed—slang term for PCP-treated parsley or marijuana.

Loaded—slang term for state of being high or intoxicated.

Nickel—a quantity of marijuana which sells on the street for $5.

Ounce—a standard unit of measurement for marijuana.

Paraphernalia—drug equipment or gadgets usually sold in head shops.

Pot—slang term for marijuana.

Reefer—slang term for marijuana.

Roach—the small end of a marijuana joint which remains after most of the cigarette is smoked.

Roach clip—a device used to hold the roach or the tail end of a marijuana joint.

Rolling papers—cigarette papers used to make a marijuana joint.

Scales—paraphernalia used to weigh drug quantities for selling purposes.

Smoking stones—paraphernalia used to hold marijuana joints while smoking.

Space cadet—slang term for a habitual marijuana user whose senses have become dulled.

Spaced out—slang term for a drug-induced state of being lost or out of touch with surroundings.

Stash—Any container or place used to store marijuana or other drugs.

Stoned—slang term for being high or intoxicated from marijuana.

Supergrass—slang term for marijuana treated with phencyclidine (PCP or Angel Dust).

Toke—slang term for an inhalation of marijuana or hashish smoke.

Water pipe—paraphernalia used to smoke marijuana or hashish which filters the smoke through water.

Weed—slang term for marijuana.

Common Drugs of Abuse

CATEGORY	Drugs	Sample trade or other names	Medical uses	Dependence: Physical	Dependence: Psychological	Effects in hours	Possible effects	Effects of overdose	Withdrawal symptoms
CANNABIS	Marijuana	Pot, grass, reefer, sinsemilla	Under investigation	Unknown	Moderate	2-4	Euphoria, relaxed inhibitions, increase in heart and pulse rate, reddening of the eyes, increased appetite, disoriented behavior	Anxiety, paranoia, loss of concentration, slower movements, time distortion	Insomnia, hyperactivity, and decreased appetite occasionally reported
	Tetrahydrocannabinol	THC							
	Hashish	Hash	None						
	Hash oil	Hash oil							
DEPRESSANTS	Alcohol	Liquor, beer, wine	None	High	High	1-12	Slurred speech, disorientation, drunken behavior	Shallow respiration, cold and clammy skin, dilated pupils, weak and rapid pulse, coma, possible death	Anxiety, insomnia, tremors, delirium, convulsions, possible death
	Barbiturates	Secobarbital, Amobarbital, Butisol, Tuinal	Anesthetic, anti-convulsant, sedative, hypnotic	High-moderate	High-moderate	1-16			
	Methaqualone	Quaalude, Sopor, Parest	Sedative, hypnotic	High	High	4-8			
	Tranquilizers	Valium, Librium, Equanil, Miltown	Anti-anxiety, anti-convulsant, sedative	Moderate to low	Moderate				
STIMULANTS	Cocaine	Coke, flake, snow	Local anesthetic	Possible	High	½-2	Increased alertness, excitation, euphoria, increase in pulse rate and blood pressure, insomnia, loss of appetite	Agitation, increase in body temperature, hallucinations, convulsions, possible death, tremors	Apathy, long periods of sleep, irritability, depression
	Amphetamines	Biphetamine, Dexedrine	Hyperactivity, narcolepsy						
	Nicotine	Tobacco, cigars, cigarettes	None	High	High	2-4		Agitation, increase in pulse rate and blood pressure, loss of appetite, insomnia	
	Caffeine	Coffee, tea, cola drinks, No-Doz		Low	Low				
HALLUCINOGENS	LSD	Acid	None	None	Degree unknown	8-12	Illusions and hallucinations, poor perception of time and distance	Drug effects becoming longer and more intense, psychosis	Withdrawal symptoms not reported
	Mescaline and peyote	Button, Cactus

MARIJUANA UPDATE

Reprinted from Reader's Digest

The first two articles in this booklet, combined under the title "Marijuana Alert" made reprint history for the Reader's Digest. In the 44 years the Digest has offered reprints, no other article has sold so many copies in so short a time. Within 11 months, over three million reprints were sold to schools, colleges, churches, courts, scout groups, the military, PTAs, businesses, clinics and to hundreds of thousands of individuals, young and old. Especially touching have been the letters from young people who said they wished to share this information with their peers.

In this edition of Marijuana Update we are adding Peggy Mann's latest article from the December 1981 Reader's Digest: "Marijuana Alert III: The Devastation of Personality."

Marijuana Alert

I. BRAIN AND SEX DAMAGE

All during this decade, evidence has been accumulating that smoking marijuana may be seriously injurious to health. In the past few years, striking new studies have further darkened the picture, demonstrating measurable harm to diverse body organs—above all, to the brain and reproductive functions. Today the specter of a damaged human stock haunts scientific researchers and clinicians alike.

This two-part report brings, first, an account of the new research and, second, one doctor's cry of anguish about the hundreds of pot-damaged teen-agers with whom he has worked.

By Peggy Mann

SCIENTISTS from around the world are sending warning signals to the millions who smoke marijuana: mounting evidence indicates that pot smokers may be unwittingly damaging their brains, and decreasing their chances of conceiving and producing completely healthy offspring.

These warnings have emerged from recent gatherings of scientists reporting on their latest research. In July 1978, at the International Symposium on Marijuana held in Reims, France, some 50 researchers from 14 countries presented new studies about marijuana's injurious effects on reproduction, lungs, cellular metabolism and the brain. In March 1979, at a conference in Virginia sponsored by the National Institute on Drug Abuse, investigators revealed more evidence of marijuana's harmful effects on the reproductive system. Three months later, at a conference at New York University Medical School, scientists and psychiatrists added to the growing list of dangers caused by chronic smoking of marijuana.

Responding to the startling evidence, the House of Representatives Select Committee on Narcotics Abuse and Control began hearings on the health hazards of marijuana in July. Rep. Lester Wolff (D., N.Y.),

chairman of the committee, said: "The United States is the most pervasive drug-abusing nation in history. And our most pervasive illegal drug of abuse is marijuana." Citing the latest (1978) national drug-abuse survey, Wolff noted that one in nine high-school seniors was smoking pot on a daily or near-daily basis, an almost 80-percent increase in three years' time; that pot smoking is now common among junior-high students; that evidence indicates pot smoking among 8- to 12-year-olds is increasing.

How to Get Out. Of all the effects of marijuana, its impairment of the brain and its harm to the reproductive system pose the greatest threats. Pot has an *affinity* for the brain and the sex organs. Marijuana's 61 cannabinoids, substances found exclusively in the cannabis plant, are soluble in fat. They are attracted to the body's fatty organs, where they remain, only gradually clearing from the body. As one researcher put it, "When the high is gone, the pot is not."

The principal psychoactive, or mind-altering, cannabinoid is delta-9-THC. It has been traced radioactively, and it takes five to eight days for just half the THC in a single marijuana cigarette to clear from the body.

One organ that contains a large amount of fat is the human brain. The testes and ovaries also have high fat contents. What does marijuana buildup in these organs do?

One psychiatrist researching this area is Dr. Robert C. Gilkeson of Cleveland, Ohio. In 1976, a tall, handsome teen-ager came into his office. Formerly a good student, Steven complained of poor grades and difficulties in concentration and memory. "Everything I used to like has become a drag. Even chicks. I feel bummed out all the time."

Dr. Gilkeson discovered reversed d's and b's in the young man's handwriting—a classic finding in learning disabilities. He suggested an electroencephalogram (EEG), a brain-wave test. The report came back: "Abnormal EEG. Diffuse encephalopathic process [brain impairment]. Markedly immature for age." His brain-wave readings were typical of those of a 6- to 8-year-old.

Steven had admitted being a chronic (usually defined as daily or near-daily) pot smoker. The psychiatrist advised him to give up pot for two months. Steven was so shaken that he agreed.

In eight weeks his EEG was notably better, though not yet normal. "But," said Dr. Gilkeson, "there was real improvement in Steven's grades, in his mood, memory, humor and speech patterns." Encouraged, Steven agreed to go for another two potless months—after which the EEG report read: "Within normal limits for age."

Because of his work with Steven, Dr. Gilkeson embarked on a study that is still in progress. He has thus far given EEGs to 43 "typical" teen-

agers, who had been high at least twice a week for the previous four months, but who had not smoked pot for 48 hours preceding the test. The results: all 43 EEGs, like Steven's, were "markedly immature" and indicated diffuse brain impairment.

Brain Damage. Dr. Robert Heath, chairman of the department of neurology and psychiatry at Tulane Medical School, showed the Reims symposium slides of magnified brain cells from the limbic area of Rhesus monkeys. (The limbic area—directly involved in control of sex drives, appetites, emotions—is very similar in man and Rhesus monkeys.) These monkeys had been exposed to the smoke of two to three "monkey-sized" marijuana cigarettes (one-fourth of an average human joint) a day at three-percent THC. ("Good pot" sold on the street today has three- to six-percent THC.) Said Dr. Heath, "The smoke of one monkey-sized joint produces the same blood level of THC in the monkey as a human gets in his blood after smoking a 'human-sized' joint of the same THC strength. By checking blood levels, researchers can ascertain so-called 'human equivalency doses' for monkeys and for all other animals."

Result: the monkeys' brain cells showed striking structural changes, including abnormal deposits of opaque material in—and a widening of—the synaptic cleft between neurons. "This," said Dr. Heath, "may cause a slowing down or interruption in the movement of brain messages." There was also an abnormal clumping of the small sacs in the endings of nerve cells that contain the chemical activators of the brain, plus a significant increase of foreign matter in the nerve-cell nuclei. All of these conditions are associated with brain impairment.

At an earlier conference, Dr. Heath noted the rapidity of these changes: "Clinical observation indicates that people might drink for years before serious brain damage occurs. But it would seem from the monkey studies that you have to use marijuana for only a relatively short time in moderate to heavy use before evidence of brain damage begins to develop."

One of the symptoms reported by chronic pot smokers is impairment of short-term memory. Neurologist William H. Stuart of Atlanta, Ga., reports the case of a 28-year-old building subcontractor who smoked pot daily (but took no other drugs and drank only beer). After five years, he would look at a blueprint, walk over to his workmen and forget what to tell them. "He stopped smoking pot two years ago," says Dr. Stuart. "But his short-term memory has not improved at all. He has lost his business. And now he's working for another subcontractor—hammering nails."

Clinicians who see human results like this are as concerned as the researchers. Dr. Mitchell Rosenthal, president of Phoenix House Foundation (which runs a residential-treat-

ment program for drug abusers), represents the findings of many drug therapists when he says: "Most of the time, when kids stop smoking pot, they will regain what short-term memory they have lost. But I've also seen cases of kids who were chronic users, or who combined pot with another drug, where there was no subsequent improvement."

Effects on Sex. Perhaps the most important structure in the limbic area is a small lump of tissue in the center of the brain: the hypothalamus. Hanging from this is a still smaller lump: the pituitary. As little as a billionth of a gram of THC affects the hypothalamus, which, in turn, affects the pituitary, which regulates endocrine function and the hormones controlling sex and reproduction.

In November 1978, Drs. Joan Bauman and Robert Kolodny of the Masters & Johnson Institute in St. Louis reported on their study of 26 women, ages 18 to 36, who smoked pot three times a week or daily for at least six months prior to the study. Thirty-one percent of the menstrual cycles of the pot-smoking women showed a shortened luteal phase, compared with 9.7 percent of the cycles of the non-pot-smoking women. A shortened luteal phase could mean that a growing embryo might not be properly nourished. The women also had decreased prolactin, a hormone important in milk production.

Another survey by Dr. Kolodny, of 500 men, ages 18 to 30, who had smoked pot for six or seven years, showed statistically significant lower rates of sexual activity and fewer orgasms. Dr. John Hall, chairman of the department of medicine at Kingston Hospital in Jamaica, reports that 20 percent of his male patients who have smoked for five or more years complain of impotence.

Research studies on animals seem to indicate that cannabinoids result in lowered sperm count and in a greater number of abnormally shaped sperm. These findings were replicated in humans using high marijuana dosages by Dr. Wylie Hembree of Columbia University College of Physicians and Surgeons. Dr. Hembree also found a statistically significant decrease in sperm mobility.

Genetic Roulette. Since men constantly produce millions of sperm, the formation of sperm probably returns to normal when pot smoking is stopped. But the effect on women could be lasting. Dr. Akira Morishima of Columbia University says: "A human female is born with about 400,000 eggs. If *they* are injured, there's no way to repair that damage. And it has been proven, by radioactively tagging the THC, that it accumulates in the ovaries, as well as in other organs."

Dr. Morishima gave 150 "teenaged" mice very high doses of THC daily. "All the mice were mated, and were sacrificed when the fertilized egg had multiplied into four cells. In the control group, very few of the fertilized eggs were abnormal. But in the THC group, about half the eggs were dying or had died. Of those that had lived, 20 to 30 percent looked unhealthy."

At the California Primate Research Center of the University of California at Davis, Rhesus monkeys, whose reproductive systems closely resemble those of human females, were given raisin cookies spiked with milligram amounts of THC—the monkey equivalent of a human smoking one to two joints. The monkeys received this dose every day for three years. Result: 44 percent of the pregnant "THC mothers" produced dead or dying offspring, compared to 12 percent, a normal birth loss, in the control group. Although all of the dead babies of the THC-drugged monkeys *looked* normal, a pathologist did microscopic evaluations of tissues and organs from each. He found subtle developmental abnormalities in various tissues and organ systems of the THC-exposed offspring, which were not present in the dead offspring of the undrugged mothers.

Says Dr. Ethel Sassenrath, who conducted the study: "The THC-exposed babies that survived acted differently from the others. They didn't seem to have normal 'brakes' on behavior. They showed deficits in attention. This kind of subtle behavioral difference is characteristic of marginal brain damage in early development."

An agent capable of affecting sex function, sex cells (sperm and egg) and fetus must be regarded as a source of possible congenital damage in those offspring that do survive. In 1974, Dr. Gabriel Nahas of Columbia University College of Physicians and Surgeons, a pioneer in marijuana research, discovered that THC exposure diminished the capacity of individual cells to orchestrate life according to the genetic plan built into cellular molecules. THC inhibits formation of DNA (the genetic material essential for proper cell functioning and division) in cells, resulting in cellular death and abnormality. Dr. Nahas's finding has since been replicated by other scientists from 12 research groups here and abroad. Dr. Nahas warns: "Today's pot smoker may not only be damaging his own mind and body, but may be playing genetic roulette and casting a shadow across children and grandchildren yet unborn."

Warning Signals. Some pot smokers discount findings about marijuana's possible genetic effects with the comment: "Pot smokers have perfectly healthy babies." However, as pointed out by Dr. Robert Peterson of the National Institute on Drug Abuse: "Despite thousands of years of alcohol consumption, not until recently did doctors discover that not very large quantities of alcohol can cause the fetal alcohol syndrome which results in abnormal babies. Therefore, pregnant marijuana smokers would be wise to heed the present warning signals before all the definitive findings are in."

Dr. Robert DuPont, former direc-

tor of the National Institute on Drug Abuse, puts it this way: "In all of history, no young people have ever before used marijuana regularly on a mass scale. Therefore, our youngsters are, in effect, making themselves guinea pigs in a tragic national experiment. Thus far, our research clearly suggests that we will see horrendous results."

II. ENEMY OF YOUTH

By Walter X. Lehmann, M.D.

ANYONE who says "pot" is harmless will get an argument from me. It hasn't been harmless for any of the nearly 3000 young people I've worked with as a specialist in adolescent medicine. Virtually all who became addicted to hard drugs started with marijuana, which distorted their judgment and put them into the drug scene. But I've learned that marijuana by itself is bad enough—its effects too often subtle and insidious, with long-range damage difficult to calculate.

One morning the police referred to me a 15-year-old youth who, after smoking marijuana, had used the family car to tear up some neighborhood lawns. The boy was brought in by his serious, well-groomed older brother, an outstanding student and athlete. It turned out that the younger boy had never used pot before, and had been so frightened by his experience that he never wanted to use it again; he was no problem.

The problem was his older brother, though it would not be apparent for some time. Dynamic, self-possessed, he confided to me that he himself had been smoking pot, cautiously but regularly two to five times a week, enjoyed getting moderately high and had suffered no untoward effects. He felt fine, his grades remained well above average, he was captain of the soccer team and had been accepted at an Ivy League college.

How often we hear of such overachieving easy riders among our middle-class friends nowadays. I tried to warn him about the gradual, long-term changes I had seen in other outstanding young people, but nothing would dissuade him from continuing his "moderate" marijuana use. I saw him again late that summer, just before he left for college. He was slovenly, unkempt, apathetic, slow. He admitted that he had been smoking pot heavily during summer vacation. I pleaded with him to get off it, but he ignored my advice.

He was home by December, having been asked to leave college. By then, he was a typical heavy user. He

didn't care about anything except getting high every day. His parents brought him to me. Eventually he began to perceive what marijuana had done to him and decided he had to kick the habit.

It wasn't easy—it rarely is. I used to think that marijuana created only a psychological dependence, without physical addiction. But now I am persuaded otherwise. I have seen too many youngsters suffer the terrible anxiety, the sleeplessness, the sweating, the lack of appetite, the nausea and the general malaise of withdrawal. Fortunately, my patient had enough fortitude left in him to do it.

He's back in college now, doing okay. His academic performance is acceptable, if mediocre—it's the best he can do, but it isn't close to the promise he once showed. He has not regained that sharp edge, that quality of drive, spirit and capability that once made him a standout. I am not optimistic that he will ever regain it. From what I have seen, there is no question that marijuana wreaks a havoc in the body, brain and psyche that can't be entirely undone.

I know a lot of young people who have broken the pot habit and seem to be doing well, but who are not likely ever to realize the rich potential that once was theirs. For example, another outstanding student-athlete became my patient after marijuana had all but ruined his relationship with his parents and caused him to be dropped from sports participation. He graduated from high school only by the skin of his teeth. He felt terrible, physically and emotionally, but was determined to recover. He got off the stuff and began doing a really good job of pulling his life together.

He then decided, however, that he could handle marijuana. He would smoke it only at parties and on special occasions; it would never get out of hand again. His attitude was not untypical; recovering youngsters often develop this sense of confidence and it's hard to convince them that they haven't a chance against this stuff. I argued and pleaded to no avail. He stopped coming in. Then, in the fall, he came back. He was smoking pot regularly again, and feeling bad. He agreed that he couldn't control it, wanted to get straight again. We're working on it.

Right now, millions of our young people are marijuana users who are performing well and are very sure that they are in firm control of themselves. But as they continue using pot, a gradual deterioration will set in for many of them—in *all* phases of their lives. Grades will slip, athletic prowess will diminish and there will be trouble at home, all of this compounded by an increasing, witless apathy.

For each young pot user who goes straight, there will be many who won't. They won't know where or how to find help, and most won't want help. They will drop out, from school and life. They will simply lose themselves in that frightful marijuana-induced lethargy.

The most unfortunate ones will

become victims of cannabis psychosis, serious mental illness resulting from heavy marijuana use. I have seen young people in the grip of it. Many of the victims land in psychiatric hospitals, are discharged, but never fully recover.

Take the case of one ninth-grader I knew, a good student and baseball player, a gifted artist, a really dynamic youngster who had a substantial contribution to make to the world. Some friends got him to try marijuana. He enjoyed the high it produced. Soon, he was a heavy user. He lost interest in everything else, literally stopped functioning to the extent that in the middle of his tenth-grade year he was expelled from school. He didn't care; all he wanted to do was smoke pot all the time.

When his parents objected, he left and just wandered, for months. His father finally found him and placed him in a psychiatric institution in the hope he could be straightened out. But he didn't improve. After six months, the hospital discharged him. That was ten years ago. He's still wandering. He has no contribution to make now, and nothing to look forward to.

I have seen too many kids wander away like that, never to recover from the damage they have inflicted on themselves. It is heartbreaking.

With 16 million Americans currently using marijuana, imagine the enormity of the destruction that is taking place in this generation. Yet today no fewer than 11 states have already decriminalized marijuana and there is a drive to make the ruinous junk legal.

Of course, most people who use pot are not criminals, any more than those millions of us who violate traffic laws are criminals. But even those of us who violate traffic laws understand that we must have such laws, that to abolish them would be to descend into chaos.

We need equitable laws dealing with marijuana, not a legal market for the stuff. For if we legalize marijuana, the human suffering that will ensue will surely lead us one day to repeal such a law. And, by that time, there won't be much we can do to help the victims of our folly.

Marijuana Alert II: More of the Grim Story

By Peggy Mann

In the midst of a virtual marijuana epidemic among young people, Americans are discovering just how injurious this drug can be. Research shows that pot permeates body tissues and fluids, and can damage almost every human organ and system tested. Last December, The Reader's Digest published a report describing how marijuana can harm the brain and reproductive system. More than three million reprints have already been ordered by readers. This follow-up continues the devastating story, documenting how pot can damage the lungs, heart and immune system.

Fourteen-year-old Teddy waited nervously for Dr. Ingrid Lantner's diagnosis. Unexpectedly, the doctor asked, "How much pot do you smoke a day?"

Teddy stared. How did *she* know?

"I've had a number of teen-age patients with this type of chest pain," Dr. Lantner told him. "My prescription is: cut out pot. The pain should disappear in 4 to 12 weeks." Teddy followed the doctor's orders and his pain went away without medication.

Dr. Lantner of Cleveland, Ohio, is just one of many pediatricians concerned about the swelling caseload of pot-smoking* youngsters. "We never used to see teen-agers with chest pain," she says. "In fact, we hardly used to *see* teen-agers; they're over the childhood diseases and usually in the prime of health. But now young pot smokers show up with a variety of symptoms, some of which—like severe chest pain, certain respiratory conditions and short-term memory loss—are normally associated with middle and old age. Many pediatricians, and I am one of them, are convinced marijuana is the single most dangerous health hazard facing American youth today."

According to Dr. Robert DuPont, founding director of the National Institute on Drug Abuse (NIDA), those pediatricians may be right. Over the past two decades, asserts DuPont, American teen-agers suffered deteriorating health, the only age group in the United States to do so. The time segment exactly coincides with the epidemic of marijuana use among young people.

Psychiatrist Dr. Carlton Turner, director of a NIDA marijuana research project at the University of Mississippi, says there is no other drug used or abused by man "that has the staying power and broad cellular actions on the body that cannabinoids do." (Cannabinoids are chemicals found only in the can-

*"Pot" comes from the Mexican *potaguaya*, or hemp plant.

nabis plant, from which marijuana and hashish are prepared.)

Only a handful of the 61 cannabinoids identified so far in pot have been studied. Each is metabolized, or broken down, into many other chemicals. Some are psychoactive; some are not. But all are biologically active. "In human studies, the chief psychoactive cannabinoid, delta-9-THC, and its by-products showed up in all body fluids tested," Turner adds. "The cannabinoids are fat-soluble and accumulate in the fatty sections of the cells and in the fatty organs. We know from animal studies that only five percent of the THC [for tetrahydrocannibinol, a group of compounds found exclusively in the cannabis plant] gets across the blood-brain barrier, which we assume creates the 'high' in humans. That five percent causes problems enough. But what concerns me even more is what the other unknown 95 percent of this and the other cannabinoids are doing to the body."

Some of the non-psychoactive cannabinoids have been shown to be more harmful to certain organs than the psychoactive ones. And cannabinoids make up only a fraction of the 421 known chemicals in the cannabis plant; new ones are constantly being identified. (In contrast to marijuana, most other drugs of abuse—LSD, cocaine, alcohol, etc.—are single chemicals.)

Recent research documents that marijuana smoking is harmful to the entire pulmonary tree, ranging from the sinus cavities to the deepest recesses of the lungs. Marijuana may be even more injurious to lungs than tobacco smoke, and its symptoms may strike faster. Dr. Forest S. Tennant, Jr., former director of a U.S. Army drug-abuse program in West Germany, studied more than 1000 U.S. soldiers stationed there and found that heavy cannabis smoking produced sinusitis, pharyngitis, bronchitis, asthma and other respiratory disorders in a year or less. In number and severity, the pulmonary symptoms far outranked those of older soldiers who had averaged 1½ packs of cigarettes a day for 11 years or more. "I saw chronic bronchitis and emphysema—generally found only in 45- or 50-year-olds—in hashish-smoking soldiers who were only 18 years old," says Dr. Tennant.

Cancer Risk. Pot smokers without symptoms can also have hidden lung disease. Dr. Donald Tashkin, director of the Lung Function Laboratory of U.C.L.A. Hospital in Los Angeles, uses highly sophisticated equipment to look for subclinical damage that otherwise cannot be detected. In one study of 28 seemingly healthy young men who averaged five "joints" a day for 47 to 59 days, Tashkin found highly significant dose-related impairments of lung function. These impairments are similar to those seen by other researchers studying moderate to heavy tobacco use over many years. In a more recent study, Tashkin and co-worker Barry Calvarese showed that marijuana smokers who averaged 2.2 joints a day for five years had 25-percent more airway resistance than a matched group of tobacco smokers who averaged 16 cigarettes a day for the same period.

"Airway resistance," explains Dr. Gary Huber, head of the University of Kentucky's Tobacco and Health Research Institute, "determines in part how well we can get oxygen into our bodies and how well we can get out the toxic carbon dioxide that can poison the cell." Working with rats, Huber has found that marijuana enhances—by some 200 percent—enzymes that potentially contribute to the "eating" or digesting of the lung itself.

Can pot cause lung cancer? A 1971–74 study compared a typical unfiltered U.S. tobacco cigarette with a marijuana joint. (Note: in the early '70s the THC potency of street pot was much lower than it is today.) Both smokes contained roughly equal amounts of such irritants and gaseous toxic agents as carbon monoxide, ammonia, acetone and benzene. But the carcinogens benzanthracene and benzopyrene were present in marijuana smoke in amounts 50 to 70 percent greater than in the smoke of cigarettes. When these researchers applied marijuana- and tobacco-smoke condensates to the backs of mice, both produced cancerous tumors.

Dr. Rudolph Leuchtenberger and his wife, Cecile, of the Swiss Institute for Experimental Cancer Research at Lausanne, studied more than 5000 animal and human lung-cell cultures exposed to puffs of smoke from a marijuana cigarette and from a tobacco cigarette. Their conclusion: Fresh smoke from marijuana cigarettes is harmful to lung cells in that it contributes to the development of pre-malignant and malignant lesions. The smoke from the tobacco cigarette had much less effect.

Lung-Tissue Damage. In February 1980, Dr. Tennant published the result of actual lung biopsies taken from 30 soldiers (average age 20), who had smoked hashish heavily for eight months to a year. Ninety-one percent of those soldiers who had smoked both hashish and cigarettes showed squamous-metaplasia cells, a step removed from "wild" or cancerous cells. Those who had smoked either hashish or cigarettes alone had a substantially lower incidence of these pre-cancerous cells. "However," Tennant noted, "the hashish-smoking soldiers were also more likely to be cigarette smokers too." He summed up: "We know that if the condition that caused the squamous-metaplasia cells doesn't stop, then cancer will likely ensue." The soldiers had smoked hash with a THC content comparable with that in pot smoked by millions of U.S. schoolchildren today.

Nor was there much difference in amounts smoked. The latest (1979) National High School Senior Survey shows that not only does one out of ten 12th-graders smoke pot daily, but these daily users now average 3½ joints a day, and 13 percent of them smoke more than seven joints daily. Of the 51 percent who smoked pot at

A Pot-Detection Test

In March 1980, after several years of research, an inexpensive, reliable, easy-to-use method was finally perfected for detecting cannabinoids in urine. Says Dr. Robert Willette, chief of the National Institute on Drug Abuse's Research Technology Branch: "The cannabinoid test is a real breakthrough. It can determine in 60 seconds, with 95-percent accuracy, the presence of cannabinoids in the urine for up to 48 hours after a joint has been smoked."

Many hospitals and private clinical laboratories now have the facilities for running the test, and many physicians are already finding it useful. For example, Dr. Donald Ian Macdonald, president-elect of the Florida Pediatric Society, plans to encourage every pediatrician in Florida to routinely use the new test when examining students from the sixth grade up. "It serves an invaluable function in alerting the physician," says Macdonald, "by eliminating 'the games of denial' many pot smokers play. It can save time and money needlessly spent on batteries of tests when, in fact, pot proves to be the sole cause of the problem."

all during their senior year, 43 percent said they usually stay high three to six hours or more.

Thus far, clinical evidence shows that all obvious symptoms, such as cough, chest pain and rales (abnormal sounds in the lungs or air passageways), disappear in time, if pot smoking is stopped. But what about the damage that shows up only in microscopic examination? The findings of Harris Rosenkrantz of EG&G Mason Research Institute are far from reassuring.

In three separate studies, rats were exposed to several puffs of pot smoke each day, the "human-equivalency dose" of an adult smoking one to six joints a day. Exposure from 3 to 12 months resulted in extensive dose-related lung damage, and the condition remained even after the smoking had been stopped for a month—which is roughly equivalent to two years for humans.

Another condition that remained 30 days after the pot puffs stopped involved the lungs' immune system. "In the healthy lung," says Rosenkrantz, "there are very few clumps of macrophages, scavenger cells that absorb and devour foreign matter. Rats were given the 'human equivalent' of one to six joints a day. After 180 days the macrophage clumps increased some 300 percent, clogging the air sacs. Some were so heavily blocked that they could not function."

A Weak Attack Force. Sue Powers was a beautiful girl of 16. But, as she frequently declared, "I'm *sick* of being sick!" She had a chronic cough, recurrent fever, sore throats. She'd recover from one illness and promptly come down with another. Her parents then learned she had been a daily pot smoker for two years. One day Mrs. Powers gave Sue a scientific report about marijuana's effect on the body's defense system, and suggested, "Why don't you cut out the pot and see what happens?" Sue did so. Within six months all her symptoms had disappeared. Coincidence? Perhaps. However, other parents and pediatricians have reported similar stories.

The scientific paper Mrs. Powers showed her daughter was done by Dr. Gabriel Nahas of Columbia University College of Physicians and Surgeons. The study centered on T-lymphocytes, white blood cells that play a key role in the body's defense system. T-cells constitute 70 percent of the lymphocytes in the bloodstream, and they respond by "charging up" (dividing rapidly) to increase their attack forces when they sense invasion by a virus, bacterium or other foreign body.

Nahas's study involved 51 young, chronic pot smokers—average age 22, who had averaged four joints a week for an average of four years—and 81 non-pot-smoking controls average age 44. Nahas found that the biochemically measured rate of division of the T-lymphocyte cells was a startling 41 percent lower in the young cannabis smokers than in the middle-aged controls.

Nahas then took his study a step further. He tested 24 kidney-transplant patients being given regular doses of special medication to *suppress* the immune system so that fighter cells would not reject the "foreign body"—the newly transplanted kidney. As an extra comparison, he also tested 60 cancer patients, who are known to have depressed immune systems. The results: the specially medicated transplant patients showed the highest impairment of T-lymphocyte response—53 percent. However, pot smokers ran neck and neck (41 percent) with the cancer patients (40 percent) in the suppression of their T-lymphocyte fighter cells.

Perhaps the most dramatic examples of defense-system impairment are the photo-micrographs taken by Dr. Marietta Issidorides of the University of Athens, Greece. Neutrophils (bacteria-fighter cells) from subjects who had never used cannabis showed up on slides as round, "plump," with a distinct "skin," or cell membrane. However, neutrophils from long-term (20-year) hash users were smaller and crumpled-looking, with dramatic alterations in the cell membrane. They were described as deformed cells, which probably could not function when challenged to do their assigned task of cleaning the blood.

All animal studies and most human studies show that marijuana not only inhibits immune cells' ability to recognize the encroachment of disease or a "foreign invader"; it also suppresses the ability to take any action once encroachment is recognized. Says immunologist Robert McDonough, "That's like having a feeble, half-blind night watchman, taking his gun away from him—and *then* expecting him to function."

Other Serious Hazards. All existing research clearly shows that marijuana should never be used by anyone with heart trouble. In one study,

Dr. Wilbert S. Aronow, professor of medicine and chief of cardiovascular research at the University of California at Irvine, gave a relatively weak joint to ten patients with angina pectoris (chest pain caused when insufficient oxygen is supplied to the heart muscle because of narrowing of the coronary arteries). Their average heart rate was 70 beats a minute. Ten puffs of pot jumped it to 100 beats a minute. Blood pressure also increased significantly. "By increasing either the heart rate or blood pressure, you increase the amount of oxygen needed by the heart muscle," says Aronow. "With ten puffs of pot you increase both simultaneously. But that's not all. Marijuana increases the amount of carbon monoxide in the blood as well—thereby reducing the amount of oxygen delivered to the heart muscle."

In other studies, Aronow showed that the amount of time one can exercise before chest pain occurs was reduced almost 50 percent after ten puffs of pot whereas ten puffs of a high-nicotine tobacco cigarette reduced exercise time only 23 percent. He also showed that marijuana significantly weakened the heart muscle's pumping action.

"Not only could marijuana precipitate a heart attack or cause sudden death in patients with known coronary disease," concludes Aronow, "but people who might have subclinical heart disease—without symptoms—could also be taking a risk. Remember that nearly 25 percent of persons dying suddenly from coronary heart disease have had no prior recognized symptoms of heart disease."

What about the cardiovascular systems of the hundreds of thousands of youngsters who are stoned more than three hours every day? Drs. Louis Vashon and Adam Sulkowski studied more than 100 young pot smokers (ages 18 to 25) and found that during all the hours of the "high," their heart rate was significantly elevated, in many cases rising from the normal 60 to 70 beats per minute to 130 to 150. The more THC absorbed, the faster the heart rate. "Such over-stimulation of the heart muscle," says Sulkowski, "could be the cause of the chest pains so commonly felt by young, chronic pot smokers."

Chest pain, emphysema, chronic bronchitis—these are conditions not normally seen in young people. Yet, at a time when four million of them, ages 12 to 17, are pot users, research and clinical evidence strongly suggest marijuana as a cause of these and other early symptoms and diseases of middle and old age. We already know that tobacco smoking is the largest preventable cause of death in America. There are many reasons to believe that marijuana smoking may be even more harmful.

Marijuana Alert III: The Devastation of Personality

By Peggy Mann

Reader's Digest has published two previous Marijuana Alert reports. The first, in December 1979, described marijuana-caused impairment to the brain and the reproductive system. The second, in November 1980, emphasized the harm pot does to the lungs, the heart and the immune system. This third report examines the drug's dramatically impairing effects on cells and how this can damage man's most precious possessions: the mind, the personality, the spirit.

In 1978, Dr. Marietta Issidorides of Athens, Greece, one of Europe's most respected biologists, conducted electron-microscope studies on the white blood cells of 40 long-term hashish smokers. "We learned," she reported, "that long-term use of cannabis (the plant from which marijuana and hashish come) deformed a significantly high proportion of the cells. Impaired white blood cells are unable to function properly and protect the individual from infections."

Two years earlier, Dr. Akira Morishima of Columbia University looked at the white blood cells of 25 apparently healthy young males who had smoked marijuana at least twice a week for four years. He

found that one-third of their cells contained only 5 to 30 of the normal human complement of 46 chromosomes. These are the particles in every cell's nucleus that pass on genetic instructions to the next generation. "In my twenty years of research on human cells," said Morishima, "I have never found any other drug that came close to the DNA damage done by marijuana."

A study completed earlier this year showed a relationship between marijuana use and cancer. Dr. Josel Szepsenwol of the department of biological sciences of Florida International University injected 216 mice with very small amounts of THC or cannabinol (2 of the 61 cannabinoids, chemicals found only in the cannabis plant) dissolved in sesame-seed oil, once a week. *Over 50 percent developed cancer.* Only 4 percent of the control mice (injected with oil only) developed cancer, a normal percentage for this strain of mice.

Erosion of Life. These research findings are just a few examples of marijuana damage to basic life processes. Since 1975 some 300 studies of cannabis's harmful effects on animal and human cells have appeared in scientific journals. These effects include: botched division, slowed growth and abnormal-sized nuclei in cells, disturbed production of protein, and also damage to sperm cells and ova, nerve and connective-tissue cells.

Pioneer marijuana researcher Dr. Gabriel Nahas sums up the central role of marijuana's effects on human cells: "The many findings of cell damage caused by cannabis explain all the other damaging effects of the drug—on the lungs, sex organs, brain, immune system. I call the slow cell damage done by regular pot smoking over the years *a slow erosion of life.*"

Psychological signs of pot impairment are often not slow to appear and, generally, the younger the user the more rapid the onset of the impairment. Last year marijuana use was second only to heroin addiction as reason for admission to federally funded drug-treatment facilities, and half of those admitted had begun smoking pot at age 14 or younger.

Marijuana use is now so endemic in every stratum of society that there is no longer such an identifiable entity as a pot-*prone* personality. Only one characteristic remains as a "prone" factor: youth. According to the latest (1979) U.S. National Survey on Drug Abuse, one out of six youngsters in the 12-to-17 age group was a current (within the past month) pot smoker. In the 18-to-25 age group, *one out of three Americans was a current pot smoker.* However, after young people *become* heavy pot smokers, these widely diverse users tend to gel into a startling sameness, with a distinct pot-induced profile.

The Pot Personality. "Not all kids have all the symptoms," says Dr. Dean Parmelee, director of adolescent in-patient services at Charles River Hospital, a teaching affiliate of Boston University School of Medicine. "In fact, some bright youngsters with outgoing personalities seem to be able to maintain their grades and activities for a few years. But gradually all users—youngsters and adults—compromise their potential, their activities and their life-style. And heavy *young* users eventually develop most, if not all, of the 'pot personality' symptoms."

Dr. Harold Voth of the Menninger Foundation's School of Psychiatry, and chief of staff of the Topeka VA Medical Center, has studied the psychopathology of marijuana in depth for the past eight years. He defines the pot personality: "The most obvious impairments caused by chronic marijuana use are in the area of Organic Brain Syndrome (OBS). These include impaired short-term memory, emotional flatness, and the amotivational—or dropout—syndrome. This can progress from dropping out of sports, to dropping out of school, to dropping out of the family."

Voth lists other typical symptoms of pot-induced OBS: "diminished will power, concentration, attention span, ability to deal with abstract or complex problems, and tolerance for frustration; increased confusion in thinking, impaired judgment, hostility toward authority.

"Another pernicious symptom," says Voth, "is the element of denial—refusal to believe the hard medical evidence that marijuana is physically and psychologically harmful." He also points out that it takes years of heavy drinking to reach the same point of psychological impairment that marijuana can induce in a matter of months, particularly in the case of the very young user.

Personality Changes. Unlike the heavy drinker who generally "becomes himself again" when sober, the underlying personality structure of the chronic pot smoker seems to change. Dr. John Meeks, medical director of the Psychiatric Institute of Montgomery County, Maryland, says, "If someone smokes twice a week or more, sobering up—in any total sense—never occurs. Even when not 'high,' he or she remains in a state of subacute intoxication; in most cases, without even recognizing this 'holdover' effect."

While alcohol is water soluble and washes out of the body in a matter of hours, cannabinoids are fat soluble and accumulate in fatty sections of the cells and in fatty organs (the brain is one-third fat). Only very slowly do the cannabinoids seep back into the bloodstream so they can be metabolized and eliminated. Thus they act like time-release capsules, constantly emitting subtle intoxication.

Rhesus-monkey studies done by psychiatrist-neurologist Robert Heath give further insights into cellular causes of psychological symptoms. The monkeys were exposed to the smoke of two to three "monkey-sized" marijuana ciga-

rettes (one-quarter the size of a human "joint") five days a week, for six months. In each monkey, several thousand brain cells from 42 different areas of the brain were examined under the electron microscope. Although there were some structural cell changes in all the brain sites, striking impairment was found in the sites specifically related to the typical pot symptoms of apathy and flatness. Dramatic cell impairment was also found in sites correlated with irritability and fear—prominent symptoms of pot-induced paranoia.

"I don't know of any other drug, including alcohol," says Heath, "that causes such a wide spectrum of brain changes as we saw in those cells. And today tens of thousands of U.S. teen-agers are inhaling proportionally far more pot smoke every day than we gave those monkeys."

Senile Symptoms. In March 1980 Dr. Adam Sulkowski, a geriatric psychiatrist, published the first scientific paper to set forth the many similarities between the psychological symptoms seen in marijuana intoxication and senility. In July 1981 Dr. Stephen Williams, professor of psychology at Houston Baptist University, and psychiatrist Jason Baron, director of Deer Park Hospital in Houston, also found a number of "senility symptoms" in a study of 60 teen-agers in a drug-treatment program who were daily pot smokers but used no other drugs. At the beginning of the study, they were given a battery of psychological tests, which were then repeated after six pot-free weeks in the hospital.

Williams reported: "In many very elderly people, we see an unreasonable preoccupation with how one's body feels, obsessive-compulsive tendencies and inflexibility. All these symptoms were strikingly evident in our study of teen-age pot smokers, and all these symptoms decreased markedly once the drug was out of their systems.

"Depression," says Williams, "is perhaps the most common psychological symptom among old people. It is usually associated with feelings of loss, such as loss of loved ones, of health, etc. The chief cause of depression among our teen-age subjects was also loss: a tremendous loss of self-esteem. One good-looking, well-dressed 16-year-old put it this way: 'I'm like an empty shell. There is nothing left that I like about myself. And pot did it.' "

Another finding is regressive immaturity. Says psychiatrist Mitchell Rosenthal, the director of Phoenix House in New York City, the nation's largest residential drug-treatment facility, "Just when our youngsters need most to grow psychologically, they are pushed back toward infantilism by self-absorption and the desire for instant gratification. When they need most to learn how to cope with the emotional storms and squalls of the troubled teen-age period, they are instead copping out, blowing

their problems away with pot."

Rosenthal predicts: "A sizeable number of our young people will not mature as they should. Instead, we can look forward to a growing population of immature, underqualified adults, many of whom will be unable to live without economic, social or clinical support."

Risk of Relapse. In August 1981 Dr. Mark Gold completed a study of 100 teen-age and adult "marijuanaholics"—chronic users of pot, who are psychologically, physiologically and socially disabled. Gold, a recipient of the American Psychiatric Association's 1981 Foundation Prize for Research in Psychiatry, is director of research at Fair Oaks Hospital in Summit, N.J., one of the few psychiatric hospitals in the country that specializes in treatment of the marijuanaholic.

"Our study," says Gold, "shows that in the case of youngsters who abstain completely for an average of six months, there is return of concentration, attention and memory to expected levels.

"This is not true for older marijuanaholics. In respect to short-term memory loss, in some cases, they do not appear to come back all the way. Furthermore, because older users are usually long-term users, they have made subtle changes in their lives that are hard to undo. For example, they slide into less-demanding jobs."

Gold also found that, like alcoholics, marijuanaholics are always at high risk of relapse. "Even if off the drug for a year," he says, "one or two joints can send them on a pot binge, and they relapse quickly into their former use patterns. And although it may have taken two years to reach their prior seriously disabled state, it may take only two weeks of renewed pot smoking to revert to that same level."

According to Dr. Carlton Turner, now Senior Policy Adviser on Drug Policy for the White House and former director of the National Institute on Drug Abuse Marijuana Research Program at the University of Mississippi, most Americans do not realize the pandemic proportions of marijuana use among our youngsters. Turner warns: "The inescapable fact is that unless our current pot-smoking habits are reversed sharply, marijuana will have drastic long-term physical and psychological health effects on our young people and, therefore, on the future of our families and our nation."

MARIJUANA AND DRIVING: The Sobering Truth

A growing number of stoned motorists is endangering lives on our highways. Here's what must be done

By Peggy Mann

RECENT STUDIES blow the warning whistle on a little-publicized but nonetheless frightening new menace to motorists: the pot smoker driving "high" on the highways. Persuasive evidence is mounting that such drivers often have a distorted sense of space and time, altered peripheral and central vision, and impaired manipulative and coördination skills.

Surveys reported by the National Institute on Drug Abuse (NIDA) reveal that 60 to 80 percent of the marijuana users questioned sometimes drive while "intoxicated" on pot. Every day, increasing numbers of stoned drivers are endangering lives—as pot use escalates into what NIDA calls "a national epidemic among young people." (The latest countrywide survey shows that one out of every nine high-school seniors smokes pot *daily,* almost twice the 1975 figure.)

Our nation is both unaware of the marijuana highway crisis and unprepared for it. Many states have inexpensive and legally recognized tests for establishing alcoholic intoxication. However, we have no workable roadside test for marijuana intoxication. (NIDA is funding research on such a test, but it is probably three or four years away from being ready.)

In 39 states, possession of marijuana is still a crime, but enforcement is generally lax—and pot smokers know it. Of the 11 states that have decriminalized marijuana, only Alaska and Minnesota have thus far enacted a special increased penalty for possession of pot in a vehicle. In all 11 states, many pot-smoking drivers mistakenly believe that decriminalization implies governmental sanction to smoke marijuana—anywhere.

The politicization of pot has helped to obscure the picture. But when emotions and polemics are cleared away, both pro- and anti-decriminalization forces agree that it is dangerous to drive stoned. Even the National Organization for the Reform of Marijuana Laws (NORML), which supports removal of all legal penalties for possession of pot for personal use, "strongly discourages driving while under the influence of marijuana or any other drug, and recognizes the legitimate public interest in prohibiting such conduct."

The "legitimate public interest," however, is *not* being protected. Highway officials nationwide express profound concern. Richard L. Burton, former commissioner of Alaska's Department of Public Safety, is among the most apprehensive, saying, "The alcohol problem on the highways will soon be only half as serious as marijuana—and that's not because the alcohol problem is going to get any better!" And Lee Dogoloff, White House adviser on federal drug policy, states: "It is essential that Americans understand the very real hazards of driving while marijuana-intoxicated."

How much does marijuana

Research findings have been remarkably consistent. In 1975, the Boston University Traffic Accident Research Team surveyed 267 drivers deemed "most responsible" for a fatal accident. Sixteen percent of the 267 drivers had been smoking marijuana prior to the fatal accident. Statistically, "marijuana smokers were over-represented in fatal highway accidents," the study concluded. Other traffic-fatality studies in Albuquerque, N.M., Baltimore, and in Oklahoma City yielded a similar incidence of marijuana involvement.

California's Department of Justice has made the first large-scale study directly relating marijuana to traffic arrests. The study, completed last year, covered 46 of the state's 58 counties and examined 1792 blood samples (randomly selected from 19,000 turned in by the California Highway Patrol) from drivers arrested for traffic accidents or for driving under the influence of drugs. The tests were made with an expensive radioimmunoassay laboratory technique that can analyze blood samples for molecules of THC (tetrahydrocannabinol), the chief mind-altering ingredient of marijuana. Sixteen percent of the 1792 arrested drivers had sufficient THC in their blood to constitute marijuana intoxication.

Victor Reeve, supervisor of the California study, pointed out: "This must be regarded as a conservative figure because, of the drivers arrested, fewer than half agreed to give a blood sample. How many of the remaining drivers were under the influence of marijuana we will never know."

More than 50 studies have been made in the United States since 1970, when standardized grades of so-called "NIDA marijuana" were made available to researchers. Says Herbert Moskowitz, a University of California research psychologist who has probably done the most work on marijuana with simulated driving studies: "The preponderance of evidence indicates that marijuana impairs skills performance and perceptual processes, including vision, attention, and tracking behavior—all important components of driving performance."

Such impairments as tracking performance are significant after two "street joints." Drivers may imagine they are doing a fine job of keeping the car in the correct lane, when in fact they are weaving.

In addition, marijuana can cause: impaired night-driving abilities, impaired short-term memory function, impaired concentration, impaired ocular motor control and impaired vigilance.

These results are generally obtained in driving-simulator tests—and most people drive *better* under simulated conditions than they drive normally.

However, one test was carried out in *actual* driving conditions by Dr. Harry Klonoff, professor of psychiatry at the University of British Columbia. He chose 64 psychologically stable subjects who had used marijuana before. One third were given a low dosage of one street joint, one third received a high dosage of two joints, the other third received placebos. With dual controls and an observer in each car, all 64 volunteers drove through a closed course with no other traffic. Low-dose subjects showed a 33-percent significant decline in driving skills, while high-dose subjects showed a 55-percent significant decline.

Thirty-eight drivers also covered a 16-mile route from the university campus to the traffic-heavy downtown area, and back again. These 38 were rated by the system used to examine drivers for licensing. Final figures for the road test showed that those on the low dose had a *42-percent decline* in driving skills, while the high-dosage subjects had a *63-percent decline.* Unusual driving behavior, Klonoff reported, included missing traffic lights or stop signs, poor handling of the vehicle in traffic, unawareness of pedestrians and stationary vehicles.

Of 11 behavioral components tested, the three of greatest vulnerability were judgment, caution and concentration—despite the fact that some of the subjects paid special attention to their driving to prove that pot had no impairing effects.

Studies in 1972 showed a definite decrease in skills performance 5 to 6 hours after intake of a strong social dose of marijuana. Another worrisome factor, reported in 1976 by NIDA, is that a person may attempt to drive without realizing that his functioning is still impaired—even though he

or she no longer feels "high."

A 1972 study of driving behavior in a safety-controlled area showed a "marked" decline in driving abilities was still present 5 to 6 hours after intake, a "definite" effect 8 to 10 hours after intake, and a lingering effect as long as 24 hours later. Another factor: Many chronic pot smokers reported that only a few puffs of "good pot" (with a high THC content) can result in a sudden intense high (if this happens on the highway it can be frightening and dangerous).

Chronic pot smokers tend to view their driving impairments through rose-colored glasses. Among more than 1000 people arrested for marijuana possession in Minnesota, 25 percent thought pot had no effect on their driving. More than 25 percent thought pot actually improved their coördination. Some enthusiasts *prefer* driving stoned, saying that it becomes less boring. "I get more into my driving" goes the refrain.

Dr. Joseph Davis, the medical examiner in Dade County, Fla., with Arnold W. Klein and Dr. Brian D. Blackbourne surveyed 571 local college and post-graduate students on pot and driving. In every driving category former and infrequent users sharply downgraded their ability to perform while stoned, while chronic pot smokers gave themselves quite good grades. Despite their cheery assessments, 53 percent of the chronic users had been stopped by police for driving under the influence of drugs; 22 percent had three or more violations, compared with 2.3 percent of non-users. Eight percent had had their license revoked, compared to one percent of the non-users.

The alcohol-drunk driver usually finds it hard to hide his condition, if stopped by the police. But the pot-high driver often believes he can "come down" and carry on a seemingly normal conversation with a police officer. This apparent ability to "hide their high" gives many pot smokers confidence that they can drive stoned.

One such self-assured driver, a 30-year-old medical sociologist—a heavy drug user and daily pot smoker for about five years before he swore off drugs—reported smoking a few joints at a friend's house. Then he borrowed his friend's car, certain that he could handle whatever might turn up on the road—including the police. "But," he recalls, "as I drove down one of the busiest streets in the city, the dream-like pleasure I usually felt when driving stoned suddenly burst into a total psychedelic experience. All I could see was a myriad of tiny dancing lights. I was so totally spaced out that I had no awareness of even being *in* a car, much less driving one."

When a traffic light turned red, he didn't notice it, and crashed into a small car. He got out, danced a little jig, walked away and wandered around the city for hours. "I knew something had happened. But I didn't know what."

Around 4 a.m. he remembered, and turned himself in to the police. He learned that he had wrecked his friend's car, and had totally demolished the small car in front of him—which had, in turn, crashed into the sedan in front of it. Remarkably, no one had been seriously injured.

What can be done—now? We need not wait helplessly until scientists come up with a roadside kit for testing THC levels, and states enact laws to deal with marijuana-intoxicated drivers. There are two avenues we can take right away.

First, state legislatures should immediately pass laws imposing a high fine and/or other stiff penalty for possession of marijuana *in a vehicle*—including taxis, buses, trucks, trains and planes.

Second, we must inaugurate educational programs by governmental agencies, insurance companies, foundations, private groups and, especially, high-school and private-driving instructors. (A friend of mine taking a driving course was offered a joint by an instructor, "to relax.") Coördination of effort will increase the impact of the message: *it's dangerous to drive stoned.*

Brochures should be distributed at toll booths, gas stations, garages. Car users are a captive audience, and "spot warnings" can be tailored to a range of radio programs. The American Automobile Association and National Safety Council could begin a nationwide information campaign.

Unless we move in these directions, warns NIDA's Robert Willette, who is responsible for developing THC test kits, more and more pot users will be driving high. "We can only hope that growing awareness of the problem," he says, "will prevent a national disaster."

TONY KNOWLES, MAYOR

DEPARTMENT OF HEALTH AND ENVIRONMENTAL PROTECTION

FEB 1984
RECEIVED

February 13, 1984

The Honorable Charlie Bussell
The House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Bussell:

Enclosed please find a concise outline of needs regarding drug abuse, alcoholism and mental health services in Anchorage. Following the statistics identifying the scope of the problem (section one) is the requested amount of state dollars (section two) needed to sufficiently fund treatment services. It is with concern the Department asks that you review the attached in an effort to responsibly fund Anchorage behavioral health treatment and prevention services.

As noted in the enclosed, the amount of money lost yearly to the potential market productivity of substance abusing youth in Anchorage alone is over 11 million dollars and the money lost to Alaskan industry yearly is greater still.

If you have any questions do not hesitate to contact the Behavioral Health Division.

Respectfully,

James C. Parsons, Division Manager
Susan Johnson, Program Coordinator
Frances Purdy, Program Coordinator

DRUG ABUSE AND ALCOHOLISM SERVICES

THE PROBLEM: SECTION ONE

PREVALENCE OF DRUG TAKING BEHAVIOR BY YOUTH:

Prevalence is defined by the Center for Alcohol and Addiction Studies (1983) as the incidence of drug-taking as represented by the percent of respondents who ever tried a drug, (i.e., has used the drug one or more times in a lifetime). Prevalence is particularly important as an indicator of potential drug abuse and as a descriptor of high risk populations. Hence, its greatest relevance is in relationship to the development of prevention programs. Although the Anchorage School District recently conducted a survey in which prevalence rates have dropped (approximately 5%) rates still exceed the national average.

COMPARISON OF PREVALENCE WITH PSYCHOACTIVE DRUGS IN ANCHORAGE AND NATIONWIDE
(Students: Grades 7 - 12)

°ANCHORAGE STUDENTS HAVE TRIED:

- ° STIMULANTS 4.4 times the national average
- ° COCAINE 3.6 times the national average
- ° TRANQUILIZERS 3.6 times the national average
- ° DEPRESSANTS 3.4 times the national average
- ° MARIJUANA 1.9 times the national average
- ° HALLUCINOGENS 1.8 times the national average
- ° CIGARETTE smoking in youth is one strong predictor of future drug abuse: 50% of the Anchorage student population has tried tobacco
- ° ALCOHOL use by Anchorage youth is only slightly higher than the national average yet an alarming 82% of the student population has tried alcohol

(Center for Alcohol and Addiction Studies, 1983)

- ° 77 MILLION DOLLARS IS LOST TO ALASKAN INDUSTRY YEARLY DUE TO ALCOHOLISM ALONE.
- ° 11.3 MILLION DOLLARS IS LOST YEARLY TO THE POTENTIAL MARKET PRODUCTIVITY OF ALCOHOL MISUSE BY YOUTH (GRADES 9-12) IN ANCHORAGE ALONE.
- ° NATIONALLY, 23% OF THE POPULATION WHO HAD "EVER TRIED" COCAINE BECAME REGULAR USERS AND 20-25% OF THAT GROUP BECAME DEPENDENT ON COCAIN .
- ° PREVALENCE OF DRUG USE IN ADULTS (26+ YEARS) IS TWICE THE NATIONAL AVERAGE FOR EVERY DRUG BUT ALCOHOL AND TOBACCO.

- PREVALENCE OF DRUG USE IN YOUNG ADULTS (18-25 YEARS) FOR MARIJUANA, COCAINE AND STIMULANTS IS ONE AND ONE-HALF TO TWO AND ONE-HALF TIMES THE NATIONAL AVERAGE.

- ONLY 15% OF THOSE PEOPLE NEEDING HELP FOR DRUG AND ALCOHOL PROBLEMS RECEIVE IT.

- THE MUNICIPALITY OF ANCHORAGE SERVED 30% OF THE STATEWIDE DRUG AND ALCOHOL ABUSING POPULATION TREATED WITH STATE OFFICE OF ALCOHOL AND DRUG ABUSE (SOADA) MONIES IN FY-83.

- THE MUNICIPALITY OF ANCHORAGE SERVED 22% OF THE STATEWIDE ALASKA NATIVE SUBSTANCE ABUSING POPULATION TREATED WITH SOADA MONIES.

- THE MUNICIPALITY OF ANCHORAGE SERVED 74% OF THE SUBSTANCE ABUSING POPULATION 17 YEARS OF AGE AND YOUNGER TREATED WITH SOADA MONIES.

WHO IN ANCHORAGE RECEIVES DRUG AND ALCOHOL TREATMENT AND AT WHAT COST

- 3400 PEOPLE RECEIVED DRUG AND ALCOHOL SERVICES IN FY83;

- DEPENDING ON THE PROGRAM FROM 10% TO 35% OF THE CLIENTELE SERVED WERE ALASKANS FROM OUTSIDE THE ANCHORAGE AREA;

- DRUG ABUSE PROGRAMS RECEIVE 46% OF THEIR FUNDS FROM ALCOHOL MONIES;

- COST PER UNIT OF SERVICE PER DAY:

SOURCE	AVERAGE COST
ANCHORAGE JAILS	76.00*
ADULT RESIDENTIAL	46.00
DRUG AND ALCOHOL OUTPATIENT	55.00
YOUTH RESIDENTIAL	107.00**

ESTIMATED COST TO MAINTAIN NARCOTIC DRUG HABIT "ON THE STREET" IS $400.00 A DAY.

* THIS DOES NOT INCLUDE CENTRAL ADMINISTRATION, OVERTIME FOR EMPLOYEES IN A 24 HR. INSTITUTION OR MAJOR CAPITOL EXPENDITURES: WE SUSPECT THIS FIGURE TO BE SIGNIFICANTLY LOWER THAN ACTUAL COST

** THIS REPRESENTS ONLY 61.4% OF THE COST OF COMPARABLE SERVICES, WHICH DOES NOT INCLUDE TRANSPORTATION OR FAMILY COUNSELING

DO THESE PROGRAMS WORK?

- RESEARCH CONDUCTED NATIONALLY (1982) CONCLUDED THAT ONE YEAR AFTER TREATMENT THERE WAS;

NO CRIMINALITY AND NO DRUG USE IN:

38% OF THE THERAPEUTIC COMMUNITY GRADUATES
34% OF THE DRUG FREE OUTPATIENT GRADUATES
32% OF THE METHADONE MAINTENANCE GRADUATES

AND

NO DAILY OPIOD USE IN:

71% OF THE THERAPEUTIC COMMUNITY GRADUATES
70% OF THE DRUG FREE OUTPATIENT GRADUATES
67% OF THE METHADONE MAINTENANCE GRADUATES

MENTAL HEALTH SERVICES

THE PROBLEM

- MORE INDIVIDUALS FROM API ARE DISCHARGED TO ANCHORAGE THAN ARE ADMITTED FROM ANCHORAGE EACH YEAR.

- 53% OF OUTPATIENT SERVICES ARE PROVIDED BY PUBLICALLY FUNDED ANCHORAGE PROGRAMS.
  OVER 50% OF THE API DISCHARGES ARE MADE TO ANCHORAGE.
  ONLY 25% OF THE STATE FUNDS COME TO ANCHORAGE ($806,000 IN 1983).

- EVEN WITH THE HELP OF THE PRIVATE SECTOR MENTAL HEALTH SERVICES, ONLY 32% OF INDIVIDUALS NEEDING HELP ARE SERVED.

- ANCHORAGE SERVES AS A REGIONAL CENTER WITH SPECIALIZED MENTAL HEALTH AND NECESSARY ANCILLARY SERVICES.

- OVER 450 ATTEMPTED SUICIDES OCCURRED IN ANCHORAGE IN 1982.

- OVER 4,800 CRISIS CALLS CAME FROM DEAF INDIVIDUALS.

- BETWEEN 400-450 CHRONICALLY MENTALLY INDIVIDUALS RESIDE IN ANCHORAGE.

- THE DIVORCE RATE IS ALMOST TWICE THE NATIONAL AVERAGE.

- OVER 1000 NEW CASES OF CHILD ABUSE AND NEGLECT WERE REPORTED IN ANCHORAGE IN 1982 OVER 1981.

DO THESE PROGRAMS WORK

IN 1982:

39 SUICIDES IN PROGRESS PREVENTED BY CRISIS INTERVENTION

506 VICTIMS OF RAPE RECEIVED ASSISTANCE

353 INDIVIDUALS WERE MAINTAINED OUTSIDE API

68% OF FAMILIES SEEKING HELP SUCCESSFULLY SOLVED THEIR PROBLEMS.

COST OF TREATMENT

IN 1982:

3,511 INDIVIDUALS RECEIVED MENTAL HEALTH COUNSELING
12,432 CRISIS TELEPHONE CALLS WERE ANSWERED

AVERAGE COST OF CRISIS TELEPHONE CALL	$ 10.89
AVERAGE COST OF INDIVIDUAL THERAPY SESSION	$ 63.39

COST PER DAY FOR CARE OF THE CHRONICALLY MENTALLY ILL:

IN THE COMMUNITY	$ 82.68
IN A.P.I.	$275.00

INDIVIDUALS WITH ACUTE OR CHRONIC MENTAL ILLNESS HAVE A BETTER THAN 20% CHANCE OF AVOIDING HOSPITALIZATION IF INITIAL CRISIS INTERVENTION IS PROVIDED IN THE COMMUNITY. IF THEY MUST BE HOSPITALIZED, THEY WILL SPEND 50% LESS TIME IN THE HOSPITAL.

Alaska State Legislature
HOUSE OF REPRESENTATIVES

REPRESENTATIVE
CHARLIE BUSSELL
CHAIRMAN

Committee on Judiciary

GUEST SPEAKERS

2:00 P.M.
Dr. Reese T. Jones
Professor of Psychiatry
Langley Porter Psychiatric Institute
University of California - San Francisco

Dr. Jones is a clinical psychiatrist at the University of California at San Francisco and served as a member of the distinguished commission of scholars sponsored by the Institute of Medicine to study the physiological and psychological effects of marijuana. The report, entitled "Marijuana and Health," is recognized by the medical community as one of the preeminent academic works on the subject.

2:30 P.M.
Gabriel G. Nahas O.B.E, M.D., Ph.D.
Professor of Anesthesiology
Columbia University
College of Physicians and Surgeons

Dr. Nahas is a professor at Columbia University in New York City and is reknowned as a pioneer in the research of the biological effects of marijuana. Considered by many as the foremost authority on the subject, Dr. Nahas has authored two books Keep off the Grass and Marijuana: Biological Effects.

Bussell: 'Close door on marijuana use'

By K.C. MOON
Daily News reporter

House Judiciary Chairman Charlie Bussell, R-Anchorage, has drafted a bill that would "close the door on marijuana use" in the state by making illegal the possession of any amount of the drug.

The bill was introduced by the committee earlier this week.

Current statutes, barely a year old, permit possession of up to a quarter pound of marijuana for personal use in one's own home.

Rep. Don Clocksin, a minority member of the committee, said the bill is "a waste of time" for legislators because they decided the marijuana issue just two years ago.

Law enforcement officials say the proposed law would not have a substantial effect on current enforcement patterns. Busting drug dealers, not users, would continue to be the focus of police and courts.

Bussell said he drafted the bill because Alaska's current law is "out of step with other states' laws and federal guidelines regarding marijuana."

Alaska, Hawaii and Oregon are the only states that permit any use of marijuana. Federal laws prohibit marijauna possession.

He said the bill reflects a conservative wave that he said is sweeping the country. "As a rough guess, I would say that the public would support (recriminalizing marijuana) about 60-40."

But Clocksin, D-Anchorage, said he doubts Bussell's reasons for introducing the bill. "There's no justification for it.

"The law we passed in 1982 was a delicate and fair compromise," he said. "We should stick with it. This new bill is a waste of the legislature's time."

The Alaska Legislature voted to allow private use of marijuana and decriminalize public use in 1975, the same year the state Supreme Court ruled that possession of marijuana in a person's home for personal use was constitutionally protected.

The court ruled that alleged health hazards associated with marijuana use were not substantial enough to justify the state's intrusion into citizens' constitutional right to privacy.

Revised drug laws passed in 1982 made public marijuana-smoking a criminal offense but allowed possession of less than four ounces in one's home.

The latest proposal would make possession of smaller amounts of the drug a misdemeanor offense with a maximum punishment of $1,000 fine and 90 days in jail.

Bussell said medical evidence published since the 1975 court decision gives the state reason enough to ban marijuana-smoking completely.

He cited no specific health studies, saying such research would be brought out when hearings on the bill begin.

Dan Hickey, chief prosecutor for the state, said the state's policy on prosecuting drug users would not change if lawmakers pass a blanket ban on marijuana.

"Our emphasis is not in the prosecution of drug abusers," he said. "Our focus is on major distributers and traffickers."

"Our opinion on that would not change if this (bill) becomes law."

Anchorage Police Chief Brian Porter said he supports banning all marijuana use but does not see the department shifting its sights to individual users. "We might make a few arrests initially to get the message out," he said. "I don't see the department putting out 25 more officers" to bust private users.

Porter said such a law would rid the state of hypocrisy in the current statutes, which ban the sale of marijuana while permitting its use.

"There's a hole in the current law," said Lt. George Novaky, who heads the Anchorage Police Department's Metro Drug Unit. "We're creating a market for the use of marijuana — turning people into purchasers — while the sale of pot is still illegal.

"Obviously the majority of users don't grow their own," he said. "If they are, I want to know who's buying all the stuff that's being smuggled into the state."

Clocksin said he has heard nothing about health studies that would justify prohibiting private use of marijuana. "What (Bussell) is trying to do is to break into people's homes and tell them what to do," he said.

He called Bussell a "conservative extremist who doesn't represent the mainstream" of public sentiment.

We are very concerned about the health hazards of marihuana use. These hazards are described in the Seventh Annual Marihuana Report to the Congress from the Secretary of Health, Education, and Welfare (HEW), which was released on April 18, 1979. This report summarized recent research on the medical and social effects of marihuana use and pointed out the dramatic increase in marihuana smoking among teen-agers and adolescents.

A need remained, however, for a comprehensive review of marihuana research efforts that would identify the most urgently needed and promising lines of inquiry upon which future decisionmaking in this area could be based. Therefore, Secretary Califano announced that the Department of HEW will undertake a comprehensive review of the existing scientific evidence on marihuana. This review will encompass research into the physiological effects of chronic marihuana use as well as behavioral research on use-related problems, such as intervention strategies to help adolescents resist peer pressure, evaluate evidence, and assess risks.

Responsibility for seeing that this review is conducted has been assigned to the National Institutes of Health (NIH). An independent scientific group will implement this review and is expected to produce a report within 12 months.

Since 1967 the Federal Government has spent approximately $35 million on marinuana research to support over a thousand research projects. This research effort continues. For example, this fiscal year, FY 1979, the National Institute on Drug Abuse (NIDA) will support approximately a hundred research studies totaling $3.8 million. NIDA-supported research includes investigations into the effects of marihuana on the heart and lungs, on psychological, social, and physical development, and on pregnancy, as well as research into possible medical use, including the treatment of glaucoma.

Mr. Chairman, presently available evidence clearly indicates that marihuana is not a "safe" substance. While I will not attempt this morning to review all of the scientific findings described in the Marihuana and Health Report, I would like to briefly indicate to the Committee what the hazards of marihuana use are for adolescents and to various organs and systems of the human body.

Acute Intoxication Impairs Learning, Memory and Intellectual Performance

Virtually all of the many studies which have been done of performance while "high" converge toward the conclusion that marihuana interferes with immediate memory and intellectual performance in ways that impair thinking, reading comprehension, and verbal and arithmetic problem solving. Less familiar, more difficult tasks are interfered with more than well-learned performance, and the effect depends on the amount used and the tolerance for the effect.

Marihuana Intoxication Impairs Driving and Other Skilled Performance

Evidence strongly suggests that being "high" interferes with driving, flying, and other complex psychomotor performance at usual levels of social usage.

Despite their commonly expressed belief that their driving skills are impaired by cannabis intoxication, there is reason for believing that more marihuana users drive today while "high" than was true in the past. As use becomes increasingly

---

Health Consequences of Marihuana Use

William Pollin, M.D.
Director
National Institute on Drug Abuse

common and socially acceptable, and as the risk of arrest for simple possession decreases, still more people are likely to risk driving while "high." In limited surveys, from 60 percent to 80 percent of marihuana users questioned indicated that they sometimes drive while high. Marihuana use in combination with alcohol is also quite common, and the risk of the two drugs used in combination may well be greater than that posed by either alone.

A study reported in 1976 of drivers involved in fatal accidents in the greater Boston area was conducted by the Boston University Accident Team. They found that marihuana smokers were overrepresented in fatal highway accidents as compared to a control group of nonsmokers of similar age and sex.

While there have been no recent studies, research thus far indicates that even experienced pilots undergo marked deterioration in performance under flight simulator test conditions while "high." Thus, flying an aircraft while marihuana-intoxicated should be considered dangerous.

A continuing danger common to both driving and flying is that some of the perceptual or other performance decrements resulting from marihuana use may persist for some time, possibly several hours, beyond the period of subjective intoxication. Under such circumstances, the individual may attempt to fly or drive without realizing that his or her ability to do so is still impaired although he or she no longer feels "high."

Effects on the Heart

Acute effects of marihuana use on heart function in healthy young male volunteers have been viewed as benign. However, the increased heart rate produced and evidence that chest pain associated with poor circulation to the heart muscle occurs more rapidly with marihuana use than with cigarette smoking have led to a consensus that those with heart conditions, or at high risk, should not use marihuana.

Effects on Lung Functioning

Since, like tobacco, marihuana is usually smoked and typically deeply inhaled, adverse pulmonary effects may be expected. Based on both clinical observation and laboratory measurement, marihuana shows evidence of interfering with lung function and producing bronchial irritation in habitual users. One study has found that smoking four or more "joints" per week decreases vital capacity—the amount of air the lungs can move following a deep breath—as much as smoking nearly a pack of cigarettes a day. This comparison, while widely quoted, needs confirmation by independent studies. As yet there is no direct clinical evidence that marihuana smoking causes lung cancer. It has been reported that marihuana smoke contains more carcinogens than tobacco, that in animal testing the smoke residuals produce skin tumors, and there is laboratory evidence that human lung tissue exposed in the test tube to marihuana smoke shows more cellular changes than when exposed to similar amounts of standard tobacco smoke. Very heavy marihuana smoking by healthy young male subjects under controlled experimental conditions has been demonstrated to cause mild but statistically significant airway obstruction. Under conditions of ready availability, there is also evidence that the number of marihuana cigarettes consumed (up to ten "joints" daily) may approach that of tobacco cigarettes.

From the total body of clinical and experimental evidence accumulated to date, it appears highly likely that daily use of marihuana may lead to lung damage similar to that resulting from heavy cigarette smoking. Since marihuana smokers often smoke both tobacco and marihuana, the effects of the combination require additional study.

Effects on the Immune System

Research findings are divided as to whether marihuana use adversely affects the body's natural defenses against infection and disease. Of the studies reviewed, the majority have shown that such an alteration occurs. Whether or not such changes, when they are found, have practical implications for users is not known at this time.

Brain Damage Research

A British research report, which originally appeared in 1971, attributed brain atrophy to cannabis use in a group of young male users. It continues to be widely cited, particularly in the mass media. In the original study, 10 patients, with histories of from 3 to 11 years of marihuana use, were examined by a neurological technique (air encephalography) used to detect gross brain changes. The authors concluded that their findings suggested that regular use of cannabis may produce brain atrophy. This research was faulted on several

grounds. All the patients had used other drugs, making the causal connection with marihuana use questionable; and the appropriateness of the comparison group and diagnostic technique was questionable.

Two studies were subsequently conducted in Missouri and Massachusetts. They examined two samples of young men with histories of heavy cannabis smoking using computerized transaxial tomography (CTT), a brain scanning technique for visualizing the anatomy of the brain. In both studies, the resulting brain scans were read by experienced neuroradiologists, indepedent of the drug histories. In neither was there any evidence of cerebral atrophy. Several additional points should, however, be stressed. Neither study rules out the possibility that more subtle and lasting changes of brain function may occur as a result of heavy and continued marihuana smoking. It is entirely possible to have impairment of brain function from toxic or other causes that is not apparent on gross examination of the brain in the living organism. One researcher has used electrodes implanted deep within the brains of monkeys instead of more conventional scalp recording techniques to record brain electrical activity changes related to marihuana use. He has found persistent changes related to chronic use. This same investigator has reported that rhesus monkeys trained to smoke a joint of marihuana five days per week for six months show persistent microscopic changes in brain cellular structure following this treatment. While both these experiments demonstrate the possibility that more subtle changes in brain functioning or structure may occur as a result of marihuana smoking, at least in animals, the implications of these changes for subsequent human or animal behavior are at present unknown. Other studies, using more conventional EEG techniques to measure brain electrical activity, have found changes temporarily associated with acute use but no evidence of persistently abnormal EEG findings related to chronic cannabis use.

As I indicated earlier, many clinicians feel that regular marihuana use may seriously interfere with psychological functioning and personality development, especially in childhood and adolescence. There is increasing clinical concern that at least some percentage of regular heavy daily users do develop a psychological dependence on marihuana to the extent that it interferes with functioning in a way analogous to heavy alcohol use.

Overall, of the studies reviewed, the majority have suggested enduring impairment occurs. The quality of studies in this area, in particular, is highly variable,leaving the issue in significant doubt.

Effects on the Endocrine System

There is evidence that marihuana can affect the network of glands and hormones which are involved in such functions as growth, energy levels and reproduction. Levels of the male hormone testosterone have been found to be reduced (though still within normal range) in some, but not all, studies. There is animal and human preliminary evidence that relatively heavy use, ranging from several times a week to daily use, may reduce fertility in women. Of eleven studies dealing with these areas, seven have reported endocrine changes, with four reporting no such change. The long-term significance of these results remains to be determined. Concern over possible effects on adolescent development and possible interference with sexual differentiation of the male fetus whose mother smokes marihuana during pregnancy has been expressed.

Reproductive Effects of Marihuana

There are a variety of both animal and human studies suggesting that marihuana used daily and in substantial amounts similar to those of a regular heavy tobacco smoker may adversely impair aspects of the reproductive function. One study of 16 male, healthy, chronic marihuana users, smoking from eight to twenty standard marihuana cigarettes per day for four weeks in a hospital environment, found a significant decline in sperm concentration and total sperm count. Evidence was also found of a decrease in the motility of the sperm. In this and another study, abnormalities of structure in the sperm of heavy users were detected.

Three studies in animals of the effects of marihuana on testicular functioning, including the production of sperm, have also found adverse effects. While the clinical implications of such findings are not yet known, and the effects noted may be reversible when marihuana use is stopped, they do indicate a basis for concern. Reduced levels of testosterone in male users, though still within the normal range, have been reported by some but not all the investigators.

Animal and human research on female reproductive function has detected changes that may have serious implications for human reproductive capacity. Because of the restrictions on experimental administration of marihuana to women, little is known about the effects of the drug on

human female endocrine and sexual functioning. One recently completed study of 26 females who used "street" marihuana three times a week or more for six months or more found that these women had three times as many defective monthly cycles (38.3 percent defective vs. 12.5 percent of the cycles of nonusers) as nonusing women. By "defective" was meant a failure to produce a ripened egg during the cycle or a possibly shortened period of fertility. Unfortunately, since the marihuana-using women also used more alcohol, it cannot be assumed that the effects observed were necessarily the result of marihuana use.

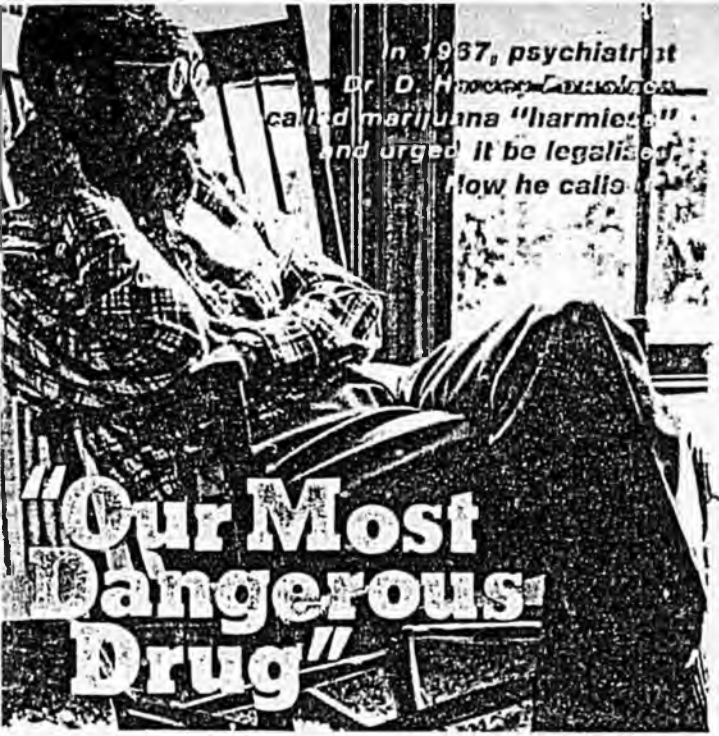
Research directly concerning effects on human reproduction is, however, very limited. We know of no clinical reports directly linking marihuana use and birth abnormality.

Chromosome Abnormalities

There is no new evidence to report in this area. While there were earlier reports of increases in chromosomal breaks and abnormalities in human cell cultures, more recent results have been inconclusive.

A team investigating the effect of marihuana smoke on human lung cells in laboratory culture has found an increase in the number of cells containing an abnormal number of chromosomes. Another investigator, who previously reported a high proportion of cells in marihuana smokers with reduced numbers of chromosomes, has more recently reported that the addition of delta-9-THC (the principal psychoactive ingredient of marihuana) to human white blood cell cultures also resulted in an increased frequency of cells with abnormally low chromosome numbers. The implications of these findings continue to be uncertain.

Overall, there continues to be no convincing evidence that marihuana use causes clinically significant chromosome damage. However, it should be emphasized that the limitations of the research to date preclude definitive conclusions.



I believe we can state that there is no controversy with respect to the hazards of use by children and young people. Studies by Dr. Gene Smith, which involve nearly 12,000 junior and senior high school students in the Boston area, indicate that the earlier marihuana use begins, the more likely is use to become heavy use and to include other illicit drugs. In addition, although there is still much to be learned about the impact of heavier use on the physical functioning of the child or adolescent, studies indicate that use may cause alterations in endocrine functioning which are more serious than endocrine involvements in older mature users.

Unfortunately, the hesitancy of the scientific community in not drawing unwarranted definitive conclusions from what are preliminary research findings has led many to conclude that marihuana is without serious medical hazard, even for the very young. In reality, the situation is more like that following the popularization of cigarette smoking at the time of World War I. It required fifty years of research for the truly serious implications of cigarette smoking to become apparent.

In view of the rapidly increasing numbers of high school students who use marihuana on a daily basis during the course of the school day, these findings are especially worrisome. For example, figures derived from an ongoing study of successive yearly nationwide samples of high school seniors indicate that as of 1978 one in nine smoked marihuana daily—nearly twice as many as in 1957. In two states, Maryland and Maine, still more recent figures indicate nearly one in six high school students use marihuana daily or nearly daily.

Our most recent national household survey, conducted in 1977, indicates that there was a significant increase of 25 percent over the 1976 level in the number of persons between the ages of 12 and 17 who had ever used marihuana. More importantly, there was a nearly 30 percent increase in the number currently using, i.e., those who had used in the preceding month. Moreover, as the figures from our annual survey of high school seniors indicate, there has been a significant trend toward beginning use at increasingly younger ages. While 16.9 percent of the class of 1975 had used marihuana by the end of the ninth grade, 25.2 percent of the class of 1978 did so.

While much remains to be learned about the health implications of marihuana, I would like to emphasize that our present evidence clearly indicates that it is not a "safe" substance. As a psychiatrist, I would also like to stress that virtually all clinicians working with children and adolescents agree that regular use of marihuana by youngsters is highly undesirable. Although experimental evidence concerning the implications of use in this group is not easily obtained, there is little serious question that regular use of an intoxicant that blurs reality and encourages a kind of psychological escapism makes growing up more difficult. While there is controversy over the implications of present research concerning adult use, few would argue that every effort should be made to actively discourage use by children and adolescents.

Interviewed by Ted Torkelson and Leon Cornforth

DR. POWELSON, you were once quoted in the "Daily Californian" (April 12, 1967) as saying, "Marijuana is harmless. There is no evidence that it does anything except make people feel good. It has never made anyone into a criminal or a narcotics addict. It should be legalized." But now you are widely quoted as the psychiatrist who has reversed his opinion on legalization of marijuana. Why did you change your mind?

Well, I was at the University of California when I made that statement. As director of the student health service I was seeing a lot of patients and supervising people who were seeing many more. In the course of the next two years, either directly or indirectly, I saw literally thousands of students.

One patient whom I knew quite well and worked with for a long time, took up marijuana and hashish, which is a more concentrated form of marijuana, during the time I was seeing him. It became clear to me and to my wife, who also saw him, that there was something changing about his ability to think, to remember, to judge, to understand.

Dr. D. Harvey Powelson was formerly chief of the psychiatry department of Cowell Memorial Hospital at the University of California at Berkeley. Currently he is in private psychiatric practice in Berkeley and also serves as Mental Health Program Chief of Calaveras County, California.

The things happening to his brain were things we would expect from somebody who was having brain damage from alcohol or a tumor or organic brain damage. But he was a young healthy man. Then we discovered that the sessions that were particularly bad occurred when he said he'd used hashish within the previous two or three days. We both began to notice this connection.

Then I began to see the same connection in other patients. Since then, a lot of recent scientific evidence has supported and explained these observations.

How do the effects of using marijuana compare with the effects of other drugs?

I think marijuana is the most dangerous drug we have to contend with, for a number of reasons.

First, unlike any other drug except DDT, marijuana stays in the body for a very long period of time. It stays in the brain, and it keeps operating long after people are high. This time element is anywhere from six weeks to six months. Biochemically, using tracers has proved that only half of the marijuana leaves your body in a week.

Marijuana is soluble in oil and fat, and totally insoluble in water. The ratio is 600 to 1, so that once it gets inside the cell, it can't get back into the bloodstream the way other drugs do. If you drink alcohol, it's soluble in water and also in the bloodstream. As fast as you drink it, it goes into the bloodstream and continues to circulate, and then it is burned and leaves the body.

Marijuana just stays there. When marijuana users get high—it usually takes them two or three times, because they have to build up a certain amount in their brain. Once they get high, they take another joint and get a little higher, then the high drops off and they think they are sober again. But the marijuana is still active. Then three days later they take another joint and they get high again. But they are suffering the effects of marijuana all that time.

Is this what is called the cumulative effect?

It could be called a cumulative effect, but what I'm really talking about is the fact that marijuana stays active in the brain long after the user feels high. It's very deceptive. Since it doesn't lead to staggering or leave a smell on your breath, nobody else can tell that you're high and you don't know that you're high or whether you're stoned. You're not high in the sense of feeling good, but you're stoned. Your brain isn't functioning right. And this can be proved. You can give a person mental tests before he takes a joint, and then you can show that he can't do the same test as well for as long as 72 hours after the equivalent of one to three joints. It depends on the concentration.

What is marijuana's effect on the function of the brain?

If you ask somebody to take 100 minus 7 back to 0, he has to do two things at once. He has to remember what he is doing, and he has to keep track of the last number. It's not very complicated, but it's the kind of memory function that marijuana interferes with. Marijuana users tell that it focuses their attention. What that means is that they can't

do two things at once. This particular memory test make them do two things at once. If you time them on that test, takes about 1½ minutes. Then they smoke three joints. day later it will still take them longer than 1½ minutes t do the same test.

In real life it's much more complicated. One of my pa tients was an airplane mechanic who worked on airplane going from Alaska to Japan. He was staying stoned all th time. His supervisor didn't know it; nobody on the jo knew it. He didn't care whether the instruments checke out or not. All he was interested in was staying stoned o the job. He wasn't thinking about anything but how goo he felt. Yet pilots and passengers were depending on tha man.

Right now some pilots in the Midwest are trying to ge the Federal Aviation Agency interested in the fact tha there are pilots and navigators and instrument testers wh are stoned. Many people in this country—literall millions—are using marijuana and are stoned. And the may be people you and I are depending on to fly a airplane or drive a bus or perform our surgery, or drive o the highway.

What do you think about the comparison tha marijuana is no worse than alcohol?

I think there is no comparison. It's hard to compare th two because there are some things about alcohol that ar worse than marijuana. Alcohol is bad for the liver. And a far as I know, marijuana probably doesn't affect the liver But overall, marijuana affects the mind much more tha alcohol, much sooner, and in a much more profound way.

How can a person, particularly kids in schools, sort ou fact from propaganda about marijuana?

There are liars and prostitutes in every field—in science in medicine, in law, and in the newspapers.

The marijuana thing is particularly difficult because th stakes are so high. That's one way of putting it, I guess Different people are putting out propaganda all the time.

Consumers' Union report (March 1975) is a beautiful example. The man who wrote it knows nothing scientifically. He selected the data and the research. It's pure

propaganda, but all the kids quote it. It has no scientific standing at all.

On the other hand, it's next to impossible to train kids to make scientific judgments of the kind that are necessary to sort out the scientific literature. I think an intelligent person can read scientific literature. There are no reputable scientific journals now that say marijuana is harmless.

The Jamaica study was noted in the "New York Times" early this year. It says, "Several recent studies of chronic marijuana users, conducted independently in half a dozen countries, one of them being Jamaica and another Greece, indicate that the drug has no apparent significant adverse effect on the human body or brain or on their functions."

To begin with, the Jamaica study was never published in reputable scientific journals. It was leaked to the newspapers in various pieces. I and my colleague Dr. Jones, who is also very involved in this, tried for months to get a copy of it. I think it was finally published in book form in Holland.

Marijuana effects have been demonstrated in reputable centers in this country, such as the University of Utah Medical Center. The head of genetics research there demonstrated the effects of marijuana on chromosomes in very difficult laboratory procedures. The people who reported that there was no chromosome damage in Jamaica have no credentials for doing that kind of study. In fact, they did it so poorly that something like half of their study had to be discarded because it was inadequate technically, which really cancels out the whole study in any reputable scientific laboratory.

The Jamaica study also says marijuana doesn't affect function. But the study was of very marginal laborers hoeing in cane fields, and we know that the main effect of marijuana is on the brain. It would be very hard to measure its effect on hoeing. However, literally hundreds of studies of all kinds of intellectual functions have been done not only in this country but all over the world, and these all show that marijuana has an adverse effect on people's ability to function.

I think that the best counter to the confusion in kids' minds is not more scientific evidence, because they're really not capable of making those judgments. There's always going to be another scientist who sells his stuff to the highest bidder. By now there are enough marijuana users in every community that people are beginning to know that he's a head, he's stoned all the time, and you can't trust him. You can't trust what he's thinking, you can't trust his judgment.

Often I ask marijuana users, Would you like your surgery done by somebody who is high? They all say, Are you crazy? They know that they're not trustworthy. And other people are beginning to know this.

It seems that the majority of our population are for the use of pot. Why is supporting marijuana use more popular than speaking out against the harm that people are doing to themselves?

I think it's so dangerous because it's so tempting. It makes you feel good. It's an easy, cheap way to feel good. You can easily be deceived into thinking it's not doing you any harm because you don't feel it. By the time it is doing visible harm, your own judgment about it is itself impaired.

Other people then become a mirror. You see healthy people who say you shouldn't do that, and your urge is to destroy them. This is just human nature. When people are doing something they want to do, they want to get rid of the person who says you shouldn't do that.

We have the same problem with alcohol, really with anything else. In the process of growing up, you have to say, Just because it makes me feel good isn't necessarily the only reason or the only thing to judge by. Ask, Is it good for my mind? Is it good for my society, for my family, the people I live with?

We hear quite a bit about the fact that smoking pot interferes with motivation, what is called amotivational syndrome. Do you believe this is a valid strike against the use of marijuana?

Yes, I think there's no question that people who use marijuana regularly over a significant period of time are clearly in a state of not being interested in anything but feeling good. There are physiological explanations for that.

Marijuana contains a chemical which affects the pleasure center. You get the illusion of feeling good. Then this illusion becomes more important than really feeling good. At the same time the effect of the drug is wearing off as you become tolerant to it. So you use more of it. And as that goes on, you either have to use stronger drugs or get another high. But this time the high is going to be a chemical or other false illusion, because you have lost the capacity to feel good in natural ways.

At that stage, in the amotivational syndrome, people lose interest in everything else but the drug. And there are literally thousands of people who are only interested in getting high. They may have shifted from marijuana to heroin. A lot of them are shifting to alcohol, and this whole false question about marijuana or alcohol is going down the drain because we're seeing younger and younger alcoholics. First they begin combining the two, then they find out they can get drunker with alcohol than they can with marijuana.

Egypt had such a terrible problem with marijuana that Nasser—even though they are a very poor country—spent a lot of money for one of the best research studies that has ever been done on marijuana. It was done by an American-trained scientist, published in 10 volumes in Arabic. It shows in a very scientific way without question that marijuana affects people's ability to function. It also showed over a long period of time a very high percentage of people shifting from marijuana to heroin.

Egypt is one of the countries that is concerned about what's happening in this country. We're a part of the Geneva Convention which says that we're going to try to control marijuana. We're decontrolling it when other countries who have had the problem for centuries, like Egypt, are trying to control it. If we decontrol it, they are going to lose what little control they have. The last convention having to do with marijuana came out very strongly with a resolution urging the United States not to decontrol marijuana.

In 1972 the National Commission on Marijuana and Drug Abuse decided unanimously to recommend that all criminal penalties be eliminated for private use and possession of marijuana. Other voices spoke out in favor of decriminalization of marijuana, but against legalization. What is your opinion about this dichotomy?

In this state [California] they said we just want to decriminalize it; we're not talking about legalizing it. I testified against it, and I said that this is just a step toward legalization. They publicly said, No, all we are asking for is decriminalization. A month later the same man was saying, Now what we have to do is legalize it, it doesn't make any sense to decriminalize something and at the same time have it illegal to grow it. Well, that's obviously a crazy law. And now they're saying, Look at how inconsistent this law is. But they're not saying, Let's go back to the old law. They're saying, Let's make it legal to grow it. That was simply a ploy, and I think everybody knew it at the time.

I think marijuana should be illegal, but it would be very hard to do that now. I think we're going to be faced with some very difficult decisions about the whole drug problem very soon. We will wake up to the fact that we're in the middle of an epidemic, that drugs spread from one drug user to the next, and that the consequences are devastating to society, to the people, to our country.

The legal procedure, which we're going to have to think about, is something like public health procedures—isolate a person for his good and for the good of society. You say to somebody, You can't use marijuana or heroin or cocaine anymore. And then it's his choice. He stops. Or if he doesn't stop, you help him stop by certain sanctions, or education, or medical or therapeutic help.

In 1971 you stated that pot use was leveling off. How does it look to you now?

Did I say that in 1971? In Berkeley the number of people using it is leveling off because we've reached the saturation point. In the university, around 80 to 90 percent use marijuana. There's another 10 percent who will never use it, such as Mormons, Orthodox Jews, etc., who won't use pot, but they won't use any other drug either.

What's happening is that the people who are using it are using more and more of it. The number of people using it may be leveling off because you have reached the available population in a particular area, but the next step is that those same people use more. Statistics show that the country as a whole is using more marijuana all the time.

What effect does marijuana have on driving?

It affects judgment, the ability to keep more than one thing in your mind at the same time, to take into account all the factors at once which have to do with driving instead of just where you are going. Particularly bad is the fact that it is often combined with alcohol. When you combine the lack of judgment, on the one hand, with poor reflexes, it's more than twice as bad.

Dr. Jones, your colleague here, is quoted as saying that by far the most significant and shocking result of the current studies on marijuana use has been the discovery of its effect on genes and chromosomes. Could you explain this?

It has been demonstrated in humans and in animals that marijuana, in socially used doses, affects chromosomes. Chromosomes are what determine our inheritance. They are also the determiners of the function of every cell. The two most striking effects of marijuana on chromosomes affect the DNA and RNA metabolism. It affects the immune cells in such a way that immunity drops way down through the social use of marijuana. And that's true, presumably, of its effect on chromosomes.

The other effects are on the germ cells, that is, the parent cells of the next generation. We know they are damaged, but it is a very hard thing to demonstrate in humans, since we don't know yet what it's going to do to the next generation. It's a fifty-year study.

I may tell high school students that marijuana damages chromosomes. As a physician I think that is a very dangerous thing to be messing with. Then someone else comes along and says, "Well, Powelson says that it damages chromosomes. That may be true, but he hasn't proved that it damages the next generation." That statement is also true. But those two statements are not equal.

Does the user develop hostility against anyone who speaks to him against using it?

Yes, that is universal. When I first began talking about it at the university, people physically threatened me and shouted at me. The situation was sometimes riotous. If you take heroin away from heroin users, or cocaine away from cocaine users, or alcohol away from people who drink alcohol, they will use any means they can to get it back.

What would you say to high school kids if you had the opportunity?

I would say that there is no evidence whatsoever that marijuana in any way is good for you. There's very strong evidence, which you can see for yourselves if you look around, that it damages the brain, that it damages your ability to think, it damages your chromosomes, it damages your immunity system—all of this at a rate of something in the neighborhood of 20 times as rapidly as alcohol.

You owe it to yourselves, to your parents, to your society, to be healthy and intelligent, and to use all your strength in the best way you possibly can. ◇

WHY DO CHILDREN USE MARIJUANA?

What are some possible reasons that children might experiment or continue to use marijuana or other drugs?

- Boredom
- To boost self-esteem
- Peer pressure
- Experimentation or curiosity
- A need to reject parents' values
- To relax
- Pop culture promotes drug use
- Lack of positive role models
- To create a new image
- For immediate gratification
- Imitation of parents' drinking and/or smoking behavior
- For independence
- Availability of drugs
- To escape from daily stress
- To have fun

First experimenting with most drugs occurs during the final three years of high school. However, for marijuana, alcohol and cigarettes, most initial experiences take place before high school. Analysis of six-year trend data collected by the National Institute on Drug Abuse indicates that age of first use of marijuana has consistently decreased; such that, the majority of users are introduced to marijuana between the ages of 12 and 14.

WHAT IS MARIJUANA?

Marijuana is the common name for the hemp plant **cannabis sativa.** The plant may grow wild in most temperate climates or can be intentionally cultivated for legal or illegal purposes. There are more than 420 chemicals, including 61 cannabinoids, currently identified in the cannabis plant. The major mood altering chemical of these is delta-9-tetrahydrocannabilol (THC).

Marijuana varies in its strength of THC. In much of the marijuana available today there is a much higher THC potency than there was five years ago. Psychoactive effects of marijuana depend not only on the amount of THC but on the body size and weight of the user. That is, a younger, smaller person will experience more of an effect than a larger adult using the same quantity of the drug.

Marijuana is most commonly smoked; however, some users prefer to combine it with food. The psychoactive effect of marijuana when smoked occurs within minutes. When eaten, the mood-altering effect might not begin until up to an hour and a half after ingestion.

WHAT ARE THE OUTWARD SIGNS OF USE?

Outward signs of the recent use of marijuana may include:

- Redness of the eyes
- Increased appetite
- Talkativeness or withdrawal

Outward signs of chronic use may include:

- Gradual drop in the quality of school work
- Unusual or increased money requests
- Often over-reaction to criticism
- Personality changes
- Secretiveness
- Physical evidence such as cigarette papers, ashes, odor

One or more of the above signs is not enough for identification of use; most are typical of adolescent behavior. Immediate signs are not always obvious. Talking with your child on a regular basis will help you understand his/her behavior.

WHAT DOES MARIJUANA DO TO THE BODY?

The health consequences of marijuana use have been the subject of scientific and public debate for almost 20 years. Based on scientific evidence published to date, the Surgeon General of the U.S. Public Health Service concludes that marijuana has a broad range of psychological and biological effects, many of which are dangerous and harmful to health. Unfortunately, the available information does not tell us how serious this risk may be.

During March 1982, *Marijuana and Health*-1982, (the ninth in a series), was given to the U.S. Congress by the Secretary of Health and Human Services. The report reviews the health consequences of marijuana use:

- Acute intoxication with marijuana interferes with mental functioning; learning and thinking are impaired. It is a marked impediment to classroom performance.
- Marijuana produces serious acute effects on perception and skilled performance which impairs such everyday tasks as driving and other complex tasks involving judgment or fine motor skills.
- A combination of marijuana and alcohol is particularly dangerous, causing temporary changes in depth perception, concentration, time perception and reaction time.

Among the known or suspected **chronic** effects of marijuana use are:

- By-products of marijuana remain in body fat for several weeks with unknown consequences. The storage of these by-products increases the possibilities for chronic effects as well as residual effects on performance even after the acute reaction to the drug has worn off.
- Impaired immune response
- Decreased sperm count and sperm motility
- Interference with ovulation and prenatal development
- Possible adverse effects on heart function
- Impaired lung function similar to that found in cigarette smokers (indications are that more serious effects may ensue following extended use)
- Impaired short-term memory and slowed learning
- The "amotivational syndrome" has been attributed by some to prolonged use of marijuana by youth. The syndrome is characterized by a pattern of loss of energy, diminished school performance, harmed parental relationships, and other behavioral disruptions.

HINTS ON PREVENTING YOUR CHILD'S DRUG USE

There are some specific steps you can take to lessen the chance of your child using drugs. Prevention consists of:

- Setting a good example in your use of alcohol, tobacco, prescription and over-the-counter drugs;
- Demonstrating positive behavior of the many alternatives life has to offer at work, at play, in nature, through art, music, and other creative endeavors;
- Involving your children in setting family guidelines that encourage positive behavior, with fair and consistent discipline;
- Learning more about drugs so that you have accurate information to share with your children.

WHAT TO DO IF YOUR CHILD IS USING

If you suspect that one of your children may be using marijuana, discuss the issue with him/her in a calm, non-arguventative manner. Keeping communications open is of the utmost importance.

If your child is using, do not condemn the child, their peers, or deny the problem. Children need to hear clearly stated values and standards from the family. Remember, when a child is independent and self-supporting s/he can make their own decisions; however, up to age 18, your child's health is your responsibility.

Your child may not respond positively to your best efforts to prevent their marijuana use and association with drug using peers. If that is true, consider professional help or a peer-support group. You are not alone.

Being a good parent is a difficult task. But, there are community resources to assist you. Community agencies may offer: course in parenting skills and drug education; family and individual counseling; drug treatment; and referral to parent peer-support groups. Contact your local alcohol, drug or health agency. Or, contact the Alaska Council on Prevention of Alcohol and Drug Abuse, 7521 Old Seward Highway, Suite A, Anchorage, Alaska 99502.

MARIJUANA

MARIJUANA

Marijuana comes from the Indian hemp plant, usually cannabis sativa. The plant can grow wild or it can be intentionally cultivated for legal or illegal purposes. Marijuana is usually seen on the street as a mixture of chopped leaves, stems, flowers and seeds. It can come in a number of different colors including brown, green, gray and red. Hashish, or hash, is a resinous extract of the topmost leaves and flowering parts of the marijuana plant.

Marijuana and Hashish

HOW USED:

Individuals who use marijuana to get high usually smoke it. Marijuana can be smoked as a cigarette (joint, reefer) or in a pipe. Some marijuana smokers also use such marijuana paraphernalia as "bongs," "smoking stones" and a wide selection of pipes specifically intended for use with marijuana.

COMMON NAMES:

There are many slang names for marijuana. Ten of the most common are: Dope, grass, herb, joint, pot, reefer, roach, smoke, stuff, and weed.

HISTORY:

Marijuana has been used as both a medical and a non-medical drug for more than three thousand years. In the United States marijuana has been used off and on as a medicine since the 1850s. Recreational use of marijuana was not widespread in this country until the early part of the twentieth century.

PHYSICAL EFFECTS:

Marijuana was not generally considered to cause physical addiction. A study carried out at UCLA, however, challenged that assumption. The study involved healthy male smokers in their early to mid-twenties. After the subjects smoked large doses of marijuana for several weeks it took more marijuana to get them to report being as high as they had been previously with less marijuana. When the subjects stopped using marijuana many of them felt nauseous and irritable and they didn't sleep well. Administering marijuana would remove these feelings. The subjects smoked an average of five and one-half two gram 2% THC joints per day for more than six weeks during the study.

There seems to be agreement on the following physical effects of marijuana: Marijuana (1) dries the eyes and the mouth, (2) increases the appetite, (3) causes a reddening of the eyes, (4) impairs one's driving ability, (5) impairs one's short-term memory while one is under the influence of the drug, (6) impacts the way stress does on the heart and circulation system, (7) raises the heart rate, (8) frequently raises the user's blood pressure, (9) produces inflammation and neoplastic changes in the airways of heavy smokers, (10) may well lead to cancer of the respiratory tract among prolonged, heavy marijuana smokers, (11) causes modest reversible suppresive effects on sperm production in men, (12) can cause tremors and startle response withdrawal symptoms in the newborn children of women who smoke five or more marijuana cigarettes per week while they are pregnant, (13) may effect chromosome segregation during cell division (although these results are a concern, their clinical significance is unknown), (14) is a fat soluble molecule, parts of which can be stored in the body for up to thirty days or more, and (15) when smoked reduces the lungs' ability to absorb oxygen.

In addition, an association has been identified between maternal use of marijuana during pregnancy and diminished birth weight in the child and the development of characteristics associated with the fetal alcohol syndrome.

Marijuana Paraphernalia

PSYCHOLOGICAL EFFECTS:

Marijuana, when taken in mild to moderate doses, tends to cause an altering of perception that includes sight, sound, touch, sense of time and taste. It can produce feelings of euphoria and intimacy. It has been reported to develop new insights in some individuals who experience its effects.

Some individuals who use marijuana become psychologically dependent on the effects of the drug. This means that the effects of marijuana have become so psychologically essential to the individual that he/she may experience emotional discomfort in the absence of the drug.

Some believe that heavy long term use of marijuana results in a loss of motivation in the user. Others disagree.

MEDICAL USES:

Marijuana had many medical uses in the U.S. in the nineteenth century. By 1937, when the first federal laws were passed to control the use and possession of marijuana, it had more or less been dropped from medical use. In the past several years more than twenty states (including North Carolina) have legalized the experimental use of marijuana to treat glaucoma and the nausea that frequently accompanies cancer chemotherapy. Efforts are now underway to develop satisfactory synthetic THC-type drugs that might be administered in place of natural marijuana.

crises situations concerning marijuana, when they occur, tend to take the form of an anxiety reaction to the marijuana high. A calming and reassuring approach has proven effective in dissipating the anxiety.

TREATMENT OF LONG TERM INVOLVEMENT:
Individuals who have developed a psychological dependence upon marijuana may need to have individual counseling, or some kind of group therapy, to develop skills to live their lives happily without dependence upon this or any other drug.

LETHAL DOSAGE:
There is no record of a human death attributable to an overdose of marijuana. The literature does contain a report concerning a dog that died of an overdose after being given approximately 40,000 times the normal dose of marijuana.

RESOURCES:
Individuals wishing to get treatment should contact their single state agency for drug abuse services or the National Institute on Drug Abuse, 5600 Fishers Lane, Rockville, Maryland 20857. (In Charlotte, N.C., treatment services are available from Open House Counseling Service, Inc., 145 Remount Road.)

LEGAL CONTROL:
The Federal government classifies marijuana as a drug with a high potential for abuse and no approved medical use. Individual states, however, have their own laws controlling the use and possession of marijuana within their own jurisdictions. (Unauthorized possession of any amount of marijuana is illegal in North Carolina. The penalty for the first conviction of illegally possessing one ounce or less of marijuana in North Carolina is a fine of not more than $100. The penalty for illegally selling marijuana in North Carolina includes a prison sentence of no more than five years and/or a fine of no more than $5,000.)

NOTE:
There are many differences of opinion about marijuana (i.e., marijuana use is really very dangerous; marijuana use should be decriminalized; marijuana should be legally available as a medicine, etc.). Because of these differences of opinion, marijuana issues are often emotionally charged. As a result, scientific studies can be used in efforts to influence public attitudes and social policy without, at times, apparent concern for the quality of a particular study or the applicability of its findings.

MARIJUANA: THE MYTH OF HARMLESSNESS GOES UP IN SMOKE

by Peggy Mann

Reprinted by the Medical Education and Research Foundation

MARIJUANA: THE MYTH OF HARMLESSNESS GOES UP IN SMOKE

New medical research puts a match to the myth that smoking marijuana is not harmful. The real dope is that the daily habit is damaging to the body as well as the mind.

by Peggy Mann

Is marijuana just the "innocent high" some have made it out to be? New medical research into the effects of this widespread drug points to heretofore unknown risks, as this exclusive two-part Post *series will show.*

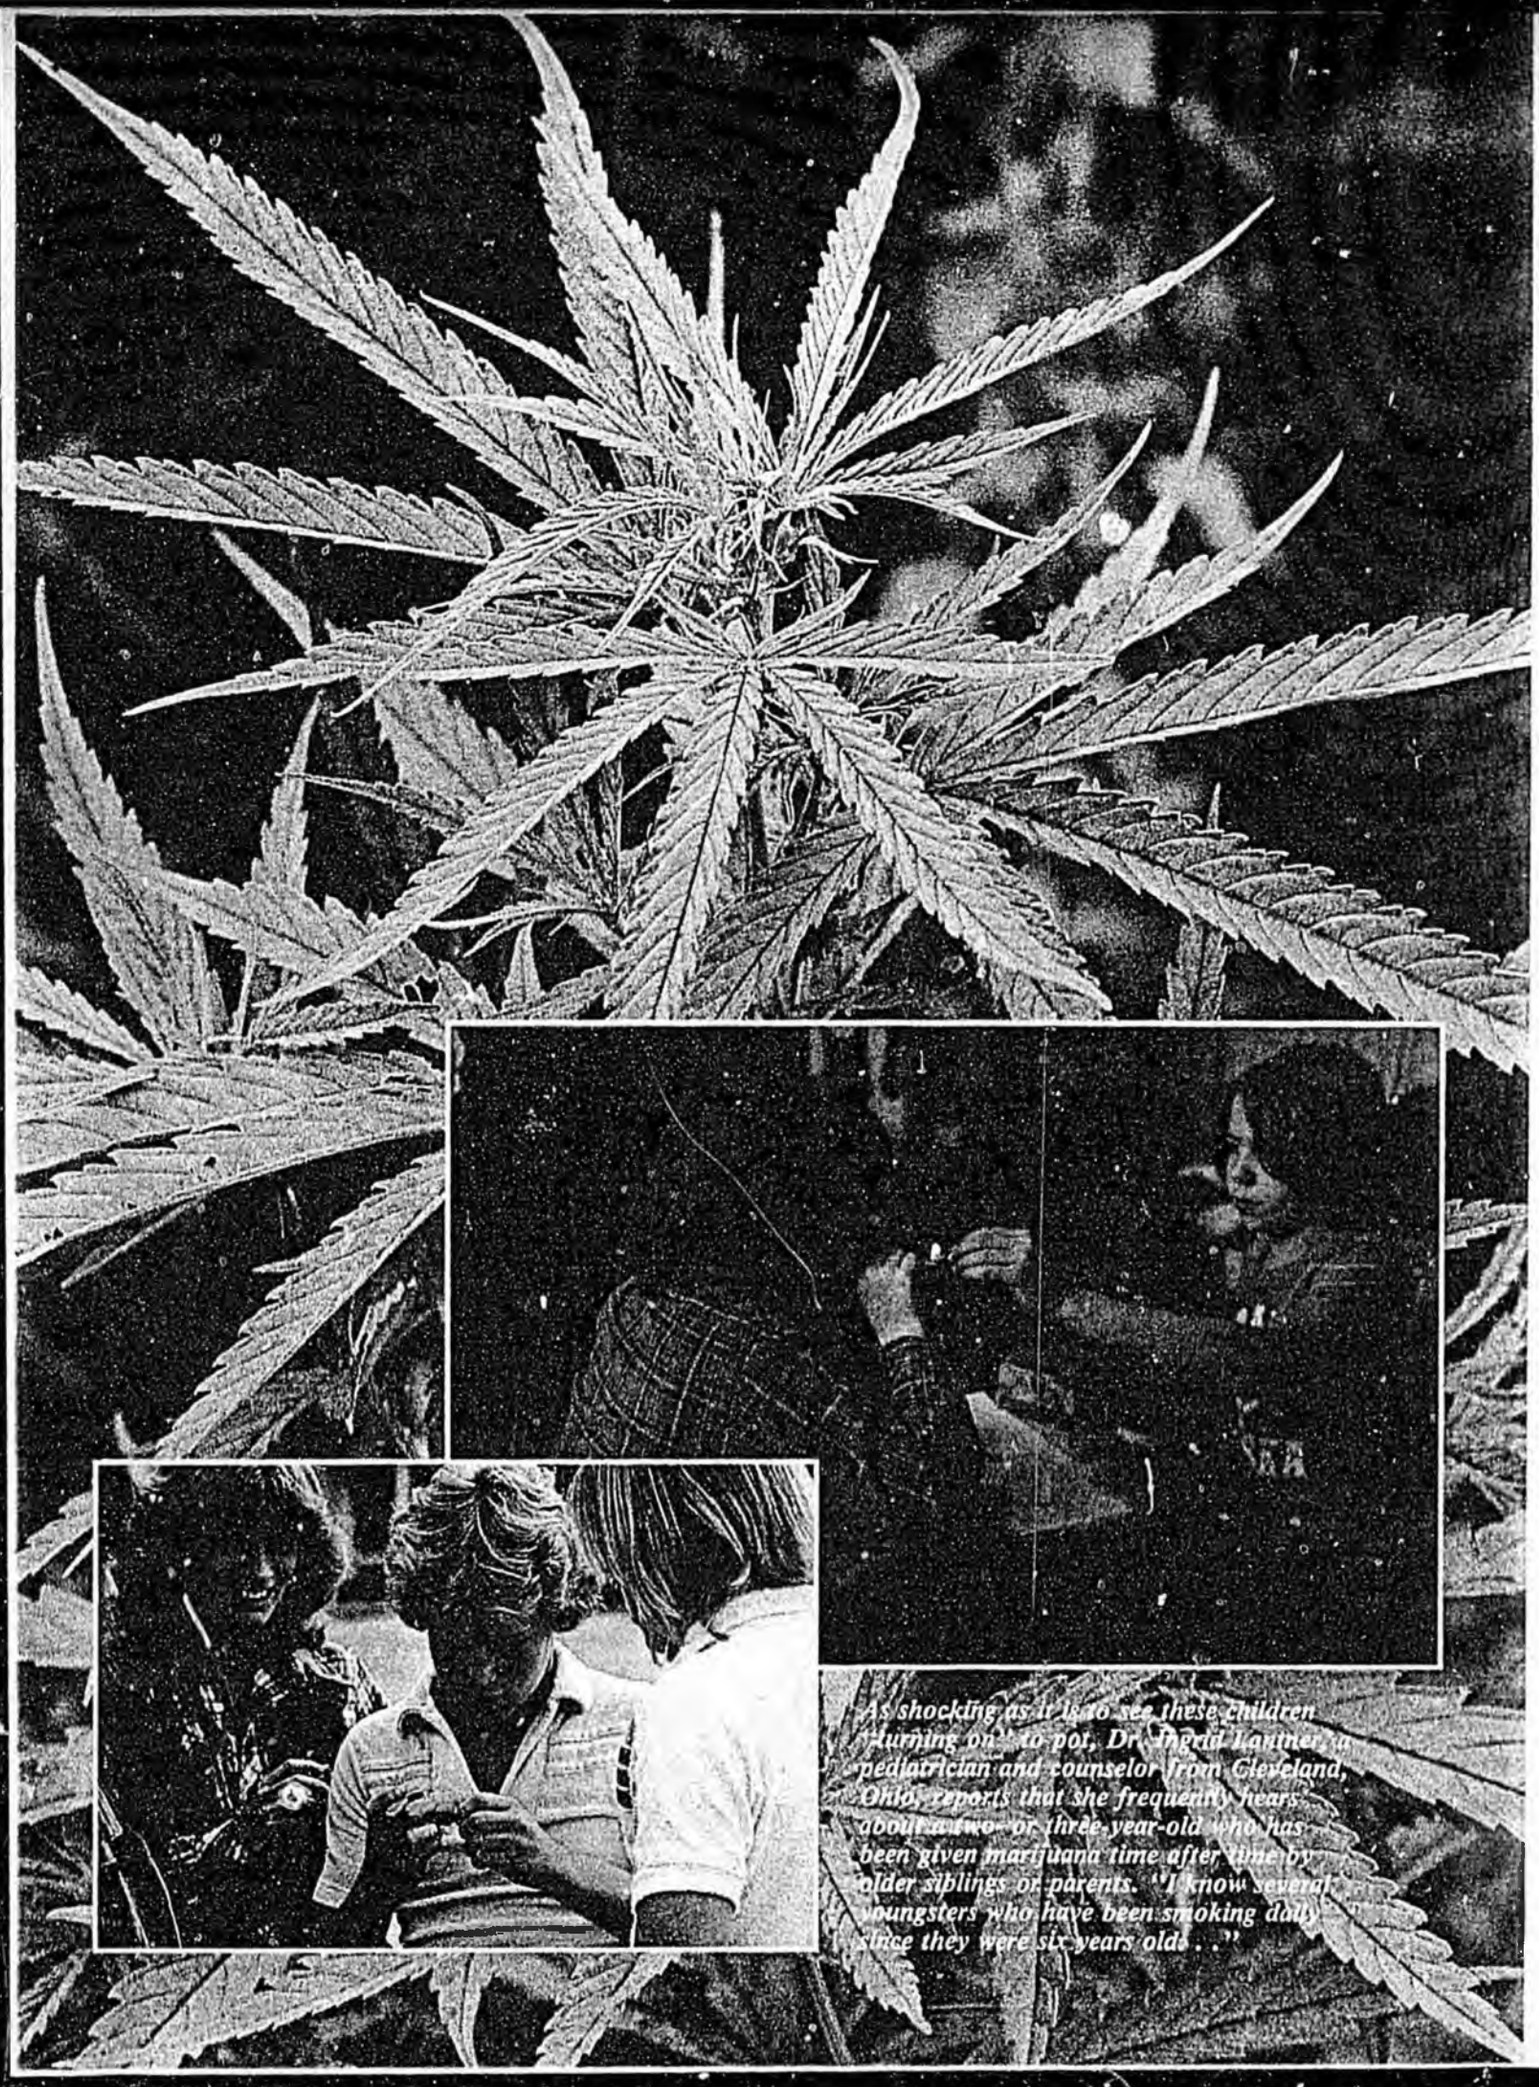
"It's unreal," the school guidance counselor told me. "The kid looks you straight in the eye and says—full of conviction—'Well, pot doesn't hurt *me*!' His grades have slid from As and Bs to Cs and Ds. He's been put off the basketball team because of poor performance. He's irritable, hostile, always tired, feels depressed. He cares less about everything. He has a cough, chest pains. He's really going down the tubes. But blowing grass every day, he insists, has no relation to any of this.

"To my mind, the scariest thing about marijuana is that the user can't see what the drug is doing to him. Or, if he does admit to a symptom, he shrugs it off. Yesterday a seventh grader told me, 'I know pot's done bad things to my memory. But I don't really need my memory because I decided I'm not going to college.' "

The guidance counselor is Rick Gibson from Goddard, a small town in Kansas. I met him at lunch in another small Kansas town, Wellington. We were both attending a two-day "Grass Roots Conference on Grass." Wellington's population is 8,500. The school auditorium has 1,000 seats. And both days there was standing room only. Physicians, teachers, school administrators, guidance counselors, psychologists and parents came from all over Kansas and from nearby states to attend.

The Wellington conference was part of a burgeoning new movement throughout America. Schools and parents' groups are waking up to the fact that: (1) marijuana abuse has reached pandemic proportions among our youth; (2) something must be done about it; and (3) they are the ones who must do it. They realize that a vital first step is to educate themselves about the rising tide of medical evidence showing that pot can have serious psychological and physical effects. It can cause cellular damage and impair lung function, the reproductive system and the brain. Furthermore, the younger the user, the more deleterious the effects.

The roster of speakers at Wellington was an impressive one. The first speaker after lunch was Dr. Harold Voth, senior psychiatrist and psychoanalyst at the famed Menninger Foundation in Topeka, Kansas. He has studied the psychopathology of marijuana in depth for the past eight years. Coincidentally, his first point carried on from the one the guidance counselor had just made to me.



"Marijuana produces a wide spectrum of symptoms," said Dr. Voth. "Some affect some people; some affect others. And there are those who seem to 'get away with it' reasonably well, for a while. But there is one truly pernicious symptom—specifically related to marijuana—which seems to be evident in *every* chronic pot user, youngster or adult. This is the extraordinary refusal to accept the hard scientific evidence about the harmful effects of marijuana. The user will scoff at the evidence, twist it, pervert it, call it 'reefer madness'—anything except look it straight in the face.

"This may be one reason much of the media have, until recently, done shockingly little to relay the medical findings about the harmful effects of marijuana to the American public.

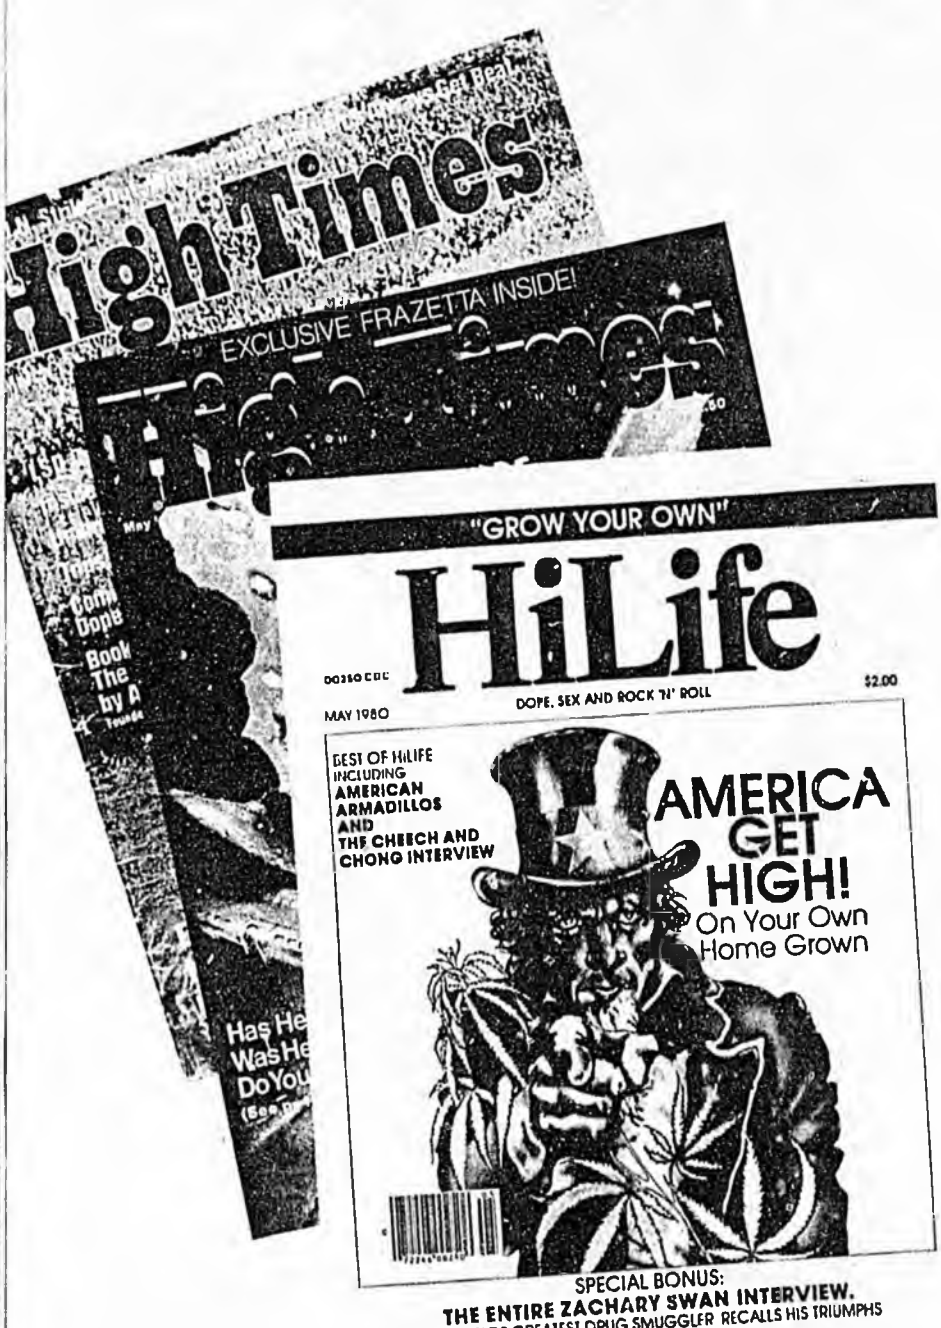
"In my opinion, marijuana use in the United States today constitutes a national crisis, and all-out efforts from all segments of our society are essential in view of the enormous harm being done to millions of Americans, particularly our youth."

Statistics on youth drug abuse clearly show why Dr. Voth's prescription for "all-out efforts" must be heeded on a national scale. For example:

- According to a report published by the House of Representatives Select Committee on Narcotics Abuse and Control, "The United States is the most pervasive drug-abusing nation in history and marijuana is our most pervasive illegal drug of abuse." Says Congressman Lester Wolff (D-NY), chairman of that committee: "Our young people are the first in all history to have used marijuana on a mass scale. Neither this nation—nor any other nation—has ever before faced a problem that is so insidious and so dangerous."
- Last year, according to the federal government's drug abuse network, marijuana accounted for the second largest number of admissions to our federally funded drug treatment facilities, and 33 percent of these had started their pot use before age 14.
- According to a recent national

As shocking as it is to see these children "turning on" to pot, Dr. Ingrid Lantner, a pediatrician and counselor from Cleveland, Ohio, reports that she frequently hears about a two- or three-year-old who has been given marijuana time after time by older siblings or parents. "I know several youngsters who have been smoking daily since they were six years olds . ."

drug abuse survey covering ages 12 and up (1976-1977), use of marijuana is twice as high for youngsters as for adults, and use by youngsters ages 12 to 17 increased by nearly a third in one year. (A new national survey has just been carried out by the National Institute on Drug Abuse and, according to Dr. Robert Peterson, assistant director of research, "We would be very surprised if this did not show an increase in use, especially among young users.")



● According to the High School Senior Survey, the only national drug abuse survey taken every year since 1975 (representing every state except Alaska and Hawaii):

• In 1979, one out of ten high school seniors smoked pot daily, or almost daily—an 80 percent increase since 1975. Of these, daily users averaged 3½ joints (marijuana cigarettes) a day; 13 percent smoked more than seven joints daily.

• Of the 50 percent of seniors who smoked pot at all during 1979, 37 percent said they "usually stay high three-to-six hours." (Add to this the fact that marijuana is up to ten times more potent than that smoked a decade ago.)

• Forty-nine percent of all seniors who used pot "during the past 12 months" also used one or more additional illegal drugs during that period.

Popular drug-culture magazines teach how to grow your own, how to smuggle dope into the U.S., how to dress for pot parties, how to get around the law. Their advertisers reach a market of young people with money to spend, and the drug paraphernalia in their pages is available by mail—portable head shops, accessible to young residents of even the smallest, most remote communities. (Paraphernalia shops have been outlawed in Indiana.)

It is worth noting that this study surveys only those students who have made it to the end of their senior year. Drug use among dropouts is notably higher than among those who finish high school. (In some areas, for example, grocery store delivery boys no longer take coffee breaks, but "pot breaks.") Also not included are those who were not in school the day the survey was taken. Truancy is another "symptom" of regular pot use.

All recent state, city, suburban and rural surveys show that pot use has increased rapidly among youngsters of all income levels and all grade levels, with the highest increase at junior high school age. Throughout the country, surveys show that junior and senior high school kids are getting stoned on the way to school, during school, after school and at home—where they often "smoke out the window" or burn incense to cover the smell. One local newspaper series on the subject started: "For many middle school students, marijuana has replaced Wheaties as the morning 'meal.'"

In some areas, pot use starts as early as the fourth and fifth grade. If the saying is true, "as Maine goes, so goes the nation," it is worth noting that a 1979 two-county survey in rural Maine showed that in the fourth grade, 6 percent had tried marijuana at least once and one percent had used it "many times." ("And," says Mel Tremper of Maine's Office of Alcohol and Drug Abuse Prevention, "as drug use goes, we in Maine are kind of behind the times.")

California is a state "ahead of

"The target for drug paraphernalia in the 1980s is ages 6 to 16," the operator of one of Florida's largest head shop chains recently admitted, claiming it was "an industry decision." Organized campaigns of this sort, added to tremendous peer pressure, are misleading young people into believing that pot smoking is a normal part of growing up.

the times" in this area. Dr. Richard Blum, one of the country's foremost authorities on drug abuse, studied 3,200 school children in California and found that some started pot use in third grade. Said Dr. Blum: "The phenomena that appear in California generally appear in the rest of the country several years later." Dr. Blum's survey was conducted in 1976.

For the past two years, pediatrician Dr. Ingrid Lantner has been speaking on the subject of marijuana at schools in the suburbs of Cleveland, Ohio. She speaks two or three times a week, often to fifth and sixth graders. She always asks them: "How old is the youngest child you know who has smoked marijuana?"

Dr. Lantner told me: "I have never asked this question without hearing about a two- or three-year-old who has been given marijuana by older siblings or parents—and not only once. I know several youngsters who have been smoking daily since they were six years old. In all these cases, the parents are users. I have never known of a grown-up who would give a child that age a tobacco cigarette or any other drug."

Dr. Lantner also asks for written questions from her young audiences. Every time she speaks she receives one or two questions which indicate that parents give pot to their young children. Two typical questions:

"I am ten. My parents let me smoke pot since I was six. Will my eggs be damaged?"

"My brother smoked M.J. since age seven but not every day. Will he have his growth affected? He is now 11. He gets the M.J. from my mother."

Another question Dr. Lantner often receives from fifth and sixth graders is: "What shall I do if someone physically forces me to

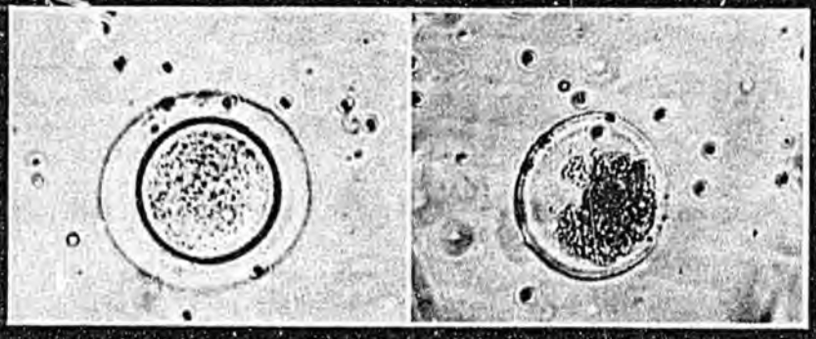
Rhesus monkeys exposed to the human equivalency dose of one to two joints per day for three years exhibited a loss of drive, motivation and interest in the care of their offspring. A picture of a control, or non-drugged, rhesus shows a rhesus mother nicely nursing her baby. But the THC-treated mother (right) has been exposed to the human equivalency dose of one to three joints a day. Typically, these mothers didn't nurse their babies, groom them, retrieve them or cuddle them as the control mothers did. Dr. Ethel Sassenrath at the Primate Research Center of the University of California, who conducted the experiments, also noted that the THC-exposed babies showed deficits in attention and over-concentration on different stimuli in the environment—the types of deficits of behavior which indicate that the central nervous system had been affected in early development.

smoke pot?"

"School principals tell me," says Dr. Lantner, "that after a ball game, a group of potheads—older students—often come around to sell drugs, and they're very aggressive with the little ones, insisting they buy and smoke on the spot. This happens in a nice, upper-middle-class area in the suburbs of Cleveland."

Nor are the suburbs of Cleveland Ohio, the only area in the country where parents are giving pot to very young children. Take Missouri, for example. Ed Moses, drug information officer of the state of Missouri, works full time lecturing and teaching about drug abuse. "Every year drug abuse is affecting younger age groups," he told me. "They commonly start feeling the pressure to turn on as early as the fifth and sixth grades. Also, every year the marijuana is getting stronger and more easily available in larger quantities.

"I think the most disturbing thing I've found is many parents' attitude that marijuana is so harmless that it's okay to reward their three- and four-year-old child with getting high.



"For example, at parties, the parent will let the three- to five-year-old child carry the joint around to the toking [pot-smoking] guests. And, as a reward, the child is allowed 'to take a hit' and get stoned. This is becoming more and more common among young parents who are heavy users.

"The youngest I have seen in a home was with a couple in their early 20s who got their nine-month-old baby high by 'shotgunning' the child [turning the cigarette backwards with the lit part in the mouth so that a concentrated rush of smoke can be blown into someone else's mouth or face]. The father told me, 'We like to get Annie high so she won't be afraid to walk.' I pointed out that she was so stoned she couldn't even crawl. The father said, 'Well, that's cool. At least she's not afraid to try.' 'She boogies around when she gets high,' the mother said, laughing. This meant that the baby bounced around a little while. Then she sat—spaced out."

A kindergarten teacher in a South Texas town told me, "My

THC-Injected Mice. Produce Abnormal Eggs

Current research indicates that THC (the active agent in marijuana) may induce genetic mutation. One recent experiment involved mouse ova (female reproduction cells, commonly called "eggs"). Two groups of 26-day-old female mice were used in the experiment. The control group was allowed to proceed with a normal routine while the test group was injected with daily doses of THC. The animals were then allowed to mate with non-treated young adult mice. Forty-eight hours after mating, the animals were sacrificed and the fertilized eggs were recovered from the oviducts. Abnormal cells occurred in 37.5 percent of ova recovered from the THC-treated mice, compared with 10 percent in those obtained from the controls.

A normal ovum (left) shows the chromatin (that part of the cell nucleus that is composed of DNA and is the carrier of the genes) to be finely granular and evenly dispersed throughout and responsive to fertilization and normal cell division.

In stark contrast is the abnormal ovum (above), taken from the THC-treated mice, where the chromatin has clumped together. The fact that it has coagulated is an indication that it is damaged and probably is a nonviable chronosomal substance, in which case there would be no pregnancy at all.

A normal fertilized ovum demonstrates predictable cell division.

Irregular shapes and sizes of fertilized cells appear in the mice ova in the THC-treated group 48 hours after mating.

It was the conclusion of this research that THC does act as a mitotic (dividing cell) poison and therefore is considered a chromosomal mutagen. It is also important to note that unlike male sperm, which is replenished during the entire life of the male, the number of female eggs is determined at birth and, once they are damaged or destroyed, they can never be replaced—the damage is permanent.

children don't smoke pot. But the first grade teachers tell me that some of *their* children come in stoned—always the ones with older brothers and sisters."

Maryland is so "typical" that it is often referred to as "America in miniature." Certainly the 1978 Maryland statewide survey reflects what is being found in local surveys throughout the country: "Students began using one or more illegal drugs at about one year earlier than the same grade level use in the last Maryland survey (1975)." And the "one" drug is invariably marijuana. Most local surveys show that, each year, initial marijuana use drops one year lower.

Older siblings are the chief source of supply for very young users. Because the myth of marijuana's "harmlessness" has so permeated our society, youngsters often feel they are doing their smaller brothers and sisters a favor by getting them high. There is also another motive. If the younger child gets involved, he or she won't "narc" (tell Mom and Dad).

It is quite possible for Mom and Dad to be unaware of the fact that their children are stoned. With marijuana use it's easy to "hide the high" or to "come down" by dinner time. The clearest tell-tale symptom—red eyes—is handled by kids via eye drops. (The eye drop industry reports a boom in sales.) Youngsters who use a local swimming pool have an easy excuse—"chlorine in the water"—even though the closest they may have been to the water was hanging out in the locker room blowing grass.

There are, of course, discernable symptoms of the youngster who is a heavy pot user. Unfortunately, most of them are so much like the "blow up" symptoms of normal adolescence that many parents tend to disregard such as merely something their child will "grow out of." But this is not likely to happen unless the child gets some firm, supportive help from parents and from the school.

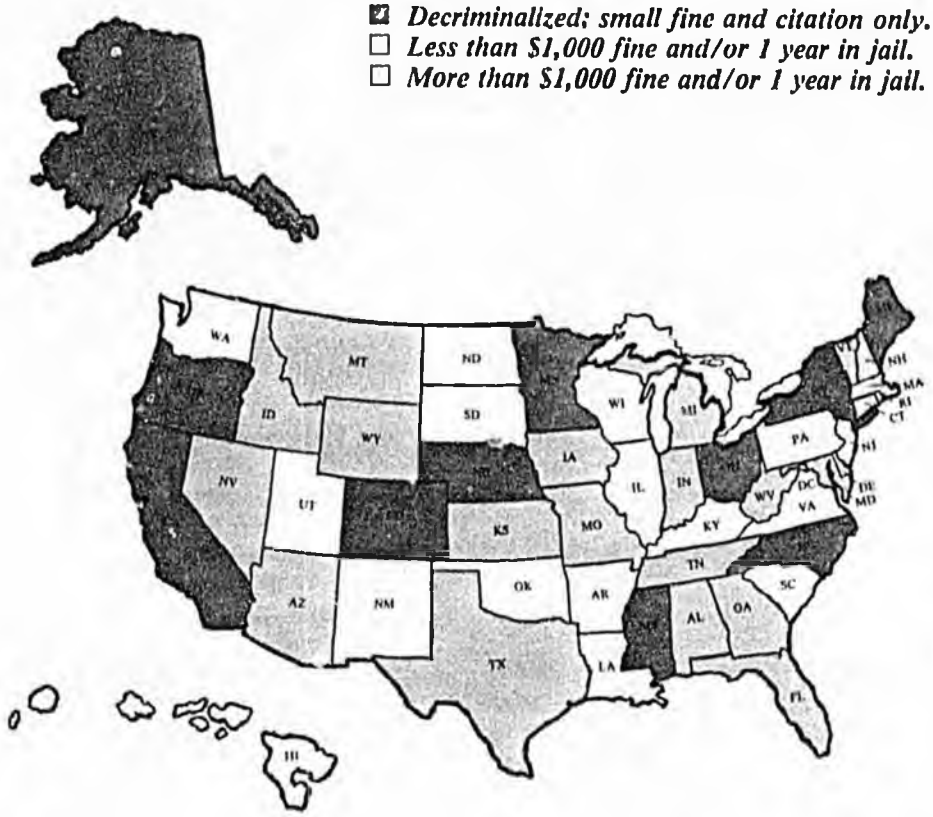
Parents should realize that even the "straight" kids (non-drug users)—who represent about 50 percent of most surveys of junior high and high school classes—are under constant peer pressure to "Try it: It's great." And this pressure to start pot use comes not only from peers. All kids are affected by aspects of adult industries which make drug use in general—and pot use in particular—seem like a normal part of growing up in America today.

For example, a recent survey in Atlanta, Georgia, showed that while one third of non-drug-using kids listen to rock music on the radio three hours or more a day, virtually *all* drug-using youngsters listen three or more hours a day. Some reported: "I listen all the time when I'm home." In addition, they have favorite records and cassettes that they put on when they're high and "float with them."

The same Atlanta researcher, Dr. Fred Crawford, studied the contents of rock lyrics to determine what messages they contained suggesting or supporting drug use. He found that more than half of the current rock songs had messages condoning or suggesting the use of drugs, and that many students start listening to rock music at about the time of first use.

And what do they hear when they listen? There are countless songs with "do drug" messages such as this from Eric Clapton:

Cocaine, cocaine
She's all right.

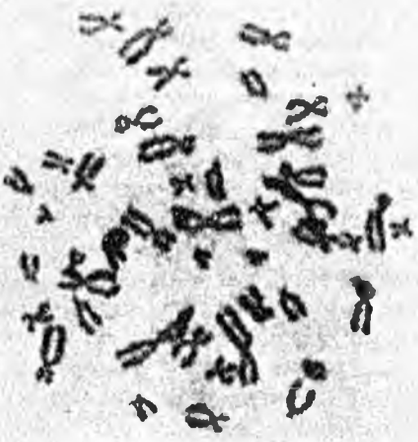


And this from Dr. Hook's Medicine Show, the *Sloppy Seconds* album ("killer weed" is marijuana):

Some men need some killer weed
And some men need cocaine
And some men need some cactus juice
To purify their brains.
Blow your whistle,
Bang your gong,
Roll up something to take along
Feels so good it must be wrong
Freebin' at the freakers' ball.

Another example of the "mes-

First-time marijuana-possession penalities for 1 ounce or less:



- ☑ *Decriminalized: small fine and citation only.*
- ☐ *Less than $1,000 fine and/or 1 year in jail.*
- ☐ *More than $1,000 fine and/or 1 year in jail.*

In most areas, laws for possession of an ounce or less of marijuana (30 to 60 joints) for personal use are not enforced. Some say this is reason to relax the laws (decriminalization) or to eliminate them (legalization). However, in states which have decriminalized pot, law enforcement officials point out that marijuana use among youths has escalated greatly, and traffic accidents and drug-related crimes have increased dramatically.

sages" youngsters receive from the adult community comes from the drug paraphernalia industry—now a $3 billion business. A highly profitable line is the "kiddie" drug paraphernalia, which includes such items as baby bottles and "Catch-a-Buzz" flying discs which double as pot-smoking devices, skateboards and kiddie belt buckles for "hiding your stash" (your supply of pot), comic books which show how to cut and snort cocaine and *McGrassey's Reader*, an easy-to-read, 20-page primer which includes clear directions on how to roll a joint, a pot vocabulary, advice on what to wear to your first pot party, plus a packet of alfalfa "practice grass." For more advanced readers there is *The Whole Drug Manufacturers' Catalog*, one-third of which is devoted to "Kitchen Chemistry and Bathtub Dope: How to Produce Drugs from Non-Prescription Items and Household Chemicals in Your Kitchen Without Prior Chemical Knowledge."

In most states such items are legal and can be found in various varieties of stores, including posh gift shops, boutiques, record stores, flower shops and stores which specialize in magic, Oriental gifts, leather goods, smoking goods, etc., as well as in the "head shops." And some head shops advertise openly in school newspapers as "novelty shops." The kids know what they are, but (presumably) the teachers don't. One of the biggest head shop chain operators in Florida recently told Florida state legislator Mary Ellen Hawkins: "The target for drug paraphenalia in the 1980s is ages 6 to 16." He said this was an industry decision.

A. Non-marijuana smokers have more white cells with 46 chromosomes.

B. Marijuana smokers have an increased percentage of cells with fewer chromosomes.

While a normal cell has the typical complement of 46 chromosomes within its nucleus (left), recent experiments indicate that heavy-marijuana smokers have marked increases in the number of cells with micronuclei (nuclei with less than 46 chromosomes, as pictured right). The experiments were performed to determine the effects of marijuana on human lymphocytes (white blood cells, which are a major part of our bodies' defense systems). Five volunteers with histories of chronic marijuana smoking were used. They ranged in age from 22 to 32 and had histories of smoking at least ten marijuana cigarettes per week for six years or more. Seven healthy students who had no history of smoking marijuana served as the control group. After repeated periods of smoking followed by deprivation, blood samples were obtained from all subjects in the test group. Similar samples were obtained from control subjects on the same day. The cells from the non-marijuana smokers showed a 15 percent incidence of micronuclei, while the cells from the marijuana smokers showed a 36 percent incidence of micronuclei. Dr. Akira Miroshima of Columbia University noted that the marijuana smoker might run a greater risk of disease, since THC lowers our resistance to infection.

What does all this mean in terms of our youngsters' health? And what can parents look for as possible signs or symptoms of chronic pot use among youngsters?

The psychological symptoms are often the first to manifest themselves. These include decreasing school performance; increased irritability ("stop *hassling* me" flared out for no justifiable reason); a general apathy; depression; drastic, inexplicable mood changes; feelings of isolation; a cutting off of communication between parent and child and a general loss of interest in everything except pot smoking and the accompanying "kiddie drug culture."

There are two very common physical symptoms: a chronic cough—a bothersome, constant hacking—and chest pains. Says Dr. Ingrid Lantner, "I have yet to see a teen-age tobacco smoker complain of chest pains, but it's quite common among pot smokers. School nurses tell me this, too."

However, it is the nonvisible physical symptoms which may be the most damaging. And this is the information which is finally crossing the chasm between the scientific community on one shore, which has been putting forth these findings at ever-increasing rates, and the general public on the other shore. For years this chasm has not remained empty. It has been industriously filled with misinformation, distortion and perversion of the facts and, at times, even outright lies emanating from pro-pot organizations and individuals whose purpose seems to be to discredit the findings which prove that pot is harmful and to make it seem an essential and harmless ingredient of the "now" way of life.

Because of this constant surge of misinformation, which is still heard loud and clear throughout the land, pot smokers often have pat answers when confronted with the warning signals now coming loudly and clearly from the scientific community.

One common "turnoff" of these findings is the shoulder-shrug comment, "For every study showing that pot is harmful, there's another showing it's harmless."

This is simply not true.

One of the world's most knowl-

edgeable experts in the field of marijuana is Dr. Carlton Turner, director of the Federal Marijuana Project funded by the National Institute on Drug Abuse (NIDA). Dr. Turner and his associate, Dr. Coy Waller, have just completed a hefty two-volume work: *Marijuana: An Annotated Bibliography*. The first volume has already been published by Macmillan; the second will be published this summer. In preparing these works, Dr. Turner abstracted more than 5,000 scientific publications on cannabis (the plant from which marijuana, hashish and hash oil are prepared). He says: "As a scientist, I have to be objective. I am not a crusader for or against any drug. I am for evaluating any drug on its merit, which I base on all scientific publications about that drug. There is not a single paper on the crude drug marijuana which gives it a clean bill of health, not a single paper to support it as an innocuous drug.

"A widely quoted study of 30 Jamaican cane workers was never published by a scientific journal. It could not stand the scientific review process.

"There *are* some reports on *individual* cannabinoids indicating possible therapeutic use." (Cannabis contains 61 known cannabinoids—substances unique in nature, found only in the cannabis plant.) "However, it must be remembered that any drug has some side effects, and with the broad biological action of the cannabinoids at the cellular level, the side effects may outweigh the benefits in long-term use. This is the reason that marijuana has no place in modern medicine. Using marijuana would be like giving people molded bread to eat to get penicillin.

"Media, with some exceptions, have not taken the time to understand the nature of the crude drug marijuana. If you attend a conference and there are 15 scientific papers cautioning against the use of marijuana, and *one* saying that a single extracted cannabinoid might be useful in a therapeutic area, the media headline this by saying that *marijuana* has been found to be useful. The findings are reported in such a way that the public is led to believe joints of street pot are being smoked by people with glaucoma or by cancer patients to control nausea after chemotherapy treatments, when the research is actually being done with a synthesized THC capsule. And by the time this 'news' sifts down to the school yard, you have kids saying that pot cures cancer, pot cures nearsightedness and pot cleans out your lungs after you smoke tobacco cigarettes." (The latter comes from early findings which indicated that marijuana might be helpful in cases of asthma. Further research clearly showed just the opposite is true.)

"Incidentally, why the media have generally been so 'up' about publicizing the possible medical benefits of marijuana and so 'down' on relaying the consistently emerging evidence concerning the harmful effects of marijuana is a matter to be comtemplated."

Another common argument of pot-smoking youngsters is this: "You have your martini, so why can't I have my pot?"

Dr. Nicholas Pace has a solid answer for this question, and he is well qualified to give it. Dr. Pace is the co-founder and past president of the New York City Affiliate of the National Council on Alcoholism. He is also one of the founding directors of the American Council on Marijuana and Other Psychoactive Drugs.

Dr. Pace points out: "There are two important differences between alcohol and marijuana. First, alcohol has a single chemical, and it is water soluble. One ounce is metabolized and is completely excreted from the body within 12 hours.

"What about pot? Youngsters like to consider it a 'natural weed.' Some even believe it to have health-giving properties. In reality, however, cannabis is an extremely complex crude drug containing 421 known chemicals. When you smoke a joint you are combusting these chemicals into hundreds of other different compounds. And we don't know how they are affecting the body.

"We do know, however, that among the 420 basic chemicals are

The only long-term (20-year) study of the effects of THC on the male reproductive cell (sperm) was conducted in the small laboring village of Piraeus, Greece, by Dr. Marietta Issidorides and Dr. Costas Stefanis of the University of Athens, Greece. Spermatozoa from nonsmokers and from chronic hashish smokers (hashish has a high concentration of THC) were photomicrographed. Normal spermatozoa from a non-hashish-smoking male show a proper density, indicating that it is rich in protein and other essential chemical substances. In the center and right panels, sperm taken from a hashish-smoking male shows a definite breakdown of protein substances and a clumping together of chromosomal material. The research team also noted changes in the ultrastructure of the spermatozoa of chronic hashish-smoking males which could result in genetic disturbances or prevent fertilization.

61 known cannabinoids (new ones are being discovered all the time), and so far scientists have studied only a few of them. We know that at least four of the cannabinoids are psychoactive, or mind-altering. But a few of the nonpsychoactive cannabinoids which have been studied thus far appear to be even more harmful to certain organ systems than the psychoactive ones.

"Therefore," says Dr. Pace, "the first important point to be kept in mind is that even the so-called 'NIDA marijuana' used by scientists is, in fact, a Pandora's box of unknowns."

"NIDA marijuana" is grown on a well-guarded five-acre "pot farm" on the outskirts of the University of Mississippi. This project, funded by the National Institute on Drug Abuse and directed by Dr. Carlton Turner, supplies to researchers marijuana which has a relatively stable Delta-9-THC content of about 2 percent. (This is the chief psychoactive cannabinoid in marijuana.)

Dr. Pace points out that so-called "good street pot" has a four, five or even six percent THC content. Therefore, sobering as the research findings are, they gain an even greater impact when we realize that they represent work with THC half as potent as that which many of our youngsters are smoking regularly today.

"The second important point regarding marijuana," says Dr. Pace, "is the fact that it is fat soluble, like DDT. And we have, of course, banned the use of DDT because it accumulates in body cells and organs.

"The cannabinoids are not only fat soluble. They are, in fact, lipophilic—fat loving. The fatty sections of cells and membranes and the fatty organs of the body act like magnets attracting the cannabinoids. The cell membrane—the coating surrounding the cell—is at least 60 percent fat. When the fat-soluble cannabinoids dissolve in the cell membrane, they make it difficult for the most important constituents of the cell, the proteins, to enter. And cannabinoid clogging of the cell has additional deleterious effects.

"What about the fatty *organs*? It should be remembered that the chief fatty organs of the body are the gonads (sex glands) and the brain. Indeed, the three-pound human brain is composed chiefly of fat. As one prominent researcher once noted: 'We're all fatheads, from that point of view.' "

Dr. Pace and every other marijuana researcher I have interviewed agree that the fat solubility of marijuana is the most important—and ominous—single factor about this drug.

Why? Dr. Pace puts it this way: "The most studied cannabinoid, the popular 'Delta-9,' has been traced radioactively in the body in human and animal studies. All the studies show that it takes three days to a week for the body to rid itself of *half* the THC in a single joint and much longer (some studies show up to 30 days) to get rid of all of it. This means that even if a youngster smokes only one joint a weekend, about half the THC and other cannabinoids *remain* in the body. Half the cannabinoids in next Saturday night's joint are added to the first. And so on, for a smoke-filled series of Saturday nights."

Dr. Robert C. Gilkeson, who has spent 15 years in neurophysiologic research, puts it this way: "No drug or chemical improves the normal cell. Marijuana is a known intoxicant. Toxic means poison. Anyone who smokes or ingests more than the equivalent of one marijuana cigarette every 30 days will accumulate an acute neurotoxic substance in his or her body."

What are the results of "cannabinoid accumulation?"

A single article can only touch the iceberg's tip. This becomes clear when picking up a 777-page volume, *Marijuana: Biological Effects*, published by Pergamon Press. This contains 50 scientific papers given at the two-day Reims Conference held in France in July 1978. The conference was limited to marijuana's effects on four areas: the lungs, the reproductive system, the brain and the cells.

The September issue of the *Post* will discuss these four areas in depth, as well as give some useful pointers for parents and other interested adults who wish to combat this "grass fire" of marijuana use among our young people. ✖

PUTTING A MATCH TO THE MARIJUANA MYTH

Most kids are fully convinced that the use of marijuana is not harmful. But new medical research proves them dead wrong.

by Peggy Mann

We have found that students in the lower grades will look their counselors straight in the eye and say—with full conviction—"Pot doesn't hurt me!" But the latest medical research has determined that marijuana can cause cellular damage and impair lung function, the reproductive system and the brain. In the conclusion of this article, we take a closer look at these four areas of abuse--and offer suggestions to parents and other adults interested in combating this "grass fire" now raging through our schools.

Although one in every ten high school seniors admits smoking pot daily, and in some areas pot usage now starts as early as the 4th and 5th grades, the highest usage of all is in the 18- to 25-year age group.

Marijuana and Cellular Damage

Many scientists, including pioneer "pot researcher" Dr. Gabriel Nahas, consider the reports on marijuana's impairing effects on body cells to be the most alarming because, as Dr. Nahas says, "they are the underlying cause of all the other deleterious effects that have been reported."

Not only do cannabinoids clog the cells, inhibiting their functions to some degree, but many studies have shown that heavy pot smokers have an abnormally large number of abnormal cells.

Dr. Akira Morishima, of the Columbia University College of Physicians and Surgeons, has done studies on the increased incidence of cells in marijuana smokers which have less than the normal number of chromosomes and which tend to revert back to the normal level after the individual has stopped smoking pot. In more recent studies, published in June 1980, Dr. Morishima found that THC disturbs the *movement* of chromosomes which, he says, "probably accounts for the production of cells with an abnormal number of chromosomes." A similar finding has just been published by Dr. Arthur Zimmerman in Canada, using an entirely different methodological technique.

Pot advocates are swift to "discredit" chromosome studies by saying that "aspirin and coffee also cause chromosome breaks." Dr. Morishima points out that his studies did not relate to chromosome *breaks*. Furthermore, in the 1980 studies he used the same technique to test the effects of aspirin, caffeine and alcohol on chromosome movement. He also used "comparable doses," except that in the case of alcohol, "we went up to 100 times the equivalency dose." The result? Neither aspirin, caffeine nor alcohol produced abnormal movement of the chromosomes.

As early as 1973, Dr. Nahas found that THC lowered the rate of cell division by diminishing the cell's ability to make DNA, RNA and essential proteins. DNA is the all-important genetic material of the cell. RNA controls gene "expression." These findings have since been replicated by scientists in 12 important research centers in the U.S. and abroad.

Said Dr. Nahas: "These findings indicate that the pot smoker may not only be damaging his own mind and body, but may be playing genetic roulette with his or her unborn children."

Marijuana, Sex and Reproduction

There are other ways in which pot smokers may be damaging their unborn children.

As noted, cannabinoids collect in the fatty gonads *and* in the brain. In the brain, THC seems to affect the hypothalamus which, in turn, affects the pituitary, a pea-like structure at the base of the brain which is a control center for sex and reproductive hormones.

It is not surprising that this double-barreled influence on the reproductive system should result in some dysfunction and abnormalities.

A sexual performance study of 500 pot-smoking men was made by Dr. Robert Kolodny of the Reproductive Biology Research Foundation in St. Louis. He summed up: "The general trend was that with increasing use,

there were lower rates of sexual activity and a lower frequency of orgasm." A study of 1,238 male users in India showed similar results.

Other researchers have shown that marijuana smoked in moderate to heavy doses results in an abnormally large number of abnormal sperm. And this is dose-related. The more joints smoked, the more abnormal sperm there are.

Dr. Carol Grace Smith did a recent study on male rhesus monkeys. Both males and females of this breed have a reproductive system close to humans. "In fact," says Dr. Smith, "under the microscope, rhesus sperm are almost indistinguishable from human sperm." She gave male monkeys the "rhesus THC equivalent" of one to two joints a day. She summed up: "THC profoundly inhibits testosterone and hormones which stimulate the sex organs, bringing them down to the level of a castrated animal. One dose 'shuts down production' for as long as 24 hours."

Testosterone is the all-important male sex hormone. A number of other human and animal studies have also shown that THC lowers the testosterone level in males.

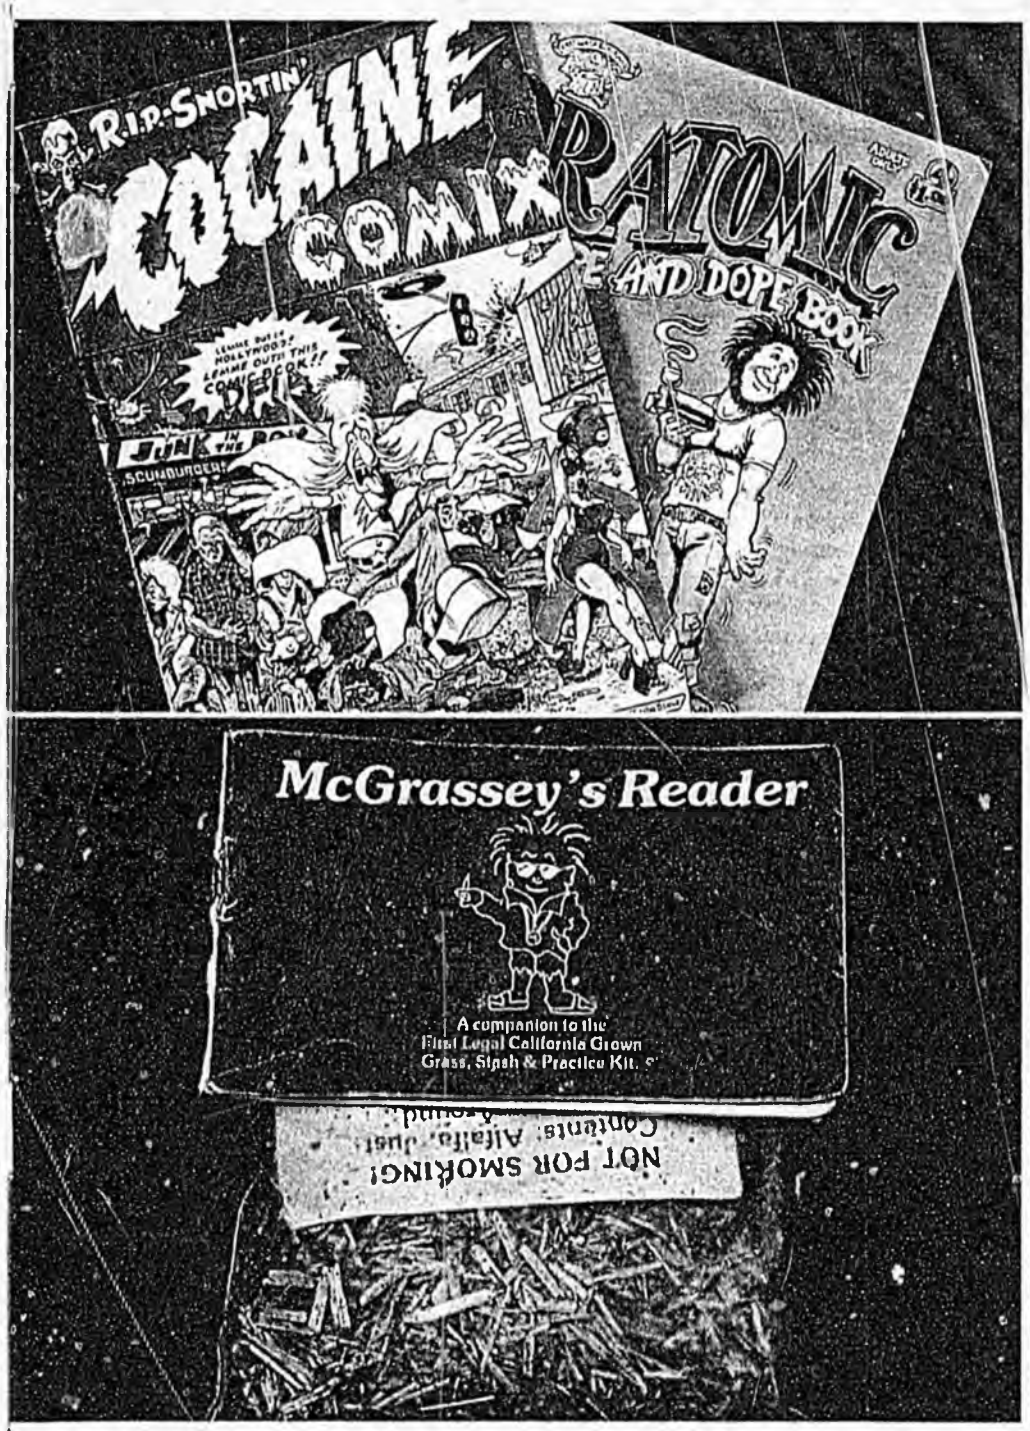
There has been only one study made on long-term (20-year) human male cannabis smokers. The researcher, Dr. Mariette Issidorides, of Greece, summed up: "Cannabis interfered with protein substances essential for the normal development of the sperm, and it altered the metabolism of the sperm cell, thus possibly affecting expression of the genetic material."

Since males produce so many millions of sperm, all indications are that, if the pot smoker ceases and desists, sperm return to normal. Females, however, may be another matter. An infant girl is born with her lifetime supply of eggs. If these are damaged, there's no replacement. And cannabinoids collect in the ovaries, a fact proved by radioactively tagged THC. What effect might this have on the eggs? Thus far, the only researcher to have delved into this question is Dr. Akira Morishima. He worked with "teen-aged" female mice. He gave them miniscule mouse-size doses of THC. Scientists figure in "human equivalency doses," which can be "checked out" by testing THC in blood levels. If a mouse has a percent of THC in its blood which is equal to the percent of THC a human adult has in his or her blood after smoking—for example, one joint at 2 percent THC—then this is the "human equivalency dose." According to human equivalency charts just published by another "pioneer pot researcher," Dr. Harris Rosenkrantz, Dr. Morishima's female mice received the THC "equivalent" of an adult woman smoking two joints a day. In his report, published in July 1979, he revealed that in the control group, very few of the mice had abnormal eggs. But in the THC-exposed group, about half the eggs were dying or had died. "And," said Dr. Morishima, "of those that lived, 20

Magazines extolling the joys of drug taking are found on newsstands throughout the U.S. As some fold, others are born. The slick **High Times** *boasts 4 million readers. Such publications make illicit drugs seem as "normal" as popcorn and apple pie.*

or 30 percent looked unhealthy."

Dr. Ethel Sassenrath at the Primate Research Center of the University of California has done other types of investigation into pot's effects on the female reproductive system. She works with female rhesus monkeys, whose reproductive system is very close to the human female's, including a 28-day menstrual cycle. Every day for three years—she even came in on Christmas—Dr. Sassenrath fed her monkeys the THC human equivalency dose of one to two joints. (She gave THC on raisin cookies.)

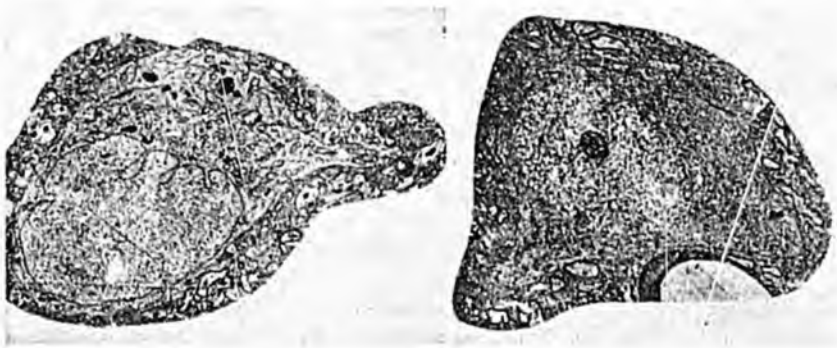


Result: Forty-four percent of the pregnancies of the THC-treated mothers did not result in living offspring. The losses occurred as abortions, reabsorptions, *in utero* death, stillbirth or death just after birth. The control mothers had a 12 percent birth loss—which is normal for a monkey colony.

Of even greater concern were the results obtained when the pathologist did microscopic evaluations of tissues and organs from the dead fetuses and infants. This was a double blind study. He did not know whether tissues came from the THC-exposed offspring or the offspring of undrugged mothers. Result: Although the dead THC-exposed offspring appeared to be normal, in each case he found subtle developmental abnormalities in various organ systems and tissues which were not found in the offspring of the undrugged mothers.

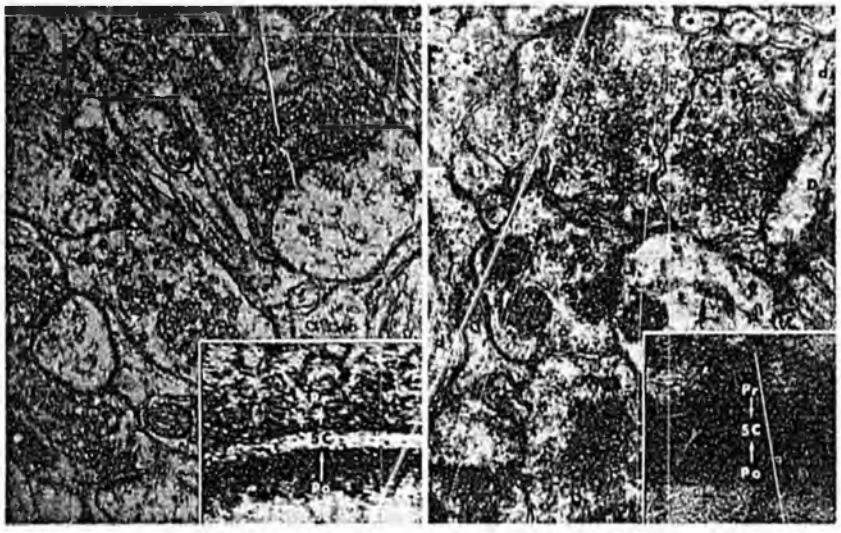
"Furthermore," said Dr. Sassenrath, "the THC-exposed babies that survived acted differently than the others. They over-responded. They didn't seem to have normal 'brakes' on such behavior as active playing without stopping or clasping cagemates who struggled to get away. They all showed deficits in attention and over-concentration on different stimuli in the environment. They had the type of deficits in behavior which indicate that the central nervous system has been affected. This kind of subtle behavioral difference can be characteristic of marginal brain damage in early development."

It has been well established that THC easily passes through the placenta. But how does it affect the placenta itself? In March 1979, Dr. Paige Besch of Baylor College of Medicine in Houston, Texas, completed a four-year study on the subject. He found that the more THC was added to the human placenta, the less estrogen was produced. Says Dr. Besch: "Decreased estrogen results in decreased blood flow to the placenta, which means decreased nutrition to the developing baby."



Other scientists working with rhesus monkeys and with human females have found that THC appears to interfere with the hormonal system and with the menstrual cycle. For example, Dr. Joan Bauman and Dr. Robert Kolodny found that 38.8 percent of pot smokers they studied had defective

A profitable branch of the drug publications industry is aimed at children. Comic books show how to "smoke dope," how to cut and snort cocaine. McGrassey's Reader, *an easy-to-read primer, explains how to roll a joint and comes with "practice grass" (alfalfa), rolling papers and a "roach clip."*



Marijuana and Brain Damage

To determine the effects of marijuana on the brain, Dr. Robert Heath of Tulane University gave rhesus monkeys 2 to 3 "monkey-sized" joints per day (inducing blood levels equal to those of human subjects smoking 3 joints per day) for six months. A control group was given an equal number of marijuana cigarettes with the active ingredient THC removed. Heath reported significant damage.

Normal Brain Cell *Damaged Brain Cell*

While no changes were noted in cells taken from the "control" group, cells from the THC-exposed brains show a marked increase in the number of inclusion bodies that appear in the nuclei, and the rough endoplasmic reticulum is disrupted. These changes in the cell structure may be interpreted as a sign of injury in most cells, including brain cells. These injured cells have a reduced capacity for normal function.

Normal Synapse *Damaged Synapse*

Vital to survival, the synaptic membrane serves as the body's communications network, transmitting messages to the brain. While a normal synapse (left) allows for free flow of messages, the THC-exposed synapse (with widening of the synaptic cleft, electron opaque materials in the cleft and some clumping in the synaptic vesicle) will not properly transmit these necessary messages.

In the light of recent experiments, little doubt can remain as to the gradual, yet significant, consequences of smoking marijuana. Perception, motor activity, sensation, emotional response, motivation, memory and states of awareness can all be affected.

menstrual cycles, compared to 12 percent of the non-pot smokers. Sex hormones were also affected.

Dr. Bauman pointed out: "Researchers are forbidden by FDA regulations to administer marijuana to teen-agers in the course of controlled experiments. But we are particularly worried about what the drug may be doing to pre-teen and teen-aged girls. Any of the effects we found could be even stronger before the body's endocrine-regulated systems have matured."

It should also be remembered that in our country, for the first time in the history of any country, pre-teen and teen-aged girls are smoking cannabis on a mass scale. Our pot-smoking teen-aged girls, therefore, are unwittingly turning themselves into guinea pigs.

Many animal experiments have shown that the mother's THC exposure affects the "next generation," to whom no additional THC has been given. One particularly strange result was found by Dr. Susan Dalterio of the University of Texas Medical School at San Antonio. She gave nursing mice mothers a tiny drop of sesame oil containing THC—the human equivalent of two joints a day. Aside from one equally small dose the day before they gave birth, none of the mother mice had ever before received any THC. The offspring were fed no THC at all. Yet when the males reached young adulthood, they all became very fat and half were "grossly overweight": 50 grams. (The normal male mice of their breed weigh 10 grams.) These fat fellows were also sexually inept, "showing," said Dr. Dalterio primly, "deficient copulatory behavior." When autopsies were performed, there were globs of fat throughout the bodies of all the male mice—whose only exposure to the drug had been as infants, through their mothers' milk.

Other researchers working with mice, rats, dogs, rabbits and rhesus monkeys have shown that the mother's exposure to THC—or to other cannabinoids—causes smaller-than-normal litters and smaller-than-normal babies.

Research on animals has proven that marijuana is not teratogenic

[producing deformed babies]. It is, however, embryocidal [having a fetus-killing effect].

Marijuana and the Brain

Pot is smoked to get a "high"—to "alter" the mind. But no smoker wants his brain cells affected, structurally changed. Yet this may be what is happening.

Dr. Robert Heath, chairman of the department of neurology and psychiatry of Tulane University, has pioneered in the study of the limbic area of the brain, working with humans and with rhesus monkeys. This particular brain area is very similar in both species. This so-called "old mammalian brain" is the site of such specifics as time sense, sexual activity, appetite and emotions—both pleasurable and painful.

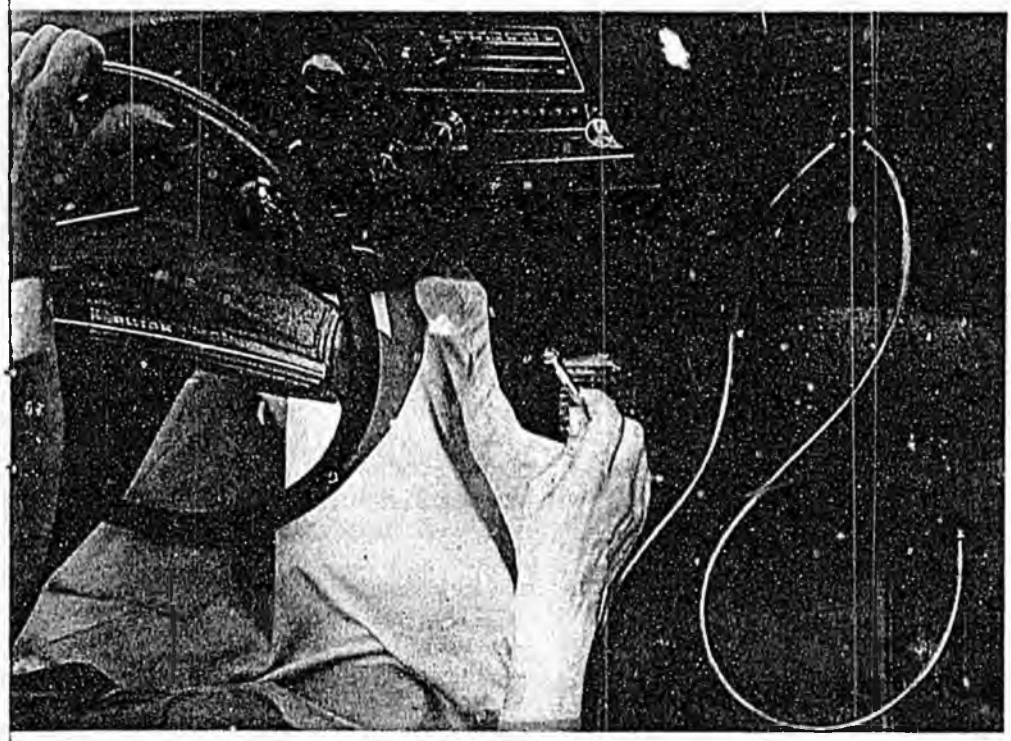
In July 1978, Heath showed some startling slides to more than 100 marijuana researchers at the Reims Conference. These were magnified pictures of brain cells from rhesus monkeys that had been exposed to the smoke of two to three "monkey-sized" joints a day (one-fourth the size of an average human joint) at 3 percent THC for six months. The monkeys had received *no* THC for the following six months (equivalent to a much longer time in human terms). Then they were sacrificed and the pictures taken.

Dr. Heath, a distinguished-looking, white-haired man, stood by the large screen. Using a pointer, he illustrated what were, perhaps, the most sobering slides shown during the entire two-day conference. He identified the following structural brain cell changes which were glaringly evident when the cells of the THC-exposed monkeys were compared to the cells taken from the same brain area of the control monkeys.

"Here," said Dr. Heath, "we see an accumulation of granular material in—and a definite widening of—the synaptic cleft between nerve cells [where the flow of messages jumps from one cell to the next]. This," he said, "causes a slowing down in the movement of the messages and may impair some brain processes."

The pointer moved on to another spot. "Here we see a clumping of the synaptic vesicles [small sacs in the endings of nerve cells, containing the essential nerve transmitters: chemical activators of the brain]. We find the identical conditions in cases of early brain damage in humans.

"And here," said Dr. Heath, "note the significant increase in inclusion bodies. These foreign substances are seen in degenerating brain cells of very old animals and humans, but not to the degree that we see them here in very young pot-exposed rhesus monkeys."



Dr. Heath summed up: "Since the monkeys had received no pot smoke for six months prior to being sacrificed, it is clear that, at least in the limbic area, structural brain changes caused by marijuana are not readily reversible."

Dr. Robert Gilkeson of Cleveland, Ohio, is completing a study of pot-smoking teen-agers which concentrates on EEG readings of the highly developed, cognitive cerebral cortex, or "new brain." Gilkeson specializes in neurophysiologic research and electroencephalography in learning disabilities. In addition to the standard hour-long EEGs, he developed another half-hour of techniques to pinpoint learning disabilities. In a unique on-going study, he has applied this technique to more than 50 youngsters, ages 13 to 18. All come from the affluent suburbs of Cleveland. All said they did not "do" other drugs. All had met the "criteria" of being high on pot at least two or three times a week for the four months preceding the EEG. But all were forbidden to smoke pot for at least 24 hours prior to the test.

Results: *All* EEGs were "markedly immature for age." They also had an abnormal amount of slow theta rhythms, "sufficient," said Gilkeson, "to be diagnostic of diffuse brain impairment. In the EEG section of academic tasks, none of these youngsters could speed up when challenged. Their brain waves failed to respond to these stimuli in the usual way, according to the standardized norms."

Reading the encephalographer's report shocked many youngsters into "getting off the pot." Those who stayed off for three months had normal EEGs when they took the test again. "Of even greater significance," said Gilkeson, "are those who progressed from abnormal to normal with abstinence—and a return to abnormal again when the youngster returned to chronic pot use."

Gilkeson's findings are con-

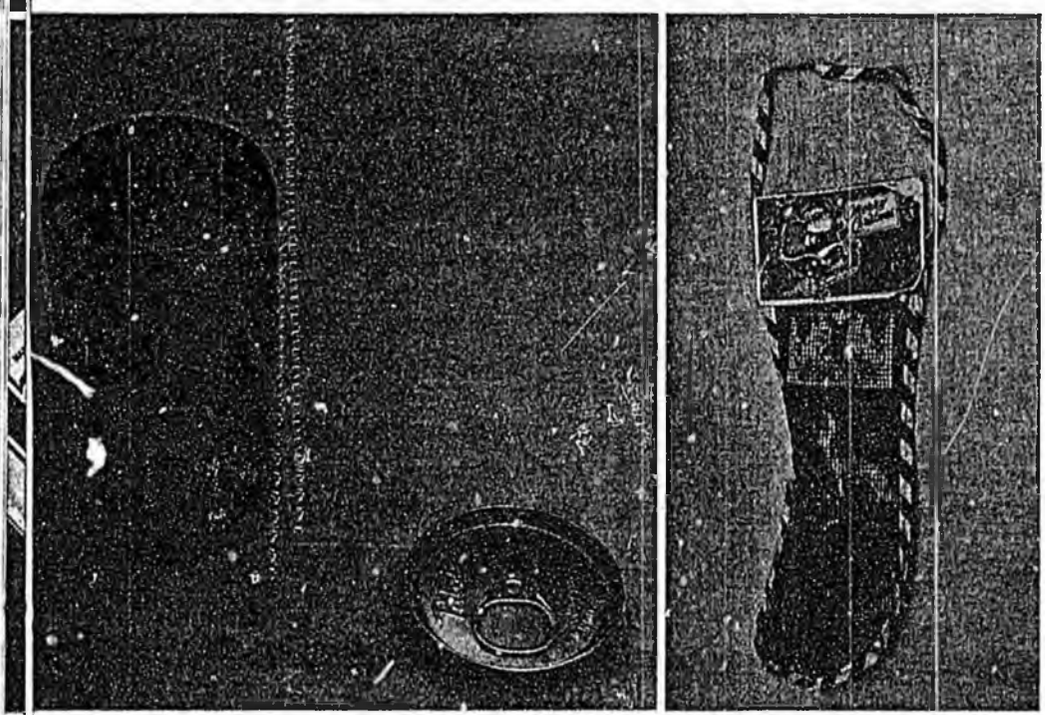
Dashboard pot pipes enable the smoker to "drive high." More than 50 research studies show that one or two joints seriously impair driving performance, even after the high has gone. Despite this, surveys reveal "60 to 80 percent of users say they sometimes drive while "intoxicated on marijuana."

firmed by a number of other scientists. Dr. Turin Itel, one of the foremost investigators of the effects of drugs on human EEGs, sums up: "Acute or chronic use of marijuana produces an EEG shift toward slow. This is definitely associated with impairment of cognitive functions."

Marijuana and the Lungs

Since pot smoke enters the body through the lungs, it obviously reaches its highest concentration in these organs. A 1975 study compared the compounds in a "weak" marijuana cigarette (.8 percent THC) with a high-tar standard tobacco cigarette. Aside from the fact that tobacco smoke contains nicotine and pot smoke contains cannabinoids, the two types of "smokes" have roughly the same compounds, including lung irritants and carcinogens (cancer-producing agents), co-carcinogens and carcinogen activators. Furthermore, a number of these are present in pot smoke in amounts 50 to 100 percent greater than in tobacco smoke—for example, the carcinogens benzanthracene and benzopyrene, with the latter also being a strong cancer initiator.

In addition to the carcinogens, there are elements in both types of cigarettes which irritate and inflame the lungs. Here, too, marijuana smoke comes out with an even "darker" picture than tobacco smoke. And, whereas tobacco smokers avail themselves of filters, low-tar cigarettes, etc., pot smokers consider "good pot" to be the strongest they can get. In addition, an entire "line" of the drug paraphernalia industry—the "power hitter"—blasts the smoke deep into the lungs. Some power hitters are produced in such kiddie-appealing shapes as red plastic space guns and miniature footballs. Many pot smokers use "bongs" in the belief that drawing the smoke through water or ice lessens the harshness of the smoke by cooling it down. The bong, however, concentrates all the smoke inside a chamber so that none is diffused into the air. As one manufacturer advertises: "The only thing wasted is you."



Pot advocates claim that comparisons between marijuana and tobacco do not hold up, since the tobacco smoker generally puffs on a pack a day or more, whereas the chronic pot smoker may use only one or two joints a day, or less. The noted researcher Dr. Sidney Cohen, who has done one of the three major human studies with marijuana, points out: "There are two factors which equalize the risks involved. First: People—especially young people—are, in fact, smoking more joints per day than ever before [this despite the ever-increasing potency of marijuana available on the streets today]. And it is the younger age groups who seem to be smoking the most.

"Second: Typical tobacco cigarette smokers either do not inhale the smoke into the bronchial passages or, if they do, it is for short periods of time. In contrast, the usual method of smoking marijuana is to inhale the material as deeply as possible, keep it in the lower airways for as long as possible and exhale only when another breath must be taken. At times the inhalation is so complete that no smoke is detectable in the exhaled air.

"This means that not only are the irritants and carcinogens in contact with the actual lung tissue for a longer time, but more of the toxic elements may be absorbed into the bloodstream than is the case with cigarettes. These elements are then delivered to other tissues. New studies show that heavy tobacco smokers are more prone than nonsmokers to cancer of the bladder, the esophagus and other nonpulmonary organs. Presumably, therefore, the carcinogens in both tobacco and marijuana smoke do 'carry.' "

Pot advocates like to point out that "there are no dead bodies from marijuana." With the notable exception of highway accidents caused by stoned drivers, this is true. "However," says Dr. Cohen, "we should not forget that it takes 20 to 30 years of consistent heavy use of tobacco to produce a lung cancer. We have been smoking marijuana heavily in the U.S. for a decade or less. Also, with all our medical sophistication, it was not until the 1950s that we noted any relationship between cigarette smoking and lung cancer.

"In those countries where cannabis has been smoked by adult males for centuries, there have been no long-term longitudinal studies regarding cancer and can-

Stash cans for pot come in many guises—and disguises. A popular item: Christmas stockings with candy-flavored rolling papers and pot pipes. Drug paraphernalia has been banned in ten states so far, and the Drug Enforcement Administration's new "model" anti-paraphernalia law is available to all states.

nabis. Studies have been done, however, which show a high incidence of bronchitis, pharyngitis, etc., among cannabis smokers, especially those who used the stronger varieties."

(In this context, it is interesting to note that in the oft-quoted "Ganja in Jamaica" study of 30 cane workers, lung cells were not analyzed. Furthermore, only healthy people were accepted for the study, thereby excluding those with chronic lung disease. In the words of Dr. John Hall, chairman of the department of medicine in Kingston, "Omitted were all cannabis smokers who showed pathological symptoms such as we see in our clinic." Among other "pathological symptoms" evidenced by long-term "ganja" smokers, Dr. Hall listed emphysema, an irreversible lung disease.)

The 1979 surgeon general's report on tobacco cigarette smoking contained some 30,000 research papers all bearing out the slogan: "The surgeon general warns that cigarette smoking is dangerous to your health." And, based on past statistics, the surgeon general said that "this year alone, cigarettes will kill 346,000 Americans."

Research on marijuana and the lungs is in its infancy compared to that on tobacco and the lungs. But, thus far, the findings are hardly reassuring. For example: Dr. Donald Tashkin, a specialist in pulmonary medicine at UCLA, found a 25 percent increased airflow resistance among pot smokers compared to non-pot smokers. (Airflow determines how well we can get oxygen into our bodies and how well we can get carbon dioxide out.) This was an abnormality which did *not* occur in heavy tobacco smokers.

In studies published in February 1980, Dr. Gary Huber, director of the Smoking and Health Research Program of Harvard University, showed that marijuana activates—by some 200 percent—enzymes which contribute to the "eating" or digesting of the lung itself.

In animal studies where marijuana and tobacco smoke condensates are painted on mouse skin, both produce cancers.

A further gloomy point is that many pot smokers also smoke tobacco cigarettes, and the harmful effects may be additive. Dr. Cohen sums up: "There is real reason for concern that marijuana alone, or marijuana smoked with tobacco, will bring forth a new wave of lung cancer in another 10 to 20 years."

Many people who once believed marijuana to be harmless have now concluded that it may be the most dangerous drug in America today, for many reasons. One such person is Dr. Robert DuPont, chairman of the Drug Dependence Section of the World Psychiatric Association and former federal director of the National Institute on Drug Abuse.

Dr. DuPont says: "I believe it to be our most dangerous drug because of widespread frequent use, especially by our youth, and because the psychological as well as the physical effects are insidious and ultimately devastating. Furthermore, for millions of our youth, marijuana is the gateway to the use of many other illegal drugs, including angel dust, LSD and heroin.

"One of the most disturbing aspects of marijuana use is that the user's judgment about the effects of the drug is clouded by his or her own use of marijuana. If an enemy nation were to plan to undermine America's future, they could not think of a more effective strategy than poisoning our youth. Marijuana is such a poison. The tragedy is more painful because the poison is not being administered by an enemy, but by ourselves. Not only the marijuana-using youth, but all of us as well, must share the responsibility for this tragedy, and we must all participate in combating and overcoming this marijuana plague.

"The one hopeful sign on the horizon is the mobilization of concerned parents. They are distraught—sometimes terrified—by the effects of marijuana on their children. And they are angry at the "professionals" who make them feel that *they* are the problem, rather than the drug. These parents throughout the country are discovering one another and are forming action groups which are beginning to have a positive impact on their own children as well as on our local and national leadership. But parents can't do the job alone. Government, business, educators, media—all segments of our society—must join in a massive endeavor to stop our kids from going to pot."

What Parents Can Do

Three national organizations have spearheaded the movement for "combating" the marijuana plague. The pioneer group in this effort is the American Council on Marijuana, founded in 1977 by the Myrin Institute. On its board were the leading scientists in the field at that time. They developed the first accurate resource materials: scientific information on marijuana for the lay public. Their publication, *Marijuana Today*, by Dr. George Russell, was the first such compilation of medical findings and is now in its fourth updated edition, having sold more than 100,000 copies.

In addition, ACM has held three major conferences at New York University Medical Center and at Columbia University. The second of these, which focused on "Marijuana: Biological Effects and Social Implications," a two-day conference, was the largest gathering of scientists, drug-abuse specialists and educators ever to be held in this country. It was also the first lecture series on marijuana to be accredited by the AMA.

The second organization, also founded in 1977, was PRIDE—Parent Resources and Information on Drug Education—which now has active parent groups in more than 19 states. PRIDE has two main functions: One is to disseminate reliable medical information on the health hazards of marijuana (a "PRIDE Packet" is available to individuals and organizations); the second is to stimulate the organization of new parent groups, using a concept originated by PRIDE—that of developing parent peer pressure groups comprised of the parents of the children's friends (not the parents' friends—these parents may not even know one another) in order to combat teen peer pressure and the "do drug" messages of the "kiddie-youth drug culture." In addition, PRIDE sponsors drug education and prevention conferences for schools, educators and parents to encour-

age them to work together to establish ongoing programs.

The third national organization, Citizens for Informed Choices on Marijuana (CICOM), whose staff helped plan Wellington's "Grass Roots Conference on Grass," has organized similar conferences from Connecticut to Washington.

Lee Dogoloff, White House drug policy advisor, supports the efforts of these groups, saying:

"I truly believe that our brightest hope for the future of hundreds of thousands of young people in the U.S. today is the burgeoning movement of parent/citizen groups now organizing in virtually every state of the nation. There are at this time thousands of adults all working toward the same goal—to see that our children grow up drug-free." ★

Marijuana Reprints

Extra copies of the two marijuana articles which have appeared in *The SatEvePost* may be ordered by enclosing a check or money order as follows:

1 to 9	$1.50 each set of two articles
10 to 99	85¢ each set
100 to 999	65¢ each set
1000 to 1500	40¢ each set

For special bulk purchases, call Susan Hanley at 317-636-8881 for price quotes (any more than 1500).

For reprints, write to: MERF, Dept. M-Reprint, P.O. Box 2166, Indianapolis, IN 46206.

Make your check or money order payable to: MEDICAL EDUCATION AND RESEARCH FOUNDATION.

Check or money order *must* accompany order. Remit in US funds *only*.
Postage is included in the above prices. Special shipping will require additional charges.

Drug Abuse Issue of the Month

Vol. 1 No. 1 May 1980

Why Decriminalization of Marijuana Must Be Opposed At Once

The issue of decriminalization of marijuana is currently under consideration by the House and the Senate and could be voted on very soon.

Experts who are fighting "the drug battle" feel that the battle would be irrevocably **lost** if decriminalization becomes Federal law -- since Federal law historically serves as a model for State law.

Dr. Robert DuPont, former Director of the Federal Agency, the National Institute on Drug Abuse -- who used to favor "decrim" -- is just one of a number of leading experts who have completely changed their minds about this issue. Dr. DuPont now says: "I have learned that it is impossible to be pro-decrim and anti-pot, **because no matter how you try to explain it to them, young people interpret decrim as meaning that pot must be okay because the government has legally sanctioned it.**"

Decriminalization is not synonymous with legalization. However, in the 12 states which have already decriminalized simple possession of marijuana (without intent to sell), it is "read" as legalization of marijuana -- which gives further impetus to the idea that decriminalization and legalization are one and the same.

The Federal Law now being proposed in the Senate, and soon to be taken up in the House of Representatives, would decriminalize simple possession of 30 grams of marijuana for personal use. How much **is** 30 grams of pot? A little over an ounce -- and enough to make 30 to 60 joints, depending on how it is rolled.

At first glance the idea of "decrim" may sound sensible to some. However, a look below the surface clearly shows that there are many important reasons to oppose decrim, and virtually no valid reasons to support it.

Pro-pot forces have muddled the issues by their constant repetition of the statistic: 450,000 marijuana arrests were made last year. They follow this up by saying that "the trauma of an arrest and a child being thrown into jail is far more harmful than the drug itself." Some of the pro-pot forces go further, claiming this is "the only really harmful thing about the drug."

The Facts Are These

1. So far as "being thrown into jail" is concerned:

> The President of the International Association of the Chiefs of Police, Chief Edward Davis, testified at the House of Representatives sub-Committee hearings on decriminalization, and summed it up like this:
>
> "Let me say in closing, that this foolish statement that we are putting our children in prison is pure poppycock. I don't think there has been one child **or** adult put in prison for simple possession of marijuana in the last five years."
>
> -House Select Committee on Narcotics Abuse and Control hearings, March 1977

This statement is, in effect, "proved out" by NORML and by other pro-pot organizations. They obviously pick the best case they can find to make their point. The Jerry Mitchell case is their "prize"; used as a powerful fund-raising platform for NORML.

Note first that the Jerry Mitchell case does not even **concern** "simple possession" (without intent to sell). Mitchell was arrested for **selling** marijuana. And NORML officially claims to be concerned only about possession, not sale. However, if this important point is overlooked, the case -- as reported by NORML -- does appear to be a miscarriage of justice where the punishment does not fit the crime. Mitchell was, says NORML, arrested in 1975 and given seven years (of which he served 15 months) for selling $5.00 worth of pot (to an undercover agent of the Missouri State Highway Patrol Narcotics Division).

What NORML does **not** mention -- though the facts are well known to them -- is the following: DURING THE PRE-SENTENCING INVESTIGATION, **MITCHELL HAD PLED GUILTY TO SELLING:**

- One pound of marijuana (the equivalent of some 500 to 900 joints, or marijuana cigarettes) which he sold for $125.00;
- one hundred tablets of what he thought was amphetamines, which he sold for $25.00.
- He also offered to sell the agent an ounce of cocaine for $800.00

Continued on page 2

The Facts (continued from page 1)

• Furthermore, he had been under prior probation -- under the same judge -- for possession of marijuana. Mitchell had just finished the probation period. This means that since the judge knew it to be a second offense, when sentencing he took into account the other drug involvements to which Mitchell had admitted.

Obviously, if they had a solid "possession" case, NORML would use it.

So much for "being thrown into jail" for simple possession of an ounce or less of marijuana.

2. So far as marijuana possession **arrests** are concerned:

• Law enforcement officials throughout the nation point out that for the past 5 or 6 years or more, most of those charged with "simple possession" of an ounce or less of marijuana, have really been arrested for some other violation of the law. Then, because marijuana was found on them, they were also charged with possession of marijuana.

• Furthermore, law enforcement agencies in some states no longer enforce any marijuana laws -- including arrest. (For example, according to **Time** magazine, March 13, 1978: "Federal prosecutors in Miami are so swamped they rarely bother with pot cases of less than one ton.") If the courts aren't going to do anything, why should the police bother to make arrests?

• Drug Enforcement Administrator, Peter Bensinger, wrote in **International Drug Report**, "Judges are not dealing with users, or small time user-dealers, but with organizations dealing in tonnage quantities of marijuana."

• A police chief in Maine wrote: "Since the decriminalization of marijuana in Maine, I have noticed a substantial increase in marijuana cases. Also, the chemists who analyze police-confiscated samples say they are finding more marijuana sprayed with PCP. This enables the dealer to charge more for what the customer is told is a better grade marijuana. Apparently, there is now so little risk that the dealer is willing to take more chances. He has an attitude of: "It will only cost some money if I get caught."

The fact is: In the states which already have decriminalization, marijuana use has increased. In the other states, we have far too much "de facto decriminalization" as it is. We certainly don't need the Federal Government offering the states a "pilot project" for more!

COMMITTEES OF CORRESPONDENCE
Wise Makes Right

Copyright © 1980 by Committees of Correspondence, New York, N.Y. 10025

A Few Q's and Their A's

Q: Why have a law that isn't obeyed?

• As a noted Washington, D.C. attorney put it: "As any prosecuter knows, there are thousands of laws on the books that are enforced only sparingly; prosecutorial discretion is built into our criminal justice system."

• Another Washington attorney says: "The marijuana possession law, as it stands, states our national attitude and policy toward marijuana: we, as a nation, do not sanction its use."

• As a highway patrol officer put it: "The 55-mile-an-hour speed limit is a heavily violated law. But in the first four years after the law was enacted, highway deaths were reduced by 36,000. The fact that the law is heavily violated does not mean it should be eliminated."

Q: Why take police time worrying about marijuana possession when they could better be doing something else?

• As pointed out, the police generally do not worry about simple possession. Furthermore, marijuana use has increased in states which have decriminalized, and traffic accidents and other drug-related crimes have increased, requiring more police time than before "decrim". In California, for example, in the first six months following decriminalization of marijuana in 1976, arrests for driving under the influence of drugs increased 46.2% in the case of adults, and 71.4% in the case of juveniles!

• During prohibition of alcohol the statement was made that it should be legalized so that the officers didn't have to waste their time enforcing those laws. Today, according to the National Council on Alcoholism, at least 50% of police time is spent on some alcohol-related problem.

It is obvious, therefore, why police throughout the country are generally vehemently opposed to decrim, which -- they say -- would, in the short and long run, make their jobs much more difficult.

Q: I have heard that in the 12 states which have, thus far, decriminalized marijuana, pot usage did not increase.

• This is not true. For example, NORML publicizes the figure that in Oregon, the second state to decriminalize marijuana, "current pot use" increased only 1%. However, what they neglect to mention is that this figure was arrived at by computing pot usage of everyone in Oregon, ages 18 to 100! Since usage is generally negligible in the over-35 age group, the age span of the computation evened out the increase in usage figures. However, the same study showed that **in the 18 to 29 age group, usage increased 16% after decrim.** And the study did not even consider usage under 18.

A police chief in Oregon reported: "Local use of marijuana has expanded greatly in the five years since adoption of the decriminalization law in this state -- **particularly in the lower high school and upper grammar school.**"

Here Are Three Bottom Line Reasons For Opposing Decriminalization

1. The fact that marijuana is understood by young people and their parents as being illegal, is, in many cases, an important deterrant to marijuana use.

2. **Youngsters "read" decrim as a green light to smoke pot.** Jeff Hamilton, son of Joe and stepson of Carol Burnett Hamilton, put it this way when testifying before the Senate Sub-Committee Hearings on Health Hazards of Marijuana: "The worst thing about decrim is the unmistakable message of 'okayness' it gives to kids. Not only that it's okay to smoke grass, but also that pot must be harmless, since the government would obviously not decriminalize a harmful drug. I have searched, and honestly can find no sound reason to feel that decriminalization would have any other effect than a negative and slow deterioration of the minds of the people of this nation."

3. **Decriminalization would be a step toward legalization.** It is important to realize that, for 10 years, NORML officially claimed they were only for decrim and not for legalization. **Then,** having achieved a climate of acceptance for "decrim", they officially adopted the policy of legalization of marijuana.

In their January 1979 "Official Policy" adopted by the Board of Directors, Executive Committee, Advisory Board and Regional and State Co-ordinators, NORML first redefined its concept of decriminalization. This included: "The removal of all criminal **and civil** penalties for the private possession of marijuana for personal use." (Emphasis added -- civil penalties include such regulatory measures as tickets and fines for traffic violations.)

Other clauses from the NORML policy statement: "The right of possession should include other acts incidental to such possession, **including cultivation, and transportation** for personal use, and the casual, non-profit transfers of small amounts of marijuana." "... It must be recognized that where personal use and possession of marijuana are no longer serious crimes. It is both inconsistent and irrational to **provide lengthy prison terms for those who distribute marijuana for profit.**" (Emphasis added.)

The statement concludes: **"Specifically, NORML supports the eventual legalization of marijuana."**

At NORML's annual convention where this policy was presented and adopted, then-Executive Director Keith Stroup said to the Conference: "We finally took the honest step to declare to the world we want legal marijuana." (As quoted in **The Atlanta Journal**, Dec. 29, 1978.)

At a seminar for lawyers sponsored by NORML on December 16, 1978, Keith Stroup was asked why the Seminar dealt not only with marijuana, but with cocaine and other drugs. Stroup answered: "NORML will always focus on marijuana, but I'd hate like hell to think decriminalization (of marijuana) would stop there." (As quoted in **The Atlanta Journal and Constitution**, Dec. 3, 1978.

In a debate on decriminalization with Sue Rusche at Emory University in February, 1979, Stroup told the students: "The next thing NORML's going to work on is decriminalizing drug dealers and drug smugglers because, after all, they're not criminals either."

Remember

Because of the well-orchestrated and well-financed pro-pot letter writing campaigns, elected representatives have become convinced over the past decade that the public wants decriminalization of marijuana. (Stroup has testified before Congress that NORML speaks for 15,000,000 marijuana users in this country.) A White House aide said at a meeting of Federation of Parents for Drug-Free Youth: "You must realize that the loudest voices -- indeed, almost the only voices -- we hear from are pro-potters." We must let our voices be heard. It is **essential** that you take ten minutes to write to your Congressman, to both your Senators, and to President Carter. (In case you do not know the name of your elected representatives, call your local library, or Board of Elections, or newspaper.)

You can phone the White House 202-456-1414 and ask for the Comments Office. Give your views on decriminalization. A report of all calls is given to the President every week.

Here are some sample letters and telegrams. **But we urge you to write your own for greater effectiveness.**

Be sure to ask your elected representatives to advise you of their position on decriminalization of marijuana. Only by asking a question of this sort can you be sure that your letter will actually be shown to him (or her). Otherwise, your letter may be answered by an aide. Please send a copy of your letter to Box 6272 Silver Spring, MD 20906, so our representatives in Washington will have a record of the number of Committees of Correspondence people responding.

Sample Letters

Dear Senator:

Please vote against any relaxation of marijuana laws. Decriminalization is not the answer to this country's marijuana pandemic. Would you please join Senator Mathias of Maryland as a co-sponsor of his amendment to remove Section 1813 of Senate Bill 1722, and return to current law. Please advise me of your position on this issue.

Dear Congressman:

Please vote against decriminalization of marijuana. Current medical and scientific evidence has proven marijuana to be a much more dangerous drug than many once believe it to be. Decriminalization will only make marijuana more available to our youth, and the epidemic will increase to even more dangerous levels. Please advise me as to your position on this issue.

Dear President Carter:

I am strongly opposed to relaxation of the marijuana possession penalties. Decriminalization is certainly not the answer to this country's massive marijuana epidemic. Indeed, as shown by the states which have decriminalized, it only makes the problem worse. Please advise me as to your present position on this issue.

HHS NEWS

U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES

EMBARGOED FOR A.M. PAPERS
Thursday, August 12, 1982

Shirley Barth - (202) 472-5663

Statement by
C. Everett Koop, M.D.
Surgeon General of the U.S. Public Health Service

As surgeon general, I urge other physicians and professionals to advise parents and patients about the harmful effects of using marijuana and to urge discontinuation of its use.

The health consequences of marijuana use have been the subject of scientific and public debate for almost 20 years. Based on scientific evidence published to date, the Public Health Service has concluded that marijuana has a broad range of psychological and biological effects, many of which are dangerous and harmful to health.

Marijuana use is a major public health problem in the United States. In the past 20 years, there has been a 30-fold increase in the drug's use among youth. More than a quarter of the American population has used the drug. The age at which people first use marijuana has been getting consistently lower and is now most often in the junior high school years. In 1978, nearly 11 percent of high school seniors used the drug daily; and although this figure declined to 7 percent in 1981, daily use of marijuana is still greater than that of alcohol among this age group. More high school seniors smoke marijuana than smoke cigarettes The current use (during previous 30 days) of marijuana is 32 percent; 29 percent smoke tobacco.

On March 24, Secretary Schweiker transmitted to the U.S. Congress a report reviewing the health consequences of marijuana use.

(More)

Marijuana and Health: 1982, the ninth in a series, is primarily based on two recently-conducted comprehensive scientific reviews on the subject: one by the Institute of Medicine of the National Academy of Sciences and the other by the Canadian Addiction Research Foundation for the World Health Organization. Both independent reviews corroborate the Public Health Service prior findings of health hazards associated with marijuana use: Acute intoxication with marijuana interferes with many aspects of mental functioning and has serious acute effects on perception and skilled performance, such as driving and other complex tasks involving judgment or fine motor skills.

Among the known or suspected chronic effects of marijuana use are:

- Marijuana impairs short term memory and slows learning;
- impaired lung function similar to that found in cigarette smokers. Indications are that more serious effects may ensue following extended use;
- decreased sperm count and sperm motility;
- interference with ovulation and prenatal development;
- impaired immune response;
- possible adverse effects on heart function; and
- by-products of marijuana remaining in body fat for several weeks with unknown consequences. The storage of these by-products increases the possibilities for chronic effects as well as residual effects on performance even after the acute reaction to the drug has worn off.

I am especially concerned about the long-term developmental effects of marijuana use on children and adolescents, who are particularly vulnerable to the drug's behavioral and physiological effects. The "amotivational syndrome" has been attributed by some to prolonged use of marijuana by youth. The syndrome is characterized by a pattern of

(More)

loss of energy, diminished school performance, harmed parental relationships and other behavioral disruptions. Though more research is required to clarify the course and extent, in recent national surveys up to 40 percent of heavy users report that they observe some or all of these symptoms in themselves.

The Public Health Service review of the health consequences of marijuana supports the major conclusion of the National Academy of Sciences' Institute of Medicine:

> What little we know for certain about the effects of marijuana on human health--and all that we have reason to suspect--justifies serious national concern.

MARIJUANA FACTS

WHY DO CHILDREN ABUSE DRUGS?

- Peer pressure
- It is fun.
- They think it is harmless
- To escape from daily stress
- To create a new image.
- "Pop Culture" promotes it.
- Lack of positive models.
- Experimenting & curiosity.
- To relax.
- High-risk behavior.
- Imitation of parent's drinking and smoking habits.
- Their short-term thinking precluded consideration of long-term consequences.
- For independence.
- Because they feel a need to reject parent's values.
- To boost their self-esteem.
- Drugs are available.

WHAT IS MARIJUANA?

It is a drug made from the dried leaves and flowering tops of the hemp plant (cannibus sativa) containing more than 421 known chemicals.

THC (delta-9 tetra-hydrocannabinol) is the major mind-altering chemical. There are also other active agents in marijuana.

Marijuana varies in its strength of THC. Today it is up to 10 times more potent than prior to 1970.

When combined with other mind-altering drugs such as alcohol, the THC becomes significantly more potent. THC is fat soluable and it *builds up* and is stored in fatty tissues, especially in the brain and in the reproductive organs.

Half of the THC ingested stays in the body for three to five days. It takes up to 30 days for a single dose of THC to be completely eliminated.

Whereas alcohol is water soluable and fully metabolized in 12 hours, marijuana lingers in fatty tissues and causes cumulative effects.

A combination of marijuana and alcohol is particularly dangerous, causing changes in *depth perception, night blindness, concentration and reaction time.*

According to Carlton Turner, one of the world's most knowledgeable experts on marijuana research: *"There is no other drug used or abused by man that has the staying power and broad cellular actions on the body."*

WHAT DOES MARIJUANA DO TO THE BODY?

EFFECTS ON THE BRAIN

- It widens the gap between brain cells, thus slowing down the nerve impulses.
- Short-term memory is impaired.
- It impairs the ability to evaluate situations and sequencing ability.
- It impairs psycho-motor performance.
- It impairs sense of time and depth perception.
- There is decreased dream activity.
- A tendency towards insomnia.
- It produces apathy and lethargic behavior.

EFFECTS ON THE LUNGS

- Marijuana smoke is more irritating and harmful than cigarette smoke.
- Studies show that smoking one joint is more impairing to the lungs than smoking a pack of cigarettes.
- It can cause pre-cancerous lesions in 2 to 3 years (as compared to 20 years for heavy cigarette smokers).
- It makes lungs more susceptible to emphysema and bronchitis.

EFFECTS ON REPRODUCTIVE ORGANS

- There is a decrease in sperm count and mobility.
- Decreased testosterone level.
- It can cause chromosome change, thus slowing down cell renewal (an ongoing process essential for the maintenance of life).
- Prevents synthesis of DNA.
- Marijuana crosses the placental membrane - passing from the mothers' blood to the unborn child.

EFFECT ON BLOOD CELLS

- There is a decrease in white cell production, therefore it interferes with the body's ability to fight off infection and disease.

EFFECT ON PERSONALITY

- Users develop the "amotivational syndrome" which is characterized by apathy, vagueness, withdrawal and lack of motivation.
- There is a tendency toward paranoia (unfounded fear and suspicions).
- Users experience illusions of accomplishments, with unrealistic evaluation.

WHAT ARE THE OUTWARD SIGNS OF MARIJUANA USE?

- Personality changes may occur.
- Lack of agressiveness in males.
- There is a gradual drop in the quality of school work.
- Often over-reaction to criticism.
- Weight loss may occur.
- Unusual money requests.
- Physical evidence: cigarette papers, ashes, odor, roach holders, etc.

- Secretiveness.
- Red eyes.
- Slowing of speech.
- One of these signs is not enough for identification. Most are typical of adolescent behavior. Immediate signs are not always obvious.

HOW MUCH DOES MARIJUANA COST?

- $2.00 for one joint.
- $5.00 for 3 joints.
- $60 to $80 per ounce (dealer price).

HOW TO DEAL WITH THE PROBLEM OF YOUR OWN CHILDREN USING MARIJUANA.

- Be informed and up-date your facts.
- Do not deny the problem.
- Do not condemn the child.
- Keep cool and calm; do not lecture.
- Keep communications open.
- Refer to resources.
- Children need to hear clearly stated values and standards from their family.
- When a child is independent and self-supporting, they can make their own decisions. Up to then, their health is *your* responsibility.

HOW TO HELP PREVENT YOUR CHILD FROM USING DRUGS

- Hold family discussions about drugs and encourage open family discussion.
- Be an active listener.
- Provide alternative activities: sports, outings, etc.
- Form parental support groups.
- Discuss with family member that stress is normal. Explain how you cope with stress.

- Discuss how we can all cope with stress other than anestetizing ourselves.
- Encourage a good self-image.
- Promote individual interests - not always following what everyone else is doing.

POINTS OF CONSIDERATION

- Any form of drug use has more serious consequences with vulnerable individuals such as children and adolescents.
- The effects of drugs on those in the early stages of mental and physical development can be more pronounced and persistent than on mature adults.
- Learning to cope with stress is a normal and necessary developmental process.
- Marijuana use provides escape from stress and robs the child of developing skills needed to cope with stress.

Animal studies prove that marijuana use causes reproductive and fetal disorders.

- Of all fatal automobile accidents, 16% are marijuana related.
- Marijuana is addictive. The more you use, the more you need.
- Marijuana is more prevalent, more potent and more frequently used today than five years ago.
- Users are getting younger.
- The contents of cigarettes and alcohol are government regulated. However, since there is no regulation of marijuana, each joint is a surprise package.

THE MARIJUANA EPIDEMIC

> I get a sick feeling in the pit of my stomach when I hear talk of marijuana being safe. Marijuana is a very powerful agent which is affecting the body in many ways. What the full range of these consequences is going to be, we can only guess at this point. But from what we already know, I have no doubt that they are going to be horrendous.[1]
>
> Dr. Robert DuPont
> Former Director of the
> National Institute on Drug
> Abuse.

INTRODUCTION

Marijuana smoking has reached epidemic proportions in the United States. Some sixteen million Americans are now regular users; and among high school seniors, about one in ten are daily smokers -- averaging 3½ joints a day.

The extent of current marijuana consumption raises many important concerns. While use of the drug is widespread throughout the world, for instance, only in the United States is it so prevalent among young people of all classes that an entire generation is affected. In other countries, the smoking of marijuana is not usually found throughout the entire society -- generally use is confined to certain religious groups or classes. Only in this country does it involve the whole culture.

---

1 Washington Post, July 30, 1978.

Note: Nothing written here is to be construed as necessarily reflecting the views of The Heritage Foundation or as an attempt to aid or hinder the passage of any bill before Congress.

The most frightening aspect of the widespread use of the drug is that the overwhelming majority of smokers have no knowledge of the demonstrated medical effects of marijuana. Most regard it as completely harmless, or at least as no worse than alcohol or tobacco. During the 1960s, when the drug became common in America, reliable scientific evidence was sparse. Marijuana seemed harmless enough to most people, and the very expression of doubt by experts was all too often discounted as deriving from opposition to the political and social attitudes of the users.

This absence of hard evidence regarding the consequences of the drug caused many scientists and legislators to take a liberal view of marijuana usage -- how could one condone alcohol and tobacco and then condemn marijuana? But in the last ten years, the climate has changed. Many detailed studies have been published on the medical aspects of the drug, and a body of scientific literature has been assembled which was unavailable only ten years ago. The National Institute on Drug Abuse (NIDA), a division of the Department of Health and Human Services, has taken the lead in sponsoring over a thousand tests, employing sophisticated procedures to control dosage, strength, etc., consistant with patterns of social usage. Other organizations have funded similar research projects.

It took sixty years of studies to establish a strong correlation between tobacco smoking and a number of serious diseases. Yet the results of experiments carried out in the last decade already suggest a strong relationship between the use of drugs and several medical disorders. Marijuana appears to impair memory, learning performance, motivation and may permanently damage brain tissue. It would also seem to have damaging effects on the lung, reproductive organs and the immunity system.

The powerful evidence now available has caused many experts to revise their position from one of indifference to one of great concern. Dr. Robert DuPont, quoted above, is a case in point. In various senior governmental positions, he did much to soften attitudes towards the use of marijuana -- indeed he was often cited in the literature of the decriminalization lobby. But now, as president of the American Council on Marijuana, he is in the forefront of a campaign to end the consensus that marijuana is no worse than many other drugs taken for pleasure. That belief, he says, "is a disaster and I feel very badly to have contributed to [it]."[2] Like so many of those who have changed their minds in light of the evidence, Dr. DuPont is particularly anxious about the long-term consequences of marijuana smoking on the current school population.

- "Reading, Writing and Reefer," ABC News Report, broadcast December 10, 1978.

H-7

This Backgrounder will review the scientific evidence which has led to the dramatic change of heart by so many people. It will then examine the policy options available to deal with the situation.

THE GROWING USE OF MARIJUANA

What is Marijuana?

Marijuana (also known as pot or grass) comes from the plant Cannabis Sativa (Indian hemp or hashish), which has been cultivated for hundreds of years as a source of rope. The principal psychoactive, or mind-altering, ingredient of marijuana is a substance know scientifically as delta-9-tetrahydrocannabinol (or THC), although several hundred other chemicals with various effects are also present.

An intake of between five and ten milligrams of THC into the bloodstream is usually sufficient to induce intoxication -- a "high." In the 1960s, when the drug was becoming fashionable, most of the marijuana smoked in this country was of domestic origin. At that time, most American marijuana had a rather low THC content (0.2 percent to 1 percent), and so a 1 gram joint might contain in the region of 2-10 milligrams of THC. By 1970, however, Mexican marijuana with an average THC of between 1.5 percent and 2 percent, had begun to dominate the market. By the end of the 1970s, Jamaican and Colombian varieties, with concentrations of 3 percent to 4 percent THC began to enter the country in increasing quantities. In addition, liquid hashish, with a concentration of 30 percent to 90 percent THC, began to appear. At a potency rate of 50 percent THC, an ounce of this oil is sufficient to intoxicate one thousand people. In 1974 alone, 369 pounds were seized by federal agents.[3]

The rise in potency of marijuana available in the United States is central to any discussion of the medical impact of the drug. The early, inconclusive studies carried out in this country were based on the low-potency marijuana then being consumed. But now we are dealing with far stronger varieties, and the studies using these strains of marijuana are far from inconclusive.

Usage of Marijuana

Twenty years ago, marijuana was hardly used in this country. Only in the late 1960s did the drug become widely used, and not until the mid-1970s did it become commonplace. The increase in use has been dramatic by any measure. The most recent major study on usage was conducted by the National Institute on Drug

---

3 J. M. Jenson, Testimony before the Senate Subcommittee on Internal Security, May 1975, ref. 51, pp. 491-505.

Abuse, using a national sample carefully broken down by age and other characteristics.[4] As Table I indicates, this study found that 68 percent of young adults in 1979 had tried marijuana, compared with only 4 percent in 1962. Among 12- to 17-year-olds, the proportion had grown over the same period from just 1 percent to 31 percent. Even among 12- to 13-year-olds in 1979, the study showed 8 percent had been introduced to the drug. When NIDA examined current users (those who had used the drug within the last month), the pattern illustrated by Table II emerged. As the figures indicate, widespread use now occurs among children of high school age and 40 percent of the college-aged population are current users.

Among those who reported current use of the drug, the NIDA study found that about two-thirds of young adults and one-half of older adults and youths have used marijuana once or more times in the last month. Of our high school seniors, some 10 percent were found to be daily users, consuming an average of 3½ marijuana joints every day. Not only has the proportion of daily users doubled among high school seniors since 1975, but it now exceeds the number who use alcohol on a daily basis (stable at about 6 percent since 1975).

When one remembers that the potency of the average marijuana joint has increased many fold in the last ten years, it becomes clear that we are dealing with a staggering increase in the consumption of THC, particularly among the student population. In the 1960s, the medical implications of marijuana use were of direct concern only to a small number of people, and the dangers of heavy chronic use to an even smaller group. But today, the drug is so widespread that the medical evidence is important for the entire population.

The volume and market value of the marijuana trade now makes it a major industry. According to the Wall Street Journal even domestically produced marijuana rivals some leading farm crops. In California, the value of production may soon pass the $1 billion grape industry -- the state's number one farm commodity. In Hawaii, the level of marijuana production and sales may exceed the islands' largest business, the $300 million sugar industry.[5] The Federal Drug Enforcement Administration (DEA) estimates that domestically produced marijuana now accounts for up to 20 percent of the value of the entire trade. The American growers have specialized in recent years on developing very high grade varieties, by selective breeding. The most potent California strains

can contain as much as 6 percent pure THC. A single plant, on a three-foot diameter plot, can yield $1,000 -- a moderate-sized garden will produce $100,000 worth of the drug.[6] The size of the total American trade, including imports, can only be determined roughly, but it has been estimated that the amount of marijuana coming into this country every year is between ten and twenty thousand tons, with a street value in the region of $20 billion.[7]

The 1970s also saw the rapid growth of what has now become a multi-million dollar industry providing drug-related paraphenalia, magazines and books. Publications such as High Times (which boasts a readership of four million), carry in-depth articles on the use of drugs and legal issues, and are full of glossy advertisements for drug equipment. High Times even provides full listings of the prevailing market prices for many drugs, much as the Wall Street Journal carries the latest stock market quotations.

While the commercial return available on marijuana has been a major contributor to its ready availability, there are other important factors behind the growth in usage. In the late 1960s and early 1970s, the drug was an integral part of the non-conformist lifestyle in universities and elsewhere. The attempt by "authority" to stamp out marijuana consumption, or even discourage it, was seen as an attack on the alternative lifestyle, and the illegality of the drug was quite probably a significant stimulus to its consumption. This mood of resistance was only encouraged by exaggerated claims (on the basis of then available evidence) regarding the health dangers connected with marijuana.

In all probability the most important cause of the explosion in use has been simple ignorance. If, as most people believe, the drug is fairly harmless, then why not use it if it is pleasant? As we shall see in this study, nothing could be further from the truth, but survey after survey shows that while the dangers of alcohol and tobacco are widely appreciated, those associated with marijuana are not.[8]

THE SCIENTIFIC EVIDENCE

General Considerations

Before we examine the evidence regarding the effects of marijuana on the body, it is important to put this evidence in its historical perspective. The early American studies on marijuana, such as they were, were unsatisfactory for several reasons.

---

6 Washington Post, February 15, 1981.

7 20,000 tons would be sufficient to make approximately 12 billion joints.

8 See, for instance, L. D. Johnston, J. G. Bachman, and P. M. O'Malley, Drug Use Among High School Students, 1975-1977 (Rockville, Maryland: NIDA, 1977).

The strength of THC in test samples was often not known with precision, and so it was debatable in many instances what was actually being measured. In addition, as has been explained, the THC strength of the average joint has increased dramatically in recent years. We are dealing with a totally different level of consumption than was the case in the 1960s. Using typical test results from the 1950s and 1960s as a guide to the effects of present-day use patterns is rather like trying to determine the consequences of a bottle of gin a day on the average person by testing the effects of a single daily martini!

Given the shortcomings of early tests, it is not surprising that many were inconclusive, and this gave powerful ammunition to the pro-legalization lobby. Even among the scientific establishment, a comparatively sanguine attitude seemed justified.

The first determined challenge to this consensus came from clinical psychiatrists -- particularly from those associated with educational institutions where the drug was in heavy use. Clinicians have often been the first people to warn the world of the unforeseen effects of a drug -- thalidomide being perhaps the most well known case -- and the importance of their front-line role cannot be understated. Typical of such clinicians was Dr. Harvey Powelson, head of the Psychiatric Division of the Student Health Service at Berkeley between 1964 and 1972. Powelson's eight years of extensive exposure to Berkeley students during the period in which marijuana use accelerated greatly make him probably the most experienced campus psychiatrist in the country. Like so many of his associates in the 1960s, Powelson took a tolerant attitude to marijuana in his early days at the University of California; but as he watched individual users over an extended period of time his attitude changed completely, to the point where he came to believe that it is the most dangerous drug with which the nation must contend.[9]

It was the conclusions of observers such as Powelson that created the pressure for the very thorough testing which began in the early 1970s. This series of tests have been far superior to the research of the 1950s and 1960s: more carefully controlled THC doses have been used, for instance, and strength levels in both human and animal tests reflect current usage. It should be noted, however, that there are still some unavoidable obstacles to testing. Marijuana <u>is</u> an illegal substance, and so it is not always easy to obtain statistically perfect volunteer groups. In addition, early studies showed that THC is highly toxic, and that it may pose significant dangers to certain individuals and to the fetus. So there are strong moral and legal impediments to certain important types of study, necessitating the use of animals rather

---

9. H. Powelson, Testimony before the Senate Subcommittee on Internal Security, May [illegible], ref. 30, pp. 18-21 and "Marijuana: More Dangerous Than You Think," Reader's Digest, December [illegible].

than humans for test purposes. But in these cases, the animals possess medical characteristics that parallel human functions, and dosages given to the subjects have been equivalent to those taken by humans. Furthermore, the results with appropriate animals correspond closely with clinical observations of human users.[10]

THC and the Body

Unlike water soluable drugs such as alcohol, which is metabolized and "washed out" of the system within twelve hours, THC is fat soluble and remains in the body for a considerable time. The THC in marijuana has a half-life of about three days; that is, it takes three days for half the THC in a joint to leave the body. It may take over three weeks for all the THC to be broken down. According to one expert, observations suggest that the younger the age of first use, the greater may be the long-term effects resulting from the THC in the body.[11]

This pattern of retention in the body means that even the occasional marijuana smoker may never be free of THC. Furthermore, there is strong evidence from animal tests that the toxicity is cumulative -- small amounts of THC administered over a period seem to be far more harmful than the same total quantity in one dose.[12]

The fat solubility of THC, which is exceeded only by substances such as DDT, affects the way in which the substance is distributed within the system. Intravenous injections of radioactive THC confirm that it concentrates in the fatty tissue, and also that it lodges in the liver, lungs, reproductive organs and the brain. It was not until the early 1970s, with the work of Julius Axelrod and others, that the pattern of THC absorption by the body, or the period for which it was retained, was known with any real certainty.[13] Until then, it was assumed that THC was broken down and removed from the body as quickly as alcohol.

---

10 For excellent reviews of the scientific studies concerning marijuana, see George K. Russell, Marijuana Today (New York: Myrin Institute, 1980 -- published in cooperation with the American Council on Marijuana); Gabriel G. Nahas, Keep Off the Grass (New York: Pergamon Press, 1979); "Twelve Things You Should Know About Marijuana," Consumers Research Magazine, April 1980; I. Lantner, J. O'Brian and H. Voth "Answering Questions About Marijuana Use," Patient Care, May 30, 1980.

11 Carlton Turner, Associate Director, Research Institute of Pharmaceutical Sciences, University of Mississippi, Address to Seminar sponsored by the J.M. Foundation, New York, September 9, 1980, (unpublished transcript).

12 W. D. Patton, Testimony before the Senate Subcommittee on Internal Security, May 1974, ref. 30, pp. 70-79.

13 Ibid.; Also D. S. Freud and J. Axelrod, "Delta-9-Tetrahydrocannabinol: Localization in Body Fat," Science, 179 (1973).

This discovery that THC is retained for a considerable time in certain organs of the body is crucial to a proper understanding of its effects. It means that the drug is quite unlike alcohol, with which it is often incorrectly compared. And the moderate user is running far greater risks than the moderate user of alcohol and many other drugs.

Tolerance and Addiction

A discussion of the cumulative effects of a drug leads to the issue of tolerance. One of the popular misconceptions regarding marijuana is that the user develops a "reverse tolerance" -- he needs gradually less and less THC to produce the same "high." It is possible that this belief developed from an examination of the effects of the low dosages commonly used in the 1960s. There may also be a "learning effect" that develops with low doses that leads to a greater appreciation of the high by the user. In addition, it is possible that low doses of THC may cause the release of quantities of the drug stored in the body's organs.

But it has now been firmly established through careful studies with doses typical of current use that a profound tolerance develops -- that is, steadily larger doses are necessary to produce the same effect.[14] Tolerance means that the heavy chronic smoker must increase his THC intake to obtain the same psychoactive results; which in turn means that he must increase the concentration of THC in his brain, lungs and other organs. Tolerance effects also encourage the user to try more potent drugs, such as LSD, and to combine marijuana with alcohol or other available drugs.

One reason why marijuana is considered as relatively safe by so many people is the belief that it is non-addictive. But a misconception regarding the nature of addiction lies at the heart of this impression. If the sole criterion is physical addiction, meaning a physical dependence on the drug followed by severe physical withdrawal symptoms, then the evidence would indeed suggest that marijuana is only mildly addictive, even at high doses.[15] Of much greater concern, however, is the degree of psychological dependence that is associated with marijuana. Many users dismiss the notion of psychological dependence as synonymous with "liking marijuana" in the sense that one might like chocolate ice-cream or tennis. But the term implies a more subtle and dangerous effect on the user. As Gabriel Nahas of Columbia University has explained:

---

14 Marijuana and Health: Eighth Annual Report to the U.S. Congress (Rockville, Maryland: NIDA, 1980), p. 26; Marijuana Today, p. 79.

15 R. T. Jones and D. Benowitz, "Clinical Studies of Cannabis Tolerance and Dependence," Annals of the New York Academy of Science, 282:221 (1976). Because of the slow elimination of THC from the body, withdrawal effects are not severe.

> The desire for instant gratification is a profound psychological reinforcer....Addiction to a drug is not a function of the drug to produce withdrawal symptoms. Drug dependence results basically from the reproducible interaction between an individual and a pleasure-inducing biologically active molecule. The common denominator of all drug dependence is the psychological reinforcement resulting from reward associated with past (use) and the subsequent increasing desire for repeated performance.[16]

It is this psychological dependence that makes the marijuana habit difficult to break. It is clear from clinical evidence that it is very common for heavy users to continue smoking even when they concede that it severely impairs their health and motivation, and that professional help is regularly needed to enable a user to give up the drug. The plain fact is that in the case of marijuana, the distinction between physical and psychological addiction is semantic, not real.

Marijuana and Other Drugs

Little could be further from the truth than the idea that a daily joint is merely the equivalent of a lunch-time martini. There are crucial differences. In the first place, as has been pointed out, alcohol leaves the system far more rapidly than marijuana. Even when taken to excess, the effect of alcohol is short-lived. It takes very heavy drinking over a long period to cause irreversible damage to the liver, or to the proper functioning of the brain (and then it is due primarily to a protein deficiency resulting from liver deterioration). The effects of THC, on the other had, occur with only moderate dosage, and it appears to cause damage to more organs in a much shorter space of time.

There is also little evidence to suggest that alcohol and marijuana are in fact considered as alternatives by users. The usage of alcohol among school students, for example, has not fallen during the period in which marijuana smoking has rapidly increased. If anything, there appears to be a small positive correlation between marijuana use and the taking of other drugs, due in large part to the fact that a combination of THC with many other drugs leads to a greater effect than that achieved with either drug alone.[17] Alcohol in combination with marijuana, for example, enhances the sedative result obtained with just the same dosage of alcohol. This is also the case with Valium, Librium, antihistamines, barbiturates, and narcotics such as opium, heroin,

morphine and codeine. With other drugs, the combination with marijuana increases the stimulant effect, followed by a heavier depression. Such drugs would include cocaine, Benzadrine and Dexadrine.

The reason for this enhancing effect may be that the cells of the liver perform as identifiers and disposers of foreign chemicals in the body through the action of enzymes. When the THC is taken, however, the efficiency of this liver function is impaired and detoxification is reduced. Consequently, the power of the other drug to affect the body is increased.[18]

With some therapeutic drugs, the combination with THC may have the opposite result, leading to a reduction in the effectiveness of the prescribed drug. Taken with anticonvulsants such as Dilantin and Pegamone, for instance, THC antagonizes the drug and lowers the seizure threshold. Similarly, THC can inhibit the results of beta-blockers, used to treat hypertension and some heart conditions. And when taken by a diabetic, marijuana can alter the amount of insulin necessary to maintain balance.[19]

The incidence of marijuana use in combination with other drugs is increasing. Not only is the enhanced effect sought of itself by the user, but it is also a means of obtaining better "value for money" from more expensive drugs. The availability of low-cost marijuana may therefore increase the use of harder drugs.

Psychological Effects

Summary:

There is now a considerable body of scientific data regarding the behavioral effects nad intellectual impairment resulting from marijuana use. Roy Hart and Gabriel Nahas have surveyed the extensive foreign literature. As Hart points out, impairment of memory, judgment, intellectual functions, orientation and motivation have been accepted as consequences of marijuana use for many years.[20] The evidence from this country leads to the same conclusion. Dr. Powelson has summarized the clinical evidence as follows:

> Its early use is beguiling. It gives the illusion of feeling good. The user is not aware of the beginning loss of mental functioning. I have never seen an exception to the observation that marijuana impairs the

> user's ability to judge the loss of his own mental functioning.
>
> After one to three years of continuous use the ability to think has become so impaired that pathological forms of thinking begin to take over the entire thought process.
>
> Chronic heavy use leads to paranoid thinking.
>
> Chronic heavy use leads to deterioration in body and mental functioning which is difficult and perhaps impossible to reverse.
>
> Its use leads to a delusional system of thinking which has inherent in it the strong need to seduce and proselytize others. I have rarely seen a regular marijuana user who wasn't "pushing." As these people move into government, the professions, and the media, it is not surprising that they continue as "pushers," thus adding to the confusion that (the scientific community) is obliged to ameliorate.[21]

Behavioral Effects:

Broadly, light marijuana smoking results in enhanced sensitivity to sensory stimuli. Heavy smoking tends to result in apathy and withdrawal. Research conducted on moderate and heavy smokers shows that a distortion of reality is common, together with confusion, memory loss, diminished concentration, reduced motivation, and hostility towards discipline and authority. Among relatively inexperienced users, acute anxiety can develop as the smoker grows aware that reality is becoming distorted. The same anxiety can also occur when a joint of higher potency is smoked.[22] Heavy usage of marijuana accentuates these effects. Marked memory impairment and confusion is common among such users, and there is evidence that heavy smoking can exacerbate mild and latent paranoia and schizophrenia.[23]

The consequences these effects have on adolescents may be very damaging. At precisely the time that difficult arrangements need to be made, marijuana may distort both the reality that must be faced and the judgment needed to deal with it. The maturing process is inhibited, and a concern with the moment overshadows any assessment of the future. Dr. Mitchell Rosenthal, president of Phoenix House in New York, has summarized the consequences of marijuana use among adolescents as follows:

---

21 Roselson, Testimony before the Senate, May 1974, quoted in Russell, Marijuana Today, p. 22.

22 Marijuana and Health, p. 21.

23 Ibid., pp. 21-22.

> To grow, to develop, to achieve adulthood, adolescents must cope with the emotional storms and squalls of the troubled teenage period. They turn to marijuana or to alcohol to self-medicate and to relieve the anxieties of the moment. They do not cope and they do not know how to cope. They blow away their troubles in clouds of smoke and they blow away their chance of becoming mature and responsible adults.[24]

Social Behavior:

Marijuana use does appear to foster alientation, towards both the family and society in general. In school and college settings, the tendency of users to form subcultures hostile to prevailing social customs and attitudes is well known. A large-scale study of Boston schoolchildren, for example, showed that early use of the drug was closely correlated with truancy, alienation from authority, poor academic achievement and the early use of alcohol and tobacco.[25]

It remains to be seen what sort of society will emerge as a generation so heavily associated with marijuana attains the position of leadership.

Intellectual Functions

Motivation:

It is all too common to hear of a marijuana user who appears to have lost all will to succeed. The decline in motivation among heavy and moderate smokers -- and even some occasional users -- is probably the effect noticed most often by a user's friends. Chronic heavy use can lead to almost total withdrawal (often rationalized in such terms as "getting out of the rat race"). Clinicians dealing with high schools and colleges report constantly of gifted students who are marijuana users and who lack the drive necessary to reach their full potential.[26] The user is often quite unaware of just how great a decline in motivation he is experiencing, and increasingly, as Dr. Franz Winkler

Rosenthal, "Marijuana and Effects on Adolescents," given at "Marijuana: Biomedical Effects and Social Implications," Second Annual Conference on Marijuana, New York University Post-Graduate Medical School and the American Council on Marijuana, New York, June 28-29, 1979 (unpublished transcript).

25 G. Smith and C. Fogg, "Psychological Predicators of Early Use, Late Use, and Non-Use of Marijuana among Teenage Students," in D. Kandell (ed.), Longitudinal Research on Drug Use (New York: Halstead Press, 1978).

26 See, for example, H. Kolansky and W. T. Moore, "Effects of Marijuana on Adolescents and Young Adults," Journal of the American Medical Association, [illegible] and "Toxic Effects of Chronic Marijuana Use," Journal of the American Medical Association, [illegible] pp. [illegible].

has pointed out, the smoker loses all interest in normal student activities:

> The lasting effects of moderate amounts of marijuana are minimal in contrast to the harmful effects of even a couple of reefers a week....An early effect of marijuana and hashish use is a progressive loss of willpower, already noticeable to the trained observer after about six weeks of moderate use....Soon all ability for real joy disappears, to be replaced by the noisy pretense of fun. While healthy teenagers will eagerly participate in all kinds of activities, such as sports, hiking, artistic endeavors, etc., a marijuana user will show an increasing tendency to talk aimlessly of great goals, while doing nothing about them.[27]

A particularly disturbing aspect of this reduction in motivation is that in some cases it may be permanent. It will be shown later that THC appears to have long-term physical effects on the brain, and clinicians such as Powelson have cited several instances of patients who gave up marijuana and yet are still unable to regain their normal level of motivation and concentration after a year or more of abstinence.[28]

Learning and Skills:

The decline in motivation common among marijuana users is closely related to a general reduction in intellectual performance. Chronic use of the drug can seriously inhibit powers of comprehension, judgment and learning -- and this effect is not confined to the period of intoxication. The most distinctive influence is on short-term memory. THC appears to interfere with the transfer of learned information from the short-term memory, leading to difficulty in recalling material learned when intoxicated.[29] Given the widespread daily use of marijuana among school children, this effect has most serious educational implications.

The use of marijuana has also been shown to have detrimental effects on the smoker's ability to operate certain machinery, such as an automobile or airplane. Several studies have demonstrated a distinct impairment of driving skills, and that users are overrepresented in accidents compared with non-users.[30] It must be emphasized that this impairment does not only occur during a "high"; it continues for many hours after the subjective intoxication. Since judgment itself is affected, a driver may be totally unaware that his skills have diminished and that his

reactions are slower. And since the influence of marijuana, unlike that of alcohol, is not easily detected by others, passengers travelling with the user may be unaware of their own danger.

There are certain aspects of the effect of THC on skills and intellectual functioning which need to be understood to appreciate the full impact of marijuana use, and the shortcomings of some studies. In the first place, THC has a much greater influence on the performance of less familiar tasks than on well learned activities. The impact on the student, in other words, is likely to be much greater than on the assembly line worker. Furthermore, the effects are dose related -- the heavy smoker experiences markedly greater impairment than the occasional user (although frequent but light smoking does have a cumulative effect). Thus, studies based on the relatively low doses generally used in the 1960s do not provide an accurate guide to the influence of high-potency marijuana currently used.

Another key feature of the drug is that its effect on skills and performance appears to be correlated strongly with the intelligence level of the user. Thus, the impairment seen among students and professionals is usually greater than that among people of average or low intelligence. More generally, the impact of the drug on middle class smokers tends to be more significant than in the case of manual or working class users. This is particularly important when examining evidence from abroad, since in countries such as Egypt, Morocco or the West Indies, the use of marijuana is a habit usually confined to the poorer, less educated classes. Only in the United States is marijuana widely used by better educated segments of society -- the very groups most prone to its damaging effects.

By appreciating these distinctions in the influence of the drug one can appreciate the deficiencies of tests such as the "Jamaica Study," which is widely cited by the pro-legalization lobby as a demonstration of the benign effects of the drug.[31] In this study, the researchers selected a group of thirty ganja (i.e., marijuana) smokers and a control group of thirty non-smokers. The groups were given a battery of psychological and other tests, and their brain wave patterns were examined. No significant differences between the groups were detected.

This study has been faulted on several grounds, some of them technical,[32] and the findings ran strongly against the clinical evidence available in Jamaica.[33] But, more importantly, the

study ignored both the relationship between intellectual capacity and impairment, and the difference in the influence of THC or skilled as opposed to simple and familiar tasks.

Brain Damage

The personality and learning impairment associated with marijuana use leads naturally to the question, "Does marijuana actually cause physical damage to the brain?" There is now a strong body of evidence to suggest that it does -- in ways consistent with clinical observations.

The most important work in this field has been conducted by Dr. Robert Heath of Tulane University Medical School. In the most significant test undertaken by Heath, groups of rhesus monkeys were used to examine the physical effects on the brain resulting from marijuana use. This species of monkeys has a central nervous system very close to that of man, and is widely used as an indicator of the consequences of therapeutic and other drug use on humans. By using monkeys, Heath was able to remove many problems associated with human volunteers -- such as legal issues and the difficulty of keeping a tight control on the level of drug use. He was also able to sacrifice the monkeys and conduct a close examination of the brain tissue of each animal. In the test THC was administered both by smoke inhalation and by injection -- the intake being equivalent to that normally found among human users. The monkeys were exposed to the drug for six months and studied for a further eight months after the drug was withdrawn, using deep and surface electroencephalograms (EEG), after which they were sacrificed and examined.

Heath found distinct changes in the brain wave pattern in the "deep brain sites" of the limbic region -- the area associated with smell, taste, emotion, pleasure, and the control of drives. This change was noticeable after two to three month's use by monkeys subjected to the equivalent of heavy or moderate intake by humans. There was no such effect in the control group. The alteration in the deep brain pattern resembled that associated with conditions such as schizophrenia, and with the reduction of awareness. Heath continued to monitor the deep brain throughout an eight-month period after THC intake was ceased, during which time the change in pattern continued -- suggesting long-term and possibly permanent brain damage.

After the eight-month period the monkeys were sacrificed and their brain tissue carefully studied. Electron microscope analysis revealed distinct damage, particularly at the synaptic junction, where one nerve cell connects with the next -- regions that are crucial to the operation of the central nervous system. This damage included a widening of the synaptic cleft (i.e., the gap between the cells) by an average of 25 percent; which is a condition seen in brain poisoning associated with substances such as carbon tetrachloride and in cases of severe vitamin B deficiency leading to psychosis. Heath also noted that dense material was

deposited in the clefts, and, among other effects, there were changes within the cells active in memory function.[34]

The changes in the brain observed by Heath correspond with the behavioral and learning function alterations described earlier. His studies show clearly that THC has a detectable physical effect on the brain, even though the implications of the effect are not known. Most disturbing of all, his experiments suggest that the changes in the brain tissue may be permanent, even among moderate marijuana smokers.

While Heath's experiments have provoked considerable controversy, both regarding the methodology and the meaning of the results, there is supporting evidence. A 1971 study, for instance, used air encephalography to examine the brains of a group of young smokers, each of whom had used marijuana consistently for many years and were experiencing severe personality changes. The study, conducted at the Royal United Hospital in Bristol, England, concluded that there was evidence of as much brain atrophy among the group as would be expected in very elderly people. None of the test group displayed clear evidence of any condition prior to smoking the drug that might have produced such a level of degeneration.[35]

More recent research, using CAT scanners to examine the brains of chronic users, has failed to confirm the Bristol results, however, and so further testing is clearly necessary before any firm conclusions can be reached on the question of brain damage.[36] Nevertheless, the weight of existing evidence does suggest that there is good reason to believe that potentially serious physical effects on the brain do result from chronic marijuana use.

Disease and Cell Division

Recent research has shown that THC seems not only to have very damaging effects on the cells of the brain, but also that it may have an impact on cells related to the immunity system. Work by Gabriel Nahas, for example, showed that the cell division rate

Mendelson, S. Davis, and [illegible] Ness, "Computed Tomographic Examination of Heavy Marijuana Smokers," Journal of the American Medical Association, 237 (1977), pp. 1229-1230.

for the lymphocytes of a group of human users was over 40 percent lower than for a control group (lymphocytes are white blood cells that divide rapidly and attack viruses and foreign tissue). This result would mean a drastic reduction in the ability of users to fight diseases -- a reduction comparable with that found in cancer patients and kidney transplant patients receiving immuno-suppressive drugs to prevent rejection (these patients are highly prone to illness).[37]

The influence of THC on cell division seems to extend even further than the immunity system. Research findings presented by twelve different medical groups at a 1978 international conference on marijuana indicated that use of the drug causes strong interference with the synthesis of proteins, DNA and RNA (the basic "building blocks" of cells) in a wide range of cell types. The substance was also shown to impair the rate of tissue growth, to lead to unnatural cell division, and to the production of cells with an abnormal number of chromosomes.[38] Further work is needed in this area, but it should be noted that chromosome damage in certain cells does lead to leukemia and other conditions; and similar damage to gonadal tissue could affect the physical and mental characteristics of children conceived from the sperm or egg cells of a marijuana user.

Reproduction

Several studies have been conducted recently to determine the effect of THC on the male reproductive system. Research by Dr. Robert Kolodny, using a group of young males who were heavy users (averaging 9.4 joints per week), found that the principal male hormone, testosterone, was reduced by 44 percent within the group (although this was still within the normal range for the population).[39] The hormone plays an important role in sexual change during adolescence, and in sperm production. Whether this reduction has a significant effect, or if it is permanent with chronic use, is not yet known.

Two other studies of smokers indicate that chronic heavy use does result in abnormalties in the sperm count, and that it affects the mobility and physical characteristics of sperm.[40]

Issidorides, "Observations in Chronic Hashish Users: Nuclear Aberrations in Blood and Sperm and Abnormal Acrosomes in Spermatozoa," in Nahas and Paton, Marijuana: Biological Effects.

Reports from Jamaica, Morocco, India, and this country also indicate a high level of impotence among long-term users.[41] As yet, there are no published reports of a correlation between marijuana use and abnormal offspring.

Testing the effects of THC on women -- especially pregnant women -- poses ethical and legal problems. Rhesus monkeys have therefore been used for certain of these tests, both to overcome such problems and to enable dosage to be tightly controlled. But there is also a good deal of clinical human evidence available.

Research by Dr. Carol Smith on monkeys has shown that exposure to THC for just a few days during the menstrual cycle can lead to the suppression of ovulation and the disruption of the cycle, due apparently to an interruption in the production of necessary hormones.[42] The menstrual cycle returns to normal two to three months after use of the drug ceases. Dr. Joan Bauman of the Masters and Johnson Clinic in St. Louis, studied the menstrual cycles of young volunteers who were frequent users of marijuana (an average of 4 joints per week), and had been so for at least six months. The group was then compared with a control. Dr. Bauman found that 38 percent of the marijuana users experienced problems with their cycles, compared with 12.5 percent of the control group, and a substantial number of them failed to ovulate. The users were also prone to other irregularities, such as hormone imbalance.[43] Although it is not possible to monitor precisely the drug habits of such volunteers, the human results compared sufficiently closely with more exact animal tests for the conclusion to be reached that marijuana use results in definite irregularities in the cycle.

More serious than the evidence on the menstrual cycle, however, are the strong indications that THC may be very damaging to the unborn. Tests by Dr. Ethel Sassenrath of the University of California Primate Research Center, in which rhesus monkeys were exposed to moderately heavy doses of marijuana (the equivalent of between one and two joints per day), resulted in a 42 percent loss of offspring by the monkeys through spontaneous abortion, fetal death, stillbirths or death in early infancy -- four times the rate in the control group. Post mortem examinations of the offspring, moreover, revealed a number of abnormalties, such as fluid in the brain, together with vascular, liver and kidney

43 J. Bauman, "Effect of Chronic Marihuana Use on Endocrine Function of the Human Female," in Nahas and Paton, Marihuana: Biological Effects.

disorders.[44] Experiments using radioactive THC (allowing its progress through the body to be traced) have shown that the drug appears in the milk of the mother and passes into the bodies of the infants being nursed. Furthermore, there is evidence that THC passes through the placental barrier, and lodges in the fatty tissue and various organs of the fetus, including the brain.[45]

These results are very alarming. The consequences of marijuana use by pregnant women and mothers has yet to be fully determined, but the evidence so far indicates that use of the drug may be extremely dangerous or even fatal to the unborn child.

The Heart and Lungs

Marijuana use tends to increase the heart rate, leading to a reduced capacity for exercise -- although this effect does diminish as tolerance to the drug builds up. For young, healthy users this presents no particular danger, but in the case of smokers with pre-existing heart conditions, marijuana can accelerate the development of chest pains and heart irregularities.[46]

Results of test examining the effect of marijuana smoking on the lungs are more disturbing, indicating not only that the drug is connected with lung damage, but also that this damage may be more severe than that associated with tobacco. The U.S. Army's drug program in Europe, between 1968 and 1972, for example, revealed a high incidence of serious respiratory ailments among soldiers with access to the very potent strains of marijuana then available in Europe. Bronchitis and emphysema were seen even among young smokers. Emphysema, in particular, is a disease usually associated with later life, and to find it among young soldiers was most unusual. As Dr. Forrest Tennent, who headed the study, testified to the Senate:

> Even though a person can get bronchitis and emphysema from cigarette smoking, one must usually smoke cigarettes for 10-20 years to get these complications. We became alarmed about this because we began seeing these conditions in 18-, 19-, and 20-year-old men.[47]

47 F. Tennant, Jr., Testimony before the Senate Subcommittee on Internal Security, May 1974, ref. 30, pp. 288-314.

An examination by Dr. Harris Rosenkrantz of the Mason Research Institute in Massachusetts, found that the exposure of laboratory rats to only moderate amounts of marijuana smoke led to a distinct alteration in lung tissue. These effects included intense inflammation, a breakdown of the air sacs, and the formation of deposits in the lung tissue. The air capacity of the lung was also reduced by 15-20 percent. Control experiments showed clearly that far more damage occurred than with the same degree of exposure to tobacco smoke.[48]

Test conducted with humans have reached similar conclusions. A University of California study, for example, matched a group of healthy users with a control group and found a 25 percent higher airway resistance in the lungs of the marijuana smokers after just two months of heavy use.[49] This level of resistance rarely occurs among tobacco smokers before fifteen or twenty years of use.

Therapeutic Uses for Marijuana

Like many drugs that exhibit damaging effects with chronic usage, THC does seem to have some useful properties for patients with certain conditions. It appears to be effective, for example, in providing relief for certain glaucoma sufferers -- although non-psychoactive drugs can achieve the same results in many cases.

Of much greater importance is the possibility of using THC as a treatment for severe nausea often associated with chemotherapy. The National Cancer Institute recently embarked on a $1 million program to distribute THC capsules to a large number of cancer patients undergoing chemotherapy. By using THC in capsule form, rather than cigarettes, the possibility of lung damage is avoided. Some critics of the program do, however, maintain that capsules are inferior to smoking the drug, and there is some evidence available to support such a claim in the case of certain patients. Further testing is necessary to determine the cases where inhalation might be an appropriate method of administering the drug until an effective synthetic version becomes available.

The use of THC for therapeutic purposes is not without its problems. Patients run the risk of the damaging results of marijuana discussed earlier, but these risks are much lower in medical programs. Most of the damaging effects associated with the drug appear to result from moderate to heavy use for a longer period than is usual in medical purposes. And the drug can be

---

49 D. Tashkin, R. Shapiro and others, "Subacute Effects of Heavy Marijuana Smoking on Pulmonary Function in Healthy Men," New England Journal of Medicine, [illegible]

avoided in the case of high-risk patients. But if THC was widely distributed, even under prescription, it would be difficult to ensure such control. Another problem with the drug is that its psychoactive effects can be very disturbing to some patients, particularly older ones. Again, carefully controlled use allows these side-effects to be detected at an early point. Certain drugs that are chemically similar to THC (such as levo-nantradol) are currently being tested to see if they may be superior in certain instances.[50]

Consideration of THC as a therapeutic drug is not in any way inconsistent with the position that it is very harmful in general. Some highly dangerous drugs are very beneficial in certain circumstances, but this does not imply that they should be made freely available. Occasional use of THC capsules by some carefully chosen patients is not the same as chronic heavy smoking of marijuana.

PUBLIC POLICY CONSIDERATIONS

Marijuana Use and the Law

The inescapable conclusion from the scientific evidence now available is that marijuana is a dangerous substance. The increase in potency in recent years means that we are now dealing with a very different problem than the one faced in the 1960s. The evidence also shows that THC is quite different from alcohol in the way that it lodges in certain organs and causes damage to them in a short period of time.

Yet the question remains, "What, if anything, should be done?" There are many things that we do which are dangerous. Is the use of marijuana any different than these?

There are really four aspects to this question, and each raises important philosophical and practical issues:

1. To what extent should society interfere with the individual's decision to pursue a dangerous activity?

2. Is there harm, or a cost, to non-users?

3. Does society have the right to enforce some collective lifestyle on the individual to preserve some notion of "culture" or "way of life"?

4. Is an effective law possible, given a resolution of the other issues?

---

50 Washington Post, November 11, 1980.

Taking each of these questions in turn:

a) Marijuana and Individual Freedom

It has always been a tenet of the idea of liberty that the individual has the right to pursue a dangerous activity, or to knowingly damage his own health. If it were otherwise, we should ban everything from hang-gliding to eating candy.

On the other hand, it has usually been conceded that there may be another justifiable position in the case of certain segments of society. When a person does not realize the consequences of an action, it is reasonable to warn him, and perhaps to physically prevent him from undertaking it. Most smokers of marijuana have very little understanding of the likely consequences of taking the drug. It would seem quite appropriate to embark on a program of education, particularly in schools, to reduce this ignorance. In addition, a policy aimed at making the drug less available, by presenting obstacles to supply, would reduce the liklihood of casual access by the ill-informed -- while the determined user would still be able to obtain supplies.

Drugs do, of course, involve a complication when considering the ability of the user to judge the consequences of his actions. We recognize that children should be protected from many things because inexperience and poor judgment can lead to unforeseen results. But some drugs actually cause reduction in the power of reasoning, or the ability to cease using the substance. This is one reason why we ban heroin but not hang-gliding. Whether there is a sufficient observable effect on the processes of the brain for us to class marijuana with heroin rather than hang-gliding is open to serious question. Yet there is probably sufficient evidence available to suggest that THC does affect motivation and the will to resist higher doses, and other drugs, to justify a policy of active discouragement.

b) Harm and Cost to Others

When a drunk decides to drive his automobile, he poses a physical threat to others, and so it is reasonable for society to impose heavy penalties on such actions for the protection of innocent parties. There is plenty of evidence for us to conclude that the use of marijuana interferes with the reactions and skills of people who drive or fly, and that this is hazardous to other people. In addition, the effects of marijuana usually last longer than those due to alcohol. It is quite reasonable, therefore, for society to punish marijuana users who drive or fly under the influence of the drug. Sophisticated laboratory techniques are now available to enable the level of THC in the body to be known with reasonable accuracy, and routine detection equipment should soon be operational. So it will be possible to provide clear guidelines, and penalties, to deal with the smoker-driver.

The idea of cost is not so simple. If the brilliant scholar becomes a heavy smoker, quits college, and goes on welfare, he is taking from society rather than contributing to it. Yet only a small minority of users could be said to impose costs such as this. Active discouragement would seem to be the most practical way of dealing with the situation.

c) The Imposition of Society's Standards

This is in many respects the most difficult issue of all, and marks a clear difference of opinion between the libertarian and the conservative. If one believes that "society" is simply a collection of individuals, it is difficult to argue that the spreading use of a drug is detrimental to society in any sense, assuming individuals other than the users are not harmed. On the other hand, if one feels that the strength of a society, and the benefits that it can provide to its members, depends on the broad acceptance of certain obligations and customs -- and that the individual is hurt when these customs are eroded -- then it could be legitimate to discourage certain activities.

It is at least arguable that the widespread use of marijuana, leading to a decline in motivation, educational achievement and health, may reduce the benefits of society for us all. If this is so, then it would provide an additional reason for active discouragement.

d) Just and Effective Law

(i) Legislation:

It has been argued by many that we are in a form of "prohibition era" with respect to marijuana. The drug is illegal, but the law is openly and widely flouted, just as it was when alcohol was made illegal. The law is held in disrespect and the punishment of marijuana users is deeply resented. According to this argument, otherwise law-abiding people find themselves dealing with criminals, and only complete legalization will restore faith in the law and get the business of marijuana out of the hands of criminals.

While this argument does have a surface plausibility to it, it is fraught with dangerous implications. In the first place, the almost universal public ignorance of the harmful consequences of marijuana use lies at the heart of the discontent with the law. If the drug were to be legalized, making it available at the corner drugstore, it would confirm the general belief that marijuana was fairly harmless. If the drug were freely available, with the consent of government, it would be virtually impossible to persuade users that they face real dangers. How could one justify a situation where marijuana was made legal when every attempt had been made to ban saccharine?

Illegality may not stop the use of marijuana, but it may serve to hold the line while people are educated as to its dangers. To remove the legal restrictions on its use could also remove any chance of reversing the trend.

(ii) Decriminalization:

There is, of course, a distinction between the issues of legalization and decriminalization. In the one case we are considering making the distribution and consumption of a drug a legal activity; while on the other we are talking about reducing the penalties for taking the drug.

It is a little difficult to justify putting someone in jail when they are probably ignorant of the consequences of taking marijuana. Even if they are fully aware of the possible damage, it does seem unreasonable to apply harsh criminal penalties when no other person is affected. While full legalization would undoubtedly lead to an explosion of use, non-criminal penalities for the possession or use of small quantities of marijuana, together with criminal sanctions for the possession of large quantities or supplying marijuana to children, would be a more just and acceptable position.

There are, however, many experts who feel that even decriminalization would be a grievous error. This view has been put forward very cogently by Dr. Robert DuPont, the former NIDA director:

> For many years, while I was in government, I supported decriminalization of marijuana and was actively publicized by the marijuana lobbying organizations as one of their chief advocates or supporters. I was never this, but I did for some years favor decriminalization of marijuana. I have changed my mind completely on that point and I now strongly oppose decriminalization. I am persuaded that we, as a nation, are dealing with a massive epidemic with grave consequences for our society, and that decriminalization is a signal in this political debate that, however much one might feel that it is not a good idea to put people in prison for possession of small amounts of marijuana, support for decriminalization is seen as support for marijuana. We all need to recognize that the battle lines are drawn and that decriminalization is the major line that is drawn across the political landscape right now.[51]

The argument surrounding the decriminalization issue is thus not so much one of principle as one of practical politics. If removing criminal penalties for the possession of small quantities

---

[51] Address to seminar sponsored by the [illegible] Foundation, see note 10.

of marijuana (while maintaining criminal sanctions for distribution) would not lead to a significant increase in use, or to overwhelming pressure for legalization, then decriminalization would have the support of many people who nevertheless consider the drug as very damaging.

ACCESS AND SUPPLY

A policy of active discouragement and education may be pursued in several ways. A number of states, for instance, have banned so-called headshops, where drug-related equipment is sold. The determined user can still find ways of obtaining paraphernalia, but open encouragement to the non-user is reduced by such a measure.

A much more effective form of discouragement, however, would be to actually reduce the level of supplies reaching this country. Enormous quantities of marijuana reach the United States from the Caribbean and South America. It is a multi-billion dollar traffic that involves radio warning planes, large cargo ships, high-speed pickup boats, secret landing strips, and large payoffs to local police. It is not uncommon for seizures of ships to reveal loads of marijuana worth up to $40 million at street prices.

The Coast Guard has been overwhelmed by the volume of the trade, and the tenacity and equipment of the smugglers. Seizures now account for probably less than 15 percent of the total -- making but a small dent in massive profits.[52] If anything is to be done to contain the staggering increase in the quantity of marijuana reaching this country, there must be a significant boost in the resources made available to the Coast Guard, the Drug Enforcement Administration, and other services involved with drug interception. Only by driving up the risks faced by smugglers do we stand much chance of reducing the drug flow.

Some argue that reducing the availability of marijuana in this country might actually be counterproductive. If you deny people marijuana, they claim, they will merely turn to something more dangerous. This is a spurious argument. For the heavy user with psychiatric problems, marijuana is generally only a stepping stone to hard drugs, or a means of enhancing the effect of other substances. If these people are denied marijuana it would make little difference to the damage they will inflict on themselves. Far more important is the person who tries marijuana because it is inexpensive and freely available, and who then becomes a chronic user or moves on to hard drugs. A reduction in the supply of marijuana would lessen the chances of a casual introduction to the drug. Even among existing users, a switch to alcohol or tobacco is far more probable than to hard drugs.

---

52 For an account of a typical Coast Guard encounter see the Washington Post, December 20, 1980.

Of course, the marijuana reaching this country has to come from somewhere, and that can present sensitive policy issues. In certain countries, the cultivation of marijuana for export to the United States has become a significant part of the domestic economy, and a major source of foreign exchange. There have been cases of the United States supporting the actions of foreign governments seeking to reduce cultivation, such as Mexico, but this kind of cooperation is rare and not very effective.

Jamaica is a good example of the kind of problem faced by the United States. The country is a major supplier of marijuana to America. The trade is worth well over $1 billion a year, equal to Jamaica's entire foreign debt, and greater than all other exports combined. Jamaica is also unstable and bankrupt, and is a target of Cuban penetration.

When the Jamaican government changed hands in 1980, the United States found itself in a very delicate situation regarding the drug business. The new Prime Minister, Edward Seaga, is a friend of the West, and so the United States is understandably hesitant to undermine what is left of the island's economy. But marijuana is crucial to the economy. As Seaga pointed out recently, "The ganja (i.e., marijuana) trade in the last several months was virtually what was keeping the economy alive."[53] According to him, the trade is "here to stay," and the question is not whether it should be wiped out but whether it should be completely legalized:

> so as to bring the flow of several hundred million dollars in this parallel market through the official channels, and therefore have it count as part of our foreign exchange -- which would mean an extremely big boost to our foreign exchange....

Mr. Seaga's tidy, businesslike approach to the drug trade is complemented by a convenient interpretation of the scientific evidence. Medical reports, he states with authority, "seem to suggest there's no conclusive evidence that ganja is harmful...."[54] Mr. Seaga would be well advised to talk to some of Jamaica's leading psychiatrists at Kingston Hospital, who seem to have reached somewhat different conclusions regarding the effects of marijuana.[55]

While the situation in Jamaica may be outrageous, dealing with it presents many problems. It would be easy to drift into the feeling that really nothing can be done without damaging the

54 Ibid.

55 See, for example, the report by Dr. John Hall, Chairman of the Department of Medicine at Kingston Hospital, Jamaica, quoted in Russell, Marijuana Today, p. 28.

fabric of the country. But if the government of Jamaica (or any other country) condones the cultivation and exportation of a drug that is harmful to the people of the United States, it has only itself to blame for the consequences. It is an absurd form of foreign aid for the U.S. government to stand idly by while a country encourages the supply of a dangerous drug to America, simply because that country needs foreign exchange!

In the interests of its own citizens, the U.S. government should state clearly that marijuana is dangerous and a threat to the American population; that it is an unfriendly act for any government to condone it and that policies will be adopted to dissuade such tacit support. The idea that Jamaica can only survive if marijuana cultivation is allowed continue is ridiculous. The reason that the industry is now so important to Jamaica is that it is highly profitable. If the incentives were altered, other industries would develop. It should therefore be the goal of U.S. policy to apply penalties against Jamaica and similar countries if they continue to allow the trade to flourish, while offering American assistance to develop other industries. Tolerating the present state of affairs is an abrogration of responsibility by Washington. How can we justify putting our citizens in jail for using marijuana when we refuse to deal effectively with the chief suppliers of the drug?

EDUCATION

While effective action must be taken to deal with the flow of marijuana into this country, the other weapon in the battle to control the marijuana epidemic is education. People simply do not know the damage that the drug may do to them, and this misunderstanding of its consequences is at the root of the growing disrespect for the law dealing with it. We spend enormous sums of money teaching children how to use birth control devices but very little educating them about the effects of a drug which large numbers of them use during the school break. The scale of the problem is so great that a major drug education program in the schools should be a priority.

But education should not be confined to the schoolroom. Most adult users know little of the drug's effects, and parents usually have no idea how to recognize the symptoms of use -- or how to deal with the situation if they do recognize them. There are a number of organizations that do seek to educate parents, such as the Citizens for Informed Choices on Marijuana, based in Stamford, Connecticut. The work of groups such as this is crucial and should be encouraged. In addition, groups such as the American Council on Marijuana, in New York City, have taken the lead in providing succinct, readable scientific information for the layman. But a great deal more needs to be done, and both private and public resources should be made available.

CONCLUSIONS

1. Marijuana is a dangerous drug. It is quite unlike alcohol and tobacco in the way in which it remains in the system and the lasting damage it can cause with only moderate use.

2. While it may seem unjust to impose penalties on users, legalization -- and possibly decriminalization -- would be taken as an official declaration that the drug was safe. This could lead to the acceleration of an already rapid growth in use.

3. The thrust of public policy should be a combination of active discouragement and restriction of supply, rather than increasing penalties for use.

4. The public should be made aware of the effect of marijuana on the ability to drive. Firmer penalties for driving under the influence of the drug should be enacted at the state level, and drivers should be made aware of the dangers and the penalties involved -- as they are regarding alcohol.

5. For medical purposes, marijuana should be treated like any other drug that appears to have some benefits for certain patients. Research should not be discouraged because the drug is used illegally for non-therapeutic purposes.

6. The government and private institutions should take the lead in discouraging use of the drug, through a greatly expanded program of education in the schools, and among the general population.

7. Measures should be taken to interrupt the flow of marijuana into the country. Resources should be made available to enable the seizure rate to be increased substantially. In addition, tougher steps should be taken to interrupt domestic production.

8. Sanctions or other pressures should be adopted against countries which allow the cultivation of marijuana for the American market. Damaging the health of U.S. citizens should no longer be considered acceptable as a means of relieving the economic plight of other nations.

REPORT OF AN ARF/WHO SCIENTIFIC MEETING ON ADVERSE HEALTH AND BEHAVIORAL CONSEQUENCES OF CANNABIS USE

TORONTO, CANADA, 30 MARCH - 3 APRIL, 1981

1. INTRODUCTION

1.1. Background and Objectives

The report of a WHO Scientific Group on the Use of Cannabis,[1] which was published in 1971, brought together all the available information on the behavioral effects of cannabis use and other useful material. However, despite the existence of a substantial number of clinical case reports, not much accurate quantitative knowledge was available concerning the possible adverse effects of heavy use of cannabis on the health of users. Since that time, the extent of cannabis use in many countries has increased greatly, and a large body of experimental and clinical observations is now available. At the same time, a number of countries are reexamining their legal policies with respect to cannabis control, and require accurate knowledge on cannabis-related health hazards, as one element in their policy discussions.

In 1980-81, a joint study was undertaken by the Addiction Research Foundation (WHO Collaborating Center) and the World Health Organization on "Adverse Health and Behavioral Consequences of Cannabis Use." A meeting of experts on various aspects of cannabis and health was convened in Toronto, Canada, from 30 March to 3 April, 1981,[2] under the joint auspices of the Addiction Research Foundation (ARF) of Ontario (Canada) and the World Health Organization, to undertake a critical assessment of current knowledge concerning the possible health hazards related to the use of this drug. The mandate extended to the participants was to consider only the scientific, clinical, and epidemiological information concerning potential and actual hazards to health resulting from the non-medical use of cannabis and its various psychoactive constituents. The objectives were to review the evidence, assess its completeness and validity, identify significant points of disagreement or gaps in knowledge, and make recommendations with respect to research policy and specific matters requiring further research.

[1] In this report, the term "cannabis" refers to all preparations derived from the leaves, bracts, flowers, or resin of the plant *Cannabis sativa* L.

[2] See Appendix A for the list of the participants
See Appendix B for the list of the members of the planning committee

The present report is to be submitted jointly by the Addiction Research Foundation and WHO to the United Nations and other international bodies and agencies, national bodies, professional and educational groups, and others interested in the prevention and treatment of health problems related to the use of cannabis and other psychoactive drugs. It is anticipated that this information will constitute an important element in the deliberations of national bodies responsible for decisions on social and political policy with respect to drug use. However, such policy decisions are based on many other considerations — legal, political, social, ethical, and others — in addition to health concerns. Therefore, in the interests of effective and objective scientific discussion, the subject of control policies and policy recommendations was specifically excluded from the scope of this meeting.

In addition, it was decided not to consider the therapeutic uses or other beneficial effects of cannabis. This decision is in no way due to a rejection of the possibility of any beneficial or therapeutic effects, but arises from simple recognition of the fact that the evaluation of these effects is not directly related to the evaluation of the health hazards. Inclusion of the former would have enlarged the scope of the meeting beyond the limits of feasibility for the available time and the number of participants. An independent review, now being conducted by the National Academy of Sciences, Institute of Medicine, Washington, DC, USA (1981), draws attention to the question of therapeutic uses and of other matters outside the scope of the present report.

Also in the interests of feasibility, this report does not deal with many basic scientific aspects of the mechanisms of action of cannabis. Such matters as the details of biotransformation, effects on cell membranes, neurotransmitter biosynthesis and turnover, electrophysiological processes, and experimental analysis of behavior are covered only to a very limited extent. The emphasis is on those basic processes and functional alterations which, on the basis of present knowledge, can be related directly to significant malfunction or disease in experimental animals or humans.

1.2. Definitions

Certain terms in this report have been used in the past in various ways. For the present purposes, the following explanatory comments are given.

1.2.1. *"Adverse Effect"*

An adverse effect of cannabis use may be considered to occur when such use produces impairment of an individual's biological, behavioral, or social function. Some effects (such as severe respiratory complications) would certainly be considered adverse in or by all users. However, it is

clear that others (such as alterations of time sense), may be regarded as pleasurable or unpleasant, or as wanted or unwanted, according to circumstances and factors such as age, expectations, setting, or the perceptions and value systems of subjects or observers. Mental effects that are enjoyed by a young user at a party might be considered adverse by a middle-aged patient receiving a cannabis preparation in combination with cancer chemotherapy. A state which a student may describe as "agreeable relaxation" might be considered by the teacher as "impaired concentration." Reduction of blood pressure has been regarded both as a desirable therapeutic goal and as potentially dangerous. From this it is obvious that often no sharp classifications can be made, and the implications of such a phrase as "adverse effect" must be drawn from the context of its use.

1.2.2. *"Intoxication" versus "Toxicity"*

A similar situation applies to the judgment of toxicity. One person's "intoxication" is another person's "toxic reaction." There is a continuous spectrum, which exists also with alcohol and other drugs, and to draw any sharp line is necessarily arbitrary. The decision as to when to draw such a line is shaped by the user's own perceptions as well as by the observer's concern.

1.2.3. *"Acute" versus "Chronic"*

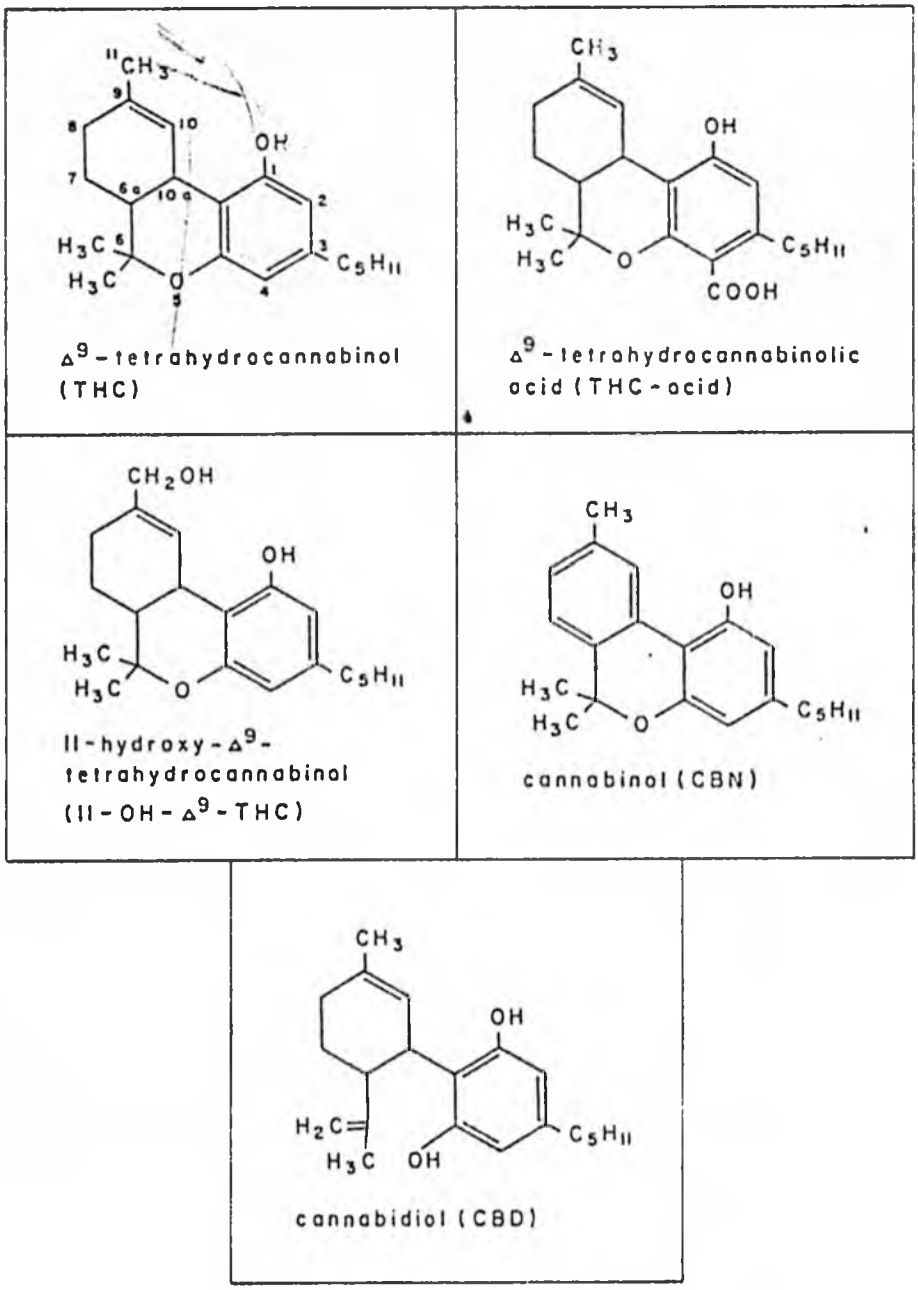
"Acute" is used to refer to single doses and their effects, or to reactions or responses on single occasions of brief duration. At the other extreme, "chronic" assumes various meanings. One of these refers to that duration of exposure beyond which further use reveals no new phenomena. Another meaning refers to a period of time that is a substantial fraction of the lifetime of a human or animal. It is worth noting that the pattern of dosage is important, and "chronic" effects may be evoked earlier with high than with low dose rates. Even when amount and pattern of alcohol consumption are allowed for, the latency of onset of Laennec's cirrhosis may range from 5 to 20 years (Lelbach, 1974). Lung cancer from cigarette smoking, and carcinoma of the vagina following *in utero* exposure to diethylstilbestrol, also show long and variable latencies of onset. Therefore the production — and also the recognition — of some adverse effects of cannabis may require similarly long and variable periods of exposure.

1.2.4. *Rates of Use*

Words describing rates of use are particularly difficult to define. For example, the word "heavy" has been employed to describe use ranging from 1 gram of marihuana (or its equivalent) per week to more than 10 marihuana cigarettes (approximately 2-10 grams) a day. Heavy use in one society may be perceived as light in another. The only satisfactory solution is to specify the use rates quantitatively, highlighting patterns of consump-

tion, route of administration, and the potency of the material, as well as total amount used in unit time. Description of use as more or less "frequent" may sometimes be more appropriate than "heavy" or "light." Significant, too, may be particular details of self-administration; for instance, just as morning drinking of alcohol, or smoking immediately on rising in the morning, are signs of heavy consumption of alcohol and tobacco, so use of cannabis early in the day may be indicative of heavy consumption.

2. GENERAL TOXICITY



2.1. Cannabis Preparations

Among the 421 compounds thus far identified in the cannabis plant are approximately 61 with the cannabinoid structure (Turner *et al.*, 1980). Of the latter, (-) -Δ^9 -tetrahydrocannabinol (THC) (Figure 1) is of greatest interest in the context of this report, since only structures closely related to THC elicit, at low doses, the characteristic mental effects that constitute the main reason for use of cannabis by humans (Mechoulam *et al.*, 1980). Several other cannabinoids including cannabidiol (CBD) and cannabinol (CBN) (Figure 1), as well as various non-cannabinoid constituents of unpyrolyzed cannabis, may also have biological activities of other types. Dependent on the geographical origin of the plant, the relative and absolute contents of individual cannabinoids vary widely (Turner *et al.*, 1980).

Various preparations derived from the cannabis plant have a wide range of potencies. *Marihuana* or *bhang* consists mainly of dried leaves and stems and can range in content from less than 1% to greater than 8% THC. The content of THC steadily decreases at a rate of approximately 5% per year in refrigerated plant material (Turner *et al.*, 1973). Other preparations *(hashish, ganja, charas)* made from the resin and flowering tops of the plant can contain up to 15% THC. Recently, solvent extracts of leaf material, flowers, or resin have appeared on the illicit markets. The potency of this so-called "hashish oil," "honey oil," or "weed oil" is extremely variable; the THC content can range up to 60%. The toxicity of these preparations appears to be related to their THC content, although other cannabinoids or non-cannabinoids may contribute significantly. The biological effects of the remaining chemical constituents of these extracts are largely unknown at present. The existence of these high potency preparations facilitates the self-administration of large doses of THC.

The pyrolysis of cannabis products produces hundreds of compounds that make up the vapor and particulate phases of the smoke. The vapor phase consists of nitrogen oxides, carbon monoxide, hydrogen cyanide,

FIGURE 1
Structures of Major Cannabinoids

and nitrosamines, together with other known toxic chemicals (Leuchtenberger. 1982). Along with the cannabinoids, the particulate phase contains many known carcinogens including phenols, cresols, and polynuclear aromatic hydrocarbons (Lee *et al.*, 1976). During pyrolysis at usual burning temperatures, tetrahydrocannabinolic acid (Figure 1) is activated by conversion to THC, but there appear to be few other significant cannabinoid interconversions. CBD can be converted to THC, especially when cannabis is pyrolyzed together with tobacco. About 50% of the total available THC is delivered in the mainstream smoke from a marihuana cigarette during the burning procedure (Rosenkrantz, 1982).

2.2. Lethality

2.2.1. *Acute Studies in Experimental Animals*

In acute studies, pure THC appears to be the most toxic cannabinoid of cannabis smoke. The LD_{50} values by inhalation and by i.v. administration are similar in rodents, and the LD_{50} for THC is smaller than those for CBD, cannabichromene, or crude marihuana extract. Intravenous LD_{50} values for THC range from about 40 mg/kg in the rat to 128 mg/kg in the monkey. In mammals, an interesting finding is that the potency of THC in lethality tests decreases as one ascends the phylogenetic tree. For most other effects, the potency is inversely related to the body size of the species, rats and mice being much more resistant than the Rhesus monkey or man (Rosenkrantz, 1982).

Species differences in pharmacokinetics must exist, since the ratio of the intravenous to the oral acute lethal dosages ranges from about 1:30 to 1:40 for rodents but is closer to 1:100 for monkeys and probably dogs (Rosenkrantz, 1982).

In experimental animals, death usually results from cardiac arrest or respiratory failure. Since, at acute lethal doses, artificial respiration is only temporarily effective in preventing death, it appears that cardiac dysfunction rather than the profound hypopnea is the major cause of death (Rosenkrantz, 1982).

2.2.2. *Chronic Studies in Experimental Animals*

Chronic animal studies have indicated a significant degree of unexplained *delayed lethality.* In one experiment, approximately 12% of rats, mainly males, survived the initial dose but died suddenly after 2-3 weeks of continued treatment (Rosenkrantz and Fleischman, 1979). Though the mechanism is not yet clear, it is possible that this delayed lethality may be related to accumulation of THC or its metabolites in the body during prolonged administration (see Section 9.1.1.2.).

2.2.3. *Humans*

No LD_{50} values can be reliably estimated for humans, since only a very small number of fatalities have been reported, and the role of cannabis in these cases is questionable (Rosenkrantz, 1982).

2.3. Clinical and Experimental Toxicity

The past decade has witnessed the clinical documentation of many toxic effects that were previously described anecdotally or superficially. Systematic evaluations of clinical populations, closed-ward drug administration studies, controlled field studies, and accumulated self-reports by users have all been remarkably consistent in their findings. The more prominent effects are summarized below by organ system.

2.3.1. *Respiratory Toxicity*

2.3.1.1. Experimental animals. Single doses of cannabis or THC in animals affect respiration mainly by depression of respiratory rate. This effect is synergistic with that of general anesthetics and other central depressants. Though compliance (elasticity of lung and bronchioles) may be diminished, lung tissue damage has not been observed histologically in acute studies. However, prolonged and repeated exposure to cannabis smoke results in bronchiolar inflammation and morphologic alteration of the lung in rats and dogs (Rosenkrantz, 1982).

2.3.1.2. Humans. Given acutely, THC or cannabis smoke produces a small transient respiratory depression (Bellville *et al.*, 1975) and bronchodilatation (Tashkin *et al.*, 1973).

Respiratory and pulmonary toxicity have emerged as major clinical complications of chronic cannabis smoking. Cannabis smoke appears to be more injurious to the lung than cigarette smoke, as judged by the use of sophisticated pulmonary function testing in well-controlled studies (Rosenkrantz, 1982). Possibly because of its high combustion temperature, hashish appears to yield a particularly irritating smoke. In addition to the ability of cannabis to produce bronchitis, and obstructive pulmonary disease, it might after sufficient exposure produce cancer (see Section 3.2.). In the light of increased frequency of cannabis use, knowledge of the natural course of pulmonary disease suggests that the next three decades may demonstrate an increased prevalence of severe pulmonary disease and possibly of lung cancer. This risk is probably greater in those users (now a majority) who smoke cannabis and tobacco concurrently (Tennant, 1982). In present-day clinical settings the most commonly encountered toxic effects will be the respiratory problems of rhinitis, sinusitis, pharyngitis, and bronchitis (Tennant, 1982).

2.3.2. *Cardiovascular Toxicity*

2.3.2.1. Experimental animals. The major cardiovascular effects of a single dose of THC in most animal species are bradycardia, decreased cardiac reflexes, and hypotension. As a result, cardiac output and cerebral blood flow are usually decreased. Chronic administration may lead to some degree of tolerance to these effects (Rosenkrantz, 1982).

2.3.2.2. Humans. In humans, in contrast, the major effect of a single dose is tachycardia; the heart rate may reach 160 beats per minute or more (Hardman and Hosko, 1976). Acute effects on blood pressure, organ blood flow, and the electrocardiogram are variable and transient (Rosenkrantz, 1982; Tennant, 1982) and are probably due to varying degrees of effect on vasomotor tone (degree of constriction of blood vessels) and vasomotor reflexes (automatic responses to changes in body position, blood volume, etc.). In general, effects on supine blood pressure are relatively slight but postural hypotension has been repeatedly reported. There is little evidence of direct toxic effect on the heart muscle. Chronic use has not resulted in any detectable permanent alterations of cardiovascular function (Tennant, 1982). However, patients with preexisting heart disease due to a relative decrease in coronary blood flow may experience greater risk of angina pectoris and possible infarction because of the extra demand placed on the compromised heart by the drug-induced tachycardia (Tennant, 1982). Cannabis and tobacco smoke contain similar amounts of carbon monoxide. Therefore, the formation of carboxyhemoglobin, which would also contribute to impaired oxygenation of the myocardium, also needs to be considered in cannabis smokers.

2.3.3. *Growth and Body Weight*

2.3.3.1. Experimental animals. Many studies have indicated that either single or repeated exposures to cannabis cause loss, or reduced rate of gain, of body weight (Rosenkrantz, 1982). This is probably due to both decreased food intake and altered endocrine function (see Sections 5 and 6). The long-term health consequences of growth impairment by these factors are unknown but may be most important in relation to the development of the fetus, neonate, or adolescent (see Section 6).

2.3.3.2. Humans. No data on body weight and growth rates before and during periods of cannabis use, comparable to those from controlled animal studies, are available for humans. Numerous clinical case reports from India and North Africa describe regular heavy cannabis smokers as emaciated or malnourished (Bouquet, 1951), and the observations of some modern field studies have suggested that regular users are lighter in weight than non-users (Rubin and Comitas, 1975; Coggins *et al.*, 1980). Social factors such as marital status or other differences in lifestyle may have contributed to this finding (Coggins *et al.*, 1980). In short-term

laboratory studies, a weight increase attributable to increases in body water and caloric intake has been observed (Jones and Benowitz, 1976; Greenberg *et al.*, 1976). There is little or no information on possible long-term effects of cannabis on growth, development, and maturation of humans.

2.3.4. *Gastrointestinal*

2.3.4.1. Experimental animals. In dogs and monkeys exposed to high oral doses of cannabis acutely, vomiting and diarrhea may occur (Thompson *et al.*, 1973). Chronic administration does not appear to be associated with significant gastrointestinal toxicity in animals (Rosenkrantz *et al.*, 1975), but may decrease gut motility.

2.3.4.2. Humans. In humans, acute or sub-acute use may produce vomiting, diarrhea, and abdominal distress (Halikas *et al.*, 1971; Tennant, 1974). Chronic cannabis use may decrease gastric acid secretion and possibly make the intestine more susceptible to *Vibrio cholerae* and *Escherichia coli* infections (Nalin *et al.*, 1978), which may pose a particular threat to travelers. Liver toxicity has been observed occasionally in cannabis users (Tennant, 1982). Concurrent alcohol abuse appears to be a factor in these cases. The mechanism by which cannabis could enhance alcohol-induced hepatotoxicity is unknown. The observation of abnormal liver function tests in users who had developed antibodies to marihuana (Shapiro *et al.*, 1976) suggests a possible antigenic response. Lysosomal damage, observed in animals treated chronically with THC (Mellors, 1976), may also play a role.. The sharing of cannabis products or paraphernalia with other smokers has led to the spread of hepatitis in some groups (Drachler, 1975). Possible decreased immunity to viral infections is discussed in Section 4.3.

2.3.5. *Miscellaneous Toxic Manifestations*

Individual case reports have also described a variety of apparent toxic reactions to cannabis in humans, of relative rarity and possibly dependent on unusual individual sensitivity (Tennant, 1982). For example, cannabis products often contain pathogenic fungi such as aspergillus, and aspergillosis has been reported to occur in cannabis-using persons who had preexisting pulmonary disease or asthma (Kagen, 1981). Other allergic phenomena are often aggravated by cannabis use and one case of anaphylatic shock has occurred in an allergic person after cannabis use (Liskow *et al.*, 1971). Some clinical reports suggest that cannabis possibly aggravates some dermatologic conditions (Tennant, 1982).

2.3.6. *Toxicity Related to Unusual Methods of Cannabis Exposure*

Unusual exposure to cannabis includes intravenous injection of plant

extracts, oral ingestion of large amounts of the raw or cooked plant, swallowing of cannabis-filled balloons to escape police detection, and use of high-potency butter-paste preparations. The use of cannabis by the above routes has led to highly toxic reactions (Tennant, 1982). These reactions are either consequences of gross overdose (e.g., from intra-intestinal rupture of a balloon filled with "hash oil"), or complications produced by the physical rather than the pharmacological properties of the material (e.g., microembolism due to intravenous injection of a particulate suspension).

3. CELLULAR TOXICITY

Cytotoxic effects of cannabinoids have been studied by a number of different techniques, reflecting different research interests. The principal questions addressed include the possibility of cannabis mutagenicity, carcinogenicity, and impairment of biosynthesis of nucleic acids and proteins. These have involved both *in vivo* and *in vitro* approaches.

3.1. Chromosomal Aberrations and Mutagenicity

During the past 11 years, about two dozen publications on the possible cytogenetic effects of cannabinoids have appeared (Bloch, 1982). Two-thirds have dealt with examination of human chromosomes, and the remainder with rodent chromosomes.

Cytogenetic analyses of lymphocyte cultures from chronic marihuana smokers have yielded contradictory results (Bloch, 1982). Four controlled prospective studies (Nichols *et al.*, 1974; Matsuyama *et al.*, 1976; 1977; Morishima *et al.*, 1979) involving experimental administration of 1 to 15 marihuana cigarettes a day for 5 to 13 days, gave no evidence of increased chromosomal breaks or gaps, though heavy doses gave rise to a higher proportion of hypoploid cells (i.e., cells containing a smaller than normal number of chromosomes) (Morishima *et al.*, 1979). This anomaly disappeared after cessation of smoking.

Rodent and human lung cells in tissue culture exposed to marihuana smoke *in vitro* also tended to show reduced chromosome complements, but not increased incidence of chromosome breaks or gaps (Leuchtenberger, 1982). Diverse studies with rodent cells also indicate little interference with chromosomal replication by cannabinoids (Bloch, 1982).

However, in contrast to purified cannabinoids, marihuana smoke has been reported to produce chromosomal aberrations (Leuchtenberger, 1982), hypoploidy (Leuchtenberger, 1982), mutagenicity in bacteria as demonstrated by the Ames test (Busch *et al.*, 1979; Wehner *et al.*, 1980),

and impaired development in the F_2 generation (the second generation of offspring) of treated animals (Fried and Charlebois, 1979). Studies to date have not shown cytogenetic abnormalities or mutagenic effects which are definitely attributable to cannabinoids, or unambiguously identifiable in the human population.

3.2. Carcinogenicity

Analysis of cannabis smoke, animal studies, and one clinical report suggest that cannabis may have significant carcinogenic potential. Cannabis smoke condensate ("tar") is a mutagen (Section 3.1.) and when painted on animal skin has resulted in alterations of cell development (metaplasia) in the sebaceous glands (Magus and Harris, 1971) and tumor formation (Hoffmann *et al.*, 1975). Certain naphthalenes, particularly benzopyrene, are known to be as much as 70% more abundant in cannabis "tar" than in tobacco "tar" (Novotny *et al.*, 1976). Rodents made to inhale cannabis smoke for several months show changes in bronchial epithelium that are compatible with precancerous alteration (Rosenkrantz and Fleischman, 1979).

One study of bronchial biopsies in young men who were heavy users showed histopathological changes similar to those observed in much older smokers of tobacco cigarettes who may develop lung cancer (Tennant, 1980). The combination of tobacco plus hashish smoking may have enhanced the development of precancerous lesions.

One team of investigators has studied the effects of chronic exposure to fresh whole cannabis smoke and to its gas vapor phase on human lung tissue cultures (Leuchtenberger, 1982). Cellular abnormalities developed in essentially the same sequence which occurs with tobacco smoke, and appeared to be related to component(s) of the gas vapor phase of the fresh cannabis smoke. Abnormalities in mitosis, DNA complement and chromosomal number, as well as cellular proliferation, were observed. All these changes were more severe after exposure to cannabis smoke than to tobacco smoke. In hamster lung cultures, both cannabis and tobacco smoke led to malignant transformation; both types of smoke appeared to promote rather than to initiate malignant transformation. When the malignant cells were injected into immunoresistant nude mice, fibrosarcomas developed. It has been reported that ascorbic acid protects human and hamster lung cell cultures from malignant transformation induced by cannabis smoke, but may enhance cancerous cell growth and dedifferentiation (conversion to more primitive cell forms) in human breast cancer cultures exposed to cannabis smoke. The significance of these findings is not yet clear.

At this time there is no confirmed evidence that cannabis has produced cancer in humans. Available information, however, indicates that can-

nabis has carcinogenic potential, and human users should be carefully surveyed and monitored for evidence of cancer development.

3.3. Impairment of Macromolecule Synthesis

Marihuana smoke (whole smoke) evoked a decrease in DNA content in spermatids (immature sperm) of cultured animal testis (Leuchtenberger, 1982). This alteration was not found in spermatids after exposure to the gas vapor phase of marihuana smoke, or after exposure to tobacco smoke (whole smoke or the gas vapor phase). Therefore the cannabinoids of marihuana smoke were probably mainly responsible for the alterations in DNA synthesis. Similar inhibition of DNA synthesis (decreased incorporation of ^{3}H-thymidine) has also been reported in cultured lymphocytes from human users of cannabis and from THC-treated monkeys, rats, guinea pigs, and mice, as well as in various unicellular organisms and cultured malignant cells exposed to THC *in vitro* (Munson and Fehr, 1982). Inhibition of RNA synthesis (decreased incorporation of ^{3}H-uridine) and of protein synthesis has also been reported in a similar range of preparations (Munson and Fehr, 1982).

In most of these studies, the concentration of THC added *in vitro* was 10^{-4} - 10^{-6} mol/1 which is probably well above the range of THC concentrations found in the plasma or tissue fluids of human users of cannabis. But there is some difficulty in specifying concentration of THC since its maximum solubility in water is of the order of 10^{-6} mol/1 or less (Banerjee *et al.*, 1975), so that one must suppose the "free" concentration cannot rise much above this. In plasma, THC and its first metabolite, (11-hydroxy-THC) are strongly bound (up to 99%) *in vivo* to lipoprotein or albumen. *In vitro*, the nominal concentration will be reduced by adsorption to glass and by uptake into the tissue or test material, and some of it may be bound either by protein in the culture medium, or by protein released by the tissue into the medium. The nominal concentration in such experiments must therefore be regarded as representing not "free" concentration, but the amount of THC available to be taken up by the test system. In the few studies in which tissue/medium ratios have been reported, the latter have been in the order of 100-600. The correlation of *in vitro* with *in vivo* work would be greatly aided by further study of these factors.

3.4. Possible Biochemical Mechanisms

Interference with macromolecule synthesis might result from various mechanisms; examples are failure of cellular uptake of the precursor substances, inhibition of the synthesizing enzymes, perturbation of the

cellular membranes in which the enzymes are located, blockade of receptors for hormones which modulate the syntheses, and so forth. The evidence on these points is not reviewed here for reasons outlined in Section 1.1.

Only one hypothesis is mentioned here in some detail, because it is recent and imaginative, and because it proposes a single explanation both for the deficiency in nuclear histone synthesis and for the ultrastructural alterations encountered in the leukocytes and spermatozoa of chronic human users of hashish (Issidorides, 1982). These cells are characterized by a depletion of the amino acid arginine and by abnormal chromatin condensation. According to this hypothesis, the biological effects observed in chronic cannabis users may be explained by arginine depletion which, in itself, can cause chromosomal aberrations, decreased sperm maturity and motility, defective ovulation, growth retardation, immunosuppression and the reactivation of latent viral infections, and CNS effects such as anorexia, motor incoordination, and lethargy. Furthermore, the enzymes reported to be affected by cannabis possess essential arginine residues at their active sites, which would permit a THC/arginine interaction.

4. IMMUNE SYSTEM

The immune system in humans and other higher animals plays a major role in protecting the body against bacterial, viral, and other infections against the growth and spread of body cells which have undergone transformation to a cancerous state, and against foreign proteins and many other substances. A considerable number of scientific reports deal with the effects of cannabinoids on the various main components of the immune system in humans and experimental animals. These principal components are the T-lymphocytes, the B-lymphocytes (which form antibodies or immunoglobulins), and the macrophages.

4.1. Experimental Animals

In contrast to the conflicting findings so far available in humans, there is consistent evidence that THC and marihuana administered parenterally or by inhalation induce immunological defects in mice and rats, and that rats are more sensitive than mice (Munson and Fe! r, 1982). The immunological responses that have been shown to be perturbed include:

a) humoral immune suppression in mice and rats, as measured by decreased antibody responses to T-dependent and T-independent antigens, and decreased lymphocyte response to a B-cell mitogen;

b) cell-mediated immune suppression in mice as measured by a reduction of the delayed hypersensitivity response to *corynebacterium parvum*, sheep red blood cells, oxazolone and skin allografts, and decreased lymphocyte response to the T-cell mitogen, phytohemagglutinin (PHA). The depression of PHA-induced lymphocyte response was also seen in rats and monkeys.

These effects were obtained with doses of THC which produced very little behavioral effect in the mice. However, the molecular structural requirements for immunosuppressant action are different from those for psychoactivity (Smith *et al.*, 1978), so that cannabinoids other than THC may contribute to the suppressant effect of cannabis.

The evidence that marihuana or THC can perturb monocyte or macrophage function is mixed (Munson and Fehr, 1982). Overall there appears to be a reduction in the staphylococcus-killing ability of cells obtained by bronchopulmonary lavage from animals exposed to cannabis smoke, along with a reduction in the release of lysosomal enzymes, in superoxide formation and in oxygen consumption. Decreased phagocytic activity has also been observed after exposure of lung macrophages to cannabinoids or cannabis smoke *in vitro*.

The degree of immunosuppression produced by THC is a function of the temporal relationship between the administration of the cannabinoid and the antigen. The effects are more pronounced if the cannabinoids are administered during the early phase of antibody formation (Luthra *et al.*, 1980) and are more evident in young animals (Pruess and Lefkowitz, 1978). The degree of tolerance that can develop to these effects is not yet clear.

The role of adrenal steroids in the immunosuppressive action of the cannabinoids is not clear. One study (Smith and Munson, 1976) suggests that a cannabinoid-induced increase in corticosteroid release may mediate certain aspects of the immune suppression (e.g., splenic atrophy), but not others (e.g., the inhibition of antibody formation).

4.2. Humans

At present, there is only suggestive but not conclusive evidence that consumption of cannabis or THC may produce immune dysfunction in humans as measured by the following immunological indicators (Munson and Fehr, 1982):

a) the numbers of T-lymphocytes, B-lymphocytes or macrophages
b) the functioning of T-lymphocytes, B-lymphocytes or macrophages
c) serum immunoglobulin levels.

The numerous studies in which these indicators have been used have yielded roughly similar numbers of reports of increased, decreased, or unaltered immune responses in cells from cannabis users compared to non-users.

There is suggestive evidence that T-lymphocyte function may be impaired, as measured by a reduced responsiveness to mixed lymphocyte cultures or to PHA, and reduction in the number that can form rosettes with sheep red blood cells.

There is one report that the phagocytic ability of polymorphonuclear leukocytes is impaired in subjects smoking marihuana (Petersen *et al.*, 1975). There is also one report of biochemical and ultrastructural changes in the leukocytes of chronic hashish smokers (Section 3.4.) (Stefanis and Issidorides, 1976; Issidorides, 1979).

4.3. Biological Significance

If the effects of cannabis on the immune system, as examined *in vitro*, are of biological importance, it should be possible to demonstrate that they reduce the resistance of the living organism to infection or to cancer although the latter effects might be altered by an inhibitory effect of THC on the cancer cells directly. Decreased resistance to infection by *Listeria monocytogenes* and to herpes simplex virus has been found in cannabis-treated mice (Morahan *et al.*, 1979). Since other drugs which suppress immune responses in mice also do so in humans, the apparent differences between the findings with cannabis in humans and rodents may depend merely on relative doses used. In humans, it has been reported that dormant genital herpes infections have been reactivated shortly after the smoking of cannabis (Juel-Jensen, 1972).

It can be expected that the immunosuppressant efficacy of cannabis, like that of any other immunosuppressant drug, will vary along a continuum, ranging from little or no effect against immunity to common viral infections such as influenza, up to marked suppression of resistance to unusual infections such as Listeria pneumonia in the mouse. Since immunological function is normally less effective in older persons than in younger ones (Hallgren *et al.*, 1973; Burnet, 1976), it is also possible (though not yet studied) that the immunosuppressant effect of cannabis would be appreciably greater in the elderly. The magnitude of public health consequences of such a drug effect is therefore difficult to assess. One of the problems of interpretation of these findings is the relative crudeness and high variability of the tests of immune function *in vivo* compared to those *in vitro*. It is necessary to have a high degree of immunosuppression *in vitro* before a statistically significant *in vivo* effect can be demonstrated in a small number of experimental animals. Therefore some immunologists consider the *in vitro* effects of cannabis to be without functional significance for health.

However, epidemiological observations on large populations of users should permit a clearer assessment of the biological significance of small degrees of impairment of immune function. A minor degree of im-

munosuppression in a substantial number of cannabis users might result not in any sudden and dramatic increase in incidence of unusual infections, but rather in a slight increase in incidence, severity, and duration of common ones. Cumulatively, this could have considerable significance for public health and health care delivery systems.

4.4. Cannabis As an Allergen

Cannabinoids have some allergic potential. From the few data available, it appears that allergic reactions in humans are uncommon, although cannabis use has been reported to worsen allergic symptoms in atopic persons (Tennant *et al.*, 1971). Skin tests in cannabis smokers have usually shown little or no reaction to cannabis or its constituents (Tennant *et al.*, 1971; Lewis and Slavin, 1975), although some cannabis users have demonstrated serum antibody responses to THC and other cannabinoids, suggesting that these compounds can act as haptens (Liskow *et al.*, 1971; Shapiro *et al.*, 1976). Antibodies have also been made against THC in experimental animals (e.g., Lecorsier *et al.*, 1977).

5. EFFECTS ON ENDOCRINE FUNCTION

As with the work on the immune system, fairly impressive and consistent effects of cannabis have been observed in endocrine functions in experimental animals, while only weak and inconsistent effects have been reported in humans (Bloch, 1982). It is not clear whether this represents a species difference or a consequence of differences in dosage and pattern of administration, or of clinical variation. The endocrine responses of experimental animals to most other drugs are at least qualitatively similar to those of humans, although there are exceptions to this statement. Therefore, when a particular endpoint or system reacts uniformly to cannabinoid exposure in several species of several classes, including monkeys, a qualitatively similar response in humans may be anticipated.

5.1. Methodological Considerations

A number of the hormones studied, such as testosterone and luteinizing hormone (LH), show very large, short-lived, and quite irregular variations in blood levels, independent of any regular diurnal rhythms (De Lacerda *et al.*, 1973). Therefore occasional measurements at single points in time show very wide scatter and large standard deviations in small

groups of normal subjects. In order to demonstrate reliable though small differences between groups submitted to different treatments, it is necessary to use either:

a) very large numbers of subjects, so that the standard error of the mean for the group is decreased in correspondence with the sample size, or
b) frequent or continuous sampling (e.g., by indwelling venous cannula), to estimate the true mean for each subject.

In human studies, (a) is probably not feasible for financial reasons, but (b) has been employed in the best recent investigations (e.g., Mendelson *et al.*, 1978).

In animal studies, published work has been deficient in a variety of important ways:

a) often only single doses of cannabinoids have been used, rather than full log-dose/response curves, so that the biological significance of the findings is difficult to determine;
b) *in vitro* drug concentrations may often be too high to be relevant to *in vivo* levels of cannabinoids (see Section 3.3.);
c) the duration of cannabis treatment is often variable and arbitrary;
d) the time between drug administration and hormone measurement is variable and often not stated;
e) animal strains are occasionally not specified;
f) data variance within the same study often differ widely;
g) in most experiments, cannabis-treated animals are compared with vehicle-treated controls, but for explanation of mechanisms there should also be comparisons with analogs, homologs, and derivatives of THC.

Despite these shortcomings, a good measure of agreement has been found in relation to the effects of cannabinoids on male and female gonadal and adrenal hormone production and on hypothalamic-pituitary regulation. Much less is known about the effects on other hormones.

5.2. Male Reproductive Hormones

5.2.1. *Experimental Animals*

In rats and mice, cannabinoids disrupt normal *male reproductive* physiology (Bloch, 1982). Testicular metabolic activity and *in vitro* testosterone synthesis are decreased; plasma levels of both testosterone and LH fall, and, upon chronic intake, androgenic target tissues show varying degrees of functional and morphological involution. Prolonged cannabinoid intake leads to diminished spermatogenesis. The effects of marihuana and cannabinoids on male reproductive endocrinology and on spermatogenesis are apparently reversible, since no permanent changes have been described following cessation of cannabinoid intake. These effects have

been studied mainly in immature and pubertal rats. There is a need for corresponding studies in mature male rats.

5.2.2. *Humans*

Only a few studies have been carried out with modern methods of hormone measurement. These have involved young healthy users of cannabis, either with or without controlled experimental administration of cannabis as part of the study design. A few groups of investigators have reported reduced plasma levels of LH and/or testosterone and reduced sperm counts in the users, while other groups have found no changes (Bloch, 1982). To date the difference has not been satisfactorily explained, but in view of the findings in the animal studies, it is possible that the cannabis doses in the humans have been just at or below the lower margin of the effective range.

5.3. Female Reproductive Hormones

5.3.1. *Experimental Animals*

As in the male, the acute or single administration of THC to *non-pregnant female rats* transiently inhibits functioning of the hypothalamic-pituitary-gonadal axis (Bloch, 1982). Plasma LH and prolactin levels are decreased; the pre-ovulatory LH surge is suppressed, and estrus is delayed. Chronic THC or crude marihuana extract intake seems to impair reproductive function reversibly. The uteri and the vagina show signs of morphological and functional involution, and ovarian function may be affected. Estrous cycles are inconsistently interrupted or abolished.

The few studies on monkey and other non-human primates tend to confirm a suppressive effect of cannabinoids on pituitary gonadotropin release, and the blocking of ovulation (Bloch, 1982). Too few studies evaluating other parameters have been carried out to permit even tentative inferences.

In experimental animals, THC exerts few effects unique to pregnancy (Bloch, 1982). High doses suppress or diminish the matenal weight gain normally occurring during pregnancy. THC also decreases prolactin levels, which may explain the reduced and inadequate lactation seen in the post-partum, cannabinoid-ingesting rat.

5.3.2. *Humans*

There is one preliminary report of an increased proportion of menstrual cycles that were either anovulatory or marked by an inadequate luteal phase in marihuana smoking women as compared with a group of non-users (Bauman *et al.*, 1980). Otherwise, this subject has been virtually unexplored in human females.

5.4. Adrenal Cortex

5.4.1. *Experimental Animals*

Pure cannabinoids and crude marihuana extract stimulate adrenal cortical function in rats (Bloch, 1982). Acute administration results in increased plasma corticosterone concentrations; long-term and short-term exposure lead to adrenal weight increase and thymus weight decrease.

5.4.2. *Humans*

Several studies in humans, however, have failed to show changes in adrenocortical function as a result of cannabis use or experimental administration (Bloch, 1982). Only one group (Benowitz *et al.*, 1976) has reported a decreased plasma cortisol response to insulin-induced hypoglycemia in THC-treated males. Again, the difference between the results in humans and animals may reflect differences in relative doses of cannabinoids. In the animal studies, adrenal activation was observed only after rather large doses of THC, and not proportionately at all doses. Therefore, it may reflect a non-specific stress response, above a certain threshold dose, as has been reported with alcohol (Stokes, 1971; Kakihana and Butte, 1979). In the human studies, the doses used may not have been high enough to produce this.

5.5. Other Hormones

Very little information exists on the effects of cannabis on other endocrine secretions. Several animal studies have shown reduction of circulating thyroxine or triiodothyronine levels after acute or chronic administration of THC, but this has not been confirmed in humans (Bloch, 1982). Plasma growth hormone levels have shown variable responses to THC, according to the age of the rat and route of administration (Bloch, 1982). There is one report of decreased growth hormone response to insulin injection in humans taking THC by mouth (Benowitz *et al.*, 1976).

5.6. Locus and Mechanisms of Action

Experimental animal studies have revealed the primary locus of cannabinoid action in the brain, probably in the hypothalamus (Bloch, 1982). Cannabinoid stimulation of the adrenal cortex can be abolished by agents and procedures which block pituitary ACTH production, while LH-releasing hormone will stimulate pituitary LH release in the THC-blocked rat.

Crude marihuana extract and THC probably also exert a direct inhibi-

tory effect on gonadal and adrenal cortical function. This is especially true for the testes, where *in vivo* and *in vitro* experiments have demonstrated an inhibition of testosterone synthesis, perhaps via reduced cholesterol esterase activity. Another possible mechanism is inhibition of testicular synthesis of prostaglandin E which is involved in mediating trophic hormone effects. Diminished metabolic activity and decreased macromolecule synthesis in testes following exposure to cannabinoids may explain the reduced spermatogenesis observed after cannabis intake.

Repeated administration of cannabinoids may result in a direct effect on the uterus, and possibly also on prostate and mammary gland tissue (Bloch, 1982). Interpretation of the data is made difficult by the fact that some investigators have used cannabis extracts while others have used THC. These preparations differ with respect to their respective dose-response relations for each effect. If direct effects exist, they occur at larger doses than are needed to produce indirect effects (e.g., via actions on the hypothalamus and the pituitary), and may reflect a more general toxicity.

The molecular mechanism of cannabinoid action remains to be elucidated. It must also be remembered that marihuana contains other components which may have activity with quite different loci of action.

6. REPRODUCTION AND DEVELOPMENT

The effects of cannabinoids have been investigated to a very limited extent on aspects of reproduction and development other than the endocrine aspects mentioned in Section 5.

6.1. Sexual Behavior

Although there are descriptive references to decreased potency, sexual activity, and fertility of males in India, North Africa, and other regions of the world (e.g., Chopra and Chopra, 1939; Bouquet, 1951), attributed to heavy use of cannabis, these observations are not accompanied by any investigation adequate to support a causal link. In more recent field studies, both the users and their spouses indicated that sexual behavior was normal, but the users stated that they often smoked cannabis in order to prolong or be able to enjoy coitus (Page and Carter, 1980). A few experimental studies have reported decreased sexual reflexes and increased latency to mount in male rats (e.g., Corcoran *et al.*, 1974).

Clearly, the effects of cannabis on sexual behavior require considerably more systematic research.

6.2. Fertility

In animals, fertility in males and females has not been significantly altered by sub-chronic or chronic treatment with THC or cannabis extracts (Grilly *et al.*, 1974; Wright *et al.*, 1976).

In one study in humans, it was claimed that sterility was twice as common among chronic cannibis users as among the general population (Chopra and Chopra, 1939). However, there is no consistent evidence of decreased fertility, as indicated by the number of offspring of males who are chronic cannabis users (True *et al.*, 1980). Fertility has hardly been studied in female users of cannabis. If, as preliminary studies suggest, ovulation is suppressed by THC treatment, fertility would be adversely affected.

6.3. Teratogenesis

Any drug could potentially affect fetal development in two ways. First, exposure to a mutagenic agent prior to conception could alter the germ cells of the male or the female and thus influence the expression of the genes in the offspring. Cytogenetic effects of cannabis have been reviewed in Section 3.1. As noted there, it seems doubtful that crude cannabis extracts or THC are mutagenic in humans, although pyrolysis products present in cannabis smoke may have mutagenic activity.

Secondly, if exposure occurs during pregnancy, drugs can produce direct toxic effects on the fetus. THC administered to pregnant rodents results in a concentration gradient of mother > placenta > fetus (Bloch, 1982). The placenta takes up THC more avidly than the fetal tissues do, but releases it only slowly. This makes the placenta potentially a barrier against, but also a reservoir for, THC transfer into the fetus. A THC-induced disruption of placental development or function as suggested by preliminary observations of Sassenrath *et al.* (1979) may be significant, and could contribute to abnormalities in the fetus.

Cannabinoid administration during the first two-thirds of gestation is associated with increased frequency of fetal resorption and decreased birth weights in mice, rats, rabbits, and hamsters (Bloch, 1982).

There are three reports that the administration of large doses of THC to mice during the critical periods of palate and brain development correlates with increased frequency of cleft palate and exencephaly respectively (Mantilla-Plata *et al.*, 1975; Joneja, 1976; Bloch *et al.*, 1979). Cannabinoid-exposed hamsters also had an increased incidence of malformations (Geber and Schramm, 1969). Other reports of cannabinoid-induced malformations cannot be considered as definitive, and the majority of studies in these species have demonstrated no significant teratogenicity. Cannabis extracts may contain constituents other than THC which are teratogenic. The few reports of teratogenicity in rodents

and rabbits (Bloch, 1982) indicate cannabinoids to be, at most, weakly teratogenic in these species, and the activity, if any, may reside in cannabinoids other than THC, or in non-cannabinoid constituents of cannabis or cannabis smoke.

The teratogenic potential, however, has never been accurately assessed in humans. A major prospective study (Zuckerman *et al.*, 1981) now in progress, should provide valuable information in this area.

6.4. Post-Natal Development

Drug effects on post-natal development may be exerted through alterations in ability of the lactating mother to feed the young adequately, through alterations in other maternal behavior towards the young both during lactation and after weaning, and through tissue alterations in the offspring themselves as a result of drug exposure *in utero* and/or via the milk. In animals, and presumably in humans, cannabinoids can cross the placenta, and are also secreted in the milk (Chao *et al.*, 1976).

There has been very little systematic study of cannabis effects on general maternal behavior toward the offspring. However, animal studies have shown repeatedly that cannabis can impair lactation, probably by central actions leading to reduced prolactin output. This results in neonatal malnourishment, unless cross-fostering procedures (i.e., allowing untreated mothers to rear drug-exposed offspring) are used; consequently there is retardation of weight gain and skeletal growth, and increased neonatal mortality. A clear-cut maldevelopment of any other type such as delayed eye opening or incisor eruption is less often reported (Bloch, 1982). Follow-up observations, now in progress, of babies born of mothers who have smoked cannabis during pregnancy will be informative in this regard (Fried, 1980).

A major concern is the possibility of retardation of later juvenile maturation and development as a result of either *in utero* exposure or early commencement of cannabis use by children and adolescents. This has been until now an almost totally neglected research field and requires specific attention.

7. EFFECTS ON NERVOUS SYSTEM FUNCTION

7.1. Effects of Cannabis on Behavior

7.1.1. *Acute Effects on Intellectual Functions*

The effects of any drug on behavior are markedly influenced by a wide variety of factors, both within the individual user and derived from the

environment at the time of testing. This is just as true of cannabis as of any other psychoactive drug. Consequently the picture of effects seen in any given instance depends on the relative contributions of the drug-specific effects (which are relatively predictable and reproducible) and of the individual and environmental influences (which are much more variable and less predictable). As a result, the behavioral effects of low doses of cannabis are relatively non-specific and can show extensive overlap with those of amphetamines, opiates, hypnosedatives, and alcohol. In contrast, at high doses the cannabis effects are much more characteristic and identifiable. This is true not only for behavioral effects, but also for neurotoxicity and psychiatric effects, which are discussed in the following sections of this report.

In studies with rodents, dogs, and monkeys, behavioral profiles reveal a biphasic dose-effect and time-effect relation of cannabis and of THC. At low doses, hyperactivity and hypersensitivity (particularly to auditory and tactile stimuli) are evident, and there is synergism (mutual enhancement) with the corresponding effects of amphetamines and of low doses of opiates. At higher doses, ataxia, hypomotility, stupor, or coma are encountered, and the corresponding effects of other central depressant drugs are enhanced (Rosenkrantz, 1982). Biphasic patterns of changes in spontaneous activity related to both time and dose have also been described repeatedly in humans (Jones, 1980).

These changes do not, in themselves, constitute adverse effects; rather, they are the characteristic features of intoxication with cannabis. They are adverse effects only when they compromise the health or safety of the user or of others, by impairing the user's ability to carry out necessary cognitive-perceptual or psychomotor functions. The main conclusions concerning the effects of cannabis on these functions can be summarized as follows (Klonoff, 1982):

a) A host of studies have demonstrated impaired functioning on a variety of cognitive and performance tasks during marihuana intoxication;
b) impaired memory, altered time sense, and decrements in performance on a number of tasks — such as those involving reaction time, concept formation, learning, perception, motor coordination, attention and signal detection — are commonly described in the literature;
c) in most laboratory studies, the duration of measurable memory alterations is a few hours after a smoked marihuana cigarette. However, for some marihuana smokers, there may be more lasting problems with transfer of new information into long-term memory storage;
d) greater appreciation has developed for the need to study a range of doses on a variety of cognitive tasks before trying to describe the effects of marihuana. For the most part, impairments are dose-related but there are apt to be multiple marihuana effects depending on the exact demands of the task; for example, performance on some cognitive tasks might even improve when low doses are used;

e) high motivation to perform well can be enhanced by incentives (e.g., more money for correct responses) and this enhancement can decrease some marihuana effects.

7.1.2. *Acute Effects on Driving Skills and Driving Performance*

Retrospective sources of information concerning the effects of cannabis on driving include:

a) self-reported experiences and perceptions of users
b) anecdotal reports by investigators
c) data collected after accidents or traffic violations.

On the basis of such accounts, there appears to be a consensus that marihuana can, and often does, impair driving ability and actual driving performance (Klonoff, 1982). There has been growing evidence that marihuana, used alone or in combination with alcohol and other drugs, is implicated in traffic accidents and fatalities (Woodhouse, 1974; Sterling-Smith, 1974; Cimbura *et al.*, 1980). The nature of this implication, however, is less than clear. Toxicological data, including measurement of cannabinoid metabolites in the urine, may mean only that the person has used cannabis at some relatively recent time (hours to days) before the time of sampling (Rubenstein, 1979). Such information obviously provides no causal link between the drug use and occurrence of an accident. Much greater attention must therefore be given to prospective studies of cannabis effects.

Prospective methods of investigation include:

a) psychomotor tasks that are presumed or known to be related to driving skills
b) driving simulators
c) traffic-free driving test courses
d) road tests under actual traffic conditions.

Psychomotor tasks can test only specific subsets of the complex behavioral demands for driving. While many such studies have reported dose-related impairment of driving skills by cannabis, there is a real question about generalizability to actual driving situations.

Driving simulators have the advantage of permitting control of many variables, but are nevertheless subject to experimental artifacts. The studies to date have operationally defined variables such as speed errors, accelerator errors, brake errors, risk-taking in terms of passing, passing-time judgments, and visual signal detection (Klonoff, 1982). Dose-related effects of cannabis on most of the measures employed have been reported, but again there is a question about generalizing to real-life driving since most of the emotional and motivational factors in real-life driving performance are missing from the simulator tests. Three published studies (LeDain, 1972; Smiley *et al.*, 1974; Hansteen *et al.*, 1976) have reported cannabis dose-related impairment of driving performance. Skilled drivers,

on traffic-free test courses, have reiterated errors similar to those observed in driving simulators.

The most sophisticated study (Klonoff, 1974), and probably the most relevant, is an investigation of actual driving in downtown rush-hour traffic, in cars with dual controls to permit the observer to make the corrections required for safety. Experienced drivers were tested under placebo, small and moderate doses of marihuana, in a double-blind crossover design. Composite driving performance was improved in some cases, unchanged in others, and worse in the majority, compared to the pre-dose control period. However, the number of those who improved or remained unchanged under marihuana was smaller than under placebo, while the number who deteriorated under marihuana was larger than under placebo, and the shift was significantly greater with the higher dose of marihuana.

These findings provide a striking demonstration of the ability of even small doses of marihuana to impair driving ability. Whether or not this is translatable into the production of automobile or airplane accidents will obviously depend upon the degree of impairment relative to the margin of safety between the situational demands and the operator's remaining skills under the drug. There is a need for independent replication of this work, preferably with inclusion of higher test doses, and combinations of cannabis with alcohol and other drugs. Night driving studies should be included, if possible. It is also not known to what extent the degree of impairment observed in these studies might be modified by cannabis tolerance, and by the age and experience of the driver.

7.1.3. *Chronic Effects on Behavior*

7.1.3.1. Experimental animals. Animal studies have indicated that chronic exposure to cannabis can modify the acute behavioral effects not only by the development of tolerance (see Section 9.2.2.) (Jones, 1982), but also by the sudden appearance of new manifestations of behavioral change after several months of administration (Rosenkrantz, 1982). Prominent among these in rats and monkeys are irritability on handling, and increased aggressiveness between animals of the same or other species. Not all investigators have observed these changes, and in some species (e.g., dog) weakness and lethargy have predominated. Therefore it might be questioned whether the aggressiveness is a specific effect of cannabis inhalation or a non-specific result of repeated exposure to noxious stimuli. The relative lack of aggressiveness in control rats exposed to the noxious stimulus of smoke from cannabinoid-free marihuana tends to support the view that there is a specific drug effect (Luthra *et al.*, 1976).

7.1.3.2. Humans. In humans, a number of studies have indicated cannabis-induced impairment of short-term memory by interference with the acquisition and storage phases rather than with initiation and recall (Ferraro, 1980; Klonoff, 1982; Mendelson, 1982). This appears to involve

lack of concentration on the task, and may be modified by specific motivational factors. These effects on memory appear to persist undiminished through a three-week period of daily smoking of marihuana under experimental closed-ward conditions (Rossi *et al.*, 1977). Speech and interpersonal behavior have shown only slight and subtle changes under marihuana (Mendelson, 1982), but the observations have been made only during single sessions or relatively short-term repeated observations. The field studies of long-term heavy users so far conducted have shown no major changes in social behavior (Rubin and Comitas, 1975; Fink, 1977; True *et al.*, 1980), but there are deficiencies of design in these studies, as described in Section 9.3.3.

7.2. Neurotoxicity

It is difficult to avoid arbitrariness in distinctions between behavioral effects of a drug, and drug-induced neurotoxicity. For the purposes of this report, "neurotoxicity" is used to refer to functional aberrations that appear to be qualitatively distinct from those which are characteristic of the usual pattern of reversible acute and chronic effects, and that might be caused by identified or identifiable neuronal damage.

7.2.1. *Experimental Animals*

7.2.1.1. Chronic exposure. In animal studies, two alterations of behavior have been noted to appear during the course of prolonged periods of cannabis treatment (Rosenkrantz, 1982). Sixty percent of rats exposed repeatedly to cannabis smoke for five weeks or longer develop a pattern of sudden vertical jumping which has been labelled the "popcorn reaction" (Luthra *et al.*, 1976). This is also seen in young animals exposed chronically to cannabis *in utero*, and then challenged with a single small dose of THC at 30 days of age (Rosenkrantz, 1979). Electrical and motor seizure activity have also been noted in several studies (Rosenkrantz, 1982), but the definition of abnormal spike-like wave forms reported in the EEG of the cannabis-treated animals have not been defined according to rigorous criteria, and the frequency has not been assessed quantitatively. Nevertheless, the claims of neurotoxicity during chronic cannabis exposure raise the possibility that long-lasting residual changes might be found.

7.2.1.2. Residual changes. Animal studies have shown no effect of chronic cannabis administration on brain weight or histology as evident under the light microscope (Fehr and Kalant, 1982). There has been one claim (Heath *et al.*, 1980) of residual alteration of synapses in the septum, hippocampus, and amygdala, as revealed by electron microscopy, but technical objections have been raised to this work (National Academy of Sciences, 1981) and the reported alterations are not easily quantifiable in statistical

terms. EEG observations in animal studies have shown the possible occurrence of withdrawal effects (Fehr and Kalant, 1982), and three reports suggest the occurrence of long-term residual abnormalities in EEG tracings from the cortex and hippocampus of cats (Barratt and Adams, 1972), rats (Fehr *et al.*, 1976; 1979), and monkeys (Heath, 1976) exposed to long-term treatment. However, these also lack critical quantitative analysis. There is only one group reporting diverse residual neurochemical changes after long-term cannabis treatment (Luthra *et al.*, 1975a; 1975b; 1976) and the functional significance of the findings is not at all clear.

Most studies of post-drug behavioral changes in chronically treated rats have been carried out too soon after the last drug administration to prove whether any residual effects are long-term ones or merely the slow disappearance of intoxication. However, two laboratories have reported decreased learning ability months after the end of long-term treatment (Radouco-Thomas *et al.*, 1976; Fehr *et al.*, 1976; 1979; Stiglick and Kalant, 1982a; 1982b).The alterations found raise the possibility of changes in the hippocampus, since the tests used include conventional and radial maze learning, operant behavior involving time discriminations (DRL schedules or differential reinforcement of low rates of responding), open-field exploration, and two-way shuttle box avoidance learning; correct performance of these tests is dependent on spatial orientation or on response inhibition, both of which are believed to depend heavily on intact hippocampal functions.

7.2.1.3. Prenatal exposure. Several studies of prenatal exposure have indicated that the offspring of cannabis-treated animals show small delays in various stages of post-natal development, such as eye-opening, reflexes of several types, and open-field exploration (Fehr and Kalant, 1982). However, the development appears to be back to normal by several weeks or months after birth. This could mean either that no residual damage was present, that remaining damage was too slight to be detected by available measures, or that plasticity of nervous system organization in the newborn permitted adequate compensation for the loss of function of any damaged cells. Charlebois and Fried (1980) reported that the retarded development did not occur in groups of cannabis-exposed rats that were fed an enriched protein diet during pregnancy. This suggests that prenatal nutrition (possibly mediated by cannabis-induced anorexia) is a factor in the development of post-natal deficits.

7.2.2. *Humans*

7.2.2.1. Amotivational syndrome. Numerous clinical reports from several countries have described heavy, chronic cannabis users who exhibit behaviors that some observers have labelled "amotivational syndrome"

(Fehr and Kalant, 1982). Included in the various descriptions of this syndrome are the following characteristics: apathy; reduced drive and ambition; impaired ability to carry out complex tasks; failure to pursue long-term plans; reduced tolerance to frustration; diminished communication skills; neglect of personal appearance; and sluggish mental responses. The syndrome takes several weeks to clear after the termination of drug administration. This fact suggests that the symptoms are related to CNS changes rather than to the continued presence of THC. Since no estimations of plasma or tissue THC levels in chronic users are available, the actual mechanism cannot be resolved. A variety of clinical studies and reports in the past decade clearly reveal, however, that the "amotivational syndrome" is neither diagnostic of, nor specific to, chronic cannabis use. The signs and symptoms of the "amotivational syndrome" are essentially those found with chronic intoxication with a number of psychoactive drugs, particularly those that are sedative-hypnotic in nature. It may, therefore, be more appropriate to refer to "chronic cannabis intoxication" and discard the non-specific term "amotivational syndrome."

At this time the dosage of cannabis or the frequency and duration of cannabis exposure required to produce chronic intoxication are not precisely known. Well-controlled clinical studies and close clinical observations (Mendelson, 1982), however, indicate that this picture is not particularly common. In addition, personality and concomitant drug-use factors make it difficult to diagnose this state, or to specify that cannabis, per se, may produce alterations in motivation.

7.2.2.2. Residual brain damage. Human studies after the end of a period of chronic intoxication with cannabis have generally yielded no evidence of residual brain damage. There has been one report of cerebral atrophy, as indicated by air encephalography, in young cannabis users complaining of a variety of neurological symptoms, including memory and cognitive dysfunction (Campbell *et al.*, 1971). However, no atrophy was found in later studies in which computer-assisted tomographic (CAT) scans were performed in young cannabis users who were not also regular users of other drugs, and who were totally asymptomatic (Kuehnle *et al.*, 1977; Co *et al.*, 1977). CAT scans also failed to demonstrate cortical atrophy in monkeys treated chronically with cannabis extract by mouth (Rumbaugh *et al.*, 1980).

Most studies which have compared the performances of chronic users and controls in neuro-psychological tests have failed to elicit significant differences. Significant cognitive deficit is not a commonly demonstrated effect of chronic use of cannabis in clinically healthy subjects. However, to provide an appropriate comparison, most daily users of alcohol are healthy and do not show cognitive deficits, even though such abnormalities are common in clinically diagnosed alcoholics (Parsons and Farr, 1981; Wilkinson and Carlen, 1981). Therefore, it is clear that studies on

relatively small samples, such as are at the moment available for cannabis, cannot be expected to rule them out.

The overall conclusions from a review of this literature are hampered by a general inadequacy of reported data, especially in the clinical studies, which have often been characterized in the past by poor sample size and selection; poor or no differentiation between intoxication, withdrawal, and residual change; and an absence of before-and-after longitudinal studies of regular users. The animal studies which revealed long-lasting impairment of learning ability after a period of chronic cannabis treatment raise the clear possibility that residual long-lasting damage can be caused by cannabis, but a decision as to whether or not it does occur in humans will probably have to await the performance of adequate confirmatory studies on brains from long-term users

7.2.2.3. Prenatal exposure. In a follow-up study of a small number of babies exposed daily or less frequently to marihuana *in utero*, Fried (1980) observed dose-related abnormalities in responses to visual stimuli and an increased prevalence of irritability, tremor, and startles as compared to a group of non-exposed controls. Since the babies were observed only at two or three days post-partum, the described symptoms may have been the manifestation of a neonatal abstinence syndrome of the type described for a variety of CNS depressant drugs (Finnegan and Fehr, 1980). Ongoing assessments of these, and additional children, should yield information on the persistence and significance of these symptoms.

7.3. Psychiatric Effects of Cannabis Use

7.3.1. *Acute Consequences*

Acute panic and paranoid states are the most commonly observed short-term adverse psychological effects of cannabis use (Negrete, 1982). The validity of these conditions is no longer questioned, as they have been seen both in clinical settings and in laboratory experiments. The marked difference in frequency with which such problems are reported in different countries, and the diminishing frequency of clinical reports on this type of reaction in Europe and North America, tend to support early contentions that they may be due mainly to adverse social conditions and the user's lack of experience. Alternatively, the decreased frequency of such reports might be due to loss of novelty, and therefore decreased incentive for physicians to describe additional cases in the clinical literature. Nevertheless, it has now been satisfactorily demonstrated that setting alone does not explain their occurrence. Additional work is needed to identify the intervening pharmacological, neuro-physiological, and psychopathological factors.

Other acute reactions of increasing clinical relevance are severe

dysphoric states which have been observed in the course of THC therapy (e.g., Shiling *et al.*, 1980). Such reactions were described frequently in the clinical literature at the turn of the century when therapeutic use of cannabis extract was common. A concerted effort must be made to develop specific treatment procedures with a view to preventing or minimizing these untoward psychiatric side-effects, especially in older subjects.

7.3.2. *Problems Related to Chronic Use*

These are seen mainly in younger users, principally males. This may be more a reflection of the criteria for defining "problems" or "cases" than of real differences in fr uency of occurrence in different groups of users. The problem of "amotivational syndrome" has been covered in Section 7.2.3. The most important other chronic psychiatric complication is that of cannabis-related psychosis.

The only cannabis-induced psychosis picture which is supported by sufficient evidence to this moment is a short-lasting condition — from a few days to four weeks — with symptoms of mental confusion, memory impairment, regressive and impulsive behavior, delusional formations, and sensory-perceptive distortions (Negrete, 1982). The frequency of occurrence in Western societies is quite low, and it seems to affect mainly very heavy users. A commonly found predisposing factor is a high degree of premorbid personality disturbance. This condition can be expected to show a rising incidence as the numbers of daily and heavier users in the population increase. More research is needed to identify risk factors other than excessive use.

A highly relevant area of research where current data are clearly too limited, is the problem of cannabis influence on independently occurring psychiatric illness. The evidence already available, however, is sufficient to warrant large-scale prospective studies on the effects of cannabis on the phenomenology of some of the most prevalent psychiatric disorders, in terms of both symptomatology and evolution (Negrete, 1982). Also, specific research is urgently needed on the interaction between cannabis and chemical agents commonly used in psychiatric pharmacotherapy, including its possible influence on therapeutic response.

7.3.3. *Flashback*

Most of the evidence available on the recurrence of drug-related symptoms during abstinence (flashbacks) originates from self-report answers to rather imprecise questionnaire surveys, and from subjective descriptions given by individuals who believe they have experienced flashbacks (Negrete, 1982). The systematic phenomenological analysis of this clinical condition has been largely neglected, and controlled studies of the intervening etiopathogenic factors do not appear to have been carried out up to the present.

7.3.4 *Cultural Influences on Cannabis Use and Its Consequences*

7.3.4.1. Social role of cannabis and social control of its use. The most prevalent purpose of cannabis use in most cultures appears to be the recreational one, both in societies where it has been practised in a traditional manner and in those which have only recently adopted it. Medicinal and ceremonial/ritual patterns of use have also been observed, but clearly more in non-industrial than in industrialized societies (Mohan, 1982).

There appear to be major cross-cultural differences in the type of population involved in cannabis use at this time. Poorer, older, and more predominantly male sectors are typical in non-industrialized societies (Mohan, 1982). In industrial countries sex differences are relatively minor and the use tends to be confined to adolescents and young adults (Smart, 1982).

However, as is the case with other drugs of abuse, there seems to be an incipient trend towards universalization and homogenization of cannabis use patterns. Patterns in other countries are tending toward the North American picture, particularly in larger urban populations around the world (Mohan, 1982).

There are cross-cultural differences in setting of use, type of cannabis preparations preferred, route of intake, dose levels, and the concomitant use of other psychoactive agents. Oral ingestion, for instance, is more prevalent in societies in which cannabis use is traditional. Such societies appear to attribute great importance to the variations in the psychoactive potency of the different cannabis preparations in use. Social reaction towards use may vary in accordance with the type of product involved. In India, for example, there is considerably more social lenience towards the use of cannabis leaf material than to that of resin. In the past, social control mechanisms have varied cross-culturally in accordance with local social perception of use. To the extent that legal controls come to be determined by national and international perceptions and agreements, such variations tend to disappear. It is conceivable that the repeated use of cannabis would be perceived as a greater threat in the more industrialized societies, where individuals are under higher pressure in regard to productivity and mental performance.

These differences in patterns of use and level of social acceptance probably infuence the levels of use and the expectations of drug effect. Therefore they may also be expected to affect the types and incidence of various behavioral and health consequences of cannabis use.

7.3.4.2. Behavioral effects. The available literature includes reports of cultural variations in the behavior of individuals under the effects of cannabis (Rubin, 1975). Attitudes varying from aggression, psychomotor agitation, and delinquent tendencies, to passivity and easier conviviality have been recorded as typical of cannabis effects in different parts of the world. Most such differences are likely to be determined by factors other

than the pharmacological action of the drug and should be scientifically re-examined. Another item that requires exploration is the possibility of ethnic variation in drug response, which has not yet been studied systematically with respect to cannabis.

7.3.4.3. Psychiatric consequences. It is quite possible that there is less cross-cultural variation in the psychiatric consequences of cannabis use than was previously believed. The higher frequency of "cannabis psychosis" observed in North Africa and India, for example, may soon disappear as the validity of this diagnosis is being questioned and the use of this term is being abandoned in that region. However, the difference in prevalence of dose-related acute reactions is likely to remain as long as there are major cross-cultural differences in the potency of cannabis preparations used.

7.3.4.4. Neuropsychological testing. At present, there is no satisfactory evidence that culture in itself may explain variations in neuropsychological test performance, provided that the tests have been properly validated in each population where they have been used.

8. EPIDEMIOLOGY

8.1. Sources of Information

A large number of studies mainly in developed countries have produced a variety of data about cannabis use. Among the most common epidemiologic sources are those listed below:

Self-report surveys of users
Observations of users
Official registration and notification records
Studies of special populations of high risk groups
Hospital, clinic, and emergency service admissions
Arrest and conviction records
Social and welfare agency records
Production and seizure records.

All of these sources of information are potentially able to give relevant and good information, although each has certain clear limitations with respect to the specific groups studied, which do not always allow generalized interpretations.

Various methodological defects impair the accuracy and uniformity of data collection, especially from self-report studies and from routine statistics of health care delivery systems. Clinical patients represent a self-selected population. Where cannabis use is illegal, it may not be reported

by the user with a health problem for fear of self-incrimination, unless confidentiality of medical records is guaranteed. In emergency treatment services, the need for prompt treatment often interferes with thorough collection and recording of information on drug use, especially when the ratio of treatment staff to case load is low. High turn-over of staff may create major difficulties for systematic data collection, unless there is continuous training of new personnel and use of specific incentives for accurate recording of histories. Nevertheless, information from such sources may give useful indices of the relative magnitudes of problems related to different drugs. More detailed discussion of these questions, and specific recommendations for steps to solve them, are contained in a recent report of the WHO Expert Committee on Implementation of the Convention on Psychotropic Substances, 1971 (1981).

Despite the shortcomings in the accuracy and uniformity of data collection, and the low quantity and quality of data in some countries, much is known about incidence and prevalence of cannabis use (Smart, 1982). However, there is less epidemiological knowledge about the adverse health consequences of cannabis use. This is not surprising, since the effects described in Sections 2 to 7 of this report are not specific to cannabis in the sense that Laennec's cirrhosis is fairly specific to alcohol (Schmidt, 1977). Therefore the diagnostic entities themselves cannot be used retrospectively as indicators of hazardous levels of cannabis use in a large population.

For this reason, assessment of the contribution of cannabis to the production of public health problems will require (a) long-term prospective studies of sufficiently large groups of users and non-users to measure the comparative incidence and prevalence of various adverse effects, and (b) large-scale retrospective correlational studies, similar to those on tobacco cigarette use, when details of cannabis use have been recorded accurately in hospital case records for long enough to provide a suitable body of statistical data. Until such studies are carried out, we can have only rough impressions, at best, concerning the real magnitude of cannabis-related health problems.

The value of individual case reports (which are sometimes dismissed as "anecdotal" evidence) should not be overlooked. With cannabis as with any other drug, relatively uncommon but potentially serious untoward effects are usually identified first by astute clinicians and published as case reports. When attention has thus been drawn to a possible problem, it may then be possible to devise experimental studies of causal mechanisms, and large-scale statistical analyses.

8.2. Epidemiological Findings

8.2.1. *Studies on Distribution of Cannabis Use*

In general, recent epidemiological studies in developed countries

(Smart, 1982) indicate that:

a) In most countries that have been surveyed, cannabis has been used by about 17-19% of the general population. Among the student populations, rates of "ever used" vary from less than 1% (Belgium) to more than 50% (USA), with most countries falling in the range of 23-32%. In both student and general populations, the proportion of daily users ranges from less than 1% to more than 11%, with the student groups tending toward the upper end of the range. The apparent average for the countries surveyed was 3-4%.

b) In most countries with good trend studies (Canada, USA, Australia) cannabis use has increased greatly since the late 1960s, i.e., the proportion of users has increased by a factor of 3 to 5. There are some recent signs of stabilization in use over the past few years in Mexico, the USA, and Norway.

In developing countries (Mohan, 1982) the picture is much less clear. Use of cannabis is widespread in Africa, the Middle East, southern and southeastern Asia, Hong Kong, and the Philippines, both among lower socio-economic groups (agricultural and urban laborers, taxi and lorry drivers) and in affluent upper-class groups (adults as well as students). However, there is a scarcity of sound epidemiological studies of general populations, hospital/clinic patients, and selected population groups.

The main reasons for the scarcity of studies appear to be lack of finances and trained people to carry out the surveys, and the relatively low priority allotted to cannabis in the health sector, both nationally and internationally. Nationally, more urgent health problems, such as communicable diseases, nutrition, and sanitation, make stronger demands on scarce resources. Internationally, the Geneva Single Convention laid greatest emphasis on control and movement of opiates across national boundaries rather than of drugs such as cannabis.

One important aspect of use in some developing countries is the difference between socially sanctioned limited use of cannabis for ceremonial purposes, and socially unsanctioned regular use. In India, for example, the great majority of the Hindu population participates in ceremonial use, as in the festival of Shiva (Hasan, 1975), but regular self-administration is carried on by only a small fraction of the population (Mohan, 1982). If the unimodal distribution-of-consumption curve holds for cannabis in the same way as for alcohol, India would be expected to have a very low modal *per capita* mean daily consumption and a very low percentage of users employing large amounts, despite the availability of potent preparations. In contrast, in North America and Europe the absence of a prescribed social role for cannabis, and of traditional social controls of use, might pose a much greater risk of hazardous consumption as potent preparations become more widely accessible.

8.2.2. *Epidemiology of Adverse Effects of Cannabis*

Knowledge about the frequency of various adverse reactions to cannabis is difficult to assemble. The epidemiologist would like to know how often adverse reactions occur, in what types of users, and to identify the explanatory variables such as cannabis dose, previous drug use, and psycho-social characteristics (Smart, 1982). The epidemiologist would also like to know if there is a "safe" (non-harmful) dose of cannabis, and whether some users are *not* at risk for adverse consequences. Answers (such as they are) to these questions typically come from studies not ideally designed to answer them. Nevertheless we might be able to accept the following tentative conclusions about adverse reactions (Smart, 1982):

a) No studies of general populations have determined the rate of adverse reactions serious enough to require treatment or hospitalization. So far, no studies have been made of adverse reactions, whether of a serious or non-serious nature, in general *adult* populations of cannabis users.
b) Usually, studies of cannabis effects on biochemical and neurological functions give very little information on the frequency of adverse reactions to be expected in large populations of users (and, of course, were not designed specifically to do so). Typically, such studies use a selected and narrow range of the cannabis-using population as subjects, mainly young males experienced with cannabis. The sample sizes are usually small (less than 100), and hence the chances to detect uncommon forms of adverse consequences could be quite small.
c) The total number of patients with psychological adverse reactions reported from treatment facilities is not great for a drug used as extensively as cannabis. Unfortunately, this information does not permit calculation of a rate of incidence of such reactions. However, the low number reported suggests either that *serious* psychological disturbances from cannabis use are not common among users in general, without telling us just how uncommon, or that a large proportion of such cases is not reported in the literature.
d) Most of the reported adverse cases come from the USA; cases from outside the USA represent only about 42% of the total. That cases from the USA are over-represented should be expected, because rates of cannabis use and heavy use are higher there than in other Western countries.
e) More cannabis-related psychological problems have been reported for males than females, and for persons under than over 21. The ratio is about 3 males for 1 female, even when the survey studies with all-male military samples are deleted. The ratio of overall and daily use for males and females in the USA, at least among young persons (from which most clinical cases of adverse reactions come), is about 1.5:1. There is a clear suggestion that female users and older persons are at lower risk than young male users for serious psychological conse-

9.1. Dose-Response Relationships

9.1.1. *Pharmacokinetics of THC*

When inhaled in smoke, THC is absorbed rapidly from the lungs. Peak blood levels are reached within minutes of the beginning of smoking, and decline very rapidly to about 5-10% of their initial level within one hour, even though the subjective symptoms of intoxication may persist for 2-3 hours and the objective signs, even longer (Jones, 1980). After oral administration, an equivalent dose of THC is absorbed more slowly, producing a less intense intoxication with a longer latency of onset and a longer duration than after smoking. The decline of blood levels of THC is due to rapid conversion of THC (mainly in the liver) to the psychoactive metabolite 11-hydroxy-THC and numerous other metabolic products of little or unknown biological activity (Gudzinowicz *et al.*, 1980). THC and its metabolites are also rapidly sequestered by the fatty tissues. These compounds are then released back into the bloodstream over a period of several days; this phenomenon slows the elimination of cannabinoids from the body. In experienced users, the terminal half-life of THC (a measure of the rate of biotransformation and elimination) is 19 hours, and of its metabolites about 50 hours (Hunt and Jones, 1980). In the human, elimination of the metabolites occurs mainly through the feces, although detectable amounts are also present in urine.

9.1.1.1. Correlation of cannabis-induced effects with blood levels of THC. Because of the rapid sequestration of cannabinoids into fatty tissues, the tissue:blood ratio of these compounds is not constant. Unlike the situation with alcohol, one cannot expect the blood levels of THC to be a good predictor of biological effects (Jones, 1980). In the absence of tolerance, brain levels of psychoactive cannabinoids in the appropriate but as yet unknown subcellular fraction would provide the only estimate that could be expected to correlate with behavior. Measures of blood levels of THC may have some value, however. If, for example, the relevance of different routes of administration, or patterns of use, to peak or average blood levels can be established, blood level determinations may be more reliable than estimates of administered dose for the cross-cultural comparison of adverse effects in heavy users (Petersen, 1979).

9.1.1.2. Relevance of tissue sequestration to toxicity. Because of the sequestration of cannabinoids, THC or its biologically active metabolites could theoretically accumulate in fatty tissues during chronic or intermittent administration (Jones, 1980). This accumulation would not be measurable by determinations of blood levels of cannabinoids, and has not, as yet, been demonstrated in human tissue samples.

Although a slowly cleared drug is not necessarily more toxic than one rapidly eliminated, the slow clearance will have the effect of prolonging

drug exposure, thus enhancing any toxicity that the drug may inherently possess. The irregular dose and administration schedules employed by most cannabis users make accurate determination of actual drug exposure almost impossible.

In humans, cumulative behavioral or physiological effects have not been demonstrated under conditions of controlled administration of up to three months duration, although the simultaneous development of tolerance may have masked this phenomenon (Jones, 1980). In animals, cumulative toxicity, as manifested by delayed lethality and the sudden appearance of neurotoxicity after several weeks of treatment (Luthra *et al.*, 1976), has been observed at doses relevant to those consumed by chronic human users. The possible occurrence of cumulative toxicity in humans, therefore, is a question that should be examined.

9.1.2. *Structure-Activity Relationships*

There has been considerable research into the biological activity of naturally occurring cannabinoids and their synthetic analogs (Mechoulam *et al.*, 1980). Many studies were designed to assess the potential therapeutic efficacy of these substances (Cohen, 1980). Of the major cannabinoids, only THC has significant psychoactivity. Several other cannabinoids, however, demonstrate immunosuppressant activity in the mouse (Munson and Fehr, 1982), cause endocrinological and testicular disturbances in the rat (Bloch, 1982), and inhibit the synthesis of macromolecules *in vitro* (Munson and Fehr, 1982). Thus it appears that the mechanism of the psychoactive effect of THC can be separated from those of some of its other pharmacological effects. Also, if the other major cannabinoids are present in high concentrations in plant material with a low THC content, they may contribute significantly to the spectrum of cannabis-induced immunological and endocrinological toxicity.

9.1.3. *Drug Interactions*

A third major consideration in the relationship of dose to effects is that of drug interactions. The latter, like tolerance, can be explained by dispositional mechanisms (i.e., related to the metabolic fate of the drug in the body) or by functional mechanisms (i.e., related to the manner in which drugs produce their effects), or by a combination of both.

Interactions between cannabis and other drugs and chemicals in the environment should be expected, but their magnitude and health consequences cannot, in most cases, be specified now. Our understanding of the pharmacology of cannabis is only sufficient to say that interactions with a wide variety of licit, illicit, and therapeutic drugs, and probably with almost all chemicals, can occur in principle, and often do occur in fact.

We know that it is unusual for someone to use cannabis regularly without using other drugs concurrently. For example, in North America,

cannabis is commonly combined with tobacco and alcohol, and less frequently with cocaine, phencyclidine, and many other drugs (Smart, 1982). In some other parts of the world opium is often used concurrently with cannabis (Mohan, 1982). The drugs which are combined, and their doses, vary with age, culture, country, socio-economic status, availability, and many other factors not well characterized in controlled surveys.

We know from a small number of studies that cannabis alters the effects of a number of other drugs (for example, alcohol, barbiturates, nicotine, amphetamines, cocaine, phencyclidine, and opiates) (Siemens, 1980). Similarly, the other drugs can alter cannabis effects. However, the precise nature of the alterations is difficult to predict. This is probably because of the complexity of the interactions. Cannabis is a mixture of many chemicals with varied pharmacology (Turner *et al.*, 1980). THC administered orally probably has different effects on the metabolism of other drugs than does smoked cannabis. This is because a cannabis smoker would be exposed to chemicals (i.e., enzyme inducers in smoke) capable of interacting with other drugs different from those that an oral user would be exposed to. CBD has more marked effects on metabolism of certain other drugs than does THC (Siemens, 1980). Simultaneous exposure to unrecognized environmental chemicals can confound the situation even further. Since cannabis, THC, or CBD can alter the bioavailability, metabolism, clearance, and distribution of other drugs or chemicals (Benowitz and Jones, 1977), interactions could occur by means of various mechanisms. Other drugs may similarly modify the fate of cannabinoids in the body.

Cross-tolerance and cross-dependence between cannabis and other drugs can theoretically also occur by functional (non-dispositional) mechanisms. This might lead, for example, to a situation in which, because of metabolic interactions, blood barbiturate levels are elevated in a cannabis user; yet, despite this elevation, the effects of the barbiturate might be lessened because of cross-tolerance probably determined by functional interactions. Hence the prediction of behavioral consequences would be difficult.

In addition to producing drug interactions by altering shared hepatic enzyme systems important in metabolism, THC could potentially interact with other drugs because of competition for available binding sites on plasma and tissue proteins. The quantitative significance of such an interaction, if it occurs, is unknown.

In summary, one can only conclude that cannabis is likely to interact with many drugs so as to enhance, diminish, prolong, or shorten the effects of both cannabis and the other drugs. Thus the complexity of cannabis pharmacology and the paucity of adequate research studies in animals or humans makes precise predictions of health significance of drug interactions impossible. Some interactions may be mainly of interest to scientists trying to understand mechanisms of drug action; others (e.g.,

the delayed absorption of alcohol or slowed metabolism of anticonvulsants observed in cannabis users) (Benowitz and Jones, 1977) will without question have health significance. The well documented cross-tolerance and the possible occurrence of cross-dependence with many licit and illicit drugs make the prediction of health consequences even less precise.

Marked and serious drug interactions are often not recognized or appreciated by clinicians until a number of patients have been harmed. Although clinical data are hard to obtain from cannabis users, we know enough already to predict that such interactions *could* occur. Both laboratory experiments (human and animal) and adequate epidemiological and field studies are needed to define properly the nature and consequences of these interactions.

9.1.4. *Tolerance*

A final factor in the discussion of dose-response relationships is tolerance. The occurrence of this phenomenon, characterized by a loss of sensitivity to the effects of a drug, must be considered whenever a drug is given more than once, and thus is relevant to any study of chronic toxicity. Tolerance to most THC effects has been demonstrated repeatedly, both in animals and in humans (Jones, 1982). It will occur after administration by any route, but the rate of its development is increased if an attempt is made to maintain the blood level relatively constant (as by giving the drug orally or in frequent parenteral doses). The differential development of tolerance to various effects, together with the available pharmacokinetic data, suggest that the mechanism is more functional than dispositional (Jones, 1982).

Tolerance to some effects develops rapidly after administration of doses that many would consider surprisingly small. For many effects, tolerance disappears equally rapidly (Jones, 1982). There is a little more uncertainty as to the precise rate of disappearance of tolerance in different organ systems and in different species, since systematic studies on tolerance loss have rarely been done. The degree of tolerance that can develop is similar to that produced by some opiates. Many characteristics of tolerance to THC are similar to those of tolerance to opiates, nicotine, and alcohol (Jones, 1982).

The so-called "reverse tolerance" (an apparent increase in drug sensitivity after a few exposures to low potency cannabis), if it occurs at all, is likely due to conditioned responses linked to familiar cues, such as those related to smoking or to other environmental factors, which facilitate the production of drug effects as the user gains experience with the drug (Jones, 1982).

The significance of tolerance as a potential adverse effect is unknown. However, various dramatic and fundamental neurochemical and physiological changes occur along with the development of tolerance. Many of

these can possibly be assumed to have implications for long-term health (Jones, 1982).

9.2. Some Parameters Affecting Self-Administration

9.2.1. *Titration*

There is some evidence that adverse reactions to cannabis are fairly infrequent in experienced users, in part because these individuals have learned to "titrate" their dose (Negrete, 1982). This means that they adjust their rate of smoking according to their subjective feeling of the degree of intoxication. This phenomenon is by no means unique to cannabis; it is common practice among users of alcohol, tobacco, cocaine, and other psychoactive drugs. Titration is not fully effective in preventing dysphoria, however, since even experienced users can suffer adverse effects after smoking cannabis, particularly when it is unexpectedly more potent than usual or differently constituted. Adverse reactions also appear to be more common after oral ingestion of cannabis than after smoking (Weil, 1970). This observation probably results from the user's inability to titrate an oral dose because of the long latency of onset of effects.

9.2.2. *Tolerance and Physical Dependence: Their Relationship to Drug-Seeking Behavior*

Dependence, both physical and psychological, can develop rapidly in animals and in humans who are exposed to cannabis at doses and frequencies that produce sustained THC blood levels for a significant period of time (Jones, 1982). Some components of the withdrawal syndrome are similar to those produced by opiates, and by alcohol and other sedatives, when they have been given for relatively short periods of time. Controlled clinical studies (Jones and Benowitz, 1976; Nowlan and Cohen, 1977; Georgotas and Zeidenberg, 1979) have shown a picture that includes disturbed sleep, anorexia, restlessness, irritability, sweating, chills, slight hyperthermia, nausea, muscle spasms, tremor, diarrhea, and intestinal cramps. In controlled experiments, subjects first experienced symptoms about four hours after their last oral drug administration. The reactions peaked at about eight hours and had largely dissipated by the third post-drug day. The onset of symptoms corresponded closely to the period when THC blood levels were dropping rapidly.

Other studies (Miles *et al.*, 1974; Rossi *et al.*, 1974) using different designs have failed to confirm all of these findings although some post-drug irritability was reported. The prevalence of these symptoms among populations of cannabis users is unknown. Although some symptoms of cannabis withdrawal resemble those associated with withdrawal from

other central depressants, no conclusions can be made with respect to common mechanisms at this point.

On theoretical grounds, tolerance and dependence could increase drug-seeking behavior in several ways:

a) Selective tolerance to the aversive effects of a drug might unmask the rewarding effects and thus increase the probability of use;
b) tolerance, by leading to more frequent use and larger doses, might strengthen the cycle of reward and repetition;
c) the progressive narrowing of interests and activities in dependent users (particularly in urban industrial societies) might make the drug occupy a steadily more significant role in everyday life, and give rise to secondary and conditioned mechanisms that would have the effect of increasing drug use (reinforcement);
d) abstinence symptoms, occurring during drug withdrawal, could generate a new reinforcement for use to alleviate the discomfort.

For the first three ways there is no information available specifically on cannabis, though the general principles derived from the study of other drugs (Cappell and LeBlanc, 1979) would be expected to apply equally to it. With respect to the fourth point, the observations cited above suggest strongly that mild to moderate withdrawal reactions can and do occur in some regular users, especially frequent users of high doses.

9.3. Principles of Experimental Design

9.3.1. *Relevance of Animal Models for Predicting Toxicity in Man*

Although some pharmacological effects can be measured directly in humans, it is evident that experimental assessment of all risk potential of cannabis use cannot be performed safely in humans. Therefore, animal models must be utilized. The resulting problems of extrapolating from animals to humans should be minimized by selecting those *in vivo* paradigms that are relevant to human physiological and pharmacological responses. It is also important that administration of cannabis products extend over a sufficiently long fraction of the animal's life-span to simulate use of cannabis for a period of years by humans. On the other hand, some animal life-spans (e.g., dog and monkey, 15-25 years) are long enough that the investigator who wishes to use these species must have high motivation and longevity, and reliable long-term funding. If possible, the experimental designs should be comparable to current human practices such as the smoking of high potency cannabis preparations mixed with tobacco, or the combination with other drugs, and the use of oral and other routes of administration.

Advantages and disadvantages are inherent in each potential animal model. For example, several rodents can be exposed simultaneously to the

smoke of the same marihuana cigarette(s). Larger animals must be exposed to the smoke of individual samples of a batch of cigarettes that may differ considerably from each other in physicochemical properties. Physiological disposition of drugs also varies among species but sufficient basic data exist on these differences to permit appropriate interpretation of differences in time of appearance, intensity, and duration of responses in laboratory animal species and in humans. It must be noted, however, that the results from some animal models (such as immunosuppression in the mouse) may be extrapolated to humans more reliably than from others (such as placental transfer of drugs in rodents).

In cannabis research, the strongest evidence supporting the relevance of animal models is the consistent dose range over which similar pharmacological events, including certain behavioral changes, can be observed and measured in rodents and non-human primates after administration of the drug by several different routes (see, for example, Rosenkrantz and Braude, 1976). These drug-related aberrations observed in animals have been produced by inhalation or oral doses that are relevant to those used by man. Indeed, circulating blood levels of THC associated with these effects have been similar in animal models and humans. Even such a phenomenon as the characteristic biphasic response to cannabinoids (CNS-stimulation/inhibition) has been observed in both animals and man (Rosenkrantz, 1982).

9.3.2. *Optimal Design of Toxicological Studies*

Apparent contradictions in the experimental literature are often difficult to interpret because of differences in experimental design. For this reason, it seems desirable to specify some basic requirements for soundness of toxicological studies. This section is not intended to be comprehensive or definitive, but identifies a few areas of special concern.

The design of toxicology studies should be such as to permit clear identification of the organs which undergo dose-dependent morphological, physiological, or biochemical disturbances. For this purpose, the ideal study would evaluate the drug effects on *all* organ systems at several dose levels. Subchronic and chronic toxicological studies should be performed in both sexes of several species of experimental animals including rodents and non-human primates. The subchronic study should be long enough to identify appropriate dose ranges and to point to specific target organs or systems that would be investigated in greater detail in the chronic study. The chronic study must be of reasonable length as discussed in Section 9.3.1., especially to provide sufficient time to determine the potential for carcinogenicity. Both inhalation and oral routes of administration should be used. Inhalation studies should use a standardized smoking system to assure direct inhalation of smoke. For inhalation studies, the cannabis preparation should be derived from standard marihuana cigarettes with

sufficiently high concentration of cannabinoids to deliver the desired dose of active substance with a minimum amount of carbon monoxide. Control cigarettes should consist of the same marihuana extracted in a manner designed to maximize the difference in cannabinoid content while minimizing the loss of other constituents. A group of animals receiving the smoke from an appropriately standardized tobacco should be included so as to facilitate comparisons between the results from different laboratories.

Oral administration should be accomplished by feeding unless the drug preparation reduces food intake, in which case gavage should be used. The cannabis preparation used for oral administration should simulate as closely as possible those which are in widest use throughout the world. Adequate dose/response data must be provided, over a range extending up to the estimated maximum tolerated dose.

The toxicological study should not only assess the standard parameters such as growth rate, food and water consumption, hematology, clinical chemistry, urinalysis, and histopathology but should make every attempt to evaluate the functional aspects of the major organs and body systems. The pulmonary system should be evaluated at regular intervals in the larger animals by measuring respiratory parameters such as rate, volume, and blood gases. Behavioral effects should be monitored at regular intervals by accepted operant and non-operant methods. The cardiovascular system should be monitored regularly, primarily by electrocardiograms. Liver and kidney function tests should be followed at regular intervals. In the larger animals, simple immunological assays should be carried out during the study but detailed humoral and cell-mediated immune responses need to be tested only at the end of the sub-chronic (90 day) study. Evaluation of the endocrine system should be carried out at regular intervals and should include measurement of plasma levels of appropriate hormones.

Animals should be set aside for use in three-generation reproductive and teratogenicity studies.

Carcinogenicity should be determined by appropriate histopathological studies of tumors and tissues at time of necropsy.

9.3.3 *Selection of Subjects and Designs for Clinical Experiments*

Most individuals who have participated as subjects in cannabis-related research in North America and Western Europe have been healthy young adult males who generally have used cannabis for five years or less. Most were students from middle to upper-class socio-economic backgrounds. Therefore some data obtained in these studies may have limited generalizability to females and to individuals who use cannabis in other social, economic, and cultural environments. Cross-cultural generalization of the findings appears to be very limited, since studies of cannabis use and effects in countries such as Egypt, Jamaica, India, and Greece in-

volved subjects who were older, less affluent, and who used higher dosages and for longer periods of time than research subjects in North America. Since patterns of dosage (both amount of drug and frequency of administration) are, in part, culturally dependent, comparisons between cultures are especially difficult (see Section 9.1.).

Many problems in design of cannabis studies are similar to those encountered in research with other psychoactive drugs. Many studies of experimental administration of cannabis have not employed placebo controls, although it should be emphasized that effective placebo control in chronic studies with highly discriminable psychoactive compounds such as cannabis, especially with experienced users, is difficult. Interpretation of results has often been rendered difficult by factors such as variable and unstated expectations or biases of subjects and experimenters, variations in criteria for defining chronicity and dosage, and variables associated with set and setting. Important controls for basic variables (e.g., drug use other than, or in addition to, cannabis) have been difficult to achieve in research on humans, except in experimental studies in monitored research ward environments. Only a few studies have provided subjects with specific incentives for cooperation, or special compensation for achieving best performance during the assessment of cannabis effects on behavior (see, for example, Cappell and Pliner, 1973). In some studies, subjects (all cannabis users) were apparently self-motivated to perform well, in order to establish the absence of cannabis-related adverse effects (Kalant, 1969). Since virtually all studies have employed volunteer subjects, there remains some question as to whether these healthy individuals are truly representative of the general population of cannabis users.

9.3.4 *Sex Differences*

There have been very few controlled administration studies in human females, or examinations of sex differences in response to cannabis in animals. Male animals demonstrated a different pattern of behavioral toxicity, and were more susceptible to delayed lethality than the females (Luthra *et al.*, 1976). Otherwise the results have revealed no overall pattern. In the past, for reasons related to U.S. Food and Drug Administration policy, or equivalent policies in other countries, there have been practically no studies of the effects of cannabis administered experimentally to human females, and none involving chronic administration.

9.4. Discussion of the Nature of Proof Required to Establish a Drug Effect

The question often arises as to the rigor of evidence or standard of proof required to substantiate statements about the effects of cannabis use. Under more readily controlled circumstances, namely, *in vitro* and in

animal *in vivo* experiments, a cause-effect relationship in the action of a cannabis constituent on some biological endpoint (metabolic, molecular, physiological, etc.), may be considered established if the following three requirements are met:

a) molecular or structural specificity of the constituent causing the effect;
b) an appropriate dose-response relationship, both with respect to range and slope; and
c) absence or inhibition of effect by neutralization or removal of the constituent.

In addition, in *in vitro* experiments the relevance of effect would need to be established by comparing the required drug concentration *in vitro* to that found *in vivo*.

The assessment of clinical evidence, however, has posed many more problems. Historically, the most common sequence of development of knowledge about a new clinical problem has included the following steps: recognition of individual cases; study of series of cases in comparison with clinical control groups; epidemiological study of incidence and prevalence in defined populations; inferential identification, from the foregoing data, of possible etiological factors; and experimental demonstration of probable mechanisms. The value of the initial steps, despite the obvious limitations of the information they provide, has not been questioned in relation to other clinical problems. In contrast, very high standards of proof are sometimes demanded from evidence concerning cannabis (see, for example, Grinspoon, 1977). It is instructive to make comparisons with the study of effects of other drugs, such as tobacco or alcohol. With these drugs, "risk-factors" have been freely identified, although full causality has not yet been established. Nevertheless, such risk-factors deserve and receive serious attention with respect to the latter drugs. It is puzzling that the same reasoning is often not applied to cannabis.

In some cannabis research on humans there are numerous constraints which are difficult to overcome directly. For example, in many of the epidemiological, laboratory, or clinical quasi-experimental studies, it seems that researchers can demonstrate relationships only by establishing statistical association. Whether in the area of cannabis research, investigations of other drugs or in other less complicated areas, the research worker more often than not is faced with a variety of possible interpretations of the findings, due to the multiplicity of variables that arise particularly from dealing with human beings. Moreover, in field studies comparing matched groups of users and non-users, it must be remembered that it is, by definition, impossible to determine a drug effect on the variable with respect to which the groups are matched. For example, if the users and controls are matched with respect to socio-economic status, any possible effect of drug use on socio-economic performance is automatically excluded.

Therefore, the researcher can only proceed towards formulating new

hypotheses about possible mechanisms or processes involved, and progress by what is usually labeled the method of successive approximations, i.e., gradually narrowing the range of possible interpretations. This method is followed in all endeavors in science, cannabis research included. To provide rigid proof of causality in such investigations is logically and theoretically impossible, and to demand it is unreasonable.

10. SUMMARY

The acute use of moderate doses of cannabis produces a state of intoxication. This is associated with a dose-related impairment of the ability to drive a car or operate complex machinery. In some situations, the user may not feel the desired euphoric state but rather may experience a short-lived dysphoric reaction which can range in intensity and character from mild anxiety to an acute psychosis. Other acute physiological effects are also transient and do not appear to be of major significance in individuals with no pre-existing disease.

Intermittent use of low-potency cannabis is not generally associated with obvious symptoms of toxicity. Daily or more frequent use, especially of the highly potent preparations, can produce a chronic intoxication which may take several weeks to clear after drug use is discontinued. The seeming inconsistency of this observation throughout the world may reflect differing exposures to THC because of the large variation of potencies and smoking techniques, as well as different cultural preferences for the route of administration.

Respiratory toxicity is observed in heavy users and is probably related to smoke components other than THC. Therefore its severity may depend more on the smoking techniques employed by the user and the combustion properties of the material, than on the THC content. Cannabis effects on the hormonal, reproductive, and immunological status of these users is, as yet, unclear.

Chronic administration of cannabis results in the development of tolerance to a wide variety of the acute drug effects in both humans and experimental animals. Though scientific opinion is more divided on the question of dependence on cannabis, there is now substantial evidence that at least mild degrees of dependence, both psychological and physical, can occur.

Some individuals may be particularly susceptible to the effects of cannabis for a variety of reasons. Adolescents who are undergoing rapid developmental change and elderly populations with decreased rates of drug metabolism, increased prevalence of disease and a more conservative and less flexible mental set may be more sensitive to the effects of cannabis and other drugs. The symptoms of patients with a variety of diseases in-

cluding various forms of mental illness, diabetes, cardiovascular disease or epilepsy may be exacerbated by cannabis use. Interactions with a variety of substances including tobacco and alcohol may also potentiate the observed effects.

The epidemiological studies necessary to assess the frequency of adverse effects and to relate their occurrence to factors such as potency and amount of cannabis used, length of exposure, set and setting have not, as yet, been conducted. The low prevalence of adverse effects observed in field studies of small numbers of heavy users suggests that the adverse effects described in many of the clinical reports occur relatively infrequently in these carefully selected populations. Given that millions of individuals are now using the drug, even relatively infrequent but serious adverse consequences could be of public health significance.

The results of experimental studies in animals have consistently demonstrated toxicity at doses comparable to those consumed by the human who smokes cannabis several times per day. Respiratory toxicity, CNS dysfunction, endocrinological disturbances, reproductive deficits, and immunosuppression have all been observed after treatment with THC or cannabinoids in experimental animals. Most, but not all, of these effects disappear when treatment is discontinued. *In vitro* studies have also been used to demonstrate cannabis-induced cytotoxicity. The results of these experiments are, for the most part, qualitatively consistent with the *in vivo* observations, and may provide valuable information about the mechanisms of action of the cannabinoids and other plant components or products of pyrolysis.

11. RECOMMENDATIONS FOR FUTURE RESEARCH

Based on a discussion of the available information on cannabis toxicity and the lack of relevant data in certain key areas, several recommendations for future study were reached. A comprehensive understanding of any biological phenomenon almost always demands the synthesis of information derived from a variety of experimental designs. Therefore, it is important that no single "best" scientific design be recommended. On the contrary, it is recognized that a broad, integrated approach employing different techniques is most likely to provide the information needed for valid conclusions regarding the adverse effects of cannabis on health and behavior.

1. As outlined in Section 1, there is a lack of consensus on what constitutes the criteria for "social" or "problem" use. Standardization of terminology with respect to patterns of use would greatly facilitate the comparison of clinical reports. There should be a search for "biochemical

markers" to indentify heavy users (such as the changes in transferrin or abnormal hemoglobin A used to identify recent heavy users of alcohol) that could be used as an objective measure of hazardous use.

2. Many general considerations were raised. There is an obvious need to relate biological responses not only to the doses given but also to blood and relevant organ levels of THC and its major active metabolites and to the duration of exposure to such levels. For this reason, further studies of the pharmacokinetics (both acute and chronic) of THC and other cannabinoids are indicated. It is important to explore the contribution of THC to biological effects, as compared to the possible role of other cannabinoids and of other substances contained in the cannabis preparations.

3. Wherever possible, the effects of cannabis should be compared with those of equieffective doses of other drugs with respect to some common action, so that cannabis toxicity can be considered within the context of toxicity of psychoactive drugs in general. This will indicate which effects are specific to cannabis and which are common to many drugs.

4. It must also be emphasized that, with the exception of a few case reports and limited experimental studies, almost all information so far obtained has emerged from observations of healthy mature males. This limits the extrapolation of results to other segments of the population. For example, there is virtually no information on the effects of cannabis in women. Because of the increasing prevalence of use by women and the evidence of sex differences in the biological response to many other drugs, studies in this area are vitally necessary.

5. Other groups may, for various reasons, be particularly at risk for the appearance of adverse consequences. The effects of cannabis on children and adolescents, a group undergoing rapid physical and psychological maturation, should be intensively studied since, in some countries, cannabis use is already very high and increasing rapidly. Effects on academic achievement, and on endocrinological profiles during puberty, are areas particularly deserving of study.

Based on evidence from animal studies, it is also recommended that children exposed *in utero* to cannabis should be examined post-natally for signs of impaired growth and delayed maturation, and for long-term health and behavioral problems.

It is possible that cannabis is producing serious but as yet unrecognized toxic effects on persons with underlying psychiatric, pulmonary, cardiovascular, gastrointestinal, allergic, and dermatologic disease, or with pathological or therapeutically produced immunosuppression. Greater attention should be directed to the problem of cannabis-induced precipitation or exacerbation of these disorders.

Because of animal experiments suggesting that nutritional status may to some extent influence the magnitude and nature of the drug-induced effects, the relationship between poor nutrition and various cannabis-related effects should be studied.

Conversely, efforts must be made to identify special risk factors in those experiencing adverse effects, so that additional groups at risk may be identified.

6. There were also suggestions aimed at improving the quality and reliability of the data available from clinical and experimental studies. Case reports are still necessary to identify rare drug-induced effects, and to confirm the existence of other previously reported signs of toxicity. More complete and consistent descriptions of clinical observations, including the extent and pattern of drug use (cannabis and other drugs) accompanied if possible by objective testing, would add to the value of these reports. There is also a need to identify, in the community, those individuals who may not be seeking medical attention for adverse effects. These "outreach" studies would provide a more accurate estimation of the prevalence of the relevant symptoms than can be provided by case reports alone. More systematic enquiring and reporting with respect to drug use by clinic and hospital patients would also assist in the assessment of the prevalence of adverse effects.

The data from carefully designed retrospective studies should not be underestimated. By means of controlled retrospective studies, the apparent over-representation of certain characteristics (such as age, sex, and pre-existing psychopathology) among patients presenting complaints related to drug use can be assessed. Since adverse drug effects are more likely to be found in individuals who are identified as "patients," i.e., who present with complaints, than in healthy users without complaints, it would be informative to apply objective measures such as various physiological and psychological test batteries to groups of patients with complaints rather than only to groups of healthy drug-using volunteers.

In the past, a large number of cross-sectional studies of cannabis users matched with non-user controls have provided information on the drug's possible toxicity. In view of the difficulties in designing a prospective study, a thorough reassessment of previously studied subjects presents certain advantages, despite the difficulties of tracing some of the individuals involved. The subjects would be older and would have had longer cannabis exposure. Thus they would be more likely to show cannabis-related symptoms. Previously made measurements could be repeated, and recently developed techniques could be employed to provide additional data.

Obviously an ideal approach is that of the controlled study of experimental administration. In this manner, confounding variables such as diet and concomitant use of other drugs can be eliminated. In such settings the subjects can also be treated with dignity and safety. From the animal studies, however, it is apparent that long-term exposure is needed for the production of adverse chronic effects. Experimental administration studies in humans should not be used to determine long-term toxicity. Optimally, methods should be developed for performing both cross-sectional and experimental administration studies without the need for hospitalization.

7. Several types of epidemiological studies are suggested to (a) determine the prevalence and trends of cannabis use in general and special populations throughout the world, and (b) to determine the frequency of adverse reactions, especially those requiring medical treatment among groups of cannabis users. The prevalence-of-use data should include information on the dose (in terms of THC content, route of administration, and frequency of use). This would include world-wide assays of potencies of various illicit cannabis preparations. The surveys of frequency of adverse effects should help to separate the influence of various factors such as frequency of use, experience with other drugs, and pre-existing psychopathology. There is also a special need for studies of the frequency of respiratory, hormonal, cardiovascular, and other non-psychological adverse consequences of cannabis use. Because of the experimentally observed carcinogenic and mutagenic potential of cannabis smoke, possible signs of increased incidence of cancer must be monitored carefully in groups of heavy users. Analysis of ongoing epidemiological data such as hospital and emergency service visits, treatment referrals, etc., is very important and should be continued.

8. Encouragement should be given for prospective studies of potential user groups, including observations of baseline (pre-drug) health status and the occurrence of cannabis-related toxicity during and after periods of heavy use. On a large scale they are difficult to design and expensive to conduct. However, this approach remains the best technique for establishing, in humans, directness of connection between drug use and an observed effect, and for determining the relationship between recorded levels of use and the prevalence of adverse effects. Thus attempts should be made to conduct such studies. Less optimally, efforts could be made to extract pertinent data from prospective studies being conducted for other reasons.

9. The optimal designs of experimental studies of toxicology have been outlined in Section 9. It is recommended that adequate investigations using a variety of species, doses, routes of administration, and lengths of exposure (including full-life studies) be performed to evaluate cannabis effects on all organ systems and to assess potential teratogenicity, mutagenicity, and carcinogenicity. Research on endocrine and reproductive functions should also include serial measurements of trans-placental cannabinoid transfer throughout gestation, and estimations of cannabinoid concentrations in breast milk and nursing pups. Further experiments should be encouraged to elucidate the cellular and molecular mechanisms of action of cannabinoids and to analyze cannabis smoke action in a variety of *in vitro* systems.

10. On the behavioral level, several recommendations have been made. Suggested psychosocial studies include examinations of the influence of legal controls on patterns of cannabis use and on the drug-induced behavioral response of the user. For example, observations of the

user's social interactions, such as peer relationships or family structures and attitudes, may provide data related to reasons for the initiation and maintenance of cannabis self-administration, and may provide independent assessment of the user's behavior while in the intoxicated or non-intoxicated state.

Behavioral studies should include measures of psychomotor and perceptual functions that would be expected to affect one's ability to drive a motor vehicle or otherwise perform safely in the work place. A replication of the reported research on driving on city streets is necessary to confirm earlier results. The hazards of operating complex machinery while intoxicated should be assessed, especially in those countries with newly introduced mechanized farming where rural cannabis use is traditional. Wherever possible, cannabis-induced effects on night driving should be examined, as well as interaction with alcohol and other drugs, and the potential development of tolerance to cannabis-induced driving impairment.

Residual CNS toxicity as a result of long-term cannabis administration must be examined in greater detail. In animal models, the possible contribution of other individual or environmental factors, such as innate intelligence or environmental stimulation, to cannabis-induced learning impairment, EEG changes and histopathology could be assessed. In humans, a careful longitudinal study with verified drug-free periods before testing would help to determine whether or not residual toxicity occurs. The question of an absence or redirection of motivation in heavy users must be examined in greater detail. In addition, an exchange should be set up for autopsy brain bank samples and case-history information relevant to chronic heavy users, to provide material for post-hoc analyses of brain in correlation with recorded levels of use.

11. Additional observations are needed to identify the intervening pharmacological, neurophysiological, and psychopathological factors underlying acute panic and paranoid states and other cannabis-related psychiatric disorders. A comparison between cannabis-related psychiatric disorders and those produced by other drugs, as well as functional disorders, would also be profitable. A controlled study of the intervening etiopathogenic factors underlying spontaneous recurrence reactions ("flashbacks") could be of assistance in the elucidation of the mechanism(s) related to these symptoms.

Specific treatment procedures should be developed to minimize the potentially severe dysphoric states that can occur as a result of the therapeutic use of THC and synthetic cannabinoids. Such studies might not only be of value to patient care, but also shed light on the mechanisms of drug action.

12. Immunological studies should include epidemiological investigations of the prevalence, severity, and duration of selected infectious diseases in populations from which data are readily available and in which use is known to be high (e.g., students, military personnel). For example,

the question of a possible cannabis-related decrease in the immune response to herpes simplex should be studied in a group of cannabis users known to be infected with herpes.

13. Because of the multiple drug intake of many cannabis users, better and broader drug interaction studies (especially regarding behavioral impairment, pulmonary and liver toxicity) are necessary. These should be conducted with both licit and illicit drugs such as caffeine, nicotine, psychotherapeutic agents, and antihistamines. Data from pharmacokinetic experiments will be helpful in the interpretation of drug-interaction phenomena.

14. The development of tolerance to, and dependence on, drug effects, whether they be therapeutic or adverse, is a phenomenon that must be considered in the evaluation of any chronic psychoactive drug effect. More sensitive measures are needed for the identification of dependence, the delineation of time course of acquisition and particularly of the disappearance of tolerance, and its implications with respect to function. The relationship of tolerance, physical dependence and drug-seeking behavior must be established, both for cannabis and for other concurrently used drugs.

Since increasing numbers of cannabis users are now presenting signs of dependence, research must be conducted on methods for treating this problem.

15. Finally, adverse health effects are better prevented than treated. The development of educational programs designed to discourage hazardous cannabis use should be encouraged, and the results of such programs evaluated.

In brief, the obvious need for further cannabis research has been demonstrated. Because of the cannabis-related problems throughout the world, there is an urgent and imperative need for agencies such as the WHO to alert the national governments and other international agencies to the need for research in this field. The benefits of cooperation between developed and developing countries in this area are mutual.

The Marijuana Health Hazard

By Nicholas A. Pace, M.D.

During the last seven years, a very active organization called NORML (National Organization for the Reform of Marijuana Laws) has been vigorously campaigning state by state for the decriminalization of marijuana. This organization has campaigned nationally to make marijuana appear harmless. They are dedicated to fostering the idea that marijuana should be decriminalized since so many people are using it.

Recently, it has been learned that high on the list of President Carter's priorities in the field of public health is the decriminalization of marijuana. In order for you as law officers to understand the health aspect of this complex issue, we would like to give you the following information.

It is the contention of this author that the public has not been properly informed concerning the harmful medical effects of this drug. If anything, the media tends to portray marijuana as no more harmful than tobacco or alcohol. This comparison is absurd.

As For Tobacco—Tobacco is not a hallucinogenic drug. Smoking tobacco produces no hallucinogenic effects. Smoking marijuana has in reality a hallucinogenic effect on the brain with distortion of time, space and sound. It takes 20 years of heavy tobacco smoking to produce the same type of severe sinusitis, pharyngitis, bronchitis, and/or emphysema that less than one year of daily marijuana smoking produces, proving that marijuana smoke is far more irritating to the respiratory tract than tobacco.

Scientific studies have shown that marijuana smoke mixed with tobacco smoke is far more damaging to lung tissue than tobacco smoke alone.

Even the *Consumer's Report* of March, 1975 acknowledged the lung damage in chronic marijuana users, although one could hardly endorse their suggestion that alternate forms of marijuana consumption such as "drinking marijuana tea" could protect the lung tissues. Medical literature is replete with reports similar to that of Dr. John A. S. Hall's report showing the emphysema-bronchitis syndrome in black male Jamaicans who were regular marijuana users.

Unfortunately, it will take another 20 to 30 years for us to have autopsy reports to show the effects of long term chronic marijuana smoke on not only the lungs but other tissues as well.

Of interest is the fact that lungs of animals exposed to marijuana smoke have shown cellular changes that are similar to those seen in patients who develop lung cancer. Tar from marijuana, painted on the backs of animals, has produced cancers.

As Far As Alcohol Is Concerned—The concept that marijuana is safer than alcohol is definitely erroneous. A person can have one or two drinks a day for 20–30 years and never suffer ill effects from it. Alcohol is water soluble. One ounce is completely metabolized and broken down into water and carbon dioxide within 12 hours. Marijuana, on the other hand, is not water soluble—it is fat soluble, and the active psychotropic (mind altering) ingredient, delta-9 Tetrahydrocannibinol (THC), accumulates (in the

same manner as DDT) in the tissues of the body which are fat laden, including the brain and the sex organs. In animal experiments with radioactive tagged Delta THC, the THC was still detected in the brain, liver, lungs and reproductive organs two weeks after a single injection.

Although alcoholism is a serious drug problem, one does not hallucinate from one or two drinks. In order to hallucinate an alcoholic would have to develop far advanced disease, with brain damage and/or the withdrawal syndrome. On the other hand, the psychotropic effect of marijuana causes hallucinations in small doses, and in some cases, every time the drug is used. The distortion of time, space and sound are examples of the mild hallucinations that occur on a mild marijuana "high" is experienced. Think of what this effect will be on our driving population should marijuana become as popular as cigarette smoking. There are several studies which show that marijuana causes marked distortion of time and space on professional automobile drivers and airline pilots. Dr. H. Klonoff, Professor of the Department of Psychiatry at the University of British Columbia, Canada, in a study, showed the neuro-psychological effects of marijuana on driving.

Marijuana Effects On The Brain—The active psychotropic ingredient has a cumulative effect on the brain which is responsible for the irreversible brain damage that Dr. Robert Heath, Chairman of the Department of Psychiatry and Neurology at Tulane University School of Medicine has shown in his rhesus monkey experiments. The actual irreversible brain atrophy or damage in the rhesus monkeys was produced after three months with the equivalent of one marijuana cigarette (2% THC) a day. The Columbian marijuana currently available in New York City is 3+% THC. Therefore, four to five marijuana joints per week would be at the same dosage that caused brain damage in the rhesus monkey experiment. Dr. Heath has not tried does less than this; therefore, this may not be the minimal level.

It is unfortunate that Dr. Heath's findings have not been properly publicized, especially since it is thought that there are at least two million daily marijuana smokers in this country at the present time.

Loss Of Motivation—In 1972, Dr. Louis J. West described the term amotivational syndrome (loss of motivation). This syndrome is well known to numerous physicians and practicing psychiatrists in this country and elsewhere. Marijuana smokers suffer personality changes that occur gradually over a period of time. These personality changes include diminished drive, lessened ambition, decreased motivation, apathy, shortened attention span, poor judgment, diminished capacity to carry out complex plans or prepare realistically for the future, and a variety of other deleterious changes.

Dr. West suggests that this syndrome is caused by actual organic changes in the tissues of the brain. Dr. William Moore and Dr. Harold Kolansky of the University of Pennsylvania Medical School showed in an excellent study the same distortion of personality among chronic marijuana users. They describe hundreds of patients who have suffered from psychiatric and nuerological symptoms such as impaired judgment, diminished attention and concentration span, a slowing in time sense, and a loss of thought continuity as a result of chronic marijuana use.

Dr. Andrew Malcolm, a Canadian psychiatrist, Dr. D. Harvey Powelson, formerly Chief of the Health Clinic at the University of California at Berkeley, and Dr. Roy Hart, a New York psychiatrist and Editor of the *Journal of the American Academy of Psychiatry and Neurology*, as well as many others, have independently confirmed and extended Dr. West's observations. In a paper that Dr. Hart presented, entitled "A Psychiatric Classification of Cannabis Intoxication," he showed that there were 75 independent studies which revealed the serious effects of marijuana on the mind. Evidence from all over the world has supported the presence of the amotivational syndrome. Dr. John A. S. Hall, a leading psychiatrist in Jamaica, and Dr. Boris Segal, a prominent Soviet psychiatrist—just to name two others—have also reported on this syndrome.

Brain Atrophy (Shrinkage)—The important findings of the English neurologist, the late Dr. A. M. G. Campbell, in his study using air contrast x-rays of the brain on long term marijuana users (all of whom presented severe personality disorders) cannot be refuted. In all ten subjects, there was definite evidence of brain shrinkage as compared to ten control subjects. Dr. Robert Heath, of the Tulane University School of Medicine, studied the brain wave patterns in rhesus monkeys who were exposed to marijuana smoke twice a week and demonstrated that animals exposed this way had irreversible alterations in brain function for about three months after onset of the experiment. These brain wave abnormalities were shown to persist for eight months after the monkeys were no longer exposed to the marijuana smoke.

The regions of the brain where Dr. Heath measured the most pronounced and persistent changes in brain function by the brain wave examination were the same regions where Dr. Campbell noted atrophy or shrinkage in the ten human subjects.

Loss Of Learning Ability—Dr. Harold Kalant of the Department of Pharmacology at the University of Toronto has shown that rats exposed to marijuana smoke for five months suffered an irreversible loss of learning ability as measured by standard psychological tests.

Of special interest are the Soviet studies on dogs who were exposed to marijuana. These dogs showed signs of organic brain damage of the central nervous system including disturbances of various reflexes, impaired motor coordination and muscle movements, and states of depression followed by periods of excitement, aggressive behavior and fears. Autopsies on the brains of these dogs showed large areas of destruction in the cortex (thinking and learning centers) of the brain as well as in the cerebellum (balance section of the brain). These are the same regions of the brain that Dr. Heath reported on in his monkey experiments.

The Seven Day Half-Life—Of interest is the fact that marijuana produces a half-life of seven days. This

means that after one week only 50% of the substance is eliminated. Therefore, anyone who uses marijuana more than once a week cannot be truly drug-free and has a build-up of the drug in his tissues. One might remember the recent headlines of the commuter train crash in Chicago. Although the engineer involved had not used marijuana for the previous 24 hours, the substance was still detected in his system.

Prevention Of Cellular Growth—When marijuana is exposed to cell cultures, there is biochemical interruption of cellular metabolism, with the prevention of the proper formation of the building blocks essential for cell growth. Scientists agree that marijuana interferes with the synthesis of proteins and causes a decrease in the rate of cell division.

Dr. Peter Freed of Ottawa, Canada showed that young rats subjected to marijuana smoke not only suffered from generally reduced body weights, but also had significantly smaller hearts and brains as a percentage of their total body weight. He also got the same results in young suckling rats whose mothers were exposed to marijuana, bringing up the strong possibility that this effect is transmitted through mother's milk.

Reduced Sperm Production—Dr. H. Morishima and Dr. Zeidenberg, at the Columbia College of Physicians and Surgeons, illustrated in a carefully controlled study on 16 marijuana smokers, ages 18 to 23, over a two-year period, a significant and sustained decrease in the sperm concentration occurring after only two weeks of marijuana smoking. The decrease in the sperm concentration was sustained for at least two weeks after marijuana was discontinued. During the experiment, the subjects smoked an average of five to fifteen marijuana cigarettes a day.

Abnormal Sperm Cells—Not only was there a decrease in the sperm count, but there was also a decrease in the motility of the sperm (movement of the sperm). The most potentially damaging effect of marijuana on the sperm was the marked increase in abnormal forms of the sperm cell. This brings forth the genetic possibility of transmitting abnormally viable sperm with decreased genetic information to a fertilized egg.

Genetic Effects—Marijuana not only interferes with cell division but also interferes with the synthesis of the important genetic material of the cells. There is interference with the immune system of the body, too. Studies have shown that marijuana use causes a reduction in the number of chromosomes in the white blood cells, plus abnormal white blood cells. Abnormal embryos have developed in the animals exposed to marijuana and birth defects have been produced in young rhesus monkeys whose parents were exposed to marijuana smoke.

Space does not permit a review in detail of the many other negative health effects that marijuana produces.

I have personally cared for two young people who became psychotic after using marijuana. In one case, psychosis developed after smoking only one joint and in the other case, after smoking five joints a week for a period of six months.

As a student and observer of the drug scene, I sincerely believe that while alcoholism is presently our most dangerous drug problem, marijuana has the potential of becoming an even greater problem since it is being used by an uninformed public. One has to be aware that decriminalization is tantamount to legalization, particularly when so many people are ignorant of the extremely serious risks involved in marijuana usage. No one wants to see young people thrown in jail, but there are other effective alternatives to decriminalization. For example, there is the Sacramento Citation Diversion Program where youths arrested for possession of marijuana are given a chance to take a drug information study course which exposes them to the information that we have written about here. Upon completion of the course, the youth's arrest record is wiped clean.

When someone asks how one can tell if marijuana has had any ill effects on someone, I suggest trying to recall what the individual was like six months prior to the regular use of marijuana and comparing him with what he is like today. If there are marked changes in personality, social attitudes, emotions, etc., coupled with apathy, the chances are that marijuana is having an ill effect on his brain.

With the help of publications like *The Law Officer*, perhaps we can inform the youth of our country of the hazardous medical effects of marijuana.

NIPPING MARIJUANA IN THE BUD

A Comparison of Paraquat—the Herbicide with Cannabis—Nature's Toxic Plant

By Mary Kohler, Hampshire Informed Parents, Inc.
Amherst, Massachusetts

What is Marijuana?

Cannabis sativa is a broad-leaf plant of which there are two main types. The fiber type, hemp, was used for making rope and homespun, while the drug type is illegally grown for its drug (psychoactive) properties. Strictly speaking, *Cannabis sativa L.* is the botanical name for the plant itself, while "marijuana" is the term applied to a crude drug derivative.

Naive *non*-drug users must understand that chronic pot smokers and the drug culture like to foster the belief that the cannabis plant is no different from other agricultural plants. Slang names for marijuana clearly illustrate this: "grass," "weed," "tea," "Vermont-Manhattan Crossbreed," "Wacky-Tobacey," "Oklahoma Baby Buds," to name a few. Scientific research in the last few years has proven how dangerous and misleading this can be.

To date, 421 different chemicals have been identified in cannabis; of these chemicals, 61 are called cannabinoids and are found in no other plant in nature. Thus, marijuana is not a pure drug but a complex mixture. (In contrast, ethyl alcohol is only 1 chemical.) The most studied cannabinoid is delta-9-tetrahydrocannabinol, or THC. This is the chemical chiefly responsible for the "high."

In order to fully comprehend the health hazards of marijuana use, one must keep in mind this basic fact: THC is *intensely* fat soluble—it is attracted to the fatty tissues of the body and the fatty organs (including the brain and sex glands) and finds its way into mother's milk. It is stored in the same manner as DDT. THC is very slow to leave the body: 25-30% of the THC and its products of metabolism reside in the body for one week—traces of THC can be found up to 30 days after one has smoked a single joint. (In contrast, alcohol is water soluble and leaves the body within a matter of hours.) Thus, any regular use of marijuana leads to a steady accumulation of THC—and other cannabinoids. And, although not all of the cannabinoids are psychoactive (mind-altering), all are biologically active.

Since each cell membrane has fatty sections, the cannabinoids dissolve into these cell membranes. This slows the entrance of necessary building blocks into the cell and interferes with biological processes. Clearly, marijuana is very far from a "harmless weed;" it is a very biochemically active and persistent mind (brain) -altering drug. Further, the THC content of today's high-potency marijuana is as much as 10 times stronger than the street marijuana of a decade ago. The National Academy of Science's Institute of Medicine reported in February, 1982, that marijuana use in our nation today "justifies serious national concern."

THE FOLLOWING ARE JUST A FEW OF THE HEALTH HAZARDS CONNECTED WITH MARIJUANA USE (Some symptoms appear in some users with light to moderate use; other symptoms appear only after heavy use. Heavy use is defined as smoking 4 or 5 marijuana cigarettes per week.)

Interference with Psychological Functioning. Symptoms are lack of goals and motivation, impairment of short-term memory and learning, and retardation of emotional growth. This is affirmed by an increasing body of clinical reports from pediatricians and psychiatrists. Each year, marijuana accounts for the second largest number of admissions into federally-funded drug abuse treatment facilities. Tragically, the chronic user is rarely able to perceive the change that has taken place in himself or herself. A carefully designed study matched marijuana smoking in rhesus monkeys to moderate and heavy smoking by humans over a six-month period. For these monkeys, a pattern of abnormal brain waves appeared within two to three months' exposure, and was found to persist even after three months' exposure, and was found to persist even after eight months of abstinence. Upon autopsy, the limbic area brain cells of these monkeys showed distinct damage. The brain cells of the control monkeys (exposed to the same amount of pot smoke with THC removed) were perfectly normal.

Impairment of Normal Sex and Reproductive Processes. In man, marijuana reduces sperm count and motility and increases the number of abnormal forms of sperm. Disruption of ovulation and disruption of menstrual cycles have been observed in humans and in rhesus monkey studies. Since THC collects in and passes through the placenta, the developing fetus will be at risk if the mother uses marijuana.

Serious Impairment of Driving and Flying Performance. Studies have shown that marijuana is just as driver-impairing as alcohol. Moreover, marijuana *adds* to the driver-impairing effects of alcohol. (Note: alcohol can lead to nausea and vomiting; however, marijuana suppresses the vomiting response setting the stage for a dangerous state of intoxication.)

Impairment of Lung Function. This ranges from subclinical effects (which do not yet "show") to the same serious lung conditions caused by cigarette smoking; but pot smoking brings on these conditions far sooner and with fewer "smokes;" for example, one marijuana cigarette may cause more air flow resistance than 16 tobacco cigarettes. (Air flow determines in large measure how well we get oxygen into the lungs and how well we get carbon dioxide out.)

High Risk Groups: The younger the user, the more deleterious the effects. Because experimentation is too often the first step to personal and social loss and eventual dependence, any use by teens or preteens must be strongly discouraged. Other special high risk groups are pregnant women; those with cardiac problems; diabetics; epileptics; and persons with underlying or present mental disorders.

Although one chemical in marijuana—THC—is being used for suppression of nausea and vomiting in various patients suffering these effects from cancer chemotherapy treatment, this does *not* mean that "pot must be safe"—as many youngsters have been led to believe. The 421 chemicals in the crude drug marijuana are combusted into over 2,000 chemicals when smoked. It is thus a Pandora's Box of unknowns. But what we *do* know about it is bad news.

What is the extent of marijuana use in the U.S.?

"Young people are often at the leading edge of social change; and this has been particularly true in the case of drug use. The surge in illicit drug use during the last decade has proven to be primarily a youth phenomenon, with onset of use most likely to occur during adolescence."

The above quote is from Dr. Lloyd D. Johnston, et al., Highlights from Student Drug Use in America 1975-1981, National Institute on Drug Abuse (NIDA). This document presents findings from a national research and reporting program, *Monitoring the Future: A Continuing Study of the Lifestyles and Values of Youth*, conducted annually since 1975 by the University of Michigan's Institute for Social Research. The data give some important indication of drug use among high school seniors, with some information about starting use in earlier grades. In interpreting the data, one must take into account one fact: the research does *not* include those in the target population who dropped out of high school before the 12th grade—15-20% of each age group. At hearings concerning international narcotics control policy, which were held before the Committee on Foreign Affairs, House of Representatives, April, 1982, Dr. Mel J. Riddile of Fairfax County, Virginia, and representing the National Association of Secondary School Principals testified:

"I would like to say that as we find younger and younger children using illicit drugs, particularly marijuana, we find that they don't make it to their senior year and they don't appear in the NIDA surveys.

One study that we conducted in a local school found that 29 percent of the marijuana users dropped out of school in 1 year. They would not have made it to their senior year for that survey. So I think we have to consider that." (U.S. Congress, Committee on Foreign Affairs, "International Narcotics Control", April, 1982)

According to *Highlights*, among high school seniors of the class of 1981, "marijuana is by far the most widely used illicit drug;" 46% used marijuana during the year; 32% used in the past month; 7% used daily (one in every 14 seniors). Daily use was on a slightly downward trend, which, said the researchers, was apparently due to concern about health consequences and peer disapproval. As for grade of initial use by the class of 1981, *34% first used marijuana prior to high school* and 25% during high school. (The remainder had never used.) See 1982 data, end of article.

As for overall use of marijuana, Dr. William Pollin, Director, National Institute on Drug Abuse stated that at least 22 million Americans use marijuana (previous hearings, U.S. Congress, Committee on Foreign Affairs, *International Narcotics Control*, April, 1982). The 1979 National (Household) Survey on Drug Abuse, ages 12 on up, shows that *one out of every three Americans ages 18 to 25 was a current pot smoker* (defined as using the drug within the past month).

To Sum Up: Since 1964, over 6,000 scientific papers have been published on cannabis, the plant from which marijuana, hashish, and hash oil are "processed." According to Dr. Carlton Turner, the White House Drug Abuse Policy Director, who has read and annotated all these papers for the

two-volume work he co-authored, *Marijuana, An Annotated Bibliography*[1], "*Not one* of those papers gives cannabis a clean bill of health."

Indeed, he says, "*The inescapable fact is that unless our current pot-smoking habits are reversed sharply, marijuana will have drastic long-term biological and psychological health effects on our young people, and, therefore on the future of our families and our nation.*" (Peggy Mann, *Pot Safari*, 1982)

Eradication of Marijuana: Use of Paraquat

The use of marijuana is clearly a public health problem of major proportions; the economic and social costs are enormous. Eradicating cannabis, the plant from which marijuana is derived, is one important way to begin to attack this problem. Although various articles we come across in magazines and newspapers might lead some to believe that domestically grown cannabis accounts for a considerable proportion of marijuana in the U.S., actually "domestic commerical cultivation has consistently represented about 7 percent of the total marijuana consumed in the United States." (Attorney General William French Smith, "Drug Traffic Today," *Drug Enforcement*,[2] Summer, 1982, p.5). Increased efforts to eradicate cannabis would certainly lessen the public health problem created by use of the drug. We need to keep in mind that the U.S. is already obligated to participate in ways to control cannabis. According to a recent U.S. State Department document, *Cannabis Eradication in Foreign Western Hemisphere Nations*, November, 1982, the State Department intends

> *"to initiate a cannabis eradication program in foreign Western Hemisphere nations. The proposed action is to support efforts of host governments to eradicate cannabis by aerially applying the herbicide paraquat where appropriate."*

Describing the proposed federal action and evaluating it in terms of domentic environmental impacts, the document also explains that

> *"The U.S. Department of State's Bureau for International Narcotics Matters is mandated by Section 481 of the Foreign Assistance Act of 1961 to establish an international program aimed at reducing the flow of illicit narcotics and dangerous drugs of foreign origin into the United States. In 1978 an Amendment to the Foreign Assistance Act placed restrictions on U.S. support to foreign governments for the eradication of marijuana using paraquat. In December of 1981, these constraints were repealed. With the advent of this development, it is now the intent of the U.S. Department of State to initiate a cannabis eradication program in foreign Western Hemisphere nations."*

Such an action as described in the above State Department document would help to reduce the supply of marijuana coming into the U.S. from abroad. However, it becomes clear that *such a program must ultimately be coordinated with efforts to reduce the domestic production of marijuana in the U.S.* Furthermore, the U.S. is obligated by international commitment to try to reduce this supply: According to the above State Department publication,

> *"The United States is a party to the 1961 Single Convention on Narcotic Drugs, as well as numerous bilateral and multilateral treaties and agreements on the control of dangerous drugs. The United States and other parties assumed the obligation under the treaty to control and prevent trafficking in narcotics, including heroin, cocaine, and marijuana. Any attempt by the United States to abrogate, amend, or withdraw from the Single Convention would have serious repercussions with respect to controls on all other narcotics and dangerous drugs..."*

It has become abundantly clear that marijuana can be controlled most effectively at the initial point of production: this requires eradication of cannabis at its source, for once the illicit crop has been cut and sent on its way to some distant point, the problem of discovering and intercepting it is manifold, and much of it remains undetected. The use of paraquat would be one way to eradicate cannabis before it is harvested and shipped.

What is Paraquat?

According to the 1980 report of the Select Committee on Narcotics Abuse and Control, *The Use of Paraquat to Eradicate Illicit Marijuana Crops and the Health Implications of Paraquat-Contaminated Marijuana on the U.S. Market*, (Congressional committee report, pp. 11-12),

> "The chemical 'paraquat' (1,1'-dimethyl-4,4'-bipyridinium dichloride) is a general contact herbicide manufactured in the United States by Imperial Chemical Indistries, Americas, and distributed by the Chevron Chemical Corporation, under license from the British-based Imperial Chemical Industries, Limited (ICI). The compound was first used as a plant growth regulator beginning in 1959, and *since 1966, paraquat has been registered for a broad spectrum of uses* (Emphasis added):
>
> 1) as a pre-planting herbicide for the control of weeds prior to the establishment of grass seed fields, and in preparation for no-tillage or [minimum] tillage production of crops such as corn and soy-beans;
>
> 2) as a directed spray for the control of weeds in orchards, vineyards, ornamental plantings, and nonerop plant areas;
>
> 3) as a desiccant and defoliant in harvesting such crops as soybeans, sugarcane and sunflowers;
>
> 4) as an aid in pasture renovation.
>
> When paraquat is applied in commercial agricultural settings, precautions are taken to avoid contact with edible portions of the crop undergoing treatment...
>
> *Paraquat is certified by the regulatory agencies of the U.S. Government as a safe and effective chemical when used in accordance with label directions." [Emphasis added.]*

Also, Federal agencies monitor for residues. Testimony quoted in the above report assures us that studies "show no evidence of paraquat residues in our food supply." (Dr. Warren C. Shaw, Staff Scientist, U.S. Department of Agriculture)

Why Use Paraquat?

Studies and experience show use of paraquat to be a viable method of eradicating cannabis.

[1]See Reference List for further information about this work.

[2]A copy of this publication may be obtained from Drug Enforcement Administration, U.S. Department of Justice, 1405 Eye Street, N.W., Washington, D.C. 20537

In July, 1979, a United Nations Narcotics Laboratory (UNNL) Study Group composed of experts from around the world convened in Geneva to consider methods for the eradication of illicit narcotic crops. Following are a few statements from its report, which is reprinted in the above congressional committee report. *The Use of Paraquat to Eradicate Illicit Marijuana Crops and the Health Implications of Paraquat-Contaminated Marijuana on the U.S. Market:*

"Opium poppy, cannabis, and coca bush are the narcotic plants of global concern, being the sources of such principal drugs as heroin, marijuana, and cocaine, respectively...

There are positive ways to control illicit narcotic crops. These include persuading illicit growers to produce other income-generating crops. Unfortunately, this alternative is not always realistic... chemical attack at the present time offers the best overall opportunities to successfully destroy narcotic crops. Mechanical means are, however, also quite viable and fire is feasible.

The variety offered by these three readily available, proven techniques, both individually and in combinations with one another, led the group to conclude that the initial costs to develop the apparently promising approaches of biological controls and genetic alteration would not be cost-effective in the effort to eradicate illicit narcotic crops."

Ultimately, the UN Study Group report states that

"From the approximately 60 herbicidal chemicals that have been evaluated for their effectiveness in controlling cannabis and poppy, the group selected five, as having sufficient merit to receive primary consideration for use in the control of cannabis and poppy."

Of these five, one was paraquat. This chemical was given high marks in terms of effectiveness in cannabis control:

Paraquat

"provides effective control of cannabis and poppy... The effects of paraquat are soon noticeable. It produces the most rapid response of any of the chemicals that have been tested..."

As for environmental impact,

"Drift of paraquat to nearby vegetation may cause visible necrotic spots, but under ordinary circumstances damage would be minimal. Paraquat persists in the soil for long periods, but it is not biologically available because it is tightly absorbed on [bound to the surface of] soil particles. Free paraquat is degraded by soil micro-organisms."

And Chevron Chemical Company, Ortho Division, states in "The Impact of Paraquat on the Environment"[3] that Paraquat

"is rendered inert once it contacts the soil and is not biologically persistent... There is no possibility of residues of paraquat being accumulated in living systems. Thus paraquat soil residues are biologically unavailable to living organisms in the environment... if water did become accidentally contaminated with paraquat, residues in the water would quickly disappear largely due to adsorbtion onto soil particles suspended in the water and in the bottom mud."

[3]Chevron Chemical Company, Ortho Division, Research and Development Department, Richmond, California, "The Impact of Paraquat on the Environment" (summary), March, 1971.

And from the White House Drug Abuse Policy Office *Fact Sheet* (July 19, 1982): "Paraquat is a fast-acting herbicide which is biodegradable, photodegradeable and decomposes upon storage and heating." In other words, paraquat is broken down by soil micro-organisms, sunlight, storage, heating. Toxicity of the break-down products is nominal.

In the application of paraquat, the availability of water is required, for water is the normal carrier.

Are there health hazards for pot smokers?

The UN Report cited above states that—although handling of the concentrate requires care by those applying the chemical, "residues of sprayed formulations on cannabis would not be sufficient to cause toxic effects to the marijuana user." In the White House *Fact Sheet* cited above, we read,

"In 1977, it was confirmed that marijuana containing Paraquat was available on the street in the United States. Analysis by the Center for Disease Control [CDC, Public Health Service, Department of Health and Human Services] in 1978 found that 3.6 percent of their samples of confiscated marijuana contained Paraquat. ***Not a single case of lung damage due to smoking marijuana containing Paraquat was found by CDC despite a follow-up on all reported cases during the 'Paraquat Scare' in 1978."*** *[Emphasis added.]*

Just what was that "paraquat scare?" First, one must understand the climate of the times. Only very recently did the general public begin to learn something about the health hazards of marijuana use; but in the mid-70's, except for scientists and a few others, the general public knew relatively little about these hazards. During that time, Mexico had begun to spray cannabis with paraquat—of course, this would reduce the supply of marijuana into the U.S. Pro-drug forces and various media elements pushed to end spraying programs, implying that paraquat was causing lung damage among marijuana users. And, significantly, research findings describing *marijuana's* effects on lungs were given almost no publicity. Eventually, the U.S. Congress passed an amendment to the Foreign Assistance Act of 1961; this amendment "...placed restrictions on U.S. support to foreign governments for the eradication of marijuana using paraquat." *(Cannabis Eradication in Foreign Western Hemisphere Nations*, State Department, November, 1982) But, when Congress realized the deception in the "paraquat scare," it *repealed* these constraints in December of 1981.

The Public Health Service, Department of Health and Human Services, is supportive of eradicatoin of cannabis using paraquat. A letter published in the State Department publication cited above *(Cannabis Eradicaton in Foreign Western Hemispere Nations*, November, 1982) reads:

"The Public Health Service (PHS) strongly supports a program for eradication of cannabis in the Foreign Westrn Hemisphere Nations... We feel that the proposed cannabis eradication activity can be properly performed by using the herbicide paraquat in accordance with Environmental Protection Agency label instructions and its application requirements and by following sound procedures to monitor the activity."

Success of the Mexican Paraquat Program. Mexico has demonstrated success in its cannabis eradication program. According to the previously mentioned Congressional

report, *The Use of Paraquat to Eradicate Illicit Marijuana Crops and the Health Implications of Paraquat-Contaminated Marijuana on the U.S. Market.*

"In 1975, the Government of Mexico, in a bilateral program agreement with the United States Government, began using chemical eradication agents to destroy opium poppy crops...

The potential of the program impressed the Mexican Government to the extent that it decided to expand the efforts of the aerial poppy eradicatoin program to include what it considers to be its own number one domestic drug abuse problem: Marijuana. The environmentally safe, commercially available herbicide 'paraquat' was chosen by the Mexican Government from a list provided by the U.S. Department of Agriculture of herbicides licenses and evaluated as safe for domestic commercial use as an acceptable agent for the marijuana eradication program. Paraquat's safety record when used in accordance with label directions is excellent."

Some additional statements from the White House Drug Abuse Policy Office *Fact Sheet* (July 19, 1982):

- *"Paraquat has been on the market as a herbicide since 1962 and is one of the most widely used herbicides in the world."*
- *"Paraquat is a legal herbicide for use anywhere in the U.S. as long as the label instructions are followed."*
- *"Paraquat is used to control broad-leaf weeds and cannabis is a broad-leaf weed."*
- *"Approximately 4 million pounds of Paraquat [are] sprayed on over 10.7 million acres in the U.S. each year." (This is for uses such as weed control in orchards and as a harvest aid for such crops as cotton and soybeans).*
- *"The Administration supports the eradication of the cannabis plant as a legitimate activity to reduce the availability and use of marijuana."*

Paraquat Use in the U.S.

In August of 1982, paraquat was used to spray a large cannabis field in Red Bay, Florida. Stringent controls were followed, which prevented the sprayed cannabis from reaching the consumer market; no adverse environmental impacts were noted; stringent controls were followed to protect the health and safety of personnel conducting the spraying. Safety clothing (rubber suits, goggles, respirators, etc.) was worn to protect the personnel involved; there were no problems. A tank-truck was used as far as it could go, and the rest of the spraying was accomplished in the tight places by back-pack sprayers. The paraquat was used as a desiccant, which dried the foliage and allowed the field of cannabis to be burned within 48 hours "at minimal cost to the state." (This information was obtained following a Committees of Correspondence inquiry to the Department of Law Enforcement, State of Florida.)

In using paraquat, one must remember that, like many chemicals in use, including many under the kitchen sink, it is a poison, and like any poison, it must be used with care. Label instructions must be followed and applicable state and federal regulations must be observed. Paraquat should be used only when appropriate and with stringent controls to ensure the health and safety of personnel involved; it is a restricted use herbicide and may be used only by Certified Applicators or persons under their direct supervision."

In conclusion, because the public health hazards involved in *marijuana* use are so great, the use of paraquat as a means to eradicate cannabis is warranted.

What You Can Do

1. Domestic commercial cultivation of cannabis is presently concentrated in seven primary states: California, Hawaii, Oregon, Kentucky, Missouri, Arkansas, Florida. But other states are also involved. Is your state one of these? You can find out from your District Attorney or state Attorney General. At the first national conference of the National Federation of Parents for Drug-Free Youth in Washington, D.C., Dr. Carlton Turner was asked on October 12, 1982:

"Dr. Turner, [we in the midwest have heard] that a growing number of farmers are growing marijuana... What would be your suggestion as to what parent groups might do with the enforcement people in the eradication of cannabis?"

Dr. Turner:

"Talk to the local law enforcement people, who will have contact with the Drug Enforcement Administration, which is giving technical assistance. With these two groups working together, we now have 26 states which are involved in eradication."

2. Parent groups and individuals, write to your elected officials: let them know that you want cannabis to be eradicated—that use of cannabis presents major health hazards. Continue to encourage and support all those who are in a position to take steps to eradicate cannabis, from local law enforcement personnel to your state legislators. Write letters to newspapers expressing this support.

3. If you become aware of a particular place where cannabis is being grown, contact your local law enforcement personnel. (This can be done anonymously.) Also, if you would like more information about Florida's successful use of paraquat on marijuana, you may write to the State of Florida, Department of Law Enforcement, P.O. Box 1489, Tallahassee, Florida 32302.

The following is a copy of an article that appeared in the Philadelphia *Daily News* on December 9, 1982 by Stuart D. Bykofsky:

Bob Hope recently disclosed that NBC axed a couple of jokes about drug use from one of his routines during a special. One of the Hope's gags said that for selling cocaine "you can get 20 years in prison or two years in Congress."

Hope is far from one of the drug generation's favorite comics. You'd have to guess you wouldn't find any white powder on the old man's nose.

NBC ran a week-long, anti-drug campaign last year and later ordered *no* drug jokes on its air. That comes right from Grant Tinker at the top.

We have a drug epidemic in America, that's for sure.

But is a flat ban the most effective remedy? Would an anti-drug joke, in which the user is portrayed in less than flattering terms be considered a "drug joke?" Even if that's not the case, should the networks be issuing flat bans on material?

This represents a conflict between a socially desirable end (fighting drug use) and a questionable means (network censorship). Freedom of expression is not an absolute—not in society and not on television—but I have trouble with edicts that wipe out an entire area of commentary.

How do you feel? Should the networks ban *all* drug humor, allow *only* anti-drug jokes, or keep its hands off the material entirely? Let me know by writing to me, care of the Daily News, P.O. Box 7788, 400 N. Broad St., Philadelphia, Pa. 19101.

We encourage people to write Grant Tinker to let him know we appreciate his effort and active participation in getting the anti-drug message to the general public via television and radio programming at N.B.C.

We have already had an encouraging reply to our letter to him. You may state that you are a member of the Committees of Correspondence. Please direct your correspondence to:

NIPPING MARIJUANA IN THE BUD

A Comparison of Paraquat—the Herbicide with Cannabis—Nature's Toxic Plant

IMPORTANT UPDATE

1. STATE DEPARTMENT DECISION: According to a December 21, 1982 public notice, Bureau for International Narcotics Matters, Dept. of State.

   "The Department of State has decided to support the efforts of foreign Western Hemisphere nations to eradicate cannabis by aerially applying the herbicide paraquat. In emplementing this decision, the Department now intends to engage in formal discussions with cannabis-producing Western Hemisphere nations."

2. The latest national high school senior survey conducted by the University of Michigan's Institute for Social Research indicates that in 1982, daily marijuana use was down to 6 percent (about one in every 16 seniors). However, this news gives us NO reason whatsoever to become complacent.

An Important New Way to Finance Drug Enforcement and Prevention Programs for Your State:

Civil Forfeiture of Illicit Drug Profits

The Drug Enforcement Administration has a powerful new model law which can be adopted by any state. This law, if enacted, would allow state law enforcement officials to trace and seize the assets and profits of illegal drug activity. This includes everything from the drugs themselves to the person's home, car, boat, bank account, etc. Once seized, these illegal drug profits could be diverted into state treasuries. Federal drug enforcement agents are already making such seizures under a similar statute, and monies and property from the federal agents' seizures are going into the federal government's treasury. If a state adopts this model law and makes the seizures, the assets so seized and found, by a court of law, to be assets or profits of illegal drug activity, will then belong to the state. Therefore, the proposed Model State Forfeiture Act, in conjunction with existing state laws, will provide important needed support for state drug enforcement efforts.

This Model Forfeiture Act was written by Harry L. Myers, Assistant Chief Counsel of the Drug Enforcement Administration. Mr. Myers is the same attorney who wrote the Model Paraphernalia Act which has now been adopted by so many of the states.

Every year billions of dollars are reaped by organized crime. Much of this money comes from illegal drug activity. The illegal drug industry is estimated to be the third largest industry in the United States, after Exxon and General Motors. The relatively new Federal Forfeiture Statute gives federal law enforcement officers a powerful new weapon with which to fight organized crime in the drug area. This new law allows the government to attach the very motive for illegal drug activities--the criminal's desire for great wealth. It subjects his money, bank accounts, and property to forfeiture if it can be shown that these items were earned from illegal drug trafficking. (Forfeiture is the taking by the government of property illegally used or acquired, without compensating the owner.) The federal statute, Title 21 of the United States Code, Section 881 (a)(6) provides that all monies and other assets acquired from the illegal drug trade shall be subjected to civil forfeiture. This means that law enforcement officers can go beyond merely arresting traffickers and seizing any drug involved. Now, illegally accumulated assets (bank accounts, cars, airplanes and even real estate) are all subject to civil forfeiture.

In order to understand civil forfeiture it is necessary to understand what civil law is. The legal system is broadly divided into two separate areas--civil and criminal. Both areas can be used to punish wrongdoers but only the criminal law--which is used exclusively by the city, county, state or federal government--can involve a jail sentence. Civil law on the other hand is most often used when one person sues another. The legal rules of evidence, as well as the standard of proof, are different in these two areas. For example, in order to find a defendant guilty of drug trafficking it must be shown "beyond a reasonable doubt" that he did, in fact, illegally distribute drugs. Under civil law it is enough to show that it is "more likely than not" that the defendant acquired his property from drug trafficking. The second standard is, of course, a much easier one to meet.

Forfeiture is an ancient concept, traceable to the Old Testament of the Bible (Exodus 21:28) as well as Greek and Roman Law. Today, forfeiture is most often used to protect the public from harmful objects (adulterated foods, sawed-off shot guns) and as a deterent to crime.

The new Federal Forfeiture of Drug Profits Act provides that the civil law with its less strenuous standard of guilt is to be combined with the concept of forfeiture to become Civil Forfeiture. This is important because it means that no criminal conviction is required.

Under this new Civil Forfeiture Law the federal government can now seize the ill-gotten gains of a drug importer if it can be proved in court that it was more likely than not that they were bought with drug profits. Notice that the criminal conviction of the drug dealer is not required.

For example: Mr. X is a drug trafficker. He has money in the bank, a lovely home, jewellery for himself and his wife, and a very expensive car. The money in various bank accounts allows him to continue to initiate and pay for further underground illegal drug activities. If it can be proved in a court of law that all the items listed above were the result of drug trafficking, they will be forfeited even if Mr. X manages, by skillful legal manuevering, to remain free. The reason is that the forfeiture case is separate from the criminal one. They are two different legal actions. Even if the District Attorney does not prosecute the criminal action against Mr. X, he can still file an action against his property as long as he can show the likelihood that the property was acquired from the illegal drug trade. It costs money to traffic in illegal drugs and moreover a business that is subject to such governmental seizures may become a poor business risk with a poor return for the investment dollar.

Before this new law the federal government could seize and subject to forfeiture certain items. These included:

1) illegal drugs,
2) any equipment and materials used to make, deliver or import illegal drugs,
3) containers for illegal drugs,
4) cars, planes and boats for transporting illegal drugs, and
5) books and records connected with drug trafficking.

However, nothing in the federal law dealt with the profits of illegal drug trafficking until Title 21 of the United States Code, Section 881 (a)(6) was enacted. Undercover drug agents have often stated that among the drug traff...ing elements of society, bragging about just what items were bought with drug money is commonplace. Under federal law and in states that enact the model act such profits would be put at high risk of seizure and forfeiture.

How Would This Law Provide the States With Much Needed Revenues?

Drug enforcement costs are enormous. It is estimated that federal enforcement costs at the present time is about $150,000,000 a year. This includes the costs of the Drug Enforcement Administration, the anti-drug activities of the Customs Service, and the anti-drug activities of the Coast Guard. This figures does not include prosecutorial costs (twenty-five percent of all federal cases deal with illegal drugs), prison costs for convicted felons, or drug treatment centers. It also does not include the millions of dollars spent by the states in these areas.

The proposed legislation offers the states substantial potential for recovering significant amounts of money now being spent to combat drug offenses. The Federal Drug Enforcement Administration serves as a good example. During 1979-1980 DEA seized assets totaling nearly one-half of its annual budget. Since many states are looking at less money because of budget cuts, eroding tax structure and growing inflation, such a statute, properly enforced, could help to provide needed revenues, just as the federal law has done.

What Exactly Does the Model Forfeiture Law Provide?

The prefatory note to the model forfeiture of drug profits act states:

> Widespread drug abuse, particularly amoung children, teenagers and young adults, poses a serious threat to the well-being of our society. Drug trafficking organizations which cater to this abuse are composed of three elements: (1) contraband drugs, (2) people, and (3) money and other assets. As long as the assets remain untouched, seized drugs and arrested people can always be quickly replaced. Capital is at the heart of all businesses, both legal and illegal. Depriving drug traffickers of their assets, including their operating tools and their illegally accumulated profits, is an essential step in crippling these organizations.
>
> The intent of the Model Forfeiture of Drug Profits Act is to amend existing state laws to permit all states to seize, civilly forfeit and deposit in their treasuries: (1) all moneys and other assets used to buy contraband drugs, (2) all moneys used to facilitate any drug law violation, and (3) all assets acquired from drug trafficking, regardless of their form. The Model Act consists of amendments to the civil forfeiture section of the Uniform Controlled Substances Act, which has been enacted by forty-seven (47) states.

The Model Forfeiture of Drug Profits Act subjects to civil forfeiture:

> " ( ) Everything of value furnished, or intended to be furnished, in exchange for a controlled substance in violation of this Act (meaning the Controlled Substances Act of this State), all proceeds traceable to such an exchange, and all moneys, negotiable instruments, and securities used, or intended to be used, to facilitate any violation of this act; except that no property shall be forfeited under this paragraph, to the extent of the interest of an owner, by reason of any act or omission established by him to have been committed or omitted without his knowledge or consent.
>
> **Rebuttable Presumption:** All moneys, coin, and currency found in close proximity to forfeitable controlled substances, to forfeitable drug manufacturing of distributing paraphernalia, or to forfeitable records of the importation, manufacturing or distributing of controlled substances, are presumed to be forfeitable under this paragraph. The burden of proof is upon claimants of the property to rebut this presumption.

It can be seen that the Model Forfeiture of Drug Profits Act targets four discreet areas.

1) **Exchange** -all things of value furnished or intended in exchange for drugs. A small number of states already have this provision. Note that this section is not only limited to money or negotiable instruments and securities but includes "anything" of value exchanged (i.e. a diamond ring). Two examples of an exchange:

> 1) Suppose Mr X is observed giving Mr Y $2000 for an ounce of cocaine; that money is forfeitable.
> 2) Suppose Mr. X admits going to Mexico with $10,000 to buy drugs but only manages to buy $3000 worth. The drugs as well as the $7000 are forfeitable because all the money was intended for exchange for illegal drugs.

2) **Proceeds** - all proceeds traceable to such an exchange. The term "proceeds" is that which is received when an object is sold, exchanged or otherwise disposed of. As with the Exchange Section, this need not be money but any item received for the illegal drugs. This is part of the model law because profits from the cash-and-carry trade are eventually hidden by changing their form. It is, after all, the proceeds that allow the drug traffickers to live the good life. They are converted into homes, yachts, planes, cars, stocks bonds, business bank accounts and other property. The power to seize and forfeit cash exchanged for drugs strikes at the operational funds of illicit business. However, the power to seize and forfeit drug "proceeds" poses a much greater threat to the accumulated profits of traffickers. For example:

> 1) Suppose Mr X sells drugs for $10,000. The entire $10,000 is forfeitable because it is the proceed from an exchange
> 2) Suppose Mr. X takes the $10,000 and puts the money in a bank. It is still a proceed and it is still forfeitable.
> 3) Suppose Mr. X buys a car with the $10,000. It is forfeitable under the model law because the money and all that it buys is tainted by a drug exchange.

3) **Facilitation money** - all money used or intended to be used to facilitate any drug violation. This section is limited only to money, negotiable instruments and securities. Examples of money used in these manners would include:

> a) money used to run an illegal PCP laboratory,
> b) money used to pay rental fees for cars, boats or planes to smuggle marijuana
> c) money to pay a drug carrier, or even
> d) Money used by a drug carrier for expenses.

4) **Innocent owner** - This section protects the innocent owner whose property might have been used in a way so as to violate the law. For example:

> Mr. A leases his beachfront property to Mr. X. Mr. X uses this property as a dock for small fishing boats bringing in bales of marijuana from the mother ship at night. Mr. A has no reason to suspect these activities. Therefore, Mr. A's property is not forfeitable.

If enacted in your state, this law would have two major beneficial impacts:

1) The law, in itself, would be a powerful deterrent to drug trafficking.
2) The law would provide much-needed revenues to help support drug enforcement, as well as drug rehabilitation, and drug education and prevention programs throughout your state.

WHAT YOU CAN DO

All of the states should adopt this powerful Model Forfeiture Law as part of their law enforcement arsenal. By using effective political action this proposed legislation can become law in your state. Here's how:

1) Write to:

> Superintendent of Documents
> United States Government Printing Office
> Washington D.C. 20402

to order a guide for the model act called:

> **Drug Agents' Guide to Forfeiture of Assets**
> Stock number 027-004-00031-2

Enclose $8.50 per copy ordered. This price includes postage and handling. Please order two (2) copies--one for yourself and one to give to your sponsoring state legislator. (Or, you may wish to photocopy important sections from a single copy).

2) Choose a state representative who has the ability to get the Model Forfeiture Law enacted. This involves using a legislative sponsor who has an excellent reputation in both state houses, if possible. This person need not necessarily have a strong knowledge of drugs, but should be well respected. Give your chosen representative a copy of the above mentioned guide, as well as a copy of this Drug Abuse Issue.

3) Notify all parent groups, PTA's church and synagogue groups, etc., in your state. Ask them to contact their local state representatives and express their support for the bill.

4) Keep in close contact with your sponsoring legislator so as to be ready to act by gathering more local support should the bill be in trouble.

POSSE COMITATUS

Here's some good news for you to share with your group and community.

Posse Comitatus, a limited exception to the doctrine of military non involvement in civilian law enforcement was signed into law December 2, 1981 by President Reagan. This legislation, a positive step forward in the battle against illegal drug trafficking, will permit meaningful cooperation between the military and civilian law enforcement officials. Now public law No. 97-86, Posse Comitatus will allow for the greater loan of equipment, training assistance, and sharing of information on movement of air and sea traffic outside the land areas of the United States. At last, the up to date equipment and expertise of our military will be used against the sophisticated measures taken by illegal traffickers. Already Drug Enforcement Administration officials are working with the Navy in the Carribean to detect smugglers.

Posse Comitatus took a full two years to become a reality and its support and passage can be credited largely to the parents of America. Their message of "NO DRUGS" is being heard everywhere and Congress is responding by initiating tougher laws. Posse Comitatus is certainly a step in the right direction.

How Much Do You Really Know About Marijuana?

by Peggy Mann

Peggy Mann has written more articles on the health hazards of marijuana and on marijuana p ue alcohol and driving, for major newspapers and magazines than any other writer in the world.

Q. What Exactly IS Marijuana?

A. Marijuana, hashish, and hash oil are prepared from a plant called cannabis sativa. Because cannabis grows, pot smokers often refer to "their drug" as a simple, natural weed — the implication being that it's harmless. However, it's far from simple and very far from harmless. Marijuana is the most complex of all the illegal drugs. It contains 421 known chemicals and, when it is smoked or burned, these break down into over 2000 chemicals entering the body. Sixty-one of these chemicals are unique — found only in one place in the world — in the cannabis plant. And they are called cannabinoids.

Q. What is THC?

A. It's short for delta-9-tetrahydrocannabinol — one of the cannabinoids; one most responsible for the "high." THC is impairing to brain cells, lungs, the reproductive organs; indeed, to all body cells. And other cannabinoids are even more impairing than THC to certain organs and organ systems. Thus far, scientists have studied only six of the 61 cannabinoids. All are biologically harmful. As one nationally known expert[1] puts it: "There is no other drug used or abused by man that has the staying power and broad cellular actions on the body that cannabinoids do."

Q. How long does marijuana stay in the body?

A. The most important single — and most dangerous — factor about marijuana is this: the cannabinoids are lipophilic (fat-loving). They seek out and seep into fatty sections of all body cells, and the fatty organs (the brain is one-third fat). Only very slowly do they leak back out into the blood stream to be eliminated. It takes about a month for all the chemicals in a single joint to clear from the body. If one smokes more than that, the cannabinoids accumulate in the cells, and the body is never drug-free. As one researcher put it: "Though the high is gone, the pot is not." When the chronic user stops smoking pot it takes about three months for the accumulation of cannabinoids to clear from the body.

Q. Can marijuana cause dependence?

A. The body cells of the regular pot smoker act like microscopic time-release capsules continually emitting cannabinoids into the bloodstream. Consequently, there are no severe physical withdrawal symptoms. (There may be mild symptoms such as sleeplessness, irritability, upset stomach, etc.). However, chronic users become strongly **psychologically** addicted. As one noted psychiatrist[2] puts it: "If marijuana **doesn't** cause dependence, why is it that it's so difficult for the chronic pot smoker to stop?" The difficulty in stopping is reflected in these statistics: according to the Federal Government's drug abuse patient data system, for the past five years, marijuana has accounted for the second-largest number of admissions into our Federally funded drug-treatment facilities. Furthermore, the percentage of these patients almost doubled between 1976 and 1981. During these years, about one-third of the patients started their pot use **prior to age 14.**

Q. How does pot affect personality?

A. The typical "pot portrait" of the heavy, young pot smoker is defined in countless clinical reports as well as in over 350 studies published in scientific journals since 1975. It includes the following: impaired short-term memory, emotional flatness, and the "dropout syndrome." (This can progress from dropping out of sports to dropping out of school to dropping out of the family.) Also: **diminished** will power, concentration, attention span, ability to deal with abstract or complex problems, and tolerance for frustration. **Increased** confused thinking, impaired judgement, hostility toward authority, self-centeredness. Also, unwarranted suspiciousness (paranoia); caring less about everything and everyone; depression, which often leads to suicidal thoughts. And the denial syndrome: refusal to believe that marijuana is affecting you adversely, and **refusal to believe the hard medical evidence that marijuana is physically and psychologically harmful. This symptom is typical of virtually all chronic pot smokers, youngsters and adults.**

Q. What about driving a car?

A. Over 50 driving studies clearly show that **marijuana is just as impairing to driving as is alcohol.** Furthermore, the driver-impairing effect of a one-ounce shot of whiskey or a 12-ounce can of beer or a glass of wine last one hour. But the driver-impairing effects of one "joint" (marijuana cigarette) last 5 to 6 hours. Marijuana impairs all important components of driving performance, including skills performance, perceptual processes, vision, attention, and tracking behavior. Because pot also impairs perception, many drivers actually believe they "drive better stoned." Studies also show that driving under the influence of marijuana **plus** alcohol means double trouble. And the latest closed course driving study showed the impairing effects of pot and alcohol to be synergistic (1 plus 1 equals 4 or 5).

Q. What does marijuana do to the lungs?

A. Pot smoking is harmful to the entire "pulmonary tree," from the sinus cavities to the tiny air-sacs deep within the lungs. Studies also show that it is even more impairing to the lungs than tobacco smoke, and its symptoms strike faster. There is also subclinical damage (which does not "show"). For example, one study[3] of healthy, adult pot smokers — who averaged 2.2 joints a day for five years — found they had 25 percent more airway resistance than a matched group of tobacco smokers who averaged 16 cigarettes a day for five years. (Airway resistance determines how well we get oxygen into the body and how well we get toxic carbon dioxide out.) Most cannabis smokers (pot and/or hashish) also smoke tobacco cigarettes. A lung biopsy study[4] of young U.S. soldiers showed that 91 per cent of those who'd smoked both had pre-cancerous cells. Those who'd smoked one or the other had a far lower incidence of pre-cancerous cells. Those who used neither had no pre-cancerous cells in their lungs.

Q. Can pot cause cancer?

A. It takes 30 to 40 years for lung cancer to grow. Thus far, in the U.S. people have been smoking pot heavily for only a decade or so. Tobacco is now called the single greatest cause of lung cancer, but marijuana and tobacco contain roughly equal amounts of such irritants and gaseous toxic agents as carbon monoxide, acetone, ammonia, and benzene. And the cancer-causing chemicals benzanthracene and benzopyrene are present in pot smoke in amounts 50 to 70 percent greater than in tobacco smoke. Researchers at the Swiss Institute for Experimental Cancer Research[5] exposed more than 5000 animal and human lung cell cultures to puffs of pot and tobacco smoke. The pot smoke caused cancerous lesions more rapidly than the tobacco smoke.

Q. What about sex and reproduction?

A. In males, human and animal studies have shown that pot reduces sperm numbers and mobility and increases numbers of abnormal sperm. Both conditions probably return to normal when smoking is stopped. In females, animal research has shown that eggs are affected by THC, which accumulates in the ovaries.[7] Rhesus monkey and human research shows that THC interferes with the menstrual cycle and impacts on fertility. In the only reproduction studies ever done on long-term exposure to THC[8], rhesus monkeys (with a 28-day menstrual cycle) were given the monkey THC equivalent of a human smoking one joint a day for 3 to 5 years. Result: 44 percent of the "THC mothers" produced dead or dying offspring, compared to 12 percent (a normal birth loss) among control mothers who received no THC. Although the THC fetuses and dead babies looked normal, microscopic evaluations showed a wide range of subtle developmental abnormalities in each of the THC babies, and in none of the control babies. The THC babies which survived had subtle behavioral abnormalities. Studies of human babies whose mothers smoked pot during pregnancy showed the same type of "dose-related" behavioral abnormalities. The more pot the pregnant mothers had smoked the more symptoms the infants showed. One noted marijuana researcher[9] put it this way: "These—as well as numerous human and animal cell studies—show that pot smokers may be playing genetic roulette with the physical and mental health of the children they may have one day."

Q. Does marijuana lead to other drugs?

A. Not necessarily. However, since chronic pot smokers develop a tolerace to the pot high, they often go on to other drugs to induce the high they once got from marijuana. Also, "pushers" (drug dealers) generally handle a variety of drugs and, like any salesperson, try to interest buyers in additional products. The annual National High School Senior Surveys[10] continue to show that about half the high school seniors who are pot smokers also use one or more additional illegal drugs, whereas virtually none of the non-pot smokers are regular users of any other illegal drugs. Teenage pot users tend to stop short of heroin. However, in the latest study published in 1981 of a national sample of 2510 males ages 20 to 30, it was shown that of the 1382 pot-users, approximately one out of ten also used heroine.[11] But of the 1128 non-pot users only one person had used herion. Furthermore, the large majority of those who used heroin frequently were heavy pot users.

The greater the extent of marijuana use, the greater the chance that one will use other drugs. For example, among these same 1382 pot smokers, 73 percent of those who had used marijuana more than 1000 times graduated to cocaine, and 33 percent went all the way to heroin.[12]

The researchers concluded, "The denial of the 'stepping stone theory' is merely the expression of a political rather than a scientific viewpoint."

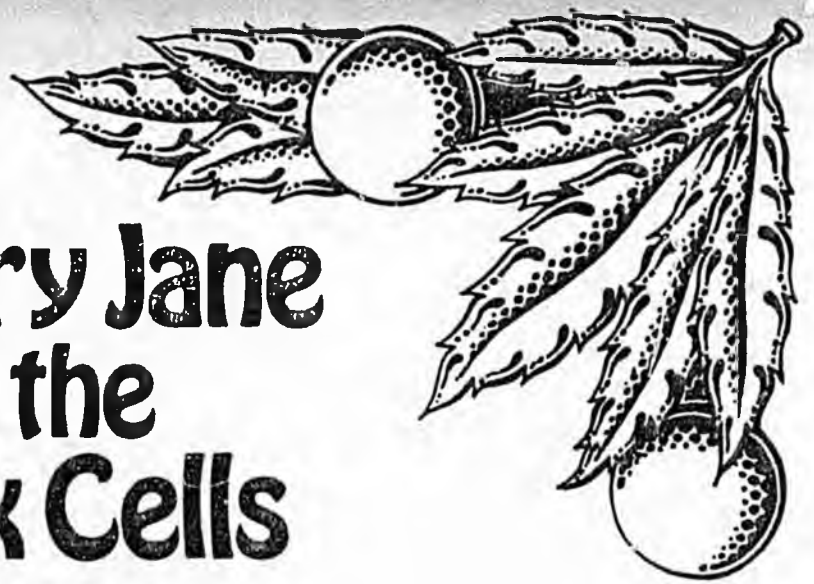
About the author...

Peggy Mann has published over 30 books; has written fiction and articles for most of the major U.S. magazines and is a staff writer on *Reader's Digest*.



Q. What's the effect on brain cells?

A. No carefully controlled cannabis studies can be done on humans, for if damage was found in brain cells of heavy pot smokers, no one could be certain whether it had been caused by cannabis or alcohol or other drugs or disease. Therefore, in the most important brain cell study done thus far, rhesus monkeys were used. The limbic area was studied. This so-called "old-brain" is so similar in man and the rhesus monkey that, under the microscope, their brain cells look identical. Some monkeys were exposed to THC in the smoke of 2 to 3 monkey-sized joints a day (1/4 the size of a "human joint"). Others (the controls) were exposed to the same amount of pot smoke — with the THC removed. After six months (two years in human terms) there were slight structural brain cell changes in monkeys who'd been exposed to pot smoke with THC two days a week ("weekend smokers"). There were five different and dramatic types of brain cell changes in virtualy all of the brain cells examined in the monkeys exposed to THC 5 days a week. These same types of cell changes are seen in humans with early brain damage. The brain cells of monkeys exposed to the same amounts of pot smoke — but with the THC removed — were perfectly normal.

Q. Does marijuana affect the heart?

A. During "the high" the normal heartbeat increases 50 to 100 percent. Also, blood pressure is increased. Both conditions increase the amount of oxygen needed by the heart. But marijuana also increases the amount of toxic carbon monoxide in the blood, thereby reducing the amount of oxygen which reaches the heart. All research shows that pot should not be used by anyone with heart trouble. It can result in heart attack or death. One problem is that 25 percent of people who die of coronary heart disease never knew they had heart trouble. Their first symptom was — death.

What of the chronic smoker who complains of chest pains? No research has been done in this area. However, in most reported cases when they take no medication — merely cut out pot smoking completely — the chest pains disappear completely within days or weeks.

Mary Jane and the Sex Cells

by Gabriel G. Nahas, M.D., Ph.D.

Seldom in the course of centuries has a plant ever created a controversy as great as has **Cannabis sativa,** better known under the name of marihuana, Indian hemp, or hashish.

Eight centuries ago Moslem scholars from Cairo and Bagdad debated the pros and cons of this magic herb which allows man to dream while still awake. Their discussions had the same alacrity as those of today's American intellectuals. It appears now that this controversy, at least from a medical standpoint, has been partially answered.

One of the greatest uncertainties concerning marihuana, was the lack of evidence of cellular damage related to its use. It was known long ago that marihuana produced marked changes in thinking and behavior. This was brilliantly described by the French physician Moreau, 130 years ago, in his book "Hashish and Mental Illness." He observed that heavy long-term users of marihuana displayed a slowly progressive mental and physical deterioration, but these symptoms were non-specific, vague and had never been directly associated with cellular damage.

Cellular damage from marihuana has now been observed. Long-term marihuana users display an impairment of their cellular controlled immunity. This immunity is a function of T-lymphocytes (white blood cells) which specialize in fighting virus infections and destroying substances foreign to the body, such as cancer cells or tissue transplants.

My colleagues, Dr. J. P. Armand, Dr. N. Suciu-Foca and Dr. A Morishima, of the College of Physicians and Surgeons of Columbia University, and I studied 51 marihuana smokers, 16 to 35 years of age who had smoked an average of 3 joints of marihuana a week for 4 years. (Science Vol. 183, 419-420, 1974) These subjects had used no other drugs, except tobacco and alcoholic beverages.

We sampled blood from the veins of these volunteers and isolated their lymphocytes. The cells were tested with special substances which normally cause them to divide and grow.

Gabriel G. Nahas, M.D., Ph.D., who was decorated by the French and British governments for his work in the French underground during World War II, is now Professor of Anesthesiology at Columbia University College of Physicians and Surgeons in New York City.

The fact that marihuana products are stored in the sex organs, raises the possibility that marihuana might adversely affect the sex cells of men and women.

Such a test, the blast transformation test, measures the strength, or response, of the immunity system of the body.

We compared the immunity response of marihuana smokers with that of control subjects who did not use the weed, but smoked tobacco and drank alcoholic beverages. The immunity response of the marihuana smokers was 40% less than that of the nonsmokers. Furthermore, their immunological response was similar to that of patients with cancer, or kidney transplants (treated with immunosuppressant medicines).

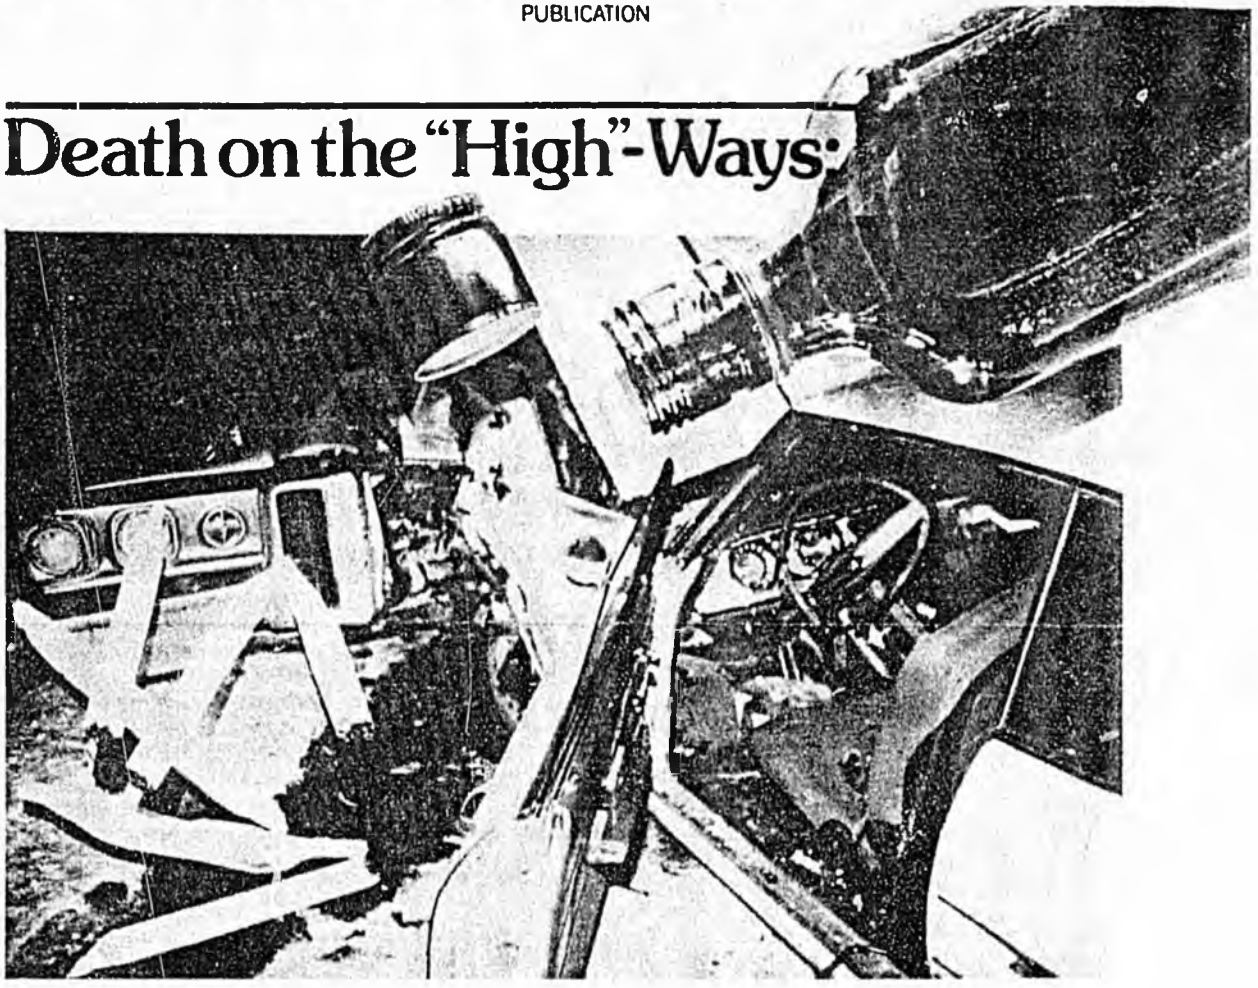
The mechanism of this decrease in the division of lymphocytes was determined in another series of experiments. We were able to show that these lymphocytes from marihuana smokers could not increase the DNA production required for their proper division. DNA (desoxyribonucleic acid) is the basic chemical contained in the core of all cells. It carries the genetic code for heredity.

Similar observations were made on lymphocytes taken from subjects who did not smoke marihuana, but which were exposed in the laboratory to the drug. These cells were incubated in a test tube with very minute amounts of THC (THC is the active ingredient responsible for the effects of marihuana). They presented the same impairment in division and DNA production as those taken from marihuana smokers.

Our results confirmed those of Dr. Stehchver, from the University of Utah Medical School, who observed an increase in chromosome breakage in the lymphocytes of marihuana smokers.

Other scientists have made similar observations on other cells. Dr. Leuchtenberger, from the University of Lausanne, showed that lung cell cultures exposed to marihuana smoke did not grow properly and presented an abnormal DNA production. Dr. Zimmerman, at the University of Toronto, reported that the growth of tetrahymena, a microorganism, was diminished by miniscule amounts of THC which interfered with DNA synthesis.

How is it that the weekly consumption of only 3 to 4 marihuana cigarettes containing 15 to 20 mg. of THC may induce such cellular damage? The answer may lie in the fact that the active ingredients of marihuana, THC, are insoluble in water and are stored in fat tissue. The excretion from the human body of a single dose of marihuana requires more than one week's time. People who smoke marihuana more than once a week will store its by-products in the liver, lungs, brain, spleen, lymphoid tissues and sex organs (testes and ovaries).



The fact that marihuana products are stored in the sex organs, together with the known cellular alterations related to marihuana, raises the possibility that marihuana might adversely affect the sex cells of men and women.

It is most urgent that we learn to what extent frequent use of marihuana will impair the genetic equilibrium of a person's sex cells. The hereditary fate of future generations may rest upon this research.

DID YOU KNOW? Since men constantly produce millions of sperm, the formation of sperm probably returns to normal when pot smoking is stopped, but the effect on women could be lasting. A female is born with about 400,000 eggs. If they are injured, there is no way to repair the damage. It has been proven that THC accumulates in the ovaries as well as other organs.

Death on the "High"-Ways:

Driving on Drink and Pot

When you mix liquor and marijuana—and then take the wheel—you compound a lethal peril

Condensed from
THE SATURDAY EVENING POST
PEGGY MANN

THE EVIDENCE is clear that alcohol and driving do not mix. Every year, more than 50,000 people are killed on the nation's roads, and almost two million are seriously injured. According to the National Highway Traffic Safety Administration, "About half of the traffic deaths are related to alcohol abuse."

Eighty percent of fatal accidents are first accidents. This figure underscores one of the most tragic parts of today's grim picture: those at greatest risk are the youth of our nation.

In 1980, the U.S. Surgeon General revealed that although the overall death rate for every other age group dropped in the period between 1960 and 1978, the death rate for 15- to 24-year-olds rose. And the Insurance Institute for Highway Safety reports that nearly half of all teen-age deaths are due to motor-vehicle accidents.

The most common explanation offered by researchers for the consistently high accident involvement of young drivers is the inexperience of this group with driving, and with

drinking and driving. But it is now clear that death on the road has received a considerable transfusion of tragedy via a wave of marijuana users.

America's young people form a generation in which large numbers smoke marijuana. The magnitude of the involvement is shown by the fact that in 1962 only four percent of Americans ages 18 to 25 had ever used marijuana, while by 1979, 35 percent reported "current use" (within the past month). Furthermore, the marijuana available today is stronger than it was ten years ago, when the average Delta-9 THC potency was only about one-half percent. (THC is the chief mind-altering chemical in the drug.) Today, the THC potency of "street pot" is 4.5 percent.

Surveys reveal that "60 to 80 percent of the marijuana users questioned indicated that they sometimes drive while cannabis-intoxicated." (Cannabis is the plant from which marijuana, hashish and the extremely potent hash oil are prepared.)

Highway officials, drug treatment professionals, research scientists and police officers from Maine to California all express profound concern about marijuana's mounting impact on our national highway-death problem. They also worry about the fact that many pot smokers say they often drive high because they *enjoy* doing so.

Hugh Alcott, a California State Department of Corrections probation agent assigned to the special narcotics section, points out a particularly dangerous phenomenon: "A lot of people who've had too much to drink and know their driving skill will be affected smoke a joint 'so they can drive better.' They actually believe that marijuana acts as an antidote to the effects of alcohol. All the pot does, of course, is to make them *feel* that they're driving better. In fact, their driving is far more impaired than if they'd used alcohol alone."

How Does Marijuana Affect Driving?

HERBERT MOSKOWITZ, a research psychologist at the University of California, has done more work than any other U.S. researcher on marijuana and simulated driving studies. In summing up his findings, he said, "The preponderance of evidence indicates that marijuana impairs skills performance, perceptual processes, attention and tracking behavior. All important components of driving are thus clearly affected."

Some of these components are impaired after only a low dose of marijuana—for example, impairment of "search and recognition abilities." After one joint, some drivers may become totally involved with a single facet of driving or with music from the car radio or even with a private reverie. Therefore, they might simply "not notice" a car exiting from a crossroad or a pedestrian who has just stepped into the street.

Other effects of marijuana intoxication on driving skills:

- Impairment of traffic-signal detection.
- Impairment of reaction time. Inability to brake quickly in rush-hour traffic or to move over quickly if another driver cuts in ahead.
- Impairment of short-term memory function and information storage. The driver may forget where to get off the highway or which crossroad to take—on a route he or she knows well.
- Impairment of coordination skills. Difficulty in backing up and turning around.

One test done by Harry Klonoff, professor of psychology at the University of British Columbia, involved 64 psychologically stable students, male and female. All had used marijuana before. Roughly a third of the students received a low-dosage marijuana joint. One-third were given a high-dosage joint. The third group received a placebo (a joint with the THC removed).

All 64 students drove through a closed course with no other traffic, and 38 of the students also drove a 16-mile route from the university campus to the traffic-heavy downtown area and back again. They were rated, before and after, according to the system used by British Columbia's Department of Motor Vehicles in examining drivers for licensing.

Final figures for the street-traffic test showed that those who had received the low-dose joint had a 42-percent decline in driving skills. Those who received the high-dose joint had a 63-percent decline in driving skills.

Even the "careful" pot smoker who "comes down" from his high before driving may well be a menace to himself and others on the highway. One and a half ounces of alcohol (the equivalent of a shot of whiskey) is excreted from the body in several hours. Marijuana, on the other hand, has 61 known cannabinoids (including THC) that appear to be fat soluble. It is speculated that they collect in body tissue—including the brain.

Legal Limbo

THE DRUNK DRIVER usually finds it hard to hide his condition if stopped by the police. But the pot-high driver often has the ability to "hide the high"—to collect himself, "come down" and carry on a normal conversation with a police officer and thus escape detection, making enforcement all the more difficult.

Also, with alcohol, we have the roadside "breath test" as a deterrent. Every state has specific laws so that the drunk driver can be defined and, if warranted, prosecuted. For marijuana intoxication, however, we have no roadside test.

In March 1980, an inexpensive, reliable method was finally perfected for detecting cannabinoids in urine. According to the National Institute on Drug Abuse's Research Technology Branch, "The cannabinoid test can determine in 60 seconds, with 95-percent accuracy, the presence of cannabinoids in the urine for up to 48 hours after a joint has been smoked."

This is a step in the right direction. Many hospitals and private clinical laboratories have the facilities for running the test, and now at least physicians and parents can be alerted about pot problems with youngsters. But until a roadside test is available to highway police, we are in a legal limbo in which no driver can be prosecuted for being marijuana intoxicated.

One mechanism the body uses to rid itself of these cannabinoids is to allow those in fatty tissue to leak slowly back into the bloodstream to be metabolized and excreted. It takes about 2½ days for *half* the cannabinoids in a single joint to leave the body; it takes about two weeks to get rid of all the cannabinoids in a single joint. As one marijuana researcher put it, "Though the high is gone, the pot is not."

Deadly Duo

THE National High School Senior Survey, conducted by the Institute for Social Research at the University of Michigan, is the only national drug-abuse survey conducted annually. The 1980 survey showed that one out of every 11 seniors smoked pot daily, averaging 3½ joints a day. More than half of the 49 percent who had smoked marijuana "usually stayed high" for up to two hours each time they smoked, and 20 percent of those who smoked pot said that they usually drank at the same time.

How much of a driving impairment does such a mix of pot and alcohol really present?

In a study published in June 1980, Moskowitz and Marcelline Burns, a research scientist at the Southern California Research Institute, tested 12 healthy men (average age 26½) who used pot no more than twice a week and who did not take other drugs. The subjects performed a series of laboratory tasks, each related to a specific driving component (tracking, information processing, and so on). Each subject was tested at different times, under four different conditions. (No one knew what he was getting at any one time.) The conditions ranged from low alcohol and placebo marijuana to placebo alcohol (orange juice with a few drops of vodka floating on top) plus one marijuana cigarette.

Following this study, Moskowitz and research scientist Alison Smiley did a related one, but this time the subjects sat in a driving simulator, where they "drove" for 21 miles.

The results of both studies were virtually the same. The "alcohol only" subjects showed the well-recognized alcohol-caused driving impairments in reaction time, coordination, visual perception, attention and information processing. The "pot onlys" had all the same impairments.

But the results of dual use of alcohol and pot were, explained Moskowitz, "essentially additive." (One plus one equals two.) "Driving," he explained, "is obviously a multitask process. You must be able to do two or more things simultaneously. Alcohol impairs this ability in one way, and marijuana impairs it in another way. The alcohol-impaired driver tends to concentrate on one driving element to the exclusion of everything else. By sticking close to the center line for reference, the driver can keep the car from weaving but may be totally unable to attend to any unexpected highway happening. The marijuana-impaired driver, on the other hand, appears to have brief total 'dropouts' in his driving attention. Thus, taken together, alcohol and marijuana undermine the ability of the driver to process the roadway information necessary to control the vehicle safely."

Moskowitz summed up both the studies by saying, "Drivers under the combined influence of alcohol and marijuana have a greatly increased likelihood of initiating an accident."

In August 1980, Lawrence Sutton, executive director of Pittsburgh's Institute for Driver Research and Substance Abuse, tested the effects of marijuana and alcohol in a "closed" driving course. Sutton selected nine students from the University of Pittsburgh. All were experienced drivers, pot smokers and drinkers. Each drove on four successive afternoons, under four different "conditions":

1. pot (one joint) plus alcohol;
2. placebo alcohol plus one joint;
3. placebo joint plus alcohol;
4. placebo alcohol plus placebo joint.

During the 36 driving trials, patrolman Donald Dolfi followed the subjects in his own car, noting their performance, which included executing common procedures for a driver's license examination in Pennsylvania. He "pulled over" those drivers he would have suspected of "DUI" (driving under the influence)—if they had been on the road.

When the test was completed Dolfi said to Sutton, "I guess I spoiled your study. I only pulled over drivers 15 times."

But when the "double blind" code was revealed and Sutton looked at the figures, a chill went through him. Of the 15 incidents in which Dolfi "pulled over" drivers, three students were under the "marijuana only" condition, two were under the "alcohol only" condition, and one bad driver was under the double placebo. But all nine of the rest—100 percent—were under the alcohol plus marijuana condition.

The results of Sutton's study are striking indeed. They show that the impairments caused by pot plus alcohol are *more* than additive. They are synergistic. One drug potentiates ("fires up") the other. One plus one equals three or four on the impairment scale.

A further sobering fact is that *if* they had been on the highway, none of these drivers could have been prosecuted for DUI since they had such a low blood-alcohol-concentration level and since there is, as yet, no viable roadside test for the pot-high driver. All 15 "pulled over" for DUI by Dolfi would, therefore, have been "home free"—unless, of course, they had injured or killed themselves or others.

What Can Be Done?

IN ADDITION to horrendous personal costs in wrecked and lost lives, what are the dollar costs of the ever-mounting highway mayhem?

According to a study published in April 1981, "Only cancer outranks motor-vehicle crash deaths and injuries in dollar costs to the nation. The killing and injuring of people on the highways can be conservatively estimated as costing the United States some $20 *billion* annually in wasteful, unproductive expenditures, including $6.7 billion in medical, rehabilitation and other direct outlay."

William Haddon, Jr., M.D., president of the Insurance Institute for Highway Safety, which sponsored the 420-page report, points out, "With the appearance of this study, public policy makers must face the immensity of this tragedy in terms of its burden on the national economy—and, it is hoped, do

something about it."

At this time, most public policy makers have done very little about it. A few, however, are taking steps, at least along the alcohol/driving route.

Rep. Michael Barnes (D., Md.) and 50 other members of the House of Representatives have introduced a bill (HR 2488) calling for a mandatory sentence of at least ten days' community service, plus fines, participation in alcohol-treatment or traffic-safety programs, and mandatory license suspension for up to one year for first-time drunk-driving offenders—and for repeat offenders, the same, plus mandatory sentencing of at least ten days' imprisonment and suspension of driver's license for at least one year. An identical bill (S 671) has been introduced in the Senate by Sen. Claiborne Pell (D., R.I.).

Candy Lightner of Fair Oaks, Calif., has formed a national organization called MADD—Mothers Against Drunk Drivers. "As it stands now," says Lightner, "drunk-driving manslaughter is a socially acceptable form of homicide. That is why we are MADD!"

The organization has some 32 chapters in seven states. They work to alert the public to the serious consequences of drinking and driving, as well as to educate victims of drunk drivers and other concerned citizens as to what they can do to help resolve the problem in their state and community.

One state that has taken a giant step forward on the marijuana/driving front is Minnesota. In many states an open liquor bottle in the car of a DUI is considered *prima facie* evidence of a crime. In Minnesota, there is also an "open baggie" law. Anyone with any marijuana in the car—whether smoking it or not—is considered to have committed a crime. If involved in an accident or driving recklessly "in a serious way," he or she is treated within the criminal-justice framework. First offenders who have not endangered anyone must attend a mandatory "pot course" on the hazards of marijuana with emphasis on pot-impaired driving.

A second-possession offense usually means a fine of up to $500 and incarceration for a series of weekends in a county jail or work farm. But of the 9000 first-offenders who have gone through the four- to six-hour course, only 22 have been arrested a second time.

For more information on this award-winning "mandatory pot course," write Bruce Bomier, Director, Minnesota Institute, 2829 Verndale Ave., Anoka, Minn. 55303.

THINK OF THIS: each man, woman and child in the United States can expect to be in a car crash once every ten years. Since any of us can be imperiled at any time by the most deadly drug-related disease of all—Death on the "High"-ways—it behooves us to do what we can to halt this menace. ii:

The Gallup Youth Survey

Marijuana Support Fading Among Youths

By GEORGE GALLUP

PRINCETON, N.J. — Although some teen-agers continue to experiment with marijuana, the drug is apparently fading as a symbol of the teen generation, according to the results of the latest Gallup Youth Survey.

The poll also indicates that teen opposition to legalizing marijuana or decriminalizing its possession in even small amounts is solidifying.

For the second year in a row, the survey shows that 74 percent of the country's youth oppose legalizing pot. Youth opposition to decriminalizing marijuana possession rose from 57 percent in 1981 to 60 percent in 1982.

Still, about one teen-ager in three (37 percent) reports having tried marijuana at least once. Marijuana was used by 8 percent of those polled during the week previous to the interview, 5 percent during the previous month, 16 percent between one month and one year ago, and 8 percent over one year ago.

Several key signs in the surveys indicate that marijuana use soon may no longer be the "in" thing to do. Use is declining, while opposition to legal reform favoring its use is growing among students of above average academic standing. Previous high levels of use, and approval from teen-agers on the liberal, trend-setting East and West Coasts are leveling off. Most importantly, long-term trends in use, and approval by those ages 13 through 15 are steadily declining.

Gone is the past rhetoric of youths that urged the nation to "turn off, light up, turn on." In its place are comments opposing marijuana on legal, social, and health grounds.

Teen-agers took surprisingly tough stands on the decriminalization issue, arguing that the amount involved does not matter. The judgment of a 17-year-old boy from Hydro, Okla., was typical: "It doesn't matter whether it's an ounce or a ton -- it's breaking the law."

The flower children of the 1960s would have been shocked had they known that a young woman in Chicago in 1982 probably summarizes the views of many of her generation when she says: "Marijuana is harmful to the human body. It increases the crime rate because an addicted person may often have to steal to support the habit. We should strive to produce healthy and honest citizens, and marijuana is not conducive to that goal. There is no middle ground between right and wrong."

By the time they are 16 through 18, half of the nation's youth (52 pe[illegible]nt) may have tried marijuana. Their opposition to legalization and decriminalization is not as strong as that of younger teens, but those favoring tempering the laws often qualify their remarks by suggesting legalization for medical purposes, or demonstrate concern about conviction of one-time experimenters. More typical, perhaps, are the remarks of two 17-year-olds:

"Legalizing marijuana will make it as available as tobacco, and then we will have even more stoned seventh-grader in school restrooms." (Fairport, N.Y.)

"I enjoy life to the fullest and I am very happy without the help of marijuana or any other drug." (Ayden, N.C.)

Following are the questions asked:

"Have you ever tried marijuana?"

"Do you think the use of marijuana should be made legal?"

"Do you think the possession of small amounts of marijuana should be treated as a criminal offense?"

The findings reported today are based on telephone interviews with a representative national cross section of 1,013 youths, ages 13 through 18 conducted in June 1982.

The Gallup Youth Survey

Teens' Views on Marijuana Show Dramatic Change

For release Feb. 8, 1984 and thereafter

By GEORGE GALLUP

PRINCETON, N.J. — Marijuana is apparently becoming passe among America's teens.

In 1978, when the Gallup Youth Survey first began polling teens on their views about marijuana, 27 percent of the respondents admitted to having used the substance during the previous month. This figure declined steadily during subsequent surveys, and in the 1983 poll, only 8 percent made such an admission.

Similar declines were shown in other aspects of teen views on marijuana. For example, in 1978, nearly four teens in 10 admitted that they had tried marijuana at least once. Five years later, the figure has been cut in half.

Teens have been taking an increasingly harder stand against marijuana when the law is concerned. In 1978, over half — 54 percent — believed that marijuana possession should not be treated as a criminal offense. By contrast, the latest survey finds 70 percent of teens calling for criminal penalties for marijuana possession.

Even in 1978, the majority of teens (62 percent) opposed legalization of marijuana. The latest survey, however, reveals that an even greater number of teens — eight in 10 — now share this view.

Over the years it has been the younger teen-agers — 13 to 15 years old — who have been in the vanguard of opposing legalization and avoiding use of marijuana.

In the late 1970s over half of the older teens reported having tried marijuana, as compared to only about 26 percent of the younger teens. Of these younger teens, who are now the 16 to 18 year olds, only 28 percent said in 1983 that they have ever tried marijuana. If this trend continues, even further reductions in use of marijuana may be anticipated, as only 10 percent of today's young teen-agers report having ever tried it.

Only 13 percent of those residing in small towns and rural areas say they have tried marijuana, and 20 percent of

suburban teens give similar reports. Use is highest in central cities at 30 percent. There is no evidence to suggest, however, that higher use in the cities is racially oriented, since white teens are slightly more likely than non-whites to report having tried marijuana, by a margin of 20 percent to 17 percent.

Regionally, after a temporary rise in use in the traditionally conservative South and Midwest, use has dropped to 14 percent in the Midwest and to 18 percent in the South.

Highest levels of use are found in the eastern (22 percent) and western (29 percent) regions of the country.

Although far fewer teenagers appear to approve of or use marijuana themselves, their concern about the substance is unabated. As the survey recently reported, teens continue to name drug abuse as the biggest problem facing their generation. In 1983, 35 percent named it as the leading problem for people their age, compared to 27 percent who named drug abuse in 1977.

These are the questions:

"Have you ever tried marijuana?"

"About how long ago did you last try marijuana?"

"Do you think the use of marijuana should be made legal, or not?"

"Do you think the possession of small amounts of marijuana should or should not be treated as a criminal offense?"

The findings reported today are based on telephone interviews with a representative national cross section of 542 teen-agers, 13 through 18, conducted from July through September 1983.

The Gallup Youth Survey

Drug Abuse Named as Biggest Problem Facing Teen-Agers

By GEORGE GALLUP

PRINCETON, N.J. — Teen-agers, according to the latest Gallup Youth Survey, say drug abuse is the biggest problem facing their generation. Concern about the impact of drugs has risen from 27 percent in 1977, when teen-agers also named it as the biggest problem facing their generation, to 35 percent in 1983.

Since 1977, however, the nature of the problem may have changed. Gallup Youth Surveys have shown a steady decline over the years in teen-age acceptance of proposals to legalize marijuana or to decriminalize its possession in small amounts.

In 1977 teen-agers saw drugs as a part of the generation gap and a symbol of their generation's uncertainty in coping with the world around them.

In the current survey teen-agers name other kinds of problems as being important to their generation. Younger teen-agers, 13 to 15 years old, are particularly concerned about drug abuse, with 42 percent naming it as the biggest problem, in comparison to 28 percent of the older teen-agers. Young women show somewhat greater concern than young men about drug abuse by a margin of 38 percent to 31 percent.

Unemployment, named by 16 percent of the teen-agers, ranks as the No. 2 problem facing the current generation. In 1977, only 6 percent said that poor job prospects were a problem. Those who will soon be entering the job market are particularly concerned about unemployment with 22 percent of the teen-agers, 16 to 18, naming it as the leading problem.

Alcohol abuse is the third leading area of concern and is named by one teen-ager in ten (10 percent). Alcohol abuse also ranked third in 1977 when it was named by seven percent. Peer pressures (8 percent) rank fourth — and often consist of pressures felt by teen-agers from their friends to break the rules and to experiment with drugs or alcohol.

The good news about today's generation may be that teen-agers no longer feel the pressure of alienation from their parents. Only five percent now cite lack of communication or getting along with their parents as their biggest problem.

By contrast, in 1977 one teen-ager in five (20 percent) said a breakdown in parental communications and relations was the major problem facing their generation.

Today's teen-agers still face many problems, but at least now they may not have to deal with parental alienation at the same time. By the same token, citation of problems in growing up or finding one's purpose in life have declined from six percent in 1977 to only one percent in 1983.

Problems in school are cited by only one teen-ager in 20 (five percent) and an additional one percent express concern about school drop-outs.

Fear of war is named by four percent. This fear was cited by less than one percent in 1977.

Economic problems such as inflation were named by only two percent, and one percent cite the specific economic problem of financing their college education.

In 1977 smoking and job boredom were each cited by three percent of the teen-agers, but in 1983 each was mentioned by fewer than one percent of the nation's teen-agers as their generation's leading problem.

The question was asked as follows:

"What do you feel is the biggest problem facing people your age?"

The results reported are based on telephone interviews with a representative national cross-section of 508 teen-agers conducted from April to June 1983.

Senate

SENATE DRUG HEARINGS

Mr. GURNEY. Mr. President, on May 9, the Senate Subcommittee on Internal Security embarked on a series of hearings on the marihuana-hashish epidemic and its impact on U.S. security. It was my privilege to preside over the two lengthy hearings on May 17 and 18, at which most of the medical, scientific, and psychiatric testimony was presented.

For the purpose of these hearings, the subcommittee brought together more than a score of top-ranking medical researchers and scientists from six countries. Several of the participants in our hearings, themselves scientists of international eminence, told me afterwards that our witness list constituted the most distinguished panel of experts on marihuana and hashish—cannabis as it is known scientifically—ever assembled at a single gathering.

I am not exaggerating when I say that I consider these hearings to be among the most important ever conducted by a committee of Congress.

They provide a terrifying answer to the question: how harmful is marihuana? In my remarks today, I plan to summarize the basic scientific findings presented to the subcommittee.

The many articles that have been written about the hearings have brought a flood of letters to my office from law enforcement officers, Government officials, educators, clergymen, writers, editors, students, and anxious parents. Already, the hearings are having a measurable impact. It is my conviction that this impact will be enhanced many times over when the printed record of these hearings becomes available sometime next month.

In his opening statement, Senator EASTLAND clearly established the jurisdiction of the Internal Security Subcommittee by pointing out that the cannabis epidemic had created a new complex of security problems for our Military Establishment and that the widespread use of marihuana and hashish had been encouraged by a militant promarihuana propaganda campaign which began at the time of the Berkeley uprising and continues to this day. As pointed out by Prof. Hardin Jones, assistant director of the Donner Laboratory for Medical Research at the University of California in Berkeley, in his testimony of May 20 before the subcommittee, this prodrug propaganda campaign was initiated by members of the radical left movement whose purpose is the revolutionary overtem. In the words of Timothy Leary, guru of the leftist drug cultists:

Drugs are the most efficient way to revolution.

Or, quoting Jerry Rubin:

Pot is central to the revolution. It weakens social conditioning and helps create a whole new state of mind. The slogans of the revolution are going to be pot, freedom, license. The Bolsheviks of the revolution will be long-haired pot smokers.

There is a tendency to dismiss people like Leary and Rubin as eccentrics or kooks—but one must remember that the underground press which featured them was read by a host of young people every week.

The damage done by this leftist promarihuana propaganda was compounded by the many academicians who were disposed to be tolerant about marihuana, because it seemed to be an integral part of the student revolt against the establishment. It was further compounded by a small number of scientists and a somewhat larger number of literary psychiatrists who repeatedly gave marihuana a clean bill of health based on limited short-term observations—without waiting for the findings on the long-term consequences of marihuana. Most of these long-term findings have only started coming in within the last few years—and that is what our recent hearings were all about.

I recall that when the controversy about cigarette smoking and cancer was raging during the late 1950's, there were medical scientists of some eminence who came to the defense of cigarettes. For example, Dr. Ian McDonald, one of California's foremost cancer specialists, and chairman of the Cancer Commission of the California Medical Association, made the sweeping statement before a congressional committee, that not only did cigarette smoking bear no relationship to lung cancer, but that he would venture the assertion that "a pack of cigarettes a day will keep lung cancer away."

Dr. McDonald's assertion was completely demolished within several years by the mounting mass of scientific evidence that there is a relationship between cigarette smoking and lung cancer.

The sweeping defenses of marihuana that are to be found in a number of books written several years ago by men of some reputation, have, in the same manner, been completely outdated by the mass of recent reports from top-ranking cannabis scientists in various parts of the world.

In amplifying the purpose of our recent hearings, Senator EASTLAND said the following at the hearing of May 9:

When a conflict of opinion exists within the scientific community on a question as important as marihuana, the Congress and the American people are entitled to a fair presentation of both sides to this controversy. In fact, however, there has been widespread publicity for writings and research advocating a more tolerant attitude towards marihuana—while there has been little or no publicity for writings or research which point to serious adverse consequences. The writings are there, the research papers by eminent scientists are there, the books are there—but very few people know about them. One witness who will appear before the subcommittee will testify that in campus bookstores in the United States, Canada and England, virtually all of the literature he found on marihuana—and he found a lot of it—took a tolerant attitude towards it or even advocated legalization.

It is because of this strange imbalance in dealing with the question of marihuana that most intelligent people are under the impression that the bulk of the scientific community looks upon marihuana as a relatively innocuous drug. Part of the purpose of the forthcoming hearings will be to inquire into, and document, the extent of this imbalance. In doing this, we shall, in effect, be presenting the "other side," so that the Senate—and the American people—will have a better understanding of the problem.

The first point that has to be made is that our country is now caught up in what is probably the worst cannabis epidemic in history—even worse than the classic epidemics that had so debilitating an effect on the Egyptian people and other Mediterranean peoples. The fact that the Federal law enforcement authorities last year seized 780,000 pounds of marihuana and 54,000 pounds of hashish means that perhaps 10 times as much cannabis—or even more—got into the country and was consumed. These are fantastic quantities when you consider that a pound of marihuana can intoxicate almost 200 people, while a pound of hashish can intoxicate eight times as many.

All strata of our population are involved in the epidemic—our college students, our high school and junior high school students, grade school students, ghetto youth, blue collar workers, and even staid conservative members of the business and professional community. On this last point, I note that the subcommittee has received a letter from an investment counsel in Chicago urging a more tolerant attitude toward marihuana because, he said, the significant majority of his business and professional freinds smoke it.

The amount of marihuana and hashish being seized in this country is enormous. A few months ago there was a single seizure involving 10,000 pounds of hashish; while on June 26, United States and Mexican agents seized 42 tons—84,000 pounds—of marihuana in the vicinity of the Mexican border. Commenting on the tremendous increase in cannabis imports into the United States, Mr. Andrew C. Tartaglino, Acting Deputy Administrator of the Drug Enforcement Administration, told Senator EASTLAND in the opening hearing on May 9 that—

The traffic in, and abuse of, marihuana products has taken a more serious turn in the last two or three years than either the courts, the news media, or the public is aware. The shift is clearly toward the abuse of stronger, more dangerous forms of the drug which renders much of what has been said in the 1960's about the harmlessness of its use obsolete.

As I have pointed out, the epidemic spread of marihuana and hashish use has been made possible, and even encouraged, by widespread publicity given the statements of scientists and lay spokesmen advocting a more tolerant attitude toward marihuana, and by the near blackout—at least until very recently—on scientific writings pointing to serious adverse consequences.

For instance, books like Lester Grinspoon's "Marihuana Reconsidered" and the Consumer Union's "Licit and Illicit Drugs"—both of which took the stand that marihuana was not seriously dangerous and should be legalized—received rave reviews in the New York Times and the Washington Post and other papers, and the authors were invited to appear on numerous talk shows. But when Dr. Gabriel Nahas, a distinguished Columbia University scientist with more than 400 scientific papers to his credit, a year and a half ago published a book entitled "Marihuana—Deceptive Weed," there was no review in the Times or the Washington Post and no invitation to appear on talk shows. When half a dozen Columbia University scientists wrote individually to the New York Times to suggest that Nahas' book had merit and should be reviewed, their letters were ignored. And when 16 professors and scientists at Columbia's College of Physicians and Surgeons signed a joint letter in January of this year to the editor of the Times book review section urging that Nahas' book be reviewed, this letter was also ignored.

This one-sided publicity has succeeded in fostering the almost universal impression that marihuana is a relatively innocuous drug, and that it is so regarded by the scientific community. So widespread is this impression that just over a year ago, in March of 1973, District of Columbia Mayor Walter Washington's Advisory Committee on Narcotics Addiction, a committee consisting of some 40 prominent citizens, filed a report urging the complete legalization of marihuana on the grounds that—

No demonstrable medical evidence is available to support the assertion that marihuana use is hazardous or detrimental to the physical or mental health of the user.

Only a few weeks ago, the Subcommittee on Internal Security received a phone call from a mother in San Diego who had just been compelled to pull her son out of his senior year in high school, because he was constantly intoxicated on marihuana and hashish. She told the subcommittee that when she had taken her problem to one of the local drug counseling programs, the drug counselor told her that marihuana was really nothing to worry about "I smoke pot every day myself," she quoted the counselor as saying.

There have been warnings from some eminent scientists in the past but—perhaps because they spoke individually—their warnings were ignored. In September of 1972, for example, I presided over a hearing of the Senate Subcommittee on Internal Security at which we took the testimony of Dr. Olav J. Braenden, for many years director of the United Nations Narcotics Laboratory in Geneva. Dr. Braenden testified that, among the scientists working in the field, there was a general consensus that marihuana is dangerous. He said:

As progressively more scientific facts are discovered about cannabis, the more one becomes aware of its potential dangers.

He underscoredthe need for more research and, pointing to the example of thalidomide, he told the subcommittee that when it comes to medicine and drug policy it is better to be careful than to be careless.

But the media generally paid shamefully little attention to the testimony given by this eminent European scientist—testimony based not only on his own experience but on the experience of some 26 cooperating laboratories in various parts of the world.

The recent hearings, I am happy to report, have finally succeeded in breaking through the virtual blackout which characterized previous media attention to the adverse scientific evidence on marihuana. There were too many scientists of distinction involved for anyone to be able to dismiss their testimony as the work of scientific mavericks or crackpots. The credibility of their collective testimony was reinforced by the fact that quite a few of them, earlier in time when embarking on their research, leaned toward the tolerant attitude on marihuana that was then prevalent. Adding further reinforcement was the additional fact that this mass of independently conducted scientific investigations came up with results that frequently overlapped and mutually supported one another.

On the basis of the attention our hearings have already received, I believe that these hearings have succeeded in completely shattering the widespread belief that the scientific community looks upon marihuana as a relatively harmless drug.

All of the scientists who testified said that they considered marihuana a very dangerous drug. They further stated that this was the consensus at several recent international conferences of cannabis researchers. Several of the witnesses said that they considered cannabis the most dangerous drug on the market today.

Collectively, their testimony pointed to the following findings: First, that marihuana reduces DNA synthesis thus impeding the process of cellular reproduction; second, that, smoked even in small amounts, it results in broken and malformed chromosomes, thus opening up the possibility of abnormal births or genetic mutations; third, that chronic marihuana smoking results in a severe reduction in male hormone levels and sperm count; fourth, that marihuana alone, or combined with cigarette smoke, damages lung tissues far more rapidly than cigarette smoke alone; fifth, that there is evidence of irreversible brain damage after several years of chronic exposure; and sixth, that even single exposures to large dosages can lead to psychotic episodes, while chronic use leads to paranoid symptoms and serious and persistent deterioration in mental functioning.

I have made the point that this testimony cannot be lightly dismissed, because there are too many internationally distinguished scientists involved. The witnesses included such eminent names as: Prof. W. D. M. Paton of Oxford University, who heads up the British drug research program and who is without question one of the world's leading pharmacologists; Prof. Nils Bejerot of Sweden, perhaps the ranking international expert on the epidemiology of drug abuse; Prof. M. I. Soueif of Egypt, author of the classic study on the consequences of hashish addiction in his country; Prof. Robert Heath, chairman

Neurology at Tulane University Medical School; Prof. Morton Stenchever, chairman of the Department of Obstetrics and Gynecology at the University of Utah Medical School; Dr. Julius Axelrod, Nobel Prize winning researcher of the National Institute of Mental Health; and, at a previous hearing, Dr. Henry Brill, senior psychiatric member of the Shafer Commission and president of the American Psychopathological Association.

Let me recapitulate some of the major findings that were presented to the subcommittee by the scientists who testified.

1. TOXICITY AND ACCUMULATION IN THE BRAIN

Marihuana is a complex toxic substance, whose principal psychoactive component is THC—tetrahydrocannabinol. This substance is intensely soluble in fat, which gives it the ability to penetrate into all parts of the body, including the brain, the ovary, the testes, and the fetus. This characteristic means that it tends to persist in the human body for long periods of time after exposure, and to accumulate with repeated exposures.

One of the principal areas of accumulation is the human brain. This has been established with radioactively tagged THC.

Experiments with animals have demonstrated that the toxicity also tends to be cumulative; thus, it requires one-tenth as much marihuana to kill a mouse if given in repeated daily doses as if given in a single dose.

2. EVIDENCE OF IRREVERSIBLE BRAIN DAMAGE

Related to its toxicity and its tendency to accumulate in the brain, is a growing body of evidence that regular marihuana use for a year or 2 may result in irreversible brain damage. This also ties in with the evidence developed by a number of researchers that marihuana use reduces DNA synthesis and, in so doing, reduces the mitotic index, or the rate at which the body produces new cells to replace the cells that are constantly dying off.

Several of the psychiatrists who testified before the subcommittee said that a hypothesis of irreversible brain damage tied in with their own clinical observations that brilliant young people who went on prolonged marihuana binges were simply not able to recapture the same level of mental competence they had displayed before becoming chronic marihuana users, even after abstaining from marihuana for several years.

Dr. Robert Heath of Tulane University, working with brain wave patterns in rhesus monkeys, demonstrated that after posure there was a persisting abnormality in the brain wave patterns of the monkeys, even when the marihuana was removed.

Professor Paton referred to animal experiments which demonstrated that rats exposed to marihuana smoke had significantly smaller brains and hearts than rats not so exposed. In the light of the cumulative evidence, he felt that serious attention had to be paid to the research of Dr. Campbell and his colleagues at the Royal Bristol Hospital, demonstrating that chronic young marihuana smokers aged 18 to 26 had suffered as much brain atrophy as is normally encountered in people aged 70, 80 and 90.

3. DAMAGE TO THE CELLULAR SYSTEM

New scientific research pointing to radically new findings, is traditionally not accepted by the scientific community unless there is confirming or converging evidence from other independent researchers. What was truly remarkable about the body of evidence presented to the subcommittee was the fact that the main reports on new marihuana research converged from four or five or six directions on several central conclusions.

There was, for example, converging evidence from a substantial number of the scientists whose research pointed to damage to the cellular system, primarily through reduced DNA and RNA synthesis.

Dr. Akira Morishima of Columbia University, told the subcommittee that—

When the specimens of three marihuana smokers were compared with those of age and sex matched non-smokers, the mitotic index, or the proportion of those cells in process of cell division, was noted to be only 2.3 percent in marihuana users, compared with 5.9 percent for the controls.

Dr. Morishima also found that a large proportion of the cell nuclei in marihuana smokers contained a significantly decreased number of chromosomes—from 33 to 8—instead of the 46 chromosomes found in normal cells.

Dr. Gabriel Nahas and a team of three other Columbia University scientists found that in 51 marihuana smokers who had averaged three marihuana cigarettes a week for 4 years, the production of the immune cells—the T-lymphocytes—in the blood was 41 percent less than in nonsmokers. He made the point that the immunity response of the smokers "was similar to that of patients with cancer, or kidney grafts—treated with immunosuppressants—who were tested and who presented documented evidence of an impairment of their immunity system."

Professor Cecile Leuchtenberger, head of the Department of Cytochemistry at the Swiss Institute for Experimental Cancer Research, also found evidence of serious damage to the cellular process, involving the possibility of lung cancer and genetic damage. This is what she told the subcommittee:

Smoke of marihuana cigarettes has harmful effects on the tissues and cells of animals and of humans. The observations that marihuana cigarette smoke stimulates irregular growth in the respiratory system, that it interferes with DNA stability of cells and chromosomes, that is it disturbs the genetic equilibrium, strongly suggests that marihuana cigarette smoke is a health hazard which may not only be implicated in lung carcinogenesis, but may also have mutagenic potentialities.

Prof. Arthur M. Zimmerman, of the University of Toronto, in a statement subsequently submitted to the subcommittee, reported on recent research dealing with the effects of marihuana on a culture of unicellular organisms.

His studies, he said:

Clearly demonstrate that THC at a modest dosage reduces the growth and delays cell division of a uni-cellular protozoan, tetrahymena. These effects on cell growth are related to a depression of cell metabolism, i.e., a reduction of DNA, RNA and protein synthesis. The effects of THC are reflected in a reduction in the cell's ability to synthesize and assemble RNA, which is an essential components of the protein synthesis system. The reduced cell synthesis, in the presence of THC, may be attributable to the reduction of DNA synthesis which is known to direct cell metabolism.

Professor Paton, who has monitored some 800 cannabis research papers in connection with his duties as director of the British drug research program, told the subcommittee that there were many more papers dealing with other aspects of the damage done by marihuana to both cell metabolism and cell division. Said Professor Paton:

Numerous such effects have now been described, including actions on microsomes, on mitochondria, on neurones, fibroblasts, white blood cells, and on dividing cells, affecting metabolism, energy utilization, synthesis of cellular constituents, and immunological responses.

Professor Paton and several of the other scientists who testified expressed grave concern that grade school children exposed to marihuana—an increasing phenomenon over the past 2 or 3 years—might damage themselves in a manner which would make impossible the physical and mental maturation. The years on either side of the advent of puberty normally constitute a period of explosive physical development, when new cells are being produced more rapidly than at any other period in the lifespan. A serious impairment in DNA synthesis and cell division during this period could conceivably have catastrophic effects. To paraphrase what Professor Paton told the subcommittee, we might, a number of years hence, find ourselves saddled with a partial generation of teenagers who have begun to grow old before they have even matured.

4. DAMAGE TO THE REPRODUCTIVE SYSTEM

The subcommittee also heard impressive evidence dealing with the damage—or potential damage—of marihuana to the reproductive system. Dr. Robert C. Kolodny, who heads up the Endocrine Research Section at the Masters and Johnson Research Foundation, reported that in a group of 20 males aged 18 to 28 who had used marihuana at least 4 days a week for a minimum of 6 months, the principal male sex hormone, testosterone, was found to be approximately 44 percent lower than for the control group of men who had never used this drug. He said that the reduction in testosterone level appeared to be related to the amount of marihuana used, so that men who averaged 10 or more joints per week had significantly lower levels than men who used fewer than 10 marihuana cigarettes weekly. He also found subnormal sperm counts in six of the men tested. In a few cases involving very heavy use, the sperm count was so low that the men had to be considered clinically sterile. Finally, he reported on several instances where intermittent impotence, apparently associated with marihuana use, disappeared after the use of marihuana was discontinued.

Although making the point that the Masters and Johnson results will have to be confirmed by further research, Dr. Kolodny warned against the possible dangers in these terms:

Since at least some of the active constituents of marihuana have been shown to cross the placenta, there may be a significant risk of depressed testosterone levels within the developing fetus when this drug is used by a pregnant woman. Since normal sexual differentiation of the male depends on adequate testosterone stimulation during critical stages of development, it is possible that such development might be disrupted. Theoretically, there is also the possibility that marihuana use by the prepubertal male may delay the onset or completion of puberty or may interfere with bone growth, if a suppression of pituitary or hypothalamic function occurs. Neither of these possibilities have been investigated.

Although Dr. Kolodny said that he was not aware of any confirmatory research that had yet been conducted on the spe-

togenesis, Dr. Cecile Leuchtenberger told the committee that she has found a marked disturbance in spermatogenesis in male mice which had inhaled marihuana smoke for several months. Not only were there fewer mature sperm cells than in the controls, but many of the spermatids—the precursors of the sperm cells—carried a faulty and reduced amount of DNA. This, she said, would indicate that marihuana smoke interferes with male fertility.

Dr. Morton Stenchever, of the University of Utah, reported on research which he and two other University of Utah scientists had conducted over 1971 and 1972 on chromosome damage in chronic marihuana users. They found that the chronic users displayed roughly three times as many broken chromosomes as nonusers, and that smoking was also accompanied in some cases by abnormal chromosone formations. The much higher rate of broken chromosones held true for light users who had averaged only one marihuana joint per week.

In summarizing his studies, Dr. Stenchever said:

The study did not shed any light on the question of whether or not this chromosome breaking agent or any other chromosome breaking agent is capable of causing abnormalities of unborn children, an increased mutation rate, or an increased incidence of cancer. However, all of these possibilities are potentially there and only further studies of a more detailed nature will be able to answer these questions.

Dr. Paton, in his testimony, reported on a number of experiments with animals that pointed to a series of adverse effects from marihuana on the birth process. Said Dr. Paton:

Administration of cannabis during the vulnerable period of pregnancy has been found to cause fetal death and fetal abnormalities in three species of animals. The deformity includes lack of limbs (reduction-deformity). The factor responsible has not been identified, but does not appear to be THC, although new work is showing that THC kills a majority of fetuses and in the remainder produces an increased incidence of still births and stunting. The effect is dose-related, an important thing to establish if cause and effect are considered.

One must notice that general anesthetics as a class can also produce fetal abnormality. A provisional hypothesis for teratogenicity, therefore, is that this action of cannabis reflects its fat-solubility and relation to anesthetics, and constitutes a sort of anesthesia, for instance, of limb buds developing in the fetus at critical periods—hence the reduction-deformity. It must be stressed that all I have said refers simply to the development of the fetus. There is also the question whether the genetic material, perhaps as a result of interference with cell-division, is altered—giving life to heritable defects.

In one of the animal experiments to which Professor Paton referred, the teratogenic effects carried over for another two generations without further exposure to marihuana.

In the light of all of this converging research, I do not think it premature to warn the public that the use of marihuana during pregnancy, or its chronic use prior to pregnancy, may result in birth defects or even in genetic mutation. Although his research would have to be duplicated by other scientists before it could be considered definitive, Dr. Kolodny made the point that the evidence already on hand was strong enough to warrant a public warning. Professor Paton went one step further. In response to a question, he stated flatly that those indulging in chronic abuse ran a serious risk of giving birth to abnormal or defective offspring.

CANNABIS AND CANCER

There is a growing body of evidence that marihuana smoke has a far greater potential for bringing about cancerous alterations in tissues than does tobacco smoke. Dr. Cecile Leuchtenberger reported that her experiments have demonstrated that addition of marihuana to tobacco cigarettes produced a smoke which was much more harmful to mouse lung cultures than was the smoke from tobacco cigarettes without marihuana.

Drs. Kolansky and Moore, two Philadelphia psychiatrists, told the committee that emphysema and other disorders of the respiratory track were the general rule among chronic marihuana smokers.

Dr. Forest S. Tennant, Jr. ,who headed up the U.S. Army drug program in Europe from 1968 until 1972, told the committee that among chronic hashish smokers in the Armed Forces, bronchitis and sinusitis were very commonplace and that he had been surprised to find in young men of 20 the kind of acute bronchitis ordinarily found in cigarette smokers who had smoked heavily for many years. He said that—

The abnormalities found in the bronchial biopsies were the same that are associated with heavy cigarette smoking and cancer on the lung.

What makes these findings all the more alarming is that, because of the time limitations of an Army tour of duty, the young men examined by Dr. Tennant had been chronic cannabis abusers for very brief periods of time—several months to a year at the most.

Dr. Paton pointed out that one of the major differences between cigarette smoking and marihuana is that the inhalation and retention of the smoke is much deeper and more efficient with marihuana than it is with cigarettes. Calling for medical studies on a wide scale to determine the effects, Professor Paton said that emphysema which is normally a disease of later life is now cropping up with increasing frequency in young people, opening up the prospect "of a new crop of respiratory cripples" early in life.

It will take some years before scientists can report in an epidemiological manner the precise impact of marihuana on cancer. Hopefully, now that we are alerted, it should not take us long to get this information as it took us to find out about the relationship between cigarette smoking and cancer.

THE PSYCHIATRIC EFFECTS OF MARIHUANA

There was also a remarkable convergence of findings between the psychiatrists who testified before the subcommittee on the spectrum of major damage resulting from chronic marihuana usage. The psychiatrists included Dr. Harvey Powelson, for 8 years—1964-72—the head of the psychiatric division of the student health service at Berkeley; Dr. Henry Brill, senior psychiatric member of the Shafer Commission and the president of the American Psychopathological Association; Dr. N. I. Soueif, of the university of Cairo, recognized as the foremost expert on hashish addiction in Egypt; Dr. Philip Zeidenberg, senior research psychiatrist at the New York Psychiatric Institute; Dr. Andrew I. Malcolm of Toronto, until recently staff psychiatrist with the Addiction Research Center of Ontario; Prof. Nils Bejerot of Stockolm, an internationally recognized expert on drug epidemiology; Dr. Conrad Schwartz of Vancouver, chairman of the drug habituation committee of the British Columbia Medical Association; and Drs. Harold Kolansky and William T. Moore, two Philadelphia psychiatrists with wide experience in marihuana-related cases.

Drs. Kolansky and Moore told the subcommittee:

Marihuana and hashish have a chemical effect that produces a brain syndrome marked by distortion of preceptions and reality. This leads to an early impairment of judgment, a diminished attention and concentration span, a slowing of time sense, difficulty with verbalization, and a loss of thought continuity characterized by a flow of speech punctuated with non sequitura which leaves the listener puzzled. In time, the chronic smoker develops a detached look as decompensation of his ego occurs.

Dr. Harvey Powelson, whose extensive exposure at Berkeley over 8 years probably made him the most experienced campus psychiatrist in the country, told the subcommittee that in 1965 and 1966, when the marihuana epidemic first broke, he had had a tolerant attitude toward it, based on the then almost universal assumption that marihuana was not seriously harmful. As a result of his experience, he said, his attitude toward marihuana was changed to the point where he now considers it the most dangerous drug we must contend with. He gave the following reasons for his change in attitude toward marihuana:

1. Its early use is beguiling. It gives the illusion of feeling good. The user is not aware of the beginning loss of mental functioning. I have never seen an exception to the observation that marihuana impairs the user's ability to judge the loss of his own mental functioning.

2. After one to three years of continuous use the ability to think has become so impaired that pathological forms of thinking begin to take over the entire thought process.

3. Chronic heavy use leads to paranoid thinking.

4. Chronic heavy use leads to deterioration in body and mental functioning which is difficult and perhaps impossible to reverse.

5. For reasons which I can't elucidate here, its use leads to a delusional system of thinking which has inherent in it the strong need to seduce and proselytise others. I have rarely seen a regular marihuana user who wasn't "pushing". As these people move into Government, the professions, and the media, it is not surprising that they continue as "pushers," thus continuously adding to the confusion that this committee is committed to ameliorate.

Dr. Philip Zeidenberg, a biologist as well as a psychiatrist, told the subcommittee that—

There is no doubt that a single dose of tetrahydrocannabinol can cause an acute psychotic reaction in mentally healthy individuals, and that marihuana use is also associated with longer-lasting and even chronic psychoses.

All the psychiatrists who testified agreed on the point that chronic marihuana abuse results in a serious loss of motivation—the so-called "amotivational syndrome." Commenting on this point, Dr. Nils Bejerot told the subcommittee that the syndrome is characterized by "a massive and chronic passivity brought about by prolonged and intensive abuse of cannabis. In these cases there is a basically altered sense of reality, and a tendency to magical thinking. Intellectual deterioration, which may be irreversible, and vagabondism commonly develop." Dr. Bejerot expressed the belief that marihuana is an addictive drug and that a strict concept of addiction does not necessarily involve the kind of agonizing withdrawal symptoms that

that—

If cannabis were legalized in the United States this would probably be an irreversible process, not only for this country and this generation, but perhaps for the whole of western civilization. As far as I can see, another result would be a breakdown of the international control system regarding narcotics and dangerous drugs.

THE DANGER OF EPIDEMIOLOGICAL SPREAD

The spreading use of marihuana throughout our society has been made possible in part by the tolerant attitude of the media and the academic community. But another major factor that accounts for the dramatic escalation of marihuana use is the ease with which it can be transported and concealed and used and the relative cheapness of the drug.

As dangerous as alcohol can be when chronically used, the bulky nature of alcohol places certain limits on its use—and these limits are further reinforced by the familiar drunken stagger and by the unmistakable smell of alcohol on an inebriate's breath.

None of these considerations apply to marihuana.

A high school student or a grade school child or a blue-collar worker or an office worker would have difficulty smuggling a bottle of alcohol into his school or his place of work without being discovered. And if he was able to conceal the bottle, he is likely to give himself away by his drunken stagger or his alcoholic breath. With marihuana, however, the concealment of several joints presents no problem ever to the unsophisticated grade schooler—nor is there any drunken stagger or telltale odor.

Cost is another factor contributing to marihuana's tremendous danger of epidemiological spread. Even though the sale of marihuana is illegal, students are able to purchase it—the rate will vary from time to time and from place to place—at approximately $1 per joint. And a joint of good marihuana is quite enough to produce intoxication. If marihuana were ever legalized, an entire pack of joints could theoretically be sold for the same price as a pack of cigarettes or less.

Because of these factors, the marihuana-hashish epidemic, which began in 1965, rapidly spread down into the high schools and junior high schools and then into the grade schools, and more recently into the ranks of the blue-collar workers and businessmen. Beyond its demonstrated ability to involve a very large number of people in a very short time, marihuana use in moderate amounts accelerates rapidly to use in large amounts and more potent forms.

up the Army drug program in Europe, found that young soldiers arriving in Germany could escalate from a few marihuana joints a week prior to arrival, to anywhere from 50 to 600 grams of hashish a month only 1 month later. I want to point out here that it takes only a quarter of a gram of hashish to produce intoxication in the average person.

Dr. Tennant also found that, because of the easy availability of hashish in West Germany, 10 percent of our servicemen rapidly reached the hashaholic stage, while a total of 10 percent consumed hashish in excess of three time a week.

These are facts we have to keep in mind when people talk about the legalization of marihuana in the United States.

Several of the scientists who testified stated that they considered marihuana far more dangerous than alcohol, in terms of its potential for damage to the individual and to society. Summarizing the important differences between alcohol and marihuana, Professor Paton said the following:

Alcohol is taken, often diluted with food, and often for taste or to quench thirst rather than for psychic effect; it is eliminated in a few hours; there is little or no evidence for carcinogenicity or teratogenicity, particularly if nutritional defect and correlation with smoking are allowed for; psychotic phenomena only occur after heavy and prolonged dosage; it occurs naturally in the body of animals, and probably also in man; it has valid medical uses for nutrition and as a vasodilator; it "escalates" only to itself; the price paid for overuse is paid in later life.

Cannabis is taken specifically, and usually by itself (sometimes with other drugs), for its psychic action; it is cumulative and persistent; its tar is carcinogenic and failure to inhale reduces its effect considerably; experimentally it is teratogenic; psychotic phenomena may occur with a single dose; it is not a natural constituent; prolonged trials in medicine from the 1840's led to its abandonment from pharmacopoeias; it can predispose to the use of other drugs; the price for its overuse is paid in adolescence.

One could say that cannabis shares the disadvantages of alcohol and tobacco, together with its own psychotogenic and biochemical actions, its chronic effects being accentuated by its cumulative tendency, giving it much earlier adverse action.

To what Professor Paton said, one has to add the much greater potential of marihuana for epidemic spread, about which I have already spoken.

MARIHUANA AND THE LAW

What I have said about the physical and psychological effects of marihuana should not be construed as meaning that I favor tougher penalties for those who smoke it occasionally and who are caught in the possession of small quantities.

In his opening statement, Senator EASTLAND made it clear that the subcommittee was opposed to sending young people to prison for the possession of small quantities of marihuana for personal use. I strongly support this position. The fact is that at the present time very few young people are sent to prison for simple possession, either under Federal law or under State law. But the State laws are uneven on this point, and Federal law still leaves much to be desired.

We have come a long way in recent years. Up until 1970, under the Marihuana Tax Act and the Harrison Act, simple possession of marihuana called for a mandatory minimum sentence of 2 years in prison and a maximum of 10 years; and it is appalling to think that many young people actually did receive sentences of this magnitude. Both of these acts were removed from the books by Public Law 93-513, which was passed in October 1970. The provisions of this law, which are now incorporated in the United States Code—title 21, sections 841-844—converted simple possession of marihuana from a felony to a misdemeanor. While there is no mandatory minimum penalty, the law does permit a maximum penalty of 1 year and/or $5,000 for first offenders. Second offenders are still considered felons, and for them the maximum penalty is 2 years in prison and/or $10,000. First offenders convicted under this law can have their convictions set aside and records cleared if probation is successfully completed.

My personal opinion is that it would make more sense to rewrite this portion of the law to make simple possession, on a first offense, a misdemeanor punishable by a fine of up to $100. Having laws which permit penalties of 1 year in prison and a $5,000 fine for a first offender caught in possession of an ounce of marihuana is actually counterproductive because by far the majority of our judges recoil from such excessive penalties—and, in the act of recoiling, they frequently are disposed to impose no penalty at all.

The same situation applies, but in an even more dramatic manner, to the laws governing the smuggling of marihuana. Smuggling of any quantity of a drug is a felony. In the case of marihuana, any person caught in the act of smuggling even 1 ounce could, theoretically, be imprisoned for 5 years. In practice, as a customs officer stationed on the Mexican border recently informed the subcommittee, hundreds of young people are caught every week trying to smuggle in small quantities of marihuana. Those caught smuggling bottles of whisky frequently have administrative fines of $5 or $10 slapped on them—in addition to suffering the pain of watching their whisky flushed down the toilet. But in the case of minor marihuana smugglers—anything under an ounce and a half or 2 ounces—our customs officers simply flush the pot down the drain and there is no penalty of any kind.

Laws that are never enforced are worse than no laws at all. In the case of the laws governing the smuggling of marihuana, I really do think that the present penalties for first offenders should be replaced by a mandatory fine similar to what I have recommended for simple possession; perhaps the second offense for both possession and smuggling should constitute a felony punishable by fine and imprisonment.

There are those who recommend the abolition of all penalties for possession of marihuana. This was the position of the Shafer Commission, and it is also the position of NORML, the most prominent of the national promarihuana lobbies. All of the scientists who testified on this point were inclined to favor some kind of penalty for simple possession. As one psychiatrist pointed out, by penalizing traffickers but letting users go scot free, we would, in effect, be sending contradictory signals to our young people—which would make it more difficult to get across the basic message that marihuana is a very dangerous drug against which society has to protect itself. Dr. Brill, who had served as senior psychiatrist on the Shafer Commission, told the subcommittee that although he had originally supported the proposal that there be no penalty of any kind for simple possession, he now felt that this position had to be reconsidered.

If those portions of our law which govern simple possession are still too stringent, the statutes covering the big smugglers and the big pushers are far too lenient—and, even worse, they are far too leniently enforced. Over and over and over again, traffickers caught with hundreds or even several thousand pounds of marihuana go scot-free, with a 6-month or 1-year suspended sentence. This portion of our law, in my opinion, has to be amended and amended promptly. The large traffickers and the pushers must not be permitted to get off so lightly. For them, I would like to see mandatory minimum sentences of several years in prison.

I have instructed my staff to study the existing legislation and ways of improv-

ing it, and after these hearings have been made public, I may want to submit some concrete proposals for the revision of existing laws.

THE NEED FOR A NATIONAL EDUCATIONAL PROGRAM

I believe that, with the evidence we have brought together at these recent hearings, we can now mount a national educational program on marihuana and hashish that will be effective in persuading young people to abstain from the drug.

No young person wants to run the danger of permanent brain damage.

No young male wants his male hormone level reduced by almost 50 percent or his sperm count reduced to zero.

No young person wants to damage their cellular processes and chromosomes, thus opening the way to abnormal offspring or genetic mutations.

Up until recently, those scientists who mistakenly believed that marihuana was a relatively benign drug have had the ear of our press and of our networks. I have the impression that we are now witnessing the beginning of a change in attitude. It is my conviction that we can reverse the massive marihuana-hashish epidemic which engulfs our country—just as we have already succeeded in reversing the relentless upward trend of the heroin epidemic and the LSD epidemic which preceded it—if our various Government agencies and our media and our schools embark on a united educational effort.

It is my hope that our recent hearings will serve to encourage and facilitate the launching of such a nationwide program.

Mr. President, I ask unanimous consent to print in the RECORD at this point the text of the testimony given to the Subcommittee on Internal Security by Prof. W. D. M. Paton of Oxford University, and the text of the testimony of Dr. Harvey Powelson, formerly of the University of California at Berkeley.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT BY W. D. M. PATON
