I am Professor of Pharmacology in the University of Oxford. My interest in cannabis was aroused by a conference on adolescent drug-dependence in 1968. Since it subsequently appeared that there was little known about it in modern terms, and that little but sociological or psychological work was being initiated, I began pharmacological studies in 1969. Some of my earlier work has been relevant; on anaesthetics (dating back to 1944 in connection with narcosis in diving and submarine escape), and on opiates (from 1949). The statement that follows rests partly on this work, partly on my own informal contacts with drug users, and partly on a review of the recent research on the effects in animals and man (written together with Dr. R. G. Pertwee and Dr. Elisabeth Tylden) which forms three chapters in "Marihuana" ed. R. Mechoulam, Academic Press, recently published. Of this work (400-500 papers), usually only a small fraction is referred to in official reports and other writings; something like 100 further scientific papers have appeared since our final manuscript was sent in. I will try to bring out what appear to me the salient points of all this work, interpreted from my pharmacological experience, and taking for the most part the point of view of preventive medicine.

I shall use the term cannabis rather than marihuana, since the use of the latter word may suggest a sharper distinction from hashish than in fact exists (both are mixtures of cannabis resin with other material from the plant), and perhaps also begs the question whether or not it would be possible to legislate differently for them.

It is sometimes said that cigarettes and alcohol are as bad as, or worse than cannabis, yet they are "legal"—why should not cannabis be too? I shall try to compare these three later; but it is necessary to review the actions of cannabis first, particularly because very little publicity indeed has hitherto been given to many of its actions.

The first point to stress is that cannabis is a complex mixture of chemicals, of which *at least* the following are known to have a biological action: tetrahydrocannabinol (THC), propyl-THC, cannabidiol, cannabinol, and a group of water soluble materials giving alkaloidal reactions. This affects, inter alia, the suggestion that one might permit a preparation containing up to 1 or 2% THC to be marketed: this would only be feasible if THC were the only active principle. It also means that pharmacological or other studies which are limited to THC have only a restricted relevance to problems of human usage of cannabis.

FAT-SOLUBILITY

Second, and possibly the most important single fact about cannabis, apart from the fact of its psychic action, is that THC, the main psychically active principle, is intensely soluble in fat, as we pointed out in 1970. It has an octanol/water partition coefficient of about 6000 to one, over 10,000 times that of alcohol. Corresponding to this is a low solubility in water. Its fat solubility is greater than that of industrial solvents, and is exceeded only by substances like DDT. The other cannabinoids share these properties. This solubility gives it an affinity for, and ability to transverse, the fatty material in cell-membranes.

From this physical property follows: (a) the activity of cannabis by all routes of administration; (b) its cumulative effect, and the persistence of effect when drug is withdrawn; (c) its passage into all parts of the body, including brain, adrenal gland, ovary, testis, and foetus; (d) the diffuseness of its effects because it is able to reach every cell in the body; (e) the overlap in its effects with those of one important group of fat-soluble materials, the general anaesthetics such as chloroform.

Perhaps I should say a special word about the brain, where perhaps the most important fatty material in our bodies is located, though in much smaller percentage than (say) in adipose tissue. Here, too, cumulation of THC and its first two metabolites has been found.

TOXICITY

(a) Fat affinity and cumulation in the body in themselves are not necessarily harmful, even if cumulation is undesirable in principle. The fundamental test is a biological one, whether *toxicity* is cumulative. This has been found to be the case; for a mouse, it require one-tenth as much cannabis to kill if given in repeated daily doses as if given in a single dose. Similar cumulative toxicity has been found for THC an din other animals. Inferences must not be drawn, therefore, from responses to single exposures to the likely effect of repeated doses.

(b) We have found that toxicity, as judged by loss of weight and lethality, is associated with the fat-soluble fraction of cannabis; THC appears to be the main, but not the only substance responsible. It appears impracticable, therefore, to dissociate the psychic and the toxic effects.

(c) The question of lethality in man is important. Since few practitioners would know how to diagnose a death caused, or contributed to, by cannabis, and since it could not at present be proved by forensic analysis, only scanty information can be expected in any case. The case reported by Heyndrickx et al, in the light of this, is rather convincing.

Possibly more important is to point to three ways in which cannabis could indeed cause or facilitate death. (a) It produces a considerable tachycardia, and this may be associated with electrocardiographic changes and ventricular extra-systoles. It is not at all impossible that this, in unfavorable circumstance in a chronic user, could progress to ventricular fibrillation and death. (b) It causes a dilatation of peripheral blood vessels, corresponding to the hypotensive action in animals. This probably underlies the "fainting attacks" reported, causing postural hypotension. As with other hypotensive drugs, if the subject could not become horizontal, either deliberately or by falling (e.g., because he was in a chair), blood supply to the brain might fail. (c) Cannabis, chiefly because of its cannabidiol content, can potentiate and prolong the action of barbiturates (as well as other drugs used in medical treatment). This could mean that a non-lethal dose of barbiturate became lethal.

Regarding decisions about the law, one wishes that all cannabis users were aware of these possibilities.

TERATOGENICITY

Administration of cannabis during the vulnerable period of pregnancy has been found to cause fetal death and fetal abnormality in three species of animals. The deformity includes lack of limbs (reduction-deformity). The factor responsible has not been identified but does not appear to be THC although new work is showing that THC kills a majority of foetuses and in the remainder produces an increased incidence of stillbirth and stunting. The effect is dose-related, an important thing to establish if cause and effect are considered.

These results are sometimes dismissed on the grounds that any drug in sufficient dose will be teratogenic. While this is not quite accurate, there is evidence that serious disturbance of the mother can have such an effect. This gives an added importance to the criterion suggested by Robson & Sullivan which I would adopt; that a result should be taken as significant when the teratogenic dose is a small fraction of the dose lethal to the mother. This is the case with cannabis, and is in contrast to other drugs, including nicotine and aspirin.

A very important question is whether cannabis directly affects the genetic material, i.e., nucleic acid. Early reports of interference with cell-division indicated this. These have been confirmed. Dr. Nqhas' report here has clinched the issue. One must notice that general anaesthetics as a class can also produce fetal abnormality. A provisional hypothesis for teratogenicity, therefore, is that this action of cannabis reflects its fat solubility and relation to anaesthetics, and constitutes a sort of anaesthesia, for instance, of limbbuds developing in the fetus at critical periods—hence the reduction-deformity. It must be stressed that all I have said refers simply to the development of the fetus. There is also the question whether the genetic material, perhaps as a result of interference with cell-division is *altered*—giving life to heritable defect.

CARCINOGENICITY AND LUNG PATHOLOGY

Like the tar from cigarettes, reefer tar is carcinogenic when painted on mouse skin. Cannabis smoke produces changes in cultures of lung tissue, including loss of contact-inhibition between cells. THC in low concentration resembles the carcinogen methyl-cholanthrene in generating malignancy in rat embryo cells incubated with a murine leucemia virus, but is slower in action. The irritant effect of the smoke on the respiratory tract is well-known to users, and is associated with bronchial pathology.

These effects are becoming very important. Originally, one was uncertain about their significance, and what the balance would be between the facts that more cigarettes than reefers will normally be smoked in any one day, whereas inhalation and retention of the smoke is much deeper and more efficient with the reefer. But now lung damage, in the form of emphysema, is being repeatedly recorded. Emphysema is normally a disease of much later life; but now the quite unexpected (to me, at least) prospect of a new crop of respiratory cripples early in life, is opening up. Originally, I thought the cancer risk was the main problem; cannabis has never been used extensively in a society with an expectation of life long enough to show a carcinogenic effect in man, until recent years. In effect, a new experiment in cancer epidemiology started 5-10 years ago. To this I would now add respiratory pathology generally; and because, just as with bronchitis and cigarette-smoking, it shows itself early, I believe medical studies on this, on a wide scale, are now urgent.

CELLULAR EFFECTS OF CANNABIS AND THC

Numerous such effects have now been described, including actions on microsomes,

on mitochondria, on neurones, fibroblasts, white blood cells, and on dividing cells, affecting metabolism, energy utilization, synthesis of cellular constituents, and immunological responses. To this we must add the recent observation that chronic administration of THC to young rats leads to a reduction in brain and heart weight. Such effects are to be expected, rather than a matter of surprise, from a drug with a high affinity for lipid in a cell-membrance. It should be noted that the local concentrations of THC or its metabolite in the cell-membranes will be far higher than those in the blood; theoretically, one would expect a concentration factor of several hundred; experimentally, concentrations of 600-fold with brain and 380 with red cell membranes.

An important aspect of these effects is what they imply for *maturation* of an individual; we are concerned not only with the effect of a drug on a mature adult, but also what it does to school-children, still developing in many ways. The interference by cannabis with both cell-metabolism and cell-division is very worrying.

THE RELEVANCE OF ANIMAL WORK

It may be argued that actions in animals are of little relevance to man. However, the pharmaceutical industry, and the bodies which supervise it, do not operate on this principle. Difficulties chiefly arise when an inordinately high safety factor has been stipulated. But there is also misunderstanding over rates of dosage. It is to be expected that small animals will require proportionately larger doses (per unit body weight) than man, just as they need proportionately more food, because of their faster metabolic rate. One can estimate a mouse dose on this basis as ten times that of man, taking this together with the rates of human use reported in WHO Special Report No. 478 (up to or exceeding 10 mg/Kg THC per day) it appears that almost all the experimental work reported in animals is relevant to man. The conclusion is reinforced by the NIMH-sponsored toxicity studies on monkeys. A daily dose of 50 mg/Kg orally of THC killed 1 of 6 monkeys; damage to the pancreas, ulcerative colitis, and myeloid hyperplasia were noted. This result, at doses only 10 times some rates of human consumption makes no allowance for contribution by other toxic materials in cannabis.

TOLERANCE

I mentioned high rates of human use. People have expressed incredulity at this, yet it is well-established. I would like to deposit a table of consumption in a group of English students (subject to the approval of the authors)—perhaps the best evidence yet, since the composition of the actual reefers being used was measured; uses ranged up to 109 mg THC per day, around 20 times the ordinary dose for a "high." By itself it shows the degree of tolerance that is achieved, with the resulting need to take high doses for an effect. By the same token, toxicity and accumulation *at these levels* must be considered.

DIFFICULTIES IN THE EXTENSION OF ANALYTIC WORK TO MAN

Although there are a number of human studies on the effects of single small doses, there is still no systematic modern study of the bodily effects of continued cannabis administration. One reason is that while limited dosage is acceptable for volunteers, dosage over a prolonged period at the higher rates of use is not. It would be possible to study users themselves, if a method of urine and blood analysis existed capable of verifying their actual consumption. This, however, is at present not practicable; as a result only the subject's testimony as to his rate of consumption of a substance of unknown composition is available, and this is hardly sufficient. Once methods of analysis of body fluids are adequate, the position should improve considerably.

PSYCHOLOGICAL EFFECTS IN MAN

It may be useful to bring a number of findings together:

(a) The neurophysiological observations, in man and animals, of hypersynchronous discharges from the deeper parts of the brain (not the cortex) as a result of giving cannabis or THC. These discharges have been termed "epileptiform."

(b) The observation by Campbell and his colleagues of an apparent loss of brain substance in the deeper regions, in a group of young chronic cannabis users. This needs further exploration, and it is likely that it is now possible with new non-invasive radiographic techniques.

(c) The cumulative property of THC, and its affinity for fat and hence for cell-membranes.

(d) The numerous psychiatric reports of gradual psychological change, which becomes less and less readily reversible, the longer the cannabis exposure. (This delayed recovery may well have been known in the Moslem community in medieval times; see Schwarz, J. Amer. Med. Ass. 223, p. 105, 1973.)

(e) The fact that most of the elements of this psychological change (paranoid feelings; change in mood, cognitive impairment, loss of memory, loss of concentration, a motivational state, introspective preoccupation with internal imagery, hallucination) can be reversibly produced by single doses of THC or cannabis in normal volunteers.

(f) The ability of cannabis to affect cellular metabolism and cell division.

These findings converge to a remarkable extent in supporting a prima facie view that repeated cannabis use acts on the deeper parts of the brain (where sensory information is processed and mood controlled); that this is at first reversible, but becomes more persistent as cumulation occurs, and that later irreversible changes occur with loss of brain substance, due either to interference with the capacity of brain cells to synthesise their requirements or to interference with cell division.

It is quite likely that all this would be accepted and acted upon, by the cannabis user, were it not for the visual imagery, and (here cannabis is very like nitrous oxide) the euphoria and the conviction of insight and cosmic significance.

COMPARISON WITH ALCOHOL AND TOBACCO

One may summarize this as follows: (1) alcohol is taken, often diluted with food, and often for taste or to quench thirst rather than for psychic effect; it is eliminated in a few hours; there is little or no evidence for carcinogenicity or teratogenicity particularly if nutritional defect and correlation with smoking are allowed for; psychotic phenomena only occur after heavy and prolonged dosage; it occurs naturally in the body of animals, and probably also in man; it has valid medical uses for nutrition and as a vasodilator; it "escalates" only to itself; the price paid for overuse is paid in later life.

(2) tobacco is taken partly for relaxation, partly to assist work, and there is some evidence of an improvement in mental function; the nicotine in it is rapidly metabolised and non-cumulative; the evidence suggests that it is the tar that is carcinogenic, and the risk can be reduced if inhalation is avoided, nicotine being absorbed through the mouth; it is not teratogenic; no psychotic phenomena occur; it is not a natural constituent; it has no medical use; it does not "escalate"; the price paid for overuse is paid in later life—reducing life expectancy from about 75 years to 70 years.

(3) cannabis is taken specifically, and usually by itself (sometimes with other drugs), for its psychic action; it is cumulative and persistent; its tar is carcinogenic and failure to inhale reduces its effect considerably; experimentally it is teratogenic; psychotic phenomena may occur with a single dose; it is not a natural constituent; prolonged trial in medicine from the 1840's led to its abandonment from pharmacopoeias; it can predispose to the use of other drugs; the price for its overuse is paid in adolescence.

One could say that cannabis shares the disadvantages of alcohol and tobacco, together with its own psychotogenic and biochemical actions, its chronic effects being accentuated by its cumulative tendency, giving it much earlier adverse action.

THE QUESTION OF LEGALIZATION

(a) Viewing cannabis as if it were a new pharmaceutical product, I could not agree to approval being given to the introduction, for general and repeated consumption, of a substance shown experimentally to be carcinogenic, teratogenic, and cumulative, and able to interfere with a variety of cellular processes, until it had been shown, quite unequivocally, that, for some reason, humans were exempt from the actions concerned.

(b) There is no rational dividing line between cannabis and other drugs such as LSD or some opiates. A high dose of cannabis overlaps with a low dose of LSD (in its hallucinatory and psychotomimetic action) and with the less active opiates (in respect of analgesia, euphoria, and "day-dreaming" state). In fact, since cannabis is unique among these drugs for its cumulative action, I would put it lower in the list for legalization than some others. One needs to ask, what other drugs can produce prolonged cognitive impairment in a young person?

(c) In a similar way, it does not seem feasible to me to propose legalization of cannabis of limited potency. There is in fact an analogy with alcohol here: we have marihuana (1–2% THC), and weak beers (3% alcohol); hashish (say 8% THC) wines (8–15% alcohol); red oil, on the illicit market (up to 30–40% THC), hard liquor (35–60% alcohol). To suggest one could legislate for 1 or 2% THC is like suggesting one could legislate for weak beer. It would remove none of the present objections to cannabis legislation, while yet allowing the drug to be used.

(d) The significance of progression from cannabis to other drugs has been much discussed, and my own (1968) paper severely, but fallaciously, criticised. (The fallacy was exposed, inter alia, by R. C. Pillard in the New England Journal of Medicine (197) 285, 416–7). The final report of the Le Dain Commission concluded as regards LSD that "the use of cannabis definitely facilitates the use of LSD or predisposes a certain number of individuals to experiment with it." The argument they give (including the relationship between the nature of the two drugs and the finding that over 95% of those who had used LSD had used cannabis) were the same as those I had advanced in respect of heroin and cannabis. My argument also cited the remarkable temporal coincidence between cannabis convictions and heroin addiction in the U.K.; evidence of this sort has not been provided in respect of LSD.

Today, with the further evolution of drug use, it seems clear that, depending on availability of drug, various patterns of progression are possible, in which one would include cannabis to opiates, cannabis to LSD, and cannabis (low potency) to cannabis (high potency). Simple reasons can now be seen; that cannabis increases suggestibility and impairs memory; and that it overlaps in pharmacological actions with opiates (euphoria, analgesia, daydreaming state) and with LSD (visual imagery). It is therefore well-suited to providing a halfway house, converting one major step directly to use of opiates, LSD or hashish, into two smaller and more easily accepted steps.

The growth of poly-drug use may now have made it impossible to define patterns of progression accurately. But one may hazard the opinion that no programme to get rid of opiate addiction or LSD use will really succeed until cannabis use declines. Cannabis can serve as well to cause relapse, as to initiate drug use.

(d) The last point concerns the age of those involved. If someone dies of alcoholism or lung cancer at the age of 50 onwards, that is a loss; but the individual has had 30 years of adult life, and the chance to make his own contribution. But the adolescent, dead or socially inactivated by 20 years old, has never even had a start on mature life; the loss, both for him or her, and for society, is incalculably greater.

THE DIFFICULTY OF FRAMING A POLICY

My own opinion is that it would be disastrous to make it legal even to possess cannabis. If one talks, not to lawyers or sociologists but to schoolchildren and students, at least in the U.K., it is not at all clear that a majority would even wish for this to happen. But nevertheless, there would be for the foreseeable future a large number of people breaking the law, just as they do over speed limits, customs-regulations, and income-tax

return. It seems that one would have to treat a cannabis-possession similarly, accepting that the majority of offences would not be recognized, yet maintaining the legal position about it. Viewing it in this way might, indeed, help to deglamourize it.

But something more is needed. It would be quite right for the debate to sharpen our criticism of alcohol and tobacco. Further, for a significant number of youngsters, who have found consolation in cannabis, there is the question, "If not pot, what?" It is for the framing of an answer to this question that new creative thinking is urgently needed.

STATEMENT BY DAVID HARVEY POWELSON, M.D.

In 1965, I was chief of the Department of Psychiatry in the Student Health Service at the University of California in Berkeley. It was the first year of the student riots. It was also the first year that hallucinogens were becoming widely used and I, as the person responsible for mental health on that campus, was vigorously involved in the debate about psilocibin, LSD and mescaline.[1]

In the spring of that year a reporter for the Daily Californian, the student newspaper, asked for my opinion on marihuana. At that time I lacked any direct experience as a physician with marihuana users. The medical literature was sparse, but in general seemed to be saying that there was no proof of long term harmful effects from marihuana. I summarized this for the reporter and said there was no proof of harm and that it probably should be legalized and controlled. In general, this view met with approval from most of the students and most of my professional colleagues.

In 1965, the use of marihuana spread throughout the Berkeley Campus. Simultaneously its use was spreading to all the colleges and universities across the country. From the campus communities it spread at an accelerating rate through the surrounding communities. By now its use is subject to no age, social or geographic barriers.

My place of observation was unique. I was there at the beginning and in my work I was actively involved with students not only as a psychiatrist but as a teacher, and as a participant in a four year research project studying maturation and growth, in college students. In addition, I was routinely meeting with deans and administrators who were dealing with the drug problem and the students who were in academic and/or disciplinary difficulties as a consequence of the use of marihuana and its derivatives.

Most importantly, I was in daily contact with the constant flow of students through the student health service and the psychiatric clinic and hospital.

During the period I am speaking of (from 1966-72) the clinic saw approximately 2000-3000 students a year as outpatients and about 150-200 students a year who were mentally ill enough to be hospitalized. Naturally, I didn't see all these students but the people who ministered to them were all under my supervision. I personally interviewed about 200 students a year; many were seen for a single hour, others were seen as intensively as 2-3 times a week for varying lengths of time up to and including 5 years. A legitimate question which is often raised is that of sampling: i.e., "how typical are these patients when compared with the general population of U. C. students?"

(I am convinced that aside from the obvious fact that they have come to the clinic, they vary in no significant way from the population of the University of California, Berkeley, as a whole. For a systematic study of this point, c. f., Katz, Joseph, Ph. D., *Growth and Constraint in College Students*, Institute for the Study of Human Problems, Stanford University, Stanford, California, 1967, pp. 510-68. This study was done at Berkeley on the same group of students I am discussing. Comparisons were made on all sorts of variables: psychological; psychiatric; and so on. No significant difference between the clinic and general population were found.)

During this time (from 1965–72) an increasing number of patients were using marihuana. My best guess, based on surveys and impressions, is that more than 90% used it at one time or another in college. More than 50% used it "socially" (approx. 1-2 times per week) and about 10% were heavy users (at least 1 time daily).

My first important shift in thinking occurred as a result of observations made during psychotherapy with a young man, S., who was bright enough to be getting his law degree and Ph. D. simultaneously and competent enough to be learning to fly and deal in real estate at the same time. As we proceeded in our work together, I came to know S.'s way of thinking; i.e., *how* he thought. Most of us do this without thinking about it. All of us come to know to some degree the way our friends and colleagues think. In therapy, the opportunity to hear someone think out loud about a problem important to him maximizes the opportunity to come to know how he uses or manipulates logic, remember clearly or not at all, thinks or does not exercise good judgment about his own thinking, and whether or not he is able to know his own feelings. We had made enough headway so that S. had begun to be able to observe and understand his own thinking. Periodically, we had hours (I was seeing him twice weekly) when his thinking became mushy. If I tried to follow him, my head began to spin. When I protested that he'd become impossible to listen to, he'd argue that his own experience was that he was thinking more clearly, more insightfully, than ever. On one such occasion, he mentioned that he'd been to a party two nights before where he'd had particularly good "grass." In Berkeley, 1968, that was not a particularly memorable remark, but we thought there might be some connection with his thinking. This same series of events recurred often enough so that I finally was able at times to post dict that S. had had some "mind-expanding drug," usually marihuana.

S., because he was a good observer, helped show me another aspect of the thinking disorder I'm describing. Central to his difficulties was a paranoid stance toward the world. By this, I mean a style of thinking characterized by a constant suspicion that one is being controlled; e.g., by the establishment, the system, etc.; and simultaneously a constant unwitting search for people and situations which will do just that; e.g., drugs, demagogues. If this manner of thinking is carried further, it blends into the condition usually called paranoia. Here the subject is controlled by voices, God, or whatever, and at the same time, he is very often "against his will" being controlled by a state hospital or jail. S. was forever talking about his search for something or someone he could trust.

When he had used marihuana, his thinking became more paranoid, i.e., he became more mistrustful of me, for instance, and at the same time, he became more wily so that he talked glibly, using cliches, theories, and "insights," all to avoid noticing concretely and immediately whatever he was really doing and feeling in his relationship with me, as well as his relationships outside. In short, the pathological part of his thinking was exaggerated in two ways: (1) he was more suspicious, etc. and (2) he was more adept at fooling himself about what he was up to, while simultaneously maintaining how "aware," "in touch," and "loving" he was.

S. continued in therapy but also continued to use marihuana and hashish. (Hashish is merely another more concentrated source of the active principals contained in marihuana). Toward the end of his therapy, I had decided that so long as he muddled his thinking in this way, there was no use continuing. He, however, suffered a fatal accident (as a result of an error in judgment) before his therapy actually terminated.

As I was becoming familiar with these effects of marihuana on S., I gradually learned to pick up signs when they were more subtle. I came to observe the same changes in others, i.e., that marihuana exacerbated the pathological aspects of their thinking.

These observations were made before controlled studies began to give clues as to the nature of the mental changes taking place which could explain these phenomena. The committee has undoubtedly heard or will hear of the studies by the Hollister[2] group at Stanford on what they call "temporal disintegration" which seem to be changes secondary to the loss of immediate memory and the loss of an accurate time sense. There are also corroborating studies from Utah[3], clinical studies by Kolansky and Moore[4], x-ray studies by Campbell in England[5], and a study on students by Schwarz[6] at the Uni- Judgment, memory and logic are necessary.

As this happens, he depends more and more on pathological patterns of thinking. Ultimately all heavy users (i.e., daily users) develop a paranoid way of thinking.

versity of British Columbia to cite a few of the most relevant studies made on subjects comparable to the ones I'm describing.

Following the above described observations, I saw the same picture more and more frequently. The essence of the pattern is that with small amounts of marihuana (approximately three joints of street grade), memory and time sense are interfered with. With regular usage the active principals cause more and more distorted thinking. The user's field of interest gets narrower and narrower as he focuses his attention on immediate sensation. At the same time his dependence and tolerance is growing. As he uses more of the drug, his ability to think sequentially diminishes. Without his awareness, he becomes less and less adequate in areas where

After I had become aware of the generality of this sequence another reporter from the *Daily Californian* interviewed me to see if my opinions had changed in the interim. In the course of that interview, I realized in a concrete and explicit way that they had. The headline read, "Psychiatrist says pot smokers can't think straight." This time the response of the community and colleagues was not so approving. It is an interesting fact that questioning the claims or marihuana users leads to much more anger, vilification, and character assassination than does the opposite stance.

In subsequent years in Berkeley, both at the clinic and in my private practice, I have observed the long term effects of cannabis. Originally, my observation was that students who had "dropped out" into the "drug scene" and were attempting to return, were finding it difficult if not impossible. A frequent story is that the young person has become aware that the life he's been leading is unsatisfactory and unproductive. He then stops drugs for six months or so and reenters the university. When he returns to school, however, he finds that he can't think clearly and that, in ways he finds difficult to describe, he can't use his mind in the way he did before. Such people also seem to be aware that they've lost their will someplace, that to do something, to do anything, requires a gigantic effort—in short, they have become will-less—what we call anomic. An irony here is that they have now achieved the freedom they sought. They need an external director. They are ripe for a demagogue.

The changes in the capacity to think in some subjects are long lasting if not permanent. One of my original (1967) subjects was a member of the junior faculty. He "dropped out" and used hashish exclusively for 18 months in daily doses. When he realized that it was interfering with his physical coordination he stopped all drugs. Two years subsequent to this he returned to the University. He found that he could not do mathematics at a level which he had found possible before. Three and one-half years later, his conviction was that the change was permanent. My own observations of him and other such gifted people

have led me to the same conclusion, i.e., that the damage may be permanent.

My stance toward marihuana has shifted to the extent that I now think it is the most dangerous drug we must contend with for the following reasons:

1. Its early use is beguiling. It gives the illusion of feeling good. The user is not aware of the beginning loss of mental functioning. I have never seen an exception to the observation that marihuana impairs the user's ability to judge the loss of his own mental functioning.

2. After one to three years of continuous use the ability to think has become so impaired that pathological forms of thinking begin to take over the entire thought processes.

3. Chronic heavy use leads to paranoid thinking.

4. Chronic heavy use leads to deterioration in body and mental functioning which is difficult and perhaps impossible to reverse.

5. For reasons which I can't elucidate here, its use leads to a delusional system of thinking which has inherent in it the strong need to seduce and proselytize others. I have rarely seen a regular marihuana user who wasn't actively "pushing."

As these people move into government, the professions, and the media, it is not surprising that they continue as "pushers," thus continuously adding to the confusion that this committee is committed to ameliorate.

Mr. GURNEY. Mr. President, I also ask unanimous consent to print in the RECORD a number of editorials that have resulted from our hearings; an article that appeared in U.S. News & World Report; a column by syndicated Columnist John Chamberlain; and a major article which appeared in the Washington Post. Although this last article did not mention our hearings, the author systematically interviewd many of the scientists who testified before the subcommittee, and there is no doubt that the inspiration for the article was provided by our hearings.

There being no objection, the material was ordered to be printed in the RECORD as follows:

SO, YOU THINK POT IS HARMLESS

(By John Chamberlain)

John Stacks, the news editor of Time's Washington Bureau and the co-ordinator of its Watergate coverage, remarks, in an article in the Overseas Press Club of America's "Dateline 1974," that "the success of the Watergate investigators in ferreting out hard facts from reluctant sources was a tonic to Washington journalism."

What Stacks says is true about one type of Washington journalism, the "get the guy" type. I applaud "getting the guy" if he is really a crook or a liar, but when the press corps of a great capital is encouraged to think of journalism primarily as an adventure in the cultivation of stool pigeons it is not a tonic generally. The trouble with Washington journalism at the moment is that whole areas of government activity get very little coverage. All the hounds are on one scent.

Information that might have a great effect on a nation's life is left to smoulder. For example, how many stories have you seen devoted to the remarkable marijuana investigation conducted by the US Senate Subcommittee on Internal Security?

The glib cliche about marijuana, endorsed, by the way, by some conservatives as well as by the liberals, is that marijuana, or pot, when smoked in moderation, is really no worse than a few glasses of beer. This view has been periodically challenged, mainly in Europe, but there has been little published on the subject that has had a cumulative impact.

The Senate Subcommittee on Internal Security, the Eastland Committee, has really dug into the question of marijuana toxicity, rolling up a vast body of testimony that should be the subject of debate on campuses from Berkeley, Calif., to Cambridge, Mass. Since I am not a doctor, and my paraphrases of medical testimony might not be trusted by the marijuana cultists, let me quote a few authorities directly.

Item, from a statement by Drs. Harold Kolansky and William T. Moore on the results of a clinical study: "In the last nine years we have seen hundreds of patients who have suffered psychiatric and neurological symptoms . . . and have described the findings in almost 60 of these patients. . . . Many of those we examined . . . appeared older than their chronological age. . . . The incapability of completing thoughts during verbal communication that resulted in confused responses seemed to imply some form of organicity either of an acute biochemical nature . . . or, one might hypothesize, structural encephalopathy." (I looked up "encephalopathy" in the dictionary: It means sickness or derangement of the brain.)

Item, from Dr. W. D. Paton, professor of pharmacology at Oxford: "Administration of cannabis during the vulnerable period of pregnancy has been found to cause fetal death and fetal abnormality in three species of animals. The deformity includes lack of limbs (reduction-deformity) . . . a very important question is whether cannabis directly affects the genetic material, i.e., nucleic acid . . . Dr. Nahas' report here has clinched the issue . . . lung damage, in the form of emphysema, is being repeatedly recorded. Emphysema is normally a disease of later life; but now the quite unexpected (to me, at least) prospect of a new crop of respiratory cripples early in life is opening up . . ."

(So you can give birth to congenital cripples and die in your 40s or 50s of wrecked lungs. Go right ahead.)

Item, from Dr. Robert G. Heath's description of his studies of the effect of cannabis on rhesus monkeys: When the monkeys were regularly exposed to these drugs . . . persistent — perhaps irreversible — alterations developed in brain function at specific deep sites where recording activity has been correlated with emotional responsivity, alerting and sensory perception.

(Warning: you may be more like a rhesus monkey than you think.)

Item, from Dr. Robert C. Kolodny, endocrine research director, Reproductive Biology Research Foundation, St. Louis, Missouri: "Cannabis resin . . . injected into pregnant rats . . . had a variety of effects. These effects included syndactyly (webbing between the digits) . . . encephalocele (hernia of the brain). . . . Phycomelia (abnormal development of the limbs, with the 'seal-flipper' appearance also encountered with thalidomide . . . complete absence of limbs . . .").

(Well, they're only rats. The trouble is that rats react to drugs in a very human way.)

I could go on quoting from other medicos. If you want more evidence, write to the Eastland subcommittee, care of the U.S. Senate.

RESEARCH REPORT—THE PERILS OF "POT" START SHOWING UP

At a time when demands are growing for reduced penalties on use of marijuana and hashish, new evidence is coming out linking the drugs to both mental and physical disorders.

As described in official testimony, research by U.S. and foreign experts indicates that marijuana and hashish may cause birth defects, psychological addiction, and sexual and other troubles.

The experts presented their findings before the Senate Internal Security Subcommittee investigating what it terms a "cannabis epidemic" in the U.S.

Cannabis is the dried parts of the hemp plant from which marijuana—called "pot"—and hashish—or "hash"—are derived. Hashish is more potent than marijuana, but is used less.

THE RISK FACTOR

The researchers emphasized that much more work is needed to substantiate their findings, but they agreed that the claim that cannabis is an innocuous drug is ill-founded.

Over and over in the testimony, the scientists made clear their studies suggest that marijuana and hashish users run considerable risks. For example:

Marijuana and hashish use among children may result in a generation of young "old people," according to Prof. W. D. M. Paton, professor of pharmacology at Oxford. He said cannabis interferes with cell division and cell metabolism and may affect adolescent development.

Professor Paton reported that studies done in England found a shrinkage, due to reduced cell production, of the brains of cannabis users. This shrinkage, he said, is comparable to that found in people late in life.

HARDER TO GET "HIGH"

Regular users of cannabis develop a tolerance for the drug, thus requiring greater levels of its use to get a "high," Professor Paton said. "This increased intake may be a serious factor," he added, since preliminary tests on animals indicate that as the drug is used regularly, less of it is needed to produce a dangerous toxic effect.

Dr. Gabriel Nahas, physiologist and pharmacologist at Columbia University, said his

body's immunity system.

Results showed that marijuana smokers had a 40 per cent lower production of white blood cells than nonsmokers of marijuana. He said he suspects that this lowered response lessens the body's ability to combat disease.

Findings by another researcher raise suspicions that cancer, genetic mutation and birth defects may result.

According to Dr. Akira Morishima, of the department of pediatrics, Columbia University, such problems may occur in marijuana smokers because of a substantial decrease in the number of chromosomes—specks of matter that carry hereditary characteristics—in each cell. This shortage often leaves the "pot" smoker with less than the normal complement of 46 chromosomes.

STERILITY PERIL

The potential danger of sterility in men was also raised.

Testosterone, the principal male sex hormone, has been found to be at a significantly lower level of production in marijuana smokers than in those who do not use marijuana, Dr. Robert C. Kolodny, research director at the Reproductive Biology Research Foundation in St. Louis, testified further: "It is apparent that there is a potential risk in cannabis use during pregnancy."

Dr. Kolodny indicated that birth defects and miscarriages were possible side effects of usage.

Despite what many believe, long-time users of the drugs can get "hooked" by developing "psychic dependence" on them, one authority testified.

Dr. M. I. Soueif, of the department of psychology at Cairo University in Egypt, said withdrawal after long-term use results in the individual's becoming "quarrelsome, anxious, impulsive, easily upset and difficult to please."

Although the findings unveiled in the hearings are relatively new, they are already being reviewed by drug-study organizations. E. M. Steindler, secretary of the Committee on Drug Abuse of the American Medical Association, told "U.S. News & World Report":

"It [cannabis] is definitely not an innocuous drug. We have looked at those reports on marijuana and hashish. . . . These are interesting studies, and we feel that more needs to be done along those lines."

Dr. Robert L. DuPont, director of the National Institute on Drug Abuse, takes an even stronger position on the findings.

"These are valid concerns, and all of these problems are being investigated further," he said. "I have no doubt that we will find problems with the use of marijuana and hashish.

"Some of the pressing concerns that I have with cannabis usage have to do with possible chromosome breakage, respiratory-system damage, reduction of testosterone levels and the hampering of the body's immunity system. . . . It's going to take some time to confirm these things and to build a firm base around these findings."

A SENSE OF URGENCY

Exactly what to do about the medical problems remains a matter of debate. Subcommittee officials contend that increased

use of "pot" and "hash," as indicated in the chart at left, adds urgency to this issue.

One thing that seems certain: How to handle this increased usage in the light of recent medical findings is going to present the nation with big problems for years to come.

All told: An estimated 835,366 pounds of marijuana and hashish—a more potent form of marijuana—were seized last year.

Officials say that roughly 8 pounds of drugs reach users for every 1 pound seized. Thus, close to 7 million pounds of marijuana and hashish were consumed in the U.S. last year—enough "pot" and "hash" to make more than 2 billion cigarettes.

Pot Perils

Advocates of legalizing marijuana have long contended that it's non-addictive and no more harmful to one's health than cigarettes or liquor.

They've got away with this because, until quite recently, no one had done any research on how marijuana affects the body and the mind.

The spreading use of marijuana has caused scientists to look into the question, and the results are now coming in.

Dr. David H. Powelson, former director of the student health services psychiatry department at the University of California at Berkeley, who once called marijuana harmless and urged its legalization, recently told a Senate Internal Security subcommittee that seven years of research have convinced him that he was completely wrong.

He has found evidence, he said, that chronic use of marijuana permanently impairs the ability to "think clearly."

Appearing before the same Senate subcommittee, Dr. Nils Bejerot, acting professor in social medicine at the Karolinska Institute in Stockholm, reported on the work of a team of German scientists.

"A serious complication of cannabis (marijuana) abuse is chronic psychosis," he said. He added that acute marijuana intoxication can cause an altered sense of reality and "a tendency to magical thinking."

At the same time, Dr. William T. Moore declared that he and a colleague, Dr. Harold Kolansky, had conducted studies which showed that "marijuana smoking carries enormous risks of physical and mental damage."

In the current New England Journal of Medicine, a group of researchers at the Reproductive Biology Research Foundation in St. Louis tell of a study they made on the relation between marijuana and sexuality.

Pot, they found, may cause temporary sterility—possibly even impotence—in males. In a prepubescent boy, it may severely disturb the normal course of puberty.

A pregnant woman carrying a male fetus might seriously inhibit his sexual development by smoking grass.

... recent survey by the Phoenix Newspapers, Inc., showed that 57 per cent of students in one Phoenix high school believe that marijuana usage by teen agers is increasing.

If the students are right—and they should know—it's about time the schools told them of these recent findings.

[From the Memphis (Tenn.) Commercial Appeal, May 10, 1974]

The Most Dangerous Drug

For several years, a movement to legalize marijuana has been gaining ground in the United States. Both the Consumers Union and the National Commission on Marijuana and Drug Abuse have urged softer laws. But Congress has reacted cautiously—and with good reason. Research reports on the long-term effects of marijuana use have not been conclusive. The possibility of the drug's becoming a more dangerous and pervasive problem than alcohol has been a strong barrier to its legal acceptance.

Now a new and most persuasive opponent has come forth. In 1965, Dr. David H. Powelson, a California psychiatrist, publicly endorsed the open sale of marijuana. He has changed his mind, he told the Senate Internal Security subcommittee recently. After seven years of research with students at University of California at Berkeley, where he was director of the student health service psychiatry department, Powelson said he is convinced marijuana is "the most dangerous drug" sold illegally in this country.

His studies indicate that chronic use for from one to three years permanently impairs the ability to think clearly. He described this pattern of deterioration: Loss of ability to think sequentially, partial loss of memory, inability to reason and, finally, a paranoid mental state in which the user thinks he's being persecuted.

Marijuana supporters, of course, will cite other studies that don't reach the same conclusion. Authorities can be quoted that pot smoking is relatively harmless fun. People who like marijuana, it is often argued, should have as much right to indulge their habit as those who like alcohol.

But what is "harmless" about the cases like Powelson documents. They exist. Even if some people are more severely affected than others, there is apparently no way to determine who is likely to be mentally and physically impaired and who isn't. Why should the government, through legalization, encourage anyone to take such a chance? And just because alcohol [illegible] doesn't mean that society should approve the abuse of another drug. To the contrary, the alcohol problem should make society determined that additional abuses must be prevented as much as possible. Making marijuana easier to get and smoke would be a major cop-out.

Powelson's change of heart and mind underlines the danger.

[From the Boston Evening Globe, May 16, 1974]

Press, TV Accused of Pro-Pot Bias

Washington.—The United States is in the midst of a marijuana and hashish epidemic, but the media have reacted by blacking out news of evidence that might be adverse to legalizing the drugs, Sen. Edward J. Gurney said today.

In a statement prepared for delivery to a Senate Panel's headings on the dangers of marijuana, the Florida Republican said that based in the amount of seizures, it is estimated that Americans consumed 7.82 million pounds of marijuane and 265,000 pounds of hashish last year.

"These are truly staggering figures—figures which suggest that the United States may today be caught up in the worst cannabis epidemic in history," Gurney said.

Gurney said he is convinced from evidence he has seen that "our media have observed a near total blackout on news or scientific evidence that might be considered inimical to the cause of legalizing marijuana."

In testimony last Thursday before the Senate internal security subcommittee Dr. Henry Brill, one of the senior psychiatric members of the President's Commission on Marijuana and Drug Abuse, said the media seized on passages in the report which suggested a tolerant attitude—"and ignored a number of strongly worded passages warning against the dangers of marijuana," Gurney said.

He added that many television talk programs and news panel shows "have run literally scores of discussions on marijuana, featuring pro-marijuana authors . . ." But he said letters which accompanied a book critical of marijuana and written by "a highly distinguished scientist" were not acknowledged by the television stations.

The senator added that "The New York Times book review section had favorably reviewed some half-dozen books on marijuana . . . the same book was ignored. When six or seven Columbia University scientists who thought the book had merit wrote individually to The New York Times urging that the book be reviewed; their letters were not accorded the courtesy of a routine acknowledgement."

[From the St. Paul (Minn.) Pioneer Press, May 21, 1974]

Result of Smoking Grass Compared to Radiation

Washington.—Marijuana smoking can have the same result as radiation poisoning and some of the blame for leading people to think it's harmless lies with the federal government, a Senate panel was told Monday.

Appearing before the Senate Internal Security subcommittee, Dr. Hardin Jones, a professor of medical physics and physiology at the University of California, said the United States is in a marijuana epidemic caused by a propaganda campaign "involving a small but influential number of academic propagandists, the media, the entertainment industry and the new left."

Jones said efforts to use marijuana at a moderate level or to legalize it "have prevented sensible acts to reduce use of this drug . . . we find no 'safe' level of the use of cannabis."

Smoking marijuana affects the body the same way radiation does, Jones said.

"As an expert in human radiation effect . . . chromosome damage . . . even in thos who use cannabis 'moderately,' is roughl the same type and degree of damage as i persons surviving atom bombing with a heavy level of radiation exposure (approxi mately 150 roentgens). The implications ar the same," he said.

As for misformation about marijuana Jones said the federal government, throug its agencies, "has been one of the worst offenders in spreading the impression that cannabis is a harmless drug.

"Reports of the Department of Health, Education and Welfare are inadequate scientifically, do not touch accurately on the principal matters needing clarification and, in many instances, are likely to lead the public to believe that science has proven marijuana harmless," Jones said.

Jones also said the networks have given so much time to people like LSD advocate Timothy Leary that if the equal time principle were invoked, "some hundreds of hours, at least, to scientists" who have found marijuana harmful would be required for broadcast.

"In placing their facilities at the disposal of this one-sided propaganda campaign, they may have succeeded in brainwashing themselves, in addition to the brainwashing of a substantial portion of the American public.

"At least one cannot escape the impression that many people in the media now seem to have convinced themselves that marijuana is perfectly safe and that the public interest demands its legalization," Jones told the panel.

[From the Jacksonville (Fla.) Times-Union, May 23, 1974]

Marijuana and the Atom Bomb

The horrors of possible genetic mutations resulting from atomic fallout have been widely accepted and rightly so.

At the same time, marijuana has been pushed in many quarters as a pleasant relaxant that should be legalized.

What do the two things have in common?

Plenty, if the testimony of Dr. Hardin B. Jones, a professor of medical physics and physiology at the University of California, is to be believed.

Dr. Jones told the Internal Security subcommittee of the United States Senate:

"As an expert in human radiation effects . . . chromosome damage . . . even in those who use cannabis (marijuana) 'moderately,' is roughly the same type and degree of damage as in persons surviving atom bombing with a heavy level of radiation exposure—approximately 150 roentgens. The implications are the same."

We don't know whether Dr. Jones is a conservative or a liberal in his political views and it should not matter. Scientific research, not ideologies, should be the determinant as to whether marijuana is harmless or dangerous.

Unfortunately, much of the debate so far has been ideological rather than scientific.

That is a ridiculous situation but ridiculous situations are commonplace these days.

The push to make marijuana socially and legally acceptable has come from some very high places and some of these voices have told many people, mostly young people, exactly what they want to hear.

This is true to the extent that evidence indicates that enough marijuana or hashish for five billion "joints" entered the United States last year.

What kind of responsibility do the marijuana "pushers"—both those who sell and those who advocate its use—bear if Dr. Jones or Dr. Olav Braenden, director of the United Nations Narcotic Laboratory in Geneva, Switzerland, are right?

Dr. Braenden's report indicates from research that "cannabis accumulates in the brains and gonads in the manner of DDT, that it produces fetal deformities in animals, in addition to abortions and stillbirths in a manner that resembles the damage done by thalidomide. . . .

"That it results in breakage and serious damage to human chromosomes, and that it seriously reduces the body's ability to produce DNA, a critical component of all cells, including reproductive cells. . . ."

If this is true, what will be the effect of marijuana on a generation yet unborn? How can it be justified on any moral, social or ethical basis?

Public outcry, based on much thinner evidence than is piling up against marijuana has relegated several substances or products into a virtual leper colony status.

Unless the scientific testimony can be refuted by believable scientific research, the case against marijuana calls for a verdict of guilty and a change in the climate of thought that regards it as merely a pleasant relaxant.

Such a change in attitude is needed to counter what Dr. Jones describes as efforts to use marijuana at a moderate level or legalize it. These efforts, he says, "have prevented sensible acts to reduce use of this drug . . . we find no 'safe' level use of cannabis."

His testimony won't make a popular man on campus and it is more believable for this reason. He is risking the treatment accorded others who have debunked some of the modern myths that have become dogma in some academic circles.

What a frightening prospect to have all the radiation monitoring equipment and worldwide efforts to curb atomic fallout only to have the same effects from the already epidemic use of marijuana.

[From the Florida Times-Union, Jan. 9, 1974]

"Pot" Accumulates—Like DDT

A striking reminder that the public fight against drug abuse is a continuous battle comes in a report recently released by the U.S. Senate Internal Security subcommittee.

In the words of Chairman James Eastland, D-Miss., "We have been concentrating on the heroin epidemic for the past two years, and there seems to be some solid evidence of progress. . . .

"But it is impossible to escape the conclusion that, while our attention was focused on heroin, there has been a runaway escalation of the use of other drugs, primarily marijuana and hashish (milder and stronger forms, respectively, of cannabis). . . ."

For perspective, it should first be recognized that throwing the nation's major attention against heroin, instead of milder drugs, was no oversight, but a soundly reasoned decision. Heroin kills; heroin destroys lives; the need of heroin addicts to support a $150 or so a day "habit" has driven many—daily—into the streets to steal and rob and kill.

It would, indeed, have been a distorted sense of priorities which did not attack the greatest evil first.

And there is evidence that the massive effort is paying off: as early as a year ago Dr. Robert Dupont, chief of the Washington Narcotics Treatment Administration, termed heroin addiction "more than cut in half" in the nation's capital; Dr. Jerome Jaffe, head of the Federal Special Action Office for Drug Abuse Prevention, told a congressional subcommittee that heroin addiction was "leveling off;" and John Ingersoll, director of the U.S. Bureau of Narcotics and Dangerous Drugs stated that a "turning point" seemed to have been reached in the battle against "H."

But, without any thought to diminishing the efforts which have curtailed the greater drug abuse, there indeed seems urgency to turn to the lesser, though still pronounced, evil.

Evidence indicates that more than five billion marijuana and hashish "joints" (or 20 for every man, woman and child in the country) entered the U.S. last year.

"The pandemic use of marijuana and hashish has been brought about, in part," Eastland said, "by a militant pro-marijuana propaganda campaign conducted by many New Left organizations and by the entire underground press . . .

"And it has been stimulated perhaps in major degree, by a number of highly publicized reports, written by persons (many entirely well meaning) who did not have available to them, at the time, most of the highly significant scientific research conducted over the past few years that puts a danger sign on cannabis use. . . ."

Among the most recent reports cited by Sen. Eastland was one by Dr. Olav Braenden, director of the United Nations Narcotics Laboratory in Geneva, which "points strongly to the conclusion that marijuana may be even more dangerous than had previously been believed. . . .

"(Researchers have found that) cannabis accumulates in the brains and gonads in the manner of DDT, that it produces fetal deformities in animals, in addition to abortions and stillbirths, in a manner that resembles the damage done by thalidomide . . .

"That it results in breakage and serious damage to human chromosomes, and that it seriously reduces the body's ability to produce DNA, a critical component of all cells including the reproductive cells. . . ."

The subcommittee's report should receive priority attention from the full Congress, and, even more important, from the public, when the new session begins Jan. 21.

The prevalent impression that "pot" is harmless—"people smoke it every day and it doesn't bother them"—is increasingly being contradicted by many studies (of which the UN report is only the latest) which show persuasive evidence of serious, long-range effects. It is a matter too important to remain clouded, confused.

[From the Washington Post, June 24, 1974]

New Findings Show Harm—Views on Marijuana Shifting

(By Robert Joffee)

Los Angeles.—Marijuana may turn out to be more harmful than many scientists had previously thought.

Only a year ago most researchers studying the drug thought it probably was relatively harmless—at least when compared with alcohol and other commonly abused drugs.

Since then, however, new findings have raised the possibility that long-term use of "grass" might be linked to damaged chromosomes, lower production of sex hormones, and greater vulnerability to diseases.

The new findings are preliminary and as yet unsubstantiated, but they have appeared in prestigious scientific and medical journals—publications which previously paid scant attention to the perils of "pot."

The findings are significant politically as well. At a time when respectable voices are calling for laws making personal possession and use of the drug a misdemeanor or no crime at all instead of a felony, the findings already have provided ammunition for those who oppose such moves.

Last week the Illinois Bar Association passed a resolution urging repeal of all laws banning personal possession and use. IBA President William P. Sutter explained, "We aren't endorsing its use; we are recognizing that the majority of medical opinion is that casual use is not harmful . . ." Critics can now argue that medical opinion may be changing, though many researchers still favor removal of criminal penalties for marijuana use despite the new findings.

About $4 million in federal grants and contracts insure that the research will continue during the coming fiscal year.

"I couldn't give a hoot about social policy," says Dr. Morton A. Stenchever, an obstetrician at the University of Utah Medical Center in Salt Lake City, "but I'll have to say there are quite a few problems with marijuana."

He compared chromosome damage in a group of 49 marijuana users to that in a control group of nonusers. His findings, published last January in the Journal of Obstetrics and Gynecology, were that users averaged 3.4 chromosome breaks per 100 white blood cells while non-users averaged only 1.2 breaks.

Dr. Stenchever explained that increased chromosome breaks might raise the likelihood of eventually getting cancer or becoming the parent of a child with birth defects.

Dr. Akira Morishima of the Department of Pediatrics, Columbia University, N.Y., has reported findings similar to Stenchever's.

The Stenchever and Morishima findings led the National Institute on Drug Abuse (NIDA)—the federal agency which bankrolls much of the nation's marijuana research—to fund several projects in which other researchers will attempt to reproduce the Stenchever and Morishima research processes to determine whether similar findings can be obtained.

Controversy over the findings persists. "Genetic damage is an extremely nebulous field," said Dr. Lissy Jarvik, a pediatrician-psychiatrist doing genetic research at the University of California Medical Center in Los Angeles.

"I don't see how Stenchever's work can be replicated," she said. "He's had some 50 students on a number of drugs, and marijuana was simply the only drug they had in common." She contended that Dr. Morishima's work would be easier to recreate.

Dr. Jarvik pointed out that "the body has repair mechanisms. Depending on the type of break, chromosome damage may have no effect. Also, cells in which breaks have occurred may die; and then again, there's no harm."

The danger, she said, is that cells with abnormal chromosomes might multiply and produce identical, also damaged, cells. "Then, in 10 or 15 years, such cells might be responsible for causing cancer."

"Whenever I present data I'm immediately attacked by the other side," Dr. Stenchever retorts. "Maybe she didn't read my article." He insists the increase in breakage alone is enough to cause serious concern, and he notes that half the drug users he studied took no other drugs except alcohol.

The Utah researcher noted that, when it comes to chromosome breaks, other widely used drugs are probably as dangerous as marijuana. "I think the same rate of breakage probably occurred in Valium," he said. Valium, a tranquilizer, is one of the most common prescription drugs in the country.

Few researchers are more cautious about the implications of their findings than Dr. Robert C. Kolodny, director of the infertility program at the Reproductive Biology Research Foundation in St. Louis. He has been checking levels of testosterone, the principal male sex hormone, in marijuana.

Dr. Kolodny, 30, has been working with Dr. William Masters, famed for his pioneer research in human sexual response, and Drs. Robert Kolodner and Gelson Toro.

In a recent article in the New England Journal of Medicine, Dr. Kolodny told how his group compared 20 men who used marijuana four days a week for a minimum of 6 months with 20 men who were non-users; testosterone levels in the users averaged a striking 40 per cent lower than in non-users.

Dr. Kolodny speculated—and he stresses the word "speculate"—that "there may be a decrease in fertility as a result of chronic, intensive marijuana use"; that heavy users may encounter potency problems; that pregnant female users "may disrupt sexual differentiation in male fetuses" during the second, third and fourth month of pregnancy; and that preteenage boys who smoke marijuana "may somehow disrupt completion of puberty," impairing normal sexual development.

He noted that his study has not yet been replicated. "So what you're dealing with is speculation based on preliminary findings."

Other researchers praised Dr. Kolodny's objectivity; and some said they believe his work is more important—and more frightening—than even he thinks it is.

Others noted that the exact function of testosterone is not completely understood, and thus the effect of the shortage is unpredictable.

Dr. Kolodny is beginning to receive testosterone samples from other laboratories throughout the country.

Even fellow researchers who respect his work call Dr. Gabriel Nahas a "crusader" against decriminalization. Others call him "a fanatic." Almost all agree, however, that efforts to duplicate the Columbia University pharmacologist's research should be made as soon as possible.

Dr. Nahas, who announced his findings at a highly publicized press conference two weeks before they appeared in Science magazine last February, studied white blood cell production in 51 marijuana users. All the subjects reported having smoked at least three times a week for four or more years.

He found that cell production in users averaged 40 per cent less than in a control group of nonusers.

Since white blood cell production is considered vital to the body's ability to fight disease, he speculates that marijuana use impairs the immunity system.

The Nahas findings are viewed as significant because they show exactly the same low level of production in white cells taken from users that he found in cells taken from nonusers and subsequently exposed to a marijuana agent in the test tube.

"We'd all be surprised if Nahas' findings are replicated," said UCLA's Dr. Jarvik. "I've spoken with a number of people in immunology and they're all extremely skeptical."

Sources at NIDA, which is funding attempts to replicate the immunity-system research, said two papers prepared for publication this summer confirm the Nahas findings while a third, using different techniques fails to do so.

Drs. Stenchever, Morishima, Kolodny and Nahas all learned about the drug-use background of their test subjects through interviews with them. Critics argue, with some justification, that interview data are not sufficiently reliable.

Ideally, say the critics, a test subject should be confined to"a closely supervised hospital ward where researchers can make certain that he is under the influence only of the drug being tested—and feeling only the effect of a prescribed dose.

Until recently, prescribed doses of marijuana were unavailable—and street doses varied enormously from cigarette to cigarette.

But now, because pharmacologists have isolated tetrahydrocannabinol (THC), the main intoxicating agent in marijuana, researchers can choose from a pot smoker's pipe dream of doses. The government provides low-, medium-, and high-dose cigarettes—and even cigarettes with no dose at all. In addition, researchers can obtain THC pills, so that marijuana can be administered orally.

Long-term controlled-dosage research is expensive, because hospital beds and supervising nurses are expensive. But such research is said to be especially rewarding for detailed study of the psychological aspects of the drug.

A bearded young man named Craig sat smoking a "joint" in a dimly lit room filled with stereophonic rock and roll. A nurse sat beside him to make sure he smoked the whole cigarette.

The smoking room was on the third floor of UCLA's Neuro-Psychiatric Institute (NPI)—and except for occasional supervised excursions to movie theaters and restaurants, Craig had been on that floor for almost 90 days, receiving $25 a day for his work.

That work involves submitting to, and participating in, a daily battery of tests: being wired to brain-wave machines, pressing buttons when images appear on a screen, answering questions in almost incessant interviews, and taking written tests not unlike school admission exams.

Would Craig continue smoking after his release? "Yeah, probably," he said, "but if anyone tries to take my pulse or ask how high I am, I'll kick 'em."

Dr. Sidney Cohen, a psychiatrist, and Phyllis Lessin, an anthropologist, supervise the NPI study.

"We've pretty well disproved the old notion that marijuana produces a 'reverse tolerance,'" Lessin said. Reverse tolerance is a technical term for the old pot smoker's notion that it takes less and less marijuana for an experienced user to get high. Dr. Cohen said NPI researches have found that the drug produces real tolerance, that one becomes inured to the effects of the same dosage if it is received day after day.

Lessin said NPI researchers also had disproved other myths about the drug. "We're learning that in many ways, it's a drug just like other drugs," she said.

Dr. Cohen provided two examples: "A lot of cops believe grass dilates the pupils of the eye; when, in fact, if a suspect's pupils are dilated, it's probably because of anxiety. As for the notion that pot excites sexual desire, well, we found that—like alcohol—it's sexually debilitating."

NPI researchers were not seeking the therapeutic applications for marijuana, Dr. Cohen said, but two therapeutic possibilities were discovered there because specialists from the enormous UCLA medical center next door also ran tests on NPI subjects.

For example, eye specialists discovered that marijuana reduces pressure within the eyeball, and thus might prove to be effective in treating glaucoma—a condition of excess pressure inside the eye which often afflicts older people. "The standard drugs for treating glaucoma don't help some people, but maybe THC will," Dr. Cohen explained.

Lessin said she occasionally goes over to the Jules Stein Eye Institute to help administer tests to middleaged glaucoma victims. "In other words, I have to teach them how to smoke pot," she said.

And while marijuana fails to dilate pupils, it does dilate bronchial tubes. "Asthma victims suffer from constricted bronchials," Dr. Cohen said. "It's possible THC will prove to be a useful supplemental drug for them, too." He said doctors at the medical center already are working to develop an experimental THC aerosol can.

Of course, the problem with THC as a therapeutic drug is its side effect—the high. Dr. Cohen said pharmacologists are hoping to isolate other cannabinoids which are not intoxicating because they may prove to have the same therapeutic effect.

At the Langley-Porter Institute (LPI) in San Francisco, another University of California facility, one strong joint a day is considered an extremely low dose. Test subjects there receive the equivalent of a pack of such cigarettes each day.

"Of course we administer it orally," said Dr. Reese Jones, a psychiatrist who has conducted marijuana research at LPI for more than five years. "Our subjects would be hoarse if they had to take that dose in smoke."

Dr. Jones' subjects—like their counterparts in Los Angeles—are confined to a psychiatric ward where they undergo constant testing. "We've been learning that little doses do one thing and big doses another," Dr. Jones said, stressing that big doses have much stronger physical effects.

"Our subjects are pretty sedated when they first get started on the high dose," he said. "Then, after six or seven days, what looks like a tolerance develops, and they become more alert and active, both psychologically and physically. You could say they return to normal.

"After two or three weeks, we substitute a placebo (a pill with no TCH); and suddenly the subjects become irritable and restless, and have trouble sleeping. They are probably suffering the symptoms of withdrawal from a physical dependence."

At such high doses, not presently available to ordinary users in this country, Dr. Jones is convinced THC closely resembles "sedatives—hypnotic-type drugs like alcohol and phenobarbital."

The "good news," he said, is that test subjects tolerate high doses "extremely well." But the "bad news" is the similarity between THC and "drugs that cause serious problems for some people in our society who use them."

Unless U.S. customs agents can prevent increasing importation of hashish and hashish oil (concentrated marijuana derivatives), Dr. Jones said he fears this country may face an epidemic of heavy-dosage use not unlike that in his laboratory.

About 40 miles south of San Francisco, at the Veterans Administration Research Hospital in Palo Alto, Dr. Leo Hollister, a pharmacologist, began some of the first U.S. government-sponsored marijuana research on human test subjects almost seven years ago.

Today he and psychiatrist Jared Tinklenberg are comparing the effects of single, normal doses of marijuana with similar doses of other drugs.

"The social aspects of this drug have been described ad nauseum," Dr. Hollister remarked. "When it comes to short-term effects, I don't think we've learned anything really significant in the last couple years.

"Now the issue that remains to be settled is how the drug achieves its effects."

The two men observed that marijuana seems to disrupt the transfer of information in the brain from short-term to long-term memory so that information acquired while under its influence is forgotten more easily than if it were acquired sober.

"It's possible that marijuana allows the brain to be flooded with irrelevant information," Dr. Tinkleberg speculates. "The subject then fails to distinguish between important and unimportant facts.

"Now we're trying to see if marijuana shares this quality with alcohol."

Dear Sir,

It was with great interest and agreement that I read the editorial from the Anchorage Times printed in your Feb.3rd edition entitled "An embarrasment". His conclusion bears repeating: "Elimination of hallucinatory drugs in the world is a commendable goal for mankind. Americans everywhere, including Alaska, can be proud of the role of their government in that effort. The revelation that this state is undermining the program is shameful and should shock its people."

It is Alaska's liberal marijuana laws that are responsible for his editorial and I couldn't agree more. Having grown up on the East Coast in an affluent community in New Jersey I had lots going for me materially. My experience with drug abuse started with occasional sips of someone's drink or sneaking a beer out of our fridge to drink in the woods behind our house. This started at about age 10 but by age 12 it wasn't occasional anymore and I found that I liked the feeling alcohol induced better than anything else.

My abuse of alcohol brought me into conflict with my family and the law. I spent 5 years, from 13 to 18 years of age, on probation and my junior and senior year of high school spending an hour per week at a court appointed psychiatrist's office. After graduation I was drafted into the Army the same year, and in 1966 that meant going to Viet Nam. My problem with alcohol was so bad by that time that I never even completed basic training and 11 months after my induction I was back on the streets with an Undesirable Discharge and a criminal record as an adult.

1968 was the year I remember for my introduction to drugs. When I returned home, the whole atmosphere of partying had shifted from alcohol to marijuana, hash, LSD, various other prescription medicines for ups or downs, and in a few cases herion. I tried most of these and marijuana became a regular part of my life at that time. I am fully aware of the effect that drugs had on my life and also of that these were all considered illegal there and then. There is no way that anyone can say that marijuana should be thought of as being in the same category as alcohol.

In the early seventies marijuana research was in its infancy and testing was limited to low-grade pot under short-term exposure. Many of my friends served in Viet Nam and quite a few came back with drug habits which led them to self-destructive experiments in their search for greater highs. Today there are strains of marijuana that contain more than 10 times the stupifying agent delta-9-THC than that used in those first tests. If that is what the kids today are starting with it's sure to be that much more damaging for those who fall victim to dependence on it. Just because there are some who seem to be able to handle occasional "recreational" use, don't kid yourself about the fact that there are inescapable physical and psychological effects.

Research has shown marijuana to be a complex substance with definite harmful effects, especially for adolescents. It's time that the people and their representatives take a close look at the facts and then get in step with the rest of the world.

Sincerely Yours,

Bob Konet

An embarrassment

The effect of Alaska's liberal marijuana laws is reverberating outside the state's borders and, indeed, around the world, according to a U.S. State Department specialist in international narcotics traffic.

During a visit here, the assistant secretary of state said the permissive attitude in Alaska is impeding federal programs in foreign countries. Other nations ask whether the United States seeks to protect its own growers from foreign competition.

It is understandable that American diplomats squirm when it is asked. Perhaps Alaskans should squirm, too.

Nine years ago, marijuana made headlines in Alaska. A group of young, liberal legislators in 1975 pushed through a bill to decriminalize marijuana because, they said, it reflected the times, it was the "thing to do." The only controls left were civil penalties that had the force of a feather in a windstorm.

The Supreme Court went even further when it ruled that possession of marijuana in a person's home for personal use was legal.

The court said, "The state cannot impose its own notions of morality, propriety or fashion on individuals when the public has no legitimate interest in the affairs of those individuals."

We said then—and we haven't changed our mind—that the state does, indeed, have an interest in what goes on in the privacy of a home, such as child abuse and health standards and anything else that has an effect upon society at large.

Last week's visitor said the Alaska tolerance of marijunana is undermining worldwide efforts to stop illicit drug production in other countries. The Alaska law allows an individual to raise up to four ounces for personal use. The U.S. is trying to convince growers in other nations to spray their fields with chemicals to kill the plant.

Elimination of hallucinatory drugs in the world is a commendable goal for mankind. Americans everywhere, including Alaska, can be proud of the role of their government in that effort.

The revelation that this state is undermining the program is shameful and should shock its people.

Fiscal Note
Analysis
HB 698

April 19, 1984

HB 698 is a blanket provision which would make possession or use of less than one-half pound of marijuana by anyone a class B misdemeanor. Some of the conduct which this bill would cover (such as use or display of any amount in a public place, possession of any amount while operating a motor vehicle, or possession of more than four ounces of marijuana anywhere) is a class B misdemeanor under existing law. See AS 11.71.060. Some of the conduct which this bill would make a crime (such as delivery of less than one-half ounce or possession of less than one ounce in public) is classified under current law as a "violation", punishable by a fine. See AS 11.71.070. The penalties under current law for other conduct such as delivery of one-half ounce or more, delivery to a minor, or possession of any amount on school grounds would not be altered. Penalties under existing law for these offenses range from A misdemeanor to B felony level. See AS 11.71.030, .040, and .050.

The passage of HB 698 would have fiscal impact on the Department of Law in three general areas: (1) the cost of defending the new law against constitutional challenge; (2) the cost of processing the resulting additional criminal cases; and (3) the cost of educating the public about the new law. These three areas are discussed separately below.

1. Defending the New Law

In 1975 the Alaska Supreme Court in the case of Ravin v. State, 537 P.2d 497 (Alaska 1975), ruled that under Art. I, Sec. 22 of the Alaska Constitution the state could not prohibit possession of marijuana by adults in their own homes for personal use. The court held that the state had not demonstrated the existence of a legitimate state interest which was strong enough to justify the regulation of this conduct.

Since passage of HB 698 would make it a crime for an adult to possess any amount of marijuana anywhere, including in his or her own home, the constitutionality of the new law is certain to be challenged. An appellate court will have to decide whether the state has proved that there is a "compelling state interest" in the prohibition of the use of marijuana which is sufficient to outweigh an individual's right to privacy under the state constitution. It is extremely important, therefore, that the legislature's consideration of this bill include extensive public hearings, debate on the social policy merits of the proposal, and the collection of the results of the most recent scientific, medical, and pharmacological studies regarding the physical, emotional, and social effects of marijuana usage.

In addition to the necessary legislative hearings, evidentiary hearings at the trial court level can be expected when a challenge to the new law is filed. Challenges to the new law will most likely arise in the context of a defendant's pretrial motion to dismiss a criminal prosecution. When responding to such a defense motion, the prosecutor would, in essence, have to convince a court to reverse the ruling in the Ravin case. In order to demonstrate that the result in Ravin is no longer correct, the prosecutor would have to present convincing, scientifically accurate, evidence that the effects of marijuana usage are so injurious to a person's mental and physical health as to justify the legislative decision to totally prohibit use of marijuana by anyone at any time (as opposed to use by minors or use by a person who is operating a motor vehicle--both of which are already prohibited under current law).

The presentation of this convincing evidence will require the prosecution to present expert testimony from authorities who have conducted recent research in this area. Out-of-state witnesses in medical and scientific fields charge a fee for their services. These fees will vary from individual to indivudal, but are expected to average at least $100 per hour. This would include services for consultation, witness preparation and actual testimony. Costs will be incurred for expert witness

transportation, food and lodging, and other incidental expenses. Additionally, there will be some costs for preparation of exhibits and written reports. To the extent possible, the Department of Law would attempt to present written testimony in situations where it is not feasible to fly a person to Alaska to testify in person. We estimate that a minimum of six expert witnesses will be required to attempt to successfully defend the new law at the trial court level.

Hearings at the trial court level can reasonably be expected to take several days. A substantial commitment of attorney time will be required for scientific and legal research in preparation for the hearings, actual court time, legal briefing, and the preparation of proposed findings of fact. Since prosecutions under the new law will occur statewide, defense challenges may be raised at the same time in different parts of the state. The extensive hearings described above may have to be held in more than one judicial district in the state.

Regardless of which side prevails at the trial court level, the lower court ruling would almost certainly be followed by an appeal. At a minimum, such an appeal (or appeals) would required additional legal research, a thorough review of the record, the drafting of briefs, and oral argument before the

appellate court. Although these appeals would present an increased workload for the criminal division attorneys assigned to appellate work, no additional funding is requested for this aspect of HB 698's fiscal impact.

2. New Criminal Cases

Although some of the conduct included within the scope of HB 698 is already against the law, much behavior which is now classified as a "violation" or which is not now an offense of any sort will become a misdemeanor crime. It is difficult to accurately predict in advance the impact which the passage of HB 698 will have on the criminal justice system.

Some law enforcement officers who work primarily in the drug enforcement area believe that the new law could potentially result in "thousands" of new misdemeanor cases a year. They believe that the bill would cause an increased enforcement effort both in the areas not now covered by existing law and against persons who commit minor offenses which are already against the law. A great number of the new cases would arise from situations where law enforcement officers now commonly discover small amounts of marijuana (as when an officer responds to a domestic disturbance call and sees some marijuana plants in a person's

home, or when a person is arrested for a minor offense and a routine search for weapons reveals some marijuana cigarettes in the person's pocket, for example). Incidents of this sort occur frequently now, but do not generally result in any criminal prosecution for the marijuana possession. Many of these cases are likely to be referred for criminal prosecution if HB 698 becomes law.

Prosecutors generally predict a lesser number of new potential criminal cases under HB 698 than do police. Once the public becomes aware of the new law, people are likely to be more careful about not allowing marijuana or smoking paraphernalia to be exposed in plain view in their homes, for example. Judging from the number of minor marijuana offenses prosecuted prior to the Ravin decision in 1975 prosecutors expect a "few hundred" new criminal cases a year.

Cases which are accepted for prosecution will require attorney time both at trial and in preparation for trial (i.e., preparation of search warrants, response to defense motions, evaluation of results of laboratory analysis, pretrial witness preparation, etc.). To handle screening of the expected case referrals, and to prosecute the additional cases, the criminal division will require the addition of at least one Attorney III

position. It is anticipated that this additional position will be used to add one half-time attorney in both the Anchorage and Fairbanks District Attorney's offices.

It is anticipated that a large percentage (perhaps 50-75%) of the defendants in the new cases will be first time offenders who will be eligible for pretrial diversion. Given the light sentences which these persons are likely to receive if convicted, pretrial diversion (including required community work service) appears to be a well justified use of criminal justice system resources. Even if a case is diverted however, attorney time is required to screen the case and make the diversion arrangements. New pretrial diversion personnel will be needed to supervise the new cases. Existing pretrial diversion offices are now working at full capacity. The addition of hundreds of new cases to an already full caseload will require, at a minimum, the addition of two new full-time positions. This fiscal note therefore includes funding for a paralegal II position for the Anchorage office. (This person would also be responsible for new cases in Palmer.) Funding of one additional community counselor is also required. This position will be divided into two half-time positions, one assigned to the Northern region (Fairbanks), and one in the Southeast region.

3. Public Education

In order to inform the public of the changes in the law, the Departmen. of Law will develop and disseminate public notices explaining the new law. These notices will include newspaper ads and brochures, and will be modeled upon the public education not.ces which were distributed statewide in connection with the new drug law in 1982 and the new DWI and drinking age laws in 1983. Based upon experience with these earlier notices, approximately $15,000 will be needed to cover the costs of writing, layout, typesetting, publication, and distribution.

In addition to the costs explained above, it is anticipated that the passage of this bill will result in increased costs to other components of the criminal justice system, including law enforcement, the courts, the public defender agency, and corrections.

JUSTIFICATION

This permanent part-time position is required to handle the influx of new cases that will result when marijuana violations, or any use of marijuana, which is not now a violation, become misdemeanor offenses. Prosecutors expect that at least a few hundred such offenses will occur each year as a result of the enactment of HB 698. This position will be responsible for prosecuting those new cases that are brought in the Third Judicial District. Because these new cases will be classed as misdemeanor offenses, allocation of the position to the Attorney III level is appropriate.

JUSTIFICATION

This permanent part-time position is required to oversee community work service assignments for those misdemeanant offenders who are screened into the state's Pretrial Diversion Program. Because a large percentage of defendants in the new cases that will result from enactment of HB 698 will be first-time offenders, as many as 50% of these defendants may be eligible for pretrial diversion. This position will be responsible for providing pretrial diversion services in the Southeast Region, centered at Juneau.

PETITION FOR A WRIT OF CERTIORARI TO THE SUPREME COURT OF THE STATE OF ALASKA

MICHAEL W. PRICE
550 West Seventh Avenue, Suite 1250
Anchorage, Alaska 99501
(907) 272-6474

Counsel for Petitioners

Of Counsel:

MICHAEL P. CONDON
GROH, EGGERS & PRICE
550 West Seventh Avenue, Suite 1250
Anchorage, Alaska 99501

QUESTIONS PRESENTED

The most fundamental principle of real property law in the United States is found in the Fifth Amendment to the United States Constitution:

> "No person . . . shall be deprived of . . . property, without due process of law; nor shall private property be taken for public use, without just compensation."

In this case, Petitioners or their predecessors' received patent to lands in Alaska which were either silent as to road reservations or, for lands entered after 1947, contained only reservations for roads as authorized by the "act of July 24, 1947 (61 Stat. 418, 48 U.S.C. §321d)."

The court below however found there existed other reservations not reserved in the patents which permit the State Highway Department to take without compensation strips of land as wide as 600 feet.[2]

The Alaska Supreme Court held by interpretation of 48 U.S.C. §321, that such taking was not barred by either the United States Constitution, nor a federal or state statute[3] prohibiting further taking under 48 U.S.C. §321d, by finding a separate easement under 48 U.S.C. §321a.

The properties affected by this decision by the State's own calculation are valued at One Billion Eight Hundred Million Dollars. ($1,800,000,000.00).

Under the circumstances, it is this conflict between federal

---

[1] A number of the Petitioners are title insurance companies who, as subrogee on claims, joined this action.

[2] Assuming sixteen-foot lanes, this could result in a highway thirty lanes wide. The minimum right-of-way was one hundred feet wide.

[3] Federal-Aid Highway Act of 1970 §138(b) Pub. L. No. 91-605, 84 Stat. 1713 (1970) and Right-of-Way Act of 1966 ch 2, 92 S.L.A. 1966. Petitioners note that this Court has found the Fifth Amendment to the United States Constitution applicable to the State through the Fourteenth Amendment.

guarantees and the lower court's ruling which raises the following questions:[4]

1. Did Congress intend to create two separate authorities for easements under the Act of June 30, 1932, Pub. L. No. 218 §§1 and 2, (47 Stat. 446), as amended July 24, 1947, Pub. L. No. 229 §5, 61 Stat. 418 (codified as amended at 48 U.S.C. §§321a-321d), so that State and Congressional acts expressly designed to prohibit further taking of property without compensation were inapplicable?

2. Whether the statute of limitation provision of 43 U.S.C. §1166 is applicable to bar the State of Alaska from taking easements or reservations beyond those provided in the actual patents?

3. Whether Congress intended the limitation unless otherwise "insufficient in law" contained in the Federal Register Act, 44 U.S.C. §1507 to apply to preclude documents published in the Federal Register from being constructive notice to real property transactions absent appropriate recording under the state recording statute?

[4] In the Alaska Supreme Court the case included an additional Plaintiff, Hansen Associates, an Alaska limited partnership. Hansen Associates is not appealing the decision of the Court below.

PETITION FOR A WRIT OF CERTIORARI TO THE SUPREME COURT OF THE STATE OF ALASKA

Petitioners respectfully pray that a Writ of Certiorari issue to review the judgment and opinion of the Supreme Court of the State of Alaska entered in this proceeding.

OPINIONS BELOW

The Memorandum of Decision of the State trial court, entered on May 7, 1980 and the judgment entered on May 27,

1980, are unreported. The opinion of the Alaska Supreme Court (and dissent), affirming in part and reversing in part, is published at 667 P.2d 714 (Alaska 1983). Petitions for rehearing were filed by both the Petitioners and Respondents. The Alaska Supreme Court denied the Petition of the Petitioners and granted the petition of the Respondent State of Alaska in an order issued July 8, 1983. The order of the court issued in response to the Petition for Rehearing has not yet been published in the official report. All of the unreported opinions and orders are reproduced in the Appendix A-1 to A-3.

JURISDICTION

The opinion of the Alaska Supreme Court was entered on May 27, 1983. Timely Petitions for Rehearing were filed by both parties. The Alaska Supreme Court denied the petitioners' Petition for Rehearing and granted Respondent's Petition for Rehearing and an Order issued on July 8, 1983 modified its opinion. This Court's jurisdiction is invoked under 28 U.S.C. §1257(3).

The full text of these constitutional, statutory and regulatory provisions are included in Appendix B.

STATEMENT

This case presents fundamental issues concerning conflicting claims to property between the State of Alaska and the Petitioners to land conveyed by the United States to the Petitioners or Petitioners' predecessors. Immediately following World War II, numerous individuals, particularly World War II veterans, came to Alaska to avail themselves of the offer by the federal government to establish fee simple ownership in public land. Patents were subsequently issued by the federal government to those individual entrymen who qualified. In the patents the federal government set forth exceptions and reservations to the entrymens' interest, including in most instances, reservations for highways. It is other alleged reservations not set forth in the patents which are the subject of this appeal.

Upon Alaska's entry into the Union in 1959, the federal government executed a quitclaim deed to the State of Alaska conveying all of its interest, if any, in highways and roads contained within the State. For unknown reasons, ten years passed before the quitclaim deed was recorded in 1969. In conjunc-

tion with the development boom in Alaska during the 1970s, the State of Alaska began increasingly to take private property without compensation for expansion of numerous highways throughout the State. The State's claim to take property without compensation was based upon certain land orders and a departmental order issued by the Department of Interior prior to Statehood. In particular, the State relied on Public Land Orders (PLO) 601, 757, 1613 and Departmental Order (DO) 2665[4] published between 1949 and 1958.

Patents issued prior to 1947 were silent as to any reference to withdrawals or easements. Patents after 1947 contained only the general reservation for highways as authorized by "the act of July 24, 1947 (61 Stat. 418, 48 U.S.C. §321d)," but did not identify any width for such reservations. Such were to be established at a later date by the Department of Interior. Petitioners assert the Secretary did this in 1951 by DO 2665.

When the State of Alaska began accelerating its claim in the 1970s based on these withdrawals and easements, numerous land owners found themselves deprived of significant portions of their property without compensation. These property rights which will continue to be taken without compensation are valued by the State of Alaska to be in excess of one billion eight hundred million dollars. Additionally, title insurance companies who had insured some, though not all, of the land sales found themselves burdened with claims which could jeopardize their continued solvency. It is in this context this Petition is filed.

The difficulty with the land order withdrawals and easements is that they were not noted on the patents. Thus, property owners never knew that their land might be subject

[4] Promulgated August, 1949 to withdraw land from any form of homestead entry, PLO 601 established corridors for future highways. These withdrawals extended from six hundred feet for the Alaska Highway to one hundred feet for all "local" roads. In October, 1951, PLO 757 removed the withdrawal for "local" roads, but there was simultaneously established "easements" of the same width under DO 2665. Special legislation was passed in 1956 to authorize PLO 1613 which conceded the remaining withdrawals were unnecessarily wide and created a repurchase program for adjoining landowners, subject to the easements identified in DO 2665.

to a highway easement significantly in excess of that noted in their patents or the official government surveys. Further, the PLO easements and withdrawals were never recorded, surveyed or posted to plats. In fact, it is not even possible to find a list of all "local" roads for which a PLO withdrawal or easement may be claimed. The State itself does not prepare a map showing the location of the withdrawals or easements until it has first decided to expand or improve that particular highway.

For years the State, and the federal government before it, has known that the failure to record, survey, map or note on plats these rights-of-way created serious title problems.[6] However, despite this knowledge, the State has acquiesced in the successive sale and improvement of properties which the State now claims to be subject to the highway reservations.

The decision of the Court below clouds the title to the vast majority of properties adjacent to every road (excluding subdivision roads) within the State of Alaska. The Alaska Supreme Court has taken the position that 48 U.S.C. §321a is a separate grant of authority by Congress to the Secretary of Interior to create an easement independent of the express authority granted under 48 U.S.C. §321d. By this erroneous interpretation of federal law finding an independent easement in 48 U.S.C. §321a, the court below precluded the protection afforded by both federal and State statutes designed to prevent the further exercise of highway reservations without compensation.[7] The ruling of the Court below is unquestionably contrary to the legislative history and language contained within U.S.C. §321a-321d.

Additionally, the Alaska Supreme Court failed to follow numerous decisions of the U.S. Supreme Court that the United States (in this case Alaska since it is the successor to the United States' interest) may not bring a suit to challenge a patent

[6] The State of Alaska has taken the position that despite its failure to record its quitclaim deed for ten years and despite the fact none of the land orders are recorded in the state recording districts pursuant to the State's recording statutes, it may seize the land.

[7] See footnote 3, *supra*.

more than six years after the patent has been issued and is thus barred from making a collateral attack upon the patent.

PROCEEDINGS BELOW, PARTIES AND JURISDICTIONAL MATTERS

This action was commenced in the Anchorage Superior Court in February of 1979, when the Petitioners filed a complaint for declaratory relief. Named as defendants were the State of Alaska, Theodore M. Pease and Claire V. Pease. Petitioners in their complaint identified eight claims for relief. On June 4, 1979, Petitioners filed an amended complaint for declaratory judgment which added an additional claim for relief. The Petitioners' amended complaint sets forth several state and federal claims.

Motions for summary judgment were brought by both the Petitioners and Respondent in the trial court. The court denied the Respondent State of Alaska's motion for summary judgment and granted Petitioners' motion as to its second, third and eighth claims for relief. The trial court denied the first claim for relief which reflected petitioner Transamerica's claim that it was not liable under its title insurance policy to Theodore and Claire Pease as to the additional right-of-way taken by the State. The trial court found that the prior Alaska Supreme Court case, *Hahn v. Alaska Title Guaranty Co.*, 557 P.2d 143 (Alaska 1976) was controlling. However, the trial court in its decision found that Petitioner Transamerica's argument was persuasive and asked the Alaska Supreme Court to review the *Hahn* decision.

The decision of the trial court rested predominantly on its determination that a State statute, the Alaska Right-of-Way Act of 1966, was applicable to prevent any further taking without compensation. The trial court determined that, unless the State had occupied or staked a highway in excess of the width set forth in the patents prior to April 14, 1966, then it would only be entitled to the roadway actually occupied or that set forth in the patent, whichever was greater. Any additional land needed by the State could be taken only by paying just compensation.

The State filed its points on appeal on June 24, 1980. The Petitioners filed their notice of cross-appeal on June 30, 1980. Upon appeal, the judgment was affirmed only as to one plaintiff and reversed as to all other Petitioners. One Justice filed a dissent from the three-person majority opinion.

FEDERAL QUESTIONS RAISED AND DECIDED BELOW

The decision of the Alaska Supreme Court is based on the determination of a number of controlling questions of federal law. The first question is whether there existed under 48 U.S.C. §321a power to create an easement in the Secretary of Interior over public lands in Alaska separate from that set forth in 48 U.S.C. §321d. The Alaska Supreme Court's misinterpretation of the power of the federal government under 48 U.S.C. §321a results in a taking of private property without compensation. Further, the Alaska State Legislature has attempted to insure that the State not avail itself of rights-of-way under 48 U.S.C. §321a-321d, when it passed the Right-of-Way Act of 1966. The court below determined that the Right-of-Way Act and the protections thereunder were not applicable since that act applied only to easements under 48 U.S.C. §321d and the easements asserted by the State were created under 48 U.S.C. §321a and DO 2665. The court below ignored the intent of a similar federal act to bar such takings. Federal-Aid Highway Act of 1970, §138(b) Pub. L. 91-605, 84 Stat. 1713 (1970). This interpretation of federal law, if allowed to stand, will permit the State to seize private property belonging to Petitioners without compensation.

The assertion that the Right-of-Way Act of 1966 and section 138(b) of the Federal-Aid Highway Act of 1970 were applicable to protect the Petitioners in these circumstances was raised at the trial court during summary judgment proceedings and again during the appeal to the Alaska Supreme Court. The question was specifically addressed by the Alaska Supreme Court in its decision.

Second, the Alaska Supreme Court rejected Petitioners' contention that the easements claimed by the State of Alaska

were not set forth in the patents and therefore eliminated by failure to annul the patents within the six-year statute of limitation period of 43 U.S.C. §1166. This is clearly a federal question. The Alaska Supreme Court, in addressing this issue on appeal, interpreted federal law in a manner such as to preclude the application of the statute to protect Petitioners' rights in this case. Petitioners raised these claims of a federal right in their complaint at the trial court and maintained their position throughout the appeal.

Third, Alaska Supreme Court misinterpreted 44 U.S.C. §1507 in requiring that public land orders and the departmental order, upon publication in the Federal Register, be considered constructive notice for real property transactions independent of compliance with State or territorial recording statutes. By interpreting the Federal Register Act as constituting constructive notice for purposes of determining ownership of land, Petitioners were precluded from availing themselves of the protection offered by the State recording statutes. Petitioners raised these claims in their memorandum in support of motion for summary judgment in the trial court and maintained their position throughout the appeal.

REASONS FOR GRANTING THE WRIT

(a) Impact of the Decision Below.

The decision of the Alaska Supreme Court below has a devastating impact on landholders within the State of Alaska. During the late 1940s when Alaska was still a territory, the federal government held open to individuals the opportunity to settle in the territory and obtain fee simple ownership of land therein. After properly complying with the applicable statutes and regulations concerning homesteads, these individuals were issued patents reflecting their ownership rights. These patents set forth the reservations and exceptions which the federal government stated it was maintaining.

In the approximately thirty years that have passed since this initial transfer of property from the federal government to individuals following World War II, the individual owners and their successors in interest have subdivided and developed

the property pursuant to the natural growth of the State. Thus this lawsuit greatly affects the current property rights of thousands of landowners within the State of Alaska, many of whom have developed valuable improvements within the claimed easements unaware the State claims the right to take their property.

The decision of the court below results in confusion to titles to thousands of parcels held within the State of Alaska. The State admits that the potential value of the land which it can seize without compensation to be valued in excess of $1.8 billion dollars. Already several other cases have been initiated involving issues related to this decision.

Therefore, the Petitioners believe that their Petition for Writ of Certiorari should be accepted by the Court to review the tremendous impact of the decision of the court below upon title to thousands of parcels of land within the State as well as the combined total economic loss to individuals residing in the State.

(b) Important and Novel Questions of Federal Law.

The decision below also involves important questions of federal law never interpreted by this or any other federal court. The Alaska Supreme Court in reaching its decision interpreted several federal statutes and orders regarding public lands within Alaska. In particular, the court below interpreted 48 U.S.C. §321a as creating in the Secretary of Interior a right to establish an easement on public lands separate from that of 48 U.S.C. §321d. By interpreting the federal statute in this manner, the court below voided the specific protection offered to private landholders by the Alaska Legislature by the Right-of-Way Act of 1966 and Congress by section 138(b) of the Federal-Aid Highway Act of 1970.[8]

---

[8] The intent of the Alaska Legislature is clear. The Act states in part:

Section 1. Purpose. This Act is intended to alleviate the economic hardship and physical and mental distress occasioned by the taking of land, by the State of Alaska, for which no compensation is paid to the persons holding title to the land. This practice has resulted in financial difficulties and the deprivation of peace of mind regarding the security of one's possessions to many citizens of the

A second question of first impression was raised by the Alaska Supreme Court in its decision regarding the Federal Register Act, 44 U.S.C. §1507. No previous court has addressed the precise question here. In this case the question rests on whether the Federal Register is constructive notice as to landholders in Alaska or whether such notice is "insufficient in law" within the meaning of 44 U.S.C. §1507. Congress did not clearly identify under what circumstances notice under the Federal Register would be "insufficient in law." However, the interpretation of the court below that the Federal Register must be notice under State land laws has not been addressed. Therefore, this presents an important question of federal law which has applicability beyond the State of Alaska. Other states, particularly in the western United States, have large tracts of federal public land which is subject to thousands of federal public land orders and department orders of the Department of Interior and other federal agencies. Thus, applicability of a decision which indicates that Congress intended the federal register to be constructive notice under State land laws has tremendous impact upon title in other states as well as Alaska. Therefore, the Court should accept Petitioners' Writ for Certiorari to address this issue.

(Footnote Continued)

State of Alaska, and which, if not curtailed by law, will continue to adversely affect the citizens of this state. Those persons who hold title to land under a deed or patent which contains a reservation to the state by virtue of the Act of June 30, 1932, ch. 320, sec. 5, as added July 24, 1947, ch. 313, 61 Stat. 418, are subject to the hazard of having the State of Alaska take their property without compensation because all patents or deeds containing the reservation required by that federal Act reserve to the United States, or the state created out of the Territory of Alaska, a right-of-way for roads, roadways, tramways, trails, bridges, and appurtenant structures either constructed or to be constructed. Except for this reservation the State of Alaska, under the Alaska Constitution and the Constitution of the United States, would be required to pay just compensation for any land taken for a right-of-way. It is declared to be the purpose of this Act to place persons with land so encumbered on a basis of equality with all other property holders in the State of Alaska, thereby preventing the taking of property without payment of just compensation as provided by law, and in the manner provided by law.

(c) The Decision of the Court Below Conflicts with Prior Decisions of the Court

The Alaska Supreme Court determined that the six-year statute of limitations applicable to suits by the United States to vacate and annul a patent under 44 U.S.C. §1166 did not apply to prevent the State Highway Department from seizing private property in which the patents from the federal government did not reserve any of the easements or withdrawals sought to be taken by the State. The court found that despite the failure of the federal government to set forth in the patent any limitations arising under the public land orders and the departmental order identified in this case,[9] it would permit a collateral attack on the patent by reducing the amount of land transferred to the patentee by the federal government and by imposing on that patent restrictions not contained herein. This Court has long held that once the six-year statute of limitations has run the United States may not attack the validity of a patent. *United States v. Chandler–Dunbar Water Power Co.*, 209 U.S. 447 (1908); *Brooks v. So. Pac. R. Co.*, 234 U.S. 669 (1914); *U.S. v. Oregon Lumber Co.*, 260 U.S. 290 (1922). Although the statute on its face is applicable to the United States it is equally binding on the State. The State has claimed to possess the interest of the United States under the respective statutes and orders pursuant to the quitclaim deed issued upon statehood in 1959. Therefore, unlike cases cited to by the majority opinion in the court below, the State of Alaska has no more than what the United States possessed in 1959. A failure to assert that interest within six years of the issuance of patent precludes the United States (and the State of Alaska, its successor in interest) from attacking the patents. Therefore, the court below has rendered a decision in conflict with prior holdings of this Court.[10]

I. NO SEPARATE AUTHORITY EXISTS TO ESTABLISH AN EASEMENT UNDER 48 U.S.C. §321a.

[9] PLO 601, PLO 757, PLO 1613, and DO 2665.

[10] A succinct discussion of this misinterpretation of 43 U.S.C §1166 appears in the dissenting opinion by Justice Rabinowitz in the court below.

A review of the legislative history of 48 U.S.C. §§321a-321d reveals, contrary to the decision of the court below, no authority for the Secretary of Interior to establish easements under 48 U.S.C. §321a. Originally, under the Act of January 27, 1905, 33 Stat. 616, Congress established a Board of Road Commissioners for Alaska. This Commission was given the power to "locate, layout, construct, and maintain wagon trails and pack trails . . ." within Alaska. Sec. 2 Act of June 27, 1905, 33 Stat. 616. In 1932, Congress transferred the power of the Commission to the Department of Interior. Sec. 1 and 2 Act of June 30, 1932, 47 Stat. 446.

However, neither of these two statutes granted the power to the Secretary of Interior or the Commission to grant easements across the land but rather only the power to construct roads. In fact, the language contained in sec. 2 Act of June 30, 1932, 47 Stat. 446, codified as 48 U.S.C. §321a, was recognized by the Department of Interior as only granting authority to the Secretary to fix the width of *public domain* roads which were "located, laid out, constructed and maintained" pursuant to sec. 2 Act of June 27, 1905, codified as 48 U.S.C. §322.

Because of the Department of Interior's concern over the pending patenting of public lands in Alaska where a 43 U.S.C. §932 easement did not apply, the Department requested in 1947 that Congress amend the Act of June 30, 1932. H.R. Rep. No. 673, 80th Cong. 1st Sess., *reprinted in* 1947 U.S. Cong. & Ad. News 1352, 1353. In the Department's letter requesting legislation, the Secretary of Interior indicated that his Department was seeking authority for the reservation of easements for the first time. Since 48 U.S.C. §321a already existed at the time that the Department of Interior made this request to amend the Act of 1932, it is evident that the Department of Interior recognized that no easement authority existed under §321a. To hold otherwise negates the 1947 Amendment."

---

[11] The Language of 48 U.S.C. §321d provides for only one easement. It states that "(i)n all patents for lands hereafter taken up, entered or located in the Territory of Alaska . . . there shall be expressed that there is reserved, from the lands . . . in such patent . . . *a right-of-way.*" (Emphasis added.)

This position is further supported by a Department of Interior memo on October 10, 1950, which in discussing PLO 601 noted that the Department of Interior discussed changing the withdrawals to easements so that rights-of-way under the Act of July 1947 would still be valid.[12] This once again indicates the Department of Interior looked to sec. 321d (the 1947 act) for its authority, not some strained interpretation of sec. 321a.

48 U.S.C. §321d requires that all lands entered after the date of the Act (June 23, 1947) have reserved in the patents an easement. The Department of Interior pursuant to this Congressional mandate began issung patents which clearly stated that an easement was being reserved pursuant to 48 U.S.C. §321d. It is clear that the Department of Interior did not consider §321a to be authority to impose an easement, or it could have just as easily put this reservation in the patents too.

The court below held that sec. 321a easements exist not from statutory language or legislative intent, but solely from the fact that paragraph 1 of DO 2665 states that the authority for the Secretary to promulgate DO 2665 is 48 U.S.C. §321a. Petitioners do not dispute that section 321a grants the Secretary of Interior the authority over Alaska roads and thus authority to issue the departmental order."[13] Petitioners

---

(Footnote Continued)
The statute goes on to state that "(w)hen a right-of-way easement under this Act . . ." once again indicating that a single authority for creating a right-of-way existed under 48 U.S.C. §321. The Act of 1947 was an amendment to the Act of June 30, 1932 (47 Stat. 448) and therefore the language "this Act" must refer to the Act of 1932.

[12] The Department of Interior in October of 1950 revealed concern that the PLO withdrawals were insufficient to protect the rights-of-way desired by the federal government. It was proposed by Department of Interior memo that the withdrawals be changed to easements under the 1947 Act (48 U.S.C. §321d) to set forth the width of the proposed easements. This concern resulted in the publication of DO 2665 in October of 1951 establishing easements under 48 U.S.C. §321d. See Department of Interior memo October 10, 1950 at Appendix C.

[13] The Alaska Supreme Court previously authorized the taking of property without compensation based on this erroneous interpretation in *State, Department of Highways v. Green*, 586 P.2d 595 (Alaska 1978)

however assert that such authority to issue the order does not equate with a separate authority to create an easement. The unmistakable intent of the 1947 amendment, codified at 48 U.S.C. §321d, was to create, for the first time, easements."

The court below in its misinterpretation that 48 U.S.C. §321a is a separate authority for the Department of Interior to establish easements nullifies the attempt by the State of Alaska in the Right-of-Way Act of 1966 to protect private landowners from State exercise of such easements. The Right-of-Way Act of 1966 has been interpreted by the Alaska Supreme Court as applying only to easements established under 48 U.S.C. §321d. Under the terms of the Act, the State is barred from taking without compensation any additional land pursuant to a sec. 321d easement if it has not done so prior to the date of the Act. Further, by its interpretation of federal law, the court below has deprived Petitioners' rights afforded by sec. 138(b) of the Federal-Aid Highway Act of 1970.

II. THE STATUTE OF LIMITATIONS OF 43 U.S.C. §1166 BARS THE RESPONDENT FROM CHALLENGING PATENTS AFTER SIX YEARS.

The United States issued patents to Petitioners and Petitioners' predecessors in interest which contained a description of the reservations and exceptions which the United States intended to retain. The State of Alaska maintains that the various PLOs and the Departmental Order grant it a right-of-way even though not identified in the patents. Had the property at the time of patent still been encumbered by the withdrawals or easements, but patent nevertheless issued, the government would have only six years to annul the patent. *United States v. Chandler—Dunbar Water Power Co.*, 209 U.S.

" The trial court agreed with petitioners and stated that:

It should be noted that DO 2665 is issued under authority of 48 U.S.C. §321a; however, sec. 321a is only the general grant of authority by Congress to the Secretary of Interior to administer the road. In Alaska sec. 321d is the specific authority for the Secretary to reserve easements for roads and therefore, DO 2665 by implication is based on authority of sec. 321d, Pub. L. 229 ch. 313 approved July 24, 1947.

447 (1908). The withdrawals or easements could not have been deemed to have been an implied exception to the patent. *Leo Sheep Co. v. United States*, 440 U.S. 668 (1979); *Hardin v. Jordan*, 140 U.S. 371 (1891); *Stewart v. Lamm*, 132 Colo. 484, 289 P. 2d 916 (Colo. 1955).

The quitclaim deed could not, as the State asserts, pass greater rights than that the United States had to transfer. It is well established that a patent is in the nature of a quitclaim deed. *Wilson Cyprus Co. v. Del Pozo y Marcos*, 236 U.S. 635 (1915); *Sampeyreac v. United States*, 7 Pet. (U.S.) 222 (1833). Consequently, the United States passed by patent its estate *except* that which was actually reserved in the patent, i.e. the 1947 highway reservations, 48 U.S.C. §321d.

Additionally, it is clear that once a patent is issued, even if it contains a mistake, the Executive Department lacks power to set the transfer aside. The annulment must be done judicially. *West v. Standard Oil Co.*, 278 U.S. 200 (1929); *Stone v. United States*, 69 U.S. 525 (1875). In the case at bar, the United States has never sought to set aside the patents issued without the alleged reservation for the easements cited by the Respondent (48 U.S.C. §321a) and therefore those patents would still be binding on the United States. Under the 1959 quitclaim deed, the State recieved no greater right to the land than the United States had and since the patents were conclusive against the United States then they are likewise conclusive against the State of Alaska.

This court in *United States v. Whited & Wheless, Ltd.*, 246 U.S. 552 (1918) noted that the purpose of the statute of limitations contained in 43 U.S.C. §1166 was to restore, in the public, confidence in the integrity and value of patent title to public lands which had been challenged under numerous suits seeking to cancel such patents. The statute itself presupposes that the government will make an error. *United States v. Chandler—Dunbar Water Power Co., supra* at 450. Indeed, the protection afforded patents under 43 U.S.C. §1166 has been strong enough that this Court has determined that even in the cases of fraud, the patent itself may not be set aside. *United States v. Diamond Coal and Coke Co.*, 255 U.S. 323 (1921). In

United States. v. Whited & Wheless, Ltd., supra, this court has also determined that even in the cases of fraud, if the title to the property has passed to a bonafide purchaser, the government may not challenge the patent. *Wright-Blodgett Co. v. United States,* 236 U.S. 397 (1915); *United States v. California & The Oregon Land Co.,* 148 U.S. 31 (1893).

Courts have also noted that in determining what land is conveyed under a patent, the number of acres specified in the patent is very important. *Ritter v. Morton,* 513 F.2d 942 (9th Cir. 1975). Other courts have also made it clear that the boundaries of land cited in a patent, even if incorrect, would be binding on the United States and its successors. *Grainger v. United States,* 197 Ct. Cl. 1018 (1972). Even though the State claims the withdrawals from homestead entry of PLO 601 and 757 still apply, none of the patents contained any commensurate reduction in total acreage. The United States under 43 C.F.R. §101.3 (1949) was required to put on notice all persons making an entry on public land which could be affected by a right-of-way."[15] The failure to include such an easement on the entry papers or on the final patent is conclusive against the United States.

Therefore, Respondent's claim was barred by the statute of limitations contained in 43 U.S.C. §1166. The Respondent has no greater interest in the land than that held by the United States. The United States was barred from challenging the patents after six years for failure of the patents to contain easements set forth in the PLOs and the departmental orders. Assuming *arguendo* that the State's position has merit, any interest which the United States had was extinguished by the

[15] The provisions of 43 C.F.R. §101.3 (1949) set forth the notations which were required to be made on entry papers and notices of allowance in 1949.

> In order that all persons making entry of public lands which are affected by rights-of-way may have actual notice thereof, the Register is directed to note upon the original entry papers and upon the notice of allowance of the application . . . issued to the entrymen, a reference to such rights-of-way . . . he will place the same notation as to right-of-way upon the final entry papers so that the reservation of the right-of-way will be made in the patent when issued.

running of the statute of limitations in 43 U.S.C. §1166. The United States did, pursuant to 48 U.S.C. §321d, maintain road reservations which were subsequently relinquished by State and federal acts.

III. THE FEDERAL REGISTER ACT IS NOT CONSTRUCTIVE NOTICE AS TO PRIVATE LANDOWNERS IN THE STATE OF ALASKA

Provisions of 44 U.S.C. §1507 provide that persons will be charged with notice of documents filed for publication in the Federal Register "except in cases where notice by publication is insufficient in law." The question in this case is whether, absent actual notice, does publication in the Federal Register constitute notice insufficient in law for real property transactions. A review of the legislative history does not reveal a clear answer as to whether Congress intended the Federal Register to be constructive notice as a matter of law or whether such notice would be insufficient in law as applied to state land titles. The federal case law cited to by the majority of the court below does not contain a case in which the court addressed the question of what was "insufficient in law." There is no reason to believe that Congress intended to displace established conveyancing and recording laws in every state of the Union with a chaotic system in which landowners must be charged with constructive notice of pre-patent federal orders not noted as reservations in the patents."[16]

Therefore, the court below erred in interpreting federal cases cited for the proposition as to what constitutes constructive notice where that determination is being made as to title under state law. Acts of Congress which affect conveyancing and recording statutes of the fifty states should be considered "insufficient in law" to be constructive notice.

[16] This position was adopted by the Dissenting Opinion in the lower court.

CONCLUSION

For all of the foregoing reasons, a Writ of Certiorari should issue to review the judgment and opinion of the Alaska Supreme Court.

Respectfully submitted,

MICHAEL W. PRICE

Defendants.

No. 3AN 79-951 Civil

MEMORANDUM OF DECISION

This case is a suit for declaratory relief and the plaintiffs, the State of Alaska and the Peases have moved for summary judgment. The facts are that in 1978 the State of Alaska widened Rabbit Creek Road, a local road off the Seward Highway approximately nine miles south of Anchorage, from a road having a bed of less than 66 feet to a road having a bed of 100 feet in width. Mr. and Mrs. Pease are adjoining landowners to Rabbit Creek Road and own the underlying fee to the centerline. They seek compensation from the State of Alaska or the title insurance company which insured their title for the taking of a strip 17 feet in width from their property for the widening of Rabbit Creek Road.

The Peases acquired by warranty deed Lot 191, Section 33, T 12N, R3W, Seward Meridian, Anchorage Recording District on August 18, 1960 which parcel was separated from the public domain on October 4, 1955 by patent number 115 1722 which provides a "reservation of a right-of-way for roads . . . constructed or to be constructed by or under the authority of the United States or by any State created out of the Territory of Alaska, in accordance with the act of July 21, 1947 (61 Stat. 418, 48 U.S.C. sec. 321d)" and "This patent is subject to a right-of-way not exceeding 33 feet in width, for roadway and public utilities purposes, to be located along the south and east boundaries of said land."

There are no facts in dispute. The other parties, Mr. Boysen, Hansen Associates and Jack White Company own property which may be affected by easements for through and feeder roads. In this memorandum of decision the case concerning the Peases will be considered first, a decision reached on the ownership of the 17 foot wide strip along Rabbit Creek Road and will be used for illustrative purposes in deciding questions relating to other parcels.

The relevant history of statutes, public land orders (P.L.O.) and department orders (D.O.) affecting rights-of-way for roads like Rabbit Creek includes:

1. P.L.O. 601 dated August 10, 1949 under the authority of *Executive Order No. 9337* (43 U.S.C. §141) withdrew from entry certain lands and reserved those lands for highway rights-of-way as follows:

a. the public lands lying within 300 feet on each side of the center line of the Alaska Highway, 150 feet on each side of the center line of all other through roads, 100 feet on each side of the center line of all feeder roads, and 50 feet on each side of the center line of all local roads.

b. through roads are the Alaska Highway, Richardson Highway, Glenn Highway, Haines Highway, and Tok Cut-off.

c. feeder roads are Steese Highway, Elliott Highway, McKinley Park Road, Anchorage-Potter-

Indian Road, Edgerton Cut-off, Tok-Eagle Road, Ruby-Long-Poorman Road, Nome-Solomon Road, Kenai Lake-Homer Road, Fairbanks-College Road, Anchorage-Lake Spenard Road, Circle Hot Spring Road.

d. local roads are all roads not classified as through or feeder roads established or maintained under the jurisdiction of the Secretary of the Interior.

e. Paragraph 6 reads:

Subject to valid existing rights and to existing surveys and withdrawals for other than highway purposes, the public lands in Alaska lying within 300 feet on each side of the center line of the Alaska Highway, 150 feet on each side of the center line of all other through roads, 100 feet on each side of the center line of all feeder roads, and 50 feet on each side of the center line of all local roads, in accordance with the following classifications, are hereby withdrawn from all forms of appropriation under the public land laws, including the mining and mineral-leasing laws and reserved for highway purposes.

2. P.L.O. 757 dated October 16, 1951 provides:

The sixth paragraph of Public Land Order No. 601 of August 10, 1949, reserving public lands for highway purposes, commencing with the words "Subject to valid existing rights", is hereby amended to read as follows:

Subject to valid existing rights and to existing surveys and withdrawals for other than highway purposes, the public lands in Alaska lying within 300 feet on each side of the Alaska Highway and within 150 feet on each side of the center line of the Richardson Highway, Glenn Highway, Haines Highway, the Seward-Anchorage Highway (exclusive of that part thereof within the boundaries of the Chugach National Forest), the Anchorage-Lake Spenard Highway, and the Fairbanks-College Highway are hereby withdrawn from all forms of appropriation under the public land laws, including

the mining and mineral-leasing laws, and reserved for highway purposes.

Easements having been established on the lands released by this order, such lands are not open to appropriation under the public land laws except as a part of a legal subdivision, if surveyed, or an adjacent area, if unsurveyed, and subject to the pertinent easement.

3. D.O. 2665 dated October 16, 1951 under the authority of section 2 of the act of June 30, 1932 (47 Stat. 446, 48 U.S.C. 321a) established the width of the public highways in Alaska established or maintained under the jurisdiction of the Secretary of Interior as follows:

a. through roads: The Alaska Highway shall extend 300 feet on each side of the center line thereof. The Richardson Highway, Glenn Highway, Haines Highway, Seward-Anchorage Highway, Anchorage-Lake Spenard Highway and Fairbanks-College Highway shall extend 150 feet on each side of the center line thereof.

b. feeder roads (with an extensive listing) shall extend 100 feet on each side of the center line thereof.

c. local roads not classified as through roads or feeder roads shall extend 50 feet on each side of the center line thereof.

d. the order provided specifically:

Sec. 3. Establishment of rights-of-way or easements. (a) A reservation for highway purposes covering the lands embraced in the through roads mentioned in section 2 of this order was made by Public Land Order No. 601 of August 10, 1949, as amended by Public Land Order No. 757 of October 16, 1951. That order operates as a complete segregation of the land from all forms of appropriation under the public land laws, including the mining and mineral laws.

(b) A right-of-way or easement for highway purposes covering the lands embraced in the feeder roads and the local roads equal in extent to the width of such roads

as established in section 2 of this order, is hereby established for such roads and across the public lands.

(c) The reservation mentioned in paragraph (a) and the rights-of-way or easements mentioned in paragraph (b) will attach as to all new construction involving public roads in Alaska when the survey stakes have been set on the ground and notices have been posted at appropriate points along the route of the new construction specifying the type and width of the roads.

Sec. 4. Road maps to be filed in proper Land Office. Maps of all public roads in Alaska heretofore or hereafter constructed showing the location of the roads, together with appropriate plans and specifications, will be filed by the Alaska Road Commission in the proper Land Office at the earliest possible date for the information of the public.

It should be noted that D.O. 2665 is issued under the authority of 48 U.S.C. 321a; however, section 321a is only the general grant of authority by Congress to the Secretary for the Interior to administer the roads in Alaska. Section 321d is the specific authority for the Secretary to reserve easements for roads and, therefore, D.O. 2665 by implication is based upon the authority of 321d, Public Law 229, ch. 313 approved July 24, 1947.

4. The effect of P.L.O. 757 and D.O. 2665 was to return to the public domain and make available for entry all land within 100 feet of the center line of feeder roads and 50 feet of the center line of local roads reserving an easement for feeder and local roads of 100 feet and 50 feet on each side of the center line respectively.

5. P.L.O. 1613 dated April 7, 1958 revoked P.L.O. 601 as amended by P.L.O. 757. Therefore, the withdrawal for through roads was no longer in effect; however, an easement for through roads was created extending 150 feet on each side of the center line for through roads designated in P.L.O. 757 and section one of P.L.O. 1613.

6. On June 30, 1959 the United States conveyed by quitclaim deed its interest in highways to the State of Alaska

which deed was recorded October 2, 1969.

7. Sec. 2, Ch. 92, SLA 1966, Right-of-Way Act of 1966 provides:

> Taking of Property Under Reservation Void. After the effective date of this Act [April 14,1968], no agency of the state may take privately-owned property by the election or exercise of a reservation to the state acquired under the Act of June 30, 1932, ch. 320, sec. 5, as added July 24, 1947, ch. 313, 61 Stat. 418, and taking of property after the effective date of this Act by the election or exercise of a reservation to the state under the federal Act is void.

8. Public Law 229, ch. 313, approved July 24, 1947 provides:

> The act entitled "An Act providing for the transfer of the duties authorized and authority conferred by law upon the board of road commissioners in the Territory of Alaska to the Department of the Interior, and for other purposes, approved June 30, 1932 (47 Stat. 446) [footnote: 5 U.S.C.A §§123, 485; 48 U.S.C.A. §§321a-321e, 322-327] is hereby amended by adding at the end thereof the following new section:
>
> "Sec. 5. In all patents for lands hereafter taken up, entered, or located in the Territory of Alaska, and in all deeds by the United States hereafter conveying any lands to which it may have reacquired title in said Territory not included within the limits of any organized municipality, there shall be expressed that there is reserved, from the lands described in said patent or deed, a right-of-way thereon for roads, roadways, highways, tramways, trails, bridges, appurtenant structures constructed or to be constructed by or under the authority of the United States or any State created out of the Territory of Alaska. When a right-of-way reserved under the provisions of this Act is utilized by the United States or under its authority, the head of the agency in charge of such utilization is authorized to determine and make payment for the value of the crops

> thereon if not harvested by the owner, and for the value of any improvements, or for the cost of removing them to another site, if less than their value."

The Alaska Supreme Court cases which directly relate to the questions in this case are: *Hahn v. Alaska Title Guaranty Co.* 557 P.2d 143 (Alaska 1976) which holds that the federal register is a public record within the meaning of the language of a title insurance policy; and *State, Dept. of Highways v. Green,* 586 P.2d 595 (Alaska 1978) which gives an exhaustive history of the subject before the court without mentioning the Alaska Right-of-Way Act of 1966.

The Peases have moved for summary judgment on their cross-claim against the State of Alaska and on their counterclaim against Transamerica Title Insurance Company. The Peases are entitled to summary judgment against Transamerica Title Insurance Company under the authority of *Hahn v. Alaska Title Guaranty Co.*, 557 P.2d 143 (Alaska 1976) and they are granted such summary judgment establishing the liability of their insurer subject to the provision that if the State must pay for the strip, then the Peases shall collect from the State and not their title insurer.

The plaintiffs have moved for summary judgment against the State of Alaska on the grounds that the State is without authority to exercise jurisdiction over easements allegedly reserved to the State by P.L.O. 601 as amended by P.L.O. 757 and P.L.O. 1613 and D.O. 2665. The title insurance companies and the other plaintiffs have standing to bring this case and are real parties in interest; there is a justiciable controversy and the plaintiffs' pecuniary interest is affected. See *Jefferson v. Asplund,* 458 P.2d 995 (Alaska 1969).

There is no statute of limitations problem; the land is not taken until staked. D.O. 2665(c).

The State asserts that the withdrawals and easements established by the various P.L.O.'s and D.O.'s are dedications of property to the public which cannot be transferred to private ownership until abandoned. There is no evidence of fact or law to support the State's contention. The withdrawals and

easements will be treated as designations by a land owner setting aside certain portions of its property.

It is necessary to view this case in its historical perspective. Pursuant to P.L.O. 601 land was withdrawn for through, feeder, and local roads in strips ranging from 300 feet to 50 feet on each side of the center line. These strips were never surveyed, the Bureau of Land Management did not know what land was withdrawn and patents were issued conveying land which allegedly had been withdrawn. The record is replete with letters explaining the problems created and the hardships which resulted.

In response to the problems created by withdrawals, the Secretary of the Interior revoked P.L.O. 601 in stages: first, P.L.O. 757 in 1951, and then P.L.O. 1613 in 1958 and substituted easements. D.O. 2665 and P.L.O. 1613. The establishment of easements did not solve all of the problems; however, entrymen and the government could determine the boundaries of parcels by measuring from the center line of the existing roads even though the roads were not surveyed.

The predecessor in interest to Mr. and Mrs. Pease was granted a two and one-half acre parcel subject to a 33-foot easement for Rabbit Creek Road and a blanket reservation for easements created pursuant to 61 Stat. 418, 48 U.S.C. sec. 321d, the authority for D.O. 2665. The Right-of-Way Act of 1966 precludes the State from taking without compensation any land pursuant to the Act of June 30, 1932, ch. 320, sec. 5, as added July 24, 1947, ch. 313, 61 Stat. 418.

The State argues that it already had the easement reserved by 61 Stat. 418, 48 U.S.C. sec. 321d before the effective date of the Right-of-Way Act of 1966 and, therefore, the Act does not apply. The State is wrong; it did not secure the easement until the right-of-way was staked by the terms of D.O. 2665.

It is realized that *State, Dept. of Highways v. Green*, 586 P.2d 595 (Alaska 1978) does not discuss the Right-of-Way Act of 1966; nevertheless, the Act does apply to the case at bar and would apparently be applicable in the *Green* case; the State should have brought it to the court's attention even if the appellees failed to do so.

Therefore, the plaintiffs and Mr. and Mrs. Pease are entitled to summary judgment establishing the fact that the State or anyone claiming through the State, including the Municipality of Anchorage, may not occupy land reserved for highway or other purposes pursuant to 61 Stat. 418, 48 U.S.C. sec. 321d without compensation which the State was not occupying on April 14, 1966.

This ruling means that unless the easement was specifically reserved in the patent or was occupied by the State or Municipality or staked by the State before April 14, 1966, the underlying fee holder is entitled to just compensation when the State or Municipality asserts its right to utilize the strip between the previously occupied, staked, or specifically designated in the patent distance from the center line and 50, 100 or 150 feet from the center line depending upon the type of road. The State's argument that the plaintiffs by this lawsuit are seeking to divest the State of its interest in all the roads of the state is not understood and is clearly not the fact.

The plaintiff Hansen Associates is not correct in asserting that its property is free from the easement designated in D.O. 2665 because its predecessor in interest entered the property before D.O. 2665 was issued. The Hansen property had not been patented as of October 16, 1951 and between a mere entryman and the government, the entryman may not be heard to complain when the government reserves an easement. *Shiver v. United States*, 159 U.S. 491, 16 S.Ct. 54 (1895); *Wilber v. United States*, 53 F.2d 717 (C.A.D.C. 1931).

It is unnecessary to decide the effect of the quitclaim deed, its later recordation and the status of land whose owners recorded their deeds or patents earlier than the recordation of the quitclaim deed in light of the above determinations. In addition, it is unnecessary to deal with the doctrine of estoppel as it may apply in this case.

And in order to fully adjudicate the issues presented in this case, it is necessary to comment on the plaintiffs' contentions that *Hahn v. Alaska Title Guaranty Co.*, 557 P.2d 143 (Alaska 1976) was incorrectly decided. The authorities and argument cited by the plaintiffs are persuasive and the Alaska

Supreme Court is requested to review its decision.

The attorneys for the plaintiffs shall prepare, serve and submit a judgment consistent with this decision.

DATED at Anchorage, Alaska, this 7th day of May, 1980.

VICTOR D. CARLSON
Superior Court Judge

APPENDIX A-2

IN THE SUPERIOR COURT
FOR THE STATE OF ALASKA

THIRD JUDICIAL DISTRICT

ALASKA LAND TITLE ASSOCIATION, SECURITY TITLE AND TRUST COMPANY OF ALASKA, ALASKA TITLE GUARANTY COMPANY, BROKERS TITLE COMPANY, LAWYERS TITLE INSURANCE AGENCY, INC., SAFECO TITLE AGENCY, INC., FAIRBANKS TITLE AGENCY, KACHEMAK BAY TITLE AGENCY, VALLEY TITLE AND ESCROW COMPANY, FIRST AMERICAN TITLE INSURANCE COMPANY, TRANSAMERICA TITLE INSURANCE CO., HANSEN ASSOCIATES, an Alaska Limited Partnership, RICHARD L. BOYSEN and JACK WHITE COMPANY,

Plaintiffs,

vs.

STATE OF ALASKA, Department of Transportation and Public Facilities, THEODORE M. PEASE, JR., and CLAIRE V. PEASE, and MUNICIPALITY OF ANCHORAGE,

Defendants.

No. 3AN-79-951 CIV.

JUDGMENT

For the reasons set forth in the Memorandum of Decision prepared and executed by this court on the 7th day of May, 1980, the court hereby awards summary judgment declaring the rights and liabilities of the parties to this lawsuit as follows:

1. The State of Alaska and the Municipality of Anchorage are claiming highway easements for local, feeder, and through roads in excess of easement widths specified in patents issued to Alaska property owners. Said easements are claimed by the State or the Municipality pursuant to authority derived from

Public Land Orders 601, 757, 1613 and Department Order 2665. For the reasons set forth in the Memorandum of Decision dated May 7, 1980, the court hereby awards Plaintiffs a summary judgment against the State of Alaska and the Municipality of Anchorage declaring that the State and the Municipality may not take or utilize property for local, feeder, or through roads in excess of the widths set forth in the patents to the affected properties without just compensation to the owners of the affected properties unless such local, feeder, or through roads were occupied and staked by the State of Alaska or the Municipality of Anchorage prior to April 14, 1966 or were specifically designated in the patents to the affected real properties.

2. The Plaintiffs Hanson Associates and Richard L. Boysen are hereby awarded a summary judgment against the State of Alaska and the Municipality of Anchorage declaring that neither the State nor the Municipality can take any portion of their properties for the through road presently known as the Old Seward Highway which is in excess of the easement widths specified in their respective patents without just compensation.

3. The Defendants Pease are hereby awarded a summary judgment on their cross-claim against the State of Alaska declaring that the State may not take or utilize any portion of the Peases' land for the local road presently known as Rabbit Creek Road which is in excess of the 33-foot easement width specified in the patent to the Peases' property without just compensation. The Peases' property is described as Lot 191, Section 33, Township 12 North, Range 3 West, Seward Meridian, Anchorage Recording District, Third Judicial District, State of Alaska.

4. The Defendants Pease are hereby awarded a summary judgment on their counterclaim against Transamerica Title Insurance Company declaring that Transamerica is liable under its title insurance policy issued to the Peases for the taking by the State of Alaska of a 17-foot strip of land for the local road known as Rabbit Creek Road, which 17-foot strip of land was in excess of 33-foot easement specified in the Peases' patent. However, since the State of Alaska must compensate the Peases for the taking or utilization of said additional 17-foot easement, the Peases shall collect just compensation from the State of Alaska, and upon receipt of said just compensation the Peases shall not be entitled to recover damages from Transamerica Title Insurance Company for said taking of the additional 17-foot strip of property.

5. Plaintiffs are hereby awarded the sum of $_____ for costs and $_____ for a reasonable attorney's fee, for a total judgment of $_____ against the State of Alaska and the Municipality of Anchorage, jointly and severally.

6. The Defendants Pease are hereby awarded the sum of $_____ for costs and $_____ for a reasonable attorney's fee for a total judgment of $_____ against the State of Alaska and the Municipality of Anchorage, jointly and severally.

DONE, at Anchorage, Alaska this 27th day of May, 1980.

_____
VICTOR D. CARLSON
Judge of the Superior Court

I hereby certify that on the 19th day of May, 1980, true and accurate copies of the foregoing were mailed to the following attorneys of record for the above-captioned cause:

APPENDIX A-3

IN THE SUPREME COURT OF THE STATE OF ALASKA

STATE OF ALASKA

Appellant and Cross-Appellee,

vs.

ALASKA LAND TITLE ASSOCIATION, et al.,

Appellees and Cross-Appellants.

Supreme Court Numbers 5407/5408

O R D E R

Superior Court No. 3AN 79-951 Civil

Before: Burke, Chief Justice, Rabinowitz, Matthews and Compton, Justices.

On consideration of the petition for rehearing filed June 6, 1983 by the Alaska Land Title Association, et al., and the [second] petition for rehearing by the State, lodged June 14, 1983 and filed June 23, 1983,

IT IS ORDERED.

1. The petition for rehearing filed by the Alaska Land Title Association is denied.

2. The petition for rehearing filed by the State is granted, and Opinion No. 2681 filed on May 27, 1983, is amended by adding a new footnote 15, referenced to the word "purposes" on page 27, line 19. The new footnote shall read as follows:

> The State and the plaintiffs have agreed that PLO 601 is based on Executive Order 9337 which, "in turn, rests on" 43 U.S.C. §141. We thus have no occasion to consider whether Executive Order 9337 delegated authority to make withdrawals in addition to those authorized by 43 U.S.C. §141.

Succeeding footnotes shall be renumbered.

Entered by direction of the court at Anchorage, Alaska on July 8, 1983.

APPENDIX B

CONSTITUTIONAL, STATUTORY AND REGULATORY PROVISIONS INVOLVED

U.S. Const. amend. V.

No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

U.S. Const. amend. XIV, §1

All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

43 U.S.C. §932

The right of way for the construction of highways over public lands, not reserved for public uses, is hereby granted. R.S. §2477.

43 U.S.C. §1166

Suits by the United States to vacate and annul any patent shall only be brought within six years after the date of the issuance of such patents. Mar. 3, 1891, c. 559, §1, 26 Stat. 1093; Mar. 3, 1891, c. 561, §8, 26 Stat. 1099.

44 U.S.C. §1507

A document required by section 1505(a) of this title to be published in the Federal Register is not valid as against a per-

son who has not had actual knowledge of it until the duplicate originals or certified copies of the document have been filed with the Office of the Federal Register and a copy made available for public inspection as provided by section 1503 of the title. Unless otherwise specifically provided by statute, filing of a document, required or authorized to be published by section 1505 of this title, except in cases where notice by publication is insufficent in law, is sufficient to give notice of the contents of the document to a person subject to or affected by it. the publication in the Federal Register of a document creates a rebuttable presumption—

(1) that it was duly issued, prescribed, or promulgated;

(2) that it was filed with the Office of the Federal Register and made available for public inspection at the day and hour stated in the printed notation;

(3) that the copy contained in the Federal Register is a true copy of the original; and

(4) that all requirements of this chapter and the regulations prescribed under it relative to the document have been complied with.

The contents of the Federal Register shall be judicially noticed and without prejudice to any other mode of citation, may be cited by volume and page number.

Pub. L. 90-620, Oct. 22, 1968, 82 Stat. 1276.

The Act of January 27, 1905, Pub. L. No. 26 §2, 33 Stat. 616

Sec. 2. That there shall be a board of road commissioners in said district, to be composed of an engineer officer of the United States Army to be detailed and appointed by the Secretary of War, and two other officers of that part of the Army stationed in said district and to be designated by the Secretary of War. The said engineer officer shall, during the term of his said detail and appointment, abide in said district. The said board shall have the power, and it shall be their duty, upon their own motion or upon petition, to locate, layout, construct, and maintain wagon roads and pack trails from any point on the navigable waters of said district to any town, mining or other industrial camp or settlement, or between any

such town, camps, or settlements therein, if in their judgment such roads or trails are needed and will be of permanent value for the development of the district; but no such road or trail shall be constructed to any town, camp, or settlement which is wholly transitory or of no substantial value or importance for mining trade, agricultural, or manufacturing purposes. The said board shall prepare maps, plans, and specifications of every road or trail they may locate and lay out, and whenever more than five thousand dollars in the aggregate shall have to be expended on the construction of any road or trail, contract for the work shall be let by them to the lowest responsible bidder, upon sealed bids, after due notice, under rules and regulations to be prescribed by the Secretary of War. The board may reject any bid if they deem the same unreasonably high or if they find that there is a combination among bidders. In case no responsible and reasonable bid can be secured, then the work may be carried on with material and men procured and hired by the board. The engineer officer of the board shall in all cases supervise the work of construction and see that the same is properly performed. As soon as any road or trail laid out by the board has been constructed and completed they shall examine the same and make a full and detailed report of the work done on the same to the Secretary of War, and in such report they shall state whether the road or trail has been completed conformable to the maps, plans, and specifications of the same. It shall be the duty of said board, as far as practicable, to keep in proper repair all roads and trails constructed under their supervision, and the same rules as to the manner in which the work of repair shall be done, whether by contract or otherwise, shall govern as in the case of the original construction of the road or trail. The cost and expenses of laying out, constructing, and repairing such roads and trails shall be paid by the Secretary of the Treasury out of the road and trail portion of said "Alaska fund" upon vouchers approved and certified by said board. The Secretary of the Treasury shall, at the end of each month, send by mail to each of the members of said board a statement of the amount available of said "Alaska fund" for the construction and repair of roads, and trails, and no greater liability for construction or repair shall

at any time be incurred by said board than the money available therefor at that time in said fund. The members of said board shall, in addition to their salaries, be entitled to receive their actual traveling expenses paid or incurred by them in the performance of their duties as members of the board.

48 U.S.C. §322 (1958)

The Secretary of the Interior, or such officer, or officers as may be designated by him, shall upon his own motion or upon petition, locate, lay out, construct, and maintain roads, trails and bridges from any point on the navigable waters of Alaska to and through any town, mining or other industrial camp or settlement, or between and through any such town, camps, or settlements therein, if in his judgment such roads, trails, or bridges are needed and will be of permanent value for the development of Alaska: *Provided,* That within incorporated towns only roads and bridges which are designated by the Secretary of the Interior as part of the through highway system of the Territory of Alaska may be constructed under this section; *Provided further,* That no roads or bridges within incorporated towns shall be maintained under this section. (Jan. 27, 1905, ch. 277, §2, 33 Stat. 616; May 14, 1906, ch. 2458, §2, 34 Stat. 192; June 30, 1932, ch. 320, §1, 47 Stat. 446; July 14, 1955, ch. 359, 69 Stat. 321.)

The Act of June 30, 1932. Pub. L. No. 218 §§1 & 2, 47 Stat. 446

Providing for the transfer of the duties authorized and authority conferred by law upon the board of road commissioners in the Territory of Alaska to the Department of the Interior, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the passage of this Act the duties authorized and authority conferred by law upon the board of road commissioners in the Territory of Alska, and upon the Secretary of War, as provided for in the Act of January 27, 1905 (ch. 277, sec. 2, 33 Stat. 616), as amended by the Act of May 14, 1906 (ch. 2458, sec. 2, 34 Stat. 192), and Acts supplemental thereto, and amendatory thereof, are hereby transferred to

the Department of the Interior, and shall hereafter be administered by the Secretary of the Interior, or under his direction by such officer, or officers, as may be designated by him.

Sec. 2. The Secretary of the Interior shall execute or cause to be executed all laws pertaining to the construction and maintenance of roads and trails and other works in Alaska, heretofore administered by said board of road commissioners under the direction of the Secretary of War; and all appropriations heretofore made, and now available, or that hereafter may be made, for expenditure by said board for meeting the cost of such work in the Territory of Alaska, are hereby transferred to the Secretary of the Interior, to be thereafter administered in accordance with the provisions of this Act; and the said board is directed to turn over to the Secretary of the Interior all equipment, materials, supplies, papers, maps, and documents, or other property utilized in the exercise of such powers, for the use of the said Secretary in the administration of the construction and maintenance of roads, tramways, ferries, bridges, and trails, and other works in the Territory of Alaska heretofore administered by said board.

The Act of July 24, 1947, Pub. L. No. 229 §5 61 Stat. 418 (amending the Act of June 30, 1932, Publ. L. No. 218, 47 Stat. 446)

To amend the Act entitled "An Act providing for the transfer of the duties authorized and authority conferred by law upon the board of road commissioners in the Territory of Alaska to the Department of the Interior, and for other purposes", approved June 30, 1932.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the act entitled "An Act providing for the transfer of the duties authorized and authority conferred by law upon the board of road commissioners in the Territory of Alaska to the Department of the Interior, and for other purposes", approved June 30, 1932 (47 Stat. 446), is hereby amended by adding at the end thereof the following new section:

"Sec. 5. In all patents for lands hereafter taken up, entered, or located in the Territory of Alaska, and in all deeds

by the United States herefter conveying any lands to which it may have reacquired title in said Territory not included within the limits of any organized municipality, there shall be expressed that there is reserved, from the lands described in said patent or deed, a right-of-way thereon for roads, roadways, highways, tramways, trails, bridges, and appurtenant structures constructed or to be constructed by or under the authority of the United States or any State created out of the Territory of Alaska. When a right-of-way reserved under the provisions of this Act is utilized by the United States or under its authority, the head of the agency in charge of such utilization is authorized to determine and make payment for the value of the crops thereon if not harvested by the owner, and for the value of any improvements, or for the cost of removing them to another site, if less than their value."

Approved July 24, 1947.

48 U.S.C. §321a (1958)

The Secretary of the Interior shall execute or cause to be executed all laws pertaining to the construction and maintenance of roads and trails and other works in Alaska, heretofore administered by said board of road commissioners under the direction of the Secretary of War; and all appropriations heretofore made, and now available, or that hereafter may be made, for expenditure by said board for meeting the cost of such work in the Territory of Alaska, are transferred to the Secretary of Interior, to be thereafter administered in accordance with the provisions of sections 321a-321d of this title; and the said board is directed to turn over to the Secretary of the Interior all equipment, materials, supplies, papers, maps, and documents, or other property utilized in the exercise of such powers, for the use of the said Secretary in the administration of the construction and maintenance of roads, tramways, ferries, bridges, and trails, and other works in the Territory of Alaska, heretofore administered by said board. (June 30, 1932, ch. 320, §2, 47 Stat. 446)

48 U.S.C. §321d (1958)

In all patents for lands hereafter taken up, entered, or located in the Territory of Alaska, and in all deeds by the United States hereafter conveying any lands to which it may

have reacquired title in said Territory not included within the limits of any organized municipality, there shall be expressed that there is reserved, from the lands described in said patent or deed, a right-of-way thereon for roads, roadways, highways, tramways, trails, bridges, and appurtenant structures constructed or to be constructed by or under the authority of the United States or of any State created out of the Territory of Alaska. When a right-of-way reserved under the provisions of sections 321a-321d of this title is utilized by the United States or under its authority, the head of the agency in charge of such utilization is authorized to determine and make payment for the value of the crops thereon if not harvested by the owner, and for the value of any improvements, or for the costs of removing them to another site, if less than their value. (June 30, 1932, ch. 320, §5, as added July 24, 1947, ch. 313, 61 Stat. 418.)

Federal-Aid Highway Act of 1970 §138(b) Pub. L. No. 91-605, 64 Stat. 1713 (1970)

(b) Any right-of-way for roads, roadways, highways, tramways, trails, bridges, and appurtenant structures reserved by section 321(d) of title 48, United States Code (61 Stat. 418, 1947), not utilized by the United States or by the State or Territory of Alaska prior to the date of enactment hereof, shall be and hereby is vacated and relinquished by the United States to the end and intent that such reservations shall merge with the fee and be forever extinguished.

43 C.F.R. §101.3 (1949)

Notation of Rights-of-Way

§101.3 *Notations to be made on entry papers and notice of allowance.* (a) In order that all persons making entry of public lands which are affected by rights-of-way may have actual notice thereof, the manager is directed to note upon the original entry papers and upon the notice of allowance of the application (Form 4-279) issued to the entryman, a reference to such right-of-way.

(b) He will make no such notation upon the final entry papers unless the right-of-way has been granted under an act of Congress which does not in terms protect the grantee

against subsequent adverse rights, in which case he will place the same notation as to right-of-way upon the final entry papers, so that the reservation of the right-of-way will be made in the patent, when issued (23 L.D. 67).

[Reg. Nov. 3, 1909, as amended by Reg. Jan 19, 1910]

Public Land Order 601

By virtue of the authority vested in the President and pursuant to Executive Order No. 9337 of April 24, 1943, it is ordered as follows:

Executive Order No. 9145 of April 23, 1942, reserving public lands for the use of the Alaska Road Commission in connection with the construction, operation, and maintenance of the Palmer-Richardson Highway (now known as the Glenn Highway), is hereby revoked.

Public Land Order No. 386 of July 31, 1947, is hereby revoked so far as it relates to the withdrawal, for highway purposes, of the following-described lands:

(a) A strip of land 600 feet wide, 300 feet on each side of the centerline of the Alaska Highway (formerly the Canadian Alaskan Military Highway) as constructed from the Alaska-Yukon Territory boundary to its junction with the Richardson Highway near Big Delta, Alaska.

(b) A strip of land 600 feet wide, 300 feet on each side of the center line of the Gulkana-Slana-Tok Road as constructed from Tok Junction at about Mile 1319 on the Alaska Highway to the junction with the Richardson Highway near Gulkana, Alaska.

Subject to valid existing rights and to existing surveys and withdrawals for other than highway purposes, the public lands in Alaska lying within 300 feet on each side of the center line of all other through roads, 100 feet on each side of the center line on all feeder roads, and 50 feet on each side of the center line of all local roads, in accordance with the following classifications, are hereby withdrawn from all forms of appropriation under the public land laws, including the mining and mineral-leasing laws, and reserved for highway purposes:

Through Roads

Alaska Highway, Richardson Highway, Glenn Highway, Haines Highway, Tok Cut-Off.

Feeder Roads

Steese Highway, Elliott Highway, McKinley Park Road, Anchorage-Potter-Indian Road, Edgerton Cut-Off, Tok Eagle Road, Ruby-Long-Poorman Road, Nome-Solomon Road, Kenai Lake-Homer Road, Fairbanks-College Road, Anchorage-Lake Spenard Road, Circle Hot Springs Road.

Local Roads

All roads not classified above as Through Roads or Feeder Roads, established or maintained under the jurisdiction of the Secretary of the Interior.

With respect to the lands released by the revocations made by this order and not rewithdrawn by it, this order shall become effective at 10:00 a.m. on the 35th day after the date hereof. At that time, such released lands, all of which are unsurveyed, shall, subject to valid existing rights, be opened to settlement under the homestead laws and the homesite act of May 26, 1934, 48 Stat. 809 (48 U.S.C. 461), only, and to that form of appropriation only by qualified veterans of World War II and other qualified persons entitled to preference under the act of September 27, 1944, 58 Stat. 747, as amended (43 U.S.C. 279-284). Commencing at 10:00 a.m. on the 126th day after the date of this order, any of such lands not settled upon by veterans shall become subject to settlement and other forms of appropriations by the public generally in accordance with appropriate laws and regulations.

Public Land Order 757

Amendment of Public Land Order No. 601 of August 10, 1949, reserving public lands for highway purposes.

By virtue of the authority vested in the President and pursuant to Executive Order 9337 of April 24, 1943, it is ordered as follows:

The sixth paragraph of Public Land Order No. 601 of August 10, 1949, reserving public lands for highway purposes,

commencing with the words, "Subject to valid existing rights", is hereby amended to read as follows:

Subject to valid existing rights and to existing surveys and withdrawals for other than highway purposes, the public lands in Alaska lying within 300 feet on each side of the center line of the Alaska Highway and within 150 feet on each side of the center line of the Richardson Highway, Glenn Highway, Haines Highway, the Seward-Anchorage Highway (exclusive of that part thereof within the boundaries of the Chugach National Forest), the Anchorage-Lake Spenard Highway, and the Fairbanks-College Highway are hereby withdrawn from all forms of appropriation under the public land laws, including the mining and mineral-leasing laws, and reserved for highway purposes.

Easements having been established on the lands released by this order, such lands are not open to appropriation under the public land laws except as a part of a legal subdivision, if surveyed, or an adjacent area, if unsurveyed, and subject to the pertinent easement.

Public Land Order 1613

Revoking Public Land Order No. 601 of August 10, 1949 which reserved public lands for highway purposes, and partially revoking Public Land Order No. 386 of July 31, 1947.

By virtue of the authority vested in the President and pursuant to Executive Order No. 10355 of May 26, 1952, and the act of August 1, 1956 (70 Stat. 898) it is ordered as follows:

1. Public Land Order No. 601 of August 10, 1949, as modified by Public Land Order No. 757 of October 16, 1951, reserving for highway purposes the public lands in Alaska lying within 300 feet on each side of the center line of the Alaska Highway and within 150 feet on each side of the center line of the Richardson Highway, Glenn Highway, Haines Highway, the Seward-Anchorage Highway (exclusive of that part thereof, within the boundaries of the Chugach National Forest), the Anchorage-Lake Spenard Highway, and the Fairbanks-College Highway, is hereby revoked.

2. Public Land Order No. 386 of July 31, 1947, so far as it withdrew the following-described lands, [illegible] items

(a) and (b) in said order, under the jurisdiction of the Secretary of War for right-of-way purposes for a telephone line and an oil pipeline with appurtenances, is hereby revoked:

(a) A strip of land 50 feet wide, 25 feet on each side of a telephone line as located and constructed generally parallel to the Alaska Highway from the Alaska-Yukon Territory boundary to the junction of the Alaska Highway with the Richardson highway near Big Delta, Alaska.

(b) A strip of land 20 feet wide, 10 feet on each side of a pipeline as located and constructed generally parallel to the Alaska Highway from the Alaska-Yukon Territory boundary to the junction of the Alaska Highway with the Richardson Highway near Big Delta, Alaska.

3. An easement for highway purposes, including appurtenant protective, scenic, and service areas, over and across the lands described in paragraph 1 of this order, extending 150 feet on each side of the center line of the highways mentioned therein, is hereby established.

4. An easement for telephone line purposes in, over, and across the lands described in paragraph 2(a) of this order, extending 25 feet on each side of the telephone line referred to in that paragraph, and an easement for pipeline purposes in, under, over, and across the lands described in paragraph 2(b) of this order, extending 10 feet on each side of the pipeline referred to in that paragraph, are hereby established, together with the right of ingress and egress to all sections of the above easements on and across the lands hereby released from withdrawal.

5. The easements established under paragraphs 3 and 4 of this order shall extend across both surveyed and unsurveyed public lands described in paragraphs 1 and 2 of this order for the specified distance on each side of the center line of the highways, telephone line and pipeline, as those center lines are definitely located as of the date of this order.

6. The lands within the easements established by paragraphs 3 and 4 of this order shall not be occupied or used for other than the highways, telegraph line and pipeline referred to in paragraphs 1 and 2 of this order except with the

permission of the Secretary of the Interior or his delegate as provided by section 3 of the act of August 1, 1956 (70 Stat. 898), provided: that if the lands crossed by such easements are under the jurisdiction of a Federal department or agency, other than the Department of the Interior, or of a Territory, State or other Government subdivision or agency, such permission may be granted only with the consent of such department, agency, or other governmental unit.

7. The lands released from withdrawal by paragraphs 1 and 2 of this order, which at the date of this order, adjoin lands in private ownership, shall be offered for sale at not less than their appraised value, as determined by the authorized officer of the Bureau of Land Management, and pursuant to section 2 of the act of August 1, 1956, supra. Owners of such private lands shall have a preference right to purchase at the appraised value so much of the released lands adjoining their private property as the authorized officer of the Bureau of Land Management deems equitable, provided, that ordinarily, owners of private lands adjoining the lands described in paragraph 1 of this order will have a preference right to purchase released lands adjoining their property, only up to the center line of the highways located therein. Preference right claimants may make application for purchase of released lands at any time after the date of this order by giving notice to the appropriate land office of the Bureau of Land Management. Lands described in this paragraph not claimed by and sold to preference claimants may be sold at public auction at not less than their appraised value by an authorized officer of the Bureau of Land Management, provided that preference claimants are first given notice of their privilege to exercise their preference rights by a notice addressed to their last address of record in the office in the Territory in which their title to their private lands is recorded. Such notice shall give the preference claimant at least 60 days in which to make application to exercise his preference right; and if the application is not filed within the time specified, the preference right will be lost. Preference right claimants will also lose their preference rights if they fail to pay for the lands within the time period specified by

the authorized officer of the Bureau of Land Management, which time period shall not be less than 60 days.

8. The lands released from withdrawal by paragraphs 1 and 2 of this order, which at the date of this order, adjoin lands in valid unperfected entries, locations, or settlement claims, shall be subject to inclusion in such entries, locations and claims, notwithstanding any statutory limitations upon the area which may be included therein. For the purposes of this paragraph, entries, locations, and claims include, but are not limited to, certificates of purchase under the Alaska Public Sales Act (63 Stat. 679; 48 U.S.C. 364a-e) and leases with option to purchase under the Small Tract Act (52 Stat. 609; 43 U.S.C. 682a) as amended. Holders of such entries, locations and claims to the lands, if they have not gone to patent, shall have a preference right to amend them to include so much of the released lands adjoining their property as the authorized officer deems equitable, provided, that ordinarily such holders of property adjoining the lands described in paragraph 1 of this order will have the right to include released lands adjoining such property only up to the center line of the highways located therein. Allowances of such amendments will be conditional upon the payment of such fees and commissions as may be provided for in the regulations governing such entries, locations, and claims together with the payment of any purchase price and cost of survey of the land which may be established by the law or regulations governing such entries, locations and claims, or which may be consistent with the terms of the sale under which the adjoining land is held. Preference right claimants may make application to amend their entries, locations, and claims at any time after the date of this order by giving notice to the appropriate land office of the Bureau of Land Management. Lands described in this paragraph, not claimed by and awarded to preference claimants, may be sold at public auction at not less than their appraised value by the authorized officer of the Bureau of Land Management, provided that preference claimants are first given notice of their privilege to exercise their preference rights by a notice addressed to their last address of record in the appropriate land office, or if the land is patented, in the Territory in which ti-

tle to their private land is recorded. Such notice shall give the claimant at least 60 days in which to make application to exercise his preference right, and if the application is not filed within the time specified the preference right will be lost. Preference right claimants will also lose their preference rights if they fail to make any required payments within the time period specified by the authorized officer of the Bureau of Land Management, which time period shall not be less than 60 days.

9(a) Any tract released by Paragraph 1 or 2 of this order from the withdrawals made by Public Land Orders Nos. 601, as modified, and 386, which remains unsold after being offered for sale under Paragraph 7 or 8 of this order, shall remain open to offers to purchase under Section 2 of the act of August 1, 1956, supra, at the appraised value, but it shall be within the discretion of the Secretary of the Interior or his delegate as to whether such an offer shall be accepted.

(b) Any tract released by Paragraph 1 and 2 of this order from the withdrawals made by Public Land Orders Nos. 601, as modified, and 386, which on the date hereof does not adjoin privately-owned land or land covered by an unpatented claim or entry is hereby opened, subject to the provisions of Paragraph 6 hereof, if the tract is not otherwise withdrawn, to settlement claim, application, selection or location under any applicable public land law. Such a tract shall not be disposed of as a tract or unit separate and distinct from adjoining public lands outside of the area released by this order, but for disposal purposes, and without losing its identity, if it is already surveyed, it shall be treated as having merged into the mass of adjoining public lands, subject, however, to the easement so far as it applies to such lands.

(c) Because the act of August 1, 1956 (70 Stat. 896; 48 U.S.C. 420-420c) is an act of special application, which authorizes the Secretary of the Interior to make disposals of lands included in revocations such as made by this order, under such laws as may be specified by him, the preference-right provisions of the Veterans Preference Act of 1944 (58 Stat. 747; 43 U.S.C. 279-284) as amended, and of the Alaska Mental

Health Enabling Act of July 28, 1956 (70 Stat. 709; 48 U.S.C. 46-3b) will not apply to this order.

10. All disposals of lands included in the revocations made by this order which are under the jurisdiction of a Federal department or agency other than the Department of the Interior may be made only with the consent of such department or agency. All lands disposed of under the provisions of this order shall be subject to the easements established by this order.

11. The boundaries of all withdrawals and restorations which on the date of this order adjoin the highway easements created by this order are hereby extended to the center line of the highway easements which they adjoin. The withdrawal made by this paragraph shall include, but not be limited to the withdrawals made for Air Navigation Site No. 7 of July 13, 1964, and by Public Land Orders No. 386 of July 31, 1947, No. 622 of December 15, 1949, No. 803 of February 27, 1952, No. 975 of June 18, 1954, No. 1037 of December 16, 1954, No. 1059 of January 21, 1955, No. 1129 of April 15, 1955, No. 1179 of June 29, 1955, and No. 1181 of June 20, 1955.

Department Order 2665

Rights-of-Way for Highways in Alaska

Section 1. Purpose. (a) The purpose of this order is to (1) fix the width of all public highways in Alaska established or maintained under the jurisdiction of the Secretary of the Interior and (2) prescribe a uniform procedure for the establishment of rights-of-way or easements over or across the public lands for such highways. Authority for these actions is contained in section 2 of the act of June 30, 1932 (47 Stat. 446, 48 U.S.C. 321a).

Section 2. Width of public highways. (a) The width of the public highways in Alaska shall be as follows:

(1) For through roads: The Alaska Highway shall extend 300 feet on each side of the center line thereof. The Richardson Highway, Glenn Highway, Haines Highway, Seward-Anchorage Highway, Anchorage-Lake Spenard Highway and

Fairbanks-College Highway shall extend 150 feet on each side of the center line thereof.

(2) For feeder roads: Abbert Road (Kodiak Island), Edgerton Cutoff, Elliott Highway, Seward Peninsula Tram Road, Steese Highway, Sterling Highway, Taylor Highway, Northway Junction to Airport Road, Palmer to Matanuska to Wasilla Junction Road, Palmer to Finger Lake to Wasilla Road, Glenn Highway Junction to Fishhook Junction to Wasilla to Knik Road, Slana to Nebesna Road, Kenai Junction to Kenai Road, University to Ester Road, Central to Circle Hot Springs to Portage Creek Road, Manley Hot Springs to Eureka Road, North Park Boundary to Kantishna Road, Paxson to McKinley Park Road, Sterling Landing to Ophir Road, Iditarod to Flat Road, Dillingham to Wood River Road, Ruby to Long to Poorman Road, Nome to Council Road and Nome to Bessie Road shall each extend 100 feet on each side of the center line thereof.

(3) For local roads: All public roads not classified as through roads or feeder roads shall extend 50 feet on each side of the center line thereof.

Section 3. Establishment of rights-of-way or easements. (a) A reservation for highway purposes covering the lands embraced in the through roads mentioned in section 2 of this order was made by Public Land Order No. 601, of August 10, 1949, as amended by Public Land Order No. 757 of October 16, 1951. That order operates as a complete segregation of the land from all forms of appropriation under the public land laws, including the mining and the mineral leasing laws.

(b) A right-of-way or easement for highway purposes covering the lands embraced in the feeder roads and the local roads equal in extent to the width of such roads as established in section 2 of this order, is hereby established for such roads over and across the public lands.

(c) The reservation mentioned in paragraph (a) and the rights-of-way or easements mentioned in paragraph (b) will attach as to all new construction involving public roads in Alaska when the survey stakes have been set on the ground and notices have been posted at appropriate points along the

route of the new construction specifying the type and width of the roads.

Section 4. Road maps to be filed in proper Land Office. Maps of all public roads in Alaska heretofore or hereafter constructed showing the location of the roads, together with appropriate plans and specifications, will be filed by the Alaska Road Commission in the proper Land Office at the earliest possible date for the information of the public.

Right-of-Way Act of 1966

Section 1. Purpose. This Act is intended to alleviate the economic hardship and physical and mental distress occasioned by the taking of land, by the State of Alaska, for which no compensation is paid to the persons holding title to the land. This practice has resulted in financial difficulties and the deprivation of peace of mind regarding the security of one's possessions to many citizens of the State of Alaska, and which, if not curtailed by law, will continue to adversely affect citizens of this state. Those persons who hold title to land under a deed or patent which contains a reservation to the state by virtue of the Act of June 30, 1932, ch. 320, sec. 5, as added July 24, 1947, ch. 313, 61 Stat. 418, are subject to the hazard of having the State of Alaska take their property without compensation because all patents or deeds containing the reservation required by that federal Act reserve to the United States, or the state created out of the Territory of Alaska, a right-of-way for roads, roadways, tramways, trails, bridges, and appurtenant structures either constructed or to be constructed. Except for this reservation the State of Alaska, under the Alaska constitution and the constitution of the United States, would be required to pay just compensation for any land taken for a right-of-way. It is declared to be the purpose of this Act to place persons with land so encumbered on a basis of equality with all other property holders in the State of Alaska, thereby preventing the taking of property without payment of just compensation as provided by law, and in the manner provided by law.

Section 2. Taking of Property Under Reservation Void. After the effective date of this Act, no agency of the state may

take privately-owned property by the election or exercise of a reservation to the state acquired under the Act of June 30, 1932, ch. 320 sec. 5, as added July 24, 1947, ch. 313, 61 Stat. 418, and taking of property after the effective date of this Act by an election or exercise of a reservation to the state under that federal Act is void.

Section 3. Prospective Application. This Act shall not be construed to divest the state of, or to require compensation by the state for, any right-of-way or other interest in real property which was taken by the state, before the effective date of this Act, by the election or exercise of its right to take property through a reservation acquired under the Act of June 30, 1932, ch. 320, sec. 5, as added July 24, 1947, ch. 313 61 Stat. 418.

Section 4. Short Title. This Act may be cited as the Right-of-Way Act of 1966.

Section 5. Effective Date. This Act takes effect on the day after its passage and approval or on the day it becomes law without such approval.

APPENDIX C

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
Anchorage, Alaska

October 10, 1950

Executive Order 601, August 10, 1949

Executive Order 601 of August 10, 1949, established rights of way along highways in the Territory of Alaska by means of withdrawing from all forms of entry strips a specified width on each side of each road.

The width of the right of way along the Alaska Highway is 600 feet. On all other through roads in Alaska it is 300 feet, on feeder roads 200 feet, and on local roads 100 feet.

Although Region VII, Bureau of Land Management, had attempted to have easements created rather than withdrawals, before the actual withdrawal order was issued, we had not even then begun to comprehend to what extent the Executive Order would complicate the functions of the Bureau of Land Management. The Bureau of Land Management gradually had begun to pick up momentum in the processing of various types of applications following the delegation of authority to the field. Depending upon our not being completely hamstrung by lack of funds, we could foresee the time when we could become reasonably current. And then it happened. Executive Order 601 was promulgated.

First, let me point out to you, there are no withdrawals along the railroad track of the Alaska Railroad. That is to say that the right-of-way itself is an easement rather than a strip of withdrawn land. Patents are issued to homesteaders which do not interfere with the operations of the Alaska Railroad but yet include the land upon which the tracks are built. If, in the future, a portion of the track is abandoned or the railroad decides to adopt another course, the land upon which the track was first located automatically becomes the property of the individual in whose patent or deed it was described. There are

no complications about a strip of land running up through the country owned by nobody.

Because of the existence of the withdrawal along roads, it has ben ruled that no entry filed or initiated after August 10, 1949, may go across the road, unless it is in the category of a local road with a right-of-way 100 feet wide. It has not been possible for the Alaska Road Commission to officially survey all of their roads and tie them in exactly with the existing corners of the rectangular net of surveys. Until these roads are surveyed, it will not be possible in some cases to determine whether or not the road crosses a given homestead entry.

Before any patent or final certificate can be issued to homesteaders who are restricted to only one side of the road, it will be necessary to survey many roads and all of the homesteads affected by roads running through surveyed land. This adds a tremendous job and workload to our Division of Engineering. In addition, it adds a tremendous expense to the taxpayers.

There is accumulating in the Land Offices files of applications by veterans who have complied with the regulations and who now want to obtain patent. These veterans are required to live on the land seven months and are not required to cultivate. Therefore, they may make application to obtain patent or, technically, to make final proof at the end of their seven months residence period. But these papers cannot be processed because withdrawal strips run through the land. The veteran must await a survey, which may be forthcoming this field season and may be forthcoming next field season.

After the survey has been made on the ground, it is necessary for the field notes to be processed, the plats to be produced from the drafting boards, the completed plat to be sent to Washington, the plat to be approved in the Washington office, and then returned to the proper Land Office for official filing. It is optimistic to assume that the plat will be finally filed in the proper Land Office within one year of the survey on the ground. During all of this time, the veteran has been unable to publish his final proof because his land cannot be

adequately described in the notice of publication.

The Sterling Highway, going down through the Kenai Peninsula gives us a specific project to discuss. The exact location of that road was not known to the Anchorage Land Office and therefore many entries were allowed which subsequently proved to straddle the road. In the meantime the entrymen have cultivated land on one side of the road, and have built their improvements on the other side of the road. Under the present rules and regulations, each entryman must elect which side of the road he is to take, and must relinquish or give up the land on the other side of the road. We have specific cases in which the road has cut across, leaving five, six or ten acres on one side of the road, and it is here that the entryman has built his house. He has cultivated and placed his fields on the other side of the road. As the saying goes, he is between the devil and the deep blue sea, and we can be of no assistance.

Then assuming that the entryman selects the portion of his entry which includes only ten acres or less. Under the provision of an act of 1947, the Alaska Road Commission still has the right to build a road through any homestead entry and therefore, technically, the Commission could put a road through the small acreage that has been left to the entryman.

Here are some specific cases:

Anchorage 014800, Richard Teller. There are 54 acres in the whole application, which comprises two lots, one north of the other. The Sterling Highway goes through the two lots, from north to south, but not through the middle, rather toward the eastern edge, about two-thirds of the way across. Teller has built a small road and has planned to build his house on the side of the road which would force him to choose the narrow strip. Originally his entry extended to Cook Inlet, and therefore he had water frontage. Under the new regulations he must relinquish either the area where he planned to build his house, and construct a small road, and give up the portion fronting the water, or he must select the portion fronting the water and give up the area where he planned to build his house and which evidently has the best house site.

There is nothing in the regulations which require us to investigate every homestead. We have an example of a case where the homesteader had appeared to be complying with the regulations in good order. He was a veteran, and therefore was not required to cultivate. His name is Clarence E. Herman, Anchorage 014574. There is nothing in the records to indicate we should make an investigation of his homestead, therefore we went through the procedures which is called "clear listing." That is, the Division of Land Planning indicated to the Land Office that a final certificate could be issued without further investigation or negotiating of any type. However, during a recent trip to that vicinity, a field examiner was making routine investigations of other homesteads, and was incidentally checking the location of the road as he went along. He discovered that the road goes through the homestead entry of Clarence E. Herman, therefore, we must backtrack in about everything that we have done. The Notice of Allowance of Herman must be vacated. Then we will have to have the road surveyed, and then await preparation of a supplemental plat. When the supplemental plat has been processed and finally filed in the Land Office, we must require this homesteader to publish again, as he already has published at the time he submitted his final proof. This homesteader had also bumped up against the regulation which affected Department of Interior employees as he was an employee of the Alaska Road Commission, but happily that restriction has now been removed through action of the Secretary of Interior.

You will recall that the homestead regulations state that each qualified individual may obtain land under the homestead laws up to a total of 160 acres. He may take that in one entry or several entries. If he homesteads in one part of Alaska and goes to another part of Alaska, he may homestead again, so long as he has not taken up an area exceeding 160 acres. If a homesteader has less than 160 acres and some available land becomes public domain adjacent to his original holdings, under the regulations he can acquire this additional land if it does not run his total over 160 acres. He is not required to live on the additional land if it is contiguous to his original entry. As a withdrawal along a highway causes a piece of land on one

side of the road to be not contiguous to a piece of land on the other side of the road, an entryman who had 40 acres would have to make proof and complete his requirements on one side of the road, then go across the road and build a house on that side, or move his house across in order to take land only 200 feet away from his original entry. As the regulations do not prevent a person from taking lands on both sides of the road under two entries, it merely complicates the matter by providing additional filings that must be placed on record by an entryman in order to get across the road if the land is still available.

The regulations provide that an entryman may obtain 160 acres, so if the land is available, the entryman may stretch his entry far along one side of the road until he has obtained 160 acres. There is a serious question as to whether it is more undesirable to have one entry straddle the road than it is to have one entry string along one side of the road for a mile and a half or two miles.

Then another complication enters into a different phase of the work. It appears that the withdrawals are in effect through the Matanuska Valley as they are elsewhere. We have on file several applications to purchase land. Two of them, Anchorage 016216 and 016304, filed by Gerald Brunner and Floyd Rock respectively, cover only five acres each. We are assuming that in this case the proposed sale may go on both sides of the road, but in order to know exactly how many acres are in the tract after the right of way has been deducted, it is necessary to survey the road to know just where it enters and leaves each tract, and then compute the acreage. In the meantime, the sales are not consummated.

We have many thousands of acres of unsurveyed lands through which roads are now built or will be built. There are claims which were staked out and are legally filed in the U.S. Commissioners' offices before August 10, 1949, the date on which 601 was promulgated. These settlement claims, therefore, have precedence over the order. However, our surveying crews are not investigators, and as they survey down through the country, they are not aware of which claims

antedate Executive Order 601 and which do not. Therefore, to be on the safe side, they must prepare their plats with two rights of way, that which was in effect before Executive Order 601 and that which was in effect after Executive Order 601 was promulgated. It may be that there was a legal claim on the land before August 10, 1949, but the claimant decides to go back to the states and give it up. The next person who settles there must stay on one side or the other of the road, and the wider right of way becomes effective. Let us assume that the claimant who was there before August 10, 1949, decides voluntarily that he wants to be on only one side of the road, and extend his claim further back to obtain other desirable lands. In effect, therefore, he gives up his claim to the other side of the road, and immediately the wide right of way becomes effective on that side, but the narrow right of way stays in effect on the side which the claimant retains. In no one given spot will anybody be able to determine what width the right of way is without referring to official plans in the Land Offices.

Let us assume another situation. A claimant was situated within 50 feet of the center line of a through road before Executive Order 601 was promulgated. For some reason he built his house within 50 feet of the road. Then he decides that he will have to go back to the states, and sells his house and gives up his claim to another individual. This sale we will assume was made after August 10, 1949. Immediately the house is in trespass, as it is located within the right of way, and the second claimant must move it back in order to get it on his homestead claim, which starts 100 feet from the center line of the road, if the road is a feeder road, and 150 feet from the center line of the road if it is a through highway. If this situation should develop along the Alaska Highway, of course, the man would have to move the house back 300 feet from the center line of the road.

Of course the Road Commission will straighten out many of the kinks in its highway system. Whenever it does that, it leaves strips of no man's land, which are withdrawn from entry. If these strips are restored to entry, the adjoining land owner does not have preference, but veterans of World War

II have preference to obtain these strips of land. We have been advised that the withdrawal becomes effective when the Road Commission sets its survey stakes through the public domain. In some cases I would imagine that the Alaska Road Commission officials change their minds and locate the road elsewhere than where it was first surveyed. Then we may have a very real difference of opinion as to where withdrawals actually do exist.

Previously in this memorandum, I mentioned that additional expense results from the requirement that we survey the roads. Each session it would be necessary to hire two draftsmen to keep up with the work of a field crew and to do a little extra work otherwise. It would take this one survey crew working indefinitely as we do not know how many roads are located within the rectangular surveys at present, or do we know how many roads are to be built by the Alaska Road Commission in the future. We are unable to estimate how many survey crews it actually would take to keep current with this work, but it is conservatively estimated that it would cost at least $31,000 per crew each season.

If the road rights of way were easements instead of withdrawals, it would not be necessary for us to delay processing of the applications for final proof by veterans or others. It would not again cause us to build up a backlog which will extend for 2, 3 and sometime 5 years before the surveys are all completed. The Alaska Road Commission could change their rights of way under the act of July 1947, without there being any question as to the ownership of the land. The entryman would still own the land, and the Alaska Road Commission would have an easement across it. There would not be additional expense to the taxpayers of hiring additional survey crews, and there would not be the delay in the survey program that will result in our putting experienced men on the road survey work instead of on other work that requires attention.

The situation is very grave. The results of the promulgation of Executive Order 601 were not foreseen, but now that we are operating with it in effect, we can see it's failing, and we should act accordingly.

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M April 26, 1984

SUBJECT: Release of claims of the state
(Work Order No. 13-2222)

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee

FROM: Richard A. Bradley
Legislative Counsel

The above described bill was provided to you earlier today at Joe Brewer's request. At that time I advised Mr. Brewer that I would be providing the committee with comments on the bill.

(1) In my memorandum of April 17, I noted that not only the state but also certain municipalities of the state may avail themselves of the benefits of the Acts of Congress and public land orders in question. I stated that the rights of the municipalities were not extinguished by the bill. I think that I was wrong in part but I believe that if the typical phrase "by the state" is deleted (for example, in the title and at line 28, page 1 of the bill), this possible ambiguity is removed. I believe that it is also desireable to acknowledge that neither the state nor municipalities may avail themselves of the benefits of the easements and subsections (c) and (d) should be conformed to that effect.

(2) The committee asked that the phrase "the subservient estate" be deleted from subsection (b) and that it be replaced with "the adjoining property owners on the effective date of this Act". I have included the phrase as requested.

But I note that it is possible that the substituted phrase has a different substantive meaning from that suggested by "the subservient estate".

If I am correct that the bill is a response to State v. Alaska Land Title Ass'n., 667 P.2d 714 (Alaska 1983), cert.

den., 52 U.S.L.W. 3509 (January 9, 1984), the bill addresses the exercise by the state and municipalities of the state of rights determined by the Alaska Supreme Court to have been created by easements established under certain Acts of Congress and certain public land orders of the U.S. Department of the Interior.

In an easement, two estates (separate ownership interests) in the same land are created. In an easement, a right of use is created in the property of another. As Black's Law Dictionary indicates, a "servient estate" (or a "subservient estate") is one that is burdened with a servitude (benefit) in favor of someone else. And the dominant estate is the right to a particular use that results from the easement.

In the situations described in the bill, the state or the municipality of the state is the owner of the dominant estate in the easement; the owner of the land adjoining the easement who also owns the land under and subject to the easement is the owner of the servient (subservient) estate.

It is the person who owns the servient estate who should receive the released and relinquished easement; that person will usually be the person whose property "adjoins" the land subject to the dominant easement but the bill confuses this distinction because there will frequently, perhaps typically be two property owners whose land "adjoins" the easement.

If I may be of further assistance, please advise.

M E M O R A N D U M April 17, 1984

SUBJECT: An Act releasing claims of the state within certain rights-of-way (Work Order No. 13-2222)

TO: Representative Charlie Bussell
Chairman
House Judiciary Committee

FROM: Richard A. Bradley
Legislative Counsel

You have requested the enclosed bill in final; because the draft does not address certain aspects that seem naturally raised by the bill, I have prepared the bill in draft for your consideration.

The bill seems to be a response to State v. Alaska Land Title Ass'n. 667 P.2d 714 (Alaska 1983), cert. den. 52 U.S.L.W. 3509 (January 9, 1984). While I have reviewed the case briefly preparatory to putting the bill into form for your introduction, I confess I have not sought to become altogether familiar with the law of that case.

But certain observations may be made regarding the bill.

(1) The bill deals exclusively with the use by the state of the benefits of the cited Acts of Congress and orders of the Department of the Interior.

However, as the Alaska Supreme Court's opinion indicates in passing, municipalities of the state may avail themselves of the benefits of the Acts and orders. I have not sought to extinguish the ability of these municipalities to use the Acts and orders.

(2) The rights-of-way are presently used by the state (or municipalities) to straighten the right-of-way or to widen or improve the roadbed. Those benefits will cease if the bill passes.

But the rights-of-way are also used by utilities (of both a public and private nature) for sewer and water lines, natural gas lines, electric power lines, and so forth. The bill does not indicate whether these rights continue though it seems clear that they are put in some jeopardy by the extinguishment of the estate on which they rely. Do you wish to deal with these issues? See, for example, AS 19.25.010 which provides:

> Sec. 19.25.010. USE OF RIGHTS-OF-WAY FOR UTILITIES. A utility facility may be constructed, placed, or maintained across, along, over, under or within a state right-of-way only in accordance with regulations prescribed by the department and if authorized by a written permit issued by the department.

(3) While I do not have an answer to suggest, I think it is patently clear that the outer edge of the ditching, if any, along the roadway is not clean demarcation on which to base title to land; whether the existing property line reflects good public policy, or not, at least the line is clearly established. I make this point only because the provisions of the Acts of Congress, orders of the Interior Department, and the efforts of the highway department have already been a goldmine for lawyers and a source of anxiety to property owners, title insurance companies and a newly added uncertainty seems undesireable. In this connection, you may wish to consider the concepts implied in AS 19.25.070.

(4) Finally, note that I have followed the draft provided to us in drafting this bill. But subsecs. (b) - (e) are altogether contained within (a) of the bill and are unnecessary.

If I may be of further assistance, please advise.

J6/054 Enclosure

1. Prospective vs. retroactive application.
2. State vs. private interests
3. Description of extent of easement
4. 1966 act - same provisions
5. Effect of SupCt case on 1966 act

SupCt interpreted 66 act to apply only to 1947 Fed act — PLO orders apply to the 1932 Act.

→ add provisions of Proposed Bill would be sure that these included.

Validity of quitclaim deed — being challenged in remand of case.

State law cannot affect if not a valid.

AG may hold 1966 act as unconstitutional.

Utility easements in r-of-way.

MEMORANDUM RE HOUSE BILL

TO RELINQUISH RIGHTS-OF-WAY

Alaska achieved statehood twenty-five years ago. Before statehood the Department of Interior, through certain Pulic Land Orders, took rights-of-way for roads from landowners without compensating the landowners. Since statehood the Department of Transportation and Public Facilities (DOTPF), acting for the State of Alaska, is still taking private property without compensating the landowners.

In 1966, the Alaska State Legislature enacted Ch. 92 (HB 415 am) which prohibited such takings by the State. The purpose of the law was to "alleviate economic hardship and physical and mental distress occasioned by the taking of land by the State of Alaska [for] which no compensation is paid to the person holding title to the land." The Legislature prohibited any further utilization of rights-of-way pursuant to various Public Land Orders and federal acts.

At the time of Statehood the State received a quit claim deed from the federal government conveying to the State certain roads built by the United States. DOTPF claims that the quit claim deed also conveyed certain easements or rights-of-way that were not described therein but included in Public Land Orders that were not even recorded in the various Recorders Offices throughout the state. DOTPF presently claims a right to highway rights-of-way varying in width from 100 to 300 feet surrounding

every major highway in the state and a smaller easement for most of the local roads throughout the state. When DOTPF determines that it needs to expand or modify an existing roadway where it claims a right-of-way exists by virtue of the federal government, it does so without paying compensation to the landowner for the value of the property taken.

The reservations for rights-of-way and easements were made by the federal government between 1947 and 1956. They were set forth in a series of Public Land Orders (namely PLO 601, 757, and 1613) and a Department of Interior Order (DO 2665) which were not recorded in District Recorders Offices in Alaska but were published in the Federal Register, which was a publication utilized by federal agencies.

The rights-of-way and reservations were not specifically included in the patents issued to homesteaders in Alaska. Homesteaders in Alaska were not informed of the existence of the easements and rights-of-way at the time they were issued patents and did not know the federal government was claiming a portion of their property for highway purposes. Now DOTPF is claiming right-of-way easements in the same way by virtue of the quit claim deed mentioned above.

No landowner or member of the public can know where DOTPF claims a right-of-way easement because those easements are not recorded and are not shown on plats available in the Recorder's Offices.

The Supreme Court of Alaska, in State v. A.L.T.A., has held that the easements are valid. The decision is wrong and must be reversed through the enactment of a law that will relinquish these easements and require DOTPF to pay just compensation for lands taken by them.

Nos. 5407, 5408.

Supreme Court of Alaska.

May 27, 1983.

Appellees and Cross-Appellants Petition for Rehearing Denied July 8, 1983.

Appellants and Cross-Appellees Petition for Rehearing Granted July 8, 1983.

As Amended July 8, 1983.

Action was brought for declaratory judgment by association representing various title insurance companies, individual title insurance companies, and several landowners against State, municipality, and others. The Superior Court, Third Judicial District, Anchorage, Victor D. Carlson, J., entered judgment against State and title insurance company, and appeal was taken. The Supreme Court, Matthews, J., held that: (1) trial court erred in declaring that State could not take or utilize any portion of property owner's land for local road which was in excess of 33 foot easement; (2) trial court erred in declaring that neither State nor municipality could take any portion of landowner's property for through road which was in excess of easement widths specified in their respective patents without just compensation; and (3) publication in Federal Register imparted constructive notice and served to preclude subsequent innocent purchaser status.

Affirmed in part, reversed in part, and remanded.

Rabinowitz, C.J., dissented in part and filed opinion.

1. Public Lands ⇐135(1)

Right-of-Way Act of 1966, which precludes State from taking privately owned property by election or exercise of reservation to State and that Act shall not be construed to divest State of any right-of-way or other interest in real property which was taken by State, before effective date of Act, by election or exercise of its right to take property through a reservation, was not applicable to State's claim of 50 foot road easement along south boundary of landowner's property, in that easement in question was established by departmental order under authority of statute to which Right-Of-Way Act was inapplicable. 48 U.S.C. (1958 Ed.) §§ 321a, 321d.

2. Public Lands ⇐135(1)

Staking requirement of subsection of department of interior order providing that reservation and rights of way or easements will attach as to all new construction involving public roads in Alaska when survey stakes have been set on ground and notices have been posted at appropriate points along route of new construction specifying type and width of roads was not applicable to road affecting landowner's property, in that road was an existing road when order was promulgated, while subsection by its express terms only applies to new construction.

8 Public Lands
Public land
Federal Register

3. Public Lands ⇐64

Before highway may be created, there must be either some positive act on part of appropriate public authorities of state, clearly manifesting an intention to accept a grant, or there must be public user for such a period of time and under such conditions as to prove that the grant has been accepted.

4. Public Lands ⇐135(1)

Staking requirement of department of interior order was inapplicable to certain highway, in that highway was in existence by time of homestead entry of landowners' predecessor. 48 U.S.C. (1958 Ed.) § 321d.

5. Public Lands ⇐135(1)

Trial court erred in declaring that neither State nor municipality could take any portion of landowner's property for through road which was in excess of easement which was specified in their respective patents without just compensation.

6. Public Lands ⇐135(1)

Trial court properly determined that certain landowners were entitled to declaration against State and municipality that neither State nor municipality could take any portion of their properties for through road which was in excess of easement which was specified in their respective patents without just compensation, where landowner's property was entered in 1945, so that it was not hereafter entered for purposes of statute under which mandatory reservation was limited to patents for land hereafter taken up, or located in territory of Alaska. Pickett Act, §§ 1, 2, 43 U.S.C. (1970 Ed.) §§ 141, 142; 48 U.S.C. (1958 Ed.) § 321d.

7. Insurance ⇐426.1

Title insurance company was liable to property owners under policy for value of 17 foot strip taken pursuant to interior department order, in that publication of public land order in Federal Register imparted constructive notice of order as to land it affected.

8. Public Lands ⇐138

Public land orders, which appeared in Federal Register, imparted constructive notice of conflicting deed or encumbrance, thereby preventing property owner from claiming innocent purchaser status.

9. Estoppel ⇐62.2(2)

Because publication of land orders in Federal Register imparted constructive notice of easements which they created, that notice made reliance unreasonable, and thus State was not estopped from claiming any easements under orders here involved.

10. Public Lands ⇐135(1)

By operation of law, land conveyed by the United States is taken subject to previously established rights of way where instruments of conveyance are silent as to the existence of such rights of way.

11. Public Lands ⇐135(1)

No suit to vacate or annul a patent in order to establish a previously existing right-of-way is necessary because patent contains an implied bylaw condition that it is subject to such a right-of-way, and thus statute of limitations expressed by statute providing that suits by the United States to vacate and annul any patent shall only be brought within six years after the date of the issuance of such patents did not apply. 43 U.S.C.A. § 1166.

Jack McGee, Asst. Atty. Gen., Wilson Condon, Atty. Gen., Juneau, for appellant/cross-appellee.

David A. Devine and Michael W. Price, Groh, Eggers, Robinson, Price & Johnson, Anchorage, for appellees/cross-appellants.

Before RABINOWITZ, C.J., and BURKE, MATTHEWS and COMPTON, JJ.

OPINION

MATTHEWS, Justice.

This is an action for a declaratory judgment brought by an association representing various title insurance companies, individual title insurance companies, and several landowners against the State of Alaska, the Municipality of Anchorage, and Theo-

dore and Clair Pease. Nine claims for relief were presented.

The first claim sought a determination that a title insurance policy issued by Transamerica Title Insurance Company to the Peases excluded from coverage any rights-of-way created pursuant to certain Interior Department Orders, namely, Public Land Orders 601, 757, 1613, and Departmental Order 2665.

The second claim for relief sought a declaration that claimed easements for "local roads" as defined in DO 2665 could not be used by the State or municipal governments because of the Alaska Right of Way Act of 1966.

The third related to "feeder roads" as defined in PLO 601 and DO 2665, seeking a declaration that rights-of-way for such roads could not be utilized because of the Alaska Right of Way Act of 1966.

The fourth claim for relief concerned property owned by plaintiff Hansen Associates along the Seward Highway. It alleged that the original patentee had made a homestead entry prior to the effective date of the first order involved, PLO 601, and sought a declaration that no through road easement under PLO 601 or any of its successors could be claimed.

The fifth claim for relief referred to a quitclaim deed given on or about April 7, 1959, conveying the United States' interests in the highways in Alaska to the State. The deed was recorded October 2, 1969. This claim sought a declaration that the quitclaim deed would have no effect on bona fide purchasers for value who purchased and recorded prior to the State's recording of the quitclaim deed.

The sixth claim for relief alleged that the failure of the United States or the State to record PLOs 601, 757, and 1613 and DO 2665 in a State recording office rendered any easements that might otherwise have been created by those orders void as against subsequent innocent purchasers for value who first duly recorded their interests.

The seventh claim alleged a theory of estoppel against the State and Municipality, claiming that for twenty years they had allowed property owners to develop property on which they now claim an easement pursuant to PLOs 601, 757, and 1613 and DO 2665, that no notice of such claims had been given, and that individual property owners would be prejudiced if the State and the Municipality were now permitted to utilize such easements.

The eighth claim sought a declaration that no easement could be taken by the State or the Municipality for a local, feeder, or through road under the authority of PLOs 601, 757, and 1613 or DO 2665 because of the Right of Way Act of 1966.

The ninth claim alleged that prior to the quit-claim deed from the United States to the State of April 7, 1959, the United States had patented to private landowners property which included rights-of-way now claimed by the State. A declaration was sought that these patents were conclusive as against the State and that the patents could not be vacated or annulled because of the six year statute of limitations set forth in 43 U.S.C. § 1166.

The Peases cross-claimed against the State, alleging that the State unlawfully claimed a 50 foot road easement along the south boundary of their property whereas only a 33 foot easement was described in the patent from the United States to their predecessor-in-interest. They sought just compensation for the 17 foot difference in the approximate sum of $3,000.00 plus interest from the date of taking. The Peases also counterclaimed against Transamerica, alleging that if the State was entitled to a full 50 foot right-of-way Transamerica would be obliged under the title policy to compensate them for the value of the 17 foot strip.

Before answering, the State filed a motion for a more definite statement requesting legal descriptions of property across which the complaint alleged that the State was claiming rights-of-way. In response, the plaintiffs described the property owned by Hansen Associates along the Seward Highway, with respect to the fourth claim for relief, and property owned by plaintiff

Richard L. Boysen which also lay along the Seward Highway, with respect to the seventh claim. The State then answered the complaint, placing in controversy all the legal theories of the plaintiffs.

The State, all plaintiffs, and the Peases moved for summary judgment as to all claims. The court denied the State's motion, granted the plaintiffs' motion as to the second, third, and eighth claims, and granted the Peases' motion as to their cross-claim and counterclaim. Following entry of a memorandum of decision reflecting these actions the court entered a declaratory judgment containing four numbered paragraphs, which proceed from the abstract to the particular. They are:

1. The State of Alaska and the Municipality of Anchorage are claiming highway easements for local, feeder, and through roads in excess of easement widths specified in patents issued to Alaska property owners. Said easements are claimed by the State or the Municipality pursuant to authority derived from Public Land Orders 601, 757, 1613 and Department Order 2665. For the reasons set forth in the Memorandum of Decision dated May 7, 1980, the court hereby awards Plaintiffs a summary judgment against the State of Alaska and the Municipality of Anchorage declaring that the State and the Municipality may not take or utilize property for local, feeder, or through roads in excess of the widths set forth in the patents to the affected properties without just compensation to the owners of the affected properties unless such local, feeder, or through roads were occupied and staked by the State of Alaska or the Municipality of Anchorage prior to April 14, 1966, or were specifically designated in the patents to the affected real properties.

2. The Plaintiffs Hanson [sic] Associates and Richard L. Boysen are hereby awarded a summary judgment against the State of Alaska and the Municipality of Anchorage declaring that neither the State nor the Municipality can take any portion of their properties for the through road presently known as the Old Seward Highway which is in excess of the easement widths specified in their respective patents without just compensation.

3. The Defendants Pease are hereby awarded a summary judgment on their cross-claim against the State of Alaska declaring that the State may not take or utilize any portion of the Peases' land for the local road presently known as Rabbit Creek Road which is in excess of the 33-foot easement width specified in the patent to the Peases' property without just compensation. The Peases' property is described as Lot 191, Section 33, Township 12 North, Range 3 West, Seward Meridian, Anchorage Recording District, Third Judicial District, State of Alaska.

4. The Defendants Pease are hereby awarded a summary judgment on their counterclaim against Transamerica Title Insurance Company declaring that Transamerica is liable under its title insurance policy issued to the Peases for the taking by the State of Alaska of a 17-foot strip of land for the local road known as Rabbit Creek Road, which 17-foot strip of land was in excess of a 33-foot easement specified in the Peases' patent. However, since the State of Alaska must compensate the Peases for the taking or utilization of said additional 17-foot easement, the Peases shall collect just compensation from the State of Alaska, and upon receipt of said just compensation the Peases shall not be entitled to recover damages from Transamerica Title Insurance Company for said taking of the additional 17-foot strip of property.

The State has appealed from this judgment. The plaintiffs have cross-appealed, claiming that the superior court should have granted them judgment on their fourth, fifth, sixth, seventh, and ninth claims for relief. In addition, Transamerica Title has appealed from the judgment against it in favor of the Peases.

I

THE STATE'S APPEAL AS TO THE PEASES' PROPERTY

We turn first to the appeal of the State as it relates to the Peases' property.

The patent to the 2.5 acre Pease parcel was issued on October 4, 1955, pursuant to the Small Tract Act of 1938, 43 U.S.C. §§ 682a–682e (1938), *repealed by* Pub.L. No. 94–579, Title VII, § 702 (1976). The lot was leased to the Peases' predecessor-in-interest on May 1, 1953. The patent contains two relevant reservations. One is a blanket reservation for roads "constructed or to be constructed by or under authority of the United States or by any State created out of the Territory of Alaska, ..." This reservation was made pursuant to 48 U.S.C. § 321d, ch. 313, 61 Stat. 418 (1947), *repealed by* Pub.L. No. 86–70, § 21(d)(7), 73 Stat. 146 (1959), which provides in part:

> In all patents for lands hereafter taken up, entered, or located in the Territory of Alaska, and in all deeds by the United States hereafter conveying any lands to which it may have reacquired title in said Territory not included within the limits of any organized municipality, there shall be expressed that there is reserved, from the lands described in said patent or deed, a right-of-way thereon for roads, roadways, highways, tramways, trails, bridges, and appurtenant structures constructed or to be constructed by or under the authority of the United States or of any State created out of the Territory of Alaska....

The other relevant reservation in the patent reserves a 33 foot right-of-way for roadway purposes along the south and east boundaries of the tract. Rabbit Creek Road lies on the south boundary of the Peases' property. As this case has been presented all parties have assumed that Rabbit Creek Road was in existence as a local road at all times relevant to the various orders hereafter discussed. We make the same assumption.

In 1978 the State widened Rabbit Creek Road from 66 feet to 100 feet. The road occupied a 33 foot strip on the Peases' property before widening and a 50 foot strip after widening. The State claimed a 50 foot easement on each side of the center line of Rabbit Creek Road, citing PLOs 601 [1] and 757,[2] and DO 2665 [3] as authority for widening the road without compensating the Peases for taking the extra 17 feet.

PLO 601, effective August 10, 1949, withdrew "the public lands in Alaska lying within ... 150 feet on each side of the center line of all ... through roads, 100 feet on each side of the center line of all feeder roads, and 50 feet on each side of the center line of all local roads, ... from all forms of appropriation under the public land laws, ..." and reserved them "for highway purposes." [4]

The Secretary of the Interior promulgated PLO 757 and DO 2665 on October 19, 1951. 16 Fed.Reg. 10,749, 10,752 (1951). DO 2665 was filed first. *Id.* at 10,752. It established, among other things, easements, rather than withdrawals, of 50 feet on each

1. 14 Fed.Reg. 5048 (1949).

2. 16 Fed.Reg. 10,749 (1951).

3. 16 Fed.Reg. 10,752 (1951).

4. 14 Fed.Reg. 5048 (1949). The quoted language is from the sixth paragraph of PLO 601. The sixth paragraph in full states:

> Subject to valid existing rights and to existing surveys and withdrawals for other than highway purposes, the public lands in Alaska lying within 300 feet on each side of the center line of the Alaska Highway, 150 feet on each side of the center line of all other through roads, 100 feet on each side of the center line of all feeder roads, and 50 feet on each side of the center line of all local roads, in accordance with the following classifications, are hereby withdrawn from all forms of appropriation under the public land laws, including the mining and mineral-leasing laws, and reserved for highway purposes:
>
> Through Roads
>
> Alaska Highway, Richardson Highway, Glenn Highway, Haines Highway, Tok Cut-Off.
>
> Feeder Roads
>
> Steese Highway, Elliott Highway, McKinley Park Road, Anchorage-Potter-Indian Road, Edgerton Cut-Off, Tok Eagle Road, Ruby-Long-Poorman Road, Nome-Solomon Road, Kenai Lake-Homer Road, Fairbanks-College Road, Anchorage-Lake Spenard Road, Circle Hot Springs Road.
>
> Local Roads
>
> All roads not classified above as Through Roads or Feeder Roads, established or maintained under the jurisdiction of the Secretary of the Interior.

Id. at 5048–49 (1949).

side of the center line of each local road and of 100 feet as to each feeder road.[5] PLO 757 amended the sixth paragraph of PLO 601, *see* note 4 *supra*, increasing the withdrawal for the Seward Highway [the Anchorage-Potter-Indian Road in PLO 601] from 100 feet to 150 feet on each side of the center line. 16 Fed.Reg. 10,749, 10,750 (1951). PLO 757 repealed the general withdrawal for local and feeder roads contained in the sixth paragraph of PLO 601, thus effecting a revocation of the 601 withdrawals as to them. However, PLO 757 acknowledged that DO 2665 had already established easements as to feeder and local roads and did not purport to revoke them. The final paragraph of PLO 757 states:

> Easements having been established on the lands released by this order, such lands are not open to appropriation under the public land laws....[6]

5. 16 Fed.Reg. 10,752 (1951). DO 2665 provides:

> Rights-of-Way for Highways in Alaska
>
> Section 1. *Purpose.* (a) The purpose of this order is to (1) fix the width of all public highways in Alaska established or maintained under the jurisdiction of the Secretary of the Interior and (2) prescribe a uniform procedure for the establishment of rights-of-way or easements over or across the public lands for such highways. Authority for these actions is contained in section 2 of the act of June 30, 1932 (47 Stat. 446, 48 U.S.C. 321a).
>
> Section 2. *Width of public highways.* (a) The width of the public highways in Alaska shall be as follows:
>
> (1) For through roads: The Alaska Highway shall extend 300 feet on each side of the center line thereof. The Richardson Highway, Glenn Highway, Haines Highway, Seward-Anchorage Highway, Anchorage-Lake Spenard Highway and Fairbanks-College Highway shall extend 150 feet on each side of the center line thereof.
>
> (2) For feeder roads: Abbott Road (Kodiak Island), Edgerton Cutoff, Elliott Highway, Seward Peninsula Tram road, Steese Highway, Sterling Highway, Taylor Highway, Northway Junction to Airport Road, Palmer to Matanuska to Wasilla Junction Road, Palmer to Finger Lake to Wasilla Road, Glenn Highway Junction to Fishhook Junction to Wasilla to Knik Road, Slana to Nabesna Road, Kenai Junction to Kenai Road, University to Ester Road, Central to Circle Hot Springs to Portage Creek Road, Manley Hot Springs to Eureka Road, North Park Boundary to Kantishna Road, Paxson to McKinley Park Road, Sterling Landing to Ophir Road, Iditarod to Flat Road, Dillingham to Wood River Road, Ruby to Long to Poorman Road, Nome to Council Road and Nome to Bessie Road shall each extend 100 feet on each side of the center line thereof.
>
> (3) For local roads: All public roads not classified as through roads or feeder roads shall extend 50 feet on each side of the center line thereof.
>
> Section 3. *Establishment of rights-of-way or easements.* (a) A reservation for highway purposes covering the lands embraced in the through roads mentioned in section 2 of this order was made by Public Land Order No. 601 of August 10, 1949, as amended by Public Land Order No. 757 of October 16, 1951. That order operates as a complete segregation of the land from all forms of appropriation under the public-land laws, including the mining and the mineral leasing laws.
>
> (b) A right-of-way or easement for highway purposes covering the lands embraced in the feeder roads and the local roads equal in extent to the width of such roads as established in section 2 of this order, is hereby established for such roads over and across the public lands.
>
> (c) The reservation mentioned in paragraph (a) and the rights-of-way or easements mentioned in paragraph (b) will attach as to all new construction involving public roads in Alaska when the survey stakes have been set on the ground and notices have been posted at appropriate points along the route of the new construction specifying the type and width of the roads.
>
> Section 4. *Road maps to be filed in proper Land Office.* Maps of all public roads in Alaska heretofore or hereafter constructed showing the location of the roads, together with appropriate plans and specifications, will be filed by the Alaska Road Commission in the proper Land Office at the earliest possible date for the information of the public. *Id.*

6. 16 Fed.Reg. 10,749, 10,750 (1951). The text of PLO 757 so far as it is relevant here states:

> The sixth paragraph of Public Land Order No. 601 of August 10, 1949, reserving public lands for highway purposes, commencing with the words "Subject to valid existing rights", is hereby amended to read as follows:
>
> Subject to valid existing rights and to existing surveys and withdrawals for other than highway purposes and public lands in Alaska lying within ... 150 feet on each side of the center line of the ... Seward-Anchorage Highway ... are hereby withdrawn from all forms of appropriation under the public-land laws including the mining and mineral-leasing laws, and reserved for highway purposes.
>
> Easements having been established on the lands released by this order, such lands are

Thus one effect of PLO 757 and DO 2665 was to substitute easements for the withdrawals made in PLO 601 as to local and feeder roads.

The State's claim to the full 50 feet, from the center line, of Rabbit Creek Road is in all relevant respects identical to the claim that it successfully asserted in *State, Department of Highways v. Green*, 586 P.2d 595 (Alaska 1978). In *Green*, as in the Peases' claim, the patents were issued by the United States under the Small Tract Act and contained blanket roadway easements under 48 U.S.C. § 321d as well as specific 33 foot easements. The local road in question in both cases was built before DO 2665 was promulgated, and the lease as well as the patent was issued after promulgation of DO 2665. We held in *Green* that DO 2665 was issued pursuant to 48 U.S.C. § 321a, as distinct from 48 U.S.C. § 321d; that DO 2665 was applicable to patents issued under the Small Tract Act; and that the 50 foot right-of-way established by DO 2665 was effective even though only a 33 foot right-of-way was expressed in the patent. 586 P.2d at 600–03.

The superior court reasoned that *Green* was not controlling because of the provisions of the Right-of-Way Act of 1966, ch. 92 S.L.A. 1966.[7] Sections 2 and 3 contain the operative provisions of the Right-of-Way Act of 1966. Section 2 precludes the State from taking "privately owned property by the election or exercise of a reservation to the state acquired under [48 U.S.C. § 321d]," and section 3 provides that the Act shall not be construed to divest the State of "any right-of-way or other interest in real property which was taken by the state, before the effective date of this Act, by the election or exercise of its right to take property through a reservation acquired under [48 U.S.C. § 321d]." The effective date of the Right-of-Way Act of 1966 was April 14, 1966.

not open to appropriation under the public-land laws except as a part of a legal subdivision, if surveyed, or an adjacent area, if unsurveyed, and subject to the pertinent easement.

Id. at 10,749–50.

7. The Right-of-Way Act of 1966 states:

Section 1. PURPOSE. This Act is intended to alleviate the economic hardship and physical and mental distress occasioned by the taking of land, by the State of Alaska, for which no compensation is paid to the persons holding title to the land. This practice has resulted in financial difficulties and the deprivation of peace of mind regarding the security of one's possessions to many citizens of the State of Alaska, and which, if not curtailed by law, will continue to adversely affect citizens of this state. Those persons who hold title to land under a deed or patent which contains a reservation to the state by virtue of the Act of June 30, 1932, ch. 320, sec. 5, as added July 24, 1947, ch. 313, 61 Stat. 418, are subject to the hazard of having the State of Alaska take their property without compensation because all patents or deeds containing the reservation required by that federal Act reserve to the United States, or the state created out of the Territory of Alaska, a right-of-way for roads, roadways, tramways, trails, bridges, and appurtenant structures either constructed or to be constructed. Except for this reservation the State of Alaska, under the Alaska constitution and the constitution of the United States, would be required to pay just compensation for any land taken for a right-of-way. It is declared to be the purpose of this Act to place persons with land so encumbered on a basis of equality with all other property holders in the State of Alaska, thereby preventing the taking of property without payment of just compensation as provided by law, and in the manner provided by law.

Section 2. TAKING OF PROPERTY UNDER RESERVATION VOID. After the effective date of this Act, no agency of the state may take privately-owned property by the election or exercise of a reservation to the state acquired under the Act of June 30, 1932, ch. 320, sec. 5, as added July 24, 1947, ch. 313, 61 Stat. 418, and taking of property after the effective date of this Act by the election or exercise of a reservation to the state under that federal Act is void.

Section 3. PROSPECTIVE APPLICATION. This Act shall not be construed to divest the state of, or to require compensation by the state for, any right-of-way or other interest in real property which was taken by the state, before the effective date of this Act, by the election or exercise of its right to take property through a reservation acquired under the Act of June 30, 1932, ch. 320, sec. 5, as added July 24, 1947, ch. 313, 61 Stat. 418.

Section 4. SHORT TITLE. This Act may be cited as the Right-Of-Way Act of 1966.

Section 5. EFFECTIVE DATE. This Act takes effect on the day after its passage and approval or on the day it becomes law without such approval.

[1] The court erred in applying the Right-of-Way Act of 196[illegible] to the Pease case. It is applicable only to interests taken by the State under a blanket reservation created pursuant to 48 U.S.C. § 321d. We held in *Green* that easements established by DO 2665 were established under the authority of section 321a, not section 321d.[8] *Green*, 586 P.2d at 600 n. 17. Further, we held in *State, Department of Highways v. Crosby*, 410 P.2d 724 (Alaska 1966) that § 321d did not apply at all to patents issued under the Small Tract Act. *Id.* at 728.

[2] The superior court also concluded in its Memorandum of Decision that the easement which otherwise would have been created under DO 2665 on Rabbit Creek Road did not come into being "until the right-of-way was staked by the terms of DO 2665." This statement refers to subsection 3(c) of DO 2665, which provides:

> The reservation mentioned in paragraph (a) and the rights-of-way or easements mentioned in paragraph (b) will attach as to all new construction involving public roads in Alaska when the survey stakes have been set on the ground and notices have been posted at appropriate points along the route of the new construction specifying the type and width of the roads.[9]

The superior court's conclusion that the staking requirement of section 3(c) was applicable to Rabbit Creek Road is erroneous. Section 3(c) by its express terms only applies to new construction. Rabbit Creek Road was an existing road when the order was promulgated. As to existing roads, subsection 3(b) of the order establishes a 50 foot easement in the present, rather than the future, tense and contains no call for additional action in order to fix the easement. It states:

> A right-of-way or easement for highway purposes covering the lands embraced in the . . . local roads equal in extent to the width of such roads as established in section 2 of th[illegible] order, *is hereby established* for such roads over and across the public lands.

16 Fed.Reg. 10,752 (1951) (emphasis added). Subsection (3) of section 2 of DO 2665 set the width of local roads at 50 feet on each side of the center line. Thus, these two sections of DO 2665 established a 50 foot easement for Rabbit Creek Road.

8. A memorandum from the Chief Counsel of the Bureau of Land Management to the Director of the Bureau, dated February 7, 1951, explains well the extent of the authority granted to the Secretary of the Interior under § 321a. The memorandum states in part:

> Prior to the issuance of Public Land Order No. 601 . . ., nearly all public roads in Alaska were protected only by easements. Right-of-way easements were acquired under section 2477 of the Revised Statutes (43 U.S.C. sec. 932) by the construction of roads. This section granted a right-of-way for the construction of highways over public lands not reserved for public uses.
>
> Section 2 of the Act of January 27, 1905 (33 Stat. 616), incorporated with amendments into 48 U.S.C. secs. 321–323, established a Board of Road Commissioners in the then Territory of Alaska to function under the jurisdiction of the Secretary of War. This section provided:
>
> "Sec. 2. * * * The said board shall have the power, and it shall be their duty, upon their own motion or upon petition, to locate, lay out, construct, and maintain wagon roads and pack trails * * *. The said board shall prepare maps, plans, and specifications of every road or trail they may locate and lay out, * * *."
>
> Section 3 of the Act of August 24, 1912 (37 Stat. 512, 48 U.S.C. secs. 23 and 24), under which Alaska was organized as a Territory, provided that the authority of the legislature of the Territory should not extend to certain statutes of the United States including the Act of January 27, 1905, *supra*, and the several acts amendatory thereof.
>
> Section 2 of the Act of June 30, 1932 (47 Stat. 446, 48 U.S.C. sec. 321a), provides:
>
> "Sec. 2. The Secretary of the Interior shall execute or cause to be executed all laws pertaining to the construction and maintenance of roads and trails and other works in Alaska heretofore administered by said board of road commissioners under the direction of the Secretary of War; * * *."
>
> The authority of the Secretary of the Interior conferred by the above-cited acts to "locate, lay out, construct and maintain" public roads in Alaska clearly implies the right to fix the width of the roads. This width is not fixed by any statute.

9. 16 Fed.Reg. 10,752 (1951). For the full text of DO 2665, *see* note 5 *supra*.

[3] The history of the promulgation of DO 2665 also demonstrates that the staking requirement applies only to new construction, not existing roads. In territorial days road easements were created across public land under 43 U.S.C. § 932, *repealed by* Pub.L. No. 94-579, Title VII, § 706(a) (1976), a statute remarkable for its brevity, which provided:

> The right-of-way for the construction of highways over public lands, not reserved for public uses, is hereby granted.

This blanket grant had to be accepted. A common method of acceptance was the building of a road by a public authority.[10] But other methods of acceptance were also recognized. As we stated in *Hamerly v. Denton*, 359 P.2d 121 (Alaska 1961) with respect to 43 U.S.C. § 932:

> [B]efore a highway may be created, there must be either some positive act on the part of the appropriate public authorities of the state, clearly manifesting an intention to accept a grant, or there must be public user for such a period of time and under such conditions as to prove that the grant has been accepted.

Id. at 123 (footnote omitted). In *Girves v. Kenai Peninsula Borough*, 536 P.2d 1221 (Alaska 1975), we held that enactment by the territorial legislature of a law dedicating a four rod strip along all section lines for roadway purposes was a positive act of acceptance of the section 932 grant. *Id.* at 1225-26.

When acceptance of the section 932 grant occurred by construction of a road by an appropriate public authority, a question remained regarding the width of the right-of-way thereby created. It was held that the width was not confined necessarily to the traveled portion of the roadway, but that "local laws, customs and usages" would control. *City of Butte v. Mikosowitz*, 39 Mont. 350, 102 P. 593, 595-96 (1909); *see also Ball v. Stephens*, 68 Cal.App.2d 843, 158 P.2d 207, 209 (1945).

One purpose of DO 2665 was to define as a matter of local law or usage the width of roadway easements which had been created by the construction of roads and which would be created in the future by the construction of new roads. The memorandum of February 7, 1951, from the chief counsel of the Bureau of Land Management to the Bureau's director[11] makes this clear:

> Notwithstanding that section 2477 of the Revised Statutes (43 U.S.C. § 932) does not fix the width of the rights-of-way granted by it, the width when fixed by a positive act of the proper State or Territorial authorities has been held valid. *Costain v. Turner* (1949) [72 S.D. 427], 36 N.W.2d 382; *Butte v. Mikosowitz* (1909) [39 Mont. 350], 102 P. 593. In both cases, the width fixed included an area in excess of the beaten path or track. The reasons which sustain the conclusion reached in those cases support the conclusion that in the case of public highways in Alaska constructed or maintained under the jurisdiction of the Secretary of the Interior, the width of the highways may be fixed by that official.

The memo goes on to suggest the publication of an order, which was to become DO 2665, in terms which make it clear that the staking requirement only applies to new construction and not to existing roads:

> The following procedure is suggested for the establishment of highway easements of prescribed widths in Alaska:
>
> (1) The issuance of an order by the Secretary of the Interior to be published in the Federal Register fixing the width for existing roads and the width for new construction, including changes in the location of existing roads, and extensions of such roads. *In the case of new construction, the order can only be effective when the survey stakes have been set on the ground.*

(Emphasis added).

Further, the Superior Court's conclusion that the staking requirement applies to ex-

10. *See Clark v. Taylor*, 9 Alaska 298, 303 (D.Alaska 1938); *Ball v. Stephens*, 68 Cal. App.2d 843, 158 P.2d 207, 209 (1945); *Moulton v. Irish*, 67 Mont. 504, 218 P. 1053, 1054 (1923).

11. An excerpt from this memorandum is quoted at note 8 *supra*.

isting roads as well as to roads to be constructed in the future is in conflict with our holding in *Green, supra*. The local road in question there was constructed before the promulgation of DO 2665. As to the Green parcel, we held that the 50 foot right-of-way was fixed as of the promulgation of the order. *Green*, 586 P.2d at 604.

For these reasons we conclude that the State's appeal with respect to the adverse judgment on the cross-claim of the Peases is well-founded. The third paragraph of the declaratory judgment is therefore reversed. Since the first paragraph of the judgment includes the situation presented in the Pease case, it too must be reversed.

II

THE STATE'S APPEAL AS TO BOYSEN'S PROPERTY

The discussion in this section concerns the plaintiff's eighth claim for relief, which is reflected in the second and third paragraphs of the judgment. This discussion is also relevant to the second claim for relief relating to feeder roads. Because specific facts concerning the Hansen parcel require that it be treated differently, we exclude it from this discussion and focus instead on the Boysen property.

This aspect of the case involves an additional public land order that was not involved in the discussion of the Pease case. This order, PLO 1613, was promulgated April 7, 1958. 23 Fed.Reg. 2376, 2378 (1958). PLO 1613 revoked PLO 601 which, as modified by PLO 757, had withdrawn and reserved for highway purposes 150 feet on each side of the Seward Highway. *Id.* at 2376. PLO 1613 converted the 150 foot Seward Highway right-of-way to an easement of the same width.[12]

The Boysen parcel consists of some 80 acres joining the Seward Highway. The patent was issued to Boysen's predecessor on May 15, 1952, under the Homestead Act. The homestead entry was made January 2, 1951. The patent contains a blanket reservation for road rights-of-way as required by 48 U.S.C. § 321d. *See* page 718 *supra*.

Setting aside the possible effect of the section 321d reservation, the homestead entry of Boysen's predecessor in January 1951 fixes the date from which the property rights of the owners of the parcel are to be measured.[13] As of that date, PLO 601 had withdrawn 100 feet of land from each side of the center line of the Seward Highway. 14 Fed.Reg. 5048 (1949).

The superior court was apparently of the view that unless the State had fully occupied or staked this 100 feet before the effective date of the Right-of-Way Act of 1966, that act eliminated the withdrawal. We disagree.

[4] The Seward Highway was in existence by the time of the homestead entry. The superior court apparently imposed the staking requirement because of section 3 of DO 2665.[14] For the reasons we have expressed with respect to the Peases' property, the superior court's conclusion concerning the applicability of the staking require-

12. 23 Fed.Reg. 2376, 2377 (1958). PLO 1613 provides in pertinent part:

> 1. Public Land Order No. 601 of August 10, 1949, as modified by Public Land Order 757 of October 16, 1951, reserving for highway purposes the public lands of Alaska lying ... within 150 feet on each side of the center line of the ... Seward-Anchorage Highway ... is hereby revoked.
>
> ....
>
> 3. An easement for highway purposes, including appurtenant protective, scenic and service areas, over and across the lands described in paragraph 1 of this order, extending 150 feet on each side of the center line of the highways mentioned therein, is hereby established.
>
> ....
>
> 5. The easements established under paragraphs 3 and 4 of this order shall extend across both surveyed and unsurveyed public lands described in paragraphs 1 and 2 of this order for the specified distance on each side of the center line of the highways ... as those center lines are definitely located as of the date of this order.

Id. at 2376-77.

13. *See* part III *infra*.

14. Subsection (a)(1) of section 1 of DO 2665 recognizes expressly the 150 foot withdrawal for the Seward Highway expressed in PLO 757. *See* note 5 *supra*.

ment to the Seward Highway is erroneous. The Seward Highway was not new construction in 1949, when PLO 601 was promulgated, or in 1951, when DO 2665 was promulgated. It had a fixed location and the boundaries of its right-of-way were ascertainable by referring to the applicable PLO and measuring from its center line.

In addition, the 100 foot right-of-way first created by PLO 601 does not depend for its existence on the reservation placed in the patent under section 321d. PLO 601 was issued pursuant to Executive Order 9337, 8 Fed.Reg. 5516 (1943), under which the President of the United States delegated his authority to the Secretary of the Interior under 43 U.S.C. § 141, ch. 421, § 1, 36 Stat. 847 (1910), *repealed by* Pub.L. No. 94–579, Title VII, § 704(a) (1976), authorizing withdrawal of public lands in Alaska for specified public purposes.[15] As previously noted, the Right-of-Way Act of 1966 applies only to rights-of-way acquired under section 321d reservations.

[5] For the above reasons the second paragraph of the judgment as it relates to the Boysen property must be reversed. The preceding discussion also requires, as did our discussion in part I concerning the Peases' property, reversal of the first paragraph of the judgment. We do not reach the question whether a full 150 foot easement became fixed across the Boysen property by operation of the section 321d patent reservation and promulgation of PLO 757, and thus may be unaffected by the Right-of-Way Act of 1966. This question was not specifically addressed by the superior court nor is it presented in the briefs before us.

III

THE CROSS–APPEAL AS TO THE HANSEN PROPERTY

The patent for the Hansen parcel was issued to Hansen's predecessor-in-interest on June 1, 1950, under the Homestead Act. The homestead entry was made on January 23, 1945, before the promulgation of any of the land orders previously discussed, and before passage of 48 U.S.C. § 321d. The patent to the Hansen property does not contain a section 321d reservation.

The PLO 601 withdrawal was expressly subject to "valid existing rights." 14 Fed. Reg. 5048 (1949). Homestead entries have been held to give rise to valid existing rights,[16] although these rights may not in all cases take priority over intervening government acts.[17] Here, however, there is no doubt of the intention to except prior homestead entries from PLO 601. As we have noted, PLO 601 was promulgated pursuant to 43 U.S.C. § 141. 43 U.S.C. § 142 states that "there shall be excepted from the force and effect of any withdrawal made under the provisions of ... section 141 ... all lands which are, on the date of such withdrawal, embraced in any lawful homestead ... entry ...." Since entry was in 1945, and the first withdrawal occurred in 1949, Hansen's predecessor-in-interest, as an entryman, had rights superior to the withdrawals.

[6] Section 321d has no effect on the Hansen property. The mandatory reservation required by this statute was limited to "patents for lands *hereafter* taken up, entered, or located in the Territory of Alaska, ..." (emphasis added). Since the Hansen land was entered in 1945, it was not "hereafter" entered and thus was excluded from the operation of that statute. This is consistent with the absence of the section 321d reservation in the Hansen patent, and also consistent with its presence in the patents to the other two parcels of land involved in this appeal where entry occurred after July

15. The State and the plaintiffs have agreed that PLO 601 is based on Executive Order 9337 which, "in turn, rests on" 43 U.S.C. § 141. We thus have no occasion to consider whether Executive Order 9337 delegated authority to make withdrawals in addition to those authorized by 43 U.S.C. § 141.

16. *Stockley v. United States*, 260 U.S. 532, 540, 43 S.Ct. 186, 188, 67 L.Ed. 390, 394 (1923). *Korf v. Itten*, 64 Colo. 3, 169 P. 148, 150-51 (1917).

17. *Wilbur v. United States ex rel. Stuart*, 53 F.2d 717, 720 (D.C.Cir.1931).

24, 1947, the date on which section 321d was adopted.

Thus, for reasons different from those articulated by the superior court, the second paragraph of the declaratory judgment is affirmed as to the Hansen parcel.

IV

TRANSAMERICA'S LIABILITY

[7] In count I of the complaint, Transamerica sought a declaration absolving it of liability to the Peases under its title insurance policy. The superior court, following *Hahn v. Alaska Title Guaranty Co.*, 557 P.2d 143 (Alaska 1976), found Transamerica conditionally liable to the Peases for the value of the 17 foot strip arising from DO 2665. In *Hahn* we held that the publication of a public land order, there PLO 601, in the Federal Register imparted constructive notice of the order as to the land it effected. Under the terms of the title policy there involved, the title insurance company was found to be liable. *Id.* at 146. We agree that *Hahn* is squarely controlling.

Transamerica, however, contends that *Hahn* should be overruled. We have considered Transamerica's arguments in support of this position and we are not persuaded that *Hahn* is unsound in any respect. We therefore decline to overrule it. Thus, Transamerica is liable under its policy to the Peases. Paragraph 4 of the declaratory judgment so far as it relates to Transamerica's liability to the Peases is affirmed.

V

CROSS-APPEAL AS TO FIFTH, SIXTH, SEVENTH AND NINTH CLAIMS FOR RELIEF

The plaintiffs claim that the superior court should have granted summary judgment in their favor on their fifth, sixth, seventh and ninth claims for relief. The court made no ruling as to these claims. We review them in accordance with the principle that any ground may be urged on appeal to support a judgment even if it was not accepted by the court in rendering judgment. *Moore v. State*, 553 P.2d 8, 21 (Alaska 1976); *Ransom v. Haner*, 362 P.2d 282, 285 (Alaska 1961).

The fifth and sixth claims are similar because to prevail, a property owner [18] must establish status as a "subsequent innocent purchaser ... in good faith for a valuable consideration" as that term is used in AS 34.15.290. An innocent purchaser must lack "actual or constructive knowledge" of the conflicting deed or encumbrance that the purchaser seeks to avoid. *Sabo v. Horvath*, 559 P.2d 1038, 1043 (Alaska 1976). *Sabo* held that as between two grantees, a prepatent grantee's deed that was recorded before the patent was issued is a "wild deed" and does not give constructive notice to a post-patent grantee who duly records. *Id.* at 1044.

The question here is whether public land orders, which appear in the Federal Register, impart constructive notice, thus preventing the property owner from claiming innocent purchaser status. We have in part IV of this opinion re-affirmed the holding of *Hahn v. Alaska Title Guarantee Co.*, 557 P.2d 143 (Alaska 1976) that publication of a land order in the Federal Register is constructive notice of the order as that term is used in a title insurance policy. That holding is controlling here.

[8] The distinction between *Sabo* and this appeal is that *Sabo* concerns private deeds and this appeal involves a conflict between a government regulation and a patent. Regulations published in the Federal Register take on the character of law. *Farmer v. Philadelphia Electric Co.*, 329 F.2d 3, 7 (3d Cir.1964); *United States v. Messer Oil Corp.*, 391 F.Supp. 557, 561-62 (W.D.Pa.1975). All persons are presumed to know the contents of the law. *See Ferrell v. Baxter*, 484 P.2d 250, 265 (Alaska 1971). In *United States v. Messer Oil Corp.*, the district court indicated that regu-

18. In this somewhat abstract context the term "property owner" should be considered to be a property owner situated as is the plaintiff Boysen, for Hansen has prevailed on other grounds.

lations published in the Federal Register were sufficient notice to allow conviction of a criminal violation. 391 F.Supp. at 562. If Federal Register notice is sufficient for this purpose, it is sufficient notice to a landowner regarding easements that the federal government has reserved across his land. Thus, the publication of the land orders in the Federal Register imparted constructive notice and served to preclude subsequent innocent purchaser status.

In the seventh claim, plaintiffs contend that the State is estopped from claiming any easements under the orders here involved. The State responds that constructive notice defeats the estoppel claim.

[9] Estoppel requires "the assertion of a position by conduct or word, reasonable reliance thereon by another party, and resulting prejudice." *Jamison v. Consolidated Utilities, Inc.*, 576 P.2d 97, 102 (Alaska 1978) (footnote omitted). Plaintiffs claim that the State has asserted by conduct that it claims no easements by allowing the owners to develop their property inconsistently with the easements, and by not recording the land orders. They assert that reasonable reliance on that assertion has taken place. Because we have already found that publication of the land orders imparts constructive notice of the easements which they create, that notice makes plaintiffs' reliance unreasonable. Thus, the estoppel claim lacks merit.

The ninth claim of plaintiffs is based on the fact that the property owners' patents involved here did not expressly refer to any land order easements. Because of this the plaintiffs contend that the property conveyed was conveyed free from such easements. They argue further that as a result suit was required to be brought against the property owners to vacate the patents, and that the time for such a suit is, in all cases now before us, barred by the six year statute of limitations contained in 43 U.S.C. § 1166.[19]

The premise of this argument is that a patent which does not say that it is issued subject to a public easement operates to transfer the property free from the easement. We rejected this premise in *Green*. We held there that an unexpressed DO 2665 easement was effective. *Green*, 586 P.2d at 603.

Similarly, in *Girves v. Kenai Peninsula Borough*, 536 P.2d 1221 (Alaska 1975), we affirmed a trial court ruling that a right-of-way not expressed in a patent was effective:

> At the outset Girves notes that neither her "Notice of Allowance", nor her patent contained any express reservation of rights-of-way in favor of any public body. However, the absence of an express reservation of easement does not preclude the borough from showing that a right-of-way was established prior to the issuance of these documents.

Id. at 1224 (footnote omitted). We cited as authority for that statement *State v. Crawford*, 7 Ariz.App. 551, 441 P.2d 586 (1968). That case aptly states:

> [I]t is also clear from cases decided under 43 U.S.C. § 932 that a subsequent patentee takes subject to previous right-of-ways [sic] established under the grant contained in that federal statute [Citations omitted.] No contrary authority has come to our attention.... The silence of the patents does not preclude the State from showing the full extent of its right-of-way established prior to the time when the patents were issued to plaintiff's predecessors.

Id. at 590.

[10, 11] The above and other authorities[20] establish that, by operation of law,

19. 43 U.S.C. § 1166 provides:
> Suits by the United States to vacate and annul any patent shall only be brought within six years after the date of the issuance of such patents.

20. *Bird Bear v. McLean County*, 513 F.2d 190, 192–93 (8th Cir.1975); *Ball v. Stephens*, 68 Cal.App.2d 843, 158 P.2d 207, 210 (1945); *Nicolas v. Grassle*, 83 Colo. 536, 267 P. 196, 197 (1928); *Flint & P.M. Ry. v. Gordon*, 41 Mich. 420, 2 N.W. 648, 655 (1879); *Lovelace v. Hightower*, 50 N.M. 50, 168 P.2d 864, 874 (1946); *Verdier v. Port Royal R.R.*, 15 S.C. 476, 481 (1881); *Costain v. Turner County*, 72 S.D. 427,

land conveyed by the United States is taken subject to previously established rights-of-way where the instrument of conveyance is silent as to the existence of such rights-of-way. No suit to vacate or annul a patent in order to establish a previously existing right-of-way is necessary because the patent contains an implied-by-law condition that it is subject to such a right-of-way.[21] Thus the statute of limitations expressed by 43 U.S.C. § 1166 does not apply.

VI

CONCLUSION

The first paragraph of the judgment is REVERSED. The second paragraph of the judgment is AFFIRMED as to Hansen and REVERSED as to Boysen. The third paragraph of the judgment is REVERSED. The fourth paragraph of the judgment is AFFIRMED as to the Peases' claim against Transamerica. The case is REMANDED for further proceedings consistent with the foregoing.

RABINOWITZ, Chief Justice, dissenting in part.

I find that I am unable to agree with the court's conclusion that the State of Alaska or the Municipality of Anchorage is entitled to claim highway easements in excess of those reserved when the parcels in question were conveyed by patent from the federal government. Before discussing the grounds for my disagreement with the court's ruling, however, I believe that it will be useful to set forth what I consider to be the significant facts.

The principal question in this appeal is whether the state[1] must compensate three landowners for portions of their parcels taken to widen existing roads. The landowners—Theodore and Claire Pease, Richard Boysen, and a limited partnership called Hansen Associates—are the successors in interest to persons who originally acquired the parcels by patent from the federal government. The federal government expressly reserved highway easements or rights-of-way in the Pease and Boysen patents; there were no easements or rights-of-way reserved in the Hansen patent. In each case the state claims a highway easement greater than that reserved in the patent, resting its claims on various now-repealed federal directives which provided arguably that the easements claimed by the state should have been expressly reserved when the parcels were conveyed by patent.[2]

36 N.W.2d 382, 383 (1949); *Wells v. Pennington County*, 2 S.D. 1, 48 N.W. 305, 308 (1891); *Sullivan v. Condas*, 76 Utah 585, 290 P. 954, 957 (1930).

21. Indeed, when the Secretary of the Interior declared these rights-of-way, they vested in the public and there is authority that thereafter the Secretary could not revoke them. In *Walcott Township v. Skauge*, 6 N.D. 382, 71 N.W. 544 (1897), the court, in discussing 43 U.S.C. § 932, stated:

> Highways once established over the public domain under and by virtue of this act, the public at once became vested with an absolute right to the use thereof, *which could not be revoked by the general government*, and whoever thereafter took the title from the general government took it burdened with the highway so established.

Id. at 546 (emphasis added); *accord Bird Bear v. McLean County*, 513 F.2d 190, 192 (8th Cir. 1975); *Wenberg v. Gibbs Township*, 31 N.D. 46, 153 N.W. 440, 441 (1915); *Gustafson v. Gem Township*, 58 S.D. 308, 235 N.W. 712, 713 (1913). *Cf. City of Butte v. Mikosowitz*, 39 Mont. 350, 102 P. 593, 596 (1909) (grant of a roadway under 43 U.S.C. § 932 is to the public, and governmental entities have "supervision and control thereof as trustee for the public, . . ."). That the rights-of-way were established by administrative action rather than public user does not put them on a different footing. *See United States v. Rogge*, 10 Alaska 130, 152-53 (D.Alaska 1941), *aff'd* 128 F.2d 800 (9th Cir.1942).

1. Although the right of the Municipality of Anchorage to claim undisclosed easements is also at issue, I will refer only to the state's rights, for convenience's sake, as the legal issues are the same as to both the state and the municipality.

2. The Pease patent reserved a right-of-way of unspecified location and width under the authority of 48 U.S.C. § 321d, and also reserved a separate 33-foot right-of-way along the south and east boundaries of the parcel. The Peases concede that the state is entitled to the 33-foot right-of-way, and the Alaska Right-of-Way Act of 1966, ch. 92, 1966 Temporary and Special Acts and Resolutions, requires the state to

In my view, the state's reliance upon undisclosed easements, decades after the lands were patented,[3] is foreclosed by both federal and state statutes of limitations governing suits to set aside patents.[4] In addition, I think the landowners are entitled to the protection of Alaska's recording act.[5] Thus, I do not agree with the court's ruling that the state need not compensate the landowners for taking easements which were not expressly reserved in the patents.[6]

In my view, the dispositive legal issue in this appeal should be framed as follows: if the federal government mistakenly issues a patent which purports to convey clear title to lands which should have been withheld for highway easements, is there a time after which the patent may not be challenged notwithstanding the mistake? Because Congress has supplied the answer to this dispositive question in the form of a statute of limitations applicable to suits challenging the validity of patents, I think it is unnecessary to address the array of statutes, Public Land Orders, and Departmental Orders marshalled by the state in defense of the easements that it claims.

Forty-three U.S.C. § 1166 provides that "[s]uits by the United States to vacate and annul any patent shall only be brought within six years after the date of the issuance of such patents."[7] This statute of

compensate the Peases if it uses a section 321d right-of-way notwithstanding the fact that the right-of-way was expressly reserved in the patent. In addition, section 138(b) of the Federal Aid Highway Act of 1970 provides an independent basis for concluding that the state may not claim a section 321d easement. That provision states:

> Any right-of-way for roads, roadways, highways, tramways, trails, bridges, and appurtenant structures reserved by section 321(d) [sic] of title 48, United States Code (61 Stat. 418, 1947), not utilized by the United States or by the State or territory of Alaska prior to the date of enactment hereof, shall be and hereby is vacated and relinquished by the United States to the end and intent that such reservation shall merge with the fee and be forever extinguished.

Pub.L. No. 91-605, § 138(b), 1970 U.S.Code Cong. & Ad.News 2001, 2029 (uncodified). The state, however, claims yet another easement of fifty feet on the Pease parcel, which is seventeen feet greater than the easement to which the Peases agree the state is entitled. The state claims this fifty-foot easement pursuant to Public Land Orders 601 and 757 and Department Order 2665.

The Boysen patent reserved only a section 321d right-of-way; once again, the state must compensate Boysen if it uses a section 321d right-of-way. The state, however, claims a separate 150-foot easement on the Boysen parcel under the authority of Public Land Order 1613 and Department Order 2665.

As to the Hansen parcel, which is subject to no reserved highway easements or rights-of-way, the state also claims a 150-foot easement under the authority of Public Land Order 1613 and Department Order 2665.

3. The Hansen patent was issued on June 1, 1950; the Boysen patent, on May 15, 1952; the Pease patent, on October 4, 1955. The state did not claim the easements that it now seeks until the mid to late 1970's.

4. 43 U.S.C. § 1166; AS 09.10.230. I do not find it necessary to distinguish or consider the many Alaska cases dealing with the effect of various federal directives, because none of those cases have addressed the statutes of limitations issues.

5. AS 34.15.290.

6. The only federal directive upon which the state relies which was in effect when the Hansen parcel was patented is Public Land Order 601; the remaining directives were not promulgated until after the Hansen patent was issued and cannot, in my view, be applied to alter vested property interests without abridging rights secured by the federal and state constitutions. The withdrawals made by Public Land Order 601 were, however, subject to "valid existing rights," and an entryman's claim is a "valid existing right" which could not be adversely affected by Public Land Order 601. Since the Hansen parcel was entered prior to the promulgation of Public Land Order 601, that parcel is not subject to the withdrawal made by that directive.

7. Admittedly the United States is not a party to this litigation, but this observation does not answer the question of the applicability of the federal statute of limitations. The state, which acquired its interests in federally-created highway easements from the federal government by quitclaim deed, could not have acquired greater rights than its grantor had; the state's rights are merely derivative. A claim that would have been time-barred as to the United States was not revived, nor did the federal statute of limitations cease to run as to viable claims, when the United States transferred its rights to

limitations was enacted because of "the insecurity and loss of confidence of the public in the integrity and value of patent title to public lands, which had been occasioned by conflicting claims ... which had resulted in many suits being commenced to cancel patents." *United States v. Whited & Wheless, Ltd.*, 246 U.S. 552, 562, 38 S.Ct. 367, 368, 62 L.Ed. 879, 882 (1918). The statute presupposes that the federal government might err and issue a patent to previously reserved lands. As the Supreme Court has explained, "[i]f the act were confined to valid patents it would be almost or quite without use." *United States v. Chandler-Dunbar Water Power Co.*, 209 U.S. 447, 450, 28 S.Ct. 579, 580, 52 L.Ed. 881, 887 (1908). The well-settled rule is that the running of the statute of limitations "makes the title of the patentee good as against the grantor, the United States." *United States v. Eaton Shale Co.*, 433 F.Supp. 1256, 1269 (D.Colo. 1977). If the landowners' patent titles are good as against the original grantor, the United States, then their titles are good as against the state, which acquired its interests, if any, in the patented lands in 1959 by quitclaim deed from the federal government. In my view the effect of the six-year statute of limitations is to validate a mistakenly issued patent after the limitations period has expired.[8] Thus, I would

the state. Stated differently, a time-barred claim is not revived by assigning it to someone to whom the relevant statute of limitations is not applicable. *See, e.g., Stanczyk v. Keefe*, 384 F.2d 707, 708 (7th Cir.1967) (parents could not revive time-barred claim by assigning it to minor child, against whom statute of limitations did not run); *Smith v. Copiah County*, 232 Miss. 838, 100 So.2d 614, 616 (1958) (assignee's claim is barred if assignor's rights are barred).

Inherent in my conclusion that 43 U.S.C. § 1166 is applicable is the view that a judicial ruling which declares that a portion of the landowners' patented parcels must be conveyed without compensation to the state, in derogation of the patents themselves, is the functional equivalent of a ruling that portions of the patents be "vacated" or "annulled."

8. *See United States v. Winona & St. Peter R.R. Co.*, 165 U.S. 463, 17 S.Ct. 368, 41 L.Ed. 789 (1897); *United States v. Chandler-Dunbar Water Power Co.*, 209 U.S. 447, 28 S.Ct. 579, 52 L.Ed. 881 (1908). In *Winona* the Court explained:

> Congress evidently recognized the fact that notwithstanding any error in certification or patent there might be rights which equitably deserved protection, and that it would not be fitting for the government to insist upon the letter of the law in disregard of such equitable rights. In the first place, it has distinctly recognized the fact that when there are no adverse individual rights, and only the claims of the government and of the present holder of the title to be considered, it is fitting that a time should come when no mere errors or irregularities on the part of the officers of the land department should be open for consideration. In other words, it has recognized that, as against itself in respect to these land transactions, it is right that there should be a statute of limitations; that when its proper officers, acting in the ordinary course of their duties, have conveyed away lands which belonged to the government, *such conveyances should, after the lapse of a prescribed time, be conclusive against the government, and this notwithstanding any errors, irregularities, or improper action of its officers therein.*

165 U.S. at 475–76, 17 S.Ct. at 370–71, 41 L.Ed. at 795 (emphasis added).

Indeed, so strong is the federal policy of ensuring that federal patents convey unassailable title that the validity of even fraudulently-procured patents may not be challenged after the six-year statute of limitations has run. *See, e.g., United States v. Whited & Wheless, Ltd.*, 246 U.S. 552, 38 S.Ct. 367, 62 L.Ed. 879 (1918). A patentee who procures a patent by fraud has good title after the six-year period has expired, although the statute of limitations does not begin to run until the fraud is discovered. *Exploration Co. v. United States*, 247 U.S. 435, 38 S.Ct. 571, 62 L.Ed. 1200 (1918).

In addition, the federal bona fide purchaser doctrine provides that the validity of an erroneously granted patent may not be challenged once the original patentee conveys the parcel to a bona fide purchaser. *See, e.g., United States v. California & Oregon Land Co.*, 148 U.S. 31, 40–41, 13 S.Ct. 458, 461–462, 37 L.Ed. 354, 359-60 (1893); *Colorado Coal & Iron Co. v. United States*, 123 U.S. 307, 313, 8 S.Ct. 131, 133, 31 L.Ed. 182, 185 (1887). Bona fide purchase from a patentee is a perfect defense to a suit to set aside a patent. *See, e.g., Wright-Blodgett Co. v. United States*, 236 U.S. 397, 35 S.Ct. 339, 59 L.Ed. 637 (1915), which involved a patent obtained by fraud:

> [T]he respect due a patent, the presumption that all the preceding steps required by the law had been observed before its issue, and the immense importance of stability of titles dependent upon these instruments, demand that suit to cancel them should be sustained only by proof which produces conviction.... And, *despite satisfactory proof of fraud in*

hold that the federal statute of limitations, 43 U.S.C. § 1166, bars the state's claim to undisclosed easements.[9]

As an independent basis for ruling that the landowners' parcels are free of the easements claimed by the state, I would hold further that the state's claims are barred by AS 09.10.230, which provides in pertinent part:

> No person may bring an action to set aside, cancel, annul, or otherwise affect a patent to lands issued by this state or the United States, or to compel a person claiming or holding under a patent to convey the lands described in the patent or a portion of them to the plaintiff in the action, or to hold the lands in trust for or to the use and benefit of the plaintiff, or on account of any matter, thing, or transaction which was had, done, suffered, or transpired before the date of the patent unless commenced within 10 years from the date of the patent.[10]

This statute, which clearly evinces the legislature's intent that patents be considered conclusive evidence of the title they purport to convey after ten years from the date of issuance, has been the law of the territory and State of Alaska for the better part of a century. In my view it is appropriate to give effect to this long-standing state policy of promoting public confidence in the stability and marketability of patent titles.[11]

obtaining the patent, as the legal title has passed, bona fide purchase for value is a perfect defense.

Id. at 403, 35 S.Ct. at 341, 59 L.Ed. at 640 (citations omitted) (emphasis added).

9. I find the authorities relied upon by the court, *see ante* n. 19, inapposite for two reasons. First, those authorities simply do not address the statute of limitations issue.

Second, many of those authorities involve situations in which, at the time the patent in question was issued, the patented lands had previously been conveyed to or reserved for some third party, such as a railroad or a state. In such situations courts have sometimes concluded that the prepatent interests prevailed over the patentees' claims. In the case at hand, however, the state is not claiming, and cannot claim, that it acquired the easements or rights-of-way prior to the issuance of the patents in question and that the patents were therefore issued in derogation of the state's rights. The claim is not that the federal government had conveyed away parts of the patented parcels to anyone prior to issuing the patents; rather, the gist of the claim is that the federal government mistakenly conveyed by patent, lands that it intended to keep for itself.

In *Cramer v. United States*, 261 U.S. 219, 67 L.Ed. 622, 43 S.Ct. 342, (1923), the Court made precisely this distinction. *Cramer* involved a suit brought by the United States to set aside a patent granted to a railroad covering lands occupied by Indians. The Court distinguished between suits brought by the government to cancel patents and revest title in itself and suits brought so that the parcels could be vested in third parties whose rights had accrued prior to patent. The Court noted that the six-year statute of limitations applies to the former kind of case, but not to the latter:

> The suit is not barred by [now 43 U.S.C. § 1166], limiting the time within which suits may be brought by the United States to annul patents.
>
> The object of that statute is to extinguish any right the *government* may have in the land which is the subject of the patent, not to foreclose claims of third parties. Here the purpose of the annulment was not to establish the right of the United States to the lands, but to remove a cloud upon the possessory rights of its wards. As stated by this court in *United States v. Winona & St. Peter R.R. Co.*, 165 U.S. 463, 475 [17 S.Ct. 368, 370], 41 L.Ed. 789, 795, ... the statute was passed in recognition of "the fact that when there are no adverse individual rights, and only the claims of the government and of the present holder of the title to be considered, it is fitting that a time should come when no mere errors or irregularities on the part of the officers of the Land Department should be open for consideration." After the lapse of the statutory period, the patent becomes conclusive against the government, but not as against claims and rights of others

Id. at 233–34, 43 S.Ct. at 340, 67 L.Ed. at 628 (emphasis in original). *See also United States v. Krause*, 92 F.Supp. 756, 766 (W.D.La.1950); *Capron v. Van Horn*, 258 P. 77 (Cal.1927).

10. *See Monroe v. California Yearly Meeting of Friends Church*, 564 F.2d 304, 306 n. 2 (9th Cir.1977).

11. Although the question of the applicability of AS 09.10.230 was not raised below, we have repeatedly stated that "[u]pon appeal, a correct decision of the superior court will be affirmed regardless of whether we agree with the reasons advanced." *Fireman's Fund Am. Ins. Cos. v. Gomes*, 544 P.2d 1013, 1017 n. 12 (Alaska 1978); *Carlson v. State*, 598 P.2d 969, 973 (Alaska 1979); *A & G Constr. Co. v. Reid Bros. Logging Co.*, 547 P.2d 1207, 1211 n. 1 (Alaska 1976).

Finally, I do not agree with the court's holding that Boysen and the Peases are charged with constructive notice of federal directives published in the Federal Register and thus are unable to claim bona fide purchaser status under Alaska's recording act, AS 34.15.290.

Forty-four U.S.C. § 1507 provides that persons are charged with notice of documents filed for publication in the Federal Register "except in cases where notice by publication is insufficient in law." Thus, the pertinent question is whether published notice of federal directives such as Public Land Orders is "insufficient in law" to bind Boysen and the Peases, who did not have actual knowledge of the published directives when they purchased their parcels.[12]

The answer to this question is supplied by federal law,[13] and, as the court notes, there are a number of situations in which notice in the Federal Register is sufficient to bind persons who did not know of the publication. In my view, however, this appeal involves a situation in which notice by publication is "insufficient in law" within the meaning of 44 U.S.C. § 1507.

Our task is to determine whether Congress intended that the sufficiency of published notice of federal directives affecting Alaska real property is to be tested by looking to state law[14] or by applying an independent body of federal common law designed to supplant the state's conveyancing rules.[15] Congress did not address this question when enacting the predecessor to 44 U.S.C. § 1507, but, in my view, had it done so it would not have concluded that lands whose private title began with a patent from the federal government should be subject to different conveyancing standards than neighboring parcels whose title originated elsewhere. I find it difficult to believe that that Congress could have intended to displace established conveyancing law in every state in the union and create a chaotic system in which each state is required to apply different standards to patented parcels than to parcels whose chain of title did not begin with a federal patent. In short, I think that the sufficiency of notice for purposes of 44 U.S.C. § 1507 should be determined by applying state law standards. Since the law of this state does not charge a grantee with notice of prepatent transactions and documents[16] or of instruments not recorded in the chain of title,[17] I would conclude that Boysen and the Peases did not have constructive notice of the easements claimed by the state and thus are protected by AS 34.15.290.

12. Under AS 34.15.290 Boysen and the Peases must prevail as bona fide purchasers unless they are charged with constructive notice of the existence of easements which were not recorded in their chains of title.

Our ruling in *Hahn v. Alaska Title Guaranty Co.*, 557 P.2d 143 (Alaska 1976) does not dispose of this issue because the parties in *Hahn* did not argue, and we did not consider, whether a notice published in the Federal Register might be "insufficient in law."

13. *See, e.g., Ritter v. Morton*, 513 F.2d 942, 946 (9th Cir.1975) (per curiam), *cert. denied*, 423 U.S. 947, 96 S.Ct. 362, 46 L.Ed.2d 281 (1975); *United States v. Boyd*, 458 F.2d 1252, 1254 (6th Cir.1972).

14. *See, e.g., Reconstruction Finance Corp. v. Beaver County*, 328 U.S. 204, 66 S.Ct. 992, 90 L.Ed. 1172 (1946). Congress is, of course, free to adopt state rules as federal law. *See generally* P. Bator, P. Mishkin, D. Shapiro, & H. Wechsler, Hart and Wechsler's The Federal Courts and the Federal System 470–71, 491–94 (2d ed. 1973). The classic example of such an incorporation of states' legal doctrine into federal law is the Federal Tort Claims Act, under which the liability of the United States—a federal question—is determined by applying state substantive law. *See* 28 U.S.C. § 2674; *see also, e.g., Otteson v. United States*, 622 F.2d 516 (10th Cir.1980).

15. *See, e.g., Clearfield Trust Co. v. United States*, 318 U.S. 363, 63 S.Ct. 573, 87 L.Ed. 838 (1943).

16. *See File v. State*, 593 P.2d 268, 270 (Alaska 1979) ("patent is the highest evidence of title").

17. *See Sabo v. Horvath*, 559 P.2d 1038 (Alaska 1976).

IN THE HOUSE BY THE JUDICIARY COMMITTEE

HOUSE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act releasing claims of the state to land within certain rights-of-way; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. LEGISLATIVE PURPOSE AND FINDING. (a) The purpose of sec. 2 of this Act is to release and relinquish certain rights-of-way claimed by the Alaska Department of Transportation and Public Facilities.

(b) The legislature finds that sec. 2 of this Act is needed to alleviate economic hardship and physical and mental distress caused by the taking of land by the state without just compensation.

* Sec. 2. AS 19.25 is amended by adding a new section to read:

Sec. 19.25.260. RELINQUISHMENT OF RIGHT-OF-WAY. (a) The right-of-way for a road, roadway, highway, tramway, trail, bridge, or appurtenant structure created, withdrawn, or reserved under the Act of January 27, 1905, 33 Stat. 616, the Act of June 30, 1932, 47 Stat. 446, the Act of July 24, 1947, 61 Stat. 418, Public Land Orders 601, 757, and 1613, and Department of the Interior Order 2665, as amended, that is not on the effective date of this Act physically occupied by the roadway, shoulder, or ditching of a road, roadway, highway, tramway, trail, bridge, or appurtenant structure is vacated and relinquished and the vacated and relinquished right-of-way may not be taken, claimed, asserted, or used by the state without the payment of just compensation.

(b) The provisions of (a) of this section relinquish and release

to the ~~subservient estate~~ that portion of the right-of-way claimed, asserted, or used by the state that is not physically occupied by the roadway, shoulder, or ditching of the roadway before the effective date of this Act.

(c) The provisions of (a) of this section do not divest the state of title to land or require compensation by the state for land physically occupied on the effective date of this Act by the roadway, shoulder, or ditching of a road, roadway, highway, tramway, trail, bridge, or appurtenant structure then constructed within the right-of-way created, withdrawn, or reserved under the Acts of Congress and the orders described in (a) of this section.

(d) Any expansion beyond the existing roadway, shoulders, or ditching of a road, roadway, highway, tramway, trail, bridge, or appurtenant structure requires the payment of just compensation to the owner of the land and no other acts or actions by the state constitute a physical occupation by a roadway, shoulder, or ditching within the meaning of this section. The state has the burden of proof to show by clear and convincing evidence that the physical occupation by a roadway, shoulders, or ditching occurred before the effective date of this Act.

(e) As used in this section, "physically occupied by the roadway, shoulder, or ditching" means the construction of the actual roadway, shoulders, or ditching before the effective date of this Act.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.-10.070(c).

IN THE HOUSE BY THE JUDICIARY COMMITTEE

HOUSE BILL NO. _____ (Judiciary)

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to defects in the title of the state to land; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*Section 1. LEGISLATIVE PURPOSE AND FINDINGS. (a) The purpose of this Act is to release and relinquish certain highway rights-of-way claimed by the State of Alaska, Department of Transportation and Public Facilities.

(b) The legislature finds this bill is needed to alleviate economic hardship and physical and mental distress occasioned by the taking of land by the State of Alaska without compensation being paid to the person holding title to the land.

*Sec. 2. AS 19.25 is amended by adding a new section to article 4 to read:

Sec. 19.25.260 RELINQUISHMENT OF RIGHTS-OF-WAY. (a) Any right-of way for roads, roadways, highways, tramways, trails, bridges and appurtenant structures created, withdrawn, or reserved by the federal government under the Act of January 27, 1905, 33 Stat. 616, the Act of June 30, 1932, 47 Stat. 446, the Act of July 24, 1947, 61 Stat. 418, Public Land Orders 601, 757 and 1613, and Department of Interior

Order 2665, as amended, which the State of Alaska may now or in the future claim, assert or utilize and which is not asserted or utilized by occupation with physical improvements by the construction of a roadway, shoulders and ditching (if applicable) shall be and hereby are vacated and relinquished and shall not be taken, claimed, asserted or utilized by the State of Alaska or its successors in interest without payment of just compensation.

(b) This section shall not be construed to divest the state or to require compensation by the state for any roadway, shoulder, or ditching, (if applicable) already constructed within the right-of-way created, withdrawn, or reserved under the federal statutes and orders set forth in subsection (a). This section hereby relinquishes and releases to the subservient estate the balance of the right-of-way claimed, asserted or utilized by the State of Alaska which is not physically occupied by roadway, shoulder or ditching (if applicable) constructed prior to the effective date of this section.

(c) For the purposes of determining whether the State of Alaska has occupied with physical improvements any right-of-way under subsection (a) "occupation with physical improvements" shall mean the construction of the actual roadway, shoulders and ditching (if applicable) prior to the effective date of this section or any expansion of existing roadway, shoulders and ditching (if applicable) which requires

additional property to construct shall require the payment of just compensation to the landowner. No other acts or actions by the State of Alaska shall constitute an occupation with physical improvements within the meaning of this section. The State of Alaska shall have the burden of proof to show by clear and convincing evidence that the occupation by physical improvements by the construction of roadway, shoulders and ditching (if applicable) occurred prior to the effective date of this section.

*Sec. 3. This Act takes effect immediately in accordance with AS 01.10.070(c).

Alaska Commercial Fishing and Agriculture Bank.	19

PURPOSE AND SCOPE OF THE REVIEW

The purpose of our review was to determine if the performance of the Alaska Commercial Fishing and Agriculture Bank (CFAB) is efficient, effective, and economical. Our scope included a review of the Board of Directors' proceedings, operating expenditures, and the loan portfolio. CFAB's financial statements for the year ended December 31, 1980 were audited by a certified public accounting firm.

ORGANIZATION AND FUNCTION

The Alaska Commercial Fishing and Agriculture Bank (CFAB) was created by Chapter 159, SLA 1978 (AS 44.81.010) as a public corporation and government instrumentality of the State, but with a legal existence independent of and separate from the State. Its purpose is to provide financing for the commercial fishing and agricultural industries in Alaska.

In Fiscal Year 1979, the Commissioner of the Department of Revenue purchased $2,000,000 (200 shares) of special preferred class C stock in accordance with AS 44.81.010(c). Then in March 1980, the Department of Revenue loaned CFAB $30,000,000 at 9 1/2% per annum. In July 1980, the loan agreements were cancelled through the issuance of an additional 3,000 shares of class C stock to the State and the payment of interest from March 1980, totalling $480,205. The class C stock receives no voting or dividend rights. CFAB must repurchase the class C stock from the State within 20 years.

CFAB made 136 loans from April 2, 1980 through March 13, 1981. As of March 13, 1981, there were 130 outstanding loans, totalling $24,287,687 (see Appendix A).

FINDINGS AND RECOMMENDATIONS

Recommendation No. 1

CFAB should require that inventories used as collateral be insured, naming CFAB as the loss payee.

CFAB has developed procedural manuals for the processing and accounting of loans and for collateral control. These manuals are well written and are useful management tools.

We reviewed 67 (49%) of the 136 loans made from April 1980 through March 13, 1981. The loan files, in general, were well organized and contained required information. However, we did note an area of weakness in collateral control that needs to be addressed.

Our test included eight loans for which CFAB has a secured interest in the inventories as collateral for the loan advances. Five of these loans did not have insurance on the inventories, naming CFAB as the loss payee.

CFAB could lose its security on the loan advances through spoilage, accident, fire, etc. Therefore, CFAB should require that insurance be obtained by the borrower, naming it as the loss payee, on inventories in transit and inventories not held in bonded warehouses.

Recommendation No. 2

CFAB should compensate members of the Board of Directors for travel expenses in compliance with Alaska Statutes.

CFAB reimburses members of the Board for actual travel expenses rather than a fixed per diem rate established by the Commissioner of Administration. During Fiscal Year 1980, Board members were reimbursed for $33,807 in actual travel expenses.

AS 44.81.110 states the Board members are to receive compensation at a rate determined by the Board for each day the Board meets if they attend the meeting. In addition, they are entitled to per diem and travel allowances as provided by law for members of State boards and commissions. AS 39.20.180(2) states the members of boards and commissions are entitled, for expenses other than transportation, to a per diem allowance prescribed by the Commissioner of Administration.

Recommendation No. 3

CFAB should give public notice of its Board and membership meetings in accordance with Alaska Statutes.

CFAB has not given public notice of the dates and places of its Board and membership meetings.

A memorandum dated May 13, 1981 from the office of the Attorney General states the Open Meetings Act (AS 44.62.310 - 44.62.312) is applicable to CFAB. AS 44.62.310(e) requires reasonable public notice be given for all meetings required to be open under the Act. Since action taken at meetings held contrary to the Act may be void, it would be prudent of CFAB to comply with the public notice requirement for future meetings.

Other Information

This section of the report addresses the results of our review of CFAB expenditures from inception through April 30, 1981. We have included this information because a significant number of the expenditures may be inappropriate for an entity subsidized by public funds.

Throughout the audit CFAB management has maintained it is a private cooperative entity. They believe they are responsible only to their members, each of whom has purchased a single share of class A common stock for $100, and class B common stock in an amount equal to ten percent of the member's loans (the amount necessary to purchase the B stock is added to the loan amount requested, deducted from loan proceeds by CFAB at closing, and capitalized.)

CFAB is primarily capitalized through a purchase of nonvoting class C stock by the State of Alaska. Paid-in capital at April 30, 1981 is shown as follows on CFAB financial statements:

Class A Common Stock	$ 1,770
Class B Common Stock	2,534,900
Class C Common Stock	32,000,000
Capital in Excess of Par Value	15,300
Total Paid-In Capital	$34,551,970

Each Alaskan has an interest in the manner in which public funds are spent. CFAB has been given a specific mission by the Legislature; that of enhancing commercial fishing and agricultural activities in Alaska. They have been provided with the authority and the wherewithal to accomplish this mission.

As an entity that receives a large State subsidy, we believe it is incumbent upon CFAB management to exercise a higher degree of prudence with their spending habits than if they were completely privately funded.

The following items represent a sampling of CFAB expenditures from inception through April 30, 1981, some of which are questionable:

A. Furniture, Fixtures, and Leasehold Improvements

The balance of CFAB's furniture and fixtures account as of December 31, 1980, CFAB's fiscal year end, totalled $313,966. Of this amount, $246,835 was for expenditures for the Anchorage office. The total expended for leasehold improvements as of the same date was $65,850, which was for purchases of carpet, wallpaper, etc. The following is an example of the type of furnishings purchased for the Anchorage office.

1. President's Office

Sofa	$ 3,631
Five swivel upholstered chairs	7,717
Teak bookcase/cabinet units with refrigerator and liquor cabinet	4,232

2. Executive Assistant's Office

Natural oak desk	$ 2,302
Natural oak credenza	3,150

3. Senior Vice-Presidents' Offices

Two teak executive desks	$ 2,903
Two teak coffee tables	1,812
Two teak bookcase/cabinet units	5,453

4. Executive Conference Room

Rosewood conference table	$16,225
Conference chairs (14)	10,470
Soapstone carving of a land otter with a crab	2,000

In addition, CFAB maintains an apartment in Juneau for which $4,218 in furnishings were purchased, such as two beds, dresser, color television, dinette set, desk, etc. Leasehold improvements were made totalling approximately $2,254, including new carpet and wallpaper.

B. Art Work

As of December 31, 1980, the balance of the non-depreciable assets account totalled $13,353. This represents purchases of prints and paintings for the Anchorage office. A sample of the paintings are:

Custom ordered original paintings by Charlen Jeffery

1.	"Brown Bear" watercolor	$ 3,400
2.	"Musk Ox" watercolor	1,750
3.	"Cows" watercolor	1,850
4.	Six additional watercolors on rice paper, subject matters are fishing and agriculture	2,150
5.	"Alaska Fisherman and Farmer"	800
6.	"Toast of Alaskan Holiday"	800
7.	"Alaskan Logger"	950

C. Automobiles

1.	1980 Chevrolet Citation for a branch office	$ 7,918
2.	1981 Chevrolet Malibu for a branch office	8,874
3.	1980 Subaru 4x4 Station Wagon for the Anchorage office	7,842
4.	1981 Subaru 4x4 Station Wagon for the Senior Vice-President/ Administration	9,350
	Total	$33,984

In addition to the bank owned vehicles, CFAB pays the $168 per month lease charge for the President's vehicle. Maintenance and repair costs for the leased and bank owned vehicles totalled $4,543 during Fiscal Years 1980 and 1981, through April 30. Gasoline expense is paid for the leased vehicle, the bank owned vehicles, and the personal vehicle of the Senior Vice-President/Credit, including gasoline consumed for personal use. The staff employees are reimbursed for the business use of their personal vehicles at a rate of 25 cents per mile.

D. Salaries and Benefits

1. Salaries, Bonuses, and State Benefits

Salary and benefit expenditures totalled $996,692 for Fiscal Year 1980. Included in this amount was $108,192 for year-end bonuses. In addition, two CFAB employees received a total of $1,565 in cash bonuses during the year and $2,390 was paid directly to a travel agency for a bonus trip to Hong Kong for the Senior Vice-President/ Administration and his spouse.

CFAB is presently accruing $22,000 to $24,000 per month for bonus expense. The Fiscal Year 1981 total budgeted bonus accrual is $282,356.

CFAB officers and employees are in the exempt service of the State personnel system. They are covered by the State insurance and retirement programs. They are also exempted from the Social Security Act, as are other State employees, and instead participate in the State Supplemental Benefit Program. Employer contributions for these benefits are paid from CFAB's operating funds. Officers receive four weeks annual leave and employees receive three weeks. In addition, both officers and employees accrue sick leave at a rate of one day per month.

2. Other Benefits, Fiscal Year 1980

Staff room costs (coffee, hot chocolate, tea, sugar, dish soap, etc.)		$2,943
Season tickets to the Alaska Repertory Theatre		$ 376
Staff Christmas party at the Anchorage Westward Hilton:		
Food	$2,353	
Liquor	2,197	
Entertainment	600	
Floral centerpieces	211	
		$5,361
Turkeys for CFAB officers and employees		$ 415
Banquet for a staff meeting at the Sheraton Hotel		$ 773
The President, Senior Vice-President/ Administration, a prospective employee and their spouses had dinner at the Captain Cook Hotel in Anchorage.		$ 245
A branch manager and his spouse had two dinners with two CFAB employees at the Mecca Lounge in Kodiak.		$ 320

The total charged to the other employee benefit and the other personnel expense accounts in Fiscal Year 1980 was $6,076 and $13,810, respectively.

E. Office Space

The Anchorage office is approximately 7,000 square feet which includes two kitchens each equipped with oak cabinets, microwave oven, dishwasher, and refrigerator. Also, one kitchen has a built-in stove top. CFAB purchased a dinette set for $1,108 and a natural oak conference table and upholstered chairs for $4,360 for kitchen/staff room furnishings. In addition, the President's office includes a bathroom with a shower stall.

F. Directors' Fees

In Fiscal Year 1980, $32,479 was paid to members of CFAB's Board of Directors. Originally in March 1979 the Board set its rate of compensation at $100 per day during Board meetings in addition to per diem and travel expenses set forth by State law. In April 1979 the Board voted to increase the compensation rate to $250 per day for the Chairperson and $200 per day for the members. Again, in February 1980 the rate of compensation was increased to $500 and $400 per day for the Chairperson and members, respectively. In addition, CFAB has reimbursed Board members for actual expenses rather than paying a per diem rate, see Recommendation No. 2.

In May 1980 the Board voted to compensate members for work concerning CFAB, other than attendance at meetings, at a rate of $62 per hour for the Chairperson and $50 per hour for the members. During the period November 1979 through April 1981, a Board member has been paid $12,438 for organization and consultation services.

G. Travel, Lodging, and Meals

During a review of Board and staff members' monthly expense reports for the period October 1979 through March 1981, we noted the following:

1. President's Foreign Travel

   a. A European tour, from October 24 through November 17, 1980, to Denmark, England, Rome, and Paris: the purpose of the trip was to tour the Danish fishing industry, visit the British banks and the White Fish Authority, examine the British dairy industry, attend the International Fisheries Conference, and the Fisheries Products Exposition. (Cost includes airfare, totalling $1,881, for the President's spouse, as well as an undetermined amount for her meals and lodging expense.) $8,805

b. An agriculture tour from January 28 through February 12, 1981, to Denmark, Norway, Sweden, and Finland: (Cost includes International Fisheries Conference fees for the President's spouse and the spouse of the Chairperson of the Board, totalling $376.) $6,088

c. At the November 25, 1980 Board meeting, the President apprised the Board of his tentatively scheduled trips for 1981:

January - Denmark
(Same as b. above)
Spring or Summer - Japan
October - Munich

2. Senior Vice President/Administration - Foreign Travel

a. A trip to London, England in January, 1981 $2,681

3. Dinners

a. The following dinners were reported on the expense reports of the President and Senior Vice-President/Administration:

1) A dinner at the Corsair in Anchorage attended by four CFAB employees and their spouses. $256

2) Three CFAB officers and their spouses had dinner at Simon & Seafort's Saloon & Grill in Anchorage. $191

3) The President and Senior Vice-President/Administration and spouses had dinner with a local businessman and spouse at the Corsair in Anchorage. $210

4) The President, Senior Vice-President/Administration, and a prospective employee had dinner. $164

5) Two legislators, CFAB's attorney, and a consultant had dinner in Juneau with the President, Senior Vice-President/Administration and a secretary. $213

6) A dinner at Yancey Derringer's in Juneau with four Board members and the Senior Vice-President/ Administration. $343

7) Five members of the Board, the three senior executive officers, the Vice-President/Branch Management, and CFAB's attorney had dinner at Josephine's Restaurant in Anchorage. $281

8) Three dinners at Josephine's Restaurant for the five members of the Board and the Senior Vice-President/Administration. $534
400
449

9) The Senior Vice-President/ Administration and the Chairman of the Board had dinner at the Captain Cook Hotel in Anchorage. $125

10) The two Senior Vice-Presidents had dinner at Josephine's Restaurant in Anchorage. $157

All told, there were 48 dinners on the expense reports of the President and Senior Vice-President/Administration each costing in excess of $100 during the period October 1979 through March 1981.

b. Cost of dinners or lunches noted on other persons monthly expense reports:

1) Branch Manager took Branch Assistant to lunch on five occasions. $137

2) The two Seattle branch office employees and six employees from offices in Alaska dined in Seattle. $127

3) The two Seattle branch office employees and seven employees from the offices in Alaska dined in Seattle. $448

4) Staff lunch at Clinkerdagger, Bickerstaff & Petts Public House in Anchorage. $172

c. Banquets held in March 1981 at the Sheraton Hotel in Anchorage. Costs include $398 for liquor. $1,331

4. Miscellaneous Expenditures

a. Alaska Airlines Board Room, United Airlines Red Carpet and University Club (San Francisco) membership dues on the expense reports of the President or Senior Vice-President/Administration. $400

b. Tuxedo rental. $40

c. Liquor and mixes for the bar in the President's office. $243

d. Glassware and cutlery purchased at Design Craft Ltd. in Anchorage. $159

e. Towels and accessories for the executive bathroom purchased at Nordstrom in Anchorage. $100

f. Two gift certificates for dinner at Josephine's Restaurant in Anchorage. $200

g. Gift certificate at Stephan Fine Arts gallery. $100

H. Promotional Costs

1. Anchorage Pre-opening Party at the Sheraton Hotel

64 dinners	$1,325	
19 bottles Chenin Blanc	186	
18 bottles Pinot Noir	124	
Hosted bar - 283 drink tickets	814	
Flowers	180	
		$2,629

Meals and lodging for: three members of the Board, two CFAB employees, three business associates, and five spouses. 1,153

Total Anchorage Costs 3,782

2. Pre-opening Parties at Branch Offices

a. Kodiak:

Party room rental and permit	$ 160	
Food	450	
Bar	621	
Gratuity	130	
Total food and bar cost	1,361	
Air charter for CFAB employees	2,711	
Total Kodiak Costs		4,072

b. Cordova:

Elks Club		7,610

c. Homer:

Finger food for 200 persons	$ 900	
Bar	934	
Tax	18	
Total Homer Costs		1,852

d. Air charter for CFAB employees to Cordova and Homer pre-opening parties. 2,541

e. Seattle (costs are based on an estimate prepared by the Branch Manager):

Invitations	$ 89	
Seafood:		
Crab legs	160	
Prawns	90	
Caterer	1,100	
Liquor and mix	600	
Total estimated Seattle Costs		2,039
Total Cost of Pre-opening Parties		$21,896

3. Legislative Cocktail Party at the Baranof Hotel in Juneau (100 guests)

Food	$1,770
Liquor	982
	$2,752

4. Sixty-six Eddie Bauer Gortex mountain parkas with CFAB logo purchased for employees and members of the Board. $5,064

5. Gift packs of Blake's Fancy Smoked Salmon for customers. $555

6. 5,750 Dot's Tide Table books printed with CFAB logo for customers. $4,573

7. Cookbooks. $1,984

8. 1,000 1980 Annual Reports (cost includes color setups, slides, printing, design work, etc.) $27,466

APPENDIXES

See Accompanying Notes to the Summary Schedule of Loans

APPENDIX B

ALASKA COMMERCIAL FISHING AND AGRICULTURE BANK
NOTES TO THE SUMMARY SCHEDULE OF LOANS
For the period 04/02/80 - 03/13/81

Note 1

Borrowers are required to purchase CFAB class B stock in an amount equal to 10% of the loan proceeds. The original loan amount listed includes the amount loaned for the purchase of the class B stock.

Note 2

Certain portions of the Fish Processor Working Capital loans are guaranteed by the State of Alaska under the authority of SLA 1980, Chapter 32.

Note 3

On May 14, 1980, CFAB signed a loan agreement with the Spokane Bank for Cooperatives (SBC) which established a line of credit to finance CFAB's current lending activity. As amended on June 18, 1980, CFAB may borrow up to $30,000,000. The agreement is for a one-year term from June 1, 1980, bearing interest at a floating rate prescribed by SBC. Interest is payable the last day of each quarter. The loan is secured by all CFAB notes evidencing loans to members. The loan agreement is to be renegotiated annually. The outstanding loan balance at March 13, 1981 totalled $1,000,000.

Further, CFAB is required, in accordance with the Farm Credit Act to purchase SBC class C stock in an amount equal to 15% or a lessor amount prescribed by SBC of the quarterly interest payable. The amount of CFAB's investment in SBC class C stock at March 13, 1981 totalled $47,784.

STATE OF ALASKA
DIVISION OF LEGISLATIVE AUDIT

APPENDIX D

ALASKA COMMERCIAL FISHING AND AGRICULTURE BANK
NOTES TO THE SCHEDULE OF LOANS BY BRANCH OFFICE
For the period 04/02/80 - 03/13/81

Note 1

CFAB has two additional branch offices; one in Seattle and another located in Ketchikan. The Seattle office does not process loans. The Ketchikan office opened in November 1980 and as of March 13, 1981 had not made any loans.

Roseleen "Snooks" Moore
Chairman

RECEIVED
AUG 31 1981
LEGISLATIVE
AUDIT

August 27, 1981

Mr. Paul V. Harris, CPA
Anchorage Office Manager
State of Alaska
Division of Legislative Audit
P.O. Box 1231
Anchorage, Alaska 99510

Dear Mr. Harris:

The report entitled, A Performance Review of the Commercial Fishing and Agriculture Bank dated May 22, 1981, to which you have requested our reply, is essentially the same as that submitted to us by the auditors themselves. We are, therefore, submitting our reply to that original submission. It remains applicable with the following modifications.

1. The reference to open board meetings is new to this report, and

2. The auditors have removed references to actions taken by the board of directors.

Since the completion of the audit, legislation has been passed clarifying CFAB's status and its relationship to the State. That legislation causes the majority of points covered in the audit, and indeed, the focus of the audit itself, to be currently moot.

The Board of Directors and the Management of CFAB look forward to working with the Committee in the future.

Sincerely,

Roseleen "Snooks" Moore

June 12, 1981

Mr. Paul V. Harris, CPA
Anchorage Office Manager
State of Alaska
Division of Legislative Audit
P. O. Box 1231
Anchorage, Alaska 99510

Dear Mr. Harris:

It is apparent from your letter that the audit has failed to grasp the mandate given to CFAB by the Legislature. It has also been unable to properly evaluate the complexities and intricacies of operation demanded of a private company operating in the private market. These standards are imposed upon CFAB in order to fulfill the mission spelled out in the enabling legislation.

The fundamental concept of the Alaska Commercial Fishing and Agriculture Bank (CFAB) is that it is a private, cooperatively owned and managed financial institution. This design was mandated by the Legislature for the purpose of linking with the national cooperative banking system to bring outside capital to Alaskan fishermen and farmers. The designers of CFAB recognized that it must be a private corporation in order to qualify for participation in the national system. The Banks for Cooperatives are prohibited by law from affiliating with or lending money to a government organization. If CFAB had not been organized to operate as a private organization, it would not have been able to lend, in 16 short months of operation, over $30,000,000 to its over 225 member stockholders who are Alaska fishermen and farmers, and over $50,000,000 to its member stockholders who are processors, as required by the Legislature. Nor could we have provided employment opportunities to Alaskan workers who crew the vessels, till the land, or process Alaska's fish and farm products.

Even in CFAB's short history, it has fulfilled the intent of bringing in outside capital to finance our fishermen, farmers and processors. Today, the commitment of the Banks for Cooperatives far exceeds that of the original State commitment. Additionally, we have increased the net worth of the Cooperative by more than $4 million during that same short period. We have in excess of $40 million in pending loan applications and fully expect to exceed $300 million in loans to fishermen, farmers and processors by the year 1985.

In testimony before the State Legislature on several occasions, the Spokane Bank for Cooperatives has testified that they have an excellent relationship with CFAB and hold its management and operations in high regard. They have remarked that the progress made by the Cooperative during its brief period of operation has exceeded their expectations for us at the end of five years. In that testimony, they plainly stated that they would not be able to lend to CFAB if we were not a private cooperative. If CFAB were not a private cooperative, it would cease to be part of the national cooperative banking system and hundreds of millions of dollars would be lost to Alaskan fishermen and farmers. In their place, the Legislature would have to fund the operations of CFAB in the annual budget document and allocate those millions for the same loans, thus reducing the funds available to the people of the state for other purposes and costing them millions of dollars in subsidies.

Our basic instructions from the Governor, the Legislature, and the consultants at the time of CFAB's creation were to form a private, cooperative financial institution. If that is not the case, as you suggest by your comments and the standards apparently used in formulating your audit, then the intent of the legislation cannot be carried out, outside funds cannot be brought in to benefit farmers and fishermen through CFAB, and the Legislature will be forced to appropriate necessary funds from the General Fund. This will, of course, place the State directly back into the loan business against the wishes of the Legislature and the financial community.

The Legislature also intended that CFAB be audited and required in the original legislation that the board of directors have an annual audit performed by outside, independent auditors, and that the audit report be made available to the Governor, members of the Legislature, and the general public. CFAB has employed the national firm of Price Waterhouse & Co. for that purpose. They have completed audits for the years 1979 and 1980. A copy of the 1980 report is attached. This audit clearly shows CFAB to be following proper practices and procedures.

In determining performance, one must look at achievements toward a stated goal. In its brief history, CFAB's achievements are many. Among them are:

1. Establishment of a well organized, systematically run business which is managed according to generally accepted management practices, including:
   a. Stated mission, goals, objectives, and action plans;
   b. Complete and accurate accounting systems;
   c. Detailed, written policies and procedures covering the whole of our operation;
   d. Complete budgeting and financial reporting system;
   e. Employee policies, pay scales, job descriptions, and evaluation systems;

f. Printed documentation for loans bearing the approval of both general and specialized legal counsels of the Cooperative.

2. Active involvement of the members of the Board of Directors in the policy development and control of the organization, plus a high level of attendance by those members at meetings.

3. Development of a full and professional cadre of accounting, legal, insurance, tax, and management advisors of national stature.

4. Completion of a procedural audit by a national firm of CPAs using both their auditors and management advisory groups to insure the continuity of our procedural and control systems. This form of audit is scheduled to be performed on an annual basis.

5. Development of 32 specialists in various aspects of fisheries finance. These add to an extremely limited, if not almost non-existent, field of expertise.

6. Opening five branch offices, offering the full services of the Cooperative, in key areas throughout the state. Branches are now located in Kodiak, Homer, Cordova, Ketchikan, and Seattle.

7. Maintenance of an active calling program to areas outside of the loactions of our established offices.

8. Attracting and financing nearly 250 member shareholders from geographically dispersed areas within the state.

9. Development of a full range of loan programs to serve the fishing and agriculture industries, adding appreciably to those previously available.

10. Development of credit lines necessary to meet CFAB's financial needs and its commitments to members.

11. Achievement of more rapid turnaround of loan applications.

12. Achievement of profits in each of its accounting periods despite expensing all opening and operating costs. Profits for the first quarter of this fiscal year are $800,000.

13. Return of patronage dividends equal to $9\frac{1}{2}$ percent of the interest paid by members during 1980.

14. The first installment in the return of the State's initial capital investment was made.

15. Support of agriculture and fisheries development through:

    a. support of 4-H and FFA;

    b. creation of the Young Alaska Farmers Financing Cooperative to provide financing for youth agricultural projects;

    c. development of financial planning manuals for use by fishermen and farmers;

    d. support and initiation of research projects;

    e. participation in policy development.

16. Enhancing other financial agencies' abilities and opportunities to finance both fisheries and agriculture. CFAB is currently financing the customers of the Agriculture Revolving Loan fund during a period in which it is out of funds, enabling farmers to plant crops and advance projects in the critical summer months.

    We have also provided the necessary additional funds and controls of credit to allow other Alaska banks to safely become involved with or continue their involvement with Alaska processors.

17. Adding a point of financial professionalism to the Alaska fishing and agriculture industries to which foreign and "Lower 48" financial institutions can relate and on which they can rely.

In the formulation of your letter, you have failed to relate to specific key points about CFAB's operation. It is owned and operated by private shareholders who bear the full risk of its operation and whose investments are subordinated to those of the State. It is these shareholders who, by law, have the management and control of the Cooperative. Moneys expended by the Cooperative in the achievement of its business purposes are not those of the State. Unlike a State or other public body, CFAB's expenditures do not represent an irrevocable loss of those funds to the people of the state. Expenses are paid by the income of the Cooperative derived from its operations which, by definition and federal tax law, are the property of the member stockholders. CFAB is governed not only by the specific statute creating it, but also the cooperative laws of the state and the federal tax law specifically dealing with lending cooperatives. CFAB pays full federal taxes, unlike a State agency or department.

We appreciate that performance of an audit of CFAB has posed a difficult problem for you. While somewhat unique to Alaska, organizations such as CFAB are widespread in the lower states. They are certainly the business of the Bank for Cooperatives and are among the clients of our CPA firm, Price Waterhouse & Co. In fact, Price Waterhouse is considered to be among the

best in the practice of cooperative accounting, management and tax practice. It lists among its clients some of larger cooperatives in the United States. Using their experience, and with a number of comparisons to draw from, they have audited CFAB and found everything to be in order and within the context of proper operation.

Being a CPA yourself, you are well aware of the Generally Accepted Auditing Standards imposed upon members of your profession. Among these are the matters of relevence, materiality, and context. It appears that items reported in your letter have been taken out of context and included without review and full understanding of the circumstances surrounding them. There is no stated standard of comparison used in the determination of significance.

Development of your report on the basis of inadequate understanding of CFAB, its purposes, and the requirements of operation imposed upon it causes the Board of Directors of CFAB tremendous concern. Presented in the fashion of your letter, without standards of acceptable comparison, provides the public reader no basis upon which to draw judgment. This may unjustly tarnish the reputation of Management and of the members of the Board, as well as diminish the willingness of some borrowers to do business with the Cooperative. In turn, the private stockholders of CFAB will be injured.

We will comment on each of the items raised in your letter.

Recommendation No. 1 is a good point and one previously raised by our CPA's in the course of completing their procedural audit. That point has been corrected both by requirement of borrower-provided insurance and by CFAB obtaining a blanket policy.

Recommendation No. 2 regards the compensation of Board members for per diem expenses. There is an alternate to fixed per diem provided for in the regulations pursuant to which CFAB has established its policies for board reimbursement. We have asked our attorneys to review that section in the case we have misinterpreted the details of application. If we find that we have, we will, naturally, correct procedures in the future.

In the evaluation of expenses, one must relate them to the mission, goals, objectives, and the business framework in which CFAB operates. While CFAB has initial investment funds from the State, it receives no other support and must repay the State within a specified period of time. Viewed as a benefit on the one side, it is a large financial obligation on the other. CFAB must develop an operation capable of attracting the hundreds of millions of dollars from outside lenders necessary to fulfill its mission and purpose. While the mission of providing loans to fishing and agriculture may appear the same as those given to a State loan program, or to AIDA, the road to their accomplishment is much more complex given the lack of State funding or State guarantees.

In addressing the mission imposed by the Legislature and in creating the organization to meet that mission, the Board of Directors has established policies, philosophies, and procedures which insure the long term viability of the organization. This same organization is established to meet the standards and the expectations of the national and international financial communities upon which we must rely now and into the future. It should be noted that CFAB now has correspondent relationships with Denmark, Danish banks, and Norwegian financial institutions, and is opening negotiations with Japanese and Canadian banks, as well as large commercial banks in the "Lower 48."

To establish its standards of operation, the board has closely examined the standards of other similar institutions. We have determined that CFAB's standards are in all cases within comparable standards, as are its expenses. All expenses are deemed necessary to CFAB's business purpose and are according to budgets established in conjunction with Management.

With regard to the items specified in your letter:

A. Furniture, Fixtures and Leasehold Improvements

The expenses of furnishing the executive offices of the Cooperative are in line with similar expenses at the Spokane Bank for Cooperatives and other financial institutions. Neither the cost nor the decor is inconsistent with the standards of other institutions in Anchorage of comparable size.

They are intended to establish the proper decorum and to relate to the type of visitor frequenting the offices. These include trade missions, ambassadors, presidents of large corporations, and executives from among the international financial community. While Steel Case desks may well serve the necessary business environment of a public agency, they do not serve the demands of this Cooperative. Decor of that nature would only serve to reinforce a "poor country cousin" image. In creating the office environment, CFAB took great care in its design and decoration to meet the needs of its many catagories of users. It is designed to be a comfortable place to work for those who spend the majority of their days here; a relaxing, warm place to visit for the borrower who is normally intimidated by banks and bankers; and a tasteful, professional environment for the executive businessman.

A careful watch was made of expenses, and a great deal was achieved by the use of highly qualified decorators with experience in office decor.

The conference area you have mistakenly inferred to be restricted to executive personnel is a general conference area decorated to fit the general office decor and serve the purposes previously described, while accommodating the larger meetings regularly held at the office.

The Juneau apartment is widely used by the Board and staff of the Bank. It was originally rented during the formation stages of the Cooperative during which time the Board and the staff were spending large amount of time on a continuing basis in Juneau. It provided a meeting place and proved cost beneficial against the use of hotels. Retention of the apartment has been reviewed periodically and will be again in the future. Having decided to open our Southeastern office in Ketchikan, but having need to conduct business in Juneau on a regular basis, it has been determined that CFAB requires some form of permanent location from which to operate and hold meetings while in that town. The combination of apartment and office showed clearly to be the most economical alternative versus renting an office on a per square foot basis and using hotels. The wallpaper itself was hung by staff and various items of sparce decoration have been contributed by the Board and the staff.

B. Artwork

It should be noted that you have listed all, not a sample, of the artwork purchased by CFAB. The use of the word "Sample" is editorially misleading.

The artwork in the Anchorage office was purchased or commissioned from local artists to fit both the decor and the operation of the office. The expenses of the works are consistent with the art and are under the value of the pieces in the present market. The cost of the individual works does not come close to the cost of the works contained in the State collection, some of which adorn the walls of legislative offices, nor in the collections of other private businesses in Alaska. All pieces in our offices depict agriculture or fishing, with Alaska overtones.

C. Automobiles

Transportation is a necessary part of our business, as it is with most. Not being a State agency, CFAB does not have access to State pool vehicles, nor was such access intended.

It will be noted that the cars purchased by the Cooperative are small, economy vehicles which meet the demands of Alaska conditions.

Provision of automobiles to members of the executive staff, both for business and personal use, is a normal business practice and one necessary to CFAB if it is to attract the personnel needed. You will note that the car provided to the President is not the high priced, luxury vehicle customary to presidents of other Anchorage financial institutions, but rather a Chevrolet with a monthly lease payment far below comparable costs. The automobile provided for the use of the Senior Vice President-Administration is also available for general Bank use and is assigned to him in lieu of other compensation. The gasoline provided to the Senior Vice

President-Credit only partially offsets the luxury vehicle provided by his previous employer, another Anchorage bank.

The decision to purchase automobiles was made after considering the life cycle costs and discounted cash outflows of purchased vehicles over locally available leases or reimbursement for personally provided automobiles.

D. Salary and Benefits

The attraction and retention of the best people is deemed to be of vital importance to the business of the Cooperative. It is a highly accepted business principal that people capital is more important than dollar capital. To attract and retain these people requires that the Cooperative provide competitive salaries, benefits, working conditions, and opportunities. In establishing these benefits, the Board annually reviews the market, both in Alaska and in the "Lower 48", to determine levels and trends.

It should be noted that CFAB pays the full cost of the PERS coverage, including an allocation for administration. No cost is borne by the State. CFAB's involvement with PERS and other State benefit programs will be deleted with passage of current legislation supported by the Board.

The bonus program has been widely covered and explained in detail, not only to the Budget and Audit Committee of the Legislature, but also to all Senators and House members. It has proven to be an effective tool resulting in rapid accomplishment of goals and objectives. Bonuses are paid for productivity, not for the mere occupation of space. In widely read coverage of CFAB pay and bonus programs, the Anchorage Times reported that CFAB's remuneration to employees, including bonuses, was not out of line with industry standards.

Staff room expenses for coffee, tea, etc. are common for business and a common courtesy extended to visitors and staff of most businesses and even some State offices. The figures quoted include stocking of cups, plates, and other necessary kitchen items.

Tickets to the Repertory Theatre were erroneously listed under benefits and should have been posted to entertainment. While listed under one employee name, they are used by other members of the staff to entertain customers, consultants, and other vendors, as well as support the theatre. If you will check the list of donors and ticket holders to the Rep and other performing arts, you will find a large portion of patronage comes from businesses.

A Christmas party is also a normal event in the private sector. CFAB also uses the occasion to thank particular vendors, consultants, and suppliers, as well as the spouses of employees

whom we feel contribute to the organization. Facilities available to accommodate groups of any size are limited in Anchorage and never inexpensive. The cost of these Christmas parties is part of the overall employee relations program which has provided the Cooperative with measurable and high levels of achievement. Comparison with other financial institutions would reveal that neither the function nor the per person cost is out of line.

In the last paragraph of this section, you have listed other staff benefits of $6,076 and other personnel expenses of $15,810. In the former figure, you have double counted an accrual of $4,551 for the previously listed Christmas dinner and $345 for tickets to the Repertory Theatre, also previously mentioned. Of the latter, the majority does not represent dinners with interviewees and staff, but rather the expenses of bringing people to Anchorage for interviews; including hotel, meals, car rentals, etc. Naturally, some of the names appearing in those postings will now appear as employees. Also included are a few dinners including employees and primarily involve our branch staffs while in Anchorage for loan presentations, training, etc. If you would have the opportunity to examine the expenses of other businesses, you would find that it is common to carry on business over lunch if it involves something better discussed away from the office or the press of the day's schedule allows only that time.

E. Rent

Here, too, you have failed completely to draw comparisons or to consider the full costs of an office. In commenting upon the cost of the office space (also mentioned in our annual report) you have not mentioned the cost of comparable space in Anchorage or within the same building. In making that comparison, one must also consider a number of factors. First is the cost of making necessary tenant improvements such as walls and wiring. Second are the inducements offered by the landlord to obtain the lease. Third is the extra cost of occupancy such as escalator clauses, utilities, and services. And of equal importance is the availability of expansion space during the course of the lease.

After looking at a number of buildings in Anchorage and receiving bids from several, the actual cost of our present location was not only cheaper than the alternatives, but also offered many side benefits, such as central location to staff; adequate, free parking for staff and members; close proximity to our CPAs, attorneys, and insurance brokers who are contacted on a frequent basis; and ease of finding the location for our members and other visitors. Even some State agencies, such as Fish and Game, pay much higher rent. The forecasted cost of a State office building is considerably higher than the figure quoted. One should caution that the disclosure of this rent figure is a violation of our agreement with the landlord, as rents in the building are not the same for all tenants.

In describing the quarters and appointments, particularly in our kitchenettes, you have forgotten to ask questions that would have put many points into perspective. For example, we have doubled the office space since opening and, in so doing, took over the office space previously occupied next to us. That tenant had a kitchenette also, which we have converted into a much needed second conference area. The cost to remove the previously installed appliances exceeded the cost of retaining them. Due to the cost benefit and the convenience of the facility to the staff and clients on that side of the building, they were left. Additionally, the table in that conference room is not natural oak, but rather formica in an oak pattern, as are all of the desks in the area.

If you had surveyed the building, you would have found the kitchenettes to be common in the building and equipped similarly to ours. As can be seen from the one taken over and now used as a conference room, many are larger than the one mistakenly listed as the executive kitchen. Furthermore, if you had observed other floors of the building during the last three and one half months, it would have been noticed, even casually, that oak is the standard material used in all trim, elevators, cabinetry, and other wood surfaces in the building. It is a standard established architectually.

The kitchenette is used often for preparation of lunches for luncheon meetings, saving not only the expense of eating out, but also time during busy days.

F. Directors Fees

Directors fees are, by law, left to the discretion of the Board of Directors. CFAB's Board compared compensation paid for other private boards and even some State boards, such as the Permanent Fund. Also, in the consideration was the amount of time necessary to complete the Board function (two days each month for regular meetings) and the lost travel time of one day each way for the majority of members. You should have also found that the Board spends considerable time outside the regular board meetings on behalf of the Cooperative. Rates for this time were compared to consultant time rates and the daily meeting rate. Closer questioning would have revealed that individual Board members bill only a fraction of the time they spend.

You have listed as significant the fact that one member received $12,438 in consulting and organization fees during an 18 month period. You are referring to the previous Chairman of the Board. During the early organization period of the Cooperative, the Bank had limited staff and those it did have were unfamiliar with much of the workings of the Alaska business system. This individual, at the request of the Board, devoted countless hours to the organizational efforts and brought to the task knowledge and experience not elsewhere available in the organization. His regular business is that of a consultant, together with other

partners, and his income dependent upon hourly billings. He could not afford to devote the time required without proper billing nor would his business partners have allowed it. The time billed was substantially below that applied and the rates below those charged by other consultants and professionals employed by the organization.

G. Travel, Lodging and Meals

Foreign travel is a necessary part of CFAB's business. We deal with internationally traded commodities, both in fisheries and agriculture. Likewise, our members have internationally related financial transactions. Markets and practices in other parts of the world have direct impact upon the financial well being of our stockholders.

CFAB has correspondent relationships in Scandanavia, has purchased equipment to aid Alaska's farming community from Denmark, and is beginning negotiations with other foreign banks. These relationships are used not only to provide necessary credit information on receivables financed, but are expected to result in lines of credit enhancing our lending abilities. Provision of knowledgeable and complete lending services to Alaskan fishermen and farmers cannot be accomplished without development of a wide range of international contacts.

You will find that others on the trips listed included representatives of State government and private enterprise. You should also note that the agriculture trip to Denmark was at Denmark's invitation and most were expenses for their account. Further examination of other private and government departments will reveal a wide range of foreign travel. The significance of international markets to Alaska is evidenced, in part, by the fact that the State itself keeps two fully staffed offices overseas, and is considering a third.

It is the policy of the Cooperative to allow travel expenses for spouses if the functions attended normally include spouses as a part of the activities. You will find this to be a similar practice among most Anchorage banks, other businesses, and the Bank for Cooperatives.

You have mistakenly listed a minor amount of $376 as an expense of a former trip. It is a prepayment of the Munich International Fisheries Conference to be held this October. That conference will be attended by various of our processing members, as well as the Alaska Seafood Marketing Institute. You might also be interested to know that the Alaskans attending the previous conference were highly appreciative of our attendance and remarked that CFAB was the first Alaska financial institution to show sufficient interest in becoming fully involved in learning the industry.

The Senior Vice President-Administration made only one trip to England. He was accompanied by the Vice President of Branch

Administration who is also a vessel surveyor. They were in London to visit the various departments of Lloyds of London, which is the major insurer of vessels in Alaska. In addition to learning about the intricacies of vessel insurance, they also investigated possible criteria for certifying vessel surveyors, as well as ways in which the risk of Alaska fisheries as perceived by Lloyds might be diminished. This would result in substantial savings to our fisheries members. Competence in both insurance and vessel valuation is a vital part of our business.

Dinners

In listing 48 dinners over $100, you have not considered the number of people involved, the purposes of the dinners, or the relationship of those entertained to the business. You also seem to miss the prices charged by the average dinner house in Anchorage that is conducive to a business discussion. In fact, it is one of the items that ranks among the more substantial cost of living differences between Anchorage and elsewhere.

All dinners you have listed were in the normal course of business and involved a defined business purpose. Most of the ten dinners you have listed should be self explanatory given the people attending. Without more detailed reference to dates, it is impossible to describe each one. However, since such dinners are not that common an occurrence, I can clarify specific occasions to help you further understand our business. I will refer to them by the number you have ascribed.

1. This was a dinner that involved the Vice President-Branch Administration who had been offered the job in Anchorage, but had not yet accepted. He was in Anchorage to look over the area with his spouse and look for available housing. Raised in Cordova, both he and his wife were unsure of the move and wanted to become more comfortable with the business climate of the Anchorage office. The dinner was to allow his spouse to become acquainted with other spouses and gain assurances of help and availability of necessary family services. It is common for businesses to have such dinners. They are a selling function necessary to have the right people in the right positions.

6. This bill also included cocktails and dessert for an assortment of legislators, UFA representatives, and CFAB consultants.

8. These dinners also included other members of the staff and possibly their spouses. They were held in conjunction with the normal board meetings. It has been the practice of the Board to continue business through the dinner hours and to use this time to obtain more general and informal information about the operation. They often invite staff members and their wives to learn

about particular jobs within the Cooperative and to give the staff members wider exposure to the business.

10. This dinner included the Senior Vice President-Administration and the prospective Senior Vice President-Credit and their wives. The occasion gave these two people, who are key officers of the Cooperative and who must interface directly on almost every matter, a chance to become better acquainted and form the grounds for needed communication. Again, this is a necessary part of a business operation and normal to private business.

Members of the Board and the Executive staff are professionals in upper income brackets and educational backgrounds. The level of entertainment done is consistent with industry standards.

You have further listed four occasions of other staff dinners. We fail to understand their inclusion. Of the first, you mention several lunches totaling $137. It is difficult to draw any conclusions from that statement since the context, purpose, and applicability elements are missing from your statement.

The dinners listed for the staff in Seattle were most likely for our participation in the Fish Exposition in Seattle during which we had several employees in Seattle to man our booth. The dinners and their prices are normal.

The lunch costing $172 was a going away luncheon for one of the staff and quite insignificant when compared to the contribution to the Cooperative of the departing member.

The items included in the $1,331 listed as "Banquets" include the annual meeting of shareholders, a board meeting, the Agriculture Symposium, and a trade delegation.

Miscellaneous expenses listed are for stocking of the office facilities in most cases. Tuxedo rental was for an affair requiring both attendance of the employee and formal wear.

The use of the Alaska Airline Board room is also a necessary part of the business and is used for meetings at the airport with clients and others passing through. It provides private accommodations for such meetings at insignificant annual cost.

H. Promotional Costs

Opening parties are a normal part of business and provide a significant show of interest in both the community and the members of the markets served. The opening Anchorage party was attended by close to 100 people, not all of whom had dinner. Both the cost of the affair and the attendance was reasonable by Anchorage business standards. Reference should be made to the recent opening of the Anchorage office of Alaska Pacific Bank, as well as several professional firms entering the Anchorage market. That comparison will show the cost of CFAB's opening dinner to be normal and the affairs to be equally frequent among those

companies.

Similar receptions were deemed essential to each branch office loaction listed and were structured to fit the norm for such affairs in each area. It is difficult to envision an opening reception in an area to introduce a new company and new services without representatives of the company present. It would be particularly insulting to CFAB members and potential members for the members of the Board and senior officers not to be present. Additionally, the occasions provide opportunity to the Board and Management to become quickly familiar with the people in the communities they will be serving. Use of charter aircraft when transporting a larger number of people offers a large cost benefit.

As a private company with legislative needs, good governmental relations is a normal and necessary function. The legislative reception, which was well attended, provided the staff and the Board the opportunity to discuss CFAB's needs and operation with legislators who would be unavailable in another form. Such receptions and dinners are also normal to the legislative process and Juneau experiences them on a regular basis.

Gortex jackets were given to the staff as both a traveling uniform providing quick and easy identification and as a functional garment for the conditions in which they travel. Provision of garments is not at all uncommon in the fishing industry. The price you have quoted included 1000 patches costing $1,200 to be used on hats and other promotions. Your attention is drawn to a feature story in a recent edition of the Fishermens Journal specifying the importance of these hats and logos within the fishing and agriculture industries, both in Alaska and the "Lower 48."

Tide books are an essential item to all fishermen and are used by all our members and potential member stockholders. Constantly referred to by the fishermen, they are an extremely effective media through which to provide facts about CFAB and its available services.

The cookbooks are a part of a visual program on the use of the microwave in cooking fish. It is part of a national promotional campaign produced by the National Fisheries Institute of which CFAB is a member. The campaign has been participated in by numerous processors and marketers. CFAB makes its slide presentation and cookbooks available to home economics groups, businessmen selling microwaves, and cooking classes. it was recently prominantly used by the Alaska Seafood Marketing Institute in a show promoting Alaska fisheries products in the Mid-West and will be used again by the same group in Germany. Development of these types of programs falls clearly within the legislative mandate.

The annual reports ordered by the Cooperative were 1000, not 500. The cost of producing that report was above that planned

because of a number of reasons, including the original photographer leaving the state with the pictures, requiring them to be reshot by another photographer; special, quick turnaround time by the printer and separator due to the time constraint of legislatively imposed March membership meeting which left only two weeks between completion of the audit and the meeting. These unusual costs associated with our first annual report should not occur again with future reports. However, the expense of an annual report is an absolutely necessary expense of our business. It is the primary publication supplied by us to our members, legislators, the Governor, the public, as well as our creditors and vendors, and is considered by members of the financial community as an essential communications tool. Put together as CFAB's was, the vehicle provides not only the opportunity to present a company's financial picture, but the entire framework of the business.

1. Review of Board Minutes

Your remarks in this section are truly out of context and without precedent. We can find no reason or justification for their inclusion in your report. Even given the consideration of the inappropriate standards used in your audit of CFAB, it is particularly unique to include two items on which the Board of Directors has taken negative action.

The items presented include no reference to the decision making process involved, the cost to benefit relationships derived, or the purpose of the discussions. Foreign travel for education in the fisheries -- the predominant market we serve -- is a viable item to review. The availability of an extremely low airfare opened an otherwise costly opportunity for discussion. An aircraft in a state dependent upon air travel and for an organization traveling to all parts of the state is also an item one would expect a board to discuss.

Are you suggesting that there are items forbidden to the Board for discussion and review in the interest of the corporation they are responsible for? Are you further implying that a board should stand in criticism for reviewing all the alternatives open to their business? Or are you suggesting that the board minutes reflect only those items which you, a staff employee of the State, consider to be proper, palatable and in keeping with your particular personal standards? I am sure you are aware that foreign travel is extensive among Alaskans and is a subject reflected in the minutes of many boards. Additionally, the State of Alaska itself has considered purchase or lease of a State plane on several occasions.

Mr. Harris, we appreciate the efforts that you and your staff put into the audit. Danna worked hard and fit in well with the office staff. We are sorry that your understanding was not more complete, enabling your audit to be of a more meaningful nature. Your report only proves that a private business operating

under the standards required by the private market cannot be audited against standards commonly used by the Legislative Auditor.

Sincerely,

Paul A. Huppert

Roseleen "Snooks" Moore
Chairman

August 27, 1981

The Honorable Arliss Sturgulewski
2957 Sheldon Jackson Street
Anchorage, Alaska 99504

Dear Senator Sturgulewski:

We appreciate the findings on management expenditures and the Board has taken steps to reevaluate and correct our current budget and will definitely take these findings into account in the budget preparation for the coming year.

As you can well appreciate, the repayment of the State is a multi-faceted problem that must be approached carefully. The impact upon CFAB and its ability to meet its mission, its goals, and the expectations of the communities it serves will be significantly affected by the course taken. There should be no doubt in the minds of the legislators that CFAB takes the responsibility of meeting its obligation seriously. Repayment of the State is of paramount importance to the Board and Management of CFAB and is of significance in established policies, budgets, and plans.

We are in the process of examining all the alternative means to accomplish the legislative imperative that the Class C stock be repaid by the end of 20 years. Our decision will be reached as part of the planning process at the December board meeting. You can be assured that our direction will be based upon our judgment and will best serve the two industries we serve as well as the original intent of the legislation.

Sincerely,

Roseleen Moore

17 July 1981

Ms. Roseleen Moore
Chairperson, Alaska Commercial
Fishing & Agriculture Bank
SRA Box 90-B
Homer, Alaska 99603

Dear Ms. Moore:

As you know, an audit of the Alaska Commercial Fishing and Agriculture Bank is being conducted by the Legislative Audit Division. At the July 15, 1981 meeting of the Legislative Budget and Audit Committee, the preliminary findings of that audit were presented for Committee review. That preliminary audit has been forwarded to you for response under separate cover.

The Committee has directed that two issues which arose in executive session regarding those preliminary findings be presented for your response. First, the Committee expressed strong concern over questionable management expenditures noted in the preliminary audit. The Committee encourages CFAB to thoroughly address those findings and recommendations in its formal response to this audit.

The Committee also requests that CFAB indicate how it intends to approach repayment of State funds provided for CFAB's capitalization. During this past legislative session, a number of approaches to repayment or amortization of the State's investment were discussed. Approaches ranged from a strict amortization schedule to the possibly politically unacceptable idea of establishing a sinking fund within CFAB that would make a single repayment at the end of the maximum twenty year period. The Committee found that a definite plan for repayment of these funds is of fiscal concern to the Legislature, especially as these funds were provided at no interest to CFAB. In short, the Committee looks forward to a proposal from CFAB on its plans for repayment of the State's funds.

Your timely response to these two requests will be appreciated by the Committee. Any questions or clarification of these requests can be directed to me.

Sincerely,

Arliss Sturgulewski

ARTICLES OF INCORPORATION

OF

ALASKA COMMERCIAL FISHING AND AGRICULTURE BANK

The undersigned natural persons of the age of 19 years, or more, acting as incorporators of a cooperative corporation (hereinafter referred to as the "Bank") under the provisions of the Alaska Cooperative Corporation Act (hereinafter referred to as the "Act") and Alaska Statutes 44.54, as amended, adopt the following Articles of Incorporation.

ARTICLE I

Name

The name of the Bank is Alaska Commercial Fishing and Agriculture Bank.

ARTICLE II

Duration

The period of duration of the Bank is perpetual.

ARTICLE III

Purpose and Powers

Section 1. The purposes of the Bank are to:

(1) provide sources of credit for Alaskan agriculture and fishing business;

(2) encourage utilization of the fisheries off the coast of Alaska that have been underutilized in the past by local fishermen;

(3) encourage harvesting, processing and marketing of underutilized fish species;

(4) encourage technological development in the harvesting and processing of underutilized fish species;

(5) promote the more rapid development of agriculture.

Section 2. In order to accomplish its purposes the Bank shall have the power to:

(1) make variable rate or fixed rate loans to individuals who are residents and who are engaged in commercial agriculture or fishing, including harvesters, processors and marketers, or to corporations, partnerships or joint ventures primarily engaged in commercial agriculture or fishing, the majority interest of which is beneficially owned by residents of the State of Alaska and a majority of the owners of which are residents of the State of Alaska, if the recipient of the loan is a shareholder of the Bank; however, the Bank may make a loan under this paragraph to a corporation, partnership, or joint venture for the purchase of a new or existing fishing vessel or for the repair or renovation of an existing fishing vessel, the primary purpose of which is to commercially harvest fishery resources, only if the corporation, partnership, or joint venture is wholly owned and controlled by residents of the State of Alaska and if the recipient of the loan is a shareholder of the Bank;

(2) make and alter By-Laws necessary or desirable to carry out its corporate functions;

(3) establish amortization plans for repayment of loans, which may include extensions for poor fishing or farming seasons;

(4) enter into agreements with regional institutions of the federal farm credit system, private lending institutions, and other State of Alaska agencies or agencies of the federal government, to carry out the purposes of Alaska Statutes 44.54, as amended;

(5) adopt, alter, and use a corporate seal;

(6) sue and be sued in the name of the Bank;

(7) issue bonds to carry out any of its corporate purposes and powers;

(8) sell, lease as lessor or lessee, exchange, donate, convey or encumber in any manner by mortgage or by creation of any other security interest, real or personal property owned by it, or in which it has an interest, when, in the judgment of the Board of Directors, the action is in furtherance of its corporate purposes;

(9) incur secondary liability by guaranty or endorsement of the obligations of another corporation or legal entity when, in the judgment of the Board of Directors, the action is in furtherance of its corporate purposes;

(10) make loans as provided in (1) of this section in participation with financial institutions, and establish and regulate the terms of the loans;

(11) make contracts and execute instruments necessary or convenient in the exercise of its corporate powers;

(12) acquire by purchase, lease, bequest, devise, gift, the satisfaction of debts, or the foreclosure of mortgages, and hold, maintain, use, operate, and convey real or personal property;

(13) borrow money and issue secured and unsecured evidence of indebtedness for a corporate purpose or to fund, refund, pay, or discharge outstanding obligations, and enter agreements and contracts concerning these obligations;

(14) secure the payment of its obligations by pledge or mortgage or other lien on its contracts, revenues, income, or property;

(15) appoint officers, employees, trustees for certificate holders, and agents, and prescribe their powers and duties;

(16) provide technical services to shareholders; for the purposes of this paragraph, "technical services" includes services that will enhance the ability of the shareholder to obtain financial assistance from the Bank;

(17) make loans, as provided in (1) of this section, secured by liens subordinate to valid first liens and security agreements granted to private lending institutions, including institutions of the federal farm credit system;

(18) participate with State of Alaska departments and agencies in formulating policy and in planning for the development of commercial fishing and agriculture in Alaska;

(19) do what is necessary or desirable to carry out the corporate purposes and powers expressed or implied in Alaska Statutes 44.54, as amended;

(20) make loans for limited entry permits to individual commercial fishermen who have been residents of the State of Alaska for a continuous period of five years immediately preceding the date of application for a loan, who have had a crewmember or commercial fishing license under AS 16.05.480 or a permit under AS 16.43 for any one of the past five years, and who have actively participated in the fishery during that period, provided that any such loans are subject to the provisions of AS 44.54.230.

(21) exercise all those powers of a cooperative set out in AS 10.15.010.

Section 3. To have and exercise all powers, privileges and rights conferred on cooperatives by the laws of Alaska, and all powers and rights conducive to carrying out the purposes for which the Bank is formed, except such as are inconsistent with the express provisions of the legislation under which the Bank is incorporated.

ARTICLE IV

Capitalization, Membership and Ownership Restrictions

Section 1. The amount of the authorized stock of the Bank shall be Eighty Million, One Hundred Thousand Dollars ($80,100,000) which shall consist of Ten Thousand (10,000) shares of Membership Stock (Class A) of the par value of Ten Dollars ($10.00) each; Four Hundred Thousand (400,000) shares of Preferred Stock (Class B) of the par value of One Hundred Dollars ($100.00) each; and Four Thousand (4,000) shares of Special Preferred Stock (Class C) of the par value of Ten Thousand Dollars ($10,000.00) each.

Section 2. Membership in the Bank is limited to those engaged in the commercial fishing and agriculture industries and is conditioned on ownership of a share of Membership Stock (Class A) in the Bank. Only such individuals who are residents of Alaska or corporations, partnerships or joint ventures primarily engaged in commercial agriculture or fishing, the majority interest of which is beneficially owned by residents of Alaska and a majority of the owners of which are residents of Alaska, shall be eligible to purchase and/or own the Class A Stock of the Bank. No member may own more than one share of Class A Stock and each member is entitled to one vote in the affairs of the Bank, provided that only members who have been patrons of and borrowers from the Bank within two years from the commencement of voting on any matter requiring a vote of the members shall be entitled to vote thereon. No dividends shall be paid on Class A Stock.

Section 3. Preferred Stock (Class B) may be issued to, and may only be held by, members of the Bank, but Class B Stock shall not have any voting powers or rights nor participate in the management of the affairs of the Bank, except to the extent specifically so provided by the Act. Such vote shall be in addition to any vote to which a holder of Class B Stock may be entitled as a member. The Board of Directors of the Bank may declare dividends payable in stock or cash upon Class B Stock, but the value of any such dividends paid annually to any shareholder shall not exceed an amount equal to 10% of the par value of the Class B Stock owned by that shareholder.

Section 4. Special Preferred Stock (Class C) may be issued to the State of Alaska upon payment therefor pursuant to the provisions of AS 44.54.010. Class C Stock shall in no event have voting rights, nor may the Board of Directors pay a dividend upon Class C Stock.

Section 5. The stock of the Bank may be transferred only with the prior consent of the Board of Directors and then only to persons eligible to hold the same. No purported assignment or transfer of stock made without the consent of the Board of Directors or made to any person not eligible to hold the same shall pass any rights or privileges on account of such stock or vote or voice in the management or affairs of the Bank.

Section 6. The outstanding Class B and Class C Stock of the Bank may be retired in whole or in part by the Bank at any time by order of the Board of Directors upon paying to its holders the par value of their shares plus accrued and unpaid dividends, if any, upon the Class B Stock. Upon the surrender of the certificate evidencing such a share the Board of Directors may recall Class A Stock upon termination of membership. The consideration paid for Class A Stock recalled shall be the par value of the share.

ARTICLE V

Fiscal Policy and Internal Affairs

Matters pertaining to fiscal policy, nature and type of equities and credits, if any, other than stock, and the rights and priorities thereof, and like matters relating to the patrons of the Bank and to the internal affairs of the Bank shall be determined and fixed in the By-Laws. The power to alter, amend or repeal the By-Laws is vested in the Board of Directors.

ARTICLE VI

Dissolution

Section 1. Upon dissolution the assets of the Bank shall be distributed as follows:

(1) To pay the cost of dissolution.
(2) To pay any liabilities.
(3) To pay the par value of the outstanding Special Preferred Stock (Class C).
(4) To pay the par value of the outstanding Preferred Stock (Class B) and any other form of equity certificate outstanding.
(5) To pay the par value of the outstanding Membership Stock (Class A).
(6) To pay the Reserve Fund book entry holders, if and to the extent a Reserve Fund is established pursuant to the By-Laws, in full or pro-rata without priority the face amount of their book entry as shown on the books of the Bank.
(7) The balance of all Bank assets shall then be distributed, without priority, to the holders of Retained Patronage Earnings, as this term may be defined in the By-Laws, in proportion to their respective credits thereof as shown on the books of the Bank.

Section 2. In the case of a vote on a resolution which would dissolve the Bank, a holder of Class B Stock may cast one vote, in addition to any vote to which he may be entitled as a member, regardless of the dollar amount of Class B Stock held by him. Passage of such a resolution for dissolution requires a majority of the authorized Class B shareholder votes cast, as well as the affirmative vote of two-thirds of the member votes cast. Dissolution may also occur in any event pursuant to the provisions of AS 44.[illegible],

ARTICLE VII

Address of Initial Registered Office and Name of Initial Registered Agent

The initial registered office of the Bank will be the Alaska Department of Commerce And Economic Development, 9th Floor, New State Office Building, 333 Willoughby Avenue, Juneau, Alaska; the mailing address of which is Pouch D, Juneau, Alaska 99811. The initial registered agent of the Bank will be Frank M. Homan, at the above address.

ARTICLE VIII

Board of Directors

Section 1. The management of the Bank shall be vested in a board of seven (7) directors, at least one of whom shall be an Alaska farmer with at least ten (10) years of Alaskan farm experiance, who shall initially be appointed by the Governor of Alaska pursuant to AS 44.54.020 and AS 44.54.090.

Initial terms of the first five members appointed to the Board of Directors shall be two members serving until the first annual membership meeting of the Bank, two members serving until the second annual membership meeting of the Bank, and one member serving until the third annual membership meeting of the Bank. Thereafter these directors, who must be members qualified to vote and at least one of whom shall be an Alaska farmer with at least ten (10) years of Alaskan farm experience, shall be elected by the members at the annual meeting as provided in the By-Laws and shall hold office for three (3) years and until a successor shall have been elected and qualified.

At the time of the first annual membership meeting of the Bank two additional directors shall be appointed by the Governor of Alaska and shall serve initial terms expiring at the time of the second and third annual membership meetings of the Bank, respectively. Thereafter the Governor of Alaska shall continue to appoint or reappoint two directors to serve terms of three (3) years until such time as the Bank has repurchased all of the Class C Stock from the State of Alaska. After repurchase is completed, all directors shall be elected by the members commencing upon the expiration of the term of each appointed director then serving.

Section 2. The names and addresses of the individuals constituting the initial Board of Directors of the Bank are:

Name	Address
Frank M. Homan	Mendenhall Building 326 Fourth St. #1104 Juneau, Alaska 99801
Paul Huppert	Box 858 Palmer, Alaska 99645
Byron Mallott	Box 422 Yakutat, Alaska 99689

Dale R. Pihiman	Box 7814 Ketchikan, Alaska 99901
Robert M. Thorstenson	4241 21st Ave. W., Seattle, Washington 98199

ARTICLE IX

Data Respecting Incorporators

The names and addresses of the incorporators of the Bank are as follows:

Name	Address
Frank M. Homan	Mendenhall Building 326 Fourth St #1104 Juneau, Alaska 99801
Paul Huppert	Box 858 Palmer, Alaska 99645
Byron Mallott	Box 322 Yakutat, Alaska 99689
Dale R. Pihiman	Box 7814 Ketchikan, Alaska 99901
Robert M. Thorstenson	4241 21st Ave. W., Seattle, Washington 98199

ARTICLE X

Amendments

The Bank may amend these Articles from time to time pursuant to the Act. Provided, however, that in the case of a vote on an amendment which would affect a holder of Class B Stock, a Class B stockholder shall be entitled to cast one vote, in addition to any vote to which he may be entitled as a member, regardless of the dollar amount of Class B Stock held by him. Provided, further, that in the case of an amendment which would affect holders of Class B Stock, the proposed amendment is adopted only if it receives a majority of the Class B shareholder votes cast, as well as the affirmative vote of a majority of member votes cast.

IN WITNESS WHEREOF, the undersigned, being all of the incorporators, as entered in Article IX, execute these

Articles and certify to the truth of the facts therein stated, this 4th day of May, 1979.

STATE OF ALASKA)

Re: Alaska Commercial Fishing and Agriculture
Bank/Articles of Incorporation

Dear Commissioner Webber:

Enclosed with this letter are two copies of the Articles of Incorporation of the Alaska Commercial Fishing and Agriculture Bank which have been signed and verified by the incorporators and which, on behalf of the Bank, we hereby deliver to you for filing under AS 10.15.335.

The Alaska Commercial Fishing and Agriculture Bank has been formed, as you know, as a result of the Alaska Legislature's passage of an enabling act, Chapter 159, SLA 1978, as amended by SCS SSHB 30 am S of the Eleventh Legislature, First Session. I believe you will find that the Articles of Incorporation tendered to you today for filing conform with the above legislation (codified as AS 44.54), as well as with the provisions of the Alaska Cooperative Corporation Act.

No filing fees are enclosed as any applicable fees have been waived pursuant to AS 44.54.030. However, your advice is solicited at some time prior to August 15, 1979 as to whether the Legislature intended by this waiver of filing fees to include the annual license fee, for fiscal year 1980 and subsequent years, required by AS 10.15.530.

Your assistance, and that of Dick Eakins and the other members of your Department, during the formation of the Alaska Commercial Fishing and Agriculture Bank has been

invaluable and we look forward to a continuation of that close working relationship.

Very truly yours,

WOHLFORTH & FLINT

ARTICLES OF AMENDMENT

TO

ARTICLES OF INCORPORATION

OF

ALASKA COMMERCIAL FISHING & AGRICULTURE BANK

1. At a special meeting of the members of the Alaska Commercial Fishing and Agriculture Bank, duly called and held on January 25, 1980, at which a quorum was in attendance and voting throughout, an amendment was adopted by a vote of three ayes, zero nays, changing Section 2 of Article IV of the original Articles of Incorporation to read in full as follows:

> Section 2. Membership in the Bank is limited to those engaged in the commercial fishing and agriculture industries and is conditioned on ownership of a share of Membership Stock (Class A) in the Bank. Only such individuals who are residents of Alaska or corporations, partnerships or joint ventures primarily engaged in commercial agriculture or fishing, the majority interest of which is beneficially owned by residents of Alaska and a majority of the owners of which are residents of Alaska, shall be eligible to purchase and/or own the Class A Stock of the Bank. No member may own more than one share of Class A Stock and each member is entitled to one vote in the affairs of the Bank, provided that only members who have been patrons of and borrowers from the Bank within two years from the commencement of voting on any matter requiring a vote of the members shall be entitled to vote thereon, except that any patron of the Bank with Retained Patronage Earnings of $2,500 or more standing to his credit will, in any event, be allowed to vote. No dividends shall be paid on Class A Stock.

20024-D

2: At a special meeting of the members of the Alaska Commercial Fishing and Agriculture Bank, duly called and held on January 25, 1980, at which a quorum was in attendance and voting throughout, an amendment was adopted by a vote of three ayes, zero nays, changing Section 4 of Article IV of the original Articles of Incorporation to read in full as follows:

> Section 4. Special Preferred Stock (Class C) may be issued to the State of Alaska upon payment therefor pursuant to the provisions of AS 44.54.010. Class C Stock shall in no event have voting rights.

MAJOR PROJECTS FUND

DISCUSSION POINTS

Both legislative bodies are proceeding with legislation to provide for a constitutional amendment dedicating state money to a Major Projects Fund that would specifically fund the proposed Susitna dam. While the details are still under discussion, the basic issues have been largely unaddressed. The following paper outlines some of these issues.

Consititutional dedications

The principal issue is, or at least should be, whether it is wise to constitutionally dedicate state funds for a particular purpose. The debate so far has centered on the same petty regional politics that surround the annual division of the capital budget rather than on this major constitutional issue. It would be wise for the legislature and the public alike to remember why the Alaska Constitution includes a prohibition against dedicated funds.

Gordon Harrison explains the prohibition in his A Citizen's Guide to the Constitution of the State of Alaska: "This restriction is intended to prevent the legislature from voluntarily reducing its own freedom and flexibility in financial affairs... The consequence of dedicating tax revenue is that the legislature loses its ability to match expenditures with public needs as these change from year to year. Convention delegates believed that public needs should openly compete for state funds on a regular basis."

The Finance Committee of the Constitutional Convention explained it this way: "Even those persons or interests who seek the dedication of revenues for their own projects will admit that the earmarking of taxes or fees for other interests is a fiscal evil. But if allocation is permitted for one interest, the denial of it to another is difficult, and the more special funds are set up the more difficult it becomes to deny other requests until the point is reached where neither the governor nor the legislature has any real control over the finances of the state."

The one constitutional amendment that Alaskans have approved to allow a dedicated fund is, of course, for the Permanent Fund, a savings account vastly different in concept than the spending plan embodied in the Major Projects Fund.

A constitutionally-dedicated Major Projects Fund is an even more serious affair than the statutorily-earmarked funds that the framers of the Constitution objected to, because this fund would be set in the Constitution and could only be removed by another constitutional amendment.

Alaska's Constitution, we should remember, is the framework for our government. It speaks only to the broad principles of governmental organization and operation. It is a model of simplicity; with its lack of statutory-language clutter, it has seen little need for amendment. It was certainly never intended by its framers to be an appropriations measure.

The problem

The problem that the Major Projects Fund attempts to respond to is that of appropriating enough money for large capital projects. The argument is that the legislature is unable to fund large projects both because legislators don't know far enough in advance what specific projects to appropriate for (to build up a construction account), and because the nature of the appropriation process encourages the funding of district-sized projects rather than regional ones.

To argue that we must have a dedicated fund to build large projects is to say that the legislature is incapable of making sound spending decisions for today or the future. This may well be true of the present legislature. It is not necessarily true of a future legislature that is willing to break from the porkbarrel appropriation process of the recent-past and take responsibility for meeting the present and future needs of Alaskans.

The real intent of the Major Projects Fund seems to be to tie the hands of future legislatures to openly compete for state dollars to serve Alaska's needs by "constitutionalizing" additional pork-barreling for today's favorite large projects.

Given a more fiscally-responsible legislature, there are numerous unexplored ways of financing large capital projects. Appropriations for any purposes can be made now, with a simple majority vote, and special accounts can be set up to save for approved projects. There are, additionally, many creative ways of financing major projects using various kinds of tax-exempt financing, debt restructuring, and leveraged leasing involving private enterprise and federal tax credits. None of these have been explored because of an assumption that the state has an open checkbook from which to write unlimited checks.

Effect on state finances

The Governor's MPF provides for a dedication of 10% of all oil revenues through 1990. Using OMB projections and assuming 50th percentile petroleum revenue forecasts, the fund would accrue $2.2 billion plus interest by 1990.

However, again using OMB calculations, if you assume the more conservative 30th percentile revenues and a yearly capital budget (for traditional capital items) of $700 million, the total "surplus" revenues available between now and 1990 are only $320 million. This translates into less than 2% of oil revenues. Therefore, under this scenario, more than 8% of that dedicated to major projects would not be coming from surplus monies but from the "regular" capital budget (and possibly a shrinking operating budget).

Under any scenario, any amount dedicated after 1990 would seriously impact funds available for any other capital or operating items.

It should be noted that the 10% proposed for the MPF is from total petroleum revenue and equates in dollars to approximately the 25% of oil royalties that are dedicated to the Permanent Fund. The stated reason for choosing 10% was, according to OMB, because 10% "is a concept that is easily grasped, approximates the proportion that is currently dedicated to the Permanent Fund, and the amount should not seem overwhelming" and because "this appears to be enough to consider the possibility of financing Susitna sometime in the future."

Susitna

The MPF has been embraced by the legislature primarily as a means by which to assure the construction of the proposed Susitan Hydroelectric Project.

The Susitna project is still under study by the Alaska Power Authority and no final determination of its economic feasibility has yet been made. The APA expects to have both an update on the project's economics and a proposed financing plan completed later this month.

With a total projected cost for Susitna of $12-15 billion (nominal dollars), and without a financing plan, the possibility of committing $2-3 billion to a project that still could not be financed or to partially building a project that could not be completed, is a very serious one. Some legislators have assumed that supplemental federal REA financing will be available, despite the most-current information that it is highly unlikely to be.

By specifying Susitna (or Watana), or even simply hydroelectric projects, in the Constitution, no leeway is allowed for the possibility that full financing may not be obtained, or that other projects, including gas generation from the North Slope, might prove more feasible. (A technological breakthrough in transmitting gas-fired electricity from the North Slope to Fairbanks is entirely possible in the near-future, and would, incidentally, do much more for those tax bases and local employment than Susitna). Any flexibility in responding to public needs, for electricity or anything else, would be lost by enshrining specific projects or types of projects in the Constitution.

Equity

Given that the MPF would be earmarked for major capital projects most likely to be located in the Railbelt, and that Susitna alone could require more than the entire fund, there is concern for establishing some regional equity.

The Governor addressed the equity issue by requiring that projects funded would have to receive a two-thirds vote of each house. This, he believed, would require gaining the support of rural legislators by providing for their areas in the annual budget.

Recent drafts of the MPF assign a per centage of the fund to the power cost assistance program, to subsize electric rates statewide to the mean rate in the three largest cities (postage stamp concept). This approach removes the general trade-off that would have resulted as all sides maneuvered to reach some reasonable distribution of total funds to a direct horsetrade-- Susitna for PCAP. This again leaves no flexibility for meeting future needs.

Energy issues

What was initially conceived as a way of providing for major projects of all kinds has now been narrowed to providing electricity.

Providing for power supplies is a real issue, primarily because past attempts have been disasters. There still is no statewide energy planning, the Railbelt's needs have not been addressed in a logical manner, and there's no plan for improving the rural situation except for continuing direct subsidies.

However, there is no reason to assume that a reasonable solution to Alaska's energy needs can not be developed in a logical manner without porkbarreling through the Constitution. Again, the open checkbook and the desire for job-creating capital projects at the expense of planning,

meeting needs, and seeking cost-effective long-term solutions has caused the problem; the solution should clearly not be another open checkbook, projects built for jobs instead of meeting needs, and institutionalizing greater subsidies rather than seeking long-term solutions.

the administration The legislature failed in 1981 to separate the issues of power needs from those of creating jobs through capital projects and sharing the oil wealth. Is it necessary to not only repeat that mistake but to incorporate it into the Constitution?

The Four Dam Pool

Railbelt legislators believe that those areas of the state that received state funding for dams now owe a debt to the Railbelt for a project of its own. They believe that the Susitna clause in the Energy Program for Alaska assures that the debt will be paid, and that they "hold a hammer" over the Four Dam Pool to guarantee Susitna.

In fact, the Railbelt has no such hammer. The Susitna clause, if left in law, will prevent any utilities from signing power sales contracts for any projects in the Energy Program for Alaska, including Susitna. Moreover, it is more to the advantage of the Railbelt to repeal the clause than to the Four Dam Pool communities. The $200 million in short-term notes must be paid off (the only alternative is default, an obviously unacceptable one.) There are two ways that it can be paid off. The first is a cash appropriation. The second is by replacing the notes with long-term revenue bonds. This can only be done if power sales contracts are signed, guaranteeing revenues, and contracts will only be signed if the Susitna clause is removed from law. The Four Dam Pool communities know the notes will be paid, one way or the other. The incentive to allow the bond sale, only possible through removal of the clause, lies with the Railbelt, because the entire state will bear the cost if bonds can not be sold. (There are in fact two costs-- the direct $200 million one and a cost in the bond market, which will look unfavorably upon the failure to bond and will likely charge higher rates in the future as a result.)

Details

The draft CS HJR 57 (Resources), as of March 5, in addition to all of the major issues above, includes a number of questionable details.

The dedication is forever, or until the constitutional amendment is repealed by another constitutional amendment. Projected revenues indicate that after 1990 there simply would not be surplus money available, and that operating and capital budgets would have to be reduced drastically. The result of this provision would be that as the state headed for financial disaster, voters would have to chose between amending the Constitution to end the Permanent Fund, the MPF, or both.

The first appropriation made from the MPF must be for Watana, unless a two-thirds vote of each house disapproves the project. Given the financial requirements for Watana, it is unlikely that any other projects would ever receive funding. It is also very possible that, without federal assistance or the sale of tax-exempt bonds, enough money for the project would ever be deposited in the fund, even while causing major restrictions in funding other state capital and operating needs.

The fund revolves, that is, any revenues repaid from appropriations made from it go back to the fund and can only be used for more major

projects. The money is never available to meet any other needs the state may have.

Projects must be owned by the state. This puts the state in direct competition with private enterprise for construction of capital projects, and would prohibit the financing of projects that weren't clearly under state ownership (such as the railroad), that involved any kind of joint ownership, or that involved some private financing such as leveraged leasing.

March 7, 1984

The Honorable Charlie Bussell
Alaska State House
Pouch V
Juneau, AK 99811

Dear Representative Bussell:

Attached to this letter are projections of State revenue and contributions to the Major Projects Fund as proposed in CSHJR 57. Contribution estimates are based on the assumption that ten percent of oil revenues, excluding corporate income tax on oil and gas producers and property tax on oil and gas production property, would be set aside in the Fund beginning in FY 1986.

These projections incorporate current royalty and severance tax revenue estimates published by the Department of Revenue. Other petroleum and non-petroleum revenue projections are those of OMB, but they are similar to the estimates used by the Department of Revenue internally.

We have analyzed the cash flow of the Major Projects Fund (CSHJR 57) with both 30th and 50th percentile estimates of severance tax and royalty income. Note that our estimates of unrestricted revenue are based on current law, and are not adjusted for deposits into the Fund.

Sincerely,

Gordon S. Harrison

Gordon S. Harrison
Associate Director

BILL SHEFFIELD
GOVERNOR

HB 1257

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

January 23, 1984

The Honorable Joe Hayes
Speaker of the House
Pouch V
Juneau, AK 99811

Dear Representative Hayes:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a joint resolution which proposes an amendment to the Alaska Constitution creating a major projects fund.

As you know, the state treasury will continue to receive substantial petroleum revenues for many years to come. However, our best current estimates indicate that large annual cash surpluses above operating budget requirements will cease to be available by the early 1990's. There is still time to set aside enough for one or more major capital projects that can serve as foundations for Alaska's future economy, but the opportunity to do so will probably be gone within the next six or seven years. Examples of major projects are the Susitna hydroelectric project; road and port infrastructure projects in rural Alaska for support of mining, fishing, and other economic development activities; the Knik Arm Crossing; the Bradley Lake hydroelectric project; Eklutna water supply; and renovation and extension of the Alaska Railroad.

The major projects fund is needed to accumulate the revenue for these large projects. There are two reasons for this. First, for many of these large projects and especially for Susitna, there still is not enough clear information to warrant unequivocal commitment. Actual construction might not begin for a number of years because of the length of time necessary for engineering, environmental study, obtaining permits, and demonstration of economic feasibility.

Ten percent of total petroleum revenue approximates the proportion that is currently dedicated to the permanent fund. For fiscal year 1985, this would require a deposit to the major projects fund of approximately $300 million, which allows an operating budget of $2.1 billion, a regular capital budget of $700 million, loan appropriations of $260 million, and enough remaining money for debt service and other likely obligations.

There are several other significant features of the amendment.

(1) Deposits to the fund begin in fiscal year 1985 and continue through fiscal year 1990, in keeping with current expectations of future revenue availability.

(2) Disbursements from the fund for a project cannot be made until all sources of the money necessary to complete the project (or a stand-alone phase of a larger project) has been identified and the money committed.

(3) A cost threshold of $100 million is set for projects to qualify for financing from the fund. This minimum allows reasonable flexibility for covering such projects as the Susitna and Bradley Lake dams, the Knik Crossing, and extension of the Alaska Railroad, without opening the fund to capital projects that can be effectively addressed in the regular capital budget process.

(4) Appropriation bills to spend from the fund must have a two-thirds majority vote in order to pass the legislature. The purpose of this requirement is to assure that projects have state-wide support at the time disbursements are made.

(5) Expenditures from the fund must be recovered and returned to the fund over the operational life of the project. The intent is to recover the principal of the fund from fees generated by the project.

(6) Neither deposits to the fund nor appropriations from the fund would be subject to the appropriation limit.

JUNEAU, ALASKA 99801

AML RESOLUTION SUPPORTING MAJOR PROJECTS FUND

WHEREAS Governor Sheffield has proposed a major projects fund to accumulate revenues for large capital projects in Alaska; and

WHEREAS Alaskan municipalities and their residents may benefit from the construction of major projects in their areas; and

WHEREAS it is difficult through conventional capital budgeting procedures to secure large direct appropriations for major projects; and

WHEREAS the Governor has indicated that sufficient revenues can be dedicated to this fund without reducing the amount available for other important current state programs; and

WHEREAS such a fund will help prepare the state for the day when annual cash surpluses above operating budget requirements decline substantially;

NOW THEREFORE BE IT RESOLVED by the Board of Directors of the Alaska Municipal League that the Board extends its conceptual support to a major projects fund, as long as the fund does not negatively impact other state programs which support Alaskan municipalities.

Adopted by the AML Board of Directors, January 31, 1984 in Juneau, Alaska.

LEGISLATIVE REFORM

IN THE HOUSE

HOUSE CONCURRENT RESOLUTION NO. 33

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

Proposing the addition of a preamble relating to ethics to the Uniform Rules of the Alaska State Legislature.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The Uniform Rules of the Alaska State Legislature are amended by adding a preamble to read:

P R E A M B L E

Part 1. CONDUCT OF A LEGISLATOR. (a) A member of the legislature [shall] at all times engage in conduct that reflects creditably on the legislature.

(b) A member of the legislature shall adhere to the spirit and the letter of these rules and to other rules and law that govern legislative or official conduct.

Part 2. GENERAL PRECEPTS OF ETHICAL CONDUCT. A person in the legislative branch should

(1) put loyalty to the highest moral principles and to country above loyalty to persons or party;

(2) uphold the constitution and laws of the United States and of the State of Alaska and never be a party to their evasion;

(3) seek to find and employ more efficient and economical ways of getting tasks accomplished;

(4) not discriminate unfairly by the dispensation of special favors or privileges to anyone, whether or not for remuneration;

(5) never accept, either personally or for a family member, favors or benefits under circumstances that might be construed by

reasonable persons as influencing the performance of official or assigned duties;

(6) make no private promises of a kind binding on the duties of office, since a public officer or employee has no private word that can override public duty;

(7) engage in no business with the state, either directly or indirectly, that is inconsistent with the conscientious performance of official or assigned duties;

(8) use no information coming to the public officer or employee in the performance of government duties as a means for making a rivate profit;

(9) expose corruption wherever discovered;

(10) uphold these principles, ever conscious that public office is a public trust.

Part 3. READING PREAMBLE. When a temporary presiding officer has assumed the chair under Rule 1(b) the temporary presiding officer shall have this preamble read to the members before calling for nomination of the permanent presiding officer.

M E M O R A N D U M

May 6, 1983

TO: House Judiciary Committee Members

FROM: Staff

SUBJECT: House Concurrent Resolution 34

Section 1

Authorizes the presiding officer to compel the attendance of individual absent members whether there is a quorum or not.

Section 2

Adds a requirement that any resolution establishing a special or joint committee shall specify what the expected budget will be and the source of funds.

Section 3

Amends "Rule 23", Committee Meetings. The substance of this section was similar to CSHCR 32 which has already failed in the House. Committee Members may want to delete this section or ask the "sponsor" for a substantive comparison between this section and CSHCR 32, at the time of his testimony.

Section 4

Amends "Rule 37" by adding a new subsection. Same recommendation as above [for Section 3].

Section 5

Adds clarifying language.

Section 6

Removes language requiring the adoption of a concurrent resolution for adjournment or recess.

Section 7

Changes "point of order" relating to violation of uniform rules by either house. By this change questions of order may be raised in the other house for violation of uniform rules other than a rule concerning matters relating to the organization or operation of a house.

III. ANALYSIS (See Fiscal Note Preparation Instruction, Section III)

There might be approximately $5,500 of transportation and moving costs if a legislator should, at sometime, be convicted of a felony for moral turpitude and has to forfeit the office. Without assuming, however, that someone will lose office for this reason in some given fiscal year, we have to assume there is no fiscal impact.

HJR No. 1 --Amendment to Constitution for Legislator to Forfeit--PHILLIPS, LISKA,
Office if Convicted of a Felony. SZYMANSKI, TISCHER

1. This would add a new section (No. 22) to Article II, Legislature, of Constitution, that a Legislator forfeits office upon conviction of a felony involving moral turpitude.

   Vacancy occurs on date of conviction.

   Vacancy to be filled "as provided by law" (i.e., see Art. II, Sec. 4 of Constitution and AS 40.320-470).

2. If adopted by people, would take effect in regular fashion (i.e. 30 days following election certifications), so no need for further provisions along those lines.

3. IMPACT:

   (no need for provisions re: reinstatement, cleansing record, or any such thing, as convicted felons have no rights anyway. If conviction is overturned on appeal, it wipes out conviction).

+ VOTED FOR

* CHANGED VOTE

March 3, 1982

1. Re-wrote bill.

2. Did not use Article II, Sections 9 and 10, "SPECIAL SESSIONS" and "ADJOURNMENT."

3. Used instead, Section 8 "REGULAR SESSIONS."

4. No change on Special Sessions.

5. No change on Governor settling adjournment disputes between House.

6. 120 - day adjournment still in the bill but resolution simplified by limiting constitutional amendment to Section 8 "Regular Sessions."

7. Limited to one the number of 10-day extensions. Original bill said increments.

HJR12 - CSHJR12

What was Judiciary amendment?

Places change in Article II, Sec. 10, ADJOURNMENT, instead of Article II, Sec. 8, REGULAR SESSIONS. No substantive change, but now makes clear that the extension vote (2/3's of each house) applies only to regular, not special sessions. Allows only one 10-day extension of the 120 - day regular session, where original allowed unlimited extension "increments."

Governor can still agree with one house and adjourn the legislature if disagreement certified by house, before 120 days, per Sec. 10. No change there.

"SESSION LIMITATION IMPOSED IN 33 STATES"

ANCHORAGE, AK.---Thirty-three states have imposed a limit on the length of their legislative session, according to a study released today by Common Sense for Alaska. In a nation wide study of the fifty states' legislative rules undertaken by the Common Sense for Alaska Research Committee, it was found that the session length allowed ranged from 140 days to 20 days with an average of 76 days per session.

In addition to determining what states have limitations on their session length, the committee is also reviewing the legislative rules to determine what states allow conference and free conference committees. Additional items under review by the committee include the states' rules on the following: Bill Content; Definition of "Germane"; Public Notice of Committee Meetings; Recommendations Used to Pass Bills Out of Committees; Interim Committees - Authorization if Interim Committees are Allowed; Code of Ethics & Discipline; Contracting

Procedures; Lobbying Laws; Rules Review and Enforcement; Time Limit for Committees to Process Bills; Rule Waiver Procedures; Legislative Oversight.

The Research Committee began its study in January by obtaining copies of the fifty states' legislative rules manuals. "There is no comprehensive study like this anywhere in the U.S.", noted Common Sense President, J. Shelby Stastny. "An estimated 500 hours of research will have been spent by committee members in compiling this information. Although the majority of information was gained from the different legislative rules, the committee also had to research state constitutions, statutes and other sources of information."

The Common Sense Research Committee is composed of the following members: Jan Faiks, Committee Chair; Ron Brown; Jan Bomhoff; Helen Butcher; Dr. Art Hippler; Darlene Holt; James Johnson, CPA; Karen Jordan; Carol Maser; Paul Robison, Attorney; J. Shelby Stastny, CPA; Kneeland Taylor, Attorney.

The Legislative Rules Study is estimated to be completed in March, 1981 at which time the results will be made available to the public.

HJR 2 --Proposes amendment to Constitution limiting length of regular sessions of Legislature. -- HAYES, BARNES, FLOOD, PHILLIPS, FURNACE, ABOOD LISKA, COWDERY, SZYMANSKI TISCHER and FRITZ

1. This would change Article II, Section 8, Constitution of Alaska, REGULAR SESSIONS, to limit of 120 days.

2/ This contains nothing regarding special sessions, or extensions of the 120 day limit. (See some of the wording of bills introduced in 12th Session.

3. If this is placed before voters at next general election, it would automatically take effect 30 days after certification of election, if adopted by the voting public (See Art. XIII, Sec. 1, Amendments).

   Thus, no need for effective date to be included.

4. Provision for extension were included in some earlier versions (12th Legislature).

irst Senate committee endorses session limit

White
ıreau Bureau

ıeau — A Senate committee proved a new version of a pro- constitutional amendment to he lengths of legislative ses-

er dickering with three ver- of the limit, the Senate Tran- tion Committee approved a over the jesting protests of its nan, Juneau Democrat Bill

e latest proposal, put forth by Ed Dankworth, R-Anchorage, limit sessions to 120 days. That could be extended once for 15 days if a majority of each house agreed.

Dankworth said he first wanted a 10-day extension, but he compromised with Senate President Jay Kerttula, D-Palmer, who wanted a 20-day extension.

The Dankworth version replaces three other proposals:

— One that would limit sessions to 120 days with no extensions. This passed the House.

— One that called for a vote by lawmakers on the 110th day on whether they want to adjourn by the 120th day. This passed the Transportation Committee last week. But Ray retrieved it to offer a bill that would be more acceptable to the House and to senators who want a strict limit on session lengths.

— A new committee proposal, which would call for a vote on the 110th day on whether the session should extend beyond 120 days.

The issue comes on the heels of a record 165-day session last year and in the midst of an effort by House leaders to adjourn as promised by the 105th day — April 25 — this year. The main sponsor of the resolution is House Speaker Joe Hayes, R-Anchorage.

Slightly more than half the states in the nation have session limits, ranging in length from 20 days for the second-year session in Utah to 125 days for the second session in Mississippi and 140 days for Texas' biennial session.

In addition to regular sessions, special sessions may be called by all governors and by 23 legislatures (including Alaska), according to the National Conference of State Legislatures.

Ray made several joking attempts Tuesday to quash the resolution quietly. He said he adamantly opposes a limit because it constrains one branch of government to the benefit of the executive and judicial branches.

But Ray clearly was outnumbered by fellow committee members Dankworth, Kerttula and Kenai Republican Don Gilman, all supporters of a limit.

Ray took a voice vote on the new version. "All those in favor of (the resolution), drop dead," he said jokingly. Then he said his lone "no" vote carried.

Kerttula also has urged that the Legislature be careful in muddling with one branch of government without checking how that action affects the other branches.

The Senate president noted that the Legislature generally doesn't meet on weekends, and the House is meeting only three days a week this year.

Dankworth said a more effective limit would be to restrict legislators to no more than a specific number of terms in office.

Ray argued that constituents expect miracles from legislators, "and now they expect to put a time limit on when the miracles are going to happen. . . .

"I don't think you could have done a competent job in 120 days in the last five years," he said.

My Turn

Empire 4/12

Session Limits

By SUZANNE JANSON

I favor a no-nonsense, straight-forward limitation on the length of our Legislative sessions. Parkinson's Law states "work expands to fill the time allowed." Applied to the Legislature, the Executive Branch or private enterprise, it is not only appropriate but virtually a truism! Any organization to be efficient and thereby effective, must plan and establish standards of operation and goals.

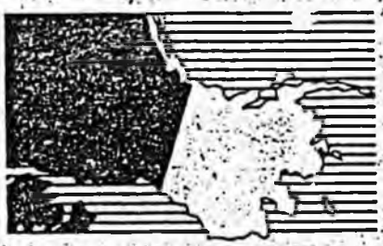
Each year one of the major work products of our legislature is the state budget. It amounts to a dollars and cents plan of operation for the coming year and is based on the individual goals for the many governmental functions which make up our state government. It also imposes limitations on government functions in the sense that they cannot do what they are not funded to do! In a very literal sense we can say that what funding is made available limits what time is available—because time is money and visa versa.

Can you imagine awarding a contract to construct a building without limiting how long it would take or how much it would cost? As taxpayers that's exactly what we are doing each year with our legislature. We are awarding a contract to construct our state with no limitation on how long it will take! Like Parkinson's Law we can say, "the Legislaure expands to fill the time allowed"—or—"the Legislature expends what funds are available." Remember—time is money and visa versa.

Let's review a few facts which to me are very relevant to the question of limiting the length of our legislative sessions. Thirty-three other states limit their sessions with the average being 76 days. Limits range from 20 to 140 days, with the vast majority being between 60 and 90 days. Here, in Alaska, no session exceeded 95 days until 1970, when we endured 147 days. Since that time there have been two sessions less than 100 days—in 1973 and 1974—when the House was led by a Republican under coalition—as is now the case. In 1972 and 1978 the sessions lasted 161 days, and in 1980 it was 145 days. But last year was the topper! Last year our legislature spent 165 days in session under the "leadership" of a House Speaker who is a present member of our local delegation! A new and regretable record, which was made even worse when you consider that it took the leadership 22 days just to organize the House!

Please bear in mind that each and every day of the sessions cost YOU and I about $40,000.00—just to run the Legislature! Finally, it has been shown that millions of dollars are added to the state budget each day that the Legislature remains in free-conference. Interestingly, last year's record length session produced our state's largest ever budget!

When I consider the issue of limiting the length of the legislative session, I can't help but remember the fact that we Alaskans are just slightly over 400,000 strong—small in population when compared to our sister states to the South. Here are some more facts to consider. The 33 states that limit their length of sessions have an average population of 3,105,230 compared to our 407,500. Again, their average limited session is 76 days, whereas our average session length has been 135 days, and the curve continues to climb upward! Consider Texas—oil and natural resource rich, a widely diversified large state with many of the like cultural variances that Alaska has, but with over 13 million people with all of the attendant social problems and issues relevant to 13 million people, and Texas has been able to limit their legislature to 140 days in session!



I find no sensible reason not to limit our Legislative sessions. You and I—the people—should decide this issue—not the Legislature! We must insist on a "Can-Do" spirit from our legislators—one which is very simply a working partnership between them and us!

Hearing promised on session limit

By JON MATTHEWS
Daily News reporter

JUNEAU — House Speaker Joe Hayes, R-Anchorage, said Monday he hopes public opinion will steer the Senate into acting on a House-passed proposal to limit the length of legislative sessions.

And Senate Transportation Chairman Bill Ray, D-Juneau, said Monday he is planning to hold a hearing on the measure at an unspecified future date.

Senate President Jay Kerttula, D-Palmer, last week upset House leaders when he referred the proposed 120-day session limit to Ray's Transportation Committee. The referral to the unrelated panel was seen as an early, Senate-backed death for the constitutional ballot question, one of the conservative House coalition's priorities for the 1982 legislature.

"I tend not to let myself get too angry," said Hayes. "But I think it's fairly obvious that the referral of a constitutional issue to Transportation is clearly outside the scope of the subject matter of the committee."

Ray said on the Senate floor that he believes his transportation panel can and will take a balanced look at the session limit issue, with some members in favor of limiting sessions and others, including Kerttula, still undecided.

Ray said a hearing will be held possibly within the next 10 days but that his committee must first deal with such issues as the proposed state takeover of the Alaska Railroad.

"I'll make some public comments like this," said Hayes, asked how he would react to the Transportation Committee referral. "But I think it's going to be fairly obvious to the public that several members of the Senate are soft on limiting session length.

"I think there is a lot of public support for the issue."

bill may die in Senate

The Associated Press

JUNEAU — A House-passed resolution calling for a constitutional amendment to limit the length of legislative sessions may be doomed to a slow death in the Senate.

Senate President Jalmar Kerttula, D-Palmer, Friday referred the measure to the Judiciary and Transportation committees for hearings.

The House resolution is expected to bog down in the Transportation Committee.

Asked when the resolution might get a hearing, Transportation Chairman Bill Ray, D-Juneau, said "this afternoon" and chuckled. Ray joked that he may hold public hearings on the proposed constitutional amendment in Anaktuvuk Pass and Unalakleet.

The Senate Judiciary Committee has twice voted down a Senate resolution that would limit the length of legislative sessions to 120 days with a possible seven-day extension.

The House version of the legislation would limit regular sessions to 120 days with no extension allowed.

Judiciary Chairman Pat Rodey, D-Anchorage, said a majority of the committee doesn't favor the resolution, "so, I could not move it" to a vote of the full House.

Rodey said he supports the resolution.

He said his committee may consider the Senate version of the legislation for a third time.

If approved by the legislature, the session-limiting plan would need to be ratified by voters.

News 3/13

Limit

(Continued from page A-1)

who's pushing the proposal in the Senate, said last week he is one vote short of the 14 needed to put the limit on the ballot. One observer said today that the seven "no" votes are just as adamant against the limit as the 13 'yes' votes are for it.

Senate President Jay Kerttula, D-Palmer, said today he sent the resolution to Ray's panel for two reasons: that committee isn't too busy now and some of the Senate's top leaders, including himself, sit on the five-member panel.

Ray said the complaints about the measure going to him are a slap in the face. "What are people trying to say, that I'm not competent to conduct a fair hearing?" Ray asked. "You can rest assured it will get a fair hearing."

He added that he's never supported a limit. "The courts are asking for more judges because they have more work.

"The administration, they're busier all the time. We give them 300 to 500 new employees every year. And yet you want to cut down on the Legislature." It's a separation of powers issue, he said.

"I think we have so many complicated problems. When the critics say we're not working, God, we're working all the time,' he said.

The Alaska Legislature, unlike most state legislatures, has no revenues that are committed for specific programs, he said. All money goes into the state's general fund, and the Legislature must sort through competing interests in allocating that money, he said.

"You're talking about hundreds of millions of dollars. They want us to just come in and make snap judgments?"

Also, the governor frequently drops major bills on the Legislature late in the session, Ray said, referring to Gov. Jay Hammond's proposal for a permanent fund dividend backup plan introduced last week. The Legislature needs time if it's to handle these bills properly, he said.

Other members of Ray's committee are split on the proposed limit.

Sen. John Sackett, R-Ruby, said a session limit "just limits ourselves."

Sens. Ed Dankworth, R-Anchorage, and Don Gilman, R-Kenai, both said they support the limit. Dankworth said he thinks 120 days is too long. Gilman said he might make a motion to move the bill from committee. But he said he must be careful not to cross any of his powerful colleagues who oppose the limit. "I don't want to get my head pinched off," he said.

Kerttula said he favors a limit. But any proposal must contain a provision to extend the limit. The resolution contains no such wording as it came from the House.

Panel waters down session-limit

By The Associated Press

A watered-down version of a House resolution calling for a statewide vote on a constitutional amendment limiting the length of legislative sessions emerged from the Senate Transportation Committee on Tuesday.

It is "better than nothing, but not much," said House Speaker Joe Hayes, R-Anchorage.

The committee's resolution calls for the House and Senate to vote on or before the 120th day of regular legislative sessions on whether to adjourn.

The resolution passed by the House would mandate adjournment on the 120th day.

Proposed amendments to the Alaska Constitution must be approved by a two-thirds vote in each house and ratified by voters.

Transportation Chairman Bill Ray, D-Juneau, said his committee's proposal gives voters what they want, the opportunity to see their representatives held publicly accountable for the length of a session.

At the same time, he said, it gives the Legislature the flexibility to remain in session as long as necessary to finish important business.

Sen. Bob Ziegler, D-Ketchikan, told the Transportation Committee the House plan is too restrictive.

"The idea, as great as it might sound, is neither wise nor responsible," Ziegler said. "Hasty decisions are invariably bad decisions."

Sen. Ed Dankworth, R-Anchorage, comparing the Legislature to the board of directors of a major land and oil company, wondered whether legislative business could be done in 120 days each year.

"I really believe we could get our work done in 90 days," Hayes told the committee. "You need to put some time constraints on whatever project you undertake.

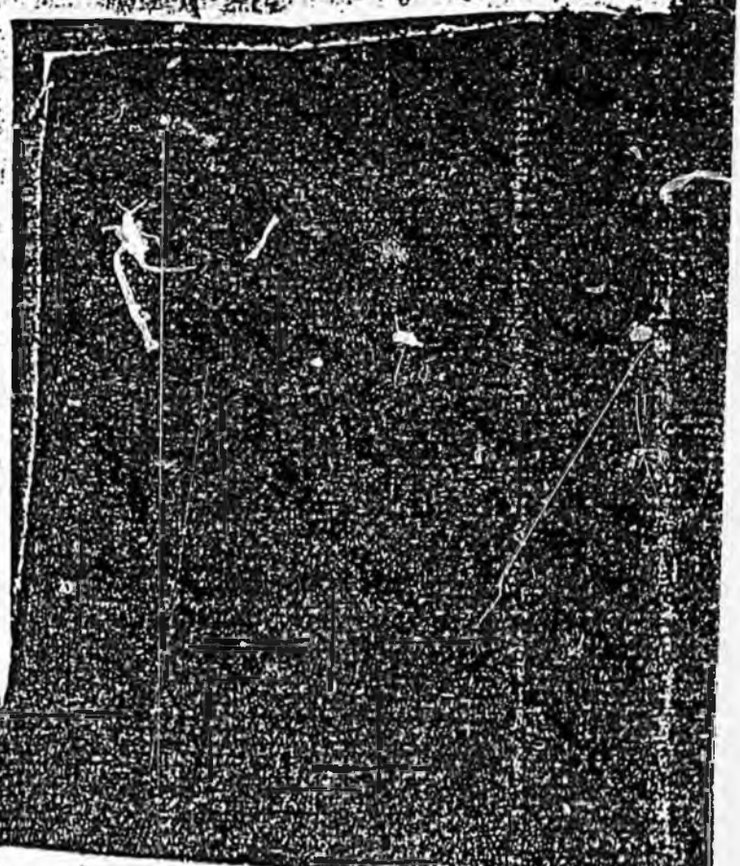
"Psychologically and otherwise," Hayes said, "there are certainly some merits to it."

Dankworth said he favors a limit on the length of legislative sessions, but noted that in his six years as a lawmaker the time needed to complete the Legislature's business has varied.

The Alaska Legislature does "more than any other state would dream of doing," he said, pointing to last year's deliberations on how to appropriate $6 billion.

"That takes a lot of time and a lot of debate," Dankworth said.

Kneely Taylor of Common Sense for Alaska, however, said shorter sessions mean better government.



Common Sense is concerned about what it sees as "the trend toward a full-time professional Legislature," he said.

George Kruse, the president of the Alaska State Chamber of Commerce, echoed the concern.

"The concept of a citizen's Legislature is one to which our members subscribe," he said.

Paula Ziegler, president of the League of Women Voters of Alaska, said the organization "favors the idea of stopping somewhere along the line and voting on the matter," but she said the league faced the same predicament as the Transporation Committee in trying to decide when that vote should be taken.

The resolution (SCSCSHJR12 Transportation) moves to the Senate Judiciary Committee where a resolution limiting legislative sessions to 120 days, plus a possible seven-day extension, has twice died.

House's session limit bill changed

The Associated Press

JUNEAU — A watered-down version of a House resolution calling for a statewide vote on a constitutional amendment limiting the length of legislative sessions emerged from the Senate Transportation Committee Tuesday.

The committee's resolution calls for the House and Senate to vote on or before the 120th day of regular legislative sessions on whether to adjourn. The resolution passed by the House would mandate adjournment on the 120th day.

Proposed amendments to the Alaska Constitution must be approved by a two-thirds vote in each house and ratified by voters.

90-day session limit termed unrealist

by Ralph Nichols
Times Writer

Times 2/23

Members of the Anchorage Chamber of Commerce were told Monday that it isn't realistic to get a proposed constitutional amendment limiting legislative sessions to 90 days through the Legislature.

Rep. Richard Halford, R-Chugiak, said it "is a case where you cannot allow the perfect (a 90-day limit) to get in the way of the better (a 120-day limit)." And, he said, getting a proposed amendment limiting legislative sessions to 120 days on the November ballot "is within the realm of possibility."

Sen. Tim Kelly, R-Anchorage, agreed. He said "somthing is better than nothing," adding that his resolution to limit legislative sessions to 120 days with a provision for one seven-day extension probably will be supported by every senator from Anchorage.

Kelly said most of the opposition to limiting legislative sessions is coming from lawmakers from the Southeast and the Bush.

The comments came during a chamber luncheon program intended to update the Anchorage business community on various legislative activities. Members of the audience spoke with their representatives via a live television hookup.

Rep. Joe Montgomery, R-Anchorage, said the Legislature supports education statewide, and that any budget cuts in appropriations for either public schools or the University of Alaska "will be made very, very cautiously."

Taking a look at overall budget-cutting efforts, Rep. Sam Cotton, D-Eagle River, said he doesn't disagree with the general philosophy of reducing the state's general operating budget for the 1983 fiscal year. But, he continued, "there is not enough thought into the consequences of reducing the budg

Cotton singled out consum

Session limit plan assured of fair hearing

Bill White
Times Juneau Bureau

Times 3/15

Juneau — Senate leaders today denied accusations by House Speaker Joe Hayes, R-Anchorage, that they are trying to kill a proposal to limit legislative sessions to 120 days.

Sen. Bill Ray said he will give a proposal to limit legislative sessions to 120 days a fair hearing next week, even though he personally opposes such a limit.

The Juneau Democrat chairs the Transportation Committee, to which the proposed constitutional amendment was referred in an unusual action. Normally the proposal would go to the State Affairs Committee, and observers were saying over the weekend that the measure was given to Ray to kill it.

Hayes said that giving the bill to Ray's committee "is an effort to kill it. The Senate used to send bills to Labor and Commerce (Committee) when they wanted to kill them. Apparently the committee of no return this year is Transportation. I look at it as someone being soft on the bill."

The House passed the measure last week, a year after the Legislature met for a record 165-day session.

Sen. Tim Kelly, R-Anchorage,

STATE OF ALASKA

Bill Sheffield, Governor

DEPARTMENT OF LAW

OFFICE OF THE ATTORNEY GENERAL

POUCH K – STATE CAPITOL
JUNEAU, ALASKA 99811
PHONE: (907) 465-3600

April 13, 1983

The Hon. Charlie Bussell
Chairman
House Judiciary Committee
Alaska State Legislature
Pouch V
Juneau, AK 99811

Re: HJR 5 (constitutional amendment on annulment of regulations)

Dear Representative Bussell:

I understand that House Joint Resolution No. 5 is on your committee's agenda for today. This letter is to briefly express the Department of Law's opposition to that resolution.

The amendment proposed by HJR 5 is virtually identical to the Eleventh Legislature's CS HJR 82 am. (The only difference between the two amendments is that HJR 5 provides for the annulment to take effect 30 days after approval of the resolution, whereas the earlier version provided that it would take effect on the date the current resolution is approved.) That amendment was rejected by the voters on November 4, 1980 by a vote of 82,010 to 58,808. That is a substantial margin, and we should assume that the voters knew what they were doing. They should not be repeatedly subjected to the same ballot issue.

As you know, these proposals for constitutional amendments are intended to reverse the effect of the Alaska Supreme Court's decision in State of Alaska v. A.L.I.V.E Voluntary, 606 P.2d 769 (1980). The essence of that court decision, which held invalid the statute (AS 44.62.320(a)) that provided for legislative annulment of administrative regulations by concurrent resolution, is that (1) procedurally and substantively valid regulations have the force of law, (2) an "annulment" of a regulation has the effect of changing the law, and (3) when the legislature changes the law, it must do so by following the constitutional procedures for law-making. Since AS 44.62.320(a)'s concurrent resolutions do not follow the procedures for law-making, the court held that that statute was invalid.

As the court pointed out in Plumley v. Hale, 594 P.2d 497, 500 (Alaska 1979), the various constitutional provisions specifying the mechanics of legislation are "designed to engender

a responsible legislative process worthy of the public trust." Those provisions are "to ensure deliberation prior to passage, to ensure that the requisite majority of each house affirmatively votes to enact a bill into law, and to provide a public record of the vote cast by each legislator." Id. Those procedures include, for example, the single subject rule of art. II, sec. 13; the requirement of separate readings on separate days, under art. II, sec. 14; the requirement that the ayes and nays on final passage be recorded in the legislative journal, under art. II, sec. 14; and, of course, the provisions on gubernatorial veto, under art. II, secs. 15 and 16.

Those provisions provide for public accountability, public notice, and an opportunity for the public to prepare for the application of new law. Regulations adopted under the Alaska Administrative Procedure Act require public notice, opportunity for public comment, legal review by the Department of Law, and a deferred effective date. The current version of this proposed constitutional amendment has improved upon some earlier versions by the provision for a thirty-day deferral of the effective date, but neither the other constitutional protections nor the corresponding Administrative Procedure Act protections would be applicable to the annulment of an administrative regulation.

The proposed constitutional amendment before you is not a "mere adjustment" or technical correction of the constitution. It proposes a substantial realignment of the constitutionally specified powers. Although the adoption of administrative regulations by an administrative agency is considered a "quasi-legislative function," it is an essential part of the executive branch's execution or implementation of a statute. The proposed amendment, by providing for legislative annulment, by means a concurrent resolution, provides for the legislature to make what could be considered executive-branch decisions -- executing a program created by statute. This concentration of power in the legislative branch -- both enacting the program statute and then participating in executing it -- does not reflect a sound policy in the face of the separation-of-powers doctrine as expressed in the Federalist Papers and other writings. That doctrine, of course, involves a blending or sharing of powers. The purpose is to avoid an inappropriate concentration of power.

In addition, when the legislature makes a simple negative statement by merely annulling a regulation, it interferes with the executive-branch's execution of the statute and offers nothing in its place. For example, the regulation involved in the A.L.I.V.E. Voluntary case was a Department of Revenue regulation dealing with permits for such things as lotteries. It contained several elements: a dollar limitation, a time limitation, and a provision for the cumulative effect of the value of individual prizes in reaching the dollar limitation. When the legislature annuls a provision such as that, is the agency to

interpret that annulment as meaning that the dollar limitation is not appropriate, or that the time period is not appropriate, or that the cumulative effect is not appropriate? If the agency concluded that the legislature must have been primarily concerned about the dollar limitation, and adopted a new regulation specifying a different dollar amount, would it be guessing right?

I do not believe that anyone questions the legislature's right to review the executive-branch's execution of the statute. Nor does anyone question the legislature's right to enact statutes setting guidelines and imposing limitations or prohibitions. We may disagree as to the merit of a particular guideline or prohibition, but not as to the right of the legislature to enact it (subject, in some circumstances, to the applicability of other constitutional provisions).

The Alaska Administrative Procedure Act (AS 44.62) provides a carefully structured system with many opportunities for legislator-involvement in the adoption of administrative regulations. If one of those opportunities was missed, or proved otherwise unavailing in some circumstance, further legislation might be appropriate. Such legislation would, of course, supersede the offending regulation.

Chadha v. Immigration and Naturalization Service, 634 F.2d 408 (9th Cir. 1980), is currently on appeal to the United States Supreme Court. That case presents to the court the question of the validity of what has become known as the "legislative veto." A decision is expected by June of this year. Your committee might also find helpful the discussion in the official commentary to the 1981 Revised Model State Administrative Procedure Act, promulgated by the National Conference of Commissioners on Uniform State Laws; see, especially, the art. III introductory comments which discuss the legislative/executive/public interrelationship regarding administrative regulations.

Thank you for this opportunity to comment. I would be happy to discuss the matter further with you at your convenience.

Yours truly,

Norman C. Gorsuch
Attorney General

STATEMENT IN FAVOR OF BALLOT PROPOSITION NO. 1

The legislature, when it writes a law, cannot foresee all of the possible details involved in carrying it out. The appropriate administrative agency is therefore allowed to write regulations which spell out who does what, when, where, and how. If the agency does no more than this no problem is created.

Unfortunately agency regulations are not always consistent with the intent the legislature had in passing the law. Sometimes an agency will get carried away and put out regulations that cause an unnecessary burden for the citizens. The First State Legislature realized this and provided a simple solution. The legislature could, by a concurrent resolution passed by a majority of each house, annul an administrative regulation. Such a resolution is not subject to the governor's veto.

The Alaska Supreme Court recently held, in a 3-2 decision, that the legislature must use a bill rather than a resolution to annul administrative regulations. But a bill is subject to the governor's veto. The governor can hardly be expected to approve a bill overruling his subordinates, who put out the regulation in the first place. The present governor has already vetoed one such bill.

The court ruling gives agency regulations equal standing with laws, *even though no single person elected by the voters has approved them.*

Our government is wisely based on dividing power among the three branches: legislative, executive and judicial. The current situation gives entirely too much power to the executive branch. Your approval of this constitutional amendment will restore the better balance under which the state operated from 1961 to 1980.

— Chair[illegible] H. Parr
Chairman, House Judiciary Committee
Alaska State Legislature

STATEMENT AGAINST BALLOT PROPOSITION NO. 1

This is still another proposal by the legislature to free itself from the checks and balances of our constitution. Under the constitution, the legislature has all the power it needs to make laws and annul administrative regulations. This proposal does not aid the public in any way. What it does is allow the legislature to exercise its power to annul regulations in disregard of the constitutional requirements that each bill have a single subject, that each bill have three readings in each house, and that there be a recorded vote of the ayes and nays on final passage. It would also free the legislature from the executive veto and it would allow it to ignore the prohibition against special and local legislation.

The Alaska Supreme Court has recently ruled that the legislature must abide by the constitution's checks and balances on its power whenever it exercises that power, including when it acts to annul regulations. This amendment is intended to overrule the court's decision and erode the constitution's safeguards. It aids legislators, not the public, and it should be rejected.

— Katherine D. Nordale
Delegate to the Alaska
Constitutional Convention,
1955-1956

BALLOT PROPOSITION NO. 1

LEGISLATIVE ANNULMENT OF REGULATIONS

Constitutional Amendment

(Committee Substitute for House Joint Resolution No. 82 Amended)

SUMMARY

(As it will appear on the November 4, 1980 General Election Ballot)

This proposal would permit the legislature to annul, by adopting a resolution, regulations adopted by state agencies. Annulment of regulations by resolution was authorized by the First State Legislature in 1959; however, in 1980 the Alaska Supreme Court held that the constitution permits the legislature to annul a regulation only by passing a bill, which requires three readings of the bill and a roll call vote which is recorded. The procedures for adopting resolutions are governed by legislative rules and require only the approval of the resolution by voice vote of a majority of both houses. A bill passed by the legislature annulling a regulation could be vetoed by the governor or repealed by referendum. A resolution annulling a regulation could not.

BALLOT FORM:

A vote "FOR" adopts the amendment.
A vote "AGAINST" rejects the amendment.

FOR ☐
AGAINST ☐

VOTE CAST BY MEMBERS OF 11TH STATE LEGISLATURE ON FINAL PASSAGE

Senate	(20 members):	Yeas 18	Nays 0	Absent or Not Voting 2
House	(40 members):	Yeas 36	Nays 0	Absent or Not Voting 4

LEGISLATIVE AFFAIRS AGENCY SUMMARY

(As required by law)

This proposal would add a new section, section 22, to Article II of the state constitution. If adopted, the proposal would authorize the legislature to annul or set aside a regulation which has been adopted by a state department or agency. In order to annul a regulation, the legislature could adopt a concurrent resolution by approval of the resolution by majority vote of the membership of each house of the legislature. The resolution specifies the date on which the annulment of a regulation would take effect.

FULL TEXT OF PROPOSED CONSTITUTIONAL AMENDMENT

SECTION 22. ANNULMENT OF REGULATIONS. The legislature by a concurrent resolution approved by a majority vote of the membership of each house may annul a regulation adopted by a state department or agency. The annulment of the regulation is effective on the date the concurrent resolution is approved by both houses unless the concurrent resolution specifies a different date.

MEMORANDUM

TO: Representative Mik Szymanski

FROM: Susan Brody, Director SEB

RE: Regulation Review by the Legislature
Research Request 83-87 (additional information)

As a follow-up to our memorandum of February 25, we have compiled additional information on the attempts by the legislature to annul executive branch regulations by concurrent resolution.

The attached chart lists concurrent resolutions pertaining to regulations which were introduced in both the House and Senate prior to the 1980 Alaska Supreme Court A.L.I.V.E. decision. As shown, we have identified 22 legislative attempts to annul regulations during the period from 1959 to 1980. Of these 22 attempts, only four passed both the House and Senate and were read by the governor.

The two most recent successful attempts to annul regulations by concurrent resolution were made during the Tenth Alaska Legislature (1977-78); copies of these two resolutions are attached (SCR 12 and SCR 32).

I hope the information provided here and in our earlier memorandum is of use to you. Please let us know if you would like us to perform additional research on this topic.

Fiscal Note
Analysis

While the Department of Law opposes this resolution, we will limit our comments here to fiscal matters. This proposed amendment to the state's constitution, if adopted in the 1984 general election, will probably not have a direct fiscal impact on the department's operations. The department is statutorily responsible for reviewing all regulations for legality and form to insure consistency with the appropriate enabling legislation. The department also drafts regulations on behalf of other departments and assists other departments in drafting regulations that deal with highly complex matters requiring the attention of an attorney. Obviously, some of the time spent in these efforts will have been lost whenever a regulation has been annulled. Larger departments, which have the responsibility for carrying out major state programs, and who routinely draft numerous program operating regulations inhouse, will probably experience an even greater loss of staff time. The absence of statutorily mandated regulations, which would occur after annulment, could result in litigation from an adversely impacted industry or public interest group. The impact of such litigation cannot, in this case, be estimated in advance and therefore no cost impact can be shown.

III. ANALYSIS (See Fiscal Note Preparation Instruction, Section III)

Assuming that no special session is called for the express purpose of annulling regulations, it is estimated that this resolution will have no additional fiscal impact.

There is no additional cost to the Division of Elections to place an issue before the voters as that is the division's function.

March 23, 1983

Mr. Harry D. Treager - Director
State of Alaska
Division of Occupational Licensing
Pouch "D" - LIC
Juneau, Alaska 99811

Re: Board of Veterinary Examiners

Dear Mr. Treager:

At the request of our Board Chairman, Dr. Valerie Shepard, I am enclosing a copy of the exact wording, as previously voted upon by our Board, for the proposed Good Samaritan Statute. As you are aware, our Board has attempted to have this legislation introduced for over two years. As indicated in your recent telephone conversation with our Board Chairman, we very much appreciate your willingness to move this matter along by carrying the legislation directly to the Governor's Office.

Also, in regard to Darrell Miller's January 24, 1983 letter to the Board relative to new 1983 Legislation, the Board took the following action at our March 14, 1983 meeting:

1. Re: Senate Bill 25 concerning the Decompression Chamber for animal euthanasia, Our Board did not take a stand on this matter but will be willing to do so with a specific request for same. Kindly advise if this is the case.
2. Re: House Joint Resolution No. 5 concerning the annulment of regulations, our Board voted not to support this matter.
3. Re: House Bill 20 relating to public officials. The Board took no official stand though agrees in principle.
4. Re: House Bill 54 relating to regulations adopted under the Administrative Procedure Act. Our Board voted not to support this matter.

In regard to your February 22, 1983 Memo to our Board pertaining to the reduction of residency requirements on the Board of Veterinary Examiners (Sec. 08.98.010), our Board voted not to support this matter and feels that the State is best served by the current five-year requirement.

We appreciate having the above matters brought to our attention.

Sincerely,

Dody Froehlich

Dody Froehlich
Member - Board of Veterinary Examiners

enc:

cc: Dr. Valerie Shepard

Wording for "Good Samaritan Statute" as voted unanimously upon by the Board of Veterinary Examiners at the December 8, 1980 Meeting:

"A Veterinarian who, on his own initiative or other than at the request of the owner, gives emergency treatment for an injured animal either at the scene of an accident or when such animal is brought to him, shall not be liable in damages to the owner of such animal in the absence of gross negligence."

AS A CONSTITUENT, I STRONGLY URGE YOUR SUPPORT FOR HJR 6. IT IS INCOMPREHENSIBLE THAT IN THIS DAY AND TIME INTELLIGENT INDIVIDUALS WOULD FAIL TO RECOGNIZE THAT EQUALITY FOR ALL IS MANDATORY IN A DEMOCRATIC SOCIETY. DON'T BE MISLED THAT THE ERA LEADS TO UNI-SEX BATHROOMS, REQUIRED ABORTIONS, OR A BRALESS SOCIETY RUN BY HOMOSEXUALS. IT IS TIME THAT ALL AMERICANS ENJOY THE BENEFITS OF AN EQUAL SOCIETY AS WE DO IN ALASKA.

HJR

7

MR. CHAIRMAN, MEMBERS OF THE COMMITTEE, FOR THE RECORD I AM RAMONA BARNES, STATE HOUSE OF REPRESENTATIVES, ANCHORAGE, DISTRICT 10.

AS YOU KNOW THIS RESOLUTION, ~~HJR 22,~~ IS NOT A NEW IDEA. SIMILAR LEGISLATION, ~~HJR 6~~, WAS INTRODUCED LAST YEAR ~~BY REPRESENTATIVE TERRY MARTIN, AND CO-SPONSORED BY MYSELF AND OTHER MEMBERS.~~ IT HAS ALSO BEEN INTRODUCED IN THE OTHER HOUSE QUITE SOME YEARS AGO.

I BELIEVE THE REASONS FOR CHANGING THE PROCESS OF SELECTING THE ATTORNEY GENERAL ARE JUST AS VALID TODAY AS THEY WERE A YEAR OR TEN YEARS AGO. PERHAPS SOME ARE SATISFIED WITH THE GOVERNOR'S CHOICE FOR THAT OFFICE, BUT I THINK WE CAN AGREE THAT IF WE WERE NOT AND HAD GOOD CAUSE TO RECOMMEND HIS REMOVAL, IT WOULD RESULT IN A POWER STRUGGLE WITH THE ADMINISTRATION. THE RESULTS OF SUCH A STRUGGLE, NO MATTER WHAT THE OUTCOME, WOULD HAVE A NEGATIVE IMPACT ON OUR LABORS HERE IN THIS BODY.

I BELIEVE THAT THE ATTORNEY GENERAL SHOULD SERVE AS AN UNBIASED INTERPRETER OF THE LAW FOR THE CITIZENS OF THIS STATE, THEIR REPRESENTATIVES, AND OUR GOVERNOR. IT IS POSSIBLE, BUT HIGHLY IMPROBABLE, THAT THROUGH OUR PRESENT SYSTEM WE HAVE AN ATTORNEY GENERAL WHO ISN'T IN AGREEMENT

WITH THE POLITICAL PHILOSOPHIES OF THE PERSON WHO APPOINTED HIM. AND SINCE HE SERVES AT THE PLEASURE OF THAT PERSON, THERE IS FURTHER INCENTIVE FOR "POLITICAL LEANINGS" TOWARD ADMINISTRATIVE POLICY AND PHILOSOPHY.

THIS IS NOT A TIME FOR POLITICS. I SINCERELY BELIEVE THAT WE, AS REPRESENTATIVES OF THE PEOPLE, HAVE TO ASK OURSELVES IF THEIR BEST INTERESTS ARE BEING SERVED BY THE PROCESS OF SELECTING OUR ATTORNEY GENERAL.

WHEN OUR CONSTITUTIONAL CONVENTION WAS IN PROGRESS AND THIS ISSUE WAS BEING ADDRESSED, THERE WERE THIRTY-EIGHT (38) STATES WHICH ELECTED ATTORNEY GENERALS. FOR THE RECORD, THERE ARE FORTY-FOUR (44) STATES THAT NOW USE THAT PROCESS. I USE THESE FIGURES TO DEMONSTRATE NOT A "TREND", BUT TO ALLEVIATE ANY DOUBT CONCERNING CITIZEN PREFERENCES OVER A GIVEN PERIOD OF TIME IN OTHER STATES.

LET ME SAY IN SUMMARY THAT I FEEL THAT THE ATTORNEY GENERAL SHOULD BE MOST ACCOUNTABLE TO THE PEOPLE OF THE STATE WHEN INTERPRETING THE LAW. WHILE HE IS NOT A JUDGE, HE DOES INTERPRET THE LAW WHICH GOVERNS PEOPLE, AND THAT CARRIES WITH IT A GREAT RESPONSIBILITY TO THE PEOPLE. SINCE WE ARE REPRESENTATIVES OF THOSE PEOPLE, OUR OBJECTIVE SHOULD BE TO ENSURE THAT THOSE LAWS ARE INTERPRETED BY SOMEONE OF THEIR CHOOSING.

STATEMENT BY REPRESENTATIVE RICK UEHLING ON BEHALF OF
HOUSE JOINT RESOLUTION SEVEN

I thank you, Mr. Chairman and members of the committee, for this opportunity to voice my reasons for introducing House Joint Resolution Seven, proposing amendments to the Constitution of the State of Alaska relating to the election of the attorney general.

The idea behind HJR 7, that of electing Alaska's attorney general, is not an original concept. For years, many Alaskans have supported the principle of electing our state's highest law enforcement officer. The past five years have seen similar legislation introduced by Senator Brad Bradley, Representative Terry Martin, and Majority Leader Ramona Barnes. As early as the Constitutional Convention in 1956, when Frank Barr of Fairbanks introduced an amendment to require the election of the AG, many citizens have recognized the need for a truly impartial and independent attorney general. Many believe, as Mr. Barr expressed the ideal, "the attorney general should be 'the people's attorney,' elected by and responsible to the citizens of Alaska."

Since our Constitutional Convention rejected Barr's suggestion, many of the states have provided for the election of attorneys general. In fact, today all but five of the fifty states elect their AG, a dramatic reversal from 1956 when only a dozen states elected attorneys general. Even the most avid opponent of electing the attorney general would have to admit that the last fifteen years have clearly indicated overwhelming national sympathy for the idea.

Today, my arguments in favor of HJR Seven will concentrate on three main points: 1. election provides for greater autonomy for the AG's office; 2. election provides for freedom from political manipulation; and 3. election provides for greater personal responsibility by the attorney general.

Today the attorney general is defined in AS 44.23.020 as "the legal advisor of the governor and other state officers." By very definition, the actions of the AG are subject to the whims of the governor. Providing for the election of future attorneys general will free the state's legal arm to exercise more autonomous control over prosecutorial and other activities. As an elected official, the AG would respond directly to the public. To quote former New York Attorney General Louis J.

Lefkowitz in his classic defense of elected attorneys general:

> The elected attorney general has a natural and impelling desire to be creative and to exercise broader initiative in the service of the public. He is free of the fear of dismissal by any superior official if he should exercise contrary independent judgement. He is in the best position to render maximum service to the people and impartial advice to the Governor, the Legislature, and State departments and agencies.

My second argument in favor of HJR Seven is to the effect that, if elective, the office of attorney general will be free from political manipulation by the governor's office. As our system is arranged now, the attorney general is just another cabinet officer, directly responsible to the governor. Although I will certainly not argue that any of the fine men who have served in the office of attorney general have been politically manipulated, I will eagerly point out that the potential does exist. As our law is written today, the attorney general is the servant of the governor: he makes prosecutions as the governor sees fit and he generally interprets the law as the governor directs. This arrangement is obviously dangerous. Requiring the election of the attorney general would help eliminate this danger. Former Illinois Attorney General William J. Scott made this point clearly when he argued, "the Attorney General's roles of 'government watchdog' and 'attorney for the people' require independence from the governor." Former Attorney General Lefkowitz argued the same point when he said that electing the state's AG provides that "he can appear in Court without fear or favor--an attorney in the fullest and finest sense of the word."

My third observation is that election would provide a sense of personal responsibility for the attorney general. As an official directly responsible to the electorate, an elected attorney general would naturally feel a personal responsibility for the activities of the department. Perhaps more than any other reason, this argument hits the real point of electing Alaska's attorney general. That is in fact the main purpose in electing almost any official, be it our governor, our judges, or our mayors. When the direct authority and responsibility inherent to a particular position become so unusually varied and important, it is prudent to make that official directly answerable to the people he serves. Going again to General Lefkowitz: "To sum it up--an elected

attorney general has a measure of independence and a sense of personal and direct responsibility to the public."

Ladies and gentlemen, I will not tell you that there are no problems with the election of Alaska's attorney general or of any state official, for that matter: elections cost money; politics is inevitably involved, even in a non-partisan election as in this bill; personal greed and ambition are simply impossible to eliminate; and effective governments do require strong executives. However, I am willing to tell you that the potential benefits of an elected attorney general are far more numerous and important than any costs, real or imagined. The arguments I have made today hopefully demonstrate that point.

In my opinion, the argument is simply this: does the attorney general represent the governor of Alaska or the thousands of men and women who make up this great state? If you believe like I do that the attorney general should represent all of Alaska's citizens, then I encourage you to support this resolution to make that official directly responsible to the people represented. I encourage you to vote "Do Pass" on this important issue.

Thank you.

MEMORANDUM

February 23, 1983

TO: Representative Charlie Bussell
Representative John Liska
Representative Joe Hayes
Representative Ramona Barnes
Representative Hugh Malone
Representative Don Clocksin
Representative Ron Wendte

FROM: Representative Terry Martin TM.

SUBJECT: SPONSOR SUBSTITUTE HOUSE JOINT RESOLUTION 7
Providing for Election Attorney General

I strongly recommend that as a member of the House Judiciary Committee you vote SSHJR 7 out of committee with a "do pass" recommendation.

In 1979 I introduced HJR 6, Providing for Election of Attorney General (copy attached) in the House of Representatives.

I believe passage of SSHJR 7 would eliminate conflicts arising from a Governor having control of a State Attorney General. The majority of Alaskans believe the Attorney General is to protect the public interest -- not only that of the Executive Branch of Government.

ALASKA STATE LEGISLATURE
HOUSE OF REPRESENTATIVES

March 24, 1983

Mr. Robert E. Sharp, Jr.
2926 Madison Way
Anchorage, Alaska 99504

Dear Mr. Sharp:

I thank you very much for your letter of March 16, 1983 regarding the legislation relating to the election of the attorney general and to procedures governing the election and term for state offices to be elected under the constitution.

I have enclosed a House Journal for March 23, 1983, which indicates how the voting went on the House Floor.

Thank you for your comments regarding the confirmation hearings on Norman Gorsuch. It is refreshing to hear good news.

Again, thank you for your letter and for becoming a part of the legislative process.

Very truly yours,

Representative Charlie Bussell
Chairman, Committee on Judiciary

CB:lyn

enclosure

AJR 7 JR

March 16, 1983

Dear Representative Bussell,

I applaud your progress towards getting an elected attorney general who will be a check on the powers of the executive branch, and who will be directly accountable to the vote of the Alaskan people.

I also applaud your investigation of the Sheffield-Gorsuch-Wunnicke "fund raiser." Enclosed is my letter to the Editor of the Anchorage Daily News. I imagine a number of people are thinking along the same line I am. I believe now is the time for new campaign finance laws, while the Sheffield trip is still alive in the memories of legislators and constituents.

Thanks for your time, and

Good Luck,

Bob Sharp Jr

Robert E Sharp, Jr.
2726 Madison Way

Change campaign laws

Regarding the controversial campaign fund-raising trip by Gov. Shefrield, Attorney General Gorsuch and Commissioner of Natural Resources Wunnicke, perhaps now is the time for two new campaign laws:

The first would limit fund-raising to the election year, from Jan. 1 to election eve. The second would prohibit any campaign fund raising after election eve and would require all candidates to pay outstanding post-election day debts out of their own pockets. In addition it may be wise to prohibit any state employees, excluding elected officials, from participating in fund-raising.

These laws would: remove "tne appearance of a conflict of interest" from elected officials' campaign fund-raising; limit the election campaign to a set period; and enforce a fiscal discipline on the candidates.

— *Bob Sharp Jr.*

HB 456

Grants Pass, Oregon
February 19, 1983

TO MY FRIENDS IN THE ALASKA LEGISLATURE:

Almost thirty years ago I proposed that the state of Alaska elect its attorney general. Although my proposal was finally rejected by the Constitutional Convention in 1956, I have never abandoned my conviction that the attorney general should be "the people's attorney," elected by and responsible to the citizens of Alaska.

For that reason, I am pleased to support House Joint Resolution 7, which proposes an amendment to the state constitution providing for the election of the attorney general. HJR 7, if approved by both houses, would allow the electorate to determine the nature of the state's highest law enforcement officer.

I urge every legislator to fully consider this important bill. If you decide that your constituents deserve a truly impartial attorney general who is ultimately responsible to the people, then I encourage you to support the passage of HJR 7.

Thank you for your attention

Respectfully,

Frank Barr

FRANK BARR
Delegate, Alaska Constitutional
Convention (1955-56)

Extracted from: Powers, Duties and Operations of State Attorneys General (1977) (Study by National Assoc. of A.G.s)

6. SELECTION, TERM AND REMOVAL

This chapter examines the important issues of how the Attorney General is selected, how long he serves, how he can be removed, and how a vacancy in the office can be filled. Some of these issues, particularly that of election or appointment, have been subject to controversy since the first state governments were established. This report discusses existing practices and presents the arguments on both sides of these issues.

Method of Selection

Table 6 shows methods of selecting the Attorney General. He is popularly elected in forty-two states. He is appointed by the Governor in six states (Alaska, Hawaii, New Hampshire, New Jersey, Pennsylvania, and Wyoming), the three territories (Guam, Samoa and the Virgin Islands), and the Commonwealth of Puerto Rico. In Maine, he is selected by the Legislature and in Tennessee, by the Supreme Court. Now elected

The Attorney General is the most prevalent elective official in state governments except for the Governor, who is elected in all jurisdictions. The Treasurer is elected in thirty-nine jurisdictions, the Secretary of State in thirty-eight, the Auditor in twenty-five, and the Superintendent of Public Instruction in nineteen, compared to forty-two states in which the Attorney General is elected.[87] The 1970s witnessed a marked acceleration of the trend toward election of the Governor and Lieutenant Governor on a single ballot and such a practice is now followed in twenty-two jurisdictions. Thus, the Attorney General is actually the most common official who is elected on a single ballot. Where very few, but more than one, state executive officials are elected, the Attorney General is usually included among these few. He is, for example, among the three executive officials elected in Virginia, among the four elected in Maryland, Michigan and New York, and among the five elected in Rhode Island, Colorado, and Utah. However, he is not one of the two elected officers in Alaska, Hawaii, Guam, and the Virgin Islands, the four in Pennsylvania, nor the five in Wyoming.

Historically, the Attorney General has been an appointive, rather than elective, official. In England, he was appointed by the Crown and only incidentally acquired elective status through a seat in Parliament. In Colonial America, Attorneys General were usually appointed by the Governor of the Colony. The Attorney General of the United States still serves at the pleasure of the President with the advice and consent of the Senate.

Most of the first state constitutions specified that the legislature would choose the Attorney General. The concept of universal suffrage had not yet taken hold, nor had the idea of direct election of many officials.

87. Council of State Governments, THE BOOK OF THE STATES, 114-115, 121-122 (1976-77).

Andrew Jackson's administration brought a new ethic to American government. The common man was considered competent to vote and to hold office, and direct election of officials became the rule. State constitutions provided for election of numerous officials, usually including the Attorney General.

A study published in the Law Library Journal[88] showed how methods of selecting Attorneys General developed in nineteen states; of these, eight provided for legislative selection prior to 1843, but none finally retained this method. Prior to 1845, twelve states provided by constitution or legislation for the appointment of an Attorney General by the Governor, the legislature, or other authority. The trend then turned toward election. For example, North Carolina's 1776 Constitution provided for appointment by the legislature; its 1868 Constitution provided for election. Louisiana's 1812 Constitution provided for appointment by the Governor; its 1852 Constitution provided for election. Michigan's 1835 Constitution provided for appointment by the Governor; the 1850 Constitution provided for election. Virginia's 1776 Constitution provided for selection by the legislature; its 1902 Constitution provided for election. Kentucky's 1792 Constitution provided that the Governor would appoint the Attorney General, with the consent of the Senate; the 1850 Constitution made the office elective.

Wyoming, in 1899, became the first "new" state to provide for appointment of the Attorney General, thereby ending the trend toward popular election. Alaska's 1959 Constitution and Hawaii's of 1960 provided for Gubernatorial appointment, following the policy set by their territorial conventions in 1950 and 1956.

Strong arguments can be advanced for either system of selection. There is not necessarily a correlation between the selection process and the extent of the Attorney General's actual powers. For example, the Attorney General is elected in Delaware and appointed in Alaska, but in both jurisdictions he has control over all legal and prosecutorial functions. In some states, the Attorney General is independently elected, but he exercises little power at either the state or local level. Thus, a "strong" department of justice can be developed under either system of selection, but is not guaranteed by either.

Proponents of an appointive Attorney General usually base their arguments primarily on the need to strengthen the executive. As one view, the commentary on the Model State Constitution developed by the National Municipal League says that:

> All authorities on executive organization agree with the position embraced by the Model State Constitution for more than 40 years that administrative power and responsibility should be concentrated in a single popularly elected chief executive. There is growing recognition that the governor, as the representative of all the people,

88. Lewis Morse, Historical Outline and Bibliography of Attorneys General Reports and Opinions, 30 LAW LIBRARY JOURNAL 39-245 (1937).

should be equipped with the constitutional status necessary to exercise constructive leadership as the chief lawmaker and political head of his state.[89]

The Model Executive Article for state constitutions recommended by the Committee on Suggested State Legislation of the Council of State Governments limits statewide elective officials to the Governor and Lieutenant Governor, who are elected jointly. This article was developed by the Committee on Constitutional Revision of the National Governor's Conference.[90] Studies on administrative reorganization usually argue that fragmentation leads to irresponsibility, but a single chief executive can be held accountable through the electoral system and, as a consequence, can make the administration more responsive. Proponents of an appointive Attorney General argue that his function is to advise the Governor, who should be permitted to choose his advisors. They believe that the two officials are more likely to maintain the close and harmonious relationship that is necessary for effective liaison if the Attorney General is appointed.

Advocates of appointment also contend that the elective process may not assure professional competence. The pressures of politics and the time involved in campaigning limit an Attorney General's abilities to serve effectively, and many highly competent people would not be willing to undergo the election process. They also argue that the Attorney General's primary function is to interpret the law, which is a technical task and should not involve the political process.

The arguments for an elective Attorney General were cogently summarized by Attorney General Louis J. Lefkowitz in a position paper submitted to the New York Constitutional Convention in 1967. General Lefkowitz reviewed the Attorney General's duties in some detail, pointing out they were predicated upon his role as an independent official, and concluded that:

> To sum it up-- an elected Attorney General has a measure of independence and a sense of personal and direct responsibility to the public. The elected official has a natural and impelling desire to be creative and to exercise broader initiative in the service of the public. He is free of the fear of dismissal by any superior official if he should exercise contrary independent judgment. He is in the best position to render maximum service to the People and impartial advice to the Governor, the Legislature and State departments and agencies. He can appear in Court without fear or favor-- an attorney in the fullest and finest sense of the word.[91]

91. Attorney General Louis J. Lefkowitz, Position Paper of Louis J. Lefkowitz Attorney General, to Constitutional Convention, Committee on the Executive Branch, June 1, 1967, Albany, N. Y.

An equally strong position in favor of election was taken by Attorney General William J. Scott before an Illinois Constitutional Convention; he stressed that the Attorney General's roles of "government watchdog" and "attorney for the people" required independence from the Governor.[92]

The primary argument for an elective Attorney General is that he is an attorney for all the people, and should be chosen by them. He is the Governor's advisor, but not exclusively; the Governor is merely one among many clients. By making the Attorney General directly responsible to the electorate, he remains subject to the ultimate source of power and will be more responsive to public needs. As discussed elsewhere in this report, the courts increasingly recognize that the Attorney General is responsible to the people, not just to the government. It is further argued that the Attorney General has important administrative and legal functions, such as programs in consumer protection and environmental control. In executing these functions, an Attorney General is acting as an advocate for the people, not as agent of the executive branch. His duties usually include prosecution of election violations, collection of debts, and bringing of suits in the name of the people; these responsibilities are outside the scope of the Governor's duties.

Many arguments for election center around the fact that the Attorney General's duties are of the highest order and he should enjoy the same independence as a member of the judiciary. He should not be a creature of the Governor, but should render opinions solely on the basis of law. He should not be the advocate for a particular administration, but should be free to oppose policies which he considers inconsistent with the law and to investigate apparent wrongdoing.[93]

In reference to the argument that an appointed Attorney General is a non-political technician, it should be noted that appointment does not necessarily remove the office from politics. Some appointed Attorneys General have been politically active as potential candidates for other office or on behalf of the Governors they serve. At the federal level, Presidents have frequently named as Attorneys General persons who had been active in their campaigns. This has also been true in some states.

In his remarks to a legislative committee which was considering a constitutional amendment to make the office appointive, former Attorney General Meyer of Nebraska mentioned several arguments in addition to those usually advanced by proponents of election. These included the following points: the Governor can appoint men with legal training to his staff if he feels he needs lawyers of his own choosing. Much of the Attorney General's work is in areas in which the Governor has little or no interest,

such as advising county attorneys and handling routine criminal appeals. The Governor is only one of many state officials whom the Attorney General advises.[94]

Confirmation of Appointment

In all six states where the Governor appoints the Attorney General on a regular basis, the appointment is confirmed by either the Senate (Hawaii, New Jersey, Pennsylvania, Wyoming), both houses of the Legislature (Alaska), or by the Council (New Hampshire). Confirmation in Pennsylvania requires a two-thirds vote of all the members of the Senate.

In Puerto Rico and the Virgin Islands confirmation is also by the Senate. In Guam, appointments are made with the "advice and consent" of the legislature, but in Samoa appointment is by the Governor with no requirement for confirmation. Although all Pennsylvania Attorneys General of recent years have been in the same political party as the Governor, the requirement of approval of two-thirds of all elected members of the Senate for confirmation of the Attorney General gives the minority party considerable leverage over appointments. However, there has been no indication that this has caused problems.

The various model constitutional provisions that have been proposed differ on the need for confirmation. The Advisory Commission on Intergovernmental Relations' suggested provision for a short ballot for state officials provides for Senate confirmation of gubernatorial appointments. The Model State Constitution of the National Municipal League does not mention confirmation. There is no extensive literature on the precise manner in which appointments are to be confirmed.

Length of Term and Succession

Forty-four states presently provide a 4-year term for the Attorney General and four states a 2-year term. Tennessee sets the term at 8 years and New Hampshire at 5. In Guam, Puerto Rico, and the Virgin Islands, the Attorney General is appointed for an indefinite term. In Samoa the term is also of an indefinite length, although there is a minimum of 2 years for an initial appointment. Table 6 indicates the length of Attorneys General's terms and the statutory or constitutional rules on succession.

The trend is clearly toward longer terms. Most states initially limited terms of officals to 1 or 2 years, on the theory that frequent elections kept government closer to the people and prevented the accretion of power by elected officials. Many states prohibited successive terms on the grounds that official power must be limited. These arguments may have been cogent at a time when Attorneys General had relatively few duties to

94. Letter from Attorney General Clarence A. H. Meyer to Patton G. Wheeler, November 24, 1970.

perform, and those duties were relatively well-defined. Present Attorneys General, however, cannot effectively operate with a 2-year term, which does not allow time to master the duties and responsibilities of the office. Neither should they be subjected to the continuing campaign requirements imposed by an election every 2 years. For these reasons, NAAG has recommended that the Attorney General should be elected or appointed for a minimum term of 4 years and should be allowed to succeed himself.

The number of Attorneys General serving 2-year terms has declined drastically in recent decades. In 1937 there were twenty-one, but this number fell to nine by 1970, and then to four by 1976. Arizona went from 2 to 4 years in 1970, and Wisconsin and New Mexico in 1971. The 1972-73 legislative biennium saw four more states-- Iowa, Kansas, South Dakota, and Texas-- shift to a 4-year term for the Attorney General. Apparently only one jurisdiction has ever gone from a 4-year to a 2-year term; this occurred under Missouri's 1865 Constitution, which was adopted during Reconstruction; its 1875 Constitution later restored the 4-year term. Voters in Rhode Island, however, rejected a 1972 proposal which would have extended from 2 to 4 years the terms of all executive officers, including the Attorney General.

Succession to Office

There are few restrictions on Attorneys General serving successive terms. There are restrictions on Attorneys General succeeding themselves in only three states: Kentucky, New Mexico, and Alabama. Only Kentucky absolutely prohibits immediate succession by the Attorney General. Until 1968 Alabama allowed only one term, but an amendment that year permitted the limited succession. New Mexico restricts the Attorney General to two terms of 2 years each.

The Model State Constitution permits succession in the office of Governor because:

> The main argument favoring restriction in the term of the governor is fear of bossism or perpetuation through use of the powers of the office. This is always a possibility but the better argument seems against any form of restriction. Limitations of this kind restrict the right of the people to pass judgment upon the quality of the gubernatorial service performed for them and thus eliminates from the field the one candidate about whom the voters usually know the most. From a program policy point of view, a restriction on service in office affects the governor's ability to develop and implement a long-range plan.[95]

These arguments apply with equal validity to the office of Attorney General.

95. National Municipal League, MODEL STATE CONSTITUTION (6th ed.) 66 (1963).

Removal from Office

There are several mechanisms for removing Attorneys General: impeachment, recall, or removal by the Governor, the legislature, or the courts. Information is not available on how often these methods have been used or how well they operated.

Of the fifty-four jurisdictions, thirty-six provide for impeachment. It is the only method of removal provided in twenty-one of these jurisdictions. Impeachment processes vary, but proceedings are usually instituted by the lower house and, if it votes to impeach, the charges are tried by the upper house. In New York, the judges of the court of appeals, the state's highest court, sit with the members of the Senate as a court of impeachment. In Nebraska, impeachment charges are proferred by the unicameral Legislature and tried before the state supreme court. In Missouri, impeachments are tried before the supreme court after charges are filed by the House of Representatives.

An impeachment proceeding is rare, and is used only under the most extraordinary circumstances. Apparently, the last impeachment trial of an Attorney General was in Kansas in 1934. That action resulted in an acquittal.[96] Whatever grounds are prescribed grounds for impeachment, the method is not a common means of removing officials. It can be utilized only when the legislature is in session and is quite time-consuming.

Fifteen states which provide for impeachment also provide alternative removal processes. In the ten jurisdictions where the Governor appoints the Attorney General, he may also remove him. In Hawaii, the Senate must consent to such removal. In New Jersey, the Attorney General can be removed by the Governor for cause only after an opportunity to be heard has been granted. In New Hampshire, the Governor and the Council may remove the Attorney General on address of both branches of the legislature. Five other states provide for Gubernatorial removal of the Attorney General. In Maine, the Governor and Council may remove on address of both branches of the legislature. In New York, removal is by the Governor and the Senate. The Governor of Arkansas, upon address of two-thirds of the members of each house of the legislature, may for good cause remove the Attorney General. In Michigan and West Virginia, the Governor may remove him without the consent of another authority.

The legislature stands alone as a removing authority in proceedings other than impeachment in seven states. Recall may be used to remove the Attorney General in Arizona, Colorado, Louisiana, North Dakota, Oregon, Washington, and Wisconsin; he is an elective officer in all of these states. Louisiana reports that the district court may remove the Attorney General, and Maryland indicates that removal is attendant to any conviction in a court of law.

As a result of a court decision, an Arizona Attorney General was removed from office in 1947, having been adjudged guilty of conspiring to violate the gambling laws of the state. The Governor considered the office

96. New York Times, February 7, 1942, at 17.

vacant and appointed a new Attorney General. The former Attorney General, however, refused to vacate his office. Subsequent court action affirmed the validity of an act which provided that an office would be vacant if its incumbent was convicted of a felony. The court reasoned that the powers of impeachment were an added protection for the public, not the sole protection.[97]

Filling Vacancies

Vacancies in the office of Attorney General may be filled by appointment of the Governor, the legislature, or the supreme court. An overwhelming majority of the jurisdictions indicate that the Governor fills vacancies as soon as they occur. In Maine, Massachusetts, New York and Virginia, the legislature fills vacancies; however, if it is not in session, the Governor makes the appointment. In Maine, he must have the approval of the Council. Tennessee provides that the Supreme Court will fill vacancies, since it normally appoints the Attorney General. In two states, Louisiana and New Jersey, the First Assistant or Deputy Attorney General becomes Attorney General until a successor is elected or appointed.

Where the Attorney General is appointed, it would seem proper that the appointing agent also fill vacancies, as is the case in all such jurisdictions. The rationale for filling vacancies when the office is elective is less clear. All but four of the states which have an elective Attorney General permit the Governor to make appointments. Three permit the legislature to name an Attorney General, and in one the deputy is promoted. Allowing the Governor to fill vacancies in an elective office seems contrary to the chief arguments for election, those concerning independence from the executive. It is also questionable whether a Governor of one party should be allowed to fill a vacancy in an office which was held by a member of the opposite party.

An Assistant or Deputy Attorney General is often promoted to fill a vacancy, even if this is not required by law. If the Deputy Attorney General is promoted to fill a vacancy, the chances of continuity in office programs are greater; however, the Attorney General may select his chief deputy according to different criteria from those he would use in selecting his own replacement.

Vacancy appointments for elective offices usually are valid only until the next general or next biennial election. At that time, if the original term has not elapsed, a short-term Attorney General is elected. This point was litigated in Oregon.[98] The statute creating the Oregon office in 1891 provided that the Attorney General would be elected for a full 4-year

term in 1894. Further, it mentioned that vacancies would be filled by Gubernatorial appointment until the next general election, when an Attorney General would be chosen to fill out the term or commence a new term. The Governor appointed an Attorney General in 1891. The question of the case was whether there was to be an election to fill out the first "quasi-term" in the general election of 1892. The court ruled that there was to be such an election.

The Supreme Court of Georgia reached the opposite conclusion in a 1939 case.[99] It held that the office of Attorney General was created under the judicial article, hence the rule that provisions for elections to fill vacancies in executive positions did not apply to it. The Gubernatorial appointee to fill a vacancy created by a resignation was to serve out the full 4-year term of office without standing for election.

POSITION PAPER

of

LOUIS J. LEFKOWITZ

ATTORNEY GENERAL

to

CONSTITUTIONAL CONVENTION,

COMMITTEE ON THE

EXECUTIVE BRANCH

in support of

PROPOSITION THAT THE PRESENT

CONSTITUTIONAL PROVISION FOR

THE ELECTION OF THE ATTORNEY

GENERAL SHOULD BE RETAINED

POSITION PAPER

Submitted to the Constitutional Convention,
Committee on the Executive Branch,
at hearing held on June 1, 1967
at the State Capitol, Albany, New York

PROPOSITION

THE PRESENT CONSTITUTIONAL PROVISION FOR THE ELECTION OF THE ATTORNEY GENERAL SHOULD BE RETAINED.

HISTORICAL BACKGROUND AND COMPARATIVE ANALYSIS

In the early years of the Colony of New York (17th century), the Attorney General was an appointee of the Royal Governor who was, himself, an appointee of the English Crown. About 1700 the intermediary was dropped and appointment of the Attorney General was vested directly in the Crown.

In 1777 the first Constitutional Convention established the State of New York, appointed all the State officers deemed necessary in the establishment of the new state, and provided for a Council of Appointment to make future appointments. Under this system, appointment of State officers was the rule rather than the exception. The Attorney General could be removed at any time and frequently was removed. There was neither difficulty nor hesitancy in removing him when a majority of the Council was of the opposite political faith. The fact of the matter is that under this system the average tenure was less than 2-1/2 years.

At the Constitutional Convention of 1821 a proposal was made that the Attorney General be appointed by the Governor with the consent of the Senate. This was rejected by the Convention and, instead, provision was made that the Attorney General, together with other important State officials, be elected by the Legislature.

By 1846 there was an overwhelming demand for the popular election of the Attorney General. This was recognized by the Constitutional Convention of 1846 and made a part of our Constitution.

Historically, traditionally, and as a matter of basic constitutional mandate, we have continued to elect our Attorneys General in New York State for the past 131 years. This is not to say that the question has not been raised or the problem re-assessed from time to time in the light of vastly changed conditions. As a matter of fact, at every Constitutional Convention since 1846 the question was reconsidered and in each instance the Convention adhered to the elective system.

Comparatively considered, and without going into the historical background of each case, it may be noted that in forty-two of the fifty States the Attorneys General are elected by the people. Interestingly, included among the States which follow the elective system are many of the most populous states in the Union (for examples: New York, California, Illinois, Ohio, Michigan and Massachusetts).

POINTS IN SUPPORT OF AN ELECTED ATTORNEY GENERAL

1. Independence.

While the history of the office of the Attorney General of New York includes efforts to make the Attorney General an appointed officer, it is significant that for upwards of one hundred years without interruption that office has survived as one to be filled by the elective process. Thus, retaining the Attorney General as an independent constitutional officer to be elected by the People of the State not only reserves to the People their traditional right to select a candidate of their choice as the State's highest ranking legal official, but has the added advantage characteristic of a democratic government of greater assurance that the laws of the State will be construed and applied objectively and without favor.

Exactly 100 years ago, at the Constitutional Convention of 1867, when that issue was considered, the report of the discussion states in part:

"The Attorney General holds a dignified position; he has important functions and acts on his own judgment and responsibility" and further, "It was not the Governor alone, but the people who wanted an Attorney General. He was to look after the interest of the people in the State and take care of their money so far as action in the courts was concerned * * *," and again, "If he (the Attorney General) does his duty it matters little to the people whether he is

in accord with the Governor or not." "Indeed," observed a delegate, "it may be to the interest of the people that the Attorney General should not always be in accord with the Governor," and more, "that he should be a man who could not be ordered by anybody. His opinions should be above any fear of the loss of his office. His duties are of the highest order * * * as high as those of any judicial officer; and he should be as independent as any judge. The Governor should have no more power to remove the Attorney General than he has to remove the Chief Judge of the Court of Appeals. His opinions are upon great questions, affecting the great questions of the State. He ought not be a mere creature of the Governor to supervise his vetoes and obey his dictation."

This independence of action and expression is particularly significant with respect to opinions of the Attorney General concerning the construction of statutes and the validity and propriety of acts thereunder by other departments and agencies of the State.

All of the various departments and agencies of government turn to the Attorney General for legal advice and for the rendering of Official Opinions. Such opinions are acted upon daily and a great deal of the operation of the State government depends upon the nature of the advice that is so rendered. These Opinions are rendered to all departments of the State government, those under the direction

and supervision of the Governor and those under the direction of other elected officials. It is important to note that the Opinions have a direct and significant impact upon the People in their daily life. Here is a compelling reason why the Attorney General should continue to be independently elected. If the Attorney General is appointed by the Governor, then of necessity his opinions must reflect the philosophy of that Governor or the relationship would not be a compatible one.

An Attorney General does not give partisan advice; he gives legal advice. There is no such thing as "Democratic" law, "Republican" law, "Conservative" law or "Liberal" law. There is simply "law" — and the Attorney General, with the same degree of impartiality and objectivity as a Judge, calls it as he sees it.

The independent status of the Attorney General — the fact that he is the People's choice and is accountable to no one else — is implicit in the wide range of his official activities and duties which are based on the concept of his independence. Thus, he is, ex officio, a member of several boards and commissions, the other members of which are usually representatives of the administration. Thus, it is his duty to defend in Court the constitutionality of an act of the Legislature regardless of whether the current administration, as a matter of policy, supports it or not. And thus, with regard to proposed legislation, it is his duty impartially

to consider its constitutional validity and statutory interpretation and advise the Governor accordingly, regardless of the latter's policy consideration of such bills. If the Attorney General were an appointee of the Governor such functions may be rendered anomalous because the objectivity and impartiality inherent in his independence would necessarily fall with the destruction of his independence.

Furthermore, the responsibility for the effective protection of the consumer and the investor entrusted to the Attorney General (the prototype for similar authority in the Attorney General in many states in the Union) is predicated upon the existence of an independently elected Attorney General who will not be deterred (as during my tenure) in taking the initiative for affirmative action by the opposition of other governmental departments or agencies, the heads of which are appointed by the Executive. My own experience in the past ten years as Attorney General is illustrative of this fact. Thus, the creation in 1957 of the Consumer Frauds and Protection Bureau in the Department of Law was resisted on the ground that there would be duplication of some of the functions of the Banking Department. Similarly, the establishment of the Real Estate Syndication Bureau in the Department of Law was effected despite executive resistance on the ground that the Attorney General would thereby be performing a function in an area presumably

policed by the State Division of Housing. The creation of the Civil Rights Bureau in 1957 was opposed on the ground that it overlapped and duplicated existing functions of the State Commission Against Discrimination. These three bureaus were created by an elected Attorney General who acted on his own initiative in behalf of the people. The important fact is that they were created without clearance from the Executive.

The basic statutes (Executive Law § 63[12] and Business Corporations Law §§ 109 and 1101) confer authority upon the Attorney General to investigate and secure judicial disposition restraining any illegal and fraudulent acts. This power is not circumscribed or qualified by the existence of concurrent jurisdiction in a limited area by other government officials. Such authority of the Attorney General obviously bespeaks an independent Attorney General.

Similar independence is called for in the invocation and enforcement of the State's anti-trust law. The vigorous enforcement in the last ten years of this statute, aided by the expanded powers authorized by the Legislature, has been so singularly impressive as to receive national attention and commendation. The intensity of such activity should not, as is the case elsewhere, be made subject to the decision of a Governor who may be influenced by many factors alien to proper anti-trust considerations. Such enforcement must be left to an independent Attorney General responsible only to

the People for the implementation of the State's anti-trust policy.

My views are based on ten years of close affiliation with all branches of State Government — with the Governor and his Counsel, with the Legislature and its Committees, leaders and members, with the executive departments and agencies and their counsel, with the Judiciary, and with Authorities and local subdivisions and their officers and counsel. The activities of the State are so vast in magnitude, so varied and complex in character — the actions of its constituent elements being occasionally at cross-purposes — that, in the best interests of the People of the State there must necessarily be premised as greater assurance of independence, impartiality and objectivity, an Attorney General who is elected.

In West Virginia, where the Attorney General is elected, the incumbent Attorney General said:

> "I've been an elected Attorney General for two terms, and in the exercise of my duties I could not have fairly represented the agencies of government or the citizens of this State had I been subject to the whims of the executive or subject to political pressures other than the voters.
>
> "* * * In every occasion wherein one would have the authority of appointment, he also would have the 'hammer' on tough questions of policy. No Attorney General should be forced to operate under such an

> arrangement. The mere fact that it would be possible should be precluded."*

The overwhelming weight of opinion in favor of the elective process, predicated on the concept of the independence of the office, is exemplified by expressions of official views throughout the United States. Thus, at the Constitutional Convention of the State of Michigan, held as recently as 1963, in adhering to the elective process, it was said:

> "We favor election of the attorney general, the chief law enforcement officer of the state. In a representative government, appointment of the chief law enforcement officer would place him in a position of obligation which would make his duties more difficult. If the attorney general were appointed, he could be subjected to the influences of the appointing authority. Presently, he is able to make an independent legal judgment which might differ from the political decisions of other members of the executive branch. * * * [T]he governor has to make many decisions. Many of them are political decisions. I don't think that the best interests of the state can be served if the attorney general is appointed so that he must confirm the political decision of the governor. I think that the people of the state of Michigan have a right to the service of an attorney general who can say no, when the law and the interpretation of the law demands that he say no."

The Attorney General of Maine, who is appointed by the Legislature, said:

---

* At my invitation the Attorneys General of virtually all of the States have stated their positions on the proposal here under discussion. Copies of their replies have been submitted to your Committee.

> "[I]f the Attorney General is appointed by the Governor, there is always the question of whether or not he becomes in the nature of a legal rubber stamp and convenient oracle of the law for the Governor's purposes."

Oregon's Attorney General states that "the elected Attorney General is the people's best guarantee of vigorous and impartial interpretation and administration of state law."

Perhaps the most forthright statement of all has come from the Attorney General of Nevada:

> "When you place the chief legal office of the state under the appointing power of the Governor you rob him of the complete independence that is his when elected by the people.
>
> "It is this very independence which results in the fearless and efficient administration of justice."

Although no elective Attorney General has favored an appointive process, it is interesting to note that two appointive Attorneys General are in favor of the elective system. Maine's Attorney General, appointed by the Legislature, has said:

> "I think I am of those who would like to see the Attorney General in Maine elected at large by the people * * *."

And the Attorney General of Alaska, who is appointed by the Governor, has said:

> "Again, from my own experience, if I were given the choice I would be inclined to favor the elective position over the appointive for the simple reason that I believe that a lawyer can function more

> effectively if he has freedom of action in his own specialized field."

It has been argued that the elective process may result in a Governor of one political party and an Attorney General of another, with possible resultant disharmony and friction in the running of the State government. Of course, as a matter of abstract theory, implicit in the concept of independence is the concept of potential disagreement. And it is always possible that incumbents who are influenced solely by political motivations are capable of disruptive tactics. But experience has shown that men who have the knowledge, experience, character and maturity to have attained the high office of Attorney General can be relied on to have a sufficient sense of responsibility and responsiveness to the public need to make such accommodations as the law will permit.

It should be noted that in those jurisdictions in which the Attorney General is appointed, because it is believed that the Governor and the Attorney General should be of the same political faith, the Attorney General is merely a part of the Executive branch of the state. An elected Attorney General, as in New York, is more than merely a part of the Executive branch.

While harmonious relations between the Governor and the Attorney General are unquestionably desirable, it seems that harmony merely for its own sake is too high a price to pay for the loss of the independence which gives greater assurance of effective government in the public interest.

It has been said that the Governor should at all times have an Attorney General with whom confidential matters can be transacted; that the Governor should not be compelled to retain his own counsel. But this is based on the erroneous concept that the Attorney General is the Governor's counsel. He is not the Governor's counsel in the normal sense of the term; he is the People's counsel. This is recognized even in States, like New Jersey, where there is Counsel to the Governor despite the fact that the Attorney General is appointed by the Governor.

The diverse functions of the Attorney General and the Governor's counsel may be succinctly summarized as follows:

(a) Attorney General

1. Litigation in all courts.

(a) Court of Claims - Representing the State and its agencies and officials in all claims based on contracts, torts and appropriations.

(b) All other Courts - Representing the State, the Governor, State Departments, Agencies and Authorities, the Judiciary, and the Legislature.

(c) Defending the validity of statutes which are attacked as unconstitutional.

(d) Habeas corpus matters - criminal and civil.

(e) Affirmative actions in all courts on behalf of the People in such matters as consumer frauds, anti-trust, civil rights, security frauds, realty investment frauds, and theatrical financing and charity frauds.

2. Renders opinions and advises the State, the Governor, the Legislature, and all State departments, agencies and officials.

3. Submits memoranda to the Governor on bills passed by the Legislature.

4. Renders advice on an informal basis to political subdivisions of the State.

5. Exercises criminal jurisdiction under the Executive Law and other statutes.

6. Supersedes District Attorneys when directed by the Governor.

7. (a) Administers registration of brokers, dealers and salesmen who deal in securities, and exercises enforcement powers.

   (b) Supervises public offerings of real estate (syndication, investment trusts condominiums, and cooperatives) and theatrical financing, and exercises enforcement powers.

   (c) Administers registration of theatre box office ticket-selling personnel, and exercises enforcement powers.

   (d) Administers registration of charitable foundations and trusts, and exercises enforcement powers.

   (e) In dealing, in court or otherwise, with estates and trusts in which the People are possible beneficiaries, he appears on behalf of the People.

(b) Counsel to the Governor

1. Advisor to the Governor.
2. Prepares annual message and special messages of the Governor.
3. Prepares Governor's legislative program.
4. Assists in the preparation of the departmental legislative programs.
5. Handles complaints against officials.
6. Extradition.
7. Clemency.

A further distinction in function between the Attorney General and Governor's counsel resides in the affirmative work of the Attorney General on behalf of the People which is constitutionally and statutorily imposed upon him. Thus, to name but a few of his functions, some of which have been mentioned, he acts affirmatively in matters of consumer protection, civil rights, anti-trust matters and charity frauds. Constitutionally, he acts under Article I § 6 of the Constitution against public officers and employees who refuse to waive immunity or testify in grand jury investigations. There are other statutory provisions, too numerous to mention, under which the Attorney General is required to take affirmative action. The most recent of those provisions, as an example, is the new Public Employees' Fair Employment Act (Laws of 1967, Chap. 392) under

which the Attorney General is now placed in the highly important field of public labor relations.

Obviously, because of the overriding primary allegiance of the Attorney General to the People, rather than to the Governor, the basis of the independence which is the hallmark of the office of the Attorney General, it is perfectly proper that the Governor have his own counsel. There is no antipathy between the two offices. Despite some unavoidable duality of operation, they complement each other.

That the existence of both positions does not create a problem of unavoidable friction is attested to by actual experience in our own State when we had a Democratic Governor with Counsel of his political persuasion and a Republican Attorney General. Dean Daniel Gutman, former Counsel to Governor Harriman, wrote to me as follows:

> "During the four years in which I served as Counsel to the Governor, I enjoyed a compatible and co-operative relationship with the Attorneys General, - first, the present Senator Javits and then yourself.
>
> "On occasions we found ourselves in disagreement. This occurred very rarely, and it served to reinforce my opinions on the more numerous occasions when we were in complete accord.
>
> * * *
>
> "In my opinion the broad scope of the Attorney General's activity, his

> great and varied responsibilities and the volume of business, particularly in a State such as ours, requires that this official be elected rather than appointed. I see nothing worthwhile that can come from a change in the present system that has been in existence here as in most other States, for so many years."

Judge Samuel I. Rosenman, who was counsel to Governor Roosevelt, observed that perhaps ten per cent of his time was devoted to legal matters. He added:

> "Neither the Counsel to the Governor nor Counsel to the President can render any official opinion. Official opinions can come only from the Attorney General; so it is not quite accurate to say that the Counsel takes the place of the Attorney General in serving the Chief Executive."

Although Judge Rosenman leaned toward the appointive method, he conceded:

> "Having said all the above, presenting the pros and cons, I don't think I am completely convinced on either side. It is as Oscar Hammerstein said in THE KING AND I a 'puzzlement.'"

Governor Poletti, who was counsel to Governor Lehman, observed:

> "I do not favor the discontinuance of the Attorney General as an elected official and his appointment by the Governor."

Pointing out that, since the Governor and the Lieutenant Governor are elected as one, the only two remaining statewide officials who are elected are the Attorney General

and the Comptroller. With perspicacity born of a lifetime of experience Governor Poletti added:

> "The people are smart enough to vote for each of these officials, and there is serious danger in reducing the scope of participation by the people in their government.
>
> * * *
>
> "* * * In all events, I believe the State greatly benefits from the independence of the Attorney General and Comptroller."

2. Separation of Powers - Checks and Balances.

As a corollary to the concept of the independence of the office is the fundamental concept of a democracy respecting the separation of powers--the system of checks and balances. "Appointment" of the Attorney General is incompatible with the doctrine of the separation of powers. There is nothing intrinsically wrong with the concept of a Governor of one political party and an Attorney General from another. They can and do often act as a "check" upon one another and if, as a result, there is occasional friction, this is a healthy phenomenon which a viable and dynamic political society can survive and, indeed, probably be the better for it. In certain situations, given a weak or ineffectual Legislature and a strong and forceful Governor, the only effective balancing and checking power may come

from an Attorney General who publicly espouses a responsible opposing point of view.

The Attorney General of Kansas expressed the point well:

> "[T]he elected attorney general is a further extension of the system of checks and balances which was incorporated into the form of government initiated by our founding fathers and which has flourished in the United States since its beginning."

To the same effect is the statement of the Attorney General of Minnesota:

> "[T]he office of Attorney General has developed in state government in a unique way. State legislatures do not have the broad investigative power that the Federal Congress has. In most states -- one of the most important statewide investigative officials is the Attorney General. If an Attorney General was to be appointed by the administration he then becomes solely dependent upon it and tends to overlook problems which develop within that administration.
>
> * * *
>
> "* * * [U]ntil there is some alternative form of check and balance on state government, a broadly based elected Attorney General is preferable to one appointed by the Governor."

The Attorney General of the State of Washington, an elected official, has said:

> "The reason I would like to see the Auditor and Attorney General elected by the people is because I believe in

> government there are two necessary ingredients--money and law. These are so important that I think an official personally responsible to the electorate should be chosen by the people to provide the necessary check and balance.
>
> * * *
>
> "The law is the whole touchstone of our Democratic form of government. The man or woman who says the law is or is not being followed should be, in my belief, directly responsible to the people."

Vermont's Attorney General has stated:

> "Having an independent Attorney General, elected by the people of the state as a whole, is but another check and balance in state government that in the all important realm of legal and constitutional interpretations is essential to the sound functioning of state government, * * *."

The Ohio Attorney General believes that the elective status of the office "constitutes one of the more effective balances of the Executive Department of the State." He adds:

> "The Attorney General's office should be run as a law office, with a completely objective approach to the legal problems of an administration, and should not be relegated to a position of house counsel finding ways and means to support executive policy. By being elected the Attorney General is responsible only to the people of the state and this, to my way of thinking, is as it should be."

Maryland's Attorney General summarized the situation very succinctly:

> "From a historical point of view Maryland's system of electing both the Governor and the Attorney General appears to have effectively served the best interests of the people of this State. That system is but another example of the checks and balances so carefully written in the Constitution of Maryland. It is my opinion that to take away from our citizens the right to elect the Chief Legal Officer of the State is to lessen their direct participation in affairs of government, and I vigorously oppose any such change in our traditional practices."

Election results, both on the State level and in the City of New York, reveal that our sophisticated electorate does not always choose a straight party ticket. At the level of Governor and Attorney General, the people should have the right to split their ticket and choose the best candidates even though they are not necessarily of the same political party. Indeed, the split ballot is proof positive that the people, themselves, are not concerned with whether the Attorney General is of the same political persuasion as the Governor.

3. <u>The elected Attorney General has a direct responsibility to the People</u>.

Also as a facet of the "checks and balances" concept and a further corollary of the "independent" status of the

office is the underlying premise, which has historical, traditional and logical validity, that only the People should be in a position to command the Attorney General's undeviating allegiance and loyalty. The correlative of this concept is that the Attorney General's prime and direct responsibility is to the People.

An elected Attorney General is imbued with a deeper sense of direct responsibility to the public from whom he has received a mandate than is the appointed official whose authority springs singularly from one individual. The elected official innately senses this strong personal and direct responsibility to the People and is thereby inspired to a greater degree of creativity, a broadened initiative and an increased desire to innovate in their behalf. The reaction is almost intuitive. As a result, he is free to act without clearing a matter with the executive hierarchy or obtaining the Governor's approval. I have already detailed my experience in this regard when I established the Consumer Frauds and Protection Bureau, the Real Estate Syndication Bureau and the Civil Rights Bureau in the Department of Law. Also, in this connection, I wish to point out that the Department of Law prepared and had introduced during my tenure, without executive clearance, our own legislative program, in the public interest, to protect

the consumer, the investor and the legitimate business man, as well as bills to reinforce civil rights.

The Attorney General of Wisconsin expressed the concept well:

> "An Attorney General also performs numerous functions independently of any state agency. I refer particularly to his activity in such fields as consumer protection and anti-trust enforcement. I believe that an Attorney General who is responsive to the needs of the people can better fulfill these duties which have been entrusted to him by the people.
>
> "It is my firm opinion that a State Attorney General should be an elected official. He should represent and be responsive to all of the people of the state. I believe that the activity of the Attorney General in the field of consumer protection alone is an outstanding example of the way in which elected Attorneys General respond to the needs of their constituents. Appointed officials who are not directly responsible to the voters are not nearly as sensitive nor as responsive to their needs."

Virtually all of the Attorneys General stress "accountability" to the People, rather than to the appointing officer; that the Attorney General should be clothed with an independency of action in protecting the public interest; that, even at the expense of potential lack of harmony, he should enjoy a freedom that is unfettered by any domination whatsoever; and that as a lawyer he should not be an employee, but rather should be allowed freely to exercise his proper

functions both as an officer of the court and as an attorney, bound only by the ethics of his profession and his oath of office.

4. People's right of recall.

Because of the fact that an elected Attorney General bears the burden of direct responsibility to the electorate which give him their mandate, he is subject to the "recall" prerogatives of the electorate. If they are dissatisfied with the performance of their elected Attorney General, they can replace him at the ensuing election. An appointed Attorney General would deprive the electorate of this substantial and salutary power.

The correlative of the right to recall an incompetent incumbent is the right to retain a competent incumbent. This is lost in the case of an appointed Attorney General because, no matter how efficient, competent or successful an appointed Attorney General may be, upon a change of administration he is usually turned out of office.

CONCEPT OF A "DEPARTMENT OF JUSTICE"

I am aware of Proposition No. 49 (introduced by Mr. Hull) which provides for the appointment of the Attorney General by the Governor and for a Department of Justice to be headed by the Attorney General and which further provides that "the legislature shall pass appropriate legislation for the implementation of this department." I am also aware of Resolution No. 24 (introduced by Mr. Sand) to direct the Committee on the Executive Branch to prepare and present a proposition to establish a Department of Justice, "into which shall be consolidated all of the functions, powers, duties and responsibilities of state government in connection with or relating to law enforcement, including, but not limited to, the prevention and investigation of crime, and the detection, identification, apprehension, prosecution, custody and rehabilitation of persons accused or convicted of crime."

Proposition No. 49 is too general and, therefore, difficult for present comment because it leaves everything to legislative implementation. Resolution No. 24 seems to indicate that all police departments, local as well as State, all Sheriffs and District Attorneys, all Correctional, Reform and Prison facilities, as well as the State Division of Parole, shall be under the jurisdiction of the proposed Department of

Justice. It does not define the projected department with sufficient particularity nor reflect the magnitude or complexity of the proposal. Nothing is said of the existing broad civil jurisdiction of the Department of Law.

However, I do have some recommendations which are more appropriate for legislative action:

(1) I am in favor of the greatest coordination and cooperation in the field of law enforcement — in a program such as is conceived under the recently created Crime Control Council (Laws of 1967, Chap. 167), under which Governor Rockefeller has provided an impressive and extensive program. Ex officio, the Attorney General or his designee should be a member of the Crime Control Council.

(2) Another area of interest is the relationship of the Attorney General and the District Attorneys. I am not in favor of appointed District Attorneys under the jurisdiction of the Attorney General. I believe that the District Attorneys should continue to be elected public officials.

However, I am of the opinion that there is room for a closer relationship between the Attorney General and the District Attorneys; this would result in better enforcement of the criminal laws. The Attorney General could be authorized to provide a forum for inter-county cooperation between District Attorneys. Periodic meetings could be mandated at

which attendance by District Attorneys or their representatives would be required. The Attorney General could prepare and disseminate information of common interest and bring law enforcement to new peaks of efficiency and excellence.

(3) Some local prosecutors are ill-equipped to handle complex criminal appeals because of a limited staff. The prosecutors should be permitted to call on the Attorney General for advice, cooperation and aid in appellate matters. To this end, provision could be made for the handling of criminal appeals by the Attorney General if requested to do so by the District Attorneys.

When specific and concrete provisions defining the jurisdiction and powers of a "Department of Justice" are presented, I shall be pleased to submit another Position Paper in which I shall make comments on the proposals.

CONCLUSION

In the interest of uniformity and consistency, the Attorney General should be constitutionally designated as the sole and exclusive representative of his public clients in all courts. In this connection I strongly support Proposition No. 365 (introduced by Mr. Reidy), which provides that -

> "The attorney-general shall be required and it shall be his duty to represent and appear for the state and all branches of the state government and all state departments, agencies, bureaus, officers and authorities in all litigation in which they shall be involved in all courts, and they shall be represented in the courts by no other persons than the attorney-general or a member of his staff."

The basic duties and powers of the Attorney General should remain intact with the addition set forth in Proposition No. 365. The Attorney General's activities as the State's chief legal officer are vital to the Legislature, to the various departments and agencies of State Government and, above all, to the People of the State of New York.

All can be accomplished, however, only if the Attorney General has the independence of an elected public official. That the elective status is productive of the best results is attested to by my immediate predecessors in the office of Attorney General. Our tenure covers the period of the past thirty-five years, during which we have experienced the deepest economic recession in our history as well as the longest period of economic well-being, during which we have had global conflicts, and during which we have come into the nuclear and the space age. Attendant upon these vast and fundamental changes have come a myriad of novel problems with which the Attorneys General have had to cope and for the most part they have successfully and vigorously responded

to the challenges. During these past thirty-five years, the Attorneys General of New York State have been John J. Bennett, Nathaniel L. Goldstein, Jacob K. Javits and I. My three immediate predecessors have authorized me to state that they favor the retention of the office on an elective basis. And so do I.

To sum it up - an elected Attorney General has a measure of independence and a sense of personal and direct responsibility to the public. The elected official has a natural and impelling desire to be creative and to exercise broader initiative in the service of the public. He is free of the fear of dismissal by any superior official if he should exercise contrary independent judgment. He is in the best position to render maximum service to the People and impartial advice to the Governor, the Legislature and State departments and agencies. He can appear in Court without fear or favor - an attorney in the fullest and finest sense of the word.

Dated: Albany, New York, June 1, 1967

Respectfully submitted,

LOUIS J. LEFKOWITZ
Attorney General

ADDENDUM

Former Attorney General Nathaniel L. Goldstein, after declaring that he is for an elective Attorney General, stated:

> "During my tenure as Attorney General, I did render opinions in opposition to the wishes of the Administration when, in due conscience, I felt that my interpretation was the legal and proper one. Had I been subject to the Governor's appointive and removal powers, I might have found myself in a very difficult and awkward position."

Another good reason

ONE WAY for Alaska to avoid having legislative lawyers sue administration lawyers is to elect an attorney general who is beholden to neither..

Add that to a long list of reasons to make the attorney general one of the very limited number of elected officials in the State of Alaska. As a matter of fact, there are only two — the governor and the lieutenant governor. Commissioners who head the various administrative departments are appointed by the governor.

This extremely restricted opportunity for the people to elect the public officials who presumably serve them is a unique provision of the Alaska Constitution. It was deliberately adopted, for the reason that those who were here at the time the new state was created wanted a powerful chief executive.

They wanted leadership and accountability. When it came to steering this new ship of state, those Alaskans back in the middle '50s wanted a single captain on the bridge.

IT WAS a good idea. There was need for a powerful hand at the helm of a state with little income, a small population and a million needs. The governor had marching orders to assemble a team and get the show on the road — with the concurrence, of course, of the legislative branch.

It had a fine beginning. For the most part, the executive and legislative branches worked in concert toward a common goal during years of economic struggle.

But not even the visionary constitutional delegates, and the voters who applauded their work in those dimming last days of the territory, could have perceived the day when Alaska would be rolling in money and a single field could produce a trillion dollars worth of oil.

The coming of that wealth produced a Mount St. Helens eruption in the Juneau bureaucracy. Not only did executive agencies swell in size and number, the legislature ballooned as well. It added offices and staffs and interim agencies and even went so far as to hire its own legal counsel, separate from the attorney general's office.

OVER THE YEARS, the attorney general became more the lawyer of the governor than of the state government as a whole. That produced an adversary situation with the legislators who often wanted a different legal opinion than they could expect from the Department of Law.

Their answer was to hire lawyers who would provide opinions supporting the legislature's interests. The result is that public funds are used to finance one set of state lawyers doing battle with another set.

An independent attorney general's office, headed by an elected chief not beholden either to the governor or the legislature, could provide both with unbiased and unfettered legal guidance. The people, as well as state officials, would be better served.

Let the voters decide

IN FORTY of the 50 states, the attorney general is elected to his post.

It is a system that obviously works well, because the people are the ones who decide who should fill this high office. And an attorney general answerable to the people is one who is responsive and responsible.

It's strange, therefore, to see the burning vigor that marks the opposition to letting the people of Alaska choose their attorney general. Yet there are those who apparently fear the people.

For example:

"I can think of no single change that would be more damaging, more harmful, more dangerous to the character of government."

THAT'S THE astonishing view of Superior Court Judge Thomas Stewart of Juneau, who testified the other day before a legislative hearing on a proposed constitutional amendment that would require the election of Alaska's attorney general, who is now an appointee of the governor and answerable only to him.

More damaging? More harmful? More dangerous?

How can this be? What is being proposed is part and parcel of the democratic form of government in which the people have the right to elect their leaders. Are elections damaging, harmful and dangerous to the character of our government?

We confess to lacking the judicial wisdom that graces members of Alaska's Superior Court. But all along we thought the character of our government was rooted in the elective process.

There are many Alaskans — and we're among them — who believe the present system of having the attorney general appointed, rather than elected, has proved less than satisfactory.

We don't buy the argument of former Attorney General Norm Gorsuch that "legal competence and electablity are not necessarily equal." The statement is incomplete. The rest of it is that "legal competence and appointability are not necessarily equal, either."

IT'S QUITE POSSIBLE that an incompetent lawyer might be elected attorney general. But his shortcomings would be readily evident and it's a sure thing that he would serve only a single term.

It's also quite possible — in fact, very likely — that some extremely capable men and women would seek election to the office, were it up to the people to decide. An elected attorney general would be his or her own person, with his or her reputation on the line. And he or she would be no lackey to any governor, or any legislature.

There's no doubt that were the office an elected position, it would be used by many as a stepping stone to higher office — the governorship, for example, or a seat in the U.S. House or U.S. Senate. But what's wrong with that?

Rep. Fred Brown, the Fairbanks Democrat who heads the House Judiciary Committee sponsoring this constitutional change, sees this as a means of strengthening government. So do we. And we hope he prevails so that this matter can be brought to the ballot for a vote of the people.

The better way

IT'S TOO BAD that former Attorney General Avrum Gross doesn't think it's a good idea for Alaskans to elect their attorney general. But just because he feels that way detracts not one iota from the merit of the proposal.

It would be astonishing were Mr. Gross, who now teaches a couple of courses at Stanford University law school, to come out for an elected attorney general. His public career has been as an appointed legal spokesman for Gov. Jay Hammond.

Fortunately, there are other legal experts — whose qualifications and public service careers are are least as good as those of Mr. Gross — who feel precisely the opposite. They offered testimony contrary to that of Mr. Gross by satellite communication facilities in a hearing last week before the House Judiciary Committee.

The attorneys general of Pennsylvania and Colorado and the assistant attorney general of California told the committee that an elected attorney general is more independent of the governor and administration and thus less vulnerable to political repercussions from decisions.

FORTY of the nation's 50 states elect their attorney general. Alaska is one of only five states where the office is filled by appointment of the governor. In the other five the selection is made in a variety of ways, including legislative appointment.

Mr. Gross, however, thinks the Alaska way is best. Were it otherwise, he contended, the governor would attempt to shift blame for administration failures onto the attorney general rather than have a clear responsibility himself.

That's a pretty feeble defense of the present system.

If anything goes wrong in the administration of any program, regardless of the attorney general, any governor is going to be politically adept enough to dance out of the line of responsibility.

THE ATTORNEY general of Pennsylvania told members of the Judiciary Committee that Pennsylvanians voted overwhelmingly in favor of a constitutional amendment to make the office elective because they felt the attorney general was "not responsive to public needs" and that there was a "cozy arrangement" between the attorney general and the governor.

Colorado's attorney general said an elected attorney general carries "at least the aura of having an independent political base" and can say no to the governor "when the governor ought to be said 'no' to."

An assistant California attorney general said an elective attorney general is more efficient than an appointive one and "is not necessarily a threat to the functioning of the governor."

Those comments make sense for Alaska. And the legislature should take steps to bring this constitutional change to the ballot.

There seems little doubt that the amendment would be approved, if the legislature would only give the people a chance to vote.

Memo to politicians

STATE OFFICIALS who depend on votes of Alaskans for their public offices would be wise to arrange for the attorney general to be elected. A statewide poll by Dittman shows that public support is overwhelming.

In response to the simple question "Should the attorney general be elected?" 61 percent responded affirmatively and 27 percent preferred appointment.

That was the quick reaction from Alaskans scattered far and wide. The idea of electing that important official was favored by 73 percent of those in rural areas, 63 percent in Central Alaska (Fairbanks), 56 percent in Southcentral, 67 percent in Anchorage.

Only in Southeast Alaska was the response different. There it was 41 percent for appointment and 42 percent for election.

A SECOND QUESTION put to the same respondents built up still more the case in favor of the elective process.

It cited some of the powers that go with the office of attorney general. Upon hearing them, the respondents were 71 percent for and only 21 percent against.

That question put it this way: "If you knew that the attorney general of Alaska, who is appointed, also appoints all state prosecutors and district attorneys throughout the state, would you support having the attorney general remain an appointed position or would you support the attorney general becoming an elected position?"

Those favoring election gained 10 points while those for appointment lost 6 points.

TWO MESSAGES are handed to the politicians in that poll. The first is that a substantial majority of Alaskans want their attorney general elected, not appointed. The second is that the proposal gains strength when Alaskans are reminded of the power that lies in the office.

A politician can readily see the significance. He is disappointing his constituents if he ignores the proposal and he may discover his reelection in jeopardy if the day comes when a candidate campaigns against him on that issue.

In rural areas the final lineup was 85 percent for election. In Central Alaska 75 percent. In Southcentral 71 percent and in Anchorage 74 percent. Even in Southeast Alaska many voters changed their minds on the second question. The final tally there was 54 percent for election and only 34 percent for appointment.

No matter how you cut it

THE UNIVERSAL preference of the majority of Alaskans for electing the state's attorney general was pointed up in many different ways in a Dittman poll that showed 71 percent in support and only 21 percent opposed.

Dittman reported that the election proposal has overwhelming support in almost every bracket of the population, be it based on age, sex, income, educational attainment, party registration.

AMONG ALASKANS who have registered as Democrats or Republicans, 72 and 73 percent, respectively, favor election. Non-partisans were 69 percent in favor. Alaskans aged 18 to 24 are 77 percent in favor, those 56 and over, 75 percent and those in between range from 68 to 72 percent.

The poll showed 76 percent of the women and 66 percent of the men favor election. Homemakers are 75 percent for it. Private and public sector employees as a whole favor it 71 to 74 percent. Among state employees, however, the idea is not so popular. Yet more than half (56 percent) are for it.

Support of the election proposal declines as family incomes increase but the majority in all categories favor it. In low income groups 77 percent favor it while in higher income households 67 percent do.

Curiously, the idea of electing the attorney general is more popular among those who don't bother to register, and hence probably don't vote, than among those who do. Those not registered showed 73 percent for election while registered voters were 71 percent favorable.

THE RESULTS of that Dittman survey will be engraved on the minds of those who plan political campaigns. And Dittman's final analysis might inspire some of them to get on the bandwagon to amend the constitution so as to give the people the elective power they want.

That analysis was, "Presenting information regarding the attorney general's powers and responsibilities causes a strong shift to the elected option — especially among the 'undecided' respondents. In total, the undecided percentage declines from 12 to 7½ and more than 5 percent of those who favored the current appointed status changed their minds to support the elected provision when it was learned that the attorney general has broad appointive powers of his own."

Weak arguments

RIGHT OFF THE BAT, there was a loud objection to the Anchorage Crime Commission's proposal that Alaska's attorney general and the local prosecuting attorneys should be elected. The complaints came from the appointed attorney general and one of his appointed district attorneys.

The flaws they see in the proposal are worthy of public review.

For one thing, they said, electing such officials would bring the justice system into politics. They would become subject to pressure from members of the public with axes to grind.

For another, they argue, lawyers would run for attorney general and district attorney in hopes of using the positions as stepping stones to higher political office.

BUT THOSE aren't necessarily flaws. On the contrary, it's possible to argue that those prospects would offer an enormous improvement in the way things are done in Alaska.

Take the second objection first. Under the Alaska constitution, only two state government officials are elected statewide — the governor and the lieutenant governor. Everybody else in the system, including the judges, is appointed by the governor or by department heads appointed by him.

The only other elected officials in Alaska are the city or borough mayors, elected locally; 60 members of the legislature, elected in local districts, and the three members of the state's congressional delegation, elected statewide. Not much of a stepladder on which people interested in public service can climb toward higher office.

An elected attorney general naturally would be looked upon as a potential candidate for governor or U.S. senator or congressman. What's wrong with that? It might be a powerful incentive for the one occupying that spot to do an outstanding job.

AS TO THE COMPLAINT that an elected attorney general might be subject to public pressure, again the advantages are compelling.

Why shouldn't the attorney general have to dance on a hot public griddle if the people become alarmed over deficiencies in the administration of justice?

The system as it now exists makes the attorney general the personal lawyer of the governor, his political defender and his legal arm in waging political warfare against the legislature and the public.

So long as he remains protected by the governor's skirts, the attorney general is immune from public pressure. All kinds of policies can be legitimatized, even though they might infuriate wide segments of the public and frustrate the aspirations of the people.

Legal opinions issued by the attorney general bind state agencies. They can be tools of the governor to guide, maneuver, control and stop all kinds of enterprises — economic and otherwise.

An attorney general answering to the public through the political process would have the freedom to respond to public concerns in ways that are not possible now.

ALASKA STATE LEGISLATURE
HOUSE OF REPRESENTATIVES

March 29,1983

Peggy Mentele
207 West 22nd
Anchorage, Alaska 99503

Dear Ms. Mentele:

Thank you for taking the time to write expressing your concern about HJR-7, the election of the Attorney General.

I, too, used to oppose the election of the Attorney General. However, after the Committee's review of our past several office holders and what is and has been done by other states (45 have elected Attorney Generals), I began to change my stand on the issue.

Having just watched the present Governor and Attorney General pull out a stop and use every trick they had to interfere with HJR-7's passage, I voted for the election with a clear mind.

Thank you again for vour Public Opinion Message and for becoming involved in the legislative process.

Sincerely,

Representative Charlie Bussell
Chairman, Committee on Judiciary

★ A. Defend state law when challenged on federal constitutional grounds.
B. Conduct litigation on behalf of state in federal and other states' courts.
C. Prosecute actions against another state in U.S. Supreme Court.
* Sues in federal courts.
** Attorney general has exclusive jurisdiction.

(a) In certain cases only.
(b) In certain cases only.
(c) When assisting the local prosecutor in the appeal.
(d) Can appear on own discretion.
(e) In certain courts only.
(f) If authorized by the governor.
(g) Because there are no local prosecutors.
(h) Except in cases in which the U.S. Attorney is representing the Government of the Virgin Islands.

Quoted in Alaska State Hous. Auth. v. Dixon, Sup. Ct. Op. No. 793 (File No. 1529), 496 P.2d 649 (1972); Warren v. Boucher, Sup. Ct. Op. No. 1205 (File No. 2316), 543 P.2d 731 (1975).

Section 23. Reorganization. The governor may make changes in the organization of the executive branch or in the assignment of functions among its units which he considers necessary for efficient administration. Where these changes require the force of law, they shall be set forth in executive orders. The legislature shall have sixty days of a regular session, or a full session if of shorter duration, to disapprove these executive orders. Unless disapproved by resolution concurred in by a majority of the members in joint session, these orders become effective at a date thereafter to be designated by the governor.

The constitution vests no power in the judiciary to define the specific functions of the principal departments in the state government or the units of the executive branch, and in the absence of express authorization or an overriding constitutional imperative, the judiciary may not bequeath such a power to itself. Granato v. Occhipinti, Sup. Ct. Op. No. 1962 (File No. 3756), 602 P.2d 442 (1979).

Thus, superior court cannot order home study by department of health and social services. — The superior court does not have the authority to order the Alaska department of health and social services, division of social services, against its will, to conduct a home-study in a private custody dispute. Granato v. Occhipinti, Sup. Ct. Op. No. 1962 (File No. 3756), 602 P.2d 442 (1979).

The legislative veto power granted in this section and Alaska Const., art. X, § 12, is the power to change statutes, not rule-making power, which is the power to interpret and implement statutes. State v. A.L.I.V.E. Voluntary, Sup. Ct. Op. No. 2022 (File No. 3670), 606 P.2d 769 (1980).

The creation of the Alaska Mortgage Adjustment Agency was not a change in the organization of the executive branch of government requiring the force of law. Suber v. Alaska State Bond Comm., Sup. Ct. Op. No. 344 (File No. 651), 414 P.2d 546 (1966).

Section 24. Supervision. Each principal department shall be under the supervision of the governor.

Section 25. Department Heads. The head of each principal department shall be a single executive unless otherwise provided by law. He shall be appointed by the governor, subject to confirmation by a majority of the members of the legislature in joint session, and shall serve at the pleasure of the governor, except as otherwise provided in this article with respect to the secretary of state. The heads of all principal departments shall be citizens of the United States.

Revisor's note. — Senate Joint Resolution No. 2, "changing the name of the secretary of state to lieutenant governor" in 16 sections of the Alaska Constitution, approved by the voters August 25, 1970, inadvertently omitted express amendment of this section.

The provisions of this section and § 26 of this article are clear and unambiguous. Bradner v. Hammond, Sup. Ct. Op. No. 1297 (File No. 2802), 553 P.2d 1 (1976).

This section explicitly empowers the governor to appoint and dismiss the head of each principal department. Bradner v. Hammond, Sup. Ct. Op. No. 1297 (File No. 2802), 553 P.2d 1 (1976).

It subjects these executive appointments to confirmation by a majority of the members of the legislature

in joint session. Bradner v. Hammond, Sup. Ct. Op. No. 1297 (File No. 2802), 553 P.2d 1 (1976).

Confirmation is part of executive power of appointment. — Confirmation is not a distinct legislative power, but rather a part of the executive power of appointment which has in turn been delegated in some specific instances by constitution to the legislative branch of government. Bradner v. Hammond, Sup. Ct. Op. No. 1297 (File No. 2802), 553 P.2d 1 (1976).

This section and § 26 of this article limit legislative checks on governor's power to appoint. — The lack of ambiguity in this section and § 26 of this article mandate that this court interpret these express provisions as embodying not only the maximum parameters of the delegation of the executive appointive authority through the legislative confirmation function but, further, that they delineate the full extent of the constitution's express grant to the legislative branch of checks on the governor's power to appoint subordinate executive officers. Bradner v. Hammond, Sup. Ct. Op. No. 1297 (File No. 2802), 553 P.2d 1 (1976).

This section and § 26 of this article mark the full reach of the delegated, or shared, appointive function to Alaska's legislative branch of government. Bradner v. Hammond, Sup. Ct. Op. No. 1297 (File No. 2802), 553 P.2d 1 (1976).

Section 1, ch. 82, SLA 1975, is unconstitutional. — Section 1, ch. 82, SLA 1975, which amends AS 39.05.020 and purports to authorize legislative "meddling" in the exercise of an executive power, i.e., the appointment of executive officials, is unconstitutional because it is violative of separation of powers requirements. Bradner v. Hammond, Sup. Ct. Op. No. 1297 (File No. 2802), 553 P.2d 1 (1976).

Submission of names for confirmation. — Neither custom nor law requires the governor to submit the names of the heads of principal departments to the legislature for confirmation when they carry over in office following a gubernatorial election. January 25, 1979, Op. Att'y Gen.

Applied in Larson v. State, Sup. Ct. Op. No. 1430 (File No. 2433), 564 P.2d 365 (1977); Buckalew v. Holloway, Sup. Ct. Op. No. 1988 (File No. 4058), 604 P.2d 240 (1979).

Section 26. Boards and Commissions. When a board or commission is at the head of a principal department or a regulatory or quasi-judicial agency, its members shall be appointed by the governor, subject to confirmation by a majority of the members of the legislature in joint session, and may be removed as provided by law. They shall be citizens of the United States. The board or commission may appoint a principal executive officer when authorized by law, but the appointment shall be subject to the approval of the governor.

(Proposed Amendment)

Confirmation and term of office. Unless otherwise provided by law, the governor shall appoint the members of all state boards and commissions, and the members may be removed as provided by law. Unless confirmation is otherwise provided for in this article, the legislature shall determine which state board and commission members are subject to confirmation by the legislature. Confirmation of board and commission members subject to confirmation under this section shall be by a majority of the members of the legislature in joint session.

MEMORANDUM

TO: Representative Fred Brown, Chairman
House Judiciary Committee

ATTN: Pete Froehlich

FROM: Deb Pomeroy

RE: Election or Appointment of Attorneys General in Other States
Research Request 81-91

You asked that we provide a breakdown of the 50 states showing which states elected their attorneys general, and which states appointed them.

According to the 1980-81 edition of Book of States (see attached table), 40 states have a constitutional provision requiring the public election of the attorney general. These states are listed below:

Alabama	Illinois	Missouri	Pennsylvania
Arizona	Iowa	Montana	Rhode Island
Arkansas	Kansas	Nebraska	South Carolina
California	Kentucky	Nevada	South Dakota
Colorado	Louisianna	New Mexico	Texas
Connecticut	Maryland	New York	Utah
Delaware	Massachusetts	North Carolina	Virginia
Florida	Michigan	North Dakota	Washington
Georgia	Minnesota	Ohio	West Virginia
Idaho	Mississippi	Oklahoma	Wisconsin

Three states, Indiana, Oregon and Vermont, have a statutory requirement that the attorney general be elected by the public.

Of the states that have appointed attorneys general, Hawaii, Wyoming and New Jersey require Senate approval of the Governor's appointment; New Hampshire requires Council approval; and Alaska requires approval by both the House of Representatives and Senate.

STATE OF ALASKA
PRELIMINARY STATEMENT OF FISCAL IMPACT

Bill No: SS HJR 7 Date on Bill: 2/11/83
Title: "proposing amendments to the Constitution..relating to the election of the attorney general"
Sponsor: Uehling, Ward et al
Requestor: House Judiciary Committee

1. Estimated fiscal impacts on: Office of the Governor, Division of Elections

a. Expenditures:

(Thousands of Dollars)

			FY 83	FY 84	FY 85	FY 86		
Capital								
Operating				-0-	-0-			
Total								

b. Revenues:

Revenue								

2. Source of funds to offset fiscal impact of bill:

3. Assumptions: Implementation of this resolution would result in a Constitutional amendment question to be asked in the 1984 general election. As a single question on the ballot it would not incur a fiscal impact.

4. Disclaimer:
This statement has not been reviewed by the OMB in the Office of the Governor. It doe not represent the policy of the Sheffield Administration or the final estimate of fisc impact.

CSSSHJR No. 7 (Judiciary)
Analysis

This resolution provides for a ballot proposition that would, if approved by the voters, amend the state's constitution by changing the position of attorney general from an appointed office to an elected office. The proposed amendments would also remove the governor's organizational and supervisory controls over any function or unit of government headed by the attorney general.

These controls are normally maintained through executive branch procedural requirements imposed on other executive branch agencies by the Department of Administration and the Office of Management and Budget. The controls are exercised by requiring that other departments obtain OMB's and Administration's approval for: purchasing, leasing and supply; professional services contracting; duplicating services; personnel administration and labor relations; equal employment opportunity programs; data processing, information management and telecommunications services; records management; preaudit accounting services; and budget preparation and budget management.

It will be very expensive for an elected attorney general to provide all or most of these services in-house. Although an attorney general may decide to use some of the centrally provided services, key areas such as: personnel; professional services contracting; purchasing, supply and leasing; data processing; and budget preparation and management, would have to be provided in-house if the attorney general's functions are to be at least reasonably free of the governor's supervision. In addition, it is more than likely that attorney timekeeping would be required throughout the Civil Division because most client agencies would not share the same priorities and program goals of an elected attorney general and they would undoubtedly insist that all interagency-funded legal services provided on their behalf be accurately documented and fully substantiated.

Additional costs, expressed in FY 83 dollars, that will provide for complete independence from the organizational and supervisory control of the governor are shown below. Even if the attorney general were to forego a part of this independence, the savings would only amount to 20 or 30% of the total cost because of the necessity to retain in-house control over the essential support services that determine a department's freedom of action.

TOTAL	(34)	1,248,721		1,164,200	2,412,921

Non-salary costs include anticipated space rental of 6,000 sq. ft. for the additional staff of 34, at $2.00 per sq. ft., per month, plus 2,000 sq. ft. each, for records management and duplication services. Also costed in is $200 per month per employee for contractual services to cover telephone, copying and postage. Ongoing commodities are estimated at $150 per month, per employee. New position costs include $1,500 per employee for one-time commodities (furniture and equipment costing less than $500 per item), and $1,200 per employee for new position equipment costing more than $500 per item. Special items include $15,000 for employee recruitment advertising for non-attorney job applicants, $5,000 for personnel system printing, and $20,000 for a data processing program to maintain EEO statistics. Word processors will cost $14,500 each for a total cost of $48,000. Records management equipment include storage devices and microfilm/graphics equipment totalling $75,000. Duplication equipment will cost approximately $150,000. DP terminals for both the DP section and the timekeeping section will cost $50,000. Data processing computer-time should be at $150,000 per year and an additional $150,000 is included to maintain and enhance the department's work management, timekeeping, opinion indexing, Westlaw and PROMIS systems.

The total additional cost of $2,412,921 is an enormous increase over the department's current administrative overhead of $449,800 projected for FY 84. It is, however, part of the price that must be paid if the proposal to have an elected attorney general is adopted by the electorate during the 1984 general election.

Another major cost area that will eventually occur as a result of changing from an appointed to an elected attorney general, will be a proliferation of special counsel on the staff of major departments. Historically, such counsel have been employed by executive branch agencies to give department heads a "second" opinion in controversial matters in states having an elected attorney general. Such counsel usually do not have the authority to litigate, but they do provide legal advice to department heads and submit amicus briefs in litigation affecting their department's programs. It is not unusual in these states to see four or five separate briefs filed in a single matter, in addition to the attorney general's brief, representing the varying viewpoints of different agencies. Costs for just a single special counsel, including secretarial assistance, total about $150,000 per year in 1983 dollars. Although it is impossible, at this time, to accurately say how extensive the use of in-house counsel will be if there is an elected attorney general, the additional cost for such counsel could easily exceed $1.0 million annually, within just a few years.

Concern re HJR-7 Elect'n of A.G.

I too used To oppose the election of the Attorney General, however, after committee review of our past several office holders and what is and has been done by other States (4/5 have elected Attorney Generals) I began to change my stand on the issue

Lately, having just watched the present Governor and Attorney General pull out all stop and use every trick they had to interfere with HJR-7's passage I voted for the election with a clear mind

Thank you

Individual

April 21, 1983

TO: Committee Members, House Judiciary Committee

FROM: Steve Cramer, Legislative Aide

SUBJECT: [redacted]

In anticipation and preparation of today's meeting I am forwarding an advance copy of material relative to your decision making. I had hoped to put before each of you a substantive "committee substitute" for the resolution, but as you will see from the accompanying memo from Dick Bradley in Legal Services an additional preliminary decision has yet to be made by each of you.

The majority vote provision is a complex issue in our State, not so much from a substantive "policy" standpoint as from a procedural one.

I would respectfully ask each of you to review the materials attached before coming to today's meeting. The next step will be to decide on a "runoff" provision either on the primary election or on the general election.

MEMORANDUM April 20, 1983

SUBJECT: Runoffs
(HJR 8)

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee

FROM: Richard A. Bradley
Legislative Counsel

Steve Cramer has discussed with me the response of the Division of Elections to the proposal for a runoff election for the office of governor/lieutenant governor. He reports that the division believes that it could not put together a runoff election until the end of the first week in January.

The premise of that response has to be that no existing mechanisms for the conduct of the general election are changed. It is possible to tighten up the process with the result that the election results are certified in a briefer period than exists under present law. While I did not review the memorandum from the division to you in any detail, I am enclosing an analysis I prepared several years ago for Senator V. Fischer. His focus was different from the goals of HJR 8 but it is useful in its analysis of the election procedures and the identification of mechanisms and procedures that would need to be changed or are available for change if the period between elections is to be shortened.

Steve also discussed a proposal apparently put forward by the division of elections to have a runoff after the primary election but before the general election. Whatever goals this might achieve, it would not seem to guarantee that a candidate in the general election would receive 50 percent of the vote plus one vote. It could not have this result if there are more than two parties competing. If the results of the "primary" include party nominees, it is likely that three or four (or more) candidates may be on the ballot as a result of the recent Vogler decisions. If only the top two

vote getters appear on the ballot, the result may be a party run-off: if the recent Chicago election were given that treatment, Mr. Epton would not have made it to the runoff: the election would have been between Congressman Washington and Mayor Byrne.

But as Steve and I talked, a proposal evolved that might achieve the goal of a majority vote for candidates at a general election.

The primary election would not look like a "primary;" each candidate nominated on June 1st would be on the ballot: both candidates nominated by a declaration of candidacy [AS 15.25.030] and candidates nominated by petition [AS 15.25.130]. Write-in votes would be counted [AS 15.-25.070 would be repealed]. No party nominations as such would result. Since all candidates will have been put before the voters at that election, it would be possible to provide that a candidate receiving 50 percent of the votes cast plus one vote is elected. If no candidate receives 50 percent of the votes cast plus one vote, the top two candidates would be voted on at the "general election." It seems that a write-in candidate there would not likely be successful and thus probably a candidate will receive the required majority.

I consider this proposal only a concept; I have not, moreover, sought to assess its pluses or its minuses.

If I may be of further assistance, please advise.

M E M O R A N D U M January 23, 1981

SUBJECT: Shortening the election period
(Work Order No. 12-0184)

TO: Senator Vic Fischer

FROM: Richard A. Bradley
Legislative Counsel

I have advised you that the director of elections believes that there would be substantial problems with a change in the election code which required that the filing period for candidates for state office occur six weeks before the primary and that the general election occur six weeks after the primary.

I have also promised to provide you with an analysis of the problems that will be incurred in a change to your proposal. This memorandum responds to that promise.

In general terms, Patty Ann Polley believes that the present time frame between the primary and the general election is about as tight as it could be made. Under the law, the primary occurs on the "fourth Tuesday in August" in even numbered years. AS 15.25.020. The general election is held on the "Tuesday after the first Monday in November" in even numbered years. AS 15.15.020. Thus it seems that there are some ten weeks between the primary and the general election.

The filing date for candidates is June 1st. AS 15.25.040, 15.25.150. It seems, therefore, that there are some thirteen weeks between the filing date and the date of the primary. Patty Ann tells me that she thinks that the filing date could be moved back to July 1 with no particular loss; the result would be a shortening of the election by some four weeks, to nine weeks.

If you approach were adopted, the last date on which declarations of candidacy could be filed would have been

August 12, 1980; the primary election would have been held on September 23, 1980. By way of comparison, a number of states come close to those dates (the information is for 1978, the most recent year apparently available). Vermont had its filing deadline on August 2nd, Washington on August 4th, Hawaii on August 8th, and Connecticut on August 11th. An even larger number of states have their primary in September: Alabama on September 5th; Delaware on September 9th; Arizona, Colorado, Connecticut, Florida, Maryland, Minnesota, Nevada, New Hampshire, New York, Rhode Island, Utah, Vermont and Wisconsin on September 12th; Louisiana on September 16th and Massachusetts and Washington on September 19th.

And lest I appear to misstate her comments, I hasten to add that the director is not suggesting that the dates cannot be further compressed: only that if there is compression, some existing mechanisms may need to be altered or, perhaps, eliminated.

Accordingly, I have reviewed AS 15 to determine those sections which have statutorily established time frames within which events must occur. The following analysis reflects this research. The statutory events are cast in terms of the 1980 election; in a different year, slight variations in the time frames might occur.

1.	April 15, 1980	AS 15.10.150	Appointment of nominees for judges and clerks by the political parties (statutory date)
2.	June 1, 1980	AS 15.25.040	Last date for filing nomination by declaration of candidacy (statutory date)
3.	June 1, 1980	AS 15.25.150	Last date for filing nomination by petition (statutory date)
4.	June 16, 1980	AS 15.25.040	Date by which nomination must be complete (statutory date)

5.	June 16, 1980	AS 15.25.150	Date by which nomination must be complete (statutory date)
6.	July 12, 1980	AS 15.25.055	Last date for nomination by party petition where unopposed incumbent candidate for reelection dies, is disqualified, or is incapacitated (45 days before primary)
7.	July 15, 1980		Six weeks before primary election under present law
8.	July 17, 1980	AS 15.07.140	List of registered voters to be displayed in the precinct by director (40 days before election)
9.	July 17, 1980	AS 15.10.080	Last date for designating precinct boundary in primary (40 days before election)
10.	July 17, 1980	AS 15.25.055	Last date for candidate to remove his name from the primary ballot (40 days before primary)
11.	July 27, 1980	AS 15.07.070	Voter registration ends for the primary election (30 days before election)
12.	July 27, 1980	AS 15.07.125	Director of elections prepares official registration list (30 days before election)
13.	July 27, 1980	AS 15.10.180	Party representatives appointed for state ballot review (30 days before election)

14.	July 27, 1980	AS 15.20.190	District absentee ballot counting boards and district questioned ballot counting boards appointed (30 days before election)
15.	August 1, 1980	AS 15.15.050	Director of elections to have election materials in supervisors' offices (25 days before election)
16.	August 2, 1980	AS 15.30.025	Last date for qualification of limited political party (presidential years: 90 days before general election)
17.	August 11, 1980	AS 15.20.048	Director of elections to have ballots for absentee voting in supervisors' office (15 days before election)
18.	August 11, 1980	AS 15.20.061	Absentee voting in person starts (15 days before election)
19.	August 11, 1980	AS 15.20.071	Absentee voting by personal representative starts (15 days before election)
20.	August 12, 1980		Twelve weeks before the general election; proposed last date on which to file declarations and petitions of candidacy
21.	August 17, 1980	AS 15.58.030	Candidates' material for voter pamphlet must be in (75 days before general election)

22.	August 17, 1980	AS 15.58.040	Parties' material for voter pamphlet must be in (75 days before general election)
23.	August 17, 1980	AS 15.58.050	Judicial officer material for voter pamphlet must be in (75 days before general election)
24.	August 19, 1980	AS 15.20.620	Computers tested (7 days before election)
25.	August 19, 1980	AS 15.20.081	Last date to apply for absentee ballot by mail (7 days before election)
26.	August 19, 1980	AS 15.20.201	Review of district absentee ballots starts (7 days before election)
27.	August 26, 1980	AS 15.25.020	Date of primary election (4th Tuesday in August)
28.	August 29, 1980	AS 15.20.205	Review of district questioned ballots starts (3 days after election)
29.	September 1, 1980	AS 15.25.200	Last date name of a candidate not nominated in a primary may be removed from the general election ballot (statutory date)
30.	September 3, 1980	AS 15.20.205	Review and counting of district questioned ballots is completed (8 days after election)

31.	September 4, 1980	AS 15.20.203	Certification of district absentee ballot counting (within 9 days after election)
32.	September 4, 1980	AS 15.20.207	Certification of district questioned ballot counting (within 9 days after election)
33.	September 5, 1980	AS 15.15.440	State ballot counting review begins (8 days after election and is completed no later than 15 days after election)
34.	September 10, 1980	AS 15.20.430	Recount requested (5 days after state review is completed; to be completed itself within 10 days)
35.	September 23, 1980		Six weeks before the general election under present law; date of proposed primary
36.	September 26, 1980	AS 15.07.140	Director of election to display list of registered voters in precinct (40 days before election)
37.	September 26, 1980	AS 15.10.080	Last date to make precinct boundary changes for general election (40 days before election)
38.	September 26, 1980	AS 15.25.110	Last date for party petition to fill vacancies created by disqualification, incapacity, or death of party nominee (40 days before election)

39.	October 5, 1980	AS 15.07.070	Voter registration closes for general election (30 days before election)
40.	October 5, 1980	AS 15.07.125	Director prepares official list of registered voters (30 days before election)
41.	October 5, 1980	AS 15.10.180	Appointment of part representatives for state canvass [review] (30 days before election)
42.	October 5, 1980	AS 15.20.190	District absentee ballot counting boards appointed (30 days before election)
43.	October 5, 1980	AS 15.58.080	Distribution of voter pamphlet (30 days before election)
44.	October 10, 1980	AS 15.15.050	Director of election to have election materials in supervisors' offices (25 days before election)
45.	October 20, 1980	AS 15.20.048	Absentee balloting starts in election supervisors' offices (15 days before election)
46.	October 20, 1980	AS 15.20.061	Absentee voting in person starts (15 days before election)
47.	October 20, 1980	AS 15.20.071	Absentee voting by personal representation starts (15 days before election)

48.	October 29, 1980	AS 15.20.620	Computer testing starts (7 days before election)
49.	October 29, 1980	AS 15.20.201	Review of district absentee ballots starts (7 days before election)
50.	October 29, 1980	AS 15.20.081	Last date to apply for absentee ballot by mail (7 days before election)

It had been my initial goal to identify sections creating problems and then to solve those problems. Because that might have put me ahead of you on this proposal, it seems adequate to identify those sections of the law which unarguably will need amendment because they fall essentially outside the framework of your proposal.

Under present law [Items 4,5], a candidate may file a partial declaration of candidacy by telegram and then complete it within 15 days. It seems that the director may need to know earlier who is going to be on the primary ballot and I suggest that this grace period be eliminated.

Under present law [Item 6], when an unopposed incumbent candidate for renomination dies, is disqualified, etc., 45 or more days before the primary, the party may replace his name on the ballot. Since the 45-day period is outside of the deadline for filing declarations of candidacy [only 42 days occur between the last date for the declarations and the date of the primary], it will be necessary either to eliminate the option or to shorten the time within which the name must be submitted. The director will need to consider what the minimum time for the printing and distribution of the ballots is; this becomes the deadline for such a party petition.

Similarly, under present law [Item 10], a candidate may remove his name from the ballot up to 40 days before the primary; this period becomes meaningless when the declarations are due 42 days before the primary. The privilege can be eliminated or the period shortened.

Under present law [Items 15, 44], the director is required to have the election materials, including ballots, in the election supervisors' offices 25 days before the particular election. Absentee balloting starts no later than 15 days before the particular election. [Items 17, 18, 19, 45, 46, 47]. Thus, it seems that there is a ten-day grace period which under the 1980 amendments becomes available for absentee voting. See, AS 15.20.048(b). Readjustments in this area may become necessary.

And finally, Item 38 permits a party to fill a vacancy created by the death, disqualification, or incapacity of a party nominee no later than 40 days before the general election. This prerogative needs to be foreshortened or eliminated.

It is altogether possible that the director will have additional suggestions for amendments; those identified here seem unarguable.

I regret the delay in the preparation of the analysis. I suggest that you may wish to raise these issues with Patty Ann Polley before I proceed to draft a bill; in any case, I am available to discuss this matter at your convenience.

I am also enclosing an analysis of the state elections held in 1978.

Enclosure

BILL ANALYSIS

CS HJR 9 (HJR P) " Proposing an amendment to the Constitution of the State of Alaska relating to elections for candidates for Governor and Lieutenant Governor and for members of the legislature."

COMMENTS: From research of materials published by the National Clearinghouse of Election Administration, published in August, 1978 and entitled BALLOT ACCESS.

The determination of elected officials by a majority vote (50% + 1) of the votes cast in an election, is practiced in only one state, Louisiana. Like Alaska and Washington, Louisiana is a blanket primary state, allowing any qualified voter to vote on any public office in either the primary or general elections without regard to voter or candidate party affiliation.

Only if a candidate receives a majority vote in the Louisiana primary, running without regard to party affiliation, is that candidate elected to office as a result of the primary vote totals.

If no candidate receives a majority vote, the two candidates receiving the most votes are entered on the general election ballot, and the candidate receiving the majority wins the elective office. Importantly, no minor or new political parties may nominate candidates solely for the general election, as in Alaska and Washington states.

Most importantly, no state has a majority-vote runoff election provision for the general election, that is, after the November election date. Rather, the process of nomination by majority vote is accomplished by subsequent runoff primaries in only 9 states. These runoff primary elections are held within 30 days after the initial party preferential primary. (See attached calendar) These runoff primaries are also along party lines, and can include or exclude major and minor party ballots, according to the state party rules.

For example: Major parties (20% of the entire vote cast) in Alabama may decline to run in the primary election, while in Arkansas, major parties must conduct a primary to place on the general election ballot. The conclusion is that this method of selection has a long history to attribute to this envolvement of closed party primaries.

The other states with primary runoff elections based on majority vote are Florida, Georgia, Mississippi, North Carolina, Oklahoma, South Carolina, and Texas. These states all have preferential party and runoff primaries that follow.

CONCLUSION: If Alaska is to remain a blanket primary state, based on the premise that 54% of our registered voters are designated, (by choice) as non-partisan voters, then closed party preferential primaries as held in the South would be inappropriate to adopt as a method of implementing majority voting.

The Louisiana example could apply here however, if all Alaska candidates run together in the primary without regard to party affiliation, but simply list their party preference after their name. This could allow the election of officials, should any candidate win a majority vote, after the sole primary; or selection of the top two vote getters to run in the general election should a majority vote not be achieved.

OPTION 2

Since no other state has a majority voting provision in the general election, with the exception of Louisiana by consequence of not achieving this in the primary, it is difficult to gauge the values or conflicts of such a proposed system.

An obvicus conflict is the time schedule for taking office in Alaska; any election held subsequent to the first week on November runs into the gamut of holidays, the defined term of the Governor and Lieutenant Governor and the Start of the Legislature.

By the same token, a runoff primary after late August will interfere with the municipal and RFAA school board elections in early October.

Another avenue is to set Alaska's initial primary for early July with all the candidates running for their party nominations as now. If a majority vote was received by any candidate, declare him the party nominee: otherwise have a runoff primary between the top two vote getters of each recognized political party. These winners, along with any that file the proper petition of voters, would appear on the general election in November, with the plurality voting method as the determinate.

This suggested scenario would approach Alaska's:

1) current blanket primary voting patterns;

2) time schedule for holding office after November, paper ballot delays;

3) desire for open, blanket voting among some party description in the primary;

4) desire to consider all candidates and party description in the primary;

5) the conflict with REAA elections and municipal elections in October should the runoff be held after the late August primary.

MAJORITY VOTE DETERMINATIONS FOR CANDIDATES FOR STATE OFFICE

EXAMPLE 1 : PRIMARY AUGUST 28, 1984 GENERAL November 6, 1984

all candidates for each office run on same ballot without regard to party affiliation, just reference

any candidate that receives 50% + 1 is declared winner

otherwise, top two votegetters run in November general, allowing a majority vote winner in each race.

EXAMPLE 2 : NOMINATING PRIMARY JULY 10, 1984 RUNOFF August 28

all candidates for party nomination file, run and are voted for as occurs now in Alaska's primary.

any candidate that receives 50% + 1 of that party's votes proceeds directly to general election as nominee.

otherwise, top two votegetters of each party race run in statewide runoff primary on August 28, 1984. The party winners are the general election candidates.

Since more than one party will be on general ballot, general election is decided by plurality vote.

EXAMPLE 3 : PRIMARY August 28 GENERAL Nov. 6 RUNOFF Jan. 8, 1985

all candidates file, run and are nominated as now occurs in Alaska's primary election system.

candidates for general election are joined by others who gain ballot access by petition, write-in . Those who receive majority vote are declared winners.

all other races where no majority is achieved, a runoff election is scheduled after recounts, contests, and receipt of all ballots between top two votegetters of each race yet undecided.

* statute governing term of governor, lt. gov conflicts.

VOTING INFORMATION—1982

APPENDIX B (PRIMARY ELECTIONS)

This chart lists primary election dates scheduled by States, Territories, and the District of Columbia; primary runoff dates to be held (if required); and Federal and State officials to be nominated in the primaries who will run in the general election November 2, 1982. NOTE: This election information is subject to change. Voting officers and counselors should be contacted to determine whether changes have been made after date of publication. Not all officials to be nominated will necessarily appear on each state's primary ballot.

FISCAL ANALYSIS FOR CSHJR 8

"Proposing an amendment to the Constitution of the State of Alaska relating to elections for candidates for governor and lieutenant governor and for members of the legislature."

The amendments proposed by this resolution would appear on the 1984 general election ballot. Because the Division of Elections plans for the inclusion of constitutional amendments this resolution does not have a fiscal impact.

By the Judiciary Comm.

Comments by the Division of Elections

CS HJR 9 "Proposing an amendment to the Constitution of the State of Alaska relating to elections for candidates for Governor and Lieutenant Governor and for members of the legislature."

ANALYSIS : This bill would require that any candidate for state elective office (executive and legislature) receive 50% of the votes cast for the office plus one vote, in the general election. If a candidate for office does not receive this amount, a runoff election shall be held between the top two vote getters.

A review of the 1982 legislative races shows that, if this law were then in effect, one (1) Senate race and eight (8) House races would require runoff elections. It should be noted that in every one of these nine races there were strong Libertarian and Independent candidates.

	Senate #15&16	House #5 A	House #5 B	House #10 B	House #14 B
winner %	41%	45%	49%	48.2%	49%
lack #	-876	-504	-101	-145	-95

	House #16 B	House # 18	House # 19	House # 17
winner %	36%	41%	48.7%	42%
lack #	-1529	-425	-66	-363

Additionally, for point of reference, there were two (2) Senate races won with 50% plus 6 and 12 votes respectively, four (4) Senate race won between 51% and 55%, and four (4) House races won with barely more than 50% (plus 12, 34, 60 and 63 votes respectively)

As was noted previously in comments on the original HJR 9, all gubernatorial races except 1970 would have required a runoff election. Even the decisive 17,000 vote margin of the1982 race left the winner with 45% of the ballots cast for that race, again due to the strong showing of the Libertarian and Independent candidates.

Scheduling of Runoff Elections per CS HJR 9 1984

Analysis : Present state election law, Title 15, does not contain provisions for runoff elections. However, AS 15.15 and AS 15.20 address absentee ballot counts, questioned ballot counts, the State Ballot Counting Review process, certification of elections and 10 day notice of election.

The following schedule sets out the election calendar for 1984:

November 6, 1984	GENERAL ELECTION	AS 15.50.020
November 14, 1984	District Absentee & Questioned Ballots are counted	AS 15.20.201 AS 15.20.205
November 14, 1984	State Ballot Counting Review begins	AS 15.15.440
November 21, 1984	Last day to receive all ballots and certificates	AS 15.15.440
November 26, 1984	Certify General Election	AS 15.15.450
December 1, 1984	Last day to request recount(s) for any race, precinct, question	AS 15.20.430
December 6, 1984	Last day to set date of recount(s)	AS 15.20.460
December 11, 1984	Last day to hold recount of General Election	AS 15.20.480
December 21, 1984	Last day to complete recount	AS 15.20.480
December 30, 1984	Last day to give notice and issue order for runoff election	AS 15.15.070
	Preparation of ballots, printing and distribution of absentee ballots	
January 8, 1985	Runoff Elections (Tuesday, not a holiday)

COMMENTS REGARDING HJR 9 "..relating to the elections of candidates for the offices of Governor and Lt. Governor"

TUESDAY 2/8 House Judiciary Committee

HJR 9 proposes an amendment to the Alaska Constitution which, if approved by the voters, would require that elections of the Gov. and Lt. Gov. be decided by receipt of 50% of the votes plus one in the general election.

If no candidate were to receive 50% plus one vote, then a runoff election would be scheduled at least two weeks after certification, but before the last Tuesday of November.

* NOTE: If this were law, all gubernatorial races except 1970 would have required a runoff election. Even the decisive 17,000 margin of the '82 race left the winner with 45%.

The Division of Elections has the position that the time limits set on the certification and runoff would be difficult to meet.

As the Governor's term of office is defined in Article III Sec. 4, it " shall begin at noon on the first Monday in December following the general election". The Division sees this requirement as the end limit under which an HJR 9 scenario could occur, unless this section is amended or repealed.

One month is not enough time to hold and certify two elections.

Additionally, as weather rapidly deteriorates in Alaska in November, weather may prevent another vote taking place, ballots distributed properly to all areas of the state or a proper count conducted.

Finally, the Division of Elections, after reviewing the margins of victory and percentages of the last 6 Governor races, contends that to achieve a 50% margin in the General Election that no more than two candidates should be on the ballot. Only in this way could runoff elections be avoided. But the Division does not advocate this position, as it would deny access to the ballot by third party and write-in candidates.

FISCAL ANALYSIS FOR CSHJR 8

"Proposing an amendment to the Constitution of the State of Alaska relating to elections for candidates for governor and lieutenant governor and for members of the legislature."

The amendments proposed by this resolution would appear on the 1984 general election ballot. Because the Division of Elections plans for the inclusion of constitutional amendments this resolution does not have a fiscal impact.

HJR

9

CONGRESSIONAL QUARTERLY'S

GUIDE TO U.S. ELECTIONS

terms for an interim of at least one term. Two exceptions to that general rule—Delaware and Missouri—impose an absolute two term limit. That is, a governor may serve only two terms, however spaced, in his lifetime. The remaining 23 states impose no limits on the number of consecutive terms a governor may serve *(box this page)*.

Majority Vote Requirement

A peculiarity of gubernatorial voting which has almost disappeared from the American political scene is the requirement that the winning gubernatorial candidate receive a majority of the popular vote. Otherwise, the choice devolves upon the state legislature or, in one case, necessitates a runoff between the two highest candidates. Centered in New England, this practice was used mainly in the 19th century. All six New England states, plus Georgia, had such a provision in their state constitutions at one time. New Hampshire, Vermont, Massachusetts, and Connecticut already had the provision when they entered the Union from 1789 to 1791.

Rhode Island required a majority election, but did not adopt a provision for legislative election until 1842. *(See p. 364)* Maine adopted the provision when it split off from Massachusetts to form a separate state in 1820; Georgia put the provision in its constitution when it switched from legislative to popular election of governors in 1825.

The purpose of the majority provision appears to have been to safeguard against a candidate in a multiple field winning with a small fraction of the popular vote. In most of New England, the provision was part of the early state constitutions, formed largely in the 1780s, before the development of the two party system.

The prospect of multiple-candidate fields diminished with the coming of the two party system. Nevertheless, each of these states had occasion to use the provision at least once. Sometimes, in an extremely close election, minor party candidates received enough of a vote to keep the winner from getting a majority of the total vote. And at other times, strong third party movements or disintegration of the old party structure resulted in the election being thrown into the state legislatures.

Vermont still maintains the majority vote provision, although the legislature has not elected a governor since 1912. Georgia maintains the requirement for a majority vote for governor, but instead of legislative election, provides for a runoff between the top two contenders three weeks after the general election.[1]

Following are the states which had the majority vote provision for governor, the years in which the choice devolved on the legislature because of it, and the year in which the requirement was repealed or changed:

Connecticut

No gubernatorial candidate received a majority of the popular vote, thus throwing the election into the legislature in the following years subsequent to 1824: 1833, 1834, 1842, 1844, 1846, 1849, 1850, 1851, 1854, 1855, 1856, 1878, 1884, 1886, 1888, and 1890. Following the election of 1890, the legislature was unable to choose a new governor, so the outgoing governor, Morgan G. Bulkeley (R) continued to serve through the entire new term (1891-93). The provision was repealed in 1901. The years prior to 1824 in which the provision was used, if any, were unavailable from the Connecticut secretary of state's office.

1. *Mississippi has a majority vote provision under the 1890 state constitution, but the provision has not been used because the Democratic Party nominee has always received a majority.*

Limitations on Governor Terms

(As of 1975)

State	Maximum number of consecutive terms
Alabama	2
Alaska	2
Arizona	No limit
Arkansas	No limit
California	No limit
Colorado	No limit
Connecticut	No limit
Delaware	2*
Florida	2
Georgia	None
Hawaii	No limit
Idaho	No limit
Illinois	No limit
Indiana	2
Iowa	No limit
Kansas	2
Kentucky	None
Louisiana	2
Maine	2
Maryland	2
Massachusetts	No limit
Michigan	No limit
Minnesota	No limit
Mississippi	None
Missouri	2*
Montana	No limit
Nebraska	2
Nevada	2
New Hampshire	No limit
New Jersey	2
New Mexico	None
New York	No limit
North Carolina	None
North Dakota	No limit
Ohio	2
Oklahoma	2
Oregon	2
Pennsylvania	2
Rhode Island	No limit
South Carolina	None
South Dakota	2
Tennessee	None
Texas	No limit
Utah	No limit
Vermont	No limit
Virginia	None
Washington	No limit
West Virginia	2
Wisconsin	No limit
Wyoming	No limit

** Indicates an absolute two term limit. That is, no person may serve more than two gubernatorial terms in his lifetime. In other states with limitations, a governor may serve as many terms as he may be elected to, provided he retires after one, or two, terms, depending on the constitutional provisions of his state, and stays out of office at least one term before running again.*

None indicates the governor must retire at the end of his first term. After a one term interim, he may serve again.

2 indicates the governor must retire after two consecutive terms. After a one term interim, he may serve again.

SOURCE: *The Book of the States, 1974-75*, Vol. XX, The Council of State Governments, Lexington, Ky., 1974.

Georgia

Although the majority vote requirement was contained in the constitution as early as 1825, it was not used until the 20th century. In 1966, with an emerging Republican Party, a controversial Democratic nominee, and an independent Democrat all in the gubernatorial race, no candidate received a majority. The legislature chose Democrat Lester Maddox. It was the controversy surrounding this experience which led to the change from legislative choice to a runoff among the top two contenders. Earlier, in 1946, the Georgia legislature also attempted to choose the governor, under unusual circumstances not covered by the majority vote requirement. The governor-elect, Eugene Talmadge (D) died before taking office. The legislature, when it met, chose Talmadge's son, Herman E. Talmadge, as the new governor. Talmadge was eligible for consideration on the basis that he received enough write-in votes in the general election to make him the second-place candidate. But the state supreme court voided the legislature's choice and declared that the lieutenant governor-elect, Melvin E. Thompson (D) should be governor.

Maine

Maine entered statehood in 1820 with a majority vote provision for governor and kept it until repeal in 1880. During this 60 year span, the legislature was called on to choose the governor nine times, as follows: 1840, 1846, 1848, 1852, 1853, 1854, 1855, 1878 and 1879.

Massachusetts

Like the other New England states, Massachusetts originally had a requirement for majority voting in gubernatorial elections. However, after six straight elections from 1848 to 1853 when the legislature was forced to choose the governor, Massachusetts repealed the provision in 1855. The years in which it was used were as follows: 1785, 1833, 1842, 1843, 1845, 1848, 1849, 1850, 1851, 1852, 1853.

New Hampshire

New Hampshire's mandated majority vote for governor was in force from 1784 through 1912, when it was repealed. The outcome of the following gubernatorial elections was determined by the legislature: 1785, 1787, 1789, 1790, 1812, 1824, 1846, 1851, 1856, 1863, 1871, 1874, 1875, 1886, 1888, 1890, 1906, and 1912.

Rhode Island

Under the constitution of 1842, Rhode Island required a majority to win the gubernatorial election. Under this mandate, the legislature chose the governor in the years 1846, 1875, 1876, 1880, 1883, 1890, and 1891. Owing to a disagreement between the two houses of the state legislature, the ballots for governor were not counted in 1893, and Gov. D. Russell Brown (R) continued in office for another term of one year. The provision for majority voting was then repealed.

Before 1842, there was also a requirement for a popular majority, but the legislature was not allowed to choose a new governor if no candidate achieved a majority. Three times—in 1806, 1832 and 1839—there was a lack of a majority in a gubernatorial election, with a different outcome each time. In 1806, the lieutenant governor-elect served as acting governor for the term. In 1832, the legislature mandated a new election, but still no majority choice was reached; three more elections were held, all without a majority being achieved, so the same state officers were continued until the next regular election. And in 1839, when neither the gubernatorial nor lieutenant governor's race yielded a winner by majority, the senior state senator acted as governor for the term.

Vermont

Vermont's provision for majority gubernatorial election resulted in the legislature picking the governor 19 times: 1789, 1797, 1813, 1814, 1830, 1831, 1832, 1834, 1841, 1843, 1845, 1846, 1847, 1848, 1849, 1852, 1853, 1902, and 1912. On a twentieth occasion, 1835, the legislature failed to choose a new governor because of a deadlock and the lieutenant governor-elect served as governor for the term. The Vermont provision remains in force.

Term of office

Time in excess of four-year term which Governor may be required to serve "until his successor shall be chosen and qualified" is part of his constitutional term; provision rendering Governor ineligible to succeed himself has no bearing whatever upon duration of his term. 201/867, 895 (41 S. E. 2d 383).

2-2702 (Art. V, Sec. I) Paragraph II. Election for Governor

The first election for Governor, under this Constitution, shall be held on Tuesday after the first Monday in November of 1978, and the Governor-Elect shall be installed in office at the next session of the General Assembly. An election shall take place quadrennially thereafter, on said date, until another date be fixed by the General Assembly. Said election shall be held at the places of holding general elections in the several counties of this State, in the manner prescribed for the election of members of the General Assembly, and the electors shall be the same.

Editorial Note

This section was Const. 1945, § 2-3002. The first election for Governor under the 1976 Constitution was changed to 1978 as the proper date.

ANNOTATIONS

Stated. 223/7, 11 (152 S. E. 2d 847).

2-2703 (Art. V, Sec. I) Paragraph III. Transmission, canvassing and publishing election returns

The returns of each election district in a gubernatorial election shall be sealed up by the superintendent thereof separately from other returns and shall be transmitted to the Secretary of State. On the Tuesday next following the general election, unless the date therefor shall be changed by law, the Secretary of State shall transmit said returns to a Constitutional Officers Election Board which shall be composed of the Speaker and Clerk of the House of Representatives, the President Pro Tempore and the Secretary of the Senate, and the chairman of each standing committee of the General Assembly. Such Board shall open and publish the returns, and the person having the majority of the whole number of votes shall be declared duly elected Governor of this State. Each candidate for Governor shall be entitled to designate one person to be present at the opening of the returns.

Editorial Note

This section was Const. 1945 § 2-3003. In the 1976 Constitution language was changed for proper agreement between noun and pronoun.

Stated. 223/7, 11 (152 S. E. 2d 847).

2-2704 (Art. V, Sec. I) Paragraph IV. Run-off election

In the event no gubernatorial candidate receives a majority of the whole number of votes cast in the general election, the Constitutional Officers Election Board shall continue the gubernatorial election by immediately calling a run-off election and designate as candidates therein the two persons who received the highest number of votes, who continue in life and have not declined to continue as a gubernatorial candidate. This run-off election shall be held on the third Tuesday immediately following the general election unless the date thereof shall be changed by the General Assembly. The run-off election shall be a continuation of the general election and only the electors who were entitled to vote in the general election shall be entitled to vote therein; and only those votes cast for the two persons designated shall be counted in the tabulation and canvass of the votes cast. The provisions relating to the transmission of the returns in the general election, the opening of the returns, their tabulation, canvassing and publication shall apply to the run-off election. On the Tuesday next following the run-off election, the Constitutional Officers Election Board shall convene, open, canvass, tabulate and publish the returns of the run-off election. The person having the highest number of votes entitled to be counted in the run-off election shall be declared the duly elected Governor of this State.

Editorial Note

This section was Const. 1945, § 2-3004.

Notes of Decisions Under the Constitution of 1945 (prior to 1968 Amendment)

Canvass of returns

General Assembly, as canvassers of election returns, have no discretionary power except to determine if returns are in proper form and executed by proper officials and to pronounce mathematical result; they can neither receive nor consider any extraneous information or evidence, but must look only to contents of election returns. 201/867, 877 (41 S. E. 2d 883).

Condition precedent

Condition precedent to election of Governor by General Assembly is a failure of the people to cast a majority of their votes for any person, in which event the General Assembly is given power to elect one of the two persons having the highest number of votes who are in life and willing to accept election at the time appointed for the General Assembly to elect. 201/867 (2) (41 S. E. 2d 883).

Constitutionality

Georgia Assembly is not disqualified to elect Governor as required by Article V of State Constitution of 1945. Neither is it disqualified by fact that its Democratic members had obligated themselves to support Democratic nominee in general election on November 8, 1966. That election is over, and with it, terminated any promises by Democratic legislators to support Democratic nominee. 385 U. S. 231 (87 Sup. Ct. Rep. 719, 17 L. Ed. 2d 330).

Article V of Georgia Constitution of 1945 provides method for selecting Governor which is as old as Nation itself. Georgia does not violate equal protection clause of Federal Constitution by following this Article as it was written. Id.

Construction

The word "person," as used in the second and third clauses of this section, refers to a living person as of the time of the election by the people, and his subsequent death is immaterial, so far as any power of election by the General Assembly is concerned. 201/867, 881 (41 S. E. 2d 883).

The clause "the person having majority of the whole number of votes, shall be declared duly elected Governor," means that the General Assembly shall declare such persons to have been duly elected Governor; it means this under any and all circumstances, for it refers always to a past fact. Id. 884.

In construing this section, Supreme Court is authorized, if indeed not required, to give consideration to the history of elections for Governor over a period of approximately half a century before the drafting and submission of the present Constitution and its ratification by the voters in 1945. Id. 884.

Acts 1871, p. 27, providing that if at special election for Governor no person be found to have received a majority of the whole number of votes cast, then from the two persons having the highest number of votes, who shall be in life, the legislature shall elect a Governor, and Acts 1878-79, p. 173 (now § 40-102 of Code), providing for election to fill vacancy in office, are legislative interpretation of language of this section prior to its incorporation in Constitution of 1877, and when lifted from that Constitution and inserted in the Constitution of 1945, presumably was intended to have the same meaning. Id. 886.

See also General Note at end of Title 2.

Death

Death of person receiving majority of votes cast for Governor after election by the people and before publication of returns by the General Assembly did not change duty of that body to declare his election nor authorize the General Assembly to declare by resolution that because of his death no person had a majority of the votes and to elect a Governor; such an election was a void act, which did not confer any right or title to the office of Governor. 201/867, 868 (2-a) (41 S. E. 2d 883).

Duty of General Assembly

In publishing returns and declaring results the members of the General Assembly perform a strict and precise duty identical in character with that which rests upon any and all persons who are merely authorized to canvass; they are not, while performing that duty, exercising or authorized to exercise any discretion, but simply perform the ministerial act of disclosing to the public the official election returns that have been prepared by the election managers. 201/867, 876 (41 S. E. 2d 883).

The canvassing of returns and declaration of the result are constitutional directives to the General Assembly, and its failure to observe them ought not to defeat the right of the person elected or the franchise of the voters who elected him. Id. 877.

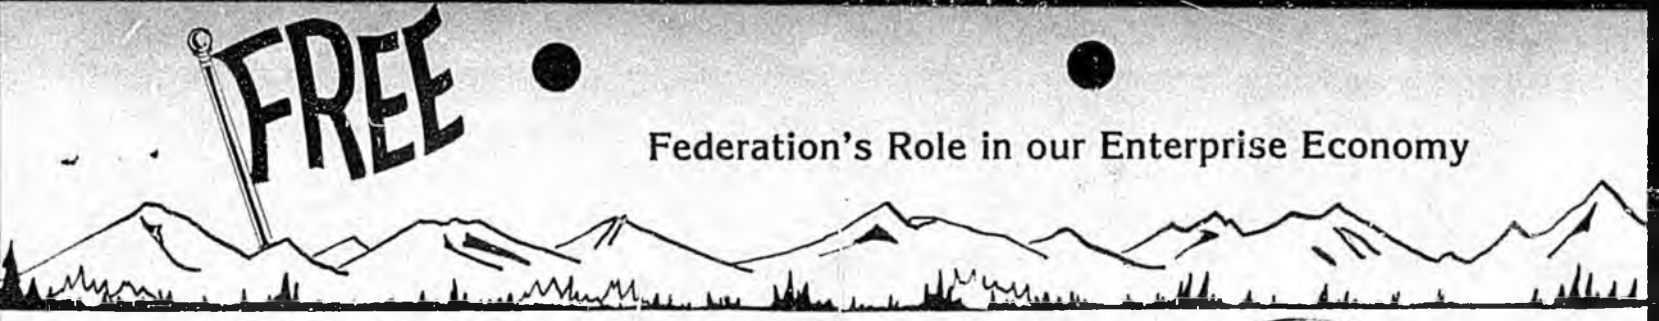
RE: HJR 12

Dear Ms. Jacobus:

Thank you, and through you, the FREE Committee for your written comments pertaining to the House Judiciary Committee considerations of HJR 12.

During the hearing held on February 22, 1983, much discussion was directed to the bill's lack of clearly defining the "set out" and "method" of going from one thing to the other, etc. As a result the Committee has produced three separate work bill copies which will be further debated, at a scheduled rehearing of HJR 12, March 1st. At this hearing one of the enclosed committee substitutes will likely be reported out.



Again, thank you for your comments and if I or the Committee staff can be of assistance, please do not hesitate to call.

With best regards,

Representative Charlie Bussell
Chairman, Committee on Judiciary

Re: HJR 12 -- Limiting Legislator Terms

Dear Representative Bussell:

In January 1981, the Legislative Study Committee sponsored by the General Federation of Women's Clubs, Anchorage FREE Committee, completed a comprehensive study on legislative reform. One of the recommendations made in that report was that legislator terms be limited.

The Legislative Information Office reported that HJR 12 which addresses legislator terms was currently being considered by the House Judiciary Committee. This particular resolution proposes an amendment to the Alaska Constitution limiting representatives to serving not more than four consecutive full two year terms and senators to serving not more than two consecutive full four year terms. We endorse this resolution.

This resolution is particularly good, because it neither grandfathers in current legislators nor applies to them retroactively. If this resolution was approved by the voters, current legislators would still be elgible for two more consecutive terms as senators or four more as representatives. This is fair. We recommend that no changes to the resolution be made.

In particular, the resolution should not be changed to allow current legislators to be exempt from its application. This would create two problems. First, creating two distinct classes of legislators, those subject to the term limitation and those who could run for unlimited terms, may violate United States constitutional equal protection guarantees. Second, we believe that areas such as Anchorage which have greater changes in representation would be hurt, because these legislators would always be junior to those grandfathered in.

Thank you for the opportunity to comment on this resolution. Please support its passage without any changes.

Sincerely,

Cheri C. Jacobus

Senate

August 27, 1982

Dear Candidate:

During the past legislative session, two resolutions were introduced in the State Senate calling for an amendment to the State Constitution limiting the number of terms a legislator could serve in each house. SCR No. 9 was introduced during the 1981 session by Senator Dankworth and myself. If it had been adopted by the Legislature and approved by the voters in a general election, it would have limited State Senators to two consecutive terms and State Representatives to four consecutive terms. A similar resolution, introduced by Senator Colletta, placed the same restriction on service, but would have allowed a legislator who had served eight years to run for election to a different house or, if four years had elapsed, to run for election to the same house.

Debate on the measure was lively in the State Affairs Committee, with violent opposition voiced by some legislators and support from others, such as myself, who favor a citizens' legislature. Two reports were circulated at the meeting: a report from the General Federation of Women's Clubs supporting the "concept of a citizen legislature versus professional lawmakers;" and a poll conducted by the Dittman Research Corporation for the Anchorage Women's Club showing 62 percent of Alaskans interviewed favored limiting terms served by legislators.

No legislation on this subject was adopted by the Twelfth Legislature, and I do not believe a similar measure would fare much better in the Thirteenth. Based on the evident popular support for the concept, however, it is my feeling that the Constitution of the State of Alaska could be amended to limit the number of terms served by legislators through the initiative process.

If you are in favor of limiting legislative terms and perhaps would like to include the issue in your campaign, my office would be happy to provide you with pertinent testimony and reports for your use. Please call my secretary at 338-6000 for this assistance.

Sincerely,

Terry

IKL Hennig

Honorable Thomas B. Stewart
Juneau Court & Office Bldg.
Juneau, Alaska 99811

Dear Tom,

I have attached a copy of SJR 42 which I recently introduced in the Senate. This resolution would amend our state constitution to limit the number of consecutive years that a legislator may serve to; eight years in the House and eight years in the Senate.

My personal philosophy is one that would generally oppose any law which would restrict the right of the public to choose a candidate. I do believe, that when there is a substantial change in the function of one of the branches of government, that a review of the checks and balance of power is in order.

I suppose that my chief concern has been that the legislature has developed into a year-round operation. The legislature now, more than perhaps was invisioned in the beginning, manages and developes one of the richest natural resource deposits in the world. Because of the Legislature's internal wealth and liberal rules of operation, an incumbent legislator has an unpresidented advantage over the average citizen seeking to compete with him for office. On the federal level, It has been suggested that an incumbent candidate has roughly $400,000. to $500,000. advantage over a challenger. Through the seniority system, and this added political advantage, a political dynasty is built and an unjustifiable concentration of power is shared by a few individuals.

It appears to me, that we may have reached that time when, in order to safeguard and keep intact the principal of a citizen's legislature; we ought to consider some of the

limits this bill would provide. I have set out a few of my thoughts and those which compelled me to introduce this legislation. Because of your experience, particularly in the writing of the state constitution, and your valued judgment; I would like to impose upon you a request that you give me your views, pro or con, concerning this legislation.

Thank you in advance.

Sincerely,

M. "Ed" Dankworth
State Senator

CHAMBERS OF
THOMAS B. STEWART, JUDGE, PRESIDING

April 1, 1980

The Honorable M. "Ed" Dankworth
Alaska State Senator
Pouch V
Juneau, Alaska 99811

Dear ~~Senator~~ Dankworth:

This is in response to your letter of February 27, 1980, asking my views on SJR 42, which would amend the constitution to limit the number of consecutive years a legislator may serve.

While I can well understand and sympathize with your concern about the concentration of power in too few hands in the legislative body, I am frankly doubtful that the approach of limiting terms provides the best solution to that problem. Perhaps I am too strong an advocate of your expressed personal philosophy that would generally oppose any law restricting the right of the public to choose a candidate. It seems to me that the problem of too concentrated a power structure in the legislative body can and definitely should be addressed, but through a different mechanism.

It is not my intent to elaborate on thoughts in this regard at the present time, though I would be pleased to discuss them with you sometime in the future if you should desire it. At the moment I would simply reiterate my concern that restricting the public's choice in its selection of candidates in my view is not an appropriate answer.

With personal regards I am

Very truly yours,

Thomas B. Stewart

Dear Ed:

Belatedly I am acknowledging your letter of March 21 and the enclosure. I have mixed feelings about SJR 42. As you acknowledged, there is some value in experience, continuity and professionalism in the legislative branch.

On the other hand, the advantages of an incumbent are enormous, as you say. The remoteness of the state capital, the relatively small size of the legislature, and the advantages of name familiarity, and other factors, can help maintain an "old boy" network. I think that in legislative work, like any other field, a worker can get calloused and stale over time.

I reached the point after eight years in the legislature where I was beginning to foresee a lack of freshness of ideas on my part. I felt it important to go back into the private sector and regenerate. There is a tendency to stay in the legislature when one has really creative matters on his or her agenda. To stay under those circumstances is a limitation on a person's own growth. It is as refreshing to leave after a time as it is to obtain office.

Also, I think there is something attractive in the notion of citizen-statesman. I like the idea that legislative service in a place like Alaska is a civic duty which concerned citizens share. Sometimes, when one is in office too long, he grows to feel that he owns the office; the sense of being a public servant is obscured.

It is a very difficult matter to generalize about because, of course, some people serve for decades with undiminished distinction. Senator Butrovich comes to mind. Others become complacent or lazy.

The argument can be made that the complacent and lazy should be removed by the people, and that the public's freedom of choice should not be diminished.

On balance, I would resolve my doubts in favor of something like SJR 42, except that I think I would favor four successive terms for house members, and three successive terms for senators as a limitation, and I would only require a senator to sit out for two years instead of "one full term."

I think the effect would be to bring new blood and fresh perspectives to the legislature from time to time to a greater degree than now is the case, and I think it would help bring the legislature closer to the people.

Thanks for seeking my views, and I hope this answers your inquiry.

Best regards,

Joe P. Josephson

The Honorable M. "Ed" Dankworth
Alaska State Senator
Pouch "V"
Juneau, AK 99811

Dear Ed:

While I have spent most of my legal career in occasional engagement with constitutional questions, I make no claim to having written the Alaska Constitution. Thanks for the compliment.

In general, I agree that something is seriously amiss with the Alaskan system of legislative representation. I would agree with you (perhaps as a partial consequence of the decay of the two party system) that we seem to be moving towards a system of constituencies based on personal fiefdoms supported by the power of incumbency. This style of government is not altogether new in America, being, in some regions of the South prior to the revival of the two party system, typical.

A limitation on number of terms served would have some effect in limiting such a system. In the absence of anyone supporting a better approach to the problem, I would support SJR 42 (assuming you have the technical bugs worked out).

As I think you certainly sense, we are moving into a period of extraordinary times in government. Government for the next decade will not be subject to the normal constraints of taxpayer resistance. We are moving from a form of government which is regulatory and lawmaking and which provides essential services to a government built around the function of disbursement of public wealth. I wonder whether the whole system doesn't need some examination under this style of government or, alternatively, we need to get the government out of this line of business.

Returning to your proposal, it is certainly a step in the right direction. Whether it will cure the disease or not, unaccompanied by other remedies, is another question.

Sincerely,

John E. Havelock

TO Dear Ed . DATE 6 Mar 80 .

SUBJECT SJR42.

I am attaching some comments to your bill as requested.

It is in rough form and I must apologize- but, I've had notice a few minutes ago to catch a plane in theearly A. M.. thought I'd better send it, since 'll be gone for a spell.

Best regards, and best of luck

Steve

- M&S #73 The Drawing Board, Inc., Box 303, Scottsdale, Texas

Dear Ed: 6MAR 80

Prior to the constitutional convention, I would have opposed legislation similar to your SJR 42. But in that convention I gave a lot of thought to just such a limitation since we were going to limit the governor, and in a sense put a limitation upon State judges.

After convention hours, Dayton Keene, who was the legislative branch comm advisor, Weldon Cooper, Emil Sady, and Ernest Bartley often met in my apt to discuss just the subject of your bill. Frankly I was looking for support from the consultants.

My presentation to them, was that historically we had many poor Governors- (of which we could do nothing) and that since the legislature had been established in 1913 we had had some pretty poor legislators. In those days the mining industry and fishing interests pretty well controlled those small legislatures of 24 people. But as state hood effort really came to life with the advent of Ernest Grueing as governor the full pressure of industry was felt. We had a number of pro mining and pro fish legislators who really controlled the legislature--much of it by seniority. ~~I sought to put a restrain on the legislature.~~

Dayton Keene who had been a legislator for some years felt my arguements were valid and that this might now be the time to put in a limitation- so was Bartley inclined. The others were of the opinion there probably was a necessity for such action, in this state as well as some other states. We all agreed that unicameralism would in no way better the situation. But then there was arguement presented that the people might feel and "infringement on voters rights.

As I look back now, I think the people would have accepted that limitation without a ~~xxxx~~ complaint, because I heard very few questioning the limitation on the Governor tenure.

I beleive we discuss the subject in our committee meeting on several occassions. I discussed the matter extensively with my friend Senator Vic Rivers who was chairman of the Executive branch committee. He was inclined to agree in principal as he was including the limitation on the governor in his articl Rivers quietly polled a number of convention delegates reporting back to me that though they agreed on the gubernatorial limitation there was no favorabl concensus relative to legislators. So, I let the matter go as we already had some novel ideas in our article.

It is my feeling, in the light of the action of the state legislature over the last 8 or 10 sessions, the people might now be ready to accept a limit on terms of legislators, particularly since they have seen the benefits of a limitation on the governor.

I doubt if your SJR 42 will pass in the legislature--too many have a "good thing" going for themselves. But, if someone had the time and energy to see it through via referendum, I'm certain it would pass.

Certainly the time has come to put some brakes on the legislature. This maybe a start.

I am agreed with your bill, I hope it passes.

S M Steve McG. Jr.

I

THE STATE CONSTITUTION WITHIN THE AMERICAN POLITICAL SYSTEM

A staff paper prepared by the Public Administration Service for the Delegates to the Alaska Constitutional Convention

November, 1955

which, though unwritten, are really a part of the "constitution" in the broad sense. Constitutional practice does not always follow the ideas which the formulators had in mind. One of the best known examples, on the national level, is found in the practice by which presidential electors have been mere rubber stamps; only on two occasions since the election of John Adams have presidential electors exercised their constitutional right to use their independent judgment in casting a ballot for the President of the United States.[40] Delegates to the Alaskan Constitutional Convention will recognize that their handiwork may not receive the precise interpretations in subsequent years that they had intended when writing the document at College.

Certainly, however, the Delegates at College will write into the Alaskan Constitution the great principles of government which have become so much a part of the genius and tradition of the American people and, in some cases, of democratic countries throughout the world. The machinery for implementing these principles may be the subject of argument but universal agreement on the principles themselves may be assumed.

The Principle of Popular Sovereignty.

Basic to the conception of democratic government wherever found is the idea that the people govern. Government is not

---

[40] One elector did so at the time of the election of Munroe. One Tennessee elector cast his ballot for J. Strom Thurmond in 1948, even though Tennessee had been carried by Mr. Truman.

something imposed <u>on</u> the people; it is an institution which comes <u>from</u> the people and over which they have control. A legal statement of the principle is found in the preamble to the national Constitution:

> We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

With less verbiage the Declaration of Rights of the North Carolina Constitution of 1776 stated simply: "All political power is vested in and derived from the people only." The principle found expression in the bloody years of the Civil War when Lincoln coined his immortal "Government of the people, by the people, and for the people."

The principle of popular sovereignty is not a platitude. "We the people" govern. We elect our lawmakers, and having elected them, we may also choose new ones more responsive to our will. We may err in our choice, and we may elect rascals instead of statesmen, but the choice is ours--freely made and freely revocable at fixed periods. And government officials, of high and low estate, are always the servants and not the masters of the people. On no other principle can democratic government function and be maintained.

Citizenship and Residence Requirements. The citizenship requirement is present in all states and constitutions either specify that a person must be a citizen or a qualified elector in order to be a member of the legislature. Some constitutions further stipulate the period of citizenship which go as high as five years in the case of Maine. State citizenship for a certain period of time is occasionally specified.[12] Residence requirements in both the state and county for membership in the legislature exist in most constitutions, either expressly or by direct implication. These range from one to five years.

Election and Terms of Members

In all states legislative terms are either for two or four years. Short terms are the rule for members of lower houses: in 43 of the 47 states with two houses, House members serve for two years.[13] Longer terms are generally provided for state senators: in 32 states they serve for four years; in 16 states

---

[12] Alabama and California have state citizenship requirements of three years; Georgia and New Jersey of four years for the upper house and two years for the lower house.

[13] Only in Alabama, Louisiana, Maryland, and Mississippi do they have four-year terms.

(including Nebraska) they serve for two. Legislatures in a quarter of the states in 1952-53 considered measures to lengthen legislative terms so as to increase the amount of time the legislator might devote to public business, to reduce the time consumed in running for re-election, and to retain experienced legislators longer. The proposed changes would have increased House terms from two to four years and Senate terms correspondingly, except in California, Illinois, Kentucky, and South Carolina, where Senate terms would have been increased from four to six years.

In setting the length of term for legislators a satisfactory balance should be sought between providing for legislative responsiveness to the ever-changing will of the people and a deliberative, experienced body of lawmakers. It would seem desirable to have the term long enough to permit a legislator to participate in two or more sessions, so that provisions governing sessions should be considered in determining the length of terms. There is really no important basis for the use of different terms for the two houses. This is largely due to the federal pattern and a device to attain some stability and to assure some experience in the legislative process. The objectives of stability and responsiveness might both be served by longer legislative terms and the election of a portion of each body biennially.

Alaska State Legislature

Senate
SENATOR MIKE COLLETTA

February 25, 1982

The Honorable Victor Fischer
Chairman
State Affairs Committee
Pouch V
Juneau, Ak 99811

Dear Senator Fischer:

Enclosed is a copy of a poll conducted by Dave Dittman for the Free Committee showing conclusively that Alaskans favor limiting the terms of legislators.

Based on the overwhelming statistics contained in the poll, I urge you to schedule hearings as soon as possible on Senate Joint Resolution 55, which I introduced earlier this session.

The resolution, which must pass this session to gain a spot on the 1982 general election ballot, would limit the number of terms a legislator may serve to four consecutive terms in the House and two consecutive terms in the Senate.

Nothing in the resolution prevents an incumbent from running for office in the opposite house after serving the maximum time in one body, or to sit out a term and seek election to his former seat.

I just feel it is good business practice to rotate people, before old habits set in. And apparently Alaskans hold the same opinion. Of the 455 persons interviewed in 51 communities across the state, 62 percent favored limiting the terms of legislators. The trend was consistent among Alaskans of all ages, background and areas of the state.

Again, I request that you take up SJR 55 as soon as possible, in order to allow the public ample time to testify on this matter.

Sincerely,

Mike Colletta

Mike Colletta

MULTI-QUEST

VOLUME IX

MARCH 1981

PREPARED FOR

ANCHORAGE WOMEN'S CLUB
FREE COMMITTEE

DITTMAN RESEARCH CORPORATION
ALASKA BANK OF COMMERCE BUILDING
3230 "C" STREET
ANCHORAGE, ALASKA

Alaska Analysis for Human Resources

SURVEY ACCURACY

The Dittman Research Corporation, recognized in 1978 as one of the nation's most accurate political survey research organizations following a nation-wide comparison of published pre-election survey results, further enhanced the reputation following the 1980 General Elections in Alaska. The final pre-election state-wide survey published in The Anchorage Times reported that Frank Murkowski would defeat Clark Gruening by 8% and become Alaska's new U.S Senator. After all challenged and absentee ballots we e counted, the certified results revealed Murkowski had defeated Gruening by 8.002%.

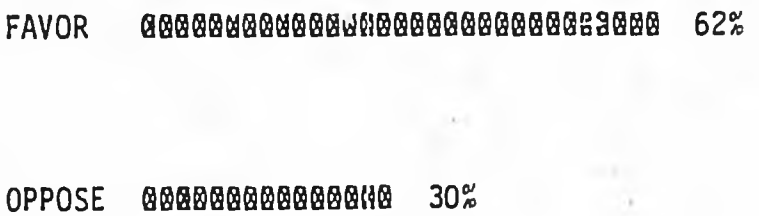
METHODOLOGY

During the period February 27 - March 5, 1981, residents of the sample locations listed on the following pages were personally contacted by telephone by professional interviewing employees of the Dittman Research Corporation. The views and opinions of the Alaska residents were recorded on a number of topics on a strictly confidential basis.

Research design- A random sample design was featured which provided that all residents of those communities included in the survey had essentially the same chance of being interviewed. The sample was apportioned based on the population of the included communities.

Sample selection- The Anchorage sample was selected through a computer-generated random digit dialing program. This is particularly important in Anchorage due to a 40% rate of unpublished and unlisted numbers.

The sample in the other communities state-wide was randomly selected from current telephone subscribers listed in the most recent telephone directory for each community. In these communities the percentage of non-listed numbers does not exceed 10%.



PROCESSING THE DATA-

Dittman Research Employees completed the coding and editing, while all key-punching, verification, and data processing was completed by Boeing Computer Services Company through the Statistical Package for the Social Sciences (SPSS) programs. The SPSS package is one of the most sophisticated research-oriented data processing and analytical systems available, and is designed specifically for the processing and analysis of survey research data.

QUESTION:

Would you favor or oppose limiting the number of terms a legislator may serve to a maximum of four consecutive terms -- 8 years -- in the House; and two consecutive terms -- also 8 years -- in the Senate?

ANSWER:

Dittman Research Corporation/March 1981

SAMPLE LOCATIONS

Sample points are assigned geographically throughout Alaska in such a manner that all citizens over 18 have essentially the same opportunity for involvement. Samples are drawn from 51 Alaskan communities.

LEGISLATIVE STUDY COMMITTEE REPORT

PART I

Sponsored by

General Federation of Women's Clubs

Anchorage FREE Committee

Prepared by

Jan Bomhoff and Jan Faiks

January, 1981

VIII.

LIMIT TERMS OF OFFICE

The FREE Committee strongly believes in the concept of a citizen legislature versus professional lawmakers. For this reason, and others, FREE feels that there should be a limitation on the number of terms a Representative and Senator may serve. Surprisingly, a good portion of the responding legislators favored this concept.

FREE feels that a limitation would serve as an incentive for more citizens to seek elective office - the perception being that incumbents are generally pretty difficult to unseat. New faces bring fresh approaches to programs and issues, needed at all times, but especially now in Alaska with its vast natural resource wealth.

When legislators remain in one house for a long period of time, excessive power over colleagues and staff seems to develop, as do legislative cliches. By dispersing the concentration of power, it will be more difficult for a handful of "long time" legislators to control legislation contrary to the wishes of the majority.

One legislator commented during the discussions that it was difficult for even the "good guy' legislators to remain free of obligations to their colleagues. In the lawmaking process there is always give and take, and legislators who have been on the job for a long time will inevitably build up a certain amount of "favors due" and

"favors owed", so that it becomes increasingly difficult to judge matters under consideration solely on their merit.

FREE recommends the following limitations on the terms of office:

1. Senate - two 4-year consecutive terms.
2. House - four 2-year consecutive terms.
3. Present incumbents would begin counting their terms with the effective date of the law.

Using FREE's formula, legislators popular with their constituents could remain in the legislature, but would have to change Houses every eight years. Thereby, the right of the citizen to choose his lawmakers remains intact.

Common Sense Surveys Legislative Candidates

The following questions and answers were obtained from a survey Common Sense sent to all state legislature candidates in July. Answers to four of those questions are listed below according to districts and additional responses will appear in upcoming newsletters:

1. *DO YOU SUPPORT A CONSTITUTIONAL PROVISION LIMITING THE LENGTH OF THE LEGISLATIVE SESSION?*
2. *IF YOU DO SUPPORT A SESSION LIMIT, HOW MANY DAYS SHOULD BE ALLOWED?*
3. *DO YOU SUPPORT THE CONCEPT OF A LIMIT OF 90 DAYS ON LEGISLATORS' PER DIEM ALLOWANCE?*
4. *DO YOU SUPPORT A LIMIT ON THE NUMBER OF CONSECUTIVE TERMS A LEGISLATOR CAN SERVE?*

ALASKA STATE LEGISLATURE
HOUSE OF REPRESENTATIVES

February 21, 1983

Ms. Denise Knapp
P. O. Box No. 4787
Anchorage, Alaska 99509

Dear Ms. Knapp:

Thank you for your telegram of February 15, 1983, supporting HJR 12, limiting legislators' terms.

This bill was heard in the House Judiciary Committee today and there were some modifications. Enclosed is a copy of the substitute bill for your convenience in pursuing these changes.

Again, thank you for your time.

Very truly yours,

Representative Charlie Bussell
Chairman, Committee on Judiciary

Dankworth urges limited terms for state lawmakers

Our Juneau bureau

JUNEAU — If Sen. Ed Dankworth had his way, nearly half the state's 60 legislators would be disqualifed from holding office.

A constitutional amendment proposed by the Anchorage Republican would limit state senators to two consecutive terms in office and representatives three terms.

As it stands, 17 members of the House and 10 members of the Senate now are at or beyond Dankworth's proposed limits. One of them, Sen. Robert Ziegler, D-Ketchikan, is chairman of the Senate Judiciary Committee, which was assigned the task of studying Dankworth's bill.

For that reason, among others, most observers here weren't giving the bill much chance of passage.

However, Dankworth, serving his first term in the Senate, attempted to meet his more senior colleagues half way by including a "grandfather" clause in the bill.

So, if it should win a two-thirds majority of both houses, qualify for the 1980 election ballot and pass, the limitation would apply only to those terms of office to follow.

2/16/85 Times

A limit on service

ALASKA HAS HAD, over the years, a number of men and women who have served well for long periods of time as members of the legislature. That has been a plus for the territory and the state. But there are some offsetting minuses connected with long tenure in the legislature. And there is mounting evidence that the negative is beginning to far outweigh the positive.

Recognizing that legislative seniority also can lead to legislative abuses, one member of the Alaska Senate has proposed to put a lid on the number of consecutive terms a person could serve. The proposal has merit and deserves thoughtful consideration.

Sen. Ed Dankworth, the Anchorage Republican who two weeks ago was kicked off the Senate Finance Committee when he refused to play ball with some senior members of the club, proposed this the other day in a resolution calling for a constitutional amendment.

IF APPROVED by the legislature — and that's a big "if" — the resolution would go on the ballot for action by the voters of the state. It calls for the imposition of a constitutional limit restricting a person to two consecutive terms in the Senate or three consecutive terms in the House.

The net effect would be to allow a person six years of continuous House service or eight straight years of service in the Senate.

To make the proposal more palatable and to give it at least a chance of passage by the current crop of legislators, Sen. Dankworth included a grandfather clause. Under its provisions, the counting of terms would begin with approval of the constitutional amendment. Incumbent senators and representatives with long tenure — including such luminaries as Sens. Bill Ray of Juneau, Bob Ziegler of Ketchikan, George Hohman of Bethel, John Sackett of Galena and Clem Tillion of Halibut Cove — would not be immediately affected.

THE RESOLUTION has drawn some initial support. Signing on as co-sponsors were Republicans Arliss Sturgulewski and W.E. Bradley and Democrats Pat Rodey and Terry Stimson, all of Anchorage.

That's a good start. But clearly it is not enough. To succeed, the proposal must have widespread support, even from districts that have long placed their legislative affairs in the hands of one or two individuals.

A constitutional amendment limiting tenure would bring two significant changes. It would guarantee that a fresh flow of ideas, personalities and backgrounds would be injected into the legislative process. And it would be a barrier to the creation of legislative dynasties and would prevent any single legislator from assuming, on the basis of seniority, a seat of power that could impair good government for all the people of Alaska.

STR 47

Tillion cracks down on Senate travel

JUNEAU (AP)—An angry Senate president has announced that senators traveling out of Juneau during the week will be on their own tab and not the state's, unless the travel is absolutely necessary.

Senate President Clem Tillion made the statement today after the Senate was one short of the necessary 11 members for a quorum.

The House took the day off, and for the last two weeks members of the Senate have received permission to be formally excused. But Tillion refused to give the entire body the day off.

The Senate had no business on its calendar and there were no committee meetings scheduled in Juneau. But Tillion said he wanted some committee reports, such as recommendations for "sunset" legislation to be officially received.

Ten members showed up when Tillion convened the Senate shortly after 10 a.m. Eight members had been officially excused previously, and two who were absent—Pat Rodey and Ed Dankworth—did not appear.

Tillion has long been an opponent of three-day weekends for the Legislature. When the House took Feb. 15 off, he refused to allow the Senate to take a holiday, saying if members knew they did not have to be in Juneau that Friday, they wouldn't have any committee work on Thursday.

After failing to get a quorum, Tillion expressed his anger a some members of the Senate who were holding a hearing in Anchorage on the Alaska Renewable Resources Corp.

"This is the capital of Alaska and this is where people should come to be heard by the Legislature," he said. Then he announced he was cutting off the travel expense reimbursements for senators who leave Juneau during the week.

"I'm not going to sign any more travel requests during the week," he said. "From now on, they are on their own money. There's no reason to go trucking off somewhere. They've had their fun and games."

Tillion said the Senate has two weeks of work left to do this year, and that the members were trying to extend that over another two months.

He said that perhaps it was time for the voters to force the Legislature into a time limit on its sessions.

"This is absolutely uncalled for," he said.

Limit proposed

Associated Press

Juneau — State senators would be limited to two terms and representatives to three under a constitutional amendment proposed in the Alaska Senate.

Sen. Ed Dankworth, R-Anchorage, filed the measure.

The amendment would disqualify nearly half the state's 60 legislators from office. At present, 17 members of the House and 10 members of the Senate are beyond Dankworth's proposed limits.

Wildlife board stipend rises

Associated Press

Juneau — Members of the state Board of Fisheries and Board of Game would receive $150 per day in per diem for attendance at board meetings under a bill approved by the Senate today.

The bill (SB358) was passed 19-1, and now goes to the House.

DANKWORTH

Currently board members receive travel expenses plus $100 for each day going to and from board meetings and for each day of meetings. The bill would increase the per diem to $150 per day.

Sen. Ed Dankworth, R-Anchorage, cast the lone "no" vote.

Tillion apologizes to two senators

JUNEAU (AP)—Senate President Clem Tillion today apologized to two senators who were absent without formal excuses Friday.

The absence of Sens. Pat Rodey and Ed Dankworth left the Senate without a quorum, meaning it could not convene and conduct business.

The House took Friday off and eight members of the Senate got formally excused from the session that Tillion planned to hold on Friday, despite the lack of a calendar of business.

Tillion, angered when he was one member short of the 11 needed for a quorum, announced that he would no longer sign expense forms for senators week unless the trips were absolutely necessary.

Many of the senators who were absent had gone to Anchorage for a hearing, which Tillion said should have been held in Juneau or on the weekend.

Rodey and Dankworth criticized Tillion on the Senate floor, saying he apparently wanted the Senate in session while the House was off "for appearances."

Rodey added that he did not call the hearing in Anchorage, which he attended. "The leadership did," he said.

Dankworth also ticked off the list of Senate leaders who had been excused and asked why those not in key committee posts should have not been excused.

Further, both senators told Tillion that they had informed him they would be gone and Rodey said Tillion had even signed his travel request form.

"You were aware I wasn't going to be here," Dankworth said.

"I feel sandbagged," added Rodey, who said Tillion signed his travel request a week ago, but asked him not to formally request to be excused.

Tillion apologized to the two, "My anger was partly my own fault," he conceded. "It probably was an ill-temperate thing."

But he refused to back down from his warning that he will not approve any more committee hearings outside Juneau during the week unless they are

Safety valve

GOV. JAY HAMMOND has proposed several times that Alaska's governor should serve only a single, six-year term. He hasn't detonated much of a public explosion in support of the concept.

But there appears to be growing support, even among legislators, for a constitutional limit to the number of consecutive terms that can be served by members of the state's House and Senate.

Sen. Ed Dankworth, an Anchorage Republican, is a leader in this movement and he vows to press hard in the next session to win converts to his cause.

His idea is to avoid the buildup of legislative power in the hands of a few senators or representatives who now — by virtue of long years in office — pretty much rule the roost when it comes to influencing activities in Juneau.

ONE PROPOSAL is that members of the House serve no more than three consecutive two-year terms and members of the Senate be limited to no more than two consecutive four-year terms.

Such a limitation would help insure a turnover in office and guarantee that, periodically, new faces, new ideas and new personalities would flavor the legislative pot.

Under normal circumstances, there might be no attraction to the concept of limiting legislative service. But these are not normal times in Alaska.

THE STATE IS facing many years when enormous sums of money will be available for appropriation. It can be handed out wisely and used well. Or it can become a treasure to be plundered.

The fear is that the temptation to misuse this wealth might increase with the length of time a person serves in the legislature and thus assumes more and more power.

Signs already are blowing in the wind, indicating the danger is real. Sen. Dankworth's ideas on the subject merit serious consideration in the 1981 legislative session.

2/12/15 Times

A limit on service

ALASKA HAS HAD, over the years, a number of men and women who have served well for long periods of time as members of the legislature. That has been a plus for the territory and the state. But there are some offsetting minuses connected with long tenure in the legislature. And there is mounting evidence that the negative is beginning to far outweigh the positive.

Recognizing that legislative seniority also can lead to legislative abuses, one member of the Alaska Senate has proposed to put a lid on the number of consecutive terms a person could serve. The proposal has merit and deserves thoughtful consideration.

Sen. Ed Dankworth, the Anchorage Republican who two weeks ago was kicked off the Senate Finance Committee when he refused to play ball with some senior members of the club, proposed this the other day in a resolution calling for a constitutional amendment.

IF APPROVED by the legislature — and that's a big "if" — the resolution would go on the ballot for action by the voters of the state. It calls for the imposition of a constitutional limit restricting a person to two consecutive terms in the Senate or three consecutive terms in the House.

The net effect would be to allow a person six years of continuous House service or eight straight years of service in the Senate.

To make the proposal more palatable and to give it at least a chance of passage by the current crop of legislators, Sen. Dankworth included a grandfather clause. Under its provisions, the counting of terms would begin with approval of the constitutional amendment. Incumbent senators and representatives with long tenure — including such luminaries as Sens. Bill Ray of Juneau, Bob Ziegler of Ketchikan, George Hollman of Bethel, John Sackett of Galena and Clem Tillion of Halibut Cove — would not be immediately affected.

THE RESOLUTION has drawn some initial support. Signing on as co-sponsors were Republicans Arliss Sturgulewski and W.E. Bradley and Democrats Pat Rodey and Terry Stimson, all of Anchorage.

That's a good start. But clearly it is not enough. To succeed, the proposal must have widespread support, even from districts that have long placed their legislative affairs in the hands of one or two individuals.

A constitutional amendment limiting tenure would bring two significant changes. It would guarantee that a fresh flow of ideas, personalities and backgrounds would be injected into the legislative process. And it would be a barrier to the creation of legislative dynasties and would prevent any single legislator from assuming, on the basis of seniority, a seat of power that could impair good government for all the people of Alaska.

Legislative terms

WITH THE growing interest in setting a constitutional or statutory limit on the amount of money Alaska's state government can spend on operating expenses, the time might also be ripe to consider another limitation.

What about putting a lid on how many terms a person can serve in the legislature?

Alaska's governor is restricted to two consecutive terms. If such a limit makes good sense for the state's chief executive, it might make equally good sense to bar people from building up legislative empires.

The two-term limit on the office of governor is to prevent the prospect of having a Huey Long seize control of the most powerful gubernatorial office in all America. When Alaska's constitution was drafted back in 1956-57, such a prospect was very much in the mind of the constitutional delegates.

HOWEVER, they saw no similar danger in the legislative branch. That's understandable. No one could have envisioned the immense power Alaska's lawmakers have today.

The subject did arise, says Steve McCutcheon, the delegate whose subcommittee dealt with the matter of legislative terms. It was discarded, he says, after only cursory consideration — but, in retrospect, it appears such a limit would have been wise.

Insofar as we have been able to determine, no other state imposes a constitutional limit on consecutive years of service in the legislature.

But several states do achieve something of the same result by requiring, either through custom or rule, that a legislator bow out after serving in a major leadership

A man who has been speaker of the House, for example, would not seek re-election after serving in that position. Another might cap his or her career as president of the Senate. The same limitation could apply to those who enjoy special authority as majority or minority leaders or as chairmen of principal legislative committees, such as Finance or Rules.

The reasons for such limitation are obvious.

For one thing, mandatory transfer of legislative power — by upward movement through the chairs, as it were — would avoid the possibility that one legislator, or group of legislators, could carve out a fiefdom within the legislative structure.

For another, it would guarantee an infusion of fresh blood, fresh energy and fresh ideas into the legislative process. Certain House and Senate seats have become virtually the personal possession of legislators who run time after time with no opposition or only a token show by a challenger.

THE POSSIBILITY of legislative abuse of power, never before a worry in Alaska, has become more and more alarming as the state's income and wealth soars. In recent months, examples have begun to become evident.

A legislator armed with a seat that is awarded to him election after election can hardly resist the temptation to become arrogant. And there are other temptations, far worse, that come with excessive legislative power.

For the benefit of all concerned, including legislators, consideration should be given to limiting terms of office — as well as government spending.

3/24 Daily

Juneau's rites of spring: What about re-election?

john greely

JUNEAU — With the coming of spring, most people's thoughts turn to such down-to-earth things as vegetable gardens and love. But for the politicians in our midst, spring invariably sprouts a different kind of basic question — what to do about re-election.

Leo Schaeffer, Ed Dankworth and Hugh Malone are approaching this biennial rite of spring in different ways.

Last week, Rep. Schaeffer, D-Kotzebue, looked ahead to the June 1 deadline for filing for office and decided he'd had enough of the legislature. So Schaeffer became the first of several legislators likely to call it quits.

By all accounts, Schaeffer would have won re-election to a third term this fall. The former city manager of Kotzebue is popular, hard-working and effective. He also comes from a respected family that wields a lot of power in Northwest Alaska.

But, Schaeffer also has a wife and four kids. When asked why he wasn't running again, he mentioned his kids first. Then he said, "I guess I'm just tired of the legislature."

Schaeffer's choice, between his kids and his political career, is one that confronts all citizen-legislators. And, despite what might be prevailing myth these days, there are still quite a few citizen-legislators (in that order) serving Alaska.

But, for Sen. Dankworth, R-Anchorage, there aren't enough. Midway through his first term in the Senate, Dankworth — though as popular in his district as Schaeffer is in his — isn't particularly hardworking or effective. This is because he's on the outs with the veteran power-brokers in the Senate.

Due to this feud, plus the fact he's retired and his children are grown, Dankworth doesn't have much else to do these days except to upset the establishment here. One part of this effort is a bill he's sponsored to limit senators to two terms in office and representatives to three.

This bill has no chance of passing, but it has a good point — Alaska does not need politicians who are concerned chiefly with homesteading their office instead of their land. And the longer they stay in office, Dankworth reasons, the more likely politicians are to lose touch with reality, their family, or both.

There are some notable exceptions to Dankworth's theory. The best is former Sen. John Butrovich, R-Fairbanks, who served here for 30 years with integrity, honesty and his family intact.

A more current exception to Dankworth's theory is Rep. Malone, D-Kenai, now in his eighth year of legislative service and hoping for more, possibly as a senator.

A land surveyor and father of three children, Malone went home a few weeks ago to do a very unpopular thing — appear before his local Chamber of Commerce and explain why he thinks it's a bad idea to repeal state income taxes.

Still, Malone is a popular, if sometimes controversial, man in his district. This is because he's honest and hardworking. This past weekend, for example, he and a handful of other legislators could have gone out and played in the warmth of a fine spring day here. Instead, they spent six or seven hours laboring over a bill on the Alaska Permanent Fund.

Malone did take a short break for lunch. And with literally billions of dollars at stake, he might have forgotten to leave a note for the legislature's cook, but he didn't.

"Tony," the note read, "please bill me for the extra sandwich and coke. Thanks, Hugh Malone."

M E M O R A N D U M February 21, 1983

SUBJECT: Terms of Legislators
(CSHJR 12(Judiciary))

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee

FROM: Richard A. Bradley
Legislative Counsel

Enclosed are three alternative resolutions for your consideration. I believe that the draft of the Judiciary Committee Substitute provided to you earlier would have created some problems and therefore it is also replaced.

As drafted, the earlier committee substitute provided that

> A legislator not eligible for reelection under this section may be . . . elected to the same house after one full term has elapsed.

The problem with the language was that it created a result that I assume was not intended: it provided that election "after one full term" was possible. But by tying the reelection possibility to the elapse of a term, the reestablishment of qualification to serve was delayed until a period having no relation to the time set for the elections. That is, a member not qualified until after "one full term has elapsed" would gain the right to run for office in the January either two or four years later, or some six months or more after the June 1st deadline for party nominations and nonparty petitions. See, AS 15.25.030, 15.25.150.

The result was that a candidate was disqualified for the "full term" plus two years.

The solution is to separate the disqualification from eligibility for election and tie it rather to eligibility to serve. A person may therefore seek office at a time when the

person is disqualified from service; the disqualification from service will expire before for the candidate is able to take office, if elected.

The second committee substitute requested the concept of restored eligibility after two years.

The third committee substitute requested the concept of restored eligibility after four years.

I believe that the concepts have been achieved.

House of Representatives

To: Representative Jack Fuller, Rules Chairman
From: Representative Barbara Lacher
Date: March 10, 1983
Subject: CS HJR 12

It has come to my attention that some clarification of intent is needed in the Judiciary Committee Substitute for House Joint Resolution 12.

On line 20, the word, "and", should be changed to "or".

The intent of the resolution is that a legislator, when he reaches ineligibility as defined in the resolution, may either run for a seat in the other house, or must wait two years before running for the house in which he reaches ineligibility. For example, a House member who serves four full consecutive terms can immediately run for a Senate seat. He must, however, wait two years before running again for a House seat.

A legislator has expressed concern that the word "and" implies that one must wait two years before running for either house, once ineligibility has been reached.

I believe that the insertion of the word, "or", in place of the word, "and" should clarify the intent of the resolution to everyone's satisfaction. I have attached a copy of the resolution indicating exactly where the change should be made.

Thank you for your consideration of this request.

Representative Barbara Lacher

I concur with Rep. Lacher's request, and with her summary of the intent of the Judiciary committee substitute.

Representative Charlie Bussell
Chairman, Judiciary Committee

February 21, 1983

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee
FROM: Steve Cramer
SUBJECT: HJR 12; Background Information on suspense action required

1. Attached please find three (3) "WORK DRAFT" copies of a proposed committee substitute per request of the committee on February 16, 1983. You will note that the significant language change for discussion appears in sentence seven (7) of SECTION 3. The proposed choices for the substitute language would limit the ineligibility period for legislators to either a "full term" "four years" or "two years".

2. A survey of available resources was conducted by this researcher pursuant to the request of the House Judiciary Committee to ascertain any similar constitutional legislation or mandates in other states. The main resource used was:

> "Constitutions of the United States", October 1982,
> Oceana Publications, Inc., Dobbs Ferry, N.Y.

After reviewing all State constitutions it can be reported that not a single case reports the limiting of legislative terms of office to any "consecutive term" language nor do any States require legislators to participate in an "ineligibility" period because of tenure within their state government legislative structure.

3. With reference to the inquiry posed by Representative Clocksin as to the "philosophy and intent" of delegates to the Constitutional Convention relative to this issue the following is submitted, In order for me to best put before this committee the research in this area I will begin by quoting Vic Fisher, author of "Alaska's Constitutional Convention"

> "Keeping a record of committee deliberations and decisions proved a major administrative problem . . . while in a number of occasions the staff consultants emphasized the critical importance of adequately recording committee deliberations, most minutes simply consisted of a record of the committee having met and of other nonsubstantive information . . . the lack of adequate committee minutes has made difficult subsequent judicial, executive, and legislative attempts to interpret constitutional intent" [1]

In reviewing the Constitutional Convention "Journal" and "Daily Proceedings" and subsequently through the tracking of the "Delegate Proposals", "Committee Proposals of the Legislative Branch", it can be reported that the Convention did not deem it appropriate to limit "government of the people" by limiting representation to our legislative branch of government for any tenure reason.

---

[1] Fischer, Victor, "Alaska's Constitutional Convention", 1975, Institute of Social, Economic and Government Research, University of Alaska Press

I have further enclosed two (2) staff position papers submitted at the Constitutional Convention relative to this issue. Although not representative of either the full committee on legislative affairs or all convention delegates, the language and intent can be interesting to you as you prepare for this issue further within your present House Judiciary Committee.

Respectfully submitted,

Stephen E. Cramer, Legislative Aide

House of Representatives

To: House Judiciary Committee
From: Representative Barbara Lacher
Date: February 16, 1983
Subject: HJR 12

The House recently passed a resolution which would allow Alaskans to decide whether session length should be limited. HJR 12 would let our voters decide whether to limit legislators' terms of office: representatives to four consecutive full terms, and senators to two consecutive full terms.

In light of the apparently substantial public support for this measure, I believe we owe our constituents the opportunity to vote on a resolution restricting terms of office. This is a decision which should be made by all Alaskan voters, the people who elect us and whom we represent.

In the packet you have received, several very good points are made in favor of limiting terms. First and most important, there seems to be a great deal of public support for such a measure. David Dittman did a poll in March of 1981 which showed that 62% of the people contacted support limiting terms of legislators. As you can see, regardless of how the results were broken down--whether by age, sex, income, length of residency, or education--the public supports this measure.

In addition, 49 of 76 legislative candidates responding to a survey done by Common Sense said they favor limiting the number of consecutive terms a legislator can serve.

Finally, a study done by the Anchorage FREE Committee in 1981 makes some very good points in favor of limiting terms:

1) Limiting terms could encourage more citizens to run for office by allowing opportunities to run for a seat without opposing an incumbent (incumbents being commonly perceived as much more difficult to defeat).

2) It would be more difficult for a few long-time legislators to develop excessive control. As the FREE report points out, the longer a legislator is in office, the more favors are owed by him and due to him. Limiting terms would interrupt this power process.

I firmly believe that, to eliminate power blocs and to ensure a citizen legislature, Alaskan voters must be allowed to decide whether to amend our Constitution to limit terms of office. I urge your support for HJR 12.

ACTION NARRATIVE

TAPE #001
RECORDING
NUMBER 000

SENATOR FISCHER CALLED THE MEETING TO ORDER AT 1:40 P.M. WITH MEMBERS SENATORS: COLLETTA, BRADLEY, AND STIMSON PRESENT. SENATOR FISCHER OPENED TESTIMONY ON THE THREE PROPOSED CONSTITUTIONAL AMENDMENTS

SSA 0311821 DOCUMENT= 6 OF 9 PAGE = 5 OF 20

CONCERNING TERMS OF LEGISLATORS; SJR 9, SJR 24, AND SJR 55.
SENATOR ED DANKWORTH, PRIME SPONSOR OF SJR 9, STATED HIS OBJECTION TO RESTRAINING THE PUBLIC'S CHOICE IN ANY MANNER. HE ASSERTED THAT THERE WERE CERTAIN POWERS IN PLACE AT THE TIME THE ALASKA CONSTITUTION WAS WRITTEN, AND THAT THE BALANCE OF THESE POWERS HAD SHIFTED. ALASKA'S ECONOMIC AND NATURAL RESOURCE WEALTH HAS PLACED MORE POWER WITH THE LEGISLATURE.
SENATOR DANKWORTH WENT ON TO EXPLAIN THAT PRESENTLY, LEGISLATORS HAVE THE POTENTIAL TO STAY IN OFFICE FOREVER "AS LONG AS YOU KEEP YOUR HAND OUR OF THE COOKIE JAR, YOU MIGHT SAY". IT COULD, AND ALMOST HAS, BECOME A YEAR-ROUND JOB. THIS IS UNFAIR TO THOSE WHO WOULD SEEK TO REPLACE MEMBERS OF THE LEGISLATURE.
SENATOR DANKWORTH POINTED OUT THAT ALASKA

HAS WORKED SUCCESSFULLY WITH A CITIZEN LEGISLATURE, AND NOW HAS BEEN TRANSFORMED INTO A BUREAUCRACY. ALASKA, AND TO AN EXTENT THE LEGISLATURE ITSELF, IS THE BIGGEST LAND COMPANY, AND THE MANAGER OF THE "BIGGEST NATURAL RESOURCE." IF ALASKA WANTS TO CONTINUE THE CITIZENS' LEGISLATURE, THIS SORT OF ISSUE MUST BE EXAMINED--IF YOU CAN'T MAKE A WORTHY CONTRIBUTION IN EIGHT YEARS, YOU'RE NOT GOING TO MAKE IT.

NUMBER 0098

AN ARGUMENT CAN BE MADE FOR THE VALUE OF EXPERIENCE, SENATOR DANKWORTH CONTINUED, BUT THAT DOESN'T NECESSARILY MAKE ONE MORE QUALIFIED.

SENATOR ZIEGLER (STANDING IN THE COMMITTEE ROOM) SAID "OBJECT." SENATOR DANKWORTH CONTINUED, "PERHAPS WITH THE EXCEPTION OF SENATOR ZIEGLER."

SENATOR DANKWORTH ADVOCATED LETTING OTHERS RUN FOR THE LEGISLATURE ON "AN EQUAL FOOTING

AGAINST US", NOTING THE LARGE ADVANTAGE A LEGISLATOR HAS IN AN ELECTION DUE TO CONNECTIONS WITH MEDIA AND MONEY. IF THIS "LIMITS THE PEOPLE'S CHOICE," THAT SEEMS A FRAIL ARGUMENT THE ARGUMENT IN FAVOR OF A CITIZEN'S LEGISLATURE.

NUMBER 0145

SENATOR FISCHER STATED THAT HE WAS COMING AT THE ISSUE WITHOUT HIS MIND MADE UP. HE SAID THAT SENATOR DANKWORTH HAD ASKED THAT THE STATE AFFAIRS COMMITTEE HOLD A HEARING, BUT DOES NOT KNOW WHAT HIS RECOMMENDATION WILL BE. "WITH RESPECT TO SENATOR ZIEGLER...WE BOTH SERVED IN THE LEGISLATURE TWENTY-FIVE YEARS AGO...WE'VE COME A LONG WAY."

NUMBER 0155

SENATOR BRADLEY EXPRESSED CONCERN THAT THE MEASURE MIGHT CAUSE "LAME DUCK" REPRESENTATIVES (THOSE INELIGIBLE FOR RE-ELECTION) TO "SLOUGH OFF." HE ASKED IF, UNDER THE PROVISIONS OF SJR 9, A MEMBER WHO HAD COMPLETED HIS MAXIMUM 8 YEAR TERM COULD

RUN FOR ELECTION TO THE OTHER BODY OF THE LEGISLATURE.

SENATOR DANKWORTH AFFIRMED THAT IT WOULD BE POSSIBLE FOR A MEMBER TO RUN FOR THE OTHER BODY, ONE JUST COULDN'T KEEP THE SAME SEAT MORE THAN TWICE.

NUMBER 0180

SENATOR BRADLEY STATED A PREFERENCE FOR A PROVISION FOR KEEPING ENTIRELY OUT OF THE LEGISLATURE FOR 2 TO 4 YEARS.

SENATOR DANKWORTH EXPLAINED THAT POWER STRUCTURES DEVELOP OVER THE YEARS WHICH AREN'T NECESSARILY HEALTHY. A LEGISLATURE WHO REPRESENTS 12,000 PEOPLE MAY BE UNABLE TO DO MUCH FOR CONSTITUENTS EXCEPT BY BELONGING TO SOME SORT OF POWER STRUCTURE. THIS MEASURE "BREAKS THE DYNASTIES...I SEE THIS MORE ON A FEDERAL LEVEL THAN THE STATE LEVEL." SENATOR DANKWORTH EXPLAINED THAT THE AMOUNTS OF MONEY INVOLVED FRIGHTENS HIM.

SENATOR FISCHER ASKED SENATOR ZIEGLER IF HE

WOULD JOIN COMMITTEE MEMBERS AT THE TABLE. HE DID SO.

NUMBER 0260 SENATOR FISCHER COMMENTED THAT THIS SORT OF MEASURE ONCE MORE LIMITS THE ABILITY OF THE LEGISLATIVE BRANCH TO HOLD ITS OWN AGAINST THE EXECUTIVE.

SENATOR DANKWORTH RESPONDED, SAYING HE SUPPOSED YOU COULD SAY THE EXECUTIVE AND JUDICIAL BRANCHES HAVE GROWN IN POWER SOMEWHAT, BUT HE STILL SEES A NEED TO BALANCE THINGS IN A LIGHT OF A VERY POWERFUL LEGISLATURE. HE ALMOST PUT IN A BILL FOR ONE TERM FOR THE GOVERNOR (6 YEAR TERM). IN FURTHER SUPPORT OF SJR 9 SENATOR DANKWORTH STATED, "SOME OF THE DECISIONS I MAKE IN AN ELECTION YEAR I MAKE MORE WITH AN EYE TO MY OWN BEST INTEREST..."

NUMBER 0237 SENATOR FISCHER ASKED IF SENATOR ZIEGLER WOULD SPEAK ON THE OTHER SIDE OF THE ISSUE.

NUMBER 0245 SENATOR ZIEGLER ASKED IF SENATOR DANKWORTH

SSA 0311821 DOCUMENT= 6 OF 9 PAGE = 10 OF 20

KNEW WHAT OTHER STATES, IF ANY, HAVE SIMILAR RESTRICTIONS.

SENATOR ZIEGLER STATED THAT HE DIDN'T KNOW WHETHER TO CHARACTERIZE THIS BILL AS A CATASTROPHE OR AN ABOMINATION, AND FIGURED IT WAS SOMEWHERE INBETWEEN A NATURAL DISASTER AND A NATURAL CATASTROPHE. THE TITLE, HE SAID, SHOULD BE AMENDED TO READ "LEGISLATORS COMPULSORY RETIREMENT"; THE MEASURE IS A WASTE OF TIME. HE DISCUSSED PROVISIONS OF THE CURRENT LEGISLATIVE RETIREMENT PLAN, INCLUDING THE YEARS REQUIRED TO VEST, AND INDICATED HOW THIS MEASURE WOULD AFFECT LEGISLATIVE RETIREMENT. WHEN IT WAS SUGGESTED THAT THE LEGISLATOR WHO HAD SERVED TWO TERMS MIGHT RUN FOR THE OTHER BODY, SENATOR ZIEGLER ASKED, "WHO WOULD WANT TO GO TO THE OTHER BODY UNDER ANY CIRCUMSTANCES?"

SENATOR ZIEGLER WENT ON TO SAY THAT ONE

SSA 0311821 DOCUMENT= 6 OF 9 PAGE = 11 OF 20

DOESN'T "ACCOMPLISH IT ALL IN EIGHT YEARS". HE REFERRED TO PAST LEGISLATORS, INCLUDING JOHN BUTROVICH (WHO SERVED 30 YEARS) AND FRANK PERATROVICH, WHO SERVED FOR EIGHTEEN (?) YEARS. HE IS VIOLENTLY OPPOSED TO THIS OR ANY OTHER RESOLUTION WHICH WOULD IMPOSE THIS KIND OF RESTRICTION, AND SAID HE KNEW OF NO OTHER STATE WITH THIS TYPE OF RESTRICTION. THE LEGISLATION, HE CONCLUDED, IS NOT WELL THOUGHT OUT.

NUMBER 0340 SENATOR DANKWORTH RESPONDED THAT HE DIDN'T KNOW HOW LONG THE MEASURE HAD TO BE IN THE LEGISLATURE BEFORE IT BECAME "WELL THOUGHT OUT" AS IT HAS BEEN CONSIDERED FOR A NUMBER OF YEARS. HE RESTATED HIS POINT ON THE WAY IN WHICH LEGISLATORS BECOME INVESTED IN THE SYSTEM, LOCKED, LIKE ANYONE ELSE, INTO THE BUREAUCRACY. HE SAID IT WAS NOT HIS INTENTION TO SLIGHT SENATOR ZIEGLER, OR JOHN BUTROVICH, OR ANYONE ELSE, NOR TO IMPLY THAT

THEIR EXPERIENCE WAS NOT VALUABLE. THE STAGGERED TERMS, HE SAID, WOULD ALLOW FOR VETERAN LEGISLATORS TO HELP OUT NEW LEGISLATORS. HE WOULD LIKE TO GET INSURANCE INTO THE ALASKA CONSTITUTION THAT THE STATE WILL STICK TO A CITIZEN LEGILATURE.

NUMBER 0374

SENATOR ZIEGLER DISCUSSED ELECTABILITY, AND HOW IT DETERMINES THE VALUE OF ONE'S SERVICE. PEOPLE WHO KNOW A LOT ABOUT THE PROCESS ARE VALUABLE.

SENATOR BRADLEY POINTED OUT THAT IT WOULD NOT AFFECT HIM AT ALL, AND THAT SOME MEMBERS NEED TO GET OUT TO MAKE THE MONEY NECESSARY TO COME BACK TO SERVE. THERE SHOULD BE ROOM FOR EXCEPTIONS HE STATED. SENATOR ZIEGLER, FOR EXAMPLE, HAD NOT ABUSED THE POWER WHICH HAS OCCURED TO HIM OVER THE YEARS IN THE LEGISLATURE.

SENATOR BRADLEY SAID THE PEOPLE HAVE A RIGHT TO ELECT WHO THEY WANT. NO ONE HAS BEEN

ABLE TO TALK HIS CONSTITUENTS OUT OF IT--THEY WANT A RESOLUTION SUCH AS SJR 9--THEY WANT SOME "NEW BLOOD". PERSONALLY, HE IS "50-50 SPLIT" ON THE ISSUE. BUT WILL SUPPORT IT FOR HIS CONSTITUENTS.

NUMBER 0429

SENATOR FERGUSON ARRIVED, AND SENATOR FISCHER BRIEFED HIM ON WHAT HAD TAKEN PLACE. SENATOR COLLETTA, PRIME SPONSOR OF SJR 55; SENATOR DANKWORTH, PRIME SPONSOR OF SJR 9; AND SENATOR FERGUSON, PRIME SPONSOR OF SJR 24, ALL WERE GATHERED AT THE TABLE.

SENATOR COLLETTA EXPRESSED HIS REGRET THAT SENATOR ZIEGLER HAD TO LEAVE AS HE HAS "HEARD THOSE ARGUMENTS FOR TEN YEARS" AND DID NOT HAVE AN OPPORTUNITY FOR A REBUTTAL. THE POINT WHICH HAS TO BE KEPT IN MIND IS THE VALUE OF A CITIZENS' LEGISLATURE.

SENATOR COLLETTA STATED THAT HIS MEASURE, SJR 55, DOES NOT DIFFER GREATLY FROM SENATOR DANKWORTH'S. HE PROVIDED COPIES OF THE

RESULTS OF A POLL HE HAD ADMINISTERED IN ALL REGIONS OF THE STATE. IN EVERY REGION IN THE STATE, IT CAME THROUGH WITH CLARITY: PEOPLE SUPPORTED LIMITING TERMS OF LEGISLATORS. IT IS THE PEOPLE'S RIGHT TO DETERMINE WHETHER OR NOT THEY WANT TO LIMIT THE LEGISLATORS. MOST SENIOR MEMBERS IN THE LEGISLATURE RUN UNOPPOSED; SO GREAT IS THEIR ADVANTAGE AS INCUMBENTS IT DISCOURAGES OTHERS FROM CHALLENGING THEM.

NUMBER 0476

SENATOR FERGUSON, PRIME SPONSOR OF SJR 24, TESTIFIED IN SUPPORT OF THAT MEASURE. HE FELT THERE SHOULDN'T BE A DIFFERENCE IN THE NUMBER OF YEARS SERVED IN THE HOUSE AND THE SENATE RESPECTIVELY, AND HIS MEASURE PROVIDES FOR THREE YEAR TERMS, AND A MAXIMUM OF TWO CONSECUTIVE TERMS. ANOTHER LINE OF THOUGHT ALONG THIS LINE IS TO HAVE THE GOVERNOR RUN FOR ONE SIX YEAR TERM. (THIS PROVISION NOT INCLUDED IN SJR 24.)

SENATOR FISCHER REFERRED TO THE CONSTITUTIONAL CONVENTION, WHERE IT WAS DETERMINED THAT THE SENATE, BY HAVING OVERLAPPING FOUR YEAR TERMS, WOULD PROVIDE MORE CONTINUITY, AND THE HOUSE WOULD RESPOND TO MAJOR CHANGES IN PUBLIC OPINION.
SENATOR DANKWORTH STATED THAT ONE HAS TO TAKE INTO CONSIDERATION WHAT HAPPENS ON THE CAMPAIGN TRAIL AND THE COST OF IT. HE REFERRED TO THE INCUMBENT'S GREAT ADVANTAGE AND THE NEED TO HAVE MONEY. THE FACT THAT "WE ARE DOWN HERE DEALING WITH BILLIONS OF DOLLARS MAKES IT WASIER TO RAISE MONEY--WE HAVE MORE STATUS THAN THE NEW GUYS ON THE BLOCK."

NUMBER 0537

SENATOR COLLETTA STATED THAT HE HAD TO LEAVE, AND, IN CLOSING, SAID THAT THE METHOD OF IMPLEMENTATION WAS NOT IMPORTANT TO HIM. HE SUGGESTED THAT THE COMMITTEE MIGHT MOVE ONE OF THE MEASURES OUT AND SEND COPIES OF

ALL OF THEM ALONG TO THE JUDICIARY COMMITTEE. SENATOR FERGUSON SUGGESTED THAT ALL OF THE MEASURES BE PASSED ON TO JUDICIARY.
SENATOR FISCHER SAID HE HAD NEVER DONE THAT--THAT IT WOULD BE LIKE WAIVING A BILL.
SENATOR STIMSON STATED THAT HE WAS IN FAVOR OF MOVING IT.
SENATOR FISCHER ASKED IF HE MEANT TO MOVE ALL THE MEASURES TO JUDICIARY, AND SENATOR STIMSON RESPONDED IN THE AFFIRMATIVE.
SJR 24, SJR 55 AND SJR 9 WERE ALL PASSED OUT WITH INDIVIDUAL RECOMMENDATIONS.
SENATOR FISCHER WAS THE ONLY MEMBER OF THE COMMITTEE REMAINING UNTIL THE END.

MEMORANDUM

March 10, 1983

TO: Joe ("Judge") Brewer
FROM: Steve Cramer
SUBJECT: HJR 29 (Exclusionary Ruling); Constitutional Research of the States

1. All State's Constitutions were researched to ascertain if under the Search and Seizure rights they contained any provision for non-suppressing of evidence obtained under that particular section.

2. I delimited the search and seizure language into three (3) sub-headings:

   [a] people to be secure in persons,houses,papers and effects from unreasonable searches and seizures

   [b[warrants not to issue to search any place or to seize any person or thing without probable cause supported by oath or affirmation

   [c] particularly describing the place to be searched and the person or thing to be seized

   Fourty eight (48) of the states contained language similar to all three (3) sub-headings.

   Alabama did not cover item [c] above.

   Washington did not cover items [b] nor [c] above.

   Michigan added an additional statement:

   > ". . . the provisions of this section shall not be construed to bar from evidence in any criminal proceeding any narcotic drug,firearm,bomb,explosive or any other dangerous weapon seized by a peace officer outside the curtilage of any dwelling house in this state."

Definition of "Exclusionary Rule:

Evidence obtained in violation of the Fourth Amendment is inadmissible in a criminal prosecution.

"Fourth Amendment" refers to the federal constitution, as well as article 1, section 14 of the Alaska Constitution.

Evidence can also be exluded for violations of other federal and state constitutional rights:

1. 5th am. privilege vs. self incrimination; e.g.s., Mirande & forced confessions.

2. 6th am. right to counsel.

3. Due process - right to not be convicted on unreliable identification.

4. Rights created by federal statutes.

5. Rights created by state constitution and statutes which go beyond federal constitutional protections.

(c) Motion for Return of Property and to Suppress Evidence.

A person aggrieved by an unlawful search and seizure may move the court in the judicial district in which the property was seized or the court in which the property may be used for the return of the property and to suppress for use as evidence anything so obtained on the ground that the property was illegally seized.

EVIDENCE RULES

Rule 412. Evidence Illegally Obtained.

Evidence illegally obtained shall not be used over proper objection by the defendant in a criminal prosecution for any purpose except:

(1) a statement illegally obtained in violation of the right to warnings under *Miranda v. Arizona*, 384 U.S. 436 (1966), may be used in a prosecution for perjury if the statement is relevant to the issue of guilt or innocence and if the prosecution shows that the statement was otherwise voluntary and not coerced; and

(2) other evidence illegally obtained may be admitted in a prosecution for perjury if it is relevant to issue of guilt or innocence and if the prosecution shows that the evidence was not obtained in substantial violation of rights. (Added by Supreme Court Order 364 effective August 1, 1979)

ISSUE: Is 2/3 majority vote of legislature required to enact legislation limiting or amending the "exclusionary rule"?

Rule of Evidence - 412 is the actual "exclusionary rule".

Rule of Criminal Procedure - 37 (c) (copy attached) sets forth the procedure whereby the exclusionary rule can be invoked by motion to suppress.

Alaska Constitution, Article IV, Section 15, provides that court rules may only be changed by the legislature by a 2/3 vote

TEST: Is proposed limitation or amendment substantive or procedural?

HOUSE JUDICIARY SUBCOMMITTEE WEIGHS PROPOSED CHANGES TO EXCLUSIONARY RULE

Witnesses give Reagan Adminstration's "good-faith" exception little encouragement.
▸350.03 ▸100.05

In early September Congress received President Reagan's draft of proposed changes in the field of criminal law. The proposals, embodied in S 2903 and HR 7117, are entitled the "Criminal Justice Reform Act of 1982" and, among other things, call for a change in the exclusionary rule. The Adminstration would like to amend chapter 223 of title 18 USC to establish a "good-faith exception" to the rule, allowing for the admission of evidence resulting from a search or seizure "undertaken in a reasonable, good faith belief that it was in comformity with the fourth amendment." 31 CrL 2540.

Additionally, just last week the Supreme Court called for reargument in Illinois v. Gates (No. 81-430, argued 10/13/82, 32 CrL 4069) and requested the parties to address the question of "whether the rule requiring the exclusion at a criminal trial of evidence obtained in violation of the Fourth Amendment, * * * should to any extent be modified, so as, for example, not to require the exclusion of evidence obtained in the reasonable belief that the search and seizure at issue was consistent with the Fourth Amendment." 32 CrL 4105.

Against this backdrop, on December 2 the House of Representantives' Judiciary Subcommittee on Criminal Justice continued its oversight hearings on the operation of the exlusionary rule. Subcommittee Chairman John Conyers, Jr. (D-Mich) characterized the issue before the subcommittee as whether or not forces were now moving against the Fourth Amendment itself. The first witness called was Silas Wasserstrom, Associate Professor of Law, Georgetown University Law Center, and former Chief of the Appellate Division of the Public Defender Service for the District of Columbia. He referred extensively to a recent article "The Good Faith Exception to the Exclusionary Rule: Deregulating the Police and Derailing the Law," 70 Geo L.J. 365 (1981), of which he was co-author.

FOURTH AMENDMENT STIFLED

Wasserstrom first addressed the potential outcome of the Gates v. Illinois reargument. He told the subcommittee that if the Supreme Court decides to adopt a good-faith exception to the exclusionary rule it would render any proposed legislation superfluous and any constitutional challenges moot. He predicted that it would not be unlikely for a limited version of this exception to be adopted in Gates. However, Wasserstrom continued, even this would be a "substantial inroad" on the exclusionary rule.

In an attempt to deter police misconduct, the Court may limit the exception to cases wherein police are acting pursuant to a warrant, Wasserstrom opined. But he quickly noted that then the question of judicial misconduct in issuing the warrant would arise. The result of any inquiry would be "odd" because the language of the Fourth Amendment makes clear that warrants shouldn't issue except on probable cause. Thus, if the Court decides to allow searches pursuant to illegal warrants, it would be circumventing the Amendment's very purpose, Wasserstrom declared.

He cautioned that if Congress attempts to promulgate its own exception to the rule, aimed at upholding the admission of any evidence seized in reasonable good faith, it might not only go beyond the future "Gates rule" but could make any search conducted pursuant to warrants "per se good faith."

Wasserstrom strongly objected to Conyers' observation that the issue really is "real world" law enforcement versus "whether an arcane constitutional provision is minutely enforced." The Fourth Amendment protects us from a police state, Wasserstrom declared, noting that criticism directed at the exclusionary rule may really be aimed at the Fourth Amendment itself. This prompted him to suggested that the subcommittee might want to consider repealing the Fourth Amendment. The exclusionary rule does not hamstring police, the Amendment does.

To what extent are police inhibited by the Fourth Amendment? Conyers asked. Only in the sense that the Amendment tells them what they can and cannot do, Wasserstrom replied. A civil remedy directed at an individual police officer would be a far more drastic deterrent to police misconduct than the exclusionary rule, he added. However, a tort remedy would be an inadequate substitute for the rule, Wasserstrom stressed. The reason for this brought him to the gist of his argument against adopting the good-faith exception - the exclusionary rule's importance in the development of Fourth Amendment law.

If the exclusionary rule is eliminated or even if the exception is adopted, Fourth Amendment doctrine will petrify, Wasserstrom explained. Courts will never reach the question of whether an officer violates the Fourth Amendment because they will stop at the good-faith issue. Once this is determined the case is over.

At this point subcommittee member Bill McCollum (R-Fla) interrupted. You have made an underlying assumption that good faith will always be found; this concludes that justice will always fall on the side of the police, McCollum pointed out.

If the good-faith exception is adopted, Wasserstrom answered, the law freezes. The defendant will be asking for a change in existing law while the prosecution will be claiming a good-faith reliance on that law; courts won't give into change. Therefore defendants will have no incentive to pursue novel Fourth Amendment claims and courts will, in effect, be choking off the development of Fourth Amendment law. The courts will actually be amending Fourth Amendment law because they will no longer be required to look for probable cause, Wasserstrom maintained.

At this juncture Wasserstrom turned his attention to the Fifth Circuit's holding in U.S. v. Williams, 622 F2d 830, 27 CrL 3293 (en banc 1980), that "reason [as well as authority] plainly demand[d] explicit recognition of a good faith exception" to the exclusionary rule. He took this decision to task, arguing that reasonableness and good faith are already built into existing Fourth Amendment law. In reality the exception changes and stifles existing law, he contended. The exclusionary rule should be supplemented, not changed or excepted to, Wasserstrom concluded; that is the only way it will grow.

BLAME POLICE ADMINISTRATORS

The next witness before the subcommittee was Sue Marie Johnson, Deputy Director of the Police Executive Research Forum, an organization of police executives from the nation's larger jurisdictions. She opened her testimony by stressing the organization's belief that the exclusionary rule, by itself, is not a sufficient deterrent on unconstitutional police actions. Like Wasserstrom Johnson rejected the good-faith exception to the rule, but she then proposed an an alternative — place the responsibility for police misconduct on police administrators and not on individual officers. This not only serves the rule's purpose, it also broadly influences the improvement of policing, she explained. The change in focus of the judicial sanction, from individual officers to their departments, will provide police agencies with the incentive to develop programs for effective deterrence of police misconduct. Additionally, police officers will be more willing to perform their duties in a constitutional fashion if they know that the regulations are internal.

This is a "risk free" proposal, Johnson claimed. It is limited only by the potential of police administrators to protect individuals' constitutional rights; if they fail then the exclusionary rule can be used. However, she added, the rule would not be applied if it is apparent that the police department in question had taken its responsibility to adhere to the Fourth Amendment seriously. Departments could show proof of such good faith by meeting three requirements: "1) publishing departmental rules and regulations that guide police on proper constitutional procedures; 2) instituting effective programs to train officers according to these rules and regulations; and 3) maintaining a history of disciplinary actions taken against officers, it having been demonstrated that the officers had committed violations of departmental rules."

The judge would then rule on whether or not the officer had committed a constitutional violation, Johnson continued. If the answer is yes then the prosecutor would ask the judge to review the three foregoing requirements. The prosecution would have the burden of proving that the requirements were met in a manner sufficient to ensure one of the following: that the failure to provide a rule was reasonable and that proper regulations would be forthcoming; or if the department already had a rule covering the circumstance involved, the officer would be disciplined for violating the rule unless he was acting reasonably and in good faith; or if the rule was found unconstitutional, it was promulgated in good faith, appeared reasonable at the time, and would be reissued in

proper form. Only if the prosecution's proof failed would the evidence would be excluded, Johnson said.

Johnson admitted that this proposal would lead to eventual replacement or ossification of the exclusionary rule. However, she noted, it also does away with all the problems the rule has engendered. She closed by stating that if the proposal was implemented on the federal level then states would soon follow suit, thus developing uniform guidelines and requirements.

NO CHANGE NEEDED

The final witness was the only member of the private criminal bar to address the Subcommittee thus far in its hearings. Alan Ellis, representing the Philadelphia Bar Association, appeared to voice that body's disagreement to any substantive change in the exclusionary rule. He contended that proposed legislation — HR 4259 (replacing the rule with a tort remedy), HR 4606, HR 5971, HR 6049, HR 4422 (all creating good faith exceptions) and S 101 (weighing intentional constitutional violations) — are not only of questionable constitutionality but also "would wreak havoc on the administration of criminal justice."

Focusing in particular on the proposed good-faith exception, Ellis said that "at a time when we are trying to reduce court costs and delays, introduction of a new * * * test will trigger years of litigation, as courts are forced to throw out well developed case law." Any change would also effect police department training programs and could eventually undercut the present extensive, high quality programs in constitutional rights that did not exist prior to Mapp v. Ohio, 367 U.S. 634 (1961), he added.

There is no need to change the rule, Ellis urged. Studies show that the rule actually has only an extremely minimal impact on criminal prosecutions, with eventual admission of most challenged evidence. Any change would just be an "unabated waste of criminal resources," he maintained. Already overworked judges and defense attorneys would have to delve into the subjective intent of police officers and perhaps even consider a department's entire training program. Lengthy litigation would revolve around the 'sole' issue of "good faith." Additional public defenders and judges would be needed. Also, it would impossible to develop a consistent, workable body of law because decisions would be made on a case-by-case basis.

In additional to this list of hazards, Ellis stressed the symbolic weakening or abandonment of the exclusionary rule. Police would conclude that the Fourth Amendment was not a serious matter. The present law already considers an officer's objectively reasonable factual mistakes, Ellis noted. Thus instead of adding to the law any change may just weaken it.

Ellis also argued that when the Supreme Court held in Mapp v. Ohio that the exclusionary rule was an essential part of the Fourth and Fourteenth Amendments, it constitutionally proscribed the Congress from revoking or rescinding the rule. Accordingly, Ellis emphasized, the subcommittee's ability to act is limited. Only the Supreme Court has the authority to reduce or remove the application of the exclusionary rule, he declared.

Testimony of

Sue Marie Johnson
Deputy Director
Police Executive Research Forum

before the

Subcommittee on Criminal Justice
Committee on the Judiciary
United States House of Representatives

Concerning

The Operation of the Exclusionary Rule

June 9, 1982

Mr. Chairman, thank you for providing to the members of the Police Executive Research Forum this opportunity to express our views on the exclusionary rule and certain proposed alternatives to it. The Forum is an organization of police chief executives from the nation's larger jurisdictions. Our goal is to improve the delivery of police services by promoting and bringing about the further professionalization of police executives and officers. We conduct research, engage in experimentation and provide a forum for debate on a wide range of criminal justice issues. It is our belief that, from these efforts, substantial improvement in the quality of law enforcement services will result.

Recently, several alternatives to the exclusionary rule have been proposed in response to dissatisfaction with the effects of the exclusionary rule. We in local law enforcement confront the effects of the exclusionary rule continually; how the rule now operates in criminal proceedings disillusions us. Still, we do not think that the alternatives suggested by critics of the exclusionary rule offer the best means of remedying the ill-effects of the rule, or of achieving the rule's primary objective: to deter unconstitutional police conduct.

What we would like to recommend is a substitute process, one that will not only serve the purposes of the rule but will also broadly influence the improvement of policing. We envision a process by which the responsibility for deterring police violations of citizens' constitutional rights is given to police administrators; they can carry

such responsibility most effectively; the judiciary can deter police violations only indirectly. The change in focus of the judicial sanction, from individual officers to their departments, will provide to police agencies the necessary incentive to institute programs for effectively deterring constitutional violations by their officers; that is because, if such programs are not implemented, the exclusionary rule will continue to be applied. If police administrators show that they can carry this responsibility, that they can execute it diligently, then the need to apply the exclusionary rule in individual cases will disappear, constitutional rights will be protected, reliable and relevant evidence will be used in trials, and the effectiveness of our criminal justice system will be enhanced.

Adopting our proposal to redirect responsibility for deterring police violations of constitutional rights from the judiciary to the police is risk free. In respect of those who believe that, to ensure true justice in criminal proceedings, the exclusionary rule must be eliminated or curtailed, our proposal provides satisfaction; it is limited only by the potential of police administrators to protect individuals' constitutional rights. Regarding those who believe that the elimination or curtailment of the exclusionary rule means more police violations of individuals' constitutional rights, our proposal guarantees that the exclusionary rule will be applied whenever the judiciary determines that police departments are not ensuring that individuals' constitutional rights will not be violated. Our proposal

guarantees that both agendas in the exclusionary rule debate will be accomplished. Each of the other proposed alternatives to the exclusionary rule forces an either-or choice: you are either for the exclusionary rule, or you are against it. Our proposal is better than the other alternatives, not only because it supports, at once, the interests expressed in both of these positions, but also because it more realistically provides for achievement of the judiciary's objectives in applying the exclusionary rule.

Objectives of the Exclusionary Rule and Problems Related to Its Application

The exclusionary rule was first enunciated in the 1914 Supreme Court decision, Weeks v. United States, 232 U.S. 383 (1914). The rule was devised as a remedy for violations of citizens' constitutional rights secured by the Fourth Amendment.

Initially, the Court held that this remedy applied only in federal prosecutions. Wolf v. Colorado, 338 U.S. 25 (1949). The Court left the states free to experiment with alternative sanctions for constitutional violations by law enforcement officers. Unfortunately, state and local officials, including those in law enforcement, did not heed the Court's warnings and failed to develop remedies that would secure compliance with the Fourth Amendment's provisions. The consequence of their inaction was the Supreme Court's 1961 decision in Mapp

v. Ohio, 367 U.S. 643 (1961), to extend the exclusionary-rule remedy to state courts.

The Rule's Objectives

The essence of the exclusionary rule is that evidence obtained in violation of Fourth Amendment requirements cannot be used against defendants in criminal proceedings. In Weeks and subsequent opinions, the Supreme Court offered a number of rationales for applying the rule, the major ones being, first, to maintain judicial integrity by removing the judiciary from the taint of partnership in unlawful behavior of law enforcement officers and, second, to deter future violations by prohibiting law enforcement officers from profiting by their lawless behavior. See, Weeks at 392 and Mapp at 648, 652, and 659-60.

Throughout the history of the exclusionary rule, the Court extended the rule's application beyond Fourth Amendment search and seizure violations to violations of the Fifth Amendment [United States v. Ade, 388 U.S. 218 (1967)], the Sixth Amendment [Miranda v. Arizona, 384 U.S. 436 (1966)] and the Fourteenth Amendment [Irvine v. California, 347 U.S. 128 (1954)]. While the sanction was being extended, however, the judicial integrity argument lost its force as an independent justification. Today, the deterrence rationale is the predominant consideration in courts' decisions regarding suppression motions; judicial integrity is a consideration that is secondary to

courts' assessments of whether or not the sanction will deter future violations. See, Stone v. Powell, 428 U.S. 465, 486 (1976); United States v. Calandra, 414 U.S. 338, 348 (1974); United States v. Janis, 428 U.S. 423, 458-59 n.35 (1976); Dunaway v. New York, 442 U.S. 200, 218 (1979).

We believe that the deterrence rationale no longer provides a reasonable justification for the rule as the rule is currently applied. Though deterrence of unconstitutional police conduct is a goal we all seek to achieve, the exclusionary rule, by itself, does not constitute an appropriate means of achieving this goal.

By our criticism we are not suggesting that the rule has failed to assist in improving our system of justice. Two major benefits of the rule's application can be identified. The first benefit is that the rule has provided to defendants an incentive to challenge the propriety of conduct of law enforcement personnel; this has led to the judiciary's focusing on the requirements of constitutional behavior as these affect police. The second benefit is constituted by the indirect, long-range effects that these judicial rulings have had on police behavior; the educational aspect of decisions that have identified certain actions as improper have led police administrators to pay more particular attention to the requirements for constitutional procedure and, as a consequence, training of police officers has improved. Whether or not these two major benefits could have been realized without the rule, or under a different sanction, will never be

known. Notwithstanding the benefits, the current level of dissatisfaction with the rule and the problems it presents require us to heed now the Court's warnings and find new ways to serve the purpose of the rule.

Ascertaining a means of measuring the deterrent effect of the rule as the rule is currently applied has proven elusive; this condition has intensified debate about the point at which a balance, if any, can be struck between the benefits of the deterrent effect and the costs to the criminal justice system and society. See Oaks, Studying the Exclusionary Rule in Search and Seizure, 27 University of Chicago Law Review 665 (1970); Spiotto, Search and Seizure: An Empirical Study of the Exclusionary Rule and Its Alternatives, 2 Journal of Legal Studies 243 (1973), Canon, Is the Exclusionary Rule Failing Health? Some New Data and a Plea Against a Precipitous Conclusion, 62 Kentucky Law Journal 681 (1974); Comptroller General of the United States, Impact of the Exclusionary Rule in Federal Criminal Prosecution, Report Number GGD-79-45 (19 April 1979). Instead of further debating such issues, we want here to share our expertise as law enforcement administrators in the process of developing a suitable alternative to the rule. Abolishing the rule without substituting an effective mechanism for it amounts to a mere experiment, one in which we are not willing to engage. It is clear, however, that something must be done; the courts cannot do it themselves. We believe it is incumbent upon

the law enforcement community to work with the judiciary and the legislatures to devise a suitable alternative.

Disadvantages of the Rule

Apart from doubts about whether or not the rule has achieved its objective of deterrence, use of the rule has led to several problems, some of which are more burdensome than those that the rule was originally intended to remedy. From the many problems discussed by commentators, we have deducted seven major arguments.

In a first line of argument it is posited that the exclusionary rule interferes with justice by distorting truth. Reliable, relevant evidence that would be admitted if obtained legally is excluded from the fact-finding process when obtained in violation of constitutional commands.

A second line of argument stresses that endlessly litigating the validity of searches, seizures and other law enforcement procedures causes delays in the trial process and diverts attention from questions of guilt and innocence; focus shifts from alleged wrongdoings of defendants to allegations about police, vitiating attempts to provide swift and certain punishment for criminal activity.

A third contention is grounded in the following perception: respect that law enforcement personnel and citizens have for the law and our criminal justice system is destroyed by the rule. Instead of

operating as a deterrent, the rule encourages some police officers to twist facts and stretch the truth about searches; there is the spectacle, too, of the guilty going free because of technical errors.

A fourth line of argument is based on assertions that the rule protects only those who face criminal prosecution, and that the rule cannot deter violations of constitutionally guaranteed rights when the police have either no interest in prosecuting or are willing to forego successful prosecution in the interest of pursuing other goals.

In a fifth line of argument it is charged that the rule fails to discriminate degrees of misconduct by police officers and degrees of harm done to victims of such conduct; regarding punishments, no rational distinctions are made between minor offenses and serious crimes or between honest mistakes and deliberate, flagrant violations.

A sixth argument is that the rule discourages internal rule-making and inhibits disciplining of errant police officers because there is fear that the very fact of punishments' being administered because of rule violations can itself be used as evidence to bolster defendants' cases for suppressing evidence obtained by illegal methods.

In a seventh line of argument it is submitted that the exclusionary rule adds to the confusion about Fourth Amendment standards for

reasonable searches and seizures. Trial court judges often tortuously construe the definitions of the Fourth Amendment so they can find that searches and seizures were reasonable and avoid the harsh requirement of excluding evidence. This gives rise to minute and often bizarre gradations in legal and illegal conduct, eliminating incentives to improve police procedures: incentives that could be provided by pointing out errors and penalizing officers.

The Forum's Alternative to the Exclusionary Rule

If an alternative to the exclusionary rule is to be acceptable, it must meet two objectives. First, it must operate as a deterrent to police misbehavior by providing a clear and understandable guide to proper conduct under the Constitution and by further providing incentive to take immediate disciplinary actions in response to violations. Second, it must remove those obstacles created by the exclusionary rule, which obstacles now prevent the guilty from being convicted, so that evidence of guilt can be used in trials.

Though deterrence of unconstitutional police conduct is the main rationale for the exclusionary rule, the effectiveness of the rule, as it currently operates, in achieving the goal of deterrence is in serious question. The apparent lack of deterrence results, in plain terms, from a lack of communication: the courts, in their rulings on motions to suppress, fail to communicate to police

departments the specific requirements of the Fourth Amendment, and the police fail to educate the courts to the realities of law enforcement practices. Much of this owes to the fact that the exclusionary rule sanction is directed against individual officers.

Effective communication between the courts and the police is vital to making most productive our efforts to preserve constitutional rights. Abolition of the rule, a good faith exception to it, will not solve the problem of poor communication. A process must be devised to ensure that police awareness of constitutional restrictions and of the necessity of operating within those restrictions is increased. We believe that directing the judicial sanction of exclusion away from individual police officers to police administrators will accomplish that objective.

As law enforcement executives, we know best how to deter our officers from improper conduct. In areas of officer misconduct other than constitutional violations--one such area being the unauthorized use of deadly force--experience tells us that improper behavior can be curbed by putting to use three tools in combination: rule-making, training, and discipline. For example: in his study of shootings by officers from the New York City Police Department, Professor James Fyfe found that significant reductions in the amount of police use of deadly force were associated with the combined implementation of clear rules which guide officers in the use of force and of procedures to strictly enforce the rules. [See, Fyfe, Administrative Interventions on Police

Shooting Discretion: An Empirical Examination, 7 Journal of Criminal Justice, 309 (1979).] Currently, however, some police administrators fail to develop precise rules regarding Fourth Amendment procedures and fail to discipline officers for constitutional violations because they fear that such actions will be used against them in suppression hearings: the exclusionary rule as it is currently applied creates for police administrators a disincentive to accept responsibility for deterring constitutional violations.

What is needed is a process that eliminates disincentive and, simultaneously, provides to police administrators incentive to accept responsibility for deterring misconduct regarding Fourth Amendment procedures.

The process by which we propose to meet these needs, especially the need to provide incentive, is one in which application of the exclusionary rule would be dependent upon the performance of police departments themselves. The concept is that the exclusionary rule would not be applied if the police department in question had taken seriously its responsibility to adhere to Fourth Amendment procedures. Departments could demonstrate proof of such good faith by meeting the following three requirements:

1. Publishing departmental rules and regulations that guide police on proper constitutional procedures;

2. Instituting effective programs to train officers according to these rules and regulations; and

3. Maintaining a history of disciplinary actions taken against officers, it having been demonstrated that the officers had committed violations of departmental rules.

The procedure by which this alternative would be implemented is as follows:

1. The judge would rule on whether or not the officer had committed a constitutional violation.

2. If the judge rules, yes, the prosecutor could then undertake to have the evidence admitted according the following procedure: the prosecutor would ask the judge to review the police department's regulations, training programs and disciplinary history.

3. The prosecutor would have the burden of proving that the police met the three requirements (mentioned above) in a manner sufficient to ensure--

   -- that the failure to provide a rule was reasonable, and that regulations specifying, and training in, the proper methods for proceeding in the particular circumstances under review would be immediately forthcoming; or

   -- that, if the department already had a rule covering the circumstance, the officer would be disciplined for violating the rule unless the officer was acting reasonably and in good faith; or

   -- that, if the departmental rule was found to be unconstitutional, it was promulgated in good faith, appeared reasonable before it was applied to the particular facts under review, and would be reissued in proper form.

Should the prosecutor fail in an attempt to prove that the department met the above conditions, the judge would exclude the

evidence. [See, Kaplan, The Limits of the Exclusionary Rule, 26 Stanford Law Review, 1027, 1050-52 (1974) for a similar proposal.]

We believe that rule-making, training and discipline constitute the most appropriate means for deterring Fourth Amendment violations, and that the emphasis we place on such means is well founded. To justify to you our reliance, I would like to spend a few moments discussing the effectiveness of each of these three components.

Rules and Regulations

The exclusionary rule, insofar as it was justified as a deterrent to police misconduct, was designed to ensure police conformance with constitutional requirements. In some agencies, however, the officer rarely learns of or understands the reasons for the exclusion of evidence, so the sanction fails in such instances to fulfill its objective. It can even be said that the rule has inhibited proffering of effective guidance to police officers: judicial reliance on and belief in the efficacy of the rule have led to the development of intricate, little understood rules of constitutional procedure and, regarding responsibility for officer direction, have diverted attention from police management to the judiciary, though the judiciary does not have a clear understanding of the daily operations of police agencies.

Administrative rule-making, from which would flow policies, procedures, and rules and regulations for structuring and controlling police conduct, has been advocated by numerous prestigious organizations and prominent spokespersons, some of which include the following: the American Bar Association [ABA Project on Standards for Criminal Justice, Standards Relating to the Urban Police Function §6.2 (1976)]; The National Advisory Commission on Criminal Justice Standards and Goals [Report of the Task Force on Police, §1.3, Commentary (1973)]; The National Advisory Commission on Civil Disorders [Report, 310-11, 314 (1968)]; Chief Justice Warren Burger [Who Will Watch the Watchmen, 14 American University Law Review 1 (1976)]; Kenneth Culp Davis [Discretionary Justice-A Preliminary Inquiry (1971); Frank Remington, Herman Goldstein [Policing In a Free Society (1977)]; and Anthony Amsterdam [Perspectives on the Fourth Amendment, 58 Minnesota Law Review 349 (1974)]. In addition, the courts have frequently suggested the need for such rules. See, e.g., Delaware v. Prouse, 440 U.S. 648 (1979); Brown v. Texas, 443 U.S. 47 (1979); Dunaway v. New York, 442 U.S. 200 (1979); and South Dakota v. Opperman, 428 U.S. 364 (1976). Some police departments have attempted to develop and implement such rules, among which departments are the following: Boston, Massachusetts; Madison, Wisconsin; and Washington, D.C. The rules provide clear, affirmative guidance to officers as to how they may proceed in a wide variety of complex situations; such rules contrast court decisions that restrict discussions to what an officer cannot do and are rendered in a manner not usually understood by police

officers. These rules address such procedures as execution of search warrants, searches incident to arrest, motor vehicle searches, stop and frisk, and eyewitness identification.

The incorporation of administrative rule-making into our alternative procedure provides several advantages over the exclusionary rule, given the rule's current application. Courts would first focus on the procedures required by the rules and, second, on the past conduct of individual officers. This would redirect judicially-imposed responsibility for constitutional violations from officers to police administrators. Police officers, as with employees of any organization, are more likely to adhere to rules established by their agencies than to rules imposed from without by the courts. Developing clear, precise directives that are free of the legal terminology contained in many court opinions and that are written in language more easily understood by police officers could make the rules easier to understand and more likely to be followed.

Administrative rule-making would exert a broader influence on police operations than the exclusionary rule; its use within constitutional restraints would help in an array of law enforcement operations because police expertise would be utilized systematically and continuously. Judges, who lack law enforcement expertise, promulgate rules through an adversary process whose sole focus is on particular facts unique to individual cases. By contrast, police administrators, who understand the realities of police behavior, are able to fully grasp

the implications of promulgated rules for all law enforcement needs. In developing rules, administrators would be able to utilize procedures best suited to the realities of law enforcement, while remaining within the confines of constitutional requirements. In addition, because many police activities are currently unregulated by the courts, i.e., activities not directed toward gathering evidence or leading toward prosecution, rule-making can lead to full definitions of rights of criminal suspects and other persons coming in contact with police. Finally, the visibility of the rule-making process would compel police administrators to make conscious assessments of law enforcement practices insofar as the practices relate to constitutional and other legal requirements and would make administrators more accountable for decisions that should be based on such assessments.

The development of administrative rules regarding police procedure would have tremendous impact in helping to control police misconduct and in preserving constitutional values. Departmental rules governing activities of officers would be applauded by street officers; the rules would free officers from the vague and clouded language of court opinions; officers could look to police guidelines that set specific bounds of conduct. The courts could find either that officers were in violation of their departments' procedures or, in some instances, that the procedures at issue were unconstitutional, thereafter requesting that departments revise such procedures so that they meet constitutional requirements.

Police Training

Development of extensive rules guiding constitutional behavior will have little value if officers are not apprised of them. Publication of the rules, though an important first step in communication, is not sufficient. Officers must be taught how, and the circumstances under which, they may invoke police procedures. Training programs should be devised in such a manner that officers acquire not only the substantive information contained in departmental rules but also insight into ways in which they may, within constitutional limits, proceed with their tasks. The need for training is not limited only to police recruits. Continual revision of regulations, reflecting refinements in constitutional requirements, will necessitate that police officials develop in-service programs to re-train their officers in accordance with changes that are made. Finally, remedial training programs should be designed to reinforce proper procedures for those officers who have violated rules in the past.

Strict Police Discipline

Deterring unconstitutional violations requires that officers be made aware that illegal behavior will not be tolerated; to make this known, an effective system of discipline must be instituted. Though precise rules and regulations are essential to defining kinds of behavior that will be subject to discipline, rules alone are insufficient. If rules are not properly enforced, their objective to conform

police behavior to the provisions of the Constitution will not be achieved. A comprehensive system of internal police discipline, administered fairly and effectively, will promote observance of the rules.

Regarding deterrence, punishing officers for improper conduct has several advantages over the current exclusionary rule sanction. First, because of the relative immediacy and personal nature of disciplinary actions, officers would generally be aware that their conduct was in violation of constitutional requirements; given how the exclusionary rule is applied today (and depending on the agency), officers might not learn of or understand a court's rationale for excluding evidence; in any event, they would not be affected personally. Second, the publication of clearly defined rules, of penalties for violating them, and of the ramification of the disciplinary process would make it clear to the entire police force, as well as to the community, that certain behavior will not be tolerated. Third, police officer aversion to disciplinary action would cause officers to conduct themselves according to proper procedures. Fourth, a system of discipline could introduce the concept of gradations of improper behavior. The exclusionary rule operates uniformly and imposes an inflexible penalty for all violations, minor or major. An effective disciplinary system could apply a variety of penalties tailored according to the seriousness of misconduct. Finally, sanctions that result from enforcement of rules

and regulations could be applied with much greater frequency than the exclusionary rule sanction; only a small percentage of investigations, searches, arrests and interrogations now reach the trial stage.

Why the Alternative Process Proposed by the Forum Is the Most Effective Method to Deter Fourth Amendment Violations

The alternative the Forum proposes is a complete package that must be viewed as a whole: the components are interweaved; each one complements the others; implementation of one component alone will provide neither an adequate substitute for the exclusionary rule nor relief from the problems currently surrounding the rule's use.

The key to the Forum's alternative is placing with police administrators responsibility for ensuring police officer compliance with constitutional requirements. Internal regulation is the most effective means by which police misconduct can be deterred. Police managers, as opposed to persons outside the agency, have greater understanding of police officer behavior and of the culture of the law enforcement community and are, therefore, more effective in causing officers to understand and comply with constitutional procedures.

If police departments realize that their efforts are to be rewarded by the admission during trials of evidence that might previously have been excluded, they will be strongly motivated to formulate rules and to institute training and discipline. Departments that

develop rules and regulations in compliance with the Constitution will not be restrained by the straitjacket of suppression motions. An objective test for determining whether or not departments have developed internal regulatory mechanisms to deter police violations will be applied by the courts. Judges will simply look to departments' good faith efforts to establish effective rules and to institute training and disciplinary systems, allowing evidence into courtrooms if departments pass the objective test. In effect, the court will be turning over to police departments the responsibility for disciplining police officer misconduct, while holding departments responsible for their policies on constitutional rights.

The procedure for determining whether or not the exclusionary rule would be applied in an individual case involves the following steps:

1. If a department has a rule governing the practice under court scrutiny, which rule is found to be constitutional, and if an officer complied with the rule, the evidence obtained as a result of the procedure would be admitted in the case.

2. If an officer fails to comply with a department's constitutional rule, and if the department has a history of disciplining its officers for violations, the evidence would likewise be admitted. Under such circumstances, the officer would be disciplined directly by the department rather than indirectly by the court.

3. If a rule is found to be unconstitutional, the court would look at whether or not the rule was promulgated in good faith and in the reasonable belief that it complied with constitutional requirements. Furthermore, if a department has a history of training and

disciplining its officers for violations, that department would merely be required to re-promulgate its rule according to proper procedures, deterring future violations while providing the benefit of use of the evidence in the immediate trial. If a department failed to meet these tests, the evidence would be excluded from the trial.

To provide an example of how this process would operate in an actual case, I will use the facts of the case United States v. Adams, 621 F.2d 41 (1st Cir, 1980). In that case, FBI agents had information regarding the possibility that an escaped murderer was living in the house of a former cellmate. This information was corroborated on a Wednesday by a social worker who had visited the residence. On Thursday at 8:30 a.m. the agents again questioned the social worker to see if the escaped convict was still there and found out she was. At 9:50 a.m., seven FBI agents went to the house and, after searching the premises, arrested the fugitive without having obtained either an arrest or a search warrant.

In the trial of the former cellmate for harboring a fugitive, the court excluded the evidence that the fugitive was there. The court found that there were no exigent circumstances to justify a warrantless arrest or search, stating there was ample time to obtain a warrant.

As in the case of an officer's entry into the home of a suspect to make an arrest, the court found that, absent exigent circumstances or without consent, the Fourth Amendment requires that a

police officer must obtain a search warrant before entering the home of a third party to execute an arrest warrant. Thus, under the exclusionary rule as it currently operates, the evidence was excluded from the trial because of the FBI agents' failure to abide by the Fourth Amendment requirements.

Assuming for the moment that the Forum's proposed process were in place, the evidence in this case would not necessarily be excluded. The court would first find out whether or not the FBI had promulgated a rule covering an arrest in the home of a third person, i.e., whether or not a search warrant should first have been obtained. If the court found that the FBI had no rule, the evidence would be excluded. The Bureau, having failed to carry its responsibility for deterring constitutional violations by promulgating a rule, would be responsible for the possible lost prosecution were the evidence to be excluded.

If, however, the court found that the FBI had a rule calling for a search warrant in these circumstances and that the agents violated it, the court would ask the following two questions:

1. Does the FBI conduct a program to train its agents to follow the appropriate procedures for searches and seizures as outlined in its periodically updated rules?

2. In the past, has the FBI disciplined those officers who were found to have violated its search and seizure rules?

If the answers to these questions were, yes, the court would admit the evidence into the trial, stating for the record its reasons for doing so; the FBI would be found to have carried its responsibility for deterring agent misconduct; FBI-imposed discipline would have supplanted the utility of the exclusionary rule as the rule is currently applied.

Advantages of Internal Regulation Required in the Process Proposed by the Forum

In our alternative, the focus of attention shifts from individual officers to police departments. If departments make good faith efforts to define and enforce constitutional behavior, evidence resulting from investigations should not be suppressed. Use of evidence gathered in criminal proceedings will restore the confidence of the police and the public in the criminal justice system. A balance between rights of criminal suspects to be protected from intrusive police behavior and rights of citizens to be protected from criminal acts will be restored.

Once implemented, our comprehensive approach to handling constitutional violations by police officers should prove to be the most appropriate substitute for the exclusionary rule. Placing responsibility for constitutional violations on police administrators is the most logical method for deterring police misbehavior: rules and regulations will provide effective guidance to officers, while strict internal

disciplinary procedures will ensure that discipline is more frequently applied than is now possible under the exclusionary rule. With clear departmental rules there will be less question as to when officers are in the wrong so that administrators will feel more comfortable in applying discipline. Regarding punishment, our system will allow for distinguishing gradations of violations. The development of explicit, comprehensive rules and regulations by police departments will provide a way of clearly spelling out the meaning of constitutional requirements, taking into account the realities of law enforcement practices. The introduction during trials of evidence that might previously have been excluded will increase chances that criminals will be brought to justice. The focus of the trial will shift back to alleged wrongdoings of defendants, increasing the likelihood of swift and certain punishment for criminal activity. The police and the public's respect for the law and the criminal justice system will increase; and what is most important, citizens will be protected, before the fact, from illegal police conduct in all areas of law enforcement activities--even those areas not involving evidentiary matters--because of the deterrent effect of this approach.

Gradual Replacement of the Exclusionary Rule

Incorporating the three components of rule-making, training and discipline into a single, comprehensive alternative can lead to

eventual replacement of the exclusionary rule, eliminating the problems the rule has engendered. Immediate implementation of our alternative will provide partial relief from the exclusionary rule's disadvantages and, eventually, could completely supplant dependence on the rule as a means of deterring unconstitutional police behavior; use of the exclusionary rule, however, will continue until our alternative has proved itself worthy. Determining when to apply the rule will, nevertheless, become easier; using an objective test for determining departments' good faith efforts will simplify the rule's use. Only after our alternative has been proven to be an effective substitute for the rule will the rule be discontinued. In effect, the exclusionary rule simply will atrophy.

The exclusionary rule is an integral part of the Forum's alternative. The prospect of its elimination is an incentive for police departments to develop effective controls over unconstitutional behavior of officers. Use of the exclusionary rule as an incentive to develop internal regulation of unconstitutional behavior is similar to use of the bail-out provision in the Voting Rights Act extension. Under the bail-out provision, if a jurisdiction remains free from discriminatory violations for ten years, it will no longer be subjected to pre-clearance by the Department of Justice for its changes in election procedures. Similarly, under our proposed procedure, if a police department demonstrates a pattern of good faith efforts to deter

unconstitutional behavior, it will be freed from the constraints of the exclusionary rule.

As experienced law enforcement executives, we firmly believe that internal regulation of law enforcement practices is the best possible approach to deterring unconstitutional violations. We are not, however, unrealistic: our belief must not lead to overconfidence. Though the measure of professionalism in law enforcement has increased remarkably over the years since the Mapp decision, many more improvements must be made. The process of improvement will necessarily be gradual. At first, most police departments could not fully meet changed standards without making extensive changes. Developing rules and regulations for conforming police conduct to constitutional safeguards will be a monumental task. Some departments will have to restructure their disciplinary systems extensively.

Nontheless, police departments will gradually adopt extensive and comprehensive rules regarding constitutional procedures and will begin to take appropriate disciplinary action against officers who violate these rules. Some departments will initiate these modifications on their own; others will do so under pressure from prosecutors, the media and the public to lift the burden of the exclusionary rule.

Disadvantages of other Proposed Alternatives to the Exclusionary Rule

Though the underlying philosophy of current proposals to modify or abolish the exclusionary rule is that something must be

done about the current operation of the rule, we believe that none of these proposed alternatives will provide an effective solution to the problem. Before commenting on these proposed alternatives, however, one cautionary note should be raised: the ill effects of the rule should not be confused with the restrictions imposed by the Constitution. It is often argued that the rule handcuffs police in enforcing the law. It is not the rule but, rather, the Constitution itself that quite properly creates obstacles for overzealous police officers. The increased judicial scrutiny that followed the rule's introduction has created for some, the illusion that, if the exclusionary rule were abolished, many of the constitutional restrictions imposed on police would also be abolished. This is a gross misconception: abolishing the current rule would not do away with the constitutional provisions prohibiting illegal search and seizure. The fundamental principles of the Constitution must, of course, be preserved. An alternative's only function is to change the remedy used when violations occur, while providing a mechanism that promotes police adherence to constitutional requirements.

Provision of Civil Remedies

The primary goal of this alternative is to deter constitutional violations by providing for use of a civil damage action against

both the police officer and the government. Though well-intentioned, we believe this alternative will fail in practice. Like current civil remedies, we believe such a damage remedy will be mainly illusory. There are several reasons for this. First, few suits, especially in comparison to the number of violations, will likely be brought: bringing and maintaining a civil action is expensive, burdensome, and time consuming. Currently, overcrowding of court dockets delays the hearing of federal court cases by an average of 13 months and the hearing of state court cases by up to seven years. Victims of illegal practices, who are not themselves involved in criminal behavior, would consequently have less incentive to challenge the police than criminal defendants. Bringing suit would consume a vast amount of a plaintiff's time and could lead many to believe it would not be worth the effort. The infrequent bringing of such suits would result in less judicial review of police practices and, what is more, less guidance for police.

Second, often the only witnesses to an event are the plaintiff and the defendant officer; in such instances the issue becomes one of credibility. Because juries tend to be sympathetic toward police officers confronted with liability, awards against the police might be infrequent. Third, for those plaintiffs who do prevail, compensation will likely be pathetically meager. Because the measure of damages will be the extent of physical injury to the plaintiff or to property, the careful officer could avoid all but nominal damages. Fourth, the damage remedy provides little direct incentive for police to develop

internal rules. The deterrent effect would amount to little more than what is already provided by the rule applied today.

Though a new damage remedy might serve better to compensate victims of constitutional violations than current civil remedies, it would not satisfactorily replace the exclusionary rule. Because such civil actions would be infrequently brought, they would not serve to systematically highlight police misconduct. More importantly, the remedy comes after the fact of the violation; it does not provide adequate incentives for establishing means of deterring misconduct before it occurs.

Elimination of "Good Faith" Efforts from the Exclusionary Rule Sanction

The thrust of this alternative is to limit the application of the exclusionary rule to those instances in which it is believed that individual police officers will be deterred by its application. A similar purpose is found in the recommendation of the Attorney General's Task Force on Violent Crime to exclude "good faith" efforts from the rule. The rationale behind this proposed alternative is that, when a police officers make reasonable, good faith efforts to comply with the law but unintentionally fail to do so because of minor technical violations, it is difficult to find any deterrent effect in suppressing the evidence that was wrongfully obtained; under such circumstances, excluding the evidence from trial has little effect on

officers' future behavior; it merely allows defendants to benefit and undermines public confidence in the criminal justice process. This alternative, though sound in theory, will be cumbersome in practice; its effect will likely be to undermine the deterrent purpose behind the rule, possibly leading to an increase in constitutional violations.

This alternative suggests limiting application of the exclusionary rule to those cases in which it is shown that the officer knowingly intended to violate someone's constitutional rights or when the violation was substantial. "Good faith efforts" by the police officer and "honest mistakes" on the part of the officer would not be subject to exclusionary rule application. The essential component of this alternative is that the exclusionary rule would be applied only when the accused police officer has a specific intent to take away a right which has been established either by the express terms of the Constitution or by decisions interpreting them. Thus, when the officers have known or should have known their conduct was in violation of the Constitution, only then would the exclusionary rule be applied.

Determining how to apply the rule will require an extremely involved fact finding process, irrespective of whether the standard operates on intent, substance or good faith. Judges will be given the difficult task of examining the inner thought processes of officers to determine their true intent. Far from reducing the amount of

fact-twisting that is alleged now to take place during suppression motions, this alternative would promote officer dishonesty regarding what were their true motives for acting. Dependence on discerning the subjective intent of officers would lead to departmental toleration of officer ignorance and would inhibit development of procedures to guide officers regarding proper behavior.

In an attempt to provide an objective measure for determinating the application of the rule under this alternative, its proponents have suggested an added requirement that the officer's good faith belief be reasonable. We believe that such an objective measure is necessary to ensure law enforcement agencies' attention to constitutional requirements. The difficulty lies in the standards by which this reasonableness requirement is to be measured.

Some who advocate this good faith modification have stated that, to meet the reasonable requirement, an officer's police department must have promulgated rules and regulations outlining Fourth Amendment procedures, implemented programs to train the officers in those rules and regulations, and maintain a system for disciplining officers who violate their rules. These statements give us only moderate assurance, however; we are not confident that the judiciary will hold that these same standards are part of the reasonableness requirement. What is needed, instead, is explicit reference in the legislation itself that the test to determine whether an officer's good faith belief is reasonable depends upon whether the officer's

department has a program consisting of the three elements: rules, training and discipline. If these three elements are defined in the legislation as the test of reasonableness, then the Forum's objective of placing responsibility for deterring consitutitional violations upon police administrators will be met. Without such detail, we fear the nebulous standard of "reasonable" will be subject to ambiguous interpretation by judiciary. The result may lead to use of a subjective standard alone as the test of good faith. In that event, the focus of the exclusionary rule will remain upon the individual officer; the opportunity to increase law enforcement agencies' attention to proper Fourth Amendment procedures will be lost.

None of the alternatives to the exclusionary rule addresses what we believe is the most important consideration in devising a remedy for Fourth Amendment violations: law enforcement executives' assuming the responsibility for their officers' violations. This is the only way to ensure with certainty that constitutional violations are minimized. What is needed is a means of testing the good faith efforts of department administrators; such efforts are susceptible of objective measurement. Basing a test on individual officers' subjective intent in paticular cases is not likely to prove productive. The Forum-developed alternative includes the necessary means of testing police administrators' good faith efforts. Our substitute process provides for an objective test by which departmental efforts to eliminate unconstitutional behavior can be gauged. Once departments have passed muster under this objective test, the exclusionary rule will not be applied.

Conclusion

As law enforcement executives who are responsible for the actions of our officers, accountable to the public, and answerable to the law, we believe that our alternative will deter constitutional violations by police officers and enhance the effectiveness of the criminal justice system. Under the process we propose, replacement of the exclusionary rule would come gradually; as the effectiveness of our process was proved, its use would gradually increase. Critics would no longer be able to complain of an artificial rule handcuffing the police in their efforts to fight crime. The key to removing the handcuffs would be placed in the hands of the police themselves. The task of establishing this alternative means of controlling police misconduct would be a time-consuming and arduous one. Judicial hearings on departmental rules, training and discipline systems would be extensive, especially in the beginning. Once the internal control systems were in place in police departments and their effectiveness in deterring unconstitutional behavior by the police was demonstrated, we believe the rewards would prove to have been well worth the effort. The alternative we have devised will best satisfy the primary purposes of the exclusionary rule and most effectively counter problems stemming from the rule's current use. These effects will promote the ends of justice and help to preserve our Constitutional liberties.

Juneau, Alaska 99811

RE: Senate Bill 49

Dear Senator Fischer,

Pursuant to your request, below is a list of cases where the Alaska Supreme Court or the Alaska Court of Appeals has invoked the Exlusionary Rule in order to suppress evidence which led to either the conviction of the defendant being reversed or evidence being considered inadmissable for purposes of trial. Time restraints prevent me from giving you a complete list of every case in Alaska where the Exclusionary Rule resulted in suppression of evidence. However, these cases are glaring enough to point up the need for revision of the "court adopted" rule of excluding evidence to prevent law enforcement "abuse."

Anderson v. State, 555 P.2d 251 (Alaska 1976)

Police officers entered defendant's apartment and conducted a search pursuant to a search warrant authorizing search for marijuana and related paraphernalia. While conducting a search, officers discovered on shelves in defendant's apartment, photographic negatives which had been mounted as slides, which depicted nude, male children. In order to discover what was on the slides, the officers had to hold them to the light. It was because of this latter act, "holding to the light," the Alaska Supreme Court reversed defendant's conviction for lewd and lascivious acts toward a child and suppressed the evidence. The Court held defendant had an expectation of privacy and the photos, since they had to be held to the light in order to veiw what was depicted on them, were not in plain view.

Zehrung v. State, 569 P.2d 189 (Alaska 1977)

Defendant was stopped by a State Trooper for excessive smoke. During the course of the stop, the trooper discovered two misdemeanor warrants existed for defendant. The trooper arrested the defendant

and transported him to the city jail. The booking procedure at the time, required complete processing of an arrestee, including inventory of his property, even if the arrestee is able to post bail at the time he arrives at jail. With Zehrung, jail personnel discovered two credit cards in his wallet during inventory search which did not belong to him. This evidence led to discovery that the credit cards were taken during a rape and robbery, which led to defendant's indictment and conviction. The Supreme Court reversed the conviction, holding there was an illegal search and seizure. The Court held that defendant should have been allowed to post bail rather than go through the regular booking procedure. Without evidence of the credit cards, the State was unable to prosecute Zehrung for the rape charge. One final note on Mr. Zehrung, he had been convicted of rape in 1972 and 1975. He subsequently was convicted of assault and battery and possession of narcotic drugs after he was released and prosecution dropped in the rape charge.

State v. Glass, 583 P.2d 872 (Alaska 1978)

This case involves the warrantless electronic surveillance of a narcotics transaction. The conversation of the transaction was electronically recorded by police officers stationed outside the home. The Court suppressed the conversation, which was in effect a new rule of law. It also applied a stricter construction of the Constitution of the United States Supreme Court. The Court held that a search warrant must be obtained before electronic monitoring of conversations should be allowed. Applying the Exclusionary Rule, all evidence of the tape recording was inadmissable in prosecution for possession and sale of a narcotic drug.

Anchorage v. Geber, et al., 592 P.2d 1187 (Alaska 1979)

Defendant, along with a number of other individuals, had been arrested for DWI and refused a breathalyzer. Defendant was transported to a local hospital where he submitted to a blood test, against his will. The Alaska Supreme Court, declining to follow the U. S. Supreme Court in Schmerver v. California and reversing itself in Layland v. State, 535 P.2d 1043 (Alaska 1975); held that once an individual refuses the breathalyzer, no additional chemical tests can be conducted. In their interpretation of A.S. 28.35.032(a) the Court held that the police were precluded from obtaining evidence even after obtaining a search warrant. Evidence of defendant's blood alcohol test was suppressed.

Lauderdale v. State, 548 P.2d 376 (Alaska 1976)

Defendant, along with many others, was arrested for driving while intoxicated. As part of their standard operating procedure, police officers, after administering a breathalyzer test, destroyed the test ampule. The Court held that there was plausible evidence that could

be derived from later testing of test ampule which could bear on the validity of the breathalyzer. The Court upheld the lower court's suppression of the breathalyzer. (Note: Testimony by experts from around the country on the Borkenstein breathalyzer, in proceedings in District Court on unrelated matters, have clearly shown that later testing of the test ampule is worthless.)

Anchorage v. Serrano, 649 P.2d 256 (Alaska Appellate 1982)

Defendant, along with many others, was arrested for driving while intoxicated. Law enforcement officers following procedures established by the Legislature and the Alaska Administrative Code, conducted breathalyzer tests in accordance with those procedures. The police officers, however, did not save a separate sample of defendant's breath for later independent testing. The Alaska Court of Appeals upheld the lower court's suppression of the breathalyzer, based on a finding that it was a violation of defendant's due process of rights of cross examination by not saving a separate sample of breath. Basically, the Court found that since it was inexpensive and reasonable to save a separate sample of breath, and it could easily verify the results of the breathalyzer, law enforcement officers should have done so.

Copelin v. State, Opinion No. 2617, February 18, 1983

The Alaska Court of Appeals in Copelin v. State, 635 P.2d 492 interpreting A.S. 12.25.150(b) and based on a prior Alaska Supreme Court decision held that an individual was not entitled to an attorney prior to taking a breathalyzer test or being placed on video to perform field sobriety tests. The date of the decision was 1981. Almost two years later, the Alaska Supreme Court reversed that decision, holding that A.S. 12.25.150(b) did require law enforcement to provide a defendant with access to an attorney, if defendant asks for one, prior to taking a breathalyzer or field sobriety tests on video. For two years, law enforcement officers, following the dictates of the Court of Appeals and the Alaska Supreme Court, denied drunk drivers the right to contact an attorney prior to taking the breathalyzer. If the decision is applied retroactively, which the Supreme Court did not reach, evidence in hundreds of drunk driving cases may be suppressed as a result of this decision. It should be noted that the application of the Exclusionary Rule resulted in a split decision in the Alaska Supreme Court itself.

Note: The last four cases led to evidence of the breathalyzer being suppressed in approximately 1,000 drunk driving cases. In many of these cases, without evidence of the breathalyzer, charges were dismissed or reduced.

Taylor v. State, 642 P.2d 1378 (Alaska Appellate 1982)

In January, 1979, defendant was wanted in connection with an armed robbery that had taken place the day before. Police thought they could locate defendant at a particular address. The reason they thought he might be there is that a month earlier defendant and another person were arrested for armed robbery; the other person had been arrested at that address, and papers and identification of the defendant had been found at that residence. One officer went to obtain an arrest warrant for defendant while the other officers went to the address.

When officers arrived there, another man answered the door. The description of this man did not match the description of the defendant (whom one of the officers knew) or the other suspect. Officers identified themselves, and asked the man for identification. He said he would have to go get it, and one of the officers followed him to a back bedroom ("protected search"). On the way to the bedroom, the officer saw defendant trying to hide under a bed. Defendant was arrested, and two important pieces of evidence which tied him to the robbery were found in the bedroom. Officers later obtained a search warrant and found even more evidence linking defendant to the robbery.

Holdings: (1) Testimony made it unclear whether the man who answered the door actually consented to let the officers in, or whether the statement that they "had a warrant for Ernie" influenced the man to allow them in. Since the burden of proof was on the State, and the evidence was 50-50, the State did not meet its burden. Unless, the entry into the home was illegal.

(2) The "protective search" conducted into the home and into the back bedroom, for the protection of the officers, cannot be justified without "compelling circumstances." Additionally, the Court found that the facts known to the police were not sufficient to justify the police intrusion into the home. (3) In order for the police to enter a home to make an arrest, the police need: (a) probable cause to believe the person committed a crime (i.e., an arrest warrant, if possible), and (b) probable cuase to believe that the suspect is at that particular residence. (4) Since the Court held the arrest was the result of the illegal entry into the home and the illegal act of following the other man to the bedroom, any evidence obtained by police as a result of the arrest should be suppressed.

Conviction reversed; searches and entry held illegal.

For your information, there is an excellent law review article on the good faith exception to the Exclusionary Rule. The article is dated in 1982 and can be found in 73 Journal of Criminal Law and Criminology 916.

Again, these are only a few cases in which the appellate courts have invoked the Exclusionary Rule to suppress evidence. The impact those decisions have on the trial courts can be devastating. For example, in Copelin and Serrano hundreds of suppression motions have been filed.

As you may be aware, the general provisions of Senate Bill 49 are supported by the Chief Justice of the U. S. Supreme Court. The rationale for excluding improperly obtained evidence can be found in U. S. vs. Calandra, 414 U.S. 338 (1974), where six members of the U. S. Supreme Court agreed that "the rule is a judicially created remedy designed to safeguard Fourth Amendment rights generally through its deterrent effect . . ."

It would seem to follow that a law enforcement officer could not be deterred from making a good faith inadvertent error in the field by this remedy.

It should be noted that Senate Bill 49 does not expand police discretion and would not reduce the training and emphasis placed on the application of reasonable searches. It would provide the Courts with the ability to allow relevant evidence to be presented at trial if in its judgment any alleged error made by a police officer while obtaining the evidence was only technical in nature and made in good faith.

At least some of the above cited cases, in my opinion, would not have resulted in the dismissal were Senate Bill 49 in effect. It would appear to me that justice would have been better served.

Needless to say, we support the passage of Senate Bill 49 and urge your support.

Thank you for the opportunity of providing our thoughts.

Sincerely,

Brian S. Porter
Chief of Police

Fiscal Note
Analysis

This resolution would place before the voters changes to the state's constitution that would establish an elected office of prosecuting attorney in each of the state's four judicial districts. The proposal would establish each of the four offices as departments and remove the offices from both the organizational control and the supervision of the governor. In order to insure that the governor's oversight that normally controls and supervises executive branch departments does not interfere with the actions of the office of each prosecuting attorney, it will probably be necessary for these offices to duplicate many of the executive branch administrative controls and services administered by the Department of Administration and the Office of the Governor. Otherwise, the approval processes normally required of executive branch agencies, such as: position authorization and classification; recruiting; purchasing; and budgeting, would continue to shape and direct the activities of the prosecuting attorney offices.

Consequently, many of the administrative procedures required of government agencies to comply with the state's statutes that govern public finance, personnel, budgeting and contracting would have to be handled in-house at each of the four prosecuting attorney offices. Obviously, a substantial price would have to be paid to achieve the degree of freedom from the governor's supervision called for by the proposal. Under the provisions of the proposal, the first election of prosecuting attorneys would occur at the first general election held after the office was established under the constitution, or 1986 at the earliest. Because of this lengthy time frame it is nearly impossible to accurately forecast the costs that will eventually be incurred. It can be anticipated, however, that establishing four separate and virtually autonomous departments will result in at least three to four times the expense that the Department of Law currently pays for its administrative services support for the entire department. Those current costs in FY 83 dollars, after taking out special programs that would not be used by prosecuting attorneys, amount to $345,900. Before accounting for any inflation that might occur in the next three years, the costs for providing necessary administrative services support will probably be between $1,000,000 and $1,400,000. These funds would be required to pay for the approximately 18 to 25 personnel, accounting, payroll, supply, purchasing and budgeting positions that would, in total, be needed to perform the administrative tasks that it would take to operate all four of the independent departments.

Providing for elected prosecuting attorneys will also cause a change in the existing balance of power and that change,

which is bound to encourage single-issue politics, will result in new and wholly independent constituencies with their own demands for a share of the state's resources. Although it is unquantifiable at this time, the long term effects of this change on the state's basic political structure will most certainly have a dramatic fiscal impact.

Lastly, the proposal may be in direct conflict with the letter and the spirit of Article III, Section 22 of the state's constitution. This section reads, in part, as follows: "Executive Branch. All executive and administrative offices, departments, and agencies of the state government and their respective functions, powers, and duties shall be allocated by law among and within not more than twenty principal departments, so as to group them as far as practicable according to major purposes. Establishing four prosecuting departments, in addition to the one that already exists, for the identical purpose of prosecuting violations of state law seems to lead to the very sort of bureaucratic growth, overlapping responsibilities, and governmental inefficiency that the constitutional framers intended to prevent.

January 28, 1982

MEMORANDUM

TO: Representative Barnes

FROM: Leslie Longenbaugh
Research Staff

RE: Relationship of Elected and Appointed Attorneys General in Other States to Prosecuting Attorneys
Research Request Number 82-9

Bill Cook of your staff asked that we report on the relationship between state attorneys general and state prosecuting attorneys. Specifically, Mr. Cook asked that we survey other states in regard to their election or appointment of attorneys general and prosecutors, and the degree to which prosecutors are independent of the attorneys general.

In most states, both the attorney general and the prosecuting attorneys are elected. Most attorneys general head their states' justice or law departments but have few or no statutory responsibilities concerning the prosecution of either criminal or civil cases. When they do have prosecutorial responsibilities, attorneys general in most states prosecute only appealed criminal cases. The attorney general is charged by statute (AS 44.23.020) with, among other duties, prosecuting violations of State law. The attorney general appoints regional district attorneys to fulfill these prosecutorial duties, and he may remove these appointees from office.

Ruth Blau of the National Association of Attorneys General[1] informed us that most attorneys general are elected; Alaska is among the six states that appoint, rather than elect, their attorneys general. In Maine, the legislature appoints the attorney general; in New Hampshire, the governor appoints with the aid of the Executive Council, made up of county representatives who are not in the state legislature; in Tennessee, the state Supreme Court makes the appointment; and in Wyoming and New Jersey the governor appoints the attorney general.

---

[2]Ruth Blau, Publications Director, National Association of Attorneys General, Washington, D.C.; telephone: (202) 624-5454.

According to Ms. Blau, states that elect their attorneys general usually require that the candidates be lawyers and United States citizens; some require two to ten years' residency in their states, and some two-thirds of all states require that attorneys general be of a minimum age. In thirty-seven states, candidates for attorney general must have passed the state bar examination.

The method used in New Jersey in selecting attorneys general and district attorneys is closest to that used in Alaska. As in this state, both attorneys general and district attorneys are appointed rather than elected; the major difference in New Jersey is that the district attorneys are appointed by the governor, rather than by the attorney general, and are subject to approval by the state senate.

Voters in Pennsylvania recently amended their state constitution to allow election, rather than appointment, of their attorneys general. After the constitutional change, a committee of interested attorneys, legislators and other citizens was appointed to decide how best to make the change smoothly. The elected attorney general may serve two consecutive terms of four years each; the election is held in the middle of the gubernatorial term.[2] The constitutional change in Pennsylvania broadened the attorney general's prosecutorial powers. Also, Ray Zimmerman, the state's first elected attorney general, was a district attorney before his election as attorney general. The new attorney general has made a commitment to cooperating with locally-elected district attorneys in investigations and prosecutions. Like his counterparts in several other states, Mr. Zimmerman has established a special office that helps local prosecutors with their investigations.

In the eastern states of Delaware and Rhode Island, attorneys general are solely responsible for prosecution of all criminal and civil cases, just as is the Alaska attorney general. The National Association of Attorneys General presumes that the two states do not have separate local district attorneys because the states are so small.

The attorney general in Ohio has no prosecutorial duties at all, even in instances of appealed criminal convictions. The attorney general in Ohio thus has little contact with the district attorneys, who are elected locally.

---

[2]Robert Gentzel, Assistant Press Secretary, Office of the Attorney General, Harrisburg, Pennsylvania; telephone: (717) 787-3391.

We also spoke with Tom Hinton of the National District Attorneys' Association[3], who informed us that prosecuting attorneys in most states are elected from within the county, election district, or other area they serve. According to Mr. Hinton, only in Alaska, Connecticut, and New Jersey are district attorneys appointed rather than elected.

Several states make a distinction in jurisdiction between criminal and civil prosecutions. In Texas, for example, the elected "district attorneys" prosecute only criminal cases, while the also elected "county attorneys" may handle both civil and criminal prosecutions.

Some of the minimum qualifications for elected prosecuting attorneys vary widely from one state to the next, although almost all states require that candidates be trained attorneys.

Mr. Hinton stated his belief that a change to an elected attorney general could compromise the integrity of the district attorneys in Alaska, if the attorney general remained charged with their appointment. An example of such a conflict is the possibility that district attorneys' prosecutions sometimes would become entangled with the attorney general's desire to win reelection. He suggested the following methods of selection, both of which he feels would maintain the prosecutors' integrity:

- gubernatorial appointment with approval by one or both houses of the state legislature, a method which would maintain control of prosecutors at the state level; and

- popular election within the regions they serve, a method which would offer the local citizenry more direct control over its prosecuting attorneys.

Mr. Hinton stated his conviction that California has the "most efficient" criminal justice system. The popularly-elected attorney general heads the state department of justice, which performs criminal justice planning and renders legal advice to state government agencies and officials. The attorney general usually has only incidental relations with the locally-elected county district attorneys, who prosecute all civil and criminal cases during their four-year terms of office. The California attorney general and district attorneys may be impeached and removed from office by the state legislature.

---

[3]Tom Hinton, National District Attorneys' Association, Virginia; telephone: (703) 549-9222.

Mr. Hinton has sent us a copy of his organization's 1979 review of all states' methods of selecting district attorneys. When these materials arrive we will forward them to your office.

Please call on us if we can be of further assistance.

national prosecution standards

First Edition — 1977

Published by: NATIONAL DISTRICT ATTORNEYS ASSOCIATION
211 East Chicago Avenue
Suite 1515
Chicago, Illinois 60611

Library of Congress Catalog Card No. 76-55501

This project was supported by Grant Number 74DF-99-0021, and the printing of this document was supported by Grant Number 76DF-99-0051, awarded by the Law Enforcement Assistance Administration, U. S. Department of Justice, under the *Omnibus Crime Control and Safe Streets Act* of 1968, as amended. Even though this project was furnished financial support for the activity described in this publication, it does not necessarily reflect the views or policies of the U. S. Department of Justice or LEAA; nor does it necessarily indicate their concurrence in the statements or conclusions contained herein. These Standards and accompanying Commentaries have been passed and approved by the Board of Directors, National District Attorneys Association.

foreword

The prosecutor is the chief law enforcement official in his jurisdiction, and therefore occupies a critical position in the Criminal Justice System. His office combines legal, administrative, and judicial functions which require experience, professional personnel, and a rational and efficient organizational structure.

The NDAA standards for prosecutors cannot provide adequate salaries for prosecutors, needed manpower for understaffed offices, or new laws. However, they can provide the best tools to achieve those needs; plus the format for an efficient and effective administrative structure, standards for operations, and goals for both long and short range planning objectives.

It is felt that the Criminal Justice System should be able to swiftly determine the guilt or innocence of an accused individual, provide sentences with potential rehabilitation and deterrence from future crime, and protect the rights of society and the offender. The NDAA, through its members, developed standards and goals to achieve those ends. In doing so, the standards will reflect the overall priorities of attaining speed and efficiency in the pro-trial and trial proceedings and prompt finality in appellate proceedings; upgrading the basic and ancillary functions of prosecution, and insuring the high quality of justice reflective of the values of the citizenry of this country.

By giving the nation's prosecutors the tools to increase their efficiency, it is expected that the effectiveness of the prosecutorial process will be enhanced. Furthermore, it is felt that by attaining speed and efficiency in the pre-trial and trial proceedings, rendering prompt finality in appellate proceedings, upgrading the function of prosecution itself, and insuring a high quality of justice, the system will be able to demonstrate an increase in crime deterrence, quicker and more positive alternatives to incarceration and rehabilitation, lower recidivism rates, better screening/diversion/intake of incoming cases, and a general upgrading of the total judicial system.

The term "standards and goals" has become cliche in the Criminal Justice System. It is by no means a new concept, nor is it a revolutionary idea. Standards, as normally defined, are entities established by authority, common usage, or public consent as an example or model; as a reference point for the comparison of value, quantity or quality; a means of arriving at a determination of what a thing should or ought to be.

Previous "standards" have been developed. The American Bar Association Project on Standards for Criminal Justice; the National Advisory Commission on Criminal Justice Standards and Goals; and The American Law Institute's Code of Criminal Procedure and Model Penal Code are well known in the criminal justice system. NDAA's Standards complement these works in their effort to establish a high level of efficiency and expedition in the reduction of crime.

The National District Attorneys Association, being the national service organization for all prosecutors throughout the country, did not become involved in the standards and goals efforts because everyone else was working on that concept, but rather because NDAA feels that prosecutors were often ignored and not given adequate consideration for their important position within the "judicial systems" portion of the Criminal Justice System. Instead of covering all areas of the Criminal Justice System, NDAA developed Standards specifically for prosecutorial services and only addressed other areas of the Criminal Justice System if those areas interrelate directly with the prosecutorial function. Throughout the development of the Standards, the concept "standards and goals" was utilized as a vehicle for planning and initiating change where needed.

It is expected that these Standards have the potential of becoming the most far reaching project NDAA has ever undertaken. The Standards at times will ask for sweeping reform and other times for simple changes and mere transpositions. They may not be accomplished for years, or they may be achieved tomorrow. But overall they are something to strive for, goals felt necessary for the efficient and effective operation of the prosecutorial portion of the total judicial system.

The National District Attorneys Association's Standards and Commentaries are not, however, exhaustive of past or present ideology and thought on their respective topics. Nor are they a conclusive review and reflection of the literature available on any given subject. Rather, they are the reactions and collective intelligence of the nation's prosecutors as represented by the individual Task Force members and NDAA Board members, supplemented and supported by research where applicable.

When developing the Standards, the Task Force members were not constrained or coerced by existing law and rules, but had the foresight to look at "what should be, what ought to exist." The task forces did not operate in a vacuum with their prosecutorial experience as their only reference, however, but considered the rationale behind existing laws and rules, and only advocated statutory and rule alteration when current application was inadequate or impractical.

Because of this merging of existing laws and alterations, there will be a broad variation in the extent to which current laws and rules will need to be modified in order to implement these Standards. Also, some states and local jurisdiction have already equaled or surpassed these Standards, both in intent and application. Many have not, however, thus pointing up how the need to alter current laws, rules, and practices will vary from state to state and jurisdiction to jurisdiction.

In all cases, each state and local jurisdiction is encouraged to evaluate, compare, consider, and deliberate existing operations and policies, laws, court and administrative rules, and adjudication practices in relation to these Standards.

The Standards must be viewed as flexible. It is anticipated that some Standards will not be applicable in various jurisdictions, and it is expected that many Standards will be modified to suit local needs. Individual prosecutors are encouraged to take the opportunity to implement the Standards wherever possible; each office may, however, wish to expand, modify, or alter them in order to make the Standards reflective of community needs and in practical harmony with jurisdictional realities.

It is hoped that the reader of these Standards will thoroughly review the Introduction of this document before perusing the Standards themselves, and that the reader will give the Commentaries their respective review and consideration.

The Task Force Members, who served unselfishly throughout the project have earned the highest regard and appreciation. Equally sincere gratitude is given to the Prosecutor/Evaluators and Independent Evaluator of the program. And, as in all projects, the Staff are accorded the highest praise — without them it would never have been done. Particular thanks goes to Jim Manak, Project Director, Jeff Thurmond, Deputy Project Director and Director of Research, and Will Hornsby, Prosecutor Analyst.

Patrick F. Healy,
Executive Director

chapter 1.
the prosecutor

This chapter is the heart of the prosecutorial service; the prosecutor himself. It deals with the most pressing and common concerns of the position, and seeks to equate a balance of the various alternatives for individuals occupying the position, and the creation and maintenance of the position itself.

Nowhere in the criminal justice system is the power of authority and discretion more balanced or more powerful. No matter how many arrests the police make, how prolific the courts are at gavel pounding and sentencing, or how many rehabilitated criminals corrections personnel process; if the prosecution doesn't act, the system stops. Being quasi-judicial, the prosecutor acts in an executive position executing legislative directives, affects legislative action through his inherent discretion of charging and screening, and functions in a judicial capacity by the very nature of his position.

Taking all of this into account, this set of Standards deals with such critical issues as how the prosecutor attains office, the qualifications required for the position, the responsibilities the prosecutor must be both held accountable for and function within, what constitutes reasonable compensation for the prosecutorial service performed, and what safeguards and sanctions need to be established and how to apply them to check the balance of prosecutorial power.

Experienced and professional personnel are required to carry out the legal, judicial, and administrative functions of the prosecutor's office. The problem of crime is unlikely to be reduced or solved if prosecutors continue to be underpaid, understaffed, and inefficiently administrated. There are several thousand prosecutors in the nation, the majority of whom work in offices having part time positions. Although salary levels have been rising, prosecutors still receive far less than lawyers of similar experience in private practice. This leads to high turnover in the position, inexperienced personnel in office, too few qualified individuals seeking office, too high of a political orientation to the position, chance of abuse of power due to political pressure and/or lack of understanding of the position's responsibility, and poor administration. These Standards were designed to help reduce those impediments.

standard 1.1 selection*

A. The prosecutor shall be a locally-elected official.

B. The term of the office of prosecutor shall be at least four years.

C. The office of prosecutor shall be approached as a career position.

---

* *Task Force II feels that because of small jurisdictional size, the election should be non-partisan, with incumbent designation. The term of office should be at least six years, and the position should be approached by candidates, the public and current office holders as a career position.*

standard 1.2 qualifications*

A. The prosecutor must, at time of filing for election and for the duration of his term of office, be a member of the bar in good standing, be a resident of the jurisdiction, and be otherwise qualified to run for and hold office under state statutes.

---

* *Because of various degrees of available candidates in different jurisdictions, Task Force I advocates that candidates be residents of the state for at least six months; Task Force V states that candidates be in good standing with the bar for at least two years prior to election for office; and Task Force VI feels that candidates should be practitioners of law for at least five years prior to filing for election for the office of prosecutor.*

standard 1.3 responsibilities

A. The office of the prosecutor shall be a full-time profession. The prosecutor shall neither maintain nor profit from a private legal practice. In those jurisdictions unable to justify the employment of a full-time prosecutor, the prosecutor may serve part-time until the state determines that the merger of jurisdictions or growth of caseload necessitates a full-time prosecutor.

The prosecutor shall devote primary effort to his office, and shall have no outside financial interests which could conflict with that duty.

B. The prosecutor shall represent the case of the people as to both civil and criminal jurisdiction. The criminal representation shall be the primary responsibility. In jurisdictions where civil and criminal responsibilities are vested in the prosecuting attorney, provision for alternative representation in the case of conflicts should be made.

C. The duties of the prosecutor's office shall be conducted in a professional and non-partisan manner.

D. The prosecutor should consider all available models of control of human behavior from the standpoint of the ultimate benefit to society. The prosecutor should at all times be zealous in the desire to protect the rights of individuals, but must place the rights of society in a paramount position in exercising prosecutorial discretion in individual cases and in the approach to the larger issues of improving the law and making the law conform to the needs of society.

Task Force I & II:

The prosecutor should be willing to represent the consensus in the community even if it differs from personal points of view.

Task Force IV:

It is the duty of the prosecutor to enforce the laws as written by the legislature and upheld by the courts, within the legal, discretionary powers of screening and diversion. Until such time as specific laws are changed by legislative or judicial action, the prosecutor shall enforce such laws, whether the prosecutor personally agrees with them or not.

standard 1.4 compensation

A. Mechanisms should be established for provision of

compensation commensurate with the responsibility and importance of the office of prosecutor.

B. Determination of an appropriate level of salary for the prosecutor should include reference to and consideration of:
   1. Salary levels of positions with analogous responsibilities in private firms and industry;
   2. Salary levels of United States attorneys and chief trial judges of the jurisdictions; and
   3. Population of the jurisdiction of the prosecutor, including seasonal fluctuations, correctional population, and other relevant considerations.

C. The salary of the full-time prosecutor should be at least that of the salary of the chief judge of general trial jurisdiction of the district of the prosecutor. The salary of the part-time prosecutor shall be set by a professional compensation board at the state level.

D. A mechanism should be established for in-term review of the prosecutor's salary in reference to changing economic conditions. Review should take place more than once per term.

E. A program of benefits, including health and pension provisions, should be established to complement the salary of the prosecutor and be at least equal to that provided to members of the state judiciary.

standard 1.5

disciplinary sanctions

A mechanism should be established to enable the legislature or court of highest appellate jurisdiction to suspend, remove, or supersede a local prosecutor upon a demonstration, after reasonable notice and hearing, that the prosecutor is incapable of carrying out the duties of his office.

A. Disciplinary Initiation:
   Such suspension, removal or superseder should be initiated by the appropriate professional body, in a proceeding designed to safeguard the rights of the prosecutor.*

B. Disciplinary Rationale:
   Such proceedings should be initiated only for just and serious cause, including:
   1. Disbarment
   2. Conviction of a felony, or a crime involving public corruption
   3. Mental incompetency and/or physical disability which would prevent performance of the duties of prosecution
   4. Willful neglect of duty

* *Task Force V feels that the appropriate body would include either the Governor or the Attorney General in initiating proceedings.*

commentary

SELECTION

Popular election is the most common method of selection of prosecutors: "The historical traditions of the demand for decentralized administration of criminal justice had led to the almost universal practice of electing local prosecutors. . . .".[1] "In choosing a method of selecting a prosecutor, most jurisdictions have determined that the advantages of popular election of chief prosecuting attorneys outweigh any disadvantages."[2] Local election of prosecutors

> . . . increases the likelihood that the prosecutor will be responsive to the dominant law enforcement views and demands of the community. Since he is not dependent on another official for reappointment, the prosecutor possesses a degree of political independence that is desirable in an officer charged with the investigation and the prosecution of charges of bribery and corruption . . . The election of local prosecutors is engrained in our political traditions. Moreover, experience in several large cities has shown that the elective process can produce dedicated career prosecutors who are highly professional and competent.[3]

Prosecutors are elected officials in 45 states.[4] This elective status is determined by constitutional provision in 36 states and by statute in 9 others.[5] Delaware[6] and Rhode Island[7] have no local prosecutors; the Attorney General handles criminal prosecutions for the State. In Connecticut the county state's attorneys are appointed by judges of the superior courts,[8] and the prosecuting attorneys are appointed by the judges of the courts of common pleas.[9] In Alaska, local prosecutors are appointed by the Attorney General.[10] In New Jersey county prosecutors are appointed by the Governor with the advice and consent of the Senate.[11]

Appointment of the prosecutor has sometimes been recommended as a potential method of removing the prosecutor from partisan considerations.[12] Appointment of the prosecutor, however, is not a desirable alternative. An appointed prosecutor does not have direct authority from, and responsibility to, the voters of his district. In addition, selection by appointment has other disadvantages. Appointment by the Governor or Attorney General results in the selection of the prosecutor by a central authority, and not by those (the voters) who can best appreciate what characteristics are suited to their particular jurisdiction. While appointment might be acceptable in smaller states, in larger states such appointment would be "too removed from the county or district served to be preferable to local elections".[13]

Appointment by local courts also is disadvantageous. Johnson notes:

> The appointment of a prosecutor by superior court judges, as in Connecticut, is a possible alternative; but the primary function of judges does not involve a responsiveness to popular will, so that the same two fears of prosecutorial unresponsiveness and even abuse of discretion might still be aroused by this alternative.[14]

Norman notes in his examination of the Connecticut

system that "the influence of politics has in no sense been eliminated, only camouflaged".[15] He also suggests that such appointment makes the prosecutor subservient to the judicial function, since "personnel whose re-appointment depends upon the judges they appear before cannot be expected to press their respective cases to the limit of the law".[16] An analogous problem would presumably exist under any appointive system.

Non-partisan elections are sometimes recommended because they keep the prosecutor responsive to the people, but not subservient to political parties, and not "subject to the pressures and demands of partisan politics".[17] Johnson's study found that "those offices that select their chief prosecutor in non-partisan elections have as little political influence as do appointive jurisdictions in the selection of deputies".[18] Non-partisan selection systems are in common use as applied to judicial selection, usually through some variation of the 'Missouri Plan'.[19]

Non-partisan elections for prosecutor are currently used in Oregon and California. The Oregon statute provides, in part, that:

> At all primary elections at which candidates for district attorney are to be nominated . . . the county clerk shall prepare and furnish a ballot entitled "District Attorney Ballot" upon which the names of candidates for the office shall be placed without any party designation. Following the name of each candidate shall be a statement, not exceeding 10 words of his qualifications and experience . . .[20]

A similar procedure is used in the general election.

Some question exists as to the need for non-partisan election of district attorneys in all jurisdictions. Jacob's study of Wisconsin district attorneys indicated that despite the use of a partisan ballot most elections for prosecutor in that state were characterized by a lack of partisanship because many candidates ran unopposed.[21] "From 1944 to 1962, between 31 per cent and 59 per cent of the elections for prosecutor went uncontested in both the primary and general elections".[22] The result is that elections for district attorney were as non-political as non-partisan judicial elections in Wisconsin.[23] And since district attorneys generally had less previous linkage to political parties than did the more politically-experienced judges, Jacob notes: "Although elected on a partisan ballot, district attorneys are perhaps more apolitical than judges".[24] If the Wisconsin situation may be assumed to exist throughout the country in those areas which have a minimum of competition for the position of district attorney, then elections for prosecutor may now be operating on a *de facto* non-partisan basis in many areas.

A final question in the election of prosecutors is whether the election ballot should carry a designation of the incumbent. Such a designation is designed to increase professionalism by providing clear identification of the more experienced candidates. One method of accomplishing this is illustrated on the previously cited Oregon ballot, which allows for a brief description of qualifications. Incumbency designation is now followed in some judicial elections.[25]

TERM OF OFFICE

The most common length of term of prosecutors is four years. Other term-length distribution is indicated in the following table:[26]

TERM OF OFFICE IN YEARS	NUMBER OF STATES
2	11
4	32
5	1
6	2
8	1
no set term	3

Source: NDAA Prosecutors Surveys — 1976 data

Two-year terms are served by prosecutors in eleven states: Arkansas, Hawaii, Idaho, Kansas, Maine, Missouri, New Hampshire, North Dakota, South Dakota, Vermont, and Wisconsin. Three-year and four-year terms are served by prosecutors in New York. In New Jersey, county prosecutors serve five years. The district attorney in Louisiana and the commonwealth attorney in Kentucky have six-year terms. In Tennessee the district attorney general is elected to an eight-year term.[27] The remainder of offices and jurisdictions have four-year terms. Recommendation is made for at least a four-year term because it is considered short enough to maintain responsiveness to the electorate, but long enough for the prosecutor to be able to carry out his programs and responsibilities. Longer terms might be considered in areas wishing to provide increased incentive for candidates for the office of prosecutor. The longer term would serve to enhance the professionalism of the office of prosecutor by increasing the experience of the incumbent. Terms longer than four years have been accorded other criminal justice officers — the median term length for major trial court judges in those states which limit judges' terms is six years.[28]

CAREER ORIENTATION

The office of prosecutor should be approached as a career position:

> The advantages of career prosecutors are fairly obvious. Longevity should breed commitment to the tasks of a prosecuting career. Experience should develop the expertise necessary to avoid trial error and appeals, which are costly to the district attorney's office in time, money, and efficiency.[29]

Increased experience in prosecution should result in a greater number of convictions and greater efficiency in criminal justice administration.[30]

Turnover of district attorneys has commonly been high. The study of prosecutors by the NAAG reports that:

> Nearly 50 percent of all respondents to COAG's 1973 questionnaire are currently serving their first term in office. Prosecutors in general are fairly young, since the median year in which all 1973 respondents were admitted to the Bar was 1958. Almost 30 per cent had been admitted since 1967.[31]

Jacob notes, in his study of Wisconsin prosecutors, that:

> Most district attorneys (65.1 per cent according to election records) left the office voluntarily rather than because of an electoral defeat. Almost half (44.6 per cent) of those no longer incumbent said they left the office because they had become too

busy with their private practice, or because they felt it had impeded the growth of their private practice and income. Consequently, despite the infrequent defeat of incumbents, there is a high turnover in the office. The mean tenure of Wisconsin prosecutors between 1942 and 1963 was four and one-half years. . . .[32]

Ori's study of Indiana county prosecutors discovered that only 3 per cent of those prosecutors examined intended to make a career of prosecution.[33] Engstrom's study of Kentucky prosecutors indicated that 44.7 per cent of those questioned were interested in seeking other political or governmental positions,[34] utilizing the office of prosecutor as a "stepping-stone" to higher office.

Lack of interest in prosecution as a career is pervasive in the prosecutor's office, not merely limited to the chief prosecutor. Felkene's study of prosecution offices in Alabama and California concludes:

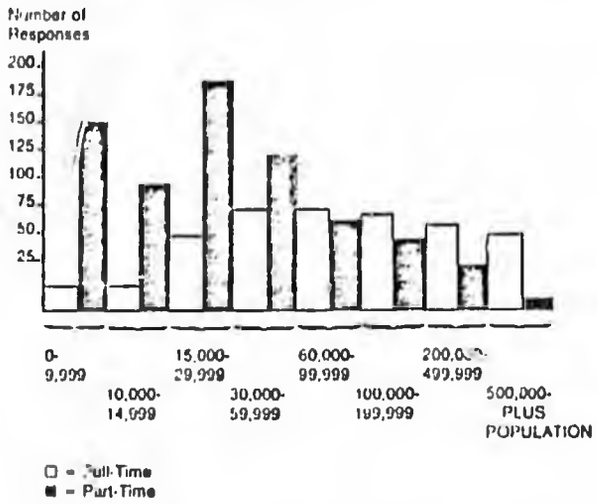
> There seems to be a definite lack of career orientation within the district attorney's office, despite the fact that almost all respondents reported job satisfaction in their present situations. This may be due, in part, to the failure of the district attorney to carry out any extensive recruiting program in the law schools. The responses of the deputies indicated that they gave very little, if any, consideration to prosecution work while in law school, probably due to a lack of information concerning the job and its availability. Presumably, most attorneys form set goals while they are still in law school, and the fact that district attorneys do not recruit on campuses to any great extent may well preclude any consideration of this type of law practice as a career. If an attorney later accepts a position as a prosecutor, incentive probably will be to gain experience which will facilitate the accomplishment of his previously determined goals, preventing him from viewing the district attorney's office as a potential career.[35]

The position of prosecutor should be approached as a career position. Candidates for the office of prosecutor should not seek election to that office unless they reasonably believe that they are willing to devote to the office of prosecutor that dedication and commitment commensurate with making it a successful and lasting career. The office of the prosecutor should not be viewed simply as a stepping-stone to other political positions.

QUALIFICATIONS

Given the importance and grave responsibilities of the office of prosecutor, some minimum requirements are deemed necessary to insure that holders of the office meet minimum standards of competence. "The prosecutor has the responsibility of presenting the government's case in court, and his skill as a trial lawyer can be a crucial determinant of whether an offender is convicted."[36] Most states require by statute or constitutional provision that a prosecutor be a licensed attorney, and it has been held that even in the absence of such requirement there exists an inherent implication that he should be so.[37] New Jersey requires that appointees to the office of county prosecutor have practiced law for at least 5 years.[38] Pennsylvania also has a minimum practice requirement for certain metropolitan areas.[39] Other states have similar requirements.[40] Whether a specific jurisdiction will wish to establish such requirements depends on its particular circumstances. Smaller jurisdictions might elect not to adopt such requirements in order to facilitate applications for the post of prosecutor.

The responsibility of the prosecutor for representation of the state in criminal matters makes it desirable that the prosecutor have experience in the practice of criminal law, through prior experience in the prosecutor's office, if possible. This ideal will not be possible in all jurisdictions. Some jurisdictions may want to explore the possibility of certification procedures for prosecutors.[41]



The prosecutor should also be a resident of the jurisdiction which he represents. This will not only enable the prosecutor to attain increased familiarity with the people and conditions of this area, but will also enhance the confidence of the area's population in the commitment of the prosecutor to his jurisdiction.

DUTIES: FULL-TIME

The nature and responsibilities of the office of the prosecutor demand continued and concentrated effort by the holder of that position. For this reason, it would be desirable if all prosecutors served full-time, and devoted no effort to private practice:

> The complexity of today's criminal law practice requires that all prosecutors devote their full efforts to their roles as prosecuting attorneys. Part-time law practice is inconsistent with the type of commitment the community has a right to expect of its prosecutor.[42]

Part-time service is common within the present criminal justice system:[43]

In smaller jurisdictions the majority of prosecutors serve part-time, either for financial reasons, or because of lack of need for a full-time prosecutor in a small district, or simply because the prosecutor in that area has always served only part-time. This practice of part-time prosecutorial service may face the problem of conflicts of interest:

> While direct conflicts of interest between the prosecutor's public office and his private practice are clearly unlawful and, we may assume, rare, there are many indirect conflicts that almost invariably arise. The attorneys he deals with as a public officer are the same ones with whom he is ex-

pected to maintain a less formal and more accommodating relationship as counsel to private clients. Similar problems may arise in the prosecutor's dealings with his private clients whose activities may come to his official attention. It is undesirable to place a prosecutor in a position in which he must always be conscious of this potential for conflict and be careful to avoid improprieties or the appearance of conflict.[44]

Even where no conflict of interest arises a potential for difficulty exists:

> . . . there is a great risk that the part-time prosecutor will not give sufficient energy and attention to his official duties. Since his salary is a fixed amount, and his total earnings depend on what he can derive from his private practice, there is continuing temptation to give priority to private clients.[45]

Argument can be made that many areas of the country lack the need for a full-time prosecutor. While this may be true presently, it will not be true in the future:

> The part-time system originated in the days when most county seats had only one attorney. Even now in many counties the part-time system is still probably workable, but as population centers grow the work load of the state's attorney will increase to the point that a part-time prosecutor will not be able to handle it.[46]

The office of prosecutor should be a full-time occupation. The holder of the office should neither engage in nor profit from a private legal practice. The full-time requirement should not be construed to prohibit an incumbent prosecutor from participating in either legal education programs or in commission or consultant work connected with criminal justice concerns, since both of these efforts are considered unlikely to produce conflicts of interest, and each is likely to produce benefits of its own to the criminal justice system.

Practical realities dictate that some jurisdictions will be unable to justify the employment of a full-time prosecutor at the present time. Each state should consider merger of jurisdictions which would allow for employment of a full-time prosecutor, or such states should require full-time prosecution when growth of caseload necessitates such a position in those jurisdictions.

JURISDICTION

The prosecutor shall represent the case of the people as to both civil and criminal jurisdiction. This is currently the case in most jurisdictions today:

> Most local prosecutors have both civil and criminal justice responsibilities. Only 12 [now 13 — Editor's Note] states assign the prosecutor solely criminal duties. In at least four others — California, Hawaii, Kansas, and Michigan — prosecutors in urban areas are divested of civil responsibilities which become the province of county or city corporation counsel.[47]

A state-by-state analysis of jurisdictional responsibilities is provided in Appendix 1 — I.

In those areas where the prosecutor is assigned civil jurisdiction the majority of the prosecutor's time is spent on criminal concerns:

> Prosecutors devote most of their time to criminal matters: 78 per cent reported they spend over one-half of their time on criminal work. The median percentage of time on criminal matters is 75 per cent. In contrast, only 2 per cent spend over one-half of their time on civil matters.[48]

Despite this, in many areas the civil duties of the prosecutor may be many, varied, and complex. This is especially true in areas where the prosecutor acts not only as criminal district attorney, but also as general city or county counsel. Many small areas simply lack the availability of attorneys to provide for both a full-time criminal district attorney and a full-time county counsel.

In some areas of prosecutorial duties civil lawsuits can be of significant importance. Civil lawsuits have some advantages over criminal actions:

> . . . civil lawsuits give the prosecutor certain major advantages. The advantages are such that civil suits may be the only practical remedy. The potential damages are greater. Due to the lack of stigma, civil suits may lead to faster correction of the problem and resolution of the lawsuit. The prosecutor is not limited by the dictates of the Fifth Amendment so his right to discovery is more effective and meaningful and the lawsuit is more easily won.[49]

In some areas, civil lawsuits are particularly advantageous:

> The great advantage of the consumer fraud prosecution in such instances is that it is not criminal, but civil in nature. Therefore all methods of civil discovery, including depositions, interrogatories, admissions, and inspection and copying of business records are available to the People. In fact, because the civil penalties sought in such an action are so similar to punitive damages, the People may also discover the financial status of the defendants.
>
> In addition, because these consumer fraud actions are not criminal certain constitutional rights peculiar to criminal actions are not available to the defendants. The defendant does not have a right to a jury trial, there is no requirement that the evidence be established beyond a reasonable doubt, but rather only by a preponderance of the evidence, nor does the defendant have the Sixth Amendment right to be confronted by the witnesses against him. Of equal importance, a criminal acquittal does not bar the civil action on the basis of double jeopardy.[50] (footnotes omitted).

Other advantages in consumer fraud prosecution include a more effective case if the defendant is a corporation, possibility of greater damages than are available by criminal fine, fewer "Sheppard" restrictions on comments or publicity, and possible avoidance of extradition problems.[51]

Civil suits can also be useful to the prosecutor in areas such as child support enforcement,[52] environmental law,[53] and others.[54]

The full-time prosecutor can serve both criminal and civil functions, and should have the responsibility for both civil and criminal jurisdiction.

PROFESSIONALISM AND NON-PARTISANSHIP

The duties of the prosecutor's office must be conducted in a completely professional and non-partisan fashion. The authority of the office of prosecutor can only be ex-

ercised in the interest of the People and not for private concerns:

> The powers of a district attorney under our laws are very extensive. They affect to a high degree the liberty of the individual, the good order of society, and the safety of the community . . . Powers so great impose responsibilities correspondingly grave. They demand character incorruptible, reputation unsullied, a high standard of professional ethics and sound judgment of no mean order . . . A district attorney cannot treat that office as his selfish affair. It is a public trust. The office is not a private property, but is to be held and administered wholly in the interests of the people at large and with an eye single to their welfare.[55]

Unprofessional use of the authority of the prosecutor's office for private concerns demeans the office of the prosecutor and violates the public trust and confidence in the criminal justice system. Loss of public confidence only makes the prosecutor's job more difficult and less rewarding. Partisanship may also affect the prosecutor's staff:

> Highly qualified practicing lawyers and recent law school graduates may be prevented from entering the prosecutor's office because they are unable or unwilling to acquire political sponsorship. Lawyers who are considering a career in the prosecutor's office may be daunted, even if they have the required political support, by the likelihood of discharge if their party does not retain control of the office at the next election. Furthermore, the obligations usually attached to a patronage position, such as purchasing or selling tickets to fund-raising dinners, campaigning, or systematically contributing to the party, may be distasteful to many lawyers.[56]

Partisanship can also adversely affect the general conduct of the prosecution function:

> Political considerations make some prosecutors overly sensitive to what is safe, expedient, and in conformity with law enforcement views that are popular rather than enlightened. Political ambition does not encourage a prosecutor to take the risks that frequently inhere in reasoned judgments.[57]

The prosecutor must strive to conduct his office and his duties in a completely professional and non-partisan way, exercising the powers and authority of his position for the interest of the People and not for any private or personal concern. To do otherwise is a violation of his responsibility and his electoral mandate.

COMPENSATION

Provision of an adequate salary is an absolute necessity if the office of prosecutor is to function at maximum efficiency. An adequate salary is essential for attracting capable candidates to the position of prosecutor:

> High quality attorneys who should be encouraged to seek the position will do so only if it offers reasonable economic rewards. Full-time devotion to duty cannot be demanded unless the pay is raised and salary scales are based on the assumption that the prosecutor will not have a second income from outside law practice.[58]

"If public service careers are pursued in an austere setting on depressed salaries, few talented people will be attracted to local prosecutorial service and experienced attorneys will seek other employment."[59] Failure to provide adequate salaries has resulted in a lack of prosecutorial candidates, as illustrated by the example of Oklahoma:

> In that state, as in some others, archaic legal limitations prevented payment of compensation which would attract competent lawyers, and the administration of criminal justice suffered. This reached crisis proportions when, in 1964, no attorneys sought election as County Attorney in 55 of the state's 77 counties.[60]

Subsequent to this, Oklahoma reorganized its prosecutorial system. Other states have faced similar problems. In Kansas, in January 1975, in 29 out of 101 counties the candidate for prosecutor chose not to seek re-election. In 89 counties the candidate for prosecutor ran unopposed.[61] Many jurisdictions face difficulties enough in attracting candidates for prosecutor without having to contend with low salaries. Jacob notes that in Wisconsin "the pool of potential candidates is quite small: eighteen

	Reason For Leaving				Nature of New Employment							
Jurisdiction	Discharged (%)	Retirement (%)	Death (%)	Sickness	More Money (%)	Other (%)	Indiv. Practice (%)	Estab. Law Firm (%)	New Law Firm (%)	Corp. (%)	Gov. (%)	Other (%)
Los Angeles	1.3	5.2	2.6		63.6 -	22.1	50	16				34
Detroit	5	50			45		30	30	20		10	10
Brooklyn	1	32	4		63		65	17	11	2	5	
Cleveland			22		33	45		66			34	
Houston	2		2		96		20	50	20		10	
Bronx		11.5			88.5		24.5	8.5	5.5	2.5	59.0	
Miami	5	5			80	10	50	50				
Buffalo					70	30	40	30	20	20	10	
St. Louis	10		5		70	15	15	60	10		15	
Phoenix					100				90		10	
Cincinnati					100							
Baltimore					90	10	5	90	5			
Sacramento					10	90		50			50	
Atlanta		50			50		25			25	50	
Crown Point		10	10		80		75	10	5		10	
Portland	6				34			59	10			
Denver					15	30	20	44		12	24	
St. Paul					100			40	40		20	

counties in 1965 had fewer than 10 active attorneys".[62] Provision of an adequate salary is thus crucial to guaranteeing the existence of sufficient qualified prosecutors.

Provision for an adequate salary level is also essential to reduce the rapid turnover of local prosecutors:[63]

> Turnover among prosecutors is one of the major problems which limits the development of prosecutorial expertise. The major reason cited for leaving the job is failure of salaries to meet the level which attorneys can reach in private practice.[64]

"Turnover in prosecutor's offices far exceeds that in any other government office dealing with the administration of criminal justice."[65] Turnover in prosecutor's offices across the country may be as high as 33 per cent annually.[66] The primary reason for this high turnover is inadequate financial compensation, as the previous table indicates.[67]

Provision of adequate salaries will also act to reduce the likelihood of prosecutorial misconduct, since "adequately paid, full-time district attorneys and their staffs will be less susceptible to temptations of outside employment and to offers of money or favors in return for accommodating individuals whose cases come before them".[68]

The source of the prosecutor's salary varies among jurisdictions, as the following table indicates:[69]

SOURCE OF PROSECUTOR'S SALARY

Source	Number of Responses	Percent of Total (636)
State	83	13
State (County may Supplement)	40	6
State and County	86	14
County	425	67
Information not available	2	—
TOTAL	636	100

Examination should be made of the feasibility of state or federal supplementation in those local areas which are unable to adequately provide a salary for the prosecutor.

LEVEL OF SALARY

Salary levels for prosecutors vary considerably across the country. The following table gives the result of a nationwide survey of prosecutors' salaries:[70]

ANNUAL SALARY OF PROSECUTORS

Annual Salary	Number of Responses	Percent of Total Responses
$Under 10,000	352	37.4
10,000-11,999	104	11.0
12,000-15,999	176	18.7
16,000-19,999	112	11.9
20,000-24,999	136	14.6
25,000-49,999	59	6.4
TOTAL	939	100.0

"The median income of all prosecutors in 1973 was $ 2,500 per year. The total salary range reported was from $1,120 to $44,028. These figures include part-time prosecutors. Full-time prosecutors received a median of $22,042 per year . . . When a median hourly salary is computed for full-time prosecutors, the figure derived is $11.74. For part-time prosecutors, the hourly median salary is between $6.50 and $7.50."[71] Additional material on various prosecutors' salaries, along with a comparison of trial judge salaries, is provided in Appendix 1 — III. Figures on increases in salaries by years of service for metropolitan prosecution offices are shown in the table below.[72]

The salary provided the prosecutor should be at least that of the salary of the judge of general trial jurisdiction of the district of the prosecutor:

> For purposes of salary, the prosecutor should be considered to be on the same level as the chief judge of the highest trial court of the local criminal justice system. Both positions require the exercise of broad professional discretion in the discharge of the duties of the offices. It is therefore reasonable that the compensation for the holders of these offices have the same base.[73]

Those jurisdictions which still have a part-time prosecutor should have salaries set by a professional compensation board at the state level.

SALARIES BY YEARS OF SERVICE

New York	—	3,083	Increase based on salary increases of judiciary-chief trial court of jurisdiction						Yes	Yes	1 wk - 4 wk.

REVIEW OF SALARY

A review mechanism should be established to periodically examine and evaluate the salary of the prosecutor in light of changing economic conditions. Current practice in many jurisdictions is to provide review and alteration of the prosecutor's salary only at the beginning of each term. This could result in a net decrease in the prosecutor's salary, as Trimble notes:

> A Constitutional prohibition against a salary increase during a term of office in Oklahoma means that the DA receives no salary increases or cost of living adjustment for 4 years. This is crazy. He is making 24% less when he ends the term than when he starts it.[74]

Unless statutory provision is made for periodic in-term increases in salary, a board or mechanism should be established with authority to review and revise prosecutors' salaries in light of changing economic conditions.

BENEFITS

A program of benefits should be established to complement the salary of the prosecutor and his staff. These benefits should include both health insurance coverage and provisions for accumulation of retirement benefits. Since it is comparatively rare for a prosecutor to serve exclusively as a prosecutor throughout his career, a method should be established whereby a prosecutor may be provided retirement coverage commensurate with the length of his service in office. Connecticut provides that the prosecutor on retiring "shall receive annually as retirement salary, for each year he has served in any such office, one-tenth of two-thirds the salary of the office which he held at the time of his retirement, as such salary may be changed from time to time; but in no event more than two-thirds of such salary".[75]

SUSPENSION

A means should be instituted whereby the prosecutor may be suspended from office. Suspension should be instituted as a punishment for actions of minor misconduct which do not warrant removal of the prosecutor. Suspension might also be instituted as a prelude to the institution of removal proceedings against the prosecutor. Suspension mechanisms should provide for hearing procedures at which the rights of the prosecutor are protected.

REMOVAL

Provision should be established for expeditious removal of the prosecutor when it has been fairly determined that he is no longer fit to hold office.

Various removal mechanisms are employed by different states. Impeachment is the most usual method of removal.[76] Removal by the Governor is another common method. Other methods of removal include removal by a court,[77] removal on recommendation of the Attorney General,[78] impeachment by the legislature,[79] or recall provisions.[80]

Grounds for removal also vary among the different states. Grounds for removal include such causes as "malfeasance, misfeasance, nonfeasance, or nonadministration in office",[81] "incompetency, neglect of duty or misuse of office when such incompetency, neglect of duty or misuse of office has a material adverse effect upon the conduct of such office",[83] and "incompetency, corruption, malfeasance or delinquency in office, or other sufficient cause".[84] Disbarment and conviction of a serious crime are other common grounds for removal. Removal proceedings, however, are seldom utilized: "The district attorney need fear ouster only for criminal activity, and even where evidence of such conduct exists, ouster proceedings are seldom employed."[85]

The method adopted for removal of the prosecutor should provide a clear statement and interpretation of all possible grounds for removal, and a speedy means of accomplishing the removal hearing. Protection of the rights of the prosecutor must be guaranteed by any system of removal.

40. For an interesting interpretation of "practicing law" see *Riddle v. Roy,* 126 So. 2d 448 (1960), which concerns a Louisiana constitutional requirement of three years practice as eligibility for the office of district attorney. The court held that an attorney was "practicing law" as long as he was ready, willing, and able to practice law, even if he had no clients or conducted no legal business. Most states now use "admission to the practice of law" rather than "practicing law".

a Arithmetic average figured for the 50 states.

b Arithmetic average figured for the 26 states that have intermediate appellate courts.

NOTE; Salaries including supplements are shown in parentheses immediately beneath the figures for state-paid salaries.

appendix 1 — IV

Floating Salary Statutes

California, Massachusetts and Tennessee provide for judicial salary increases based on a consumer price index. California utilizes the California consumer price index while Massachusetts and Tennessee use the U.S. consumer price index. Maryland provides automatic salary increases for the judiciary based on general salary increases awarded to all state employees. Rhode Island provides for longevity increases as shown in this section. The statutory authority for these automatic salary increases follow.

California: The California Government Code 68203 provides:

> "In addition to the increase provided under this section on September 1, 1968, on the effective date of the 1969 amendments to this section and on September 1 of each year thereafter, the salary of each justice and judge named in Sections 68200 to 68202, inclusive, shall be increased by that amount which is produced by multiplying the then current salary of each justice or judge by the percentage by which the figure representing the California Department of Industrial Relations has increased in the previous calendar year."

The judges named in 68200 to 68202 include the Chief Justice of California, associate justices of the Supreme Court, justices of courts of appeal, superior court judges and municipal court judges.

Maryland: Maryland Code I-703 Pay Plan; Automatic Salary Increases, provides:

> "(a) Pay plan. — Section 27, Article 64A of the Code applies to judicial salaries, except for its provisions authorizing emergency salary increases with approval of the Board of Public Works.
>
> "(b) Automatic salary increases. — Whenever a general salary increase is awarded to state employees, each judge shall receive the same percentage increase in his salary as awarded to the lowest step of the highest salary grade for classified employees in the state salary plan."

Massachusetts: Massachusetts General Laws Annotated Chapter 30 §46 provides:

> "The director of personnel and standardization shall annually determine the percentum difference between the average cost of living for the next preceding calendar year and the average cost of living for the calendar year during which the weekly rates prescribed in the above salary schedule were last revised, both as shown by the United States Consumer Price Index for such years, and shall prepare and submit to the general court a report of such determination within a reasonable time after said index for the next preceding calendar year has become available. Whenever such determination indicates a percentum increase or decrease of at least three percentum, such report shall be accompanied by a recommendation for legislation to provide a corresponding percentum increase or decrease in the salaries of all employees in the service of the commonwealth and paid from the treasury thereof. . . . Whenever such determination indicates a percentum increase of at least three percentum, as hereinbefore described, such report shall be accompanied by a recommendation of legislation to provide a corresponding percentum increase in the salaries of the chief justice and associate justices of the supreme judicial court, the appeals court, the superior court and the municipal court of the city of Boston, the judges and associate judges of the land court, the chief judge and the judges of probate and insolvency, the chief justice and the justices of the district courts other than the municipal court of the city of Boston, the justices and special justices of the Boston Juvenile Court, the justices of the Worcester, Bristol County and Springfield juvenile courts, and special justices of the district courts, including the municipal court of the city of Boston, such increase to take effect as of the beginning of the first payroll period of the year in which such report is submitted."

Rhode Island: General Laws of Rhode Island 36-4-16.5 provides:

> Judges as well as all other court personnel are entitled to longevity increments. Longevity after seven years 5%, after

eleven years 10%, after fifteen years 15%, after twenty-five years 20%.

Tennessee: T.C.A. §82303 provides:

> Beginning September 1, 1974, the compensation of judges and chancellors shall be the base salaries fixed in this law adjusted to reflect the percentage of change in the Consumer Price Index as reported by the U.S. Department of Labor. The adjustments shall occur on September 1, 1974 and on September 1 of every year thereafter for the ensuing year commencing September 1.

ALASKA STATE LEGISLATURE
HOUSE OF REPRESENTATIVES

April 7, 1983

Mr. Arthur H. Snowden, II
Administrative Director
Alaska Court System
303 "K" Street
Anchorage, Alaska 99501

Dear Mr. Snowden:

Thank you for your recent correspondence of mobilized informational endeavors relative to HJR 36, "Relating to the confirmation of justices and judges by the Legislature.

As you are aware, the maximum ethical validity of the measure was discussed with consummate procedural proficiency on Wednesday, March 30th, and passed out of Committee. I am certain that on the House floor it will be subject to studies of perceptive logistical structure and strategic philosophical rationale. Certainly qualitative relevant approximations may be forthcoming in order to reduce any perceived corrective anticipatory disparity in the orchestrated hierarchical integrity of the system.

Your fears of lengthy delays, as a functional administrative tactician, would not be of significant import, I would hope, through progressive humanistic accommodation and adapted management performance. It would be expected that accredited responsive studies would imply that tabulated definitive placement would render little harm to that tabulated definitive placement would render little harm to proficient concurrent stabilization now apparent in the system.

The resolution's sponsor seemed to believe that our courts' systematized multilateral uniqueness seems to fail in comprehensive informational responsiveness to the electorate. In particular, he expressed the idea that the qualified deliberative selectivity process indulged in by Judicial Council members is negatively responsive to the public, since they avoid the elective mode, in their positions.

As to your lack of opportunity for input, your staff--namely Ms. Karla Forsythe or Mr. Rick Barrier--have established a standing, weekly telephone call to the Committee staff in order to ascertain the topics regularly scheduled for the ensuing week. I have no knowledge as to how or why you were not informed.

Thank you for involving yourself in the legislative process.

Yours very truly,

Representative Charlie Russell

MEMORANDUM

DATE: March 30, 1983

TO: Representative Charles Bussell, Chairman
House Judiciary Committee

FROM: Representative Jerry Ward

SUBJ: House Joint Resolution No. 36

Under our present system, the Governor appoints supreme court justices and superior court judges from lists prepared by the Alaska Bar Association and the Judicial Council. Since neither the Alaska Bar Association nor the Judicial Council are elected by the general public, there is a danger that this will be perceived as a self-serving process. By extending the function of legislative confirmation to these positions, this resolution brings the general public back into the process, allowing for public hearings and the expression of public will.

98TH CONGRESS
1ST SESSION

H. J. RES. 23

Proposing an amendment to the Constitution of the United States relative to abolishing personal income, estate, and gift taxes and prohibiting the United States Government from engaging in business in competition with its citizens.

IN THE HOUSE OF REPRESENTATIVES

JANUARY 3, 1983

Mr. PAUL (for himself and Mr. MCDONALD) introduced the following joint resolution; which was referred to the Committee on the Judiciary

---

JOINT RESOLUTION

Proposing an amendment to the Constitution of the United States relative to abolishing personal income, estate, and gift taxes and prohibiting the United States Government from engaging in business in competition with its citizens.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"ARTICLE —

"SECTION 1. The Government of the United States shall not engage in any business, professional, commercial, financial, or industrial enterprise except as specified in the Constitution.

"SECTION 2. The constitution or laws of any State, or the laws of the United States, shall not be subject to the terms of any foreign or domestic agreement which would abrogate this amendment.

"SECTION 3. The activities of the United States Government which violate the intent and purposes of this amendment shall, within a period of three years from the date of the ratification of this amendment, be liquidated and the properties and facilities affected shall be sold.

"SECTION 4. Three years after the ratification of this amendment the sixteenth article of amendments to the Constitution of the United States shall stand repealed and thereafter Congress shall not levy taxes on personal incomes, estates, and/or gifts.".

98TH CONGRESS
1ST SESSION

H. R. 538

To amend the Internal Revenue Code of 1954 to repeal the estate and gift taxes and the tax on generation-skipping transfers.

IN THE HOUSE OF REPRESENTATIVES

JANUARY 6, 1983

Mr. PHILIP M. CRANE introduced the following bill; which was referred to the Committee on Ways and Means

---

A BILL

To amend the Internal Revenue Code of 1954 to repeal the estate and gift taxes and the tax on generation-skipping transfers.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 11 of the Internal Revenue Code of 1954 (relating to estate tax) is hereby repealed.

(b) Chapter 12 of such Code (relating to gift tax) is hereby repealed.

(c) Chapter 13 of such Code (relating to tax on generation-skipping transfers) is hereby repealed.

(d)(1) The repeal made by subsection (a) shall apply to the estates of decedents dying after the date of the enactment of this Act.

(2) The repeals made by subsections (b) and (c) shall apply with respect to transfers made after the date of the enactment of this Act.

FARM Family Living®

They sued the IRS —and won

Victories by two widows in federal estate tax cases may help other farm women who feel they have been denied justice

This is the first of two articles about farm women who have won court battles in estate tax cases.

By LAURA LANE

Her name may appear in countless law books, but Bessie Craig remains an unassuming woman. She has a head for business and in preparation for testimony in her case against the U.S. she was able to produce bank checks written 30 years earlier. Now that sons operate the farm, Mrs. Craig lives in a small town, enjoying family and friends.

A farm-reared South Dakota attorney, Kenneth L. Gosch knows firsthand about "the value of a woman in the family business."

Photos: Richter's House of Portraits

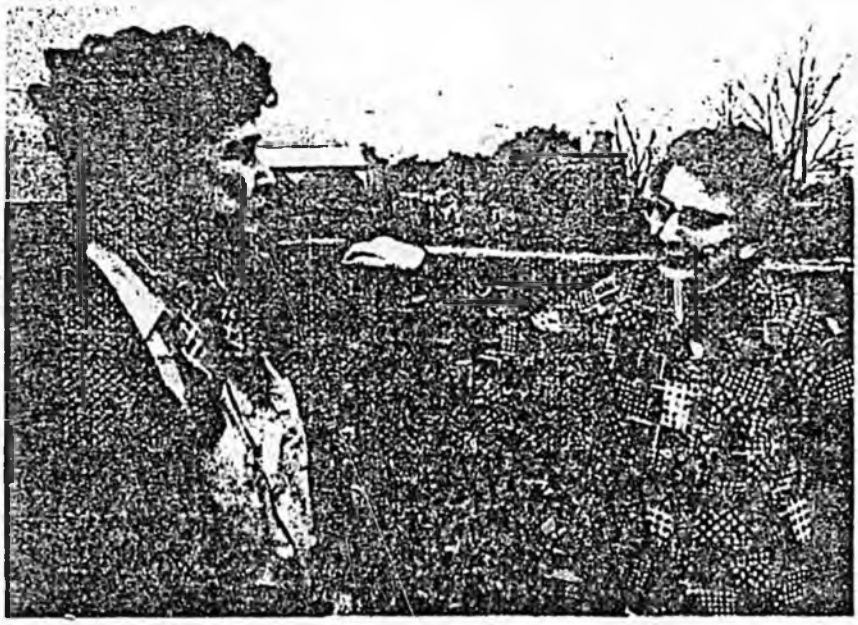
Probably you have never heard of Bessie Craig or Lura Otte, but these unassuming farm women are true heroines. Both are widows, courageous in a special way.

They pioneered in a setting unfamiliar to them—the federal courts. Both hired competent attorneys to help them press for justice in estate tax cases. Each won—not just for herself but for other farm wives who have worked along with their husbands, managed and sometimes scrimped to have a good life and, in the process, build a farm estate to pass along to their children. Here are their stories:

Bessie Craig vs. The United States of America

FACTS: Bessie married Clarence Craig in 1925, and they started farming from scratch on rental land in Brown County, S.D. From day one of their 43 years of married life, Bessie was the bookkeeper—she had studied bookkeeping and typing in high school, and she developed her own form of enterprise accounting.

The Craigs were good farmers and good managers. They bought their first farm during the Depression (1930), and from time to time borrowed money to add other parcels to their holdings. They raised wheat, corn, oats, barley and flax, and they had stock, too—a cow-calf operation, hogs, sometimes sheep and a sideline Shetland pony business.



Early in their marriage Bessie worked in the fields, and she was always available to haul grain or stock. Once she trucked a load of horses from Missouri to South Dakota. Somehow she found time to raise a big garden and do a great deal of canning—vegetables, fruit, meat.

The Craigs' five children helped as they grew old enough, but that wasn't sufficient. Clarence and Bessie together hired farm laborers who "lived in." Bessie cooked for them, did their laundry, mended all their clothing, cleaned their quarters.

She had one enterprise of her own—a butter and egg route in town. She churned by hand and molded the butter; and the chickens were her special responsibility. "I'd get up in the middle of the night to see after my baby chicks," she reminisced to me not long ago in her comfortable living room. The money from this and all farm sales went into a single bank account in both names.

When Clarence and Bessie went on cattle-buying trips, she usually wrote the checks. And she was the one who hired truckers to deliver the stock to the farm. A favorite meal of truckers was hamburgers and homemade cherry pie, she says.

The Craigs were fortunate to have an astute attorney, Douglas Bantz of Aberdeen, who persuaded them as early as 1958 to "equalize" their holdings for estate tax purposes. When Clarence died following a car accident in 1968, he held title to 5½ quarter sections of land, Bessie to 7½, and they owned one parcel of pastureland in joint tenancy. In his will Clarence set up a trust, through which his hold-

Lura Otte, right, keeps up with changes in estate tax laws and alters her estate plan accordingly. "These days a widow needs all the help she can get," she tells the author, Laura Lane, left. Mrs. Otte especially values the continuing support of two sons and three daughters, all in farming. The youngest son, unmarried, lives in the family home with her. Mrs. Otte remains a record-keeper and keen analyst of commodity market trends.

Photos: John Starkey, Black Star

Elmer E. Lyon was the first attorney to sell the Tax Court on the idea that farming can be a team operation, involving both husband and wife

ings went to the children. Bessie inherited only household goods and the family car, since she already owned half of the farm (966.5 acres). Neither the South Dakota Department of Revenue nor IRS contested her ownership of real property.

THE ISSUE: At stake was personal property valued at $265,405.09—machinery worth $53,938.50; livestock, including 620 head of cattle, valued at $167,864.56; and miscellaneous assets (stored grain, interest in several co-ops, etc.) worth $43,602.03.

Attorneys for the U.S., strictly interpreting the Tax Code, claimed Bessie owned none of this personal property and said she therefore owed IRS an additional $42,318.79 in tax. (A tax she describes as "a whopper" already had been paid by the estate.) Bessie forked over the tax deficiency, but reserved the right, as executrix, to sue to get the money back.

Bessie's attorneys, Kennith L. Gosch and Harry N. Sandstrom (then partners of Mr. Bantz), chose to fight the case on their own home ground—that is, in District Court in Aberdeen. They preferred this to the Tax Court, which they feel often favors IRS.

By the time the case began on a blizzardy day in November, 1977, Bessie had done her homework. In one instance that meant digging up a check she had written in 1946—more than 30 years earlier.

It was easier to find records than to keep her cool when a U.S. tax attorney accused her of "a self-serving assertion not in accordance with the objective facts." She could not deny that on federal income tax returns (which Bessie always prepared for review by a CPA) that "Mr. Craig is listed as a farmer while Mrs. Craig is not listed as having an occupation." Nor had Bessie and Clarence ever filed a partnership income tax return, the government's attorneys pointed out.

Bessie had a chance to testify in her own behalf ("I wasn't scared," she told me), and so did three of the Craig children and the family banker. The Justice Department attorneys from Washington, D.C., were polite to Bessie, but out of her hearing they often chided her counsel on the futility of her case. Nevertheless, attorneys Gosch and Sandstrom kept hammering away at the idea that if it had not been for Bessie's help, Clarence would have had to employ another hired man. And they never let anyone forget that Bessie had been a joint decision-maker with her husband.

"The best point in Bessie's favor was that she and Clarence really did operate as farm partners," attorney Gosch told me.

He explained to me why he and his partner had delayed filing suit against the U.S. for several years. "We felt there was a changing mood in the country. The longer we waited, the more people would realize the value of a woman in a family business."

THE VERDICT: Judge Fred J. Nichol wrote the Court's decision announced on June 14, 1978. Some of his statements were music to a farm wife's ears: "All in all, the efforts of Bessie Craig, in the operation of the family farm, as well as her capital contributions in income derived from her land, can properly be characterized as those of a partner, in the fullest business sense of the word . . .

"The Court will not ignore this farm wife's contribution to the success of the business as the Internal Revenue seeks to do . . . (T)he plaintiff is entitled to the refund sought."

In time, Bessie got back her $42,318.79 plus interest. She had to pay attorneys' fees, of course, but it is a great satisfaction "to get justice," she says with a proud smile.

Now Bessie's place in history is assured—in future law books, later generations will study "Craig vs. The United States of America."

Lura Otte vs. Commissioner of Internal Revenue

FACTS: Everett and Lura Otte farmed in Jackson County, Ind., fol-

lowing their marriage in July 1932. Like the Craigs, they acquired land by the "borrow-then-pay-for" method, using farm income to buy several tracts to add to their 103-acre "homeplace" Everett bought before their marriage. They held title jointly, or as Indiana law puts it, "as tenants by the entireties."

Under Indiana law, income from such joint property belongs to spouses in equal shares, and "each spouse is considered to have paid from his or her separate funds one half of the cost of any property acquired through payment of the income from such property."

In 1947 Everett inherited from his father one-quarter interest in 20 acres. He and Lura then bought out the three other heirs—one brother and two sisters. Lura also received an inheritance—$2,170 from the estate of her mother in 1951. She used most of it to buy an Oliver 66 tractor and the remainder to install running water and a bath in a farm house the Ottes owned.

The Ottes began farming with horses (as the Craigs had done), and Lura would drive a team to harrow, disk, plant or haul hay. Later she learned to drive a truck and made trips to town for feed. When Everett was "working at another place," Lura helped care for the stock and did the milking. She kept chickens, too; premiums for an endowment life insurance policy on Everett were paid with her hen-and-egg money.

One enterprise of the Ottes was raising certified seed. Lura took responsibility for picking out odd kernels, and she also handled most orders and deliveries. She set out cabbages and tomatoes; helped harvest both.

Somehow she managed to keep track of markets to determine "the best day to sell hogs." She was in charge of many financial affairs, including the bookkeeping.

Everett and Lura Otte reared five children—two sons now farm land that Lura owns.

In 1966 Everett had an opportunity to go to Russia as part of a farmer exchange program. Beforehand he decided to get his affairs in order, and that included some estate planning, which he had learned about at Farm Bureau meetings. On the advice of his attorney, Everett transferred approximately 260 acres to Lura separately, of the 636 acres jointly owned. He did this for several reasons: to cut estate taxes in the event of his death, to compensate Lura for her hard work and give her more experience in managing real estate, and to lessen his own responsibilities, even though at age 61 he was in excellent health and had never had any serious illnesses.

About a year after the trip to Russia (Oct. 10, 1967) Everett Otte died of a cerebral hemorrhage.

THE ISSUES: The IRS and Lura Otte had several bones of contention on federal estate taxes due, but the principal one was IRS's contention that none of the real and personal property reported on the estate tax return originally had belonged to Lura, with the exception of the inheritance from her mother. In other words, her contribution had not been of "money or money's worth." IRS billed Lura for an additional $7,943.44. This was "widow's tax," because if Lura had died first, Everett would have been recognized as the owner and not billed for a deliquency.

Lura contended IRS had not given her proper credit and said she was due a refund of federal estate tax amounting to $1,870.29.

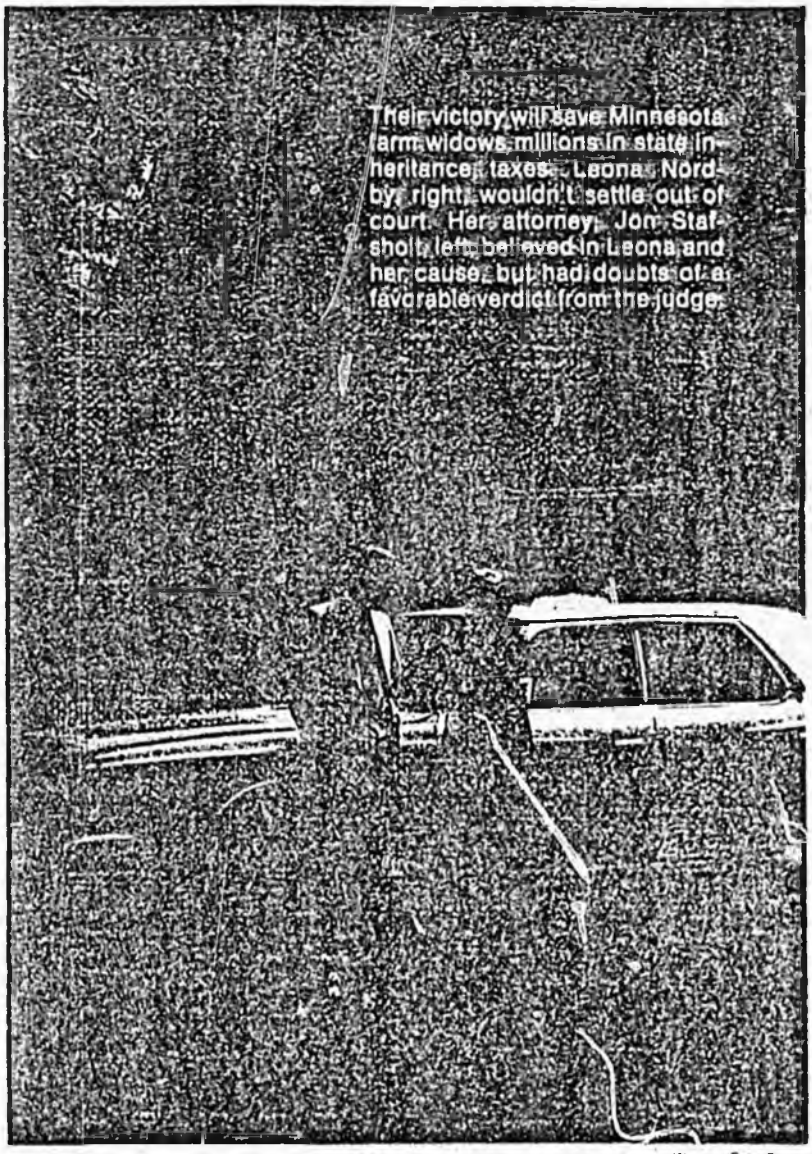
"I just felt I had made a considerable contribution to buying, upkeep and farm expenses, but in the eyes of IRS a woman's work counts as nothing," she told me in reviewing her battle in the federal Tax Court in Indianapolis.

Was she frightened? "No, I felt secure with my figures. I had to supply complete records for every year we had farmed, and it was those farm records that convinced the judge."

Her principal attorney, Elmer E. Lyon of Indianapolis, adds: "Mrs. Otte's openness and honesty couldn't be ignored. She had never considered herself as a partner of her husband—women didn't in an earlier era, even if they were outstanding performers like Mrs. Otte. But we were able to sell the court on the idea that Everett and Lura were a husband-and-wife team."

THE VERDICT: The concept of a husband-wife team was recognized by Judge Graydon G. Withey in his memorandum decision of March 28, 1972. He noted that the home farm had been in Everett's name only until 1958, but added: "We believe the enhanced value of the homeplace resulting from (Everett and Lura) working as a team constitutes jointly acquired property subject to equal division for estate tax purposes . . .

"Lura's efforts, industry and skills were not limited to those of an ordinary housewife and contributed to the success and growth of the overall farming operation."



The money involved was not an enormous sum by today's inflated standards, but Lura Otte was satisfied in the knowledge that a woman's contribution was officially recognized, despite strenuous objection by IRS. She keeps up with federal estate tax law and believes it should be changed to give justice to "women up and down the road who are milking cows, driving tractors." When told that her case had helped other women she had never heard of, she said: "Really? Well, I'm happy that is the case."

The 1978 change in the federal tax law that allows a widow or widower to "earn" and exclude from estate tax 2% a year of jointly held property often is referred to as "the Otte Amendment," attorney Lyon says. That's an unexpected reward for Lura Otte.

Many other widows have contributed to farm estate building and conserving, letters to FARM JOURNAL tell us, but whether they could win in the courts depends on individual circumstances. What a woman needs is a sense of her own worth, records to back her up, some money for legal fees, a determination to see justice done—and the courage of a Bessie Craig or a Lura Otte.

More on Estate Planning

Laura Lane's detailed report, "How the Revenue Act of 1978 Affects Your Estate Plan," a companion piece for *FARM JOURNAL's Estate Planning Idea Book*, is just off the press. To order, send $1 plus 40¢ delivery charge to: Revenue Act, Farm Journal, Box 1927, Philadelphia, Pa. 19105. Or get the report free with your order of the *Estate Planning Idea Book*, available from the same address for $14.95 plus 70¢ delivery charge. Both items are tax-deductible. ◁

Their victory will save Minnesota farm widows millions in state inheritance taxes. Leona Nordby right, wouldn't settle out of court. Her attorney, Jon Stafsholt, left, believed in Leona and her cause, but had doubts of a favorable verdict from the judge.

Photo: Felix Farrar

Two states recognize a farm wife's worth

Landmark court victories in Minnesota and Wisconsin may help more women win estate tax cases

By LAURA LANE

Late in the Twentieth Century we still have pioneers, and I am fortunate to know one. Her name is Leona Nordby, and she is a soft-spoken, well-groomed, fiftyish farm widow who lives in Grant County, Minn. Leona did something no Minnesota farm woman had ever done before: She won a fight with the state's Commissioner of Revenue in an inheritance tax case.

You can even put a price tag on what her victory means to other farm women—$2,500,000 is the amount of revenue the state will not collect this biennium because of the decision in

This is the second of two articles about farm widows who have won court battles in estate tax cases.

Leona's favor. That's money which in the past has been paid by farm widows who had held farm property in joint tenancy with their husbands. Add another $1.7 million usually forked over by widows who have been deeply involved in other kinds of family businesses.

Money (about $4,000 in taxes) was important, but it wasn't the prime consideration in the case of *Leona Nordby vs. Commissioner of Revenue*. Her fight was for justice for herself and others.

The principal issue was whether the full value of the joint property was subject to inheritance tax at the death of Leona's husband, Lewis M. Nordby. Leona had contributed equal effort to earning income that enabled the couple to buy the property in the first place, so Leona contended she owed inheritance tax on only half—her husband's half. FARM JOURNAL readers have known for years about this legalized discrimination that puts no financial value on a woman's farm work in field, barn or office. It isn't recognized as "money or money's worth" in common-law states (42 of the 50).

When Leona filed her state inheritance tax return following her husband's death, she based her payment on half-ownership plus a widow's exemption, with full knowledge that she was asking for trouble. As her attorney, Jon Stafsholt of Elbow Lake, had ▷

foreseen, the Commission of Revenue rejected Leona's claim. The next step was to appeal to the state Tax Court.

Stafsholt felt the Minnesota statute discriminated against women in practice if not in language and was eager to challenge the interpretation.

Several factors favorable to Leona's case were listed for me by attorney Stafsholt:

- The case could be heard on home ground—in the courthouse at Elbow Lake, thanks to new Minnesota Tax Court procedure.
- The presiding judge had been a country lawyer earlier in his career, so he knew something about farm women's work habits.
- The Minnesota Legislature was considering an Equal Rights Amendment at the time.
- A few months before, a Wisconsin widow, Doris Kersten, had won a similar action against the Department of Revenue in her neighboring state (more about this case later). Attorney Stafsholt says: "Actually, the Kersten case has almost no bearing on Minnesota law, but knowledge of a decision like that puts the judges in tune with the trends."

The gloomy factor was that no one had ever successfully challenged Minnesota's Inheritance Tax Department on "the widow's tax."

Revenue Department officials tried to settle out of court with Leona before the case came to trial. First they offered to exclude 20% of the estate from Minnesota inheritance tax, then 25%, then 30% and finally 35%. That posed a real dilemma. Stafsholt explained to me:

"I told Mrs. Nordby it was probably in her own interest to accept that offer—the dollar amount wasn't significantly less and it was a sure thing. Taking the appeal to court was risky, as I had warned her.

"She thought about the offer for a week and then asked again: 'If I settle out of court, will this help other farm women?' I told her, no it wouldn't. That settled the matter. She said, 'Let's go to court then.' It was a courageous decision."

Testifying in Leona's behalf were people who knew her well: two farmers—a neighbor and her husband's brother; her own brother and Leona herself. . . "an excellent, soft-spoken witness," Stafsholt describes her. She followed his two bits of advice: "Think before you reply to a question. Tell the truth."

Stafsholt considers *Leona Nordby vs. Commissioner of Revenue* the most important case of his career thus far. His client, Nordby, now rents out the farm and works as a nurse's aide in an Elbow Lake Hospital. She says the case has changed her life and views in several respects.

What the testimony revealed: Shortly after Leona and Lewis married, both were employed by an elderly bachelor farmer—Lewis as a hired man and Leona as a housekeeper. That was in 1936. They rented a place in 1939 and borrowed to buy their own 160 acres in 1947, after a lot of worry and pencil pushing. Sometimes they had dairy cows, sometimes sheep and beef cattle, usually hogs, chickens and turkeys, often ducks and geese.

The work and worries of farming—as well as the rewards—were always shared. Leona milked and helped care for animals and poultry, prepared meals for hired help, treated seed, loaded fertilizer, cleaned and repaired buildings and equipment, operated farm machinery, helped with bookkeeping and tax returns. She and Lewis borrowed money together and they shared a bank account.

When Lewis was incapacitated, Leona became the farm operator—for about a year at a time. Once was when Lewis had an operation for a slipped disc and again later when he was injured in an accident with a tractor-pulled spray rig. Later she took over when Lewis became too ill to work. He died of cancer in 1976.

A key point that attorney Stafsholt made in the court proceedings: If Leona had divorced Lewis instead of nursing him and carrying on the farm operation, she would have been entitled to half of his assets under Minnesota law. Why should she be financially penalized for 40 years as a working partner in a good marriage? "The legislature certainly did not mean to reward divorcees and penalize widows," Stafsholt says.

Judge John Knapp, who wrote the unanimous opinion of the Tax Court, picked up this point: "If the rights of ownership in jointly owned property are recognized in divorce proceedings, there is no reason in logic or equity to ignore these same rights in inheritance tax cases.

"The work and contributions made by each spouse in operating a family farm should be recognized as being adequate consideration in money or money's worth in considering a claim of ownership in at least a portion of the property which passes to the surviving spouse upon death. In the instant case, we have found that the contributions of each spouse were substantially equal."

That was on Feb. 17, 1978. In April, then Governor Rudy Perpich announced that the state would not appeal the ruling, and that the Department of Revenue would "extend the principle to women who participate in any family business."

A landmark case has repercussions for client and attorney.

Leona Nordby's victory saved her

some inheritance tax money, and she gladly used part of it to pay attorney's fees. She remains an unassuming woman though she has been much photographed and interviewed by the Minnesota press. What changed?

1. Estate and inheritance taxes and laws that discriminate against women have become a consuming interest. She values the praise of those who recognize the magnitude of her contribution, and accepts philosophically the criticism of "some people who don't approve of what I did."

Leona's decision to engage in a legal struggle was prompted in part by the experiences of a widowed cousin in another state who, because of lack of documentation, had been obliged to pay inheritance tax on her own property as well as on property jointly owned. The cousin never fought her case. Leona considered for several months whether to go to court.

"I kept thinking, 'Boy, how I had worked.' To say that the results of 40 years' labor belong only to one is an insult to both members of a marriage. I felt it was the right thing to do [to go to court] and the right time to do it, and I proved to be right."

2. Leona lost her prejudice against lawyers. She credits a daughter-in-law, Marlyce Nordby, a paralegal aide in Minneapolis, with her change in ideas, and says, "An attorney can be as eager as a client to get justice and to help you in the process."

Jon Stafsholt considers the Nordby case the most significant in his career thus far, because of its widespread social impact: "It's the beginning of the end of farm wife discrimination." He was asked to write about it for a Minnesota legal journal, and he has conducted three seminars for the Minnesota Bar Association. He also has received appreciative letters from farm wives and from attorneys.

More farm women should use the courts to get their just due, Stafsholt believes. He says: "Legislative bodies and the executive branch of our government are sensitive to the pressure of majorities, but our courts still are sensitive to the rights of minorities." That's what farm and ranch women are—a minority.

A favorable decision helps other cases—in fact, there's a slow-but-sure domino effect.

Numbers of Wisconsin women have profited from Doris Kersten's victory in the state's Supreme Court, March 2, 1976 (In re Estate of Kersten, 71 Wis. 2d 757).

Records of the court proceedings give these facts:

"Lester and Doris Kersten devoted all their working efforts during marriage to operating the farm. Almost all that was owned by the couple at the death of Lester Kersten had been acquired by them during marriage. Neither inherited anything. Lester and Doris Kersten made substantial capital improvements to the farm, all of which were paid for from farm profits. . . expansion of milking facilities, remodeling of the house, and addition of several structures, including a silo, machine sheds, milk house, heifer barn and garage.

"In addition to maintaining the household (the couple raised four children), Doris helped keep the farm books, cared for and trained the calves, helped with the milking, operated the tractor during [hay] baling, and generally assisted her husband in the farm work.

"Additionally, Doris Kersten ran the farm alone for two periods of time during which her husband was ill. However, she testified that neither would have successfully operated the farm without the continuing assistance of the other.

"On cross-examination, Doris Kersten testified that there was never a written partnership or joint venture agreement between herself and her husband.

"Doris Kersten never reported personal income for either federal or state income tax purposes. The milk check, the primary source of farm income, was made out to Lester Kersten. Farm income was reported by Lester Kersten as his income for Social Security purposes."

The trial court (Marathon County Court) had determined that, with two exceptions (property Lester already owned when he married Doris and one certificate of deposit), the balance of the jointly owned property should be taxed on a "50/50 basis." It ordered the Commissioner of Revenue to refund $2,911.01 of inheritance tax to Doris, the personal representative (executrix) of Lester's estate. That's when the Department of Revenue appealed the case.

In his decision favoring Doris, Wisconsin Supreme Court Judge Robert W. Hansen said: "So the issue in this case narrows to whether Doris Kersten's personal services on the family-operated farm constituted 'consideration in money or money's worth' in return for her interest in the property jointly held by her and her husband. . .

"We agree with the trial court and affirm its holding that Doris Kersten was entitled to credit for inheritance tax purposes for such contribution on her part to the jointly held property . . ." Victory for Doris!

Elsewhere in his decision Judge Hansen quoted extensively from the federal Tax Court case *Estate of Everett Otte vs. Commissioner of Internal Revenue* (see "They sued the IRS and won," FARM JOURNAL, Aug., 1979). This case established that the contribution by Lura Otte of personal service as a wife "who kept the farm records and took an active part in the day-to-day operation of the farm, fairly justifies a division of the property acquired during her marriage."

To sum up, Lura Otte helped Doris Kersten.

Both Lura Otte and Doris Kersten helped Leona Nordby.

And Leona Nordby's case was cited in the successful suit of *Bessie Craig vs. The United States of America* (District Court, South Dakota, 1978).

None of these four women knows the other. None was aware she was helping anyone but herself. But the collective heroism of these four may benefit every wife who is a working partner with her husband . . . for all time to come. ◁

MORE ON ESTATE PLANNING

Laura Lane's detailed report, "How the Revenue Act of 1978 Affects Your Estate Plan," is just off the press.

To order, send $1 plus 40¢ delivery charge to: Revenue Act, FARM JOURNAL, Box 1927, Philadelphia, Pa. 19105. Or get the report free with your order of *FARM JOURNAL's Estate Planning Idea Book* by Laura Lane, available from the same address for $14.95 plus 70¢ delivery charge. Both items are tax-deductible.

Why you should work to rewrite tax law

LAURA LANE

Farm and ranch people are in estate tax trouble again because of increased values of land, equipment and livestock. These examples show why it has become harder to save the family farm business and why estate tax laws need updating:

- *"We have just been through the long three-year settlement of my mother-in-law's estate . . . On the 320-acre farm where my husband and I live, over $1 million dollars has been paid in estate taxes in less than 100 years."*—Betty Brand in April 1981 newsletter of Illinois Women for Agriculture.
- *"My husband's family and mine have been farmers for generations. The inheritance tax has broken up farms belonging to both families. We are victims, and if our income doesn't improve, my husband and I won't own a farm to pass along.*

"My grandfather died just 10 months before my father, so the estate had to pass through the courts twice before anyone could benefit. The land in my grandfather's estate had to be sold to pay the tax.

"When my father-in-law died, my mother-in-law had to mortgage the farm to pay the estate tax. She was in her 60s, alone, without income or job skills.

"In each of these instances, if the women had died first, the surviving husbands would have paid no estate tax. It is my firm belief that property should pass untaxed from husband to wife, as it does from wife to husband."—Peggy Arensman, Kansas Women Involved in Farm Economics (WIFE).

Key points made at recent hearings on estate and gift taxation:

The revenue issue: "The quote most often heard from members of Congress who favor continuation of the estate tax is, 'We cannot lose the revenue.' In 1980, the revenues from estate taxes amounted to about $6 billion of the total federal collection of $466 billion (about 1.4%). Those who emphasize revenue usually quote the gross amount received. The cost of administration (by IRS) is never subtracted. Is the government netting revenue or just exchanging dollars?"—Doris Royal, Nebraska, co-chairman, taxation committee, American Agri-Women.

Effects of inflation: "Most farmers never thought their modest holdings would be affected by federal estate tax law. We are just beginning to realize what inflation of land values has done to us, resulting in bracket leap of estate taxes when an owner dies. That's why Washington Women for the Survival of Agriculture are for the greatest simplification of the estate tax system, tax-free transfers between spouses, and eventually total repeal."—Janet Allison, chairman of government relations.

Endangered: "Today family businesses are an endangered species. We have spent billions to preserve endangered plants, animals, fish and birds. If individuals really are important, this is one of the best chances Congress will ever have to prove it."—Ben Wallis Jr., Texas attorney and rancher.

Proposal to Congress: "With a fixed estate and gift tax credit such as we have now, Congress has to tinker constantly with tax laws and rates just as you have done in 1976, 1978 and 1980. This is an expensive way to govern people's financial affairs, and it puts a costly burden on tax-paying citizens who in good faith revise their wills, break up joint tenancies, incorporate, create trusts and then have to do it over again because Congress changes the rules. The simplest solution would be to set an ample unified credit and peg it to the rate of inflation. That would save the family farm for now and for the future."—Laura Lane, contributing editor, FARM JOURNAL.

Recent history proves you can influence Congress if you speak up emphatically.

- The collection of 236,248 signatures of farm people on petitions to Congress was a big factor in passage of the Tax Reform Act of 1976. These petitions were printed in FARM JOURNAL and delivered to Washington. The kickoff to this big campaign was the article "Let's Get Rid of the Widow's Tax," Sept. 1975.
- More pressure by farm people helped kill the carry-over-basis provision ("Let's Get Carry-over Basis Repealed," Mid-February 1979). Congress repealed it in the Windfall Profits Tax Act.

In the past six years, FARM JOURNAL has published 61 separate articles on estate taxation and estate planning. The magazine can supply the ammunition, but vocal, persistent farm and ranch voters are the ones who get the job done in Washington. ◁

We make it easy for you to urge Congress!

To make your voice heard where it counts, all you need to do is tear out the card insert to the right of this page, fill it out, put a stamp on it and put it in the mail. ☐ But do this today so FARM JOURNAL can compile totals fast and pass along the results of our poll to Congress and to President Reagan. ☐ This card can help save your family business.

Taxing Matters

Edited By Richard Greene

Everybody knows you can't take it with you—but if you own your own business, you might not be able to leave it behind either.

The death tax

By Jon Schriber

When Wilbur Doyle got out of the service in 1947 and founded Doyle Lumber in Martinsville, Va., he didn't know he would someday wind up paying, on average, 20% of his earnings on a life insurance policy—with Uncle Sam the ultimate beneficiary. Doyle's little business has prospered—with $6 million in annual sales, it's now the fifth-largest lumber company in Virginia and is worth about $3 million. Yet to insure that his sons won't have to sell it to pay estate taxes, Doyle keeps paying those premiums. This year—an off year for the business—Doyle predicts they'll amount to more than the company's total earnings.

In Mars, Penna., Harry G. Austin, 65, and his brother John, 55, the only stockholders in $8 million (sales) James Austin Co., a soap manufacturer, pay around $20,000 each in premiums so their 92-year-old company can be passed down to the fourth generation. "Sometimes I think we're really working for the insurance company," says Harry.

Wilbur Doyle and the Austin brothers aren't alone in worrying about the future of their businesses when they're gone. A survey by the National Federation of Independent Business found that among its 539,000 members, death taxes are a close second to concerns about changes in individual income taxes. Says Mike McKevitt, a lobbyist at the federation: "At any small business group, if you want to see them come right up out of their chairs, start talking about death taxes." No wonder. In many cases—perhaps most—if the founder can't afford the premiums Wilbur Doyle pays, his heirs will not be able to keep the company when he dies.

Small businessmen and their supporters *have* already gotten to their feet and are taking their case to Washington. Senator Steve Symms (R–Idaho) has introduced a bill to repeal current estate and gift tax laws. The Reagan Administration originally came out in favor of repeal but recently backed off, citing budgetary restraints. Still, it's a safe bet that the Administration will have some recommendations next fall.

Moreover, this month the House Ways & Means Committee may consider a bill to increase individual estate tax exemptions to $600,000 and to cut the taxable value of qualified businesses by 50%. The measure also would broaden the definition of what qualifies as a closely held business. Former Ways & Means Chairman Al Ullman, who helped organize a lobbying group for the bill after he left Congress this year, thinks "the chances are excellent" the measure will pass.

About $6 billion a year goes into the U.S. Treasury from estate and gift taxes. Ullman and other champions of death-tax reform argue that the breakup of family businesses, the loss of jobs and other dislocations, can cause an ultimate tax loss that could offset this revenue. David Raboy, director of research at the Institute for Research on the Economics of Taxation, contends the tax forces people into "uneconomic decision making." Says he: "It discourages people from investing in the things that are productive."

As an example he mentions a small foundry: that may be a very good productive investment, but an entrepreneur will be reluctant to make the necessary capital commitment. "He knows that if he dies they're going to have to sell off part of it to settle the estate. Clearly that's going to discourage you."

Besides the negative impact on the economy, Raboy points out, the taxes are not fulfilling their original purpose. That purpose, of course, was to prevent great concentrations of wealth, like the Rockefellers' or du Ponts', from being passed on from generation to generation. But the great fortunes remain, while the impact of the tax, at least initially, is falling right on the middle class. Inflation puts it there, of course.

But, while waiting for reform, what are folks like Wilbur Doyle going to do? There are some solutions. For example, each year you can give up to $3,000 away to anyone you want, and to as many recipients as you want,

Wilbur Doyle thinks it's necessary to go on paying those crushing life insurance premiums. "During my years in business I've seen some 25 good companies become nonviable when the principal died. They just didn't have the cash flow to pay their bills."

without paying gift taxes—a married couple can give $6,000 a year. Over and above that, there's a lifetime maximum of $175,000 for an individual or $350,000 per couple. So theoretically, a couple can give $6,000 a year to their heirs for 40 years, with each child winding up with a quarter of a million dollars and the estate with an additional exemption of $350,000. The problem with this—apart from whether a young couple can afford to give away $6,000, $12,000 or $18,000 a year, is that many people are reluctant to give. "They get cold feet," says Warren Shine, a tax principal at the accounting firm of Ernst & Whinney. "They say, 'maybe next year.' "

So what if this $350,000 allowance is not used and the husband dies? Assuming the business is in his name, the estate is allowed to take a marital deduction of $250,000 or 50% of the adjusted gross estate, whichever is more. Take an estate valued at $1 million. First the administration and funeral expenses as well as claims against the estate can be deducted—in this instance, say $100,000. Half the remaining $900,000 adjusted gross estate is subtracted, leaving $450,000. After deducting a unified tax credit of $47,000, the tax due is $91,800.

But all this—plus deferred payment provisions which may help stretch out the taxes—frequently leaves the business with a severe drain on cash flow. One solution is recapitalization, in which the founder or owner issues preferred stock to himself in return for his common shares. It works like this: The owner gets the company appraised for market value, let's say $1 million. Assume he has 75% of the common, and through gifts over the years, his son has 25%. The father exchanges his $750,000 worth of common for a like amount of preferred, which pays a dividend, say 15% of par, cumulative.

The father's share in the company is now locked in at three-quarters of a million dollars. If he dies ten years later estate taxes will be due on only that amount. All the *growth* in the company has become the property of the son, so that even if the company quadruples in value the father's estate is still only $750,000.

There are some pitfalls to this. The IRS may disagree with the original valuation, and the father may have to pay some gift taxes (if the father did not take out enough value in his preferred stock, in effect he gave his son a gift). Some people can have second thoughts, too. Charles Bogen of Ernst & Whinney tells of a client for whom he did a recapitalization 12 years ago. The business, valued at $1 million then, is now worth about $12 million. Says Bogen: "The old man said, 'Look what you did to me. You took all my money.' I told him, 'Yes, but we also took it away from Uncle Sam, and we took more away from him than we took from you.' He's still mad at me. But the sons love it."

All this may help, but for many small businessmen, perhaps not enough. Wilbur Doyle, for example, thinks it's necessary to go on paying those crushing life insurance premiums even though he has recapitalized his business. "During my years in business I've seen some 25 good companies become nonviable when the principal died," he says. "They just didn't have the cash flow to pay their bills."

The Austin brothers haven't recapitalized their soap company at all. "My brother and I each have children working in the business," Harry says. "How do you know 20 years from now which one is going to be in and which one is going to be out?"

In the meantime, the Austins continue to pay those hefty insurance premiums, adamant that the firm remain a family business. But the real truth is that with the Austins—as with so many others—the family is not really the most injured party if the taxes force the firm to be sold out or closed. Elder brother Harry says that if the worst were to happen and the firm had to be put on the block, the heirs would be all right, they would still have enough to live on.

It would be the town of Mars (pop. 1,400), where Austin's soap company is the single largest employer, that would suffer the most. Why? "Certainly if a national firm, any of the big soap companies, bought the company to get the label franchise, why, I doubt they would operate here," Austin explains. "The little town would economically go down the tube." There have been offers already from large corporations for Austin's company, which serves a 500-mile radius of Pittsburgh. Indeed, you could hardly expect a conglomerate like Gulf & Western or Litton to have any kind of emotional attachment or loyalty to Mars. Small family businesses aren't just moneymakers for families—they are an integral part of the economies of small towns from coast to coast.

Wilbur Doyle knows that. But sometimes he wearies of the whole mess. "Once in a while," he says, "I think, why shouldn't I just blow the money and have a good time?" ■

ALASKA STATE LEGISLATURE
HOUSE OF REPRESENTATIVES
RESEARCH AGENCY

May 10, 1983

MEMORANDUM

To: Representative Mae Tischer

From: Leonard Steinberg, Research Staff

Re: Estate Taxes -- Research Request 83-154

Gail Thibodeau of your office asked for the following state and federal estate tax information:

1) the justification for the taxes;

2) the amount of income received from these taxes for the last four years;

3) the percentage of total revenue represented by estate taxes;

4) the amount of estate tax revenue collected by Alaska from residents and non-residents; and

5) the hardships that may result from estate taxes.

Justification for Estate Taxes

Estate taxes originated with the Populist political movement in the United States; the goal was to reduce certain excise taxes by taxing the wealthy. The federal government has levied a tax on the transfer of wealth at death continuously since 1916.

The primary reasons Congress passed the estate tax in 1916 were:

1) redistribution of wealth by breaking up large concentrations of wealth at the time of death; and

2) raising additional revenue for the federal government.

Another justification for estate taxes is that the appreciation in value that occurs between the time property is acquired and a person's death is income which normally escapes income taxation; estate taxes recoup part of this loss.

Following its imposition, individuals avoided the new estate tax by giving away large portions of their wealth prior to their death. Consequently, Congress has imposed a gift tax since 1932. The gift tax rate was substantially less than the estate tax rate until the two were unified by the Tax Reform Act of 1976.

The justifications for state estate taxes are the same as for federal estate taxes. However, according to Mr. Joe Donohue, Deputy Commissioner of Revenue, Alaska has the additional justification that its tax brings in revenue to the State without increasing the tax liability of an estate. Mr. Donohue explained that Alaska's estate taxes are credited, dollar for dollar, against the taxes that would otherwise be paid to the federal government. Therefore, until federal estate tax law is changed, a reduction in Alaska's estate taxes will not present a savings to the estate but only increase the revenues paid to the federal government.

Estate Tax Revenues

The amount and number of State estate tax collections, their percentage of total State revenue, and the amount of State revenues are listed below in Table 1. In fiscal year 1982, 325 estates filed tax returns with the Department of Revenue; 317 (86 percent) of the filed returns received a certificate of non-tax liability while 52 (14 percent) had taxes to pay. The estate tax revenues received in 1982 are not directly related to the 1982 returns because estates have 15 months to make their payments and are frequently granted 10-15 year extensions. Estate taxes during the period 1978-1982 have always been substantially less than one-half of one percent of the State's total unrestricted revenues.

Table 1

State Estate Taxes and Unrestricted State Revenues -- FY1978-1982

	1982	1981	1980	1979	1978
# of State Estate Tax Returns*	325	369	382	407	334
# of Paying Returns* †	52	42	N/A	57	55
State Estate Taxes Collected	$334,676	$453,492	$197,592	$136,685	$244,143
State Unrestricted Revenues($millions)	$4,108.4	$3,718.2	$2,501.2	$1,133.0	$764.9
Estate Taxes as a % of State Revenues	.008%	.012%	.008%	.012%	.032%

* These figures are for calender years and are based on the number of certificates issued for tax and non-tax liability.

† Eighty to ninety percent of state estate tax returns result in the the Department of Revenue issuing certificates of non-tax liability; those returns which actually impose State estate tax liability are listed in this column.

According to Ms. Eloise Herrick of the Department of Revenue, State estate tax records do not break down the revenues collected by residency status. However, Ms. Herrick stated that in her opinion, very little revenue is collected from non-residents. A more accurate determination of how much money was collected from residents and non-residents would require corrolating the revenues received with individual returns and reviewing each individual return to determine residency status; because this would require substantial time and effort, we have not pursued this information at this time.

Table 2 below illustrates the number of federal estate tax returns and the revenues collected by the federal government from both Alaska and the nation. The table also shows the percentage of total federal revenue represented by estate taxes. For example, in federal fiscal year 1982, 159 estate tax returns were filed with the federal government from Alaska and 134,965 were filed nationally. The federal government collected approximately three million dollars in estate taxes from Alaskans and eight billion dollars nationally in 1982. Estate taxes contributed 1.3 percent of the total federal revenue received in 1982.

Table 2

Federal Estate Taxes -- Federal FY1978-1982

($ in thousands)

	1982	1981	1980	1979	1978
# of Alaska Federal Estate Tax Returns	159	152	145	156	129
Total # of Estate Tax Returns Filed	134,965	145,617	148,228	159,404	160,152
Estate Taxes Paid by Alaskans	$3,081	$2,097	$2,285	$2,689	$2,412
Total Estate Taxes Paid	$8,035,335	$6,694,641	$6,282,247	$5,344,176	$5,242,080
Estate Taxes as a % of Total Revenue	1.3%	1.1%	1.2%	1.2%	1.3%
Total Federal Revenue	$626.8* (bil.)	$599.3 (bil.)	$517.1 (bil.)	$463.3 (bil.)	$399.6 (bil.)

* Estimate

Federal gift taxes, because they were created to stop estate tax avoidance, are often evaluated in conjunction with federal estate taxes. Table 3 presents information on federal gift taxes. As Table 3 illustrates, gift taxes add relatively little to federal revenue collections.

Table 3

Federal Gift and Estate Taxes and Total Revenues -- 1978-1982

($ in thousands)

	1982	1981	1980	1979	1978
# of Alaska Gift Tax Returns	98	252	252	260	193

* Estimate

Hardship Cases

Information regarding the frequency of cases in which a family must sell everything to pay estate taxes is not readily available. Large real estate holdings, such as farms, pose the most common hardships; families have reportedly been required to sell farms to pay estate taxes. However, due to the urgency of completing this request, we have not been able to provide a substantive response to this question. Please let us know if you would like additional research performed on this issue.

Several changes to federal tax laws have attempted to reduce the hardships that may result from estate taxes. The Tax Reform Act of 1976 made the following changes:

- increased the value of estates which can escape taxation from $60,000 to $175,000;

- allowed farms and other closely held businesses to be valued at less than fair market value; and

- increased marital deductions.

The Economic Recovery Tax Act of 1981 also attempted to reduce hard ships by:

- further increasing the value of estates exempt from taxation to $600,000;

- increasing the amount by which farms and closely held businesses can be undervalued; and

- allowing for unlimited transfers of property among spouses.

Furthermore, the 1981 Act extended the payment period for certain estate taxes to 15 years, and lowered the tax rates from a maximum of 70 to 50 percent.

To: Representative Bussell, Chairman, House Judiciary Committee

From: Representative Bettisworth RHB

Subject: HJR 52, Proposing an amendment to the Constitution of the State of Alaska to provide for a biennial budget.

Over the past several years the time required to generate annual budgets, both operating and capital, has been increasing every budget cycle. The experiences of other states that have adopted the biennial budget format seem to indicate that significant improvements in planning and cost reductions are likely. The following specific improvements are attainable:

1.) Operating budget preparation costs would be reduced in most instances in the following ways:

   a. reduced professional and clerical staff cost,
   b. reduced staff support costs for budget preparation,
   c. reduced departmental workload conflicts during the peak months of activity (budget preparation by key staff often occurs at the same time program management load is at its peak).

2.) A biennial budget would afford improved legislative program review since only major changes in fiscal requirements or an emergency situation would require substantive legislative action by agencies or the legislative branch in off budget years.

3.) Savings realized from implementation of a biennial budget cycle could be used for other purposes; ie., delivery of services and support of other priorities.

4.) The capital project planning process would be enhanced by implementation of a biennial budget cycle.

AMENDED TITLE:
PROPOSING AN AMENDMENT TO THE CONSTITUTION OF THE STATE OF ALASKA TO PROVIDE FOR A BIENNIAL STATE BUDGET.

MEMORANDUM

Representative Bob Bettisworth
Attention: Ralph Bennett

FROM: O. Alexander Hoke
Legislative Analyst

RE: Impact of Biennial Budgeting on Cash-Based Budgeting
Research Request 84-040

As you requested, this memorandum addresses the impact of legislation which initiates biennial budgeting (HJR 52 and HB 485) on the proposal to institute cash-based budgeting in the state (CS HJR 39).

Multiple Interpretations of Biennial Budgeting

The implications of having both biennial budgeting and cash-based budgeting approved by the voters in the upcoming general election depends substantially on the ultimate legislative interpretation of these budgeting concepts. As discussed in David Teal's November 25, 1983 memorandum to you, biennial budgeting has different meanings in the states in which it is practiced. Nine states have both biennial sessions with biennial budgets and special provisions for amending the budget on an annual basis. Twelve states have annual sessions with biennial budget cycles, and provide for full legislative review of the budget each year. Of the 21 states with a biennial budget, all but four make separate appropriations for each year of the biennium. Biennial budgeting practices among the states range from systems almost indistinguishable from annual budgeting to true two-year budgets with allowances for only minor (or emergency) amendments.

Biennial budgeting under HJR 52 and HB 485 seems to qualify as a true two-year budget and appropriation cycle. Biennial budgeting in HJR 52 calls upon the governor to submit "a budget for the next two fiscal years setting forth all proposed expenditures and anticipated income ...with a general appropriation bill to authorize the proposed expenditures..." The companion bill (HB 485) states that "the biennial budget shall contain appropriations for the succeeding two fiscal years and state agencies shall prepare their budgets on this basis."

The Intent of Cash-Based Budgeting

The intent of cash-based budgeting (as defined by HJR 39) is to eliminate "revenue uncertainty" by restricting appropriations for a given fiscal year to the level of total General Fund unrestricted revenues for the preceding calendar year. HJR 39 provides for a cash reserve equal to 1.5 times the appropriations of the fiscal year preceding the start of cash-based budgeting. With this cash reserve, the legislature can be certain that funds are available to cover expenditures through the balance of the current fiscal year (6 months) and the coming fiscal year (12 months).[1]

Revenue Certainty Under A Biennial Budget

An 18-month revenue reserve is needed when cash-based budgeting applies to a 12-month budgeting period. If the State adopted a two-year (24-month) budget period through biennial budgeting, cash-based budgeting would require a 30-month cash reserve in order to provide full certainty that available funds are sufficient to offset expenditures over the budget period. With a 30-month reserve, the legislature would know at the beginning of the session that funds were available to cover expenditures through the remainder of the current budget period (6 months) as well as the coming budget period (24 months).

Table 1 shows the fiscal impact of combining the concepts of biennial budgeting and cash-based budgeting (as defined by HJR 39) for a 30th percentile revenue projection. The fiscal impact of these two proposals is the requirement of annual contributions (column 7) of general funds of between $267 and $358 million for a 12-year period, totaling $3.686 billion. The underlying assumption of this calculation is that the legislature intends to prepare a two-year budget and wants to be certain that funds will be available to cover the total appropriation for the two-year budget.

In comparison with a two-year budget cycle, the cost of cash-based budgeting as defined in CS HJR 39 is $2.866 billion (sum of contributions shown in Table 2), or $820 million less than the cost of cash-based budgeting under a true biennial budget cycle.

2 Department of Revenue January, 1984 revenue projection.

3 Revenues after effects of cash-based budgeting program. During the CBB reserve contribution period, revenues (column 3) are equal to DOR projections minus annual CBB contributions. Starting with the first cash-based budgeting year, revenues (column 3) are equal to DOR projections plus additional earnings which accrue to the general fund as a result of transferring the CBB reserve fund balance to the general fund.

4 Expenditure levels are presently limited to projected revenues (ignoring the Constitutional appropriation limit). Beginning with the first cash-based budgeting year, expenditures will be limited to the revenues collected in the previous calendar year.

5 General fund earnings are DOR projections up to the start of cash-based budgeting, at which point the general fund earnings will be augmented due to the increased earnings capacity of the general fund from that point on into the future.

6 Beginning with the first cash-based budgeting year, the general fund balance is substantially increased by the transfer of the CBB reserve fund.

8 Reserve fund earnings are calculated at a 10 percent annual interest rate compounded monthly.

9 The earnings rate of the CBB reserve fund is compounded monthly using a 10% annual interest rate.

This projection is based on a general fund unrestricted revenue contribution of 8.0 percent.

This projection is based on a general fund unrestricted revenue contribution of 8.8 percent.

Biennial Budgeting With Annual Review

If the State of Alaska budgeted biennially but with full legislative review annually, the effect would be little different from annual budgeting. Consequently, the impact of this type of biennial budgeting on cash-based budgeting would be negligible.

We hope that this information is helpful in your deliberations on biennial budgeting. If you have further questions regarding the relationship of biennial budgeting to cash-based budgeting, please give the agency a call.

February 16, 1984

M E M O R A N D U M

To: Representative Mitch Abood, Chairman, House State Affairs Committee

From: Representative Bob Bettisworth RHB

Subject: HJR52--Proposing an amendment to the Constitution of the State of Alaska to provide for a biennial budget.

It has become increasingly apparent to me since becoming a legislator, that the time consumed each session for budget related activities seems to be expanding each year. The experiences of other states that have adopted biennial budget cycles seem to indicate that the administrative agency budget preparation workload is reduced, program evaluation is enhanced by the increased time frames available for reviews, and long range planning opportunities are improved as well. Most observors of the budget process seem to agree, regardless of perspective, that improved planning mechanisms are essential and this is especially so in Alaska.

Some states now utilizing biennial budget cycles have found that legislative control over spending may be diminished. I don't think this problem is inherent in the system chosen but rather constitutes a lack of clear direction to the executive branch. Another criticism that jurisdictions have for biennial budget systems centers on the inaccuracy of revenue forecasts but this problem is already a major factor in Alaska and would not appear to be exacerbated by moving to a two year budget cycle.

Research indicates that the length of the budget cycle does not appear to have much effect on the level of state spending.

Variations on biennial budget systems are extensive among the states and it is likely that annual budget revisions--especially in operating budgets regardless of format--are a virtual certainty. Major time savings are likely to result by avoiding the current practice of complete annual budget preparation and legislative review. This is especially true for the operating budget and some savings would accrue in the capital budget area as well. Under most biennial budget scenarios, the comprehensive and time consuming operating budget review process could be significantly curtailed in off years and only essential program funding changes would have to be addressed.

RECEIVED 8-17-83

MEMORANDUM August 15, 1983

SUBJECT: Biennial state budget
(Work Order No. 13-1508)

TO: Representative Robert H. Bettisworth

FROM: Keith B. Levy KBL
Legislative Counsel

In drafting your bill request establishing a biennial state budget, I neglected to point out to you that Article IX, Section 12 of the Constitution of the State of Alaska requires an annual budget:

> The governor shall submit to the legislature, at a time fixed by law, a budget for the next fiscal year setting forth all proposed expenditures and anticipated income of all departments, offices, and agencies of the State. The governor, at the same time, shall submit a general appropriation bill to authorize the proposed expenditures, and a bill or bills covering recommendations in the budget for new or additional revenues.

Thus, your bill is technically in violation of this constitutional provision since it requires the governor to submit a budget every two years rather than annually.

This problem can be resolved in one of two ways. The first would be to amend Article IX, Section 12 of the constitution to provide for a biennial budget rather than an annual one. A more simple solution would be to redraft your bill to provide for a biennial budget, but require the governor to submit an amended budget every other year covering the second fiscal year of the biennial budget. In that way, the constitutional requirement would be met since the governor would be submitting a budget annually, but the bulk of the budget process would be completed biennially.

If you have any questions or if you would like a redraft of your bill, please feel free to contact me.

MEMORANDUM

TO: Representative Bob Bettisworth

FROM: David Teal
Legislative Analyst

RE: Biennial Budgeting
Research Request 83-239

This memorandum responds to your request for information on states that have a budget cycle longer than one year. The Council of State Governments (CSG) and the National Conference of State Legislatures (NCSL) provided much of the information required to fulfill your request. Because the information received from these sources is concise and limited to the question at hand, only the highlights are reviewed in this memorandum. Material provided by the CSG and NCSL are attached.

In the early 1940s, only four states had annual legislative sessions. There are now only nine states with legislatures that do not convene annually. The budget process is the primary reason that many states have converted to annual sessions.

Attachment A classifies states according to the length of their budget cycle and the time between legislative sessions. As noted above, nine states have biennial sessions and operate under a two-year budget cycle. Of the 41 states with annual legislative sessions, 29 have a one-year budget cycle. The remaining 12 states are on a two-year budget cycle. No state has a budget cycle longer than two years. The 12 states that have annual sessions and biennial budgets have the potential for full legislative review of the budget each year. All of the nine states with biennial sessions have some procedure for amending the budget during the biennium. Procedures for amending the budget include special legislative action, delegation of authority to a legislative committee or emergency board, and executive branch transfers between agencies or programs.

The Council of State Governments and the Public Affairs Research Council of Louisiana surveyed states to obtain their views on annual versus biennial budgeting. Highlights from those surveys are listed below and the published survey results are attached to this memorandum.

- Biennial budgeting reduces the budgetary workload (particularly for the executive branch), increases the time available for program evaluation, and may encourage long-range planning.

- Biennial budgeting may reduce legislative control over spending, provide less flexibility to meet requirements for receipt of federal funds or other purposes, and cause legislators to work with less accurate forecasts of revenue.

- Most states are satisfied with the system currently used in their own state.

- Most respondents felt that the length of a budget cycle had no significant effect on the level of state spending.

The conclusion of the Louisiana survey was that the success of a budget cycle seems to depend on the commitment of state officials to good implementation rather than on the method of budgeting. The Louisiana report also stated that the arguments used to support the systems are unproven; neither an annual nor biennial cycle is clearly superior to the other.

Budget Amendments Under Biennial Budgeting

Ken Kirkland, program director of the fiscal affairs section of NCSL, said that most states on a two-year budget cycle are unable to avoid substantial annual revision of their biennial budget. He added that some states on a biennial budget cycle avoid annual budget amendments by "overfunding" operating costs and relying on the executive branch to act in a fiscally conservative manner.

In those states where the budget process includes an annual review of a biennial budget, the budget process in the "review year" is often streamlined. State agencies are generally required to submit budget documents only for changes from the approved amounts instead of preparing a complete justification package. Maine, Iowa and other states that use this process claim that it combines the best features of both the annual and biennial budget cycles.

The analysis of budget cycles is not as straightforward as one might expect. Biennial budgets do not necessarily mean that appropriations are made for a two-year period. The 1982-83 Book of the States (Attachment D) shows that 17 of the 21 states on a biennial budget cycle make separate appropriations for each year of the biennium (see footnote a of Attachment D). In addition, extensive annual budget review and revision can make biennial budgeting virtually indistinguishable from annual budgeting.

Another factor complicating the analysis is that one cannot simply look at the constitution or statutes of the states to determine what actually occurs. For example, the Minnesota constitution specifies biennial legislative sessions and a biennial budget cycle. In practice, the Minnesota legislature meets annually and only a few appropriations are made for the biennium. In Vermont, an annual or biennial budget cycle is at the discretion of the governor. These complicating factors and the resultant difficulty in classifying certain states accounts for the inconsistent presentation of data in Attachments A, B and D.

I have attached applicable statutes from Florida, Montana, North Dakota and Oregon. According to the Book of the States, these are the four states with a biennial budget cycle that do not make separate appropriations for each year of the biennium.[1] The statutes specify information required by the legislature. Sections 291.322-336 of the Oregon statutes discuss that state's method of amending the budget during the biennium.

ATTACHMENT A

BIENNIAL AND ANNUAL BUDGETING

Prepared by Fiscal Affairs Program
NATIONAL CONFERENCE OF STATE LEGISLATURES
1125 17TH Street Suite 1500 Denver, CO 80202
303/292-6600

Since 1969, ten states have changed their budgeting cycle. Hawaii, Vermont and, most recently, Florida, have all changed from annual to biennial budgets. In that same time, Connecticut, Idaho, Illinois, Missouri and Nebraska have all gone from biennial to annual budgets. Indiana experimented with annual operating budgets in fiscal years 1975-76 and 1976-77, but operated with a biennial capital and highway budget. It returned to full biennial budgeting in 1977.

Currently, 29 states have annual budgets and, of course, annual legislative sessions. Another nine states have biennial budgets with biennial sessions, and thus lack any opportunity for annual changes or revisions. (The exception is Oregon, whose joint Ways and Means committees meet during the interim as the Emergency Board, a constitutional board with authority over supplemental appropriations, federal funds, and transfers.) The remaining twelve states have biennial budgets, but meet annually. This last group has some review of the budget annually, but it varies from full reviews to occasional amendments. Only North Carolina, North Dakota, Oregon, Texas, Washington and Wyoming actually make appropriations for the full biennium rather than by fiscal year, and North Carolina, Washington and Wyoming review the budget for possible changes annually.

ANNUAL LEGISLATIVE SESSIONS AND ANNUAL BUDGETS

Alabama	Delaware	Maryland	New Jersey	South Carolina
Alaska	Georgia	Massachusetts	New Mexico	South Dakota
Arizona	Idaho	Michigan	New York	Tennessee[1]
California	Illinois	Mississippi	Oklahoma	Utah
Colorado	Kansas	Missouri	Pennsylvania	West Virginia
Connecticut	Louisiana	Nebraska	Rhode Island	

BIENNIAL LEGISLATIVE SESSIONS AND BIENNIAL BUDGETS

Arkansas	Nevada	North Dakota[3]
Kentucky	New Hampshire	Oregon[3]
Montana	North Carolina[2]	Texas[3]

ANNUAL LEGISLATIVE SESSIONS AND BIENNIAL BUDGETS

Florida	Maine	Virginia
Hawaii	Minnesota[1]	Washington[2]
Indiana	Ohio	Wisconsin
Iowa	Vermont[1]	Wyoming[2]

All state fiscal years begin on July 1 except for Alabama (October 1), Michigan (October 1), New York (April 1) and Texas (September 1).

Footnotes

[1]Technically a biennial session, but in practice meets annually.

[2]Appropriations are made for the biennium, but reviewed annually.

[3]Appropriations are made for the biennium.

NOTE: Unless otherwise noted, biennial budget states make appropriations for each

MEMO TO: Respondents of PAR Survey

FROM: Brian Davie, Research Analyst

RE: Results of PAR Survey on Annual vs. Biennial State Budgeting

Research Council of Louisiana, Inc. (PAR) is a nonpartisan, nonprofit organization which conducts research on state and local government issues in Louisiana. PAR surveyed all states (excluding Louisiana) in early 1982 to obtain the most current information available on the experience and views concerning the issue of annual vs. biennial state budgets. This paper is a tabulation of the results of that survey.

Louisiana Policy

Louisiana's state government has annual legislative sessions (limited to 60 legislative days during an 85 calendar day period) and an annual budget. New or increased tax levies are not permitted during regular legislative sessions in odd-numbered years. The state has not changed its annual budget cycle and is not considering a change at this time.

Response Rate from Other 49 States

PAR sent the enclosed questionnaire to state budget officers and legislative chairmen of the budget committees in each house. One followup letter was sent and at least one response was received from all 49 states. The maximum number of responses (3) was received from 23 states (47%), two responses were received from 18 states (37%), and one response was received from 8 states (16%). Budget officers or their representatives responded from 45 states (92%) and legislative chairmen responded from 44 states (90%). The overall response rate was 77%. Following are results of the survey.

Budget Cycles

Table 1 shows the number of states which use the types of legislative sessions and budgets indicated.

TABLE 1. State Legislative Sessions and Budget Cycles[a]

Type Legislative Session	Budget Cycle	Number of States
Annual, unlimited	Annual	25[b]
Annual, unlimited	Biennial	3
Annual, unlimited	Biennial but amended annually	5
Annual, with fiscal session in off-year	Annual	5
Annual, with fiscal session in off-year	Biennial but amended annually	4
Biennial	Biennial	8

[a]Includes Louisiana.

[b]One state has annual sessions and budgets by current practice, although the constitution specifies biennial sessions.

Recent Changes

Most states (36) have not changed their budget cycle since 1970. Of the 13 states that changed, eight went from a biennial to an annual budget cycle while two changed from annual to biennial budgets. The remaining three states changed twice — two states experimented with annual budgets and reverted back to biennial while one state did the opposite.

Only four states reported they are considering seriously a change between annual and biennial budgets. Three of those states now have annual budgets (two changed recently) and the other state has a biennial budget. A budget officer or legislative chairman in 14 states mentioned some change is being considered but those responses were evenly divided between states with annual or biennial budgets.

Time to Plan & Evaluate

Most respondents from both annual and biennial budget states indicated satisfaction with the time available for planning and evaluating state programs, but many added comments to qualify or explain their response. Among respondents from annual budget states, 80% thought an annual cycle allowed adequate time. From the biennial budget states, 98% of the respondents thought the cycle allowed adequate time. Every state with a biennial budget has some procedure for changing budgeted amounts during the biennium; the methods vary from limited authority of the governor or a special interim committee to annual review and/or special sessions of the legislature.

States That Have Changed

The remaining survey questions concerned only the 13 states that changed their budget cycles since 1970; results were inconclusive. For the states that changed twice since 1970, the primary reason appeared to be political -- depending on which party controlled the legislature or which cycle the governor strongly advocated and enforced.

PAR classified responses on effects of the change (Question #8) according to whether the comments were positive, negative or indicated no difference. Respondents from the eight states that changed to annual budgets were almost equally divided between the positive and negative effects of the change and several stated there was no difference. The positive effects most often cited for changing to annual budgets were increased evaluation, legislative scrutiny and more accurate revenue estimates; however, an almost equal number of respondents cited the same factors as having a negative effect, mainly because of the compressed time schedule for reviewing an annual budget.

Respondents from the two states that changed to biennial budgets cited no negative effects, but two of the six respondents in those states said there was no difference. The positive effects mentioned included opportunities for increased planning, evaluation and legislative scrutiny.

It is difficult, if not impossible, to determine what effect a change in budget cycles has on increased state spending (Question #9) since so many other factors intervene such as inflation and major policy changes in state programs. Most respondents acknowledged this and qualified their response. The change had no effect on the rate of increased state spending according to 55% of the respondents. The remaining responses were equally divided between those who thought the change did increase state spending and those who did not know.

Similarly, respondents were almost evenly divided about whether the change affected the accuracy of revenue estimates and accumulation of surplus funds (Question #10).

Which Type Favored by Respondents?

The final survey question provided an opportunity for respondents to comment in general on the issue of annual vs. biennial budgets. Table 2 shows the results of classifying the comments according to which type budget the respondent appeared to favor; again responses were almost equally divided.

TABLE 2. Preferences of Respondents

Preference	Budget Officers	Legislative Leaders	Total
Favor annual budget	5	5	10
Favor biennial budget	6	5	11
Neutral	2	7	9

Conclusion

The Council of State Governments published a detailed state survey analysis on the issue of annual vs. biennial budgets in 1972. PAR's questionnaire was an attempt to update that survey, but it appears little has changed. While more states changed to annual budgeting during the 1970s than in the 1960s, the arguments used to justify and refute both annual and biennial budgets remain essentially unchanged — and unproven. The inconclusive and generally split results on controversial survey questions indicate that both budgeting methods and modifications of them may work effectively in different situations. The success of a budget cycle seems to depend on the commitment of state officials to good implementation rather than the method itself.

Thank you for your interest and participation in PAR's questionnaire. If you would like any further information on the results, please do not hesitate to call or write.

FOREWORD

Recent changes in budget procedures in some States have brought renewed attention to the question of whether the process should be an annual or biennial one. The Research Committee of the National Association of State Budget Officers, therefore requested the Council of State Governments to ascertain the reaction of state officials to these changes.

The survey was conducted by means of a questionnaire to ten key executive and legislative officials in each of eleven States. The Council is most grateful to the responding officials for their cooperation and assistance. The report was prepared by Paul Hibberd, Research Associate, under the direction of George A. Bell, Director of Research.

Brevard Crihfield
Executive Director
The Council of State Governments
Iron Works Pike

Introduction

The increasing complexity and mounting problems of state government have triggered many changes in state operations, among these being the shift of legislative sessions to an annual basis rather than biennial. There are now (1972) 33 annual session states plus 3 more whose unlimited biennial sessions extend into the second year, compared with 18 States ten years ago, 10 States twenty years ago, and only 4 States in the early 1940's.

One reason advanced in support of annual sessions has been that state financial and budgetary policies must be reviewed more often than once every two years. This was a predominant factor leading toward annual sessions, as shown by the fact that 9 of the 13 States having annual sessions in 1962 restricted one session every two years primarily to fiscal matters. However, there has been a reversal in this trend, and now a much lower proportion of States - 5 of 33 annual session States, place such limits on sessions.

The felt need for making fiscal decisions annually is still strongly apparent, since most States which have adopted annual sessions have also shifted to annual budgets. However, a few States with annual sessions have not shifted to annual budgets. A further surprising development in view of the trend was the action of Hawaii, which in 1971 shifted to a biennial budget while retaining annual sessions, after having had annual budgets throughout its statehood.

The Hawaii move is one event that has triggered interest among state officials everywhere concerning the advantages and disadvantages of annual versus biennial budgeting, leading to this survey of States which have

made recent shifts. The following questions were asked:

1. What effect has changing from a biennial to an annual budget in your State had on the following:
   (a) Workload of the budget agency:
      1. Has there been a change in the duties or type of work performed by budget staff?
      2. Has there been a commensurate change in size of budget staff?
   (b) Workload of other executive agencies (operating agencies; Governor's Office, etc.)
   (c) Workload of the legislative staff:
      1. Has there been a change in the duties or type of work performed by legislative staff?
      2. Has there been a commensurate change in size of legislative staff?
   (d) Ability or willingness to undertake planning beyond the budget period:
   (e) Accuracy of revenue estimates:
   (f) Ability to meet matching requirements for federal grants in aid:
   (g) Ability to fully finance programs to carry out the program level the appropriation was designed to meet?
   (h) On the rate of annual increase in state expenditures

2. When you were on a biennial budget, what procedures (such as use of transfers, emergency appropriation, allotment adjustments, etc.) existed for taking care of changing financial requirements for programs or agencies?

3. What are you able to do under annual budgeting in providing for year to year changes that you could not do under biennial budgets?

4. If the opportunity arose to switch back to biennial budgets, would you favor doing so? Please state reasons.

5. If the switch to biennial budgeting were to be made, what recommendations would you make to assure that legislative and executive controls over program plans and expenditure are not weakened?

The survey covers most States which have recently switched from biennial to annual budgets and have had at least one full biennium under the annual budget system - Florida, Idaho, Illinois, Missouri, Oklahoma, Tennessee, Utah and Vermont. Other States moving to annual budgets such as Connecticut, Nebraska [illegible] had not experienced the annual cycle at the time the questionnaire was mailed (fall, 1971.)

Iowa and Georgia have instituted annual legislative sessions while retaining a type of biennial budget and were also surveyed. Indiana's similar shift has occurred too recently for coverage. Hawaii was surveyed

for its shift from annual to biennial budgets. Wisconsin was subsequently added; that State now has annual sessions, and in 1972 completed its first formal off-year budget review process in lieu of an annual budget.

In each of the eight States surveyed which switched from a biennial to an annual budget (above), a questionnaire was sent to ten officials - the Governor, President of the Senate, Speaker of the House, administration/finance officials, budget officers, legislative research directors, legislative fiscal review officers, planning officials, and the chairmen of the appropriations committees. There was, therefore, a possibility for 80 responses. The number of actual responses received was 35, with at least two from each State: two from Tennessee, two from Utah, five from Illinois, six from Idaho, three from Florida, five from Missouri, six from Vermont, and six from Oklahoma. In terms of responding officials the breakdown of answers was: Governors, one; Presidents of Senates, four; Speakers of Houses, four; legislative fiscal review officials, four; chairmen of appropriations committees, six; planning officials, six; administration/finance officials, one; budget officers, six; legislative research directors, three. For purposes of narrating the reported opinions the sole responding administration/finance official was included among the budget officers, and the responses of the Presidents of the Senate and the Speakers of the House were combined and treated as the opinions of legislative leaders.

The questionnaire was also sent to the identical officials in Georgia and Iowa, which changed to annual legislative sessions while retaining biennial budget approaches. These officials were requested to provide their opinions on advantages and disadvantages of not switching to an annual budget cycle.

Finally, the questionnaire was also sent to the same officials in Hawaii, which switched from annual to biennial budgeting. These officials were requested to provide their comments and opinions on the effects of the reverse change from an annual to a biennial cycle. Limiting the usefulness of the original Hawaii responses, according to several officials of the State, was the fact that a full biennium had not yet passed under the new procedure. A followup request to the Hawaiian respondents was sent in June, 1972 to seek further reactions after experience with the new approach during the 1972 session.

In view of the delay in analyzing the responses, the questionnaire was also sent to Wisconsin officials in June, 1972 to ascertain reactions to the budget review process first used in the 1972 session.

Opinions in States Recently Switching to Annual Budgets

The responses of officials in the States which have recently changed from biennial to annual budgets are analyzed in this section. The responses are organized in accordance with the questions asked.

Effect on Workload and Size of the Budget Staff

Budget officers should be in the best position to know whether there has been a change in staff size. According to the seven budget officials who responded, the budget staff was increased in size in three States and remained the same in four. The perception of other officials did not always fit these facts, for in four of the seven States one or more other officials thought the staff had increased when the budget official said it had not (two States) or thought it has not increased when the budget

chief said it had (two States). (See table 1 for summary tabulation).

1. Effect on the size of the Budget Agency:

	Increase	Decrease	No Change	No Opinion	No Answer	Total
Governor			1			1
President Senate/Speaker House	1		6		1	8
Legislative Fiscal Review	1		3			4
Chairmen Appropriations Committees	3		2		1	6
Planners	1		1	4		6
Budget Department	3		4			7
Legislative Research	2			1		3
	11		17	5	2	35

In at least one State reporting an increase in staff size, this change was due only in part to annual sessions. Annual sessions were begun at the same time that a major change in budget procedures occurred, including establishment of an analytical staff in the Governor's office and development of program analysis procedures.

With the above indications of a different opinion concerning a factual situation, a difference of opinion is to be expected on the less factual questions which follow.

Legislative leaders expressed doubt whether the workload of the budget agency had increased significantly and whether additional staff was necessary. However, chairmen of the various appropriations committees believed that there was a significant increase in the duties of the budget agency, but not to the point that staff members need be added. One suggestion was that the "off-year" was often not very productive and that the solution to the increased workload was a more concentrated effort each

year. In addition to the above positions, several legislative officials contended that there were insufficient funds to employ additional budget staff members.

Although several executive officials expressed the opinion that there was no change in the duties of the budget agencies, a few budget administrators expounded the adverse effects of the change. Their primary contention was that the switch to an annual budget had left little time to perform various studies for the improvement of organization and operations. For example, one budget director remarked, "the increased workload in terms of budget preparation has left less time to explore substantive issues, and has necessitated restrictions on all other activities." When commenting upon the increased workload of his agency and the inability to add new staff members, another budget official remarked, "instead of additions to staff, such activities as analysis, studies, management services, etc., have been drastically reduced if not altogether eliminated."

2. Effect on the workload of the Budget Agency:

	Increase	Decrease	No Change	No Opinion	No Answer	Total
Governor			1			1
President Senate/Speaker House	3		4		1	8

Budget Department	4		3			7
Legislative Research	3					3
	16		12	5	2	35

Effect on the Workload of other Executive Agencies

An overwhelming majority of officials responding were of the opinion that the change to an annual budget significantly increased the workload of other executive agencies. In a few instances it was noted that budget operations in all the executive agencies were operating throughout most of the year. One budget official reported that with demands on the individual agencies for program information that was not previously requested, "budgeting has become a full time activity and the days when part time budgeting was possible are gone."

Recognition of this increased workload was not limited to executive officials. Three out of every four legislative officials reported an increased burden on the executive agencies in submitting a budget for their programs annually. One legislative council director remarked that, "probably the most significant aspect of the change (to an annual budget) is an awareness that budgeting is a continuous process the year round, and not just something that takes place at session time."

3. Effect on the workload of other Executive Agencies:

	Increase	Decrease	No Change	No Opinion	No Answer	Total
Governor			1			1
President Senate/Speaker House	5		2		1	8

Effect on the Workload and Size of the Legislative Staff

The majority of legislative officials felt that the change to an annual budget had no significant effect upon the size or workload of legislative budget staffs already in operation. In two States the statement of the legislative fiscal staff director, who should know, concerning increase in staff was not unanimously supported in the opinions of others. In some States the legislative budget staffs were virtually non-existent under a biennial budget. For example, Vermont had no legislative budget staff until 1970, when an analyst was hired to serve the appropriations committees. Other States in which legislative budget analysis agencies were created at the time of the change to an annual budget cycle attributed those creations directly to other sources, naming the budget change as only an indirect cause.

Most executive officials asserted that they were in no position to express an opinion on the effect of the change to an annual budget upon legislative staffs. Among those who did express an opinion, two out of every three felt that the change had no significant effect upon the size or workload of the staffs.

4. Effect on the Size of the Legislative Staff:

	Increase	Decrease	No Change	No Opinion	No Answer	Total
Governor			1			1
President Senate/Speaker House	3		4		1	8
Legislative Fiscal Review	1		3			4

Legislative Research	2		1			3
	10		21	3	1	35

Effect on Ability or Willingness to Undertake Planning beyond the Budget Period

The opinions expressed on this issue were widely varied among both legislative and executive officials. Two out of every three budget officials took the position that an annual budget cycle had an adverse effect upon the willingness to undertake planning beyond the budget period. Other respondents noted that agencies and departments were reluctant to engage in advance planning to begin with, but that the switch to an annual budget left less incentive to plan beyond the budget period. Some legislative leaders said that legislative desire for long range planning was not shared by executive agencies. One executive official, explaining the slowness of agencies to plan ahead, noted that program planning is an activity "which must be fostered by the Chief Executive as a basic management tool for a reasonable length of time before agencies are even interested in performing the activity."

5. Effect on the workload of the Legislative Staff:

	Increase	Decrease	No Change	No Opinion	No Answer	Total
Governor			1			1
President Senate/Speaker House	3		4		1	8
Legislative Fiscal Review	1		3			4
Chairman Appropriations Committees	3		2	1		6
Planners				6		6
Budget Department	2		3	2		7
Legislative Research	1		2			3
	10		15	9	1	35

A few officials expressed the opinion that longer range planning was one advantage of annual budgeting, but failed to explain the reasoning behind this statement. Some other officials noted that longer range planning was being instituted under planning programming budgeting systems (PPBS) independently of the effect of annual versus biennial cycles.

Also, in two States the answers revealed differences of opinion among officials. For instance, in one State the Speaker, the legislative fiscal officer and the planning official felt that there was an increase in willingness to undertake planning beyond the budget period, while the budget officer thought there was a decrease in that willingness and both the President of the Senate and a committee chairman reported no change, attributing any difference to a recent emphasis on program planning.

6. Effect on the ability or willingness to undertake planning beyond the budget period:

	Increase	Decrease	No Change	No Opinion	No Answer	Total
Governor		1				1
President Senate/Speaker House	2	1	3	1	1	8
Legislative Fiscal Review	2		2			4
Chairmen Appropriations Committees	2	1	3			6
Planners	2		1	3		6
Budget Department	3	4				7
Legislative Research	1		1	1		3
	12	7	10	5	1	35

Effect on Accuracy of Revenue Estimates

A majority of the officials felt that a change to an annual budget cycle should, or did, increase the accuracy of revenue estimates. This opinion was held by 16 reporting officials, compared to 4 who thought that accuracy decreased and 10 who felt that there was no change.

accuracy was presumed to increase because of increased frequency of compiling estimates, and the shorter time interval between making the estimate and realizing the revenue.

7. Effect on the accuracy of Revenue Estimates:

	Increase	Decrease	No Change	No Opinion	No Answer	Total
Governor		1				1
President Senate/Speaker House	5	1	1		1	8
Legislative Fiscal Review	1	1	2			4

Planners			3	3		6
Budget Department	3	1	2	1		7
Legislative Research	1		2			3
	16	4	10	4	1	35

Effect on Ability to meet Matching Requirements for Federal Grants in Aid

A majority of the state officials took the position that the change to an annual budget increased the ability to meet matching requirements for federal grants in aid. The chief reason for this opinion was the time factor, especially when the federal government is often tardy in appropriating and allocating grants. An annual budget is thought to allow considerably more flexibility if the federal government should significantly alter the amount of money available. One budget director noted that the construction of an annual budget helps avoid the possibility of a special session of the legislature which, when called for fiscal matters, often generates "political stress."

8. Effect on the ability to meet matching requirements for federal grants in aid:

	Increase	Decrease	No Change	No Opinion	No Answer	Total

Legislative Research	1				2	3
	18	3	8	3	3	35

Effect on Ability to Fully Finance Programs to Carry Out the Program Level the Appropriation was Designed to Meet

The majority opinion was that the ability to fully finance programs had been increased by the change to an annual budget. An annual budget, as stated before, appears to be more accurate in predicting revenues. The increased accuracy of estimates increased the ability to fully finance programs, thereby carrying out the program level the appropriations were designed to meet.

Some officials felt that the ability to fully finance programs was not necessarily related to annual or biennial budgets. Their position, as one budget director noted, was that the ability to fully finance programs "speaks to the quality of program projection and revenue estimating and not necessarily for the period during which these events occur."

Some officials recognized the disadvantage of predicting program finance and revenue two years in advance, as opposed to one, but felt that biennial budgeting had other overriding advantages. They suggested

that any problems encountered in fully financing programs during the second year of the biennium could be mitigated by annual sessions where emergency appropriations, transfers, etc., could be enacted.

9. Effect on the ability to fully finance programs to carry out the program level the appropriation was designed to meet:

	Increase	Decrease	No Change	No Opinion	No Answer	Total
Governor	1					1
President Senate/Speaker House	5	1	1		1	8

Effect on the Rate of Annual Increase in State Expenditures

There is no evident consensus on what effect, if any, the change to an annual budget might have had on the rate of annual increase in expenditures: 16 thought it would result in greater increases than biennial budgets while 12 indicated there would be no change.

One budget director who believed increases would result observed, "biennial budgeting tends to lock the second year in close proximity to the level of the first fiscal year. Annual budgeting permits the entire lobby and pressure effort of the various special interests to come into play." Some indicated that as inflation, program alterations, salary adjustments, etc., are considered annually, the rate of increase must necessarily be greater. One budget director introduced a formula: "the rate of annual increase in state expenditures is inversely proportional to the length of the budgetary period."

Those officials who took the position that the change to an annual budget had no effect on the rate of annual increase in expenditures felt that the rate of increase is dependent upon revenue. They noted that if revenue should increase beyond expectations in the second year of the biennium, alterations in appropriations could be made at that session of the legislature. These increases in appropriations would essentially be equal with any changes that might have been made if there were a new budget in the process of formulation under an annual cycle.

10. Effect on the rate of annual increase in state expenditures:

	Increase	Decrease	No Change	No Opinion	No Answer	Total

Procedures under Biennial Budgets for Fiscal Adjustments

Operations under biennial budgets had not prevented most States from changing their fiscal plans where necessary. In some cases this was done through legislative action in special session or otherwise, such as emergency, deficiency or supplemental appropriations.

An additional method which was often mentioned as a means of combatting unforeseen conditions was the transfer of appropriations from one agency, unit or program to another. Five States reported the utilization

of intra-agency transfer, with three of them additionally inter-agency transfers.

Finally, three States noted the existence of an emergency board which had the power to appropriate from a special account in cases when the legislature was not accessible.

A Switch back from Annual to Biennial Budgets?

Among those States which changed to an annual budget, 75 percent of the legislative officials and 70 percent of the executive officials, (but only 50 percent of the budget officers are included in this majority) were satisfied with the new system, while the remainder in each group favored a return to the biennial budget.

Some of the following reasons were cited by legislative officers for remaining with the new system:

(1) fewer emergency appropriations;

(2) "annual budgets tend to strengthen the legislator's role in setting the policy of the state."

Two other reasons, cited by some executive officials, are:

(1) annual budgeting permits the Governor a more frequent review of agency programs and requires state agencies to develop tighter administrative controls over the spending of public funds,

(2) "in biennial budgeting immediate correction of the State's budget is not possible, and waiting until the legislature meets 'next time' is the only alternative. When corrections are eventually made the legislature in its alarm may accuse the Governor of mismanagement and the Governor in turn accuse the legislature of irresponsibility."

One legislative official who favored returning to a biennial budget system noted that with annual budgeting there was a tendency to focus legislative attention on the details, which should be the concern of the executive.

Among the executive officials who were dissatisfied with the annual budget cycle some of the reasons cited were the following:

(1) an annual budget system results in a narrow viewpoint, short time spans for accomplishment, and a vast increase in staff work;

(2) a biennial budget provides more time for program planning activities;

(3) "with annual budgets, the top talent of the executive branch is tied up preparing, defending and implementing budgets. This creates a continuous and overlapping cycle which requires preparations for next year's budget to start before information on the operation of the current year's budget can be collected and evaluated."

Expenditure Controls under Biennial Budgets

Since a switch to biennial budgeting would allow the various state agencies to operate for two years without their programs being subjected to fiscal change, respondents were asked what measures should be introduced to assure that legislative and executive controls were not weakened. Among those suggested by legislative officials were these:

(1) a strong post-audit division for the evaluation of programs,

(2) the existence of an interim committee or emergency board to act upon requests to cover deficiencies or emergencies.

Executive officials, especially budget officials, made other suggestions for assuring control, including the following:

(1) legislative willingness to attend special sessions if a significant imbalance in the budget should arise,

(2) a requirement that each fiscal year in the biennium should stand alone, and no appropriations be carried forward from one year to the next,

(3) "greater emphasis be placed upon program evaluation and review in terms of definition or objectives, method of operation and intended results,"

(4) rather than becoming concerned with details, the legislative fiscal staff "should develop information for policy decisions and directions so that the legislators can decide what services the State should render and determine whether the service is worth the dollars that are required....the legislative branch should give the necessary attention to establishing the goals and policies that will set the directions and shape the future of the government."

Annual Session States with Biennial Budgets

Officials from both Iowa and Georgia pointed out that neither State operates on a strict biennial budget. Rather, the systems in those States might be described as 'modified annual' or 'modified biennial' budgets.

The Georgia constitution provides that a General Appropriations Act shall be passed the first year of the legislative term to cover the next two fiscal years. Any excess funds not expended during the first fiscal year shall lapse and revert to the fund from which they were appropriated. In practice, however, the money provided for the second year of the biennium by the appropriations act is merely a 'dummy appropriation' since it duplicates the first year. At the legislative session in the second year of the term amendments are made to the General Appropriations Act to authorize realistic appropriations for the second fiscal year. Since the executive departments are nevertheless required to present their requests on a two-year basis and the Governor must make his recommendations on a two-year basis, the General Assembly has access to the information to make a reasonable prediction of what funds will be necessary in the second fiscal year.

Prior to 1971, Iowa operated on almost a strictly biennial budget. During those years appropriation bills were drawn which authorized an

identical amount for each year of the biennium. Any departmental appropriations which were not expended during the first fiscal year of the biennium could be carried over and expended during the second fiscal year.

In 1971 a new procedure was put into effect through adoption of a law providing that if the appropriated funds of an agency were not expended during the first fiscal year, the balance would 'revert to the state treasury and to the credit of the fund from which appropriated.' If an agency felt that the funds which would normally have reverted to the state treasury were essential to that agency, an application could be made to the appropriations committees for a hearing.

One legislative official expressed the opinion that the most significant factor in preventing Iowa from changing to an annual budget was the added burden of repeating the entire budget process each year. Although several bills had been introduced in the State which would provide for an annual budget, this time factor seems to have been the foremost cause of defeat.

Questionnaire responses from the two States totalled six, but only three were susceptible to tabulation for any one question. Thus, the following discussion is based on limited responses.

Among both Georgia and Iowa officials there were differing opinions whether a change to an annual budget cycle would have any effect on the workload or size of executive budget agencies. One budget officer noted that the only alteration might be less emphasis on analysis work and more on projection. It was suggested that the workload of other executive agencies would increase as budget preparation became a 'full-time' project.

identical amount for each year of the biennium. Any departmental appropriations which were not expended during the first fiscal year of the biennium could be carried over and expended during the second fiscal year.

Questionnaire responses from the two States totalled six, but only three were susceptible to tabulation for any one question. Thus, the following discussion is based on limited responses.

Among both Georgia and Iowa officials there were differing opinions whether a change to an annual budget cycle would have any effect on the workload or size of executive budget agencies. One budget officer noted that the only alteration might be less emphasis on analysis work and more on projection. It was suggested that the workload of other executive agencies would increase as budget preparation became a 'full-time' project.

Additionally, officials from both these States expressed the opinion that the workload of legislative fiscal staffs would be affected by a change to an annual budget. They felt that such a change would require greater detail, greater analysis of budget requests, and overall greater control being exercised by the general assembly. There was a difference of opinion, however, concerning whether the altered workload would necessitate a larger staff.

Regarding the State's willingness to undertake planning beyond the budget period when operating on an annual cycle, Georgia and Iowa respondents indicated that the proclivity to look beyond one year would either be reduced or unaffected. While they felt that annual budgets would lead to more accuracy of revenue estimates, they indicated that inaccuracies resulting from biennial budgets could be remedied in the annual legislative sessions. Georgia and Iowa officials contended that the rate of increase in budgets is more controllable in a biennial cycle. The primary argument in Iowa was that the pressure for increase is reduced during the second session when additional appropriations will be made only in the case of emergencies or unforeseeable changes. One Iowa official summarized as follows: "It seems to us that really we have the 'best of both worlds' 1) less time consumed in preparation/hearings, yet 2) the ability to review and make changes in the second session."

The Switch from Annual to Biennial Budgets – Hawaii

Hawaii abandoned an annual system in favor of a biennial one, effective July 1, 1971. Since this change was so recent, few definite results or effects were available for analysis at the time the questionnaires were sent out. In addition to the change to biennial budgeting, the

was in the process of implementing a planning-programming-budget system. The combination of these changes resulted in a change of focus from more detailed management control to an emphasis on planning and analysis. This new approach was intended to allow the state legislature to devote more attention during the second year of the biennium to an examination of the progress and effectiveness of various programs. In fact, under the new budget act annual reports to the legislature are required "reflecting the deviations of actual from planned levels of program effectiveness, program size, and program expenditures."

As far as could be determined, the change to a biennial budget had alleviated the burden of the executive budget staff and freed the staff members for more analytical assignment on the PPBS implementation project. In addition, it was predicted that the budget workload of other executive agencies and the legislative fiscal staff would be reduced substantially.

Although Hawaiian officials admitted that revenue estimates for the biennium period would probably be less accurate than on an annual cycle, they apparently felt that the difference would not cause significant problems. The officials also recognized that additional problems could arise in projecting matching requirements for federal grants and aid, but were hopeful that the legislature would be amenable to supplemental budget requests for this purpose during the second year of the biennium. Some hoped also that the rate of annual increase in state expenditures would be less under the biennial system.

Responses to the followup request reiterated the difficulty involved in determining the effect of the switch to biennial budgeting, because that switch was made coincidentally with a change to a planning-programming

budget. One official, commenting on the budget agency workload, pointed out that a change to a biennial budget might have substantially decreased the time spent in budget preparation, yet the amount of time allotted to this function actually increased due to the demands of the planning-programming budget.

One legislator noted that the change afforded committees the opportunity to scrutinize more closely various program accomplishments and problems, "the point being that there was 'extra' time to review programmatic matters and accomplishments because the committee was not straddled with the urgency or necessity of passing an annual budget."

A legislator also noted that the 1971-73 budget could have been legislatively reduced to realign expenditures with anticipated revenues. However, he added that such action deserves careful scrutiny when the effect would impose a restrictive ceiling for expenditures while the possibility of an upturn in revenues remains.

Despite the fact that the second legislative session under Hawaii's biennial budget is now history, the general feeling is that the State has not as yet experienced the full impact of the switch from an annual to a biennial budget.

Annual Budget Review – Wisconsin

Responses concerning the Wisconsin annual review process for the second year of the biennium were received from six officials — two executive, three legislators and one legislative staff. According to a 1971 joint resolution the Governor was to submit to the Legislature by January 18, 1972 any budget changes he deemed desirable for the second year of the biennium. An executive respondent estimated that the amount of work this

entailed for the central budget office was approximately one-third of that associated with full budget preparation. This additional work was absorbed by existing staff, at the expense of fewer daily agency contacts and policy development and management improvement work. On the legislative side, one respondent hailed the process as allowing legislative review of selected programs without waiting for a full budget cycle to elapse. The budget change also altered the duties of administrative agencies which respond only to specific questions raised by the budget staff rather than being required to submit new budgets.

In discussing any change in ability to meet matching requirements for federal grants in aid, one respondent noted that most agencies more than adequately budgeted to cover any such requirements. However, he cited one instance where the annual review remedied a situation of under-estimation and was subsequently the cause of critical comment from some legislators because the review allowed agencies to be "bailed out" of their errors. The respondent also predicted that the annual review process would accelerate the rate of increase in state expenditures. This position was contradicted, however, by another respondent, who reported that the rate of increase was substantially lower in 1971-73 than in the previous three biennia.

Five of the six responding Wisconsin officials expressed satisfaction with the annual review process, because it possessed the advantages of both the annual and biennial budget. The only dissatisfied official expressed the fear that the second year budget bill would consistently become "a grab-bag for everyone's pet project with considerable logrolling."

One factor preventing a full trial of the annual review process was that the 1972 budget was not adopted until November 1971, over [illegible] the

after the beginning of the fiscal year. Thus there was little time under the first year's budget before recommendations had to be made on the second. Partly for this reason most respondents felt that it is too soon for a full evaluation of the annual review process.

Conclusion: Which way to go?

It is not surprising that most respondents from States which have shifted from biennial to annual budgets support the change. This support among most categories of officials is strong, ranging from 75 percent for legislators to 100 percent for executive officials outside of the budget office. Only budget officers made a contest of the issue - three favored retention of annual budgets and three favored returning to biennial budgets. In no case were all respondents from a State unanimous in favoring a return to biennial budgeting.

The difference in point of view can occur because of differences in conception of the budget process and differences in experience undergone by each participant in the budget process in each State. In reality, a State can develop a good system of executive and legislative fiscal and program planning and controls under either an annual or biennial budget. The system would work differently with the alternate time-spans, but could be effective under either approach.

To illustrate the contention just stated, let us examine the major selling points of both annual and biennial budgets.

Annual budgets permit more frequent and probably more accurate estimating of revenues and financial requirements of state programs. Corrections on both the expenditure and revenue sides of the balance sheet can more readily be made. Adjustments because of sudden availability or loss of [illegible] funds can be made sooner.

Annual budgeting assures that action will be taken which reflects the above occurrences. Yet action can be taken under biennial budgeting too, if the Legislature meets annually. The Wisconsin budget review process was established for this purpose, and there appears to be nothing in the Wisconsin procedure that could not be adapted to the needs of any other State.

A fundamental reason why most responding legislators favor annual budgeting is that legislative control over spending is more easily attained; the Legislature can more frequently review the spending programs it previously authorized and ascertain whether legislative intent is being carried out.

This review is a basic function of the legislature, and any system should contain built-in procedures to accomplish it. It can be done with biennial budgets as well as annual. Of course, certain conditions must be met. If the legislature meets annually, if the legislature and its committees are continuing bodies throughout the biennium, if legislators are adequately paid and staffed so that they can devote time to the task and make productive use of their time, then the task of review can be carried out effectively, and corrective actions can be taken.

Now let us look at reasons in support of biennial budgeting. Biennial budgets force a longer range planning than annual budgets simply because appropriations must be made for a longer time span; they provide more time for long range planning; and they save the time of agencies, Governor, budget staff, legislature and legislative staff in compiling, presenting, explaining and defending the myriad details that go into the making of a budget. This would allow more time for program review and evaluation.

But these activities are not excluded under annual budgeting. Most budget procedures as established by budget offices require submission and analysis of much detail, but a number of States have been struggling with ways to reduce this burden. Many details, such as replacement of equipment, are better handled through concentration on good management as part of budget execution rather than as items to be spelled out in budgets. Detailed budget items imply a specific knowledge of needs that cannot be that accurately estimated months in advance of expenditure. Concentration on management analysis and program evaluation would be more productive in the long run, and can be fitted in with annual budgets as well as biennial.

Now, simply because appropriations must be made annually, must legislatures necessarily examine the fine print in every budget every year. Legislatures can find time for program evaluation if they adjust their procedures accordingly, such as concentrating on major issues and unusual changes along with a periodic careful review of all other programs. This is a variation of a suggestion made by one respondent that major programs such as education and welfare be budgeted annually, while lesser and more routine ones such as civil defense and licensing boards be budgeted biennially.

Good decision-making encompasses, among other things, defining state program needs, determining the most effective method of accomplishing the program, providing the resources to get the job done, and evaluating the operation of the program to see whether its aims were accomplished. The budget process is but one aspect, although a most crucial one, of this larger process.

Both executive and legislative officials in many States are seeking ways to accomplish this decision-making task more effectively. The job can be done with either an annual or biennial budget. Which way a State goes depends on its existing system of budget decision-making and a realistic assessment of what can be done soon to fashion the budget process to better serve its purpose. If institutions such as the budget cycle get in the way, then a decision must be made on whether to change the institution, find a way around it, or adjust it to better accomplish the job to be done.

Table 1
STATE BUDGETARY PRACTICES

State or other jurisdiction	Budget-making authority	Official or agency preparing budget	Date estimates must be submitted by dept. or agencies	Date submitted to legislature	Power of legislature to change budget*	Power of item veto by governor	Fiscal year begins	Frequency of budget
Alabama	Governor	Div. of the Budget, Dept. of Finance	Oct. 15 for Jan. session; Nov. 15 for Feb. session	By the 5th day regular business session	Unlimited	Yes	Oct. 1	Annual
Alaska	Governor	Div. of Budget & Management, Office of the Governor	Oct. 1	3rd legislative day of session	Unlimited	Yes	July 1	Annual
Arizona	Governor	Finance Div., Dept. of Administration	Sept. 1 each year	By the 5th day of regular session	Unlimited	Yes	July 1	Annual
Arkansas	Governor	Office of Budget, Dept. of Finance & Administration	Sept. 1 in even years	Date of convening session	Unlimited	Yes	July 1	Biennial, odd yr.(a)
California	Governor	Dept. of Finance	Specific date for each agency set by Dept. of Finance	Jan 10	Unlimited	Yes	July 1	Annual
Colorado	Governor	Executive Director, Office of State Planning & Budgeting	Aug. 1-15	Dept. budgets submitted Nov. 1; governor's full recommendation submitted within first 10 days of legislative session	Unlimited	Yes	July 1	Annual
Connecticut	Governor	Div. of Budget & Financial Management, Office of Policy & Management	Sept. 1	1st session day after third of Feb. in odd years, except if change in governor, then 1st session day after Feb. 14. In even years, on the Wed. following the 1st Mon. in Feb.	Unlimited	Yes	July 1	Annual
Delaware	Governor	Office of Budget Director, Office of the Governor	Sept. 15; schools, Oct. 15	By Feb. 1	Unlimited	Yes	July 1	Annual
Florida	Governor	Office of Planning & Budget, Office of the Governor	Nov. 1 each year	45 days prior to regular	Unlimited	Yes	July1	Biennial
Georgia	Governor	Office of Planning & Budget	Sept. 1	By 5th day of session or sooner	Unlimited	Yes	July 1	Annual
Hawaii	Governor(b)	Budget, Planning & Management Div., Dept. of Budget & Finance	Aug. 31	20 days prior to convening of session on 3rd Wed. in Jan.	Unlimited	Yes	July 1	Biennial, odd yr.(a,c)
Idaho	Governor	Office of the Governor	Sept. 1 before Jan. session	Not later than 5th day of session	Unlimited	Yes	July 1	Annual
Illinois	Governor	Bureau of the Budget, Office of the Governor	Specific date for each agency set by Bureau of the Budget	First Wed. in March	Unlimited	Yes	July 1	Annual
Indiana	Governor	Budget Agency(d)	Sept. 1 in even years, flexible policy	Within the 1st two weeks after the session convenes(e)	Unlimited	No	July 1	Biennial, odd yr.(a)
Iowa	Governor	Comptroller	Sept. 1	Feb. 1 or before	Unlimited	Yes	July 1	Biennial, odd yr.(a)
Kansas	Governor	Div. of the Budget, Dept of Administration	Not later than Oct. 1	Within 3 weeks after convening of session in odd years and within 2 days after convening of session in even years	Unlimited	Yes	July 1	Annual
Kentucky	Governor	Office for Policy & Management, Dept. of Finance	Specific date set by administrative action but may not be	As governor desires	Unlimited	Yes	July 1	Biennial, even yr.(a)

Louisiana	Governor	State Executive Budget Director, Div. of Administration	Dec. 15	Not later than 1st day of each regular session	Unlimited	Yes	July 1	Annual
Maine	Governor	Bureau of the Budget, Dept. of Finance & Administration	Sept. 1 in even years	Not later than the Fri. following the first Mon. in Jan. of the 1st regular legislative session. Governor-elect to 1st term, not later than Fri. following 1st Mon. in Feb. of 1st regular legislative session	Unlimited	No	July 1	Biennial, odd yr.(a)
Maryland	Governor	Secretary, Dept. of Budget & Fiscal Planning	Sept. 1	3rd Wed. of Jan. annually	Limited: legislature may decrease but not increase, except appropriations for legislature and judiciary	No	July 1	Annual
Massachusetts	Governor	Budget Director, Div. of Fiscal Affairs, Executive Office for Administration & Finance	Set by administrative action	Within 3 weeks after convening of the legislature	Unlimited	Yes	July 1	Annual
Michigan	Governor	Office of the Budget, Dept. of Management & Budget	Set by administrative action	10th day of session	Unlimited	Yes	Oct. 1	Annual
Minnesota	Governor	Budget Div., Dept. of Finance	Oct. 1 preceding convening of legislature	Within 3 weeks after the 1st Mon. in Jan. in each odd year	Unlimited	Yes	July 1	Biennial, odd yr.(a)
Mississippi	Commission of Budget & Accounting(f)	Commission of Budget & Accounting	Aug. 1 preceding convening of legislature	Dec. 15	Unlimited	Yes	July 1	Annual
Missouri	Governor	Div. of Budget & Planning, Office of Administration	Oct. 1	By the 30th day	Unlimited	Yes	July 1	Annual
Montana	Governor	Director, Office of Budget & Program Planning, Governor's Office	Sept. 1 of year before each session	1st day of session	Unlimited	Yes	July 1	Biennial, odd yr.
Nebraska	Governor	Budget Div., Dept. of Administrative Services	Not later than Sept. 15	Jan. 15	Limited: three-fifths vote required to increase governor's recommendations; majority vote required to reject or decrease such items	Yes	July 1	Annual
Nevada	Governor	Budget Director, Budget Div., Dept. of Administration	Sept. 1	10th day of session or before	Unlimited	No	July 1	Biennial, odd yr.(a)
New Hampshire	Governor	Comptroller, Dept. of Administration & Control	Oct. 1 in even years	Feb. 15 in odd years	Unlimited	No	July 1	Biennial, odd yr.(a)
New Jersey	Governor	Director, Div. of Budget & Accounting, Dept. of the Treasury	Oct. 1	Third Tues. after opening of session	Unlimited	Yes	July 1	Annual
New Mexico	Governor	Budget Div. Dept. of Finance & Administration	Sept. 1	On or before 25th day of regular session	Unlimited	Yes	July 1	Annual
New York	Governor	Div. of Budget, Executive Dept.	Early in Sept.	Second Tuesday following the first day of the annual session, except on or before Feb. 1 in years following gubernatorial election	Limited: may strike out items, reduce items, or add separate items of expenditure	Yes	April 1	Annual

State or other jurisdiction	Budget-making authority	Official or agency preparing budget	Date estimates must be submitted by dept. or agencies	Date submitted to legislature	Power of legislature to change budget*	Power of item veto by governor	Fiscal year begins	Frequency of budget
North Carolina	Governor	Office of State Budget	Sept. 1 preceding session	1st week of session	Unlimited	No	July 1	Biennial, odd yr.(a)
North Dakota	Governor	Office of Management & Budget	July 15 in even years; may extend 45 days	Dec. 1, prior to biennial session	Unlimited	Yes	July 1	Biennial, odd yr.
Ohio	Governor	Office of Budget & Management	Nov. 1; Dec. 1 when new governor is elected	Within four weeks of convening in odd years unless change in governor; then March 15	Unlimited	Yes	July 1	Biennial, odd yr.(a)
Oklahoma	Governor	Director of State Finance, Div. of Budget	Sept. 1	Immediately after convening of regular legislative session; an incoming governor, following inaugural	Unlimited	Yes	July 1	Annual
Oregon	Governor	Budget & Management Div., Executive Dept.	Sept. 1 in even year preceding legislative year	Dec. 1 in even year preceding legislative year	Unlimited	Yes	July 1	Biennial, odd yr.
Pennsylvania	Governor	Secretary of Budget & Administration, Governor's Office of Budget & Administration	Nov. 1 each year	As soon as possible after organization of legislature, but no later than 1st full week in Feb. Governor-elect to 1st term, no later than 1st week in March	Unlimited	Yes	July 1	Annual
Rhode Island	Governor	Div. of Budget, Dept. of Administration	Oct. 1	24th day of session	Unlimited	No	July 1	Annual
South Carolina	State Budget & Control Board(g)	Finance Div., State Budget & Control Board	Sept. 15 or discretion of board	2nd Tues. in Jan.	Unlimited	Yes	July 1	Annual
South Dakota	Governor	Commissioner, Bureau of Finance & Management, Dept. of Executive Management	Sept. 1	1st Tues. after 1st Mon. in Dec.	Unlimited	Yes	July 1	Annual
Tennessee	Governor	Budget Div., Dept. of Finance & Administration	Oct. 1	Prior to Feb. 1, except prior to March 1 in first year of governor's term	Unlimited	Yes	July 1	Annual
Texas	Governor, Legislative Budget Board	Budget & Planning Office, Office of Governor; Legislative Budget Board	Date set by budget director and legislative board	7th day of session or before	Unlimited	Yes	Sept. 1	Biennial, odd yr.(a)
Utah	Governor	State Budget Office	Sept. 1 (odd yrs.)	After convening of legislature, 5 days regular session; 1 day budget session	Unlimited	Yes	July 1	Annual
Vermont	Governor	Commissioner, Dept. of Budget & Management; Agency for Administration	Sept. 1	3rd Tues. in Jan.	Unlimited	No	July 1	(i)
Virginia	Governor	Director, Dept. of Planning & Budget; Office of Administration & Finance	Feb.-Sept. in odd years	Within 5 days after convening of regular session on 2nd Wed. in Jan. in even years	Unlimited	Yes	July 1	Biennial, even yr.(a)
Washington	Governor	Director, Office of Financial Management	Date set by governor	20th day of Dec. prior to session	Unlimited	Yes	July 1	Biennial, odd yr.(a)

West Virginia	Governor	Planning Div. & Div. of Budget, Dept. of Finance & Administration	Aug. 15	1st day of session except for 1st year of new gov. when it may be submitted 1 month after convening of session	Limited: may not increase items of budget bill except appropriations for legislature and judiciary	Yes	July 1	Annual
Wisconsin	Governor	Div. of State Executive Budget & Planning, Dept. of Administration	Dates as set by secretary, Department of Administration	On or before the last Tues. in Jan. in odd-numbered years	Unlimited	Yes	July 1	Biennial, odd yr.(a)
Wyoming	Governor	Budget Div., Dept. of Administration & Fiscal Control	Sept. 15 preceding session in Feb.	Jan. 1	Unlimited	Yes	July 1	Biennial, even yr.(a)
Dist. of Col.	Mayor	Office of Budget & Management Systems	Date set by mayor	(j)	Unlimited	Yes	Oct. 1	Annual
American Samoa(k)	Governor	Planning & Budget Office	July 1	August	Unlimited (local funds)	Yes	Oct. 1	Annual
Guam	Governor	Bureau of Budget & Management Research	Date set by director, Bureau of Budget & Management Research. Usually not later than Feb. 15	By April 30	Unlimited	Yes	Oct. 1	Annual
Puerto Rico	Governor	Bureau of the Budget, Office of the Governor	Oct. 15	2nd Mon. in Jan.; opening day of regular session	Unlimited	Yes	July 1	Annual
Virgin Islands	Governor	Director of the Budget, Office of the Governor	Dec. 30	Upon convening	Unlimited	Yes	Oct. 1	Annual

*Limitations listed in this column relate to legislative power to increase or decrease budget items generally. Specific limitations, such as constitutionally earmarked funds or requirement to enact revenue measures to cover new expenditure items, are not included.

(a) Budget is adopted biennially, but appropriations are made for each year of the biennium separately. Maine – budget is reviewed annually. Minnesota and Wisconsin – a few appropriations are made for the biennium. Virginia – amendments to current budget can be made in any year, but there is no formal provision for annual review of the entire biennial appropriation. North Carolina, Washington and Wyoming – biennial appropriations with annual review. Wisconsin – statutes authorize an annual budget review, and the governor may in even years recommend changes.

(b) Governor has budget-making authority for executive branch only. Judiciary and legislative branch budgets are the responsibility of the respective branches, and the governor may only veto the budget bills as a whole, not by item.

(c) Increases or decreases may be made in even-year sessions.

(d) Budget Committee serves in advisory capacity.

(e) Convenes on first Thursday after first Monday in January in odd years.

(f) Composition of commission: governor as ex officio chairman, lieutenant governor, chairman House Ways and Means Committee, chairman House Appropriations Committee, chairman Senate Finance Committee, president pro tem of senate, chairman Senate Appropriations Committee, one member of senate appointed by lieutenant governor, speaker of house, two house members appointed by the speaker.

(g) Composition of board: governor as chairman, treasurer, comptroller general, chairman Senate Finance committee, chairman House Ways and Means Committee.

(h) Thirty days prior to each department or agency hearing before the governor.

(i) 1981 legislature authorized annual or biennial budget at governor's discretion. Submission of annual budget began with fiscal 1982.

(j) Budget submitted to both council and Congress. Council sets date of submission for its review; the Office of Management and Budget, Executive Office of the President, sets the date for submission to Congress.

(k) Information from 1980-81 *Book of the States*.

electronic or other medium approved for such purpose by the governing board or officer having jurisdiction or control of such public funds.

(5) PROCEDURES FOR WIRE TRANSFER OF FUNDS.—Notwithstanding any other provision of law, the governing board or officer of any local government who has the authority to deposit or withdraw funds is authorized to transfer funds from one depository to another or within a depository or to another institution, and may transfer funds wherein the transfer does not represent an expenditure, advance, or reduction of cash assets. Such transfer may be made by electronic, telephonic, or other medium; and each transfer shall be confirmed in writing and signed by the designee of the governing board or officer of the local government.

(6) INVESTMENT OF PUBLIC FUNDS.—Notwithstanding any other provision of law, the governing board or officer of any local government who has the authority to invest funds is authorized to transfer funds by electronic or other medium for purposes of investment to any depository authorized by law to receive funds or in the Local Government Surplus Funds Trust Fund. A written record shall be kept of all transfers made pursuant to this section.

History.—ss. 1, 2, 3, 4, 5, ch. 78-406; s. 3, ch. 82-104.

215.96 Coordinating council.—[Repealed effective October 1, 1989, by s. 1, ch. 82-46, and scheduled for review pursuant to s. 11.611 in advance of that date.]

CHAPTER 216

PLANNING AND BUDGETING

216.031 Budgets for operational expenditures.

216.031 Budgets for operational expenditures.—The legislative budget requests submitted by the head of each state agency, showing the amounts requested for operational expenditures during the next biennium, shall contain the following:

(1) For each budget entity, a summary exhibit showing, for each appropriation category, for each fund, 2 prior years' appropriations for general revenue, 1 prior year's actual and 1 current year's estimated expenditures, and the requested expenditures for each year of the next biennium. The total number of positions for the budget entity shall be shown for each fiscal year of data for which positions are authorized, fixed, or requested. However, the agency budget request for the State University System shall be expressed in terms of the amounts for the various programs as prescribed in s. 240.271 and in terms of the specified appropriation categories, including the special units' budgets, prescribed in the prior appropriations act.

(2) For each program component within the budget entity, an exhibit showing, for each appropriation category, the summary explanation of expenditures for each detail issue describing the amounts and positions for each year of the next biennium to continue current programs, for improved programs, and for new programs, with a summary showing totals by fund for each year of the biennium.

(3) For each trust fund within the budget entity, a schedule showing the trust funds available, providing the source of receipts, detail of nonoperating disbursements, operating disbursements, fixed capital outlay, and unencumbered cash balances, for 2 prior years' actual, the current year's estimated, and the request for each year of the biennium.

(4) For each budget entity, a schedule showing detail of positions, providing for each class of positions within discrete organizational activities, by the collective bargaining unit and program component for each year of the next biennium, the number of full-time equivalent positions, the estimated rate of salary, the number of months to be employed, the amounts requested for new positions, and the number of new positions requested.

(5) Detailed information for each year of the biennium necessary for the Legislature and the Governor to evaluate:

(a) The effectiveness of current programs, including justification for those programs.

(b) The justification for increasing costs to continue the operations of current programs.

(c) The justification for proposed improvements in existing programs.

(d) The justification for proposed new programs.

(6) Additional information providing a detailed description of the agency's request and the corresponding calculations needed to support the request.

(7) A schedule and other such detailed information as may be necessary to identify the federal grants-in-aid portion of the agency's legislative budget request, as may be prescribed by the Executive Office of the Governor, in consultation with the appropriations committees of the Legislature.

(8) Workload and other performance indicators as prescribed by the Executive Office of the Governor pursuant to s. 216.023.

(9) The sum of money actually expended for contractual services, as defined in s. 287.012, by the agency for the previous year.

(10) A schedule listing each committee, however created; council; coordinating council; commission; and board of trustees that is adjunct to the executive agency. The schedule shall show the name, number of meetings held in the past fiscal year, number of members, and expenses of each committee, council, coordinating council, commission, or board of trustees. The schedule shall further state the purpose of each committee, council, coordinating council, commission, or board of trustees and the statutory basis for each one's creation.

The legislative appropriations committees and the Executive Office of the Governor may require the agency to address major issues for inclusion in the agency's requests. The issues shall be submitted to the agency no later than August 30 of each even-numbered year and shall be displayed in the agency's requests as provided in the budget instructions.

History.—s. 41, ch. 69-106; s. 7, ch. 71-354; s. 1, ch. 77-452; s. 40, ch. [illegible]; s. 1, ch. 80-45; s. 3, ch. 82-10; s. 11, ch. 82-196.

*Note.—As amended by s. 1, ch. 80-45, paragraph (e) is added to subsection (5) effective July 1, 1981, to read:

(e) The projected cost of the requested [illegible] budget cycle.

CHAPTER NO. 666

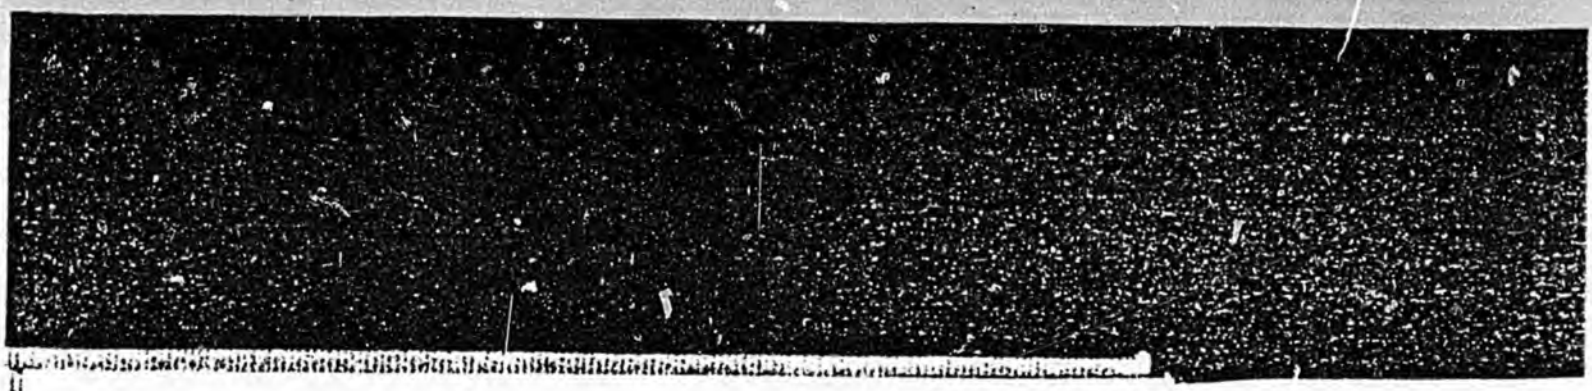
AN ACT TO CLARIFY THE INFORMATION REQUIRED TO BE SUBMITTED TO THE BUDGET DIRECTOR AND THE LEGISLATIVE FISCAL ANALYST FOR THE PREPARATION OF AGENCY BUDGET ESTIMATES; PROVIDING A DATE BY WHICH THE BUDGET OFFICE WILL PREPARE AN AGENCY REQUEST; AND SPECIFICALLY INCLUDING THE UNIVERSITY SYSTEM UNDER THE BUDGET REQUIREMENTS; AMENDING SECTIONS 17-7-111 AND 17-7-112, MCA.

Be it enacted by the Legislature of the State of Montana:

Section 1. Section 17-7-111, MCA, is amended to read:

"**17-7-111. Agency program budgets — form distribution and contents.** *(1)* In the preparation of a state budget, the budget director shall, not later than July 1 in the year preceding the convening of the legislature, distribute to all state offices and departments, including the judicial branch and the legislative branch, the proper *forms* necessary for the preparation of budget estimates. These *forms* shall be prescribed by the budget director to procure *the* information *required by subsection (2).*

(2) The agency budget requests, when completed by the budget office, must set forth a balanced financial plan for the agency completing the forms for each fiscal year of the ensuing biennium. The plan must consist of:



(a) a consolidated agency budget summary for current level expenditures and for each modification request setting forth the aggregate figures of the full-time equivalent personnel positions (FTE) and the budget in such manner as to show a balance between the total proposed disbursements and the total anticipated receipts, together with the other means of financing the budget for each fiscal year of the ensuing biennium, contrasted with the corresponding figures for the last completed fiscal year and the fiscal year in progress. The consolidated budget summary must be supported by schedules classifying receipts and disbursements contained therein by fund and, where applicable, organizational unit.

(b) a schedule of the actual and projected receipts, disbursements, and solvency of each accounting entity within each fund for the current and subsequent biennium;

(c) a detailed schedule of receipts, by accounting entity within each fund, indicating classification and source of funds;

(d) an agency schedule summarizing past and proposed spending plans and the means of financing the proposed plan. Information presented shall include the following:

(i) a statement of agency goals and objectives and a statement of goals and objectives for each program of the agency;

(ii) actual FTE and disbursements for the completed fiscal year of the current biennium, estimated FTE and disbursements for the current fiscal year, and the agency's request for the ensuing biennium, by program; and

(iii) actual disbursements for the completed fiscal year of the current biennium, estimated disbursements for the current fiscal year, and agency's recommendations for the ensuing biennium, by disbursement category;

(e) any other information the budget director feels is necessary for the preparation of a budget.

(3) The budget director must also prepare and submit to the legislative fiscal analyst in accordance with 17-7-112:

(a) detailed recommendations for the state long-range building program. Each recommendation shall be presented by department, institution, agency, or branch by funding source, with a description of each proposed project; and

(b) the proposed pay plan schedule for all executive branch employees with the specific cost and funding recommendations for each agency. Submission of a pay plan schedule under this subsection is not an unfair labor practice under 39-31-401."

Section 2. Section 17-7-112, MCA, is amended to read:

"17-7-112. Submission deadline. (1) It shall be the duty of each department, agency, and office, *including the Montana university system,* to submit *the* information *required under 17-7-111 to* the budget director on or before September 1 in the even year preceding the convening of the legislature.

(2) Between August 15 and September 30 in the year preceding the convening of the legislature, the director must submit each state agency's budget request required under 17-7-111(2) to the legislative fiscal analyst. The transfer of budget information shall be done on a schedule mutually agreed to by the budget director and the legislative fiscal analyst in a manner that facilitates an even transfer of budget information during the month of September and which allows each office to maintain a reasonable staff workflow.

(3) If any department, institution, *university unit,* or agency shall fail to present such information within the time herein specified, the budget director shall note that fact in the budget submitted to the governor and the budget director shall prepare *and submit to the legislative fiscal analyst and the governor by October 30* a budget request on behalf of such department, institution, *university unit,* or agency, based upon his studies of the operations, plans, and needs thereof.

(4) The proposed pay plan schedule required by 17-7-111(3) must be submitted to the legislative fiscal analyst no later than November 15 in the year preceding the convening of the legislature."

Approved April 28, 1983.

54-44-03. Director of the office of management and budget. There shall be a director of the office of management and budget who shall be appointed by and serve at the will of the governor. The salary of the director shall be set by the governor within the limits of the amount appropriated for salaries by the legislative assembly, and the director and other employees of the office shall be reimbursed for expenses incurred in carrying out the duties of their office at the same rate and in the same manner as other state officials. The director shall be empowered to adopt rules, not inconsistent with law or rules established by the governor, for the administration of the office of management and budget, the conduct of its employees, the

distribution and performance of its business, and the custody, use, and preservation of the records, documents, and property pertaining thereto. He shall be empowered to set up such divisions or other internal organization within the office that he shall deem necessary in order to efficiently carry out the duties, powers, and responsibilities of the office.

The director of the office of management and budget shall execute an official bond in the sum of one hundred thousand dollars.

54-44-04. Powers and duties of the director of the office of management and budget. The director of the office of management and budget, or such subordinate officer as he shall designate:

1 to 4. Repealed by S.L. 1965, ch. 358, § 20.

5. Shall examine the budget affecting the legislative and judicial branches of the state government, but only for the purpose of determining the sufficiency of funds to meet the contemplated expenditures of these branches of state government or their officers or agencies.

6 and 7. Repealed by S.L. 1965, ch. 358, § 20.

8. Shall keep the general accounts, reflecting for each fund the resources and balance, together with current revenues and expenditures, and shall provide for an accrual accounting system.

9. Shall, acting as director of the office of the budget, process all claims for submittal to the office of management and budget, which may conduct the preaudit of all claims from the executive branch of the government before payment and the director shall conduct the current audit of all revenues, which shall include the supervision of the collection of all moneys due the state.

10. Repealed by S.L. 1979, ch. 541, § 2.

11. Except as otherwise provided by law, shall prepare warrants for payment of all claims from the executive branch of government, when approved by the office of the budget, and for payment of all claims from the judicial and legislative branches.

12. Shall be vested with the duties, powers, and responsibilities involved in the development and installation of financial records and procedures for all state departments and agencies.

12.1. Shall coordinate the development of accounting and financial related systems.

12.2. Shall create an accounting manual and provide sufficient training of current and potential users concerning the functions and use of a statewide accounting and reporting system.

13. Shall conduct such interval audits of accounts in the several departments of the state as he shall deem necessary.

14. Shall issue current reports to administrative officials concerning the status of revenue, expenditures, and appropriation accounts, and shall make periodic financial reports to the governor, administrative officials, the legislative assembly, and the public.

14.1. Shall prepare on an annual basis comprehensive financial statements of the state of North Dakota.

15. Shall submit a biennial report as prescribed by section 54-06-04 to the governor and the office of management and budget covering the activities of all the divisions of the office. In addition to any requirements established pursuant to section 54-06-04, the report shall include a statement of the funds of the state, the revenues of the state, and public expenditures during the two preceding fiscal years.
16. Shall accompany his biennial report with tabular statements showing the amount of each appropriation for the two preceding fiscal years, the amount expended, and the balance, if any, and also the amount of revenue chargeable to each county for such years, the amount paid, and the amount unpaid or due therefrom.
17. Shall, when requested, give information in writing to either house of the legislative assembly relating to the fiscal affairs of the state or to the administration of his office.
18. Shall submit to the governor at the close of each business day, or at such times as the governor may request, a report showing the current condition of each fund and appropriation.
19. Shall keep an account with each organized county of the state in which each county shall be charged with the amount of delinquent taxes due to the state, and with all sums levied in such county for state purposes, and shall be credited with all sums paid into the state treasury on account of such taxes.
20. Shall keep an account between the state and state treasurer, and charge the state treasurer therein with the balance in the treasury when he came into office, and with all moneys received by the state treasurer, and credit him with all warrants drawn on and paid by him.
21. Shall be vested with the duties, powers, and responsibilities involved in the operation of a centralized purchasing service.
22. Shall maintain and operate such supply rooms as may be found desirable to supply the several departments with office supplies and other commonly used commodities; however, this subsection shall not be construed as authorizing the establishment of a warehousing system.
22.1. Shall distribute federal and state surplus property pursuant to sections 54-44-04.5 and 54-44-04.6.
23. Shall establish and operate a central duplicating service and central mechanical or electronic data processing facilities.
24. Shall perform such other duties as are or may be prescribed by law.

Institutions under Board of Administration.

This chapter did not relieve the board of administration (predecessor to director of institutions) of all responsibility for overseeing accounts and purchases of institutions under its control; rather, the department of accounts and purchases (predecessor to office of management and budget) is to work through the board of administration with respect to such institutions. State ex rel. Joos v. Guy (1963) 125 NW 2d 468.

54-44-04.1. The director of the office of management and budget shall have authority to withhold or deduct certain amounts from employees' compensation. The director of the office of management and budget, in addition to other deductions or withholdings authorized or permitted by law, shall be authorized to withhold or deduct from the employees' monetary compensation such amounts as may be determined by the employer and employees to participate in tax-favored or tax-sheltered annuity programs which are authorized by the federal Internal Revenue Code

Source: S.L. 1969, ch. 453, § 1.

54-44-04.2. Unemployment compensation assessments to departments and institutions. Beginning July 1, 1979, all departments and institutions of the state of North Dakota shall pay to the office of management and budget one percent of the first six thousand dollars of each employee's earnings. Such assessments shall be paid to the office of management and budget in accordance with guidelines established by the office of the budget, from the general fund and special funds appropriated for salaries and wages to the individual departments and institutions. The moneys received from such assessments shall be deposited by the office of management and budget into a fund for the purpose of paying unemployment compensation claims. The director of the office of management and budget may decrease or suspend the assessments provided for in this section upon determination that the funds deposited pursuant to this section are sufficient to offset anticipated obligations.

1. The office of management and budget is responsible for the fair and equitable distribution, through donation, of all federal surplus property transferred to the state in accordance with the Federal Property and Administrative Services Act of 1949, as amended [63 Stat. 378; 40 U.S.C. 484 (j)], hereinafter referred to as the federal Act.
2. The director of the office of management and budget, or such subordinate officer as the director shall designate:
   a. May receive, investigate, and make recommendations on applications for federal surplus property available under the federal Act.
   b. May acquire any federal surplus property transferred to the state under the federal Act.
   c. May distribute any federal surplus property pursuant to the federal Act to:
      (1) Any public agency for use in carrying out or promoting for the residents of a given political subdivision one or more public purposes; or
      (2) Nonprofit educational institutions, public health institutions, or organizations which are exempt from taxation under section 501 of the federal Internal Revenue Code, for purposes of education or public health or research for those purposes.
   d. May store the federal surplus property.
   e. Shall develop, submit, and implement a state plan of operation for distribution of federal surplus property and comply with the federal Act and rules and regulations adopted thereunder Provided, the director may continue the state plan of operation developed by the department of public instruction.
   f. May cooperate and enter into agreements with other surplus property agencies and federal agencies to screen and acquire surplus property and exchange property, facilities, personnel, and services.
   g. May provide information and assistance for acquiring federal surplus property to entities listed in subdivision c.
   h. May assess and collect service charges from participating recipients to cover direct and reasonable cost of services under this section. The service charges shall be deposited with the state treasurer in a surplus property special fund and used pursuant to the federal Act. The state treasurer shall credit all interest earned to the fund if the director requests the state treasurer to invest portions of the fund.
   i. Adopt rules and take other action necessary to distribute federal surplus property pursuant to the federal Act.

Source: S.L. 1981, ch. 537, § 2.

54-44-04.6. State surplus property — Department heads to inform director — Disposition of property — Proceeds — Exchange of property.

1. The person in charge of any department, agency, or institution of the state shall inform the director of the office of management and budget whenever that department, agency, or institution possesses surplus property, whether originally obtained with state or federal funds, and

the person in charge believes that the state surplus property may be used by any other department, agency, institution, or political subdivision of the state.

2. The director of the office of management and budget shall dispose of the state surplus property in the following manner:
   a. By transferring it to other state departments, institutions, or agencies without cost other than transportation expenses which shall be paid by the receiving agency. Provided, when the state surplus property was originally purchased pursuant to an appropriation other than from the general fund of the state, the agency receiving that state surplus property shall pay an amount equal to the fair market value of the property. Moneys received pursuant to this subdivision shall be deposited in the fund from which the original purchases were made.
   b. If not disposed of under subdivision a, then by sale on sealed bids or at public auction to the highest and best bid for property valued at more than three thousand dollars, with no money deposit required prior to sale, or by sealed bids, public auction, or negotiation at fair value for property valued at less than three thousand dollars.
   c. If not disposed of under subdivision a or b, title to the property shall be transferred to political subdivisions without cost, except transportation expenses.
3. All proceeds of property sold under this section, less sales costs, shall be deposited in the general fund except as provided in subdivision a of subsection 2.
4. No department, agency, or institution may exchange items as part of a purchase price of new items until a detailed statement of the value of the items to be exchanged and request for approval have been submitted to the director of the office of management and budget. The director shall approve the exchange only if the director has determined that the item has been valued at fair value.

Source: S.L. 1981, ch. 537, § 3.

54-44-04.7. Responsibility to administer unassigned statutory functions of state government. The office of management and budget shall administer all statutory functions assigned to the executive branch of state government but not statutorily placed with any specific state entity.

Source: S.L. 1981, ch. 534, § 6.

54-44-05. Warrants — Numbered — Show funds on which drawn — Not drawn unless authorized. Warrants drawn by the office of management and budget and signed by the state auditor on the state treasurer shall be numbered consecutively in the order in which they are drawn. Every warrant shall be drawn upon the fund out of which it is payable. A warrant shall not be drawn by the office of management and budget and signed by the state auditor unless authorized by law, and unless there are funds in the treasury applicable to the payment thereof to meet the same. In case of an emergency, and in anticipation of taxes already levied and

in the process of collection, the office of management and budget may prepare warrants to be signed by the state auditor in payment of duly authorized vouchers even though funds at such time do not exist to honor the warrants. Warrants so issued shall be payable by the state treasurer out of any funds in his hands other than sinking funds, or funds dedicated by the Constitution of North Dakota for other purposes.

Source: S.L. 1959, ch. 372, § 1; 1965, ch. 345, § 2.

54-44-06. Duties as to school fund. The office of management and budget shall keep a separate account of the school fund and of the interest and income thereof, together with such moneys as may be raised by special tax or otherwise for school purposes. The office shall perform such duties with reference to the apportionment of such fund as are described in title 15.

Source: S.L. 1959, ch. 372, § 1.

54-44-07. Office to set up account against person who fails to render account. Whenever any person has received moneys or has moneys or other personal property which belongs to the state by escheat or otherwise, or has been entrusted with the collection, management, or disbursement of any moneys, bonds, or interest accruing therefrom, belonging to or held in trust by the state, and fails to render an account thereof to and make settlement with the office of management and budget within the time prescribed by law, or when no particular time is specified, fails to render such account and make such settlement, or fails, within twenty days after request by the office of management and budget to pay into the state treasury any money belonging to the state, the office of management and budget must state an account with such person, charging interest at the rate of twelve percent per annum from the time of the failure. A copy of such account shall be prima facie evidence in any suit of the things therein stated. If the office of management and budget, for want of information, cannot state an account, that fact may be alleged and the amount of money or other property which is due or which belongs to the state may be stated generally.

Source: S.L. 1959, ch. 372, § 1.

54-44-08. Director to institute suits in name of state. The director of the office of management and budget shall institute suit in the name of the state against:

1. Officials for all official delinquencies in relation to the assessment, collection, and payment of the revenue.
2. Persons who by any means have become possessed of public moneys or property and who fail or neglect to pay for or deliver the same.
3. All persons indebted to the state.

Source: S.L. 1959, ch. 372, § 1.

54-44-09. Supplies for institutions under control of the office of management and budget. The office of management and budget shall make

all purchases of goods and materials on behalf of the various state institutions, departments, and agencies in accordance with the standards and specifications of the United States bureau of standards.

Source: S.L. 1959, ch. 372, § 1.

54-44-10. Legislative inspection of books of office of management and budget. Whenever required the office of management and budget shall submit its books, accounts, and vouchers to the inspection of the legislative assembly, or any committee thereof authorized to request such documents.

Source: S.L. 1959, ch. 372, § 1.

54-44-11. Office's operating funds creation.

1. The office of management and budget shall establish a state purchasing operating fund to be used for the procurement and maintenance of an inventory of equipment and supplies for the state departments and agencies. Any surplus in this fund in excess of one hundred thousand dollars on June thirtieth of each year shall be transferred to the state general fund.
2. The office of management and budget shall establish a state printing operating fund to be used for the procurement and maintenance of an inventory of printing equipment and supplies for the state departments and agencies.
3. The office of management and budget shall establish a state central data processing operating fund to be used for the procurement and maintenance of data processing equipment and supplies and for providing data processing services to state departments and agencies.
4. Each office, agency, or institution provided with purchasing, printing, or data processing services, unless exempted by law, shall pay to the office of management and budget a proportionate share of the cost of such service as determined by the director of the office of management and budget, based on actual costs and actual usage. The amounts paid to the office of management and budget by the various offices, agencies, and institutions shall be deposited in the appropriate operating fund and shall be expended in accordance with legislative appropriations.

Note.

Section 54-44-11 was amended twice by the 1981 Legislative Assembly. Section 7 of chapter 534, S.L. 1981, changed the name of the department of accounts and purchases to the office of management and budget in subsection 1. Section 1 of chapter 538, S.L. 1981, deleted language concerning transfer of surplus funds in subsections 2 and 3. Pursuant to section 1-02-09.1, the section is printed above to harmonize and give effect to the changes made by both acts.

54-44-12. Deposit and disbursement of funds of occupational and professional boards — Appropriation. 54-44-13. Failure of political subdivisions to repay natural disaster overpayments — Office of management and budget authorized to withhold funds. Whenever an overpayment made to any state political subdivision under the Disaster Relief Act of 1970 [Pub. L. 91-606; 84 Stat. 1744], and all acts amendatory and supplemental thereto, is not repaid by the following July first, the state office of management and budget shall:

1. Upon certification from the governor's natural disaster representative that a political subdivision is delinquent in repaying such overpayment, withhold all funds, grants-in-aid, tax shares, and other similar moneys due the subdivision from the state until the subdivision repays either the federal or state government.
2. Cease to withhold funds when the governor's natural disaster representative certifies that the subdivision has repaid the overpayment.

Note.

The Disaster Relief Act of 1974 (P.L. 93-288, 88 Stat. 143, 42 U.S.C. § 5121 et seq.) substantially repealed the Disaster Relief Act of 1970 referred to in this section.

CHAPTER 54-44.1

OFFICE OF THE BUDGET

Section

54-44.1-01. Definition.
54-44.1-02. Office of the budget — Director — Employees — Powers.
54-44.1-03. Powers and duties of the director of the budget.
54-44.1-04. Budget estimates of budget units filed with the office of the budget — Deadline.
54-44.1-05. Federal aid budget requests — Filed with the office of the budget.
54-44.1-06. Preparation of the budget data — Contents.
54-44.1-07. Presentation of budget data — How presented to the legislative assembly.
54-44.1-08. Budget report — Contents — When submitted to legislative assembly.
54-44.1-09. All expenditures must be appropriated.
54-44.1-10. Payments made pursuant to law only.
54-44.1-11. Office of management and budget to cancel unexpended appropriations — When they may continue.
54-44.1-12. Control over rate of expenditures.
54-44.1-13. Budget requests for legislative and judicial branches.
54-44.1-14. Biennial report to legislative assembly.

54-44.1-01. Definition. As used in this chapter, unless the context otherwise requires, the term "budget unit" means a department, institution, board, commission, agency, or other unit of government for which separate or distinct appropriations are made.

81A C. J. S. States, § 203.

54-44.1-02. Office of the budget — Director — Employees — Powers. The office of the budget is hereby established in the office of management and budget, for the purpose of promoting economy and efficiency in the fiscal management of the state government. The director of the office of management and budget shall be ex officio director of the budget.

The director of the budget shall appoint a budget analyst who shall hold a baccalaureate degree from a recognized institution of higher learning and such appointment shall be based upon the qualifications of eligible persons, without reference to partisan politics. Special consideration shall be given to persons who hold a degree in law, political science, business administration, or a combination thereof and who are experienced in governmental processes. The budget analyst shall serve at the pleasure of the director of the budget. The budget director shall employ such other professional, technical, and clerical personnel as he may deem necessary to carry out the duties prescribed in this chapter and shall fix the salary of all employees within the office of the budget and within the limits of the legislative appropriations. All personnel within the office of the budget shall be allowed their actual and necessary travel expenses at the same rate as for other employees of the state.

Claims against state, budget office to assume functions of auditing board, see § 54-14-01.1.

54-44.1-03. Powers and duties of the director of the budget. The director of the budget, or such subordinate officer as he shall designate shall:

1. Be vested with the duties, powers, and responsibilities involved in securing budget estimates and work programs from the several departments and agencies of the state government.
2. Be vested with the duties, powers, and responsibilities involved in the preparation of revenue and fixed expense estimates.
3. Develop financial policies and plans as the basis for budget recommendations to the legislative assembly, and prepare detailed documents in accordance with such financial policies and plans for presentation to the legislative assembly.
4. Coordinate the fiscal affairs and procedures of the state to assure the carrying out of the financial plans and policies approved by the legislative assembly.
5. Exercise continual control over the execution of the budget affecting the departments, institutions, and agencies of the executive branch of the state government involving approval of all commitments for conformity with the program provided in the budget, frequent comparison of actual revenues and budget estimates, and control of the rate of expenditures through a system of semiannual, quarterly, or monthly allotments.
6. Investigate, examine, and make exhaustive studies:
   a. Of the structure and operation of the entire executive branch of government and of every office, institution, and agency thereof.
   b. Of all the functions, duties, and services of all executive branch offices, departments, institutions, industries, boards, bureaus, and commissions.

54-44.1-04. Budget estimates of budget units filed with the office of the budget — Deadline. The head of each budget unit, not later than July fifteenth of each year next preceding the session of the legislative assembly, shall submit to the office of the budget, estimates of financial requirements of his budget unit for the next two fiscal years, on the forms and in the manner prescribed by the office of the budget, with such explanatory data as is required by the office of the budget and such additional data as the head of the budget unit wishes to submit. The estimates so submitted shall bear the approval of the board or commission of each budget unit for which a board or commission is constituted. The director of the budget in his discretion may extend the filing date for any budget unit if he finds there is some circumstance which makes it advantageous to authorize the extension. If a budget unit has not submitted its estimate of financial requirements by the required date or within a period of extension set by the director of the budget, the director of the budget shall prepare such budget unit's estimate of financial requirements except such estimate shall not exceed ninety percent of such budget unit's previous biennial appropriation. The director of the budget or such subordinate officer as he shall designate shall examine the estimates and shall afford to the heads of budget units reasonable opportunity for explanation in regard thereto and, when requested, shall grant to the heads of budget units a hearing thereon which shall be open to the public.

Budget director to receive quarterly reports

54-44.1-06. **Preparation of the budget data — Contents.** The director of the budget, through the office of the budget, shall prepare budget data which shall contain and include the following:

1. Summary statements of the financial condition of the state, accompanied by such detailed schedules of assets and liabilities as the director of the budget deems desirable, which shall include, but not be limited to, the following:
   a. Summary statements of fund balances and assets showing in detail for each fund the surplus or deficit at the beginning of each of the two fiscal years of the previous biennium and the first fiscal year of the present biennium, the actual revenue for those years, the total appropriations for the previous and present biennium, and the total expenditures for those fiscal years; and
   b. Similar summary statements of the estimated fund balances and assets for the current fiscal year and each of the fiscal years of the next biennium.

   Summary statements may include, but not be limited to, a comparative consolidated balance sheet showing all the assets and liabilities of the state and the surplus or deficit, as the case may be, at the close of the first fiscal year of the current biennium.
2. Statements of actual revenue for the previous biennium, the first year of the present biennium, and the estimated revenue of the current fiscal year and of the next biennium, and a statement of unappropriated surplus expected to have accrued in the state treasury at the beginning of the next fiscal year. The statements of revenue and estimated revenue shall be classified by sources and by budget unit collecting them. Existing sources of revenue shall be analyzed as to their equity, productivity, and need for revision, and any proposed new sources of revenue shall be explained.
3. Summary statements of expenditures of the previous biennium and first year of the present biennium, itemized by budget units and classified as prescribed by the director of the budget.
4. Detailed comparative statements of expenditures and requests for appropriations by funds, budget units and classification of expenditures, showing the expenditures for the previous biennium, the first fiscal year of the present biennium, the budget of the current biennium, and the governor's recommendation for appropriations for each budget unit for the next biennium, all distributed according to the

prescribed classification of expenditures. Following the lists of actual and proposed expenditures of each budget unit there shall be a brief explanation of the functions of the unit and comments on its policies and plans and on any considerable differences among the amounts recommended, with such descriptive, quantitative, comparative, and other data as to work done, unit costs, and like information as may be considered necessary or desirable. For capital outlay expenditures involving construction projects to be completed in two or more fiscal years, there shall be shown the total estimated cost of each such project and the amount thereof recommended to be appropriated and expended in each ensuing fiscal year until completion of the project. Capital outlay needs may be projected for at least two years beyond the period covered by the budget.

5. A detailed statement showing the estimate of all moneys required to be raised or appropriated for the payment of interest upon the funded debt of the state and its other obligations bearing interest, and the amount of money required to be contributed in the two next ensuing fiscal years to the general sinking funds maintained for the redemption and payment of the debts of the state.
6. A summary statement of the unappropriated fund balance estimated to be available at the beginning of the next biennium, and the estimated revenue of the next biennium, as compared with the total recommended amounts of appropriation for all classes of expenditures for the next biennium, and if the total of the recommended expenditures exceeds the total of the estimated resources, recommendations as to how the deficiency is to be met and estimates of any proposed additional revenue.
7. Drafts of a proposed general appropriations act and special appropriations acts embodying the budget data and recommendations of the governor for appropriations for the next biennium, and drafts of such revenues and other acts recommended by the governor for putting into effect the proposed financial plan. The recommended general appropriation for each budget unit shall be specified in a separate section of the general appropriations act.
8. Such other information as the director of the budget deems desirable or as is required by law.

Source: S.L. 1965, ch. 358, § 6; 1979, ch. 562, § 1.

54-44.1-07. Presentation of budget data — How presented to the legislative assembly. The director of the budget or his designated subordinate shall present the budget data information in section 54-44.1-06, including the budget and revenue proposals recommended by the governor, and make available sufficient copies thereof to the budget section of the legislative council. The budget data shall be completed and made available to the budget section of the legislative council, or its designee, in such form as may be acceptable to it by December first of each year next preceding the session of the legislative assembly, or at such later date as may be set by the budget

section chairman. The chairman of the budget section shall set the time and place at which such budget data is to be presented.

Decisions under Prior Law.

The budget of appropriations prepared by the auditor was an official record, of which the courts would take judicial notice. State ex rel. Wallace v. Jorgenson (1916) 34 ND 527, 159 NW 35.

54-44.1-08. Budget report — Contents — When submitted to legislative assembly. The official budget report shall be transmitted by the governor to all holdover legislators and legislators-elect not later than three days after the commencement of the session of the legislative assembly. Such report is not a third-class item under section 46-02-05. The budget director shall provide for the duplication or other satisfactory reproduction or printing of the official budget report, so as to ensure delivery of same as provided in this section. Such reports shall contain the budget and revenue proposals recommended by the governor and the information required in subsections 1, 2, 3, 5, and 6 of section 54-44.1-06 and all other data and information as the governor shall decide. The budget director shall make available any and all information regarding budget data to the governor, the legislative assembly and its designees, legislators, and to the governor-elect as may be requested. The governor may present any additional budget information in any manner to the legislative assembly as he may desire.

Source: S.L. 1965, ch. 358, § 8; 1967, ch. 393, § 1; 1973, ch. 430, § 1.

54-44.1-09. All expenditures must be appropriated. All expenditures of the state and of its budget units of moneys drawn from the state treasury shall be made under authority of biennial appropriations acts, which shall be based upon a budget as provided by law, and no money shall be drawn from the treasury, except by appropriation made by law as required by section 12 of article X of the Constitution of North Dakota.

Source: S.L. 1965, ch. 358, § 9.

54-44.1-10. Payments made pursuant to law only. No payment shall be made and no obligation shall be incurred against any appropriation unless such payment or obligation has been authorized as provided by law Every official authorizing payments in violation of this chapter shall be subject to the penalties and provisions of chapter 12.1-23.

1. New construction projects.
2. Major repair or improvement projects.
3. Purchases of new equipment costing more than ten thousand dollars per unit if it was ordered during the first twelve months of the biennium in which the funds were appropriated.
4. The purchase of land by the state on a "contract for deed" purchase where the total purchase price is within the authorized appropriation.

Source: S.L. 1965, ch. 358, § 11; 1979, ch. 563, § 1.

54-44.1-12. Control over rate of expenditures. The director of the budget shall exercise continual control over the execution of the budget affecting the departments and agencies of the executive branch of the state government. Execution shall mean the analysis and approval of all commitments for conformity with the program provided in the budget, frequent comparison of actual revenues and budget estimates, and on the basis of these analyses and comparisons control the rate of expenditures through a system of semiannual, quarterly, or monthly allotments. Before an allotment is made which will reduce the amount of funds which can be disbursed pursuant to an appropriation or before an allotment disallowing a specific expenditure is made, the director must find one or more of the following circumstances to exist:

1. The moneys and estimated revenues in a specific fund from which the appropriation is made are insufficient to meet all legislative appropriations from the fund.
2. The payment or the obligation incurred is not authorized by law.
3. The expenditure or obligation is contrary to legislative intent as recorded in any reliable legislative records, documents, or other reliable evidence available.
4. Circumstances or availability of facts not previously known or foreseen by the legislative assembly which make possible the accomplishment of the purpose of the appropriation at a lesser amount than that appropriated.

Source: S.L. 1965, ch. 358, § 12; 1967, ch. 394, § 1.

54-44.1-13. Budget requests for legislative and judicial branches. The budget requests and expenditures for the legislative and judicial branches of this state shall not be subject to the provisions of this chapter and such budget requests shall be submitted directly to the legislative assembly with informational copies of such budgets provided to the director of the budget not later than November fifteenth in each year preceding a session of the legislative assembly.

Source: S.L. 1965, ch. 358, § 13.

54-44.1-14. Biennial report to legislative assembly. The director of the budget or such member of that office as he shall designate may prepare

and transmit to the governor and upon approval by him may transmit to the members of the legislative assembly at least sixty days prior to the commencement of an ensuing legislative session a report which shall contain definite and specific proposals and recommendations to accomplish the following purposes:

1. To simplify the governmental structure of the state so as to render it more economical and efficient.
2. To eliminate all obsolete and unnecessary offices, departments, institutions, boards, bureaus, and commissions of the state.
3. To consolidate the functions, services, and activities of state offices and agencies thereof so as to eliminate duplication of service and expense wherever it exists.
4. To correlate the functions and services of the several offices and agencies of the state government.
5. To eliminate obsolete methods, unnecessary functions and services carried on by the state government and to render those functions and services which are determined to be absolutely essential and more economical and efficient.

CHAPTER 54-44.2

OFFICE OF CENTRAL DATA PROCESSING

Section

54-44.2-00.1. Definitions.
54-44.2-01. Office of central data processing — Creation.
54-44.2-02. Office of central data processing — Powers and duties.
54-44.2-03. Acquisition of data processing equipment.
54-44.2-04. Appointment of data processing coordinators.
54-44.2-05. Repealed by S.L. 1979, ch. 565, § 1.
54-44.2-06. Secrecy provision.

54-44.2-00.1. Definitions. As used in this chapter:

1. "Data processing" or "electronic data processing" means the systematic sequencing of operations performed by data processing equipment or programs, or both, upon data stored or entered in alphabetic, numeric, or alphanumeric format.
2. "Data processing equipment" means an electronic device or associated devices, except calculators and stand-alone noncommunicating word processors, which perform logical, arithmetic, and memory functions by the manipulation of electronic or magnetic impulses and includes all compiling and related input, output, and storage, equipment, programs and procedures, and data processing communication facilities.
3. "Word processing" means the textual formatting, correcting, editing, and rearranging of language elements, designed to convey full messages in English syntax, through manipulation of electronic or magnetic impulses. "Word processors" are devices on which word processing can be carried out.

condition and results of operation of the State of Oregon in accordance with current, generally accepted accounting principles and such other financial and statistical information as may be necessary to completely and accurately disclose the financial condition and financial operations of the state and its various agencies. The financial statements shall include, but not be limited to, such information as may be found in a balance sheet, a statement of changes in fund balances, statement comparing budgeted and actual revenues and expenditures, statement of changes in financial position and a statement of operations. The financial statements shall compare the current fiscal year and, if it is the second year of the biennium, the first year thereof, and each fiscal year of the preceding biennium.

(2) As used in subsection (1) of this section, generally accepted accounting principles shall mean those accounting principles sanctioned by recognized authoritative bodies such as the National Council on Governmental Accounting, the American Institute of Certified Public Accountants, the Financial Accounting Standards Board or their successors.

(3) The first financial report required by subsection (1) of this section shall be prepared for the biennium ending June 30, 1979. [1977 c.897 §1]

Note: 291.040 and 291.042 were enacted into law by the Legislative Assembly but were not added to or made a part of ORS chapter 291 or any series therein by legislative action. See the Preface to Oregon Revised Statutes for further explanation.

291.042 Use of data processing programs, information and materials; approval by legislature. (1) Subject to the approval of the Joint Legislative Committee on Data Processing, the Data Systems Division of the Executive Department:

(a) May obtain copyrights and patents on copyrightable or patentable data processing programs, information or materials developed, published or produced by state agency staff.

(b) May cause to have sold, leased, or otherwise made available such data processing programs, information or materials to any agency or legislative body of any state or the Federal Government under such terms and conditions as may be agreed to by the committee and the agencies.

(2) Moneys collected under this section shall be credited to the General Fund and are available for general governmental purposes. [1979 c.740 §3]

Note: See note under 291.040.

STATE BUDGET; BUDGET REPORT

291.202 Budget report of Governor; department to assist Governor in preparation. Except as otherwise provided in ORS 291.222, the Governor shall prepare in each even-numbered year a budget report for the biennium beginning July 1 of the following year. The Executive Department shall advise and assist the Governor in the preparation of his budget report and shall perform such duties in connection therewith as the Governor requires. [Amended by 1969 c.464 §2]

291.204 Prescribing forms for submitting budget estimates and requests for appropriations; furnishing budget forms to agencies. The department, by July 1 of each even-numbered year, shall furnish every state agency with a sufficient number of forms for its use in preparing for submission to the Governor the information required by the Governor in the preparation of his budget report. The Governor shall prescribe the forms to be used by the agencies in submitting their budget estimates and requests for appropriations as required by ORS 291.208.

291.206 Guidance of agencies in completing budget forms. (1) The Governor shall prescribe such rules and regulations as he deems necessary for the guidance of agencies in the preparation of the budget estimates and requests. The Governor, with the approval of the Secretary of State, shall prepare and prescribe classifications of expenditures and revenue for the purpose of budget-making and accounting.

(2) In so far as practicable, agency budget estimates and requests and appropriation measures shall be prepared in a manner that reflects state governmental organization and state agency duties, functions and powers under the law in effect on January 1 of the following year. The Executive Department shall maintain agency budget estimates and requests in the form in which they are submitted. [Amended by 1969 c.173 §1]

291.208 Filing budget forms with department; preparing requests for agencies failing to file. Each state agency shall file with the department, before September 1 in each even-numbered year, on the form and in the manner required, its budget forms

containing the information required. The department shall prepare budget estimates and requests for appropriations for all agencies that fail to file requests.

291.210 Preparing tentative budget plan. The department, in connection with its direct studies of the operations, plans and needs of state agencies and of the existing and prospective sources of income, shall prepare a tentative budget plan for the two fiscal years for which a budget report is required to be prepared.

291.212 Revising budget plan; transmitting budget forms and tentative budget report to Governor. Upon receipt of the budget forms, the department shall check the agencies' estimates in the light of the tentative budget plan and shall make such further inquiries and investigations as the Governor requires and revise its tentative budget plan accordingly. The department then shall transmit to the Governor the budget forms filed with it by the state agencies and the revised tentative budget report.

291.214 Governor to examine budget forms and revise tentative budget report. The Governor, during the preparation of the budget report and before its submission to the Legislative Assembly, shall examine the budget forms filed by the various agencies. He may make or cause to be made such further investigations by the department, with such hearings before him or any state agency, as he deems advisable, and may make such changes or revisions in policy and program and in specific details of the tentative budget report as he finds warranted.

291.216 Governor's budget report. (1) Not later than November 10 of each even-numbered year the Governor shall cause the budget report to be compiled and prepared for printing.

(2) The budget report shall include a budget message prepared by the Governor, including his recommendations with reference to the fiscal policy of the state government for the coming biennium, describing the important features of the budget plan, embracing a general budget summary setting forth the aggregate figures of the budget report so as to show a balanced relation between the total proposed expenditures and the total anticipated income, with the basis and factors on which the estimates are made, the amount to be borrowed, and other means of financing the estimated expenditures for the ensuing biennium, compared with the corresponding figures for at least the last completed biennium and the current biennium.

(3) The budget plan shall be supported by explanatory schedules or statements, classifying the expenditures reported therein, both past and proposed, by organization units, objects and funds, and the income by organization units, sources and funds, and the proposed amount of new borrowing as well as proposed new tax or revenue sources.

(4) The budget plan shall be submitted for all dedicated funds, as well as the state General Fund, and shall include the estimated amounts of federal and other aids or grants to state agencies or activities provided for any purpose whatever, together with estimated expenditures therefrom.

(5) The budget report shall embrace the detailed estimates of expenditures and revenues. It shall include statements of the bonded indebtedness of the state government, showing the actual amount of the debt service for at least the past biennium, and the estimated amount for the current biennium and the ensuing biennium, the debt authorized and unissued, the condition of the sinking funds and the borrowing capacity. It shall also contain any statements relative to the financial plan which the Governor may deem desirable or which may be required by the legislature.

291.218 Printing budget report; transmitting to members of legislature; distribution. Except when the Governor under whose supervision the budget report has been prepared will be succeeded in office in January next following:

(1) The department shall have as many copies of the approved budget report printed as the Governor directs.

(2) Not later than December 1 of each even-numbered year, the Governor shall transmit a copy thereof to each member of the legislature who is to serve during the next session.

(3) Upon request, the Governor shall distribute copies free of charge, under such regulations as he may establish, to public libraries, schools and state officials. He shall make copies available to the general public at a reasonable charge for each copy. [Amended by 1959 c.140 §1; 1967 c.302 §1]

291.220 Furnishing information and assistance to legislature. The Governor, upon request, shall furnish the Legislative Assembly any further information required concerning the budget report. The department, upon request, shall furnish a representative to assist the Legislative Assembly, its Joint Committee on Ways and Means, appointed under ORS 171.555, and the Legislative Revenue Officer in the consideration of the budget report and any accompanying measures. [Amended by 1969 c.173 §2; 1975 c.789 §8]

291.222 Furnishing information and assistance to Governor-elect; revision of budget report. If the Governor under whose supervision the budget report has been prepared will be succeeded in office in January next following:

(1) The department shall make available to the Governor-elect so much as he requests of the information upon which the tentative budget report is based, and upon completion of the tentative budget report shall supply him with a copy thereof but shall not cause the tentative budget report to be printed and distributed. The department shall also make available to him all facilities of the department reasonably necessary to permit him to review and familiarize himself with the tentative budget report.

(2) After a review of the tentative budget the Governor-elect may prepare revisions and additions thereto. The department shall assist, upon request, in the preparation of such revisions or additions.

(3) The department shall have as many copies of the revised budget report printed as the Governor-elect requests.

(4) Not later than the convening of the next Legislative Assembly the department shall transmit a copy of a summary of the revised budget report containing the revenue and expenditure recommendations of the Governor-elect and not later than February 1 shall transmit a copy of the revised budget report to each member of the Legislative Assembly.

(5) Upon request, the department shall distribute copies of the revised budget report free of charge, under such regulations as it may establish, to public libraries, schools and state officials. It shall make copies of the revised budget report available to the general public at a reasonable charge for each copy. [Amended by 1967 c.302 §2; 1969 c.464 §3]

291.223 Furnishing agency budget estimates to Legislative Fiscal Officer and Legislative Revenue Officer; confidentiality of estimates. (1) Not later than November 10 of each even-numbered year the Governor shall cause the agency budget estimates and requests as described in ORS 291.206 to be made available to the Legislative Fiscal Officer and to the Legislative Revenue Officer.

(2) Before December 1 of the year in which they were made available under subsection (1) of this section, the Legislative Fiscal Officer or his staff and the Legislative Revenue Officer or his staff shall not reveal to any other person the contents or nature of the budget reports and other materials, except with the written consent of the Governor. [1969 c.173 §4; 1975 c.789 §9]

291.224 Capital construction program to be included in budget report; recommendation of Capitol Planning Commission. (1) A capital construction program containing estimated capital construction needs, irrespective of how financed, shall be included with the budget report required by ORS 291.216. The capital construction program shall contain the estimated physical construction requirements for each biennium of a period to be determined by the Governor, which period shall not be less than six years. The department shall assist the Governor in the preparation of the capital construction program.

(2) Except as otherwise provided in subsection (3) of this section and in accordance with regulations prescribed by the department, state agencies shall submit to the department their anticipated capital construction requirements for the period specified by the Governor. The department shall prescribe the basic assumptions relating to population changes, economic trends and other factors which might generally affect capital construction requirements and these basic assumptions shall be used by the state agencies in preparing their anticipated capital construction requirements. Each state agency is responsible for the basic assumptions which affect only its own program. The department shall prepare estimated capital construction requirements for any necessary capital construction not covered by the capital construction requirements submitted by the state agencies under this section.

(3) Each state agency, including the department, required under subsection (2) of

this section to submit or prepare anticipated or estimated capital construction requirements, shall submit a copy of such requirements that relate to construction or improvements within the areas described in ORS 276.028 to the Capitol Planning Commission at a time specified by the Capitol Planning Commission, but not later than August 1 of each even-numbered year. The Capitol Planning Commission shall review capital construction requirements submitted as required by this subsection and, not later than November 1 of each even-numbered year, make recommendations to the department with respect to such capital construction proposals.

(4) In accordance with regulations prescribed by the department, each state agency shall separately submit its estimated office space requirements for the period specified by the Governor; and the department shall consolidate those needs and make an estimate for all state office buildings to be included in the capital construction program.

(5) The Governor shall consolidate the estimates, review all of them and make such revisions as he finds warranted.

(6) The budget report shall include the proposed expenditures for the capital construction program for the ensuing biennium and the proposed expenditures for preliminary planning of the construction projects included in the capital construction program for the biennium following the ensuing biennium. The budget report shall also include dollar estimates of the cost of the capital construction projects included in the capital construction program for the succeeding years of the period determined by the Governor under subsection (1) of this section and the recommendations submitted to the department pursuant to subsection (3) of this section.

(7) As used in this section, "capital construction program" does not include the acquisition, repair, improvement, enlargement, construction or maintenance of highways and highway bridges, or park improvements, by the Department of Transportation. [1959 c.500 §1; 1973 c.129 §6]

291.226 Budget item to replace lost and unrecovered public funds or property. When there has been a failure to recover a loss of public funds or property pursuant to ORS 297.120, the state agency sustaining the loss shall include the amount of the loss in its budget estimate and request for the following biennium clearly marked as to purpose, and the Governor shall include such item in his budget report for the consideration of the Legislative Assembly. [1963 c.617 §3]

ALLOTMENTS

291.232 Declaration of policy. It is declared to be the policy and intent of the Legislative Assembly that the total appropriations made by it, or the total of any budget approved by it, for any state agency, shall be deemed to be the maximum amount necessary to meet the requirements of such agency for the biennium, excepting as may otherwise be provided by law, and that the Governor and the Executive Department are given the powers granted by ORS 291.202 to 291.222 and 291.232 to 291.260 in order that savings may be effected by careful supervision throughout each biennium, with due regard to changing conditions, and by promoting more economic and efficient management of state agencies.

291.234 Department to make allotments to state officers and agencies of appropriations and funds; allotment period. (1) The department shall make allotments to state officers and agencies of appropriations and funds pursuant to the allotment system provided for in ORS 291.234 to 291.260.

(2) For the purposes of the allotment system, each fiscal year shall be divided into four quarterly allotment periods, beginning, respectively, on the first days of July, October, January and April. However, in any case where the quarterly allotment period is impracticable, the department may prescribe a different period suited to the circumstances, not exceeding six months nor extending beyond the end of the biennium.

291.236 Allotment system applicable to all appropriations; controlling expenditures and encumbering of emergency, contingent, revolving and trust funds. (1) The provisions of ORS 291.234 to 291.260 relating to the allotment system shall apply to all appropriations for state officers and agencies. For this purpose "appropriation" includes standing, continuing and annual appropriations, and dedicated funds. In those cases where periodical allotments are impracticable, the department may dispense therewith and prescribe such regulations as will insure proper application and encumbering of funds.

(2) Subject to ORS 291.238, emergency or contingent funds, revolving funds and trust funds shall be subject to such regulations as

the department may prescribe for controlling the expenditures and encumbering of such funds.

291.238 Expenditures without allotment prohibited; expenditures from dedicated, revolving and trust funds. (1) Except as expressly authorized in this section or ORS 291.236, no person shall incur, or order or vote to incur, any obligation against the state in excess of, or make or order or vote to make any expenditure not authorized by, an allotment. Any such obligation so incurred shall not be binding against the state, but where the obligation violates this section only for having been made in excess of an allotment, the department may authorize payment thereof from unallotted funds.

(2) Excepting as to administrative expenditures from dedicated, revolving and trust funds and to revolving funds established to provide services rendered by any state agency to other state agencies or to any body politic of the State of Oregon, expenditures from dedicated funds, revolving funds and trust funds may be made by any state agency without appropriation or allotment.

(3) No person shall make or order or vote to make any expenditure from or chargeable to a revolving fund or trust fund in excess of the amount standing to the credit of such fund or for any purpose for which such fund may not lawfully be expended.

291.240 [Repealed by 1953 c.168 §4]

291.242 Allotment required before expenditure of appropriation; submitting estimates. No appropriation to which the allotment system is applicable shall become available to any state agency for expenditure thereby during any allotment period until:

(1) The agency submits to the department an estimate, in such form as the department prescribes, for such allotment period, of the amount required for each activity to be carried on during that period; and

(2) The estimate is approved, increased or decreased by the department and funds allotted therefor.

291.244 Department action on estimates. The department shall act promptly upon all estimates required by ORS 291.242. If the estimate is within the terms of the appropriation as to amount and purposes, having due regard for the probable further needs of the agency for the remainder of the term for which the appropriation was made, and if the department determines that there is a need for the estimated amount for the allotment period, the department shall approve the estimate and allot the estimated amount for expenditures. Otherwise the department shall modify the estimate so as to conform with the terms of the appropriation and the prospective needs of the agency, and shall reduce the amount allotted accordingly.

291.246 Allotments to be made for purpose or classification of expenditure prescribed in appropriation measure. Allotments shall be made according to purpose and classification of expenditures prescribed in the appropriation measure as enacted by the Legislative Assembly; provided, however, that the department may make allotments for agencies by purposes or by other classification of expenditures of amounts appropriated or authorized to be expended in appropriation measures enacted by the Legislative Assembly, whether or not such measures establish classification of expenditures. In making allotments, the department shall not authorize the expenditure of moneys for any purpose not authorized by the Act appropriating the money or authorizing it to be expended, and the funds allotted for each purpose or classification of expenditure shall be used for no other purpose or classification of expenditure. [Amended by 1963 c.182 §7]

291.248 Notice of allotment. Upon the granting of any allotment, the department shall transmit a notice of the allotment to the agency concerned.

291.250 Claims and encumbrances limited by amount and purpose of allotment. The agency shall not create any claim or encumbrance for the future disbursement of appropriated moneys unless the proposed expenditure as estimated, together with expenses theretofore paid from or encumbered against such allotment, is within the total amount and for the purposes specified in the notice of allotment transmitted to such agency.

291.252 Modifying allotment previously made. The department may at any time modify or amend any allotment previously made by it, upon application of, or upon notice to, the agency concerned, but no such modification or amendment shall reduce an allotment below the amount required to meet

valid obligations or commitments previously incurred against the allotted funds.

291.254 Reducing allotment to prevent deficit. If the department determines at any time that the probable receipts from taxes or any other sources for any appropriation will be less than was anticipated, and that consequently the amount available for the remainder of the term of the appropriation or for any allotment period will be less than the amount estimated or allotted therefor, the department shall, with the approval of the Governor, and after notice to the agency or agencies concerned, reduce the amount allotted or to be allotted so as to prevent a deficit.

291.256 [Repealed by 1959 c.608 §1]

291.258 Approval of department required for establishment of new personnel position or classification. A new personnel position or classification, not provided in the budget of an agency upon which appropriations have been based, shall not be established without prior approval of the department.

291.260 Approving, modifying or disapproving requests and budgets to be submitted to the Federal Government. Every state agency, when making requests or preparing budgets to be submitted to the Federal Government for funds, equipment, materials or services, other than for highway purposes, and purposes for which the state was legally committed on August 2, 1951, shall, upon completion of such request or budget, first submit it to the department. The department shall have authority to approve, disapprove, modify or amend any such request or budget before it is submitted to the proper federal authority.

291.262 [1963 c.182 §6; 1965 c.111 §1; repealed by 1969 c.488 §3]

ALLOCATION OF GOVERNMENTAL SERVICE EXPENSES

291.272 Definitions for ORS 291.272 to 291.280. As used in ORS 291.272 to 291.280, unless the context requires otherwise:

(1) "Administrative expenses" has the meaning defined by ORS 291.305.

(2) "Department" means the Executive Department.

(3) "Governmental service expenses" means the expenses of state government that are attributable to the operation, maintenance, administration and support of state government generally, and includes the following:

(a) Expenditures of the State Treasurer supported out of the General Fund incurred in the administration of the duties of his office, but not including the Inheritance and Gift Tax Divisions.

(b) Expenditures of the Department of Justice incurred in the administration of its duties, other than those of the Support Enforcement Division.

(c) Administrative expenses of the Executive Department supported out of the General Fund.

(d) One-half of the expenditures of the Legislative Assembly out of moneys appropriated from the General Fund, and all of the expenditures incurred in the administration of the duties of the Emergency Board.

(e) One-half of the expenditures incurred in the administration of the duties of the Joint Committee on Ways and Means and the Emergency Board.

(f) One-half of the expenditures incurred out of moneys appropriated from the General Fund in the administration of the duties of the Legislative Counsel Committee.

(g) Expenditures of the Secretary of State in the administration of the office of the State Archivist.

(4) "State agency" means every state officer, board, commission, department, institution, branch or agency of the state government, whose costs are paid wholly or in part from funds held in the State Treasury, and includes the Legislative Assembly, the courts and their officers and committees. [1967 c.637 §2; 1973 c.439 §9]

291.274 Determination of funds and appropriations to be assessed. The department shall determine and may at any time redetermine which state funds or appropriations shall be assessed a reasonable share of governmental service expenses. In determining or redetermining the funds that shall be so assessed:

(1) A fund consisting of moneys the use of which is restricted by the Oregon Constitution shall be assessed only those governmental service expenses ascertained as being necessarily incurred in connection with the purposes set forth in the Oregon Constitution.

(2) Trust funds shall be assessed only those governmental service expenses ascertained as being necessarily incurred in connection with the purposes for which the trust fund was established. [1967 c.637 §3]

291.276 Department to allocate governmental service expenses among state agencies. (1) With respect to each biennium beginning on July 1 of an odd-numbered year, commencing July 1, 1971, the department shall allocate among all state agencies the governmental service expenses, as determined by the department in accordance with ORS 291.272, for the biennium ending two years prior to the beginning of the biennium for which the allocation is made.

(2) The department, in accordance with the procedures and methods prescribed under subsection (3) of this section, shall determine and may at any time redetermine the reasonable share of governmental service expenses to be assessed against any fund or appropriation. Such expenses shall be a charge against any fund so designated and be considered an administrative expense of the agency administering the fund or appropriation.

(3) The department, with the approval of the Governor, shall prepare and prescribe the procedures and methods used in determining and redetermining the reasonable share of governmental service expenses assessed against any fund or appropriation.

(4) The department, with the approval of the Governor, may make rules necessary or proper to carry out the duties imposed upon it by ORS 291.272 to 291.280.

(5) The computation required by subsection (1) of this section shall be made by the department in advance of the biennium with respect to which the allocation is to be made. [1967 c.637 §4; 1969 c.105 §1]

291.278 Transfer of allocated amounts to General Fund. (1) Upon completion of the determination by the department under ORS 291.274 and 291.276, the department shall transfer to the General Fund, with appropriate notice to the State Treasurer, out of moneys appropriated to each state agency, the amount of governmental service expenses so certified for the agency.

(2) In the case of a state agency that collects or receives moneys for fees, fines, licenses or taxes not by law made a part of the General Fund available for general governmental purposes, if moneys available to such state agency are not sufficient to permit the transfer under subsection (1) of this section, the department shall notify the state agency of the amount certified with respect to the state agency under ORS 291.274 and 291.276, less any amount transferred out of moneys appropriated to such state agency under subsection (1) of this section. Thereafter, until such balance has been paid into the General Fund, 10 percent of all moneys collected or received by the state agency for fees, fines, licenses or taxes not by law made a part of the General Fund available for general governmental purposes shall be:

(a) Transferred by the department to and made a part of the General Fund available for general governmental purposes if such moneys are paid to the State Treasurer by the state agency; or

(b) Paid to the State Treasurer by the state agency receiving such moneys at the time when they are received by the state agency if such moneys are authorized by law to be kept and disbursed other than by and through the State Treasurer, and be credited by the State Treasurer to and made a part of the General Fund available for general governmental purposes.

(3) The transfer and payment to the General Fund required by this section shall be made notwithstanding any law that appropriates such moneys or any of them to any other purposes, and such portion so paid and transferred is not subject to any special uses thereby provided. [1967 c.637 §5]

291.280 Receipts by State Treasurer for transferred moneys. In receipting for moneys paid and transferred under ORS 291.278 (2), the State Treasurer shall make his receipt in duplicate, showing the amount credited to the General Fund available for general governmental purposes as well as the amount credited to any special fund or account. He shall file one of the duplicate receipts with the department. [1967 c.637 §6]

291.302 [Repealed by 1953 c.386 §9]

291.304 [Repealed by 1953 c.386 §9]

ACTS APPROPRIATING MONEY OR LIMITING EXPENDITURES

291.305 Meaning of "administrative expenses" in law appropriating money or limiting expenditures; limitation not ap-

propriation of money otherwise unavailable to agency. (1) As used in the laws enacted by the Legislative Assembly appropriating money or limiting expenditures, the term "administrative expenses" means, unless the context requires otherwise, those expenditures that are included under the classifications of expenditures, except debt service and special payments expenditure categories, which are prepared and prescribed, pursuant to ORS 291.206, for the purpose of budget-making and accounting during the biennium for which such laws appropriating money or limiting expenditures are enacted.

(2) In the laws enacted by the Legislative Assembly, the establishment of maximum limits for expenditures from, or for the payment of administrative expenses from, fees, moneys or other revenues collected or received by any agency is not intended as an appropriation of moneys not otherwise available to such agency. [1963 c.182 §§1, 3]

291.306 [Repealed by 1963 c.386 §9]

291.307 Appropriation from General Fund to constitute a credit only. An appropriation of any sum of money from the General Fund by any law shall not be considered as segregating or setting aside the amount of such appropriation from the moneys constituting the General Fund, but shall be considered and construed as constituting a credit in favor of the appropriation for the amount stated in the law making the appropriation, subject to allotment as provided in ORS 291.232 to 291.260. [Formerly 291.376]

291.308 [Repealed by 1963 c.386 §9]

291.310 [Repealed by 1963 c.386 §9]

EMERGENCY EXPENDITURES; EMERGENCY BOARD

291.322 Definitions for ORS 291.322 to 291.334. As used in ORS 291.322 to 291.334:

(1) "Emergency" means any catastrophe, disaster or unforeseen or unanticipated condition or circumstance, or abnormal change of conditions or circumstances, affecting the functions of a state agency and the expenditure requirements for the performance of these functions.

(2) "State agency" means any elected or appointed officer, board, commission, department, institution, branch or other agency of the state government. [1963 c.386 §1]

291.324 Emergency Board created. There hereby is created a joint committee composed of members of both houses of the Legislative Assembly, to be known as the Emergency Board. [1963 c.386 §2]

291.326 Powers of board concerning expenditures by state agencies. (1) The Emergency Board, during the interim between sessions of the Legislative Assembly, may exercise the following powers:

(a) Where an emergency exists, to allocate to any state agency, out of any emergency fund that may be appropriated to the Emergency Board for that purpose, additional funds beyond the amount appropriated to the agency by the Legislative Assembly, or funds to carry on an activity required by law for which an appropriation was not made.

(b) Where an emergency exists, to authorize any state agency to expend, from funds dedicated or continuously appropriated for the uses and purposes of the agency, sums in excess of the amount of the budget of the agency as approved in accordance with law.

(c) In the case of a new activity coming into existence at such a time as to preclude the possibility of submitting a budget to the Legislative Assembly for approval, to approve, or revise and approve, a budget of the money appropriated for such new activity.

(d) Where an emergency exists, to revise or amend the budgets of state agencies to the extent of authorizing transfers between expenditure classifications within the budget of an agency.

(2) No allocation, authorization or approval under paragraph (a), (b) or (c) of subsection (1) of this section shall be effective unless made at a meeting at which 10 members of the board were present.

(3) The laws enacted by the Legislative Assembly making appropriations and limiting expenditures, or either, are not intended to limit the powers of the Emergency Board. [1963 c.386 §3; subsection (3) enacted as 1963 c.182 §2; 1973 c.201 §2]

291.328 Board may require presentation of evidence to support requests for action; board to report its action to agencies concerned. Before the Emergency Board makes any allocation, grants any authorization or approves any budget under ORS 291.326, it may require the state agency in question to submit written evidence to justify the allocation, authorization or approval and

may require the head of the agency to appear before it in support thereof. The Emergency Board may also require the Director of the Executive Department to submit a written report as to the need and justification for the allocation, authorization or approval. Upon making an allocation, granting an authorization or approving a budget, the Emergency Board shall file with the department, the Secretary of State and the state agency in question a copy of the order of allocation, grant of authorization or approved budget. [1953 c.386 §4]

291.330 Members of board; confirmation. The Emergency Board shall be composed of the President of the Senate, the Speaker of the House of Representatives, the chairmen of the Senate and House Ways and Means Committees, six members of the Senate, at least three of whom shall have had some previous experience on the Ways and Means Committee, to be appointed by the President of the Senate and confirmed by a majority of all the members elected to the Senate, and seven members of the House, at least four of whom shall have had some previous experience on the Ways and Means Committee, to be appointed by the Speaker and confirmed by a majority of all the members elected to the House. [1953 c.386 §5; 1973 c.201 §1; 1979 c.324 §1]

291.332 Meetings of board; terms of members; filling vacancies on board. (1) The Emergency Board shall meet immediately upon adjournment of each Legislative Assembly and elect a chairman from their number. The board shall meet thereafter at such times as it may determine.

(2) The term of members of the board shall run from the adjournment of one regular session to the organization of the next regular session.

(3) If a vacancy occurs in the board, either the Speaker, if the legislator previously filling the position was a member of the House, or the President, if the legislator previously filling the position was a member of the Senate, shall fill such vacancy by an appointment for the unexpired term. However, such appointment, before becoming effective, shall be confirmed by the remaining members of the board, sitting as such board. [1953 c.386 §6]

291.334 Board authorized to secure assistance; payment of board expenses. (1) The Director of the Executive Department, upon request of the board, shall furnish necessary assistance to the board, or the board may employ such assistance as they may deem necessary.

(2) The expenses of the board, the cost of employed assistance, and other necessary expenses of the board shall be paid out of funds appropriated to the board specially for such purpose or, if no such appropriation is made, out of any emergency fund that may be appropriated to the board. All claims for those expenses and cost shall be approved by the chairman or other person authorized to approve claims, and warrants shall be drawn on the State Treasurer for the payment thereof in the same manner as other expenses are paid. [1953 c.386 §7; 1967 c.454 §96; 1975 c.530 §7]

291.336 Appropriation bills requiring approval of board before project commenced or contract let; how requirement met. (1) As used in this section, "appropriation bill" means a legislative Act which appropriates money or authorizes the expenditure of dedicated or continuously appropriated moneys or otherwise makes moneys available for expenditure.

(2) In all cases where an appropriation bill heretofore or hereafter passed provides that a state agency shall not commence any project or allow any contract to be let for any project without having the approval of the Emergency Board, such requirement may be met:

(a) During any period when the Legislative Assembly is in session, by the adoption of a resolution by each house approving the proposed action; or

(b) During any period when the Legislative Assembly is not in session, either by approval of the Emergency Board as provided in the appropriation bill, or by the elapse of 45 days without adverse action of the Emergency Board after notice of the proposed action has been given to each member of the Emergency Board at his last-known address. [1957 c.382 §1]

ESTIMATES OF STATE REVENUES

291.342 Annual estimation of state revenues; apportionment among counties of any state property tax levy necessary to make up deficiency; quarterly estimates. (1) By August 15 of each year, but not earlier than 90 days from the end of the regular session, if any, of the Legislative Assembly held in that calendar year, the Executive

Department, with the assistance of the Department of Revenue, shall:

(a) Ascertain by computation and estimate the total amount of revenue available for state purposes for the current fiscal year; and

(b) Apportion the state tax levy on property, if any, among the several counties in the manner provided in ORS 291.344.

(2) In addition to the requirement in subsection (1) of this section, the Executive Department with the assistance of the Department of Revenue shall for each calendar quarter of the year ascertain by computation and estimate the total amount of revenue available for state purposes for the current fiscal year, as well as the amount of revenue received quarterly, cumulated throughout the biennium, and report its estimate to the Legislative Revenue Officer and to the Emergency Board, or if the Legislative Assembly is in session, to the Joint Committee on Ways and Means.

(3) In carrying out its duties under subsection (2) of this section, the Executive Department shall issue quarterly a statement setting forth the methodology and assumptions used in making the revenue estimate. Nothing in this subsection requires the statement to set forth procedures used or methods used to determine either the methodology or the assumptions. [Formerly 309.510; 1971 s.s. c.5 §3; 1975 c.789 §10; 1989 c.11 §1]

291.344 Procedure for computation, levy, offset and apportionment of state property tax levy. (1) The department shall proceed as prescribed in this section.

(2) The department shall prepare a statement, summarizing:

(a) All the items of expense or deficiency, including interest on unpaid warrants left over from the previous year, to which the state will be subject under existing laws for the fiscal year next after that year or period for which the last preceding levy of state revenues was computed and declared; and

(b) When the levy is made on the assessment of an even year, the estimated expense of one biennial session of the Legislative Assembly.

(3) There shall be segregated from the total of the items tabulated in accordance with subsection (2) of this section the amount necessary for the payment of bonded indebtedness and interest thereon, and this amount shall constitute the state tax levy on property.

(4) From the total of the items summarized in accordance with subsection (2) of this section, after the amounts segregated pursuant to subsection (3) of this section have been deducted, there shall be deducted, in the order listed in subsection (5) of this section, all miscellaneous receipts including any surplus remaining in the State Treasury from all funds, however derived, excepting only the following:

(a) Funds whose use is restricted to particular purposes by the Constitution of Oregon.

(b) Funds whose use is restricted to particular purposes by federal law.

(c) All trust funds, as defined in ORS 291.002.

(5) (a) The department shall deduct first those miscellaneous receipts not excluded by paragraphs (a), (b) and (c) of subsection (4) of this section and not includable in the definitions of dedicated or revolving funds in ORS 291.002.

(b) If necessary, in order to provide revenue for all of the items summarized in subsection (2) of this section, the department shall then deduct as much as is necessary or available from any fund remaining in the State Treasury and not excluded by subsection (4) of this section. The department shall list these deductions in its records.

(6) The state tax levy on property segregated and levied pursuant to subsection (3) of this section shall be offset first by the application of miscellaneous receipts to the extent that they are not applied in accordance with subsection (4) of this section. Subject to the limitations of ORS 311.660, the amount of the state tax levy on property not offset by the foregoing application shall be apportioned among and charged to the several counties in that proportion which the total assessed value of all the taxable property in each county bears to the total assessed value of all the taxable property of the state as equalized.

(7) Immediately after the department has completed the computation, levy, offset and apportionment of the state tax levy on property in accordance with this section, a certificate thereof, signed by the director of the department, shall be filed in the office of the department. [Formerly 309.520; 1967 c.454 §97; 1981 c.804 §831]

291.348 Biennial estimate of General Fund revenues; certification to Secretary of State. (1) The department, with the assis-

tance of the Secretary of State, as soon as possible after June 30, 1966, and each even-numbered year thereafter, shall ascertain the total of General Fund revenues obtained from all sources during the preceding fiscal year, so far as is practicable.

(2) The Director of the Executive Department shall certify to the total of General Fund revenues during the preceding fiscal year as determined under subsection (1) of this section.

(3) As used in this section, "General Fund revenues" means all payments of money credited to the State Treasury that are placed or to be placed by the State Treasurer to the credit of the General Fund of the State of Oregon for general governmental purposes. [1965 c.615 §12; 1967 c.454 §98]

291.349 Revenue estimate; effect of revenue in excess of estimate. (1) As soon as practicable after adjournment sine die of the regular session of the Legislative Assembly, the Executive Department shall report to the Emergency Board the estimate as of July 1 of the first year of the biennium of General Fund revenues that will be received by the state during that biennium. The Executive Department shall base its estimate on the last forecast given to the Legislative Assembly before adjournment sine die of the regular session on which the printed, adopted budget prepared in the Executive Department is based, adjusted only in so far as necessary to reflect changes in laws adopted at that session. The report shall contain the estimated revenues from corporate income and excise taxes separately from the estimated revenues from other General Fund sources. The Executive Department may revise the estimate if necessary following adjournment sine die of any special or emergency session of the Legislative Assembly but any revision does not affect the basis of the computation described in subsection (3) or (4) of this section.

(2) As soon as practicable after the end of the biennium, the Executive Department shall report to the Emergency Board, or the Legislative Assembly if it is in session, the amount of General Fund revenues collected as of the last June 30 of the preceding biennium. The report shall contain the collections from corporate income and excise taxes separately from collections from other sources.

(3) If the revenues received from the corporate income and excise taxes during the biennium exceed the amounts estimated to be received from such taxes for the biennium, as estimated after adjournment sine die of the regular session, by two percent or more, the total amount of that excess shall be credited to corporate income and excise taxpayers in a percentage amount of corporate excise and income tax liability as determined under subsection (5) of this section. However, no credit shall be allowed against tax liability imposed by ORS 317.090.

(4) If the revenues received from General Fund revenue sources, exclusive of those described in subsection (3) of this section, during the biennium exceed the amounts estimated to be received from such sources for the biennium, as estimated after adjournment sine die of the regular session, by two percent or more, the total amount of that excess shall be credited in a percentage amount of income tax liability as determined under subsection (5) of this section.

(5) If there is an excess to be credited under either subsection (3) or (4) of this section, or both, on or before October 1, following the end of each biennium, the Executive Department shall determine and certify to the Department of Revenue the percentage amount of credit for purposes of subsection (3) or (4) of this section. The percentage amount determined shall be a percentage amount to the nearest one-tenth of a percent that will distribute the excess to be credited to either the corporate excise and income taxpayers or personal income taxpayers for taxable years beginning in the calendar year during which such excess is determined. The credit shall be computed after the allowance of any credit allowed or allowable under ORS chapter 316, 317 or 318, whichever may be applicable, and before the application of estimated tax payments, withholding or other advance tax payments. [1979 c.241 §30; 1981 c.885 §1]

Note: 291.349 and 291.355 were enacted into law by the Legislative Assembly but were not added to or made a part of ORS chapter 291 or any series therein by legislative action. See the preface to Oregon Revised Statutes for further explanation.

291.350 [1965 c.615 §13; repealed by 1971 c.544 §7]

291.352 [Renumbered 293.105]

291.354 [Amended by 1959 c.273 §7; 1961 c.280 §3; 1961 c.308 §2; renumbered 293.110]

RATE OF GROWTH OF APPROPRIATIONS

291.355 Rate of growth of appropriations for general governmental purposes. (1) Each biennium, growth of state governmental appropriations for general governmental purposes shall be no greater than the rate of growth of personal income in Oregon in the two preceding calendar years. The rate of growth shall be computed based on the U.S. Department of Commerce reports for the two preceding calendar years.

(2) For the 1979-1981 biennium, the base to which the rate of growth applies shall equal state governmental appropriations for general governmental purposes in the 1977-1979 biennium plus expenditures from non-General Fund sources that are to be funded in 1979-1981 out of the General Fund and less any General Fund expenditures in 1977-1979 that are to be funded in 1979-1981 from non-General Fund sources.

(3) In bienniums subsequent to the 1979-1981 biennium, the base shall be adjusted as necessary to reflect transfer of funding sources between General Fund sources and non-General Fund sources in order to maintain a base used for general governmental purposes.

(4) Debt service and tax relief other than that provided under ORS 310.630 to 310.690 shall not be considered appropriations for general governmental purposes. [1979 c.241 §29]

Note: See note under 291.349.

FISCAL MATTERS; LEGISLATIVE REVIEW

291.371 Approval of salary plan changes and unbudgeted new positions by legislative review agency required. (1) As used in this section, "legislative review agency" means the Joint Committee on Ways and Means during the period when the Legislative Assembly is in session and the Emergency Board during the interim period between sessions.

(2) Prior to making any changes in a salary plan, establishing any new positions specifically not provided for in the budget of the affected agency or reclassifying any positions specifically provided for in the budget of the affected agency, the Executive Department shall submit the proposed changes to the legislative review agency. The proposed change shall only be approved and take effect if the legislative review agency finds that the affected agency can finance the proposed change within the limits of its biennial budget and that the proposed change conforms to legislatively approved salary policies. The effective date of the change shall be the date prescribed by the Personnel Division. [1973 c.49 §1]

291.372 [Renumbered 293.155]

291.374 [Amended by 1955 c.133 §1; 1955 c.672 §1; 1957 c.460 §1; 1959 c.686 §39; 1961 c.268 §13; 1961 c.486 §27; renumbered 293.160]

291.375 Legislative review of applications for federal financial assistance; submission, approval required; exemptions. (1) Prior to the submission of any application for financial assistance or grants from the United States or any agency thereof by or on behalf of any agency of this state, the application must be submitted for legislative review in the following manner:

(a) If the application is to be submitted to the Federal Government when the Legislative Assembly is in session, the application shall be submitted to the Joint Committee on Ways and Means for review.

(b) If the application is to be submitted to the Federal Government when the Legislative Assembly is not in session, the application shall be submitted to the Emergency Board for review.

(2) If the legislative agency authorized under subsection (1) of this section to review applications described therein approves the application, it may be submitted to the appropriate federal agency. If the legislative agency disapproves of the application, it shall not be submitted to any federal agency unless it is or can be modified to meet the objections of the legislative agency.

(3) Notwithstanding subsection (1) of this section, the Joint Committee on Ways and

Means and the Emergency Board may exempt any state agency from the requirements of this section. Project grants for departmental research, organized activities related to instruction, sponsored research or other sponsored programs carried on within the Department of Higher Education, for which no biennial expenditure limitations have been established, are exempt from the requirements of this section.

(4) The review required by this section is in addition to and not in lieu of the requirements of ORS 293.550. [1973 c.44 §1]

291.378 [Renumbered 291.307]

291.378 [Amended by 1961 c.590 §1; renumbered 293.165]

291.380 [Amended by 1961 c.590 §2; renumbered 293.170]

291.385 Use of certain federal moneys for employment; legislative approval. Expenditures of moneys available to this state or any agency thereof under the Comprehensive Employment and Training Act (Public Law 93-203, 87 Stat. 839) and (Public Law 95-524, 92 Stat. 1909), the Emergency Job and Unemployment Assistance Act of 1974 (Public Law 93-567), and the Emergency Jobs Program Extension Act of 1976 (Public Law 94-444), as amended, are not limited by fixed sum appropriations or expenditure limitations imposed for the biennium beginning July 1, 1977, if authorized by the Joint Committee on Ways and Means after March 1, 1979. However, positions added under the provisions of the federal enabling legislation are subject to approval of the Emergency Board during the interim between sessions of the Legislative Assembly and by the Joint Committee on Ways and Means during a session of the Legislative Assembly. [1977 c.85 §1; 1979 c.93 §1]

Note: 291.385 was enacted into law by the Legislative Assembly but was not added to or made a part of ORS chapter 291 or any series therein by legislative action. See the Preface to Oregon Revised Statutes for further explanation.

COMMISSION ON OREGON STATE MANAGEMENT AND ORGANIZATION

Note: Sections 1 to 8, 10 and 12 of chapter 795, Oregon Laws 1979, provide:

Sec. 1. It is the purpose of this Act to improve the responsiveness and manage the growth of Oregon state government.

Sec. 2. (1) There is created a Commission on Oregon State Management and Organization consisting of nine members and four ex officio members.

(2) The Governor shall appoint four members of the commission; the President of the Senate and the Speaker of the House of Representatives shall each appoint two members of the commission; the Chief Justice of the Supreme Court shall appoint one member of the commission.

(3) The Governor, President of the Senate, Speaker of the House and Chief Justice of the Supreme Court shall serve as ex officio, nonvoting members of the commission.

(4) No person shall be eligible for appointment to the commission who is an elected or appointed official, or who has not been seven years a resident of the State of Oregon, nor shall any person be eligible for appointment to the commission who has not demonstrated excellent leadership or managerial ability prior to the person's appointment.

(5) Each member shall be appointed to serve for a term of two years and may be reappointed for one additional term.

(6) In case of a vacancy for any cause, the Governor, President of the Senate, Speaker of the House or Chief Justice of the Supreme Court, according to the position vacated, shall make an appointment to become effective immediately for the unexpired term.

Sec. 3. (1) The purpose of the Commission on Oregon State Management and Organization shall be to provide the greatest effectiveness of state government at the lowest possible cost.

(2) The commission shall advise and assist within the limits of its resources the legislative and executive branches of state government, including state agencies, to improve the responsiveness and manage the growth of Oregon state government through proposals for legislation or changes in administrative rules or policy.

(3) The commission shall select one or more comprehensive tasks to undertake each year from priority lists submitted to the commission by the Governor, President of the Senate, Speaker of the House and Chief Justice of the Supreme Court on or before July 1 of each year.

(4) In performing its duties, the commission within the limits of available funds may:

(a) Conduct hearings and conferences to ascertain facts, to comprehend state programs and activities and to obtain qualified opinions;

(b) Appoint subcommittees consisting of members of the commission and public members, if desired, and pay the reasonable and actual expenses thereof as provided in section 4 of this Act;

(c) Obtain from any state agency necessary assistance and data; and

(d) Perform all other necessary functions to carry out the purposes of the commission and this Act.

Sec. 4. A member of the Commission on Oregon State Management and Organization shall receive no

Legislative Budget & Audit Committee
Rep. Robert Bettisworth, Chairman

April 23, 1984

M E M O R A N D U M

To: Representative Charlie Bussell, Chairman, House Judiciary Committee

From: Representative Bob Bettisworth RHB

Subject: HJR52, Proposing an amendment to the Constitution of the State of Alaska to provide for a biennial state budget.

I have previously asked that HJR52 be scheduled for hearing in House Judiciary so that it can be considered in tandem with companion legislation (HB485) which has already reached House Finance. I would appreciate any help you can give me with respect to moving the resolution so we can deal with the biennial budget question in the most expeditious manner possible. The issue here has received positive reaction from the administration and could lead to improved budgetary planning and fiscal savings should a biennial budget cycle be adopted.

Please let me know if you have any questions. This is a very straightforward piece of legislation.

OFFICE OF THE DIRECTOR

DEC - 4

Honorable Terry Martin
Alaska House of Representatives
Anchorage, Alaska 99501

Dear Mr. Martin:

This is in response to your telephone request concerning corrections to the April 1, 1980 census population counts for Anchorage, Alaska made subsequent to the release of the Public Law 94-171 data. These corrections, which changed the 1980 population count of Census Tract 0002 from 6,114 to 7,528 and the count for the city and borough of Anchorage from 173,017 to 174,431, are reflected in final 1980 census tabulations and publications.

We are enclosing excerpts from the Block Statistics report (Census Tract 0002) for the Anchorage Standard Metropolitan Statistical Area, as well as a listing of the individual blocks affected by the changes. Map sheets containing Census Tract 0002 also are enclosed.

If you need additional information, please contact Mr. Joel Miller, Population Division, Bureau of the Census, Washington, D.C. 20233, (301) 763-7955.

Sincerely,

C. L. KINCANNON
Deputy Director
Bureau of the Census

Enclosures

* Letter was sent to Lt. Gov. Miller + Karen Ward (Rehfeld) on Sept 15, 1981 Advising them of the Eagle River Census Correction. The Nov. 1981 Publication also has the Updated Figures.

Copies of Block Maps were included (on shelf)

Daniel B. Levine, Deputy Director

POPULATION DIVISION
Roger A. Herriot, [illegible]

HOUSING DIVISION
Arthur F. Young, Chief

Acknowledgments

Many persons participated in the diverse activities of the 1980 census. These acknowledgments generally reflect staff during the census-taking process. The Bureau was guided by then Director, Vincent P. Barabba, and Deputy Director Daniel B. Levine. Primary direction of the census program was performed by George E. Hall, then Associate Director for Demographic Fields, assisted by Earle J. Gerber, then Assistant Director for Demographic Censuses, in conjunction with Barbara A. Bailar, Associate Director for Statistical Standards and Methodology, Howard N. Hamilton, Assistant Director for Computer Services, Shirley Kallick, Associate Director for Economic Fields, James D. Lieberg, Associate Director for Administration, Rex L. Pellis, Associate Director for Field Operations, and W. Bruce Ramsay, Associate Director for Information Technology. The director's staff was assisted by Peter A. Bounpane and Sherry L. Courtland.

Responsibility for developing the population portion of the 1980 census questionnaire content and designing the tabulations was in the Population Division, under the supervision of Meyer Zitter, then Chief, Paula J. Schneider, Staff Assistant for Census Programs, Roger A. Herriot, Nampeo D. McKenney, and Arthur J. Norton, Assistant Chiefs.

Responsibility for developing the housing portion of the 1980 census questionnaire content, designing the tabulations, and preparing this report was in the Housing Division, under the supervision of Arthur F. Young, Chief. This report was planned and written by William A. Downs, Chief, Decennial Planning and Data Services Branch, assisted by Carol A. Gentzkow and Richard G. Knapp.

Responsibility for the overall planning, coordinating, and processing of the 1980 census was in the Decennial Census Division under the direction of Gerald J. Post, then Acting Chief, assisted by Marie G. Argana, Rachel F. Brown, Donald R. Dalzell, Leonard DeMong, Earle C. Knapp, Jr., and Roger D. Lepage.

Data base and generalized system support was developed and provided by Systems Development Division, Judy M. Bedell, Chief, under the direction of John Jerry Ball, Assistant Chief.

Computer processing was performed in the Computer Operations Division, C. Thomas DiNanno, then Chief, and John E. Hatterman, Assistant Chief.

The Statistical Methods Division was largely responsible for developing new procedures to obtain a more accurate count of the population. This work was supervised by Charles D. Jones, Chief, David V. Bowman, Susan M. Miskura, and Robert T. O'Reagan, Assistant Chiefs.

Geographic programs and plans were developed in the Geography Division under the direction of Gerald F. Crawford, then Assistant Chief, Robert W. Marx and Billy G. Tennel, Assistant Chiefs, and Donald L. Hinrichs, Special Assistant. Joseph J. Kneot coordinated geographic operational phases.

Data collection activities were supervised in the Field Division by Richard C. Bell, then Chief, under the direction of Lawrence T. Love and Stanley D. Matchett, then Assistant Chiefs, with the assistance of the directors and assistant directors of the Bureau's regional offices.

The coordination and acquisition of automatic data processing equipment were the responsibility of the Automatic Data Processing Planning Staff, James R. Papel, Chief, under the direction of Richard L. Peaty, Deputy Chief.

The system design, technical specifications, construction, and installation of the FOSDIC and Automated Camera Technology System were the responsibility of Technical Services Division, Mattie Anderson, Chief, assisted by Robert I. Joseph, Assistant Chief.

Questionnaire processing procedures were developed in the Decennial Processing Staff, James B. Working, then Chief, under the direction of Harry C. O'Haver, Assistant Chief. The manual processing and microfilming of the questionnaires were performed at three decennial processing locations as follows: Data Preparation Division, Don L. Adams, Chief; Jeffersonville Processing Office, Robert L. Kirkland, then Processing Manager; New Orleans Processing Office, Robert L. Allen, Chief; and Laguna Niguel Processing Office, Robert N. Schaller, Chief.

Administrative support was provided by the Administrative Services Division, O. Bryant Benton, then Acting Chief.

Publications editing, printing, and composition were performed in the Publications Services Division, Raymond J. Keeli, Chief, under the direction of William S. Anderson, Arlene C. Dashiell, and Gerald A. Moss.

User services were provided by the Data User Services Division under the supervision of Michael G. Garland, Chief, and Marshall L. Turner, Assistant Chief.

Many other persons participated in the various activities of the 1980 census. For a list of key personnel, refer to the *History of the 1980 Census of Population and Housing*, (PHC80-R2).

1976	413,289	51,172	244,056	28,488	68,572	21,041
1977	411,211	53,162	252,836	26,512	58,208	20,493
1980	400,331	53,613	235,465	28,659	67,154	15,440
1981	435,300	NA	NA	NA	NA	NA
1982	460,837	NA	NA	NA	NA	NA

Note: Revised totals and estimates have been made for 1970 forward but are not available by region. They include: 1970 (302,580); 1971 (311,200); 1972 (320,000); 1973 (330,000); 1974 (344,000); 1975 (383,100); 1976 (410,700); 1977 (413,100); 1978 (403,100); 1979 (400,600); 1980 (401,850). These figures and the 1981 and 1982 totals were taken from "Preliminary State Intercensal Estimates," released 24 June 1981 by the Chief, Local Area Population Estimates, U.S. Bureau of the Census. Note that the date of estimation for each year 1971-1979 and 1981, 1982 is July 1st; for 1970 and 1980, the final census figures (rounded to the nearest 1,000) are as of April 1st.

REAPPORTIONMENT: A BETTER WAY

a common cause proposal

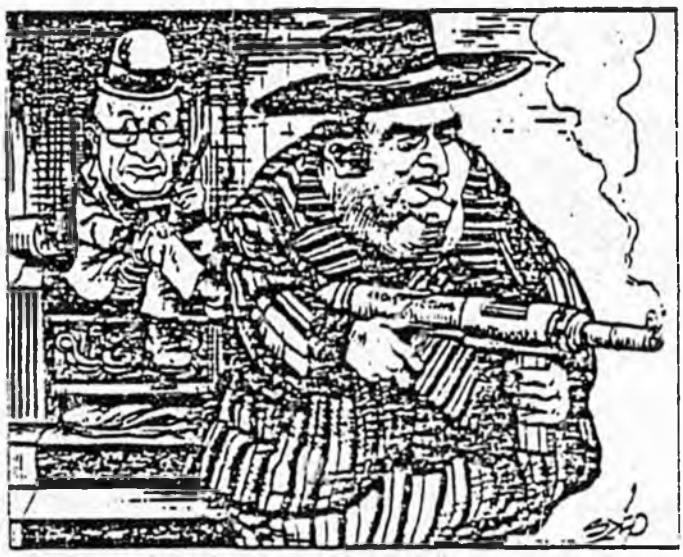
> "I don't think they play at all fairly, and they all quarrel so dreadfully one can't hear one self speak—and they don't seem to have any rules in particular: at least, if there are, nobody attends to them—and you've no idea how confusing it is . . ."
>
> —Alice
>
> *Alice's Adventures in Wonderland*

Alice would have felt quite at home watching a typical state legislature attempt to reapportion itself during the 1960's and early 1970's. In many states, reapportionment*—the decennial division of states into legislative districts for voting purposes—has been a series of secret deals based largely on personal and partisan motivations. Few rules have existed to safeguard the public's interest in an open and competitive political system. The guiding principle for most incumbent legislators has been self-protection.

The method by which state legislative and congressional district lines are drawn is fundamental to our system of representative democracy. The Supreme Court decisions of the mid-1960's requiring periodic reapportionment on the basis of "one person, one vote" eliminated the gross population inequalities among legislative districts that existed in the 1950's and 1960's. These decisions took us a large step toward the goal of achieving "fair and effective representation for all citizens" articulated by the Court in the 1964 *Reynolds* case. Unfortunately, we have not com-

*As a technical matter, "reapportionment" is "a distribution of legislative seats" to already established units of government (for example, states, counties). "Redistricting" is "the drawing of lines" to establish legislative districts within already established units of government. Thus, congressional seats are apportioned to the states and then districts drawn within each state. As a matter of practice, however, the terms "reapportionment" and "redistricting" have been used interchangeably. In this report, "reapportionment" is used to refer to the act of drawing legislative district lines as well as apportioning legislative seats among units of government.

pleted the journey toward that worthy goal because the Court has not dealt with the equally debilitating problems of racial and political gerrymandering. The reapportionment revolution remains unfinished.



The Court's decisions leave reapportionment in the hands of the state legislatures, presenting an inherent conflict of interest. With few standards other than substantial population equality to guide them, the state legislatures have been free to draw districts of bizarre configurations designed to serve personal and partisan ends. Professors Keefe and Ogul, authors of *The American Legislative Process*, have examined our nation's experience with reapportionment and concluded that "everything about reapportionment, whether legislative or congressional, suggests the triumph of self-interest."

Political and racial gerrymandering have resulted. They have reduced electoral competition and undermined our system of representative democracy in significant ways. Political gerrymandering dilutes the value of political participation, undermines legislative responsiveness to constituent views, and weakens political parties. Gerrymandering has been used to deny representation to minority groups.

The present process works extremely well for incumbent legislators and other political insiders. It does not serve the public well. An Illinois legislator once explained this insider's game in blunt terms:

> Outsiders shouldn't stick their noses in and tell this committee how to reapportion the state . . . . Any man in this legislature who doesn't fight for his own district is a particular damn fool. I'm not for too many sitting members running against each other if we can work it out.

In the early 1980's virtually all state legislative and congressional district lines will be redrawn based on the 1980 federal census. Common Cause believes that it is well past time for citizens to "stick their noses" in this important political process and insist that it be cleaned up and opened to public participation before the reapportionment of the early 1980's takes place. Common Cause has proposed a model reapportionment process designed to establish the legal framework necessary to achieve the Supreme Court's goal of "fair and effective representation." The Common Cause model is summarized on pages 24-25. It proposes the establishment of rigorous anti-gerrymandering reapportionment standards and the creation of an independent, nonpartisan commission to draw the state legislative and congressional district lines. Unless citizens demand a better way than what we have had, the unseemly spectacles of the 1960's and 1970's will be repeated in state after state.

"If no one else has a question, we'll proceed with the democratic process."

Background

The quest for fair and effective representation runs deep in Anglo-American political thought. In 1690, John Locke despaired of England's rotten boroughs and argued that it was in the interest of the public "to have a fair and equal representative." Apportionment was a fundamental issue for the Constitutional Convention meeting in Philadelphia in 1787. The Connecticut compromise provided for equal representation of the states in the U.S. Senate and for representation based on population in the House. Article I, Section 2 of the Constitution specifically provides that Representatives be apportioned among the states according to population every ten years.

Despite federal and state constitutional requirements to reapportion periodically, many states failed to do so. As the nation's population shifted from rural areas to the cities and suburbs, the population inequality among state legislative districts as well as congressional districts increased substantially. In 1946, the U.S. Supreme Court failed to halt this trend when it denied relief in the *Colegrove* case challenging an Illinois congressional district plan that had one district with nine times as many people as another. Justice Frankfurter argued: "Courts ought not to enter this political thicket." State courts also declined to become involved. Rural dominance was maintained in some states by simply doing nothing.

Absent a court mandate, nearly one-half of the states did not reapportion their legislatures after the 1950 census according to Professors Keefe and Ogul. By 1962, ten states had at least one house which had not been reapportioned since 1930. Vermont had not reapportioned since 1793; nor had Delaware since 1897. The resulting malapportionment was extraordinary. The Brookings Institution has pointed out that twenty-one of the forty-two states with more than one congressional district in 1962 had constituencies in which the smallest district had less than one-half of the population of the largest district. In 1961, according to Professors Jewell and Patterson, authors of *The Legislative Process in the U.S.*, there were fourteen states in which a majority of members of at least one house could be elected by as few as twenty percent of the electorate from rural areas. In the Vermont House, the 38 citizens of Stratton had the same representation as the 35,531 citizens of Burlington. The five largest cities in Connecticut had one-fourth of the state's population but elected only ten of the 294 house members. The six million citizens of Los Angeles County comprised forty percent of the population of California but had only one of the forty seats in the state Senate.

> But things not always changing equally, and private interest often keeping up customs and privileges when the reasons of them are ceased, it often comes to pass that in governments where part of the legislative consists of representatives chosen by the people, that in tract of time this representation becomes very unequal and disproportionate to the reasons it was first established upon . . . . This strangers stand amazed at, and every one must confess needs a remedy; . . . . And therefore the people, when the legislative is once constituted, having in such a government as we have been speaking of no power to act as long as the government stands, this inconvenience is thought incapable of a remedy . . . . For it being the interest as well as intention of the people, to have a *fair and equal representative*, whoever brings it nearest to that is an undoubted friend to and establisher of the government, and cannot miss the consent and approbation of the community. [emphasis added]

> *Second Treatise of Civil Government* (1690)

The Supreme Court in the "Political Thicket"

In 1962, in the famous *Baker v. Carr* case, the U.S. Supreme Court decided to enter the "political thicket" of reapportionment. The Court held that federal courts have jurisdiction over complaints against malapportioned legislatures. The *Baker* case involved the Tennessee General Assembly which had not reapportioned itself since 1901 despite a state constitutional mandate to do so every ten years and a dramatic growth and shift of population. The Court declined to specify a remedy in Baker but did establish guidelines in a series of decisions over the next several years.

Early in 1964, in *Wesberry v. Sanders*, the Court voided Georgia's congressional district plan and held that:

> . . . the command of Art. I, Sec. 2, that Representatives be chosen "by the People of the several States" means that as nearly as is practicable one man's vote in a congressional election is to be worth as much as another's.

Perhaps the most important decision came in *Reynolds v. Sims* in June of 1964. In *Reynolds*, the Court voided Alabama's state legislative district plan and held that:

> The Equal Protection Clause requires that a State make an honest and good faith effort to construct districts, in both houses of its legislature, *as nearly of equal population as is practicable.* [emphasis added]

The response to *Baker*, *Wesberry*, and *Reynolds* was predictable. Suits were filed in federal or state courts of 48 of the fifty states between 1962 and 1972 alleging violations of the equal protection clause with respect to the apportionment of one or both legislative houses.

Over the years, the Court has refined the "one person, one vote" standard. The Court has made a distinction between state legislative and congressional districts, allowing larger population deviations among districts in state legislative plans. The Court has defined the "as nearly of equal population as is practicable" standard of *Reynolds* under the equal protection clause to allow maximum population deviations among state legislative districts of up to ten percent. The Court has allowed somewhat greater deviations if justified by rational state policy, such as the desire to respect the boundaries of political subdivisions. The Court has defined the "as nearly as is practicable" standard of *Wesberry* under Article I, Section 2 of the Constitution to require as close to mathematical equality as is reasonably possible for congressional districts.

While the Supreme Court has secured substantial population equality among legislative districts, it has been unreceptive to reapportionment challenges based on charges of political or racial gerrymandering. Districts of bizarre configurations admittedly designed to serve personal or partisan ends have been upheld if they meet the population test. The Court has indicated that it will scrutinize carefully charges of racial gerrymandering. But in *Whitcomb v. Chavis* in 1971, the most important racial gerrymandering case to date, the Court held that the use of multi-member rather than single-member state legislative districts in Indiana did not result in invidious discrimination against the black voters of Indianapolis.

SUMMARY OF MAJOR U.S. SUPREME COURT DECISIONS

Colegrove v. Green, 328 U.S. 549 (1946): The Court, by a four to three vote, denied relief in a case challenging an Illinois congressional district plan that had one district with nine times as many people as another. Justice Frankfurter argued that: "Courts ought not to enter this political thicket. The remedy for unfairness in districting is to secure state legislatures that will apportion properly, or to invoke the ample powers of Congress."

Baker v. Carr, 369 U.S. 186 (1962): In a case involving the Tennessee General Assembly, the Court held that federal courts have jurisdiction over complaints against malapportioned legislatures. The legislature had not reapportioned since 1901 despite a state constitutional mandate to do so every ten years and a dramatic growth and shift of population. The Court declined to consider what remedy would be appropriate and remanded the case to the lower court.

Wesberry v. Sanders, 376 U.S. 1 (1964): The Court voided Georgia's congressional district plan. The Court held that Article I, Section 2 of the Constitution required that "as nearly as is practicable one man's vote in a congressional election is to be worth as much as another's."

Reynolds v. Sims, 377 U.S. 533 (1964): In a case involving the Alabama Legislature, the Court rejected the analogy to the U.S. Congress and held that both houses of a state legislature must be apportioned on a population basis. The Court held that: "The Equal Protection Clause requires that a State make an honest and good faith effort to construct districts, in both houses of its legislature, as nearly of equal population as is practicable." The Court said that some deviations from the equal population principle are constitutionally permissible if "based on legitimate considerations incident to the effectuation of a rational state policy," such as a desire to respect the boundaries of political subdivisions.

Swann v. Adams, 385 U.S. 440 (1967): The Court rejected Florida's 1966 state legislative reapportionment plan because it contained senate districts ranging from 15.09 percent above the average district and 10.56 percent below and house districts ranging from 18.28 percent above to 15.27 percent below.

Kirkpatrick v. Preisler, 394 U.S. 526 (1969): The Court rejected Missouri's 1967 congressional Redistricting Act because the most populous district was 3.13 percent greater than the average district and the least populous was 2.84 percent below and the state failed to satisfactorily justify the deviations. The Court held that "the 'as nearly equal as practicable' standard requires that the State make a good-faith effort to achieve precise mathematical equality. Unless population variances among congressional districts are shown to have resulted despite such effort, the State must justify each variance, no matter how small."

Continued on page 6

U.S. SUPREME COURT DECISIONS continued from page 5

Whitcomb v. Chavis, 403 U.S. 124 (1971): The Court held that the use of multi-member districts in state legislative reapportionment in Indiana did not result in invidious discrimination against the black voters of Indianapolis. The Court "insisted that the challengers carry the burden of proving that multi-member districts unconstitutionally operate to dilute or cancel the voting strength of racial or political elements." The Court found that the challengers had not demonstrated discrimination.

Mahan v. Howell, 410 U.S. 315 (1973): The Court upheld a 1971 Virginia state legislative reapportionment plan despite the fact that it had a maximum population deviation from the largest to the smallest district of 16.4 percent. The Court held that the legislative plan "may reasonably be said to advance the rational state policy of respecting the boundaries of political subdivisions," but noted that "this percentage may well approach tolerable limits."

Gaffney v. Cummings, 412 U.S. 735 (1973): The Court upheld a 1971 state legislative reapportionment plan for Connecticut with maximum population deviations between house districts of 7.83 percent. The Court held that "minor deviations from mathematical equality among state legislative districts are insufficient to make out a prima facie case of invidious discrimination under the Fourteenth Amendment so as to require justification by the State." In addition, the Court held that the plan was not constitutionally vulnerable just because it attempted to reflect the relative strength of the major political parties.

White v. Weiser, 412 U.S. 783 (1973): The Court rejected a congressional district plan for Texas because its maximum deviations of 2.43 percent above and 1.7 percent below the average "were not 'unavoidable', and the districts were not as mathematically equal as reasonably possible."

Chapman v. Meier, 420 U.S. 1 (1975): The Court overturned a federal court ordered reapportionment of the North Dakota Legislative Assembly. The Court held that "unless there are persuasive justifications, a court-ordered reapportionment plan of a state legislature must avoid use of multi-member districts." The Court noted that it was exercising its supervisory powers with regard to federal courts; it was not holding that multi-member districts are unconstitutional *per se*.

United Jewish Organizations v. Carey, 97 Sup. Ct. 996 (1977): The Court upheld a legislative modification of New York's state legislative reapportionment plan that was designed to bring the plan into compliance with the Voting Rights Act. In order to establish several substantially non-white districts in Kings County, the legislature divided a community of Hasidic Jews. The Court held that the use of racial criteria in an attempt to comply with the Voting Rights Act did not violate either the Fourteenth or Fifteenth amendments.

Existing State Policies

Virtually all substantive law regarding apportionment procedure is found in the constitutions of the states. With the exception of some of the newest provisions, few describe in much detail either the procedure for preparation of reapportionment plans or the standards to be used. Only the constitutional provisions in Colorado, Hawaii, and Montana meet the anti-gerrymandering test advocated by Common Cause. Table I below provides an overview of existing state provisions for state legislative apportionment. A typical state constitutional provision requires the legislature to reapportion on the basis of population after each federal decennial census. One state statute and twenty-one state constitutions explicitly require that districts be compact; two state statutes and twenty-seven constitutions explicitly provide that districts be formed of contiguous territory. Many state constitutions require the apportioning authority to respect political subdivision boundaries. But even where standards exist, they are generally stated in terms too vague to be enforced in court.

In thirty-seven states, the legislature is given the initial responsibility for preparing the apportionment plan. Nine of these states provide for an apportionment authority to prepare a plan if the legislature does not do so—in five states a board is established as the backup, in three the supreme court is responsible, and in Oregon the secretary of state prepares a plan. Nine other states give responsibility to a board or commission; in two of these states the supreme court is to prepare a plan if the

board does not. In two additional states—Maine and Vermont—boards are established to advise the legislature; the supreme courts backup the legislature. In Alaska, the governor is responsible for preparing a plan with the assistance of an advisory board. In Maryland, the governor presents a plan to the legislature; if the legislature does not enact a substitute, the governor's plan goes into effect. Table II on page 9 provides an overview of the makeup and responsibilities of the eighteen boards and commissions that are assigned state legislative apportionment responsibilities. Many are dominated by legislators or other public officials and lack the necessary independence. Seventeen state constitutions establish prompt court review by providing for original jurisdiction in the state's highest court.

The apportionment authorities designated by the state constitutions—especially the state legislatures—have often failed to produce acceptable plans. According to a 1973 survey by the Massachusetts Legislative Research Council, courts promulgated districts for one or both houses in at least twenty-one states between 1962 and 1972. In other states, the courts rejected reapportionment plans and ordered reapportionment authorities to prepare acceptable plans. According to Tables III and IV on pages 10-11, prepared by the Council of State Governments, sixteen existing state house apportionment plans and seventeen senate plans were court ordered.

STATE CONSTITUTIONAL AND STATUTORY REAPPORTIONMENT PROVISIONS

Alabama: Const. art. 9, secs. 197-201.
Alaska: Const. art. VI, secs. 1-11.
Arizona: Const. art. 4, pt. 2, sec. 1; and Ariz. Rev. Stat. secs. 16-1401 to 16-1403.
Arkansas: Const. amendment no. 45.
California: Const. art. 4, secs. 6 and 27.
Colorado: Const. art. V, secs. 46-48.
Connecticut: Const. art. 3, secs. 3-6.
Delaware: Code tit. 29, secs. 801-808.
Florida: Const. art. III, sec. 16.
Georgia: Const. art. 3, secs. 2-3.
Hawaii: Const. art. III, sec. 4; and Haw. Rev. Stat. secs. 25-1 to 25-8.
Idaho: Const. art. 3, secs. 4-5.
Illinois: Const. art. 4, sec. 3.
Indiana: Const. art. 4, secs. 5-6.
Iowa: Const. art. 3, secs. 34-39.
Kansas: Const. art. 10, sec. 1.
Kentucky: Const. sec. 33.
Louisiana: Const. art. III, sec. 6.

Political Gerrymandering

The U.S. Supreme Court has taken us a substantial way toward its aim of "fair and effective representation for all citizens." The Court's "one person, one vote" standard has done away with the gross malapportionment of the pre-*Baker* years. But the substantial population equality required by the Court is not a total answer to the representation question. The Court has not guaranteed fair district lines. According to William J.D. Boyd of the National Municipal League:

> The reapportionment revolution has certainly come a long way, and very effectively eliminated the evil of malapportionment. As with most revolutions, it remains incomplete so long as the political gerrymander remains to effectively dilute the basic principles of a representative democracy.

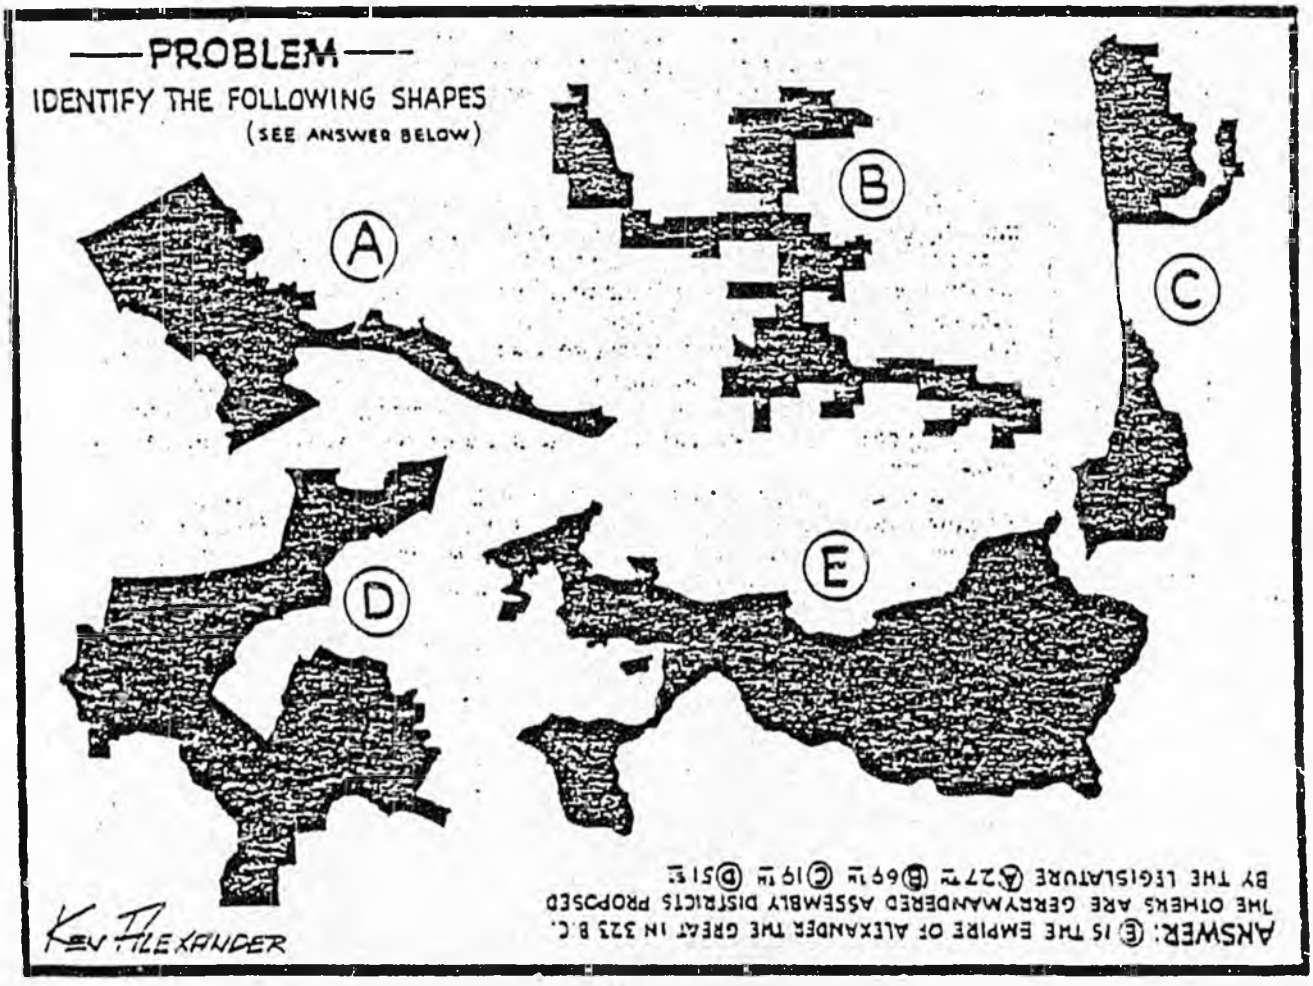
The problem of political gerrymandering has replaced population inequality as the major obstacle to "fair and effective representation." Gerrymandering has been defined by Professor Robert Dixon, one of the nation's foremost experts on reapportionment, as "discriminatory districting which operates to inflate unduly the political strength of one group and deflate that of another." It is usually, but not exclusively, manifested in the manipulation of the shape of legislative districts. Political gerrymandering is a political tool that has a long history in American politics. The gerrymander was named after Elbridge Gerry, Governor of Massachusetts in 1812 when the legislature created a peculiar salamander-shaped district to benefit Gerry's Democratic Party (see "The Original Gerrymander" on page 16). It lives on today. In 1971, University of California Professor Gordon E. Baker surveyed the reapportionment plans drawn for California and concluded:

> While population variances among districts were negligible, several resulting configurations appear to be prime candidates for the Elbridge Gerry Memorial Award for Creative Cartography. Indeed, comparatively speaking, the early Massachusetts governor was a rank amateur and his famed salamander-like district a model of compactness.

Political gerrymandering is generally an attempt by incumbent legislators and majority parties in legislatures to draw district lines that perpetuate their positions of power within the status quo. It often results from the conflict of interest of having district lines drawn by state legislators. Few issues are of as intense interest to legislators as reapportionment. The drawing of district lines can make or break the political careers of the incumbent legislators who are charged with drawing the lines in most states. All too often, incumbents give in to the pressure to manipulate district lines for personal or partisan benefit. As the Majority Leader of the Maryland Senate has quipped: "There are two things that excite the Senate, reapportionment and horse racing."

Political gerrymandering is usually done by the majority party in the legislature working with statistics of past voting behavior, party registration, and demographic information. The intent is to create districts designed to produce the greatest number of legislative victories for the majority party by wasting minority party votes. As a New York politico discussing an upcoming reapportionment once said: "Now it's just a question of slicing the salami, and the salami happens to be in our hands."

One gerrymandering technique is to concentrate minority party strength in as few districts as possible, conceding these districts to the minority by wide margins in order to prevent the minority party from competing in other districts. For example, the majority party would concede one district to the minority in order to win three others. Another technique is to diffuse minority party strength in order to make it difficult for the minority party to win the number of seats representative of its popular support. In Illinois in 1973, for example, the General Assembly crossed the city line of Chicago nine times in drawing state legislative lines. The purpose and effect of this gerrymandering were to waste suburban Republican votes and to increase the number of city Democrats in the state legislature. In a 1972 study published by the American Enterprise Institute, Terry B. O'Rourke compared the ratio of votes won to seats won in the 1966-70 Congressional elections by parties with and



without the power to draw district lines. O'Rourke found that "parties with reapportionment power used it to enormous advantage."

The majority party in the legislature does not always undertake affirmative action to undermine the representation of the minority party. Sometimes the majority party will cut a deal with the minority to protect incumbents of both parties. Bipartisan gerrymandering seeks to increase the strength of the incumbent or the majority party in each district. Yale Professor Edward R. Tufte has found that:

> . . . a major element in the job security of incumbents is their ability to exert significant control over the drawing of district boundaries; indeed, some recent redistricting laws have been described as the Incumbent Survival Acts of 1972. It is hardly surprising that legislators, like businessmen, collaborate with their nominal adversaries to eliminate dangerous competition.

Thus, even where apportionment plans are drawn by bipartisan legislatures, gerrymandering can be used to preserve the domination of incumbents and undermine competition.

Political gerrymandering is often a weapon in intra-party disputes. Legislative leaders have used their authority over reapportionment to win support for their legislative proposals and to punish their political opponents. In the 1971 session of the Texas legislature, Texas House Speaker Gus Mutscher's absolute control of the House was threatened by a group of maverick representatives who came to be known as the Dirty Thirty. Mutscher used the redistricting plan as his vehicle for revenge. According to one observer:

Reprinted from the June 17, 1973 *San Francisco Chronicle & Examiner* with the permission of Ken Alexander.

> On May 28, 1971, three days before the end of the sixty-second session, Mutscher and his henchman Delwin Jones of Lubbock unveiled their House redistricting plan and placed it on a little easel near the front of the House chamber. One by one, the members gathered round. First came the gasps of horror, then the laughter, and finally the shaking of heads and little smiles. More than half of the Dirty Thirty had been placed in districts with each other and most of the others wound up in districts composed of voters clearly antagonistic to their political philosophies . . . [Mutscher went to great pains to put two young liberals in the same district.] The result resembles a fat chicken with Denton's house at the end of the beak and Moore's at the tip of the tail.
>
> (from Katz, *Shadow on the Alamo*)

When Chicago Mayor Richard Daley proposed a congressional districting plan designed to increase his already firm control over the Illinois delegation and remove a maverick Democrat from Congress, the *Chicago Daily News* saw the proposal as an assertion that "raw power can roll over the public interest by buying off the necessary votes in the Legislature with cynical political trades."

On the state level, political gerrymandering is often achieved by the establishment of multi-member rather than single-member legislative districts. The inevitable result of establishing multi-member districts—from which more than one legislator is elected—is to submerge the voting strength of ethnic or political party minorities. The U.S. Supreme Court has criticized multi-member districts but has not found them to be unconstitutional. In 1971, the Court rejected an argument that the use of multi-member districts in Indianapolis to limit black representation was unconstitutional.

The Effects of Political Gerrymandering

Political gerrymandering—whether by the majority party or by both parties, whether the result of intra- or inter-party disputes—attempts to pre-determine electoral results. Competition is minimized. This undermines the system of competitive elections on which our representative democracy is based.

A Common Cause survey of state and congressional election results shows a shocking lack of competition in American electoral politics. We examined the proportion of incumbents in Congress and fourteen state legislatures who ran for renomination or re-election from 1968-1976 and won. The figures in Tables VI and VII on pages 17 and 18 show that incumbents who ran for re-election were re-elected at rates frequently in excess of ninety percent. Of the 69 state legislative elections reported in Table VII, the incumbent re-election rate dropped below eighty percent in only six. Four of these six came in the four elections held in Hawaii and Montana since the adoption of reapportionment plans through processes that meet the anti-gerrymandering test advocated by Common Cause.

As public opinion polls have demonstrated, this high rate of incumbent re-election can hardly be traced to public satisfaction with the performance of government. Rather, a lack of meaningful competition is the major factor. Clearly, the existing system of reapportionment—where incumbent legislators establish the electoral ground rules and stack them in their favor—is one of the reasons for this lack of competition. The present system of financing elections and the many perquisites of public office are others.

The lack of electoral competition that results from political gerrymandering undermines our system of representative democracy in several significant ways.

First, political gerrymandering dilutes the value of political participation. Where election results are largely pre-determined through political gerrymandering, the chance that a voter can influence an election through volunteer campaign activity or voting is diminished. Without competition, political issues need not be debated. Voters receive little meaningful information and have few real choices regarding candidates' positions on major issues.

Second, political gerrymandering makes legislators less responsive to the political interests of their entire constituency. Safe districts remove the incentive to grant political concessions to constituent interests within the district or to create electoral coalitions and ensure representation of diverse points of view.

Third, political gerrymandering weakens political parties by allowing them to field weak candidates. With safe districts, political parties have little incentive to find strong candidates. Their talents are not essential to victory. Instead, the majority party in each district may use the safe seat as a political reward for a party loyalist.

Racial minority groups have been special victims of gerrymandering. An eighteen month study of the operation of the Voting Rights Act by the United States Civil Rights Commission in 1969 concluded that gerrymandering was a prime weapon for discriminating against black voters. There is no doubt that political gerrymandering in general and the use of multi-member rather than single-member districts in particular has had and can continue to have the effect of denying representation to

The Original Gerrymander . . .

The practice of "gerrymandering"—the excessive manipulation of the shape of a legislative district to benefit a certain incumbent or party—is probably as old as the Republic, but the name originated in 1812.

In that year, the Massachusetts Legislature carved out of Essex County a district which historian John Fiske said had a "dragonlike contour." When the painter Gilbert Stuart saw the misshapen district, he pencilled in a head, wings and claws and exclaimed: "That will do for a salamander!"—to which editor Benjamin Russell replied: "Better say a Gerrymander"—after Elbridge Gerry, then Governor of Massachusetts.

Reprinted from *Congressional Districts in the 1970s* (2nd Ed.) with the permission of *Congressional Quarte*

. . . and the Daley Plan

The white portion of the map below was the 10th congressional district proposed by Chicago Mayor Richard J. Daley in 1975 in order to unseat the district's maverick incumbent, U.S. Representative Abner Mikva. Mikva commented: "That's not a map, that's a spaghetti." Notice that the Daley plan is quite similar to the original Gerrymander (at left).

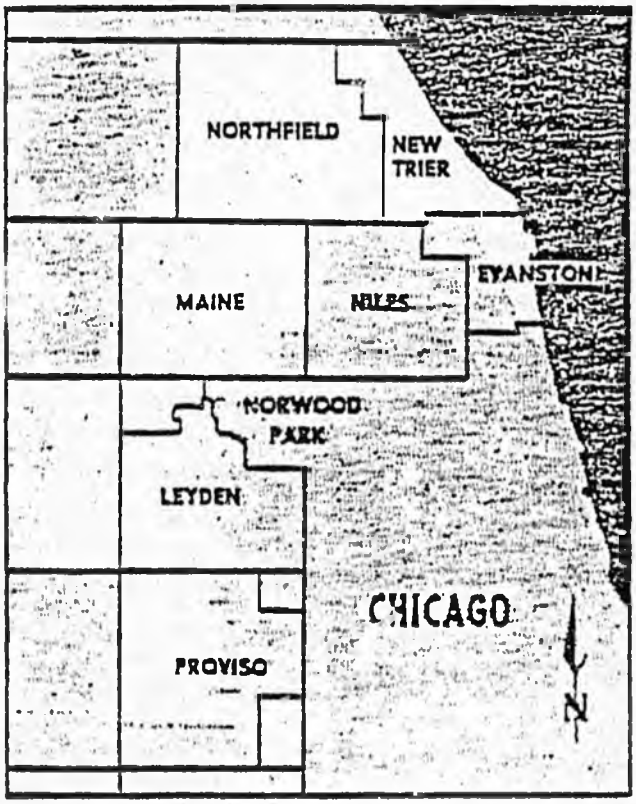


TABLE VI:

RATE OF INCUMBENTS WHO RAN FOR RE-ELECTION AND WON IN 1968-76 FOR U.S. HOUSE OF REPRESENTATIVES

*In 1973, Hawaii was reapportioned by a Legislative Reapportionment Commission pursuant to a new constitutional provision that established strict reapportionment standards.

**In 1974, Montana was reapportioned by a commission established pursuant to the 1972 Constitution.

The information in this table represents the percentage of incumbent legislators (House and Senate) who ran for renomination or re-election and who won re-election in fourteen states where election information and volunteer researchers were available. Assistant Professor Jerry W. Calvert of Montana State University provided the data for Idaho, Montana, South Dakota, and Wyoming. The Wisconsin Legislative Reference Bureau supplied the information for that state. The data for the other states were compiled by Common Cause volunteers from state election records.

minority groups. While blacks comprised 11.2 percent of the population in the 1970 census, only 287 of the approximately 7,500 state legislators—less than four percent—are black (see Table VIII). Only seventeen of 535 Members of Congress—just over three percent—are black.

The Goals of Reapportionment Reform

In the 1960's, the goal of reapportionment reform was to establish legislative districts of substantially equal population. The goal now is to finish the reapportionment revolution by ridding the system of political gerrymandering in order to establish electoral fairness and increase electoral competition.

By minimizing electoral competition, unfair districting undermines the political process and weakens the political parties. Our political process needs competition in order to function as envisioned. Competition forces the political process to be responsive to new ideas and new people. Without competition, the parties lack the incentive to recruit or put forward their best candidates. Electoral competition is an essential factor in giving citizens a chance to have their ideas given serious consideration in legislative forums.

The purpose of political gerrymandering is to shut people out of the political process. Reapportionment reform is designed to benefit the public by broadening political participation and increasing electoral competition. Reapportionment reform is designed to strengthen the political process by providing an incentive for political parties to bring new ideas and new people into the process. By reforming the reapportionment process and improving state legislatures, states may increase public respect for state government and strengthen the role of state government in our federal system.

The Common Cause Model Proposal

The Common Cause model proposes a reapportionment process designed to produce districts that are fairly drawn as well as districts of substantial population equality. Unlike district lines produced by political gerrymandering, fair district lines are not drawn to pre-determine election results. The model proposes a system of reapportionment that is equitable in its treatment of incumbent legislators, political parties, and others. This replaces the present system where people with political power are able to manipulate district lines for personal and partisan advantage.

The Common Cause model has three main elements—strict anti-gerrymandering standards; an independent, nonpartisan reapportionment commission; and prompt judicial review. All three elements of the model are crucial. They are designed to reinforce each other and to produce fairly drawn district lines. The reapportionment standards are designed to produce fair district lines by limiting the discretion of the commission to gerrymander for political or partisan purposes. The nonpartisan reapportionment commission replaces the legislature, providing much needed inde-

TABLE VIII:

BLACK STATE LEGISLATORS (1977)

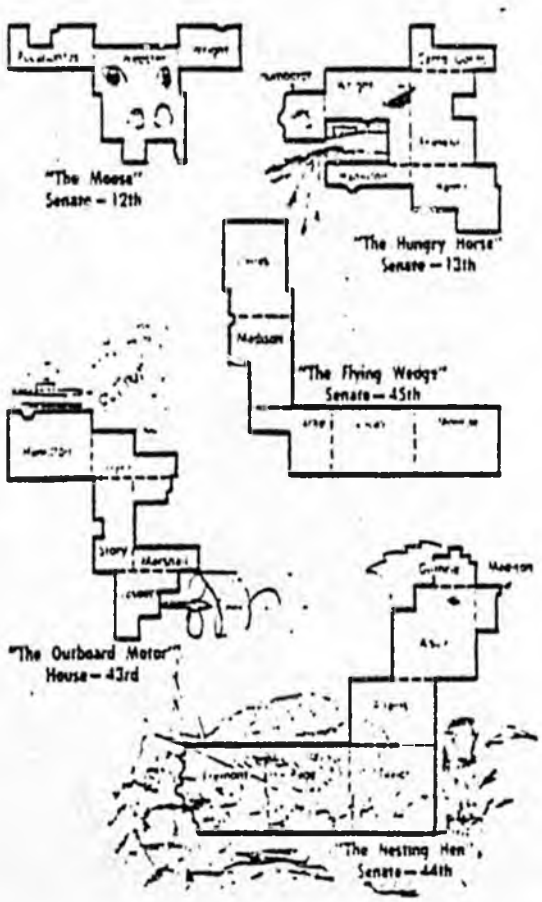
				TOTALS	287	3.8	11.2

The number of black state legislators is from statistics compiled by the Joint Center for Political Studies in Washington, D.C. The percentage of blacks in each state population is taken from the 1970 federal census.

pendence. Fair district lines are more likely if district lines are drawn by persons not directly affected by them. Judicial review provides finality and acts as the final safeguard of the public's interest in fair and effective representation. A discussion of the three major elements of the model follows.

I. REAPPORTIONMENT STANDARDS



The most important element of reapportionment reform is the establishment of strict anti-gerrymandering standards. While an independent commission is more likely to produce fair district lines than a state legislature, strict reapportionment standards can virtually eliminate the potential to manipulate district lines for political or partisan advantage.

It is the absence of objective, judicially enforceable standards that has allowed the political gerrymandering that undermines our system of representative government. According to University of California reapportionment scholar Gordon E. Baker:

> If more specific guidelines to minimize gerrymandering are not forthcoming, then a great democratic principle—one man, one vote—will have degenerated into a simplistic arithmetical facade for discriminatory cartography on an extensive scale.

The model seeks to provide more specific definitions of reapportionment standards than are found in most state constitutions. This is done by providing population and compactness standards against which to judge reapportionment plans. A strong anti-gerrymandering provision is the centerpiece of the model proposal.

In *Reynolds*, the Supreme Court established the general rule that districts in each house have population "as nearly equal as is practicable." While the Court has discussed this requirement on numerous occasions, no precise definition has evolved. The model proposal attempts to establish specific population parameters

Wild and Wonderful Iowa Gerrymanders

more rigorous than those allowed by the Court in some cases, while maintaining flexibility necessary to allow the commission to apply other reapportionment standards as well.

In addition to establishing specific population standards, the Common Cause model's reapportionment standards are designed to produce fair districts by minimizing the opportunity for political gerrymandering. Single-member districts—favored by the National Municipal League, Legis 50, and other reform minded organizations—are required. The model requires the commission to respect local political subdivision boundaries (for example, towns and counties) where consistent with the population standards. By respecting these boundaries, the model minimizes voter confusion, enables constituencies to organize for political action in an effective manner, and limits the ability to gerrymander. Compactness and contiguity are required and are defined in order to establish a basis for enforcement. A strong anti-gerrymandering provision adapted from the Hawaii Constitution is included. It provides that: "No district shall be drawn for the purpose of favoring any political party, incumbent legislator, or other person or group." To help enforce this provision, the commission is not allowed to take into account the addresses of incumbent legislators. The commission may not use the political affiliations of registered voters, previous election results, or demographic information other than population headcounts for the purpose of favoring any political party, incumbent legislator, or other person or group. This is precisely the information that has been used by partisans in the past to gerrymander. The model provides that no district may be drawn for the purpose of diluting the voting strength of any language or racial minority group.

II. REAPPORTIONMENT COMMISSION

The National Municipal League has described the reapportionment process in most states as an "illogical system in which legislators are the judges and juries in a matter of highest importance to themselves." The conflict of interest of having state legislators draw state legislative district lines is obvious. As the Illinois legislator quoted above pointed out: "Any man who doesn't fight for his own district is a particular damn fool." A state legislator can also have a conflict of interest in preparing a congressional district plan. In addition to the fact that some legislators might want to run for Congress, a candidate for re-election to the state legislature can benefit from an unbeatable congressional candidate at the top of the party ticket.

Independence and accountability are key aspects of reform. It is essential that the responsibility for drawing legislative districts be taken from those most directly affected. The model proposes establishment of an independent, nonpartisan commission to prepare reapportionment plans. The model is drawn largely from the successful commission established in the Montana Constitution of 1972. As in the Montana Constitution, the model is not designed to deny the legislature any interest in reapportionment but rather to buffer the process from the most direct and personal conflicts of interest. Four of the five members of the commission are appointed by the legislative leaders of the major parties. The fifth is chosen by the other four. Reapportionment scholars Gordon E. Baker and Robert G. Dixon recommend similar bipartisan commissions with tie breakers. As in the Michigan, Montana, and Vermont Constitutions, the model prohibits public officials from serving on the commission. State commissions made up entirely of public officials as in Arkansas or dominated by legislative leaders or their deputies as in Pennsylvania do not meet the standard of independence sought by advocates of reapportionment reform. As in Hawaii, Michigan, and Missouri, the model prohibits commissioners from running for legislative office for a period after service on the commission in order to avoid self-dealing. The model contains numerous accountability provisions designed to ensure that the apportionment process is done by the commission in the open with a full public record and opportunity for public participation.

Few states used commissions before the reapportionment revolution of the 1960's, but they have become increasingly popular in recent years. As noted above, seventeen states now provide for boards or commissions to play a role in the reapportionment process—either as the apportioning authority, as a backup to the legislature, or in an advisory role. There is no federal obstacle to shifting the function of drawing congressional districts from the legislature to a reapportionment commission.

Establishment of a reapportionment commission is designed primarily to remove the conflict of interest inherent in having legislators draw their own districts and to

eliminate the abuses that have resulted from this system. It also should save valuable legislative time and reduce reliance on the courts. The California Legislature, for example, dealt with apportionment in 1971, 1972, and again in 1973 at an estimated cost of over $1 million. In 1971, the Legislature had 26 full-time staff members working on apportionment. Ultimately, court-appointed special masters prepared the plan. In Montana in 1974, a commission prepared a plan at a cost of only $20,000. Extended and special sessions are frequently required when state legislatures try to reapportion. With most state legislatures still understaffed and restricted by state constitutional limitations on session time, the task of legislative reapportionment takes away from time that could be spent more profitably on substantive legislative matters.

The present method of reapportionment also ties up considerable court time. As noted above, sixteen existing state house apportionment plans and seventeen senate plans were court ordered. In virtually every state, apportionment plans have been challenged in court. Under the model, litigation should be less frequent because of the strong presumption of fairness that a plan developed by a nonpartisan commission would have. After evaluating the reapportionment experience of the 1970's, the Council of State Governments concluded that commissions "appear to have a better track record than Legislatures."

MONTANA'S REAPPORTIONMENT COMMISSION

Our bipartisan reapportionment commission has become something of a model for other states. It did its work promptly and efficiently, for a total cost of less than $20,000. That is less than what it costs us to run this place for one day. And we have heard few voices raised to say the commission's districts were poorly drawn or unfair.

The real world alternative to our commission is not one of legislators surrendering the interests of their constituents to those with greater claim, every ten years.

The alternative to our commission is return either to judge-made reapportionment, or to the 1971 pattern of costly special sessions to handle this awkward problem.

To take this task back upon ourselves would not only be costly in time and money. It probably just wouldn't work. It would fail for the same reason it has failed elsewhere. Each of us considers himself elected to press the advantage of our own constituents, whatever that may mean for someone else's constituents. Why, in the crunch, should we as individual legislators be expected to do anything else? This is why legislative reapportionment of legislatures breaks down into push-and-shove and seldom manages the job to constitutional standards of fair representation.

Let's keep our reapportionment commission to do this awkward task promptly and inexpensively; let's save our costly and numbered days here for the kinds of things we manage to do passably well.

—Montana House Majority Leader
Peter M. Meloy, successfully arguing against
a proposal to repeal Montana's excellent
reapportionment commission, March of 1977

III. JUDICIAL REVIEW

No matter how well the reapportionment process works, legal challenges are inevitable in a matter as politically significant as reapportionment. Prompt judicial review is an essential element of a reformed reapportionment process. It is extremely important that all challenges to reapportionment plans be resolved and plans finalized well in advance of state legislative and congressional elections.

Finality in reapportionment is a matter of such importance and sensitivity that it warrants the prompt attention of the highest court in each state. The model grants these courts original jurisdiction over reapportionment matters. Challenges must be filed soon after a plan is prepared and the courts are required to issue decisions within a time certain.

Time To Act

While reapportionment will not take place until 1981, it is now time for the states to reform their reapportionment procedures so that the legal framework for the development of fair reapportionment plans is in place by 1981. In virtually every state, this will require voter approval of the model constitutional amendment—either proposed by the legislature or petitioned to the ballot by citizen initiative—by 1980.

Legislative resistance to the Common Cause model will be strong because it strikes at the heart of the incumbency protection system. But public support can be expected. Proponents of reform should have little trouble convincing the public of the merit of a proposal designed to strip the legislature of its ability to gerrymander for self-serving purposes. The Special Masters appointed by the California Supreme Court in 1973 to prepare a reapportionment plan found "widespread public cynicism" about the traditional method of having the state legislature redistrict itself.

The model proposal relies heavily on the Colorado, Hawaii, and Montana reapportionment procedures. The Hawaii and Montana processes were recommendations of constitutional conventions that received voter approval in 1968 and 1972, respectively. The Colorado process was the result of a citizen initiative approved by the voters in November of 1974 by a vote ratio of three to two.

By working with problem solving legislators or using the citizen initiative process where necessary and available, citizens can establish reapportionment procedures designed to ensure fair and effective representation for all citizens in the 1980's. This can complete the reapportionment revolution of the 1960's. No longer will incumbent legislators and majority parties be able to perpetuate their power by pre-determining election results through reapportionment. Establishment of fair district lines through an equitable reapportionment process will help to restore competition—the lifeblood of a democratic society—to our electoral process.

SUMMARY OF COMMON CAUSE MODEL STATE REAPPORTIONMENT PROPOSAL

The Common Cause model state reapportionment proposal is in two parts—a model constitutional amendment and model act. Virtually all substantive law regarding state apportionment procedure is found in the constitutions of the states. In almost every state, a significant change in reapportionment procedures will require a constitutional amendment. The Common Cause model state constitutional amendment establishes the essential elements of reapportionment reform—strict anti-gerrymandering reapportionment standards, an independent commission to draw the lines, and prompt judicial review. The amendment is as brief as possible in keeping with the belief that a constitution should be flexible and should not be unduly burdened with detail. The model act implements the constitutional amendment, giving definition to some of the reapportionment standards and establishing the duties, powers, and method of appointment of the commission. The model act should be adopted contemporaneously with the constitutional amendment and made contingent upon voter approval of the amendment. Obviously, each state will need to adapt the model to take into account the particular circumstances of the state.

CONSTITUTIONAL AMENDMENT

The model constitutional amendment provides for reapportionment of state legislative and congressional districts in 1981 and every tenth year after. Single-member districts are required.

The model constitutional amendment provides for the establishment of a five member reapportionment commission in 1980 and every tenth year after and at any other time of court ordered reapportionment. Four members of the commission are appointed by the legislative leaders—one each by the President of the Senate, the Speaker of the House, the Minority Leader of the Senate, and the Minority Leader of the House. The four members select a fifth member who serves as chair. None of the five members may be a public official. The model requires the legislature to provide by law for the qualifications, duties, and powers of commissioners, procedures for the selection of commissioners and filling of vacancies, and adequate funding for the commission.

The model provides that districts in each house shall have "population as nearly equal as is practicable" based on the federal census. Specific population parameters are established to give definition to the requirement of substantial population equality. For state legislative districts, the model provides that the average percentage deviation of all the districts of a house from the average population of all districts in that house shall not exceed one percent. No district shall have a population which varies from the average population of all districts unless necessary to comply with one of the other reapportionment standards. In no case shall a district have a deviation from the average of more than five percent. Thus, the maximum allowable deviation from the highest to the lowest populated district is ten percent. In the event of a court challenge, the commission has the burden of justifying any deviation.

For congressional districts, the model provides that the same standards shall be used as for state legislative districts except that no district shall have a population deviation of more than one percent from the average population of all districts.

The model constitutional amendment provides that district lines be drawn to coincide with the boundaries of political subdivisions (for example, towns and counties) to the extent consistent with the requirement of substantial population equality.

The model constitutional amendment requires districts to be "compact in form and composed of convenient contiguous territory." The amendment provides that the aggregate length of all district boundaries shall be as short as practicable consistent with the constitutional requirements of substantial population equality and maintenance of political subdivision boundaries. The model establishes a judicially enforceable compactness requirement by providing that in no case shall the aggregate length of the boundaries of all districts exceed by more than five percent the shortest possible aggregate length of all the districts under any other plan consistent with the population and political subdivision standards. The same compactness standard applies to district lines within local political subdivisions that have two or more complete districts.

The proposed amendment provides that: "No district shall be drawn for the purpose of favoring any political party, incumbent legislator, or other person or group." The model prohibits the commission from taking into account the addresses of incumbent legislators. The commission may not use the political affiliations of registered voters, previous election results, or demographic information other than

population headcounts for the purpose of favoring any political party, incumbent legislator, or other person or group. The model further provides that no district shall be drawn for the purpose of diluting the voting strength of any racial or language minority group.

In addition, the model authorizes the legislature to define by law these standards and to establish other standards not in conflict with the Constitution of the United States or of the state and designed to guarantee "fair and effective representation for all citizens."

The constitutional amendment provides that the state supreme court has original jurisdiction over apportionment matters. The model authorizes any registered voter to file a petition to challenge a reapportionment plan or to compel the commission or any person to perform duties required by the model. Challenges to an apportionment plan must be filed within forty-five days of adoption of a plan. The court must give apportionment matters precedence over all other matters and must render a decision within sixty days after a petition is filed. The court may declare a plan invalid in whole or in part and must order the commission to prepare a new plan.

The model constitutional amendment provides that reapportionment plans remain in effect for ten years unless invalidated or modified pursuant to court order. A plan shall not be subject to amendment, approval, or repeal by initiative, referendum, or act of the legislature.

MODEL ACT

The model act provides for the timing of the selection of commissioners. By May 1, 1980 (and every tenth year after), notice must be given of the establishment of the commission. Not earlier than June 1 but not later than July 1, the four legislative leaders must select four commissioners. By August 1, the four commissioners must select a fifth commissioner to serve as chair. Vacancies are filled by the initial selecting authority.

The model act provides that commissioners must be registered voters of the state who may not: hold or have held public office within two years prior to selection; be a relative or an employee of a state legislator or U.S. Representative; or be or have been a registered lobbyist within two years prior to selection. Members and employees of the commission may not: hold or campaign for public or political party office; participate in or contribute to a state or federal campaign; hold a seat in the state legislature or U.S. House of Representatives for four years after the effective date of the plan; or lobby the state legislature or U.S. Congress for compensation for one year after the effective date of the plan.

The model act provides for a staff and budget for the commission and authorizes the commission to hire consultants, reimburse witnesses for their expenses, and borrow staff and other resources from other state agencies. The act prescribes the duties of the commission: promulgate rules and regulations; preserve information and make it available to the public; give notice of meetings; open meetings of three or more commissioners to the public; log contacts with persons outside the commission; and prepare a detailed report explaining each preliminary and final reapportionment plan. The act authorizes the commission to subpoena persons and materials and to administer oaths.

The model act provides for the timing of the development of the reapportionment plan. By May 1, 1981 (and every tenth year after), the commission must propose one or two preliminary plans for public comment. The chair may also propose a plan. By July 1, the commission must complete public hearings around the state on the preliminary plans. By August 1, the commission must adopt a final plan by vote of at least three members. The act provides for an extension of these time deadlines if the necessary census tabulations are not available by February 1. The commission is required to prepare a financial statement and compile and preserve an official record of its activities. The commission expires as soon as all legal challenges to its plan have been resolved, but the supreme court may reconstitute it to comply with a court order.

The model act repeats the standards established in the model constitutional amendment. The act defines the constitutional requirement that districts be of contiguous territory. It also establishes procedures for dividing political subdivisions where required. The model act provides for alignment of state legislative and congressional district boundaries where practicable.

The model act repeats the model constitutional amendment's provision for judicial review and authorizes the state supreme court to order the state to pay petitioners reasonable attorney fees and court costs where the court finds that a petition was filed with reasonable cause.

Revised September 1980

Model Reapportionment Amendment to State Constitution

Section ___. Legislative and Congressional Reapportionment.

(a) Reapportionment Mandate. In each year ending in one, the state shall be divided into as many congressional districts as there are United States Representatives apportioned to the state, as many representative districts as the number of members of the state house of representatives as provided by law, and as many senate districts as the number of members of the state senate as provided by law. [All legislative districts shall be single-member districts.]

(b) Reapportionment Commission. In each year ending in zero and at any other time of court ordered reapportionment, a commission shall be established to prepare a reapportionment plan for state legislative and congressional districts. The commission shall consist of five members, none of whom may be public officials. The president of the senate, the speaker of the house, the minority leader of the senate, and the minority leader of the house shall each select one member. The four members so selected shall select, by a vote of at least three members, a fifth member who shall serve as chair. Failure to select the

fifth member within the time prescribed by law shall constitute an impasse which shall automatically discharge the commission, and a new commission shall be appointed in the same manner as the original commission. The legislature shall establish by law qualifications of commissioners and procedures for their selection and filling of vacancies. The legislature shall establish by law the duties and powers of the commission and shall appropriate funds to enable the commission to carry out its duties.

[ALTERNATIVE SECTION/(b) Reapportionment Commission. In each year year ending in zero and at any other time of court ordered reapportionment, a commission shall be established to prepare a reapportionment plan for state legislative and congressional districts. The commission shall consist of seven members, none of whom may be public officials. The president of the senate, the speaker of the house, the minority leader of the senate, the minority leader of the house, and the chair of the political party that received the second highest vote in the previous gubernatorial election shall each submit to the governor and make public a list of not less than three persons. The governor shall appoint six members of the commission who are broadly representative of the people of the state, including one person from each list and one additional person. The six members shall select, by a vote of at least four members, a seventh member who shall serve as the chair. Failure to select the seventh member within the time prescribed by law shall constitute an impasse which shall automatically discharge the commission, and a new commission shall be appointed in the same manner as the original commission. The legislature shall establish by law qualifications of commissioners and procedures for their selection

and the filling of vacancies. The legislature shall establish by law the duties and powers of the commission and shall appropriate funds to enable the commission to carry out its duties.]

(c) Reapportionment Standards.

(1) State legislative districts in each house shall have population as nearly equal as is practicable based on the population reported in the federal census taken in each year ending in zero. In no case shall the absolute value of the total percentage deviations of all districts of a house divided by the number of districts exceed two percent. In no case shall a district have a population which varies from the average population of all districts, unless a population variance is necessary to comply with one of the other standards set forth in this section. In no case shall a single district have a population which varies by more than five percent from the average population of all districts. When a petition challenging a plan adopted by the commission is filed with the supreme court, the commission shall have the burden of justifying any variance between the population of a district and the average population of all districts.

(2) Congressional districts shall have population as nearly equal as is practicable based on the population reported in the federal census taken in each year ending in zero. No district for election of members to the United States House of Representatives shall have a population which varies by more than one percent from the average population of all congressional districts in the state. When a petition challenging a plan adopted by the commission is filed with the supreme court, the commission shall have the burden of justifying any variance between the population of a district and the average population of all districts.

(3) To the extent consistent with subsections (1) and (2), district lines shall be drawn to coincide with the boundaries of local political subdivisions.

(4) Districts shall be composed of convenient contiguous territory.

(5) Districts shall be compact in form. The aggregate length of all district boundaries shall be as short as practicable consistent with the standards contained in subsections (1), (2), (3), and (4).

(6) The commission shall exercise its powers to provide fair and effective representation for all citizens, and, consistent with the criteria contained in subsections (1), (2), (3), (4), and (5), shall encourage electoral competition. No plan shall be drawn for the purpose of favoring any political party, incumbent legislator, or other person or group. In preparing a plan, the commission shall not take into account the addresses of incumbent legislators. The commission shall not use the political affiliations of registered voters, previous election results, or demographic information other than population head counts for the purpose of designing a plan that favors any political party, incumbent legislator, or other person or group.

(7) No district shall be drawn for the purpose of diluting the voting strength of any language or racial minority group.

(8) The legislature may define by law any of the standards enumerated in this subsection and may establish by law additional standards, not in conflict with the Constitution of the United States or this constitution, designed to guarantee fair and

MEMORANDUM

To: State Chairs, State Offices

From: Bruce Adams, Director, Issue Development
Ted Stein, Research Associate

Re: Revisions to the Common Cause Reapportionment Model

Since its publication in 1977, the Common Cause reapportionment model has helped focus the debate over reapportionment reform in the states, and on the federal level. Some version of our model proposal has been introduced in more than twenty states. Reapportionment reform measures have been enacted or await voter approval in five states--Arkansas, California, Iowa, Minnesota, and Oregon. The Common Cause model has held up well under the intense spotlight of legislative debate. We have always recognized that our model offers a basic framework for reapportionment reform--not the final word. Based on discussions over the past three years with legislators, legislative staff, political scientists, and others, we believe that certain improvements can and should be made.

We have indicated the revisions on the attached copy of the Common Cause model constitutional amendment. A clean copy of the revised model amendment also in enclosed. Additional copies are available from Field Central. Keep in mind that if you decide to use the CC model statute, it will have to be modified to be

consistent with the revised amendment. A revised CC model statute is being prepared.

The revisions are as follows:

(1) Commission structure: The model should offer as an alternative the commission structure proposed in 1978 by the Florida Constitution Revision Commission (see page 2 of attachment, "Revisions to Reapportionment Model Constitutional Amendment"). This plan called for a seven-member commission. Six members would be appointed by the governor. The governor would select one and one each from lists supplied by the four legislative leaders and the chair of the opposite political party. The six members then would have selected a seventh member or tiebreaker. The potential advantage of this proposal over the original model is twofold. First, it allows the governor to provide for racial, ethnic, and geographic balance and diverse expertise in making appointments. This is aided by the size of the commission, which is larger than the five-member panel proposed by the CC model, and the fact that a single person makes the final choices. Second, the alternative places some distance between the legislature and commission appointments.

In addition, either commission structure (i.e., the CC model or the Florida alternative) should require that the commission be discharged if a deadlock develops over selection of the tiebreaker. (pages 1 and 2). Such a deadlock is a real possibility. In Montana, one of the three states with a commission system that meets our test, commissions have deadlocked twice over the selection of a tiebreaker--in 1973 and again in 1979. This same situation

occurred in Pennsylvania in 1971. In each case, the state'e supreme court selected the tiebreaker. A discharge mechanism would provide a powerful incentive to select the tiebreaker. It also would avoid the possibility--raised by court participation--of a partisan tiebreaker in states where supreme courts are dominated by one party.

(2) Compactness: According to computer experts, our original compactness definition, which requires a plan's aggregate boundary length to be within five percent of the shortest possible aggregate length, raises serious practical problems. Finding the shortest possible aggregate length, these experts say, would greatly increase the necessary data base with a commensurate cost increase. We have deleted the five percent requirement (page 4). The revised standard still requires that the aggregate length of all district boundaries be as short as practicable. This establishes a standard beyond the mere requirement of compactness while avoiding the political and technical problems inherent in a complex mathematical formula.

(3) Fair representation: A reapportionment commission has an affirmative obligation to provide fair and effective representation for all citizens of the state. The need for "fair and effective representation" was eloquently stated in the Supreme Court's famous "one person, one vote" rulings of the mid-1960s. Within the constraints of the Common Cause standards, there are various ways that lines can be drawn to ensure or to undermine fair representation in the state legislature and in Congress. While the goal of fair and effective representation has always been Common Cause's guiding principle, the original model did

not directly state it. The revised CC model clearly states the objective as part of the sixth standard (page 4).

(4) Competition: In the past, reapportionment has been used to undermine electoral competition. Attempts to produce a bias in favor of incumbents or majority parties robs our political system of its vitality. Legislators who never face close re-election races are less responsive to their constituents. Reapportionment reform is designed to encourage competition, not discourage it. To guard against a bipartisan gerrymander by the bipartisan commission, we have added competition as a standard (page 4). It is important to note that the competition standard is to be used only after application of the more fundamental standards of population equality, respect for political subdivision, and compactness. Otherwise, the standard could lead to bizarre-shaped districts that did not respect city and county lines.

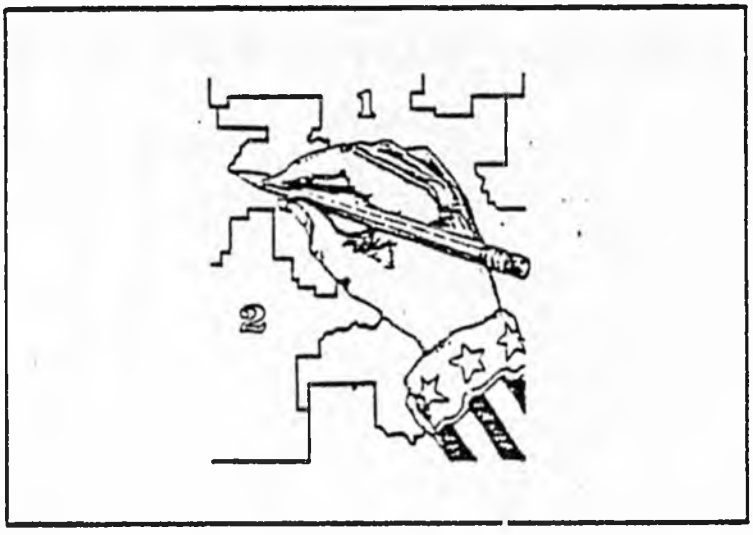
(5) Population deviation: To prevent line-drawers from using population deviations to gerrymander, the model requires all population deviations to average one percent or less. This denies the majority party, for example, the opportunity to gain an advantage by making majority party districts underpopulated and minority party districts overpopulated. The revised model changes this standard in two ways (see page 3). First, the standard has been increased from one to two percent to insure that this t t is not overly rigid. Second, it adds the word "percentage" tc clarify that the average of all percentage deviations must be one percent or less.

(6) Anti-gerrymandering provisions: In the revised model, no reapportionment plan shall be drawn for the purpose of favoring any political party, incumbent legislator, or other person or group. The change in this standard involves the substitution of "plan" for "district" (page 4). This revision recognizes that to achieve fairness it may be necessary to benefit a certain political or ethnic group in one district and a second group in another. The key is that the overall plan does not purposefully favor or disadvantage any person or group. To be consistent, the use of political or demographic data to design a plan that favors any person or group is prohibited (page 5).

One additional point, not addressed in the attached revised model, involves the relationship of our proposal to the federal Voting Rights Act. Some legislators have incorrectly charged that the Common Cause model violates the Voting Rights Act. Among its provisions, the federal Act requires the Justice Department to invalidate any reapportionment plan or voting change that has a racially discriminatory effect--in certain states. Obviously, the federal Voting Rights Act would prevail over any state provision in the event that a conflict should arise between our model and the Act. This establishes a two-track system. First, states covered by the Voting Rights Act*--states with histories of discrimination

---

*The Voting Rights Act of 1965, as amended in 1970 and 1975, requires Justice Department review of voting changes in nine states: Alabama, Alaska, Arizona, Georgia, Louisiana, Mississippi, South Carolina, Texas, and Virginia. Some jurisdictions in another thirteen states are also covered: California, Colorado, Connecticut, Florida, Hawaii, Idaho, Massachusetts, Michigan, New Hampshire, New York, North Carolina, South Dakota, and Wyoming. In some of these thirteen states coverage is quite limited (e.g., four counties in California, five counties in Florida, two townships in Michigan). The Act will be in effect through most of the reapportionment of the 1980s--until August 1982 when it will be up for review by Congress.



against minority voters--would be subject to an effect test. Second, states not covered by the Act would be subject to the model's purpose test.

COMMON CAUSE REPORT ON CONGRESSIONAL AND STATE REDISTRICTING

This is the second report to be prepared by the Common Cause Redistricting Clearinghouse. This report focuses on state efforts to establish new congressional and legislative districts based on the 1980 census.

This study was researched and written by Marty Stephens of the Issue Development Staff with the assistance of Joseph Zwerdling. Staff members Janet Kaufmann, Vicky Kim, and Phyllis Sickels also provided assistance.

INTRODUCTION

Every ten years citizens in many states observe their elected officials fighting to draw new election districts to accommodate population changes reflected in the latest U.S. census. Redistricting as a result of the 1980 census changes has been characterized by heavy litigation activity and skyrocketing costs. Once again, in this highly partisan process, Democrats and Republicans alike have proven that they can manipulate and "gerrymander" district lines with great skill and verve.*

A number of states are taking action to counter gerrymandering practices. Voters in California and Missouri, for example, will have a chance to vote on reapportionment reform measures on the November 1982 ballot. In both states the move to change the present system of redistricting -- requiring legislators to design their own districts -- was triggered by a sense of frustration over the 1980 redistricting events. In California, new congressional districts were likened to jigsaw puzzle pieces, while in Missouri the House and Senate deadlocked over redistricting congressional seats. A three-judge federal district panel ultimately drew up the final plan.

Except for Kansas and two states -- Maine and Montana -- that will act in 1983, congressional redistricting plans

---

* The term "gerrymandering" is not new; it was inspired by the efforts of Governor Elbridge Gerry of Massachusetts in 1812. An attempt to gerrymander generally means an attempt at one of four things: (1) to protect an incumbent; (2) to gain partisan advantage; (3) to eliminate a political maverick; or (4) to exclude a racial minority.

based on the 1980 census are now drawn. Seven states must still complete redistricting for their own legislatures. However, court challenges or Justice Department rejection of plans under Section 5 of the Voting Rights Act has prolonged the process in many states. In some cases, primary election dates have been postponed until litigation has been resolved.

The purpose of this report is to examine the redistricting process, court activity, and the outcome of redistricting itself. A state-by-state status report for congressional redistricting is provided and a survey of interesting state legislative redistricting activity in 20 states follows.

Redistricting and the Courts

Article 1, Section 2 of the Constitution specifically provides that representatives be apportioned among the states according to population every ten years.* Despite this mandate, up until the 1960's many states failed to redistrict to adjust for population changes and the courts declined to get involved. The U.S. Supreme Court decisions of the mid-1960's established certain one-person, one-vote standards, requiring states to eliminate gross population inequalities in redistricting. Beyond that, however, the Supreme Court did not spell out specific substantive standards for redistricting. Few state constitutions describe in much detail either the procedure for preparation of reapportionment

---

* Technically, reapportionment is the distribution of seats among units of government and redistricting is the drawing of lines.

plans or the standards to be used in drawing congressional and legislative districts.

The absence of clear criteria for redistricting leaves map makers with wide discretion in drawing up plans. The results are often controversial. Consequently, lawsuits challenging redistricting plans have been brought by aggrieved political parties, citizens' groups, and individual citizens on a variety of issues. In this round of redistricting, most of the action has been at the federal district court level, although the Supreme Court has been involved in a number of actions concerning congressional plans as follows:

- On March 22, 1982 the U.S. Supreme Court rejected an appeal by California's Republican Party to overturn the State Supreme Court's decision to allow 1982 elections to be held in districts drawn by the Democratic legislature in September 1981.

- In Illinois, a Democratically-oriented map adopted November 23, 1981 in a ruling by a federal panel in Chicago was upheld by the U.S. Supreme Court.

- Republicans in Missouri and Minnesota appealed District Court decisions on redistricting to the U.S. Supreme Court. In both cases motions to expedite were denied. However, in summary dispositions on May 17, 1982 the high court affirmed plans for both states.

- On March 29, 1982, the U.S. Supreme Court refused to overturn a stay of a decision on New Jersey's congressional map granted by Associate Justice William Brennan. A federal panel had earlier declared the Democratic-styled plan unconstitutional.

- In April 1982, a number of New Mexico candidates asked the U.S. Supreme Court to stay a decision by a federal panel to delay the primary, because it found the plan for the state legislature to be unconstitutional. The U.S. Supreme Court approved the scheduled primary for all but legislative races.

- On May 3, 1982 the U.S. Supreme Court rejected an appeal to defer reapportionment of New York's state legislature until 1983. The appeal was made by state Senate Republicans.

- A Texas congressional map was drawn by the legislature in August 1981. A three judge federal panel, in February 1982, ordered changes in six districts. The U.S. Supreme Court subsequently ruled that the federal panel acted improperly in readjusting boundaries. However, the high court left it up to the federal panel to decide what plan will go into effect for the May 1 primary. The District Court opted to have its own version in place for the election.

In states where the legislature has responsibility for drawing redistricting maps and legislators have failed to produce a plan because the House and Senate could not agree or where the legislature passed a plan which was then vetoed by the governor, the federal courts have stepped in with maps of their own:

- In Arkansas, a three-judge panel overturned a commission drawn plan and absent any corrective action by the legislature, adopted its own map on February 25, 1982.

- In Colorado, the Governor vetoed three successive plans passed by the legislature. A federal panel in Denver finally approved its own plan on January 28, 1982.

- On May 24, 1982 a federal panel issued a decision adopting a congressional plan for Michigan. An appeal has been filed with the U.S. Supreme Court.

- A U.S. District Court in Minnesota adopted a congressional plan after the legislature failed to come up with a redistricting bill.

- In Missouri, on January 7, 1982, a federal court issued a map. The state Senate had adjourned without approving redistricting legislation.

- A three-judge federal panel in Columbia, South Carolina adopted its own congressional plan on March 8, 1982, when the legislature failed to adopt a plan by the court-imposed deadline.

Federal courts have found the respective congressional redistricting maps in Arkansas, Hawaii and New Jersey to be unconstitutional. (Details of congressional redistricting are provided in the state-by-state survey beginning on page 9.)

A number of state legislative maps have met with a similar fate. State legislative plans in Hawaii, Michigan, New Mexico, Oregon, Tennessee, Texas, and Virginia have been overturned in the courts. In Michigan, the court overturned the process by which state legislative redistricting is accomplished.

Court involvement in reapportionment is not a new phenomenon. According to a 1973 survey by the Massachusetts Legislative Research Council, courts determined districts for one or both houses in at least twenty-one states between 1962 and 1972 because the state reapportionment procedure failed to produce acceptable results.

Justice Department Approval of Redistricting Plans

States that are subject to the preclearance provisions of Section 5 of the Voting Rights Act because of evidence of past voting discrimination must submit their redistricting plans to either the Justice Department or the U.S. District Court in the District of Columbia for approval within 60 days (see Appendix II for a listing of states covered by the Voting Rights Act and the status of plans submitted to the Justice Department).

The Justice Department has issued objections to a number of plans where statewide preclearance is required. For example, congressional plans for Georgia, Mississippi and Texas were rejected by the Justice Department and must be resubmitted. Action on a number of other plans is still pending.

The Time and Money Factor

Apart from inciting cynicism by voters and legislators themselves over this highly partisan process, there are other visible drawbacks to the way this round of reapportionment has been conducted -- the time and the cost. This aspect of reapportionment is especially striking at a time when state governments -- which often meet in only two or three month sessions -- are facing grave financial difficulties.

The Los Angeles Times (March 13, 1982) reported that the "Democratic-controlled legislature ... has spent $2.7 million in public funds drawing new political districts." The L.A. Times compared California's expenses with the amount spent by the New York Legislature so far, cited as "about $2.5 million."

In Virginia in early April 1981, legislators made an inauspicious start at redistricting when they came up with a House of Delegates plan that created 101 districts; that is one more than is mandated in the Constitution. Since then two House plans were vetoed by former Governor John Dalton (R), one was declared unconstitutional in federal court, and

two plans were rejected by the Justice Department under Section 5 of the Voting Rights Act. The Washington Post (April 15, 1982) reported that "[t]he entire process, including 14 special sessions and bills paid to a Richmond law firm to defend the state in court, have been estimated to cost taxpayers $1 million."

Opting for Reform

Despite the inherent conflict of interest in having legislators design their own districts, efforts at reapportionment reform have not come easily. Legislators resist giving up the responsibility and generally turn a deaf ear to groups or individuals who are seeking a more equitable process.

This could, however, change in the 1980's. Large-scale reform efforts have been launched in a number of states:

° California - San Francisco's Field Institute published the results of a February poll that found greater than 4 to 1 disapproval among both Democrats and Republicans for the present system of redistricting. Citing redistricting abuses following the 1980 census and before, Republicans and Common Cause members teamed up to conduct a petition drive for a state constitutional amendment initiative to establish a nonpartisan commission. The proposed 10-member commission would be required to draw lines according to standards designed to promote fair and effective representation for all citizens of the state. If the amendment is approved by the voters in November, the commission will draw new lines for state Senate, House, and congressional districts in 1984.

° Missouri and Washington State, after struggling with reapportionment following the 1980 census, opted to establish commissions to remove direct control for drawing lines from the legislature. Missouri already has a commission structure for state legislative redistricting; the new commission, if approved by voters on the November ballot, will be responsible for drawing congressional lines. Washington legislators, after great pressure from Common Cause and other public interest groups, established a commission to conduct state legislative and congressional redistricting, following certain apportionment standards.

° Florida, Virginia, and South Dakota - Other reform efforts have been specifically focused on standards for redistricting. Common Cause/Florida lobbied successfully for state legislative plans that included single member rather than multi-member election districts and a congressional plan that creates compact districts of convenient contiguous territory. Virginia adopted a House of Delegates plan (approved by the U.S. Justice Department) that is comprised of only single member districts. In the past Virginia had traditionally elected delegates from citywide, at-large districts. Both states hope to see improved minority access under their new single member plans. In South Dakota, the Farmers Union, AFL-CIO, League of Women Voters, We the People, ACORN, and Common Cause are conducting a petition drive to initiate a constitutional amendment to create certain single-member Senate districts to replace current multi-member districts in three urban areas.

Overview of Congressional Redistricting

The political parties have proven that they will gerrymander if they have the opportunity to do so. For example, an initial victory by Republicans in Indiana -- where the GOP turned a 6-5 Democratic edge to a projected 7-3 Republican majority of congressional seats -- was revenged by Democratic map makers in California, where the Republicans could lose five seats.

1980 census changes resulted in a 17-seat shift of congressional seats, mainly frostbelt to sunbelt. Republicans, who launched an expensive and sophisticated congressional reapportionment campaign, anticipated a gain of 10 to 12 congressional seats. But Democrats hold both houses of state legislatures in 28 states, and they proved to be tough opponents. The Baron Report (March 1, 1982) summed up the action this way: "The result, with some plans in major states still uncertain, is that reapportionment, per se, will be a 'wash' for the two parties."

Maine and Montana will not redistrict until 1983; otherwise, only Kansas must finish drawing up a congressional district plan. The Kansas legislature adopted two plans -- each subsequently vetoed by the Governor.

Georgia, Mississippi, and Texas are struggling to win Justice Department approval of their congressional redistricting plans. In other states, litigation surrounding new maps threatens to prolong reapportionment action to the end of 1982, or beyond.

The following is a summary of the action on congressional redistricting:

ALABAMA - The Democratic legislature passed a redistricting plan which was signed into law by Governor Forrest James (D) on August 18, 1981. The current congressional makeup -- four Democrats and three Republicans -- is not likely to change. The American Political Report (August 28, 1981) notes that the plan by the state legislature "makes only minor adverse changes in GOP'er Albert Lee Smith's sixth district." The state's other six districts are essentially unchanged. The Justice Department precleared the legislature's plan on February 26, 1982.

ACTION: Complete

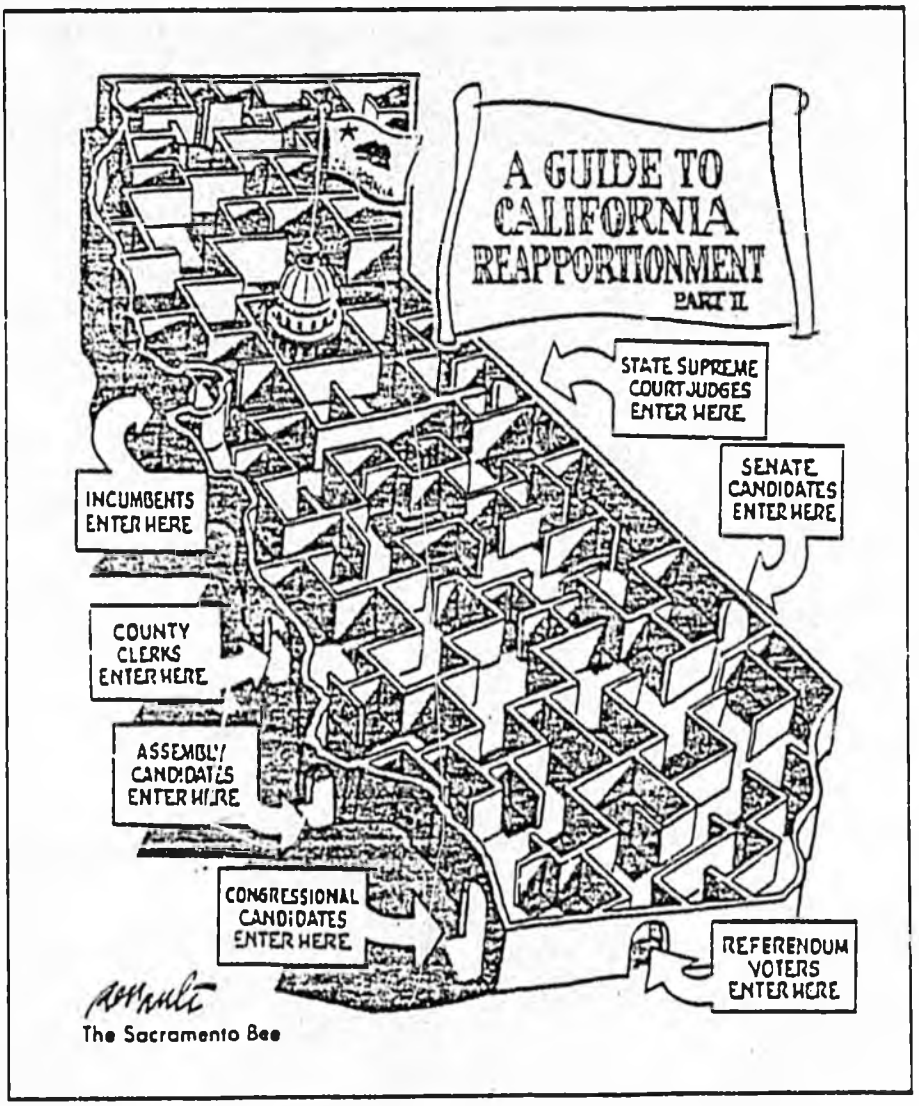
ALASKA - One congressional district

ARIZONA - On December 7, 1981 Arizona legislators voted to override Democratic Governor Bruce Babbitt's veto of a congressional plan. Within minutes of the override, the Democratic party filed a suit in federal district court, attacking the constitutionality of both the congressional and state legislative plans and charging Voting Rights violations (Art Hamilton v. Babbitt). There is also a petition drive to put the map on the referendum ballot on November 2, 1982. Congressional Quarterly (January 30, 1982) terms the new Arizona districts "a quandary for Udall." Democratic Rep. Morris K. Udall's Tuscon base was split in the creation of a fifth congressional seat.

On April 2, 1982 a Phoenix Federal District Court issued a settlement plan redrawing both the state legislative and congressional plans to eliminate the splitting of San Carlos Apache Reservation. The settlement plan requires Justice Department approval. Justice had previously rejected the plan because of dilution on the San Carlos Apache Reservation.

ACTION: Complete

ARKANSAS - In March 1981 Arkansas became the first state to draw new congressional district lines based on the 1980 census. Residents and state representatives of Garland County (Hot Springs) filed a lawsuit in district court (Doulin v. White) charging that the legislature could have adopted a plan that has a lower population deviation and more compact districts.



On January 6, 1982 a three-judge federal panel held that the plan was unconstitutional. On February 25 the Court, in the absence of any corrective action by the legislature, issued an opinion adopting its own redistricting plan for the 1982 elections, reflecting a .78% population deviation. On March 8 the Court denied the plaintiffs' motion to reconsider. The deadline for filing an appeal to

the Supreme Court is 60 days from that date, and it is not expected that an appeal will be filed.

According to Congressional Quarterly (March 6, 1982), the Court's plan "will have little effect on the re-election efforts of the state's incumbent House members." (Two Republicans and two Democrats.)

ACTION: Complete

CALIFORNIA - The Los Angeles Times (September 18, 1982) reported that on September 16, 1981 Democratic Governor Edmund Brown, Jr. signed a redistricting package: "All three Democratic-oriented bills were designed to perpetuate the political party now in power ..." Observers say that under the new plan -- drafted by Representative Phillip Burton (D) -- the Republicans could lose at least five congressional seats.

Reprinted from the Sacramento Bee with permission

On November 18, 1981 the California Republican Party submitted enough petition signatures to election officials to require a referendum on the June 1982 primary ballot regarding the three redistricting bills. The State Supreme Court was forced to come to a decision about which districts the candidates will run in this year. The Court decided to allow the Democratic plan to go into effect for one year only, allowing the referendum to take place. If the bills are rejected in June, the legislature will be required to redistrict again next year. In March 1982, the U.S. Supreme Court rejected an appeal by the California Republican Party to overturn the State Supreme Court's decision.

Meanwhile, the State Republican Committee and Common Cause launched an initiative to establish a ten-member independent redistricting commission. The initiative drive, begun in January 1982, is targeting the November election.

ACTION: Complete -- referendum and initiative pending

COLORADO - Colorado gains a sixth congressional seat (there are now three Democrats and two Republicans). In December 1981, "[t]hree federal judges began trying to do what the Colorado Legislature and governor couldn't -- redraw congressional district boundaries" (Denver Post, December 4, 1981). This action followed a series of three vetoes by Republican Governor Richard Lamm of three redistricting bills.

On January 28, 1982, a three judge panel in Denver issued a court drawn plan which protects the current officeholders and puts the new sixth district in Republican Denver suburbs.

ACTION: Complete

CONNECTICUT - A General Assembly Committee failed to draw congressional districts so a nine-member commission took over the task. The commission, on October 28, 1981, adopted a "Democratic plan that made minimal changes in the 6th District ... less Republican in makeup than it would have been under the GOP plan. Other incumbents appear strengthened" (Washington Post, February 14, 1982). Connecticut retains six congressional seats.

ACTION: Complete

DELAWARE - One congressional district

FLORIDA - Florida picked up four congressional seats, the largest increase of any state. The House and Senate resisted compromise over a new map, prompting two lawsuits (Kiser v. Firestone and Buoniconti v. Firestone). The suits were consolidated in U.S. District Court in Tallahassee. However, the legislature arrived at a plan on May 21, 1982. Governor D. Robert Graham signed the plan two days later; however, Rep. Curtis Kiser (R), whose lawsuit asks the federal court

to draw a plan, "declined to withdraw a lawsuit on the matter until his lawyer returns next week," according to the Washington Post (May 25, 1982).

ACTION: Complete -- litigation pending

GEORGIA - Georgia's congressional map was signed by Governor George Busbee on September 22, 1981 and submitted to the Justice Department for Voting Rights clearance on October 1. In February 1982 the Justice Department objected to the congressional (and state House and Senate) plans. The Washington Post reported (February 12, 1982) that Justice objected to the "division between two congressional districts of a 'cohesive black community' in Fulton and Dekalb counties in the Atlanta metropolitan area."

The U.S. District Court in the District of Columbia will hear a suit by the state of Georgia, appealing the Justice Department decision (Busbee v. Smith, et al.)

ACTION: Justice Department rejected plan -- litigation pending

HAWAII - A nine-member reapportionment commission that is responsible for conducting redistricting approved new congressional districts on September 28, 1981.

On March 23, 1982 a three-judge federal panel heard two redistricting challenges; however, only one of these suits (Craig Travis, et al. v. Jean King, et al.) concerns congressional redistricting. Plaintiffs challenged the use of voter registration, instead of census data, as a reapportionment base and charged malapportionment and gerrymandering in the congressional and legislative plans.

On March 25, the federal panel determined that the State legislative and congressional maps were unconstitutional based on the voter base issue and unacceptable population deviations. The federal court appointed special masters to supervise redrawing of the three maps. New maps were submitted to the Court on April 28, and approved in early May.

ACTION: Complete

IDAHO - Idaho keeps the same number of congressional seats (it has two, both Republican). Democratic Governor John Evans signed the congressional redistricting plan on July 29. The major action in the July special session concerned a shift of voters from the first to the second congressional district. Steve Ahrens of the Idaho Statesman (August 17, 1981) commented: "Not since 1964 have the Democrats elected a Congressman in the first district. The loss of 21,000 votes doesn't help their chances in 1982.

ACTION: Complete

ILLINOIS - Legislators -- who had the task of remapping a drop from 24 to 22 representatives -- could not come up with a plan. A three-judge federal panel charged with the responsibility subsequently considered Democratic, Republican, and bipartisan plans respectively, and "approved a Democratic-sponsored congressional redistricting proposal that would eliminate the seats of two Republicans and preserve the seats of two Democrats," according to the New York Times (November 24, 1981).

Republican legislators, including state House Speaker George H. Ryan, appealed the decision of the federal panel. In the first reapportionment case based on the 1980 census to reach the Supreme Court, the high court issued a one-line order upholding the congressional map. The Chicago Sun Times (November 24, 1981) reported that House Democratic Leader Michael J. Madigan, of Chicago, said the map "gives Democrats a strong edge in 10 districts, gives Republicans an edge in 11 districts and produces one swing district in central Illinois now represented by Republican Representative Paul Findley."

ACTION: Complete

INDIANA - The Indiana congressional plan was signed by Republican Governor Robert Orr on May 5, 1981. Indiana Republicans, who have sizable majorities in both legislative houses, used the most sophisticated computer technology available to draw up their plans. Pollster Robert Teeter's Market Opinion Research provided mapmakers with 92 separate items of information on the state's subdivisions according to The Washington Post (May 11, 1981). The Indiana Republican leadership has been candid about its reapportionment effort. Bruce Melchert, Indiana Republican chairman, told ABC news on July 22 that "there are three or four incumbent Democrats that we would like to see defeated." That would mean a transformation of the present 6-5 Democratic edge to a Republican 7-3 majority (Indiana lost one seat).

As Congressional Quarterly (May 2, 1981) describes the plan: "Its lines weave in and out of counties, concentrating Democratic voting strength into three districts and creating seven others in which the GOP believes it can win." The major victims of this design were Watergate Democrats Philip Sharp, David Evans and Floyd Fithian, whose districts were balkanized. Fithian's and Evans' districts were dispersed into four new congressional districts. Evans, Sharp, and Democratic Representative Lee Hamilton now live in the same district. The Republicans, in an attempt to try the case before a friendly judge, quickly requested a ruling on the constitutionality of their plan from the Marion Circuit Court. In an attempt to move the case to a more friendly court, the Democrats removed to federal court and filed a motion to dismiss, arguing that there was no case or controversy. The federal district court agreed and dismissed the

suit, because, at the time, no defendants said they were prepared to argue that the plan was unconstitutional.

ACTION: Complete

IOWA - Legislators rejected an initial plan that the legislature's nonpartisan research bureau produced, putting GOP Representatives Tom Tauke and Jim Leach in the same district. (Iowa's six-man delegation is currently split, three Republicans and three Democrats, and the Governor and the Legislature are Republican). American Political Report on July 3, 1981 reported that the Legislature rejected the second plan because "incumbent GOP Representative Tom Tauke got a shaky district." A third plan was finally passed on August 14. It puts Democratic Representatives Neal Smith and Tom Harkin in the same district, but Harkin is apparently expected to move elsewhere in his state to seek re-election. The Des Moines Register (August 14, 1981) stated that the approved redistricting plan will end up "preserving the balance between parties."

ACTION: Complete

KANSAS - Governor John Carlin (D) vetoed a congressional plan (SB 664) on February 18, 1982. The Kansas City Times (February 19, 1982) stated that Governor Carlin accused Republican lawmakers of "drawing a map without hearing from Democrats," and of splitting "the state's two metropolitan areas, Kansas City and Wichita, among congressional districts." Governor Carlin vetoed a second version as well. This action prompted two court challenges, which have been consolidated by a federal district court. Democrats are asking the court to take over responsibility for redistricting (O'Sullivan v. Brier). Republicans are seeking court approval of the plan passed by the legislature (Carson v. Carlin).

ACTION: Congressional plan vetoed

KENTUCKY - A congressional map was signed by Governor John Y. Brown, Jr. (D) on March 10, 1982 (HB 235). Kentucky has seven congressional seats (no losses or gains). American Political Report (February 26, 1982) noted that "Democrats think that redistricting gives them a better shot at defeating GOP Rep. Gene Snyder."

ACTION: Complete

LOUISIANA - Louisiana Governor David Treen (R) signed the state's congressional plan on November 19, 1981. The Morning Advocate observed that the "new congressional districts will look much like the present ones -- to the benefit of Louisiana's eight present members of Congress."

A lawsuit asking the Court to allow candidates to run in the old congressional districts was filed in district court (Robert E. Couhic v. James L. Brown). A second lawsuit -- charging one person, one vote violations and minority voting dilution in congressional and state house redistricting -- was also filed in district court (Barbara Major v. David Tree and James Brown).

ACTION: Complete - litigation pending

MARYLAND - The General Assembly needed to approve eight congressional districts (no change in the number of districts). Legislators completed their task on April 9, 1982.

ACTION: Complete

MASSACHUSETTS - The Boston Globe (December 10, 1981) reported that, "[the] Special Commission on Redistricting adopted a plan ... which carves 11 new districts out of the present 12 and merges the districts of Frank and Heckler." The plan was approved by Governor Edward J. King (D) on December 16, 1981.

ACTION: Complete

MICHIGAN - also loses one congressional seat, leaving the state with 18 districts. On April 8, 1982 the House adopted a plan, giving it immediate effect. On April 8, the Senate adopted a bill, but did not give it immediate effect. Governor William G. Milliken (R) vetoed the plan on April 27. A three-judge federal panel held hearings on May 7 on proposed plans submitted by the parties (Agerstrand v. Austin), and on May 24 the court issued a decision adopting a plan. The Republican party filed an appeal with the U.S. Supreme Court.

ACTION: Plan vetoed -- litigation pending

MINNESOTA - On March 11, 1982 a three-judge panel issued a plan for Minnesota's eight congressional districts. The Court took over responsibility for adopting a plan following its ruling of September 30, 1981, in which it required the state's legislature to submit both congressional and legislative maps to the court by January 29 (Lacomb v. Joan Growel). The court acted when the legislature failed to meet the deadline. American Political Report (March 12, 1982) stated that the new court-drawn map "essentially mirrors the Democratic plan. GOP Rep. Tom Hagedorn's seat was wiped out, throwing him in a new district with freshman GOPer Vin Weber ..."

The Republican congressional delegation appealed the decision to the U.S. Supreme Court. The St. Paul Pioneer Press (March 25, 1982) reported that Independent-Republican

party attorneys "argued that the panel exceeded its constitutional authority by departing dramatically from existing congressional district lines and carving out a new district within the Twin Cities metropolitan area." The U.S. Supreme Court denied a motion to expedite on April 5, 1982. On May 17, 1982 the U.S. Supreme Court upheld the plan.

ACTION: Complete

MISSISSIPPI - Governor William Winter (D) signed the congressional redistricting plan on August 28 -- the conclusion of a special summer session. The Jackson Clarion-Ledger (August 28, 1981) reported that the plan shifted six counties and parts of four other counties between districts and has been termed the "least change plan." The plan maintains five white majority districts. The overall population variance was low (.0338 percent) but the state split county lines for the first time.

Justice Department approval is required. On January 11, 1982 Justice requested additional information on the redistricting plans. On March 30, Justice rejected the congressional remap because of the minority makeup of the Delta area. The state of Mississippi is appealing the Justice Department rejection in U.S. District Court in the District of Columbia.

Two lawsuits have been filed challenging the new congressional remap for one person, one vote and Voting Rights Act violations. The suits (David Jordon v. William Winters & Owen H. Brooks v. William Winters) have been consolidated in U.S. District Court.

ACTION: Justice Department rejected plan

MISSOURI - The Missouri state House approved a congressional map, but the state Senate could not come to an agreement on nine new congressional seats (Missouri lost one district). A U.S. District Court three-judge panel filed its own plan on January 7, 1982, making it "the second time in the last two decades a federal panel has had to come up with a congressional map because of lawmakers' inability to reach agreement." Kansas City Times (Dec. 29, 1981). The court drew up its new map by essentially eliminating the rural central Missouri district of Republican representative Wendell Bailey. The three Democratic congressional seats in St. Louis, however, appear to be safe.

An appeal of the District Court decision was filed with the U.S. Supreme Court by officials of the local Farm Bureau and others (Schatzle, et al. v. Kirkpatrick). On March 29, 1982, a motion to expedite was denied by the Supreme Court. On May 17, the U.S. Supreme Court affirmed the lower court's plan.

ACTION: Complete

NEBRASKA - enacted a plan which was signed by Governor Charles Thone (R) on May 29, 1981. As the Baron Report (June 22, 1981) puts it, "GOP governor ... Nonpartisan GOP legislature ... Three GOP districts ... Little population shifts ... Add up to no change."

ACTION: Complete

NEVADA - now has two congressional seats instead of one. Questions about where to put the second congressional district culminated in a plan which creates one Las Vegas district and one district spreading across the rest of the state. (There had been talk of an east-west split.) The American Political Report (June 19, 1981) figures that the southern seat (Las Vegas) is sure to be Democratic (as it is now) and that the northern district "could go either way but probably leans to the GOP."

ACTION: Complete

NEW HAMPSHIRE - maintains its two congressional seats (one Democrat, one Republican). Democratic Governor Hugh Gallen signed the new congressional remap on March 4, 1982.

ACTION: Complete

NEW JERSEY - In a final action before leaving office, Democratic Governor Brendan Byrne signed a congressional remap developed by the Democratic legislature. New Jersey had the task of cutting back from 15 to 14 districts. Congressional Quarterly (March 6, 1982) noted that "The map had joined the districts of two Republican incumbents, created a new Democratic-leaning constituency and presented several Democratic incumbents with safe seats."

New Jersey Republicans challenged the plan based on its population deviation (0.69 percent), and on March 3, 1982 a three-judge federal panel, in a 2-to-1 vote, declared the plan unconstitutional because it violated the one person, one vote requirement.

On March 11, 1982, Democrats filed a request for a stay with Supreme Court Justice William J. Brennan, Jr., which was granted pending an appeal to the Supreme Court. New Jersey Republicans requested an expedited hearing; however, on March 29 the court rejected a request by New Jersey Republicans to vacate the stay. Subsequently, Republicans filed another lawsuit in an attempt to have the plan voided on the grounds that the redistricting process was not done in accordance with the state constitution.

ACTION: Litigation pending

NEW MEXICO - added one seat to give it three congressional districts. A new map was signed by Governor Bruce King (D) on January 19, 1982. Congressional Quarterly (January 23, 1982) noted that the plan "places New Mexico's new congressional district in the Albuquerque area and divides the rest of the state roughly between a district in the north and one in the south."

In April 1982, a federal court held that the plan was constitutionally impermissible based on the use of a votes-cast formula to estimate precinct populations and sent the plan back to the legislature. However, the U.S. Supreme Court allowed a June 1 primary for all but state legislative races, staying the federal court order that could have delayed the election.

ACTION: Complete

NEW YORK - New York's congressional delegation had to be reduced from 39 to 34 seats. As expected, the Senate and Assembly deadlocked over a plan. Senate Republicans appealed to the U.S. Supreme Court to stay a lower court order to complete a plan by May 10 (Flateau, et al. v. Anderson, et al.). The U.S. Supreme Court rejected the appeal.

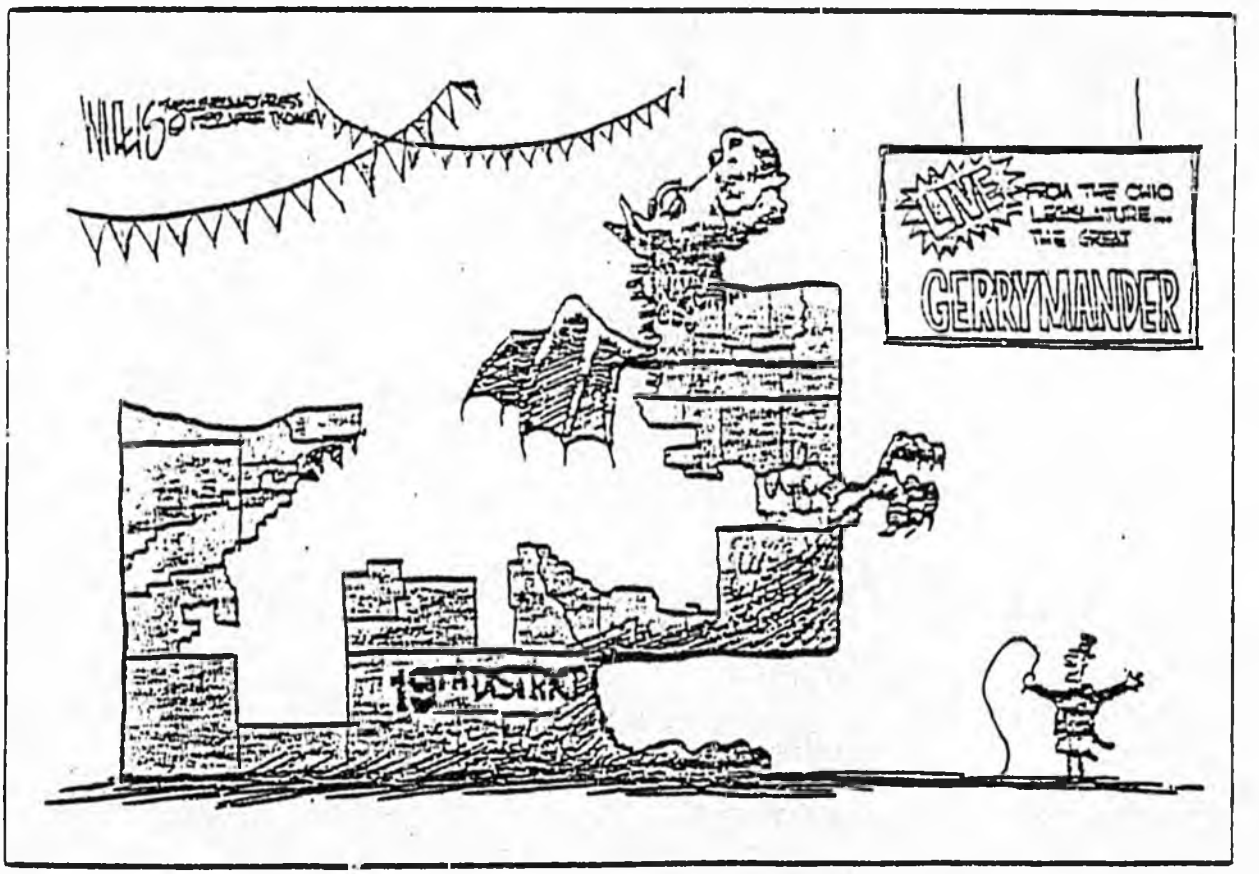
The legislature enacted a congressional redistricting bill on May 11, amended May 17, and signed by the Governor on May 20. In spite of this, the court-appointed master in the pending U.S. District Court suit is reported to be proceeding to draw up his own proposed map. It is not clear what course this court proceeding will take.

American Political Report (May 21, 1982) stated: "If the congressional remap put through by the legislature holds up, the major face-offs necessitated in the new districts -- New York lost 5 seats -- will be Rep. Ben Gilman (R) vs. Rep. Peter Peyser (D), Rep. Guy Molinari (R) vs. Rep. Leo Zeferetti (D), Rep. Ted Weiss (D) vs. Rep. Jonathan Bingham (D), Rep. John Le Boutillier (R) vs. Rep. Greg Garman (R), unless Garman decides not to seek re-election. If the remap is accepted by the governor, courts and the Justice Department, Democrats would wind up bearing most of the burden..."

ACTION: Complete -- litigation pending

NORTH CAROLINA - On August 4, 1981, The Southern Political Report stated that, "the North Carolina legislature completed action on a redistricting plan that helps incumbent Congressmen and encourages a continuation of the 7 Democrats - 4 Republicans ratio in the Tarheel delegation." Under the plan, Representative L... Fountain's new district was nicknamed "Fountain's Fishhook" because of the way it wound around Durham county, a black-dominated area that had been proposed for inclusion in the conservative Fountain's district.

As required by the Voting Rights Act, the Justice Department reviewed the plan and failed to preclear the congressional map. The congressional map was rejected on the grounds that it diluted black voting strength.



In February 1982 the North Carolina General Assembly passed a new plan that includes Durham County in Representative Fou ·in's 2nd district. In March the Justice Department p.ecleared the plan.

Meanwhile, the NAACP Legal Defense and Education Fund had challenged the congressional base based on the racial dilution issue (Gingles v. Edmisten).

ACTION: Complete -- pending litigation

NORTH DAKOTA - One congressional district

OHIO - Redistricting means a loss from 23 to 21 seats (the current delegation is now 10-D, 13-R). A bill was finally signed by Governor James Rhodes (R) on March 25, 1982. According to the Columbus Citizen-Journal (March 25, 1982): "The final version basically protects most incumbent congressmen but knocks out the 17th District now held by Republican Rep. John M. Ashbrook of Johnstown, a candidate for the U.S. Senate. It also consolidates the districts of Democratic Reps. Eckart and Ronald M. Mottle of Parma, forcing them to run against each other this year." The

Reprinted from The Cleveland Press with permission

district in which they have been placed (District 19) has been called the Pac-Man district because its shape is similar to a route in the electronic game (see cartoon on page 20).

Ohio Democrats have intervened in a pending U.S. District Court suit (Patrick Flanagan v. Gillmor) to challenge the constitutionality of the plan.

ACTION: Complete -- litigation pending

OKLAHOMA's congressional district plan was signed by Democratic Governor George Nigh on July 22, 1981. The state has six seats (currently five Democrats and one Republican) and American Political Report (July 31, 1981) has noted that the new lines "solidify most of the state's Congressmen."

The Oklahoma Republican Party obtained the 92,000 signatures needed to validate an initiative petition asking voters to repeal the redistricting plan and enact a substitute plan. Initiative News Report (March 22, 1982) noted that "the State Supreme Court ruled in late February hearing to allow initiative opponents to re-check petition signatures ... until the end of April. Then, the Court must rule on 5/26/82 on ballot placement." Regardless of the pending initiative, however, congressional candidates in the November, 1982 election will run on the basis of the redistricting plan already enacted.

ACTION: Complete -- pending litigation and initiative

OREGON - The Democrats control the legislature and have a 3-1 edge in Congress. The state picks up a new district. According to Congressional Quarterly (August 8, 1981), "the redistricting bill gives Republicans a good chance to win the state's new 5th district and assures GOP control in the 2nd district." Democrats should retain control of their three congressional seats under the new plan. Governor Victor Atiyeh (R), voicing objections to diluted GOP voting strength in a Portland suburb, allowed the bill to become law without his signature.

ACTION: Complete

PENNSYLVANIA - must drop two of its 25 seats. The current delegation is 13 Republicans and 12 Democrats, following Representative Eugene V. Atkinson's switch from the Democratic to the Republican party in October 1981. On March 2, 1982 -- after many months' effort and in the face of potential federal court action and a March 9 primary filing date -- the Legislature approved a plan. Republican Governor Richard Thornburgh signed the plan on March 3.

Congressional Quarterly (March 6, 1982) noted that under the new plan, "[t]wo pairs of incumbent Democrats -- John P. Murtha and Don Bailey in the western part of the state, and Thomas M. Foglietta and Joseph F. Smith of

Philadelphia -- will have to run against each other for renomination. Democrat Doug Walgren's Pittsburgh-area district becomes more difficult for him to win, and Republican convert Eugene V. Atkinson is given territory in which he has a good chance to hold on." Lawsuits challenging the plan were filed by Democratic officials and a number of other groups. The consolidated suits were the subject of a hearing before a three-judge federal panel in March 1982. (In Re: Pennsylvania Congressional Districts Reapportionment Cases.)

ACTION: Complete -- litigation pending

RHODE ISLAND - has two congressional seats (no gains or losses). On April 2, 1982 the legislature completed action on a Congressional plan. The plan became law without the governor's signature.

ACTION: Complete

SOUTH CAROLINA - A legislative conference committee was unable to reach a compromise on South Carolina's six seats (2 Democratic, 4 Republican), so a three-judge panel U.S. District Court took over the task and adopted its own congressional redistricting plan on March 8, 1982. There is discussion of an appeal by the NAACP.

ACTION: Complete -- litigation possible

SOUTH DAKOTA - One congressional district

TENNESSEE - The legislature enacted a congressional redistricting plan in 1981. Currently Democrats have a 5-3 edge and control the legislature. Reportedly they were shooting for a 7-2 margin in Congress (the state picks up a seat). Observers say the newly-created 4th district, which has no incumbent, looks like a salamander because of the way it winds halfway across the state -- apparently made up of leftover counties from other districts. On August 25, 1981 the Tennessee Journal commented that "the makeup of the district leans slightly Democratic but a strong Republican candidate could have a good chance of winning." Democrats also targeted the new 7th district, but in the end the shift of precincts won't affect the number of Democrats and Republicans voting in the district. Republican Governor Lamar Alexander allowed the plan to become law without his signature.

ACTION: Complete

TEXAS - picks up three new seats (the current delegation is 19 to 5 Democratic). Last summer Republicans and conservative Democrats joined forces to give Republican Governor William Clements "precisely what he demanded -- a

Dallas -- Fort Worth minority district and improved Republican prospects statewide," according to the Dallas Morning News (August 11, 1981).

A lawsuit, charging racial discrimination (Seamon v. Clements) was filed in U.S. District Court. On January 29, the Justice Department filed objections concerning two southern districts, noting dilution of Hispanic voting strength.

On February 27, a three-judge federal panel ordered a redrawing of six congressional districts. According to the New York Times (February 29, 1982), "The plan adopted by the Federal judges would eliminate any distinctly black district for Dallas County. The court plan would also create a new district that appears likely to be won by a Republican."

Republicans appealed to the U.S. Supreme Court, which indicated that the lower court drew a congressional plan when the legislature's plan was not found to be unconstitutional or to violate the Voting Rights Act. The Supreme Court noted that the three-judge panel could make the redistricting change before or after the May 1 primary, as long as the legislature's map is in place for the next election. The federal court, on April 5, ordered the May 1 primary to be held under the federal court's plan.

ACTION: Plan must be redrawn by court order

UTAH - has two Republican seats and picked up a seat. The legislature adopted a congressional redistricting plan on October 30, 1981. As Congressional Quarterly (January 2, 1982) puts it: "the GOP dominated Legislature saw to it that Republicans have a strong chance of winning all three districts in 1982."

ACTION: Complete

VERMONT - One congressional district

VIRGINIA - The Democratic Virginia General Assembly adopted a redistricting plan on May 1 that "fails to loosen the Republican party's stranglehold on the state's 10-member U.S. House delegation," according to The Washington Post (May 2, 1981). Republican Prince William County was moved out of Representative Stanford Parris' (R) 8th district; observers feel that it may make him more vulnerable to a challenge. The plan was approved in a special session and precleared by the Justice Department as required by the Voting Rights Act.

ACTION: Complete

WASHINGTON - In the 1981 legislative session Republican Governor John Spellman vetoed the legislature's congressional plan, which must reflect an increase from seven to eight seats. This year the Republican legislature had better

luck; Governor Spellman signed the congressional remap on February 17. (Legislators also approved a redistricting commission to take over reapportionment after 1990.)

ACTION: Complete

WEST VIRGINIA - has four congressional districts (two Republican and two Democratic). A congressional map was signed by Democratic Governor John D. Rockefeller IV on February 11, 1982. The Washington Post (February 14, 1982) noted that "after considering more drastic changes, the Democratic legislature passed a plan making only minor adjustments in four districts, now equally divided between the parties." The legislature was pressured to act because of a lawsuit (Brookover v. Manchin). A U.S. District Court issued an order on February 23, 1982 affirming the validity of the enacted plan.

ACTION: Complete

WISCONSIN - retains nine congressional seats. A new map was enacted on March 24, 1982. Legislators were pressured by a lawsuit asking a federal court to takeover redrawing both congressional and state legislative plans (AFL-CIO v. State Elections Board). Enactment of a congressional plan effectively excluded congressional redistricting from the court challenge.

ACTION: Complete

WYOMING - One congressional district

Overview of State Legislative Redistricting

With the exception of just seven states (Maine, Massachusetts, Montana, New Hampshire, New Mexico, South Carolina and Wisconsin), legislative redistricting based on the 1980 census is completed.

Litigation brought by groups or individual citizens concerning legislative plans has been resolved in at least a dozen states, but court challenges continue to protract the process in other states. Moreover, the Justice Department, under Section 5 of the Voting Rights Act, has current objections to Alabama's state Senate plan and Texas' state Senate and House plans.

Democrats have control of state legislatures in 28 states and have total control -- the legislature and the governorship -- in 17 states. Despite this advantage, political forecasters pointed to potential Republican gains in Illinois, Pennsylvania and other states that were subject to population movement from major urban and industrial areas to outlying suburban regions.

This theory, for example, held true in Pennsylvania, where Republicans have majorities in both houses. However, in Illinois, Democrats were able to control the process and ensure enactment of a Democratic-leaning plan. The following survey looks at 20 states in which the redistricting process has been particularly noteworthy.

Highlights of Legislative Redistricting

ALABAMA - On May 6, 1982 the state House and Senate plans were rejected by the Justice Department under Section 5 of the Voting Rights Act. The Justice Department objected to a number of districts where black voting strength was decreased through redistricting decisions.

ARKANSAS - A commission composed of the Governor, a Republican, and the Attorney General and Secretary of State, both Democrats, adopted a plan for both legislative houses in June, 1981. Two lawsuits were subsequently filed. Siloam Springs residents charged that the Senate plan discriminated against voters in their area. The Senate plan was upheld by the Arkansas Supreme Court. A second challenge to the plan was dismissed.

COLORADO - A 1974 constitutional amendment proposed by the League of Women Voters established a reapportionment commission to conduct state legislative redistricting. The 11-member commission included four members appointed by House and Senate party leaders, three appointed by the Governor, and four appointed by the Chief Justice of the Colorado Supreme Court.

A plan was unanimously approved by the Commission in December 1981 and submitted to the state Supreme court for review. The court approved the commission-drawn plan but ordered revision of the sequencing of two Senate districts so that no district would be without representation from 1982 to 1984. The commission filed an amended plan that completely redrew the two Senate districts. The court rejected the changes and ordered the Commission to simply make the election date adjustments. The final plan was complete by the March 15 deadline.

FLORIDA - On April 7, 1982 the Florida legislature adopted a legislative plan, which was sent to the state Supreme Court for review. The Justice Department must also approve the plan under provisions of the Voting Rights Act. The new plan creates only single-member legislative districts.

HAWAII - The League of Women Voters, Republicans, and Democrats challenged the legislative plan prepared by Hawaii's nine-member bipartisan reapportionment commission on an issue that is unique to Hawaii -- the reapportionment base. The commission based its 1981 map on the number of registered voters rather than on census data. A U.S. District Court panel invalidated the state Senate and House plans and ordered the appointment of a special master to make a comparison of voter registration and census figures to determine if the deviation is great enough to violate the one person, one vote doctrine. The new plan created the first multicounty, single-member districts in Hawaii's history.

IDAHO - Governor John Evans (D) vetoed the Republican legislature's first and second attempts at redrawing state legislative districts, prompting Republican legislators to file a suit in district court (Budge v. Cenarrusa). By March 24, however, the legislature and the Governor approved a plan so the case -- along with a second suit charging improper splitting of political subdivisions -- was dismissed. A separate state District Court suit challenging the splitting of Sandpoint (Bonner County) Indian Reservation is pending.

ILLINOIS - The Legislative Redistricting Commission on Oct. 2, 1981 adopted a final legislative reapportionment plan that is expected to give "Democrats control of both houses of the legislature, and greatly enhance Chicago's ebbing influence there ... the new map was drawn in such a way as to carve up Republican districts ... to leave some Republican incumbents outside their districts, or to put them in districts where they would face strong challenges by other incumbents." (New York Times, October 8, 1981)

The validity of the plan was challenged in U.S. District Court (Rybicki v. State Board of Elections). In a decision issued January 12, 1982 the Court generally upheld the plan, with the exception of modifications to a few Chicago districts, to eliminate the concentration of minority voters into an unreasonably small number of districts.

INDIANA - Court action is pending concerning legislative plans which were signed by Governor Orr on February 25. Two lawsuits (Bandemer v. Davis and NAACP State Conference v. Orr) are in the U.S. District Court in Indianapolis. The Court rejected a motion to dismiss the cases, which charge minority dilution and other issues.

LOUISIANA - faces a lawsuit challenging the State House and congressional plan (Barbara Major v. David Treen and James Brown). Plaintiffs contend that the plan violates one person, one vote principles and dilutes the minority vote.

MICHIGAN'S Supreme Court issued a decision on redistricting on March 26, 1982, after reviewing a plan adopted and submitted by the Legislative Reapportionment Commission. The court held the plan unconstitutional, determining that it is unconstitutional for redistricting responsibility to be vested in the Legislative Reapportionment Commission instead of the legislature. Subsequently, in the absence of legislative action by the Court's May 4 deadline the Court appointed a special master to draw a plan in compliance with its guidelines. The master filed a revised plan on May 13, and the Court on May 21 adopted that plan with some revisions. The Democrats are appealing to the U.S. Supreme Court, and in the meantime have asked the Supreme Court to stay the effective date of the plan.

MINNESOTA - The St. Paul Pioneer Press noted that "the suburbs are the big winners and central cities the losers in a new federal court-drawn legislative redistricting plan ..." The court took responsibility for adopting a plan after the legislature failed to meet its March 12 deadline (LaComb, et al. v. Growel, et al.). The U.S. District Court's March 11 decision was appealed to the Supreme Court, which turned down the appeal.

NEW HAMPSHIRE - Governor Hugh Gallen (D) vetoed a Senate reapportionment plan passed by a Republican legislature. The Hartford Valley News (May 15, 1982) reported that Senate President Robert Monier (R) filed a suit in state Supreme Court on May 14, 1982 asking "the justices to take jurisdiction over reapportionment, declare the present district boundaries unconstitutional and accept and adopt a vetoed Senate redistricting plan."

NEW MEXICO - New Mexico has a Democratic legislature and a Democratic governor. A state legislative plan was adopted but was subsequently determined to be unconstitutional by a federal district court. The court objected to the votes-cast formula that was used to estimate precinct populations, and thereby upheld the claims of a number of plaintiffs who charged that the use of the formula resulted in minority underrepresentation.

The legislature is considering preparation of a new plan. In the meantime the June 1 primary date for members of the legislature has been delayed by court action.

NEW YORK - The state legislature, pressed by a federal court threat to appoint a special master, approved state legislative maps on May 11, 1982, with amendments May 17. Assembly Democrats who have a majority decided on the Assembly map. In the Senate, Republicans who are in control drew up the Senate map. The New York Times (May 9, 1982) commented: "Not surprisingly, the plan strengthens each party's hand in its own house." The bills were signed by Governor Hugh Carey (D) on May 20.

NORTH CAROLINA - Legislators struggled to win Justice Department approval for their state legislative districts, adopted in bills enacted in February 1982. The Raleigh News and Observer (April 28, 1982) noted that when legislators met to approve a plan, "the special session was the third to deal solely with the prickly redistricting issue since October."

Meanwhile two lawsuits were consolidated and will be taken up by a federal District Court (Gingles v. Edminsten and Fuch v. Hunt). Plaintiffs are charging Voting Rights Act violations, racial dilution, and other issues.

PENNSYLVANIA - The Reapportionment Commission adopted its final General Assembly reapportionment plan on October 13, 1981. It is expected that the plan will accelerate the shift of power in the legislature from Democratic urban areas to usually Republican suburban and rural area.

Common Cause filed suit in the Pennsylvania Supreme Court challenging the constitutionality of the plan, on the ground that it unnecessarily divided a very large number of counties, municipalities and wards into more than one district and created districts which were not compact, diluting the voting strength of racial and ethnic minorities. The Court on December 29, 1981 upheld the constitutionality of the plan, characterizing equality of population as the overriding constitutional goal.

A second challenge to the validity of the plan was raised in a suit filed in the U.S. District Court -- Hispanic Coalition on Reapportionment v. Legislative Reapportionment Commission. This suit focused on one district in Philadelphia and attacked validity of the plan on grounds it diluted Hispanic minority voting strength. In a decision issued April 6, 1982 the court rejected the challenge and dismissed the case, on the ground that the final plan increased the concentration of Hispanic votes over what it had been prior to reapportionment.

SOUTH DAKOTA - The state legislative reapportionment plan, adopted March 13, 1981 was challenged in U.S. District Court (Sioux Falls) in O'Connor v. Kundert. It was argued that the use of multi-member districts was unconstitutional. On February 12, 1982 the Court issued a decision rejecting these arguments and holding that the plan was constitutional. The case was dismissed.

However, the petition drive by Common Cause, League of Women Voters and certain other groups for an initiative constitutional amendment that would abolish multi-member state Senate districts in three urban areas was successful, and as a result the proposed constitutional amendment will be on the November, 1982 ballot.

TENNESSEE - A Nashville Chancery Court on February 18, 1982 issued a summary judgment holding the state Senate plan invalid because it divided counties in forming districts. On March 31, the state Supreme Court issued a decision holding the summary judgment improper. The legislature subsequently adopted a modified Senate plan. However, a court date was set for September 13 (the primary is scheduled for August 5) to determine the validity of both the House and Senate plans for future elections (Lockert v. Crowell).

TEXAS - Ignoring Justice Department objections to certain districts, a three-judge federal panel adopted the Legislative Redistricting Board's plans with only a few modifications, in order to hold the May 4 primary on

schedule. The court made its ruling in a lawsuit brought principally by Republicans (Terrazas v. Clements). The legislative districts were adopted only for the 1982 election. The legislature will have to redraw the districts in 1983.

VIRGINIA - After 14 special sessions, the General Assembly was finally successful in completing a House of Delegates plan and a Senate plan. An earlier plan approved by the legislature was overturned in federal court on the basis of excessively high population variance (Cosner, et al. v. Dalton, et al.). Earlier plans were also objected to by the Justice Department, but their validity is subject to review in Cosner v. Dalton. The Washington Post (April 2, 1982) stated: "The central issue throughout the debate was the demand ... for the abolition of citywide at-large districts that have protected senior white Democratic incumbents and, according to the critics, diluted black voting strength." Civil rights groups and Republicans have praised the new maps. However a number of localities have intervened in the litigation, with complaints on the issues of compactness plus the manner in which counties have been split up. Hearings are scheduled for mid-June.

APPENDIX III: REAPPORTIONMENT: A BETTER WAY

Common Cause first proposed a model reapportionment process in 1977 for adoption at the state level. The model proposal relies heavily on the Colorado, Hawaii, and Montana reapportionment procedures.* The Hawaii and Montana processes were recommendations of constitutional conventions that received voter approval in 1968 and 1972, respectively, (Hawaii and Montana commissions draw congressional as well as state legislative boundaries.) The Colorado process was the result of a citizen initiative approved by the voters in November of 1974 by a vote ratio of three to two.

The Common Cause model proposes a reapportionment process designed to produce districts that are fairly drawn as well as districts of substantial population equality. Unlike district lines produced by political gerrymandering, fair district lines are not drawn to pre-determine election results. The model proposes a system of reapportionment that is equitable in its treatment of incumbent legislators, political parties, and others. This replaces the present system where people with political power are able to manipulate district lines for personal and partisan advantage.

---

* A description of reapportionment commission activities in Colorado and Hawaii is found on page 26. Montana will not complete redistricting until 1983.

The Common Cause model has three main elements -- strict anti-gerrymandering standards; an independent, nonpartisan reapportionment commission; and prompt judicial review. All three elements of the model are crucial. They are designed to reinforce each other and to produce fairly drawn district lines. The reapportionment standards are designed to produce fair district lines by limiting the discretion of the commission to gerrymander for political or partisan purposes. The nonpartisan reapportionment commission replaces the legislature, providing much needed independence. Fair district lines are more likely if district lines are drawn by persons not directly affected by them. Judicial review provides finality and acts as the final safeguard of the public's interest in fair and effective representation.

Four states have enacted legislation in the last three years that strengthens the standards that legislators must use in drawing congressional and state legislative districts -- California (1980), Iowa (1980), Oregon (1979), and Washington (1982). In addition, proposals to establish a redistricting commission will appear on November 1982 ballots in California and Missouri.

Common Cause will continue to lobby for reapportionment reform in the states. To obtain a copy of Common Cause's report on state and congressional reapportionment, Toward a System of Fair and Effective Representation, and the Common

Cause model reapportionment amendment to a state constitution, please call or write to the Common Cause Redistricting Clearinghouse, 2030 M Street, N.W. Washington, D.C. 20036 (202) 833-1200.

Chairman:
Not yet selected

By August 1, 1981, a 2/3 vote in each chamber is required to approve a redistricting plan. If the legislature cannot complete the plan by the deadline, a Commission of 9 members is appointed: 2 each by the Senate President Pro Tem, House Speaker and the Minority Leaders of each party, all from the two major political parties and a 9th member selected by the eight within 30 days. The Commission by at least a 5 to 6 vote must submit its plan by October 30, 1981. If no plan is submitted, by petition of a registered voter, the state Supreme Court must file a plan by January 15, 1982 or rule on the petition submitted to it.

REAPPORTIONMENT MECHANISM

STATE LEGISLATIVE DISTRICTS: Legislature/Legislative Redistricting Commission

Legislature must redistrict by June 30, 1981. If they do not, an 8 member Legislative Redistricting Commission is appointed by July 10, 1981: 2 each by the Senate President and Minority Leader, the House Speaker and Minority Leader. The members are to include 2 Senators, 2 Representatives and 4 citizens. The Commission must file a report with the Secretary of State by August 10, 1981. If the Commission does not adopt a plan by that date, the State Supreme Court selects 2 people by September 1, 1981, one of whom is chosen at random to be the commission tie-breaker. The 9 member commission must file its report by October 5, 1981.

REAPPORTIONMENT MECHANISM

STATE LEGISLATIVE DISTRICTS: Advisory Commission/Legislature

Advisory Commission established in 1975 by Constitutional amendment. Members will be appointed in 1983 and every 10 years after that. 15 members: 3 by House Speaker, 2 by Senate President, 5 by Floor leaders, 5 by others. 6 majority and minority party members. 3 public members. The commission prepares a plan and submits it to the legislature which may adopt the commission's plan or one of its own. If the legislature cannot agree on a plan, the Supreme Judicial Court must redistrict.

A LEGAL VIEW OF REAPPORTIONMENT
A Cronology of Supreme Court Reapportionment and Voting Rights Decisions

CITY OF ROME vs. UNITED STATES, 64 L Ed 2nd 119, 100 S Ct. 1548 (1980) (GA - Local)

Voting Rights Act

Sec. 5 of the Voting Rights Act was not unconstitutional as exceeding Congress' power under the Fifteenth Amendment by prohibiting voting changes that have only a discriminatory effect; the Act, instead, being an appropriate means for carrying out Congress' power, under Sec. 2 of the Fifteenth Amendment to enforce the Amendment's Command that the right of United States citizens to vote shall not be denied or abridged on account of race, and the Act being consonant with all provisions of the Constitution.

CITY OF MOBILE vs. BOLDEN, 64 L Ed 2nd 47, 100 S. Ct. 1491 (1980) (AL - Local).

The city's at-large electoral system for city commissioners did not violate 14th and 15th Amendments and did not warrant replacing with a mayor council government.

Voting Rights Act

1. Since Negroes in the city registered and voted without hinderance, the court erred in holding that the 15th Amendment was violated by the at-large voting practice, since the 15th Amendment does not entail the right to have Negro candidates elected, but prohibits only purposefully discriminatory denial or abridgement by the government of the freedom to vote on account of race, color, or previous condition of servitude.

2. The courts below had erred in ruling that the 14th Amendment was violated by the at-large voting practice, since there can be no violation of the 14th Amendment's equal protection clause in regard to racial discrimination in voting if there is no purposeful discrimination in voting, and the evidence in the case at bar fell short of showing that the at-large voting practice was a purposeful device to further racial discrimination.

MISSISSIPPI vs. UNITED STATES, 444 U.S. 1050 62 L Ed 2nd 739 (1980) (MS - Leg)

Voting Rights Act

The statutory plan enacted in 1978 had the impermissible effect of diluting black voting strength.

NEVETT vs. SIDES, 571 F 2nd 209 (1979) (5th Cir. 1979) (AL - Local)

U.S. Court of Appeals At-Large Elections.

CLARK vs. MARENGO COUNTY, 469 F Supp. 1150 (1979) (AL - Local)

At-Large Districts

At-large scheme for elections of members of County Commission and County Board of Education cannot be held to be per se unconstitutional.

CONNOR vs. FINCH, 469 F Supp. 693 (1979) (MS - Leg)

Legislative reapportionment promulgated. Districts were drawn using federal census population, percent variance, percent black population, percent black voting age population.

DOUGHERTY COUNTY BOARD OF EDUCATION vs. WHITE, 439 U.S. 32 (1978) (GA - Leg)

Employee required to take a leave of absence to run for state Legislature.

Voting Rights Act

Sec. 5 of the Voting Rights Act must be given the broadest possible scope, encompassing the subtle as well as the obvious forms of discrimination.

WISE vs. LIPSCOMB, 437 U.S. 535 (1978) (TX - Local).

1. When the District Court invalidated the provisions of the Dallas city charter mandating Council elections, the city had the duty to devise a substitute plan rather than to leave the matter to the District Court.

2. No reason existed why the District Court was not entitled to consider the City Council's substitute plan under the principles applicable to legislatively adopted reapportionment plans.

3. The Council's ordinance should not be regarded as a court-ordered plan subject to a level of scrutiny more stringent than required by the Constitution.

Additional Opinion - Renquist, Burger, Stewart, Powell

The case at bar did not present, and the court did not decide, the question whether the use of multimember districts for city governments was unconstitutional as diluting the voting strength of racial groups.

UNITED STATES vs. BOARD OF COMMISSIONERS OF SHEFFIELD, 435 U.S. 110 (1978) (AL - Vote)

Voting Rights Act

Sec. 5 applied to all entities having power over any aspect of the electoral process within covered jurisdictions, not only to counties or to whatever units of state government performed the function as registering voters and, therefore, Sec. 5 required the city to obtain preclearance of a voting change even though it had never conducted voter registration.

UNITED JEWISH ORGANIZATIONS OF WILLIAMSBURG, INC. vs. CAREY, 430 U.S. 144 (1977) (NY - Leg)

Voting Rights Act

The Hasidic Jewish community sued, alleging that the state's use of racial criteria and quotas in developing a redistricting plan acceptable to the U.S. Justice Department, (65% non-white population majority) violated their rights. The U.S. Supreme court upheld a dismissal of their suit.

MORRIS vs. GRESSETTE, 432 U.S. 491 (1977) (SC - Leg - Senate)

Voting Rights Act

Is the USAG's decision not to object to a covered state's proposed change in its laws, submitted for his consideration under Sec. 5, subject to judicial review?

1. When the Attorney General failed to interpose a timely objection, a federal District Court did not have jurisdiction to review the Attorney Generals' action under Sec. 5.

2. Compliance with Sec. 5 is measured solely by the absence of a timely objection by the Attorney General.

BRISCOE vs. BELL (1977), 432 US 404 (TX - Vote)

Voting Rights Act

1. Under Sec. 4(b) of the Act, judicial review of coverage determinations by the Attorney General and the director of the census was absolutely barred, the only procedure available to Texas being a "bailout" suit under Sec. 4(a) to seek termination coverage.

2. In enacting Sec. 4(b), Congress acted within its "power to enforce the fourteenth and fifteenth amendments by appropriate legislation."

CONNOR vs. FINCH (1977), 431 US 407 (MS - Leg).

Population Variance

1. The District Court's reapportionment plan under which there were maximum population deviations of 16.5% in the Senate districts and 19.3% in the House districts were unconstitutional, and such a departure from constitutional requirements was not justified as reflecting deference to the state's historic respect for the integrity of county boundaries especially where

(a) the court had failed to identify any unique features of the state political structure to support the plan's more than de minimus variations,

(b) the court had been presented with a more statistically acceptable plan which fragmented fewer county boundaries.

Voting Dilution

2. With respect to challenges of the plan impermissibly diluting Negro voting strength, the court should either draw legislative districts that would be reasonably contiguous and compact, so as to eliminate suspicions that Negro voting strength was being impermissibly diluted or explain precisely why in a particular instance such a goal could not be accomplished.

KIRKSEY vs. BOARD OF SUPERVISORS OF HINDS COUNTY, MS (1977), 54 F 2nd 139 (Court of Appeals) (MS - Local).

Redistricting plan is constitutionally impermissible as racially discriminatory if it is racially motivated gerrymander or if it perpetuates existant denial of access by racial minority to political process. The court ordered a plan of voting districts for election of county officials by single member districts.

BEER vs. UNITED STATES, 425 U.S. 130 (1976) (LA - Local)

Multimember districts

Since the two at-large city councilmanic seats, having existed since 1954, could not be reviewed in a proceeding to obtain approval for the reapportionment plan under Sec. 5 of the Voting Rights Act, the plan could not be rejected solely because it did not eliminate the two at-large seats.

Voting Rights Act

The plan did not have the effect of denying or abridging the right to vote on account of race or color under Sec. 5 since under a prior plan, none of the five councilmanic districts had a clear Negro majority of registered voters and no Negro had been elected to the City Council but, under the plan for which approval had been sought, Negroes would constitute a majority of the

CONNOR vs. WALLER, 421 U.S. 656 (1975) (MS - Leg)

Voting Rights Act

Three judge panel, sitting for the U.S. District Court for the Southern District of Mississippi, erred in ruling the Mississippi statutes reapportioning the state legislature were not legislative enactments subject to federal approval pursuant to Sec. 5 of the Voting Rights Act.

CHAPMAN vs. MEIER, 420 U.S. 1 (1975) (ND - Leg - Sen)

Population Variance

A population variance of 20.14% between the largest and smallest Senate district could not be justified on the grounds of absence of electorally victimized minorities, the state's sparse population, the division of the state by a river or the goal of observing geographical and political boundaries, since none of such factors had been explicitly shown to necessitate the substantial population deviation ...

Multimember Districts

Absent persuasive justification, a federal court's reapportionment plan for a state legislature should avoid use of multimember districts, and should ordinarily achieve the goal of population equality with little more than de minimis variation.

TAYLOR vs. MCKEITHEN, 499 F 2nd 893 (1974) (LA - Leg)

Long history and continuing vitality of wards in voting districts in New Orleans entitled ward boundaries to respect in drawing district lines.

Constitution extends equal protection of the laws to people, not to interests.

WHITE vs. REGISTER, 412 U.S. 755 (1973) (TX - Leg - House)

Population Variance

House districts of 71,597 to 78,943 or 9.9% overall deviation plan upheld.

Multimember Districts

The court invalidated the use of two large multimember districts in two metropolitan counties because the Black and Chicano communities had been "effectively excluded from participation in the Democratic primary selection process".

population in two of the five districts and a clear majority of the registered voters in one of them, making it predictable that at least one and perhaps two Negroes could be elected to City Council. An impermissible effect is created whenever a reapportionment plan has the effect of diluting existing black voting strength.

EAST CARROLL PARISH SCHOOL BOARD vs. MARSHALL, 424 U.S. 636 (1976) (LA - Local)

Multimember districts

The Supreme Court's preference for single-member districts in court ordered apportionment plans is extended to districts in a local jurisdiction. The preclearance procedures of Sec. 5 of the Voting Rights Act were not applicable when a District Court adopted a reapportionment plan submitted to it by a local legislative body that was covered by the Act.

McGILL vs. GADSDEN COUNTY COMMISSION, 535 F 2nd 277 (1976) (FL - Local) (Court of Appeals)

At Large Districts

Plaintiff failed to establish that at-large voting scheme used to elect members of County Commission diluted black voting strength.

WHITE vs. REGISTER, 422 U.S. 935 (1975) (TX - Leg). (Follow-on case to White v. Weiser.)

The Texas Legislature adopted a single member redistricting plan for the multimember districts at question subsequent to WHITE vs. REGISTER. On direct appeal, the U.S. Supreme Court vacated the District Court judgment and remanded the case for further consideration.

CITY OF RICHMOND, VIRGINIA vs. UNITED STATES, 422 U.S. 358 (1975) (VA - Local)

Voting Rights Act

The effect of annexation did not deny or abridge the Negroes' right to vote in the postannexation community, since the fairly designed ward plan afforded them representation reasonably equivalent to their political strength in the enlarged community.

Multimember Districts, Racial Discrimination

In order to sustain a claim that multimember legislative districts are being used individiously to cancel out or minimize the voting strength of racial groups, it is not enough to show that the racial group allegedly discriminated against has not had legislative seats in proportion to its voting potential. Evidence must be produced to support findings that the political processes leading to nomination and election were not equally open to participation by the group in question - that its members had less opportunity than did other residents in the district to participate in the political processes and to elect legislators of their choice.

GAFFNEY vs. CUMMINGS, 412 U.S. 735 (1973) (CT - Leg)

Population Variance

Senate 83,441 to 84,973; total 1.81%

House 19,297 to 20,870; or 7.83%.

Plan upheld.

Partisan Gerrymandering

The plan was based on a "political fairness" principle, which was designed to reflect the relative strength of the major political parties, by creating a certain number "safe" of "safe" districts for each party and a certain number of "swing" districts.

Court Holdings

Minor deviations from mathematical equality among state legislative districts are insufficient to make out a prima facie case of invidious discrimination under the Equal Protection Clause.

The population variations in this case are so minor the state need not justify them.

The principle of "political fairness" is not invidiously discriminatory.

Congressional districts are to be judged by stricter deminimus standards than are state legislative districts.

GEORGIA vs. UNITED STATES, 411 U.S. 526 (1973) (GA - Leg)

Voting Rights Act

State reapportionment plans are specifically included in Sec. 5 preclearance requirements. Despite the lack of any affirmative finding by the Attorney

General to the effect that the reapportionment plan had a racially discriminatory purpose or effect, the Attorney General had properly promulgated and applied a regulation stating that the burden of proof was on the submitting party, and that the Attorney General would refrain from objecting only if his review of the material submitted satisfied him that the proposal change did not have a racially discriminatory purpose or effect.

MAHAN vs. HOWELL, 410 U.S. 315 (1973) (VA - Leg)

Population Variance

Legislative redistricting plans are not to be judged by the more stringent standards applicable to Congressional reapportionment, but judged against Equal Protection Clause.

Some divergences from a strict population standard are constitutionally permissible with respect to the apportionment of seats in either or both houses of a bicameral state legislature, where such divergences are based on legitimate considerations incident to the effectuation of a rational state policy.

Maintenance of political subdivision lines in the apportionment of legislative seats is not an irrational state policy; though such a policy, however rational, cannot be permitted to emasculate the goal of substantial equality of representation.

Tested by such standards, the population disparities among the House districts created by the Virginia General Assembly (+6.8% to -9.6% or 16.4% overall), though approaching tolerable constitutional limits, do not exceed them.

WHITE vs. WEISER, 412 U.S. 783 (1973) (TX - Cong)

Population Variance

458,581 to 477,856 for a spread of 4.1% is unconstitutional (2.43% & 1.70% average deviation among districts; .745% or 3,421 persons).

Although the percentage deviation in the legislative plan are smaller than those in Kirkpatrick & Wells, they were not "unavoidable" and the districts were not as mathematically equal as reasonably possible.

Avoidable variations must, if possible, be avoided.

Partisan Gerrymandering

The drawing of district boundaries, in a way that minimizes the number of contests between present incumbents, does not of itself establish invidiousness.

GOINES vs. HEISKELL, 362 F Supp. 313 (1973) (WV Leg - House) (U.S. District Court)

Population Deviation

16.179 maximum percentage population variance among the delegate districts was tolerable and acceptable, and did not violate "one man - one vote".

Multimember Districts

Statut apportioning membership in House of Delegates of the West Virginia Legislature did not arbitrarily discriminate against some voters and favor others in creating multimember districts.

67TH MINNESOTA STATE SENATE vs. BEENS, 406 U.S. 187 (1972) (MN - Leg)

Federal Court Intervention:

Insofar as possible, a federal court in reapportioning a state legislature should accommodate the relief ordered to the appropriate provisions of state constitutions and state statutes relating to the legislature's size.

In a federal district court action for reapportionment of a state's legislature, a court-imposed minor variation from the state's prescribed figures as to the proper size of the legislature, is permissible when the change is shown to be necessary to meet constitutional requirements; but cutting a state Senate's size almost in half and the House size by nearly 1/4 is more than a mere minor variation.

CONNOR vs. WILLIAMS, 404 U.S. 449 (1972) (MS - Leg)

Multimember Districts

The Supreme Court affirmed its preference for an emphasis upon single-member districts in court-ordered reapportionment plans.

ABATE vs. MUNDT, 403 U.S. 182 (1971) (NY - Local)

Population Variance

Population variances of 11,577 to 13,020 or +4.8% to -7.1%, or total of 11.9%, are constitutionally permissible in light of the absence of a built-in bias tending to favor any particular area or interest and the longstanding local governmental structures in which the towns and the county worked in close cooperation to provide overlapping public services.

WHITCOMB vs. CHAVIS, 403 U.S. 124 (1971) (IN - Leg)

Population Variance

Multimember districts

The use of multimember state legislative districts is not per se unconstitutional under the Equal Protection Clause, but is subject to challenge where circumstances of a particular case may operate to minimize or cancel out the voting strength of racial or political elements of the voting population.

Racial Discrimination

Minorities are not ipso facto and per se, entitled to representation in proportion to number or to relief even in multimember districts, based only on the fact of their racial or political minority.

ELY vs. KLAHR, 403 U.S. 108 (1971) (AZ - Leg)

Population Base

The use of voter registration as a basis is allowable only if it produces a "distribution of legislators not substantially different from that which would have resulted from the use of a permissible population basis".

Partisan Gerrymandering

Plan tried to insure inter alia, that no incumbent would run for re-election against another incumbent. Court held that "the incumbency factor has no place in any reapportionment or redistricting", and found "inapposite" the consideration of party strengths as a factor.

CONNOR vs. JOHNSON, 402 U.S. 690 (1971) (MS - Leg)

Multimember Districts

When U.S. District Courts are forced to fashion state legislative apportionment plans, "single-member districts are, as a general matter, preferable to large multimember districts".

PERKINS vs. MATTHEWS, 400 U.S. 379 (1971) (MS - Local)

Voting Rights Act

Definitional refinement of Sec. 5.

Any change in election procedure, no matter how small, is subject to Sec. 5 scrutiny.

The local district courts do not have jurisdiction to review Sec. 5 cases; only the U.S. Attorney General and the U.S. District Court for the District of Columbia may review these cases.

OREGON vs. MITCHELL, 400 U.S. 112 (1970) (OR - Elections)

Federally imposed voting eligibility requirements:

Congress has the right to establish national standards for voting eligibility in federal elections.

The provision lowering the minimum voting age from 21 to 18 was valid as applied to federal elections.

Congress could not lower the voting age from 21 to 18 in state and local elections.

The provision suspending the use of literacy tests for both federal elections and state and local elections is valid.

Provisions pertaining to residency requirements and absentee registration and voting in a presidential and vice presidential election are valid.

HADLEY vs. JUNIOR COLLEGE DISTRICT, 397 U.S. 50 (1970) (MO - Local)

Population Variance

Population equality is necessary in a consolidated junior college district from which trustees are elected.

GASTON COUNTY vs. UNITED STATES, 395 U.S. 285 (1969) (NC - Local)

Voting Rights Act

The District Court could properly consider the county's practice of educational discrimination in determining whether its literacy test had the effect of discriminatorily denying the franchise.

It was not clearly erroneous for the District Court to conclude that the county had not met the burden of proving that the education it provided had no such discriminatory effect.

Adult Negroes who had received inferior education were discriminatorily affected by the use of this literacy test, despite impartial administration of

the voting registration law and recent progress toward equalizing and integrating the county's school system. Educational levels can have some effect on the voting regulations under Sec. 5.

MOORE vs. OGILVIE, 394 U.S. 814 (1969) (IL - Elections)

Election Nomination Procedures

A state statute providing that the 25,000 or more signatures of qualified voters prescribed for nominating petitions of independent candidates for offices to be filled by voters at large must include the signatures of 200 qualified voters from each of at least 50 of the 102 counties in the state; notwithstanding that it was designed to require a statewide support for launching a new political party rather than support from a few localities, violates the equal protection clause of the 14th Amendment in that it applies a rigid, arbitrary formula to sparsely settled counties and populous counties alike, contrary to the constitutional theme of equality among citizens in the exercise of their political rights, discriminates against the residents of the populous counties in favor of rural sections ...

WELLS vs. ROCKEFELLER, 394 U.S. 542 (1969) (NY - Cong)

Population Variance

A difference of +435,000 to -390,000 is unconstitutional.

Community of Interest

To accept population variances, large or small, in order to create Congressional election district with specific interest orientations, is antithetical to the basic premise of the constitutional command to provide equal representation for equal numbers of people.

KIRKPATRICK vs. PREISLER, 394 U.S. 526 (1969) (MO - Cong)

Population Variance

Districts varying in population from 420,000 to 445,000 were unconstitutional. "Limited population variances among Congressional districts are constitutionally permissable only if they are unavoidable despite a good-faith effort to achieve absolute equality or if justification for them is shown".

There is no de minimus standard for congressional districting.

Acceptable reasons must justify each variance, no matter how small.

Unacceptable justifications include:

- o avoided fragmenting areas with distinct economic and social interests;
- o a reasonable legislative compromise resolving practical political problems;
- o adjustments made on eligible voter population done on a haphazard basis;
- o projected population shifts not applied systematically geographic compactness.

ALLEN vs. STATE BOARD OF ELECTIONS, 393 U.S. 544 (1969)
(MS,VA - Local)

Voting Rights Act

Approval requirements of Sec. 5 were applicable to:

- o changes from district voting to at-large voting for county supervisors;
- o changes making the office of county superintendent of education from an elective to an appointive one in certain counties;
- o increasing the requirements for an independent candidate to gain position on a general election ballot; and
- o a bulletin issued by the State Board of Elections outlining new procedures for casting write-in votes.

AVERY vs. MIDLAND COUNTY TEXAS, 390 U.S. 474 (1968) (TX - Local)

County Precincts, Population Variance

One-man, one-vote appliesd to local units of government.

LUCAS vs. RHODES, 389 U.S. 212 (1967) (OH - Cong)

Population Variance

Unofficial population population statistics are insufficient to justify the disparity among districts because they are too unreliable and not available for all areas. However, seven years after the initial census count such figures may be used.

KILGARLIN vs. HILL, 386 U.S. 120 (1967) (TX - Leg - House)

Population Variance

54,384 to 71,301, or +14.84% to -11.64%.

The Supreme Court accepted the ruling of the District Court sustaining the allocation of a representative to a smaller but more rapidly growing district.

Multimember Districts

The use of multimember and/or flaterial districts in state legislative reapportionment plans is not unconstitutional per se.

DUDDLESTON vs. GRILLS, 385 U.S. 455 (1967) (IN - Leg)

Case remanded to District Court in light of: SWANN vs. ADAMS, WESTBERRY vs. SANDERS, and REYNOLDS vs. SIMS

SWANN vs. ADAMS, 385 U.S. 440 (1967) (FL - Leg)

Population Variance Senate: +13.09; -10.56; House: +18.28; -15.27. Deviations are unconstitutional.

KATZENBACH vs. MORGAN, 384 U.S. 641 (1966) (NY - Elections)

Voting Rights Act

Sec. 4 (e) - barring English language proficiency and literacy tests as a condition of voting is constitutional.

BURNS vs. RICHARDSON, 384 U.S. 73 (1966) (HI - Leg)

Population Base

Hawaii's use of a registered voter base is upheld only because on this record it produced a distribution of legislators not substantially different from that which would have resulted from the use of a state citizen population base or another permissible population base.

Multimember Districts

The equal protection clause does not require that at least one house of a bicameral state legislature consist of single-member legislative districts.

Partisan Gerrymandering

Drawing district boundaries "in such way that minimizes the number of election contests between present incumbents does not in and of itself establish invidious discrimination".

of the state's population would elect a majority.

House: 21,825 to 95,064 + 40.5% of the state's population would elect a majority.

MARYLAND COMMITTEE FOR FAIR REPRESENTATION vs. TAWES, 377 U.S. 656 (1964) (MD - Leg)

Population Variance

Neither house, even after the reapportionment, was apportioned sufficiently on a population basis to be constitutionally sustainable. House: 6,541 to 37,879 and 35.6% of the state's population would elect a majority. Senate: 15,481 to 492,428 and 14.1% of the state's population would elect a majority.

WMCA, INC. vs. LOMENZO, 377 U.S. 633 (1964) (NY - Leg)

Population base

Case upheld New York's use of a citizen population base which excluded resident aliens.

Population Variance

Apportionment based on 1960 figures. State Assemblymen representing 37.5% of the state's citizens, and Senators representing 38.1% of the state's citizens, would constitute a majority in each chamber. Population in Assembly districts would vary from 14,974 to 190,343. Population in Senate districts would vary from 162,840 to 425,000. Population variance unconstitutional.

REYNOLDS vs. SIMS, 377 U.S. 533 (1964) (AL - Leg)

The equal protection clause requires that the seats in both houses of a bicameral state legislature be apportioned on a population basis.

Some deviations from the equal-population principle are constitutionally permissible, with respect to either or both houses of a state legislature, so long as such deviations are based on legitimate considerations incident to the effectuation of a rational state policy.

WESBURY vs. SANDERS, 376 U.S. 1 (1964) (GA - Cong)

Population Variance

The federal Constitution requires that Congressmen be chosen by "the people of

GERMANO vs. KERNER, 378 U.S. 560 (1964) (IL - Leg)

Population variance unconstitutional.

NOLAN vs. RHODES, 378 U.S. 556 (1964) (OH - Leg)

Population variance unconstitutional.

WILLIAMS vs. MOSS, 378 U.S. 558 (1964) (OK - Leg)

Population variance unconstitutional.

MEYERS vs. THIGPEN, 378 U.S. 554 (1964) (WA - Leg)

Population variance unconstitutional.

LUCAS vs. FORTY-FOURTH GENERAL ASSEMBLY OF THE STATE OF COLORADO, 377 U.S. 713 (1964) (CO - Leg)

Population Variance

Population variance in the state Senate was unconstitutional. 19,983 to 71,871 +33.2% with the maximum population.

Variance ratio in House 1.7:1 & 45.1% to elect a majority.

ROMAN vs. SINCOCK, 377 U.S. 695 (1964) (DE - Leg)

Population Variance

Population variance in both reapportionments were unconstitutional.

Senate: 4,177 to 64,820 + 22%; 4,177 to 64,820 + 21%

House: 1,643 to 58,228 + 18.5%; 1,643 to 20,040 + 28.0%

DAVIS vs. MANN, 377 U.S. 678 (1964) (VA - Leg)

Population Variance

Population variance was unconstitutional. Senate: 61,730 to 163,401 + 41.1%

SOUTH CAROLINA vs. KATZENBACH, 383 U.S. 301 (1966) (SC - Elections)

Voting Rights Act

The Voting Rights Act is upheld as constitutional.

WMCA INC. vs. LOMENZO, 382 U.S. 4 (1965), 238 F. Supp. 916 (NY - Leg)

Population Base

Apportionment on citizen population does not violate the federal Constitution. Partisan "g rrymandering" may (not) be subject to federal constitutional attack under the Fourteenth Amendment.

FORTSON vs. DORSEY, 379 U.S. 433 (1965) (GA - Leg)

Multimember Districts

Absent any contention that there was not substantial equality of population among the districts, or evidence to support the assertion that the scheme was intended to minimize or cancel out the voting strength of racial or political elements of the voting population, a statute creating multimember districts is constitutional.

HILL vs. DAVIS, 378 U.S. 565 (1964) (IA - Leg)

Population variance unconstitutional.

PINNEY vs. BATTERWORTH, 378 U.S. 564 (1964) (CT - Leg)

Population variance unconstitutional.

HEARN vs. SMYLIE, 378 U.S. 563 (1964) (ID - Leg)

Population variance unconstitutional.

MARSHALL vs. HARE, 378 U.S. 561 (1964) (MI - Leg)

Population variance unconstitutional.

the several states" which requires that, as nearly as practicable, one man's vote in a Congressional election must be worth as much as another's. Near mathematical precision in Congressional redistricting is necessary under the Equal Protection Clause of the Fourteenth Amendment.

GRAY vs. SANDERS, 372 U.S. 368 (1963) (GA - Elections)

County unit system in counting votes in Democratic primary for nomination of U.S. Senator violated the Equal Protection Clause of the Fourteenth Amendment.

County unit system cannot be equated to states in conducting elections and, therefore, the Equal Protection Clause requires that every voter is equal to every other voter in the state when he casts his ballot in a statewide election.

BAKER vs. CARR, 369 U.S. 186 (1962) (TN - Leg)

Federal Courts have jurisdiction in such political questions as legislative malapportionment, which violates the Equal Protection Clause of the Fourteenth Amendment.

GOMILLION vs. LIGHTFOOT, 364 U.S. 399 (1960) (AL - Local)

Prescribed racial gerrymandering under the Fifteenth Amendment; held Fourteenth Amendment to be inapplicable.

COLGROVE vs. GREEN, 328 U.S. 549 (1946)

Congressional districting held to be a non-justiciable political issue

BIBLIOGRAPHY

The Council of State Governments

FOREWORD

This Bibliography is the second in a series of resource materials to be released by the Reapportionment Information Service of The Council of State Governments. The first document released in December 1980, was a Directory of people and organizations actively involved in reapportionment.

The Bibliography includes published and unpublished materials on reapportionment, legislative districts, elections and representation. It covers the years from the early 1970's to the present comprehensively. Citations to earlier documents reflect their long term relevance to the understanding of the current reapportionment process.

The Bibliography is organized into two parts. The first part is a numbered, alphabetical listing of all entries. The second part is a brief index dividing entries into broad subject areas.

For additional information on the 1981 Reapportionment process, interested persons should contact Carolyn L. Kenton, Director, Reapportionment Information Service, The Council of State Governments, P. O. Box 11910, Lexington, Kentucky, 40578 (606) 252-2291.

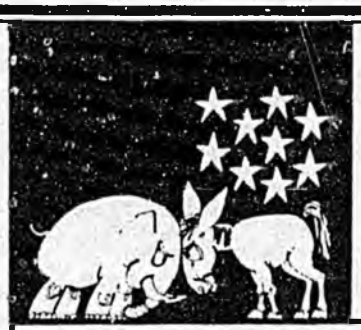
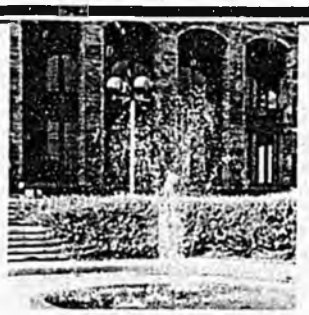
STATE GOVERNMENT NEWS—Published monthly by The Council of State Governments, P.O. Box 11910, Lexington, Kentucky 40578. Considered the prime source of information on current activities by all branches of state government. Articles cover new state laws, federal-state relations, and state legislative trends, as well as court decisions and administrative actions. Writers include headquarters and regional staff professionals. Opinions expressed in this magazine do not necessarily reflect the policy of the editorial staff or the Council of State Governments. Readers' comments welcome.

About the Council of State Governments—The Council of State Governments is a joint agency of all the state governments—created, supported, and directed by them. It conducts research on state programs and problems; maintains an information service available to state officials and legislators; issues a variety of publications; assists in state-federal liaison; promotes regional and state-local cooperation; and provides staff for affiliated organizations.



Subscription rates—
In the U.S., $15 per year. Elsewhere, $20 per year. Single issues $1.50 per copy from the Circulation Department at the offices of *State Government News*. Change of address: Please send old and new addresses.

Circulation—
Elizabeth Williams, Supervisor, Data Systems.



Advertising—

Reapportionment—Dividing the Power

BY CAROLYN KENTON, CSG, Lexington

The decennial struggle for controlling political power and influence is in full swing. The process of recarving the political pie, which is called redistricting, was triggered by the 1980 census on the congressional and the state legislative levels.

Congressional Redistricting

The political composition of Congress will be altered by the redistribution of seats among the states due to population shifts. In addition, it appears as though most states will have redrawn congressional district lines prior to the 1982 elections. Six states will have only one congressman and require no districting —Alaska, Delaware, North Dakota, South Dakota, Vermont and Wyoming. Another 14 states—Alabama, Arkansas, Idaho, Indiana, Iowa, Mississippi, Nebraska, Nevada, North Carolina, Oklahoma, Oregon, Tennessee, Texas and Virginia—have redrawn congressional district lines to conform to the 1980 census figures. Of the remaining 30 states, eight are expected to address the issue before the first of the year.

The standard for drawing congressional districts is simple and straightforward. The districts must be as nearly equal in population as possible. So far, the U.S. Supreme Court has not been willing to interject any other criterion except that imposed by the Voting Rights Act and the equal protection provisions of the 14th and 15th Amendments to the U.S. Constitution.

The new congressional districts appear to be satisfying the court's requirements for "one man, one vote." Eight of the 14 new congressional plans have an overall population difference between the largest and smallest district of less than 1 percent. The remaining six have a population difference of 2-3 percent or less.

Gerrymandering Charged

The reliance on population equality gives redistricting cartographers leeway in drawing lines and leaves the door open to gerrymandering.

Partisan battles in the states have been intense. In states controlled by a single party—governor and legislature—the party out of power and some political observers have accused the controlling party of gerrymandering. Republican Gov. John Spellman of Washington considered the Republican-drawn plan so badly gerrymandered that he vetoed it. In Indiana, the legislature and governor apparently tried to change the congressional delegation from the present 6-5 Democratic edge to a 7-3 Republican edge (Indiana lost one congressman). To accomplish this, two existing Democratic districts were divided into four new ones and three Democratic congressmen were placed into one district.

States with divided political control—one or more houses of the legislature controlled by the opposition party—have also suffered problems. Democratic Gov. Richard Lamm of Colorado has vetoed two congressional plans drawn by the Republican legislature although the largest and smallest districts had a population difference of only 41 people in one plan.

The governors of Idaho, Oregon and Tennessee allowed the opposing legislative party's congressional plans to become law without their signatures.

Three states—Illinois, Minnesota and Missouri—have suits pending which would declare the existing congressional districts invalid, therefore requiring that they be redrawn before new elections could be held. These suits were filed after an apparent political impasse on the enactment of a plan developed by the parties in the legislature and/or the governor.

The majority of congressional districts will be redrawn through the normal legislative process. The exceptions are Hawaii and Montana, where commissions are responsible, and Connecticut, where a commission will be appointed to draw them because the legislature was unable to meet an Aug. 1 deadline. Plans will be prepared in Iowa by the Legislative Service Bureau and in Maryland by the governor, but the legislatures must still act on them. Generally speaking, however, congressional districts are much easier for state legislators to redraw than are legislative districts.

Legislative Redistricting

State legislatures have doggedly plunged ahead with their own redistricting. Redistricting is expected to be completed before the next legislative election in all states except Kansas, Kentucky, Maine, Massachusetts, Montana and New York. To date, 22 states have adopted a plan for one or both legislative houses.

The Texas and Virginia house plans have been ruled unconstitutional. The Texas Supreme Court ruled the house plan split counties unnecessarily in violation of the state constitution. The Texas plan will now be drawn by the Legislative Redistricting Board which will also draw the senate districts. In Virginia, a three-judge federal district court ruled the house plan invalid because of the large disparity—over 26 percent—between the largest and smallest districts. The court allowed the election for delegates to the house to proceed on schedule this fall, but shortened their terms to one year and required the legislature to redraw the house plan before Feb. 1982.

State Legislative Criteria Differs

The rules governing legislative redistricting as set out by the U.S. Su-

(continued)

preme Court are more complex than those for congressional redistricting, and so are the redistricting mechanisms used by the states. Population equality, although important, is not the only consideration the states can use in drawing districts, and single-member districts are not required.

In addition, the states may choose to use less than the total U.S. census figures or not use the federal census figures at all. Kansas and Massachusetts use a state census as the basis for their redistricting, although Kansas plans to switch to the federal census in 1990. Hawaii uses registered voters, and Alaska has exempted transient military personnel from its population base.

States may choose other criteria such as maintaining political jurisdictional lines if they apply the policy uniformly and have a rational and justifiable reason, and if it does not violate the provisions of the Voting Rights Act.

Of the 39 new chamber redistricting plans—including Kansas and excluding the voided Texas and Virginia house plans—the overall population range between the largest and smallest district in 12 chambers is less than 5 percent. In another 19, the overall range is between 5 and 10 percent. One chamber has a range of 10 to 15 percent, and seven chamber plans have an overall range of over 15 percent between the largest and smallest district. The plans were drawn by the legislature in 17 states and by boards in the remaining four states.

The use of a board or commission to redistrict state legislatures has grown. Spurred by the efforts of such organizations as Common Cause, 15 states have a formal agency or advisory mechanism for redistricting. Another 11 states designate an agency to redistrict if the legislature fails to perform in a specified period of time. So far, this backup mechanism has been used by Connecticut for congressional districting and Illinois and Texas for legislative districting. In addition, petitions are circulating in South Dakota and Ohio for this fall's ballot to alter the apportionment process. The proposed constitutional

(a) Population figures in most instances are based on the 1980 federal census.

(b) Excludes transient military population.

(c) Legislative redistricting was based on state conducted census.

(d) More than one legislator runs for office from a senate district.

(e) A constitutional referendum petition is being circulated to invalidate the current plan. South Dakota: The referendum would create single-member senate districts with one senator and two house members elected from each district.

(f) Court suit filed challenging validity of existing or new plan.

(g) Preliminary plan. Pennsylvania: Challenges to the plan have been filed. Hearings were scheduled for September 24-25.

(h) This plan was declared unconstitutional.

Reapportionment
(continued)

amendment in South Dakota would establish single-member senate districts and other criteria for redistricting.

Republicans are threatening to circulate legislative referendum petitions to repeal redistricting laws which they believe are unfair in Oklahoma (congressional) and California (legislative and congressional).

The state political stories of legislative and congressional redistricting will continue to unfold for at least the coming year. So far the courts have barely been involved, but they will undoubtedly make a contribution before the process is over.

CSG will continue to follow and report on state activities. More detailed information on individual plans or current activities can be obtained by contacting the Council's Reapportionment Information Service.

Redistricting Snag Delays New York City Primary Election

The New York City primary was delayed in September when a federal court ruled the city had failed to comply with the federal Voting Rights Act in redrawing council district lines.

The court's action, which was upheld by the U.S. Supreme Court, held that the city had failed to obtain the necessary pre-clearance from the U.S. Justice Department for any changes in voting procedure. It did not go so far as to uphold the plaintiff's contention that the new district lines discriminated against minorities.

The city reached an agreement with the Justice Department to allow all but city council elections to be held Sept. 22.

Suit Filed over Kentucky Education Budget Cuts

The Kentucky Education Association has filed suit asking that education spending cuts ordered by Gov. John Y. Brown Jr. be declared unconstitutional. The suit in circuit court charges that the legislature should decide on cuts and that the reductions are "inequitable, discriminatory, and arbitrary."

Gov. Brown ordered the cuts, rather than calling the legislature into special session. Recent reductions affecting education amount to more than $70 million.

Stated Briefly

Louisiana Transfers Local Prisoners

Louisiana Gov. David C. Treen has announced that eligible prisoners have been transferred from parish jails to the Department of Corrections as of Sept. 1. Reassessment of the state prisons resulted in room to house 1,348 more prisoners, an 18 percent increase, in fiscal 1981-82.

Accounting Manual Offered by Iowa

The Iowa Department of Substance Abuse (IDSA) has developed a Project Level Accounting Manual which tells how to establish and maintain a basic bookkeeping system that meets audit requirements and how to provide separate accounting for various funding sources. It also provides management information. The manual is used by substance abuse programs within and outside of Iowa. Copies can be obtained for $12 from the IDSA, Suite 202, 505 Fifth Ave., Des Moines, Iowa 50319, or call Allen Vander Linden, (515) 281-3641.

College Tuition Rates Rise

Average tuition rates at public four-year colleges and universities shot up 16 percent the past year, according to a survey by the College Board. The rise is the largest in a decade and does not reflect increases announced since May. Many schools have raised rates since then due to lower than anticipated appropriations from state legislatures. Average tuition rates are up 13 percent at private colleges.

Costs to Be Shared in Three Mile Island Cleanup

Pennsylvania Gov. Dick Thornburgh's cost-sharing proposal for cleanup of the disabled Three Mile Island nuclear power plant won support recently. The Edison Electric Institute, an electric utilities' trade association, pledged its members to paying $192 million over six years.

The owners of the plant, General Public Utilities, have agreed to pay $335 million. The U.S. General Accounting Office in August recommended a national cost-sharing approach to Congress, but no federal action has been taken.

Wisconsin Budget Increases Transit Aid

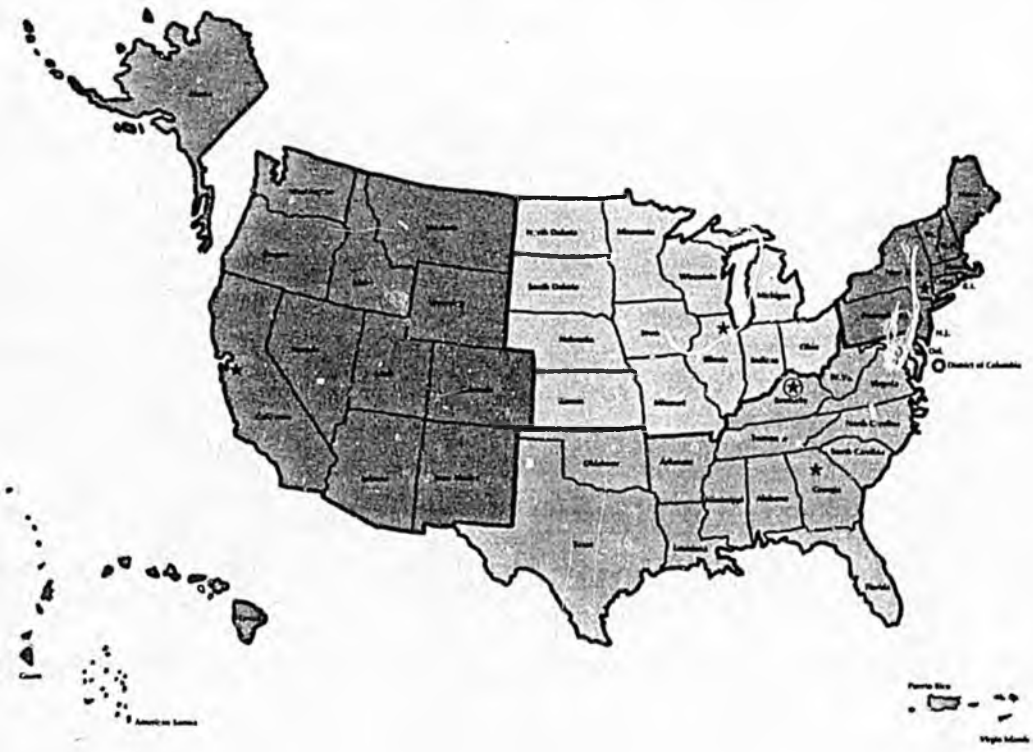
Wisconsin's 1981-83 budget, signed by Gov. Lee S. Dreyfus July 29, includes $58.6 million for urban mass transportation programs and ridesharing (S. 85-24). Beginning in 1982, state aid will be available to cover up to 30 percent of the total operating costs of the state's urban transit systems.

Two States and U.S. Reach Desegregation Agreement for Colleges

Missouri and Louisiana have reached agreement with the U.S. Justice Department on plans to desegregate public colleges. A consent decree filed in federal court in New Orleans, if approved by the court, would end a lawsuit filed by the department in 1974.

Legislators Hold Off on Funding Decision for Higher Education

A special session of the Texas Legislature has adjourned without resolving the controversy over the future of state construction funds for public higher education.



The lawmakers will watch for the results of a pending lawsuit to restore a state property tax of 10 cents per $100 valuation. The tax had provided funds for 17 colleges and universities. The House did pass a proposal to repeal the tax; the Senate voted for a new rate of 3 cents per $100.

States' Tax Base Reflects Shifting Wealth

Alaska has the largest tax base per capita of the states—more than twice (213 percent) the nation's average.

The top five states in per capita tax wealth are Alaska, Wyoming (190 percent), Nevada (164 percent), Texas (121 percent) and California (116 percent), according to the Advisory Commission on Intergovernmental Relations' (ACIR) preliminary estimates of 1979 tax capacity. The estimates account for tax bases available to states including property, income, sales, motor fuels and the value of extracted natural resources.

Affiliated and Cooperating Organizations

The Articles of Organization of the Council of State Governments recognize two forms of association with the Council by groups of state officials—affiliated and cooperating. The Council presently recognizes 33 such groups—seven affiliated and 26 cooperating.

For organizations affiliated with the Council, the state services agency is authorized to provide financial assistance and secretariat and other staff services.

The seven affiliated organizations of the Council are the:

- National Conference of State Legislatures,
- Conference of Chief Justices,
- National Association of Attorneys General,
- National Conference of Lieutenant Governors,
- National Association of State Purchasing Officials,
- Conference of State Court Administrators, and
- National Association of State Auditors, Comptrollers and Treasurers.

The Council's Articles of Organization also permit its executive committee to recognize other groups and associations of state officials as cooperating organizations and maintain continuing cooperative arrangements with such organizations.

The cooperating organizations include the:

- National Conference of Commissioners on Uniform State Laws,
- Parole and Probation Compact Administrators' Association,
- Association of Juvenile Compact Administrators,
- Interstate Conference on Water Problems,
- National Association of State Mental Health Program Directors,
- Adjutants General Association of the United States,
- National Conference on Uniform Reciprocal Enforcement of Support,
- Association of State and Interstate Water Pollution Control Administrators,
- National Association of State Boating Law Administrators,
- National Association of State Civil Defense Directors,
- Association of State Correctional Administrators,
- National Association of State Units on Aging,
- National Association of Extradition Officials,
- National Association of State Juvenile Delinquency Program Administrators,
- State Personnel Administrators Association,
- Council of State Administrators of Vocational Rehabilitation,
- National Association for State Information Systems,
- National Association of Regulatory Utility Commissioners,
- Coastal States Organization,
- Federation of Tax Administrators,
- National Association of Tax Administrators,
- Conference of State Sanitary Engineers,
- National Conference of States on Building Codes and Standards,
- National Association of State Departments of Agriculture,
- National Conference of State Criminal Justice Planning Administrators, and
- National Conference of State General Services Officers.

U.S. SUPREME COURT DECIDES NEW JERSEY AND PENNSYLVANIA REDISTRICTING CASES

In a landmark decision, the U.S. Supreme Court has tightened the "one-person, one-vote" criterion for assessing congressional redistricting being challenged in the courts. While the High Court found the New Jersey congressional redistricting plan unconstitutional on the issue of population deviation, it upheld the Pennsylvania congressional districts without comment.

On June 22, the U.S. Supreme Court struck down the New Jersey congressional redistricting plan finding that an overall population range just under .70 percent does not conform to the constitutional requirement for equal representation. In a five-to-four vote, the court ruled in Karcher, et al. v. Daggett, et al. (No. 81-2057 and formerly Forsythe, et al. v. Kean, et al.) that there are no de minimis population variations that can stand constitutional muster, and the states must adhere as closely as possible to the "one-person, one-vote" standard of reapportionment. In challenging congressional redistricting plans, the plaintiffs must prove that population differences among districts can be reduced or eliminated in a conscientious effort to design districts of equal population. If the plaintiff's arguments are satisfactory to the court, the states have the burden of proving that deviations from equality are necessary to achieve a legitimate state goal.

In defense of the New Jersey redistricting plan, the legislature argued that the deviation of the plan was justified to protect black urban neighborhoods from being divided into different districts. In addition, the legislature contended that the deviation was less than the predictable undercount in the census figures. In answer to the first assertion, the plaintiffs failed to convince the Court that the population differences were essential to preserve minority voting strength in the congressional plan. The Court further identified legislative policies which, when applied in a nondiscriminatory manner, might have been successfully used in defense of the New Jersey congressional plan, including: compactness, respect for municipal boundaries, preserving the core of prior districts, and avoiding contests between incumbents.

Earl S. Mackey, Executive Director

With regard to the margin of error in the census data, the Court held that the census count "provides the only reliable--albeit less than perfect--indication of the districts' 'real' relative population levels, and furnishes the only basis for good faith attempts to achieve population equality." In the Court's opinion, Justice Brennan wrote: "Adopting any standard other than population equality, using the best census data available would subtly erode the Constitution's ideal of equal representation."

In a dissenting opinion, Justice White objected to the Court's rule of absolute equality on the basis that such a strict standard may be used to justify gerrymandered congressional districts. In addition, Justice White argued that the lack of a de minimis rule encourages the intrusion of federal courts into state legislative affairs. Other dissenters argued that even a miniscule population deviation is now vulnerable to constitutional attack.

Eleven states currently have congressional district maps with an overall population range greater than that of New Jersey: Alabama (2.45%), Arkansas (0.78%), Georgia (2.00%), Indiana (2.96%), Kentucky (1.39%), Massachusetts (1.09%), New Mexico (0.87%), New York (1.64%), North Carolina (1.76%), Tennessee (2.40%),and Virginia (1.81%). Although the Court's decision has no effect on the validity of these 11 plans, one state is currently involved in litigation to resolve the constitutionality of population deviation. In Ohio, a three-judge federal panel has been awaiting a decision on the New Jersey case before making a final decision in Flanagan, et al. v. Gillmor, et al..

On July 6, just two weeks after the New Jersey decision, the Pennsylvania congressional redistricting case, In Re: Pennsylvania Congressional Districts Reapportionment Cases, was decided by the U.S. Supreme Court. In a six-to-three vote, the Supreme Court affirmed the three-judge federal panel which had upheld the congressional plan drawn by the Pennsylvania legislature last year. The plaintiffs challenged the plan's overall population range of .24 percent.

WYOMING LEGISLATIVE REAPPORTIONMENT PLAN UPHELD BY U.S. SUPREME COURT

The U.S. Supreme Court has always held the states to less stringent standards of population equality in legislative reapportionment than congressional redistricting. The decisions made by the U.S. Supreme Court on June 22 prove to be no exception. On the same day the New Jersey congressional case was decided, the High Court ruled in Brown v. Thomson that the Wyoming legislative reapportionment plan, with an overall population range of 89 percent, was constitutional in light of the state's policy of allowing every county its own representation. Under the state constitution, Wyoming's 23 counties are required to have a senator and a representative in each district "apportioned among the counties as nearly as may be according to the number of their inhabitants." The plan included one small county with a population less than one-half the state's ideal district size.

The ultimate question before the Court was the state policy of granting a representative to each county. The Court held that the policy was rational and even "well-suited to the special needs" of the sparsely populated state. Justice O'Connor, in a concurring opinion, emphasized that ensuring equal representation is not simply a mathematical problem. The Court's decision rested on the narrow appeal which was brought before it. If the entire legislative plan had been challenged, rather than the representation of one county, the Court's decision might have been very different.

STATE NOTES

In ALABAMA, new state legislative elections will be held this fall as a result of the April 11th federal court decision in Burton, et al. v. Hobbie, et al. On June 21, a suit was filed petitioning the federal court for an order to require the governor to call the primary election. The Alabama Democratic Party Executive Committee will nominate all 140 state legislative candidates if the governor does not call for a primary. The plaintiffs in the suit, Boggard, et al. v. Hobbie, et al. (C.A. 83-I-604-N), claim that the executive committee is malapportioned by population and by race. They also question whether Section 5 preclearance provisions under the Voting Rights Act apply to the special elections as mandated by the Burton decision.

CALIFORNIA Governor Deukmejian has called a special election for December 13 on an initiative which recently qualified for the ballot and which would repeal the existing reapportionment and redistricting plans in favor of one drawn by an independent contractor for Assemblyman Sebastiani. Controversy over this proposal reportedly crosses party lines. However, if adopted, the Sebastiani plans could change dramatically the political makeup of both the congressional delegation and the California legislature.

In addition, the California legislature has intervened in the Wadham v. Eu case which was filed in federal court this spring. The suit contests the congressional plan signed into law on January 2, by Governor Jerry Brown, on the basis that it violates constitutional requirements of one-person, one-vote. A dispute has arisen over the authority of the secretary of state to make technical adjustments to the plan to compensate for an 8,000-person census correction. California and several states have reapportionment statutes which allow the secretary of state to make necessary corrections as a result of final population figures provided by the U.S. Bureau of the Census or as a result of minor local election district problems. The plaintiffs contend that the secretary of state does not have the constitutional authority to make these corrections and that the congressional plan must be judged as originally drawn by the legislature. The legislature argues that under state law the plan must be judged as corrected. The Ninth Circuit Court of Appeals has remanded the case back to district court for a trial on its merits. The legislature has been asked to respond.

The HAWAII congressional redistricting and legislative reapportionment plans were reviewed by the federal court on June 17. At the request of the League of Women Voters, the court, which maintained jurisdiction over the plans under the case Travis, et al. v. King, et al., reviewed the master plan and

decided that the districting plans were merely interim. Consequently, the state now has the responsibility to devise a new plan. The same commission has been reformulated with many of the same staff people available to assist. New plans should be complete by December of this year.

On June 7, the IDAHO State Supreme Court remanded Hellar, et al. v. Cenarrusa, et al. back to state district court for trial on the issue of county boundary splits. Last year the case was appealed to the state supreme court after the district court upheld the legislature's reapportionment plan as an interim plan for the 1982 elections. The plaintiffs filed the case based on the fact that the state constitution forbids county boundary lines from being split in reapportionment. Defendants argue that the splits were necessary to comply with federal constitutional requirements. The trial is scheduled to begin July 26, but a delay in the proceedings is expected. An election this year under a new legislative reapportionment plan is highly unlikely.

The LOUISIANA case of Major v. Treen is still undecided. On March 7, the three-judge federal panel heard the case which challenges the plan on the issue of minority representation.

In MONTANA, a hearing is scheduled for August 10 and 11 in the case of McBride, et al. v. Waltermire (Docket No. CZ-83-25-BU) filed in the U.S. District Court of Montana, Butte Division. The case challenges the state's legislative reapportionment plan on the issues of population equality and violation by the reapportionment commission of its own criteria including: communities of interest, county boundary splits, compactness, and contiguity. The Manning v. Montana Districting and Apportionment Commission has been dismissed. The suit was originally brought to prevent filing of the redistricting and reapportionment plans with the secretary of state. Since the plans have been filed, the federal court dismissed the case as moot.

In SOUTH CAROLINA, the new Senate redistricting plan has been in conference committee for the last several weeks. The legislature is expected to end its session sine die on July 27 and a resolution will be required for a special session to continue work on the Senate plan. The overall population range of the plan is 9.8 percent.

The TEXAS legislature has redrawn the congressional and legislative reapportionment plans. The overall population range for the congressional plan is .28 percent. The population deviation in the House plan is 9.95 percent and in the Senate is 1.81 percent. All three plans are pending approval from the Department of Justice and from the federal court under the case of Terrazas v. Clements. During this session, the Senate passed a resolution authorizing the attorney general to make changes in the Senate plan if the Department of Justice does not drop its objections. The Senate basically accepted the interim Senate plan ordered by the federal court after initial department objections coincided with court action.

WISCONSIN Governor Anthony Earl signed the new legislative redistricting plan into law on July 15, after having vetoed a similar plan passed with the Wisconsin budget bill just two weeks earlier. The overall population range of the Assembly is 1.73 percent, and the population deviation for the Senate

is 1.05 percent. There are rumors of possible court challenges to this latest reapportionment plan, but nothing has been filed to date.

Material for this edition prepared by Candace L. Romig, NCSL

SUMMARY OF STATE LITIGATION ON
CONGRESSIONAL REDISTRICTING AND LEGISLATIVE REAPPORTIONMENT

State	Court Case	Issues	Status
Alabama	Burton v. Hobbie Federal Court (L - 11/5/81)	• Malapportionment • Population equality • Dilution of minority voting strength	U.S. Supreme Court affirmed plan drawn by legislature. (4/11/83)
	Boozard v. Hobbie Federal Court (L - 6/21/83)	• Petition to require governor to call primary • Determine if election subject to Sec. 5 preclearance of Voting Rights Act	Pending trial
Alaska	None		
Arizona	Hamilton v. Babbitt Federal Court (C, L - 12/13/81)	• Gerrymandering • Violation of due process • Dilution of minority voting strength	Federal court approved corrected legislative plan per settlement agreement. (4/12/82)
Arkansas	Doulin v. White Federal Court (C)	• Population equality and deviation	Federal court ordered court plan. (2/25/82)
	Bizzell v. White Wells v. White State Supreme Court (L - 10/5/81)	• Gerrymandering	State Supreme Court dismissed. (11/2/81)
California	Brown v. Deukmejian State Supreme Court (C, L - 10/26/81)	• Challenges 3 initiatives to prevent plans from going into effect	State Supreme Court upholds all 3 initiatives. (1/28/82)
	Vadham v. Eu Federal Court (C - 2/83)	• Population deviation • Authority of Secretary of State to make technical corrections to plan	Court of Appeals orders federal court to proceed on the merits of the case. (7/11/83)
	Richardson v. Eu Federal Court (L - 2/82)	• Numbering of Senate districts with regard to staggered terms	Federal Court dismissed case (10/15/82)
	Chavez v. Eu Federal Court (L)	• Numbering of Senate districts with regard to staggered terms	Federal Court dismissed case. (5/82)
	Mallowell v. Eu Federal Court (L - 2/82)	• Malapportionment	Pending trial
Colorado	Carstens v. Lamm Federal Court (C - 10/8/81)	• Proposed to break stalemate through judicial intervention	Federal court ordered court plan. (1/25/82)
	Kallenburger v. Buchanan State District Court (L - 6/82)	• Vacancy election • Deferred vote of electorate	State Supreme Court orders election to be held using 1981 senatorial boundary. (9/82)

State	Court Case	Issues	Status
Connecticut	Logan v. O'Neill State Superior Court (C, L - 10/81)	• Municipal boundary splits • Constitutionality of backup commission • Method of devising districts	State Supreme Court upheld plans. (8/3/82)
Delaware	None		
Florida	Buoniconti v. Firestone Federal Court (C)	• To stop Secretary of State from conducting elections • Sought redistricting deadline of 3/29, after which court to enact plan	Federal Court dismissed case. (6/28/82)
	Clem v. Haben Federal Court (C - 6/23/82)	• County and municipal boundary splits	Federal Court upheld plan. (9/3/82)
	In re Apportionment Law (SJR 1E) 414 So. 2d 1040 (1982) (L)		State Supreme Court reviewed plan as provided by law.
Georgia	Busbee v. Smith Federal Court (C)	• Contested objection by Department of Justice	Federal Court upheld Justice objection (7/22/82); approves plan (8/24/82).
Hawaii	Travis v. King Federal Court (C, L)	• Malapportionment • Gerrymandering • Registered voter population base used as formula	Federal Court approves masters' plan (6/4/82); state directed to draw new plan (6/17/82).
Idaho	Evans v. Cenarrusa Federal Court (L - 3/82)	• Proposed to break stalemate through judicial intervention	Federal Court dismisses after legislature and governor agree on plan.
	Miller v. Cenarrusa State District Court (L - 5/82)	• County boundary splits • Request to enjoin general election	Supreme Court remands case to district court to try case on merits. (6/7/83)
Illinois	In Re Illinois Congressional Districts Reapportionment Cases Federal Court (C - 7/1/81)	• Congressional redistricting not complete	U.S. Supreme Court affirmed court plan (1/11/82)
	Schrage and Wolf v. State Board of Elections State Supreme Court (L - 10/19/81)	• Violation of compactness criteria of state constitution • Petition court to approve plan	State Supreme Court upheld map with changes to conform to compactness criteria
	Rybicki v. State Board of Elections State Supreme Court (L - 10/27/81)	• Dilution of minority voting strength • Municipal and county boundary splits	State Supreme Court approves commission plan as amended with regard to population variance (1/12/82); amended to conform to 1982 amendments to Voting Rights Act (1/21/83).
Indiana	Orr v. Baldridge Federal Court (C - 5/6/81)	• Challenges census procedures resulting in the loss of one congressional seat	Pending decision

State	Court Case	Issues	Status
Indiana	Sandemer v. Davis Federal Court (L - 1/12/82)	• Political gerrymandering • Request injunction to prevent plan from going into effect • Dilution of minority voting strength in multimember districts • Incongruent legislative and congressional districts • Districts inconsistent with communities of interest	Pending trial
	Garton v. O'Bannon Federal Court (L)		Federal Court dismissed case. (8/24/81)
Iowa	None		
Kansas	O'Sullivan v. Brier Federal Court (C - 4/23/82)	• Requests court to draw plan	Federal Court ordered court plan.
Kentucky	None		
Louisiana	Major v. Treen Federal Court (C, L - 3/25/82)	• Dilution of minority voting strength	Pending decision
Maine	None		
Maryland	Wiser v. Hughes State Court of Appeals (L - 3/3/82)	• Communities of interest • Natural boundaries • Political boundaries • Compactness • Dilution of minority voting strength • Partisan gerrymandering	State Court of Appeals upheld enacted plan (6/4/82) U.S. Supreme Court refused to hear case for want of substantial federal question.
Massachusetts	None		
Michigan	Koerstrand v. Austin Federal Court (C)	• Violation of one-person, one-vote because new districts not drawn	Federal Court ordered court plan. (5/24/82)
	In Re Apportionment of State Legislatures State Supreme Court (L - 1/82)	• Requests court to assume jurisdiction for reapportionment	State Supreme Court declared reapportionment statutes unconstitutional (3/25/82); interim plan approved as drawn by special master (5/21/82); U.S. Supreme Court refuses to hear case (10/12/82).
Minnesota	Orwoll v. Lacomb and Growe U.S. Supreme Court (C)	• Challenge to court plan on basis lower court exceeded its authority in drawing plans ignoring overriding state policy	U.S. Supreme Court affirms court plan (5/13/82)
	Lacomb v. Growe Federal Court (C, L - 3/25/81)	• Requests deadlines for redistricting and reapportionment	Federal Court ordered court plans. (3/11/82)
Mississippi	Mississippi v. Smith Federal Court (C - 4/7/82)	• Contested objection by Department of Justice	Federal Court upheld department's objection. (5/28/82)

State	Court Case	Issues	Status
Mississippi	Brooks v. Winter Federal Court (C)	• Requests judicial intervention in redistricting • Delay of primary election • Dilution of minority voting strength	Federal Court ordered court plan (6/9/82); U.S. Supreme Court remanded case to federal court for reconsideration under Sec. 2 of the Voting Rights Act (5/16/83).
Missouri	Schatzle v. Kirkpatrick Federal Court (C)	• Requests court to assume jurisdiction over redistricting process	U.S. Supreme Court affirmed court plan (5/17/82)
Montana	Manning v. Montana Districting and Apportionment Commission State Supreme Court (C, L - 12/22/82)	• Requests injunction on commission plan • Challenges the constitutionality of the commission: reapportionment should be done by legislators	State Supreme Court dismissed case as moot. (4/7/83)
	McBride v. Waltermire Federal Court (L - 3/11/83)	• Population deviation • Violation by commission of its own criteria, i.e. maintenance of communities of interest, county boundaries, compactness, contiguity	Pending trial August 10, 1983
Nebraska	None		
Nevada	None		
New Hampshire	Gover v. Gardner Federal Court (L - 5/17/82)	• Challenge to House plan	Federal Court upheld enacted House plan and appeal dismissed. (5/27/82)
New Jersey	Kircher v. Tarlett Federal Court (C)	• Population deviation • Legislative procedure	U.S. Supreme Court declares plan unconstitutional. (6/22/83)
New Mexico	Sanchez v. King Federal Court (L - 1/82)	• Dilution of minority voting strength • Compactness • Contiguity • Court to assume jurisdiction	Federal panel declares eligible voter population base unconstitutional and postpones primary (4/8/82); U.S. Supreme Court reinstates primary for nonlegislative candidates (4/23/82 Pending hearing by federal panel on unresolved issues.
	Apodaca v. King State Supreme Court (L - 7/6/82)	• One senator's term regarding 1982 elections	State Supreme Court ruled senator didn't have to run. (8/82)
New York	Flateau v. Anderson Federal Court (C, L - 2/82)	• Population deviation • Dilution of minority voting strength • Violation of the Voting Rights Act	Federal Court approves plans adopted by the legislature. (7/5/82)
	Bay Ridge Community Council v. Carey State Supreme Court (L - 5/25/82)	• Violation of state constitution on basis of compactness, contiguity, and convenience. • Request to enjoin state from holding elections	State Supreme Court declares plan unconstitutional (6/21/83); case appealed to the Court of Appeals

State	Court Case	Issues	Status
New York	Bay Ridge (cont.)	• County boundary splits • Dilution of minority voting strength • Violation of communities of interest • Political gerrymandering	case transferred to the Appellate Division (1/13/83).
	Montano v. Carey Federal Court (L - 6/17/82)	• Incorporated allegations set out in Plateau • Improper interference with election schedule • Violation of the Voting Rights Act	Federal Court upheld plan (7/7/82); U.S. Supreme Court denied stay of order (7/23/82); Federal Court ordered action discontinued because moot (1/13/83).
	Mirrione v. Anderson Federal Court (L - 11/12/82)	• Dilution of minority voting strength • Violation of Voting Rights Act • Alleged that legislators acted contrary to their responsibility to constituents costing taxpayers under expense • Protection of communities of interest	Federal Court dismissed case (12/3/82); pending decision of U.S. Court of Appeals (4/27/83).
North Carolina	Gingles v. Edmisten Federal Court (C, L)	• Population deviation • Dilution of minority voting strength • County boundary splits • Single-member districts	Federal Court cross congressional charges (5/82); pending trial in summer of 1983.
North Dakota	None		
Ohio	Flanagan v. Gillmor Federal Court (C)	• Requests court to assume jurisdiction for redistricting • Population deviation • Dilution of minority voting strength • Political gerrymandering	Federal panel: all charges dismissed except population deviation pending decision in New Jersey case (8/25/82); case still pending.
	Laurence v. Rhodes Federal Court (L - 9/10/81)	• Requests injunction for plan because it gerrymandered against Republicans	Federal Court: suit dropped.
Oklahoma	None		
Oregon	Cargo v. Paulus State Supreme Court (L - 10/80)	• All senators to be elected in 1982 • Municipal boundary splits • Authority of Secretary of State to assign senators to specific districts challenged	State Supreme Court declares plan unconstitutional (9/23/81); court upholds Secretary of State's plan (10/27/81).
Pennsylvania	In Re: Pennsylvania Congressional Districts Reapportionment Cases Federal Court (C - 2/15/82)	• Alleges congressional plan is unconstitutional • Requests court to delay primary • Population deviation • Requests court to assume jurisdiction	U.S. Supreme Court affirms 3-judge federal panel which affirmed plan drawn by legislature. (1 6/83)
	Hispanic Coalition on Reapportionment v. Legislative Reapportionment Commission Federal Court (L - 1/28/82)	• Dilution of minority voting strength	U.S. Supreme Court upheld commission plan. (3/1/83)

State	Court Case	Issues	Status
Rhode Island	Licht v. State of Rhode Island and Providence Plantations State Superior Court (L - 4/82)	• Challenges validity of Senate plan	State Superior Court ordered legislature to redraw plan. (6/3/82)
	Holmes v. State of Rhode Island State Superior Court (L - 4/82)	• Challenges validity of House plan	State Superior Court upheld House plan. (10/29/82)
	Farnum v. State of Rhode Island Federal Court (L - 8/7/82)	• Challenges 1974 Senate District lines imposed for 1982 elections by legislature	Federal Court declares 1974 Senate districts invalid. (1/10/83)
South Carolina	NAACP v. Riley Federal Court (C - 10/14/81)	• Denial of equal protection under the law • Dilution of minority voting strength • Violation of Voting Rights Act • Population deviation • Failure of legislature to complete redistricting	Federal court ordered plan proposed by the House implemented with minor change (3/8/82); U.S. Supreme Court upheld the court plan (11/23/82).
South Dakota	O'Connor v. Kundert Federal Court (L - 7/2/81)	• Multi-member districts	Federal Court dismissed case as moot due to adoption of single-member district plan. (11/82)
	Twinnereim v. Kundert State Supreme Court (L - 7/29/81)	• County boundary splits	State Supreme Court refused to hear the case. (8/12/81)
Tennessee	Lockert v. Crowell State District Court (L)	• County boundary splits in Senate plan	State Supreme Court overturned lower court decision and upheld Senate plan. (3/30/82)
Texas	Seamon v. Clements Federal Court (C)	• Dilution of minority voting strength	Federal Court ordered an interim plan for 1982 elections. (2/27/82)
	Terrazas v. Clements Federal Court (L)	• Dilution of minority voting strength • Population deviation • Disruption of the election process • Violation of Voting Rights Act	Federal Court redrew legislative plan for 1982 elections. (3/5/82)
Utah	Dmitrich v. Monson State Supreme Court (L - 1/29/82)	• Representation in districts with holdover senators	State Supreme Court rejected motion.
	Rawson and Wiese v. State of Utah State District Court (L)	• Provisions regarding holdover senators	District court granted summary judgment and dismissed case. (4/82)
Vermont	Petition for Review of Apportionment Bill State Supreme Court (L)	• County and municipal boundary splits	State Supreme Court dismissed cases. (6/17/82)

State	Court Case	Issues	Status
Virginia	Cosner v. Dalton Federal Court (L)	• Contest House plan in nine cases • Dilution of minority voting strength • County boundary splits • Population deviation	Federal Court declared House plan unconstitutional, orders elections to be held 1981, 1982, 1983 (8/28/81); court upheld House plan as redrawn (6/21/82).
	Cline v. Robb Federal Court (L)	• Suit brought on behalf of counties who objected to being split into single-member districts in the House	Federal Court upheld House plan. (9/10/82)
Washington	Doth v. Munro Federal Court (C)	• Population deviation • Violation of criterion of communities of interest	Federal Court declared plan unconstitutional because of population deviation. (11/82)
	Republican State Committee and Dunn v. Munro Federal Court (C, L - 5/13/81)	• Plaintiffs asked for advisory opinion issuing a declaratory judgment upholding the constitutionality of the legislative plan	Case settled out of court. (1/82)
West Virginia	Brookover v. Mancnin Federal Court (C)	• Requests court to compel legislature to complete redistricting	Federal Court approved plan drawn by legislature. (2/22/82)
	Moses v. Rockefeller Federal Court (L - 2/4/82)	• Requested court to require legislature to draw plan • Violation of population equality requirements	Federal Court accepted enacted plan. (3/25/82)
Wisconsin	AFL-CIO v. State Elections Board Federal Court (C, L)	• Present apportionment is unconstitutional • Request that court enjoin elections until valid plans are in effect	Federal Court ordered a court plan with minor corrections until valid constitutional plan enacted by law. (6/17/82) Congressional plan challenge dismissed April 2, 1982.
Wyoming	Brown v. Thomson Federal Court (L - 10/2/81)	• Dilution of voter strength • Population deviation	U.S. Supreme Court upheld legislative plan. (6/22/83)

C - Challenge to congressional plan.
L - Challenge to legislative plan.

Dates in parentheses with challenge designation signifies when case was initially filed.

Prepared by the National Conference of State Legislatures, July 22, 1983.

PREFACE

The American Bar Association Special Committee on Election Law and Voter Participation is now entering its second decade of service as one of the Association's major public service undertakings. Its work has been marked by a dual tradition of policy leadership and guidance to the ABA and of education for the bar and public on contemporary issues in election system improvement. The former is reflected in a number of formal ABA policy positions (popular election of the president, vice-presidential selection, voter registration by mail, amendment of the Federal Communications Act's "equal time" provisions, campaign financing reform, an independent federal election commission, and a presidential study commission on declining voter participation) by which the bar has contributed to the national dialogue and endorsed specific proposals for election law reform. The latter has borne fruit in a variety of conferences, symposia, and publications on current electoral system problems.

This monograph is a new addition to our public education tradition. It explores the important issues of congressional reapportionment theory and practice which still face the nation notwithstanding the "one person, one vote" giant step of the early 1960s. The message is particularly timely with our federal system on the brink of the major redistricting initiative that comes with each decennial census, and will be an important determinant of the fairness and equity accorded in the decade ahead of all citizens and all segments of society in their representation within the Congress of the United States.

The monograph was designed with a non-technical approach in mind. Despite its character as a "primer," informational appendices and literature references will be found to direct readers to relevant case and statutory law, analytical studies, and historic evolution and thereby permit more intensive study of the problem.

Fair redistricting is not just a priority of our Special Committee. It is a commitment of the entire American Bar Association. In 1979, the Association's governing body, its House of Delegates, in considering a variety of voter participation initiatives, formally supported the enactment of legislation that "provides for fair redistricting pursuant to the 1980 census without regard to partisan advantage." While no specific method of reapportionment was endorsed at the time, the concept itself was engraved in formal Association policy. Specific measures were weighed and explored at a conference cosponsored by the Committee in June 1980 with the National Science Foundation and a distinguished group of academics and practitioners at San Diego, California.*

*See conference volume, *Representation and Redistricting in the 1980s*, Grofman, Lijphart, McKay, Scarrow, eds. (1981, forthcoming)

The Committee would, therefore, welcome views, reactions, and suggestions from all readers of this handbook, whether or not Association members, on how best to ensure implementation of the "fair redistricting" concept. If the pamphlet stimulates and informs this kind of dialogue—in bar, civic, and other forums of concerned citizen activity—it will have well served its purpose and the cause of good government.

I. Introduction

Fair and equal representation, a cornerstone of the American political system, depends largely on the fairness of the process for selecting representatives. One of the most important factors in this process is the drawing of congressional districts from which members of the United States House of Representatives are chosen.* State legislatures traditionally have been responsible for establishing district lines.

Alterations in congressional district lines after the 1980 census promise to be extensive. According to its 1980 figures, the Census Bureau estimates that population movement among states will cause about 14 states to gain or lose seats in the House of Representatives. This shift, combined with population movement within states, may force virtually all of the 435 existing district lines to be redrawn. Even though redistricting inequities have been reduced in the past two decades, under the 'one person, one vote' mandate, many citizens are dissatisfied with current methods of reapportionment.

How Congressional Seats are Now Allocated

No matter how small its population, each state must have at least one representative in the House of Representatives. The remaining 385 seats are to be allotted so that each representative speaks for approximately the same number of people, thus attempting to provide each person with an equal share of representation in the nation's lawmaking processes.**

The population figures used are those provided by the decennial U.S. census. The President transmits these figures to Congress during the first week of the first regular congressional session after the census. Within fifteen days after receiving these figures, the Clerk of the House sends the chief executive of each state a certification of the number of representatives to which the state is entitled. Each state, according to rules in its state constitution or statutes, then creates the same number of districts as the number or representatives to which it is entitled. While states are required to redistrict every ten years, no formal time limit exists for the completion of the redistricting plan.

A Brief History of Redistricting***

While state legislatures traditionally have been the main bodies responsible for redistricting, the Congress and the courts have played varying roles in the line-

*The drawing of *legislative* districts (those from which representatives to a State House or Senate are chosen) is also central to fair representation, yet entails certain issues separate from those involved in congressional redistricting. For a more detailed discussion of legislative redistricting, see *Toward a System of Fair and Effective Representation*, Common Cause (Washington, D.C., 1977). Unless otherwise indicated, "redistricting" will refer only to congressional linedrawing.

**U.S. Constitution, Article I, Section 2, clause 3; 2 U.S.C. § 2a.

***"Reapportionment" refers specifically to distributing seats to established units of government, while "redistricting" signifies line drawing to establish districts within these units. States receive an apportionment of congressional seats, after which districts are drawn. Both terms will be used interchangeably throughout this monograph to discuss how congressional seats are distributed within each state.

drawing process. Congress was silent on the issue before 1841. However, since that time, it has enacted several pieces of legislation to alter the congressional reapportionment system, with congressional involvement peaking in the early twentieth century. The current congressional redistricting law was passed in 1929. It contains very few directives but does mandate that representatives be apportioned every ten years according to the then most recent U.S. decennial census, based on the principle of equal representation (see Appendix A). Except for an act passed in 1976 which banned at-large elections *(i.e.,* those where the entire state votes for all seats to which the state is entitled), Congress has not recently imposed any redistricting rules on the state legislatures.*

Until 1962, in the landmark case of *Baker v. Carr,* 369 U.S. 186, the courts trailed far behind state legislatures and Congress in their involvement with reapportionment.** Indeed, in the 1946 case, *Colegrove v. Green,* 328 U.S. 549, the Supreme Court asserted that it had neither a judicial responsibility nor a right to address the redistricting question, on the grounds that it was a political issue. *Baker v. Carr,* however, offered a dramatic departure from the previous stance of judicial "laissez-faire," in ruling that federal courts do have authority to judge whether districts are apportioned fairly. Some controversy, however, still exists concerning the appropriate roles of Congress and the courts in this area.

*2 U.S.C. § 2c.

**See Appendix A for summaries of major cases affecting redistricting.

II. The Current Redistricting System

Gross Population Inequality: Past Injuries Healed

Despite the requirement that congressional districts be redrawn every ten years so that each district has approximately the same population size, many states have had congressional districts whose populations varied dramatically. A study by the Brookings Institution revealed that in 1962 half of the states with more than one congressional district (21 states out of 42) had constituencies in which the smallest district contained less than fifty per cent of the population of the largest district.*

In the 1964 case of *Wesberry v. Sanders,* 376 U.S. 1, the Supreme Court condemned this gross inequity. It voided Georgia's redistricting plan, deciding that the population disparities among congressional districts violated the spirit of Article I, Section 2 of the Constitution. Articulating what is frequently referred to as the "one person, one vote" or "as nearly as practicable" standard, the Court wrote that "as nearly as practicable, one [person's] vote in a congressional election is to be worth as much as another's." Following the 1970 redistricting, most districts adjusted to this mandate: 402 of the 435 congressional districts were within 1 per cent of the district population average for their state.

Current Redistricting Problems: The Gerrymander

Even though major inequities in the area of population disparity have been greatly reduced, redistricting reformers contend that substantial and avoidable injustices remain. These defects result largely from the practice of "gerrymandering."

What is "Gerrymandering?" In 1812, the Massachusetts state legislature created a dragonlike district to benefit the Democratic party over which then Governor Elbridge Gerry had tremendous influence (see *Figure 1*). Drawing a head, claws and wings on a picture of the district, painter Gilbert Stuart exclaimed that it looked like a salamander. Editor Benjamin Russell, however, noted that "gerrymander" would be a more appropriate name, in "honor" of the governor. Since then, the term has generally referred to the drawing of district boundary lines for the purpose of giving some individual or group a political advantage. It is important to note that gerrymandering is detectable in terms of its *impact,* not necessarily by the *shape* of the district.**

Gerrymandering typically involves the use of one of two techniques to dilute the influence of "minorities" in the electoral process.*** It may concentrate minority

*A. Hacker, *Congressional Districting: The Issue of Equal Representation,* (Brookings Institution: Washington, D.C. 1961).

**A strangely shaped district may, for example, merely be following natural topographical features. *See* B. Grofman and H. Scarrow, "Representation and Redistricting in the 1980s", *Policy Studies Journal* (1981, forthcoming).

***In this discussion, "minority" refers generally to any group whose influence the line-drawers are attempting to reduce. Thus, it can include racial and ethnic minorities, challengers, members of minority factions within the party that is in control of the state legislature, and minority parties.

Figure 1
The Original Gerrymander

Reprinted from *Congressional Districts in the 1970s* (2nd Ed.) with permission of *Congressional Quarterly*.

strength in a few districts, thus wasting minority votes. To illustrate, a state with ten districts and a minority comprising 30 per cent of the state's population distributed as shown in *Figure 2* could draw district lines in at least two ways. One of these would be less beneficial for minorities. For example, instead of the minority comprising 75 per cent of the constituency in four districts (as in *Figure 3*), gerrymandered districts might be drawn so that minorities would constitute 100 per cent of the population in three districts (as in *Figure 4*), thus reducing the changes of a minority candidate being elected in other districts. It should be noted, however, that the courts have rarely concluded that this minority-concentrating technique violates minorities' constitutional rights.

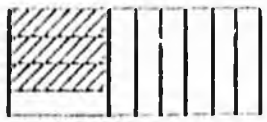

Figure 2

Figure 3

Figure 4

Note: ▨ denotes minority

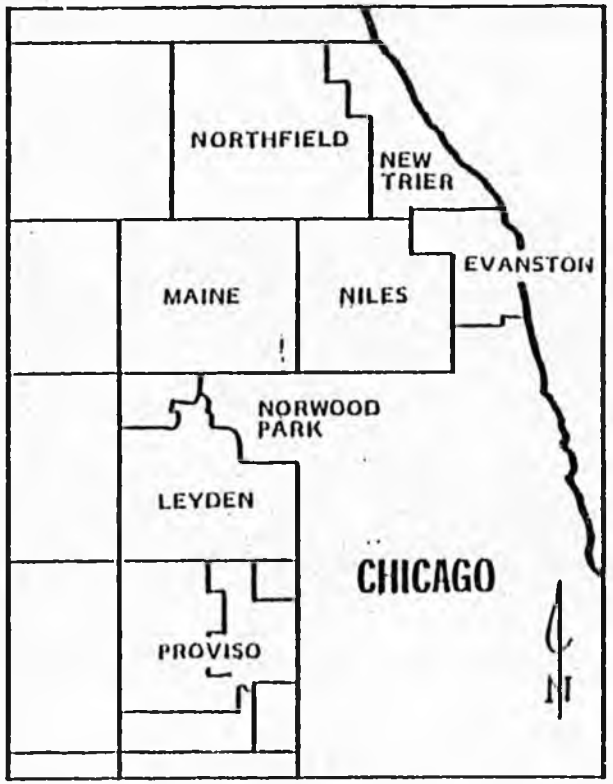
A second technique is the conscious dilution of minority strength. By this strategy, a minority group that is concentrated in one geographic area (and which thus would comprise a majority if that area were a congressional district) would be split among many districts, losing a majority voice in any.

Why Gerrymandering Harms. Many individuals denounce any type of gerrymandering. Indeed, a former director of the National Municipal League's legislative redistricting information service contends that the evils which are meant to be alleviated by requiring population equality are simply accomplished through gerrymandering:

> It was inevitable that this gerrymandering problem would become worse, not better, as a direct result of the Supreme Court's rulings regarding population equity during the '60s and '70s. The incentive for resort to the gerrymander was much less when the legislature could easily accomplish the same thing by simply making districts of wildly different populations.*

In addition to general condemnation, however, the following specific charges have been leveled at gerrymandering practices:

It reduces the opportunity for ethnic minorities to be elected: the previously described techniques have often contributed to minority underrepresentation in Congress. While blacks comprise approximately 13 per cent of the nation's population, less than 3 per cent of congressional representatives were black at the beginning of the 1980s. Hispanics constitute approximately 9 per cent of the population, but make up only 1 per cent of the House of Representatives.



It reduces the opportunity for political minorities to be elected: members of parties not controlling the state legislatures, or members of the majority party who break with prevailing party views, also have fallen victim to the gerrymandering sword. Florida's 1972 reapportionment plan, for example, resulted in Democrats winning 75 per cent of the 15 congressional seats, while receiving only 53 per cent of the statewide vote.** And at least two recent political mavericks have been the target of their own party's gerrymandering initiatives. In 1975, Chicago's Democratic boss, the late Mayor Richard Daley, proposed an odd-shaped district plan, remarkably similar to the original Massachusetts gerrymander, which was narrowly rejected by the Democratic-controlled state legislature, and which many observers felt was designed to weaken an outspoken Daley opponent (Democrat Abner Mikva) who went on to win the contested congressional seat (see *Figure 5*). The 1972 California reapportionment apparently was designed, among other reasons, to protect incumbents of both parties. Yet, it was not designed to benefit a minority among incumbents, a liberal, anti-war Republican (Paul McCloskey) who nevertheless was reelected.

It unduly protects incumbent seats: this reduces competition and enables parties to field weak candidates. If potential candidates perceive that incumbents are drawing district lines to ensure their own reelection, challengers may be less likely to enter the race. In 1978, 11 per cent of the winners in congressional races ran unopposed. Moreover, even new-

*Congressional Anti Gerrymandering Act of 1979: Hearings on S.596 Before the Senate Committee on Governmental Affairs, 96th Congress, 1st Sess. 286 (1979) (statement of William Boyd (hereinafter cited as 1979 Hearings).

**1979 Hearings at 50 (statement of David Cohen, President, Common Cause).

Figure 5
Reapportionment Plan
(Illinois Tenth Congressional District)

comers who enter may confront additional barriers where lines have been consciously rearranged in an incumbent-protecting fashion. Plans designed to protect incumbent seats usually achieve their goals. In 1978, over 95 per cent of congressional incumbents seeking reelection were reelected.*

3. discourages voter participation: redistricting reformers argue that gerrymandering disenfranchises voters not only directly, by discouraging challengers from entering congressional races, but also indirectly, by discouraging other campaign involvement. For example, odd-shaped districts covering broad geographical areas increase the difficulty for both candidates and canvassers of undertaking neighborhood and door-to-door campaigning. Perhaps more importantly, gerrymandering may be contributing to the unfortunate decline in voter participation.* While voter turnout in House of Representatives races was about 44% in 1970, it fell to approximately 35% in 1978. Voters may reason that since gerrymandering has predetermined election results, their individual ballots hardly count. Furthermore, voters may become confused when they reside in a "strategic location" which is relocated for each major election, depending on the line-drawer's goals. A former Congressman from New York complained:

> I was redistricted in the sort of ongoing flow that occurred sufficiently often that I found that I ran for Congress three times from the same house but each time I was in a different congressional district. And the third time it was impossible for me to get from my house to the rest of my district without paying a toll.**

In addition, once candidates are elected, they might show more responsiveness to the needs of the line-drawers who created districts favoring their candidacies than to those of the citizens who elected them.

An Overview of Reform Proposals

While there exist defenders of the current system,*** advocates for improving reapportionment see the significant injustices just discussed and demand a more equitable system. The call for reform is bipartisan and nationwide.

Various groups and opinion-leaders in the nation are demanding that the redistricting system be improved. The *Washington Post*, the *Wall Street Journal*, and the *Boston Globe* all have run strong editorial messages stressing the need for change in reapportionment procedures. Some states have adopted modifications on their own in recent years. California, Colorado, Hawaii, Iowa, and Oregon have adopted strict redistricting standards, and Colorado, Hawaii and Montana have established redistricting commissions. Organizations expressing support for redistricting reform include the American Bar Association, the National Association for the Advancement of Colored People (NAACP), the Mexican American Legal Defense and Educational Fund (MALDEF), and the National Municipal League. The League of Women Voters has mounted a public education campaign on reapportionment issues and options and has left its individual state leagues free to consider and support corrective options that best meet local needs. An estimated ten to fifteen state leagues have endorsed reapportionment commissions. A Common Cause questionnaire sent to congressional candidates in the 1978 elections showed that 271 representatives favored federal redistricting standards, with only 41 opposed.

*This is not to imply that preservation of existing district lines is necessarily undesirable or harmful. From the *incumbent* legislator's perspective, a familiar constituency may be valuable if he or she is to represent constituents' views accurately.

*See ABA Special Committee on Election Reform, *The Disappearance of the American Voter* (Washington, D.C., 1979).

**1979 Hearings at 312 (statement of the late Allard Lowenstein, Representative from New York's 5th Congressional District, 1968-70).

***E.g., the National Conference of State Legislatures, (NCSL) a national organization of approximately 7000 state legislators and their staffs.

Examples of the major national initiatives are:

The Common Cause Proposal—A Model for State Self-Improvement. This public interest group, a grass-roots "good government" organization with more than 225,000 individual members and offices in over 45 states, has developed a model amendment to state constitutions with an accompanying act which states can choose to adopt. The two enactments (constitutional amendment and statute) apply to both legislative and congressional districts and are designed to balance stability with flexibility. The Common Cause plan proposes among other things:

- a commission to draw district lines. Commissioners (five in number) must meet certain qualifications for "impartiality;" Four are appointed by specific members of the state legislature, and the four select a fifth to serve as Chair;
- redistricting standards. These are rules which the initial apportioning authority must follow in its plans. It is suggested that districts embrace approximately the same size population, respect political subdivisions, be composed of contiguous territory, be compact, be drawn so as to avoid giving any group or individual political advantage, and be drawn so as to avoid diluting minority voting strength;*
- accountability provisions. In addition to requiring public hearings on redistricting proposals, the plan provides the opportunity for qualified voters to challenge the plans, and for federal courts to adjudicate these claims.

Federal Guidelines with Redistricting Commission Requirement. Senate Bill 596 and its House companion H.R. 2653 (96th Congress, 1st Session) embody this approach. Although the bills differ slightly from each other, both support the tripartite Common Cause approach: commission-standards-accountability. The primary difference lies in the Common Cause models' presumption of state action which gives the individual states a choice on implementation, unlike the congressional bills, which, once enacted, require states to adhere to their provisions. On the other hand, because the Common Cause Act is meant to be a state statute, it contains many specific provisions which the congressional options omit. The congressional bills afford states the opportunity to decide individually on a number of "specifics" in the way in which they will adhere to the more general federal mandates.

Federal Guidelines without Commission Requirement. H.R. 1516 and its companion in the Senate, Amendment 237 (96th Congress, 1st Session) offer another reform approach. Although the two bills vary slightly, both are based on suggestions from the House Wednesday Group.** The major differences between these bills and the previously mentioned congressional proposals is that H.R. 1516 and S. Amendment 237 do not recommend the establishment of commissions, as the sponsors feel that the choice of approach in ensuring equitable application of federal standards should be left to the states.

• • • •

Rather than address the totality of strengths and weaknesses of each major proposal, it may be more valuable to review individually major components or concepts. As might be expected, many proposals share some provisions and differ on others. The following discussion, therefore, takes up the key remedial options and touches on the significant arguments from various perspectives in an attempt both to foster a better understanding of the issues and to facilitate informed decisionmaking. The discussion treats two major issues: who should make the decisions, and what role might standards play in this process. Our intent is to illuminate rather than to advocate particular stances on specific provisions.

*For further discussion of standards, see Part III.

**Comprised of thirty-two moderate to liberal Republican members of the U.S. House of Representatives.

III. The Issues: Are Standards Needed?

In examining the redistricting process, several basic issues must be addressed. One fundamental set of questions revolves around the need for and character of standards to guide and order the development of reapportionment plans.

To What Extent Should Standards be Articulated?

Some groups claim that the most important aspect of redistricting reform is the establishment of specific rules which must be followed when drawing congressional district boundaries. Indeed, if fair redistricting standards are made so explicit that line-drawers cannot abuse their discretion in interpreting them, the matter of who has the responsibility for applying the standards may well become less important. Yet, even those endorsing clear standards may disagree about the extent to which certain standards should be defined by the law. The narrower the definition, the less flexibility is available to accommodate factors affecting the fairness and soundness of plans which are not yet in existence when the definition is formulated. Moreover, as might be expected, some electoral experts are opposed to explicit standards, particularly federal ones.

In Defense of Standards. A 1979 editorial in the *Washington Post* stressing the need for standards (particularly to provide courts with reviewing guidelines) emphasized one of the common rationales for this approach: "Since the federal courts are already deeply into this 'political thicket,' [of judging the fairness of redistricting plans] it might be useful to them—as well as to the cause of ending the more indefensible forms of the gerrymander—for Congress to spell out how it believes congressional district lines should be drawn."* Indeed, many have viewed standards as perhaps the most important agenda items in the fair redistricting "portfolio." As a former AFL-CIO advisor on reapportionment matters and the plaintiff in *Wells v. Rockefeller* has stated:

> The most effective way to prevent gerrymandering is not to . . . vest special power in some judicial umpire or even in a nonpartisan authority. Rather it is to make sure that whoever draws the district lines cannot do so in a manner calculated to bestow special advantages on any . . . group . . . And the best way to do this is to establish firm, explicit . . . ground rules.**

*Washington Post, June 21, 1979.

**Wells, *'Affirmative Gerrymandering' Compounds Districting Problems,* National Civic Review (January 1978) at 17.

Equity, uniformity, visibility and accountability—at first blush, all appear to make the case for articulate standards. Few seem to quarrel with the idea, at least in principle. Yet, there is a significant measure of opposition.

In Opposition to Standards—Encroachment on States' Rights. The National Conference of State Legislatures has expressed concern that if Congress mandates that commissions draw plans according to specific federal standards, the state legislatures will be accorded little voice in the redistricting process. The standard response to this objection is that state legislatures would retain a significant influence in appointing commission members. Of course, this influence would be limited by reform proposal restrictions on who could be appointed.

Absence of Standards throughout the Nation's History. It is true that federal redistricting standards have not been employed throughout most of U.S. history and that many states have set no standards for either legislative or congressional redistricting. Standards supporters, however, assert that (i) perhaps the federal standards which were renewed and embellished from 1842 to 1911 ultimately expired simply because they were not judicially enforced, and not because they were unnecessary or because Congress did not have the authority to impose them, and (ii) states are now increasingly adopting standards. These observations cast doubt on the argument that the relative absence of standards in the past implies that they are unnecessary to fair and effective operation of our redistricting apparatus.

Effect on Volume of Litigation. Some have expressed wariness of standards without commissions, suggesting that such a combination may "open the floodgates to litigation" and entail lengthy bureaucratic red tape. An underlying premise is that many plans will be unable to satisfy fully the variety of standards being proposed, and dissatisfied parties may be encouraged to find some inconsistency worthy of court contest. Yet others have speculated that the articulation of standards could reduce frivolous litigation, since challengers would use standards as guidelines to determine the types of deficiencies the courts will recognize and would assess their prospects with greater care.

Standards: Conflicts or Priorities. Focusing on the dilemmas of definition and differing social and political values that underlie many of the standards proposals, some authorities suggest that the task of reconciling and ordering meaningful standards may be unmanageable. For example, drawing districts with the same size population in order to fulfill the "population equality" standard may require odd-shaped districts which fail to meet the frequently asserted "compactness" requirement. NCSL has complained, in this vein, that many congressional bills "impose a litany of substantive and inconsistent standards to govern redistricting plans."*

Proponents of standards generally respond to such assertions not by disagreeing that standards may conflict, but by arranging them according to priorities which can operate to mitigate the problem: the less important standards need only be met to the extent that the plan they affect is also faithful to the more important standards. Indeed, several experts suggest that priorities should be

*1979 Hearings at 400 (statement on behalf of NCSL of State Senators S.H. Runyan, Arizona, Ross Doyen, Kansas, and Charles Vickery, North Carolina).

made explicit in any reform proposals which espouse redistricting standards. The Supreme Court seemed to advocate this priority approach at least with respect to legislative districts, in *Reynolds v. Sims*, 377 U.S. 533 (1964) where the Court wrote that although the state must attempt to construct districts in both houses of its state legislature as nearly equal in population as practicable, some population deviations were permissible if "based on legitimate considerations incident to the effectuation of rational state policy" such as a desire to respect political boundaries. It should be noted that placing standards in order of importance does not eliminate all difficulties. Additional questions which need to be answered include what the precise order should be among any given set of standards, whether there should be a range within which some standards can be modified to accommodate others and, if so, what these ranges might be.

Examination of Specific Standards

Against this backdrop, it is appropriate now to examine individual standards which have been proposed, where on the priority scale each might be placed, how clearly these can and should be defined in law, and how much a given standard should be modified to accommodate other standards.

Population Equality. Past congressional statutes, Supreme Court decisions, and virtually all major reform proposals agree that congressional districts should strive for equal population size. According to the Congressional Quarterly, 385 of the existing 435 congressional districts are within 1 per cent of the average district population within their states, thus confirming the efforts of states to adhere to this requirement.* Nevertheless, many issues with regard to this standard remain unresolved and a good number turn on definitions of "population equality." Most definitions set forth a percentage of population deviation allowable from a state's average population in a congressional district. Various advantages and disadvantages are claimed for this approach. The "deviation range" concept is meant to eradicate gross population since any deviation outside the stipulated range would be impermissible. This approach seems to offer a better solution than precise mathematical equality since it allows other relevant considerations to be taken into account in a way that mathematical equality may not. Thus, districts would be presumed to be within constitutional tolerances if the maximum deviation were within the permitted range. Yet this presumption might be overcome by showing that a given plan, nevertheless, "operated unreasonably to minimize the voting population," see *Kirkpatrick v. Preisler*, 394 U.S. 526, at 531 (1969).

Among those standards defining "population equality" according to range, there exist alternatives concerning the amount of deviation allowed. One 1979 Senate proposal, for example, (S. 596**) allows the largest district to be 4 per cent greater than the smaller district (*i.e.* permits deviations from the average district of up to 2 per cent). Advocates defending the broader ranges assert that they provide a greater opportunity to accommodate other relevant standards and, that in any event, small ranges may require census figures to be more accurate than is now the case. Indeed, the Census Bureau admits to a margin of error of

*Congressional Quarterly, "Congressional Districts in the 1970s" (2d ed. 1974) at 1.
**96th Congress, 1st Session.

approximately 2 per cent in its estimates, and a census authority testified in mid-1979 before a House subcommittee that many state representatives had encountered problems using census figures to draw redistricting lines.*

Thus, although debate continues concerning the precise definition of "population equality," there seems to be a consensus that some standard of this kind is a necessary (albeit not alone sufficient) requirement for fair redistricting. It appears that a range of standards would pass constitutional muster although Supreme Court decisions are not fully clear on the extent to which states must at least strive for strict mathematical equality.

Political Subdivisions. Over 200 counties are split up among congressional districts more than is required by their state's population average. Many of those concerned with improving the redistricting process feel that the boundaries of political subdivisions (counties, municipalities, and other units of local government) should be respected in the line-drawing processes, although not all of them agree on whether the term "political subdivision" should be defined in the federal law or left up to the states to define. They propose that political subdivisions remain undivided whenever possible not only because unnecessary fragmentation undermines the ability of constituencies to organize effectively, but also because it increases the likelihood of voter confusion regarding other elections based on political subdivision geographies. Furthermore, preserving political subdivisions tends to foster a sense of community.

Still not settled, however, is the priority this standard should be assigned. While it is generally agreed that boundaries should only be respected to the extent that they are consistent with the "equal population" standard, the issue becomes more controversial when this standard conflicts with the "compactness" standard which discourages odd-shaped districts. Many political subdivisions are odd-shaped; if the compactness standard is given a high priority, the political subdivisions should only be respected when both "population equality" and the "compactness" requirement are fulfilled. Most groups place preservation of political subdivisions second only in importance to "population equality."

Other criticisms of the high priority accorded preservation of political subdivisions boundaries cut more deeply than those just mentioned. It is charged that honoring subdivisions preserves the "status quo," a change in which may sometimes be needed in order to eliminate undue incumbent power in fair districting situations. Representatives from MALDEF, for example, have expressed concern that this standard may jeopardize minority voters: "[T]he standard which requires maintaining the boundaries of political subdivisions is unwarranted. In order to maximize the voting strength and enhance the opportunity for minorities to be elected, it is often necessary to split cities or counties which have large concentrations of minority citizens."**

Contiguous Territory. Rarely has it been suggested that congressional districts not be composed of contiguous territory. Generally, a district is considered contiguous if none of the territory included within it is entirely separated from the remainder of the district by intervening territory assigned to another district. Indeed, even though not required by the Constitution or by federal law, contiguity is almost always observed in congressional districts.* Perhaps this practice is common because, like compactness, it seems inherent to the system of representation upon which the U.S. House of Representatives system is based. Although there has been questioning of the incorporation of contiguity into federal legislative standards because of difficulty of definition, the almost self-evident character of the concept suggests that detailed definition may not be needed.

There are, nevertheless, problematic situations for assessing contiguity. For example, the question might be raised whether districts are necessarily contiguous if they are comprised of territories joining only at one point or connected only by bridges or tunnels, or separated by unconnected waterways. Some plans, therefore, propose "convenient contiguous" territory, a concept that is designed to permit searching scrutiny of these marginal situations and to afford some recognition to travel and communication barriers.

Compactness. The "compactness" requirement is designed to prevent gerrymandering districts into odd shapes. One measure of compactness is to determine the smallest circle in which the district can be circumscribed and to compare the ratio of the area of the district inside the circle to the area of the circle itself, with the closer to 1-1 the better. Like contiguity, compactness is required neither by the Constitution nor by federal law, but scholars and politicians alike have acknowledged its value and many states have established compactness provisions.

Defenders of the compactness requirement maintain that it is central to the theory of geographical representation upon which U.S. House of Representatives selection is based. Geographically compact districts also tend to reduce electoral costs in time and money, since candidates and campaign workers can more readily cover smaller districts. Nevertheless, a compactness standard which would be logical for one district might be quite inapplicable to another. Thus, general language requiring the aggregate lengths of district boundaries in the state to be as short as possible might be more appropriate in federal standards than more detailed or narrow definitions. States, however, could choose to define the term more narrowly in their own constitutions or codes. This level of generality is seen as preventing the arbitrary shifting of lines for political advantage while permitting minor departures from compactness to accommodate important companion standards. Virtually all proposals suggesting this standard place it below the three previously mentioned in terms of priority.

"Antigerrymandering" Standards. Some endorsers of standards believe that even if the previously mentioned requirements are carefully articulated and enforced, there should also be explicit "antigerrymandering" standards. These generally prohibit the drawing of lines for the purpose of gaining political advantage, and currently exist under the laws of Colorado, Delaware, Hawaii, and Oregon. Such requirements serve as an added safeguard against line-drawers who, while devising a means of fulfilling the previous requirements, still intentionally manage to structure district lines which establish an undue political advantage.**

*Remarks by Marshall L. Turner, Jr., U.S. Bureau of the Census, testifying before the House Subcommittee on Census and Population, May 4, 1979.

**Letter dated September 27, 1972, Abelardo Perez, then Associate Counsel for MALDEF, to Senator Danforth (R-Illinois) sponsor of S. 596.

*In fact, a federal court, in *Kopald v. Carr*, 343 F. Supp. 51 (M.D. Tenn. 1972) imposed a requirement of contiguity where that requirement was not mandated by state statutes. In addition, redistricting expert Bruce Adams has noted that, ". . . two state statutes and twenty seven constitutions require contiguity." ("A Model Reapportionment Process: The Continuing Quest for 'Fair and Effective Representation'," 14 *Harvard J. on Legislation*, June 1977 at 874).

**See Backstrom, Robins and Eller, "Issues in Gerrymandering: An Exploratory Measure of Partisan Gerrymandering Applied to Minnesota," 62 *Minn. L. Rev.* No. 6, July 1978, which points out that

The "political advantage" type of standard has encountered some opposition. It is seen by some as an attempt to make the line-drawing process politically neutral, an impossibility since every district line favors some political party, person or group. Proponents respond, however, that the standard is not meant to void a plan merely because it favors some group or individual. The Common Cause model, for example, does not void a plan merely because it *results* in favoritism. Rather, it requires that challengers demonstrate that districts were drawn for the *purpose* of favoring some person or group.*

In addition, problems may arise under an antigerrymandering standard with regard to determining which entities should explicitly be prohibited from gaining political advantage. Among those suggested by various proposals are: political parties, incumbents, economic groups, certain racial minorities, certain language groups, and specific individuals. While it seems laudable to attempt to eliminate the possibility of any entity gaining political advantage, an effective standard may be so difficult to articulate that the resulting attempt could create more problems than it would solve. Indeed, Common Cause redistricting expert Bruce Adams has advanced this criticism with respect to the protection of certain socio-economic communities (as has been attempted in Alaska, Colorado, Hawaii, and Oklahoma). In a 1977 article, he wrote:

> The notion of "socio-economic communities of interest" is so broad that a reapportionment authority could knowingly demark geographically overlapping communities. As a result, the reapportionment authority would have to favor some communities of interest over others. It is possible, therefore, that under the broad provisions those communities of interest that have been the traditional victims of discrimination will gain no additional protection.**

Another frequent criticism of the antigerrymandering standard is that it weakens the theory of geographical representation. If a "fair system" is defined as one which guarantees that groups receiving a certain percentage of the total vote are awarded a similar percentage of seats in Congress, the United States would have to adopt a mechanism for proportional rather than geographical representation.*** Many political scientists assert that the U.S. electoral system could not readily make this change because it would entail political conditions (*e.g.*, the growth of a multi-party system) which are foreign to the nation's political system and traditions. Yet, it is possible to focus only on geographic information in the *initial* formulation of redistricting plans and then to apply a "political influence" concept in checking a plan to ensure that it does not unduly benefit some specific group or individual. An antigerrymandering standard might decree that such a check is desirable although the type of data to be used in making this test and its manner of application would have to be carefully worked out.

one can measure the extent of gerrymandering by looking at any proposed districting in terms of statistical calculations on how likely the expected seats votes relationship it would give rise to could have occurred by chance.

*Common Cause, "Toward a System of 'Fair and Effective Representation'," (Washington, D.C., 1977) at 55.

**Adams, "A Model Reapportionment Process" *supra*, at 879.

***See* Backstrom, "Issues in Gerrymandering," *supra*. As measured in Backstrom's terms, fair representation is *not* proportional representation.

Some groups oppose any express prohibition of political gerrymandering, arguing that the Supreme Court has never found it unconstitutional to take certain considerations into account when drawing initial redistricting plans.* However, advocates of this standard, in addition to questioning the validity of case precedent here, suggest that it is precisely for the reason that constitutional strictures may permit some accommodation of political considerations that federal standards must be articulated in this area in order to prevent abuse.

Other Considerations: "Affirmative Gerrymandering" Practices

Most authorities and organizations advocating antigerrymandering standards disapprove of the use of statistics about a district's racial or linguistic composition to dilute the voting strength of certain racial or language minorities. Indeed, both Supreme Court decisions (*e.g. Gomillion v. Lightfoot*) and federal legislation (the Voting Rights Act of 1965) prohibit such practices.**

A more controversial question, however, is whether such information should be taken into account to afford minorities an advantage so as to compensate for past redistricting injustices (hence the name "affirmative gerrymandering"). In this vein, an expert on the effect of redistricting on black voters has suggested the following language for inclusion in redistricting proposals:

> There shall be an affirmative duty on the part of the [initial reapportionment authority] to insure that there is no discrimination on the basis of race or color in the drawing of congressional district lines.***

This approach seems to be supported by Supreme Court pronouncements [*United Jewish Organizations v. Carey*, 430 U.S. 144, (1977)]; the NAACP has also gone on record in support of "affirmative gerrymandering":

> Whereas, courts, including the Supreme Court, have recognized that it is sometimes necessary to take race into consideration in the shaping of voting districts to correct violations of the Constitution and of the Voting Rights Act; . . .[T]he NAACP opposes any law that would restrict legislatures or other entities in their efforts to correct the underrepresentation of blacks in Congress.****

Some minority interests (*e.g.* MALDEF) suggest that a diluting effect in a redistricting proposal (with or without proven intent) should be sufficient proof of discrimination to invalidate it or, at least, to create a presumption of defectiveness in any state and not merely in those jurisdictions with a history of discrimination. The rationale, drawing on experience with respect to efforts to establish discriminatory intent in matters of minority employment and education, is that proving such intent is difficult if not impossible.

In *City of Mobile v. Bolden* the U.S. Supreme Court dealt with the intent issue in the context of a redistricting challenge based on Section 2 of the Voting Rights

*NCSL; *See Gaffney v. Cummings*, 412 U.S. 735 (1973) and *White v. Regester*, 412 U.S. 755 (1973) in support of Supreme Court neutrality in this area.

**42 U.S.C. §§ 1971, 1973 *et seq.*

Act.* Mobile's at-large system of elections was alleged to cause discrimination against minority groups. The Supreme Court ruled against plaintiffs, finding that the intent to discriminate had not been proved as required in a Section 2 challenge.** This particular election system had been established in 1911, before the date of applicability of Section 5 of the Voting Rights Act. Had Section 5 applied, the system when proposed might not have passed muster during the statutorily mandated preclearance procedure which requires that a covered jurisdiction must prove that a proposed change has neither the intent *nor* the effect of discriminating against minority groups. Thus, a paradox exists with respect to the relationship between the Voting Rights Act and electoral systems. While Section 5 jurisdictions generally may not establish at-large systems, such existing systems and systems adopted by non-Section 5 jurisdictions may be imposed and perpetuated regardless of their effect on voting strength.

While a requirement which prohibits dilution of minority voting strength would lean toward Plan B instead of Plan A in an illustrative four-district urban area such as graphically portrayed in *Figure 6*, the "affirmative gerrymandering" approach might favor Plan C (at the cost, it is noted, of some geographic gerrymandering).

*Figure 6****

Note: ▨ denotes minority

These points of view have been criticized on several grounds. First, there has been questioning of one assumption upon which affirmative gerrymandering rests, namely, that minorities make up an essentially unified voting block that will rally behind a minority candidate. It can be argued, of course, that even though minority constituencies will not necessarily elect minority representatives, the larger the percentage of a minority population in a district, the more likely it is that the district will elect a minority candidate. More intensive studies of minority voting behavior may shed light on this issue. However, regardless of

*42 U.S.C. 1973, Section 2: "No voting qualifications or prerequisite to voting, or standard or procedure shall be imposed or applied by any State or political subdivision to deny or abridge the right of any citizen of the United States to vote on account of race or color, or in the contravention of the guarantees set forth in Section 1973b(f)2 of this title." Section 2 is interpreted as a restatement of the Fifteenth Amendment which requires a showing of purposeful discrimination.

**64 L. Ed. 2d 119 (1980).

***Each box represents a state; divisions denote districts. Equal population distribution is assumed.

the practical impact of such "affirmative gerrymandering," some political analysts seriously question its theoretical foundation, maintaining that while redistricting should not contribute to discrimination, neither should it carry the burden of compensating for past discriminatory practices. In the words of one expert:

> [A] racial quota [affirmative gerrymandering] could easily be superimposed on a legislative body which is elected by a system of proportional representation. It could simply be required that a particular group's proportion of the total population be reflected in the membership of the legislative body. But to attempt to apply a quota to a legislative body which is geographically based (as are the U.S. Congress and every one of the state legislatures) is to mix two fundamentally incompatible concepts.*

Time Provisions. Throughout the redistricting process, there exist steps which may become obstacles to timely action if time limits are not imposed. These include:

- completion of a proposed redistricting plan;
- voter challenge;
- initial court review;
- formulation of an acceptable plan if the initial plan is rejected;
- final judicial decision on acceptance of the plan.

Some improvement advocates believe that there should be few, if any, specifications of time limits since they may be unenforceable if emergencies arise which preclude attention to redistricting matters. These individuals endorse the "as soon as practicable" approach. Others believe that a maximum time limit should be set for some, if not all, major steps. This would help avoid the problem of ultimate plan acceptance after census figures have become outdated or after crucial elections have passed.

Perhaps the most crucial time problems arise in connection with drafting of initial and final plans. Some experts suggest that a time limit be set only for the final product. Interim time limits are unnecessary, they assert, if the final plan is accepted before political interests can predominate. The voter challenge time period is also a subject of controversy. Some proposals allow voters to challenge plans up to 60 days after they have been made public, while others allow up to nine months after establishment of the last district after a decennial census (*e.g.*, S. 596 and Amendment 237 plans, respectively). The shorter period attempts to ensure that litigation will conclude before the next major congressional election takes place. The longer time provision, on the other hand, offers citizens a greater opportunity to participate in the apportionment process and to hold line-drawers accountable. Generally speaking, some articulated time limits, perhaps more as a target than as a rigid goal, would seem desirable in reapportionment standard-setting.

*****

*Wells, "'Affirmative Gerrymandering' Compounds District Problems," *National Civic Review* (Jan. 1978) at 16.

This discussion has explored the major options under consideration with respect to standards for congressional redistricting. While the options remain open to debate, it appears that virtually all reform interests view mandated redistricting standards as an important element for improving the electoral process.

IV. The Issues: Who Should Make the Redistricting Decisions?

In addition to a determination of the need for and character of standards, the reapportionment "rulemakers" must be identified, *i.e.*, the body or governmental entity which determines where responsibilities lie for making subsequent decisions. This body possesses the authority to determine whether commissions, state legislatures, or other governmental officials draw district boundaries. If the rulemakers decide that specific processes and specific protections should be included in initial plans, such reviewing responsibility must be allocated. The main candidates for these key duties in the reapportionment process will be discussed separately.

Who Should be the Redistricting Rulemakers?

The ultimate authority to decide how subsequent redistricting decisions should be made lies with either Congress or the state legislatures.

Contentions as to Congressional Authority. It can be readily argued that the Constitution grants Congress this ultimate authority. Article I, Sections 4 and 8 are cited in support of this view. Article I, Section 4 declares that Congress "may at any time by law make or alter" [regulations about the] "times, places and manner of holding . . . [congressional] elections" and Section 8 grants Congress the power "To make all laws which shall be necessary and proper . . ." for carrying out its constitutional powers. This basic authority as well as subsequent judicial interpretations suggest that regulation of redistricting is within Congress' constitutional prerogatives. Indeed, the Supreme Court, on several occasions, has interpreted the Constitution as giving Congress authority over rules affecting congressional elections.* Another argument supporting this view is the pragmatic contention that Congress has exercised such authority in the past on several occasions without encountering serious objections.

Contentions as to State Legislative Authority. The National Conference of State Legislatures (NCSL) is perhaps the leading advocate of preeminent authority in state legislatures over reapportionment, and has officially opposed any federally mandated procedures, structures, or substantive standards on redistricting. Those, like NCSL, who favor the current system (which accords state legislatures an essentially free hand, subject, of course, to Supreme Court constitutional interpretations) advance several arguments. First, they maintain that the framers of the Constitution intended that state legislatures have ultimate control, noting that Article I, Section 4, provides that "the times, places and manner of holding Congressional elections shall be prescribed in each State by the Legislature thereof." Testifying before the Senate in 1979, NCSL spokespersons contended that congressional power in Article I, Section 4 to "make or alter" such rules is misinterpreted when applied beyond the most compelling emergency situations:

> Congressional authority to oversee national elections was controversial and was accepted only as an extraordinary device to be used in extraordinary circumstances. It was not intended to grant the national legislature plenary power over elections or to permit that body to interpose its notion of political fairness.*

Although Congress has legislated some standards, state legislatures historically have been responsible for making redistricting decisions. This relative congressional inactivity on redistricting stems largely from a history of lack of enforcement of congressional mandates rather than from any irrelevancy of the rules to improving the process or from an absence of congressional authority to make the rules in the first place.**

The debate about "ultimate rulemaking" authority is of greatest moment where the U.S. Congress and state legislatures would assign subsequent responsibilities in a different manner. Perhaps, then, the most crucial question to be answered is who should have responsibility for drawing district boundaries.

Who Should be the Initial Apportioning Authority?

This is perhaps the most controversial issue in the reapportionment debate, for it affects a power exercised by state legislatures since the inception of our republic. The two major candidates for the responsibility are commissions and state legislatures. The "commission" concept has generally attracted the "reform" label, yet even some "reformers" hesitate to support it.

Advocates of the "commission" approach feel it has appeal because the "legislated" system allows a great degree of self-interest to operate in the redistricting process. A former Illinois Congressman testified in 1979 that taking redistricting out of legislative hands "greatly reduces the inherent conflict of interest which now exists when the same people who draw a new map and vote on it also have a personal stake in its outcome."*** State politicians have occasionally admitted to this self-interested motivation; many legislators dislike the redistricting responsibility, but use it in "self-defense," with knowledge that if they do not succumb to the temptation of drawing lines favorable to their political interests, their opponents will certainly seek to do so.

Those groups skeptical about commissions suggest that commissioners might be just as subject to political pressures from congresspersons as are state legislators. If the commissioners are political appointees, they may even be more vul-

*See Appendix A, *Baker v. Carr, Ex Parte Siebold, Oregon v. Mitchell.*

**E.g., see discussion of Standards, at page 10.

***1979 Hearings at 302 (statement of Abner Mikva, formerly 10th Congressional District, Illinois, presently a member of the Circuit Court of Appeals for the District of Columbia).

nerable to political pressures than a legislature elected by the public. Commission supporters respond by endorsing the introduction of safeguards into the appointment process to eliminate "special interest" commission members. In a 1977 article, one redistricting expert pointed to the Arkansas legislative commission (composed mostly of legislative leaders) as a biased body that could not "exercise the independence sought by the advocates of reapportionment reform." He strongly commended, therefore, the "impartiality" restrictions incorporated in the Common Cause proposal.*

Critics of the commission approach also assert that creating commissions unrealistically attempts to remove politics from an inherently political process. It is impossible, the argument holds, to apportion political power by a non-political process. Further, the fact that citizens can vote directly for legislators but not for commissioners may cause voters to feel disenfranchised and removed from the electoral process. Pro-commission authorities concede the importance of a sensitivity to the danger of removing the redistricting process too far from the legislature. They typically stress, however, that the reform is designed not to deny the legislature its interest in reapportionment, but rather to buffer the process from conflict of interest.**

Some experts contend that entrusting redistricting to a commission may bring the process closer to the voter, as many plans implemented in the recent past were drawn by the courts, a body over which voters have even less control than over commissioners. However, proponents of the current system assert that commissions boast no better "track record" than do legislatures in terms of producing plans acceptable to the courts. While there exist few statistics relating to commissions drawing congressional lines, the information about state legislative commissions and reapportionment commissions in other countries may shed light on the issue. According to NCSL, only a "handful" of states have seen their congressional plans redrawn by the courts, and one recent study of redistricting practices suggests that the overall record of some bipartisan commissions has thus far been shown to benefit the party controlling the state legislature more than have the other methods.*** Furthermore, according to 1974 data, about a third of the plans initially proposed by both state legislatures and the courts were rejected initially by appellate courts.

While these statistics offer meager support, if any, for the commission concept, commission proponents point to other data that tend to corroborate the improved commission track record. First, many reformers take issue with the "handful of states" estimate. In fact, most estimates are that between 25 percent and 35 percent of current house district lines were drawn by the courts. A 1973 study by the Council of State Governments concluded, moreover, that commissions seemed to establish better track records than state legislatures.**** Other analysts point to commissions in other countries (*e.g.*, Australia, Canada, and

*Adams, "A Model Reapportionment Process: The Continuing Quest for 'Fair and Effective Representation,'" *supra* at 868. Adams is a principal architect of the Common Cause models.

**It is worth noting that the most direct conflict of interest concerns legislative districts. While state representatives may run for congressional seats (and thus benefit directly from congressional lines), they more often run for reelection in their state house and senate.

***1979 Hearings at 424 (statement of Eric Uslaner).

****Council of State Governments, *Reapportionment in the Seventies* 11 (1974).

Great Britain), suggesting that their record of electoral equity is better than that of those in the United States. Although the controversy about actual performance may be resolvable only with further study, it does seem clear that more than a "handful" of congressional redistricting plans initially drawn by state legislatures have been found unacceptable in the courts.

A collateral consideration in assessing performances is economy, *i.e.*, whether commissions can save time and money. Because commissions would be created for the specific purpose of efficiently and equitably preparing redistricting plans, their entire organization could be shaped toward that end. Such specialization is, of course, extremely difficult in a state legislature with numerous and diverse responsibilities. Unfortunately, reliable estimates of the comparative costs of commission versus state legislature formulation of plans are not readily available. Yet, there are some figures which provide an initial framework. From 1971 to 1973, the California legislature invested approximately $1 million developing a redistricting plan (which was ultimately replaced by a court-appointed Special Masters' Committee plan) and in 1971 there were over 26 full-time legislative staff members working on the California redistricting. Hawaii's reapportionment commission spent about $200,000; Montana's spent approximately $20,000.* These figures suggest that the dollar dimension of the debate, even if not an overriding consideration, merits some study.

In addition to criticism of the "commission" approach, advocates of state legislature line-drawing advance several positive claims. It is commonly asserted that state legislatures have not abused their discretionary powers. It is argued that since forty-two states have a population deviation of less than 1 per cent (*i.e.*, in these states, the population of the greatest district does not exceed by more than 1 per cent that of the smallest district),** this demonstrates that legislatures have made a concerted effort to draw fair districts. Thus, since the only constitutional requirement of fairness articulated by the Supreme Court is population equality, and since the legislatures are adhering to that rule, they have made a "good faith" (and largely successful) effort to establish fair district lines. As noted earlier, reformers caution that although population equality is necessary for fair redistricting, it is not alone sufficient.

Even if the commission concept is accepted, controversies can arise concerning both the method of selecting commission members and their number. The greater the number, the more likely it is that the commission will take into account minority views. However, a large membership may increase financial costs while reducing the likelihood of a consensus. An equally troublesome question is, who should mandate the commissions—Congress or the states? Those supporting the congressional approach maintain that it will ensure that all states establish commissions whose members are selected in the most impartial and uniform way possible. Critics, however, question both the political and constitutional advisability of federally mandated commissions. They voice the view that the redistricting mechanism should be left in state hands, where it can be held accountable to the citizens. They also express concern that members of a federally mandated com-

**1979 Hearings at 101 (statement of North Carolina State Senator Charles Vickery, citing *Congressional Quarterly*).

mission may view themselves as ultimately accountable to the federal government, to the detriment of viable state government.

Constitutional questions also have been raised in this area, especially with respect to congressional authority to specify the method of commissioner selection. Plans requiring certain state legislators to appoint commission members, for example, might violate the "appointments clause" of the Constitution which requires that certain "Officers of the United States" be nominated by the President and confirmed by the Senate.*

Three congressmen advanced this argument in 1979 before a House Subcommittee, pointing out that it was their understanding that (i) commission proposals do not specifically define whether a commission would be a state or federal agency, (ii) if a federal agency has more than investigatory and informatory powers, its members must be selected in conformity with the "appointments clause," and (iii) since the commissions would be responsible for making reapportionment decisions (clearly more than investigatory and informatory powers), the constitutionality of their selection by party members in the state legislatures would clearly be put into question.** They also suggested that congressional specifications as to commission selection and membership might violate states' rights under the Tenth Amendment, by requiring rather than authorizing state officials to perform federal duties. These views are questioned by legal experts for groups espousing redistricting commissions who see no "appointments clause" issue where purely legislative functions are involved (as in preparing district plans) and discern in the broad federal authority recognized by the courts over congressional elections the legitimate power to specify redistricting procedures such as commission mechanisms.*** Thus, it appears that the issue of congressionally mandated reapportionment commissions must await judicial interpretation for final constitutional validation (although little constitutional question exists that the states may proceed with this technique on their own initiative).

A further line of thinking in this vein merely dismisses commissions as lacking relevancy and meaning with respect to the problems of fair apportionment. On the one hand, it is claimed that if there are fair and clearly defined redistricting standards and if there are "accountability" provisions serving as a check on the redistricting authority, it makes little difference what body holds the redistricting responsibility. Thus, each individual state should choose whatever method of

*Article II, Section 2, cl. 2: "He shall have power, by and with the advice and consent of the senate, to make treaties, provided two-thirds of the senators present concur; and he shall nominate, and by and with the advice and consent of the senate, shall appoint ambassadors, other public ministers and consuls, judges of the supreme court, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law. But the Congress may by law vest the appointment of such inferior officers, as they think proper, in the president alone, in the courts of the law, or in the heads of departments."

**1979 Hearings at 35-36 (statements of Representatives James Leach, Robert Kastenmeier, and William Frenzel relying on *Buckley v. Valeo*, 424 U.S. 1 (1976), interpreting the case as holding in part that if a federal agency has more than investigatory and informatory powers, member selection must conform to the "appointments clause.").

***See, e.g., 1979 Hearings at 67-75 (statement of Common Cause General Counsel K. Gindo, *The Constitutionality of the Antigerrymandering Act of 1979*, relying on *Ex Parte Seibold* (1880), *Smiley v. Holm* (1932), and *Oregon v. Mitchell* (1970), as establishing Congress's clear power to divest states of all control over redistricting and, therefore, also to exercise more limited prerogatives of specifying procedural rules and methods for that function.).

reapportionment would, in its political context, be consistent with fulfilling these other major requirements. On the other hand, there are those who remain skeptical about articulating any reform measures, feeling that those who wish to exploit the redistricting process for reasons of political self-interest will find a way to circumvent even the most clearly defined rules.

Accountability Provisions: Who Should Judge the Plan?

Even if the initial reapportioning authority has built-in fairness safeguards in terms of character, independence, representativeness, and procedural standards, it must be recognized that unforeseen injustices may still result. Thus, the major reform proposals all incorporate some accountability provisions. These include:

- providing for open hearings when the line-drawers are considering redistricting options;
- requiring public notice of redistricting hearings;
- making the record of any hearings publicly available (perhaps by publication in legislative journals);
- affording the opportunity to qualified voters to challenge a proposed plan within a reasonable period (affording sufficient time to become acquainted with the line-drawing proposals and to prepare necessary information for the challenge, but not so long as to delay unduly final determinations) and, possibly, with waiver or reimbursement of attorney's fees for successful challenges;
- placing authority in federal courts for expeditious review of plans, either through challenge initiatives or automatically; and
- allocating responsibility for replacing inadequate or objectionable plans—the redrawing to be accomplished by initial redistricting body, new group, or the courts.

With respect to judicial review measures, questions arise concerning what specific time provisions should be included in the authorizing bills, and whether there should be automatic judicial review as opposed to review only of those cases which are challenged. Automatic review now occurs for legislative reapportionment plans in Colorado, Florida and Kansas. It offers the advantage of a routine and more thorough check on initial plans, as courts may catch improprieties which public scrutiny misses. However, automatic review also raises questions. In particular, it is interpreted as permitting the courts too great a role in the redistricting process.* The underlying argument stresses that the legislative and not the judicial branch of government should possess the primary authority over redistricting; the courts should not operate as the ultimate arbiter and approver of electoral system arrangements of this kind. An additional problem identified with respect to automatic judicial review is that the courts must make a judgment without the benefit of the adversarial process, a role for which they are not optimally suited.

*See, e.g., *White v. Weiser*, 412 U.S. 783 (1973) where the Court rejected a Texas redistricting plan on the basis of "avoidable" deviations. Four justices dissented, asserting that the ruling in effect established a *de minimus* rule for state legislatures where the state was not even required to justify population variances.

The problem of revision or redrafting where initial plans are rejected has also generated some differences of approach. One option dictates that courts redraw plans themselves or appoint other apportioning authorities if they reject the first plan proposed. Others follow this course only when the initial apportioning authority fails twice; such a "second-try" approach is usually defended for plans which call for redistricting commissions. An underlying rationale reflects the concern that members of a nonpartisan commission, knowing that a court of their political persuasion will take over the reapportionment process should the commission fail to act, might be inclined to force a deadlock. Moreover, the commission would likely have at its disposal staff, resources, and experience not readily available to the court, which it could employ in formulating a new plan.

Although many of the accountability provisions remain subject to debate, particularly in their detailed content, most redistricting reformers agree that this is a crucial component for improvement. Similarly, while influential groups may differ as to who should make redistricting decisions and how critical these decisional bodies are, most seem to join forces in recognizing the importance of accountability factors to an equitable reapportionment process.

V. Concluding Observations

This monograph has attempted to identify problems associated with the current congressional redistricting system and to review the various proposals for improvement along with major arguments which have been advanced in favor of and against them. It is hoped that this analysis will enhance understanding of the important issues involved, and that it will motivate groups and individuals both within and outside the legal profession to formulate their own views, consider remedial action and resist deterrence to change by traditional obstacles in this field.

The improvement proposals under consideration and debate fall into two broad categories—structural change (largely focused on the use of special commissions for developing reapportionment plans) and promulgation of standards to help ensure fairness and equity in line-drawing (based on a handful of principles running from population equality through encouragement of minority influence). Concurrently, two levels of legislative initiative for such reforms are under consideration and debate—federal and state.

It is not the intent or function of this pamphlet to advocate specific reform positions. However, redistricting equity remains a problem for the nation and optimal solutions and conditions do not yet appear to have been devised, no less incorporated in existing processes. Thus, a measure of experimentation with the new reform concepts seems desirable; the American Bar Association has formally endorsed such a posture in relation to the 1980 census redistricting process.*

The nation's experience with redistricting commissions has not been sufficiently widespread or intensively evaluated to draw final conclusions as to universal value or the most desirable subfeatures and characteristics. Thus, it would seem that those who call for state initiatives in jurisdictions so inclined, rather than for a mandate that all states establish commissions, would offer the most promise and the best opportunity to evolve optimal structures for reapportionment.

*See Appendix B.

Federal rules governing redistricting standards, rather than governing methods to apply these standards, however, may be beneficial, although existing uncertainties as to the best "mix" and order of priority among the most commonly cited standards (e.g., population equality, compactness, contiguity, avoidance of intentional political preference) suggest that such formulations might do well to leave some room for state flexibility and experimentation in detailed definition and ordering of any standards articulated.

Whatever the case, carefully studied and soundly conceived redistricting reform promises to aid many sectors of society:

- voters in general whose voice will be heard more clearly when election results are not predetermined by gerrymandering, when competition for congressional seats is maximized, and when representatives must focus their responsiveness on voters rather than on line-drawers;
- racial and ethnic minorities whose interests have often been subordinated in past redistricting practices;
- congressional candidates from minority parties and challenger groups who no longer need hurdle undue barriers of self-protection constructed by incumbent politicians;
- state legislators who will be liberated from political pressures which may influence them to manipulate the line-drawing process;
- courts which will have clearer guidelines concerning the acceptability of redistricting plans; and
- rural and suburban communities (when gerrymandering has been used to strengthen unduly the urban voice) and urban residents (when line-drawers have attempted to increase unduly rural representation).

Indeed, virtually all sectors of society can benefit from congressional redistricting improvement which aids the American electoral machinery in functioning according to our highest ideals of representative government. The time is right—for thought, for decision, and for new levels of achievement.

APPENDIX A

IMPORTANT DATES IN REDISTRICTING HISTORY

DATE	ACTOR	EVENT	DESCRIPTION	STATE LEGISLATIVE/ CONGRESSIONAL
1842	U.S. Congress	5 Stat. 491	First federal statute requiring states to establish congressional districts. First congressional attempt to impose standards in congressional redistricting: compactness, contiguity, single-member districts.	C
1872	U.S. Congress	17 Stat. 28	Reiterated 1842 standards; set forth population equality standard. Reiterated in 1882, 1891, 1901.	C
1880	U.S. Supreme Court	*Ex Parte Siebold*	Congress has supreme authority over congressional election rules.	C
1911	U.S. Congress	1,2,37 Stat. 13,14	Reiterated 1872 requirements. Fixed number of U.S. House members at 435.	C
1929	U.S. Congress	46 Stat. 21	Required automatic reapportionment on basis of population after each decennial census.	C
1932	U.S. Supreme Court	*Ex. Rel. Smiley v. Holm* (Minnesota)	Congress has "authority to provide a complete code for congressional elections."	C
1946	U.S. Supreme Court	*Colegrove v. Green* (Illinois)	Courts lack authority, to judge fairness of a political matter such as redistricting plans.	C
1960	U.S. Supreme Court	*Gomillion v. Lightfoot* (Alabama)	Gerrymandering of city boundaries with a clearly defined racial motive is unconstitutional.	L
1962	U.S. Supreme Court	*Baker v. Carr* (Tennessee)	Federal courts have authority to judge fairness of legislative redistricting plans.	L
1964	U.S. Supreme Court	*Wesberry v. Sanders* (Georgia)	"One man, one vote" ("as nearly as practicable") standard: strict numerical equality among populations in congressional districts.	C

DATE	ACTOR	EVENT	DESCRIPTION	LEGISLATIVE/ CONGRESSIONAL
1964	U.S. Supreme Court	*Reynolds v. Sims* (Alabama)	Both houses in state legislature must meet the "as nearly as practicable" standard; some deviation is allowed to accommodate other relevant considerations. (e.g., preserving political subdivisions).	L
1964	U.S. Supreme Court	*Wright v. Rockefeller* (New York)	To prove gerrymandering unconstitutional on grounds of discrimination, challenger must show evidence of discriminatory effect and purpose.	C
1965	U.S. Congress	Voting Rights Act, 42 U.S.C., 1971, 1973 et seq.	States with past history of discrimination must submit electoral changes to Department of Justice for preclearance. State plan may be rejected if either intent or effect is to dilute minority power. Protected language minorities include Alaskan natives, American Indians, Asian Americans, persons of Spanish heritage.	C,L
1966	U.S. Supreme Court	*Burns v. Richardson* (Hawaii)	Redistricting plans are not necessarily unconstitutional if merely designed to reduce competition among incumbent legislators.	L
1967	U.S. Congress	2 U.S.C. § 2c	Banned at-large congressional elections.	C
1967	U.S. Supreme Court	*Swann v. Adams* (Florida)	Although rejecting legislative apportionment plan, the court recognized that *de minimus* numerical deviations are unavoidable in state legislative apportionment.	L
1969	U.S. Supreme Court	*Kirkpatrick v. Preisler* (Missouri)	States must make "good faith effort" to achieve "precise mathematical equality" and must justify all population deviations.	C
1969	U.S. Supreme Court	*Wells v. Rockefeller* (New York)	Strict mathematical equality is required. Invalidated plan which set up a New York congressional district with maximum deviation of 6.6%.	C
1970	U.S. Supreme Court	*Oregon v. Mitchell* (Oregon)	Reiterated Congress's ultimate authority over congressional elections.	C

DATE	ACTOR	EVENT	DESCRIPTION	LEGISLATIVE/ CONGRESSIONAL
1971	U.S. Supreme Court	*Whitcomb v. Chavis* (Indiana)	Multimember state legislative districts are not unconstitutional *per se*; challengers must prove unconstitutional dilution of voting strength.	L
1971	U.S. Supreme Court	*Connor v. Johnson* (Mississippi)	Where a federal court fashions a redistricting plan, single-member districts are preferable to multi-member districts.	L
1973	U.S. Supreme Court	*White v. APPENDIX B

AMERICAN BAR ASSOCIATION RESOLUTION ON FAIR REDISTRICTING

(House of Delegates: February 1979)

Note: The following resolution relates to voter participation initiatives extending well beyond legislative reapportionment. While the complete resolution is set forth, only that commentary from the underlying report which relates to redistricting has been excerpted.

RECOMMENDATIONS

BE IT RESOLVED, that the American Bar Association urges the President of the United States to appoint a commission of distinguished persons from various walks of life to study the decline in voter participation in the electoral process and to make appropriate recommendations, such study to culminate in a White House conference on the subject of declining voter participation; and

BE IT FURTHER RESOLVED, that the American Bar Association supports the enactment of legislation that encourages voter participation, eliminates mechanical barriers to voting and provides for fair redistricting pursuant to the 1980 census without regard to partisan advantage; and

BE IT FURTHER RESOLVED, that the state and local bar associations be urged to support and join with the American Bar Association in this program to improve and enhance voter participation.

REPORT (Excerpts)

3. *Redistricting Pursuant to the 1980 Census*

Many of the participants in the Palo Alto conference* stated that persons frequently do not vote because politically motivated manipulation of the borders of legislative districts has prevented citizens from developing a sense of community identity with the area in which they vote. Also, such districting practices actively skew the voting power that does exist, such as when cohesive communities are broken into several legislative districts. Such gerrymandering was said to have resulted to a large extent from the judicial prescription of "one man, one vote." The sense of the conferees was that legislative districts can comply with that principle and still represent cohesive communities. Accordingly, they suggested that, at the next chance for redistricting, the ABA take an active role in supporting fair and representative legislative districts, drawn without regard to partisan advantage.

Among our recommendations for action is that the Association support the concept of fair redistricting pursuant to the 1980 census. We believe that there should be a statement of principle at this time because of the proximity of the census, following which virtually every state will be required to redraw the boundaries of congressional and state legislative districts. We believe that well in advance of the required redistricting the Association should be on record in support of the goal of fair representation for all citizens without regard to partisan advantage. In this regard, we should note that one of the recurrent themes at the Palo Alto conference was that one of the side effects of gerrymandering was a lack of competition in electoral politics, thereby decreasing the level of participation. Our redistricting recommendation does not endorse any specific method of reapportionment. Toward that end we plan to sponsor a future conference on the subject of redistricting.*

*Symposium on Citizen Participation in Government, sponsored by the Special Committee on Election Law and Voter Participation, June 1978. See proceedings published in *The Disappearance of the American Voter* (1979).

*Held in San Diego, California, June 1980. Attended by approximately forty election law experts, state legislators, attorneys, citizen groups and mathematicians, the three day session has been transcribed for publication. See *Representation and Redistricting in the 1980s*, ed. by Grofman, Lijphart, McKay, and Scarrow (Lexington Books, 1981, forthcoming).

APPENDIX C

ABA SPECIAL COMMITTEE REPORT ON REDISTRICTING

(Excerpts, August 1980)

Since its last report to the House of Delegates in February 1980, the Special ommittee has focused its attention on three major areas of election law: edistricting, absentee voting, and campaign finance.

REDISTRICTING: Introduction

In February 1979 the House of Delegates of the American Bar Association dopted, on the recommendation of our Committee, a series of resolutions on ie subject of voter participation, among which was a resolution calling for "fair edistricting pursuant to the 1980 census without regard to partisan advantage." n launching a program to encourage voter participation, the Association uthorized our Committee to co-sponsor, with the National Science Foundation, conference on representation and apportionment issues in the 1980s.

This conference was held in San Diego, California, June 11-15, 1980. It was at-ended by distinguished political scientists, mathematicians, reapportionment nd election law experts, representatives of congressional and state legislative ommittee staffs, lawyers, and representatives of various public interest groups ncluding the League of Women Voters, Common Cause and the Mexican merican Legal Defense and Educational Fund. The conference discussions ocused on such districting subjects as the use of single-member districts, the gal criteria for determining the fairness of single-member districts, electoral echanisms other than single-member districts, the policy consequences of reap-ortionment, representation within the political party system, and theories of epresentation. A number of scholarly papers were prepared for the conference, hich, along with commentaries on the proceedings, will be published in a eparate volume.* We believe this volume will be an invaluable aid to members f legislative bodies, lawyers and judges, as they grapple with the important epresentation and apportionment issues of the 1980s. How these issues are andled will be of critical importance to our nation and to the integrity, vitality nd effectiveness of our electoral system and government for the next ten years.

For that reason, we believe it of great importance that a national dialogue be pened at this time on the mixed legal and political issues of redistricting and apportionment. Although our examination of these issues will continue into 981, we felt it valuable to set forth in this informational report some of the reliminary conclusions we have reached as a result of our study of this area.

General Observations

We feel that the entire problem of reapportionment and redistricting is exceedingly complex, and quite possibly does not permit a national solution that

*One paper presented at the conference, by Professor Michel Balinski, raised questions about the formula that should apply in allocating congressional seats among the states. Another paper, by Professor Steven Brams, suggested the introduction of a new voting system called "approval voting."

is either appropriate or realistic in all fifty states. Of fundamental concern is the fact that reapportionment and redistricting are important aspects of deciding the allocation of political power within an electorate.

Because the districting process amounts to an allocation of political power and because of the obvious conflicts in having the legislatures control the process, various proposals have been submitted, some of which would create independent commissions to do the actual job of redrawing district lines. While these commission proposals may have merit (a proposition on which we now express no opinion, pro or con), it is probably utopian to expect that many legislatures are now prepared to adopt such proposals.

We do feel, however, that the time is ripe for each state to consider the standards it will apply in its actual redistricting process. Adopting standards before beginning the actual districting process has at least three advantages. First, it would make more open and public the bases upon which political power would be reallocated. Second, it would establish a framework for accomplishing the redistricting itself. And third, it would establish the benchmark against which the eventual districting plan could be evaluated by the public, the press, and (in the event of judicial appeal) the courts.

An underlying assumption is that the redistricting process—both the adoption of standards and the drawing of district lines—should be open and public. It is certainly apparent that the conflicts of interest inherent in the process are reduced by public and media scrutiny.

The Districting Standards

The next, and most fundamental, question is, specifically, what should these standards be? While one scholar has identified at least sixteen standards, not all possible standards will be relevant or appropriate in each state.* Nonetheless, there are certain basic standards which deserve consideration in every state.

The most obvious standard is population equality. Ever since the "apportionment" decisions of the U.S. Supreme Court, very close population equality has been constitutionally required. Many states have set their own standards in this regard, and it is worth noting that some states allow even less population variance from district to district than do the federal court decisions.

Other standards include the extent to which electoral districts should be compact and/or contiguous; follow local political boundaries; and be drawn to concentrate identifiable groups (whether political, ethnic, or economic) in the district.

Two other standards, which have not received the in-depth judicial scrutiny that population equality has, pertain to the functioning of a democratic form of government. The first of these is the principle that the party or faction receiving a state-wide majority of votes should also receive a majority of the seats in the legislature, so that it is able to carry out its mandate to govern. Another standard involves an application of the principle of competitiveness so as to ensure voter interest in district elections.

*The San Diego conference volume will contain an extremely useful section on the criteria for redistricting and reapportionment.

Standards: Conclusions

In considering the adoption of standards, each state will be faced with some very hard choices. This is because, by adopting and following one standard, a state may in certain cases make it impossible to follow another. Therefore, the adoption of standards likely will require their prioritization. The critical point is that because the process is a difficult one, now is the time for the states to begin dealing with the complexities of redistricting before the process is upon us.

Single-Member Districts as a Norm

As a result of its consideration of the consequences of using different types of districting, our Committee believes that a single-member districting system generally is the best and most effective form of district representation.

Single-member districts allow voters in a district to choose one representative, *i.e.*, one legislator or one county commissioner. Multi-member districting permits a citizen to select more than one representative. The geographical area and population of multi-member districts are usually much larger than those of a single-member district. Some states and localities use a combination of single and multi-member districts, including at-large elections, where all voters in a political subdivision vote for several representatives. The impact of districting is fundamentally the same no matter what type of governmental entity (city, county, state) is involved.

In favoring the use of single-member districts, we note that such a districting system has worked well for congressional elections. Authorities who have studied the subject point to a number of advantages to the single-member districting system:* a single-member district is smaller than an at-large or multi-member district, which permits closer contact between the single representative and his or her constituency. The smaller district also provides greater accountability to the electorate, who will be better informed of the activities and voting record of the sole representative. In addition, political and racial minority groups who at times have had their voting power and strength diluted by larger multi-member districts will have greater impact on the elections and a better opportunity for election to office from within the district. Finally, election campaigns would also be affected by the choice of single-member districting. It is likely that campaign costs would be decreased as a result of reducing the size of the area and population of a district and limiting the election to one representative. The nature of campaigning might also change, by reducing the impact and necessity of extensive media advertising. More effort could then be expended on neighborhood and local campaigning, which should allow the electorate to become better acquainted with the candidates. Significantly, by reducing the cost of campaigns, it is likely that more individuals would be able to run for office, thereby making the process more competitive.

While single-member districting is by no means the panacea to representation problems, we believe it would go a long way toward ensuring more effective representation and a greater opportunity to participate in government and the electoral process

The foregoing discussion outlines the intricate nature of the redistricting question. In view of the complex issues which require resolution before "fair districting without regard to partisan advantage" can take place, our Committee urges that legislators, lawyers and all reapportionment experts take up the question at this time.

*The San Diego conference volume will contain an extensive section on this subject.

Respectfully submitted,

John D. Feerick, Chairman

Senate Concurrent Resolution No. 39 was passed by the last legislature because the Superior Court, on April 11, 1966, in Nolan et al v. Wade,/1 directed that a constitutional convention be held or constitutional amendments be proposed by the legislature and ratified by the people before December 1, 1967, the amendment to provide for a valid reapportionment of the state Senate in conformity with the rulings of the U.S. Supreme Court. The resolution directed the Legislative Council to gather "information on all facets of the matter of legislative reapportionment to the end that the 1967 session of the legislature may have all the necessary data and alternatives on hand for consideration when preparing amendments to the state constitution regarding legislative apportionment" in conformity with the opinion in Nolan et al v. Wade.

Nolan et al v. Wade was appealed to the state Supreme Court and, as will be discussed in detail in this study, the Supreme Court almost entirely overturned the decision of the Superior Court. The Supreme Court declared the Governor's Proclamation of Reapportionment and Redistricting valid and the 1966 elections have been held under that proclamation. Therefore, the stated purpose for SCR 39 no longer exists since there is no need for a constitutional amendment by December 1, 1967. As a consequence, it was questionable whether the staff should proceed with this study. It was concluded that reapportionment will continue to be of interest to the legislature since the constitution will eventually have to be amended to conform to the federal and state decisions even though it need not be done in 1967.

This study will cover the history of legislative apportionment in Alaska from the Organic Act of 1912 through the November 1966 elections, the federal and state cases on reapportionment, and possibilities for future action on this subject.

I. HISTORY OF LEGISLATIVE APPORTIONMENT IN ALASKA/1

The Territory of Alaska was first given legislative authority of its own in 1912 in the Organic Act of 1912 (37 Stat. 513). This Act provided for a bicameral legislature consisting of a House of Representatives of sixteen members and a Senate of eight members. For thirty-two years two senators and four representatives were elected at-large from the four judicial divisions into which the territory was divided, and the remaining seats were divided equally among the four divisions. By a 1942 amendment to the Organic Act (56 Stat. 1016), effective for the election of 1944, the Senate was increased to a membership of sixteen and the house to a membership of 24, the latter apportioned on the basis of estimated civilian population. The 1942 Act also provided for reapportionment of seats by the United States Director of the Census after the 1950 decennial census, and the territorial legislature was authorized to provide for legislative districting within the judicial divisions.

In 1951 the director of the census reapportioned the House seats on the basis of the civilian population reported in the 1950 census, with the following results:

Judicial Division	Apportionment 1944 - 1951	Apportionment 1952 - 1958
First	8	6
Second	4	3
Third	7	10
Fourth	5	5
	24	24

The apportionment and districting for the election of fifty-five delegates to the constitutional convention of 1955-1956 anticipated the provisions of the Alaska constitution on that point. The twenty-two election districts were of three types:

(1) The seventeen one-member districts were based on existing districts or combinations of those districts.

(2) Each of the four judicial divisions constituted a multimember district, as follows: First Division 7; Second Division 4; Third Division 12; and Fourth Division 8.

/1 "Reapportionment" by Robert B. McKay, 1965

(3) The territory as a whole constituted one district from which seven delegates-at-large were elected.

Alaska was admitted to statehood by proclamation dated January 3, 1959, on the basis of the constitution drafted in the 1955 constitutional convention. Under the constitution the Alaska legislature was divided into a House of Representatives of forty members and a senate of twenty. /2 Reapportionment is an executive function to be performed by the governor immediately following each United States decennial census. /3 The governor can appoint a reapportionment board of five members to act in an advisory capacity, which must include one member from each of the four senate districts. /4 The board must submit a report to the governor within ninety days following the official reporting of each census, and the governor must, by proclamation, reapportion or redistrict within ninety days thereafter. /5 Any qualified voter may apply to the Superior Court to compel the governor "by mandamus or otherwise" to perform his reapportionment duties. /6

Under the constitution, apportionment of the House is primarily by population. "Reapportionment shall be by the method of equal proportions." /7 Originally the state was divided into twenty-four election districts. /8 Then the total civilian population was divided by forty and "each election district having the major fraction of the quotient obtained" was allotted one representative. /9 If "the total civilian population of any election district falls below one-half of the quotient," provision is made for attaching the district to another election district "within its senate district, and the reapportionment for the new district shall be determined as provided in Section 4 of this article." /10 After publication of the 1960 census results, the governor accepted the recommendations of his advisory board on apportionment and reduced the number of districts to nineteen, thereby meeting more nearly the population standard fixed in Article VI, Section 4.

Apportionment of the Senate is a combination of area and population, with the emphasis on area. The state was

/9 Ibid., Art. VI, Sec. 4
/10 Ibid., Art. VI, Sec. 5

originally divided into sixteen senate districts, /11 which were continued in the 1961 reapportionment.

The governor is allowed to change the size and area of election districts, but each district must "be formed of contiguous and compact territory containing as nearly as practical a relatively integrated socio-economic area. Each shall contain a population at least equal to the quotient obtained by dividing the total civilian population by forty. Consideration may be given to local government boundaries. Drainage and other geographic features shall be used in describing boundaries wherever possible." /12 Senate districts may be modified to reflect changes in election districts. /13

The report of the commitee on suffrage, elections, and apportionment to the Alaska Constitutional Convention stated in a letter of December 17, 1955, to the president of the convention that "These (election) districts are economic units of the Territory and may be compared in a sense to Swiss cantons. Their boundaries are watersheds wherever possible; waterways and steamship routes are not used as boundaries, but are considered as highways piercing valleys."

In view of the 1964 U.S. Supreme Court decisions discussed later in this study, it was obvious that Alaska must reapportion its state Senate. There was a population disparity of nineteen to one in the Senate and 2.5 to one in the House. In August 1964 the state attorney general advised the governor that he had authority to reapportion the state Senate. The governor then called the Advisory Reapportionment Board into session. That board submitted its report to the governor in September 1964. In March 1965 the governor reconvened the board for additional study and it submitted its second report to the governor on June 4, 1965. /14 On September 3, 1965, the governor issued a "Proclamation of Reapportionment and Redistricting" /15 which reapportioned the state Senate, to be effective for the 1966 election. The new reapportionment plan was designed to satisfy the equal-population principle. Each of the eleven senate districts (composed of one to two election districts) was given one senator except Anchorage (seven)and Fairbanks (four). No change was made in the house districts as promulgated in 1961. On February 21, 1966, fifteen state senators applied to the

Superior Court for the First Judicial District in Juneau for a permanent injunction to prohibit the secretary of state from conducting an election under the governor's proclamation. Both sides eventually moved for a summary judgment and they agreed that Section 2, Article XIV of the Alaska Constitution was invalid under the equal protection clause of the Fourteenth Amendment of the Constitution of the United States. The basic issue was the validity of the governor's Proclamation of Reapportionment and Redistricting.

On April 18, 1966, the Superior Court declared the governor's proclamation null and void. The court retained jurisdiction, providing that if a valid constitutional amendment modifying the state Senate apportionment was not adopted by December 1, 1967, the court would issue the necessary orders to insure that the 1968 election would be held under an apportionment plan consistent with the decisions of the U.S. Supreme Court.

The case was appealed to the Alaska Supreme Court which held that the governor and the reapportionment board had implied power under the constitution to reapportion the Senate on an interim basis. The validity of the reapportionment plan set out in the proclamation was not questioned with respect to the requirements of the equal protection clause of the Fourteenth Amendment so the court did not discuss that matter. The court delcared the governor's reapportionment plan effective for the 1966 elections and "thereafter until the Alaska Constitution has been amended to provide a valid, permanent reapportionment plan for the Senate."

The 1966 elections have been held under the governor's proclamation as decreed by the state Supreme Court. The legislature may now wish to prepare consitutional amendments relating to reapportionment of the legislature or have a constitutional convention consider this problem. Scheduling factors in proposing and adopting constitutional changes are discussed in part VI of this study.

II. IMPORTANT APPORTIONMENT CASES IN THE U. S. SUPREME COURT

BAKER v. CARR, 369 U.S. 186 (1962)

> "This civil action was brought under 42 U.S.C. secs. 1983 and 1988 to redress the alleged deprivation of federal constitutional rights. The complaint, alleging that by means of a 1901 statute of Tennessee apportioning the members of the General Assembly among the State's 95 counties, 'these plaintiffs and others similarly situated, are denied the equal protection of the laws accorded them by the Fourteenth Amendment to the Constitution of the United States by virtue of the debasement of their votes' was dismissed by a three-judge court convened under 28 U.S.C. sec. 2281 in the Middle District of Tennessee. The court held it lacked jurisdiction of the subject matter and also that no claim was stated upon which relief could be granted. 179 F.Supp. 824. We noted probable jurisdiction of the appeal. 364 U.S. 898. We hold that the dismissal was error, and remand the cause to the District Court for trial and further proceedings consistent with this opinion." 369 U.S. at 187.

The court held only "(a) that the court possessed jurisdiction of the subject matter; (b) that a justiciable cause of action is stated upon which appellants would be entitled to appropriate relief; and (c) because appellees raise the issue before this court, that the appellants have standing to challenge the Tennessee apportionment statutes."

The court goes on to discuss at considerable length the factors which went into the determination of these three matters. In discussing the "justiciability" of the question presented, the court said:

> "We understand the District Court to have read the cited cases as compelling the conclusion that since the appellants sought to have a legislative apportionment held unconstitutional, their suit presented a 'political question' and was therefore nonjusticiable. We hold that this challenge to an apportionment presents no nonjusticiable 'political question.' The cited cases do not hold the contrary."

WESBERRY v. SANDERS, 376 U.S. 1 (1964)

This case, while dealing with state establishment of districts for the election of representatives to the federal Congress, contains a worthwhile discussion of the history of the Great Compromise, by which agreement was reached on having the population represented in one house and the states represented in the other. This matter is important because of the argument which the Supreme Court subsequently makes that the "Federal analogy" is false as applied to state legislatures.

REYNOLDS v. SIMS, 377 U.S. 533 (1964)

> "On August 26, 1961, the original plaintiffs...filed a complaint in their own behalf and on behalf of all similarly situated Alabama voters, challenging the apportionment of the Alabama legislature.... The complaint alleged a deprivation of rights under the Alabama Constitution and under the Equal Protection Clause of the Fourteenth Amendment, and asserted that the District Court had jurisdiction under provisions of the Civil Rights Act, 42 U.S.C. secs. 1983, 1988, as well as under 28 U.S.C. sec. 1343(3)." 32 LW at 4535.
>
> "Plaintiffs below alleged that the last apportionment of the Alabama Legislature was based on the 1900 federal census, despite the requirement of the State Constitution that the legislature be reapportioned decennially. They asserted that, since the population growth in the State from 1900 to 1960 had been uneven, Jefferson and other counties were now victims of serious discrimination with respect to the allocation of legislative representation. As a result of the failure of the legislature to reapportion itself, plaintiffs asserted, they were denied 'equal suffrage in free and equal elections...and the equal protection of the laws' in violation of the Alabama Constitution and the Fourteenth Amendment to the Federal Constitution." 32 LW at 4536.

They showed that the history of the situation clearly demonstrated that there was no relief available to them except through the District Court. Plaintiffs sought a declaration of the unconstitutionality of the existing apportionment, an injunction against the holding of further elections without reapportionment, and a mandatory injunction requiring that the 1962 elections be held at large.

The District Court initially declined to stay the impending primary election in Alabama, and refrained from acting until the Alabama legislature has been given an opportunity to remedy the admitted discrepancies in the state's legislative apportionment scheme. After the Alabama legislature had failed to act effectively, the court ordered into effect a reapportionment using the best parts of two proposed plans. The District Court recognized that its own plan was only provisional, and would not be acceptable as a permanent apportionment. The District Court then retained jurisdiction while deferring a hearing in the issuance of a final injunction in order to give the provisionally reapportioned legislature an opportunity to act effectively.

Upon review, the Supreme Court approved the actions of the District Court, holding that:

> "...as a basic constitutional standard, the Equal Protection Clause requires that the seats in both houses of a bicameral state legislature must be apportioned on a population basis. Simply stated, an individual's right to vote for state legislators is unconstitutionally impaired when its weight is in a substantial fashion diluted when compared with votes of citizens living in other parts of the State."

It also found that the "federal analogy" [see Wesberry v. Sanders, supra] was inapplicable, since there has never been a question of subordinate units of state government surrendering, as did the original 13 States, a portion of their sovereignty in order "to form a more perfect Union."

The court qualified its remarks by stating that "mathematical exactness" was not required, but that a state would have to make "an honest and good faith effort to construct districts, in both houses of its legislature, as nearly of equal population as is practicable." The court also felt that a reasonable plan for periodic reapportionment is acceptable, and specifically approved the decennial reapportionment prescribed in forty-one states.

Finally, the court remarked:

> "...legislative reapportionment is primarily a matter for legislative consideration and determination, and that judicial relief becomes appropriate only when a legislature fails to reapportion according to federal constitutional requisites in a timely fashion after having had an adequate opportunity to do so."

WMCA, INC. v. LOMENZO, 377 U.S. 633 (1964)

This action was similar in nature to that in Reynolds v. Sims, supra, and challenged the constitutional validity under the Fourteenth Amendment to the federal constitution of the apportionment of seats in the New York legislature. The District Court had initially found "want of justiciability," and dismissed the complaint. Baker v. Carr, supra, having been decided during the pendency of appeal from dismissal, the Supreme Court remanded the case for reconsideration by the District Court in the light of that opinion. The District Court subsequently dismissed the complaint on the merits, finding that the plaintiffs had not shown any invidious discrimination, that the New York Constitution's apportionment provisions were rational, that they were of historical origin and contained no improper geographical discrimination, and that the provisions could be amended by an electoral majority of the citizens of New York.

The Supreme Court, after a detailed examination of the New York scheme of apportionment, found that there was in fact an invidious discrimination against the voters in the more populous districts, as to both houses, and that there was no political remedy and remanded the case to the District Court to determine what relief was available, and when it should be made available to the plaintiffs. /16

LUCAS v. FORTY-FOURTH GENERAL ASSEMBLY OF COLORADO, 377 U.S. 713 (1964)

This case arose on appeal from a District Court decision upholding the validity of the apportionment of seats in the Colorado legislature pursuant to a constitutional amendment approved by the Colorado electorate in 1962.

The Supreme Court noted several features which rendered this case different from the other cases decided on the same date. First, at least one house of the Colorado legislature is at least arguably apportioned according to a population basis. Second, the scheme of apportionment question in the case is one which was adopted by a majority vote of the Colorado electorate at a recent date. Third, in Colorado there is an initiative to propose a constitutional amendment, which requires a percentage of the electorate to sign a petition without regard for the geographical distribution of the petitioners.

/16 For current status of legislative reapportionment in any state, see Appendix "C".

The court found the second and third features unpersuasive as arguments for the constitutionality of the scheme. It said:

> "Except as an interim remedial procedure justifying a court in staying its hand temporarily, we find no significance in the fact that a nonjudicial, political remedy may be available for the effectuation of asserted rights to equal representation in a state legislature. Courts sit to adjudicate controversies involving alleged denials of constitutional rights. While a court sitting as a court of equity might be justified in temporarily refraining from the issuance of injunctive relief in an apportionment case in order to allow for resort to an available political remedy, such as initiative and referendum, individual constitutional rights cannot be deprived, or denied judicial effectuation, because of the existence of a nonjudicial remedy through which relief against the alleged malapportionment, which the individual voters seek, might be achieved. An individual's constitutionally protected right to cast an equally weighted vote cannot be denied even by a vote of a majority of State's electorate, if the apportionment scheme adopted by the voters fails to measure up to the requirements of the Equal Protection Clause."

The case was remanded to the District Court to determine whether the imminence of the 1964 primary and general elections required the use of one of the schemes attacked, or whether appellants' rights to cast adequately weighted votes could be effectuated in 1964. /17

MARYLAND COMMITTEE FOR FAIR REPRESENTATION v. TAWES, 377 U.S. 656 (1964)

This case arose under circumstances similar to Reynolds, supra. It adds to case law insofar as it describes the principle that the Supreme Court must of necessity consider the entire apportionment scheme of a legislature, and cannot be restricted, regardless of s ope of consideration in inferior courts, to examining the apportionment in one house only. The Supreme Court further makes it clear that while it highly approves of state court attempts to deal with apportionment problems, these courts must apply federal constitutional standards.

/17 For current status of legislative reapportionment in any state, see Appendix "C".

The court remanded the case to the Maryland Court of Appeals with instructions to ensure that election of members to the Maryland legislature in 1966 was conducted in accordance with a constitutional apportionment scheme, noting that there appeared to be adequate time for the legislature to reapportion itself. /18

DAVIS v. MANN, 377 U.S. 678 (1964)

This case arose in much the same way as Reynolds, supra. The District Court found for the plaintiffs, and declared that the challenged 1962 apportionment scheme violated the Equal Protection Clause and accordingly was void and of no effect. Defendants were enjoined from proceeding under the 1962 plan, but operation of the injunction was stayed until the general assembly could act or appeal could be taken to the Supreme Court. After a characteristic examination of the facts surrounding the particular plan of apportionment, the court found that it was violative of the federal constitution and that no adequate political remedy for the malapportionment existed. While noting that the situation in Virginia is different from that in Alabama, since the Virginia legislature has consistently reapportioned itself every ten years as required by the Virginia constitution, the court found that significant uncorrected malapportionment existed, and affirmed the decision of the District Court with the understanding that the District Court would provide plaintiffs with suitable equitable relief should the Virginia legislature itself fail to act to correct the constitutional defects before the 1965 elections. /18

ROMAN v. SINCOCK, 377 U.S. 695 (1964)

Again similar in nature to the suit in Reynolds, supra. Plaintiffs here asked the District Court for relief from malapportionment in the Delaware legislature. Relief sought included a declaration that the apportionment section of the Delaware constitution was unconstitutional, an injunction to prevent further elections from being held under it, and, alternatively, a reapportionment by the court or a direction that the November 1962 elections be held on an at-large basis.

The District Court refused to interfere with the November 1962 elections, and the legislature elected approved, in January 1963, a constitutional amendment to the legislative

---

/18 For current status of legislative reapportionment in any state, see Appendix "C".

apportionment provisions of the constitution. After trial of the suit, the District Court found that the apportionment both before and after the 1963 amendment resulted in the debasement of certain votes, and gave the general assembly until October 1, 1963, to reapportion itself in accordance with the Fourteenth Amendment. The District Court, having evidence of an apparent intention on the part of state officials not to comply with its instructions, enjoined the holding of any elections under the existing plans. This injunction was stayed by a Supreme Court justice pending outcome of the appeal.

The Supreme Court reviewed the facts of the Delaware situation and found the plan in force in Delaware to be unconstitutional. It affirmed the District Court's decision, and left it up to the District Court to determine.

> "...whether it would be advisable, so as to avoid a possible disruption of state election processes and permit additional time for the Delaware Legislature to adopt a constitutionally valid apportionment scheme, to allow the 1964 election of Delaware legislators to be conducted pursuant to the provisions of the 1963 constitutional amendments, or whether those factors are insufficient to justify any further delay in the effectuation of appellants' constitutional rights." 32 LW 4588. [N.B. It appears that "appellants" in the preceding quote should read "appellees."]

The court approved the manner in which the District Court gave the Delaware legislature an opportunity to act, and its deferral of decision until after the November 1962 elections "because of the imminence of that election and the disruptive effect which its decision might have had." Taking exception to the attempt of the District Court to establish a mathematical figure by which constitutionality could be judged, the court said:

> "Rather, the proper judicial approach is to ascertain whether, under the particular circumstances existing in the individual State whose legislative apportionment is at issue, there has been a faithful adherence to a plan of population-based representation, with such minor deviations only as may occur in recognizing certain factors that are free from any taint of arbitrariness or discrimination." /19

/19 For current status of legislative reapportionment in any state, see Appendix "C".

BURNS v. RICHARDSON, __ U.S. __, 16 L ed 2d 376 (1966)

In proceedings challenging the constitutionality of Hawaii's legislative apportionment, the District Court for the District of Hawaii held that provisions of the Hawaii Constitution apportioning the state senate were unconstitutional under the Fourteenth Amendment to the federal constitution, and ordered the legislature to give the electorate an immediate opportunity, in a special election, to authorize a convention for the purpose of amending the state constitution, the court retaining jurisdiction so that it could reapportion the senate if the electorate failed to authorize the convention or if a suitable reapportionment amendment was not adopted by the convention and approved by the electorate. (238 F Supp 468) The court subsequently suspended its order that a special election be held, and ordered the legislature to enact a statute providing, on the basis of the number of registered voters, an interim plan of apportionment of the senate until the next general election. After the legislature enacted an interim senate reapportionment plan, the court disapproved it and ordered immediate resort to a convention, its disapproval of the plan being based upon the failure of the legislature to create single-member senatorial districts instead of using multimember districts. (240 F Supp 724)

On appeal, the U. S. Supreme Court vacated the District Court's orders and remanded the case for further proceedings. In an opinion by Justice Brennan, expressing the view of six members of the court, it was held that the legislature's freedom of choice to devise a reapportionment plan should not have been restricted by the District Court beyond the clear commands of the equal protection clause of the Fourteenth Amendment; that the legislature's use of multimember districts in its interim reapportionment plan was not shown to have constituted invidious discrimination in violation of the constitution; that the use of the number of registered voters as a basis for the interim plan was not shown to have produced a distribution of legislators substantially different from that which would have resulted from the use of a permissible population basis and was not unconstitutional; and that the District Court should adopt the legislature's interim plan, but should retain jurisdiction pending the effectuation of a permanent plan of legislative reapportionment.

Justice Harlan concurred in the result but expressed the view that an earlier Supreme Court decision involving legislative apportionment was constitutionally wrong, and that even under that decision an apportionment plan based on the number of registered voters should be considered permissible regardless of whether it approximates some other kind of a population apportionment.

III. APPORTIONMENT CASES IN ALASKA

NOLAN ET AL v. WADE, Civil Action No. 66-30, Superior Court, First Judicial District, Juneau. Memorandum opinion filed April 11, 1966.

For the first time, in either state or federal courts, the question of whether or not the Alaska State Senate was validly apportioned was raised in the above case. In addition, there was also raised the question of whether or not the governor's Proclamation of Reapportionment and Redistricting issued on September 3, 1965, was a valid exercise of executive authority and if not whether the 1966 elections could be held under the existing constitutional apportionment.

The parties conceded and the court found that the state Senate was invalidly apportioned under the equal protection clause of the Fourteenth Amendment of the U. S. Constitution.

The court held that the governor's proclamation was issued solely under the authority vested in him by Art. VI of the State Constitution, "Legislative Apportionment", and that the State Constitution gives no power to the governor to apportion the Senate. The court then directed that the 1966 elections be held under the existing provisions of the constitution and fixed December 1, 1967, as a reasonable date for enactment and adoption of a valid apportionment of the state Senate by constitutional amendment. The court retained jurisdiction of the case so that if a valid apportionment plan for the state Senate was not timely adopted, it could enter whatever order it considered necessary to permit a valid plan of apportionment to be used in the 1968 elections.

WADE v. NOLAN ET AL, 414 P2d 689 (1966)

The decision of the Superior Court was appealed to the Alaska Supreme Court. The Supreme Court agreed with the Superior Court that the state Senate was unconstitutionally apportioned because under the constitutional apportionment 30.7 per cent of the voters resided in districts which could elect a majority in the Senate.

However, the Supreme Court disagreed with the Superior Court which had held that the governor's reapportionment was invalid. The Supreme Court looked at Article VI of the constitution in detail. The court found that under Article VI reapportionment is an executive function in Alaska. The court looked at decisions from other states in which the question was where the authority lay to reapportion a frozen legislative body

on an interim basis. /20 It concluded that in such cases the courts recognized that the agency having the power of reapportionment could reapportion a "frozen" legislative body on an interim basis although not specifically granted that power by the constitution.

The court said that Article VI of the constitution as a whole and the appropriate convention minutes indicate the pervading purpose and intent of the convention was that reapportionment authority and responsibility be in the governor and the reapportionment board; "it is only reasonable to imply that it would have required the governor to periodically reapportion the Senate had it known that its frozen formula would be declared invalid." The court then held that the governor and the board had the implied power to reapportion the Senate on an interim basis.

/20 Buckley v. Hoff, 243 F Supp 191(D. Vt. 1964); Faubus v. Kinney, 369 S.W.2d 887 (1965); In re Apportionment of Michigan Legislature, 137 N.W.2d 495 (1965)

IV. POSSIBLE DEVIATIONS FROM SUPREME COURT RULE "ONE MAN, ONE VOTE"

It is clear that the principle which must underlie apportionment is "one-man, one-vote" in both houses. It presently appears that the only factor which a state may consider, apart from numbers, is political subdivisions./21 The Supreme Court does not feel that there can be a mathematical standard for testing the constitutionality of apportionment with respect to the permissable variation from the one-man, one-vote standard, but that the state must "make an honest and good faith effort to construct districts, in both houses of its legislature, as nearly of equal population as is practicable." /22 The deviation may be "such minor deviations only as may occur in recognizing certain factors that are free from any taint of arbitrariness or discrimination." /23 It is clear that a state cannot give consideration to geographical considerations or have a variation to insure effective representation for sparsely settled areas as was done in the Alaska Constitution.

One probably minor aspect of determination of equality presented by the language of the Alaska Constitution is the provision of Article VI, Section 3, which provideds that the governor's decennial reapportionment shall be based upon the civilian population. This provision is not without precedent, as approximately the same limitation occurs in Washington. A number of other states have various limitations on the portions of the electorate to be used in apportioning legislative seats. The civilian limitation presents problems in that (1) there are military personnel who are residents of the state and entitled to vote in the state; (2) there is a great disparity in the distribution of military personnel throughout the state; and (3) the ratio of military to civilian personnel in the state is extremely high. In view of the fact that most military personnel stationed in Alaska do not vote here, it is probable that a deletion of the provision would give rise to much greater inequality, but it might be necessary to modify the provision somewhat to include resident military personnel in the apportionment figure. The Supreme Court has said in connection with military personnel, that "discrimination

/21 Dissent to Reynolds v. Sims by Justice Harlan
/22 Reynolds v. Sims, 377 U.S. 533 (1964)
/23 Roman v. Sincock, 377 U.S. 695 (1964)

against a class of individuals, merely because of the nature of their employment, without more being shown, is constitutionally impermissible." /24

In order to convey some idea of how the Supreme Court in Reynolds v. Sims, supra, and companion cases, and in the cases summarily decided on June 22, 1964, and the U.S. District Courts in cases decided after June 15, 1964, have been handling the situation, the following is a list of the pertinent cases together with the numerical figures describing the disparities alleged to result in invidious discrimination, and the action on the case:

Reynolds v. Sims, Alabama

Constitutional plan in effect since 1901: population-variance ratios of up to 41 - 1 in the Senate, 16 - 1 in the House.

Proposed constitutional amendment: population-variance ratios of up to 59 - 1 in the Senate and 4.7 - 1 in the House.

Crawford-Webb Act (standby legislation to take effect in 1966 if constitutional amendment should fail) population-variance ratios of up to 20 - 1 in the Senate and 5 - 1 in the House.

All rejected: A provisional plan put into effect using parts of the proposed constitutional amendment and part of the Crawford-Webb Act, with an opportunity given to the provisionally reapportioned legislature to adopt a valid permanent scheme.

WMCA v. Lomenzo, New York

1894 Constitution, 1960 census apportionment: maximum population-variance ratio in Senate 3.9 - 1 and in the House 21 - 1.

Case remanded to District Court to determine whether to conduct the election under the old provisions or whether conditions permit redress of the constitutional inequities before the 1964 elections. The state Court of Appeals appointed a five-man bipartisan commission to draw up a valid reapportionment plan by March 14, 1966, after the legislature failed to agree on a plan.

/24 Davis v. Mann, 377 U.S. 678 (1964)

Lucas v. Forty-fourth General Assembly of Colorado

Colorado Constitution as amended in 1962: maximum population-variance ratio is 3.9 - 1 in the Senate and 1.7 - 1 in the House.

Apportionment of the legislature as a whole was rejected, with the court specifically declining to comment upon the population-variance ratio in the House alone. Case remanded to the District Court to determine whether the 1964 elections would have to be conducted under the old scheme or whether appellants' right to cast adequately weighted votes could be effectuated in 1964.

Maryland Committee for Fair Representation v. Tawes

Maryland Constitution: maximum population-variance ratio is 32 - 1 in the Senate and 12 - 1 in the House.

Stopgap legislation in 1962 reapportioned the House so that a maximum population-variance ratio of 6 - 1 continued to exist.

Case remanded to Maryland court with instructions to act only if the legislature should fail to reapportion itself constitutionally.

Davis v. Mann, Virginia

Virginia Code: maximum population-variance ratio is 2.65 - 1 in the Senate and 4.36 - 1 in the House.

Case remanded to the District Court with instructions to exercise its equitable powers only should the Virginia legislature not act to create a constitutionally acceptable plan of apportionment before 1965, the next date of election of Virginia legislators.

Roman v. Sincock, Delaware

Delaware Constitution prior to 1963 constitutional amendment: maximum population-variance ratio of 15 - 1 in the Senate, and 35 - 1 in the House.

After 1963 amendment if effectuated: maximum population-variance ratio in Senate remains the same, reduced in House to 12 - 1.

Case remanded to District Court to determine whether 1964 elections should be held under the terms of the 1963 amendment or whether relief should be granted earlier.

In those cases summarily decided on June 22, 1964, the Supreme Court:

Affirmed Meyers v. Thigpen, 211 F. Supp. 826 (1963) in which it was held that equal protection was not denied by Washington's congressional districting in which the maximum population-variance ratio was 1.5 - 1 and that the District Court has jurisdiction of a legislative apportionment case in which invidious discrimination is alleged, even though Washington voters in 1962 rejected an initiative proposal to reapportion on the basis of population.

Reversed Nolan v. Rhodes, 31 LW 2641 (1963) in which it was held that the provisions of the Ohio Constitution which guarantees each county at least one representative in the lower house does not invidiously discriminate against urban voters proportionally represented in the upper house. (Ohio's maximum population-variance ratio in the lower house is approximately 14 - 1.)

Affirmed Williams v. Moss, 32 LW 2077 (1963) and Oklahoma Farm Bureau v. Moss (same citation) in which judicial reapportionment was held to be available where 1963 legislature had failed to correct malapportionment declared unconstitutional in 1962, even though a constitutional amendment had been proposed which would be placed before the voters in 1964 and would, if approved by the voters, become effective in 1965.

Affirmed Lucas v. Adams (USDC MFla May 22, 1963) in which it was held that no claim was stated on which relief could be granted by a complaint seeking to enjoin enforcement of the 1963 apportionment act on the grounds that the Act invidiously discriminates against residents of more populous counties by giving residents of smaller counties, regardless of population, the right to elect at least one lower house member, while failing to secure to somewhat similar numbers of citizens living in more populous counties the right to elect at least one house member.

Reversed Germano v. Kerner, 220 F. Supp. 230 (1963) which held that Illinois' apportionment of the upper house on a geographical basis did not violate the Fourteenth Amendment so long as the lower house was

apportioned on a population basis. (The maximum population-variance ratio in the Illinois Senate is 10 - 1.)

Reversed Marshall v. Hare (USDC EMich, March 16, 1964) which held that the Fourteenth Amendment was not violated by a provision of the Michigan Constitution which permitted a maximum population-variance of 4 - 1 in the upper house, even though this representation was said to be necessary to assure representation to certain counties.

Reversed Hearne v. Smylie, 225 F. Supp. 355 (1963) which held that (a) the District Court was obliged to dismiss as beyond its capabilities a declaratory judgment suit alleging Idaho's legislative apportionment to be irrational and unconstitutional and (b) owing to its inability to devise an effective remedy for injustices claimed by voters to result from malapportionment of the legislature, the District Court was required to dismiss, for want of equity, a voters' suit to enjoin further elections under Idaho's apportionment statute.

Affirmed Pinney v. Butterworth (USDC Conn. March 26, 1964) in which it was held that voters in larger towns were discriminated against by a limitation in the Connecticut Constitution that every town should have at least one and not more than two representatives in the lower house. (The maximum population-variance ratio in the lower house is 425 - 1.)

Affirmed Hill v. Davis (USDC SIowa, January 14, 1964) in which it was held that Iowa's constitutional provision that each county should have one representative in the upper house and at least one in the lower house was unconstitutional.

William B. Saxbe in "Criteria Established by Court Decisions" /25 concludes:

(1) Each legislator must represent approximately the same number of people. As a rule of thumb, a plan under which districts deviate from the population of the perfect district by no more than fifteen per cent will be

---

/25 Reapportioning Legislatures, Chapter 4, Howard D. Hamilton, Editor, 1966.

constitutional, and a plan having districts that exceed this fifteen per cent limit will probably be unconstitutional. /26

(2) An apportionment plan cannot be used for purposes of racial discrimination. Any plan which results in the power of minority groups being split between several districts, or overwhelmed in a multiple member district by a monolithic majority, is likely to be held invalid.

(3) As a strictly legal proposition, it is unclear whether political gerrymandering raises a judicial question, but the interests of good government obviously make gerrymandering an unacceptable practice.

(4) Multiple-member districts are not unconstitutional per se. However, if used for purposes of racial discrimination, they will be unconstitutional. Additionally, if huge blocks of votes are seen in one district it is not likely to meet court approval.

(5) Sitting legislators have no constitutional right to their office. If an attempt to protect such legislators results in an apportionment plan that violates the other guidelines or which would continue in office legislators who were elected under an invalid system, then that plan is unconstitutional.

/26 See chart on the following pages. And see Appendix "E" for 1966 electoral percentages in all states.

FORMULA FOR OBTAINING POPULATION FIGURE REPRESENTED BY EACH LEGISLATIVE SEAT /27

House	Senate
4,837 people should be represented by one legislator (40/ 193,475)	9,674 people should be represented by one legislator (20/ 193,475)
15% variance over 4,837 - 5,563	15% variance over 9,674 - 11,125
15% variance under 4,837 - 4,111	15% variance under 9,674 - 8,223
4,719 (41/ 193,475)	9,213 (21/ 193,475)
15% variance over 4,719 - 5,427	15% variance over 9,213 - 10,595
15% variance under 4,719 - 4,011	15% variance under 9,213 - 7,831

The above figures indicate that although each member of the House should represent 4,837 people, that in fact the representative from House District No. 5 represents only 2,926, while the representative from House District No. 3 represents 6,605.

/27 1960 civilian population of Alaska (193,475) divided by membership of the house.

V. CONSIDERATIONS FOR CONSTITUTIONAL CHANGES

A. Alaska Constitution

Article II

Section 3. An election has been held under the new apportionment scheme, and with the new plan in effect, this section is again appropriate. It is questionable whether any change should be made.

Article VI

Section 3. The Senate as well as the House should be covered by this section. A change may be indicated here in connection with basing the apportionment upon the civilian population. A possible change to bring the section in line with the Supreme Court's expressed view in Davis v. Mann, supra, would be to insert after "civilian" the words "and resident military". This change, if adopted, must also be made in other sections of this article where the phrase appears.

Sections 4 - 7. These sections embody provisions which now will permit the governor to redistrict the House within the requirements of the equal protection clause. It appears, however, that the limitation of section 7 would prohibit him from doing the same for the Senate within the present framework. A number of possible alterations are therefore possible in these sections. Such provisions as prevent the governor from complying with the mandate of the United States Constitution could merely be removed, or alternatively, a section or sections could be substituted for the present sections 4 - 7 which would specifically enunciate the principle of equal representation as a basis for the apportionment of both houses of the legislature.

Section 10. This section provides only for a decennial reapportionment, not for a reapportionment of the kind which has taken place in the 1966 election. Therefore, while the section is sound as a permanent part of the article, it was ignored in order to carry out the present reapportionment. The legislature may want to consider whether any change in the wording is indicated to take care of a similar situation in the future.

Article XIV

Sections 1 and 3. These sections set up the original apportionment schedule for the House and were in effect superseded by the action of the Reapportionment Board and the governor culminating in the reapportionment proclamation of September 3, 1965.

Section 2 is the description of the senatorial districts which will disappear with Senate reapportionment and redistricting.

It appears that Article XIV should be deleted in its entirety since it has served its purpose for the initial apportionment of seats in the first state legislature and no longer rules.

It should be mentioned that there seems to be a procedural question in preparing and voting on this series of amendments. The changes necessary to bring the constitution into conformity with the federal constitution may be several in number, affecting different sections and even articles of the constitution, yet closely related to one another. It would be problematical to regard each change in wording as an independent "amendment" since the integrated plan could be rendered meaningless if one part failed. It is suggested, therefore, that the situation might be simplified by the use of a kind of "one-subject" rule, by which changes proposed would be separated to the extent possible, but changes in different sections which formed part of a plan and would be meaningless independently would be considered a single "amendment" for purposes of proposal and placement on the ballot, and would stand or fall together upon referral to the people.

B. Other Considerations

(1) The number of members in each house. When considering constitutional amendments, it might be well to change the present constitutional provisions for even-numbered membership in each house to an odd number, e.g., a Senate of 19 or 21 members and a House of 39 or 41 members to avoid tied votes.

(2) Use of civilian population as an apportionment basis. Thus far there has been no judicial determination of record as to the constitutionality of using strictly civilian population as a basis for determining apportionment of legislative seats. Most states use total population but variations include using the total population excluding aliens, regular military, and non-tax paying Indians, the number of registered voters,

the number of persons voting in the preceding general election for a certain office (e.g., the governor), and, in Indiana, the male population over 21 years of age. See the discussion in the June 1, 1965, opinion of the state attorney general. /28

(3) Multi-member districts. The Advisory Reapportionment Board recommended that District 8 (Anchorage) be divided into four House Districts and four Senate Districts. The governor, in his proclamation, did not make any changes in the House Districts, and House District 8 remained a multi-member district. The governor designated House District 8 as Senate District E, with the seven senators running at large. The governor gave two reasons for his decision that House District 8 and Senate District E would be multi-member districts. First, Anchorage has traditionally been a multi-member district and secondly, it would be unfair to divide Anchorage into more than one legislative district on the basis of the 1960 census figures because they became obsolete after the 1964 earthquake which resulted in a radical population dislocation. See the discussion in the June 1, 1965, opinion of the state attorney general. /29

(4) Unicameral Legislature. There is evidence of increasing interest in the unicameral legislature idea (Nebraska) since the new requirement for apportionment of both houses on a strict apportionment basis removes the original purpose of a bicameral -- a balance of having one house based mainly on population and the other emphasizing area representation. However, there are many factors to be considered in discussing the relative merits of a bicameral versus a unicameral legislature that go beyond the differences in the basis of apportionment for a bicameral legislature.

/28 Appendix "D"
/29 Idem.

VI. SCHEDULE FACTORS IN PROPOSING AND ADOPTING CONSTITUTIONAL CHANGES IN LEGISLATIVE APPORTIONMENT

1967 — If the 1967 legislature proposed amendments, the proposition would not go on the ballot until August 1968 unless a special election is called for and financed for late 1967 or very early 1968.

1968 — If a regular election schedule is followed, amendments approved by the voters in 1968 would be effective for the 1970 filings and elections.

1970 — Elections could be held under a new apportionment-districting plan. The federal decennial census is reported late in the year. If the census is still the basis, the advisory board or other authority would undoubtedly take into 1971 to come up with a new plan effective for 1972. If no constitutional convention is held in the meantime, the proposition asking for voter opinion on a constitutional convention would go on the November general election ballot. A constitutional convention would devise a plan, subject to ratification, which would become effective for the election year 1972.

Without any legislative action in 1967 - 1968, the normal course of events would bring about decennial reapportionment/redistricting effective for the 1972 filings and election. If the decennial census basis is kept and the legislature proposes a constitutional amendment during 1967 - 1968 and the amendment is approved in 1967 - 1968 by the people, it would be operative for only two years. A convention held during the same period would have the same two-year effect.

A P P E N D I C E S

APPENDIX A

REAPPORTIONMENT ADVISORY BOARD

STATE OF ALASKA

June 4, 1965

The Honorable William A. Egan
Governor of Alaska
Juneau, Alaska

Dear Sir:

The Reapportionment Advisory Board reconvened as a result of your official Proclamation, dated March 6, 1965. The Board has held public hearings on the matter of reapportionment in all of the major regions of the State of Alaska. The schedule of those public hearings was as follows:

Fairbanks	May 10th
Nome	May 11th
Anchorage	May 12th
Juneau	May 13th

In addition the following meetings were held by the Board as part of its program for developing a plan of Reapportionment for submittal to you:

Anchorage	March 22nd and 23rd
Fairbanks	April 9th and 10th
Juneau	May 13th and 14th
Anchorage	June 4th

In developing its program for reapportioning the State Legislature the Board has given due consideration to all the data presently available to it. This consists of the report submitted by the Board on December 10, 1964; the more recent opinions of the Attorney General and their relation to the decisions of the Federal Supreme Court which have become available subsequent to the December report; the hearings held; the personal contacts and observations of the Board Members; and all other relevant matter which has been presented in person, by letter, or other form to the Board for its consideration. On the basis of full and complete discussion of the relevant data and material, the Board unanimously recommends the following plan for Reapportionment and Redistricting of the Alaska State Legislature:

a. All existing House Districts except District No. 8 shall remain as presently constituted and retain their present number of House seats.

b. District No. 8 shall be subdivided into four districts. They shall be titled: Anchorage City, Anchorage North, Anchorage Southeast and Anchorage Southwest. The subdivision shall be in accord with the attached descriptions of the four new districts.

c. Anchorage City District shall have eight House seats and four Senate seats assigned to it with the candidates for these seats running at-large for the Anchorage City District.

Anchorage North District shall have two House seats and one Senate seat with the candidates for these seats running at-large from the Anchorage North District.

Anchorage Southeast District shall have two House seats and one Senate seat assigned to it with the candidates for these seats running at-large from the Anchorage Southeast District.

Anchorage Southwest District shall have two House seats and one Senate seat assigned to it with the candidates for these seats running at-large from the Anchorage Southwest District.

d. The House election Districts shall be renumbered from 1 to 22 and named in accord with the attached Schedule of House Apportionment.

e. The Senate Districts shall be fourteen in number and shall be designated by the letters "A" thru "N" and formed of the House Districts listed on the attached schedule of Senate Apportionment.

f. The terms of office for the Senators from the various Senate Districts shall be as set forth in the attached schedule of Senate Apportionment. In Senate Districts "E" and "L", one half of the Senate seats shall be designated as position "A" and one half designated as position "B" for the purpose of the initial election under this schedule of apportionment to insure that one half of the Senate is elected in each biennial election following the initial election.

The Board again wishes to repeat its recommendation that any future Federal Census be taken with more regard to the requirements of the Alaska State Constitution in the matter of redistricting and reapportioning the State Legislature. The use of enumeration districts encompassing more than 1/40th of the population of the State as well as enumeration districts totally surrounding other enumeration districts creates situations which make redistricting and reapportioning the State extremely difficult.

For your information and review the Board is attaching to this report minutes of the Board Meetings and Public Hearings, copies of correspondence received and marked up maps of the Anchorage area indicating the recommended redistricting of existing Election District No. 8.

Respectfully submitted,

Victor D. Fischer, Chairman

Irene Ryan

Edward M. Cox

Doris Wilke

ANCHORAGE - CITY AREA

Being that area used in the 1960 Census as the Anchorage City Area and more particularly described as follows:

Beginning at a point on the southerly boundary line of Section 22, T13NR4W, S.M., approximately 1800' west of the easterly boundary line of Section 22; thence east along the southerly boundary line of Section 22 and the centerline of Northern Lights Boulevard to the centerline of Minnesota Drive; thence south along the centerline of Minnesota Drive to the southerly boundary of the Martin Manor Subdivision; thence east along the southerly boundary of the Martin Manor Subdivision to the centerline of Spenard Road; thence north along the centerline of Spenard Road to the centerline of Northern Lights Boulevard; thence east along the centerline of Northern Lights Boulevard to the centerline of Arctic Boulevard; thence north along the centerline of Arctic Boulevard to the centerline of Fireweed Lane; thence east along the centerline of Fireweed Lane to the centerline of the Seward Highway; thence south along the centerline of Seward Highway to the east-west centerline of Section 29, T13NR3W, S.M.; thence east along the east-west centerline of Section 29 to the centerline of Lake Otis Parkway; thence south along the centerline of Lake Otis Parkway to the southerly east-west sixteenth line of Section 28, T13NR3W, S.M.; thence east along the southerly sixteenth line of Section 28 and 27, T13NR3W, S.M., to the north-south centerline of Section 27; thence north along the north-south centerline of Section 27 and Section 22 to the east-west centerline of Section 22, T13NR3W, S.M.; thence east along the east-west centerline of Section 22 to the centerline of Boniface Parkway; thence north along the centerline of Boniface Parkway to the east-west centerline of Section 15, T13NR3W, S.M.; thence west along the east-west centerline of Section 15 to the north-south centerline of Section 15; thence north along the north-south centerline of Section 15 and the centerline of Pine Street to the east-west centerline of Section 10, T13NR3W, S.M., identical with the centerline

of McPhee Avenue; thence west along the centerline of McPhee Avenue to the centerline of Taylor Street, projected; thence south along the centerline of Taylor Street to the centerline of Thompson Avenue; thence west along the centerline of Thompson Avenue, projected, to the intersection with the westerly sixteenth line of Section 9, T13NR3W, S.M.; thence north along the westerly sixteenth line of Section 9 to the centerline of Bluff Road; thence southwesterly along the centerline of Bluff Road to the centerline of Plum Street; thence north along the centerline of Plum Street and its projection to the east-west centerline of Section 5, T13NR3W, S.M.; thence west to the centerline of Knik Arm; thence southwesterly along the centerline of Knik Arm to a point due north of the point of beginning; thence due south to the place of beginning.

ANCHORAGE NORTH

All of that area drained by streams flowing into the Knik Arm from the east from and including the Old Knik River Bridge on the north to a southerly boundary line more particularly described as follows:

Beginning at a point on the centerline of Knik Arm where it intersects the westerly projection of the east-west centerline of Section 6, T13NR3W, S.M.; thence east along the projected east-west centerline of Section 6 & 5, T13NR3W, S.M. to the north-south centerline of Section 5, T13NR3W, S.M.; thence south along the north-south centerline of Section 5 and the centerline of Plum Street to the centerline of Bluff Road; thence northeasterly along the centerline of Bluff Road to its intersection with the westerly sixteenth line of Section 9, T13NR3W, S.M.; thence south along the westerly sixteenth line of Section 9 to the westerly projection of the centerline of Thompson Ave.; thence east along the westerly projection of the centerline of Thompson Ave. and the centerline of Thompson Ave. to the centerline of Pine Street; thence south along the centerline of Pine Street to the south boundary of Section 10, T13NR3W, S.M.; thence east to the intersection with the Knik Arm Drainage Divide.

ANCHORAGE SOUTHEAST

All of that area drained by streams flowing into Turnagain Arm from and including Placer River on the south; and bounded on the west by a line more particularly described as follows:

Beginning at the intersection of the centerline of Seward Highway with the east-west centerline of Section 29, T13NR3W, S.M.; thence south along the centerline of the Seward Highway and the easterly boundary of Section 30, T12NR3Wm S.M. to the centerline of Turnagain Arm.;

and bounded on the north by a line more particularly described as follows:

Beginning at the intersection of the centerline of the Seward Highway with the east-west centerline of Section 29, T13NR3W, S.M.; thence east along the east-west centerline of Section 29 to the centerline of the Lake Otis Parkway; thence south along the centerline of Lake Otis Parkway to the southerly east-west sixteenth line of Section 28, T13NR3W, S.M.; thence east along the southerly east-west sixteenth line of Sections 28 and 27m T13NR3W, S.M. to the north-south centerline of Section 27, thence North along the north-south centerline of Sections 27 and 22, T13NR3W, S.M. to the east-west centerline of Section 22; thence east along the east-west centerline of Section 22, T13NR3W, S.M. to the centerline of Boniface Parkway; thence north along the centerline of Boniface Parkway tothe east-west centerline of Section 15, T13NR3W, S.M.; thence West along the east-west centerline of Section 15 to the north-south centerline of Section 15, T13NR3W, S.M.; thence north along the north-south centerline of Section 15 to the north boundary of Section 15, T13NR3W, S.M.; thence east to the Knik River Drainage Divide,

ANCHORAGE SOUTHWEST

Beginning at a point on the southerly boundary line of Section 22, T13NR4W, S.M. approximately 1,800' west of the easterly boundary line of Section 22; thence east along the southerly boundary line of Section 22 and the centerline of Northern Lights Boulevard to the centerline of Minnesota Drive; thence south along the centerline of Minnesota Drive to the southerly boundary line of the Martin Manor Subdivision; thence east along the southerly boundary of the Martin Manor Subdivision to the centerline of the Spenard Road; thence north along the centerline of Spenard Road to the centerline of Northern Lights Boulevard; thence east along the centerline of Northern Lights Boulevard to the centerline of the Seward Highway; thence south along the centerline of the Seward Highway and the easterly boundary of Section 30, T12NR3W, S.M., to the centerline of Turnagain Arm; thence northwesterly following the centerline of Turnagain Arm and northeasterly following the centerline of Knik Arm to a point due north of the point of beginning; thence due south to the place of beginning; and also including all of Fire Island within its limits.

SCHEDULE OF HOUSE APPORTIONMENT

House District No.	Name of District	No. of Representatives
1	Ketchikan	2
2	Wrangell-Petersburg	1
3	Sitka	1
4	Juneau	2
5	Lynn Canal	1
6	Cordova-Valdez	1
7	Palmer-Wasilla	1
8	Anchorage City	8
9	Anchorage North	2
10	Anchorage Southeast	2
11	Anchorage Southwest	2
12	Seward	1
13	Kenai	1
14	Kodiak	1
15	Aleutian Islands	1
16	Bristol Bay	1
17	Yukon-Kuskokwim	1
18	Fairbanks	7
19	Barrow-Kobuk	1
20	Nome	1
21	Wade-Hampton	1
22	Bethel	1
		40

Ratio Calculations:

Lowest District — Population 2,925 (Lynn Canal)

Highest District — Population 6,505 (Sitka)

Ratio - - - - - - 2.25 to 1

Percentage of Population required to elect majority of House 47.1%

SCHEDULE OF SENATE APPORTIONMENT

Senate District	Name of District	No. of Senators	Initial Term of Senator
A.	Ketchikan	1	4 years
B.	Wrangell-Petersburg & Sitka	1	2 years
C.	Juneau & Lynn Canal	1	4 years
D.	Cordova-Valdez & Palmer-Wasilla	1	2 years
E.	Anchorage City	4	(see note)
F.	Anchorage North	1	4 years
G.	Anchorage Southeast	1	2 years
H.	Anchorage Southwest	1	4 years
I.	Seward & Kenai	1	2 years
J.	Kodiak & Aleutian Islands	1	4 years
K.	Bristol Bay & Yukon-Kuskokwim	1	2 years
L.	Fairbanks	4	(see note)
M.	Barrow-Kobuk & Nome	1	4 years
N.	Bethel & Wade-Hampton	1	2 years
		20	

Note: In both Senate District E and Senate District L, it will be necessary to designate half the Senate seats as position "A" and half the seats as position "B" for the purpose of the initial election under this schedule of apportionment to insure that one half of the Senate is elected in each biennial election following the initial election.

Ratio Calculations:

Lowest District Population 8,159 (Anchorage Southeast)

Highest District Population 12,471 (Juneau-Lynn Canal)

Ratio - - - - - - 1,526 to 1

Percentage of Populations required to elect majority of Senate 53.1%

POPULATION TABULATION TO ACCOMPANY HOUSE and SENATE APPORTIONMENT SCHEDULES

PROCLAMATION OF REAPPORTIONMENT AND REDISTRICTING

WHEREAS, the United States Supreme Court in the case of Reynolds v. Sims, and in other companion cases decided in June of 1964, held that under the Equal Protection Clause of the United States Constitution both houses of a state legislature must be apportioned on a population basis and that a state is required to make an honest and good faith effort to construct districts, in both houses of its legislature, as nearly of equal population as is practicable;

WHEREAS, it does not appear that the Alaska State Senate is apportioned on a population basis within the meaning of the Supreme Court decisions;

WHEREAS, the Constitution of the State of Alaska (Article VI) and the minutes of the Alaska Constitutional Convention clearly contemplate that the Governor shall have the sole responsibility for legislative reapportionment;

WHEREAS, the mandate of the United States Supreme Court can be carried out in a manner consistent with the manifest intent of the Constitution of the State of Alaska only by reapportionment by the Governor with the advice of the Advisory Reapportionment Board;

WHEREAS, I, William A. Egan, Governor of the State of Alaska, pursuant to Article VI of the Constitution of the State of Alaska, issued a Proclamation on March 6, 1965, directing the Advisory Reapportionment Board to submit a plan that would meet the requirements of the Supreme Court decisions and those provisions of the Constitution of the State of Alaska that are not in conflict with those decisions;

WHEREAS, the Advisory Reapportionment Board convened pursuant to my order and on June 8, 1965, submitted to me a plan for reapportionment and redistricting;

WHEREAS, the Governor is required by law to issue a proclamation of reapportionment and redistricting within 90 days after receipt of the recommendations of the Advisory Reapportionment Board;

NOW, THEREFORE, I, WILLIAM A. EGAN, Governor of the State of Alaska, do proclaim the following plan of reapportionment and redistricting:

First: The election districts for the House of Representatives shall remain as designated by the Proclamation of Reapportionment and Redistricting of December 7, 1961.

Second: Members of the Senate shall be elected from the Senate Districts and in the number shown below:

Senate District	Name of District	Composed of Election Districts	Number of Senators
A.	Ketchikan	1	1
B.	Wrangell-Petersburg & Sitka	2 & 5	1
C.	Juneau & Lynn Canal	4 & 5	1
D.	Cordova-Valdez & Palmer-Wasilla	6 & 7	1
E.	Anchorage	8	7
F.	Seward & Kenai	9 & 10	1
G.	Kodiak & Aleutian Islands	11 & 12	1
H.	Bristol Bay & Yukon-Kuskokwim	13 & 15	1
I.	Fairbanks	16	4
J.	Barrow-Kobuk & Nome	17 & 18	1
K.	Bethel & Wade-Hampton	14 & 19	1
			20

Third: This reapportionment and redistricting shall be effective for elections of members of the Legislature until the next decennial census.

Fourth: This reapportionment and redistricting shall be implemented for the 1966 primary and general elections. The terms of all members of the Fourth State Legislature shall terminate on the fourth Monday in January, 1967. In the 1966 general election 40 members shall be elected to the House of Representatives and 20 members to the Senate.

Fifth: Members of the State Senate elected at the 1966 general election shall serve the term indicated as follows:

Senate District	Name of District	Initial Term of Senator
A.	Ketchikan	4 years
B.	Wrangell-Petersburg and Sitka	2 years
C.	Juneau-Lynn Canal	4 years
D.	Cordova-Valdez and Palmer-Wasilla	2 years
E.	Anchorage A	4 years
	Anchorage B	2 years

Senate District	Name of District	Initial Term of Senator
	Anchorage A	4 years
	Anchorage B	2 years
	Anchorage A	4 years
	Anchorage B	2 years
	Anchorage A	4 years
F.	Seward & Kenai	2 years
G.	Kodiak & Aleutian Islands	4 years
H.	Bristol Bay & Yukon-Kuskokwim	2 years
I.	Fairbanks A	4 years
	Fairbanks B	2 years
	Fairbanks A	4 years
	Fairbanks B	2 years
J.	Barrow-Kobuk & Nome	4 years
K.	Bethel & Wade-Hampton	2 years

Sixth: State legislators elected at the 1966 general election shall hold office for a term beginning with the fourth Monday of the January following election. Their term shall be two years, except that senators elected for four-year terms shall serve an additional two years thereafter.

IN WITNESS WHEREOF, I have hereunto set my hand and caused the Seal of the State to be affixed, this third day of September in the year of our Lord nineteen hundred and sixty five.

William R. Egan
Governor

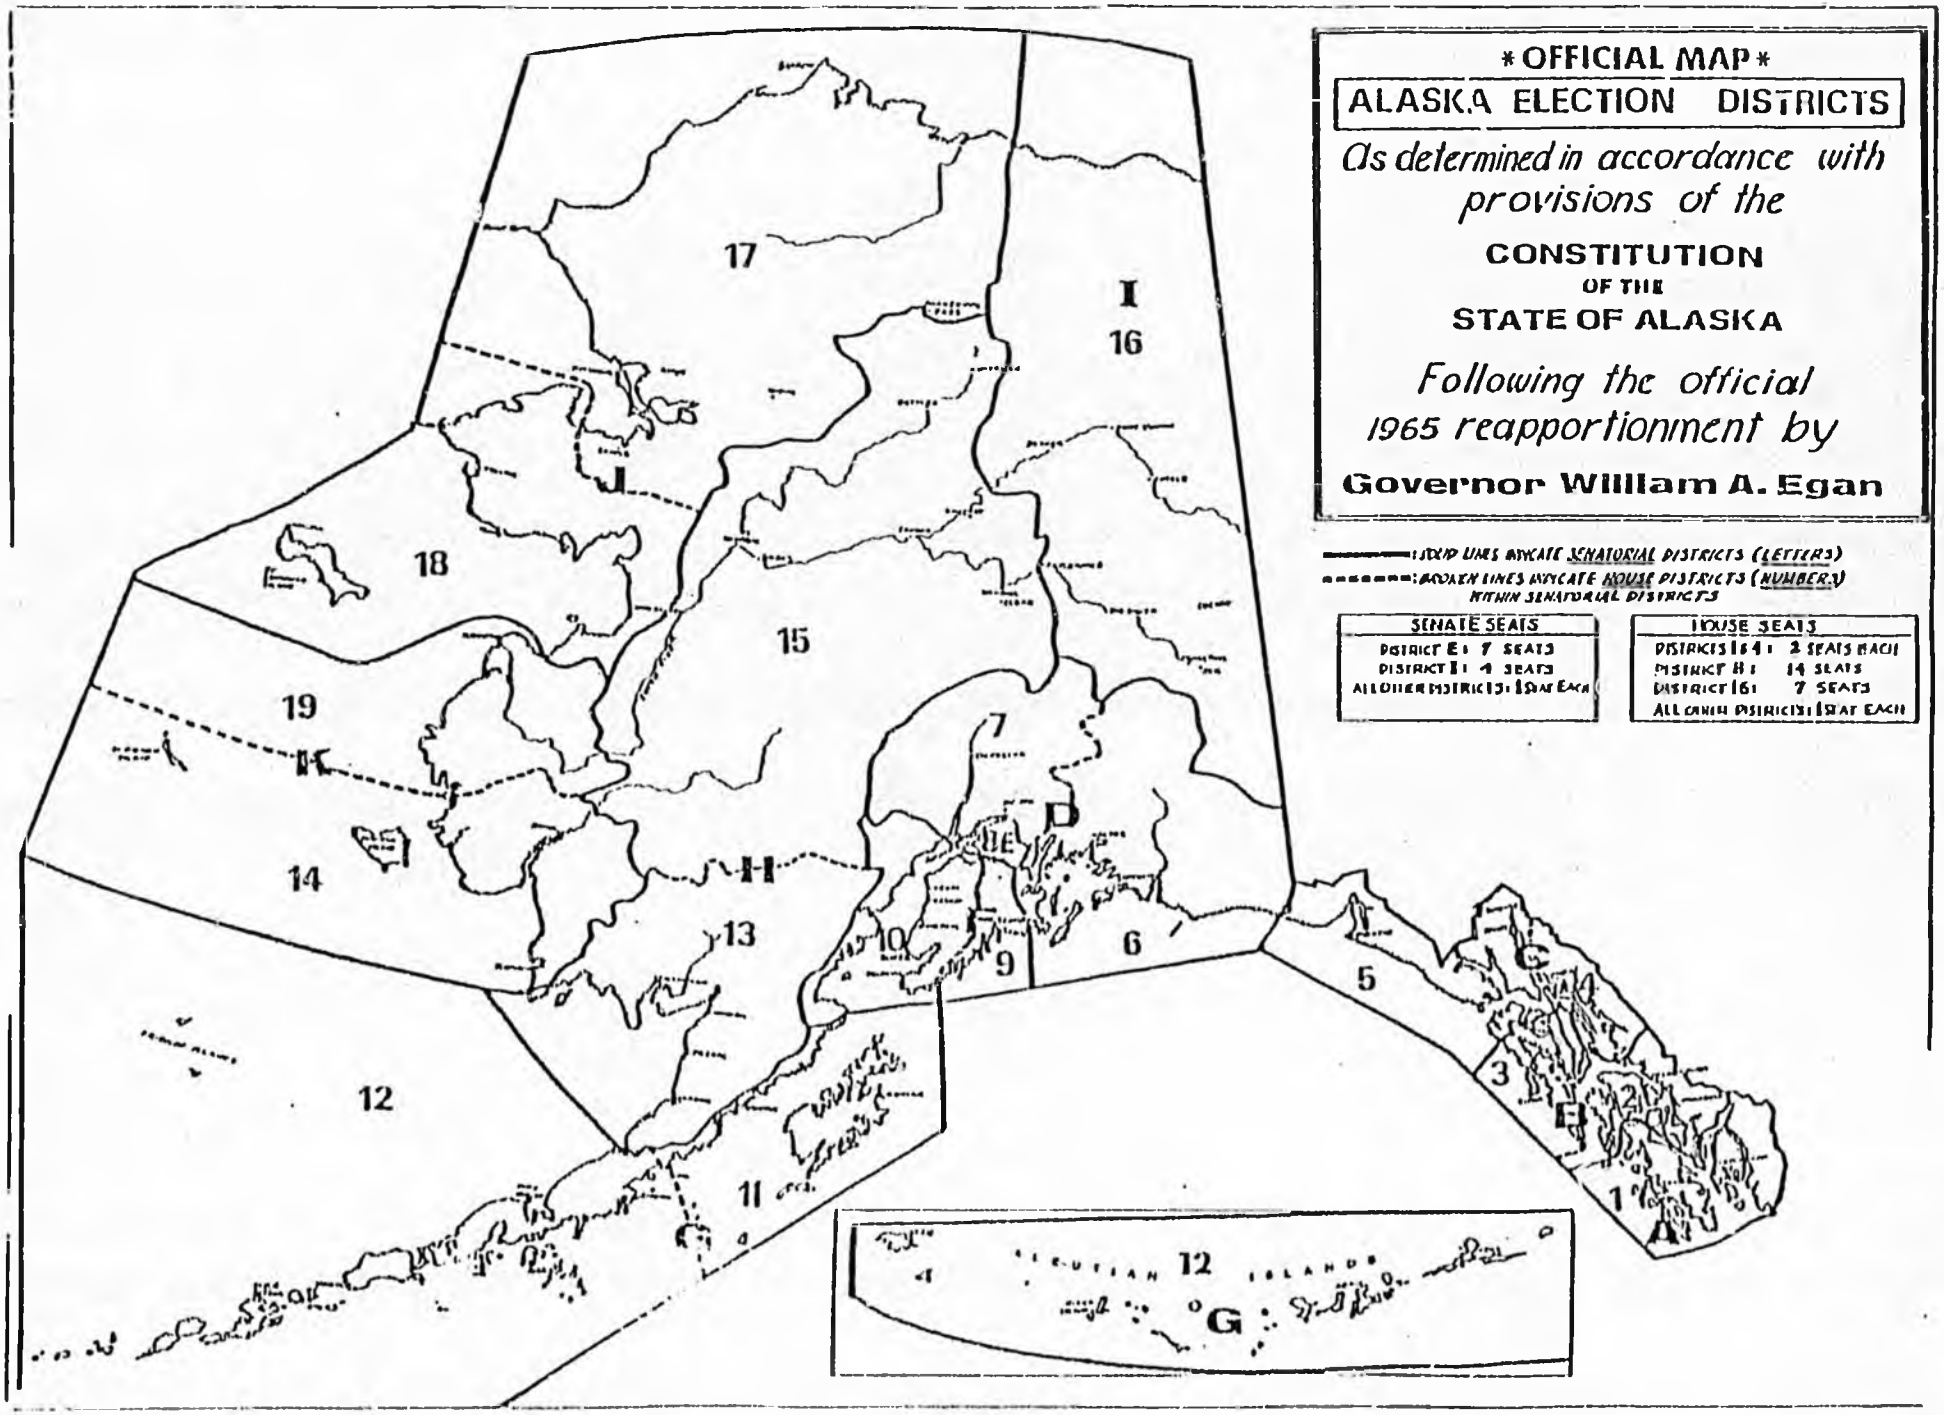
ATTEST:

Secretary of State

STATEMENT ACCOMPANYING PROCLAMATION
OF
REAPPORTIONMENT AND REDISTRICTING

I have adopted the excellent and well-considered recommendations of the Advisory Reapportionment Board with two exceptions, neither of which increases or decreases the numerical representation allotted by the Board to any area.

Under the Board's recommendation District 8 would be divided into four House Districts. Under my Proclamation all House Districts, including District 8, remain exactly as they were designated in the Proclamation and Redistricting of December 7, 1961.



Under the Board's recommendation District 8 would also be divided into four Senate Districts (E, F, G and H), with a total of 7 senators assigned to the four districts. I have changed the Board's recommendation so that the 7 senators assigned to District 8 will all run at large in that district which will be designated Senate District E. This will eliminate Senate Districts F, G and H from the Board's proposal, and all other Senate Districts have been re-lettered accordingly in the Proclamation.

It would be unwise and unfair to attempt to divide District 8 into more than one legislative district on the basis of the 1960 census figures. These figures became obsolete with the March 27, 1964, earthquake which devastated large, heavily populated areas in and around Anchorage and resulted in radical population dislocation and movement of unknown proportions. Therefore, any reapportionment plan based on the 1960 census which would split District 8 into several legislative districts could result in over-representation of districts which have lost a considerable part of their population and under-representation of districts which gained substantially in population as a result of the earthquake and subsequent dislocation.

Furthermore, Anchorage has traditionally been a multi-member district with all of its candidates for the Legislature running at large. This system has proved workable and fair in the past, and is the most equitable one which can be devised under existing circumstances.

Dated: September 3, 1965.

William A. Egan
Governor

LEGISLATIVE REAPPORTIONMENT IN THE STATES /1

(November, 1965 - May, 1966)

The following checklist shows that 33 states have now been reapportioned. In four additional states one house has been so apportioned: in one of these a plan for the other house is being challenged in the courts; and in three more, a temporary plan has been implemented. In five states reapportionment schemes for both houses await court approval, while eight states are operating with temporary plans.

PLAN ADOPTED AND NO CURRENT LITIGATION

Alabama
Alaska (house only)
Arizona
Arkansas
California
Colorado
Connecticut
Idaho
Illinois
Indiana
Kansas (house only)
Kentucky
Louisiana (house only)
Maine
Maryland
Massachusetts
Missouri
Nebraska

Vermont
Virginia
Washington
West Virginia
Wisconsin
Wyoming

PLAN ADOPTED BUT LITIGATION OR COURT APPROVAL PENDING

Delaware
Florida
Louisiana (senate only)
Minnesota
Mississippi
Pennsylvania

TEMPORARY LEGISLATIVE OR COURT PLAN

Alaska (senate only)
Georgia
Hawaii
Iowa
Kansas (senate only)
Michigan
Montana
New Jersey
Ohio
South Carolina (senate only)
Texas

/1 Published by the Council of State Governments.
/2 Some litigation is yet pending; nevertheless, the basic plans have received court approval.

STATES IN WHICH THERE HAS BEEN NO CHANGE IN LEGISLATIVE REAPPORTIONMENT SINCE NOVEMBER 1965 ARE FOUND IN THE BACK OF THIS APPENDIX.

ALASKA

On April 11 the Alaska superior court issued a memorandum opinion that (1) the governor had exceeded his constitutional authority in reapportioning the senate (2) the 1966 elections be held under the existing plan, and (3) a constitutional amendment for a valid reapportionment of the senate be adopted no later than December 1, 1967. The state supreme court reversed, in part, the superior court ruling and adopted the governor's plan of September 3, 1965, declaring it effective for the 1966 elections and thereafter until the constitution is amended to provide a permanent reapportionment plan for the senate (Wade v. Nolan, et al, decided May 20). A separate appeal from the April 11 ruling is pending with the federal court.

ARIZONA

The federal court on February 2 reapportioned both houses of the Arizona legislature, reducing the house from 80 to 60 members, increasing the senate from 28 to 30 members, and providing for at-large elections except in Maricopa and Pima counties (Klahr v. Goddard). On March 14 the court issued a supplemental decree approving subdistricting plans for the two counties.

ARKANSAS

On November 4 the federal court issued a memorandum opinion approving a reapportionment scheme for the general assembly, as submitted by the state board of apportionment (Yancey v. Faubus). The plan calls for 44 districts for the house and 25 for the senate. Intervenors' appeal to the U. S. supreme court that the 1965 plan failed to meet the "one-man, one-vote" requirements was denied February 28 (Crawford County Bar Association v. Faubus; Alexander v. Faubus).

CALIFORNIA

The state supreme court on January 11 upheld the reapportionment of the California legislature, as adopted October 21 during the second 1965 special session. In doing so, the court overruled objections that the senate plan included two multi-member districts for San Francisco and the populous part of Alameda county and did not have such multi-member districts for other sections of the state (Silver v. Brown; Adams v. Brown).

CONNECTICUT

On December 14 voters approved a new state constitution with provisions conforming with the 1965 reapportionment act. The senate consists of 30 to 50 members, the house from 125 to 225 members. Responsibility for future reapportionment, following each decennial federal census, is placed with the legislature or, should it fail, an eight-member legislative commission or, should it fail, a board comprised of two judges from the state superior court and one elector.

DELAWARE

Sincock v. Gately is still pending in the federal court. The contested reapportionment plan, enacted by the Delaware legislature in 1964, is based wholly on straight population and provides single-member districts for both houses.

FLORIDA

The federal court on December 23 declared the 1965 legislative reapportionment act (HB 19-XX) unconstitutional but allowed it to stand as an interim plan until 60 days following adjournment of the 1967 regular session (Sobel v. Adams; Swann v. Adams). On February 25 the U. S. supreme court ruled that the district court erred in approving the plan on an interim basis (Swann v. Adams). The legislature subsequently adopted another reapportionment scheme, HB 17-X (66), which was then approved by the federal court on March 19 (Swann v. Adams). Appeal has been lodged with the U. S. supreme court.

GEORGIA

On March 25 the federal court rejected arguments that the Florida case Swann v. Adams required an immediate reapportionment of the Georgia legislature. (NOTE The court had previously accepted the 1965 house reapportionment plan as an interim measure but had ordered both houses reapportioned no later than the end of the 1968 regular session or May 1, 1968, whichever arrived first.) But the court did advance to May 1, 1967, the date by which further reapportionment must be accomplished (Toombs v. Fortson).

HAWAII

On April 25 the U. S. supreme court reversed its lower court and accepted the interim scheme (HB 987) passed during the 1965 regular session to reapportion the senate and the existing house apportionment as temporary plans for use in the 1966 general elections and to continue until such time as a permanent plan is adopted (Burns v. Richardson, et al; Cravalho, et al v. Richardson, et al; Abe, et al v. Richardson, et al).

IDAHO

The federal court on December 20 declared the Idaho reapportionment plan, enacted during a March, 1965 special session, unconstitutional and ordered at-large elections for both houses until constitutionally apportioned (Hearne v. Smylie). The legislature then enacted a new reapportionment plan during the third 1966 extraordinary session. The defendants from Hearne petitioned the federal court to dissolve the December 20 injunction which required at-large elections. When plaintiffs failed to respond to the petition, the court on April 1 granted the petition which, in effect, approved the new reapportionment plan.

ILLINOIS

On December 8 a special bipartisan commission appointed by the governor filed its plan for new house districts with the office of the secretary of state. It became immediately effective for the 1966 elections, providing for three representatives elected at-large from each of 59 multi-member districts. There is no court action pending.

INDIANA

On November 18 the federal court approved one of four alternate plans for the house and one of four alternates for the senate as adopted by the legislature in 1965 (Stout v. Bottorff; Grills v. Branigin).

IOWA

In Davis v. Cameron the federal court deferred to the state district court which, in turn, on November 5 gave temporary approval to the interim apportionment scheme for both houses, enacted during the Iowa 1965 regular session. On April 15 the state supreme court declared the 1965 temporary plan sufficient to serve as an interim plan of apportionment until 1968. But the court also ruled that a combination of multi- and single-member districts could not be used for the same chamber (Kruidenier v. McCulloch). Defendants are expected to file a writ of certiorari with the federal court.

KANSAS

On December 28 the senate apportionment was declared unconstitutional, although the federal court delayed the effective date of its ruling until April 1 (Long v. Avery). The court followed on February 24 with a decree that the legislature adopt a new senate plan no later than April 1, 1968 or, failing to do so, the court would order into effect its own plan or at-large elections. The state supreme court on March 23 approved the reapportionment plan (HB 504) for the lower house, adopted during a 1966 special session (Harris v. Anderson).

MAINE

During the 1966 special session the legislature approved a proposed constitutional amendment providing for not less than 30 nor more than 40 senators. In the event the legislature failed to reapportion, the state supreme court would be entrusted with the duty. If the amendment is approved by the voters in November, the legislature in its 1967 session will have to establish lines for the districts which would take effect in the 1968 elections.

MARYLAND

The lower state court on December 22 accepted a 1965 special session act (SB 5) to reapportion both houses of the Maryland legislature (Maryland Committee for Fair Representation, et al v. Tawes). The court also found another act of the 1965 special session (SB 8) violative of the equal protection clause of the 14th Amendment. The ruling was reaffirmed by the state court of appeals on January 11.

MICHIGAN

The plan presented by the commission in 1964 was never explicitly ruled unconstitutional. But the state supreme court indicated its shortcomings insofar as compliance with the state constitution was concerned by instructing the commission on November 2 to prepare new plans within 60 days. However, the commission deadlocked. The court itself stalemated regarding the validity of the 1964 plan and, thus, issued seven separate opinions on March 9 (In Re Apportionment).

MINNESOTA

On November 26 the state supreme court reversed its lower court and declared that the veto power existed with respect to apportionment legislation. Thus the governor's veto of the 1965 reapportionment act was upheld. But the court also noted that its decision was not intended to be an evaluation of the act (Duxberry, et al v. Donovan). On January 14, plaintiffs from Honsey v. Donovan petitioned the federal court to go ahead with preliminary plans for establishing new legislative districts for the 1966 elections. The judges denied the petition, noting that sufficient time existed for the legislature to reapportion.

The Minnesota legislature on May 9 enacted a reapportionment bill (SF 2) in special session providing 67 and 135 members, respectively, for the senate and house. On May 11 the governor vetoed the bill, charging population inequities and gerrymandering. But the legislature followed one week later with a new plan which was signed by the governor on May 20.

MISSISSIPPI

On January 21 the federal court received briefs in Conner, et al v. Johnson. (This suit was filed October 19, 1965 challenging the 1963 reapportionment.)

MISSOURI

During a special session in the fall of 1965, the legislature approved a proposed constitutional amendment to create a commission for reapportioning the house periodically. The amendment was approved by referendum January 14. New house districts were announced by the commission in March. (The senate had been reapportioned by a commission in the fall of 1965.)

NEBRASKA

On January 25 the Nebraska supreme court upheld a 1965 reapportionment act (LB 925) which provided for crossing of county lines in forming districts (Carpenter v. State). Consequently the state withdrew its appeal to the U. S. supreme court on LB 628, a previously invalidated reapportionment act. The federal court followed on February 10 by dismissing litigation regarding the constitutionality of LB 925 in League of Nebraska Municipalities v. Marsh.

NEVADA

On November 13 the legislature in special session passed a reapportionment bill which provided for a 20-member senate and 40-member house. The federal court approved the plan on March 21 (Dungan v. Sawyer).

NEW HAMPSHIRE

Since the legislature had reapportioned both houses during its 1965 regular session, the federal court on December 2 dismissed Levitt v. Stark, et al, which had attacked the 1961 apportionment.

NEW JERSEY

A constitutional convention began work on March 21 to draft new constitutional provisions for apportioning the legislature. It is to report in June, 1966.

NEW MEXICO

The federal court on March 17 ruled that the senate reapportionment act, adopted in a 1966 special session, fell short of the "one-man, one-vote" requirements and issued its own plan establishing 39 senatorial districts (Beauchamp v. Campbell). The court increased the number of districts to 42 in an amended order dated March 31.

NEW YORK

A commission appointed by the legislature reported a reapportionment plan in December, but the legislature failed to act on the issue by the court deadline. On February 23 the New York court of appeals assumed jurisdiction and appointed a five-member commission to prepare apportionment plans for both houses. One month later the court adopted the commission's report providing for a 57-member and 150-member senate and house, respectively.

NORTH CAROLINA

The North Carolina legislature was ordered by the federal court to reapportion no later than January 31, 1966. The court warned that if the legislature failed the court would hand down its own plan in time for the 1966 primaries and elections (Drum, et al v. Seawell, et al, November 30). On January 14 the legislature adjourned a five-day special session after enacting bills to reapportion both houses. The federal district court accepted the plan on February 18 (Drum, et al v. Seawell, et al). And the U. S. supreme court on April 4 reaffirmed the decision.

OHIO

On December 20 arguments were heard before the state court of appeals (10th district) re: King v. Rhodes. Plaintiffs contended that the members of the state apportionment board exceeded their power in reapportioning the Ohio legislature. The U. S. supreme court issued a per curiam opinion February 21 reaffirming its lower court ruling which had adopted the board's reapportionment plan and ordered it into effect on a temporary basis for the 1966 general elections (Nolan v. Rhodes, October, 1965).

OREGON

An original mandamus proceeding commenced in the state supreme court December 9 as plaintiffs petitioned for a redistribution of the representatives from the subdistricts of Multnomah county (Portland). However the court refused granting relief until the legislature had had an opportunity to act (Cook, et al v. McCall, January 26).

PENNSYLVANIA

On February 4 the Pennsylvania state court reapportioned the legislature, reducing the house from 209 to 203 members and leaving the senate at 50 members (Butcher v. Bloom). The federal court has subsequently been asked to review the state supreme court decision. Briefs were filed during April.

RHODE ISLAND

After receiving two extensions to the original January 15 deadline, the 15-member legislative commission on March 28 filed its report. The legislature subsequently enacted separate bills providing for the reapportionment of each chamber. Both bills were vetoed by the governor. However, in each instance, the legislature overruled the vetoes. A general constitutional convention is now at work that will consider a permanent apportionment plan.

SOUTH CAROLINA

The federal court on February 18 upheld the 1961 apportionment of the house, and approved the 1966 reapportionment plan for the senate as an interim measure for purposes of the next election only, and for a limited term of two years (O'Shields v. McNair, et al; Munro v. McNair).

TENNESSEE

On November 15 a three-judge federal court upheld the 1965 Tennessee legislative reapportionment act (Baker v. Carr). However, the chancery court at Nashville held unconstitutional that portion of the 1965 act which divided four urban counties into senatorial subdistricts (Williams v. Carr, March 7). An appeal is now pending with the state supreme court.

TEXAS

Hainsworth v. Martin was vacated as moot by the court of civil appeals on November 15 in view of the enactment of the 1965 Texas apportionment act. On February 2 the federal court upheld the 1965 act (HB 195) as a valid interim plan of apportionment for the 1966 elections, but ordered the eleven flotorial districts revised no later than August 1, 1967 (Kilgarlin v. Martin).

VERMONT

On November 18 the Vermont supreme court denied appeals aimed at blocking the November 23, 1965, special legislative election and at having the 1965 reapportionment acts declared null and void.

WYOMING

On February 28 the U. S. Supreme court reaffirmed a federal court ruling that subdistricting of multi-member districts was not required (Harrison v. Schaefer).

LEGISLATIVE REAPPORTIONMENT

IN THE STATES /1

(November 1965) /2

ALABAMA

In summer, 1962, the federal court, after declaring the existing Alabama legislative apportionment unconstitutional, issued its own temporary plan (Sims v. Frink). On appeal the lower court was sustained by the supreme court in the now famous Reynolds v. Sims.

During 1965 regular session, the house approved a proposal which would have reapportioned the senate. This bill died on the senate calendar. The federal court later made it clear that the bill would have been insufficient inasmuch as it applied only to the upper chamber.

On September 23, the legislature reapportioned both houses during special session. The court on October 2 held the reapportionment of the senate constitutional but substituted its own scheme for the lower house to correct certain population discrepancies of the legislative version.

COLORADO

Lucas v. Forty-Fourth General Assembly (1964) struck down a "little federal" plan that had been approved by the voters in preference to a straight population proposal. Meeting in 1964 special session, the legislature then enacted a plan using a population basis. This statute was challenged because of its provision for subdistricts in multi-member counties. After the state supreme court found for the plaintiffs, the 1965 general assembly passed a new apportionment act eliminating subdistricts and, shortly thereafter, the state supreme court dismissed all litigation.

KENTUCKY

The Kentucky legislature successfully reapportioned itself in 1963 special session. No litigation is pending.

/1 Published by the Council of State Governments.

/2 There has been no change in legislative reapportionment since November 1965 in the states in this listing.

LOUISIANA

Meeting in special session, the legislature reapportioned the house in 1963 after the federal court declared that the existing apportionment violated the 14th Amendment (Daniel v. Davis).

Litigation has been pending since 1963 (Bannister v. Davis) to reapportion the senate; however, plaintiffs have not yet moved to bring the matter to a hearing on merits.

MASSACHUSETTS

After the state supreme court declared existing house apportionment unconstitutional (Fishman v. White), the legislature realigned house districts in October, 1963. But reapportionment will be required again in 1966 following the new state census.

MONTANA

Suit challenging apportionment of the Montana legislature was decided January, 1965 (Herwez v. Thirty-Nineth Legislative Assembly) when the federal court held both houses malapportioned.

However, the court stayed remedial action pending outcome of the 1965 regular session. When the legislature failed to report a new apportionment scheme, the court on August 6 announced its own plan for use in the 1966 elections and declared that its plan would remain in force until the legislature was properly apportioned.

NORTH DAKOTA

As a result of longstanding litigation (Lien v. Sathre and Paulson v. Meier), the legislature reapportioned itself in the 1965 regular session. The act was declared unconstitutional by the federal court which on August 13 ordered into effect its own plan, to become effective with the 1966 elections (Paulson v. Meier).

The court plan is a slight modification of a proposal to the legislature by the Legislative Research Committee.

OKLAHOMA

In Moss v. Burkhart, the federal court ruled the state legislature malapportioned and warned that if a new plan was not devised by March, 1963, the court would implement its own scheme. New measures were adopted by the legislature in 1963, but these also were invalidated by both the federal and state supreme courts. Extensive litigation finally was climaxed July 31, 1964, when the federal court reapportioned both houses on a population basis.

SOUTH DAKOTA

Both houses of the legislature were reapportioned on a population basis in 1961.

UTAH

A federal court ordered the reapportionment of the state legislature in Petuskey v. Clyde. After the legislature enacted new plans during its 1965 regular session, the attorney general filed motion to dismiss all suits pending.

The plan, providing for 23 senators and 69 representatives, was approved by the federal court, excepting one section designed to allow senators elected in 1964 to complete their full terms.

VIRGINIA

The reapportionment undertaken by the 1962 state legislature was declared unconstitutional by a federal court in Mann v. Davis. During a March, 1964 special session, the legislature enacted a new plan which a federal special three-judge court found acceptable, except that two of the house districts, each having one delegate, were ordered combined into a single district with two delegates.

Henrico County appealed to the U.S. supreme court asserting that the effect of being placed in a single district with the City of Richmond, rather than being made an independent district, was to give Richmond a voting power greater than Henrico and deprived the county of representation by its own citizens. On October 26, the High Court upheld the ruling of the special court.

WASHINGTON

In Meyers v. Thigpen the U. S. supreme court affirmed a federal court decision that declared existing apportionment unconstitutional and enjoined further elections thereunder. On February 26, 1965, the legislature reapportioned itself and the federal court dismissed pending litigation.

WEST VIRGINIA

After Robertson v. Hatcher declared existing apportionment unconstitutional, the legislature successfully reapportioned itself during 1964 extraordinary session.

WISCONSIN

Following gubernatorial veto of three separate legislative apportionment acts and legislative failure to conform with an order to reapportion, the state supreme court issued its own scheme on May 14, 1964.

Upon resuming the 1965 regular session on October 4, the legislature considered several bills that would give statutory standing to the court plan. However, none of the proposals advanced to final passage and after one month the legislature adjourned until May 2, 1966.

STATE OF ALASKA

WILLIAM A. EGAN, GOVERNOR

DEPARTMENT OF LAW

OFFICE OF THE ATTORNEY GENERAL / BOX 2178 — JUNEAU 99801

June 1, 1965

Mr. Felix Toner, Chairman
Advisory Reapportionment Board
Juneau, Alaska

Dear Mr. Toner:

You have asked the following questions:

1. May the Board create a multi-member legislative district in the Northwest?

2. May the Board include military personnel in population for apportionment purposes?

I will answer these questions in order.

1. Some residents of the Northwest have proposed that the Board establish a single legislative district in the Northwest, stretching from the Kuskokwim River in the south to Point Barrow in the north. Under the proposed plan a huge multi-member district would replace the single-member districts now used in the Northwest. All candidates for both the House and Senate would be required to run at large.

You have indicated that the Board is considering retaining multi-member districts in Anchorage and Fairbanks. The Board has decided that it would be practically impossible to divide these urban areas into single-member districts. The 1960 census gives population figures for enumeration districts which have no relationship in size or shape to apportionment of the area into single-member districts of approximately equal population. Also, it is obvious that last year's earthquake displaced large numbers of people from the major population centers of Anchorage. Since the Board must use 1960 census figures, it would only compound the inequities resulting from use of census figures rendered obsolete by the earthquake to attempt to establish single-member districts in Anchorage. We understand that for these reasons, the Board intends to retain multi-member districts in Anchorage and Fairbanks.

With the census data available it is possible, however, for the Board to establish single-member districts elsewhere in the State. Although the United States Supreme Court, in Forston v. Dorsey, 379 U.S. 433 (1965), upheld use of some multi-member districts in Georgia, the Court warned:

> "It might well be that, designedly or otherwise, a multi-member constituency apportionment scheme, under the circumstances of a particular case, would operate to minimize or cancel out the voting strength of racial or political elements of the voting population. When this is demonstrated, it will be time enough to consider whether the system still passes constitutional muster."

If the Board determines that a vast multi-member district in the Northwest would "minimize or cancel out the voting strength of racial or political elements of the voting population," it would be unconstitutional for the Board to create such a district.

A multi-member district in the Northwest might minimize or cancel out voting strength in several ways. For example, in a vast, sparsely-settled Northwest legislative district voters in several population centers might be able to elect most, if not all, of the entire Northwest's legislators. These voters would minimize or cancel out the voting strength of entire areas containing small, widely-scattered villages which could elect their own representatives if the Northwest were divided into single-member districts. In addition, voters in population centers located in one part of the district, which would stretch almost 800 air miles from the Kuskokwim to Point Barrow, might combine to prevent voters in other parts of the district from electing their unanimous choice. If voting strength of a minority of voters were minimized or cancelled out, vast areas of the Northwest would be without any effective representation in the legislature. It would be unconstitutional for the Board to create a multi-member district in the Northwest which would give rise to this type of discrimination.

In retaining multi-member districts in Anchorage and Fairbanks, the Board runs a risk that political or racial minorities in these areas will argue that use of multi-member districts minimizes or cancels out their voting strength. It is clear, however, that the Board plans to retain multi-member

districts in these urban areas only because of the practical impossibility of dividing the cities into single-member districts and, in the case of Anchorage, because of the inequities that would result from following pre-earthquake census figures. Since the Board has no reason to believe that use of multi-member districts in these two relatively compact urban areas would submerge political or racial minorities, it is improbable that use of these multi-member districts would be held unconstitutional.

2. Your second question is whether the Board may include military personnel in population for apportionment purposes. The Alaska Constitution, in Article VI, Section 3, states:

> "Reapportionment shall be based upon civilian population within each election district as reported by the census."

This clearly provides that military personnel are not to be included in population for apportionment purposes. Unless the United States Supreme Court declares this provision unconstitutional, it must be followed by the Board.

The United States Supreme Court has not held that military personnel must be included as part of the population base for apportionment purposes. It has not yet been asked to settle this specific issue. In Davis v. Mann, 377 U.S. 678 (1964), the Court discounted Virginia's argument that certain areas were not in fact under-represented because these areas contained large numbers of military personnel who were not domiciled in Virginia and did not vote there. The Court purported to answer this argument by stating that "discrimination against a class of individuals, merely because of the nature of their employment, without more being shown, is constitutionally impermissible." Whatever this statement means, it does not invalidate Alaska's constitutional provision excluding military personnel from the population base for apportionment purposes. Until the Supreme Court decides in explicit terms that such a provision is unconstitutional, the Board must follow Alaska's Constitution.

This was the approach taken by a federal district court in Holt v. Richardson, 33 U.S. Law Week 2443 (Feb. 17, 1965). Under Hawaii's Constitution, apportionment is based on the number of registered voters in the last general election. Since many military personnel are not Hawaii residents and do not vote there,

they are not counted for apportionment purposes. Plaintiffs argued that apportionment must be based on total population, including military personnel. The federal district court refused to invalidate the apportionment of Hawaii's House of Representatives because registered voters, and not total population, were used as a basis for apportionment. The Court stated its reason for holding that registered voters were a valid basis for representation:

> "Hawaii has become the United States' military bastion for the entire Pacific and military population in the State fluctuates violently as the Asiatic spots of trouble arise and disappear. If total population were to be the only acceptable criteria upon which legislative representation could be based, in Hawaii, grossly absurd and disastrous results would flow from a blind adherence to the 'elusive "one-person-one-vote"aphorism.' (Mr. Justice Harlan in Forston v. Tombs, 33 U.S. Law Week 4172)"

Military personnel accounted for about 10 percent of Hawaii's total population in 1960. Military personnel account for about 15 percent of Alaska's population. Alaska can point to the same inequities as does Hawaii if military personnel are included in population for apportionment purposes.

Even if the Board were to include military personnel who are Alaska residents in the population base, this would not affect representation under any possible apportionment plan. The military has informed us that just over 100 military personnel stationed in Alaska consider themselves Alaska residents. There is no method of determining how many military personnel vote in Alaska. However, since voting is one factor in determining residence, it is likely that military personnel who claim residence in states other than Alaska do not vote in Alaska. Most vote by absentee ballot in the state where they claim residence and for that reason, in many cases, they will be counted for apportionment purposes.

Until the United States Supreme Court holds that a constitutional provision excluding military personnel from

population for apportionment purposes is invalid, the Board must follow Alaska's provision and reapportion on the basis of civilian population only.

Very truly yours,

WARREN C. COLVER
ATTORNEY GENERAL

WCC/sr6

HEADQUARTERS, ALASKAN COMMAND
APO SEATTLE 98742

% PA

16 April 1965

Mr. Felix J. Toner, Chairman
Reapportionment Advisory Board
P.O. Box 2534
Juneau, Alaska

Dear Mr. Toner:

Reference is made to my letter of April 1st and your letter of March 29th concerning the matter of military residents in Alaska.

A survey of military personnel records indicates that there are 111 Alaskan residents in the military forces stationed in Alaska. I must point out, however, that this cannot be considered an absolutely accurate figure, as military personnel records do not contain an entry showing what can be called a "legal residence" for voting purposes. The record shows only the place the person prefers to consider as his permanent home.

The Alaska resident personnel are scattered in several places with the greater number in the Anchorage area. It appears, however, the total is so small that it would have no effect on reapportionment action.

Sincerely,

HARRY A. WAKEFIELD
Lt Col, USAF
Chief, Public Affairs

I. INTRODUCTION

Article VI of the Alaska Constitution requires that reapportionment of election districts take place following each decennial census. The Governor is responsible for reapportionment with the assistance of a five-member advisory board.

The board must submit a plan for reapportionment and redistricting to the Governor within 90 days following receipt of official census data. The Governor has an additional 90 days to approve or modify the plan and issue a proclamation of reapportionment and redistricting.

A. COMPOSITION OF THE BOARD

Article VI, Section 8 of the Alaska Constitution provides for appointment of a five-member reapportionment board to act in an advisory capacity to the Governor. None of the members is to be a public employee or official. Appointments are to be made without regard to political affiliation. One member each is to be appointed from the Southeastern, Southcentral, Central and Northwestern Senate Districts, the original geographic senate districts at the time of statehood. In September of 1979 Governor Hammond appointed the following individuals to serve on the Reapportionment Board: Kent Dawson, Juneau; Cliff Groh, Anchorage; John Holm, Fairbanks; Byron Mallott, Yakutat; and John Schaeffer, Kotzebue. During their organizational meeting in December 1979, Byron Mallott was selected as Board chairman and served until his resignation in August of 1980. In

September 1980, Governor Hammond appointed Avrum Gross of Juneau to the Board to replace Mallot. John Schaeffer was elected chairman during the Board meeting on October 15, 1981 and Kent Dawson was elected vice chairman.

B. STAFF AND TECHNICAL REQUIREMENTS

The Board secured the services of Karen Ward as full-time Executive Director to be responsible for all administrative and fiscal details for the Board. The Executive Director arranged meetings and prepared and maintained records for all meetings, hearings, and other business conducted by the Board. Additionally, the Executive Director developed proposals and monitored the work of consultants and other personnel retained by the Board. Suzanne Lowell was retained to provide clerical and administrative support on a part-time basis over the course of the project. The Board also entered into a Reimbursable Services Agreement (RSA) with the Department of Law to provide legal counsel on a full-time basis. Assistant Attorney General Thomas M. Jahnke served as legal counsel to the Board throughout its existence.

The University of Alaska, Institute of Social and Economic Research (ISER) was retained to assist the Board in its use of census data and to supplement that data with additional information on non-residents. The Institute presented a report prepared by Dr. John A. Kruse. Dr. Kruse's findings are discussed in detail in Section III of this report.

R & M Consultants, Inc., was selected to prepare the election district maps and corresponding legal boundary descriptions for the Board.

Additionally, demographic and statistical assistance was provided by the Department of Labor, Research and Analysis Section. Stephen Harrison assisted in developing pre-census population estimates by election district. State Demographer Dave Swanson assisted in organizing the census data for use by the Board. The Research and Analysis Section also handled all requests for population data regarding the 1980 census.

John Gliva of the Department of Community and Regional Affairs, Division of Community Planning, provided preliminary cartographic services. A complete set of Community and Regional Affairs mylars with incorporated city, regional corporation, Regional Education Attendance Area, and borough boundaries was made available to the Board and provided considerable assistance in developing preliminary proposals.

C. BUDGET

The Governor's Contingency Fund was the source of $50,000 for the immediate activities of the Board in January of 1980. The Legislature approved a special appropriation of $204,800 for Fiscal Year 1980. $50,000 was returned to the Governor's Contingency Fund. $47,025.90 lapsed at the end of FY 80. The Reapportionment Board was funded $314,200 for FY 81.

II. PUBLIC PARTICIPATION

The Reapportionment Board conducted 20 public hearings across the state beginning in October of 1980 and ending in February, 1981. A schedule of the dates and locations of the hearings is included in Table I.

The Board scheduled a week out of each month, over a period of four months, for public hearings. In almost every case, at least two board members were present to conduct the hearing. Weather conditions during the December hearing schedule grounded several of the board members in different locations. John Holm conducted the Ketchikan and Wrangell hearings, and Avrum Gross conducted the Sitka hearing. The Petersburg hearing for December was cancelled due to weather and rescheduled in February.

Advertising for the hearings included newspaper display ads that were typeset and camera-ready, and sent to the newspapers in the specific areas for each hearing. Thirty second public service announcements were recorded with the assistance of the Broadcast Information Office in the Office of the Governor, Division of Communications, and sent via telephone to the local radio stations. Formal press releases were issued prior to each set of hearings with the dates and locations of the hearings. Additionally, a televised interview with Board Executive Director Karen [illegible] was conducted prior to each round of hearings and sent via satellite to television stations across the state. Individual television and radio stations and newspapers

conducted interviews which resulted in increased advertising for the hearings.

Attendance at the hearings varied in each location. The time of day during which the hearing was held and conflicts with other activities may have contributed to a lower turnout at some of the meetings.

Many people expressed the sentiment that, prior to receipt of census data and absent any formal action by the Board, there was little to contribute regarding reapportionment during the public hearings. However, the Board had several major policy decisions to make concerning reapportionment and how they would proceed in developing their recommendations upon receiving census data. The Board sought public comment on a proposal to create 40 single-member house districts as well as arguments supporting multi-member districts. Various alternatives for apportioning the state senate were discussed during the hearings, including single-member districts and electing senators statewide. Local input and suggestions for either expanding current election district boundaries, if need be, or carving out portions of election districts to join with adjacent underpopulated districts were also sought during the meetings.

The Alaska Constitution allows 90 days from receipt of census data to prepare the reapportionment plan and submit it to the Governor. That period did not allow adequate time for the Board to conduct a second set of public hearings. The Board received official census data on

March 12, 1981. Organizing the census data, applying the results of the data obtained by ISER and preparing the maps for the Board to utilize in developing the plan took approximately 30 of the allotted 90 days.

The Board released a draft plan for house districts on May 5. Copies of the draft plan were supplied to each legislative information office, regional governor's and election offices, and mailed to each of the several hundred people who attended the public hearings. A statewide teleconference was scheduled for May 12, 1981 for public comment and testimony. The teleconference tied in 23 communities and approximately 60 people testified during the three-hour conference. Additionally, the Board received numerous telephone calls, telegrams and letters.

As a result of testimony received regarding the first proposal, the Board made several revisions and called for written public comment. The Board met on May 22, 1981 to finalize their recommendations and instructed the staff to prepare the text and corresponding maps to submit to the Governor.

III. POPULATION BASE AND IDEAL DISTRICT SIZE

A. THE CENSUS POPULATION

The United States Census of 1980 reported a state population of 400,481. That total may include a significant number of persons who do not consider themselves to be residents or domiciliaries of Alaska, including aliens, oil

production base camp workers, lumber camp workers, workers at fish processing facilities, college students and military personnel and their dependents.1/

B. ADJUSTMENT OF CENSUS FIGURES

The United States Supreme Court has held that

> [T]he Equal Protection Clause does not require the states to use total population figures derived from the federal census as the standard by which this substantial population equivalency is to be measured ... Neither in Reynolds v. Sims nor in any other decision has this Court suggested that the states are required to include aliens, transients, short-term or temporary residents, or persons denied the vote for conviction of a crime, in the apportionment base by which their legislators are distributed and against which compliance with the Equal Protection Clause is to be measured.

Burns v. Richardson, 384 U.S. 73, 16 L. Ed 2d 376, 390-391 (1966). With this principle in mind, Dr. John A. Kruse of the Institute of Social and Economic Research (ISER) of the University of Alaska inquired into the census treatment of the groups enumerated in III-A above.2/

In communication with the Bureau of the Census prior to the census date, Dr. Kruse learned that the census bureau had developed a special procedure for enumerating oil production base camps which allowed the census bureau to allocate the workers back to their true residence in Alaska or elsewhere.3/

There was extensive consideration by Dr. Kruse of floating and on-shore fish processing facilities.4/ Floating processors were enumerated by the census bureau in January through March 1980, at which time the non-resident population would have been at its lowest. On-shore processors were

enumerated ahead of the peak employment period, but there was a chance that some non-residents were included. Dr. Kruse noted the very short time-frame in which ISER would have to work, the variations in residency patterns from company to company, uncertainty as to how the residency of persons would be recorded in the census, and the likely resistance of workers to the efforts of ISER. Based on these factors, the Board decided to forego further inquiry into the residency of workers at fish processing facilities.5/

All but one of 88 companies active in the timber industry responded to ISER inquiries. Their responses indicated 630 non-resident lumber camp employees or dependents out of a total of 1,442. The Board decided not to undertake a further inquiry given the large number of camp locations and the relatively small number of people in each affected region.6/

Dr. Kruse recommended that there be no special study of college students to determine their residency characteristics. His reasons included the extremely low proportion of students (10%) paying non-resident tuition rates, indicating a relatively low non-residency factor, and their small number compared to the population of the surrounding communities.7/ The Board concurred.

The alien population in Alaska, based upon figures provided by the Immigration and Naturalization Service, is extremely small. Though relatively concentrated in a dozen election districts, their proportion does not exceed 2.9% in

any one area of concentration. The decision was made not to undertake a special study.8/

Felons and persons who are mentally incompetent were also considered. Their numbers were so small that no effort was made to eliminate any portion from the population base for reapportionment.

The only segment of the population thought to contain large and readily identifiable concentrations of non-residents is military personnel and their dependents. Historically, this group has been concentrated in great numbers in a handful of communities. Their residency factor has been thought to be very low.9/

The Alaska Supreme Court has approved the principle that non-resident military personnel may constitutionally be excluded from the reapportionment population base:

> [W]hile the clause of the Alaska Constitution seeking to exclude military as a class is unconstitutional, that is not to say that some military cannot be excluded as a permissible device for limiting the impact of transients and non-residents on legislative districting.

Egan v. Hammond, 502 P. 2d 586, 869 (Ak. 1972). More to the point, the court observed:

> We hold that it was reasonable for the Board to exclude some proportion of military personnel not merely because of their transience, but because a significant number of Alaska-based military personnel exercise an option to be non-Alaskans, despite their physical presence here. This phenomenon is well demonstrated by the minuscule voter registration on military enclaves. It is thus not offensive to notions of equal protections to exclude from the population base even military personnel who have lived in Alaska for substantial

> periods of time, so long as those people have exercised their option to remain residents and domiciliaries of other states.

Id. at 872-873. 10/

Dr. Kruse determined that there are seven military installations with populations large enough to affect the reapportionment process.11/ These installations are Elmendorf Air Force Base, Eielson Air Force Base, Fort Wainwright, Fort Richardson, Fort Greely, Adak Naval Base, and the Kodiak Coast Guard Station.

Because military records are not updated consistently, they were deemed unreliable. A full census of military personnel and their dependents was rejected both because of cost and because more reliable results can actually be obtained from a survey of a scientific sample. Thus, it was decided to proceed with a survey of military personnel and dependents, both on- and off-base.

The survey sought to answer two questions: First, did the respondent consider Alaska to be his or her nome; second, was the respondent registered to vote in Alaska. If the answer to either of these inquiries was "yes", the respondent was deemed to be a resident; put another way, a person was not deemed to be a non-resident unless he or she neither voted nor considered Alaska home.12/

Separate non-residency factors were obtained for on-base servicemembers, on-base dependents, off-base servicemembers and off-base dependents. The off-base results were achieved by use of address lists provided by the military

branches which allowed Dr. Kruse to determine, with precision, how many servicemembers and dependents live in each off-base enumeration district near a given installation.

Table II shows the numbers of non-resident servicemembers and dependents deducted from the population of each base and the total number of non-resident servicemembers and dependents deducted from the off-base areas adjoining the installations.

C. IDEAL DISTRICT POPULATIONS

The total non-resident servicemember and dependent count is 31,363.8. When that number is subtracted from the census population of 400,481, an adjusted state population of 369,117.2 results.

The ideal house district population is the quotient of the adjusted population divided by the number of house seats to be apportioned, i.e. 40. 13/ That quotient is 9,228.

The ideal senate district population is the quotient of the adjusted population divided by the number of senate seats to be apportioned, i.e. 20. 14/ That quotient is 18,456.

IV. THE ELECTION DISTRICTS

A. GUIDELINES

Federal and state constitutional provisions prescribe two basic rules to be followed by the Board in designing new election districts. First,

> The Equal Protection Clause requires that a state make an honest and good faith effort to construct districts, in both houses of its legislature, as nearly of equal population as is practicable.

Reynolds v. Sims, 377 U.S. 533, 12 L. Ed 2d 506, 536 (1964) (emphasis added).

Second,

> Each new district so created shall be formed of contiguous and compact territory containing as nearly as practicable a relatively integrated socio-economic area.

Alaska Constitution, Article VI, § 6.

The population parameter first mentioned is elucidated in Groh v. Egan:

> We conclude that in the absence of a showing that the manner of reapportioning the state was improperly motivated or had an impermissible effect, [combined] deviations of up to ten percent require no showing of justification. The state, however, has the burden of showing that [combined] deviations in excess of ten percent are "based on legitimate considerations incident to the effectuation of a rational state policy."

526 P.2d at 877. Thus, it was the Board's goal to fashion districts with combined deviations or variances from the population ideal of not more than ten percent. This was accomplished: the most overrepresented and underpopulated house district is Mid-Town Anchorage at 4.1737 percent; the most underrepresented and overpopulated house district is Juneau at 5.8084 percent; their combined variance is 9.9821 percent. Table III contains a statistical summary of the proposed house districts.

Notwithstanding the Board's success on the paramount population front, the district configurations also represent

contiguous, compact, relatively integrated socio-economic areas. The Board's conception of these terms follows.

1. Compactness and Contiguity

"Compact" and "contiguous" are relative terms embodying imprecise concepts. In the Board's view, the requirements aim to serve at least two goals. First, they are intended to foster the inclusion in a single district of people with substantially like backgrounds and concerns. Such people are typically found in a single region or area. Second, the standards introduce an efficiency into representative government by requiring a closer grouping of people to form a constituency. Such a grouping facilitates communication among constituents and between constituents and legislators.

To implement these concepts, the Board decided to fashion single-member house and senate districts throughout the state except in five relatively populous and socio-economically homogeneous areas.

Still, there is, in some features of the plan, an undeniable tension between the geographical aspect of the compactness requirement and its socio-economic aspect. Nowhere is this more apparent than in the Cordova-Inside Passage District. It is indisputable that Cordova is physically closer to Valdez and Seward than it is to the balance of House District 2. However, it is also indisputable that, from a socio-economic standpoint, Cordova has less in common with the predominantly commercialized and industrialized

economies of Seward and Valdez than with the fishing communities of the Inside Passage. Thus, to honor the form of the compactness command would debase its substance by combining socio-economically less compatible communities.

2. Socio-Economic Homogeneity

The concept of socio-economic homogeniety has a number of interrelated components, including ethnic composition, economic base, governmental and neighborhood boundaries, community size, transportation and communication links, and other miscellaneous considerations. In the task of district composition, a balance often had to be struck between competing socio-economic factors. In a given case one factor, e.g. economic base, might indicate the inclusion of a population group in district X. However, its ethnic composition might indicate inclusion in district Y. This balancing process was the most difficult part of the Board's task.

A primary concern of the Board, especially in northern and western Alaska was the ethnic composition of the districts. Divisions between the Athabascan and Eskimo peoples go back centuries and profoundly influence voting patterns today. Eskimos note bright-line distinctions between Inupiat Eskimos in the north and Yupik Eskimos in the south. Unfortunately, unbending observance of these divisions would have produced enormous population variances and severed other current and substantial cross-cultural socio-economic ties. It was therefore impossible to conform

district lines to the distribution of each of those cultural and social groups. Still, substantial respect for such divisions is apparent in the district boundaries between the North Slope-Kotzebue and Norton Sound districts on the one hand, and the Interior Rivers District on the other. Ethnic composition was a tertiary consideration in the design of the Inside Passage-Cordova District, after economic base and community size.

Economic base was a major factor in the composition of many districts. A shared economic base was a primary or secondary consideration in House Districts 1, 2 and 3 (fishing, timber), 4 (government), 5 (energy, fishing), 6 (shipping, recreation), 16 (agriculture), 17 (transportation, subsistence), 24 (subsistence), 26 and 27 (fishing).

A distinct effort was made to observe the Alaska Native Regional Corporation boundaries and the socio-economic divisions they embody, but there are a number of significant deviations therefrom, especially in the relatively populous Lower Yukon and Lower Kuskokwim areas. Respect for political subdivision boundaries is also apparent throughout the state. A deliberate and largely successful effort was made to respect the boundaries of the following political subdivisions: the Ketchikan Gateway Borough, the City and Borough of Juneau, the Haines Borough, the City and Borough of Sitka, the Kenai Peninsula Borough, the Municipality of Anchorage, the Matanuska-Susitna Borough, the Fairbanks North Star Borough, the North Slope Borough, the Bristol Bay

Borough and the Kodiak Island Borough. In Anchorage, the Board endeavored to follow the formal neighborhood council boundaries, with considerable success. Substantial strides were made toward the goal of eliminating large, multi-member districts in Anchorage and Fairbanks while preserving the integrity of the cities' neighborhoods. In Anchorage, none of the long-established neighborhoods has seen any substantial portion of its citizenry placed in a different district. It is the Board's hope that, in future decades, as the newer areas coalesce into readily identifiable neighborhoods, their geographic and social integrity will be respected in the reapportionment process.

Transportation and communication links explain many of the decisions made at the edges of districts. For example, these were important considerations in placing Platinum and Goodnews Bay in the Lower Kuskokwim district while Twin Hills and Togiak went with the Bristol Bay district. With the exception of the southern reaches of the Interior Rivers District and the southern third of the Norton Sound District, the villages on the edges of each bush district are oriented toward a transportation and communication center <u>within</u> the district.

There are a number of other miscellaneous considerations which influenced the Board, some of which are merely shorthand expressions for a combination of the socio-economic factors already discussed. One such expression is "lifestyle". It is illustrated more or less clearly in virtually every

district, with some districts reflecting an urban lifestyle, other districts representing a suburban lifestyle and still others representing rural and/or subsistence lifestyles. The senate district including South Anchorage, the Kenai Peninsula and the south coast constitutes a balance of rural and suburban interests in a region that is experiencing increasing commercialization and industrialization.

The Ketchikan-Wrangell-Petersburg district depicts the resolution of two legitimate but conflicting considerations: the logic of keeping all of the Ketchikan Gateway Borough together in one district; and the logic of not submerging the interests of Wrangell and Petersburg by including them in a "metropolitan" district with the much larger Ketchikan. In the case of House District 1, inclusion of Wrangell and Petersburg with Ketchikan is justified by the considerable identity and interdependence of their economies and the substantial ties between their citizens. Were districts drawn separating Ketchikan from Wrangell and Petersburg, it would also be necessary to submerge scores of small Indian villages in two districts dominated by the three larger white communities. This would do substantially more violence to the social interests of the Indian communities than District 1 does to the interests of Wrangell and Petersburg.

3. Single Member vs. Multi-member Districts

The Board decided at an early date to endeavor to fashion forty single-member house districts. Testimony in all communities save Fairbanks clearly favored the con-

Single Member District

cept.15/ The case is especially compelling in the bush areas where even single-member house districts are larger than most of our sister states. Thus, the Board adhered steadfastly to the single-member concept in bush Alaska.16/

In six areas of the state, however, two-member districts were fashioned. In Ketchikan, a two-member district was designed because of the overpopulation of the Ketchikan Gateway Borough. In order to create single-member districts, a portion of urban Ketchikan would have had to be carved out and joined with either Wrangell and Petersburg or a collection of smaller communities to the west and north of Ketchikan.

In Juneau a two-member district was utilized for two reasons: First, a two-member district would allow the preservation of the entire City and Borough of Juneau in a single district. Second, the population of Juneau constitutes a virtually indivisible unit that, with a government service economy, is unique in a region otherwise dominated by fishing and timber interests.

The Kenai Peninsula Borough is populous enough for two and three-quarters seats. If single-member seats were utilized, as in the Board staff's first proposal, the borough would be divided in three.17/ By use of a two-member house district, the borough is divided only in two. Even that split is ameliorated by the combination of the Kenai Peninsula, South Coast and South Anchorage districts in a two-member senate district. With the exception of the

Kachemak Bay communities, the senate district encompasses an area of growing urbanization, commercialization and industrialization.

A two-member district was utilized in the Matanuska-Susitna Borough area to keep the borough intact. The population approximates the ideal for a two-member house district.

The Fairbanks North Star Borough includes one two-member house district in downtown Fairbanks and three single-member house districts covering the outlying areas.

In Anchorage there are eight two-member house districts. These configurations accomplish two things: First, they allow the inclusion in a single district of entire neighborhoods which would have to be split if single-member house districts were the rule. Second, they work less hardship on incumbents and constituents who have, since the 1974 reapportionment, been joined in districts with broader interests in Anchorage. This plan is, in effect, a step toward single-member districts, which goal may be reached in the 1991 reapportionment plan if the intervening decade of experience recommends the concept.

Single Member Districts

In the rural areas of Alaska the Board combined two house districts to make one single-member senate district. In three areas, Fairbanks, Anchorage, and the Kenai Peninsula, the Board combined four house districts to make two-member senate districts with designated seats. Table IV contains a statistical summary of the proposed senate districts.

4. Length of Senate Terms

Realignment of senate districts in this plan creates some districts with two or more incumbents and some districts with no incumbents. The Board believes that that situation must be corrected at the next election in 1982. In order to accomplish this, candidates must run to represent the vacant districts. However, because the constitution limits the size of the senate to 20, for every vacant district that elects a senator, another district with two or more incumbents must give up a senator. Some of those senators are serving terms that will not expire until January 1985.

Another problem is the need to preserve the staggering of senate seats whereby only half of the seats are filled at each election.18/ Thus, for the 1982 elections in which more than ten senate seats may be filled, the Board must decide which seats will have two-year terms and which will have four-year terms.

Truncation of some senators' terms is unavoidable. The Board recommends that truncation occur only in two situations: First, where approximately one-third or more of an incumbent senator's constituency has changed, tuncation may occur. That is, if approximately one-third of the population of an incumbent's new district did not have an opportunity to vote on the incumbent in 1980, that incumbent's term may be truncated in 1982. Additionally, if approximately one-third of the population which had the

opportunity to vote on the incumbent in 1980 is now in a different district, that incumbent's term may be truncated. Second, if it is the case that, notwithstanding the numerical standard just articulated, an incumbent now represents a district in which the method of selecting senators has changed, that incumbent's term may be truncated. For example, if an incumbent had been elected in an at-large, multi-member district in 1980, and were now in a two-member district with designated seats, his or her term could be truncated.

In each of the six two-member senate districts, the seat designated "A" will be a two-year seat for the 1982 elections; the seat designated "B" will be a four-year seat. For the remaining eight single-member senate districts, length of terms commencing in 1982 was decided by drawing lots:

Senate District	Term
A	four-year
B	two-year
C	four-year
I	two-year
J	four-year
L	four-year
M	two-year
N	two-year

Beginning in 1984, senate elections should follow the constitutionally prescribed scheme wherein ten seats are filled at each election for four-year terms.

B. DISTRICT CONFIGURATIONS AND POPULATIONS

1. Ketchikan-Wrangell-Petersburg

District 1 is an area within a line proceeding from Dixon Entrance in a northerly direction up Clarence Strait, passing west of Zarembo Island, northerly up Duncan Canal, across Frederick Sound to a point just north and west of Cape Fanshaw, then northeasterly to the Canadian border and southerly along the Canadian border to the point of beginning at Dixon Entrance. The district includes the Ketchikan Gateway Borough, Wrangell, Petersburg, Metlakata, Hyder, Saxman, Meyers Chuck and Kupreanof. It has a population of 17,940 and a variance of -2.8 percent. Candidates will run for either of two designated seats in the house and one senate seat.

2. Inside Passage-Cordova

District 2 is composed of that portion of Southeast Alaska between Dixon Entrance and Port Gravina on Prince William Sound that is not contained in Districts 1, 3 and 4. Included within its boundaries are the communities of Cordova, Yakutat, Haines, Skagway, Klukwan, Gustavus, Angoon, Kake, Thorne Bay, Klawock, Craig and Hydaburg. The district has a population of 9,301 and a variance of +.8 percent. One house member will be elected from the district. With District 3, it will elect one senator.

3. Baranof-Chichagof

District 3 consists of Baranof Island and Chichagof Island. The communities on the islands include Sitka,

Pelican, Hoonah, Tenakee Springs and Port Alexander. The district has a population of 9,266 and variance of +.4 percent. It will elect one house member and, with District 2, one senator.

4. Juneau

District 4 boundaries coincide with those of the City and Borough of Juneau. The district has a population of 19,528 and a variance of +5.8084 percent. It will elect two house members to designated seats and one senator.

5. Kenai-Cook Inlet

District 5 includes all of the coastal areas on the east and west sides of Cook Inlet that lie south and west of Nikishka. Sterling is also within the district. The district has a population of 19,068 and a variance of +3.3 percent. Candidates will run for either of two designated seats in the house. Districts 5, 6 and 7 will elect two senators to designated seats.

6. North Kenai-South Coast

District 6 includes the northern quarter of the Kenai Peninsula, Nikishka, Hope, Cooper Landing, Moose Pass, Seward, Whittier and Valdez. It has a population of 9,267 and a variance of +.4 percent. It will elect one house member and, with Districts 5 and 7, two senators to designated seats.

7. South Anchorage

District 7 contains the suburban southern and southeastern reaches of the Municipality of Anchorage,

including the community council areas of Eldon, Old Seward/ Oceanview, Rabbit Creek, Turnagain Arm and Girdwood Valley. Its northern boundary proceeds east from the inlet on Klatt Road to the New Seward Highway, southerly on the New Seward Highway to DeArmoun Road, east on DeArmoun Road to Morgaard Road, easterly on Morgarrd Road to DeArmoun Road, easterly and southerly on Rabbit Creek. The district has a population of 8,853.2 and a variance of -4.1 percent. It will elect one house member and, with Districts 5 and 6, two senators to designated seats.

8. Hillside

District 8 is bounded on the south by Rabbit Creek, Morgaard Road and DeArmoun Road and on the west by the Seward Highway. At Tudor Road the boundary proceeds east to Bragaw Road where it turns south. This district includes the neighborhood council areas of Campbell Park, Abbott Loop, Huffman-O'Malley, Mid-Hillside, Hillside East and Glen Alps. The district population is 18,202.1 and its variance is -1.4 percent. It will elect two house members to designated seats and, with District 9, two senators to designated seats.

9. Sand Lake

District 9 is bounded by a line beginning at the inlet and proceeding east on Klatt Road. The line proceeds north on the New Seward Highway to Dimond Boulevard where it turns west. At Minnesota Drive the line turns north and proceeds to International Airport Road where it turns west

and extends to the inlet. The district includes the community council areas of Sand Lake and Klatt Road. Its population is 18,004.7 and its variance is -2.4 percent. It will elect two house members to designated seats and, with District 8, two senators to designated seats.

10. Mid-Town

District 10 is bounded by a line beginning at the intersection of the Seward Highway and Dimond Boulevard. The line proceeds west to Minnesota Drive, north to International Airport Road, east to the Alaska Railroad, north by northwest along the railroad right of way to Tudor Road, east to Arctic Boulevard, north to 36th Avenue, east on 36th Avenue to C Street, north to Northern Lights Boulevard, west to Spenard Road, north to W. 25th Street, west to Minnesota Drive, north to Chester Creek, easterly to Lake Otis Road, south to Tudor Road, west to the New Seward Highway and south to the point of beginning. The district includes the community council areas of North Star, Rogers Park, Tudor, and parts of Spenard and Taku-Campbell. It has a population of 17,685.7 and a variance of -4.1737 percent. It will elect two house members to designated seats and, with District 11, two senators to designated seats.

11. West Side

District 11 is bounded by the boundary of District 10 on the east, International Airport Road on the south, and the inlet and Chester Creek on the north. It includes the community council area of Turnagain and the major part of

the Spenard area. It has a population of 17,957.8 and a variance of -2.7 percent. It will elect two house members to designated seats and, with District 10, two senators to designated seats.

12. Downtown

District 12 is bounded by Chester Creek on the south, Bragaw Road on the east, Commercial Drive and the Elmendorf reservation boundary on the north and the inlet on the west. Included are the community council areas of Government Hill, Downtown, Penland Park and South Addition, and parts of the areas of Fairview, North Mountain View and Airport Heights. The district has a population of 18,170 and a variance of -1.5%. It will elect two house members to designated seats and, with District 13, two senators to designated seats.

13. Mountain View-University

District 13 is bounded by a line beginning at the intersection of Tudor Road and Lake Otis Road proceeding east to Baxter Road, north to Northern Lights Boulevard, west to Boniface Road, north to the Glenn Highway, west on the Glenn Highway, northerly and westerly around North Mountain View along the Elmendorf military reservation boundary, south to the Glenn Highway, east to Bragaw Road, south to Chester Creek, westerly to Lake Otis Road and south to the point of beginning. The district includes the community council areas of Russian Jack Park and University, and parts of the North Mountain View and Airport Heights

areas. It has a population of 18,907.5 and a variance of +2.4 percent. It will elect two house members to designated seats and, with District 12, two senators to designated seats.

14. Muldoon

District 14 includes Stuckagain Heights and the community council areas of Northeast and Scenic Park. That part of the Northeast area bounded by Boniface Road, DeBarr Road, Turpin Street and the Glenn Highway is included in District 15. District 14 has a population of 19,031.5 and a variance of +3.1 percent. It will elect two house members to designated seats and, with District 15, two senators to designated seats.

15. Chugiak-Eagle River-Bases

District 15 includes the community council areas of Eklutna Valley, Chugiak, Birchwood and Eagle River Valley. Also included are Fort Richardson, Elmendorf Air Force Base and that area of the Northeast community council area bounded by Boniface Road, DeBarr Road, Turpin Street and the Glenn Highway. The district has a population of 18,560.7 and a variance of +.56 percent. It will elect two house members to designated seats and, with District 14, two senators to designated seats.

16. Matanuska-Susitna

District 16 is comprised of the Matanuska-Susitna Borough, including the communities of Talkeetna, Willow, Houston, Big Lake, Wasilla, Bodenburg Butte, Palmer, Sutton,

Peter's Creek, Montana and Chickaloon. It has a population of 17,724.6 and a variance of -4.0 percent. It will elect two house members to designated seats and one senator.

17. Interior Highways

District 17 is made up of those areas outside of the Matanuska-Susitna Borough and the Fairbanks North Star Borough which are along the Glenn, Parks, Richardson and Alaska Highways. Included are Paxson, Gulkana, Glennallen, Copper Center, Tonsina, Tazlina, McCarthy, Eagle, Delta, Fort Greely, Tanacross, Tok, Tetlin, Northway, Nenana, Anderson, Healy and Cantwell. The district has a population of 9,111.9 and a variance of -1.2 percent. It will elect one house member and, with District 18, one senator.

18. Southeast North Star Borough

District 18 encompasses the southeast section of the Fairbanks North Star Borough. It includes North Pole, Eielson Air Force Base, Salcha and Harding Lake. Its population is 9,300, with a variance of +.7 percent. It will elect one house member and, with District 17, one senator.

19. Fort Wainwright-Outer Fairbanks

District 19 includes Livengood, Ester, Goldstream Road, the Steese Highway, the eastern half of Farmers Loop Road, Fort Wainwright, Chena Hot Springs Road, Circle, Central and Circle Hot Springs. It has a population of 8,934.3 and a variance of -3.2 percent. It will elect one house member and, with Districts 20 and 21, two senators to designated seats.

20. Fairbanks City

District 20 is bounded by the Noyes Slough and University Avenue on the west, the Fairbanks International Airport on the southwest, the Tanana River on the south and Fort Wainwright on the east. The Creamers Field area is included as the northern edge of the district. The district has a population of 18,319.7 and a variance of -.7 percent. It will elect two house members to designated seats and, with Districts 19 and 21, two senators to designated seats.

21. West Fairbanks

District 21 includes the western half of Farmers Loop Road and the area west of Noyes Slough and University Avenue to, but not including, the Ester area. It has a population of 9,247.1 and a variance of +.2 percent. It will elect one house member and, with Districts 19 and 20, two senators to designated seats.

22. North Slope-Kotzebue

District 22 includes the areas of the North Slope Borough/Arctic Slope Regional Corporation and the Northwest Alaska Native Association. It has a population of 9,030 and a variance of -2.1 percent. The district will elect one house member and, with District 23, one senator.

23. Norton Sound

District 23 includes the area of the Bering Straits Regional Corporation; Shishmaref, Diomede, Teller, Nome, Koyuk and Saint Michael, and the coastal communities

as far south as Hooper Bay and Paimiut. Chevak is also included along with Yukon River villages down river from Mountain Village. The district has a population of 9,388 and a variance of +1.7 percent. It will elect one house member and, with District 22, one senator.

24. Interior Rivers

District 24 includes the communities on or near the great interior rivers, the Yukon, the Koyukuk and the Kuskokwim, as far down river as Mountain Village on the Yukon and Lower Kalskag on the Kuskokwim. The Lake Clark and Lake Iliamna communities, Minto and Manley Hot Springs are included; Eagle and Circle are not included. The district has a population of 9,549 and a variance of +3.5 percent. It will elect one house member and, with District 25, one senator.

25. Lower Kuskokwim

District 25 includes the Kuskokwim River communities down river from Tuluksak and the coastal communities from Newtok to Platinum. It has a population of 9,698 and a variance of +5.1 percent. It will elect one representative and, with District 24, one senator.

26. Bristol Bay-Aleutian Islands
