Visitors center attracts vandals

By CRAIG MEDRED
Empire Assistant Editor

Booze, drugs, vandalism, reckless driving, drunk driving.

Put them in any order you want. U.S. Forest Service officials say they are reaching crisis proportions in the Mendenhall Recreation Area at night, particularly on weekends.

"It seems to be getting worse and worse and worse," Juneau District Ranger Jack Blackwell said. "We can't continue to put up with that."

Forest Service officials "staked out" the parking lot at the Mendenhall Glacier on Jan. 16 and 17, a Friday and Saturday.

"There were 150-plus vehicles Friday night between 10 p.m. and 2 a.m., and 100-plus vehicles Saturday night between 9 p.m. and 1 a.m.," according to a report on the night's activities. "Major violations of the teenagers were:

•"Minor consuming — 80 percent;

•"Minor possession drugs-marijuana — 30 percent;

•"Reckless driving (brodies) — 5 percent;

•"Littering — minimal because we were monitoring so closely;

•"Driving while intoxicated — 25 percent."

The report, according to Pat Thrasher of the Forest Service, could cover any weekend.

"There is an increasing level of disruptive behavior," he said. "It seems to be related to teenagers, young adults, that find that a relatively easy area to party."

Nobody knows about the problem better than Ann Leonard. She has lived as the caretaker at the Mendenhall Visitor's Center since October. In that time, her car has been demolished, and she has several times harbored fears she might suffer bodily injury.

"There's drugs and drinking. They're all underaged. They're driving like crazy," Leonard said. "It seems to get worse around basketball games, tournaments .... It's weekends generally. It's a real party spot."

Leonard's problems started right after she took the part-time caretaker job. Shortly after Thanksgiving, vandals, believed to be youths, broke the rear and side windows out of her car, stole the battery and air cleaner, smashed the distributor, pulled out wires and caused general havoc.

Just before Christmas, they stole another battery, stereo speakers which were bolted in the car and anything else that could be pried or battered off. In January, vandals smashed the windshield, the glass over all the dash instruments, the grill, tore off a rear view mirror and generally preceded to tear up the inside of the car.

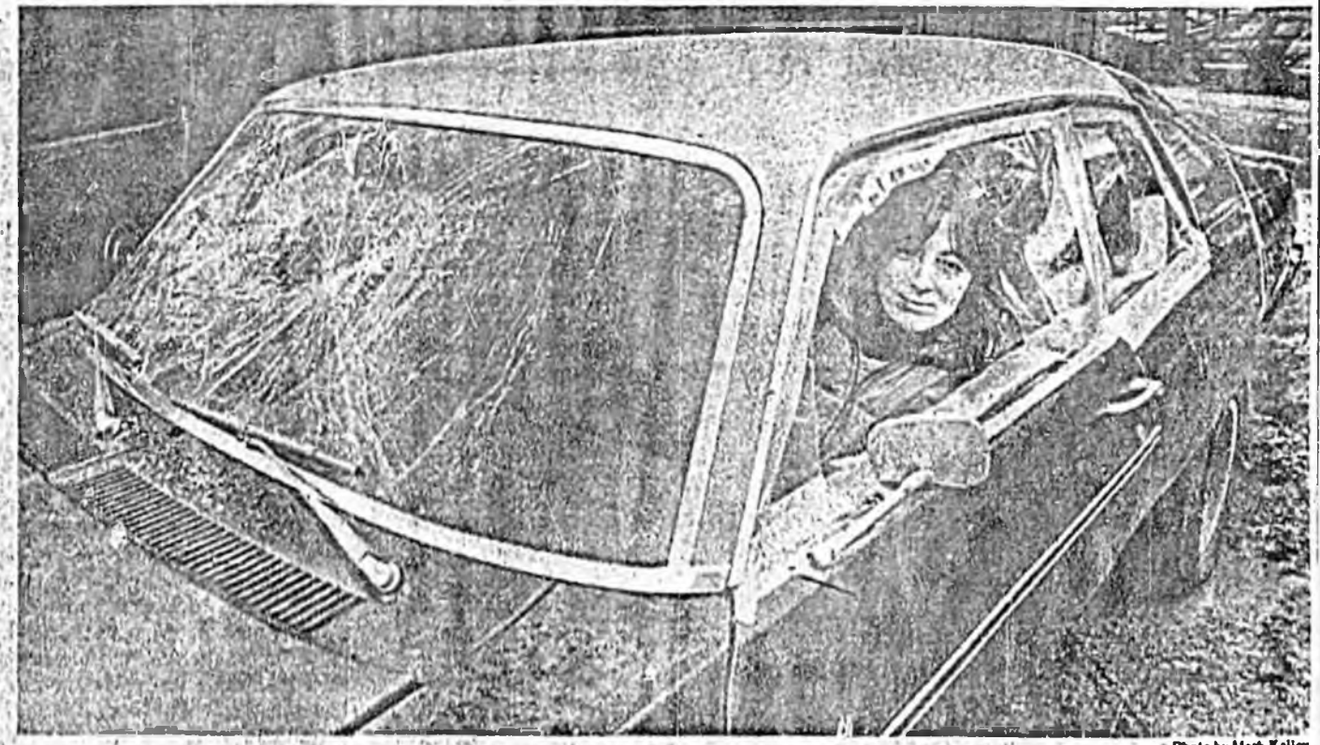

Photo by Mark Kelley

VANDALIZED CAR — Mendenhall Visitor Center caretaker Ann Leonard sits in her car, which was nearly demolished by vandals while parked in the center's lot. The lot is regularly used as a party site for under-age drinking, according to authorities.

All of this happened while Leonard's car was parked in the glacier parking lot, which hosts a number of partying youths on nearly any weekend night, according to the Forest Service.

"I've gotten alarmed...," Leonard said, noting the two caretakers before her quit in the wake of break ins at the visitor's center and problems with vandals.

Not only do the partying youth go on rampages, they are a "real garbage problem," Leonard said. "Every weekend we can pick up two garbage cans full of beer bottles. They just throw them on the ground, (leaving) a lot of broken glass that is hard to pick up.

"I bet if they ever drain those kettle ponds (next to the parking lot), they'll find their full of beer cans."

Alaska State Troopers say there is little they can do about the problem, pointing to state laws which say they must observe probable cause to believe a crime is being committed before acting.

"They (troopers) are real frustrated," Leonard said.

Thrasher said the Forest Service is considering a number of ways to eliminate the problem — including a curfew or a nighttime blockade on the highway to the glacier.

"We'd also like to raise the consciousness level, particularly of the parents," Blackwell said. "Hey, what are your kids doing tonight?"

Among the Forest Service ideas for solving the problem:

•Close the glacier parking lot from midnight to 6 a.m.

•Put a year-round dumpster at the site in hopes youths will use it.

•Put a "traffic island in the center of the parking lot to reduce 'brodies' and large group parking.

•"Place (a) gate at (the) Forest Service boundary. These kids are so much into their cars few would walk the mile and a half to the parking lot."

•Patrol the area with Forest Service personnel.

"What we are dealing with here are the problems of an urban park," Thrasher said.

Date??

Higher drinking age is proposed

By The Associated Press

Raisng Alaska's legal drinking age to 21 could make the state's highways safer, the director of the Alaska Council on Prevention of Alcohol and Drug Abuse told a House panel Thursday.

Drivers from 18 to 20 years old are "extraordinarily prone" to automobile accidents and "more apt to lose control" when they drink, Barbara Hoffman told the House Judiciary Committee.

The committee is considering a bill calling for an advisory vote on the issue. Voters would express their opinions at the first general election after passage of the bill.

Consultants on alcoholism testified both for and against the legislation. An expert hired by the alcohol council said figures show a variety of social problems involving youths are declining in states where the drinking age has been raised. An expert hired by bar and restaurant owners said the figures are inconclusive.

Frank Lee, who last year supported the bill but this year testified in opposition to it for an Anchorage bar and restaurant association, said data can be interpreted in many ways.

Bar and restaurant owners don't think the proposed advisory ballot offers the right question, he added, suggesting the Legislature consider a vote on raising the age of majority from 19 to 21.

The bill before the Judiciary Committee restricts the change in the legal age to "the purpose of regulation of the sale, consumption, service, furnishing, barter, purchase, gift or delivery of intoxicated liquor."

Rep. Charles Anderson, R-Anchorage, said he is bothered by the idea of "legislating against" 19 to 21 year olds.

Committee Chairwoman Ramona Barnes, R-Anchorage, and Rep. Randy Phillips said they have been getting cards on the issue saying "I'm 18. I vote."

Bill sponsor Rep. Terry Martin, R-Anchorage, admitted the bills has "political ramifications" that make some politicians nervous, but he argued polls show Alaskans strongly in favor of changing the drinking age.

99-year jail term upheld

ANCHORAGE (AP) — The maximum 99-year prison term handed out to a Fairbanks man convicted of the contract killing of a young woman on Nov. 9, 1980, has been approved by the state Court of Appeals.

Lawrence Hoover was convicted of first-degree murder in the death of 25-year-old Nancy Williams, who was killed when a shotgun was fired point-blank into her face during a hunting trip.

In approving the 99-year sentence, the Court of Appeals said it was justified.

Sheffield: hike drinking age

FAIRBANKS (AP) — Democratic gubernatorial candidate Bill Sheffield told a group of high school students Thursday that Alaska should raise its legal drinking age from 19 to 21.

The Anchorage businessman said the change would be a first step toward reducing alcohol abuse in the state.

"Other states in the Lower 48 have been increasing the legal drinking age — and with impressive results," Sheffield said in remarks prepared for an American government class at Lathrop High School, "the automobile accident rate has declined, thousands of lives have been saved and young people are leading more productive lives."

He said there were almost 2,900 fewer traffic fatalities in Michigan the first year after it raised its drinking age from 18 to 21, Sheffield said.

To illustrate the severity of the problem in Alaska, Sheffield said alcohol was a factor in:

—64 percent of the criminal homicides in 1980;
—80 percent of the suicides;
—70 percent of the traffic fatalities;
—48 percent of the violent crimes.

Juveniles account for about 52 percent of the arrests of liquor law violators and 64 percent of the arrests for non-aggravated assaults, he said.

Opposing Sheffield for the Democratic nomination are state Rep. Oral Freeman of Ketchikan, Fairbanks attorney Steve Cowper, former Lt. Gov. H.A. "Red" Boucher, and political newcomers Bruce Lemke of Anchorage and Edward Vincent of Fairbanks.

Running as Republicans in Alaska's open primary in August will be Lt. Gov. Terry Miller, Anchorage businessman Tom Fink and Rick Reakoff of Wiseman.

State Rep. Dick Randolph of Fairbanks says he will run in the November general election as a Libertarian.

ATTENTION: Pastor Howard Bess

RE: F.A.B.C. Letter of February 12, 1983

Dear Pastor Bess:

Thank you for taking the time and spending the effort to send your comments regarding various legislative efforts presently under consideration.

I know well how hard it is to follow the legislative process from Anchorage. So, I hope my comments help you get a better picture of our progress regarding your points of interest.

1. HB 17 was referred to the Judiciary Committee and became the object of our early deliberations. This bill raises the drinking age to a minimum of 21 years of age and to a certain extent restricts attendance of young people (less than 21 years of age) in public places which sell or serve alcoholic beverages.

A copy of the bill as it passed from the Committee is enclosed.

Representatives Malone and Clocksin opposed the committee passage and the bill.

2. I'm solidly behind the legislation to increase penalties for drunk driving, but do not believe it goes far enough. I'm planning introduction of additional legislation which will require the industry which sells the booze to pay for the problems it causes.

3. You already know some of my feelings about our State's prison problems. When I think of them I'm reminded of the old story about the guy who was waundering through the woods one day and came upon a fast moving river. In the middle of the river he noticed a number of people who appeared to be in trouble of drowning. At once he jumped into the river to save them. When he reached the people in the middle of the river he was able to see around a bend upstream where he observed another group of people throwing others into the river.

If I can just stop the people from being thrown in prison, we'll not have to build the things. That is a tall order, but we must all work toward that goal.

Thanks again for taking the time to become involved in the legislative process.

With warm regards I remain,

Sincerely yours,

Representative Charlie Bussell
Chairman, Committee on Judiciary

FIRST AMERICAN
BAPTIST CHURCH

HOWARD H. BESS
MINISTER

1200 East 27th Avenue, Anchorage, Alaska 99504 (907) 278-3233

February 12, 1983

The Honorable Charles Bussell
Alaska State House of Representatives
Juneau, Alaska 99801

Dear Charlie:

I have followed the legislative session thus far as best I can through the newspapers. I know that does not always give us folks in Anchorage the clearest of pictures, but its the best we can do. May I pass on some comments.

1) I encourage your support for the restoring of the drinking age to 21. As you know I give time to the prisons as a chaplain. So many of the new people coming into our prison system are 18-20 year olds who were drinking when they committed their crimes. Also it is apparent that 18-20 year olds do a lot of passing of alcoholic beverages to the 16-17 year old group. I know the argument that the 18 year old is old enough to serve in the military, old enough to vote, old enough to be tried as an adult, therefore he is old enough to drink. It makes good philosophy, but the evidence is that the 18-20 year olds cannot drink responsibly and are getting into a lot of trouble. We can't afford to support them in prison.

2) I encourage you to pursue your battle for strong drunk driving laws. Take their license. Take their vehicle. Fine them heavily. You are on the right track.

3) I urge you to use all your power and influence to block spending 45 million dollars on the building of a 300 bed maximum security prison!
a) We have other needs for the 45 million dollars plus the one million dollars it will take to operate it each year.
b) We do not have 300 maximum security prisoners. One long time prison official gave me an estimate that we have no more than 50 hard core criminals who need a maximum security prison. Why build a 300 bed facility? An adequate classification system can identify the hard core criminals. A smaller facility can be built, or it may make sense to leave the 50 in the lower 48. (See the enclosed editorial I clipped from the Times.) Who came up with the 300 number anyway?
c) We don't need 300 more beds of any kind! I am sure you are familiar with Charles Colson. (No one has ever accused him of being a liberal or of advocating soft attitudes toward crime.) I believe he has become a valid prophet about prisons in the United States. He rightfully raises the question...

"Why do we lock up people who are of no danger to the public?"

He maintains (and I agree) that many of the people we lock up should be on parole or probation and should be making financial restitution and doing public service. Why should WE be paying to house and feed (at a cost of $30,000 per person per year) people who are not dangerous to society?

Before we build a 300 bed maximum security prison, we need to know why we have 150 people in our prisons who are eligible for parole and who have not applied for parole. I suspect that the answer is that we have a poor parole system in which the prisoner has no confidence. This has been verbalized to me several times. An excellent parole system is much cheaper that prisons. In addition, people, who are on parole, work, pay taxes, and make restitution.

To sum up, Charlie, stop the building of that 300 bed maximum security prison! Our tax money can be spent on better things.

I have enclosed a number of things for your consideration. I hope they are helpful and give you food for thought.

If you come back to Anchorage for a few days in the near future, I would appreciate the opportunity to talk to you. Thank you for the job you are doing for us.

Sincerely,

Howard Bess

HB17 JR

P.O. Box 871
Wrangell, AK 99929
March 22, 1983

Representative Charlie Bussell
Chairman, House Judiciary Committee
Pouch V
Juneau, AK 99811

Dear Representative Bussell:

My name is Fawn Werner, and I am a sophomore at Wrangell High School. I am writing this letter to voice my personal opinion concerning the Alaska state drinking age.

I feel that the drinking age should remain nineteen. Consider this: at the age of eighteen, you are considered a legal adult. As a legal adult you accept certain responsibilities, such as registration for the military draft. If you are capable of fighting for your country, and risking the chance of death every day, then I feel you should be allowed to consume alcoholic beverages.

Also keep in mind that when you reach the age of eighteen you are tried in court as an adult. You are also able to vote for the state governor, president of the United States, state senators, and representatives.

If you are to be considered in so many ways, a legal adult, I feel that you should accept all adult responsibilities including consumption of alcohol.

Sincerely yours,

Fawn D. Werner

Rep. Charlie Bussell, Chairman
House Judiciary Commettee
Pouch V
Juneau, AK 99811

Dear Mr. Bussell

I am writing this letter with concern of the drinking age.

I think raising the drinking age to 21 is stupid and unnecessary. They say it would lesson the D.W.I's. I doubt that very seriosly. Consider using Wrangell as an example for raising the drinking age. Would this eliminate most D.W,I's NO! There are always more people over the age 30 who get D.W.I's in this town than people between the ages of 19 and 21. Perhaps the over 30 group is the ones that should not be allowed th drink. They're as big or bigger threat than teenagers.

I just think if you really look and consider what I'm writing. you will see my point of view.

I'm not writing this to hurt Wrangell in any way I'm just using it as an example. All I am saying that in this town there are more adults over the ages of 19 and 21 that get D.W.I's

Sincerely,

Melinda Paulo

Representative Charlie Brussell
Chariman, House Judiciary Committee
Pouch V
Juneau, Alaska 99811

Dear Mr. Brussell:

I am addressing this letter to y u concerning the drinking age in Alaska. I am against the change all the way. I don't think that it is a good idea at all. It should stay the same way because, if young adults want to drink then they will. You don't need a bar to drink you just need a buyer and money and the booze. Nothing will stop them not even the law.

If you decide to change the law it only seems that only more kids throughout Alaska will get into more trouble. They'll get in trouble with the Police, at home and in their social life. I say if that is what they want out of life let them drink.

Thanks for you time.

Sincerely yours,

Cari Kuntz

Dear Tammy:

Thank you for taking the time to write expressing your concerns regarding recent action by the House of Representatives which, if approved by the Senate and signed by the Governor, would raise the legal age for consumption of alcohol to 21.

HB 17 is a good bill. If enacted into law, it will save many lives. It will not prevent you from going or taking a friend into a restaurant which serves alcohol and having a nice dinner. You just cannot drink if you are under 21 years old.

Thank you again for taking the time to become involved with the legislative process. Together we can make a difference and do something about the state we are in.

With best regards I remain,

Sincerely,

Representative Charlie Bussell

Senator Bill Ray
Chairman, Senate Judiciary Committee
Pouch V
Juneau, Ak. 99811

Dear Senator Ray:

I am 15 years old and I am writing in concern of the drinking age being moved up from 19 to 21.

Although I don't drink, I don't think it will change anything. Sure, not as many people in the bars, maybe, but that means more people drinking illegally. I also feel very strongly about the portion of the law that doesn't allow minors to be in establishments that serve liquor without someone of age.

Here in Wrangell, we don't have a nice restaurant that does not serve liquor. That means that a teenager can't take a friend out for a nice dinner. The only place available is the local "hagg-out".

This is one area my parents and I agree on. They also believe that this portion of the law is too restrictive. As long as the bar is separated from the restaurant, there should be no restriction, in our view.

Thank you for taking time to read my letter.

Sincerely,

Tammy Watkins

POUCH V
JUNEAU, ALASKA 99811
(907) 465-4990

Alaska State Legislature
HOUSE OF REPRESENTATIVES

REPRESENTATIVE
CHARLIE BUSSELL
CHAIRMAN

Committee on Judiciary

May 2, 1983

Ms. June Gerrish
MADD - Mothers Against Drunk Drivers
5800 Glenn Highway
Anchorage, Alaska 99504

Dear Ms. Gerrish:

The House Judiciary Committee passed HB 6, the "drunk driving" bill, out of Committee on Friday, April 29, 1983. I think it is an excellent and comprehensive item of legislation.

The Committee put considerable thought and effort into its creation and fine-tuning. Representative Mitch Abood's staff, the Committee staff, and the bill drafters for the Legislative Affairs Agency and the Department of Law worked very hard and diligently expending many long hours on this bill.

The Committee really appreciates the way the original sponsor, Rep. Abood of Anchorage, spent so much time working with the bill and with us. Rep. Abood testified before the Committee each time the bill was scheduled for hearing. He "rode herd" on the bill from its inception to the final product that passed out of the Committee.

I sincerely hope that this bill will not be substantially altered or amended in a way that weakens or destroys it.

The bill provides for seizure of a driver's license upon arrest as well as increased penalties upon conviction. While the minimum of 72 hours in jail is mandated for a first offense in keeping with the existing law, a second offense requires a minimum of no less than 20 days in jail and the third offense would result in at least 30 days in jail and a 10-year license revocation.

REP. JOHN LISKA, VICE CHAIRMAN; REP. RAMONA BARNES, EMERITUS;
REP. JOE HAYES; REP. HUGH MALONE; REP. DON CLOCKSIN; REP. RON WENDTE

Fines based on the number of absence of prior convictions, carry mandatory minimums of $250 for a first offense, $500 for the second offense and not less than $1,000 for a third offense. Courts will be required, under the proposed bill, to consider prior offenses over the preceding 15 years in this or another jurisdiction, rather than going back only five years under the existing law to find prior convictions.

The bill also maintains as a crime the refusal to submit to a chemical test following arrest, as does existing law, except penalties are more stringent under the new bill.

In addition, law enforcement officers are authorized to require a breath test on the spot when the driver is first stopped. Refusal to submit to a preliminary breath test, prior to arrest, is classed as an infraction in the measure.

The House Judiciary Committee moved HB 17, the bill to raise the drinking age to 21, on the House Finance Committee back in February. The Chief Prosecutor of the State, Dan Hickey, testified before that group and the Finance Committee Substitute substantially weakened the bill. One wonders if Mr. Hickey initiated the amendments to that bill.

It is known that HB 6, the so-called "drunk driving bill," was not classed as one of the Chief Prosecutor's priorities when we were waiting for suggestions from the Department of Law. It is to be hoped that HB 6 will receive swift action in the House Finance Committee and not be weakened in the same manner HB 17 was. In fact, one wonders who is running the apparently leaderless Department of Law during this part of the Sheffield administration.

The Governor, afterall, during his campaign told folks he was in favor of raising the drinking age to 21. Recently, he said he was not in favor of this. A crystal ball would be helpful, maybe, to see what his views are on driving while intoxicated.

Very truly yours,

Representative Charlie Bussell
Chairman, Committee on Judiciary

CB:lyn

May 7, 1983

¥a¥

Dear ¥s¥:

The House Judiciary Committee passed HB 6, the "drunk driving" bill, out of Committee on Friday, April 29, 1983. I think it is an excellent and comprehensive item of legislation.

The Committee put considerable thought and effort into its creation and fine-tuning. Representative Mitch Abood's staff, the Committee staff, and the bill drafters for the Legislative Affairs Agency and the Department of Law worked very hard and diligently expending many long hours on this bill.

The Committee really appreciates the way the original sponsor, Rep. Abood of Anchorage, spent so much time working with the bill and with us. Rep. Abood testified before the Committee each time the bill was scheduled for hearing. He "rode herd" on the bill from its inception to the final product that passed out of the Committee.

I sincerely hope that this bill will not be substantially altered or amended in a way that weakens or destroys it.

The bill provides for seizure of a driver's license upon arrest as well as increased penalties upon conviction. While the minimum of 72 hours in jail is mandated for a first offense in keeping with the existing law, a second offense requires a minimum of no less than 20 days in jail and the third offense would result in at least 30 days in jail and a 10-year license revocation.

Fines based on the number of absence of prior convictions, carry mandatory minimums of $250 for a first offense, $500 for the second offense and not less than $1,000 for a third offense. Courts will be required, under the proposed bill, to consider prior offenses over the preceding 15 years in this or another jurisdiction, rather than going back only five years under the existing law to find prior convictions.

The bill also maintains as a crime the refusal to submit to a chemical test following arrest, as does existing law, except penalties are more stringent under the new bill.

In addition, law enforcement officers are authorized to require a breath test on the spot when the driver is first stopped. Refusal to submit to a preliminary breath test, prior to arrest, is classed as an infraction in the measure.

The House Judiciary Committee moved HB 17, the bill to raise the drinking age to 21, on the House Finance Committee back in February. The Chief Prosecutor of the State, Dan Hickey, testified before that group and the Finance Committee Substitute substantially weakened the bill. One wonders if Mr. Hickey initiated the amendments to that bill.

It is known that HB 6, the so-called "drunk driving bill," was not classed as one of the Chief Prosecutor's priorities when we were waiting for suggestions from the Department of Law. It is to be hoped that HB 6 will receive swift action in the House Finance Committee and not be weakened in the same manner HB 17 was. In fact, one wonders who is running the apparently leaderless Department of Law during this part of the Sheffield administration.

The Governor, afterall, during his campaign told folks he was in favor of raising the drinking age to 21. Recently, he said he was not in favor of this. A crystal ball would be helpful, maybe, to see what his views are on driving while intoxicated.

I want to especially thank you for the time and effort you have put into expressing your concerns about HB 6. It is wonderful feeling to know that the citizens in my District are interested in the legislative progress of our State. Working together is the way we can improve our surroundings.

Very truly yours,

Representative Charlie Bussell
Chairman, Committee on Judiciary

III. ANALYSIS (See Fiscal Note Preparation Instruction, Section III)

This bill raises the age at which a person is legally allowed to consume alcoholic beverages from 19 to 21. It does not change the current penalty provisions under Title 4; most violations of Title 4 are class A misdemeanors. It is anticipated that passage of the bill would result in 250 to 300 additional criminal prosecutions per year statewide, especially during the first 1 or 2 years after passage. Those persons now aged 19 and 20 are used to being able to legally consume alcoholic beverages, it is expected that many would resist efforts to enforce a law which takes away this privilege.

Prosecution of consumers of alcoholic beverages under 21 years of age would be for relatively minor violations; however, the total anticipated number of such violations represents an appreciable increase in overall prosecutor workload.

Additionally, it is anticipated that 50 to 100 prosecutions of the more serious offence of furnishing alcohol to a minor will also occur. These offences, committed by bars, liquor stores, bootleggers, and older friends, will require vigorous prosecution by the state if the change in the drinking age is to succeed. Consequently, prosecutor resources must be increased to handle the increased workload that will result from enactment of this bill.

1/25/83

NOTIFICATION OF BILL HEARING

WEEK OF: _____

BILL #	BILL TITLE	DEPARTMENT	DATE	SPONSOR	DATE
HB 17	age/ Alcoholics	Pub Ser. F.N.	1/21	Martin	1/19

HB 17--Re: raising age limits under Title 4, Alcoholic Beverages------ --MARTIN, M. W. MILLER, M.M. MILLER, VASKA, and LINDAUER

1--This bill amends existing statutes to raise age from 19 to 21 in dealing with alcoholic beverages, such as access to, entering, being on the premises, purchasing, getting another to purchase for the under-aged person, or furnishing by licensees or by employees of licensees, to persons under 21.

2--The new, substituted language than the age references add words or phrases such as "of licensee" after "employee" (so it reads "employee of licensee"); changes "his" to "the person" in existing statute, and "for the person under the age of 21 years" replaces "on his behalf." Persons under 21 are barred from selling or serving, also.

3--Penalties--they are not provided in this bill, since penalties are provided in AS 04.16.080 which this bill does not amend. (Mostly all class A misdemeanors for violations, except for transporting into an area a certain amount of liquor, a class C felony)

4--NOTE--in reading the last section of this bill, Sec. 14, it amends AS 23.10.355. Existing AS 23.10.355 in the statute books refers to AS 04.15.020(h) and the entire Chapter 15 of Title 4 (AS 04.15.010-04.15.115) was repealed in 1980. There is no reference to Chapter 15 in this proposal, so if enacted, the statute will read exactly as sponsors wish, and, therefore, this final section in the bill does NOT refer to any repealed portion of Title 4.

4/21/82

Dear Representative Martin:

I discussed your question with Patty Ann Polley in the Division of Elections after our meeting this morning. She advised me that the division cannot undertake investigations into the validity of candidates' declarations of candidacy. The Attorney General has issued an opinion on this very question, as well; I have attached a copy for your reference.

I hope this arswers your question.

Sincerely,

Debbie Baley

FILE NO: J-66-412-80

TELEPHONE NO:

FROM: AVRUM M. GROSS
ATTORNEY GENERAL

By:
Rodger W. Peggs
Assistant Attorney General

SUBJECT: Constitutional residency requirements for elective state office

You have asked what you, as Lieutenant Governor and the state's chief election officer, should do with respect to the application of the constitution's residency requirements to those who file for elective state office.

As a general rule, you should accept filings which are valid on their face, and it is neither your duty nor your function to question their validity.

Under the Alaska Constitution, one who files for elective public office must have been a resident of the State (and, for legislators, of the election district) for a prescribed period. */ A candidate's eligibility for filing is determined "immediately preceding his filing for office." Alaska Const., art. II, § 2, art. III, § 2. The requisite information is entered on the declaration of candidacy which is filed by the candidate. AS 15.25.030(8).

The Election Code makes no provision for the election officials to reject an application which is valid on its face and timely filed. Under AS 15.25.040, an untimely filed declaration of candidacy clearly must be rejected. But there is no similar provision for rejecting a declaration which substantially complies with the prescribed requirements for filing for office. With respect to residency, those requirements are that, in substance, the candidate states that he meets "the specific residency requirements of the office for which he is a candidate." AS 15.25.030(8). Given substantial compliance by the candidate, his name must

---

*/ For the legislature, three years in the State and one in the district is required. Alaska Const., art. II, § 2. For governor and lieutenant governor, seven years in the State is required. Alaska Const., art. III, §§ 2, 7.

be placed on the ballot. AS 15.25.060.

For the most part, the Alaska Election Code, like many others, depends upon the adversarial nature of the election process for enforcement. The law reasonably assumes that a candidate's opponents will be the first to raise complaints against any false or fraudulent filing. Residence (domicile) is an elusive legal concept. Proof of residence consists of both objective facts and subjective feelings. A determination requires a full blown hearing and an independent, nonpartisan decision maker. The Election Code quite wisely does not provide for the election officials to make such determinations.

Of course, if a declared or would-be candidate states to the election officials that in his own mind he does not believe he is a resident of the state or of the election district or that he believes that he no longer meets the constitution's residency requirements, then the officials -- on the basis of that admission -- may reject a declaration of candidacy from that person unless it is preceded or accompanied by a withdrawal or repudiation of the admission of disqualification. While election officials have no duty to question or determine residency, they are not compelled to ignore admissions of disqualification. However, whether one is qualified or not is a legal question and an admission of disqualification could be dead wrong. Therefore, the election officials must honor any subsequent withdrawal or repudiation of such an admission. And, indeed, if they are convinced at the outset that a candidate's admission of disqualification is in error, they can and should disregard it and accept a timely and properly filed declaration of candidacy from the candidate.

Voter Registration (proof of eligibility)

HOUSE BILL NO. 30, by Martin and Lindauer. Amends section of the Election Code relating to information required when registering to vote (AS 15.07.060) by adding a new section that would allow the Director of Elections to require an applicant to provide proof of eligibility to vote. The Director may use information available from other state departments or agencies to determine an applicants eligibility to vote. The Director shall provide an application form containing a statement wherein the voter certifies that he has been a state resident for at least 30 days prior to the date of the election or that he claims eligibility as an overseas voter, or that he is eligible to vote in a presidential election. Provides a false claim of eligibility is a criminal offense. The Director is to investigate a claim of eligibility if information provided by the voter is or seems inconsistent with other information regarding eligibility of the applicant. Does not provide for an effective date.

Introduced January 17 and referred to State Affairs, Judiciary, then to Finance.

Property Tax (exemption--disabled veterans)

HOUSE BILL NO. 31, by Furnace, Barnes, Grussendorf, Koponen, Phillips, Lindauer, Abood, Liska, Larson and Fritz. Would require municipalities to exempt the real property owned and occupied as a permanent place of abode by a disabled veteran from taxation. The exemption for veterans would be the percentage of the assessed value of the property that is the same as the percentage of disability as established by the vets' service disability rating. The bill changes sections of the existing Municipal Code relating to assessment and taxation (AS 29.53.020--required exemptions), effective January 1, 1984, and would change those sections of a new Municipal Code (AS 29.45.030) when enacted by the Thirteenth Legislature.

Introduced January 17 and referred to Community & Regional Affairs, then to Finance.

Appropriation (special) (Anchorage campus dorms)

HOUSE BILL NO. 32, by Furnace, Martin, Barnes, Flood, Lindauer, Abood, Liska, Szymanski and Fritz. Makes a special appropriation in the amount of $15,000,000 to the University of Alaska for construction of dormitories for the U of A Anchorage campus. Provides appropriation is for a capital project and does not lapse. Provides Act takes effect immediately.

Introduced January 17 and referred to Health, Education and Social Services, then to Finance.

Appropriation (special) (Anch. state trooper facility)

HOUSE BILL NO. 33, by Furnace, Martin, Barnes, Lindauer, Abood, Liska, Szymanski, Pestinger. Makes a special appropriation in the amount of $8,100,000 to the Department of Public Safety for construction of a state trooper crime laboratory and office facility in Anchorage. Provides appropriation is for a capital project and does not lapse. Provides Act takes effect July 1, 1983.

Introduced January 17 and referred to State Affairs, then to Finance.

REGISTRATION PROCEDURES BY MAIL

1. If you are currently registered to vote in another state you must complete the attached "Voter's Authorization to Cancel Registration" card.

2. Print or type full name - last, first and middle initial. Names containing punctuation, such as a hyphen (-) or apostrophe ('), should be shown with that punctuation. A name suffix such as "Jr.", "Sr.", or "III" should follow the last name.

3. Print previous name if registered to vote under that name. Be sure to sign this card according to your new name.

4. Print complete Alaska residence address. Exact descriptions are necessary to determine accurately the exact precinct and district in which you live. As examples (where applicable) you should provide street name and house number, subdivision name, highway name, milepost number, a pier and slip number for ships, space number and trailer park name for trailers, and tract or plot numbers for rural areas. A rural postal box or highway will not suffice.

5. Print your mailing address if different from your residence address including a specific street address (where applicable), postal box number, star route, city and zip code.

6. It is not mandatory to provide your social security number, however, this information is helpful to our office.

7. Please fill in place of birth, although this information is not mandatory. If you were born abroad, enter the foreign country along with a phrase indicating military or American parents (if applicable).

8. Please fill in date of birth. Although this information is not mandatory, it is helpful to the Elections Office for identification purposes.

9. If you are a naturalized citizen, fill in your date of naturalization.

10. Fill in how long you have lived in Alaska. This information is computed from the day you moved to Alaska to the date of registration. For those who have lived here longer than one year, only the number of years need be entered. If you have temporarily resided outside of Alaska after initially residing here, your time in Alaska would include the time spent outside IF you have not registered to vote in any other state. If you have registered to vote in another state, THEN, the length of time in Alaska would be computed from the date of your return to Alaska.

11. Fill in how long you have lived in the current election district, following the same guidelines as above. If you are unsure of your election district, indicate how long you have lived at your current address.

12. Indicate male or female.

13. Please indicate if you have been convicted of a felony. If your civil rights have not been restored, it is illegal for you to register to vote. If you have been unconditionally discharged from incarceration, probation and/or parole be sure to indicate the date of your discharge.

14. You are not required to provide your political affiliation. "Non-Partisan" is the same as "Independent" (a designation used in some other states) while "Other" is the category for any political affiliation other than Republican and Democrat (such as Libertarian, Alaskans for Independence, etc.)

15. Fill in today's date -- the date of this registration -- so that this office can compute the thirty-day registration requirement.

16. You are required to sign the registration form, and are, in fact, taking an oath. Sign the form by the same name you have printed above (i.e. by your proper first, middle initial, and last name, including any suffixes, etc.).

17. Have a registrar, notary public, U.S. postal official, a district judge or magistrate, commissioned officer of the armed forces, or other person qualified to administer oaths, witness and sign this registration form. If a qualified official is not available, two witnesses over the age of 18 years may sign this registration form, and, in addition, shall provide certification according to AS 09.65.012. A sample certification is attached.

government to provide housing facilities to persons engaged in national defense activities, to register and vote at elect in state. 142 ALR 430.

Sec. 15.07.040. Time for registration. A person who is qualified under AS 15.05.010(1) — (4) is entitled to register at any time throughout the year except that a person under 18 years of age may register at any time within 90 days immediately preceding his 18th birthday. (§ 2 ch 211 SLA 1968; am § 20 ch 32 SLA 1971; am § 6 ch 116 SLA 1972; am § 7 ch 100 SLA 1980)

Effect of amendments. — The 1980 amendment substituted "a person under 18 years of age may register at any time within 90 days immediately preceding his 18th birthday" for "no registration will be made for a period of 30 days preceding the election" at the end of the section.

Collateral references. — Constitutionality of statutes in relation to registration before voting at election or primary. 91 ALR 349.

Sec. 15.07.050. Registration in person or by mail. Registration may be made in person before a registration official or by mail. (§ 2 ch 211 SLA 1968)

Sec. 15.07.060. Required registration information. (a) Each applicant who requests registration or reregistration shall supply the following information under oath:

(1) name and sex;

(2) address and other necessary information establishing residence if requested;

(3) Repealed by § 8 ch 100 SLA 1980.

(4) term of residence in state and in election district; and whether the applicant has previously been registered to vote in another jurisdiction, and, if so, the jurisdiction and the address of the previous registration;

(5) a declaration that the registrant will be 18 years of age or older within 90 days of the date of registration;

(6) a declaration that the registrant is a citizen of the United States;

(7) date of application;

(8) signature or mark.

(b) If the applicant has been previously registered to vote in another jurisdiction, he shall surrender to the registration official any voter registration or identification card or credentials from that jurisdiction the applicant may possess. The director shall notify the chief elections officer in that jurisdiction that the applicant has registered to vote in Alaska, request that jurisdiction to cancel the applicant's voter registration there, and return the applicant's voter registration or identification card or credentials, if any, to that jurisdiction.

(c) If application for registration is made in person before a registration official, the applicant shall exhibit one form of identification to

the official, including but not limited to a driver's license, birth certificate, passport, hunting or fishing license. A registration official who knows the identity of the applicant may waive the identification requirement.

(d) If the applicant requests reregistration, the applicant shall supply under oath any former name under which the applicant was registered to vote in the state. (§ 2 ch 211 SLA 1968; am § 21 ch 32 SLA 1971; am §§ 6, 7 ch 197 SLA 1975; am § 8 ch 100 SLA 1980)

Effect of amendments. — The 1980 amendment inserted "under oath" at the end of the introductory paragraph of subsection (a), repealed the former provisions of paragraph (3) of subsection (a), which read: "Election district and precinct as of the date of registration," substituted "the jurisdiction and the address of the previous registration" for "where" at the end of paragraph (4) of subsection (a), substituted "within 90 days of the date of registration" for "on or before the date of the next statewide election" at the end of paragraph (5) of subsection (a), substituted "director" for "lieutenant governor" at the beginning of the second sentence of subsection (b), and added subsections (c) and (d).

NOTES TO DECISIONS

Omission of a voter's complete address is not a "minor" omission. Willis v. Thomas, Sup. Ct. Op. No. 1923 (File No. 4398), 600 P.2d 1079 (1979).

Where a voter filled out a voter registration application on October 5, 1978, but failed to supply her complete street address as required by this section, and on election day, filled out a second voter registration form, this time including her complete address, her ballot should not be counted. Willis v. Thomas, Sup. Ct. Op. No. 1923 (File No. 4398), 600 P.2d 1079 (1979).

Applied in Hammond v. Hickel, Sup. Ct. Order (File Nos. 4281, 4282, 4283, 4284, 4285, 4291), 588 P.2d 256 (1978).

Collateral references. — Validity of statute requiring information as to age, sex, residence, etc., as condition of registration or right to vote. 44 ALR 260.

Propriety of test or question asked applicant for registration as voter other than formal questions relating to specific conditions of his right to registration. 76 ALR 1238.

Right of married woman to use maiden surname. 67 ALR3d 1266.

Sec. 15.07.065. Exchange of voter registration information.

Repealed by § 231 ch 100 SLA 1980.

Editor's notes. — The repealed section derived from § 8, ch. 197, SLA 1975.

Sec. 15.07.070. Procedure for registration. (a) The director may adopt regulations under the Administrative Procedure Act (AS 44.62) relating to the registration of voters consistent with the requirements of this section.

(b) To register by mail the director or the area election supervisor shall furnish, upon request, and at no cost to the voter, forms prepared

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF LAW

OFFICE OF THE ATTORNEY GENERAL

POUCH K — STATE CAPITOL
JUNEAU, ALASKA 99811
PHONE: (907) 465-3600

July 8, 1982

The Honorable Terry Martin
3960 Reka Drive-B6
Anchorage, Alaska 99504

Re: Marilyn Carpenter's candidacy
Our file 366-029-83

Dear Representative Martin:

In a letter dated June 24, 1982 (received in this office on June 28, 1982), you requested that we review certain aspects of Ms. Marilyn Carpenter's candidacy for the office of Representative from Election District 13, Seat B. Although you pose a number of specific questions, you appear to have two primary concerns: (1) was Ms. Carpenter a resident of Election District 13 for one year, as required by Article II, Section 2 of the Alaska Constitution, at the time she refiled her declaration of candidacy on June 1, 1982; and (2) because she was not properly a candidate before June 1, 1982, having not been a resident for a full year in Election District 13, must her campaign committee (or, in the alternative, contributors to that committee) repay to the state any campaign contribution refunds under AS 43.20.013(a)?

In brief, the Attorney General's office cannot make the residency determination you desire. We are the attorney for the Division of Elections, and as such have no greater powers than the division possesses to make such inquiries. As you note in your letter, the division cannot go beyond the statements in the declaration of candidacy. If you have a disagreement with the statements in that declaration of candidacy, one remedy which you may pursue is to file a lawsuit in the Superior Court. The answer to your question regarding repayment to the state for refunds given to campaign contributors is not as clear. However, on the basis of our research and consideration of the facts presented, we believe it is extremely unlikely that a court would require contributors to repay the refunds, and even more unlikely that the court would require the campaign committee to do so. A more detailed analysis of these issues follows.

I. FACTUAL BACKGROUND

On December 1, 1981, Ms. Carpenter filed her declaration of candidacy under AS 15.25.030. In the declaration, she stated that she had been a resident of Election District 13 since June, 1981.

Article II, Section 2 of the Alaska Constitution provides in pertinent part: "A member of the legislature shall be a qualified voter who has been a resident of Alaska for at least three years and of the district from which elected for at least one year, immediately preceding his filing for office." (Emphasis added.) Since Ms. Carpenter stated on her December 1, 1981 declaration that she had been a resident of Election District 13 only since June, 1981, it appeared from the face of her declaration that she did not meet the constitutional eligibility requirement for the office of having been a resident of the district for one year "immediately preceding [her] filing for office."

However, that fact was not noticed by Division of Elections officials at that time, and they accepted her declaration. Ms. Carpenter solicited campaign contributions and made expenditures for campaign purposes.

In April, 1982, you contacted officials in the Division of Elections and pointed out the problem with Ms. Carpenter's December 1, 1981 declaration of candidacy. On May 5, 1982, Patty Ann Polley, Director of the Division of Elections, spoke with Ms. Carpenter about the residency question, following up the conversation with a May 6, 1982 letter to Ms. Carpenter.

Ms. Carpenter responded that she became a resident of Election District 13 on May 28, 1981. On May 27, 1982, Ms. Polley sent Ms. Carpenter a letter informing her that her declaration of candidacy was being rejected because she did not meet the one-year residency requirement prior to filing. The letter noted that Ms. Carpenter had indicated an intention to refile on or after May 28, 1982.

On June 1, 1982, Ms. Carpenter refiled for the office of Representative from Election District 13, Seat B, stating that she had been a resident of Election District 13 since June 1, 1981.

Your June 24, 1982 inquiry to this office followed.

II. MS. CARPENTER'S RESIDENCE SINCE JUNE 1, 1981.

In your letter, you relate a number of items which lead you to question Ms. Carpenter's residence in Election District 13 as of June 1, 1981. However, as you also note in your letter, there is nothing the Division of Elections "could do but accept as the truth any information a candidate submits on the application." That is what we advised the Lieutenant Governor in a memorandum on January 22, 1980 (Department of Law file J66-412-80). In that memorandum, we stated: "As a general rule, you should accept filings which are valid on their face, and it is neither your duty nor your function to question their validity." We also stated:

> For the most part, the Alaska Election Code, like many others, depends upon the adversarial nature of the election process for enforcement. The law reasonably assumes that a candidate's opponents will be the first to raise complaints against any false or fraudulent filing. Residence (domicile) is an elusive legal concept. Proof of residence consists of both objective facts and subjective feelings. A determination requires a full blown hearing and an independent, nonpartisan decisionmaker. The Election Code quite wisely does not provide for the election officials to make such determinations.

The court in Bell v. Foster, 200 A.2d 354 (N.J. Super. App. Div. 1964), reached the same conclusion. In that case, the court found that the clerk's duty in reviewing a nominating petition (similar to a declaration of candidacy) was merely ministerial, and that the clerk could not rule on the question of residency. The court stated: "To the extent that the residence requirement embraces the concept of domicile, its determination calls for judicial intervention." The court noted the significant possibility of abuse if such determinations were made by individuals appointed by elected officials. Garcia v. Carpenter, 525 S.W.2d 160 (Tex. 1975). A similar result was reached in (In our telephone conversation yesterday, you acknowledged the problems which might result from the Lieutenant Governor, as supervisor of elections, ruling on the qualifications of a candidate for Lieu-

tenant Governor or the Attorney General, as an appointee of the Governor, ruling on the qualifications of a candidate for Governor.)

While you recognize that Division of Elections officials cannot question Ms. Carpenter's residence in Election District 13 as of June 1, 1981, you wondered whether the Attorney General might make a ruling on this question. Under AS 44.23.020, the Attorney General is the legal advisor to the Governor and other state officers. In other words, he is charged with assisting them in carrying out their duties. It was in this capacity that we gave advice to the Lieutenant Governor regarding elections officials making residency determinations. The Attorney General does not have independent authority to make such determinations; rather, it is his duty to advise other state officials and, if necessary, defend their decisions (for example, a decision by elections officials not to make a residency determination) in the event of litigation.

As we indicated in our advice to the Lieutenant Governor, "the Alaska Election Code, like many others, depends upon the adversarial nature of the election process for enforcements." If you still believe that Ms. Carpenter is not qualified to run as a candidate for the office of Representative from Election District 13, there are two remedies available to you. The first is to file a lawsuit in Superior Court seeking a judicial determination that Ms. Carpenter is not qualified to run. The second is to take your case directly to the most powerful judges of all, the voters in Election District 13.

III. REPAYMENT OF STATE REFUNDS TO CAMPAIGN CONTRIBUTORS.

AS 43.20.013(a) authorizes refunds by the state of up to $100 per individual for political contributions. You are interested in knowing whether the state could require repayment to the state of those refunds made for campaign contributions to Ms. Carpenter's campaign prior to the refiling of her declaration of candidacy on June 1, 1982.

Initially, it must be noted that any repayment to the state would have to be made by the individual contributors to Ms. Carpenter's campaign, not her campaign committee. The campaign committee did not claim any refunds from the state; only the individual contributors did. Accordingly, if

those refunds were improperly claimed, it was the contributors who improperly claimed them. The campaign committee could not be required to repay the state for refunds given to individual contributors.

More importantly, however, we believe it is extremely unlikely that a court would require the repayment of those refunds under the facts of this case. Ms. Carpenter initially filed on December 1, 1981. On December 8, 1981, she was informed by Division of Elections officials that her filing was in order and that her name would appear on the primary election ballot. It was not until May 27, 1982, that the division rejected her declaration of candidacy.

Under these facts, the contributors to Ms. Carpenter's campaign would have a very strong argument that their contributions to her campaign were made in reliance on the representation by the division that Ms. Carpenter's filing was in order and that she would be listed on the ballot as a candidate. There is an appearance of unfairness in the state certifying Ms. Carpenter's candidacy, allowing contributions to be solicited on behalf of her campaign, allowing those contributions to be spent for campaign purposes, refunding those contributions, and only then seeking repayment of those refunds upon discovering that her initial filing was not proper.

There are a number of cases which hold that the absence of fraud or willful misconduct excuses a failure to comply with the letter of the law. See, e.g., Anderson v. Davis, 419 A.2d 806 (Pa. 1980); People ex rel. Bell v. Powell, 221 N.E.2d 292 (Ill. 1966). While we have discovered no cases precisely on point, in Owens v. Sharpton, 381 N.E.2d 160 (N.Y. 1978), the court addressed the question whether petitions designating a candidate in a party primary election and a committee to fill vacancies were completely invalidated because the candidate did not meet residency requirements. If the petitions were completely invalidated, the committee to fill vacancies would not be permitted to make an appropriate substitution. The court held that the petitions were valid as far as the committee was concerned and that the committee should be permitted to make an appropriate substitution, notwithstanding the disqualification of the candidate, as long as there was no finding that either the petition or the petition gathering process was tainted by fraud. Compare Fotopoulos v. Bd. of Elections, 381 N.E.2d 337 (N.Y. 1978)

(where designating petition invalid, committee invalid as well).

Under the facts presented here, where the Division of Elections recognized Ms. Carpenter's candidacy until May 27, 1982, we believe the court would find that her campaign contributions committee expenditures were sufficiently valid -- or at least appeared sufficiently valid to good faith contributors -- that contributors to the campaign were entitled to refunds under AS 43.20.013(a).

IV. OTHER MATTERS.

You also raise a number of other questions:

1. Should Ms. Carpenter have listed the name of the person or persons renting her condominium from June 1981 until its sale in November, 1981? AS 39.50.030(b)(1) requires a conflict of interest statement to include "(1) the source of all income over $100 . . . received by him . . . during the preceding calendar year." Because Ms. Carpenter's conflict of interest statement was filed in December 1981, it was not necessary for it to include any sources of income during that same calendar year, only the preceding calendar year.

2. Should the individual who loaned Ms. Carpenter the down payment for her new home be listed on the conflict of interest form? We have no knowledge that Ms. Carpenter received a loan to make the down payment on her new home. However, if she received such a loan, it is reportable on the conflict of interest form under AS 39.50.030(b)(6).

3. Should the person leasing or renting Ms. Carpenter's part ownership in a condominium in Girdwood be listed on the conflict of interest statement? If she received income from the rental of a condominium in calendar year 1980, the source of that income should be listed on the form under AS 39.50.030(b)(1).

4. Would Ms. Carpenter's campaign committee have to return monies given in federal tax credits to contributors in 1981? While that is a question of federal law, not state law, we believe the federal courts would apply an analysis similar to that contained in Part III of this letter.

5. Can a person list their campaign telephone number as a work number on the declaration of candidacy form? We are unaware of any provision of law which prohibits this practice.

6. If Ms. Carpenter won the primary election and then was found not to be qualified, would her primary opponent be entered on the ballot for the general election? AS 15.25.110 provides that a vacancy on the general election ballot resulting from a candidate's disqualification may be filled by party petition. See AS 15.25.120 -- 15.25.130 for petition procedures.

V. CONCLUSION.

We hope we have answered your questions. If we can be of further assistance, please contact us at your convenience.

Sincerely,

WILSON L. CONDON

AMENDMENT

OFFERED IN THE HOUSE: BY: Judiciary Committee

TO: SS HOUSE BILL No. 34

SENATE BILL No. _____

PAGE: 1 LINE: line 21

Insert after "governor": "has not made an appointment or"

To: Representative Mitch Abood, Chairman
House Committee on State Affairs

Through: Walt Furnace, Representative

From: Steven C. Levi, Staff

Date: January 20, 1983

COPY

RE: ~~HB~~ 34

At the present time, the line of succession to the Governor's chair is limited to two (2) individuals: the elected Lt. Governor and the Governor's hand-picked, legislatively confirmed successor. Should the Governor's chair fall empty when there is no Lt. Governor, for whatever reason, the hand-picked, legislatively confirmed successor is only an acting governor and will hold this postion only until a special election may be held to fill the office with an elected governor.

There is, however, a gap in the succession process. Should the Governor and the Lt. Governor be unable to fill the chair and there is no hand-picked, legislatively confirmed successor, there is no procedure for succession.

Representative Furnace recommends, through HB 34, that in the hopefully unlikely case that the Governor's chair is vacant and there is no Lt. Governor or hand-picked, legislatively confirmed successor, that the President of the Senate and thereafter the Speaker of the House shall succeed to the chair of governor.

Legislative Counsel has assured Representative Furnace that the succession to the chair of Governor by the President of the Senate or the Speaker of the House is only in the capacity of Acting-Governor and only until such time as a special election may be held. Legislative intent is that the President or the Speaker shall be Acting-Governor only.

RECEIVED
JAN 20 1983

To: Mitch Abood, Chairman
House Committee on State Affairs

From: Representative Walt Furnace

RE: SSHB 34

Date: March 25, 1983

Under current statute, the succession to the chair of Governor runs through the Lt. Governor and thereafter the Governor's appointed and legislatively confirmed successor.

This bill allows for the line of succession to continue thereafter to a lock step progression of administrators, whether they have been confirmed or not. Should the vacancy occur in the office of Governor-Elect and Lt. Governor-Elect, the outgoing Governor will become the Acting Governor for that period after his expired term until a special election is held and the new Governor inaugurated.

The important fact to keep in mind is that if the Governor and Lt. Governor are unable to fullfill the duties of their respective posts and the Governor's handpicked successor has not yet been confirmed, there must be someone who can step in immediately and assume the powers and duties of the Acting Governor.

MEMORANDUM

TO: Representative Walt Furnace

FROM: Deb Pomeroy, Research Aide Deb

RE: Succession to the Offices of Governor and Lt. Governor
Research Request 83-119

Steve Levi of your office called requesting the following information regarding succession to the offices of Governor and Lt. Governor in other states:

1) What is the line of succession in other states?

2) Is succession decided constitutionally or by statute?

3) What is the term of the successor?

4) Is the successor appointed Acting Governor or Governor?

5) Does the Acting Goverror have the same powers as the Governor?

6) Are there any states where Supreme Court Justices succeed to Governor?

As you are aware, Alaska does not have a constitutional line of succession after the Lt. Governor. AS 44.19 states that after the start of the initial term of office, the Governor appoints, and the Legislature confirms in a joint session, a person from a principal department of state government as the successor to the Lt. Governor. If the Lt. Governor succeeds to the Governor's office, the appointee becomes Lt. Governor and serves for the remainder of the term. If, however, the appointed successor succeeds to the Governor's office, (s)he serves only until a special election is held.

Thirty-six states decide the succession to the Governor's office by constitution; thirteen states either decide the succession or add to the line of succession by statute. In all of the states, the successor has the duties and powers of the Governor. In all states except Hawaii,

the successor is appointed Governor; in Hawaii, only the Governor and Lt. Governor may have the title of Governor, with other successors known as "Acting" Governor.

The majority of the states have direct succession to Governor. That is, if the Lt. Governor becomes Governor, his office remains vacant until the next election. Connecticut, Hawaii, Minnesota and Pennsylvania are the only states which have a successor to the office of Lt. Governor.

In 31 states, either the Senate President or House Speaker is next in line after the Lt. Governor to become Governor. Of the remaining 18 states, all but Delaware have an elected administrative official next in line for succession. Delaware has an appointed secretary of state in line after the Lt. Governor, although the next official for succession is elected. Nebraska is the only state in which the entire line of succession consists of legislative committee chairmen.

In reference to the term of the successor, most of the states have the successor serving for the remainder of the Governor's term, or until the next general election at which time a successor is elected for the unexpired portion of the term. A few states' constitutions or statutes vaguely state that the successor will serve "until the vacancy is filled."

I have prepared the attached chart listing the following information for each state:

1) the order of succession to either the Governor's or Lt. Governor's office and whether or not it is decided by statute or constitutionally;

2) whether the person in the line of succession is elected, appointed, or a legislative official; and

3) the length of the term the successor holds and any conditions which apply.

I hope this information is useful. If you have any questions, please call.

Georgia	Governor	Cons. Art.V	Lt. Governor House Speaker	Elected Hse. Elected	Lt. Governor serves until next general election, at which time a Governor is elected for the unexpired term. If the House Speaker succeeds to Gov.,a special election must be held to elect a Gov. within 60 days of the Speaker taking office.
Hawaii	Governor	Cons. Art. V HS 26-2	Lt. Governor Senate President House Speaker Attorney General Director of Finance Comptroller Dir. of Taxation Dir. of Pers.Svces	Elected Sen. Elected Hse. Elected Appointed Appointed Appointed Appointed Appointed	Successor serves for the remainder of the term. When the Lt. Gov. succeeds to Gov., the Sen. Pres. becomes Lt. Gov. After that, succession leaves the Lt. Gov. office vacant. Only the Governor and Lt. Governor can hold the title of Governor; the others are known as Acting Governor. Although known as "Acting" Governor, the successor has all powers given to the Gov.

STATE	SUCCESSION TO	CONSTITUTION OR STATUTE	ORDER OF SUCCESSION	APPOINTED OR ELECTED	CONDITIONS
Idaho	Governor	Cons. Art.IV	Lt. Governor Sen. Pres. pro tem House Speaker	Elected Sen. Elected Hse. Elected	Lt. Gov. holds office for the remainder of the term; Sen. Pres. pro tem and House Speaker serve "until the vacancy is filled."
Illinois	Governor	Cons. Art. V IS127¶63b122	Lt. Governor. Attorney General Secretary of State Comptroller Treasurer Senate President House Speaker	Elected Elected Elected Elected Elected Sen. Elected Hse. Elected	Holds office for the remainder of the term. Elected officials only are eligible to succeed.
Indiana	Governor	Cons. Art. V	Lt. Governor	Elected	Serves until Governor is elected. Constitution states that further succession will be determined by law; however, no statutes were found.
Iowa	Governor	Cons. Art.IV	Lt. Governor Sen. Pres. pro tem House Speaker	Elected Sen. Elected Hse. Elected	Lt. Gov. serves remainder of term; Sen. Pres. and House Speaker serve "until the vacancy is filled."
Kansas	Governor	Cons. Art. 1 KS 48-12-4	Lt. Governor Senate President House Speaker Secretary of State Attorney General Chancellor, U.of K. Pres, Kansas State Univ. of Ag. and Applied Science	Elected Sen. Elected Hse. Elected Elected Elected	Serves until next election.
Kentucky	Governor	Cons. Art.84	Lt. Governor Sen. Pres. pro tem	Elected Sen. Elected	Lt. Governor serves until a Gov. is duly elected and qualified; if the Sen. Pres. pro tem succeeds, and vacates office before the first two years are over, a new election is held. If there is no Pres. pro tem, the Secretary of State, then Attorney General hold office until a President pro tem has been elected.

STATE	SUCCESSION TO	CONSTITUTION OR STATUTE	ORDER OF SUCCESSION	APPOINTED OR ELECTED	CONDITIONS
Louisiana	Governor	Cons. Art.IV	Lt. Governor Secretary of State Attorney General Treasurer Presiding Sen. Off. House Speaker	Elected Elected Elected Elected Sen. Elected Hse. Elected	Successor serves for the remainder of the term. The governor appoints and the legislature confirms a new Lt. Governor. He is not eligible to succeed however, to the Governor's position. The constitution states further succession may be determined by law; however no statute was found.
Maine	Governor	Cons. Art. V	Senate President	Sen. Elected	If the office becomes vacant more than 90 days before primary election for a bienniel election, a Governor is elected at that bienniel election and serves for the remainder of the term.
Maryland	Governor	Cons. Art.II	Lt. Governor	Elected	A Lt. Governor is appointed by the Governor and confirmed by the majority of a joint session. If both seats become empty, the assembly elects a new Governor. The Senate President serves as Acting Governor until that time.
Massachusetts	Governor	Cons. Ch. 2	Lt. Governor	Elected	Serves for remainder of the term.
Michigan	Governor	Cons. Art. V	Lt. Governor Sec. of State Attorney General	Elected Elected Elected	Successor serves for remainder of the term. Order of succession pertains to elected officials only, not those appointed to fill a vacancy. The constitution states that further succession may be determined by law; however, no statute was found.
Minnesota	Governor	Cons. Art. V MS 4.06	Lt. Governor Senate President House Speaker Secretary of State State Auditor State Treasurer Attorney General	Election Sen. Elected Hse. Elected Elected Elected Elected Elected	Successor serves for remainder of term. The Senate President succeeds to the Lt. Gov. office. After the Senate President, all successors are for the governor's office. If the Senate President succeeds to governor, the Lt. Governor office remains vacant.
Mississippi	Governor	Cons. Art. V	Lt. Governor Sen. Pres pro tem House Speaker	Elected Sen. Elected Hse. Elected	Successor serves for the remainder of the term. If all three mentioned seats are vacant, the Sec. of State convenes Senate to elect a Pres. pro tem.

(c) A domestic company is exempt from taxation under this section for a period of five years from the date of its organization.

(d) An authorized insurer shall, with respect to all wet marine and transportation contracts written in this state during the preceding calendar year, before April 1 of each year, pay to the director a tax of three-quarters of one per cent on its gross underwriting profit. The gross underwriting profit is computed by deducting from the net premiums (i.e., gross premiums less all return premiums and premiums for reinsurance), on wet marine and transportation insurance contracts, the net losses paid (i.e., gross losses paid, less salvage and recoveries on reinsurance ceded) during the calendar year under the contracts. In the case of an insurer issuing participating contracts, the gross underwriting profit shall not include, for computation of the tax prescribed by this section, the amounts refunded or paid as participation dividends by the insurers to the holders of the contracts.

(e) Payment to the director by an insurer of the tax upon its premium required by this section shall be in lieu of all other taxes imposed by the state upon premiums, franchise, privilege or other taxes measured by income of the insurer commencing with the taxable year beginning January 1, 1967.

(f) The state hereby pre-empts the field of imposing excise, privilege, franchise, income, license, permit, registration, and similar taxes, licenses, and fees upon insurers and their general agents, agents and representatives as such; and on the intangible property of insurers or agents; and all political subdivisions of agencies in the state, including home rule boroughs or cities, are prohibited from imposing or levying upon insurers, or upon their general agents, agents and representatives as such, any tax, license, or fee. Provided that this subsection sha.. not be construed as prohibiting the imposition by political subdivisions of taxes upon real and tangible personal property of insurers and their general agents, agents and representatives.

(g) The director may suspend or revoke the certificate of authority of an insurer which fails to pay its taxes as required under this section.

(h) The provisions of this section do not apply to title insurance companies. A premium tax on title insurance companies shall be levied in accordance with the provisions of AS 21.66.110. (§ 1 ch 120 SLA 1966)

Sec. 21.09.220. Counter signature by resident agent—Application of title. No company, association, reciprocal exchange, person or persons authorized to transact insurance or offer indemnity contracts in this state excepting reciprocal mutuals organized under the laws of this state and life insurance companies or life in-

surance contracts and health and accident contracts and annuity contracts written therein, may make, write, place or cause to be made, written or placed, a policy or contract of insurance or indemnity of any kind or character, or a general or floating policy covering risks on property located in the state, liability created by or accruing under the laws of this state, or undertakings to be performed in this state, except through their licensed resident insurance agents, who shall countersign all policies, riders and endorsements or indemnity contracts so issued and collect the premiums, or see to their collection in due course, and who shall keep a record of the same. The record shall contain the usual and customary information concerning the risk undertaken, including the full premium paid or to be paid, to the end that the state may receive the taxes required by law to be paid on premiums collected for insurance on property or undertakings located in this state. No agent shall pay or forward a premium or application for insurance or in any manner secure, help or aid in the placing of insurance, or effect a contract of insurance or indemnity upon property, liability or undertakings located in this state with an insurer which is not authorized to transact its business in this state; except that if two or more insurers issue a single policy of insurance, the policy may be countersigned on behalf of all insurers appearing on it by a licensed agent, resident of the state, or any one of the insurers. The practice of signing policies in blank is likewise prohibited. (§ 1 ch 120 SLA 1966)

Sec. 21.09.230. Exception. Nothing contained in § 220 of this chapter shall be construed as preventing the free and unlimited right to negotiate wholly outside this state contracts of insurance by licensed nonresident agents and brokers, provided the policies, dailies, endorsements or evidence of the contracts covering properties or insurable interests in this state are countersigned by the resident agent of this state, in which event the countersigning agent shall receive a commission of not less than five per cent of the premium paid; provided, however, that the countersigning commission may not exceed one-half of the total commission and provided further that for countersigning these insurance policies the resident agent shall not be paid more than $50 nor less than $1 for countersigning a policy or bond; and provided further, that if the licensed nonresident agent or broker or the insurer assuming the risk desires the resident agent to render additional services during the life of a policy the compensation to be paid to the countersigning agent shall be a matter of contract between the parties in interest. Sections 220—250 of this chapter do not apply to the following contracts:

(1) policies covering property received for shipment or delivery, or in transit while in possession or custody of a common carrier,

or the rolling stock, vessels, aircraft, or other property of a common carrier used and employed by it in interstate or foreign commerce, or insurance of aircraft owned or operated by manufacturers of aircraft;

(2) policies issued by insurers not using agents in the general solicitation of business;

(3) contracts of reinsurance or retrocessions made by and for admitted companies;

(4) contracts of life and disability insurance and annuity contracts;

(5) contracts of title insurance;

(6) bid bonds issued in connection with a public or private contract;

(7) wet marine and transportation insurances. (§ 1 ch 120 SLA 1966)

Sec. 21.09.240. Affidavit attached to annual statement. At the time the annual statement of every such company is filed with the director there shall be attached to it an affidavit of the president, manager or chief executive officer in the United States stating that §§ 220—250 of this chapter have not been violated. (§ 1 ch 120 SLA 1966)

Sec. 21.09.250. Unlawful acts defined. It is unlawful for an insurer doing business in this state to make, write, place or cause to be made, written or placed in this state a policy, duplicate policy or contract of insurance of any kind or character, or general or floating policy upon persons or property resident, situated or located in this state, from or through a broker, agent, surplus line broker or person who has not secured a license in this state. No insurer may pay a commission or any form of remuneration to a person, firm or organization for the writing or placing of insurance coverage in this state unless that person, firm or organization holds a license issued by the director or his successor. (§ 1 ch 120 SLA 1966)

Sec. 21.09.260. Violations—Penalties. An insurer violating the provisions of §§ 220—250 of this chapter is guilty of a misdemeanor and upon conviction is punishable by a fine not more than $500 for each violation. In the event of conviction the insurance director may suspend or revoke the license of the insurer, but violation shall not invalidate the insurance contract. (§ 1 ch 120 SLA 1966)

Sec. 21.09.270. Retaliation. (a) If, under the laws of another state or foreign country, taxes, licenses and other fees, in the aggregate, and fines, penalties, deposit requirements or other material obligations, prohibitions or restrictions are or would be im-

PHONE: (907) 465-3600

April 25, 1983

The Honorable Charlie Bussell
Chairman, House Judiciary Committee
Alaska State Legislature
Pouch V
Juneau, AK 99811

Re: CS for HB 49
Our file no.: 366-568-83

Dear Representative Bussell:

This letter responds to the several questions relating to the nepotism restrictions proposed in the CS for HB 49, now pending before the House Judiciary Committee.

As discussed at the prior committee hearing, the state is presently a party to litigation which questions the permissible scope of any nepotism prohibition established under the Personnel Rules. Public Employees Local 71 v. State, Case No. 82-4931 Civ. (Third Judicial District). The complaint, filed in June 1982, alleges, in pertinent part, that the director of the division of personnel exceeded statutory authority in adopting Personnel Rule 13 09. The state's position in the litigation is that the personnel Rule was adopted under the authority of AS 39.25. At the present time, the parties are pursuing settlement negotiations.

A brief summary of the legal questions posed in the litigation may prove helpful to the committee. Directly at issue in the litigation is whether AS 39.25.150 confers the requisite statutory authority for the promulgation of any Personnel Rules which relate to a nepotism restriction. See AS 44.62.020. See also Kelly v. Zamarello, 486 P.2d 906, 910 n. 19 (Alaska 1971). If adoption of a nepotism restriction is authorized under AS 39.25, the inquiry turns to whether the rules are "in accordance with standard prescribed by other provision of law." AS 44.62.020. See Boehl v. Sabre Jet Room, Inc., 349 P.2d 585 (Alaska 1960). Our research has not as yet disclosed any Alaska case authority which offers a direct answer to whether it is per-

missible to adopt under the authority of the enabling statute a regulation which extends, but is not inconsistent with, the policy expressed in a separate statutory provision. Two factors may prove relevant were the litigation to proceed to a judicial resolution. First, regulations are typically accorded a presumption of validity. Alaska Intern Industries, Inc. v. Musarra, 602 P.2d 1240 (Alaska 1979). Second, the legislature has amended AS 39.25 subsequent to the enactment of AS 39.10.010, as recently as last session, presumably with knowledge of the long-standing nepotism prohibition in the Personnel Rules. However, since the matter is presently in litigation, any further comment on the merits of the pending litigation would be inappropriate. If, ultimately, the matter is not resolved in the immediate litigation, the Department of Law will review whether the director of personnel enjoys the authority to establish reasonable nepotism restrictions beyond the scope of AS 39.10.010. We are in formed that in the interm the division of personnel does not intend to enforce Personnel Rule 13 09. See 1979 Inf. Att'y Gen. Op. (Feb. 13; J-66-191-79).

The committee also questioned whether any legislative action to amend AS 39.10.010 would unduly prejudice the state's position in the litigation. That the propriety of Personnel Rule 13 09 is questioned in pending litigation should not, in our view, impair the Legislature's ability to address this matter. Any inference drawn from the legislature's action or, alternatively, inaction would be speculative at best, and would not be a determining factor in the litigation. Moreover, an appropriate letter of intent would dispel whatever inference may be suggested due to prospective legislative reform.

The committee also raised several questions broadly relating to the scope of CSHB 49. The proposed bill establishes nepotism restrictions specific to state "department[s] or agenc[ies]." Absent specific statutory provision to the contrary, the nepotism restrictions would not apply, for example, to the appointment of members or employees of regulatory boards and commissions, such as those regulatory bodies established in Title 8 of the Alaska Statutes. Further, in its most expansive scope the restrictions concern only the relationship between a prospective employee and the commissioner, deputy commissioner or executive head of a particular agency or department. The bill does not, therefore, address the situation of a relationship between two persons not employed within the same department or agency. The example raised at the prior committee hearing, the appointment of a legislator's spouse or child to a position in a state agency or, for that matter, to a position on any legislator's personal staff, would not be within the ambit of the present bill. Of course, other rules adopted by the legislature to

manage internal affairs may address such a situation. Finally, a question was raised as to whether it would be appropriate to limit the coverage to persons related by blood or marriage. More specifically, the question concerned the possible extension of the nepotism prohibition to persons in a meretricious relationship. Without addressing any policy implications, we caution that amending the bill to obtain the contemplated policy objectives would render the legislation extremely vulnerable to challenge as violative of the constitutional guarantees to equal protection, due process and personal privacy.

Please let us know if we can offer any further assistance on this matter.

Dear Mr. Brown:

Thanks for taking the time to write expressing your interest in House Bill 49, an Act relating to nepotism.

The House Judiciary Committee has had House Bill 49 under consideration during several hearings. I tend to agree with you. I see little or no need for this legislation.

It seems to me that our leaders and supervisors should be able to control the work being done by individuals employed for that purpose.

Thank you again for writing and for becoming a part of the legislative process.

Very truly yours,

Representative Charlie Bussell
Chairman, Committee on Judiciary

REPRESENTATIVE CHARLES BUSSE
HOUSE JUDICIARY COMMITTEE

RE: HB-49 (NEPOTISM)

I VEHEMENTLY OPPOSE THIS BILL, AND I SUGGEST YOU DO ALL IN YOUR POWER TO KILL IT. I WORK FOR DOT/PF — IT IS A LARGE STATE DEPARTMENT WITH A LARGE POOL OF EMPLOYEES — I SUGGEST THAT SOMEONE SEE HOW MANY EMPLOYEES WOULD BE AFFECTED IF THIS IS ENACTED.

WHAT PURPOSE DOES THE BILL SERVE THAT THE EXISING LAW DOES NOT? AS LONG AS A PERSON DOES NOT USE THEIR POSITION OR HAVE ANY INFLUENCE IN THE HIRE OF A RELATIVE, ANY FURTHER RESTRICTIONS ARE AN INVASION OF THEIR CIVIL RIGHTS. AND WHAT DOES MARITAL STATUS HAVE TO DO WITH PROMOTIONS? — WHY NOT PASS A LAW AGAINST CO-HABITATION BETWEEN EMPLOYEES? — IT IS A PROPOSAL THAT WOULD BE A FLAGRANT VIOLATION OF PRIVACY. KILL IT!

MEMORANDUM

March 2, 1983

TO: House Judiciary Committee

FROM: Teresa B. Cramer
Administrative Assistant

SUBJECT: Committee Substitute for House Bill 49 (State Affairs)
Nepotism in State Government

The existing statute prohibiting nepotism in state employment forbids only the employment of anyone related to the executive head of a department or agency. The statute states in full:

> It is unlawful for a person who is the spouse of or is related by blood within and including the second degree of kindred to the executive head of a principal state department or agency to be employed in that department or agency. AS 39.10.010.

The Personnel Rule is more extensive, prohibiting the employment of relatives of the head of a division or subdivision within that division or subdivision. In addition, the Rule prohibits the employment of two related persons in the same agency unless express approval is given by both the appointing authority and the Director of Personnel. A copy of the Rule is attached.

The scope of the Personnel Rule is broader than the statutory authority granted in AS 39.10.010. The rule-making authority given to the Personnel Board by the State Personnel Act may not extend to nepotism, since the nepotism statute is not part of that Act. The Attorney General has advised the Division of Personnel that the nepotism rule exceeds the scope of statutory authority. A lawsuit has been filed challenging the Department of Transportation's implementation of nepotism prohibitions.

The Blue Ribbon Commission recommends that legislation prohibiting nepotism in state employment be adopted to provide statutory authority for the Personnel Rule. The prohibition against employing relatives does limit the opportunities for some Alaskans to find state jobs. The disadvantage to those people should be weighed against the appearance of impropriety and favoritism which is created by people working for a close relative who is a highly-placed state official.

Bill Analysis

Page 1 Line 9 — The first section of the Committee Substitute is based on the existing statute and Personnel Rule. The first paragraph prohibits the appointment of relatives or the spouse of the commissioner, assistant or deputy commissioner of a department or the relatives or spouse of an executive head of an agency. The reference to AS 39.25.020 means that the prohibition will extend to departments or agencies in all branches of government.

Paragraph (a) differs from the existing Personnel Rule and the statute by including reference to assistant and deputy commissioners and by its application to departments and agencies which are not part of the executive branch of government. It also differs by prohibiting the appointment rather than the employment of relatives. Prohibiting appointments of relatives permits people whose relationship is created (by marriage or adoption) after both are employed within a department to continue their employment even if one is the commissioner, deputy or assistant commissioner. However, the relative could not be promoted while related to the commissioner, since a promotion is an appointment to a higher position.

Line 16 — Paragraph (b) prohibits the appointment of relatives of a division director to a position within that division. Like the first section, this prohibition extends to all branches of government through reference to AS 39.25.020.

Line 21 — Paragraph (c) requires that before two relatives may be employed in the same department, the commissioner must approve the appointment in writing. This prohibition is limited to the executive branch.

Line 27 — The commissioner may not approve an appointment if one of the people will be working in a direct supervisory relationship to the other spouse or relative.

Page 2 Line 1 — The commissioner may not approve an appointment which is prohibited by paragraphs (a) or (b).

Line 3 — Paragraph (d) defines "second degree of kindred" as it is defined in the current Personnel Rule. The definition extends beyond the normal definition by including aunts and uncles,

who are usually defined as being third degree kindred. The definition applies only to the nepotism statute.

"Second degree of kindred" is defined to include full, half, and step relationships. It does not include in-law relationships.

Line 7 The second section of the Committee Substitute provides for an immediate effective date.

Am. Jur. 2d references. — 12 Am. Jur. 2d, Bonds, § 1 et seq.; 63 Am. Jur. 2d, Public Officers and Employees, §§ 122, 414-482.

Sec. 39.15.020. Obligation and effect. Bonds of state officers and employees are in force and obligatory upon the principal and sureties for breach of the condition of the bond committed during the time the officer or employee discharges the duties of or holds the office or appointment. Each bond is considered in force and obligatory upon the principal and sureties for the faithful discharge of all duties required of the officer or employee by any law enacted after the execution of the bond and this condition shall be set out in the bond. (§ 11-2-2 ACLA 1949)

Sec. 39.15.030. Action on bond. An official bond executed by a state officer or employee is in force and obligatory upon the principal and sureties to and for the state, and for the use and benefit of all persons injured or aggrieved by the wrongful act or default of the officer or employee in his official capacity or employment. A person injured or aggrieved may bring suit on the bond in his name. (§ 11-2-3 ACLA 1949)

Alaska State Legislature

JUNEAU, ALASKA

BLUE RIBBON COMMISSION ON THE
STATE PERSONNEL ACT

Senator Bill Ray, Chairman

Pouch YG
Mail Stop 3123
Juneau, Alaska 99811
(907) 465-4442

MEMORANDUM

January 25, 1983

TO: House Judiciary Committee

FROM: Teresa B. Cramer Teresa B Cramer
Administrative Assistant

SUBJECT: House Bill 52 - Government Interests in Intellectual Work Products Developed at the Expense of the State

The Blue Ribbon Commission is proposing legislation to create and protect the state's interest in inventions, discoveries and creations developed by state employees or contractors during their employment or developed with the use of state facilities or resources.

The commission became interested in the issue when an employee of the Department of Fish and Game testified about employment problems arising from his patenting of a production scale salmon incubator. He had begun developing the incubator before he accepted employment with the state. He began working for the department and continued his project after securing advice from the Department of Law concerning avoiding the potential conflict of interest. His job for Fish and Game was closely related to the development of incubators. The employee stated that he created the incubator on his own time. He then patented it and sold the patent to a private corporation which marketed it. Thereafter, the department was required to pay royalties for use of the process.

The employee has filed several grievances over poor performance evaluations, lost promotional opportunities, and an alleged retaliatory layoff which he believed resulted from his patenting the invention. The department testified that there had been considerable morale problems because other employees believed that they had contributed to the development of the process. They thought it unfair that one individual could secure a patent and potentially profit from an invention in which others had participated and in which the state should have an interest.

The Blue Ribbon Commission is concerned that there is no statute protecting the state's interest in the inventions, discoveries and creations made by its employees or made through the use of its facilities. Legislation for the Alaska Energy Center and the Alaska

Resources Corporation gives each agency the authority to hold patents. Nothing in either chapter spells out how the state acquires that interest.

While the proposed legislation does not specifically address the situation which occurred in the Department of Fish and Game, the commission believes that this system would alleviate similar problems in the future. Information about the number of conflict of interest hearings before the Personnel Board indicates that there will probably be no more than two or three applications of the bill per year.

Bill Analysis

Page 1 Line 10	The first section of the proposed legislation gives the state all right, title and interest in any intellectual work product developed during working hours or with the use of state facilities or by employees whose duties include responsibility for research.
Page 4 Line 12	"Intellectual work product" is broadly defined later in the bill to include anything which is subject to patent, trademark or copyright laws.
Page 2 Line 8	A state employee or person under contract with the state is obliged to disclose the development of an intellectual work product to the Alaska Council on Science and Technology and to assign any interest in it to the state. If requested, the person is required to assist the Council in applying for a trademark, patent or copyright. The commission believes that the Council is the most appropriate existing state agency to administer the program.
Page 2 Line 21	The Council is given broad discretion to decide whether to pursue patenting, trademarking, or copyrighting the invention after consultation with affected state agencies. The Council may waive any state interest in the discovery or may waive all interest but retain a royalty-free license in the intellectual work product so that the state would not have to pay for its use in the future. If the state waives its interest, then the inventor would be able to pursue protection of his own interest in the discovery.
Page 3 Line 3	The proposed legislation gives the Council authority to grant monetary recognition to employees who develop an intellectual work product. The recognition could be in

the form of a cash award, a share in any royalties generated by the invention, or in any other manner the Council found appropriate. Payment would, of course, be subject to legislative appropriation. The commission believes that the Council should have wide discretion in implementing the monetary award system in order to best encourage employees in their work and serve the state's interests.

Page 3
Line 13 — Any disagreements between an employee and the state pertaining to ownership of an intellectual work product would be subject to voluntary arbitration if the parties agreed to be bound by the result. If not, then the disagreement could be settled in court. In addition, the state and the employee or contractor may enter into an employment contract which requires compulsory arbitration.

Page 3
Line 29 — Legislators and employees of the University of Alaska are exempted from the chapter. The University has its own policy on intellectual property developed at its expense which is codified in section 2 of the proposed legislation.

Page 4
Line 5 — The Council is granted rule-making authority for the chapter in accordance with the Administrative Procedure Act.

Page 4
Line 24 — Section 2 of the legislation adds language to codify the University of Alaska's right to intellectual work products developed by its employees.

Page 5
Line 7 — Section 3 requires state employees to waive their interest in intellectual work products developed at the expense of the state as set out in section 1 of the bill. The waiver is not subject to negotiation under the Public Employment Relations Act.

Page 5
Line 29 — Section 4 amends the Alaska Council on Science and Technology statutes to add the powers and responsibilities granted by the proposed legislation.

Page 6
Line 7 — Section 5 repeals the patenting powers currently granted to the Alaska Energy Center and the Alaska Resources Corporation. The commission believes that there should be a single system which applies to all legislative, judicial and executive branch employees of the state.

POSITION PAPER/Department of Health & Social Services

POSITION PAPER

CS for SS for House Bill No. 58 (Judiciary)

"An Act relating to a prisoner serving a sentence in full or having probation revoked for refusing to participate in counseling or treatment required by the court."

Section I

AS 12.55.015 Authorized sentences sets forth the conditions a judge may impose, either singly or in combination, on a defendant at the time of sentencing. Section I of CSSSHB 58 adds an additional condition "(9) provide for a sentence to be served in full by a defendant who refuses to participate in available alcohol, drug, sex offender or other mental health treatment required by the sentencing judge."

Section II

Sec. 12.55.080 Suspension of sentence and probation is amended by giving the court the authority to require available alcohol, drug, sex offender or other mental health treatment as a condition of probation.

Section III

AS 12.55.085 Suspending imposition of sentence (b) is amended by giving probation officers and the court the authority to re-arrest a person on probation status in instances of where the probationer refuses to participate in treatment required by the sentencing judge.

Section IV

AS 12.55.100 Conditions of probation (a) is amended by adding "(5) to participate in available alcohol, drug, sex offender or other mental health treatment" as a condition of probation which may be required.

Section V

AS 12.55.110 Notice and grounds for revocation suspension is amended to include refusal by a defendant to participate in available alcohol, drug, sex offender or other mental health treatment required by the court as a condition of probation as good cause for revocation of a suspended sentence.

Section VI

AS 33.15.080 Granting of parole is amended by including the provision that parole may not be granted to a prisoner who has refused available alcohol, drug, sex offender or other mental health treatment recommended by the sentencing judge.

POSITION PAPER/Department of Health & Social Services

Section VII

AS 33.30.250 Work Furlough (g) as amended would prohibit prisoners who refuse to participate in available alcohol, drug, sex offender or other mental health treatment required by the Division of Adult Corrections from being granted work furlough.

Summary

It is understood that the intent of this legislation is to help assure that offenders participate in treatment programs as determined by the court and professional correctional staff. It is noted that the purpose of section 1 of CS for SS for HB 58 is set out elsewhere in the bill and that the language contained in section 1 is unclear. Because the purpose of section 1 is carried throughout the other sections and is not necessary to ensure the intent of the bill is understood, it is recommended that section 1 be deleted.

IV. ANALYSIS

The earlier fiscal note prepared on House Bill No. 58 assumed a loss of good time by inmates refusing to participate in counseling or treatment. Subsequent testimony at the House Judiciary Committee indicated that it was not the intent of the legislation to take away good time. This is also the opinion of the Office of the Attorney General. Therefore, enactment of this bill would have no fiscal impact on the Division of Adult Corrections.

SUMMARY OF COMMITTEE SUBSTITUTE FOR SSHB 58

Denial of Parole or Furlough

Section 7 - The Parole Board may not parole a prisoner who refuses to participate in alcohol, drug, sex offender or other mental health treatment.

Section 8 - The Division of Corrections may not furlough a prisoner who refuses to participate in treatment.

Revocation of Suspension of Sentence

Sections 2, 3 and 5 - A judge may impose available alcohol, drug, sex offender or other mental health treatment as a condition of probation.

Section 6 - A sentence will be revoked if the defendant refuses to participate in treatment that is required by the judge.

2. Source of funds to offset fiscal impact of bill:

No information provided.

3. Assumptions:

This bill requires that a prisoner who refuses to participate in court ordered counseling while incarcerated may not be released until he has served his full sentence. The bill is not expected to have an appreciable impact on prosecution functions, as the prisoner will have already been convicted and sentenced by the time the question of his release arises. The bill may require the commitment of additional corrections resources, however.

4. Disclaimer:
This statement has not been reviewed by the OMB in the Office of the Governor. It therefore does not represent the final estimate of fiscal impact.

POSITION PAPER/Department of Health & Social Services

POSITION PAPER
Sponsor Substitute for House Bill No. 58

"An Act requiring certain prisoners to serve a full sentence."

House Bill No. 58 adds a new section to AS 30.30 which states that a prisoner who refuses to participate in counseling or other programs required or recommended by the sentencing judge may not be released, paroled, or furloughed until the prisoner's sentence is fully served.

State Statute 33.30.100 authorizes the Commissioner of Health and Social Services to designate the facility where a sentence is to be served. AS 33.30.120 authorizes the Commissioner to transfer prisoners from one facility to another. This provides Adult Corrections the flexibility to effectively manage prison population and to give consideration to prisoner needs.

It is the goal of Adult Corrections to provide a complete rehabilitative process for every prisoner; however, this is not always possible due to availability of certain types of programs, maintaining the integrity of programs, overcrowding, prisoner motivation, length of sentence, etc. At the time of sentencing, all of those factors are not known. It is the duty of the classification committee to identify and evaluate whatever factors may be relevant in each case; including the recommendations of the court. The placement of a prisoner reflects both the prisoner's needs and the needs/capabilities of the system. It should be recognized that factors of individual and system needs may conflict and that it is the responsibility of adult corrections to determine the most appropriate placement and programming.

Prisoners are classified within 30 days of admission to an institution and within 30 days following sentencing. The purpose of this classification is to work with each prisoner to develop a plan of incarceration to meet the prisoner's needs within the constraints of the correctional system. The classification committee addresses insitutional placement, custody level, housing, work, program (including counseling) and furlough. Each prisoner's classification is reviewed a minimum of once every six months during the sentence.

The classification committee considers the availability of beds in correctional facilities in relationship to the type of security required for each prisoner; i.e. maximum, medium, minimum. The committee also considers the prisoner's program/counseling needs in relationship to the custody level. In some cases, prisoners cannot be placed in correctional facilities where specific program/counseling is available due to their custody level; i.e. a maximum custody prisoner would not be placed in a minimum/medium custody setting because of the risk to staff, prison population, and the public presented by the maximum security prisoner.

POSITION PAPER/Department of Health & Social Services

Alaska's prison system does not have the same programs/counseling available at every institution; therefore, we are required to consider security needs before program/counseling needs.

There are two portions of Sponsor Substitute for House Bill No. 58 which are unclear 1) Sec. 33.30.330(a) does not define "sentence is fully served." There is a question of whether good time would be granted to those who are ordered to serve a sentence in full. The attached fiscal note is based on the assumption that good time would not be awarded. 2) The bill does not provide a mechanism to return a prisoner who refuses to participate in counseling or programs to court.

The enactment of House Bill No. 58 would increase the length of time to be served for the certain group of prisoners. Alaska's already overburdened correctional facilities would have to provide additional and very costly new beds to house the prisoners required to serve their full sentences.

Although the intent of this legislative proposal is both positive and admirable, it is not clear that coercion will cause a cure. In fact, it appears that the cure may cost considerably more than the problem and may be constitutionally questionable mechanism to alleviate a relatively minor problem in terms of the small number of uncooperative prisoners. We believe that the correctional division already possesses sufficient resources to deal with this problem through better and more sound prisoner classification and management.

Because of the reasons stated, the Department of Health and Social Services does not support passage of House Bill No. 58.

IV. ANALYSIS

A. Assumptions

Statistical data is not available regarding the number of inmates currently refusing to participate in to participate in counseling or other programs required or recommended by sentencing judges. It is, therefore, assumed that two (2) inmates per year with an average sentence length of six (6) years would refuse to participate in rehabilitation programs required or recommended by the sentencing judge. A prisoner who must fully serve his/her sentence loses all good time. The amount of good time earned during a six (6) year sentence is one and one-half (½) years.

The fiscal impact in the State's correctional system would be three (3) additional beds (2 inmates per year for an additional 1½ years). It is assumed these individuals would require a medium security setting. It is assumed that the 3 beds will not be needed for 4½ years as that would be the normal release date for the first offenders affected by this legislation.

B. Program Summary

1. Positions

One Correctional Officer II will be needed based on one staff positions for every 2½ beds in the correctional system. It is estimated the cost for this position, including overtime and shift differential, for FY 1988 will be $55,500.

2. Other Expenditures - FY 1988

a. Contractual Services - $6,800 is estimated to pay for medical services based on FY 1984 estimates of $1,800 per inmate per year.
b. Commodities - $11,100 will be needed for food, clothing, bedding supplies, paper products, etc. This is based on the FY 1984 estimate of $8.00 per inmate day with 6% annual inflation.
c. Grants - $400 is requested to pay gratuities for inmates working on kitchen or janitorial crews.
d. Capital Expenditures - FY 1985
It is estimated 3 beds will be needed. It is assumed that the capital cost will be $146,000 per bed.
Capital needs = 3 x $146,000
= $438,000

C. Impact - There is no economic or local government impact anticipated if this legislation is enacted.

Judges' sentences may be ignored

by Jeff Berliner
Times Writer

Sentencing orders handed down by state judges may be ignored when a convict refuses to take part in rehabilitation programs in jail, according to Commissioner of Health and Social Services Helen Beirne.

Sentencing orders also may be ignored when the length of a sentence is too short to offer much promise for rehabilitation," Beirne wrote in a letter to assistant municipal prosecutor Mike Marsh, who questioned why the Division of Corrections — which is in Beirne's department — is able to ignore judges' recommendations.

Marsh focused his criticism on the case of Amos Singletary, convicted of nine crimes for enticing or dragging young girls into his car. Singletary has a past rape conviction and a sentence which ordered that he be enrolled in a sex offender program in prison.

Singletary was never enrolled in such a program following his Feb. 19 sentencing, and District Court Judge John Mason released him after he had served 6½ months of a one-year sentence. Singletary was placed on probation and ordered to get professional counseling outside since he wasn't getting it in jail.

Two weeks after his release, Singletary was picked up for violating his probation by returning to a home where two of his earlier victims lived. Mason sentenced Singletary to another year in jail on Oct. 13, and again ordered that Singletary be placed in a prison sex offender treatment program.

Beirne said she had a staff member contact Singletary in jail, and that "Mr. Singletary continued to take the position that he is not guilty and that he does not wish to participate in sex offender treatment."

Singletary did not deny his guilt in court. And Marsh said prosecutors dropped eight other enticement charges in exchange for Singletary's accepting the evidence against him.

Mason had sentenced Singletary to a year in jail in February. In her letter, Beirne reported Singletary's projected release date as July 6.

Because the sex offender program "is of a long-term nature," Beirne said there was no point in enrolling Singletary.

But according to Marsh, Singletary had 5½ months left to serve as of July 6.

"It would not be realistic to treat an individual over a period of less than a year," Beirne wrote. Marsh, attributing that judgment to a staff psychiatrist.

Mason last month sentenced Singletary to another year in jail, and for the second time ordered that he be enrolled in the sex offender rehabilitation program.

Although the second one-year sentence came on Oct. 13, Beirne said Singletary's release date has been set for April 30.

Beirne, quoting another psychiatrist, wrote Marsh that "chronic offenders such as Mr. Singletary are not very amenable to treatment, and that an absolute minimum of nine months in treatment would be necessary to offer the slightest hope of having an effect on his behavior."

Alaskan c
to be reva

by Jeff Berliner
Times Writer

The state plans to overhaul its court system to simplify civil litigation and to cut the time it takes to get a civil case to trial after it's filed.

Alaska will be the first state in the country to undertake a project of this magnitude. The doors of the court system will be opened to experts from the National Center for State Courts in January.

State Supreme Court Chief Justice Edmund Burke will appoint a task force to work with the center's consultants.

The \$450,000 project will take a year to complete, but court system administrator Art Snowden said it will reduce costs for litigants and make Alaska's courts among the most efficient in the country.

It now take 18 months for a civil suit to go to trial.

"Although our time frame is one of the best in the country, it can be improved," Snowden said.

"No state has undertaken an examination of its litigation process on the scale here proposed," according to a proposal from the court center's western regional office in Sacramento, Calif. "The results should benefit litigants in Alaska and serve as provocative example to other states."

The project will cover three areas:

- Divorce — A task force will look at

Division ignores judge's order

by Jeff Lerner
Times Writer

An assistant municipal prosecutor may ask a judge to haul Division of Corrections officials into court to explain why they are ignoring a judge's sentence of a convicted sex offender.

Anchorage District Court Judge John Mason echoed the concern expressed by prosecutor Mike Marsh over corrections officials' failure to place Amoe Singletary in a sex offender treatment program.

And a prison official acknowledged that Singletary is not an isolated case — that others sentenced to jail have not been placed in the counseling programs selected by judges as part of their sentences.

"We can't force people to participate in a program," said Hiland Mountain prison superintendent Frank Sauser.

Sauser said that ignoring a judge's sentencing recommendation is not uncommon.

"It occurs not just with this (sex offender program), but with all kinds of treatment," he said.

Sauser said conditions of sentences handed down by judges are ignored when it involves a treatment program in which an inmate refuses to participate.

Mason and Marsh expressed dismay that the court does not have the power to order the Division of Corrections to carry out the sentence Mason imposed on Singletary almost three weeks ago.

This is the second time Mason has sent Singletary to jail and asked that he be enrolled in a sex offender treatment program. The first time the request was ignored, Mason released Singletary so he could get counseling out of jail that was not provided in prison.

One day after the second sentencing, on Oct. 14, Marsh wrote Commissioner of Health and Social Services Helen Beirne asking her to intervene, because corrections responsibilities fall under her department. Copies of the letter also went to Division of Corrections director Robert Hatrack, Sauser, Mason, Gov. Jay Hammond and Attorney General Wilson Condon.

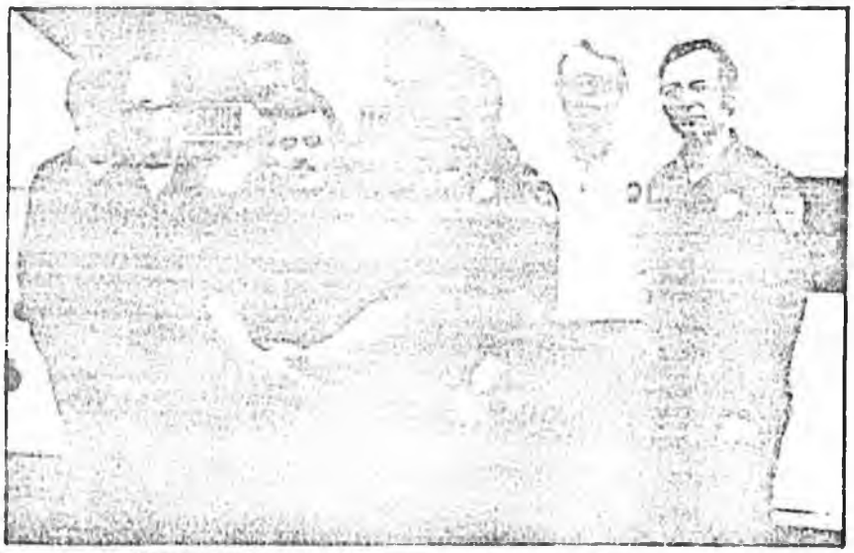
Marsh has not received a response to his letter. A spokesman for Beirne, Judy Shiller, said Beirne would "probably" respond this week. She didn't say what her response would be.

Short of hauling corrections officials into court, Mason said he may first try to get through to them by telephone and in writing.

Mason first sentenced Singletary to jail — recommending his placement in the sex offender program at Hiland Mountain — in February after Singletary pleaded no contest to nine crimes and had eight other charges dropped in exchange for his plea.

Singletary was sentenced to three years in jail — with two years suspended — on seven counts of trying to entice young girls into his car and two counts of assault and battery for trying to force them into his car. Singletary also has a prior rape conviction.

When Mason learned that Singletary was not getting any psychological treatment, he ordered his release on supervised probation so he could get professional counseling.



But two weeks after his release, Singletary was picked up outside a foster children's home where two of his former victims lived. A condition of his probation had been that he have no contact with young girls.

In sentencing him to jail again, this time for another year, Mason again stressed that he wanted Singletary enrolled in the sex offender treatment program. Mason threatened to release Singletary again so he could get professional counseling if the state failed to give him the treatment in jail.

Marsh said Singletary is a danger to society and "the number one goal should be protection of society." He has urged Singletary be sent to jail for the full 4½-year maximum term.

Singletary has been in the Third Avenue jail for the three weeks since his sentencing and the Division of Corrections has one more week under the law to classify him and respond to Mason's sentence.

"They may resist that," said Mason, "but there's nothing I can do. That's a corrections problem and corrections has a lot of problems now. We don't have the authority to order them to do it, only to recommend."

RESCUE TEAM

Eight veteran Anchorage firefighters recently completed 40 hours of intensive underwater rescue training for white water, lakes and rivers. Each member of the class already has five years experience in water rescue and recovery. From left, they are firefighters Kent Bohac and Mike House; engineers Paul Burns, Claude Adams, Dean Fortain and Larry Tish; battalion chief and team leader Kent Andersen; and firefighter John Huxley.

State extends funding for quake research

Associated Press

Fairbanks — State officials say they will continue to fund 30 earthquake monitoring stations which were scheduled to close in December because of federal funding cuts.

The seismic stations are one of six University of Alaska projects which will get state funding under the Legislature's plan to appropriate state funds to shore up programs affected by the tight federal budget.

The stations are located in the southern Cook Inlet area, monitoring one of the most active earthquake areas in the state.

John Eppenberger, director of the university's Geophysical Institute, said closing the stations would be equivalent to shutting down weather monitoring stations.

The $150,000 grant to continue the seismic operations for the next fiscal year will underwrite [illegible] telephone circuits to transmit data, helicopter [illegible] service the stations and not been found," he said. "If we don't get new money by the first of July, we are right back where we were two weeks ago."

Other state grants for university projects include:

• $150,000 to the School of Mineral Industry for minerals research.

• $40,000 to the Division of Life Sciences for continued research on brucellosis vaccine for controlling disease prevalent among reindeer.

• $35,000 to the Institute of Water Resources for studies of arsenic contamination of groundwater and streams near placer mining operations.

• $5,000 for the Rural Education Health Careers Program.

Anchorage police promote 2 officers

Two Anchorage police corporals — Mark Marsh and Gary Russell — have been promoted to sergeant, according to Police Chief Brian S. Porter.

Marsh, who will be supervisor of the Crisis Intervention Response Team, joined the department in 1971 as a reserve officer.

After becoming a full-time officer in 1972, he worked in the warrants section, the dispatch center, on traffic patrol and trained new recruits. He is now enrolled at Anchorage Community College, where he is studying for a degree in police administration.

Subject: SSHB 58

Thank you for this opportunity to comment on SSHB 58.

This bill amends existing law to preclude the release, parole or furlough of any prisoner who refuses to participate in programs recommended or required by the court, unless the prisoner at a court hearing shows good cause for failure to participate. The prisoner is entitled to be represented by counsel.

Since the length of prisoners' sentences will be at stake, and since prisoners can be expected to raise the issue of lack of available programs, the bill will result in increased contested hearings. Any new hearings add to the already considerable workload of the courts. Although this bill taken by itself does not require additional manpower, continued caseload increases will require additional judicial resources.

In Anchorage alone, the police force has increased 169% since 1976, from 174 officers covering 31 square miles to 294 officers covering 110 square miles in 1983. DWI arrests have increased by 276% from 1977, from 651 to 1797. Small claims in Anchorage are

up 172% from 1977. Search warrant requests have also increased, up 538% from 1975 (99 search warrants in 1975; 532 in 1982). In-court deputies for the Anchorage district court accrued a total of 787 hours of overtime last year. Alcohol screening statistics point to a 34% increase in new cases since 1977. These cases are a continuing responsibility for the court, because non-compliance affidavits are filed in about 25% of the cases, requiring court hearings and bench warrants.

In general, as legislative action continues to increase penalties, attorneys litigate longer and harder to protect their clients' interest.

The effectiveness of legislation which involves the justice system is directly related to the ability of the courts to process cases efficiently. As with other bills which provide for additional court hearings, the benefits of SSHB 58 should be analyzed in this context.

January 21, 1983

TO: House Judiciary Committee

FROM: Representative John Lindauer

SUBJECT: House Bill #58: "An Act requiring certain prisoners to serve full sentence."

The purpose of this Act is to motivate convicts to accept counseling or other rehabilitation programs required or recommended by the sentencing judge.

Presently, convicts may refuse to accept counseling or rehabilitation and then may be released early by the Commissioner on the premise that the convict will not be rehabilitated if he or she stays in jail.

Copy to Bill file

HB

60

HB 60--Lindauer--An Act providing or conditional pardon."

1--At first glance, it would seem to fly in the face of Art. XIV, Sec. 1, (But probably doesn't)

U.S. Constitution, where it reads, in part:

> "....No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

Arguably, if such a law were tested in Alaska, a pardoned person requested to leave the state could say (1) privileges to stay in Alaska were abridged, (2) did not have the "immunity" of being protected by Alaska laws, or (3) infringements were made on his liberty to remain in the state of his choice and (4) was denied "equal protection" of Alaska laws.

2--Article I, Alaska Constitution, under "inherent Rights" gives citizens the same kind of protection.

Probably similar arguments could be made under Alaska Constitution, and the additional hue and cry that the State cannot make "unjust distinctions between persons." (See Legee v. Martin, 379 P.2d 477(1963)

3--HOWEVER, COUNTERING THAT,

is Art. II, Sec. 21, Executive Clemency, as follows:

> "Subject to procedure prescribed by law, the governor may grant pardons, commutations, and reprieves, and may suspend and remit fines and forfeitures. This power shall not extend to impeachment. A parole system shall be provided by law."

(a) The Legislature has not yet prescribed procedures relative to executive clemency or how it should be carried out. THis measure would be the first, or come closest, to that proposition.

(b)--Obviously, the Governor already has the power to grant pardons. There is no Alaska case law on same and apparently there are no standards prescribed anywhere that the Governor would have to meet.

In other words, "he can do it if he wants to."

(c)--I understand from BIlly Berrier such executive clemency arrangements have been upheld in at least two jurisdictions (but he was unable to give me case law citations and I haven't the hours to research it, yet).

(d)--"Executive clemency", I think, is quite different from a Judge handing down a sentence. In the latter case, to make such a condition as a part of a sentence, the Judge would be dealing with law and very likely would be acting unconstitutionally and the provision probably could be successfully challenged. Action challenging Governors action under this kind of law probably would be unsucessful.

MEMORANDUM

TO: House Judiciary Committee

FROM: Representative John Lindauer

RE: House Bill #60: "An Act providing for conditional pardon."

The intent of HB 60 is to offer a released prisoner the option of leaving the state of Alaska in exchange for a Governor's conditional pardon.

Recividism is a major problem in Alaska allowing Alaska's released convicts to leave the state would insure that these convicts would not terrorize, rape, burglarize, or assault Alaskans. Hopefully, a new climate and location often closer to the "home" from whence they came, would assist in their rehabilitation.

The transport by the convict would be voluntary. However, should the individual renig on his agreement, he would fall again under the provisions of his parole.

Exclusionary rule change sought

by Steve Hansen
Times Writer

A Senate resolution aimed at amending the so-called exclusionary rule received a strong endorsement from several prosecutors, law enforcement officials and citizens who testified before a Senate Judiciary Subcommittee public hearing here Friday.

If the resolution receives similar support from at least two-thirds of the state House and Senate, the amendment will appear on the ballot in the 1984 general election.

Under the rule, if a judge decides that evidence has been gathered illegally by law enforcement officials, it is inadmissable in court. And if a defendant is brought to trial based on evidence gathered in an illegal search, the charges can be dismissed.

The exclusionary rule is based primarily on the U.S. Constitution's prohibition of illegal search and seizure by the government. But many states have the same type of prohibition either in their constitutions, or in their statutes.

Opponents of the rule say it often allows criminals to go free on legal technicalities.

The resolution, co-sponsored by Sen. Bill Ray, D-Juneau, and Sen. Fritz Pettyjohn, R-Anchorage, would modify the rule.

Under the provisions of the resolution, even if officers did not follow correct constitutional procedures in gathering evidence, it would be admissible if the state could prove the police acted in "good faith."

Pettyjohn called the resolution "the most significant piece of criminal legislation this legislature will address."

Alaska law currently guarantees the right of citizens to be "secure in their persons, houses and other property, papers, and effects" and against "unreasonable" searches and seizures.

It also states that warrants must be issued based on probable cause, must describe the place to be searched, and the persons or things to be seized.

If the resolution is approved by the legislature and voters, the following amendment will be added:

"A person whose rights under this section are violated has a cause of action for civil damages against the peace officer who violates this section. Evidence seized in violation of this section shall not be suppressed in a criminal prosecution if it is discovered by a peace officer acting in the good-faith belief that the officer's conduct is constitutional and if there is a reasonable basis for that belief."

District Attorney Victor Crumm, Municipal Prosecutor Allen Bailey and U.S. Attorney Michael Spaan were among those who testified in favor of the "good-faith" resolution at Friday hearing.

Sens. Joe Josephson and Pat Rodey, both D-Anchorage, and Pettyjohn hosted the hearing.

Crumm said the charges against some suspects are now being reduced or amended if he thinks the evidence would not be admitted by the court.

Bailey repeated Crumm's statement, adding, "But in my opinion if one rapist walks (away free) then that's too many."

Bailey was making reference to a case he handled in which a conviction against a rapist was thrown out because the evidence was ruled inadmissable.

Spaan said the exclusionary rule should be amended because it "doesn't benefit an innocent party but it benefits the guilty."

He said the alternative to allowing a judge to decide whether evidence was obtained in a "good-faith" mistake was "worth letting a guilty person go unpunished."

After the hearing, Pettyjohn said he felt confident the proposal would receive the required two-thirds majority in both legislative bodies.

"I doubt it will have that much trouble because it is such a common-sense proposition," he said.

And if it goes before the voters?

"I think it will sail," Pettyjohn said.

Police support easing evidence regs for court

By CHRIS JARVIS 1/28/83
Empire Staff Reporter

The Board of Directors of the Alaska Peace Officers Association has recommendedeasing the "fruit of the poisoned tree" doctrine, which prohibits admitting evidence in court if it was obtained illegally.

In its annual winter meeting the board unanimously supported a bill introduced by Sen. Fritz Pettyjohn, R-Anch., which would allow evidence to be admitted even if it was obtained illegally if the officer acted in good faith and believed a search was proper.

"It's bad to put a potentially dangerous person back on the street just because of a technical error," said board chairman Warren Suddock.

Suddock is a captain in the Uniformed Field Services Division of the Anchorage Police Department.

If evidence is obtained illegally out of negligence or malice, however, the officer should be liable for criminal, civil or internal discipline, Suddock said.

Lawmakers should also make assaulting a police officer and causing injury that requires minor medical treatment third degree assault, which is a felony, said Suddock. Currently, assaulting a police officer is considered resisting arrest, a misdemeanor.

Suddock also called for clarification of penalties for drunk driving convictions.

"For a myriad of reasons," such as lack of space in the jails, "a lot of people don't pay the penalty," he said.

The Legislature should clarify the law to prevent the "set-up of some ludicrous bookkeeping systems to keep people guessing what three days is," he said, referring to judges who sentence drunk drivers to three days in jail without specifying three 24-hour days.

Southeast judges seem to know three days means 72 hours, Suddock said.

Pettyjohn seeks to tighten state's exclusionary rule

by Hal Spencer
Associated Press

Times 1-25-93

Juneau — An Anchorage police officer spots what he suspects is a getaway car moments after an armed robbery. He stops the vehicle, but its driver flees. The policeman discovers a loaded pistol in a paper bag under the seat.

It is possible, says Sen. Fritz Pettyjohn, that the hypothetical driver, later charged with armed robbery, would "walk free" because the car was searched without a warrant.

It's called the "exclusionary rule," and it's firmly rooted in the U.S. Constitution's Fourth Amendment protections against unreasonable searches and seizures.

Pettyjohn, an Anchorage Republican and former prosecutor, is leading a fight to tighten Alaska's statute on the rule so that often-inadmissable evidence can be used in court.

A portion of the proposal would permit introduction of the evidence "if the prosecution satisfies the judge that the peace officer's conduct was taken in a reasonable, good-faith belief that the conduct was proper and that the evidence discovered should not be kept from the trier of fact, if otherwise admissable, because the conduct resulted in only a technical violation of the defendant's right to be protected from unlawful searches and seizures."

The bill, sponsored by Pettyjohn and three other senators, reached the Senate Judiciary Committee on Monday and was assigned to Pettyjohn, in his capacity as a member of that committee.

The freshman senator said he expects "heat from civil libertarians" on the measure, but is prepared to devote a lot of energy to its passage.

"The result of this (proposal) would be that if an officer makes a good-faith and reasonable effort to comply with the Fourth Amendment, the evidence he obtained in the course of a search or seizure will not be thrown out of court," Pettyjohn said.

The senator said the exclusionary rule seems to come up most often in drug-related cases, "but it's really as most terrible in violent crime cases."

The measure "is in response to grass roots pressure," said Sen. Bill Ray, D-Juneau, Judiciary Committee chairman.

Sen. Patrick Rodey, D-Anchorage, chairman of the Judiciary Committee last year, attended Monday's meeting and said a study of the exclusionary rule by a former state prosecutor will be completed by the first half of February.

The study, performed by Barry Stern, now a professor of law in Boston, will be made available to the committee, he said.

Pettyjohn said he has strong feelings about what he called shackles placed on police officers by the exclusionary rule and he said he is confident the U.S. Supreme Court soon will tighten the rule.

SUBJECT: Information Request on Status of HB 75 and SB 49

Dear Ms. Kolkhorst:

Enclosed is a copy of a brief report which was made to me by a House Judiciary staff member who attended the first hearing held on SB 49.

As you can see the three Anchorage Senate attorneys gathered precious little information at their hearing. I also understand the Senate intends little or no further action with the bill at this time.

HB 75 is in the House Judiciary at this time and I plan little effort on it at this time. I prefer to give the Feds time to make some changes.

If you have a chance, please stop by Room No. 124 in the Capitol. You may be interested in our regular hearing schedules.

Regards,

Representative Charlie Bussell
Chairman, Committee on Judiciary

Dear Representative Bussell:

The Juneau Bar Association at its Friday meeting discussed, for the first time, Senate Bill 49 and House Bill 75 which would limit the application of the exclusionary rule.

The membership was quite interested in gaining more information about the effects of the two bills and directed me to request that your committee schedule the bills for further hearings to permit reflection and comment.

We appreciate your consideration of this request and would ask to be kept informed of scheduled hearings on these bills.

Sincerely,

Kathy Kolkhorst/pc

III. ANALYSIS (See Fiscal Note Preparation Instruction, Section III)

Although not quantifiable at this time, this bill has the potential for causing a significant fiscal impact on the Department of Law, the Public Defender and the Court System. The department rarely uses peremptory disqualification and the department's Criminal Division probably does so only 10 or 12 times each year. The problem will arise from the private criminal defense bar which disqualifies some judges 30% or 40% of the time. If the private bar continues to seek this same level disqualification, based on cause, our prosecutors will then have to devote substantial portions of their time participating in a two-tier disqualification hearing process. Without any prior experience to guide us, the department is hesitant to speculate on the actual cost that this bill might cause. The department does believe that this bill will have the effect of hampering its

Lawyers' muscle

THE LAWYERS in Homer continue to prevail in the case of the transfer of District Court Judge James Hornaday from their town to Anchorage.

Those lawyers wouldn't try criminal cases before the judge because he was handing out severe punishment for drunken drivers. So many of them boycotted his courtroom that Judge Hornaday had little to do. Anchorage lawyers had to be sent to Homer to handle the load.

Judge Hornaday protested his forced move by appealing it. This week, a memo filed with state and federal court from the attorney of the presiding judge who made the transfer maintains it was done through due process.

The peremptory challenges in Homer have turned out to be a powerful instrument in the lawyers' control over that small community's judicial system. They also have frustrated the efforts of a conscientious judge to control the drunk driving on Alaska's roads and highways.

THE LAW that allows peremptory challenges needs modification so that abuses such as the one in Homer can be avoided. Judges need to be able to concentrate on the business at hand and not be required to concern themselves with lawyers' attitudes.

Working on proposals for such a modification would be a good job for the members of the legislature between the time they adjourn this year and meet again next January.

TIMES 5-20-83

Pre-emption of judges 'disruptive'

by Jeff Berliner
Times Writer

Times 2-6-83

A handful of state judges are "disrupting" the state court system because they are removed from cases so frequently, says state court administrator Art Snowden.

Court records show that one Anchorage judge and five other judges from around the state are excused from cases far more than their colleagues.

Although the current debate over pre-emptions has focused on Homer District Court Judge James Hornaday, he is not the only judge regularly excused from cases by lawyers. There are 42 trial judges in the state, (the eight appellate judges may not be pre-empted), and lawyers routinely excuse six of them.

According to court records, in addition to Hornaday, the judges most regularly bumped from

See Judges, page A-1

Judges

(Continued from page A-1)

cases are Juneau District Court Judge Gerald Williams, Fairbanks District Court Judge Stephen Cline, Anchorage Superior Court Judge Karl Johnstone, Juneau Superior Court Judge Roger Pegues, and Wrangell Superior Court Judge Henry Keene.

By law, attorneys have a right of pre-emption, called peremptory challenge, which means that each side in a case may excuse the judge assigned to that case one time. The parties involved do not have to state the reason. Lawyers have five days from the initiation of a case to file a notice for a change of judge. The legislature is now considering a bill to repeal lawyers' right to pre-empt a judge.

Court officials have called the pre-emption an "administrative nightmare" because of the problems in reassigning judges.

"It is more efficient without it," Snowden said, adding that the court system has not taken a policy on the peremptory challenge and is probably split on the issue.

Snowden called it "a disruption" that costs the state court system an average of $20,000 yearly in extra costs of reassigning cases to other judges.

The biggest expense, Snowden said, is paying travel and expense money to have judges journey to one-judge areas to fill in where the only judge in town has been legally removed from a case.

That has happened so much in Homer that Hornaday has been ordered to pack up, leave town, and don his judicial robes in Anchorage. Even if lawyers pre-empt him there, the reasoning is, there are other judges to fill in. Presiding Judge Mark Rowland ordered Hornaday to move to Anchorage by June 1 to fill a judicial vacancy here.

Hornaday has been pre-empted from about 84 percent of the criminal cases assigned to him. His lawyer, Henry Camarot, claims that Hornaday is pre-empted 8 percent of the time when all his cases are considered.

Cline, Williams and Johnstone are taken off cases up to half the time. All four of the most pre-empted judges have been retained in office by voters in recent elections.

Johnstone, the only Anchorage judge regularly excused, is also the only judge who hears civil cases almost exclusively. The others regularly hear criminal cases, too. Johnstone is pre-empted three times more than all the other Anchorage Superior Court civil judges put together, and his pre-emptions climbed to a high of 20 in December. Judges are assigned between 30 and 40 new cases monthly. Johnstone was pre-empted 153 times in 1982, up from 71 in 1981. And although Johnstone said last summer that his pre-emptions were going down, court records show they are on the rise.

But in Anchorage, the state's biggest judicial district, Johnstone's cases are simply reassigned to another Anchorage judge. That can't be done in Homer, where Hornaday is the only judge. His removal means that court administrators have to send in another judge to hear Hornaday's cases.

Last week the House Judiciary Committee held two days of hearings on the bill to abolish the pre-emption. Lawyers argued against the bill, claiming the pre-emption is used to excuse a judge who may not give their client a "fair shake."

Both defense attorneys and Anchorage municipal prosecutor Allen Bailey argued for keeping pre-emptions around so they have a tool to excuse a judge they think is either too lenient or too harsh when it comes to sentencing.

Judge blames lawyers for high disq

Empire - 2-8-83

Lawyers counter that challenges are needed to guarantee fairness

By CHRIS JARVIS
Empire Staff Reporter

Lawyers, not judges, are to blame for the high frequency with which some judges are disqualified from cases, Juneau District Court Judge Gerald O. Williams said today.

Williams is frequently disqualified from hearing cases because, in his opinion, "Alaska is the most lawyer-whipped state in a lawyer-whipped country."

Williams and Juneau Superior Court Judge Rodger Pegues have been named as two of six Alaska trial judges most frequently disqualified from cases. Pegues is on vacation and was unavailable for comment.

Alaska Court Administrator Art Snowden said the peremptory challenges, which allow lawyers to ask for a different judge without stating a reason, are an "administrative nightmare," noting it costs the state an estimated $30,000 a year to fly judges into a jurisdiction to hear a case.

Williams, a former Alaska State Trooper, said members of the bench should not be blamed.

Williams said it is his responsibility to make sure a person accused of a crime is brought to trial within 120 days of his arrest, he said. He thinks peremptory challenges are often used to prolong the time before trial.

Lawyers generally disagree.

"I don't know of any attorney" who uses peremptory challenges only to prolong

...qualification rate

cases, said lawyer Richard Burnham.

According to current rules, an attorney on either side of a case can request a judge be disqualified without giving a reason.

Requiring attorneys to say why a judge should be disqualified would present problems if a judge is not disqualified and the attorney must then argue a case before him, Burnham said.

Although acknowledging it costs money to fly a judge to hear the cases of a disqualifed judge, Burnham said there are other solutions to the problem. For example, he said, a superior court judge could hear district court cases or, if that is not possible, another district judge could be hired.

"It doesn't seem to me the goal of the judicial system is to run cheaply. It's to give people their day in court," Burnham said.

Williams, however, said if a case is prolonged long enough; eventually a case

Continued on Page 2

Judge...

Continued from Page 1

could be dismissed because the time limit for trial has been passed.

Admitting he is sometimes curt when on the bench, Williams said he finds it difficult to "put someone in jail in a nice way."

He defended his record, saying he treats everyone who is convicted in his court in the same way.

"I've still got friends who are mad at me (for sentencing them to jail), but it goes with the turf," he said.

"I admit I'm old fashioned," Williams said. He seldom likes to grant delays in court proceedings because cases often end up dismissed when delayed too long, he said.

Peremptory challenges are often used by attorneys in a "tactical and strategic" manner, Williams said.

Of defense attorneys, Williams said, "It is in their interest to prolong to avoid a trial."

However, it is not always in the best interest of the defendent, Williams said. Peremptory challenges and continuances might result in an attorney's client staying in jail, if not able to make bail, he said.

It is the court's responsibility to assure efficiency in the system especially with criminal case loads in Juneau almost doubling in four years, he said.

Sometimes 30 to 60 days will have elapsed days since a person's arrest before making the first court appearance. That leaves as few as 60 days before the case may go to trial, Williams said, noting motions for continuances, if granted, could extend beyond the 120 day limit.

Although some people who see Williams on the bench for the first time might see him as "a combination of Attila the Hun and Genghis Kahn," he said it is because his experience has taught him he must be absolute when passing judgement.

"I may appear curt in court but I've learned through experience that you've got to do it," he said.

Christian Ministers Association of Kachemak Bay
P.O. Box 2018
Homer, Alaska 99603

December 9, 1982

Judge Mark C. Rowland
303 K Street, Courtroom D
Anchorage, AK 99501

Dear Judge Rowland,

Your office and the judicial system are held in high regard by us and our children. We value justice as one of the key ingredients in our democratic way of life. We regularly instruct our children to respect the law and to deal in a just way with their companions and fellow citizens.

In this context we cannot understand why you should order Homer District Court Judge James Hornaday transfered to Anchorage against his will and against the overwhelming wishes of our community. As we understand, there is no precedence for this.

Therefore, we ask — for justice sake — that Judge Hornaday be retained as our District Court Judge. Secondly, you should know that we wholeheartedly endorse the policies of Judge Hornaday in sentencing DWI offenders. Finally, we request that the whole peremption policy be reviewed in light of these circumstances.

A judge serves his community in an exceptional manner. His policies are supported by the people he serves. He is an outstanding example for our children. Yet, he is transfered against his will. That seems a strange reward — even stranger justice.

Speaking for the Christian Ministers Association, I am

Sincerely yours,

J Schmidt

RESOLUTION

SOUTH PENINSULA MENTAL HEALTH ASSOCIATION, INC.

December 11, 1982

Whereas, Judge James Hornaday has proven to be an effective and competent District Court Judge serving the Homer Court, and

Whereas, Judge Hornaday was overwhelming endorsed by the residents of his jurisdiction during the recent election, and

Whereas, the right of the State Judicial system to move a Judge without public hearing or other procedural considerations is currently being questioned,

Be it hereby resolved that the South Peninsula Mental Health Association requests the retention of Judge Hornaday in the Homer District Court, and

Be it further resolved that the judicial pre-emption statutes in Alaska should be thoroughly reviewed and that the procedures for moving a Judge from one jurisdiction to another should be standardized through promulgation of appropriate regulations.

Resolution passed at the Board of Directors meeting on December 11, 1982.

Joe P Aprill

Reverend Joe Aprill, Chairperson

December 6, 1982

Homer Chamber of Commerce

Judge Mark C. Rowland
303 K Street
Courtroom D
Anchorage, AK 99501

Dear Judge Rowland:

The community and surrounding areas of Homer is greatly dismayed to learn of your decision to transfer Judge James C. Hornaday from Homer to Anchorage. We strongly urge your reconsideration in this matter.

Judge Hornaday has been an excellent judicial representative for Homer for many years. His home and family are here. We do not want to lose Judge Hornaday to this area.

This community has steadfastly supported Judge Hornaday's courageous stand against the crime of drunken driving and we wholeheartedly support his sentencing procedures.

Please find attached petitions of support in favor of Hornaday being retained as District Judge in this area.

Sincerely,

December 6, 1982

The Honorable Mark Rowland
Presiding Judge of the Superior Court
303 "K" Street
Anchorage, AK 99501

Dear Judge Rowland:

We, as a community, strongly oppose the transfer of Judge James Hornaday. Judge Hornaday's stance on drunk driving is looked upon as a favorable public service in the community. Perhaps the laws of pre-emption should be closely scrutinized and amended out of necessity in administering a trial court system.

Jim Hornaday is an active participant in community affairs, an impeccable family man, and contributes strong support to this rural community. The type of program he advocates serves the individual rights of our citizens to travel the streets of Homer with less probability of being harmed by drunk drivers.

As Mayor of Homer, I petition you to cancel the transfer order removing Judge Hornaday from this community as District Court Judge.

Sincerely,

Erle Cooper
Mayor

TELEPHONE (907) 283-7167

December 23, 1982

Milo H. Fritz
Box 158
Anchor Point, Alaska 99556

Dear Milo:

This letter is prompted by the article concerning your position on certain legal reforms you have proposed which appears in the December 20 issue of The Clarion.

You were quoted as indicating that you expected the legal profession to oppose your bill removing the right of peremptory challenges. I know of very few attorneys who have ever exercised their right to file a peremptory challenge against a judge. I, myself, have never filed one and I agree that no such right should exist. I have not made a study of other jurisdictions but would be very surprised if the right exists in very many states. Presumably, the law was originally passed by well meaning individuals who enjoy tinkering with the system. I wish you well in pushing the legislation and offer you my support.

I was surprised that you were quoted as indicating your interest in enacting legislation which would impose a limit on attorney's fees in probate matters. Although I do not do any probate work myself at the present time, it has been my experience in the past that after the passage of the Uniform Probate Act and the institution of simplified probate procedures, many attorneys are now charging fees which are lower than they were in the past. In the case of a large estate I would suggest that a fee based upon the percentage of that estate would be unconscionable. From the attorney standpoint, it generally does not cost any more to probate a large estate than to probate a small one. Prior to the passage of the Uniform Probate Act, that was not the case.

Philosophically, I am opposed, as I am sure you are,

to the State interfering in contract relationships between professionals and their clients. I would suggest that a legislature which would concern itself with fees charged by an attorney to his client would also not hesitate in interfering with the fees charged by a physician to his patient. As a practical matter, a client who is overcharged by an attorney presently has recourse to the fee arbitration panel which operates under the auspices of the Alaska Bar Association. In light of the foregoing, I would request that you rethink your position on supporting a limit on attorneys fees.

Thank you for your attention to my comments. I wish you well in Juneau this year.

Very truly yours,

Rick

LAWS OF ALASKA

1967

Source: SB 66 am

Chapter No. 48

AN ACT

Relating to the disqualifications of judicial officers; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 22.20.020 is repealed and re-enacted to read:

Sec. 22.20.020. DISQUALIFICATION OF JUDICIAL OFFICER FOR CAUSE. (a) A judicial officer may not act as such in a court of which he is a member in an action in which

(1) he is a party or is directly interested;

(2) he was not present and sitting as a member of the court at the hearing of a matter submitted for its decision;

(3) he is a material witness;

(4) he is related to either party by consanguinity or affinity within the third degree;

(5) either party has retained him as their attorney or has been professionally counseled by him in any matter within two years preceding the filing of the action;

(6) the judicial officer feels that, for any reason, he cannot give a fair and impartial decision.

(b) In an action specified in (a)(4) and (5) of this section the disqualification may be waived by the parties and is waived unless a party raises the objection.

(c) If a judicial officer disqualifies himself or

consents to disqualification, the presiding judge of the district shall immediately transfer the action to another judge of that district to which the objections of the parties do not apply or are least applicable and if there be no such judge, then the chief justice of the supreme court shall assign a judge for the hearing or trial of the action. If a judicial officer denies his disqualification the question shall be heard and determined by another judge assigned for the purpose by the presiding judge of the next higher level of courts or, if none, by the other members of the supreme court. The hearing may be ex parte and without notice to the parties or judge.

* Sec. 2. AS 22.20 is amended by adding a new section to read:

Sec. 22.20.022. PREEMPTORY DISQUALIFICATION OF A SUPERIOR COURT JUDGE. (a) If a party or his attorney in a superior court action, civil or criminal, files an affidavit alleging under oath that he believes that he cannot obtain a fair and impartial trial, the presiding judge shall at once, and without requiring proof, assign the action to another judge of that district, or if there be none, then the chief justice of the supreme court shall assign a judge for the hearing or trial of the action. The affidavit shall contain a statement that it is made in good faith and not for the purpose of delay.

(b) No judge or court may punish a person for contempt for making, filing or presenting the affidavit provided for in this section, or a motion founded on the affidavit.

(c) The affidavit shall be filed within five days after the case is at issue upon a question of fact, or within five days after the issue is assigned to a judge, whichever event occurs later, unless good cause is shown for the failure to file it within that time.

(d) No party or his attorney may file more than one affidavit under this section in an action and no more than two affidavits in an action.

* Sec. 3. This Act applies to all actions pending, but not set for trial on the effective date of this Act.

* Sec. 4. This Act takes effect on the day after its passage and approval or on the day it becomes law without approval.

Approved by Governor: March 28, 1967
Actual effective date: March 29, 1967

Appeal from joint judgment.—See Stanley v. Greenberg, 5 Alaska 178.

Am. Jur. reference.—2 Am. Jur., Appeal and Error, § 1 et seq.

Sec. 22.15.250. Disposition of fines. When by law any fees, fines, forfeitures, or penalties are levied and collected by the district magistrate or deputy magistrate, the proceeds and all other money collected shall be accounted for and transmitted to the administrative director of the judicial system for transfer to the general fund of the state except as provided in § 270 of this chapter. (§ 21 ch 184 SLA 1959)

Sec. 22.15.260. Bond. Before entering upon his duties each district magistrate and deputy magistrate shall execute and file with the administrative director a surety bond in form and amount to be determined by rule of the supreme court. The state shall pay for the bond. (§ 22 ch 184 SLA 1959)

Am. Jur. reference.—30A Am. Jur., Judges, § 12.

Sec. 22.15.270. Retention of fines, etc., by political subdivisions. All fines, penalties and forfeitures resulting from violations of ordinances of political subdivisions shall be returned to the political subdivision whose ordinance is involved in the manner provided by rule of the supreme court. The political subdivision shall pay to the state administrative director of the court for transfer to the general fund of the state such sums as shall pay for the judicial services rendered to the political subdivision by the magistrate rendering the services. Fines, penalties and forfeitures imposed after appeals accrue to the state, unless the appeal is prosecuted by the political subdivision. (§ 23 ch 184 SLA 1959)

Article 1. Judicial Officers.

Section
10. Judicial officer defined
20. Disqualification of judicial officer
30. Power of judicial officers

Pre-1967 Law

Sec. 22.20.010. Judicial officer defined. The term "judicial officer" means a supreme court justice, including the chief justice, a judge of the superior court, a district magistrate and a deputy magistrate. (§ 54-2-1 ACLA 1949)

Am. Jur. reference.—14 Am. Jur., Courts, § 22.

Sec. 22.20.020. Disqualification of judicial officer. (a) A judicial officer may not act as such in a court of which he is a member in any of the following cases:

(1) in an action or proceeding to which he is a party or in which he is directly interested;

(2) when he was not present and sitting as a member of the court at the hearing of a matter submitted for its decision;

(3) when he is related to either party by consanguinity or affinity within the third degree;

(4) when he has been attorney in the action or proceeding in question for either party;

(5) when a party, or an attorney for a party to an action or proceeding, civil or criminal, files an affidavit that the judge before whom the action or proceeding is to be tried or heard has a personal bias or prejudice either against him or his attorney or in favor of an opposite party, or attorney for an opposite party, to the suit, and that it is made in good faith and not for the purpose of delay, and the affidavit shall state the facts and the reasons for the belief that bias or prejudice exists, and shall be filed within one day after the action, suit, or proceeding is at issue upon a question of fact, unless good cause is shown for the failure to file it within that time. No party or attorney may file more than one such affidavit in any case. The provisions of this subdivision apply only to the superior court.

(b) In the cases specified in (3) and (4) of this section the disqualification may be waived by the parties and is waived unless a party raises the objection. (§ 54-2-1 ACLA 1949)

Revisor's note.—Also see the Rules of Civil Procedure relating to "Disability of a Judge."

This section contains the only conditions under which the judge should abandon the trial of a cause and send it to another judge. United States v. Pratt, 3 Alaska 400, affirmed in 170 F. 881.

The affidavit must assert facts from which a sane and reasonable mind may infer bias or prejudice. United States v. Pioneer Packing Co., 10 Alaska 70; Graff v. Electrical Enterprises, Inc., 12 Alaska 322.

And is subject to strict construction. — That affidavits of prejudice are to be strictly construed has been held consistently. United States v. Pioneer Packing Co., 10 Alaska 70.

Personal bias must be shown.—The affidavit of prejudice must show that a personal bias exists, and the holding is that judicial bias or rulings of a judge which are the subjects of correction on appeal do not constitute personal bias. United States v. Pioneer Packing Co., 10 Alaska 70.

Filing of affidavit.—The affidavit must be filed within the time specified by statute and the recused judge must determine the question. United States v. Pioneer Packing Co., 10 Alaska 70.

Requires that cause be at issue upon question of fact.—This section specifically requires that the cause be at issue upon a question of fact before the affidavit may be filed. United States v. Pioneer Packing Co., 10 Alaska 70.

When cause is at issue.—A cause is not at issue upon a question of fact until all permissible motions and demurrers have been waived or filed and passed upon, and the proper pleading, setting forth the claims of the respective parties, has been filed. United States v. Pioneer Packing Co., 10 Alaska 70.

Mere assertion of bias insufficient. —A mere assertion of belief that the judge is biased or prejudiced, giving no reasons in its support, does not disqualify the judge under the provisions of this section. Pacific Coal, etc., Co. v. Pioneer Min. Co., 205 F. 577.

It is a mistake to assume that a judge can be ousted from jurisdic-

tion to try a cause upon an allegation of mere bias or prejudice. United States v. Pratt, 3 Alaska 400, affirmed in 170 F. 881.

Attorney may allege prejudice in a respectful manner.—An attorney may in a proper case, in a respectful manner, allege that the judge is prejudiced against his client, and unless the act is done with reckless disregard of truth, or with the express intention to reflect upon the honor and integrity of the judge, it is not a contempt. Tjosevig v. United States, 225 F. 5.

And untrue or excess facts are not proper ground for contempt or criticism.—Where an attorney filed a proper affidavit of prejudice and of interest, if the facts therein stated were untrue, the fact that they were untrue is not a proper basis for adjudging a contempt, nor is the fact that the affidavit contained more than was necessary to accomplish the change of judges a ground for punishment or criticism. Paul v. United States, 36 F. (2d) 639.

Duty of judge not to withdraw from case where affidavit is insufficient.—A judge against whom an insufficient showing for recusation has been made owes it to his oath of office and to the litigant who has invoked the jurisdiction of the court over which he regularly presides not to withdraw from the case, where an insufficient affidavit of prejudice has been filed, however much his personal feelings may incline him to do so. Graff v. Electrical Enterprises, Inc., 12 Alaska 322.

Statements made by the judge in a prior suit involving a different defendant, and in the case at bar, did not show any objectionable attitude on the part of the judge, or any personal bias against the defendant in the case at bar. United States v. Pioneer Packing Co., 10 Alaska 70.

Cited in Stringer v. United States, 16 Alaska 305, 233 F. (2d) 947.

ALR references.—Disqualification of judge by relative's ownership of stock in corporation which is party to action, 8 ALR 295; 110 ALR 472.

State's right to file affidavit disqualifying judge for bias, 115 ALR 866.

Right of party in course of litigation to challenge title or authority of judge, 144 ALR 1207.

Disqualification of judge in pending case as subject to revocation or removal, 162 ALR 641.

Sec. 22.20.030. Power of judicial officers. A judicial officer may

(1) preserve and enforce order in his immediate presence, and in the proceedings before him, when he is engaged in the performance of a duty imposed upon him by law;

(2) compel obedience to his lawful orders, as provided by law;

(3) compel the attendance of persons to testify in a proceeding pending before him in the cases and manner provided by law;

(4) administer oaths to persons, in a proceeding pending before him, and in all other cases where it may be necessary in the exercise of his powers and the performance of his duties;

(5) take and certify the proof and acknowledgment of a conveyance of real property, or any other written instrument authorized or required to be proved or acknowledged;

(6) take and certify the acknowledgment of satisfaction of a judgment in any court;

(7) take and certify an affidavit or deposition to be used in any court of justice or other tribunal of the state. (§§ 54-2-3, 54-2-5, 54-2-6 ACLA 1949)

The power to punish for contempt is the highest exercise of judicial power. United States v. Pratt, 3 Alaska 400, affirmed in 170 F. 881.

It is not an incident to the mere exercise of judicial functions. United

Memorandum

Alaska Court System

Fiscal Officer

SUBJECT: Travel Costs - Pre-emptions

The following information is provided in response to your request for information on the cost of travel arising from the pre-emption of judges.

Several problems prevent an accurate reporting of these costs. To begin with, Technical Operations does not accumulate statistics strictly on the number of pre-emptions. Some statistics are available for all the categories of disqualifications, but not all courts are represented. Secondly, the travelling judges do not report the specific reason for travelling to other courts on their reimbursement claims. The result is the court does not have the capability to identify the actual cost of pre-emptive disqualifications.

Despite these problems, all judicial travel claims for the period of 7/1 through 12/31/82 were reviewed. Those claims which appeared to be related to the pre-emption or disqualification of a judge were analyzed further. While this method of estimating costs is not perfect, it provides an approximate cost figure.

The schedule presented below shows the travel costs of providing judicial coverage for disqualifications at various court locations during the six month period ending 12/31/82.

COURT LOCATION	TRAVEL COSTS
Juneau - District Court	$ 2,500
- Superior Court	600
Ketchikan - District Court	1,250
- Superior Court	1,100
Bethel - Trial Courts	3,900
Kenai - Trial Courts	650
Homer - District Court	2,700
TOTAL	$12,700

Note - With per diem for travelling Judges, annual costs would probably be $50,000 or so, according to Art Snowden - JJ Brewer

The approximate annual cost would be $25,400. To obtain estimated costs for individual locations the six month figures should be doubled.

Adm. F-1
Rev. 2-73

TESTIMONY OF ATTORNEY HENRY CAMAROT, ANCHORAGE
February 3, 1983

Gentlemen and (unable to hear the period of 4 log numbers due to static in the teleconference) except for a short period when I left Alaska I practiced in the State of Oregon. I presently represent District Judge James Hornaday in respect to an order that was issued by the Honorable Mark Rowland, presiding Superior Court Judge for the Third Judicial District. In that order, Judge Hornaday had been directed to move from Homer, Alaska, his place of residence for some seven years, to Anchorage, Alaska to permanently fill the office of District Judge in the Anchorage area. I come in favor of repealing the perempt statute. Alternatively I wish to make several other comments and I think they can be interpreted as clear recommendations. The consideration of the perempt statute repeal perhaps can be invaluated against the framework of the true factual situation that currently exists; infact, I got the impression as I was listening to some of the witnesses testify, that this law seems to be directed all towards Judge Hornaday, when I believe the issue is far greater than Judge Hornaday.

Some eight years ago more or less Judge Hornaday gave up a successful 10 year law practice to accept an appointment as the acting district judge in Homer. The condition of his employment at thr time that he moved to Homer. He moved to Homer. The Legislature established a Homer District Judge position. He applied to the judicial council for that office in Homer. His name was forwarded to the Governor for that office and that office began in Homer. He was appointed by the Governor for that specific office. The Judicial council twice recommended him for retention and he has twice been overwhelming retained by the vote in the election of the Third District. More recently, in the election of 1982, more people turned out to testify on his behalf before the judicial council meetings held in Homer than for any other judge in the state. He also passed with the lawyers in the bar poll and received the highest rating of any judge with the Alaska Peace Officers Association.

Judge Hornaday has established deep roots in Homer. His wife, Karen, teaches violin to many children and serves as chairperson on the Homer Parks and Recreation Commission. She serves on many church and civic activities and just recently helped passed the bond issue of the building of the new high school in Homer. His daughter, Mary, is a sophomore
in college and his son, Dan, is a high school sophomore who worked his way up to the staring quarterback on the football team. He also plays on the basketball team. Dan is usually on the honor roll. Their son, Joshua, is in the third grade and is into music, Little League and Cub Scouts. Five year old Matthew has just started kindergarten. The Judge is active in Little League matters, Chamber of Commerce matters and plenty of other activities. When he left the private practice and accepted the appointment as the district judge in Homer, he made substantial financial sacrifices. He was required to sell his home and a commercial building that had been partially set aside as a retirement income. When he moved to Homer, he bought a home there. That was to be his home and that was to be his community for years to come.

We have all heard about how in early 1982, the first part of 1982, Judge Hornaday decided to do something about the drunk driving. He was deeply concerned about this continuing highway travesty, which he was aware resulted in the killing and maiming of over 200,000 Americans a year. It was frustrating to him. Apparently, drunk driving cases constitute over 50% of all the jury trials in the Alaska court system. For many reasons, and because he also serves at times as a coroner and probate judge, because of times when he has come in direct contact with auto crash results, leaving maimed bodies and grieved families or person who have suffered injuries, thereby, felt he had to do

something. He wanted to do it, not by legislative action, but what he wanted to do was in a true effort to be fair, give notice beforehand that persons convicted of a drunk driving in his court would receive a 60 day sentence with 45 suspended and 15 days actually having to be served. Now at the outstead let me point out this is not the maximum sentence, as some people have suggested. The maximum sentence under AS23.35.030 is $1000 or by imprisonment for not more than one year or by both. Now it is not the minimum sentence, which is 72 consecutive hours in the first instance. But what he was really doing, was, he was really giving fair warning beforehand to attorneys and drivers, particularly those consuming alcohol and driving under the influence, that this is what he would do. Now that resulted in an increase in Judge Hornaday being perempted. This is not to say that Judge Hornaday had not been perempted on prior occasions, but this announced policy seemed to have resulted in a definite increase in the peremptions that he experienced prior to the spring of 1982. Let me stop here and note that he was not legislating at that time. He was not attempting to. But what he was doing again just simply identifing the symptom patterns. Now when it was called to his attention that the public statement could not be followed, that he had to consider matters on a case to case basis, he acknowledged that. He publicly recinded the policy and he did sentence on a case-by-case basis. And he did not give 15 days in every insistence. He did go back to the 72 hours, frequently. But the peremptions continued. Continued to the point that Presiding Judge Mark Rowland determined, as he put it, it became administratively a nightmare and was costly to the system. And the system is one of the things I want to talk about.

Now the statistics put together by the court administrator regarding Judge Hornaday and our statistics will be at odds. Truthfully speaking, we don't think that there is comparable statistics that show that one District Judge or Superior Court Judge, particularly in areas where there is only one judge, that experience any more or less peremptions than Judge Hornaday had been experiencing. We don't know to what degree the peremptions compare. But we do know that there are problems and there are serious problems and the problems are going to continue in our opinion with the peremption statute in other areas as they have happened in the past in Wrangell, Petersburg, Ketchikan, Juneau and Kodiak. In any event, Judge Rowland believes that Judge Hornaday's peremptions in Homer were occurring to such a degree that he determined that he had to move Judge Hornaday out of Homer. I don't suggest that Judge Rowland is not acting in good faith. He was very candid when he said that it is the exercising of the peremption by counsel out of the current statute and the resulting costs of bringing in another judge from Anchorage, which is causing him to issue his order. Judge Rowland is attempting to follow obligations imposed on him as the presiding judge to properly administer the court system. And also to be concerned about the costs endowed in his responsibility.

In that regard, as I understand it from Judge Hornaday, Judge Hornaday was advised that he should consider peremtory challenges in sentencing persons before him as a particular consideration. I am sure this is done to avoid having the experse of the cost of having to send another District Judge to Homer when Judge Hornaday was perempted. Chief Justice Burke in a public hearing in Homer indicated perempts had to be considered in sentencing. So, I think we ought to recognize the issue that peremptions affect sentencing, that with the statute as it exists, the system should acccept that the consequences and cost and, threaten, the independence of the judiciary. So it's understood, are we challenging Judge Rowland's order on Judge Hornaday's behalf because I believe that there are serious constitutional and legal arguments on whether he has the authority to take the action he did. But aside from that, and if it be found that Judge Rowland does have the power and authority to remove a District Judge

from his place of residence and the office to which he is assigned, then the problem will still remain. Let's turn for a moment to the defense attorneys or primarily to the ones that are utilizing the perempt statutes.

I have talked with defense attorneys, quite a few of them, and I recognize what they are saying. They can not claim that Judge Hornaday has been more stern in his sentencing practices than other judges. They contend they are under ethical duties to advise the client that he or she has a right to perempt Judge Hornaday. I hear what those defense counselors are saying. But I also know that this constitutes and is just as clear an act as judge-shopping as any other act would be if not for the perempt statute. Even if the attorney contended that he had a ethical responsibility, it's judge shopping. In other instances in my opinion, they are using the perempt for purposes of delay in coming to trial. The delay is always an act that has to do with the defendant because anything can happen between the time of the charge and the actual time of the trial. But what is truly more troubling is, and what must be troubling to an elected official, be he legislator or otherwise, be he judge or otherwise, regarding what the justification might be claimed in respect to the perempt statute, the bottom line is not withstanding thousands of voters particularly those voters in the Homer area voting in favor of the man, Judge Hornaday. There will still be a few members of the bar who are mainly able to sufficiently prevail upon the presiding judge so as to require Judge Hornaday to be removed from one area to another. I don't say they are making personal contact, I say they are doing that through the perempt statute. In my mind as it has already been indicated, the perempt statute and peremption rule interferes with the judicial process under the Constitution and the court responsibility to perform the duties endowed upon them. It also destroys the independence of the judge and to a degree I believe it interferes with the oath of office that each judge takes that he will support the state and federal constitution and will faithfully discharge the duties of his office as a judge of the court to which he is appointed, to the best of his ability. It destroys the independence of the judge. I sincerely believe that it is very wrong to remove a judge who is regarded as judicially competent and I would like to make a note that the major incidents that I have heard in respect to Judge Hornaday has nothing to do with his ability in a civil case, nothing to do with his ability during the course of a trial, presumably it has to do with his sentencing in DUIL cases and some pr' trial motions, other than that attorney after attorney have told me he is a very competent, capable judge. But the clutch of the issue comes down to this, if the peremption statutes are to stay in existance and Judge Rowland's order is to remain in effect, then every judge appointed to a district judge area is subject to be reassigned depending on how his rulings and sentencing practices are viewed by the attorneys. I suggest that the precedent being established here is extreme for the reasons already stated. It should be a matter of a state-wide concern. What happens to the next District Judge that goes to Homer. He accepts that office in the wake of Judge Hornaday's reassignment, if that occurs. He knows that the presiding judge doesn't want to have make another reassignment. He does know that he has to avoid peremptions and to avoid peremptions he obviously must not follow the practices followed by Judge Hornaday. Peremption has an effect on sentencing without a question. The matter of degree perhaps in Homer is a matter of degree anywhere. I know that there are many judges today in Alas who are very concerned about this order. I think it is a matter for new judicial candidates to consider as part of the input as to whether or not they want to become judges. They are invited to place themselves, as now, in front of the judicial council for particular judicial office. They have to realize they maybe reassigned. Against this background I wish to make the following recommendations. I thought a lot about

the perempt statute and I believe that it has one part of it that makes me feel that it should be repealed and its the view of it being unfair.

I submit to you that whether its the filing of an affidavit or a simple notice of a change of judge of Criminal Rule 25 and Civil Rule 43, the accusation is that litigants can not receive a fair and impartial trial. If the judge has no opportunity to defend himself against that charge, although it clearly imputes his integrity. In my opinion the judge, whether it's Judge Hornaday or any other judge is denied due process, he cannot defend his integrity which is so important to a judge. I would suggest in the first inistance, therefore, that the particular AS22.20.022 be repealed.

Then I have an alternative suggestion. I have a lot of respect for my brethren. I see the attorneys here in mass. I've heard them. Accordingly, realistically speaking, that perempt statute cannot be repealed. I would like to give you perhaps a compromise. I would suggest that there would be a statute passed or present statute amended, rejecting the reassignment of any Superior Court or District Judge from the area of his residence to any other location. It is not say that a judge cannot be temporarily assigned, as the Constitution recognizes, and it takes place periodically, so long as there is a time limit on each assignment each year. I think the wholesome affect of this type of law is that if the perempt statute is to be continue as part of the Alaska Judicial processes that it be recognized as part of the overall system, including the cost of reassigning a judge to the area where the peremption right is imposed. It will also reassure other members of the judiciary or future potential members, that have to give that fact their consideration. They are weighing the pros and cons of continuing or becoming a judge.

Another alternative, the second alternative, I would suggest would be given serious consideration, would be to limit the perempt statute to those areas that have more than one judge serving a community, such as Anchorage and Fairbanks, and deny the invoking of the peremptory challenge for no cause where there are single judges, whether they be Superior or District Court Judges in other areas.

I realize that this would not be as popular and be subject to constitutional attack. However, I believe that it could withstand that constitutional attack.

I wish to thank the committee for allowing me to make this presentation. I sincerely hope that reservation in supporting this and that the recommendations maybe of some assistance to the committee. Needless to say, in the final analysis, in the case of Judge Hornaday, that any action taken by the legislature, I sincerely hope, will allow him to stay in Homer. Thank you.

TESTIMONY IN FAVOR OF PASSAGE OF HB 79

THANK YOU, MR. CHAIRMAN.

I AM REP. MILO FRITZ FROM ANCHOR POINT, NEAR HOMER ALASKA.

THE FIRST COURT OF JUSTICE IN ALASKA WAS ESTABLISHED BY THE U.S. IN 1900 UNDER JUDGE JAMES WICKERSHAM IN EAGLE ON THE YUKON RIVER. SINCE THEN, THE COURT SYSTEM HAS GROWN IN SIZE AND COMPLEXITY TO MEET THE CHANGING NEEDS OF THE TIMES AND THE INCREASE IN POPULATION.

GENERALLY SPEAKING, THE LEGAL NEEDS OF THE PEOPLE OF ALASKA, EXCEPTING THE DISSIDENTS AND ECCENTRICS PRESENT IN ANY AGE, WERE ADEQUATELY MET. UNTIL 1967, PEREMPTORY DISQUALIFICATION OF A JUDGE COULD ONLY BE INVOKED FOR CAUSE, THAT IS, FOR A GOOD, TRENCHANT REASON. AND I BELIEVE, MR. CHAIRMAN, THAT NO REASONABLE PERSON CAN OBJECT TO THAT.

IN 1967, ACCORDING TO THE SESSION LAWS OF ALASKA FOR THAT YEAR AND APPEARING IN ALASKA STATUTES, THAT IS THE LAWS OF ALASKA KNOWN AS AS 22.20.022, AN ADDITION WAS MADE, MAKING IT POSSIBLE FOR THE PETITIONER, THAT IS THE LAWYER OR THE CLIENT TO DISQUALIFY A JUDGE WITHOUT PROVIDING ANY REASON WHATSOEVER. AND IT IS THE PURPOSE OF HB 79 TO STRIKE THIS 1967 AMENDMENT TO ALASKA LAW FROM THE BOOKS MAKING PEREMPTORY CHALLENGE OF A JUDGE POSSIBLE ONLY FOR CAUSE, THAT IS, FOR A VALID REASON.

IN THE ELECTION OF NOVEMBER 2, 1982, THE VOTERS IN THE THIRD JUDICIAL DISTRICT VOTED 57,000 TO 38,000 TO RETAIN JUDGE JAMES C. HORNADAY ON THE BENCH. ON THE KENAI PENINSULA, WHERE

JUDGE HORNADAY RESIDES AND HOLDS COURT IN THE SMALL CITY OF HOMER, THE VOTE WAS 6000 TO 3000 IN FAVOR--AN IMPRESSIVE VOTE.

NOW IT HAPPENS THAT JUDGE HORNADAY HANDS OUT TOUGH SENTENCES TO THOSE CONVICTED OF DRUNK DRIVING. SO QUITE NATURALLY, THE TRANSGRESSOR AND HIS LAWYER, QUITE LOGICALLY AND WITHOUT HAVING TO GIVE A REASON, PEREMPTORILY CHALLENGED JUDGE HORNADAY ASKING THAT THE CASE BE HEARD BEFORE ANOTHER JUDGE SINCE, OF COURSE, THE SENTENCE ~~CAN'T LEGALLY BE~~ IS NOT GENERALLY MADE ANY MORE SEVERE AND MIGHT QUITE POSSIBLY BE LIGHTER. ANY GOOD LAWYER WHO DOES THIS IS QUITE WITHIN HIS RIGHTS, SINCE IT HIS DUTY TO OBTAIN FOR HIS CLIENT THE LIGHTEST POSSIBLE SENTENCE. IN OTHER WORDS, THE LAWYER IS NOT AT FAULT, THE LAW IS, AND THAT IS WHY I ASK YOU AND YOUR COMMITTEE TO REMEDY THIS DEFECT BY FAVORABLY PASSING OUT HB 79.

NOW, IN A STATEMENT AT A HEARING REGARDING JUDGE HORNADAY HELD IN HOMER ON JANUARY 5, 1983, SUP. COURT JUDGE MARK ROWLAND TESTIFIED THAT JUDGE HORNADAY WAS PEREMPTORILY CHALLENGED IN ABOUT 80% OF THE CASES COMING BEFORE HIM, ONLY A SMALL PERCENTAGE OF WHICH HAD TO DO WITH DRUNKEN DRIVING. IN OTHER WORDS, BY ACCIDENT OR DESIGN, MOST OF THE LAWYERS ON THE KENAI PENINSULA INDULGED IN A VENDETTA AGAINST JUDGE HORNADAY PEREMPTORILY DISQUALIFYING HIM. IN EFFECT, THESE LAWYERS SAID, "OKAY, SO YOU ARE GOING TO HAND OUT MAXIMUM SENTENCES AGAINST OUT DRUNK DRIVING CLIENTS. THEREFORE, WE WILL PEREMPTORILY DISQUALIFY YOU FOR ALL OUR CASES." OF COURSE, THIS LEFT JUDGE HORNADAY WITH LITTLE TO DO AND MADE IT NECESSARY FOR SUP. COURT JUDGE

MARK ROWLAND TO DISPATCH A JUDGE FROM ANCHORAGE AT NEEDLESS EXPENSE TO HOMER TO HEAR JUDGE HORNADAY'S CASES. AND SINCE HORNADAY HAS BEEN RENDERED INEFFECTIVE, ROWLAND HAS TRANSFERRED HIM TO ANCHORAGE AS OF JUNE 1, THUS QUITE LEGALLY TRANSGRESSING THE WILL OF THE PEOPLE OF THE KENAI PENINSULA. JUDGE ROWLAND IS NOT WRONG; THE LAWYERS ARE NOT WRONG; THE LAW IS WRONG AND HB 79 RECTIFIES THE SITUATION.

IN ANCHORAGE, PEREMPTORY DISQUALIFICATION OF JUDGE HORNADAY WOULD COST NOTHING SINCE THERE ARE SEVERAL JUDGES OF JUDGE HORNADAY'S RANK AVAILABLE.

THEREFORE, IT SEEMS THAT PEREMPTORY CHALLENGE OF A JUDGE WITHOUT CAUSE SHOULD BE STRICKEN FROM THE BOOKS SINCE IT SERVES LAWYERS AND TRANSGRESSORS AND NOT THE ADMINISTRATION OF JUSTICE. REM ACU TETIGISTI.

IF, MR. CHAIRMAN, THIS 13TH STATE LEGISLATURE PROMPTLY PASSES OUT HB 79 WHICH WOULD ELIMINATE PEREMPTORY DISQUALIFICATION WITHOUT CAUSE, THE PEOPLE OF THE KENAI PENINSULA WILL KEEP THE JUDGE WHOSE ACTIONS THEY APPLAUDED BY VOTING FOR HIS RETENTION 2 TO 1.

PASSAGE OF THIS MEASURE WILL ALSO PREVENT THIS FROM OCCURRING IN OTHER one-JUDGE JURISDICTIONS WHERE, FOR FRIVOLOUS REASONS OR NO REASON AT ALL, A JUDGE MAY BE PEREMPTORILY DISQUALIFIED. THE JUDGES ARE NOT WRONG, THE LAWYERS ARE NOT WRONG, THE PEOPLE ARE NOT WRONG--THE LAW IS WRONG. LET US REPEAL IT BY PASSING HB 79.

I THANK YOU, MR. CHAIRMAN.

RE: HB 79, Legislation Pertaining to Peremptory Disqualification

Dear Mr. Ross:

Thank you for taking the time to author and forward to the Committee the letter setting out your feelings with regard to HB 79. This letter, along with a great deal of other inofrmation, was considered by the Committee before making its findings and reporting the bill out without amendment or change.

On Wednesday, February 25, 1983, HB 79 was brought before the House for second reading and debate. After nearly two hours of debate and one attempt at having the bill amended, HB 79 was advanced to third reading and voted on by the body.

A copy of the House Journal covering action by the House for its thirty-eighth day is enclosed and shows the voting and progress of HB 79 as it passed the House. At the close of the floor action for the day on HB 79, Representative Fritz gave notice of reconsideration of his vote which carries the bill to the next legislative day for another vote if brought up at that time.

On the next legislative day, HB 79 was not again brought up, so it has passed the House as shown in the Journal for the thirty-eighth day.

Thank you again for taking the time to become involved with the legislative process.

Regards,

Representative Charlie Bussell
Chairman Committee on Judiciary

Re: House Bill No. 79
"An Act repealing peremptory disqualification of a judge and changing Rule 10(c) and Rule 25(d), Rules of Criminal Procedure and Rule 42(c), Rules of Civil Procedure; and providing for an effective date."

Dear Representative Bussell:

This letter is to express our strong opposition to House Bill No. 79.

It was clearly apparent from the testimony of Representative Fritz in support of his bill, that this bill is tailored for only a few judges and primarily Judge Hornaday of Homer. The bill simply is inapplicable to the majority of the judges on the bench today.

The attorney handling the case is in the best position to gauge his rapport with a judge based upon the judge's past actions. A peremptory challenge allows a change of a judge without antagonizing or embarrassing a judge. There is no need to state your reason for the peremptory challenge. If there is a valid reason for a change of judge, and an attorney had to state his reasons, it would certainly destroy that attorney's rapport with that judge for any future cases in front of him. Judges are only human too.

A judge being only human, can easily be biased in one area of the law. If a fair trial is to be guaranteed, the attorney and his client should have the right to a change of judge when appearing in front of him in that area of the law. It is

apparent in this state as in all other states that jurors can be challenged for cause and in fact may be excused without cause. Why cannot we have the right to change one judge as well?

Apart from a judge's actual bias on issues of law, there are times when attorneys do suffer from personality conflicts with a judge. For this reason, the attorney should be allowed to preempt the judge and not make the client suffer.

The system has worked well in the past, and now only in the one judge area is it having a problem. In essence the baby should not be thrown out with the bath water for that one problem. We are certain that there are other ways of resolving the problem rather than repealing Alaska Statute 22.20.022.

We urge you to defeat House Bill 79.

Sincerely,

Robert D. Frenz

RE: HB 79, Legislation Pertaining to Peremptory Disqualification

Dear Mr. Ross:

Thank you for taking the time to author and forward to the Committee the letter setting out your feelings with regard to HB 79. This letter, along with a great deal of other inofrmation, was considered by the Committee before making its findings and reporting the bill out without amendment or change.

On Wednesday, February 25, 1983, HB 79 was brought before the House for second reading and debate. After nearly two hours of debate and one attempt at having the bill amended, HB 79 was advanced to third reading and voted on by the body.

A copy of the House Journal covering action by the House for its thirty-eighth day is enclosed and shows the voting and progress of HB 79 as it passed the House. At the close of the floor action for the day on HB 79, Representative Fritz gave notice of reconsideration of his vote which carries the bill to the next legislative day for another vote if brought up at that time.

On the next legislative day, HB 79 was not again brought up, so it has passed the House as shown in the Journal for the thirty-eighth day.

Thank you again for taking the time to become involved with the legislative process.

Regards,

Representative Charlie Bussell

SUBJECT: House Bill 79, Pre-emptory Disqualification

Dear Mr. Andrews:

Thank you for taking the time to write expressing your thoughts on alternative proposals to improve HB 79.

After a great deal of deliberation on the bill and having taken several hours of teleconference, the Committee moved the bill out favoring its passage as written. It will require a 2/3's vote as it deals with a court rule and I believe it is scheduled for floor action some time this week.

Thank you again for becoming a part of the legislative process.

Regards,

Representative Charlie Bussell

February 15, 1983

Representative Charlie Bussell
State Capitol
Pouch V
Juneau, Alaska 99811

Dear Rep. Bussell;

These are my comments concerning House Bill No. 79, which would repeal peremptory disqualifications of judges.

I listened to all of the testimony on January 31, and to much of the testimony on February 3. Without going into the pros and cons again, I believe that the alternative proposal for temporary reassignments should be adopted. Specifically, I believe that there should be a limit on the first reassignment to 90 days. This temporary reassignment would provide a "cooling off" period for all parties involved. The costs to the judicial system would be reduced by temporarily halting the continual reshuffling of judges, and relations between bench and bar would have the opportunity to improve.

If the peremptory disqualifications continued with the same frequency after this first reassignment, then the solution to the problem would be left to the discretion of the chief judge of the district, including the possibility of permanent reassignment.

I believe that a second alternative, that of limiting peremptory challenges to multijudge courts, is unconstitutional.

The Homer incident has illuminated a part of a larger problem with the practice of peremptory disqualifications. Perhaps the House Judiciary Committee could vote to provide funding to the Alaska Court System for a study of (1) the dollar costs of the present practice, specifically focusing on the differences between single judge and multijudge courts, and (2) the effects of the current practice on sentencing.

Thank you for your kind attention.

Very truly yours,

Mark Andrews

Judicial challenge bill stands

3-1-83 Clarion

Senate next to consider Fritz bill on challenges

A House bill to eliminate the right of attorneys to disqualify a judge without stating a cause will move to the Senate after its sponsor abandoned efforts to convince more representatives to support the legislation.

Rep. Milo Fritz, R-Anchor Point, sponsored the bill to repeal peremptory challenges (the legal term for removing a judge from a case without stating a cause). In addition to a state statute allowing those challenges, the state court system has a rule implementing the law. While the statute may be repealed with a simple majority vote, eliminating the court rule requires a two-thirds majority.

Fritz's bill passed the House by a 24-13 margin last week. With that margin, the portion of the bill repealing the statute could take effect if passed by the Senate and signed by the governor. The portion of the bill repealing the court rule would not be effective, because 27 votes, or a two-thirds margin, was not reached.

On Thursday, Fritz said he would ask for reconsideration in hopes of picking up the additional votes. Fritz's aide, David Schade, said Monday that reconsideration was not asked for because support from some representatives was wavering. "If you have a sure thing, keep it," he said.

Schade also reiterated Supreme Court Chief Justice Edmond Burke's comment that the court would change its rules voluntarily if the statute was changed.

The peremptory challenge law came under fire last fall after the court system announced that Homer District Court Judge James Hornaday would be transferred to Anchorage on June 1. The reason for the transfer, court officials said, was that in more than 80 percent of the criminal cases to come before Hornaday, attorneys were disqualifying him without cause.

House passes repeal of judicial challenge law

Reconsideration asked in try for larger margin

A House bill to repeal the right of attorneys to disqualify a judge from a case without cause passed by a 25-13 margin Wednesday, but the bill's author still asked legislators to reconsider their vote.

Rep. Milo Fritz, R-Anchor Point, said he is asking for reconsideration in hopes of getting 27 votes, a two-thirds majority. He expected that vote to come today or Monday.

Rep. Hugh Malone, D-Kenai, voted against the bill.

A two-thirds majority is required to repeal a court system rule which implements the challenge without cause (legally called a peremptory challenge) statute. If the 27-vote mark is not reached, the bill repealing the statute only would still pass and go to the Senate. If passed there and signed into law, the court rule could still stand, although many judges would like to see the law done away with.

"The only indication we've had on the court rule is the 17 judges that were interviewed. They all agreed, along with the Supreme Court Chief Justice, that they would welcome any opportunity to change the law," Fritz said Thursday.

Supreme Court Chief Justice Edmond Burke said in a public hearing in Homer that the court rule would not be maintained if the Legislature repealed the peremptory challenge statute.

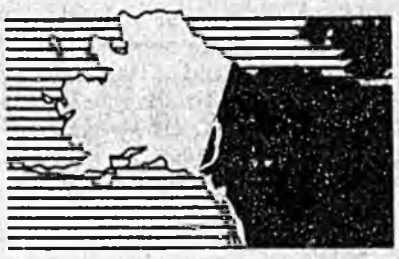
See AREA, Page 24

...Area legislation

Continued from Page 1

The issue of peremptory challenges arose because Homer District Court Judge James Hornaday was being challenged in more than 80 percent of the criminal cases to come before him.

Third Judicial District Presiding Judge Mark Rowland transferred Hornaday to Anchorage, but delayed the move to June 1.



Bill would stop peremptory challenge of judges

The Associated Press

JUNEAU — The Alaska House by a 24-13 vote has passed a bill to eliminate the peremptory challenge of judges, but it rejected a change in court rules that take precedence over legislative mandates.

Another attempt to change court rules was expected today on a notice of reconsideration filed by the bill's sponsor, Rep. Milo Fritz, R-Anchor Point.

A change in court rules would have required a two-thirds vote in the House, or 27 votes, but the court rule

amendment mustered only 23.

The peremptory challenge has come under fire because of the highly publicized case of District Court Judge James Hornaday of Homer. He has been disqualified by challenges in 80 percent of his recent cases, after he said he automatically would sentence first-time drunken drivers to 15 days in jail.

The vote on the bill (HB79) came after nearly two hours of debate on the measure and an amendment proposed by Rep. Ron Wendte, D-Ketchikan. Wendte's amendment would have made all challenges qualified, but it was defeated.

Describing the bill as overkill, Wendte said his change was an attempt to "strike middle ground and provide that peremptory challenges be maintained but put the burden on the client and his attorney."

Calling the middle ground unobtainable, Judiciary Chairman Charlie Bussell, R-Anchorage, said the amendment would allow clerks in attorneys' offices to offer superflous reasoning on challenges.

Rep. Don Clocksin, D-Anchorage, said that Wendte's amendment would not allow the challenges to be eliminated.

Rep. Niilo Koponen, D-Fairbanks, said the bill is an issue over the right to a fair trial, which was the reason for the peremptory challenge becoming a part of court procedures.

The amendment would "at least make the right (of a fair trial) accountable," said Rep. Hugh Malone, D-Kenai.

But Rep. Tony Vaska, D-Bethel, said the elimination of the peremptory challenge would allow prejudice to remain in the court system.

"Prejudice means to me stiffer sentences for blacks, Chicanos and Alaska Natives," he said. "The public should have a fair hearing at all times, not with a judge who is prejudiced."

TIMES 2-24-83

House passes judge challenge bill

Associated Press

Juneau — The Alaska House passed by a 24-13 vote on Wednesday a bill to eliminate the peremptory challenge of judges.

A change in court rules would have required a two-thirds vote in the House, or 27 votes, but the court rule amendment mustered only 23.

The peremptory challenge has come under fire because of the highly publicized case of District Court Judge James Hornaday of Homer. He has been disqualified in 80 percent of his recent cases, after he said he automatically would sentence first-time drunk drivers to 15 days in jail.

The vote on the bill came after nearly two hours of debate on the measure and an amendment proposed by Rep. Ron Wendte, D-Ketchikan. The amendment would have made all challenges qualified, but it was defeated.

Describing the bill as "overkill," Wendte said his change was an attempt to "strike middle ground and provide that peremptory challenges be maintained, but put the burden on the client and his attorney."

Judiciary Chairman Charlie Bussell, R-Anchorage, called the middle ground unobtainable. He said the amendment would allow clerks in attorneys' offices to offer superfluous reasoning on challenges.

Rep. Don Clocksin, D-Anchorage, said that Wendte's amendment would not allow the challenges to be eliminated.

Rep. Niilo Koponen, D-Fairbanks, said the bill is an issue over the right to a fair trial, which was the reason for the peremptory challenge becoming a part of court procedures.

The amendment would "at least make the right (of a fair trial) accountable," said Rep. Hugh Malone, D-Kenai.

But Rep. Tony Vaska, D-Bethel, said the elimination of the peremptory challenge would allow prejudice to remain in the court system.

"Prejudice means to me stiffer sentences for blacks, Chicanos and Alaska natives," he said. "The public should have a fair hearing at all times, not with a judge who is prejudiced. A fair hearing in every case; that's what justice is all about."

Koponen said the bill "will be known as the Lawyers' Full Employment Act of 1983."

In other action, the House rejected a change in court rules that take precedence over legislative mandates.

Another attempt to change court rules was expected Friday on a notice of reconsideration filed by the its sponsor, Rep. Milo Fritz, R-Anchor Point.

Malone questioned on judicial challenge stand

To the editor: Clavion 2-25-83

An open letter to Rep. Hugh Malone:

I understand you are a surveyor. I hope you get your transit out and take a good look at where you're going, as I understand you opposed the Milo Fritz bill which would repeal the law of peremptory challenge. By letting this law stay in running Judge Hornaday out of Homer, do you for one think this will solve the problem?

When there is a new judge assigned, regardless of his attitude toward drunken driving and other crimes, this will only tell lawyers who use this law to load their pockets with taxpayers' money. Apparently Chief Justice Burke and Judge Rowland want to keep this law on the books, perhaps for the day when they topple and have to take defending drunken drivers. I am told when Judge Rowland was a visiting judge in Homer, he apparently wasn't interested in saving taxpayers money, as he flew his own plane, landing on Lake Beluga. Another visiting judge recently, along with a district attorney and a game warden, were seen as they ran aground on the bar and he was so hard aground, he didn't show up to court till 2 p.m. the next afternoon. Judge Hornaday is a skilled navigator and keeps his ship off the bar.

If this peremptory law is so all-fired necessary, why not put our courts on a paying basis and let them pay for visiting judges, instead of having people who are able to survive the drunken drivers, as in most states one found guilty or the loser in a civil action is required to pay the cost of court. As of now, we the taxpayers are not only paying the cost, we're also paying for a public defender who apparently uses excess time with this peremptory or other laws, stalling to feather his own nest, telling people who want to plead guilty to plead not guilty so they can run up expense. Also, I know of one case where a man had a quite steady job on the Slope and a public defender, defending him on a criminal trespass case.

WHO is paying?

I'm almost to the point of advocating a repeat of history, as was in Colonial Williamsburg, Virginia, in 1658.

I hope you'll see the light.

Some questions for anyone interested in such subjects:

1. Why not breath-test equipment in all bars and places liquor is sold?

2. Why not let the people vote for all judgeships as long as we are paying their salaries?

3. Why couldn't we send other perempted judges for a Homer visiting judge?

4. Why, as heard on a teleconference before a committee, are three Anchorage judges not sent as visiting judges to Homer — maybe too tough or lawyers can't dictate to?

5. I am told you are against the bill, Rep. Malone. Why?

I and many of the voters are watching to see if our representatives are satisfying the will of the people.

Calvin H. Hand
Anchor Point

Letters to the editor

Bill would stop peremptory challenge of judges

The Associated Press

JUNEAU — The Alaska House by a 24-13 vote has passed a bill to eliminate the peremptory challenge of judges, but it rejected a change in court rules that take precedence over legislative mandates.

Another attempt to change court rules was expected today on a notice of reconsideration filed by the bill's sponsor, Rep. Milo Fritz, R-Anchor Point.

A change in court rules would have required a two-thirds vote in the House, or 27 votes, but the court rule

amendment mustered only 23.

The peremptory challenge has come under fire because of the highly publicized case of District Court Judge James Hornaday of Homer. He has been disqualified by challenges in 80 percent of his recent cases, after he said he automatically would sentence first-time drunken drivers to 15 days in jail.

The vote on the bill (HB79) came after nearly two hours of debate on the measure and an amendment proposed by Rep. Ron Wendte, D-Ketchikan. Wendte's amendment would have made all challenges qualified, but it was defeated.

Describing the bill as overkill, Wendte said his change was an attempt to "strike middle ground and provide that peremptory challenges be maintained but put the burden on the client and his attorney."

Calling the middle ground unobtainable, Judiciary Chairman Charlie Bussell, R-Anchorage, said the amendment would allow clerks in attorneys' offices to offer superflous reasoning on challenges.

Rep. Don Clocksin, D-Anchorage, said that Wendte's amendment would not allow the challenges to be eliminated.

Rep. Niilo Koponen, D-Fairbanks, said the bill is an issue over the right to a fair trial, which was the reason for the peremptory challenge becoming a part of court procedures.

The amendment would "at least make the right (of a fair trial) accountable," said Rep. Hugh Malone, D-Kenai.

But Rep. Tony Vaska, D-Bethel, said the elimination of the peremptory challenge would allow prejudice to remain in the court system.

"Prejudice means [redacted]me stiffer sentences for [redacted]ks, Chicanos and Alaska Natives," he said. "The public should have a fair hearing at all times, not with a judge who is prejudiced."

Judge ban repeal law advances

JUNEAU — A bill repealing the right of attorneys to disqualify judges without stating a reason was given a "do pass" recommendation Wednesday by the House Judiciary Committee.

Also on Wednesday, the Senate Finance Committee passed to the full Senate the supplemental appropriations bill for school districts.

Rep. Hugh Malone, D-Kenai, voted against passing the judicial bill, sponsored by Rep. Milo Fritz, R-Anchor Point.

Malone said Wednesday he supports changing the current method of allowing attorneys to disqualify one judge in a case without stating a reason. The law allowing disqualification for cause should stay, he said. Under that law, a hearing to determine whether changing judges is appropriate is held in each case.

A law taking the middle ground, where attorneys would have to state a cause under oath, but no hearing would held, should be passed, he said. Malone said when the bill reaches the floor, he would propose amendments to accomplish his preferred procedure.

"I'd like to know the reasons why judges are being challenged," he said. "I also loathe to take away a right withut a clear showing that the right is unnescessary or that it is being used in such a way that it is causing a hardship."

Sen. Don Gilman, R-Kenai, Wednesday reported that the Senate Finance Committee has voted to pass the supplemental appropriation bill for school districts to the Senate floor. The bill passed the House last week and Gilman said he expected it to pass the Senate within a few days. The bill appropriates $23.5 million for schools.

"It was refreshing to see the bill go through. It was straightforward, and no one tried to tack on anything," he said.

Gilman also reported that two other bills that he introduced are moving through the Senate committee structure. A bill providing a supplemental appropriation for the Department of Environmental Conservation for water and sewer projects and to municipalities for Municipal Assistance will be heard by the Finance Committee Tuesday and Wednesday next week. The bills received "do pass" recommendations by the Senate Community and Regional Affairs Committee.

Judge blames lawyers for high disqualification rate

Empire - 2-8-83

Lawyers counter that challenges are needed to guarantee fairness

By CHRIS JARVIS
Empire Staff Reporter

Lawyers, not judges, are to blame for the high frequency with which some judges are disqualified from cases, Juneau District Court Judge Gerald O. Williams said today.

Wiliams is frequently disqualified from hearing cases because, in his opinion, "Alaska is the most lawyer-whipped state in a lawyer-whipped country."

Williams and Juneau Superior Court Judge Rodger Pegues have been named as two of six Alaska trial judges most frequently disqualified from cases. Pagues is on vacation and was unavailable for comment.

Alaska Court Administrator Art Snowden said the peremptory challenges, which allow lawyers to ask for a different judge without stating a reason, are an "administrative nightmare," noting it costs the state an estimated $30,000 a year to fly judges into a jurisdiction to hear a case.

Williams, a former Alaska State Trooper, said members of the bench should not be blamed.

Williams said it is his responsibility to make sure a person accused of a crime is brought to trial within 120 days of his arrest, he said. He thinks peremptory challenges are often used to prolong the time before trial.

Lawyers generally disagree.

"I don't know of any attorney" who uses peremptory challenges only to prolong cases, said lawyer Richard Burnham.

According to current rules, an attorney on either side of a case can request a judge be disqualified without giving a reason.

Requiring attorneys to say why a judge should be disqualified would present problems if a judge is not disqualified and the attorney must then argue a case before him, Burnham said.

Although acknowledging it costs money to fly a judge to hear the cases of a disqualifed judge, Burnham said there are other solutions to the problem. For example, he said, a superior court judge could hear district court cases or, if that is not possible, another district judge could be hired.

"It doesn't seem to me the goal of the judicial system is to run cheaply. It's to give people their day in court," Burnham said.

Williams, however, said if a case is prolonged long enough, eventually a case

Continued on Page 2

Judge...

Continued from Page 1

could be dismissed because the time limit for trial has been passed.

Admitting he is sometimes curt when on the bench, Williams said he finds it difficult to "put someone in jail in a nice way."

He defended his record, saying he treats everyone who is convicted in his court in the same way.

"I've still got friends who are nad at me (for sentencing them to jail), but it goes with the turf," he said.

"I admit I'm old fashioned," Williams said. He seldom likes to grant delays in court proceedings because cases often end up dismissed when delayed too long, he said.

Peremptory challenges are often used by attorneys in a "tactical and strategic" manner, Williams said.

Of defense attorneys, Williams said, "It is in their interest to prolong to avoid a trial."

However, it is not always in the best interest of the defendent, Williams said. Peremptory challenges and continuances might result in an attorney's client staying in jail, if not able to make bail, he said.

It is the court's responsibility to assure efficiency in the system especially with criminal case loads in Juneau almost doubling in four years, he said.

Sometimes 30 to 60 days will have elapsed days since a person's arrest before making the first court appearance. That leaves as few as 60 days before the case may go to trial, Williams said, noting motions for continuances, if granted, could extend beyond the 120 day limit.

Although some people who see Williams on the bench for the first time might see him as "a combination of Atilla the Hun and Genghis Kahn," he said it is because his experience has taught him he must be absolute when passing judgment.

"I may appear curt in court but I've learned through experience that you've got to do it," he said.

Pre-emption of judges 'disruptive'

Times 2-6-83

by Jeff Berliner
Times Writer

A handful of state judges are "disrupting" the state court system because they are removed from cases so frequently, says state court administrator Art Snowden.

Court records show that one Anchorage judge and five other judges from around the state are excused from cases far more than their colleagues.

Although the current debate over pre-emptions has focused on Homer District Court Judge James Hornaday, he is not the only judge regularly excused from cases by lawyers. There are 42 trial judges in the state, (the eight appellate judges may not be pre-empted), and lawyers routinely excuse six of them.

According to court records, in addition to Hornaday, the judges being regularly bumped from

See Judges, page A-4

Judges

(Continued from page A-1)

cases are Juneau District Court Judge Gerald Williams, Fairbanks District Court Judge Stephen Cline, Anchorage Superior Court Judge Karl Johnstone, Juneau Superior Court Judge Roger Pegues, and Wrangell Superior Court Judge Henry Keene.

By law, attorneys have a right of pre-emption, called peremptory challenge, which means that each side in a case may excuse the judge assigned to that case one time. The parties involved do not have to state the reason. Lawyers have five days from the initiation of a case to file a notice for a change of judge. The legislature is now considering a bill to repeal lawyers' right to pre-empt a judge.

Court officials have called the pre-emption an "administrative nightmare" because of the problems in reassigning judges.

"It is more efficient without it," Snowden said, adding that the court system has not taken a policy on the peremptory challenge and is probably split on the issue.

Snowden called it "a disruption" that costs the state court system an average of $30,000 yearly in extra costs of reassigning cases to other judges.

The biggest expense, Snowden said, is paying travel and expense money to have judges journey to one-judge areas to fill in where the only judge in town has been legally removed from a case.

That has happened so much in Homer that Hornaday has been ordered to pack up, leave town, and don his judicial robes in Anchorage. Even if lawyers pre-empt him there, the reasoning is, there are other judges to fill in. Presiding Judge Mark Rowland ordered Hornaday to move to Anchorage by June 1 to fill a judicial vacancy here.

Hornaday has been pre-empted from about 84 percent of the criminal cases assigned to him. His lawyer, Henry Camarot, claims that Hornaday is pre-empted 8 percent of the time when all his cases are considered.

Cline, Williams and Johnstone are taken off cases up to half the time. All four of the most pre-empted judges have been retained in office by voters in recent elections.

Johnstone, the only Anchorage judge regularly excused, is also the only judge who hears civil cases almost exclusively. The others regularly hear criminal cases, too. Johnstone is pre-empted three times more than all the other Anchorage Superior Court civil judges put together, and his pre-emptions climbed to a high of 20 in December. Judges are assigned between 30 and 40 new cases monthly. Johnstone was pre-empted 153 times in 1982, up from 71 in 1981. And although Johnstone said last summer that his pre-emptions were going down, court records show they are on the rise.

But in Anchorage, the state's biggest judicial district, Johnstone's cases are simply reassigned to another Anchorage judge. That can't be done in Homer, where Hornaday is the only judge. His removal means that court administrators have to send in another judge to hear Hornaday's cases.

Last week the House Judiciary Committee held two days of hearings on the bill to abolish the pre-emption. Lawyers argued against the bill, claiming the pre-emption is used to excuse a judge who may not give their client a "fair shake."

Both defense attorneys and Anchorage municipal prosecutor Allen Bailey argued for keeping pre-emptions around so they have a tool to excuse a judge they think is either too lenient or too harsh when it comes to sentencing.

Homer residents still trying to keep judge

By RONNIE CHAPPELL
Daily News correspondent

HOMER — The residents of this Kachemak Bay community apparently are willing to give up their right to pre-empt judges without legal cause in order to keep District Court Judge James C. Hornaday in Homer.

Opponents of Hornaday's pending transfer to Anchorage took their fight to the halls of the State Capitol Monday and urged the House Judiciary Committee to support a proposed bill that would bar lawyers from disqualifying judges without cause.

The bill is sponsored by Rep. Milo Fritz, R-Anchor Point, who told the committee that lawyers in Homer were abusing the right of peremptory challenge for the sake of "indulging in a vendetta against Hornaday."

A past president of the Alaska Bar Association, a judge, an Anchorage prosecutor and the Alaska Department of Law all testified against passage.

Early last year Hornaday announced plans to begin sentencing first time drunken drivers to 15 days in jail. The stance earned Hornaday the respect of the community at large, but incurred the wrath of defendants and local lawyers, who began asking that their cases be tried by other judges.

"Attorneys have usurped and abused the system," testified Wayne Kessler, chairman of an ad hoc committee that is fighting Hornaday's transfer. Speaking through the state teleconference system, Kessler charged that often lawyers use peremptory challenges for personal and political reasons. "The idea that the clients are the ones preempting the judges is totally assinine," Kessler said.

Homer City Councilwoman Gail Phillips and Homer High School teacher Wayne Lee joined Kessler in urging passage of the bill.

However, Fairbanks District Court Judge Jane Kauver advised the committee that changing the law would do little to remedy the existing problem. "Judges getting challenged peremptorily will be challenged for cause," Kauver said. The result, she said, will be damaging hearings that tie up court time, drive up the cost of litigation and result in hard feelings.

What others say

Times – 1-25-83

From The Peninsula Clarion, Kenai

HORNADAY'S transfer is only the battle — the war is the larger question of whether attorneys should be armed with the right to disqualify without cause a judge assigned to hear a case. There is no suggestion that attorneys be limited in their right to challenge for cause. Indeed, it is a vital right for those accused of crime. However, it is suggested that they should not be able to use peremptory disqualification.

Kenai C of C:

Stiffer DWI sentences but keep pre-emption

C/N 1/14/83

The Kenai Chamber of Commerce Board has come out for stiffer drunk driving sentences but chose not to support the house bill prefiled by Rep. Milo Fritz which would eliminate preemption of judges by defendants without stated cause.

But the subject will be in for more disucssion when the Chamber Board meets again Friday noon, said Chamber secretary Peggy Arness. Some of the Board members are not satisfied that the Chamber took a strong enough stand, and Board members are getting phone calls, said Mrs. Arness.

About 12 of the 16 Board members attended Friday's meeting. At that time all "went along" with the Board's stand on stiffer sentencing and non-support of the proposed pre-emptory bill.

Influencing the Board's decision was attorney Ed Garnett, a Chamber Board member, who defended preemptions which have taken Judge James Hornaday off the Homer Superior Court bench so often he may be transferred.

Judge Mark Rowland has said Hornaday could remain in Homer if the legislature made changes in the preemptory bill. Hornaday has been preempted on 80 percent of his cases, at least partially because of his announced tough sentences for drunk drivers.

But Garnett stated Hornaday had more than his share of preemptions even before his stand on drunk driving.

An earlier letter from the Chamber to the Homer task force to retain Hornaday in Homer, expressed Chamber support of the group's efforts.

Assembly balks at backing Homer judge retention

Gene McBride hopefully suggested a "unanimous consent" for a Borough Assembly resolution asking that the transfe[illegible]ng of District Judge J[illegible]es C. Hornaday from Homer be set aside, but differing opinions greeted the resolution which went down to defeat on a six to nine vote.

Brentley Keene of Homer, despite his community's strong show of sentiment favoring Hornaday's retention, stated he believed the resolution was "not the type of thing the Assembly should be dealing with."

Marilyn Dimmick also thought it an area the Assembly shouldn't be delving into, confusing the good feeling for Hornaday by expanding the resolution to proposing mandatory sentences for drunk drivers and limiting pre-emptory disqualification of judges which has plagued Hornaday and brought his transfer orders.

But Tommy Corr of Kalifonsky Beach thought the resolution was the type of thing the Assembly should be doing.

Corr also supported the right of Raymond Gillespie, Seward attorney, to vote on the issue. Attorneys have been solidly opposed to weakening the pre-emptory rights, a prospect which has arisen with support of Hornaday. Gillespie's voting had been questioned by Chuck Crapuchettes.

Support for the resolution came from Betty Glick, Onis King, Corr, Crapuchettes, McBride, and Mrs. McGahan. Opposed were John Crawford, Dave Carey, Don McCloud, Joe Arness, John Douglas, Kenn Stephens, Keene, Gillespie, and Mrs. Dimmick. Sharon Jean was absent.

Mrs. McGahan earlier offered a resolution deleting the section calling for a review of the pre-emption without cause and expressed personal feelings. "I know one judge I would like to preempt. No cause; it's just that we don't agree on anything." But her motion went down 5 to 10.

Corr's motion to delete the section asking for mandatory drunk driving sentences also was beaten, 5 to 10.

Around the Peninsula...

C-N 1/14/83

Homer drunk driving arrests in 1982 more than doubled over 1981 (171 compared to 84), according to the *Homer News*. Early in 1982, alarmed about a 30 percent increase in drunk driving over the previous year, Judge James Hornaday stiffened sentences. But preemptory challenges have prevented him from hearing 80 percent of the criminal cases, including DWI cases.

The trend does not appear to have changed for 1983. Two were brought to court on drunk driving charges the second day of the new year. One had almost made it home, within 50 feet despite a .23 breathalyzer test result. According to law, a driver testing at .15 is drunk.

RE: HB 79, Legislation Pertaining to Peremptory Disqualification

Dear Mr. Andrews:

Thank you for taking the time to give the Committee your comments via Teleconference during our hearing process on HB 79.

On Wednesday, February 25, 1983, HB 79 was brought before the House for second reading and debate. After nearly two hours of debate and one attempt at having the bill amended, HB 79 was advanced to third reading and voted on by the body.

A copy of the House Journal covering action by the House for its thirty-eighth day is enclosed and shows the voting and progress of HB 79 as it passed the House. At the close of the floor action for the day on HB 79, Representative Fritz gave notice of reconsideration of his vote, which carries the bill to the next legislative day for another vote if brought up at that time.

On the next legislative day, HB 79 was not again brought up, so it has passed the House as shown in the Journal for the thirty-eighth day.

Thank you again for taking the time to become involved with the legislative process.

Regards,

Charlie

TESTIMONY OF JUDGE JAMES D. HORNADAY, HOMER
February 2, 1983

Mr. Chairman and ladies and gentlemen of the Committee, thank you for holding this hearing and inviting me to address the Committee. I hope I am not the monster judge that everyone has been talking about. My name is James D. Hornaday and from a perspective of nearly 20 years in Alaska I am speaking to you today as a judge. The judicial cannons permit and even require that judges speak out for the improvement of the administration of justice. And with all of the comments by many of my lawyer friends I feel a little like David when he went up against Goliath. The men and women of good will can and do differ in their opinions, and it does remind a little of the old Alaska adage that if the lawyers are against something it must be worthwhile. I wish it were someone else who was on the line rather than me, frankly I would rather be playing basketball or working on a legal history project. But the question of the peremptory challenge is involved with the independence of the judiciary and the decreasing respect for the judiciary. First of all, the peremptory challenge is not a fundamental constitutional right; it does not even exist anywhere in the Federal system, and there are Federal judges in every state and territory. Apparently it does not even exist in the vast majority, about two-thirds of the states. Alaska is in the extreme minority. It did not exist in Alaska until a few years ago when some lawyers pushed it through the Legislature. The Federal system and the majority of states get along just fine without it. Now as one example, drunk driving cases are the most serious problem facing the Alaska Court System. Over half of all the jury trials in the entire Court System are drunk driving cases. Drinking was involved in over 80% of the traffic fatalities; over 200 thousand are killed or injured annually on our nation's highways. Let's make clear what the Legislature has already done; the Legislature has passed legislation providing for up to one year in jail and $5,000 fine, revocation of licenses and community work. Now the statutes specifically states that for the first offense a defendant is to receive not less than 72 consecutive hours. It is too serious a problem to leave in the hands of the attorneys and that is the none effect of the peremptory challenge without cause. Judges are concerned about the peremptory challenge; it is affecting sentences. The Chief Justice has stated publicly that the peremptory challenge moderates sentences and that a judge has to walk a fine line and if they get too far over they will be removed by the peremption. I was told by the presiding judge that I had to take peremptions into consideration when I sentence. It is the most frequent topic of conversation at the Annual Judicial Conference. The leading authority on court delay called the Alaska peremptory challenge an absolute abomination, those were his words. Representatives of the National Center of State Courts were amazed at the existence of the removal without cause. I have heard judges tell the Chief Justice they are concerned about the peremption. It is a problem state-wide, not just in Homer. You have heard the lawyer in Bethel and the problems there. You've heard the judges in Fairbanks. It exists in Kodiak, Ketchikan, Juneau and all over the state, even in multi-judge areas. Now we announced a pattern of sentencing in drunk driving cases in Homer about a year ago which was effective, but sentences were clearly within the sentences permitted by the Legislature. Fifteen days is less than 5% of the maximum penalty. Although the announced pattern is no longer in effect and was rescinded when the higher court ruled that it could not be applied. There are sentencing patterns in Alaska, attorneys keep records of the sentences of judges. So there are patterns but known only to the judges and the lawyers. The public, including the potential defenders, do not know the patterns. It is time to open up the System and bring it out from behind the closed doors of the

legal profession. Now I was a lawyer for 10 years and you are never going to satisfy the lawyers on sentencing. About 6 years ago we initiated the first work program, alternate work program, for drunk drivers in Alaska. Some lawyers supported, but other complained that work was a cruel and unusual punishment. Now the program has been reinstituted pursuant to the community work which the Legislature has made a sentencing tool. Now the lawyers are complaining that we are giving too much community work. Also the argument that the System would be flooded with time consuming challenges for cause is questionable, as several attorneys have indicated that they would not use challenges for cause. Further the presiding judge denied a challenge because against me on hearing a DWI case after the announced policy was rescinded. The hearing took all of 10 minutes. The Court System and the people of Alaska should not be held held hostage by attorneys threating to plug the System with challenges for cause. Further judges will disqualify themselves if for some reason they should not hear a case. There is already a procedure for this approach that is in effect. However, again note that a judge has to give a reason why they are disqualifying themselves. Related to the peremptory challenge is another deep concern which I have as a 20 year Alaskan and as a lawyer and a judge and a citizen, and that is the growing lack of respect for the Alaska Judiciary among the members of the public. Reportedly, concern over the Justice System trailed only the capitol move and subsistence in intensity in the recent election. Almost half of the voters in the Third District voted not to retain the trial judges last November. This negative vote is up nearly 10% in only 4 years. How many years will it be before all judges are defeated? Some of the longer serving judges remember when they received 85% approval ratings. For the first time in nearly 20 years in the legal profession, so many people told me they were voting against all of the judges that I lost count. And note that, at least to-date, that most of the people, most of the lay people, testifying to you are against the peremption, only the lawyers are testifying before you in favor of it. That should tell you something. We pride ourselves in Alaska on the merit selection appointment procedure for judges. The Judicial Council recommends the Governor appoints and the people vote, and yet the present situation with the peremptory challenge is worse than the most partisan political election of judges, and that a very few attorneys can remove a judge & hold the System hostage. The cost to the public and the wasted expense and time is high. The selection process of which we are so proud and the public vote means absolutely nothing. Just as an example, I was required to move to Homer to take the judgeship in Homer. The Judicial Council recommended me for Homer and the Governor specifically appointed me to Homer. The family moved here and has put down deep roots; we have children in school of all ages. I received good ratings from the lawyers and the highest rating from the Alaska Peace Officers and was retained overwhelming by the voters in the November election in my home area by a 2 to 1 margin. And although I appreciate Mrs. Barnes' invitation to Anchorage, I would prefer frankly to remain in Homer. I did live in Anchorage for a couple years and I have, we have, a lot of friends up there, however we are pretty deeply rooted in Homer at the present time. Two weeks after the election I was asked to transfer to Anchorage because of the peremptions. I have been assured that there is no other reasons for my transfer, only the peremptions. None of my sentences have ever been reversed as excessive. Now there are checks and balances that are far more appropriate than peremptions without cause and they are numerous. If a judge is doing something improper turn them over to the Judicial Qualifications Commission, or challenge the judge for cause, or test the judge in the retention elections, or appeal the judge's decision, or ask the judge to voluntarily disqualify himself. The message is going out loud and clear to the judges in Alaska, to the attorneys and to the public that inspite of the vote of thousands that vote means nothing, and a handful of attorneys can accomplish the transfer

of a judge, and threaten other judges through peremptions for which they do not even have to give a reason. All the attorneys have talked about before you are the rights of their clients, and these are important rights, no one would say that they are not. But what about the rights of the victims? What about the rights of society? The Constitution clearly requires a judge to sentence to protect society and reformation. No where in the Constitution, in the statutes or in the case law is there any indication that a judge is to sentence in order to avoid peremptions. And yet the Chief Justice of the Alaska Supreme Court has stated publicly that this is happening, and any judge who will level with you will tell you the same. The tail is wagging the dog at the present time as the attorneys are in effect controlling sentencing, and are now even controlling the transfer of judges. Thank you.

Dear Representative Davis:

I am writing regarding House Bill 79 which has apparently been introduced in the First Session of the 13th Legislature. This bill provides that the current Alaska Statute 22.20.022 providing for peremptory disqualification of judges be repealed. I wish to express my most sincere opinion that the passage of this bill would constitute a giant leap backward in the struggle for a fair and impartial judiciary in Alaska.

I take a particular interest in this bill because my father, Robert A. Parrish, strongly supported it when it was originally passed. I have paid special attention to the effect which it has had upon the judiciary and justice in individual cases. I have consulted with numerous other lawyers whose opinions I respect. Among those, the near unanimous consensus is that the peremptory disqualification procedure has been of great benefit to the state and should not be abandoned.

The peremptory disqualification procedure operates on two independent levels. Each is basic to fair adjudication of both civil and criminal controversies in this state.

On the first level, the disqualification procedure helps insure that a party or his counsel will not be required to participate in litigation before a judge who is consciously or unconsciously biased against him. Despite its rapid growth and large size, Alaska is a small state in terms of its citizens inter-relationships and their relationship with the judiciary. Lawyers especially have the occasion to go before the same judge time and time again during the course of the average year. Trial judges wield substantial power well beyond that which can be controlled by appellate review. The potential is always present that a judge will for non-judicial reasons act in a biased manner against a given attorney or party. The availability of a peremptory challenge effectively precludes a judge from at least repeatedly acting in a biased manner against a lawyer or party.

Additionally, despite the high quality of the Alaskan judiciary, lawyers are often correct in the belief that a certain judge may not be properly suited to the trial of a certain type of case. Again, the peremptory challenge procedure helps insure that such a lawyer or his client will not be bound to accept a given judge to try any given type of case.

At the second level, the peremptory challenge procedure promotes and assures that the judiciary will in general operate in a completely unbiased manner and will strive to provide justice uniformly.

It is easy to say at this stage of the judiciary's development that we do not need a peremptory challenge law because there is no evidence that any judge has been acting in a biased manner toward any particular attorneys or any particular type of cases. But, this has not always been the case. There have in the past been strong inter-personal conflicts between lawyers and judges which have resulted in biased decisions. Likewise, before the peremptory challenge law there was much less uniformity in judicial application of the law. It is my strong belief that the peremptory challenge law has contributed substantially to the improved judicial situation in this state.

The exercise of a peremptory challenge in any given case is of little significance to a judge. However, if a pattern develops whereby a certain attorney is repeatedly challenging the same judge, it becomes apparent to the bar in general that that attorney does not believe he can get a fair trial in front of that judge. No judge wishes to be subject to such public opinion and therefore each strives to avoid bias in his attitude towards attorneys and/or parties and their cases. This office has not had occasion to peremptorily challenge a judge for many years. Nevertheless, we consider the right to a peremptory challenge a fundamental guarantee of the high quality and unbiased judiciary that we have.

Likewise, if any judge develops a pattern of bias in a given type of case, that pattern will soon become evident through the use of peremptory challenges. Again, since such a pattern is indicative of bias, no judge would want it to continue. Therefore, he will be spurred to closely evaluate his rulings in light of those of other judges and conform to them. In this way, the judiciary acts in a more uniform manner. Uniform application of laws is desirable. Aside from equality of treatment, it speeds the revision process if the people or the lawmakers disagree with the manner of application.

Perhaps the most important attribute of the peremptory challenge procedure is that it allows attorneys to represent their clients to the fullest extent without fear of subsequent judicial reprisal in other cases. In the absence of a peremptory challenge rule, judges can develop the attitude that they are always right and that any attorney who challenges their judgment by openly disagreeing with it or appealing it is wrong. In the absence of a peremptory challenge, a challenge to the authority of such a judge will be met with conscious or unconscious retaliatory measures in a subsequent case.

I am pleased to say that in Fairbanks, at least, there is no evidence of such attitudes. However, as they did exist before the peremptory challenge law and do exist in other states without such a law, I am constrained to believe that there is a cause and effect relationship.

I have not had any experience with political controversies in the courts. However, I would assume that the risk of a biased judge is as great there as it is in other types of cases. As a lawmaker, I would think that you would be especially attuned to the importance that an unbiased judge makes in a legal controversy. I am sure you can see as well as I that there is always the potential for the selection of a judge who simply should not be chosen to hear a given case. I also hope you can understand that judges, as human beings, are sensitive to their reputation as to fairness. Since the peremptory challenge rule may be the singlemost important means by which judicial reputations can be developed and communicated, their continued existence is critical.

I understand that there are concerns of expediency which would militate in favor of repealing the peremptory challenge rule. I, for one, favor taking measures which increase the efficiency and reduce the cost of the legal system. Nevertheless, the importance of the peremptory challenge procedure in terms of judicial quality and fairness offsets by far its cost in terms of efficiency and expense. Therefore, I hope that you will oppose passage of House Bill 79.

Sincerely,

James Parrish

Representative Charles Bussell
Alaska House of Representatives
Pouch V, Mail Stop 3100
Juneau, AK 99811

Dear Representative Bussell:

I had hoped to attend the telephone conference with you some weeks ago concerning the deliberations by the House Judiciary Committee on whether to continue to permit the preemption of trial judges. A conflicting court appearance made it impossible for me to attend. As a result I am writing to you to express the reasons I think the right to preempt a judge should be preserved.

While preemption of judges has been a fairly longstanding practice, the situation involving Judge Hornaday in Homer has, for the first time, put the propriety of that practice in focus. I understand that Judge Hornaday is preempted in approximately 80% of the drunken driven cases which are on his calendar on the basis of his publically announced policy of automatically imposing a substantially longer sentence than the mandatory three-day provision now applicable. I do not know Judge Hornaday. I harbor no ill will toward him. I think that he is both sincere and mistaken and that his position demonstrates the need for the right to preempt any given judge if the circumstances warrant it.

People are free only to the extent they are not vulnerable to the arbitrary exercise of power. To protect freedom and to prevent disparate treatment of persons by those with power, the rule of law was established as a basic tenet of our constitutional scheme. That means nothing more nor less than a guarantee that objective standards will be established which apply to all persons whose conduct comes within the ambit of those standards. It eliminates persons being held

to a standard of which they are not aware or which is applied to some and not to others. It offends any reasonable person's sense of fairness to be treated differently than another for the same act or omission under similar circumstances. Even a child understands this basic notion of fair play.

The means by which standards are set for the conduct of Alaskans is through legislation by their elected representatives. By that means everybody participates in the process of deciding what standards will govern them. Once those standards are established, they are expected of everyone. As a result, I should not be punished for something from which you are exempt or anyone else might be exempt as a matter of some subjective or unilateral action by someone in authority.

The havoc wrought by drunken drivers in this state is a disgrace. However, that does not justify me imposing my personal standards on others. Nor does it justify a judge imposing his personal standards on others. It is the responsibility of the elective representatives of the people of this state to establish the standards by which citizens must conduct themselves. The state legislature has decided that three days is the appropriate sentence for the first drunk driving conviction under most circumstances, with the discretion to impose heavier sentences if egregious circumstances exist. If a judge decides that he will automatically impose substantially longer sentences than those established by the legislature, he is imposing his personal standards on those persons who come before him. To the extent a judge considers his subjective judgment to be superior to that mandated by the state legislature, he preempts the legislative process.

Judges are sworn to uphold the law. They should therefore apply legal standards. Indulging personal standards is unfair because it puts average citizens in a position of having to guess what the personal preferences of each judge might be when conducting themselves during their daily lives. Citizens of this state are entitled to know what the consequences of their acts are by referring to the laws of this state.

It is a very basic principle that citizens should be ruled by law, not men. A judicial system will be respected

only to the extent it not only is fair but is also preceived to be fair. There is no discernible reason for a person who comes before a judge to be treated differently than a person who comes before any other judge in this state for the same charge, particularly when the legislature has provided a guide which all judges are expected to follow absent special circumstances.

I personally would prefer better laws than those now on the books concerning drunk driving. To that extent I share Judge Hornaday's views. If you agree with Judge Hornaday's views on drunken driving, I urge you to support remedial legislation that applies to all drunken drivers in this state. I urge you not to adopt the principle that allows the people of this state to be subjected to the personal standards of every judge in this state. The rule of law is too important to be sacrificed for the expediency and the emotional appeal of the drunk driving issue. Only if persons who come before the judicial system have the right to exclude judges who are known to have personal bias in a given area can the rule of law be promoted with the sort of assurance that the people of this state deserve and are entitled to expect.

Yours very truly,

John H. Bradbury

Re: House Bill 79,
Repealing Peremptory Disqualification of Judges

Dear Representative Bussell:

House Bill 79 would eliminate the peremptory challenge of judges. It would thus only allow challenges of judges for cause under A.S. 22.20.020. If only challenges for cause are allowed, then challenges for cause will increase. Under the present system, I do not hesitate to appear before judges that I have challenged peremptorily. There are many reasons for changing a judge.

However, if you challenge a judge for cause, it is a very serious accusation. You must state, by affidavit, that you feel the judge cannot be fair and impartial. In a way, you are stating the judge has not followed the judicial canons of ethics. S/he has failed to recuse himself or herself when that is what should have happened. If I ever had to challenge a judge for cause, I would never want to appear before that judge again. I would continue to challenge that judge for cause, particularly if that is what my client wanted or insisted upon.

Using this method of disqualification will cause an increase in legal costs and expenses for clients, and will increase the work of judges. Attorneys will have to file motions to disqualify for cause, accompanied by affidavits and memoranda. There will be hearings on the motion. If the motion is first denied, then it is assigned to another judge for hearing under A.S. 22.20.020(c). If the motion is still denied, the question can go up on appeal, or at least a petition for review can be filed. The peremptory challenge system is so much more efficient, that it should be retained.

If there are problems because there are single judge districts, those are problems should be solved by ingenious

use of telephone hearings, and, if necessary, assignment of a judge from a different district to handle motions and the trial. Eliminating the peremptory challenge of judges will not solve the problem.

Alaska is still a small enough state that many people know judges that they come before. If they are not comfortable, for whatever reason, they should have the right to one peremptory challenge. The times when this has become a problem for the court system are times when a judge has announced publically the sentence s/he intends to give in all drunk driving cases, for example, or cases where lawyers and litigants have consistently felt that the judge's demeanor or decisions were unacceptable.

The peremptory system works very efficiently. If a judge is challenged, another judge is very simply assigned to the case. One piece of paper needs to be filed by the attorney, and another is filed by the courts. (See Civil Rule 42.)

The peremptory challenge of judges should be retained. I urge you to defeat House Bill 79.

Sincerely,

SCHAIBLE, STALEY, DeLISIO & COOK, Inc.

MEMORANDUM

TO: REPRESENTATIVE CHARLIE BUSSELL
CHAIRMAN, HOUSE JUDICIARY COMMITTEE

FROM: REPRESENTATIVE RANDY PHILLIPS L.E.P.

DATE: JANUARY 12, 1984

RE: HOUSE BILL 80

Craig Lovell of your staff advised me today that House Bill 80 will be before the House Judiciary Committee on Monday, January 16, at 1:30 p.m. for hearing. I have requested that the Division of Elections update their 1983 Fiscal Note on this bill. I have requested that this updated fiscal note be ready for your committee's hearing.

As you know, the Anchorage area experienced a power outage on the day of the 1982 general election. While power was restored to some of the Anchorage bowl by about 6:00 p.m. that day, power was not restored to outlying areas (including the Chugiak-Eagle River area) until 12:30 a.m. the next morning. Additionally, the normally 45-minute to an hour trip from the downtown Anchorage area to places of residence in Chugiak-Eagle River took approximately two hours or more because of traffic signal light malfunction and traffic tieups. After the election, many persons in my district expressed to me that they assumed polling places would be closed because of the power failure or that they left town at their normal time only to arrive home too late to vote because of the traffic problems.

According to an article in the November 3, 1982, Anchorage Times, "Stray Bullet Stalls Traffic, Voters, Power," page C-1, Attorney General Wilson Condon stated that after review of the situation and the law, he determined that there was "Absolutely no authority to extend the polling time."

The proposed legislation presently before your committee in the form of House Bill 80 is an attempt to rectify this matter so that if a natural disaster or something on the order of the Anchorage situation occurs in later years, there will be some authority for some action if any action is deemed necessary.

For your information, and the information of your committee members, I have attached the following items to this memorandum:

1. November 13, 1982 memorandum from Assistant Attorney General Kennedy and Investigator Savage to Attorney General Condon.

2. "Polling Hours for the General Election" from The Book of the States 1982-83.

M E M O R A N D U M January 12, 1984

SUBJECT: Extension of time for voting: HB 80

TO: Representative Charles Bussell
Chairman, House Judiciary Committee

FROM: Richard A. Bradley
Legislative Counsel

You have requested a sectional analysis of the above described bill. As a preliminary matter, I must advise you that a sectional analysis or summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please address a specific request to this office.

I have assumed that the justification for the bill is the power outage that occurred during an election in Anchorage in 1980. It was widely believed at that time that some percentage of the voting population was deterred from voting at that election because of the outage.

Section 1 of the bill establishes new subsections to AS 15.15.080, a provision dealing with the times for the opening and closing of the polls.

The existing provisions of that section now provide:

> Sec. 15.15.080. TIME FOR OPENING AND CLOSING POLLS. On the day of any election, each election board shall open the polls for voting at eight o'clock in the morning, shall close the polls for voting at eight o'clock in the evening, and shall keep the polls open during the time between these hours. The election board members shall report to the polling place at 7:30 in the morning of an election day. The hour shall be

determined by the standard time, or daylight saving time, that is applicable to the polling place.

The material added by this bill would permit the director of elections, with the concurrence of the lieutenant governor, to "extend the hours for voting on election day" on a determination by the director that a "natural disaster or exigency" has prevented a "substantial number of qualified voters from voting."

The director may draw that conclusion and offer that determination only if the director is able to show by statistics or other means "an actual decrease in the number of qualified voters voting" over previous elections and no other factors such as redistricting can account for the change.

In my opinion, even if there is a decrease in the number of voters voting, the provisions of Sec. 15.15.080(b) would not be triggered unless the "natural disaster or other exigency" was simultaneously occurring.

The director may adopt regulations to implement the provisions of Sec. 80(b).

If I may be of further assistance, please advise.

After the election, many persons in my district expressed to me that they assumed polling places would be closed because of the power failure or that they left town at their normal time only to arrive home too late to vote because of the traffic problems.

According to an article in the November 3, 1982, Anchorage Times, "Stray Bullet Stalls Traffic, Voters, Power," page C-1, Attorney General Wilson Condon stated that after review of the situation and the law, he determined that there was "Absolutely no authority to extend the polling time."

The proposed legislation presently before your committee in the form of House Bill 80 is an attempt to rectify this matter so that if a natural disaster or something on the order of the Anchorage situation occurs in later years, there will be some authority for some action if any action is deemed necessary.

For your information, and the information of your committee members, I have attached the following items to this memorandum:

1. November 13, 1982 memorandum from Assistant Attorney General Kennedy and Investigator Savage to Attorney General Condon.

2. "Polling Hours for the General Election" from The Book of the States 1982-83.

PHONE (907) 586-6181

March 31, 1983

Virginia D. Hillikin
3211 W. 28th Court
Anchorage, AK 99503

Dear Ms. Hillikin:

The Division of Elections has received your letter to Lieutenant Governor McAlpine and members of the Alaska Legislature regarding changes in the Alaska Election Laws, Title 15.

To address your main concern, the power outage in Anchorage during the 1982 General Election and contingency plans for voting under emergency conditions, the Division of Elections has closely reviewed the actions of the poll workers in Anchorage and the percentage of voter turnout in the districts affected by the power outage with the following conclusions:

1.) Auxiliary power and lighting were available in all but six polling places, and in those six places lighting and the ability to vote were quickly restored.

2.) Ballot security was not compromised in any precinct or polling place.

3.) A total of 30 persons in 14 Anchorage precincts were noted by the poll workers as arriving too late to vote, after 8 p.m.; this is no appreciable difference than any previous election, the workers noted.

4.) Conclusion: Despite the inconvenience, voters were willing and able to cast their ballots in record numbers.

As a legislative response to the power outage, House Bill 80 was introduced by Representative Phillips to provide "for the extension for the time for voting on election day under certain circumstances." I have attached this bill for your reference.

This legislation has had two hearings before the House State Affairs Committee and the Division of Elections has testified on the bill. We submitted a report made in conjunction with the investigation of the power outage by the Alaska State Troopers and the office of the Attorney General, which I have also attached for your reference.

The Division of Elections has valid concerns with the proposed H.B. 80, primary being:

1.) the prior public notice of certain hours between which the polling places will be open, as required by AS 15.15.070;
2.) the difficulty in determining what constitutes a "natural disaster or other exigency" as stated in line 12 of H.B. 80;
3.) the method and means of reviewing statistics to determine, on election day, where an actual decrease in the number of voters has occurred, as stated in lines 13-20 of H.B. 80;
4.) the apparent lack of any law or regulation in any other state's election laws providing for an extension of polling hours for emergencies or natural disasters.

The Division of Elections feels that the present provision, AS 15.15.320, that "every qualified voter present and in line at the time prescribed for closing the polls may vote" is adequate for both emergencies and fairness to all parties in the voting process. Consequently we do not feel that a bipartisan committee with authority to extend the voting hours under emergency conditions is necessary or advisable.

It should be noted that H.B. 289 has recently been introduced by Representative Hayes to extend the polling hours in Alaska by opening one hour earlier at 7:00 a.m. The Division of Elections supports this legislation and will testify today before the House State Affairs Committee to begin this practice on a statewide basis. H.B. 289 is attached for your reference.

Your point is well taken on the display of political banners, posters etc., near or in a polling place. AS 15.15.170 prohibits any political persuasion of any type within 200 feet of a polling entrance, and notices are posted at each polling area to that effect. As you may know, this law precludes giving verbal advice on any race or issue on the ballot, wearing of political buttons, any display of printed political materials, etc. The penalties for violation of this section are described in AS 15.56.020, detailing campaign misconduct in the second degree, a Class B. Misdemeanor. A person who knowingly violates this provision after being given warning by an elections official at the polls may be arrested and charged by an Alaska State Trooper.

Your comment on the abuse of this statute is the first instance received by the Division of Elections that this did occur. You can be assured that we will enforce this statute and continually re-emphasize its importance in our training of election officials throughout the state. Thank you for bringing this to our attention.

Regarding the disposition of unused ballots, as cited in AS 15.15.480, all unused ballots are destroyed at the polling place after the polls are closed; this is done in the presence of the election officials, who then sign an oath testifying to the time, method, and number of unused ballots that were destroyed. Since a determined and certified number of ballots are distributed to each polling place, the Division of Elections feels that this method of disposal is more proper than transferring the unused ballots to Juneau with other marked question ballots, tallies and other materials incidental to the vote tabulation.

I hope that these comments and materials have addressed the concerns that your group has. If I can clarify these comments any further or assist you in any other way, please contact the Division of Elections.

Thank you for your interest and comments.

Sincerely,

Mary Lou Meiners
Director of Elections

SUBJECT: Effect of Power Outage on Voting Procedures

As a result of the power outage in the Anchorage area on November 2, 1982, an investigation was initiated at the request of the Attorney General to determine whether or not election procedures at the polls were adversely affected and whether or not the voters in those areas were deprived of their right to vote.

The investigation included interviews with officials of Chugach Electric, Municipal Light & Power, the Anchorage Police Department, the Federal Bureau of Investigation, officials of the Division of Elections, and members of the election boards from the election precincts directly affected by the power outage.*

I. Extent of Power Outage

According to Robert H. Day, an engineer for Municipal Light and Power, there were two power outages in Anchorage on

---

* A list of election board members interviewed follows this report.

RECEIVED
FEB 7 1983
DIRECTOR OF ELECTIONS

Election Day, November 2, 1982. The first occurred at approximately 7:00 a.m. and power was restored at about 7:45 a.m. The second power outage in Anchorage occurred at about 4:00 p.m. and was caused by an apparent act of vandalism** which caused a power line belonging to Chugach Electric to fall across a power line belonging to Municipal Light and Power. The resulting overload and power surge caused power to go out throughout much of Anchorage. Power in Anchorage west of Muldoon Road was restored by approximately 6:15 p.m. Power east of Muldoon to Eagle River was not restored until as late as 1:00 a.m. the following morning.

According to officials in the Division of Elections, the following 28 polling places reported power outages:

1. District 10, Precinct 84 (Stellar School, 2508 Blueberry, Anchorage)

2. District 10, Precinct 86 (Rogers Park Elementary School, 1400 East Northern Lights Blvd., Anchorage)

3. District 10, Precinct 88 (North Star Elementary School, 605 W. Fireweed, Anchorage)

4. District 10, Precinct 89 (West High School, 1700 Hillcrest Dr., Anchorage)

5. District 11, Precinct 104 (Enstar, 3000 Spenard Road, Anchorage)

6. District 11, Precinct 111 (West High School, 1700 W. Hillcrest Dr., Anchorage)

7. District 12, Precinct 120 (Inlet View School, 1219 "N" Street, Anchorage)

** The cause of the power outage was not the subject of this investigation but is being investigated by the FBI. Agent Kampher of the FBI indicated that at this point in time, there is no evidence to suggest that the motive for the vandalism, if in fact it was vandalism, was to affect election results.

8. District 12, Precinct 121 (Pioneer Home 923 West 11th Ave., Anchorage)

9. District 12, Precinct 122 (Denali Elementary School, 148 East 9th Ave., Anchorage)

10. District 12, Precinct 123 (Fairview Elementary School, 1317 Nelchina, Anchorage)

11. District 12, Precinct 124 (Airport Heights Elementary School, 1510 Alder, Anchorage)

12. District 12, Precinct 126 (Alaska Sales & Service, 1300 East Fifth Ave., Anchorage)

13. District 12, Precinct 127 (Chugach Elementary School, 1205 "E" St., Anchorage)

14. District 12, Precinct 128 (Government Hill Elementary School, 525 E. Bluff Road., Anchorage)

15. District 13, Precinct 140 (Lake Otis Elementary School, 3331 Lake Otis Pkwy., Anchorage)

16. District 13, Precinct 141 (College Gate Elementary School, 3104 Sunflower, Anchorage)

17. District 13, Precinct 142 (Baxter Elementary School, 2991 Baxter Road, Anchorage)

18. District 13, Precinct 143 (East High School, Bragaw and Northern Lights Blvd., Anchorage)

19. District 13, Precinct 144 (Russian Jack Elementary School, 4470 East 20th Ave., Anchorage)

20. District 13, Precinct 147 (Clark Jr. High School, 150 S. Bragaw, Anchorage)

21. District 14, Precinct 160 (Baxter Elementary School, 2991 Baxter Road, Anchorage)

22. District 14, Precinct 170 (Bartlett High School, 25500 North Numdoon, Anchorage)

23. District 15, Precinct 184 (Homestead Elementary School, 2901 Baranof Drive, eagle River)

24. District 15, Precinct 185 (Northland Baptist Church, Eagle River Loop Road, Eagle River)

25. District 15, Precinct 186 (First Baptist Church, Old Glenn Highway, Eagle River)

26. District 15, Precinct 187 (Eagle River Elementary School, Old Eagle River Road, Eagle River)

27. District 15, Precinct 188 (Chugiak High School, Birchwood Loop, Chugiak)

28. Statewide Precinct at Anchorage International Airport

Of the above-listed polling places, power was restored to all before or by about 6:15 p.m. except for the five polling places in District 15 (Chugiak, Eagle River) where power was not restored until after midnight.

II. Auxillary Power or Supplemental Lighting

With the exception of precincts 12-121, 12-126, 14-170, 15-185, 15-186, and the statewide polling place at Anchorage International Airport, all of the polling places were equipped with auxillary power sources and those persons working at the polling places were able to move polling booths and punch machines beneath lighted areas so that those voting could see more clearly.

At the precinct polling places which were not equipped with auxillary power, election board members usually were able to move the punch machines and booths near windows until supplemental sources of light such as candles, flashlights and lanterns, could be obtained.

All board members that were interviewed reported that supplemental light was obtained very quickly; many reported that due to the morning power outage, they brought flashlights with them to the polls and were prepared when the power went out in the evening. In addition, precinct workers reported that school principals, custodians, as well as the voters were very cooperative in providing light sources to the poll workers.

III. Ballot Security

All board members interviewed reported that despite the power outage, security of the ballots and the procedures ensuring the integrity of the voting process were not compromised. In most instances, those signing the precinct registers were separated from those waiting to vote and those voting. Reports indicated that at no time did four or five voters have ballots in hand waiting to vote. Many precincts used a card system whereby those who had signed the register received cards and in turn traded the card for a ballot. Other precincts did not give voters ballots until booths and flashlights became available.

All precincts reported that despite less than ideal lighting conditions, visual contact and control were maintained throughout the power outage.

Finally, all precincts reported that throughout the entire election day, including the period of time the power was out, the ballot box was attended by a precinct worker and a source of light was near the ballot box to ensure security.

IV. Poll Closures

All board members interviewed except those in precinct 13-143 indicated that their precincts closed the polls at 8:00 p.m. Precinct 13-143 closed the polls at 8:01 and allowed two people to vote who had come in by way of a back door and were in the building at 8:00 p.m.

Fourteen of the precincts that reported a power outage, also reported that persons arrived at their polling place after closure of the polls and were not allowed to vote. The total number of people denied access to the polls after closure in these 14 precincts was about 30 with precinct 15-185 (Eagle River) reporting about four or five people arriving too late to vote.

Those denied access to the polls in some cases indicated to the precinct workers that they had had a difficult time getting from their work in Anchorage to the polling place due to fog and traffic. Others indicated that they had heard on the radio or television that because of the power outage, polling places might be open late. Many indicated that they simply did not make it to the polls in time and offered no excuse.

According to precinct workers interviewed, the number of people who arrived late at the polls and were not allowed to vote did not differ appreciably from previous elections.

V. Questioned Ballots

Board members interviewed reported a range of 33 to 103 questioned ballots in their precincts. People generally cast questioned ballots because their names were not on the precinct register. Others told precinct workers that due to traffic delays, they would not be able to get to their polling places before the 8:00 p.m. poll closure. Others simply indicated that due to traffic congestion, it was inconvenient to vote at their regular polling places.

Board members indicated that the number of questioned ballots generally did not differ significantly from previous elections and where significant differences did occur, may have been a result of redistricting as well as problems associated with the power outage.

All those interviewed indicated that when a voter wanted to cast a questioned ballot, they were advised, if time permitted, to vote at their correct precinct so that the voter could vote for the local legislative candidates for their district but in all cases, if the voter wanted to vote a questioned ballot at their precinct, the precinct workers allowed voters to do so.

VI. Complaints by Voters

Nearly all precinct workers interviewed indicated that generally, voters were very cooperative and praised the election workers for an admirable job in light of the conditions. It was reported that some voters complained of long lines, or the inconvenience involved in getting to the polls, or of the poor lighting conditions, but those complaints were few in number. None of those interviewed reported people walking away from the polls without voting because of lines or conditions. Some voters did indicate they would vote later after polls were a bit less crowded and did return. While voters generally were inconvenienced by traffic congestion and, in some cases, insufficient light, board members indicated that the atmosphere was a bit more jovial and voters more cooperative as a result of the power outage.

Generally, board members reported that, subsequent to the election, they had not talked with any people who absolutely had been unable to vote either in their own district or cast a questioned ballot in another district as a result of the power outage.

VII. Conclusions

The power outage in the Anchorage area has raised three primary concerns:

1) whether or not security of the ballots and integrity of the voting procedures as practiced by the election boards was compromised;

2) whether or not voters were deprived in any way of their right to vote;

3) whether or not the turnout by voters was affected by the power outage.

With regard to the security of the ballots and the integrity of the procedures followed by the election boards, it appears that neither were compromised despite less than ideal lighting conditions. Board members seem to have been very careful with regard to the security of the ballots by ensuring that ballot boxes were under constant supervision and under adequate light. Those signing the voter register generally were kept separate from those obtaining ballots. Those receiving ballots were generally limited to a small number of people and various procedures were used to safeguard against non-registered persons obtaining ballots. Finally, while in many instances lighting limitations required that voting booths be abandoned, voters were able to vote in relative privacy and sufficiently lighted areas.

Interviews with board members indicated that the polling places were open until 8:00 p.m. and that voting was not interrupted except in some instances for a very short period of time, a few minutes at most, to enable board members to find supplemental lighting or to move voting booths or punches to lighted areas.

All of the precinct boards allowed voters to cast questioned ballots if voters chose to do so but if time permitted, encouraged voters to vote at the proper polling places

so that voters could vote for candidates in their legislative districts.

Apparently, some people indicated that they heard on the radio or television that the polls might be open later than 8:00 p.m. According to the Division of Elections, no release or statements by the Division were made to the media that polling hours would be extended. This misinformation was apparently a result of conjecture by certain members of the media. In fact, the Division of Elections enlisted the assistance of the Anchorage Police Department and the Alaska State Troopers to notify election boards that the polls would officially close at 8:00 p.m.

Finally, with regard to how the outcome of the elections was affected by the power outage, it is impossible to determine how many voters did not participate in the election as a result of the power outage. There is no question that traffic congestion, as a result of inoperative traffic signals, may have affected the ability of many people to vote in areas that were both directly and indirectly affected by the power outage. Officer Hutchison of the Anchorage Police Department indicated that some traffic arteries were congested as much as 45 minutes to an hour after power was restored. On the other hand, members of election boards reported that while many people were delayed by as much as two hours in getting to the polls, there generally was enough time for most voters to make it to their precincts. In addition, there was nothing prohibiting persons from casting questioned ballots at more convenient locations which many voters in fact did.

A look at the percentage of registered voters who cast ballots in the November 2 election (excluding questioned and absentee ballots) shows that the turnout in those precincts directly affected by power outages ranged from 43.4 percent (District 12, Precinct 127, a downtown Anchorage location) to 67.1 percent (District 15, Precinct 187, an Eagle River precinct). The figures cited are not intended to be used to explain voting patterns, only to show that the power outage did not necessarily adversely impact voter turnout in areas where power was out for a period of time.

The conclusion to be drawn then is that while many people may have been inconvenienced and delayed by the power outage in the Anchorage area, a majority of the people registered to vote did vote and while others may not have voted, most had the opportunity to vote either at their proper precincts or to

cast questioned ballots in other precincts. In addition, despite less than ideal conditions in those precincts without power, order and control over the security of the ballots and integrity of the voting procedures was maintained by election board members. It does not appear that anyone was deprived of the right to vote nor was that right compromised by improper conduct or negligence on the part of election boards.

ELECTION BOARD MEMBERS INTERVIEWED

1. District 10, Precinct 84: Kathryn Marshall (274-4724) and Holly Brown (337-3897)

HB

84

#1

1-28-83 CPP

P.O. Box 100795
Anchorage. 99510
24 Feb. 1983

Dear Charlie Bussell:

I could not take part today in the teleconference on HB #84 which I support, because of a heavy drift of tobacco smoke from an adjoining office. When my throat begins to feel irritated, I have learned not to "stick it out" or I will suffer later. I left and returned later but the participants had just finished.

Smokers tend to discount non-smokers' complaints because the ill effects of second-hand smoke are not immediately evident, but they are not present to observe the victim waking up short of breath or choking in the small hours of the morning. I have had first hand experience of this result when working for years in smoke-polluted air. For a very long time I was not aware that second-hand smoke was the direct cause of my problems and when I did come to that conclusion my lungs had been irreparably damaged. I have no doubt that the very same thing is happening to thousands of people today. After leaving my job the nightly spells gradually became very few but I continued to have trouble with little exertion especially in cold weather. After tests my doctor diagnosed my trouble as emphysema.

Some smokers are very thoughtful. I have seen them extinguish smokes before entering stores and this is appreciated not just by people like me, but by those who simply hate the odor of tobacco. Those who do smoke in stores leave behind a cloud that hangs in the air for hours afterwards. Many, many store checkers have complained to me about the smoke that is blown in their faces all day long. Waitresses suffer too. many complain about the odor that is carried home in their clothes. I used to hang my coat in the basement every evening on coming home from work.

The passage of HB #84 will protect our health and indirectly help smokers also.

Sincerely,

Janet C Goetz

(Mrs. John Goetz) Goetz

HB 84: An Act relating to smoking in public places and vehicles

I support the legislative intent behind HB 84 which declares that tobacco smoking in public places constitutes a significant health hazard, that employees have a right to work in a smoke-free environment as stated in recent court decisions, and that smoking by employees results in increase costs to employers in the form of higher costs for health, fire, and life insurance and worker compensation coverage.

Further, I support the provisions of HB 84 which would amend the existing law on smoking in public places to include . . ."an office, factory, warehouse, or other place of employment. . . ."

Also, I also support the provisions of HB 84 which would assure employees that some work areas would be designated for non-smokers, that the only places of employment which could be designated in entirety as smoking areas are those in which all employees smoke, and that in areas where not all employees smoke, "a person in charge". . .must post signs in conspicuous locations in non-smoking areas stating 'Smoking Prohibited by Law.'"

Killing for cash

Cigarettes are biggest hazard, doctor warns

by Warren King
Times staff reporter

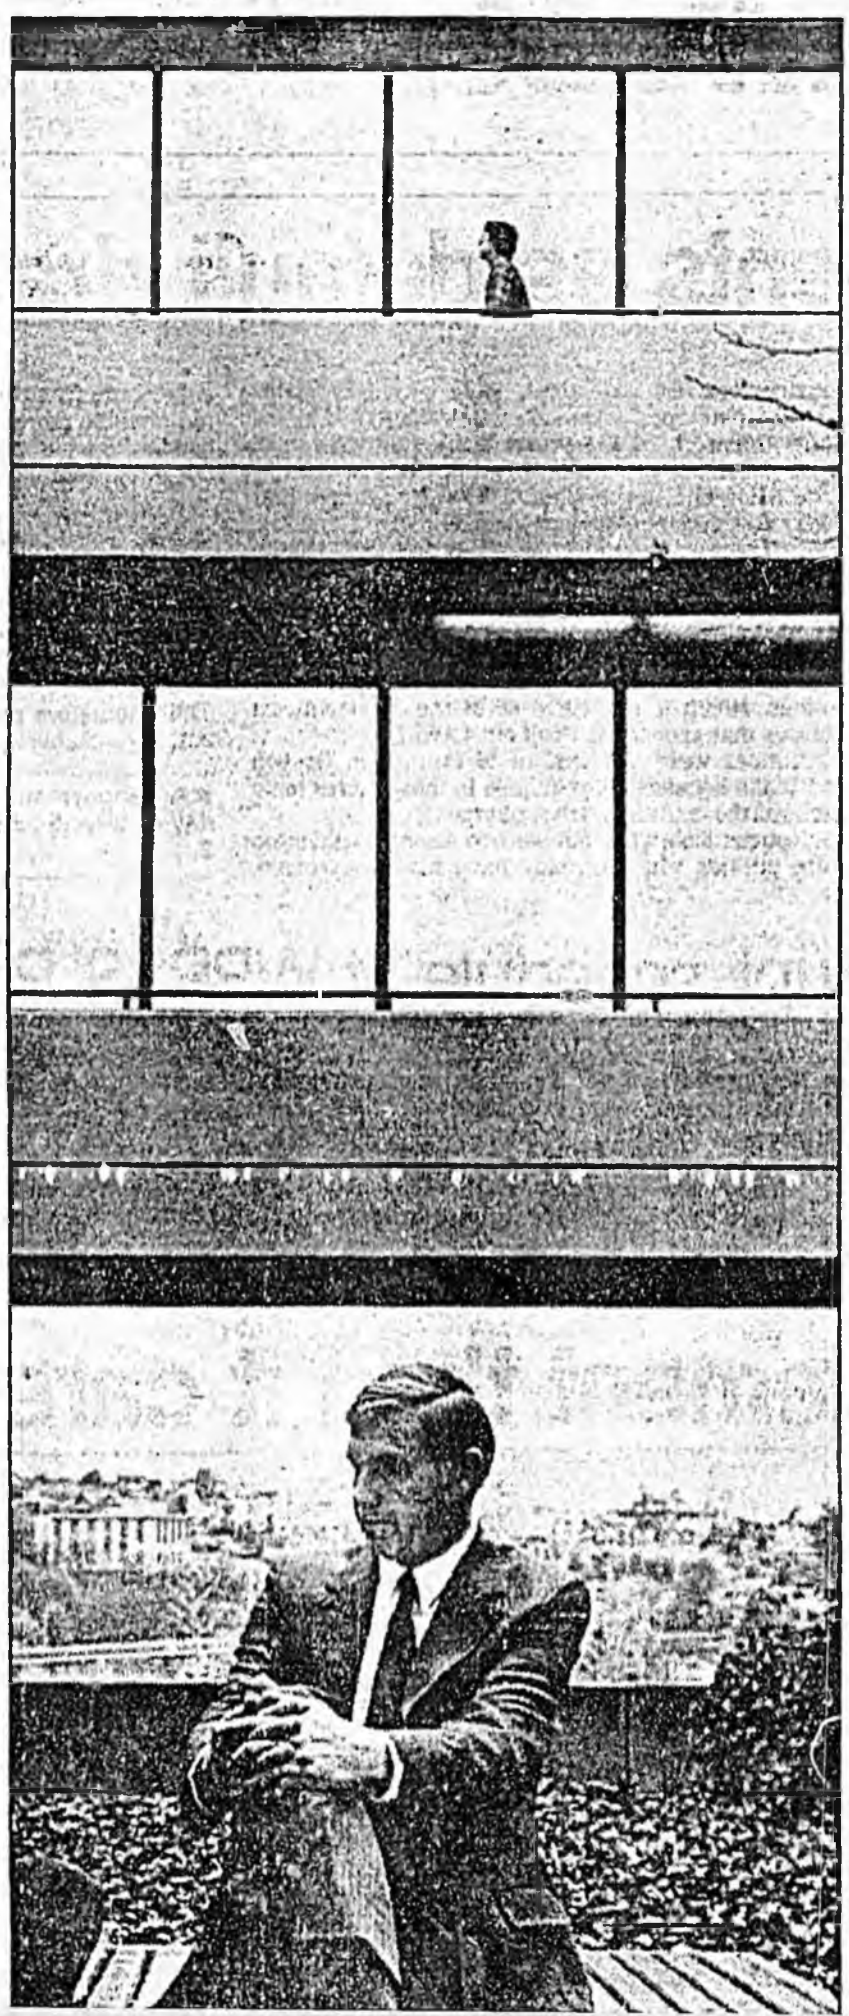
Scientists struggle to beat major killers like heart disease and cancer, but the nation's biggest health hazards are largely preventable with common sense, America's chief disease fighter said here yesterday.

Cigarette smoking, alcohol abuse and violence all need more attention as serious public health hazards today, said Dr. William H. Foege, director of the federal Centers for Disease Control.

"The three interact. But we're losing more personal years of life from cigarette smoking than any other cause," he said.

"What's especially staggering is that we tolerate it ... The tobacco companies know they are killing for money. Let's take the steps to prevent that."

Foege said legislators should ban tobacco advertising and tax cigarettes for the funds to treat health problems stemming from smoking.



He predicted that unless something is done to control the tobacco industry, smoking will become the major health problem of Third World countries by the year 2000.

"We would do the Third World a real favor if we became very indignant about this problem," said Foege, who delivered the keynote address at the University of Washington's observance of World Health Day.

Foege, a graduate of the UW Medical School and Pacific Lutheran University, announced Wednesday that he is stepping down as director of the Atlanta-based CDC.

He will remain with the agency to pursue such interests as international public-health projects, and has agreed to stay on as director until a successor is found.

"I wasn't fired and I wasn't doing this (resigning) to protest a policy," said the 47-year-old Foege in an interview. "I said I should do this for only five or six years. I didn't want to stay in too long and [illegible]"

tobacco companies know they are killing for money. Let's take the steps to prevent that."

Foege said legislators should ban tobacco advertising and tax cigarettes for the funds to treat health problems stemming from smoking.

He predicted that unless something is done to control the tobacco industry, smoking will become the major health problem of Third World countries by the year 2000.

"We would do the Third World a real favor if we became very indignant about this problem," said Foege, who delivered the keynote address at the University of Washington's observance of World Health Day.

Foege, a graduate of the UW Medical School and Pacific Lutheran University, announced Wednesday that he is stepping down as director of the Atlanta-based CDC.

He will remain with the agency to pursue such interests as international public-health projects, and has agreed to stay on as director until a successor is found.

"I wasn't fired and I wasn't doing this (resigning) to protest a policy," said the 47-year-old Foege in an interview. "I said I should do this for only five or six years. I didn't want to stay in too long and get too comfortable."

Foege took over the agency in 1977 after his predecessor was ousted over the controversial swine-flu-vaccine program. He said he is most proud of the CDC's efforts during his tenure to increase immunization programs.

Immunization levels for measles, rubella, polio, diphtheria and whooping cough were as low as 60 percent six years ago; now they are more than 95 percent, he said.

Foege, a native of Chewelah, Stevens County, is credited with developing the immunization strategy that dealt a final blow to smallpox worldwide. He is still vitally interested in international health problems.

"Health among nations is as interrelated as oil," he said. "We live in a global village where all health problems are . . . intensified by the jet age."

Foege said the two or three new cases of measles a week in the United States are almost always imported from other countries. On another plane, he said, the findings of cholera research done in Bangladesh had application to treating diarrhea in all children.

"We end up benefiting as much as other countries," he said. "And in a generic way, we're more likely to have a stable world and a more peaceful world if there are not high mortality and (disease) rates."

Foege said scientists are working hard to decrease disease and infant mortality rates in Third World countries. He predicted vaccines for leprosy and malaria will be tested in humans by the end of the 1980s. But better control of health problems still has a long way to go, he said.

It is "a bit obscene," he said, that American health officials hold endless meetings discussing international health "while a mother in western Africa is in deep depression after her child has died of measles because we can't figure out a way to deliver the (25-cents-a-dose) vaccine."

It is embarrassing, he said, that we sit and try to figure out the cost of a home computer when fewer than 25 percent of those in western Africa can read.

And he asked members of his World Health Day audience if they could identify with losing half the children in a nation to disease before the youngsters reach the age of 5.

"I think the measure of civilization is how we treat each other," he said, "and international public health is one of the best indices of how we treat each other."

A realistic goal for year 2000 is "for the United States to demonstrate it is indeed a civilized country."

As for taking care of ourselves, Foege predicted major gains in Americans changing to healthier lifestyles during the next 20 years. Tobacco and alcohol abuse and obesity must decline, he said.

Foege said: "This is a very American message: You can be a rugged individualist, you can determine your own health destiny.

"That is such a powerful message instead of packaging it as 'Thou shalt not smoke.'"

Alan Berner / Seattle Times

Dr. William Foege, director of the federal Centers for Disease Control, says cigarette smoking is the nation's top health hazard.

Idea of smoke-free work place catches fire

By PHILIP HAGER
The Los Angeles Times

SAN FRANCISCO — The new office policy on smoking took effect on a Monday morning. Four days later, Ann Williamson was still ecstatic.

"I can't tell you what a difference it makes," she said. "Believe me, it's wonderful to be able to breath clean air and earn a living at the same time."

Williamson, an employment interviewer in the state Employment Development Department office in nearby Berkeley, and some other non-smoking workers had been trying for nearly two years to get the department to establish a smoke-free workplace. Weary of the pervasive blue haze in the air, they finally brought a lawsuit against the department.

But now a new policy has gone into effect: there is no smoking in the main office — by the employees or the public. Employees can take work-breaks and smoke in the restroom, coffee shop or conference room if it is not being used.

The success of Williamson and her co-workers is far from isolated. Responding to protests, lawsuits and new concern over the health hazards of "second-hand smoke," a growing number of employers — public and private — are establishing smoke-free environments in the workplace.

Until now, the focus of anti-smoking campaigns had been on theaters, restuarants and public meeting places. Now that focus has shifted to the workplace, where people spend more time. Some workers cite fears of contracting lung cancer, respiratory infection or some other illness from smokey environments. Others are just tired of headaches, nausea and burning eyes and throats.

The state of California, in a new law covering 144,000 state employees, requires all state agencies to adopt a policy on office smoking. No sweeping office renovations are mandated. But agencies have been told they should ban smoking from formal meetings, encourage workers in small meetings to ask permission to smoke and, where feasible, provide no-smoking areas, ventilated smoking areas or other arrangements to separate smoker from non-smoker.

Ordinances restricting smoking in the workplace have been adopted recently in such cities as San Diego and Ukiah. And a proposed ordinance that would require employers to set aside smoke-free office space — and also that would provide city tax incentives for installing partitions, air cleaners and other structural changes — is being considered the by Board of Supervisors here. Employers who do not comply would face civil fines of $100 per day.

However, proposals like this are not going unchallenged.

In San Francisco, the city's Chamber of Commerce has expressed concern over the measure, raising questions about its cost to employers and objections to the prospect of fines for violations.

The Washington-based Tobacco Institute is staunchly opposing court or government-ordered smoking bans in the workplace. It contends such prohibitions amount to "job discrimination" against smokers and that there is no conclusive proof of health hazards from second-hand smoke.

"It's eminently preferable to strike a balance between what smokers desire and what anti-smokers desire," says Walker Merryman, a spokesman for the institute. "But no courts have said that there's a constitutional right to be free of someone else's tobacco smoke. Such a right just doesn't exist."

Nonetheless, a number of private employers have responded to the demands of non smokers. Several large companies — IBM, AT&T and Pratt & Whitney Aircraft, among others — have set aside smoke-free work areas. In San Francisco, companies ranging from Bancroft-Whitney, a publishing concern, to Just Desserts, a pastry maker, limit smoking to specific times and places.

Pacific Telephone Co., with 103,000 employees the largest private employer in the state, is drafting a far-reaching program in the wake of two petition campaigns by employees and a subsequent employee survey that found surprising sentiment — both among smokers and non-smokers — for setting aside smoke-free work areas.

The company plans not only to set aside smoke-free areas, but to sponsor its own programs to help employees to quit smoking.

Eriksen notes that among its other benefits, the new program is expected to reduce certain costs attributable to smoking, including medical care, fire insurance, maintenance of facilities and worker absences.

The question of cost savings is receiving considerable debate. One widely noted study, published in 1981 by William L. Weis, a business administration professor at Seattle University, cited the additional expenses of insurance, absenteeism and disability payments and concluded that employers may be spending an extra $4,611 per year per smoking employee.

On the other side, Lewis C. Solomon, an education professor at the University of California, Los Angeles, calls that analysis "faulty." Solomon, in a paper published in connection with his work as an economic consultant to tobacco companies, contended among other things that worker absenteeism was more likely related to job boredom, low pay and lack of company loyalty than to smoking.

Alaska State Legislature

House of Representatives

Office of The Majority Leader

Official Business

Pouch V
State Capitol
Juneau, Alaska 99811

February 7, 1983

Mr. Richard Gelardin
SRA Box 84-B
Anchorage, Alaska 99507

Dear Mr. Gelardin:

Thank you for your message regarding HB 84, limiting smoking in public places. Your concerns about the hazards of smoke, including second hand smoke are shared. I agree with the premise that the right to breathe clean air is more basic than the right to pollute it.

However, in a sense of equality, we must be sure the rights of smokers are safeguarded as well; remembering many of them would like to stop smoking, but are unable.

I will carefully consider HB 84, and if it represents a fair solution to these concerns, I will support it.

Thank you again, for sharing your concerns with me. Please feel free to contact my office any time.

Very truly yours,

Ramona L. Barnes
House Majority Leader

RLB:jl

THE TWO OF YOU

Your baby-to-be, snuggled inside your womb, is silently engaged in a wonder-filled adventure: the struggle toward life. Your unborn baby needs all the help it can get in that struggle. Especially from you.

The two of you are separate beings. Yet you're united in the closest possible togetherness.

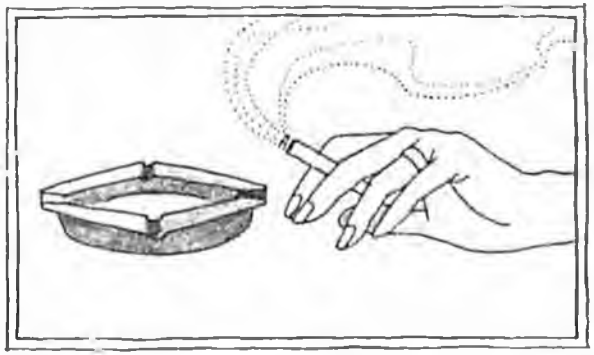
Right now your baby is floating in fluid inside your womb. The baby cannot breathe or take nourishment through its mouth. Everything it needs — oxygen and food — must be supplied through a special lifeline. Attached to the wall of your womb is the placenta, which is connected by a cord to your baby's tummy. Not until birth will your baby be set free to breathe and live on its own. Until then, every breath you take is your baby's too.

QUIT SMOKING

When you quit smoking this minute, you'll be giving your unborn baby the smoke-free environment both of you need to be healthy. It's more than a gift. It's a matter of life and breath.

Your lung association is concerned about you and your baby. For more information on how to quit smoking, check with them. They care about every breath you take.

AMERICAN LUNG ASSOCIATION
Affiliate



0963 2/80 Published by American Lung Association

SMOKING AND THE TWO OF YOU

IF YOU SMOKE

Your unborn baby doesn't breathe before the moment of birth. But it practices some motions of breathing by exercising certain chest muscles. The effects of cigarette smoke are so immediate — and so powerful — that your baby's practice movements slow down after you smoke just two cigarettes. The more cigarettes you smoke, the more you interfere with your baby's preparations for life.

Normally, your blood is completely separate from your unborn baby's. But when you smoke, some of the harmful gases and poisonous substances in smoke actually pass from your blood through the placenta and into the baby's blood.

One of these gases is carbon monoxide, which forces oxygen out of the red blood cells — both yours and your baby's. Another powerful poison, nicotine, adds to the damage by narrowing blood vessels, including those in the placenta itself. This means not as much oxygen and food is delivered to your developing baby.

- The babies of mothers who smoke during pregnancy are more likely to be born undersized. And these babies have a greater chance of dying soon after birth.
- Studies show that women who smoke during pregnancy also have more stillbirths, spontaneous abortions, and premature deliveries than women who don't smoke.

© AMERICAN LUNG ASSOCIATION, 1980

AFTER THE BABY IS BORN

It's always important to you and the baby to stay away from cigarettes.

Babies have little lungs and very small airways. Breathing smoke-filled air causes those tiny airways to get even smaller, and breathing can be blocked or impaired.

Babies and young children also breathe much faster than adults. They inhale more air — and more pollution — in comparison to their total body weight. And many of their lungs' defenses have not developed yet.

Babies in their first year have a higher rate of pneumonia and bronchitis if their parents smoke at home.

Another complicating factor is that mothers and fathers who smoke, thereby damaging the defenses in their own lungs, have more respiratory infections which they can pass on to their children. Acute respiratory problems are more common in young children if their parents smoke.

And, if you smoke while your children are growing up, you have enormous influence on their behavior. Parental smoking — by both fathers and mothers — is a major factor motivating youngsters to smoke. Few, if any, parents want their children to take up a habit that can cripple their lungs and cut short their lives.

YOUR OWN HEALTH

Right now your baby is your central concern. So is your own health. If you're as healthy as possible — both before and after your baby's birth — life is a lot happier.

Even if you feel fine now, smoking is a slow time-bomb. If you quit smoking now, it increases the possibility of your being around to see your child grow and develop.

Cigarette smoking is the major cause of such lung diseases as emphysema, chronic bronchitis, and lung cancer. Smoking constricts your blood vessels, increases your blood pressure, and damages your heart. Even one cigarette upsets the flow of blood and air in your body.

After your baby is born, you should be aware that cigarette smoking is especially dangerous among women who use birth-control pills, especially after age 35. Smoking sharply increases the risk of serious effects on the heart and blood vessels. The risk is so serious, in fact, that the Food and Drug Administration has revised its labeling requirement for such pills and included this prominent warning: "Women who use birth control pills should not smoke."

Your family wants you alive and well. Cigarettes don't keep you that way.

JUDICIARY COMMITTEE
ALASKA STATE HOUSE OF REPRESENTATIVES

DEAR PEOPLE,

WE HAVE READ HOUSE BILL NO. 84, "AN ACT RELATING TO SMOKING IN PUBLIC PLACES AND VEHICLES". WE FEEL THAT WHILE THE BILL IS AN IMPROVEMENT TO THE CURRENT STATUTES, IT FALLS FAR SHORT OF PROTECTING THE PUBLIC. WE FEEL THAT SMOKING SHOULD BE LIMITED TO ONES RESIDENCE, PRIVATE VEHICLE, OR THE OUT-OF-DOORS.

IN THE UNITED STATES, 67% vs 33% OF THE POPULATION IS NONSMOKING[1] AND WE FEEL THE STATUTES SHOULD PROTECT THE RIGHTS OF THE 67% WHO DON'T AND NOT THE PRIVILEGE OF THE 33% WHO DO. WE HOPE YOU WILL CONSIDER MAKING IT ILLEGAL TO SMOKE ANYWHERE BUT IN ONES RESIDENCE, PRIVATE VEHICLE, OR THE OUT-OF-DOORS.

THANK YOU.

Juneau
AK 99801

DATE: March 5, 1983

TO: The Judiciary Committee

FROM: Julie Mapes
P.O. Box 82450
Fairbanks, Alaska 99708

SUBJECT: House Bill 84

I understand that this bill is now before your committee. I have not read the bill, but I have been told that, if passed, it will prohibit smoking in many public areas. I **STRONGLY** urge you to support this bill.

I have a serious allergy to cigarette, cigar, and pipe smoke. I also have allergies to several other substances and foods. It is my choice not to eat those foods or to come in contact with any substance that will cause me to have a reaction. No other person can interfere with that decision with one exception. THE TOBACCO SMOKER! They may be a minority now days, but it only takes one smoker to pollute the air in a room. I do not object to other's smoking. I DO OBJECT TO BEING FORCED TO BREATHE THEIR SMOKE!!!

A few years ago, I would have been against House Bill 84 because I believed that the majority of the smokers would be considerate of non-smokers rights. The responses I have gotten from most smokers has convinced me that I was completely wrong. For example, the following are a sample of the responses I have gotten and my answers to those responses:

1) "You can take it for a little while."

It only takes two to ten minitues to start a reaction. The reaction will last anywhere from one to seven days depending on the concentration of the smoke and the length of the exposure.

2) "You better see an allergist."

I wouldn't mind seeing an allergist but what good would it do. I know most of the things I'm allergic to. All the doctor could do is prescribe medicine I don't wish to take. About seven years ago, I had to take very large doses of anti-histamines to counteract the worst reaction I've ever had. The reaction was gone within a week but I didn't feel too good. A few days later I was hospitalized for a serious bladder infection. (The

result of the anti-histamines.) Last night, I heard on the news that cancer causing agents have been found in medicine used for allergy shots. I believe the best solution would be to stop the cause. NO THANKS, NO MEDICINE FOR ME!!!

3) "AW" (This one flipped the ashes on to my desk and blew the smoke into my face."

I don't think I should repeat what I said, so I'll leave it to your imagination.

4) "Oh, I'm sorry" (This one politely put the cigarette behind his back.)

Being sorry and putting that thing behind your back doesn't do any good. It's still in the same room and it's doing just as much damage.

5) "You should get one of those air purifiers for your desk."

I work on a wide open floor with five foot partitions between the offices. Between fifteen to twenty industrial size purifiers are needed. I am not the one pulluting the air so why am I the one who is supposed to spend $30 to $130 on a purifier?

6) "Even if you weren't allergic to smoke, I wouldn't smoke around you because I know you it bothers you." (This one is the only smoking friend I have.)

Thank you, I really appreciate your courtesy!

I know I'm not the only one who is bothered by or allergic to tobacco smoke. Like many people, I avoid places where smoke is present. That even includes my husbands Lion's club socials. But there are places I can't avoid. We have to eat so I have to go to the grocery store. I have to go to work. (I'm fortunate that on our corner of the floor there are no smokers.) I can't wait to be called for jury duty and see the reaction when I say "I will not be able to serve if smoking is allowed during deliberation."

For myself, my children (who have started having minor allergy reactions to tobacco smoke), and for all non-smokers who are too shy to stand up for their rights, I once again urge you to support House Bill 84.

Thank you for your attention.

The Honorable Charlie Bussell
Pouch V, MS 3100
Juneau, Alaska 99811

Dear Representative Bussell:

We are writing in support of HB 84, a bill relating to smoking in public places and vehicles. The hazards of smoking have been known for many years; however, it has only been recently that evidence has become available that there is also a risk in breathing smoke from another persons cigarette. In addition, the non-smoking public has become increasingly less tolerant of being exposed to the smoke of others, especially in places such as restaurants, theaters, and places of employment.

NAHRA has long been an advocate of school and community health education efforts which attempt to prevent children from beginning the habit of smoking and to convince those who smoke to quit. In addition, we have strongly advocated the passage and enforcement of State laws prohibiting smoking in public places. House Bill 84 proposes to strengthen and broaden the concept of protecting the non-smoker from exposure to the dangers of inhaling the smoke generated by others. We support this approach.

Sincerely,

Chas M. Kaltenbach

Rep. Charlie Bussell
Chairman, House Judiciary Committee
State Capitol
Pouch V
Juneau, AK 99811

I am in full support of HB 84, "An Act relating to smoking in public places and vehicles." I am very concerned about my health and the health of the other employees in my place of employment. I, as well as 76% of the employees in the building am a non-smoker; only 24% of this building's occupants smoke tobacco, primarily in cigarette form.

Fourteen people out of 56 have chosen to pollute their bodies with tobacco, however these 14 people are successful in polluting the air that everyone breathes. I am sure that you are aware of the hazardous side effects of cigarette smoke, both ingested directly into the lungs by drawing on cigarettes etc., and the "side-stream smoke" breathed by everyone, as the burning weed smolders in the ashtray.

According to Laurence H. Bates, M.D. in "Lessen Your Cancer Risk,"

> "A nonsmoker who lives with a smoker has 3.7 times the risk of developing lung cancer as the nonsmoker who lives with a mate who does not smoke. The smoke that comes from the burning end of the cigarette is breathed by both the smoker and the nonsmoker. Called 'side-stream smoke,' it contains about <u>five times</u> the amount of carbon monoxide, tar, nicotine and carcinogens as the 'mainstream smoke' that a smoker draws through the cigarette into his lungs. Some recent information indicates that side-stream smoke may be a major causative factor in cancer for the smoker, since the smoker constantly is exposed to his own side-stream smoke." (emphasis added)

I would like to further note that the majority of the time the cigarettes smoked in this building are just sitting in the ashtrays polluting the air with side-stream smoke, as the smoker is chatting on the telephone or flipping through a file. Further observations lead me to believe that our building has extremely poor ventilation and a good deal of stagnant air, therefore trapping the cigarette pollutants, and forcing everyone to inhale these pollutants.

I would like to offer several suggestions to remedy this dangerous and unhealthy working situation throughout the state.

The most effective means would be controlling the source, namely the smokers themselves, by prohibiting smoking in public buildings, as HB 84 suggests. Smoking should <u>NEVER</u> be allowed in the working offices, and if the smoker has trouble accepting the guidelines of this approach, that is their own personal problem. I believe that it is criminal for innocent

people to be subjected to a well-known carcinogen beyond their control, because smokers can't break their destructive habit.

A second, less radical approach would be to segregate smokers and non-smokers. Smokers could be put in rooms with only smokers (and any non-smoker that didn't object), and in no case would a smoker be put in a room with non-smokers. The main problem with this approach is that the continuity of certain working sections could be disrupted.

The third and least palatable of choices would be to do something about the smoke itself. Due to the antiquated air-conditioning system in our building, and lack of duct work, installing some kind of central air cleaner would certainly be out of the question, not to mention ineffective, since the smoke would actually have to travel to the registers, thereby polluting the air the cleaner was intended to purify. It is possible that offices supply smokeless ashtrays AND desk unit air cleaners for every smoker in a particular building. However, the major drawback with this approach is that the smokers would have to cooperate in using the apparatus.

I am sure by now that you have an understanding of the problem as I percieve it, and I can assure you that I am not the only person in the state of Alaska that shares these feelings. I would like to emphasize that I fully support HB 84 as written (as of this date), and I feel that any other means of controlling the smoking problem other than the actual prohibition of the practice in public buildings would be nothing but a poor and interim compromise.

I am very sincere and very concerned about my health, as well as the health of my fellow workers and all the citizens of the state, and I know that you are too. Please support and vote for HB 84 and pass it through to the House Rules Committee.

It's a matter of life and breath.

Sincerely,

Joseph S. Russo

Joseph S. Russo

4 March 1983

HB 84 (against smoking)

The Honorable Charlie Bussell, Chairman
Alaska State House Judiciary Committee

Dear Representative Bussell,

I am pleased to report that a majority of the APEA Juneau GGU members and delegates present at our 1 March 1983 monthly meeting passed a resolution of support for the anti-smoking HB84, now pending action in your committee.

I believe this spontaneous gesture of support may have greater credibility than the "smoking survey" now being conducted among State employees. Unless someone has personally suffered smoke abuse they usually don't take the problem seriously, and smokers can be expected to oppose it with habit-induced fervency. The survey's wording is being questioned. I myself never received one at home or at my work station.

I realize that peripheral developments may have terminally jeopardized the bill. It could have meant a more healthy, safe and productive working environment for State employees. Regardless of the outcome of all this, I thank you and each of your committee members for your time and for your fair hearing of my testimony.

Respectfully,

Louis R. Coatney

PS. I have written this letter as an individual Alaskan and individual APEA member and Juneau-GGU delegate.

March 3, 1983

TO WHOM IT MAY CONCERN:

At the regular monthly meeting of the Juneau General Government Unit of the Alaska Public Employees Association, held at APEA Headquarters conference room at 340 N. Franklin on Tuesday, March 1, 1983, the following resolution was passed by a majority vote of members present:

"WHEREAS, smoking is a health and safety hazard and may contribute to redueed productivity at the workplace; and

WHEREAS, Alaska State House Bill 84 would reduce the amount of smoking in public places;

BE IT THEREFORE RESOLVED that the majority of GGU members present at the March meeting of same do endorse House Bill 84.

Phil McMurray

Phil McMurray
APEA Juneau GGU Chapter Secretary

The resolution was proposed "off the cuff," and the wording is ours.

4343 Taku Blvd.
Juneau, Alaska 99801
March 2, 1983

The Honorable Charlie Bussell
Capitol Building #126

Dear Sir:

I would like to take this opportunity to thank you for the introduction and support of House Bill #84.

As a non-smoker who is constantly subjected to "second hand" cigarette smoke, I would like to offer whatever help I can for the passage of this bill.

I am employed by the State in the State Office Building and everyday I became ill--due to the fact that in my division of seven people, five are heavy smokers. When I discussed this problem with my supervisor, I was informed there was nothing that could be done. The smokers have the "right" to smoke while working. I'd certainly like to know who bestowed this "right." Perhaps if their smoke stopped where my air began, there wouldn't be a problem, however, a smoker can do his or her job without smoking, but when there is smoke in the air, I can't do my job without breathing it. And since one reason I don't smoke is because of the health risk, my attempt to reduce this risk is meaningless as I have no choice but to breathe the air which is smoke-filled.

Once again, let me thank you for the bill. If I can do anything beside writing to the legislators and my union, please let me know.

Sincerely,

Jacqueline A. Hatcher

March 28, 1983

Mr. Gary Miller
P. O. Box No. 2436
Juneau, Alaska 99803

Dear Mr. Miller:

Thanks for taking the time and effort to write expressing your concerns with regard to HB 84.

The Judiciary Committee has indeed spent a good deal of time hearing testimony on this bill resulting in a record for all the items you outline in your letter including the cost "guesstimate" to the State.

I do not believe there is anyone on the Committee against what the bill is intended to do, but I am concerned with getting it done.

We presently have a law on the books which if enforced, would extend relief to the problem. Creating another non-enforceable law is not my aim, nor that of the House Judiciary Committee.

We have the bill before the Committee again today with hope our staff work will combine with committee agreement on the best way to proceed, with the result being an enforceable, legal and fair law which all parties can live with.

Thanks again for writing and becoming involved in the legislative process. Together we can make a difference and do something about the state we are in.

With best regards I remain,

Sincerely,

Representative Charlie Bussell
Chairman. Committee on Judiciary

CHARLIE BUSSELL
JUDICIARY COMMITTE
HOUSE OF REPRESENTATIVES

DEAR REPRESENTATIVE BUSSELL,
WHEN HOUSE BILL $84, "AN ACT RELATING TO SMOKING IN PUBLIC PLACES AND VEHICLES", CAME BEFORE THE STATE AFFAIRS AND JUDICIARY COMMITTEES, STATISTICS, STUDIES, AND THREE DAYS OF TESTIMONY WERE RECORDED. CITED WERE RECENT COURT DECISIONS, WORKERS COMPENSATION PAYMENTS, AND EARLY RETIREMENT DISABILITY PAYMENTS TO WORKERS WHO ARE SENSITIVE TO TOBACCO SMOKE DO TO AN ALLERGY, ASTHMA, OR EMPHYSEMA. THE COST OF THESE TO THE STATE OF ALASKA IS UNKNOWN, BUT THERE IS ONE COST THAT CAN BE ESTIMATED AND IT WAS OVERLOOKED.

THE AMERICAN CANCER SOCIETY WROTE IN 1981, "...THE AVERAGE PACK-A-DAY SMOKER COSTS A COMPANY $625-$750 PER YEAR IN INCREASED EXPENSES." THE ALASKA DEPARTMENT OF LABOR'S RESEARCH AND ANALYSIS UNIT REPORTED AN AVERAGE MONTHLY NUMBER OF STATE EMPLOYEES FOR 1980 AT 15,370. THE SURGEON GENERAL REPORTS THAT 33% OF THE ADULT POPULATION SMOKES SO THERE ARE APPROXIMATELY 5,072 STATE EMPLOYEES WHO SMOKE. USING THE ABOVE FIGURES, THE INCREASED EXPENSES TO THE STATE BECAUSE OF SMOKING EMPLOYEES CAN BE ESTIMATED:

5,072	SMOKING STATE EMPLOYEES	5,072
x625	DOLLARS	x750
$3,170,000		$3,804,000

SINCERELY,
Gary Miller

Letters

Smoking

Dear Editor:

House Bill 84, "An act relating to smoking in public places and vehicles," is not a bill just for the health conscious person who is into aerobic exercise, jogging, etc. It is more than a statement by the 2/3 population, which does not smoke, to the 1/3 that does, to give us a place to breathe smoke-free air. The bill: addresses the health hazards of second hand smoke, acknowledges the recent court decision concerning rights of nonsmokers, and takes note of the cost of smoking to the public.

It has been estimated the State of Alaska pays increased expenses for its smoking employees in excess of three million dollars annually. Alaska also pays workers compensation to people who lose work time because of smoke conditions making them too ill to work.

Some private industry is addressing the smoking problem now. IBM, 3M, and AT&T have set up separate areas for their nonsmoking employees. Some employers have set up separate areas because of court decisions.

In 1976, a New Jersey court ruled against New Jersey Bell Telephone Co. stating that companies have a duty to give workers a smoke free work area if they want it. In August 1982, Lanny L. Vickers vs. the Veterans Administration, the United States District Court, Western District of Washington, ruled that a person who is physically sensitive to smoke qualifies as handicapped person as defined in 29 U.S.C. 706(7) (B). In October 1982, the United States Court of Appeals, ninth circuit, (Irene C. Parodi vs. Merit Protection Board) ruled a person is eligible for voluntary disability retirement benefits if that person is medically not able to perform the job because of sensitivity to smoke in the work place and the employer does not offer "... Suitable employment in a safe environment ..." Werner H. Peterke, a former Social Security administration worker, was awarded approximately $700 every two weeks in employee compensation payments on the grounds that he suffered from the smoke of fellow employees at work.

Medical research has linked ambient smoke to medical problems in nonsmokers. Children of parents who smoke are more prone to bronchial ailments. Nonsmoking wives of smokers have higher lung cancer rates than nonsmoking wives of nonsmokers.

House bill 84 represents an issue whose time has come. It has moved from arguments between smokers and nonsmokers to a bill before the legislature. It could very well go on to become law. If you have an interest, contact your legislator at Pouch V, Juneau, Alaska, 99811.

Juneau Ak 99811

Dear Mr. Bussel...

Please Get with the program on HB84. Its time that the None smoking population had some protection. I have a lumber yard and it really upsets me the way some of the general public abuse the rights of others.....and totally disrespect the facilities , by their careless use of cigarettes and other smokes... I have a hard time keeping up with the insurance costs as it is...let alone smokers who just mash out thier smokes on the floor and flipping thier cigarette butts carelessly anywhere in the yard. Even with signs out...they don't pay attention.

Thank you...I assume that you will be prompt on this bill, and I urge you to support this bill.

Angie Kruckenberg

Judiciary
Referral

May 3, 1983

Representative Charlie Bussell,
Chairman, Committee on Judiciary
Ak. State Legislature

Dear Mr. Bussell,

On Feb. 15th your committee received H.B. #84. After it was there seven weeks you wrote in reply to my previous letter that you expected to have it out of committee by April 15th. That was nearly 3 weeks ago and still the bill awaits action.

This bill is of considerable importance to many Alaskans: those who are asthmatic, those allergic to tobacco smoke, and those who resent being to breathe someone else's foul smoke. Medical data has recently shown this bill to be of importance to everyone who ~~don't smoke~~ whether or not they fall into one of these categories for all non-smokers suffer damage to their small airways when forced to inhale drifting tobacco smoke.

Presently all non-smoking Alaskans are forced to do just that! They must stand by unprotected in most public places and watch their right to breathe clean air be completely disregarded by certain insensitive smokers. H.B. #84 will correct this situation - but it needs your support and your immediate action to get it to the floor. Won't you please give it and non-smokers a chance?

Sincerely,

Grant B. Carlin

NO "IFS", "AND" OR "BUTTS"

These are the facts and Nordale intermediate students would like to share them with you:

- - - Each year 300,000 Americans die prematurely from the effects of smoking.

- - - Ninety percent of all lung cancer cases occur in smokers.

- - - If you are a male and smoke two packs a day, you have a ten times greater chance of getting lung cancer than a non-smoking male.

- - - More than twice as many smokers die each year from coronary heart disease than non-smokers.

- - - Cigarettes are the major cause of home fire deaths and injuries in the United States each year.

- - - Cigarette smoke contains thousands of harmful chemicals including poisons such as arsenic, formaldehyde, cresote, ammonia and hydrogen cyanide.

- - - Breathing someone else's tobacco smoke is harmful.

- - - Two million asthma attacks among non-smokers are caused by breathing someone else's smoke.

- - - Persons suffering from angina can have an attack induced by breathing another person's smoke

- - - Children of parents who both smoke are likely to have twice as many respiratory illness as kids raised in a smoke free home.

- - - Infants in their first year of life have a higher rate of pneumonia if their parents smoke than they would have if their parents did not smoke.

- - - Smoking when pregnant can cause stillbirths, pre-mature births, or smaller size babies.

- - - Breathing someone else's cigarette smoke frequently causes these effects in the non-smoker; headache, cough, eye irritation, and nasal discomfort.

- - - Breathing cigarette smoke either as a smoker or non-smoker increases your heart rate, raises your blood pressure and puts carbon monoxide in your blood.

- - - More than one-half of all physicians, dentists and druggists have quit smoking since the Surgeon General's Report in 1964.

- - - Parental smoking is the major cause of their children's smoking.

The Honorable Charlie Bussel
Alaska Legislature
House Judiciary Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Bussel:

I am writing to urge your action within committee on House Bill 84, to increase the penalties for smoking in public places and vehicles.

As you must be aware, smoking has a direct affect on the health of everyone in the presence of those who smoke. As a former cancer patient who was specifically ordered by my physician to stay away from cigarette smoke, I am in strong support of House Bill 84. While I don't want to infringe upon the rights of others, I feel that here is a case where the smokers are infringing on the rightsof everyone else. In the instances where I must enter public buildings and vehicles, I don't want to be forced to breathe air filled with cigarette smoke and thus endanger my own health.

Smoking is not a necessary function of the human body. It is a habit, just as chewing gum,drinking liquor etc. etc. etc. We don't allow people to drink liquor on public vehicles or in other public areas. Frankly, I'd prefer that to the smokers and I don't prefer either one. At that point where one's habits become a danger to the health of another, they are no longer and right....and I'm sure any cancer specialist in the state or country will verify for you the danger cigarette smoke poses to the health of all of us, particularly those whose medical history includes cancer.

Please stop sitting on this legislation and get it out of committee.

Thank you.

Sincerely,

Margaret Bauman

Dear Ms. Gray:

I would like to thank you for the time that you have taken in relation to HB 84. I also appreciate the brief telephone conversation we had on this date.

Enclosed you will find the Committee Substitute for HB 84. The Committee, along with many others, have put considerable work into this legislation. We feel that the changes will enhance the passage of the bill.

CSHB 84 is scheduled for hearing on Thursday, May 5, at 1:30 p.m. At this time, we plan to move the bill from Committee, with perhaps minor amendments. The bill will then be forwarded to the Finance Committee. It is my hope that the Finance Committee will act quickly on this legislation.

I want you to know how much we appreciate the involvement of the citizens of the State of Alaska in the legislative process. Working together is the way to make our State a better place in which to live.

Sincerely,

Representative Charlie Bussell
Chairman, Committee on Judiciary

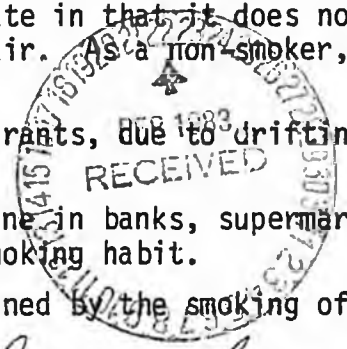
Dear Members of the Judiciary Committee:

I am writing to ask your support of House Bill 84, which provides long overdue health protection to non-smokers in Alaska. The present statute is inadequate in that it does not go nearly far enough to guarantee everyone's right to breathe clean air. As a non-smoker, I can attest to this fact because:

yes I frequently have had meals ruined while eating in restaurants, due to drifting tobacco smoke.

yes I have experienced extreme discomfort while waiting in line in banks. supermarkets, and other retail establishments, due to someone else's smoking habit.



yes Where I work, I am constantly annoyed and sometimes sickened by the smoking of my fellow employees.

How this bill is treated by your committee will show Alaskan voters whether their representatives really represent them or instead owe their allegiance to the tobacco lobby.

CSHB 84
Fiscal Note
Analysis

This bill extends the state's current mandatory prohibition of smoking in public places to include public meetings of municipalities and most places of business such as retail stores, restaurants, banks, offices, factories, warehouses, and other places of employment. Under existing statute, this extended prohibition is at the option of the person having control of such places of employment. The bill would also make the existing mandatory requirement to provide reasonable smoking areas, in most prohibited areas, optional. Because of the very broad changes to the existing law, requiring mandatory compliance by nearly every place of business in the state, except for cocktail lounges, taverns and tobacco shops, it is anticipated that the department will have to devote additional resources of one part-time attorney and a part-time secretary to provide the civil enforcement actions required by the bill in the Superior Court.

Consequently, the only costs shown are those that will occur in the department's civil division as result of filing and handling civil complaints on behalf of the Commissioner of the Department of Environmental Conservation. Work drafts of the committee substitute, dated 4/12/83, have added an entirely new section that provides criminal citations and penalties. So that there will be no misunderstanding, the department intends to handle these citations in the same manner as minor traffic offenses are handled. Traffic offenses are heard in magistrate court and only the arresting officer, civilian witnesses and the defendant appear before the magistrate. Prosecutors only attend these proceedings in those rare instances when defendants appear with counsel. If for any reason, it is expected that state prosecutors are to regularly prosecute violations of the proposed AS 18.35.300 or AS 18.35.330, then substantial additional funding will be required. A preliminary estimate is that 2 full-time and 1 part-time prosecutors and 1 legal secretary would be needed at an initial annual cost of $220.0.

Fiscal Analysis - HB 84

The impact of HB 84 is expected to result in the addition of one-half the time of an Attorney IV and one-quarter of the time of a Legal Secretary I on a statewide basis. Actual placement of cummulative positions and costs can only be determined after the Legislature has acted and we know what bills and fiscal notes have been approved. For purposes of the analysis, salary schedule A has been used.

The first year of the analysis is FY 84 and costs have been calculated on a 10 month basis to account for the time required to establish new positions and the time it takes to get a new program underway. The costs after FY 84 are on a 12 month basis and include a 6% annual inflation factor.

1st Year (10 months)

	Atty IV (PPT)	L/SI (½ equiv.)	Total
Personal Services	26.9	5.8	32.7
Travel	2.5	-	2.5
Contractual	4.0	.5	4.5
Commod. - ongoing	.8	.4	1.2
Commod. - single time	2.0	.4	2.4
Equipment - single time	1.5	3.6	5.1
			48.4

2nd Year (12 months + 6% annual inflation)

Personal Services	34.1	7.5	41.6
Travel	3.2	-	3.2
Contractual	4.3	.5	4.8
Commodities	1.0	.5	1.5
Equipment	-	-	-
			51.1

ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION

POSITION PAPER

CS for HB 84

April 22, 1983

The Department of Environmental Conservation supports this proposed legislation because it extends and clarifies the existing statute. If HB 84 is enacted, the Department would amend 18 AAC 55, Smoking In Public Places. We would also take appropriate measures to inform the public of the new law.

III. ANALYSIS (See Fiscal Note Preparation Instruction, Section III)
This bill extends the state's current mandatory prohibition of smoking in public places to include public meetings of municipalities and most places of business such as retail stores, restaurants, banks, offices, factories, warehouses, and other places of employment. Under existing statute, this extended prohibition is at the option of the person having control of such places of employment. The bill would also make the existing mandatory requirement to provide reasonable smoking areas, in most prohibited areas, optional. Because of the very broad changes to the existing law, requiring mandatory compliance by nearly every place of business in the state, except for cocktail lounges, taverns and tobacco shops, it is anticipated that the department will have to devote additional resources to provide the enforcement actions required by the bill such as seeking injunctions and the collection of fines and penalties.

POSITION PAPER/Department of Health & Social Services

House Bill No. 84

"An Act Related to Smoking in Public Places and Vehicles"

BACKGROUND INFORMATION:

First, there is mounting evidence in the medical literature that passive smoking by children, particularly young children, and adults with heart or lung ailments cause them to suffer physiological and eventually anatomic consequences that adversely affect their health status. Second, there is a mounting public awareness of the annoyance caused by persons smoking indoors in public areas. Third, and this is the fact of greatest significance, in 1981, there were 92 deaths in Alaska due to cancer of the respiratory system and 145 premature deaths due to coronary disease. Smoking undoubtedly contributed heavily to these numbers.

WHAT THE BILL DOES:

This bill strengthens the rights of persons who choose not to damage their lungs and cardiovascular systems by smoking - either active or passive smoking. It recognizes several features of indoor air quality that are not adequately recognized by the present statute.

SUGGESTION FOR IMPROVEMENT:

On page 3 line 13: Due to the difficulty of defining a "smoker" this line could be more effectively stated; "(4) a place of employment if all the employees consent to the designation in entirety,".

On page 3, line 27: Addition of "per Alaska statute 18.35.300" would make the sign more effective.

On page 4, Section 6 would add a potential case load to already overcrowded district and superior courts. The personal injury sustained by a violation, or even a brief series of violations, of this statute would be minimal and difficult to prove. The remedies contained in Sections 7 and 8 of this bill set forth adequate avenues for correction of violations.

POSITION PAPER/Department of Health & Social Services

DEPARTMENT POSITION:

This bill is an enlightened public health policy statement and is strongly endorsed by this department.

PREVIOUS ACTION

None

ACTION NARRATIVE

TAPE#1

Recording Number 0001 — Chairman Abood called the meeting to order at 1:00 p.m., and indicated the members present at the hearing. He told committee members that the first bill to be heard would be HOUSE BILL NO. 85 and then following HOUSE BILL NO. 84.

Number 0036 — Chairman Abood told committee members that it was the intention of the Chairman to pass HB 85 out of committee to the next committee of referral.

Number 0050 — Rep. M. M. Miller moved that HB 85 be passed out of committee with individual recommendations. Hearing no objections, the motion carried with Representatives Abood, Cowdery and Furnace recommending a "do pass" and Representatives M. M. Miller, Shultz and Larson having no recommendation.

Number 0058

Chairman Abood called Rep. Fritz to the stand, the sponsor of HB 84; the bill relating to smoking in public places and vehicles. Rep. Fritz told committee members that if smoking affected only those who smoke, there would be little need for HB 84; but smoke is not confined to the smoker. He stated that smoking interferes with the rights of those who do not smoke, to work or carry on their business in a smoke-free environment. Therefore, it was his feeling that smoking should be banned in vehicles and indoor areas open to the public. He asked the committee to favorably consider HB 84 for passage.

Number 0136

Rep. M. M. Miller, co-sponsor of HB 84, testifies on behalf of the legislation. He told members of the committee that second hand smoke was a significant health hazard. He said a recent court decision ruled that employees had a right to work in a smoke-free environment. He said, "we're not prohibiting smoking." The intent is that smoking does not interfere with those who do not want to smoke.

Rep. M. M. Miller went over new sections of HB 84 that are different from current statutes. In Sec. 2. (2), Line 27 that indicates if privately owned such as, a library, (INDOOR) theater, museum, lecture or concert hall, gymnasium, or swimming pool or other indoor (PUBLICALLY OWNED AND OPERATED) place of entertainment or recreation. Rep. M. M. Miller stated that it was changed to include municipalities, retail store, restaurant or bank which was not in place in previous legislation. The reason being was because people with breathing difficulties and sensitivities to smoke have to go to these places. He urged support of HB 84.

Number 0270

Don Kubely, representing Cabaret Motel and Restaurant Association (CHAR) takes the stand. He told committee members that he had no problem with the main thrust of the bill. He was against the verbiage on Page 2, Lines 6-7 that referred to no smoking in a retail store, restaurant or bank. Mr. Kubely stated that it was contrary and establishments or businesses that are privately owned should not be subject. In

conclusion, Mr. Kubely stated that CHAR felt that sections on Page 2, Lines 6-7 should either be deleted, or left as they are in the present statutes.

Number 0309

Donna Reeder, representing herself and currently employed with the State Department of Administration, takes the stand. She said that she was in a corner with two other non-smoking employees and although the smokers are in another section, the non-smokers are still getting their smoke. She told committee members that dividing sections in offices does not help the problem. She said employees can't wear contacts and suffer irritations in their nose and throat, due to second hand smoke. She urged passage of HB 84.

Number 0339

Beverly Bradon, representing herself and currently employed with the State Department of Administration, Word Processing Unit takes the stand. She said she worked with machines that draw smoke to their section of the office. She told members of the committee that the smoke gave her frequent headaches, but that she had to work to support her child. She urged passage of HB 84.

Cherie Shelley, representing APEA takes the stand. Ms. Shelley referred to Page 4, Line 5 of the bill. She said that she wasn't for or against the bill per say. It was her intention to point out to committee members that if HB 84 passed APEA would be forced to file grievances or a court action, because of the change in working conditions for an employee.

Number 0385

Rosalee T. Walker takes the stand in opposition to HB 84. She said she was a law abiding citizen and that passage of HB 84 would make her a potential criminal, because she smoked. She said she didn't feel it was necessary to pass HB 84, because if merchants do not want you to smoke they can hang a sign and that was sufficient. She also said that there would be a great burden put on enforcement people if HB 84 passed. She opposed passage of HB 84.

Number 0422

Dove Kull, representing herself as an older

Alaskan takes the stand. She said older people have thin skin. She said that same thing happens in your nasal passages when you are around smokers. Ms. Kull said she and other older Alaskans have frequent nose bleeds when subjected to second hand smoke. She strongly recommends HB 84 for those people who have sensitivities such as older people encompass.

Number 0445 — Leo Kaye, the Director of the Alaska Lung Association gives his testimony via the teleconference network from Anchorage. He said that HB 84 was designed to improve the original law and provides safeguards for non-smokers. He told committee members it was a health hazard to receive second hand smoke. He urged passage of HB 84.

Number 0522 — Richard Lauber, with the Tobacco Institute takes the stand. He told members of the committee that there is no actual fact findings that indicate second hand smoke is harmful. He was opposed to HB 84.

Number 0658 — Tom Coyne of Ketchikan gives his testimony via teleconference network. He said that present laws pertaining to smoking were not being enforced. He supported HB 84.

Number 0700 — Alice Hovena takes the stand. She said that the current law was not effective on the part of businesses in controlling smoke. Ms. Hovena said she didn't wish to be subjected to second hand smoke, although she would like to have dinner at a restaurant with a smoke-free surrounding. She said that when someone has nose bleeds, headaches and difficulty breathing, how can it be stated that there is no fact finding evidence that second hand smoke is harmful. She urged support of HB 84.

Number 0840 — Don Hagmason representing the Alaska Retailers Association takes the stand. He was concerned with passage of HB 84, in that if a person was smoking in a grocery store and the knowledge of who the individual was uncertain, the action suit would be filed against the grocery store merchant. He opposed HB 84.

Number 0870 — Ken Richardson, representing himself gives his testimony via the teleconference

network. He said he must constantly wear masks to breathe when he is around smoke in federal meeting places, grocery stores and airplanes. He said the residual smoke gives you colds and other sensitivities and urged passage of HB 84.

Number 0916 — Joe Clodauis, with the Department of Environmental Conservation (DEC) takes the stand. He said that the current bill was more complete and extensive, addressing current needs. He added if the DEC is to enforce the law, support HB 84.

Number 0954 — Susan Scott, representing the Alaska Council on Health gives her testimony via teleconference in Anchorage. Her concern was mainly for small children, with breathing difficulties, who could not go into a store or restaurant because of second hand smoke. She said that breathing second hand smoke was a health hazard and urged passage of HB 84.

Tape 1, Side B
Recording
Number 0010 — Alice Richardson, a retired Public Health Nurse, representing herself gives her testimony via teleconference in Anchorage. She said over 3 million people suffer sensitivities to smoke. During her recent air travel, she indicated she was still recovering from bleeding sinuses. She urged passage of HB 84.

Number 0048 — Debbie Sharpe of Ketchikan gives her testimony via teleconference network. She told of the problem on the ferry system where the lounge is divided in half for smokers and non-smokers, but how the people blow their smoke as they go to their side of the lounge. She urged support of HB 84.

Number 0100 — Jeff Sharpe of Ketchikan gives his testimony via teleconference network. He was opposed to smoking in a grocery store near the fresh food section and was appalled at finding cigarette ashes on produce. He supported HB 84 and its passage.

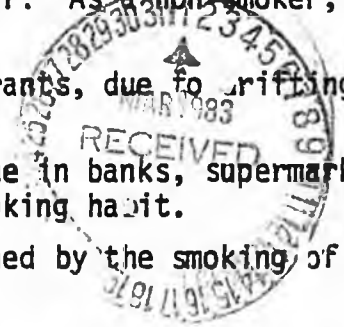
Number 0119 — Gary Miller, a state employee representing himself, speaks on behalf of many state employees in favor of HB 84. He read a memo

from a department executive who found loopholes in the current statute and; therefore, permitted employees objecting to second hand smoke to be subjected to it just the same. It was the executive's belief that he set the rules and decide what is fair for all. Mr. Miller felt that passage of HB 84 would make the law for enforceable.

Number 0224 — Roberta Banko, representing herself takes the stand. She said that passage of HB 84 would give the non-smoker more leeway to go to a smoker and encourage him to put out his cigarette. She supported HB 84.

Number 0245 — Discussion continues on HB 84.

Number 0290 — Ric Inannolino representing himself takes the stand. He passed out an article from a San Francisco newspaper that told of a non-smoker, employed with the federal government, receiving a $20,000 suit because she was subjected to a smoke filled office. He supported passage of HB 84.



Tape 2, Side A
Recording
Number 0001 — Chairman Abood thanked everyone for taking the time to testify.

Number 0013 — Rep. Shultz moved that HB 84 be passed out of committee with individual recommendations. Motion passed with Rep. M M. Miller recommending a "do pass" and Representatives Larson, Abood and Shultz recommending do pass "if amended".

Number 0025 — No further business to come before the committee. Chairman Abood called the meeting adjourned at 2:35 p.m.

Dear Members of the Judiciary Committee:

I am writing to ask your support of House Bill 84, which provides long overdue health protection to non-smokers in Alaska. The present statute is inadequate in that it does not go nearly far enough to guarantee everyone's right to breathe clean air. As a non-smoker, I can attest to this fact because:

X I frequently have had meals ruined while eating in restaurants, due to drifting tobacco smoke.

X I have experienced extreme discomfort while waiting in line in banks, supermarkets, and other retail establishments, due to someone else's smoking habit.

X Where I work, I am constantly annoyed and sometimes sickened by the smoking of my fellow employees.

___ _____

How this bill is treated by your committee will show Alaskan voters whether their representatives really represent them or instead owe their allegiance to the tobacco lobby.

MANY THANKS.

EOM//

SENATE JUDICIARY/Department of Health and Social Services

POSITION PAPER

CS FOR HOUSE BILL NO. 84 (Judiciary)

"An Act Relating to smoking in public places and vehicles."

BACKGROUND INFORMATION:

First, there is mounting evidence in the medical literature that passive smoking by children, particularly young children, and adults with heart or lung ailments cause them to suffer physiological and eventually anatomic consequences that adversely affect their health status. Second, there is a mounting public awareness of the annoyance caused by persons smoking indoors in public areas. Third, and this is the fact of greatest significance, in 1981, there were 92 deaths in Alaska due to cancer of the respiratory system and 145 premature deaths due to coronary disease. Smoking undoubtedly contributed heavily to these numbers.

WHAT THE BILL DOES:

This bill strengthens the rights of persons who choose not to damage their lungs and cardiovascular systems by smoking - either active or passive smoking. It recognizes several features of indoor air quality that are not adequately recognized by the present statute.

Starting on page 4 through the end of the bill there is considerable discussion adding and amending items regarding size of no smoking signs, civil complaints/penalties, citations/penalty, injunctions, enforcement authority, public education and definitions which delineate the context of the subject.

SUGGESTION FOR IMPROVEMENT:

On page 3, line 14: Due to the difficulty of defining a "smoker" this line could be more effectively stated; "(4) a place of employment if all the employees consent to the designatio in entirety,".

On page 3, line 27: Addition of "per Alask statute 18.35.300" would make the sign more effective.

DEPARTMENT POSITION:

This bill is an enlightened public health policy statement and is strongly endorsed by this department.

ALL MEDICAL DIRECTORS:

RE: EMPLOYEE SMOKING AT WORK

The number of complaints from employees who state they are seriously bothered by the smoking of others has increased somewhat and the strength of the complaints has increased a lot recently. A New Jersey Bell employee has recently gained much publicity on this topic and this has caused us to focus on the subject and consider just what the Company position should be to requests for banning all smoking on Company premises.

This issue is not solely a Medical one nor even a health issue alone but rather is a social matter. We don't know how many of our employees smoke but probably between 25 - 50%. We have not had any great problems in the Bell System and the issue has been handled on a local basis without the need for a Company policy or position. We would prefer to have it remain this way, with each complaint handled individually.

About a year ago I prepared the following statement for Mr. H. W. Clarke as a guide for consideration if it becomes necessary to have a definite Policy or Practice on smoking. This was distributed to the Personnel Vice Presidents February 18, 1977, at their annual meeting:

EMPLOYEE SMOKING AT WORK

Except in areas established as non-smoking such as switch-rooms, traffic operating rooms, etc., supervisors should make a reasonable attempt to separate in work areas those personnel who smoke from those who do not. This can usually be done by segregating the smokers (or non-smokers) in one area of the work space.

CONTROL DATA CORPORATION
Interoffice Memorandum

4

TO: Distribution A (Executives)

FROM: R.G. Wheeler HQS13A Ext. 4160

SUBJECT: New Policy on Designation of Smoking and Nonsmoking Areas

Effective January 1, 1980 the Corporation has approved a new domestic policy on the designation of smoking and nonsmoking areas.

Since both smokers and nonsmokers are employees, we're trying to find the most equitable way in which to assure the rights of both, given the rapidly moving public position on the question of smoking. Attached are the new policy and guidelines which are our best attempt to create a smoke-free atmosphere for those who desire it, and permit smoking by individuals who desire to do so. Where it gets tough, is in those areas regularly used by both smokers and nonsmokers. Here, the only way any semblance of equity can be achieved is by first establishing the basic assumption that those areas of our buildings in general use by employees will be nonsmoking, except where specific "smoking permitted" areas are designated.

At this time, Minnesota and Nebraska have legislation that is similar to this policy. Other states are currently holding hearings and working on legislation that will be similar to this policy. For both health and legal considerations, the Corporation has approved this policy to protect and preserve in the most reasonable manner we could find, the health and comfort of employees by creating both places that are free from smoking as well as those where smoking is permitted.

It is recognized that whenever there are potentially conflicting individual rights, a considerable amount of emotion surrounds those issues. We need to be as helpful as possible for our employees and our facilities people to implement this policy as equitably as possible.

Control Data is committed to protecting the rights of smoking and nonsmoking employees. As a consequence, we need to proceed as carefully as possible. If you have any questions, please do not hesitate to contact your personnel manager or myself.

Roger G. Wheeler
Vice President
Personnel & Public Affairs

Council Adopts A New Policy On Smoking

Few subjects stir up as much controversy as "smoking versus no smoking" in University buildings.

Nonsmokers often worry about the harmfulness of "passive smoking," i.e., inhaling the smoke of others. Smokers, on the other hand, often feel their own rights are being curtailed.

After a lengthy review and wide solicitation of faculty and staff opinions, the Personnel Policy Council has adopted the following policy:

"Harvard University recognizes the increasing weight of scientific evidence that smoking is harmful not only to the smoker but also to nearby nonsmokers who, in enclosed areas, become 'passive smokers,' without choice. It is hoped that such situations can be resolved among and between the staff members involved.

"If there remains a conflict between smokers and nonsmokers about when and where a staff member may smoke within University buildings, this policy calls for the smoker to respect the expressed wishes and needs of the nonsmoker."

Staff with questions and comments should contact their Personnel Officer or drop a note to Sunny Macmillan, Holyoke Center 661.

HARVARD UNIVERSITY GAZETTE 9/18/81

About the Hospital

In 1977, the New England Deaconess Hospital actively instituted an antismoking policy through a standing administrative and medical staff committee still active in the hospital today.

From the start, the Deaconess Smoking Policy Committee believed that slow, steady progress would produce more lasting results. Thus, smoking has not yet been banned throughout the hospital. However, the Deaconess has taken incremental steps to reduce the number of smoking areas and, in due course, hopes to eliminate smoking entirely within the hospital.

Although the most productive activity regarding the anti-smoking effort has taken place over the past few years, concern with this issue has been growing since the 1950's.

In 1959, a study found that doctors in Massachusetts had cut their smoking activity drastically. In 1962, Deaconess employees and visitors were asked to smoke only in designated areas. In 1964, with the issuance of the now famous Surgeon General's report on smoking and its destructive side effects, the antismoking effort increased at the hospital. In 1977, a New England Deaconess Smoking Policy Committee was established to complete the task of making the Deaconess a "smoke free" hospital. That goal is soon to be realized.

Policy on Smoking

Smoking Pc

The New England Deaconess Hospital is a health care institution committed to the prevention of disease as well as its treatment. Smoking, the major preventable cause of disease and death in this country, is, therefore, not permitted anywhere in the hospital by any patient, visitor or employee, except in specifically posted smoking areas. *All unposted areas are 'No Smoking' areas.*"

Where You May Not Smoke

Please refrain from smoking except in an area that is clearly marked to permit smoking.

Massachusetts General Laws, Chapter 270, S 21, (1975), require such a restriction in all hospitals in the Commonwealth, but permits *limited* smoking areas to be defined.

Where You May Smoke

Patients may not smoke unless their doctors write an order to permit them to do so. This should be discussed with individual physicians. Even with permission, patients may not smoke in most areas of the hospital.

Visitors are asked not to smoke at all in the hospital, if possible. However, an area located near the hospital cafeteria (Farr Building) is available for those for whom it is difficult to abstain.

Staff members may not smoke in patient areas, nor *any* area not marked to permit smoking.

The Reason

Smoking causes premature death for 300,000 Americans *each year.* Lung cancer, now the most common cancer in men and the second most common in women, is due almost entirely to smoking. With the steady rise in illnesses associated with cigarette smoking, such as emphysema, bronchitis and heart disease, the New England Deaconess Hospital has assumed an active, leadership role through its antismoking effort. The Deaconess policy sets an example for its employees, its patients and its visitors and for other hospitals and health care institutions. The Deaconess policy has been recognized by other health care institutions as one of the most progressive in the United States.

Patients

1) Patients are expected not to smoke while in the hospital, and are so informed prior to admission. This may be modified only on the written order of the patient's own physician.

2) No patient may smoke in a two-bed room unless both persons in the room have written permission from their respective physicians.

3) Smoking is never permitted, and may not be ordered on the intensive care units (Farr 6) or the special care units (Baker 5 and Farr 8).

Employees

1) No hospital employee may smoke while on duty. Employees may smoke only on their free time, and then only in the areas specifically set aside for them and clearly marked as "smoking" areas.

2) Employees may not smoke in patient or visitor areas.

3) Employees should not visibly carry cigarettes while on duty, as it might help to undermine a patient's effort to break the habit.

4) Employee lounges and locker rooms, provided for the use of all staff, are "no smoking" areas, unless specifically posted as "smoking" areas.

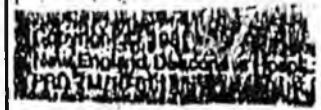
5) Prospective employees will be informed of these points at their first interviews.

Visitors

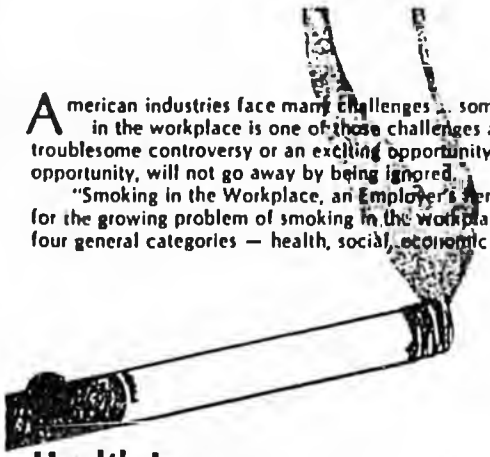
Visitors are requested not to smoke while in the hospital.

However, if visitors are on the premises for an extended period and they feel they must smoke, the vending area near the hospital cafeteria (Farr Building) has been designated as a visitors' smoking area. This is the only area where visitors may smoke, and medical and nursing staff are asked to help by informing any visitor who does not realize this.

Founded in 1896, the New England Deaconess Hospital began as a 14-bed home-hospital dedicated to serving the health care needs of the Boston community. Today, it is the third largest hospital in Boston, a 489-bed and [illegible] 14-building complex located in the famed Longwood medical area. The Deaconess is a specialty referral hospital [illegible] the medical and surgical needs of the patients as well as patients from the Joslin Diabetes Center and the Dana Farber Cancer Institute. The Deaconess is known internationally and [illegible] for its research and teaching [illegible] cardiac, pulmonary and chest [illegible] for diabetes, transplant and pediatric [illegible] cancer, diabetes, [illegible] and renal disease and [illegible]



Com nce



Supervisors and department heads are responsible for ensuring compliance with the letter and spirit of this policy, and violations of the policy should be referred to them.

1) Questions of interpretation, understanding or compliance may be referred to the coordinator of patient relations, ext. 2-8042 or to the personnel department, ext. 2-8146.

2) Suggestions regarding the policy, or its application, will be welcomed by the Smoking Policy Committee, ext. 2-8330. Members of the Committee are also available to speak to staff, patients or visitors who are reluctant to cooperate with this policy.

H4

American industries face many challenges ... some troublesome, some exciting. Smoking in the workplace is one of those challenges and, depending on who is speaking, it is either a troublesome controversy or an exciting opportunity. The smoking challenge, whether viewed as controversy or opportunity, will not go away by being ignored.

"Smoking in the Workplace, an Employer's Perspective" is an examination of facts and issues responsible for the growing problem of smoking in the workplace. The issues facing the employer are many, but fit into four general categories — health, social, economic and legal issues.

Health Issues

Health issues are of two types: risks to the smoker and to the non-smoker. Volumes of research verify that smokers are at increased risk of cancer, lung disease and heart disease. Research in the industrial setting has demonstrated that smoking increases risks to workers exposed to a wide variety of chemical and physical agents.[1] The risk may be that tobacco facilitates the inhalation, ingestion or skin absorption of toxic agents. In addition, workplace chemicals may be transformed into even more harmful agents by smoking. The synergism of smoking and asbestos is the most well known hazardous link. (Smoking asbestos workers are about five times more likely to develop lung cancer than are non-smoking asbestos workers.[1])

Health risks to non-smokers in the workplace are less well known. Recent research has demonstrated that exposure to tobacco smoke in the work environment is deleterious to the non-smoker and significantly reduces [redacted] airways function (a test of lung function.)[1] Prolonged second-hand smoke does more than cause demonstrable damage to healthy non-smokers. The effects on non-smokers with heart and lung disease can be devastating and life threatening. For the employee with emphysema or asthma, exposure to second-hand smoke at work will significantly impair the ability to breathe. By displacing oxygen with other gases it instantly (and in some cases drastically) alters symptoms. Most asthmatics and every employee with emphysema will incur long-term problems from systematic exposure to second-hand smoke.

Social Issues

Social issues of smoking are addressed less often, but are no less significant. Non-smokers frequently are offended by smoke. They express resentment that they cannot avoid air contaminated by second-hand and side stream smoke. More and more frequently conflicts are arising between smokers and non-smokers who demand what they feel are their rights.

A Social Security Administration poll of 14,110 SSA employees revealed that 76% of the non-smoking employees were bothered by second-hand smoke. A majority reported developing sore throats, burning eyes and coughing spells, and half reported occasional difficulty in concentrating. Since two-thirds of most work forces are non-smokers, the indicated rate of dissatisfaction among all employees translates to half the work force. They reported dissatisfaction and disrupted work caused by others' smoke.[4]

As management approaches the smoking issue, it is treading in a sensitive area. The positive aspects must be emphasized to smokers (promotion of quit-smoking programs) and non-smokers (protection from others' smoke). The second-hand smoking issue will continue to snowball during the 1980's. Research has shown that 78% of the work force feel employers have the right to prohibit smoking.[4]

Economic Issues

Economic issues related to smoking include:

- The absentee rate among smokers is twice that for non-smokers.
- The accident rate is twice that of non-smokers (due in part to loss of attention, hand occupation, eye irritation and cough.)[6,7]
- Increased health insurance costs ($204 additional cost per smoking employee, in 1980 dollars)[1]
- Additional fire insurance, workers compensation, life and disability insurance costs.[1]
- Down time spent doing smoking-related activity (estimated at 30 minutes per day at $4 per hour for a yearly cost of $500, $900 for a pipe smoker.)[8]
- Increased maintenance costs (Merle Norman Cosmetics returned $40 to each employee in unused maintenance funds after they banned smoking in their facilities). It is estimated each smoker causes $120 damage per year to carpeting, etc.

A less obvious economic price for smoking is the increased cost of heating and cooling outside air. Recommended outdoor air ventilation rates for areas of buildings where smoking is permitted is *25 cubic feet per minute per person.* Compare this to only *one-fifth* that for areas where smoking is not permitted. The expense of heating and cooling such a large amount of outside air is staggering and increasing as energy costs rise.[10]

Legal Issues

Legal responsibilities for smoking are still evolving. In Minnesota, however, the guidelines are clear. The Minnesota Clean Indoor Air Act (MCIAA) defines places of employment as public places. The right of non-smokers to breathe clean air is primary. All areas, except private offices, must have signs designating smoking/no-smoking areas. Non-smoking employees must be allowed, under the MCIAA, to carry out their duties in a smoke-free area.

Employers who fail to comply with the law are at risk to suits by employees who wish to force compliance. They are additionally at risk in cases where workers compensation or personal injury are issues.[11] By mid-1981, several successful litigations, as well as numerous workers compensation claims, have been settled on behalf of the non-smoker. Punitive damages have been awarded to non-smokers.

Solutions

Resolving the four categories of issues normally takes a two-pronged approach. The combination of restricting smoking to a limited number of designated areas, combined with a company-supported smoking cessation program, seems to be most common.

Smoking restrictions take a variety of forms. Probably the most effective method is to restrict smoking to a portion of the cafeteria or certain rest areas. An alternate method is to separate smokers from non-smokers at work stations and allow smoking in the smokers' area. This plan often leads to complications with work flow, reshuffling people who quit smoking, and problems with air flow pulling smoke into non-smoking areas. This solution also fails to address the problems of energy consumption, reduced productivity and the increased accident rate of smokers.

Some companies have banned smoking in all company facilities. The transition period for older employees is somewhat difficult, but new employees readily accept the restrictions.

Smoking cessation programs can be educational, supportive, or added incentive. An extensive listing of smoking cessation programs is available through the American Lung Association.

Incentive programs attempt to use the economic system to motivate people to quit. There are numerous examples. G.W. Dahl Co., Inc., Bristol, Rhode Island, allows employees to sign a pledge stating "To qualify for a bonus of $3 per week, I promise to quit smoking entirely. I promise to report myself immediately in writing to the payroll department in the event I break this pledge..."

Intermatic Company employees bet against the house on their ability to quit smoking. Bets range from $1 to $100 with double-or-nothing for anyone with 12 month's abstinence.

Texas Division of Dow Chemical Company quitters earned a raffle ticket for a fishing-boat for each month they didn't smoke. Non-smokers could participate in a second raffle by recruiting smokers to join the smokers' raffle.[11]

Incentive programs often achieve a success rate well over 30%, with some as high as 70%. (Unless there is a provision for them to participate, non-smokers may build resentments over incentive programs.)

Smoking in a work environment poses a unique set of problems for management. There are tools and techniques which, when properly applied, provide for positive intervention. It is possible for management to (1) provide a beneficial smoking and health package for workers, (2) simultaneously improve productivity and profits, and (3) head off an issue of growing concern among employees and between management and labor.

About ANSR

The Association for Non-Smokers' Rights (ANSR pronounced answer) is a concerned citizens' group for smokers and non-smokers alike, interested in protecting everyone's right to a clean indoor environment.

ANSR promotes and protects the right to clean indoor air through many activities including:

- Working for enforcement of the Minnesota Clean Indoor Air Act (MCIAA-1975), a law protecting "the public health, comfort and environment by prohibiting smoking in public places and at public meetings EXCEPT in designated smoking areas."
- Informing Minnesotans as to their rights and responsibilities under this law.
- Educating the public about the health and safety hazards of SECOND HAND SMOKE, particularly in an enclosed environment.
- Encouraging implementation of the MCIAA in the workplace and other public places such as restaurants, retail stores, public transportation, educational facilities, health care facilities, auditoriums and arenas and public meetings.

ANSR is sponsored by the American Lung Association of Minnesota and the American Lung Association of Ramsey County. Its activities are governed by a board of directors who are elected by the general membership.

Smoking in the Workplace

An Employer's Perspective

ACTION ON SMOKING AND HEALTH
2000 H Street, N.W. Washington, D.C. 20006 (202) 659-4310

ASH SPECIAL REPORT:
THE ECONOMICS OF EMPLOYEE SMOKING

Action on Smoking and Health (ASH) has prepared this presentation to help employers appreciate both the immediate and long-range economic benefits of implementing "quit smoking" programs for smoking employees, and of establishing policies to protect nonsmoking employees from exposure to tobacco in the workplace. Today private business firms are expressing more interest than ever before in smoking cessation programs for their employees. In one month ASH has received in excess of 60 separate company requests for assistance and/or information on how to reduce smoking among employees.

These companies writing for our suggestions have already realized the fact that smoking is bad business. One fifth of all lost work days in the U.S. is attributable to the effects of cigarette smoking;[1] a 2-pack-a-day smoker is absent from work 150% more often than a nonsmoker.[2] Cigarettes are a major cause of damage to furniture[3] and carpets, the leading ignition source for small fires,[4] and a prime cause of damage to inventory and expensive office equipment.[5] Medical and disability payments are greatly increased due to the smoking habit,[6] as are insurance costs.[7] Add to this increased costs for cleanup and equipment to accommodate smoking employees,[8] lost production time fiddling with smoking paraphernalia, the problems of smoking in hazardous areas, etc., and the reduction of smoking becomes a significant source for savings and increased efficiency for almost any business operation. This reduction can be accomplished both by helping smokers cut down on (or quit) smoking and by restricting smoking in the work area. Of course, hiring, salary and promotion policies can also influence the amount of smoking cutting into work hours.

In addition to the economic aspects of smoking in the workplace, large employers are increasingly sensitive to the health problems, counterproductive discomfort, and offense smoking causes nonsmoking employees and customers alike. Not only does unrestricted smoking contribute to discontent, conflict and ill will on the job, but it is now the subject of a mounting body of legal and regulatory action.[9]

Employees in many states have been awarded unemployment and job disability payments after having left their jobs due to significant tobacco smoke in their workplace. In one case which has received national attention, a court in New Jersey has banned all smoking in the office of a worker whom the judge found to be allergic to tobacco smoke.[10] The court determined: "There can be no doubt that the by-products of burning tobacco are toxic and dangerous to the health of smokers and nonsmokers generally and to this plaintiff in particular."[11] The judge also held as a matter of law that "an employee has a right to work in a safe environment," and that to the extent necessary to protect this right, a court may prohibit smoking in the workplace.[12]

We at ASH strongly believe that the problems of smoking in the workplace should be taken to the courts, or before regulatory agencies, only as a last resort. With the cooperation of companies concerned with the welfare of their employees and the public interest, the health and comfort of nonsmoking employees can be protected with little or no inconvenience to employees who smoke during working hours.

We are therefore providing these materials to major business organizations in an effort to secure their cooperation with regard to this problem. For our part, we do not seek a total ban on smoking in the workplace. Rather, we ask only that certain minimal -- and we believe reasonable -- steps be taken to protect the health and comfort of the majority of workers who are nonsmokers.

Attached is a list of proposals. These are steps which we feel would provide minimal protection for nonsmoking employees. Many employers have gone beyond these proposed measures after determining it is in their best interests to do so.

Although at least 30% of businesses in America already have restrictions on smoking at the workplace, ASH attaches only a sample list of employers who have already acted to reduce or eliminate smoking among their employees. As you can see, the approaches taken by different companies vary considerably.

In considering this matter you may find the following information of particular interest:

1. An idling cigarette generates as much as four times the amount of toxic agents given off by a cigarette being puffed by the smoker.[13] These toxic agents go directly into the air, and are not filtered by the cigarette filter or by the filtration through the cigarette tobacco.

2. Studies have shown that nonsmokers in a smoke-filled room may be forced to breathe in the equivalent of several cigarettes a day.[14]

3. The American Medical Association estimates that at least 34 million Americans are tobacco smoke sensitive in one way or another.[15]

4. Seventy-eight per cent of all adults -- including 70% of all adult smokers -- believe management should have the right to prohibit smoking in their places of business. The clear majority feels management should have this right even if there is no safety hazard.[16]

5. The majority of adults are nonsmokers. Specifically, less than 40% of adult males, and less than 30% of adult females, are cigarette smokers.[17]

6. Almost 65% of all adults -- including 77% of nonsmokers, and 34.8% of smokers -- find it annoying to be near a person smoking cigarettes.[18]

7. A very substantial body of evidence now clearly indicates that ambient tobacco smoke can create a serious health problem, especially for the estimated 34 million Americans who have particular susceptibilities. Moreover, in significant concentrations, tobacco smoke causes measurable physical symptoms of irritation in the majority of all nonsmokers.[19]

8. The majority of smokers -- and the overwhelming majority of nonsmokers -- believe smoking should be allowed in fewer places.[20]

9. In response to increasing pressures from nonsmokers, the majority of states -- and literally hundreds of counties, cities, towns, etc. -- have passed laws to protect the rights of nonsmokers to breathe air unpolluted by tobacco smoke.[21] Restrictions on smoking aboard airplanes, trains, buses, and in a growing number of federal office buildings are other indications of the strong desires of many nonsmokers, and of the growing public acceptance of reasonable restrictions on smoking in enclosed public places.

Action on Smoking & Health would be happy to provide further documentation for any of the statements made above. To obtain information relating to this general problem, or to discuss any particular aspect of the economic disadvantages of smoking in the workplace, please feel free to write or call at your convenience.

Action on Smoking & Health is a national, nonprofit tax-exempt scientific and educational organization concerned with the problems of smoking and with the rights of the nonsmoker. It serves as the legal action arm of the anti-smoking community, initiating, participating in, and assisting legal actions designed to reduce the toll of smoking in the U.S. and to protect the rights of the nonsmoker. In this regard, the issue of smoking in the workplace is of great concern to us.

NONSMOKERS MAKE GOOD RISKS, SAY INSURANCE COMPANIES

Now, those bastions of cautious economics are rewarding nonsmokers with discounts—and not just for life insurance.

By Diana Shaman

In 1979, 15 years after the Surgeon General issued the first report on smoking and health, a Worcester, Mass., insurance company, State Mutual Life Assurance Company of America, issued a landmark study of its own. Entitled "Mortality Differences Between Smokers and Nonsmokers," the report is still causing ripples within the insurance industry.

The study, which was conducted over a 15-year period, examined the causes of death of policyholders and revealed, for example, that for lung cancer, pneumonia and influenza, the mortality rates among smokers were 15 times higher than among nonsmokers.

For heart disease, cardiovascular disease, and other respiratory diseases, the death rate for smokers was two to three times higher. In general, a higher death rate for smokers, usually two and one half times that of nonsmokers, showed up at all ages, particularly among younger people.

The insurance company's president, W. Douglas Bell, emphasizing that he was not taking a moral stance on cigarette smoking, issued this statement at the time the report was released: "State Mutual's position has been simply that nonsmokers are better life insurance risks than cigarette smokers, and that as a mutual life insurance company, we have a responsibility to our nonsmoking policyholders to recognize their improved mortality rate in the form of lower insurance costs."

As the most comprehensive insurance study to date, the report continues to have an impact on insurance underwriting. "Immediately before our study, no more than 50 companies offered nonsmoker discounts on life insurance," says Peter Marion, associate actuary at State Mutual. "Less than three years later, there are 400 companies offering them."

Nonsmoker discounts are reduced premiums on insurance policies offered by some companies to policyholders who have not smoked cigarettes—in some cases also pipes and cigars are included—for at least 12 months.

The idea for a nonsmoker discount became a reality at State Mutual in 1964, a month following the Surgeon General's report. "The idea was prompted by the report," says William Moisuk, associate actuary for individual health insurance at State Mutual, "but at the time there was no such thing as an insurance study on the subject, so we were pioneering the ground."

Initially, State Mutual offered nonsmokers discounts of from 5 to 10 percent, but as the company grew more confident that mortality rates were indeed substantially affected by smoking, it increased discounts and dividends so that nonsmokers now save an average of 20 percent. Mr. Marion says that more than 100,000 nonsmoker policies, representing 70 percent of life insurance sales, have been issued since the discounts began.

State Mutual's success has been closely monitored by other insurers who are anxious to achieve the same competitive edge. "Nonsmoker discounts are a vital selling tool for us," says Theodore Topalian, chief underwriter at Mutual of New York, the 15th-largest life insurance company in the country. "Sometimes it makes the difference between a sale and a nonsale."

Some companies have stepped in with discounts on health, homeowner, and other insurance

In addition to life insurance discounts, several companies have begun offering nonsmoker discounts on disability income policies, which are paid when a policyholder can't work because of being sick or disabled. One company, Provident Indemnity Life Insurance, in Norristown, Pa., offers a one-third discount for nonsmokers in its small group comprehensive medical insurance plans. And, on the theory that smokers cause more fires and often have accidents when lighting up a cigarette while driving a car, casualty companies—companies that insure property—have stepped in with discounts on homeowner, fire and automobile insurance.

Because the cost of premiums is usually based on a company's claim experience, many insurance companies say that, by taking new directions, they are treading on shaky ground from an underwriting point of view.

"There is an abundantly clear correlation between smoking and less than good mortality, but on the disability side we are frankly winging it," says William Boyd, vice president of health insurance at the Indianapolis Life Insurance Company. The company has been offering nonsmoker discounts on life insurance for 10 years and is about to offer a three percent discount for disability insurance.

Collective savings on nonsmoker discounts by policyholders could be substantial

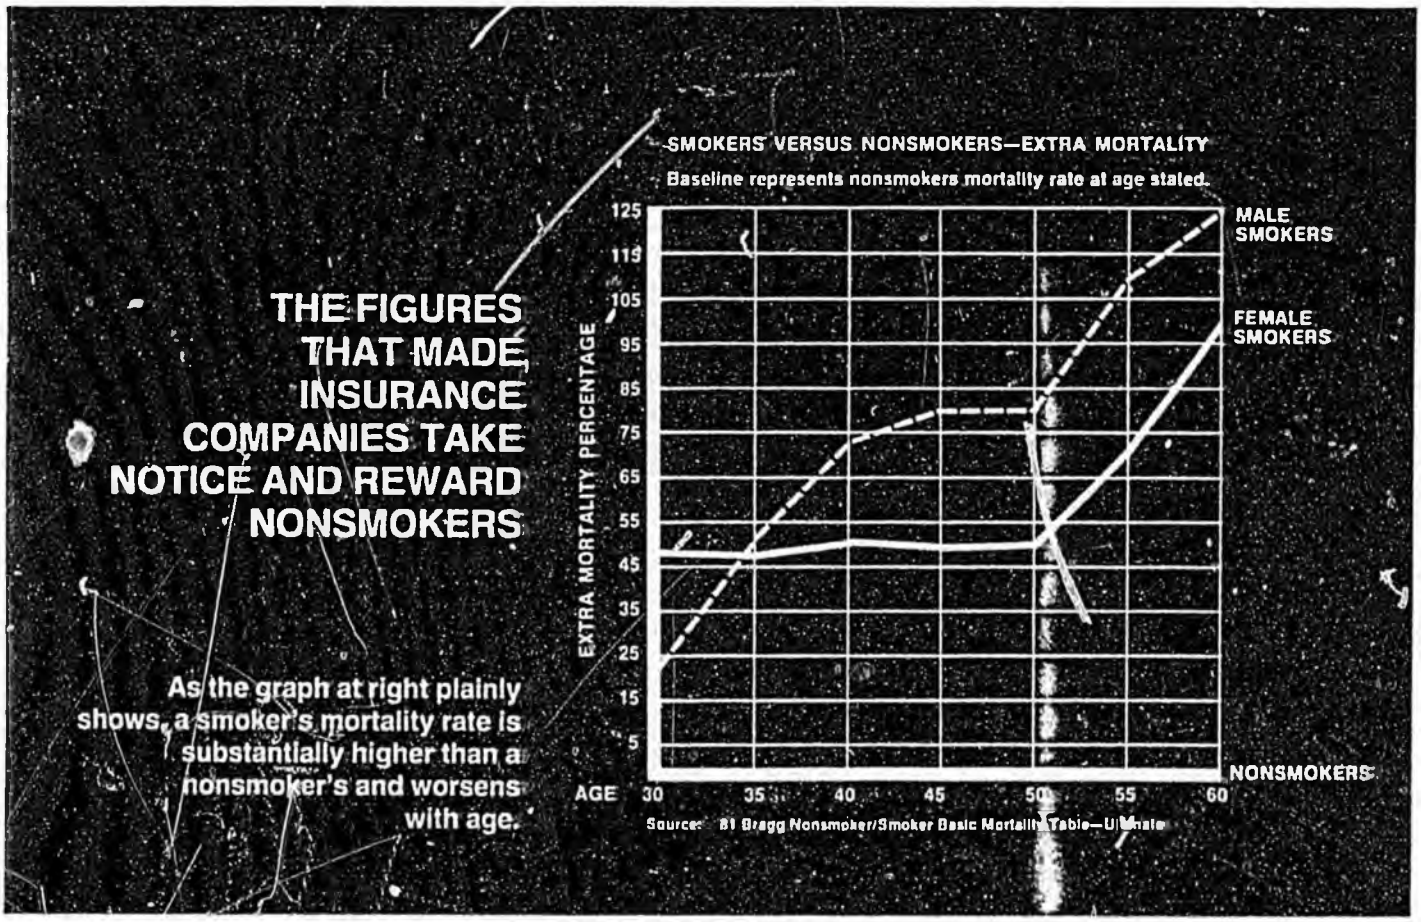
Insurance premium receipts amount to billions of dollars annually. During 1981, companies collected $33.8 billion in individual automobile insurance premiums, and $11.4 billion in individual homeowner insurance premiums. Life insurance companies collected $36 billion in individual life insurance premiums, and $31.8 billion in group and individual health insurance premiums. If the nonsmoker discount trend accelerates, collective savings by policyholders could be substantial.

John M. Bragg, an actuarial consultant with offices in Atlanta, Ga., and Toronto, Canada, has researched the effects of smoking and nonsmoking both on mortality and morbidity (disease) and has come up with some startling conclusions, based on studies of data on about 250,000 persons insured by life insurance companies over the period 1968 to 1978.

At age 45, male smokers die at an 80 percent higher rate than nonsmokers, Mr. Bragg concluded. At age 55, male smokers die at a 110 percent higher rate. Though somewhat less affected, women are also hit by smoking. Women smokers at age 45 have a 49 percent higher death rate than nonsmokers. At age 55, their death rate is 71 percent higher. For both sexes, the situation tends to get worse with advancing age. Mr. Bragg's definition of a nonsmoker is someone who has not smoked cigarettes for 12 months at the time the policy was issued.

"We also have reason to believe that medical and surgical expenses for smokers, both male and female, are generally 70 percent higher than for nonsmokers," Mr. Bragg says. He arrived at that figure, he says, by studying available data. "Smokers have far more deaths related to pulmonary illness, for example. We also talked to knowledgeable doctors. When you put everything together, you can come up with an educated professional opinion."

Mr. Bragg points out that his conclusions will probably cause some controversy, but he is in the business of advising insurance companies on product development, and many companies appear to agree that the nonsmoking discounts are justified. More important, companies feel they have the evidence to present to state insurance commissioners, who also have to rule that discounts are not arbitrary and unfair.



"Nonsmokers live longer. Our rates prove it!" proclaims one insurance company's billboard ad

Allnation Life Insurance Company in Wilmington, Del., rented a billboard last June to advertise a new 30 percent discount on life insurance premiums for nonsmokers. The message read, "Nonsmokers live longer. Our rates prove it!" Said their company president, Douglas Ietter, "We thought we should reward people who don't smoke."

Industry spokesmen say that nonsmoker discounts are good for business. "Everyone is looking to save money," says Marshall Hendrian, an agent for The Travelers Insurance Companies in New York. He is able to offer nonsmoking customers who take out a minimum of $75,000 in life insurance a substantial discount. A male smoker, aged 45, for example, pays an annual premium of $2,107 compared with a nonsmoker's premium of $1,936.

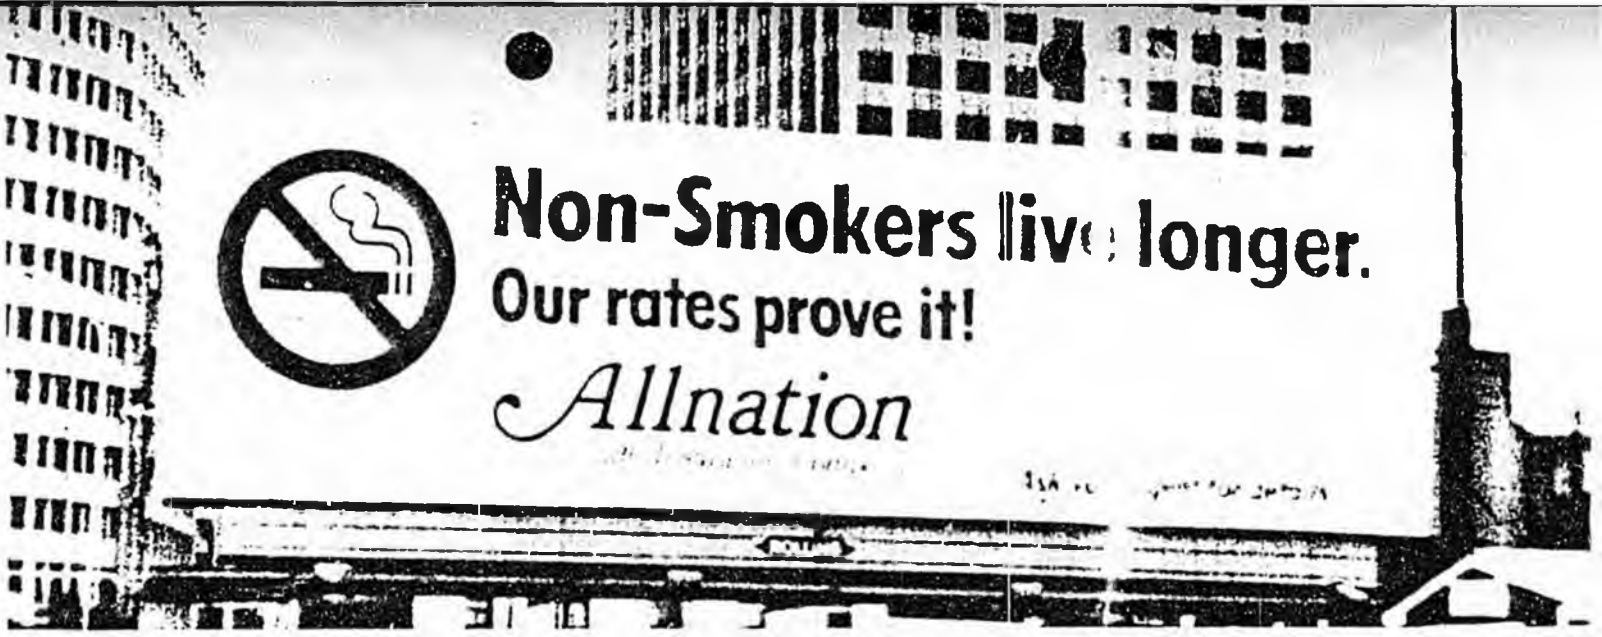
Discounts on life insurance premiums are now relatively common, but nonsmoker discounts on disability income insurance are also increasing. Reflecting the current trend, Kansas Farmers Life Insurance Company in Manhattan, Kans., began offering about a 10 percent discount on this type of insurance, effective August 1, 1982, according to John Cooper, the claims manager. The company also offers nonsmoker discounts on life insurance.

A company that already has been making discounts available on disability is Pacific Mutual Life Insurance Company in Newport Beach, Calif., which began to offer such plans in July 1980. The discounts average five percent of the premium, and 70 percent of the company's disability policies are sold on a nonsmoker basis. "Smokers are less concerned about their general body condition and are generally more careless than nonsmokers," says William Hezzelwood, assistant vice president, explaining why the company felt justified in offering the discounts. "The Surgeon General's report also indicates that nonsmokers get sick less often than smokers."

Another trend: Raise the discounts

Pan American Life Insurance Company in New Orleans, La., was another company in the forefront, offering three percent nonsmoker discounts on disability as of July 1981. The company is now considering raising the amount of the discount, according to Paul Wisnewski, second vice president and disability income director.

The company started with the smaller discount, he says, because "there was no empirical study we could transfer into claims costs of occupational groups that we sell to. We figured that in a year or two we would get more empirical data." Two thirds of the company's sales are to nonsmokers. And Pan American is now working on developing new health insurance policies, including hospitalization. "I suspect that whatever we work on will have a nonsmoker discount," Mr. Wisnewski says.



Like others in the industry, Mr. Wisnewski considers discounts the coming trend. Paul Barnhart, a consulting actuary in St. Louis, Mo., predicts that within two years, 90 percent of the insurance companies carrying disability plans will be offering some kind of nonsmoker discount on disability income policies. What percentage the discount will be of the premium amount depends on how conservative or aggressive the individual company wants to be, Barzhart says. He has worked on discounts ranging from 3 to 10 percent and feels the higher figure is justified. "Nonsmoker policyholders ought to experience at least 10 percent lower disability claims," he says.

Less prevalent are nonsmoker discounts being offered by casualty companies, but they are available. Farmers Insurance Group, headquartered in Los Angeles, Calif., has been offering discounts on homeowner and automobile insurance since the late '70s. The present discount on homeowners policies is 10 percent. The discount on automobile insurance is 12 percent.

The company's decision to offer the discounts was prompted in part by a Columbia University study that showed smokers to have significantly more accidents than nonsmokers. Among one of the groups studied by researchers, 54 percent of those who had a high rate of accidents were smokers, compared with 18.6 percent of those who had no accidents or violations.

Farmers also conducted its own study of policyholders, and it showed that 6.59 percent of smokers had accidents compared with 3.75 percent of nonsmokers. Robert Hitchcock, sales manager of the company's regional office in Merced, calls the discounts "our number one calling card."

Citizens Insurance Group in Howell, Mich., has been offering a 10 percent nonsmoker discount on homeowner policies since October 1, 1980. No member of a house-

The billboard in Wilmington, Del., rented by a life insurance company offering a discount to nonsmokers.

hold can have smoked over a 12 month period. The Michigan Insurance Bureau regulations have allowed insurance companies to use smoking as a rating criterion since January 1981. "That was one of the reasons we started to offer the discounts," says Jim McLogan, personal lines unit manager.

A study has shown that 17.7% of the fires in one- and two-family homes are smoking-related

The Hanover Insurance Company in Worcester, Mass., introduced nonsmoker discounts on homeowners insurance in 1973, says James Richardson, the vice president of the company. Discounts on automobile insurance were offered a year later. "Initially, we offered a five percent discount on both plans," Mr. Richardson says. "We were so pleased with the results that we felt we could increase the discounts and did so in the late '70s." The discounts now average 10 percent.

Studies by the National Fire Protection Association have shown that 17.7 percent of fires in one- and two-family homes are smoking-related, Mr. Richardson says. Children playing with matches caused an additional 9.7 percent of fires.

Several companies are now studying the possibility of offering nonsmoker discounts on comprehensive medical insurance coverage, but Provident Indemnity Life Insurance took the step two years ago. With that company, nonsmokers pay one third less for small group comprehensive medical insurance, life insurance and short-term disability insurance.

"We felt that if nonsmoker discounts make sense for life insurance, why not for health insurance," says Samuel Corey Jr., Provident's senior vice president of marketing. "Everyone knows there is a relationship between smoking and health. The problem was how to price the product. We took an educated stab." Because the field is so new, other insurers will probably be watching Provident's experience in order to develop their own products.

In a broader sense, nonsmoker discounts go beyond mere savings on premiums, and they may, in fact, already be shaping social policies. Mr. Corey, for example, noted that employers must pay at least 50 percent of small group insurance premiums, which average about $5,000 a year. Hiring nonsmokers saves them money, and many are already indicating that they make that choice when they can.

"I think that newer policies down the road will take into consideration things even beyond smoking," says William Boyd of Indianapolis Life. "Whether or not you are exercising, for example, or whether or not you are dieting. Insurance companies could be rewarding lifestyles that have been proven effective in promoting longevity and lower rates of morbidity. In a way, I think we have a social responsibility to do that."

A. Judson Wells, Ph.D., a former director of the specialty products division at E.I. De Nemours Du Pont & Company, has been working, since his retirement, as a volunteer for the American Lung Association. His special concern are the issues of passive smoking, smoking in the workplace, and nonsmoker discounts in the insurance industry. "We are always looking for ways to convince people that smoking isn't good for them," Dr. Wells says. "If they start getting the same message from the insurance industry, maybe it will help."

Most insurers appear convinced that nonsmokers live longer and are healthier. As good business practice, they are putting that conviction to use. "Nonsmokers discounts are not a gimmick," says William Moisuk of State Mutual, where nonsmoking discounts started. "We feel they are something we should offer our policyholders in order to be equitable and fair." «

SMOKING AND HEALTH DON'T COMPUTE

At IBM, educating employees to attain and maintain a healthy lifestyle is considered good business. The giant corporation gives its managers guidance on smoking practices in the workplace—and it also has ordered 27,000 copies of ALA's self-help Freedom From Smoking manual

A conversation with Cole Mandelblit, IBM senior advisor for Health and Care Planning.

Q. *IBM, which is one of the leading corporations in this country, has offered ALA's* FREEDOM FROM SMOKING *self-help manuals as part of its health education program to its 200,000 employees. Tell us something about that health education program.*

A. Back in 1978, we at IBM took an intensive look at what we were doing in our preventive health efforts. We concluded that although we had a number of good programs in place, and some of them had been in place for many years, we had not done enough in the way of health education and health promotion.

Q. *Did you have a special reason for that review?*

A. Yes, we did. In recent years, medical research has found increasing evidence that lifestyles have a major influence on health. Lifestyles that include cigarette smoking, insufficient exercise or poor diet affect people's health over a period of time. It follows, then, that lifestyle also affects corporate costs in relation to medical benefits and absenteeism as well as productivity. And it also impacts life insurance and total disability costs.

Q. *Is money the bottom line?*

A. No. The larger picture is that if employees learn how to improve or maintain their health, they will lead more productive, more satisfying lives.

Q. *Leading a more satisfying life is really what people want these days, isn't it?*

A. They do. In contrast, if you develop a serious ailment, such as emphysema, chronic bronchitis or lung cancer, you are limited in your activities, often for years on end. This impacts your whole life, as well as your ability to perform work effectively.

"Smoking cessation is a key area of concern in terms of preventive health programs."

Q. *Can you identify an important area of lifestyle that people should modify to protect their health?*

A. Well, if you look at the available data, smoking cessation is a key area of concern in terms of preventive health programs. Smoking cessation should be the first on the list.

Q. *Have you offered smoking cessation clinics to IBM employees?*

A. Yes, IBM will provide tuition assistance for any smoking employee or a member of the family to attend smoking cessation clinics run by the Lung Association or other organizations in the community. This is in addition to clinics specifically scheduled by IBM for employees and their families. However, only a small percentage of smokers have tried cessation clinics.

Q. *The National Cancer Institute reports that 95 percent of smokers who successfully quit do so on their own, not through a group.*

A. The data seems to indicate that a lot of people quit smoking only after a number of efforts, maybe of different types. You never know what it was that helped the person to succeed—whether it was the last thing that did it or all of the things that preceded the decision to quit.

Q. *Well, preliminary data show that people who use the American Lung Association's "Freedom From Smoking in 20 Days" manual and the followup manual keep returning to the manuals for help. The rate of nonsmoking does not drop off as the months pass but, instead, increases with users of these manuals.*

A. Yes, and IBM was the first corporation to offer the manuals to its employees. In our opinion, the FREEDOM FROM SMOKING self-help program—which includes ways to change eating habits, reduce stress, and start exercising—is a well-thought-out piece of work. It's also a low-cost approach to smoking cessation. The research data indicated that there was sufficient expectation of success to justify making it available to our employees and members of their families free of charge.

Q. *Did IBM employees order a large number of copies?*

A. Yes, 27,000 requests were received.

Q. *Besides smoking cessation, what else does IBM offer in its preventive health program?*

A. We offer exercise classes, weight reduction programs, nutrition courses, and a number of other programs that

Photos: Penny Gentieu

IBMer Rose Fletcher has a company-supplied desk sign proclaiming her workspace to be a nonsmoking area.

help to improve lifestyle patterns. The subjects vary somewhat according to local interest.

Q. *Are many corporations other than IBM taking a hard look at the effect of lifestyle on health?*

A. Although a lot of companies are doing things and there has been considerable publicity and attention to this subject, it is my impression that the trend toward providing health education in the workplace is just beginning to develop.

It seems to me that employers have been presented with a very high-cost model of preventive health. It includes not only building new exercise facilities but also hiring staff members to maintain them and to conduct the programs. More than this, the model includes detailed needs and interest surveys, as well as evaluation studies to assure that the programs result in changes in people's health practices.

Q. *You are saying that IBM has another approach.*

A. Yes. IBM decided to turn to community organizations that have an established track record in health promotion and fitness—organizations such as YMCAs, hospitals, voluntary health organizations—such as Lung Associations—and commercial organizations. We offer approved courses at IBM offices or at local community facilities at no cost to employees, retirees and their families.

Q. *Using community organizations and local facilities as part of your health program looks like a practical approach for a corporation like IBM, which has so many employees spread throughout the nation.*

A. That's true. We have some 200,000 employees in about 300 locations.

Q. *Returning to IBM's concern about smoking, surveys today show that two-thirds of employees are nonsmokers. Does management have a responsibility to them, as well as to the smokers?*

A. We recognize the responsibility. In addition to assisting smokers to quit, IBM has established guidelines concerning smoking in the workplace.

Q. *Does IBM have written policies on smoking at work?*

IBM managers are responsible for banning smoking from meeting rooms without good air-clearing ventilation

A. We don't call them policies, but we have provided managers with guidance over a period of eight years concerning smoking in the workplace. We have modified that guidance from time to time with the goal of increasing the sensitivity to the needs of the nonsmoker.

Q. *People in other organizations would be interested in the way smoking-nonsmoking guidelines work at IBM. What is management's overall approach?*

A. Briefly, the guidance involves setting aside areas in cafeterias, libraries and other general areas for the smoker and the nonsmoker. It involves identifying certain common areas, such as elevators and copier rooms and small shuttle buses, as nonsmoking areas. It also indicates that managers are responsible for assuring that meeting rooms have adequate ventilation. If the ventilation is not adequate, the conference room is to be designated as a nonsmoking area.

"We make a reasonable effort to accommodate the person who may be irritated by smoke."

Q. *What do you do about private offices? Can the person who occupies an office designate it as either a smoking or nonsmoking area?*

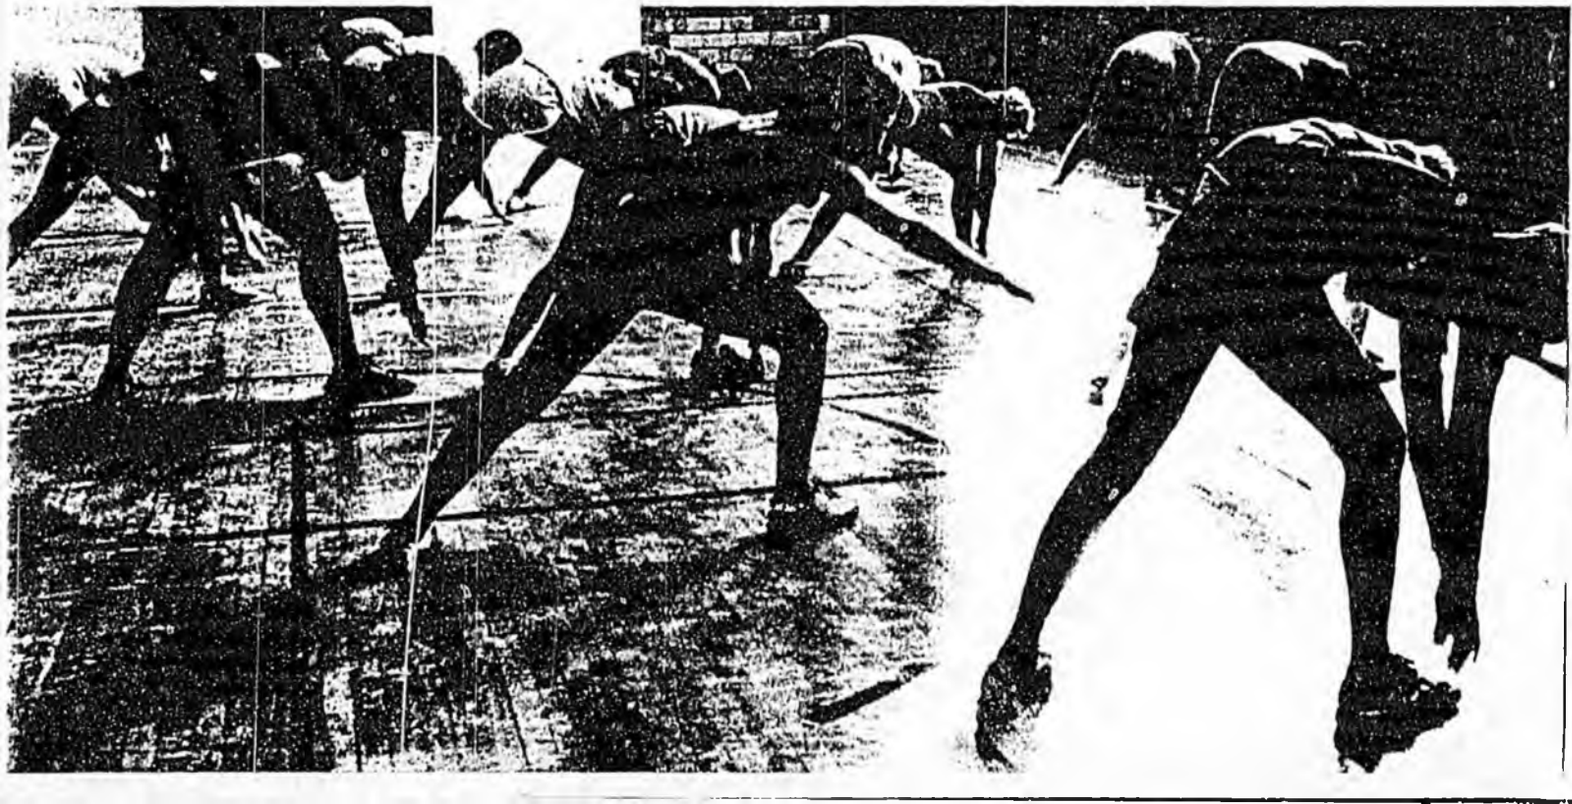
A. We've made nonsmoking signs available to people who want to place them on a desk and make that office a nonsmoking area. The problem is, of course, what to do if there are three or four desks in an area where some people are smokers and some are not. We try to deal with

that the best we can. We make a reasonable effort to accommodate the person who may be irritated by smoke. We certainly don't have 100 percent success, but we work pretty hard at it.

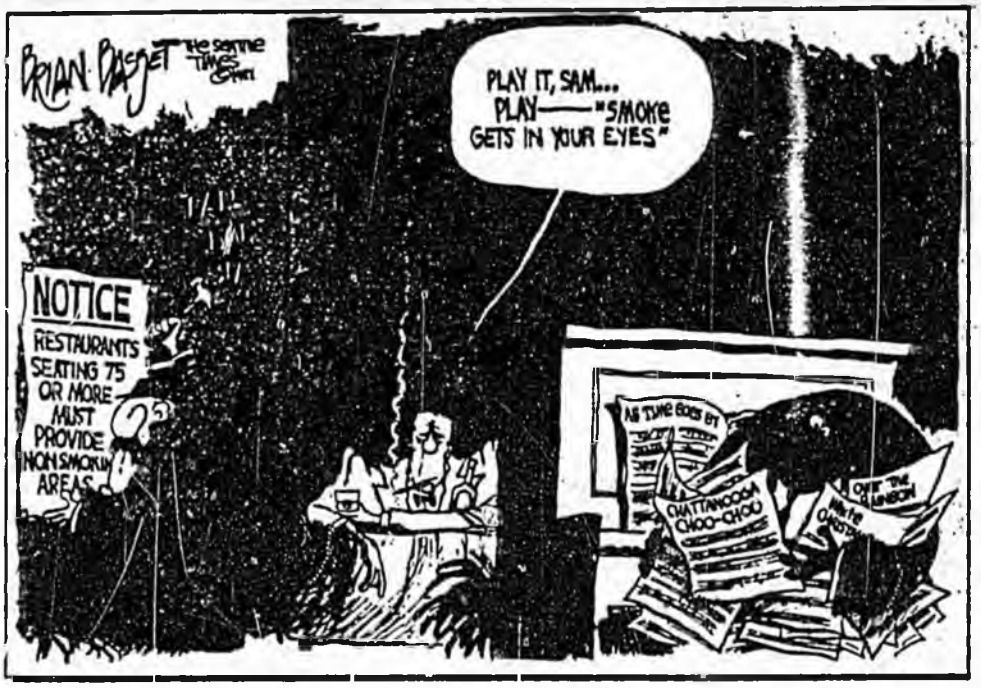
Q. *Beyond the guidelines IBM has worked out, is there any one thing that you can recommend from your experience that will make the workplace more agreeable for both smokers and nonsmokers?*

A. In the past, we have obtained opinion survey data and reviewed the written complaints we have received from nonsmokers. A few people have said they want smoking banned entirely in the workplace. We have not been able to accommodate people with that view.

The vast majority of people are not saying "ban smoking." They are saying something else—"be more sensitive." If you conduct a meeting and six of ten people are heavy smokers, some of the nonsmokers will get a headache or an irritated throat and be very uncomfortable.



Q. *Are you saying that it's only fair for the smokers to curb their smoking at such a meeting?*



A. If you're conducting a meeting in a conference room, you have to manage it in a rational way so you're not affecting people negatively. By the same terms, if someone whom you know is affected by smoke in your office, you don't smoke. I think that a lot of smoking complaints in places of work and in public places would disappear if people were basically more sensitive to each other. A lot of the friction would be reduced if smokers were thoroughly informed about the effect that smoking may have on other people. «

COLE MANDELBLIT was a speaker at a session on Smoking at the Workplace at the ALA Annual Meeting held in Los Angeles in May 1982. The ALA has since sent "Smoking at the Workplace, A Program Guide" to all Lung Associations to help them work with companies in establishing programs to curb smoking at work.

ASH Assists Appeal of Nonsmoking Employee

Action on Smoking and Health has agreed to assist in appealing a court decision holding that an employee in the District of Columbia is entitled to no protection from the health hazards and risks of drifting tobacco smoke on the job.

The case involved Adele Gorden, a young woman who was hired by a contractor for the Environmental Protection Agency (EPA). Because she was sensitive to tobacco smoke and because she was pregnant at the time, she asked that she not be required to be seated near smokers. At first her request was granted, but subsequently she was given the choice of being seated in the midst of smokers or of being dismissed from her job.

When Ms. Gorden's action was first filed, the defendant argued that it should be dismissed because she was entitled to no legal protection against smoke on the job. ASH filed an *amicus curiae* (friend of the court) brief on her behalf, and ASH Executive Director John Banzhaf joined in the oral argument on the motion. The defendant's request was denied because the original judge determined that Ms. Gorden was entitled to legal protection.

When the case finally went to trial, a different judge ruled, after presentation of all the evidence, that the law provided no protection for a smoke-sensitive worker in Gorden's situation, regardless of whether the smoke had in fact proven harmful to her health. At this point ASH agreed to help finance the appeal and to provide additional legal assistance.

The case is an important one because the precedent will affect all nonsmoking employees in the District of Columbia. The rule also contradicts the well-known Donna Shimp case in which a smoke-sensitive office worker in New Jersey was granted an injunction preventing any smoking in her office, and provides legal support for other employers who wish to disregard the health and needs of nonsmoking employees. The proceeding is expected to be a difficult and expensive one: the transcript alone cost almost $1,000. But, as ASH general counsel Paul Pfeiffer put it, "This is one case that nonsmokers simply can't afford to lose."

Every employee who smokes a pack of cigarettes a day costs his or her employer $624 a year because of illness and absenteeism, according to Dr. Marvin Kristein, professor of economics at the State University of New York at Stony Brook.

A smoking ban in your workplace?

A smoking ban in the workplace can result in savings of up to 75% in personnel costs, insurance premiums, maintenance charges, and other expenses. An article in **Personnel Journal** quotes extensively from the 1979 **Surgeon General's Report**, which indicates that more than 81-Million days of work are lost each year in the US because of smoking; that the lung cancer mortality rate for those who smoke 25 or more cigarettes per day is 2,500% higher than for nonsmokers; and that male employees who smoke more than 40 cigarettes per day are absent from work 84% more often than their nonsmoking peers. In addition, the mortality rate for smokers is 300% higher than that of nonsmokers during their peak employment years.

The following costs can be reduced by enforcing a smoking ban:

- Interior cleaning costs can be cut by up to 50%.
- Health and fire insurance premiums can be 25 to 35% lower for smoke-free businesses, and morbidity and fire statistics suggest that premium discounts should be as high as 70%.
- Disability and early retirement payments can be slashed by as much as 75%. Smokers are almost 6 times as likely to become disabled and retire early as nonsmokers.

It was also reported that a recent study in the **Wall Street Journal** found particulate contamination in office buildings that permit smoking to be 10 to 100 times higher than allowable limits for the quality of outside air.

— **Management World, August 1981.**

No-Smoking Airline Gets Support

Muse Air, a Dallas-based airline that bans all smoking on its flights, is operating successfully on its present Dallas-Houston route with a 40 percent load factor, quite high for a carrier that began operations on July 15. In support of its decision to fly smokeless, the airline cited studies showing that for every passenger who requests a smoking seat, five request seats in the no-smoking section. A recent survey conducted by the airline showed that passengers support the idea of a smoke-free flight by a margin of 100 to 1. Muse Air is hoping to expand its routes to other cities in the future—friendly letters from nonsmokers would help. Write to Muse Air, 3300 Mockingbird Lane, Dallas, TX 75235.

February 7, 1983

Mr. Leo C. Kaye
Executive Director
Alaska Lung Association
P.O. Box 3056 DT
Anchorage, AK 99510

Dear Mr. Kaye:

I am writing at the request of Mr. Don Allen to provide you with some statistics regarding costs associated with employees who smoke as opposed to those who do not smoke.

Our health insurance consultant did research the subject and reported that health insurance claims for non-smokers could possibly warrant an approximately 2% reduction of standard premium rates over the long run. Further figures indicate a more significant employer savings when absentee rates are examined. These statistics point to a greater absentee rate for smokers than for non-smokers. This might be explained by a smoker's greater susceptibility to minor throat ailments and colds of relatively short duration that do not require the services of a physician. These statistics are still quite tentative since such studies are as yet ongoing and should not be considered conclusive.

As I discussed with Mr. Allen, I do not believe that the State of Alaska is able to financially reward a specific group of employees due to the obvious claims of discrimination and a negotiated pay schedule for all employees. We further discussed that if our experience rated group health plan felt the effects of fewer claims because of more non-smokers, our savings as an employer would eventually result from lower health insurance premiums. A even greater economy would presumably be realized if the absentee rate decreased as suggested. We are considering these types of programs generally and this reasoning may lead to an employee program to assist employees in their efforts to stop smoking.

I did recommend to Mr. Allen that efforts in establishing such a program also be discussed with agencies such as the Division of Labor Relations

Rep. Aboud

and the Department of Health and Social Services since they might be in a position to research this subject further and/or implement non-smoking programs or even other avenues that might be indicated.

The idea of health insurance cost containment is an issue affecting all of us. This division, in dealing with group health insurance, is particularly interested in efforts that could result in lower medical costs. Please feel free to contact me if there is additional health insurance information that this office might furnish.

Sincerely,

Michael B. Coughlin

Screening for Adult Respiratory Disease

tant to emphasize that the common denominator underlying the asthmatic diathesis is a nonspecific hyperirritability of the tracheobronchial tree. Thus, the distinction between various types of asthma may often be artificial and the response of a given subclassification may be initiated by more than one type of stimulus" (22). The natural history of adult asthma has not been well documented. There is no evidence that early detection of asthma is feasible, and no documentation that therapy for asymptomatic asthmatics is beneficial. Therefore, no justification exists at present for asthma screening in the general population.

B. *Clinical Case Finding*

It is important to establish the diagnosis of asthma (reversible airway obstruction) in all patients with one or more symptoms of the classic triad (cough, wheezing, or dyspnea), particularly when these symptoms are episodic and nocturnal. Although pulmonary function studies alone are nondiagnostic, when performed on patients with these symptoms spirometry can document the airways hyperirritability that is characteristic of asthma.

Ideally, all patients with wheezing, dyspnea, or chronic cough should have spirometry. If airways obstruction is demonstrated, the spirometry should be repeated after bronchodilators to document reversibility of the airways obstruction. In the presence of normal spirometry, symptomatic patients who suffer paroxysmal breathlessness or unexplained cough should have a provocational challenge with methacholine. A positive challenge can document airways hyperirritability between symptomatic attacks.

It is important to obtain repeated spirometric measurements throughout the treatment of asthmatic patients to evaluate objectively the therapeutic response. ". . . signs and symptoms of asthma imperfectly reflect the physiologic alterations that are present, so much so that if one relies upon the loss of subjective complaints, or even the sign of wheezing, as being the end point at which therapy for an acute attack should be terminated, an enormous reservoir of residual disease is missed" (22).

III. Lung Cancer

A. *Population Screening*

Lung cancer mortality has increased continuously over the last half century even though the major causal factor is a well-known controllable exposure. Eighty-seven percent of bronchogenic carcinoma in the adult male is attributable to cigarette smoking (23), and it has been noted that "For every preventable death from highway accidents, there were approximately two deaths from lung cancer which could have been prevented if the individual had not smoked cigarettes" (24). The risks for developing lung cancer are directly related to the amount and duration of smoking, the age of starting to smoke, the degree of inhalation, the tar and nicotine content of cigarettes, and inversely related to smoking cessation. Other etiologic factors, such as occupational exposures to asbestos, nickel, chromium, and radioactive ores have contributed, but far less than cigarette smoking, to the mortality risk from lung cancer. Males 45 years and over who have had a chronic, daily cigarette consumption of one or more packs seem to be the high risk group for this disease (24).

The treatment of lung cancer after it has become symptomatic remains unsatisfactory. Symptomatic bronchogenic carcinoma is usually advanced and incurable. Presymptomatic bronchogenic carcinoma is not necessarily early-stage disease, but resectability rates and survival rates tend to be considerably better among those with presymptomatic cancer. The National Cancer Institute's program of Surveillance, Epidemiology and End Results Reporting (SEER) in lung cancer (25) indicates that only 18 percent of newly detected lung cancers were found to be "localized" (confined to the site of origin) at the time of detection. However, individuals with localized lung cancer who were subsequently treated by surgical resection experienced a 50 percent five-year survival.

Of various methods considered for the early detection of lung cancer, only examination of sputum cytology and chest radiography have been found by population studies to be sufficiently practical and acceptable to be considered for a clinical trial of the efficacy of screening (26, 27). Previous clinical trials of early lung cancer detection using chest radiography alone (28-30) and those using exfoliative sputum cytology in addition to chest radiography (26, 27) failed to demonstrate a reduction in lung cancer mortality associated with screening. However, none of these studies was a randomized clinical trial using full size (36 cm x 43 cm) chest radiographs with or without sputum cytology testing in which screening was compared to no screening. Until recently, such a trial might have been considered ethically inappropriate.

There have been only three completely randomized clinical trials of screening (exclusively) for early-stage bronchogenic cancer. These clinical trials are now being conducted under auspices of the National Cancer Institute (31). These studies have enrolled more than 30,000 men, age 45 years and older, who smoked 20 or more cigarettes per day. The three clinical centers of the NCI Cooperative Early Lung Cancer Study follow two separate study designs. One study design (Mayo Clinic) tests whether screening by chest radiography plus sputum cytology at four-month intervals is more efficacious than a traditional recommendation that the two tests be performed annually (32). The other design (Johns Hopkins and Memorial-Sloan Kettering) tests whether the efficacy of lung cancer screening by annual chest radiography is enhanced by the addition of exfoliative sputum cytology screening at four-month intervals (33, 34).

The three clinical trials are incomplete, thus only interim results are available. These studies have demonstrated that chest radiography and sputum cytology can detect presymptomatic, earlier stage carcinoma, particularly carcinoma of the squamous cell type. Resectability and survival rates have been higher in the study groups than in the control groups. However at this time, only one of the three centers (Johns Hopkins) reports a statistically significant reduction in lung cancer mortality associated with screening (35). "With equal rates of lung cancer occurrence in the two arms of the JHLP population, the observation of a reduced lung cancer mortality in the Study group seems likely to be due to the effect of cytologic screening. However it must still be realized that the entire benefit of cytologic screening seems to be confined to only one (squamous) cell type (35). These optimistic results remain to be corroborated.

In the fall of 1978 a Consensus Conference of Screening for Lung Cancer was held under the sponsorship of the Division of Cancer Control and Rehabilitation, National Cancer Institute, in collaboration with the National Institute for Occupational Safety and Health. This conference sought to develop guidelines for lung cancer screening programs in the general population. Recommendations were developed in conformity with the criteria developed by Wilson and Junger for the World Health Organization (3).

Included among these recommendations are the following (36):

1. Current prospective studies of asymptomatic persons who have been screened for lung cancer by chest roentgenograms and cytological examination do not at present show any evidence of a definite reduction in mortality from the disease. These studies must be continued for several more years before the accumulated information will be sufficient to allow a relationship between screening and mortality to be established. Re-

of Washington is working with Weyerhauser in Tacoma and Seattle, Intalco in Bellingham, General Telephone in Everett, Eddie Bauer Clothing, Northern Pacific Insurance and Sea-First National Bank.

ALA of Washington does not charge a fee to the company for any of these services.

The ALA of Middlesex County (Mass.) has been actively promoting the FFS self-help manuals in industry since 1981. Health or personnel departments are contacted and a date is arranged for a "Smoking/Health Awareness Day," an inservice introduction to the association's services and resources. Films, FFS slide/tapes, and ecolyzers are used, and a question-and-answer period ensues. "Miss Massachusetts" for 1981-82, who quit smoking using the FFS self-help manuals, frequently participates in the session, answers questions, and signs autographs.

The company always promotes the event with a notice either in pay envelopes, newsletters, or announcements posted throughout the building. The association presented its awareness day to 1,000 employees at Digital Equipment Corporation.

After the event, the FFS program begins centered on the manuals. The association staff meets six times with participants for one hour, twice a week during lunch hour. Progress with the manuals is reviewed. The following week participants meet to focus on the second manual and maintenance.

The association reports much more interest from employees in this approach with the manuals rather than the seven-session FFS clinic.

COST/BENEFIT ANALYSIS

The issue of the costs of smoking to individual businesses is controversial. There is no question that costs are involved. But determining exactly what those costs are is extremely complex.

In spite of well-known literature on the subject it is still open to question as to just how much money a company will save if it institutes smoking cessation programs. Such financial analyses, or so called cost benefit analyses, are very complex, involving as they do mortality and morbidity estimates, actuarial life tables, discounting of future benefits to present values, productivity impact studies, and other similarly complex components.

The marketing strategy plan (see Appendix B), suggests that associations emphasize the health benefits of curbing smoking at the workplace rather than put major stress on cost benefits.

ALA does not recommend using the figures widely cited by Professor William L. Weis, a C.P.A., who teaches at Seattle University. His calculations have been examined and questioned by one of the experts on this topic: Marvin Kristein, Ph.D., associate professor of economics at the State University of New York at Stony Brook. Dr. Weis' figures are not as widely accepted and are more than 6 times greater than Dr. Kristein's.

The total economic cost of cigarette smoking per year to American industry is estimated at $47.5 billion, according to Dr. Kristein, who believes his calculations represent underestimates of the real financial cost of smoking workers.

The average pack-or-more-a-day smoker, he says, costs the employer $624 for every year of his or her working life. These calculations are based on an average salary of $10,000.

These are totally wasted dollars that could otherwise be given to the employees as compensation or improved health benefits, shared with stockholders, or otherwise allocated to business development for a stronger national economy. Dr. Kristein is now in the process of refining his analysis.

At the National Conference on Smoking OR Health (see below) a special workshop addressed how to conduct a cost-benefit analysis on smoking control and cessation in industry. The assembled group of experts agreed that relatively good data exist on the extra costs of smoker absenteeism, disability insurance, health insurance and life insurance, but the impact on accident rates, productivity, pension accruals, maintenance costs and the impact of smoking on the health of nonsmokers need much more work.

The American literature on the cost benefit analyses for smoking cessation programs suffers from several weaknesses. The higher pension accruals that will result if smokers quit smoking and therefore live longer are not considered. This number is substantial and could be as high as the total "savings" calculated in some papers.

Other areas where better basic data are needed involve: accident rates for smokers versus nonsmokers; productivity of nonsmokers versus smokers; and costs of the health effects of passive smoking at the workplace. A third area of concern is the length of time that will elapse between the time the smoker quits and the time a given benefit will materialize (such as increased productivity or improved health of nonsmokers).

It is ALA's experience from contacts with national companies that officers--including medical directors--are extremely interested in both the health and financial costs of smoking at the workplaces. As more definitive studies become available these will be sent to associations.

NATIONAL CONFERENCE ON SMOKING OR HEALTH

Smoking at the workplace was one of the major topics at a November 1981 conference, Smoking OR Health, underwritten by the American Cancer Society and cosponsored in cooperation with a host of other organizations, including ALA.

Under discussion are ways to produce models to help companies calculate their own costs as a result of smoking at the workplace. During 1982 and the years ahead, more materials on these subjects will be published as a result of the conference, which called for ongoing cooperation among agencies to develop programs to curb smoking at work.

Appendix BB from the proceedings includes: action strategies and suggested elements of corporate guidelines for smoking control programs; ways to calculate cost benefits; experiences of selected companies to date; labor-managment relations. Further updates from the Conference will be published later in the summer of 1982 and will be sent to associations.

Until this cost benefit area becomes much better defined, lung associations would be well-advised to avoid using explicit economics as the major basis for selling smoking control and cessation programs to industry. Nevertheless, nearly all experts feel that in the long run a given workplace will be healthier, and more productive, if smoking among the workplace is eliminated or reduced to an absolute minimum.

A vice president of Boeing summed it up: "We tried to calculate the costs and benefits but finally gave up. We just decided that we would rather pay pension benefits than hospital bills."

SMOKERS AND NONSMOKERS AT WORK

An investigation by C.B. Barad (reported in the journal, Occupational Health Safety, 48:1979) studied symptomatic effects of passive smoking in a population of more than 10,000 nonsmoking office workers:

- more than 50% of the nonsmokers reported difficulty working near a smoker.
- another 36% said that they were forced to move away from their desks or work stations because of passive smoking.
- about one nonsmoker in three reported being "bothered" either continuously or very frequently by tobacco smoke at work. In terms of specific symptoms, 48% of the nonsmokers reported conjunctival irritation, 35% nasal irritation, and 30% coughing, sore throat, or sneezing. Nearly 25% reported exacerbation of a preexisting

pulmonary condition, 3% aggravation of a cardiovascular disorder, and 10% stated they were "allergic" to tobacco smoke.

The study also found:

- nearly one fourth of the nonsmokers very frequently or always reacted to tobacco smoke with frustration, and a similar proportion felt hostile toward smokers or management.
- 7% of the nonsmokers stated that they had used sick leave during the preceding 12 months because of the tobacco smoke around them at work.

White and Froeb in a study of the long-term effects of both voluntary and involuntary smoking in more than 5,000 persons (New England Journal of Medicine, 302:720-23, 1980) found that chronic exposure to tobacco smoke in the work environment harms nonsmokers and significantly reduces small airway function. Small airway function in nonsmokers exposed to smoke on the job was reduced to the equivalent of smokers who consumed from one to ten cigarettes daily.

The studies suggesting a link between lung cancer and passive smoking (the chapter on involuntary smoking and lung cancer from the 1982 Surgeon General's report has been sent to all associations, see DETAILS, March 12, 1982) present alarming possibilities of concern to all employers and nonsmoking employees.

In an article by W.L. Weis (Supervisory Management, 26(9):31-35, September 3, 1981) the possibility that smokers may be experiencing a growing negative bias in the job interview process and on the job itself is investigated.

The survey of 223 Seattle-area managers found:

- 119 would choose nonsmokers over smokers if they were equally qualified.
- 103 had no definite preference.
- 1 preferred smokers.

The managers were then asked to make two assumptions, that smokers have about a 50 percent higher absenteeism rate than nonsmokers, and that the health of nonsmokers who work around smokers is measurably impaired. The number choosing nonsmokers increased to 198, 23 were undecided, 1 had no response, and 1 still preferred smokers.

CLEARING THE SMOKE FROM THE WORKPLACE

By Kay Amicone

Few companies have calculated what employee smoking actually costs them in employee health, in benefit programs, and in the cost of doing business

NONSMOKERS HAVE A RIGHT TO BREATHE air not fouled by cigarette smokers practicing their addiction—and a growing segment of American industry has come to believe that dictum. Business is finding it both altruistic and economical to protect employees' health, so a number of firms are examining policies regarding smoking in the workplace—and some companies have sharply restricted smoking at work.

Because a widening body of medical evidence suggests that the potential health problems caused by "side-stream" or "secondhand" smoke can be very serious, managements are looking hard at the fact that a nonsmoking employee can spend 40 hours a week in a confined area breathing co-workers' sidestream smoke. Sidestream smoke has even higher concentrations of noxious compounds than the mainstream smoke inhaled by the smoker, the secondhand variety containing *twice* the tar and nicotine and *five* times the carbon monoxide of mainstream smoke. Before the nonsmoker inhales secondhand smoke, however, some of these concentrations are diluted in the ambient air. The smoker, on the other hand, inhales more toxic compounds directly into the lungs.

A 1980 study by James White and Herman Froeb published in the *New England Journal of Medicine* concluded that chronic exposure to tobacco smoke in the workplace may be deleterious to the nonsmoker. In their study, the nonsmokers who were chronically exposed to tobacco smoke showed dysfunction of the small airways of the lungs comparable to that of light smokers. It is also a fact that tobacco smoke can combine with other toxic agents, such as asbestos, in ways that compound the harm caused by either agent alone. Add to this not-pretty picture that many nonsmokers suffer allergic or irritative reactions when exposed to tobacco smoke, and it is not difficult to understand why the health cost of on-the-job smoking can be high indeed. The economic costs are equally overwhelming.

Health economist Marvin Kristein of the State University of New York at Stony Brook has estimated that the average one-pack-or-more-per-day smoker may, over his or her lifetime, be costing his or her employer about $624 per year in lost productivity and excess insurance costs. He puts the total economic cost of cigarette smoking per year to American industry at $47.5 billion.

Smokers raise the cost of doing business

Smokers cost industry billions of dollars a year in lost productivity: Smokers waste time lighting and puffing on cigarettes, they are absent more often than nonsmokers, they get sick more, they have twice the number of on-the-job accidents as nonsmokers, they also retire more often on early disability—and they may die sooner from smoking-related diseases.

And smokers raise the cost of doing business: Employers pay more for maintenance, ventilation and fire insurance if their employees smoke. Increased fire-accident costs alone have been estimated to be $10 per year per smoker.

Few companies, however, have calculated what smoking actually costs them or what management has saved in those firms that do have no-smoking policies. Such figures are difficult to pin down for several reasons. Cigarette smoking is not the only risk factor to consider when evaluating employee health, and there has not been sufficient time to measure the long-term gains from smoking cessation efforts or reduced incidence of disease. The question of employee turnover further complicates the calculations.

New York Telephone has tried to add it all up. The company determined that 57 percent of the employees who participated in their smoking-cessation program actually quit smoking. Using this figure, the company esti-

adults, too) to find a useful, self-fulfilling societal niche. By that I mean a place where a young man or woman can be a self-supporting, contributing citizen engaged in a worthwhile, healthful life. As a Ph.D. scientist trained in chemistry, I understand perhaps better than most what can happen to the human mind and body when it is abused. I count the habitual inhalation of tobacco smoke as serious abuse.

What then does all this say to me? For one thing, that there is plenty to accomplish in educating youth about pitfalls, shortfalls, wrong turns. If you choose to regard life as a highway, then consider that just off the shoulder of the road is quicksand. People who tend to romanticize life's fast track seldom see that quicksand—until they are waist-deep in it.

"The new volunteer load must be spread evenly"

Additionally, with the federal government in retreat along the social service front and with more women working, the new volunteer load must be spread more evenly among young and old, male and female. It is imperative that each does his or her appropriate share.

Still, the skeptic may say, "Why worry about all this? Leave people alone. If they got hooked on drugs, that's their problem. If they become sick and die after smoking cigarettes for a long time, well, they knew what they were doing. Why bother?"

As I see it, there are two reasons for us all "to be concerned." One is simply the social costs reflected through what I'll label public burdens. Consider the escalating health, accident and life insurance rates; add on higher taxes to pay widows' benefits; and figure in the costs of building, equipping and maintaining hospitals, clinics, rehabilitative centers and jails.

The second reason is more personal. It has to do with a basic view of life here on earth. Stated simply, it says that each of us should do what he or she can to leave the world a slightly better place than he found it. I find support for this in recent explorations of the solar system. I was fascinated to learn that all our space scientists found were barren rock and gaseous clouds. This discovery merely emphasizes the uniqueness of planet earth, with its broad oceans and verdant valleys teeming with life.

I don't mean to pontificate, but doesn't this fact point to an object lesson, one that argues compellingly to society to maintain, to nurture, to improve our precious and oftentimes precarious existence?

President Derek Bok of Harvard University, in charging this year's seniors, commanded my attention when he stated: "Most of us will never achieve a lasting happiness unless we engross ourselves in some serious effort to improve the condition of others. Sooner or later we have to find a convincing way to justify our privileges and opportunities in a world in which so many others remain in much less fortunate circumstances. If you fail to make these efforts, every success and satisfaction is likely to become, sooner or later, hollow . . . illegitimate . . . and unfulfilling."

"Most of us have some time or talent to promote good causes"

Not all of us have the good fortune to find careers that directly benefit others or improve the long-term prospects of life. But most of us have some funds we can spare and time or talent to promote good causes in our home communities. So, gathering everything together, I would much rather miss a few games of golf, or even some time sitting on the warm sands of a Caribbean island. I prefer to get back into the thick of some action, in a setting where it's easy to tell the white hats from the other guys. I enjoy getting in a few more licks for a cause I truly believe in; and I can't think of a better, more aggressive group to work with than the American Lung Association.

Two areas are of particular interest to me, and both deal with smoking and health: 1) passive smoking and 2) smoking cessation in the workplace. I feel safe in predicting that we are on the cutting edge of developments in these obviously interrelated arenas.

Finally, when I become tired or discouraged trying to break into a field which is somewhat new to me, I reach back for an authority. The best one I know is that of Isaiah, one of the original volunteers. When the Lord had a particularly sticky job and asked, "Whom shall I send? Who will go for us?" Isaiah had a ready answer. This biblical stalwart said, "Here am I, send me." «

Fight LUNG DISEASE with a WILL– *yours.*

Bequests are powerful medicine.

AMERICAN LUNG ASSOCIATION
The Christmas Seal People

Campbell's Carol Ritchie, supervisor of personnel services, makes sure prospective employees know that smoking is banned except in designated areas.

areas. "I guess the general idea was not to get any cigarette butts in the soup," says Dr. Wear.

Now Campbell can't find enough employees for the kind of smoking-cessation programs it ran in the past. The reason for this is not a lack of interest—it's a lack of smokers. According to Dr. Wear, "We can't find enough people to make up a group anymore. We cleaned up all those [smokers] who were ripe for picking a long time ago, and we just don't have that many left." The company now deals with smokers on a one-to-one basis as part of a periodic health examination program.

• The Austad Company sells mail-order golf equipment and has a showroom and retail store in Sioux Falls, S.D. Oscar Austad, who started the company in 1963, has never permitted smoking. At Austad no one is allowed to smoke—not workers or customers or sales people—not even at break time. "If Ronald Reagan walked in here and lit up," says Mr. Austad, "we'd kick him out."

A nonsmoker himself, Mr. Austad cites fire protection and aesthetics among his reasons for the ban. But his main motivation, he says, is to protect the rights of his nonsmoking employees.

• Johns-Manville, an asbestos manufacturer, bans smoking in plants where asbestos and asbestos products are made. The company instituted the ban in 1976 after medical evidence showed that asbestos workers who smoke have a 92 times greater chance of contracting lung cancer than workers who do not smoke. In some Johns-Manville facilities the ban is total; in others, where unions saw the ban as an issue in contract negotiations, the company has had to set up break areas where smoking is permitted.

When the smoking ban was imposed at each plant, Johns-Manville also offered smoking-cessation classes to help its employees make the nonsmoking transition. As a further safeguard, the company no longer hires smokers in asbestos-using plants.

• Intermatic, Inc., of Illinois, which manufactures small electrical appliances, offers its smoking employees incentives to quit and has run three separate programs. In one program, employees could bet the company up to $100 that they would quit smoking for one year. In the most recent campaign, 18 successful quitters were eligible for a lottery. The winner of the lottery received a trip for two to Las Vegas. The "losers" were treated to a day at the race track.

Smoking is viewed as New York Telephone's principal health hazard

• Employee smoking is given top priority at New York Telephone: "We view smoking as the principal health hazard of this company," says Dr. Loring Wood, medical director for research and development. "We consider that smoking cessation will alleviate a whole variety of chronic diseases and productivity problems."

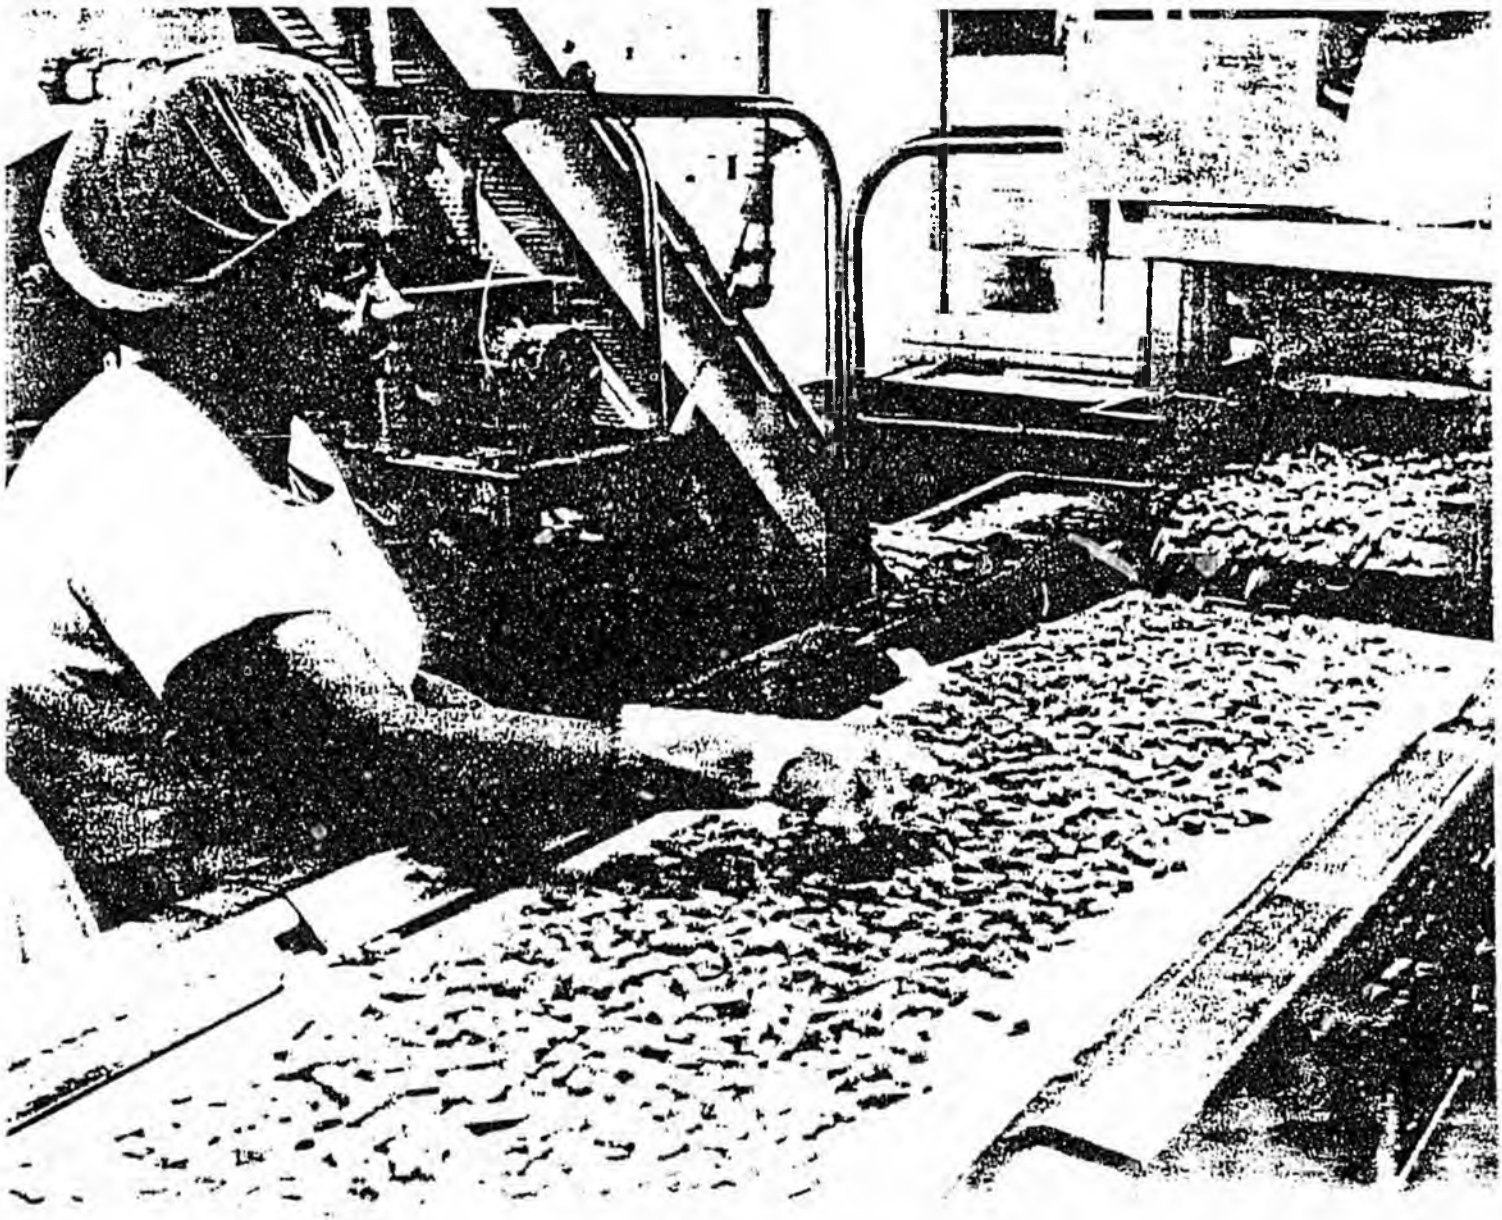
About 1,000 New York Telephone employees have completed various company-sponsored cessation programs. The company's medical staff also refers smoking employees to community organizations, such as lung associations, as part of their health-strategy planning for each employee.

Because total prohibition is considered a last resort, the company's on-the-job policy provides for separate smoking and nonsmoking sections in areas of common use, such as cafeterias and conference rooms; and employees having private offices can decide for themselves whether to smoke or not. In areas with two or more workers, accommodation is urged, with a series of steps to be followed if someone objects to smoking for medical reasons.

• Riviera Motors, a Volkswagen/Porsche/Audi dealership in Hillsboro, Ore., restricts on-the-job smoking to specified areas. Since 1978, the company has run annual smoking-cessation classes and has maintained a support system for those who were trying to quit. The company stocked a refrigerator with yogurt, fruit and fresh vegetables to serve as low-calorie substitutes for smoking; it compiled a collection of books on smoking, jogging and health; and it encouraged nonsmokers to give moral support to their fellow workers. The support was sometimes expressed in novel ways, such as placing a flower with an encouraging note on a smoker's desk.

Smoking also plays a role when Riviera interviews prospective employees: "We still hire some people who smoke," says Marcus Sassaman, "but we try to be very much up front with them and tell them this is not what

mated that their smoking-cessation program produced an annual savings in health costs of $645,000 for reduced coronary disease and $1,400,000 for reduced lung disease.



The Campbell Soup Company also has been willing to work up estimates on the effects of their past smoking-cessation programs. The company figured that it cost them $500 for every employee who quit smoking (about 70 employees participated, with a 20 percent quit rate), mainly for time off the job to attend the sessions. It is difficult to measure the long-term savings for such a small group, but Campbell's corporate medical director, Dr. Roland Wear, has worked out estimates of probable savings, and his figures indicate a substantial return on the company's investment. Dr. Wear is convinced of the value of this type of economic evaluation: "I'm a doctor, not an economist," he says. "But at the same time I think this is the kind of thing we're going to have to get into we hope to get businessmen to spend upfront money i this area." Such savings analyses make the kind of bo tom-line presentation that can impress businesses wit how reduced-smoking policies can combine concern f employee health with good economics.

A number of approaches to smoke-free workplaces

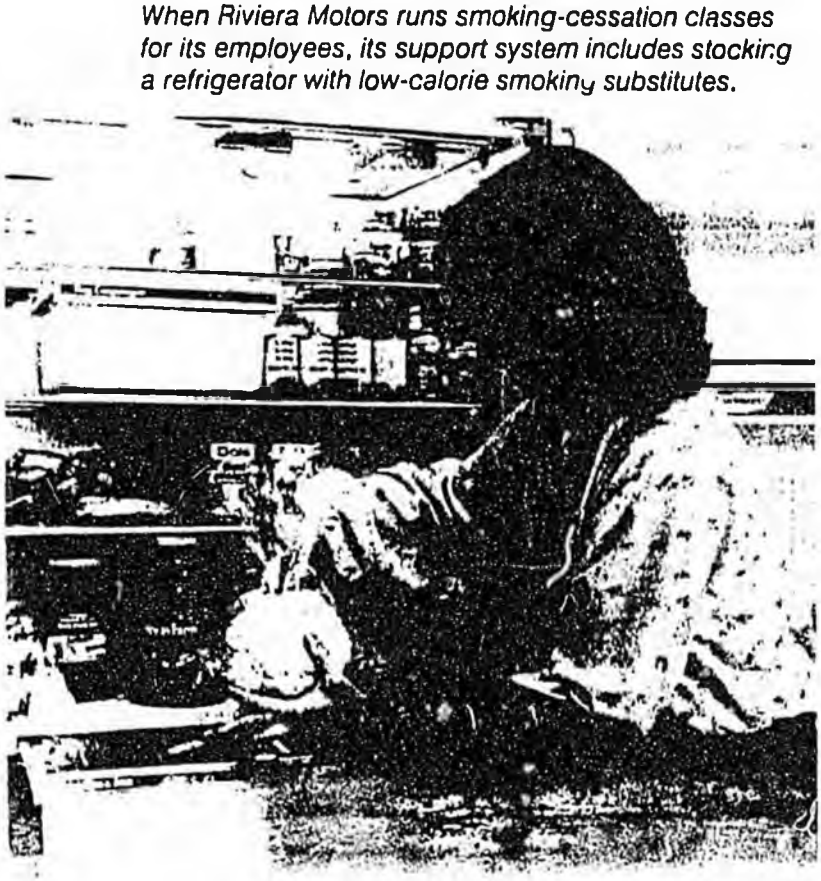
Once a company has opted for a smoke-free workplace it can choose a number of approaches to this goal. Som employers concentrate on smoking-cessation program and incentives, others prefer promulgating on-the-jo smoking policies, and combining techniques is also pop ular. Some examples:

- At the Campbell Soup Company, which has banne smoking on the job since the company was founded i 1869, smoking is permitted only in designated breal

Founded in 1869, Campbell Soup may have modernized its technology but one original policy remains: No Smoking.

Because sponsoring smoking-cessation programs has proved to be a relatively noncontroversial way for companies to approach the smoking-in-the-workplace problem, much of industry's effort to reduce on-the-job smoking is centered upon such programs. "The nonsmokers at this point," says Donna Shimp, an activist for nonsmokers' rights, "are benefiting from the fallout of the pitch to smokers."

Some employers won't go as far as instituting hard and fast no-smoking rules because they fear employees' resistance. Their fears could well be groundless: In a 1975 government survey, 78 percent of all adults, including 70 percent of all adult smokers, felt employers had the right to prohibit smoking in the workplace.



And evidence from companies already restricting on-the-job smoking supports the survey results. Johns-Manville reports that the employee who resists is the exception. According to Marcus Sassaman at Riviera Motors, the nonsmokers support their fellow workers' attempts to quit.

Anticipating union resistance also discourages some employers from pushing nonsmoking programs. The union question is complicated. At Johns-Manville it was the union's insistence that the right to smoke was negotiable under their contract that compelled the company to set up smoking areas in some facilities.

But, says Donna Shimp, this is the case only where a contract contains a specific right-to-smoke provision. Yet even when smoking is not a matter of direct contract negotiation, management often will consider union reaction while formulating a no-smoking policy. "Organized labor is in the middle," says Shimp, because it represents both smokers and nonsmokers. In 1976 Shimp, who suffers severe allergic reactions to tobacco smoke, sued her employer, the New Jersey Bell Telephone Co., for the right to a smoke-free workplace. She won. At that time, her union told her it would represent her right to work but not at the expense of other, smoking employees.

But now some unions have found a way out of this dilemma. Today a union might represent both the nonsmoker's right to a healthy, smoke-free work area and the smokers's right to a smoking lounge. "Comparing six years ago with today," says Mrs. Shimp, "it's a whole new ball game."

When Riviera Motors runs smoking-cessation classes for its employees, its support system includes stocking a refrigerator with low-calorie smoking substitutes.

Court decisions are enunciating nonsmokers' rights

Some employers worry about the possibility of a smoking ban violating smokers' legal rights. Not so, says Shimp: There is no constitutional right to smoke. The judge in her precedent-setting case cited her common law right to a safe working environment and termed tobacco smoke a "non-necessary toxic substance."

"The right of an individual to risk his or her own health," the judge's decision states, "does not include the right to jeopardize the health of those who must remain around him or her in order to properly perform the duties of their jobs."

In other court cases, employees adversely affected by tobacco smoke on the job have been awarded compensation and disability by the courts. And three states—Minnesota, Utah and Nebraska—have legislation controlling smoking in the workplace. The Nebraska law, passed in 1979, illustrates the shift in emphasis from a smoking to a no-smoking norm. It states: "No person shall smoke in a public place or at a public meeting except in designated smoking areas." Most office settings are included under the law.

Those who work in the smoking and health field feel there is an increasing awareness of the hazards of secondhand smoke and the rights of nonsmokers. "I was in industry for quite a while, and I can't even remember anybody talking about this five years ago," says Judson Wells, a retired Du Pont executive who is working with Edwin Fisher on the ALA program for industry.

In the 1979 NICSH survey cited earlier, 33 percent of the responding companies expressed an interest in developing or expanding a program to help their employees quit smoking. This number represents both the progress that has already been made and the work left to be done. The momentum is there; someday America may be a land of smoke-free workplaces. «

Kay Amicone is a freelance writer based in New York.

.Kimberly-Clark sees health promotion as part of the total health-care containment efforts by the company. The program shows management's concern and respect for the health needs of the employees. "Effectively helping people achieve their normal life expectancy as healthy, motivated and productive citizens is really the bottom line," says the company's medical director.

.Smokers have twice the deaths due to coronary heart disease and 10 times the risk of developing lung cancer. They also have longer convalescent periods from respiratory infections. If surgery is required, they are more likely to develop post-operative infections.

.Smoking in certain occupations greatly increases the threats to lung health because of synergistic effects of tobacco smoke and other airborne hazards. Controlling smoking at the workplace—as well as exposure to other airborne hazards—is critically important in these industries.

.As a result of its smoking cessation programs, New York Telephone estimates an annual savings in absence and treatment costs for smoking-related diseases of $1.4 billion for lung disease and $645,000 for cardiovascular diseases. This does not take into account the impact on employees' well-being, productivity and approximately 15 lives saved annually.

.Protecting workers from airborne hazards—asbestos, silicosis, cotton dust, and thousands more substances—is critically important in specific industries. Lung associations are eager to assist these industries in establishing programs to prevent occupational lung disease.

.The facts urge a new definition of employee benefits, one which stipulates that no-smoking policy is a labor-management accomplishment of which both sides can be proud. Unions as well as management are now beginning to see programs to help smokers quit as an employee health benefit.

.Of the $245 billion spent by Americans on health care in 1980, estimates are that employers paid nearly half the cost.

.Smokers who consume one pack of cigarettes daily have a 50% greater rate of hospitalization than those who do not smoke. If they smoke two packs per day, smokers have twice the absenteeism rate of nonsmokers.

.Cigarette smoking causes the premature death of 340,000 Americans each year and disables millions more.

.Although costs and savings are the language of business, a main driving force for most companies is improvement of health. Overall, "Companies would rather have healthy employees and pay pension benefits instead of hospital bills," says the medical director of Boeing.

.Smokers, on the average, have 35-45% higher absenteeism rates compared to nonsmokers.

.The total economic cost of cigarette smoking per year to American industry runs as high as $47 billion, according to Marvin Kristein, Ph.D., Associate Professor of Economics at the State University of New York at Stony Brook. Each smoker costs the employer approximately $624 for every year of his or her working life. These costs are based on an average one-pack-a-day smoker.

.Smoking is related to 90% of all lung cancer cases; 80% of emphysema and bronchitis.

."We view smoking as the principal health hazard of this company," says Dr. Loring Wood, Medical Director for Research and Development at New York Telephone Company. "We consider that smoking cessation will alleviate a whole variety of chronic disease and productivity problems."

News Briefs

Famed attorney Melvin Belli has filed a $100 million lawsuit against two major tobacco companies on behalf of a terminally ill former smoker. The patient suffers from cancer, lung disease, and heart failure, all attributed to cigarette smoking.

If the suit is successful it will pave the way to shifting the cost of providing cigarette victims' medical care from nonsmokers (in the form of higher taxes and insurance premiums) to the tobacco industry and its customers.

"THANK YOU FOR SMOKING."

GASP GETS FILM SUPPRESSED BY PHILLIP MORRIS

Death in the West is now in GASP's hands. The 25-minute film made by Britain's Thames TV shows old Marlboro man commercials along with footage of real cowboys dying of smoking--for instance, a rancher riding along with an oxygen mask for his emphysema, his oxygen tank on his saddlebags. The victims' doctors testify smoking caused their patients' diseases. And Philip Morris representatives are interviewed, making asinine comments like "Applesauce can be hazardous to your health if you eat too much."

The showing in Britain produced such outrage against

(See FILM, page 2)

Two Nonsmoking Workers Win

A Missouri Appellate Court has ruled unanimously that Western Electric Co. must provide a safe workplace, free from tobacco smoke, for employee Paul Smith. The Sept. decision, as a unanimous ruling by a higher court, can be expected to have much greater impact than Shimp vs. N. J. Bell.

Jesse Rivera, an employee of N. J. State Division of Youth and Family Services, has won a grievance asking for the Governor's policy on smoking for state employees to be implemented in his office. The arbitrator directed that an enclosed area be set up for smoking and the majority of the office be smoke-free.

GASP has copies of both decisions.

Current workplace cases now number in the tens, if not in the hundreds, as nonsmoking workers seek protection or compensation. In Washington State a federal judge has ruled tobacco intolerance is a legal handicap. GASP will follow these cases and report them.

PLEASE DON'T DROP YOUR CIGARETTES ON THE FLOOR. THE COCKROACHES ARE DYING OF CANCER.

SMOKING AND HEALTH REVIEW

Volume XI, Number 5 September-October 1981

ASH Sues CAB Over Smoking Rules

Action on Smoking and Health has taken the Civil Aeronautics Board (CAB) to court in a challenge to the CAB's new rules, which significantly reduce the protections provided for nonsmoking passengers and open the door to seating smokers next to nonsmokers. In a related matter, ASH is asking the CAB to reconsider a staff decision to do nothing about ASH's complaint about allowing smoking on airplanes despite cutbacks in airplane ventilation, particularly cutbacks that occurred when they clearly violated existing CAB rules.

Under the old rules, passengers seated in the no-smoking section were entitled to protection against drifting tobacco smoke by a rule that provided that they not be "unreasonably burdened" by such smoke. This rule was used by ASH to force Pan Am to abandon its practice of seating smokers directly across the aisle from nonsmokers (longitudinal separation), and TWA to stop sandwiching small no-smoking sections between smoking sections. ASH attorneys argued that the new rule provides no protection for passengers seated in the no-smoking section because it does not consider how thick or how harmful the drifting tobacco smoke is. Moreover, under the new rule, passengers could not complain about new longitudinal or sandwiching configurations, or even about the seating of smokers next to nonsmokers as long as the latter were technically in a no-smoking section.

Smoker's Brown Lung Compensation Limited

Court Decision

In a decision that could have important ramifications in many other industrial compensation fields and to government entitlement programs generally, the North Carolina Supreme Court has ruled that a textile worker need not be compensated for that portion of her disabling lung condition caused by her own smoking.

Mrs. Elsie Morrison, now 54 years old, had worked in the textile trades for more than 20 years, where she was exposed to cotton dust. For at least 20 years, she also smoked half a pack of cigarettes per day even though she had been treated many times for respiratory infections, bronchitis, and coughing. In recent years she reportedly smoked less, but she was still regularly smoking when she became totally disabled and sought workers' compensation.

Mrs. Morrison claimed that her condition, diagnosed as byssinosis (also known as brown lung), was caused by her exposure to cotton dust during her employment. If her claim proved true, she would have been entitled to an award of approximately $36,000. However, the industrial commission that considered her case found on the basis of medical testimony that almost half of her condition was caused by other factors, including primarily smoking, and accordingly slashed her award by almost one half. This decision was affirmed by North Carolina's highest court; thus it becomes binding in that state.

Many authorities have begun to question what proportion of various

Smoker's Brown Lung Compensation Limited

(Continued from page 1)

compensable medical conditions are in fact caused by the employee's own smoking, and whether employees who smoke should continue to be fully compensated for these disabilities. For example, in a commentary in the *Journal of the American Medical Association*, Drs. Heyden and Pratt stated that "it is difficult to conceive the legislative need for compensation of a disease that rarely reaches irreversible disabling degrees among exsmokers or nonsmokers who continue to work under the same cotton dust exposure." (Vol. 244, No. 16, Oct. 17, 1980 at 1797-8) They cited a study, reported in 1972, that indicated that only smokers seemed to suffer from serious byssinosis and that "workers with typical byssinosis who stopped smoking cigarettes without changing their work area ... observed that their byssinosis symptoms disappeared." Another study showed similarly high rates of emphysema in smokers regardless of whether they worked around cotton dust or not, and virtually no emphysema among nonsmokers even if they worked with cotton.

The Morrison decision could have a major impact in North Carolina, where awards for brown lung totaled $4 million in 1980, particularly if the compensation commissions reduce awards to heavier smokers by a proportionally higher amount. The decision is also of particular importance since it comes from a state with a strong sympathy for the tobacco industry; thus it might serve as a precedent in other southern, as well as northern, states.

The rationale of the decision--that workers are not entitled to full compensation for conditions that they cause by their own smoking—also has potential application in many other areas. As indicated elsewhere in the *Review*, respiratory diseases among coal miners, lumber workers, employees in the construction industry, and workers exposed to asbestos are believed to occur largely in workers who smoke, and in many cases the disability is moderated if they quit smoking. Various studies also indicate that a significant portion of the medical expenses paid by the government under Medicare, Medicaid, veterans' benefits, and welfare are for conditions caused primarily by the smoking of the recipients.

While it may be illogical to require nonsmokers to pay the vast medical costs of conditions caused by smoking, either through unnecessarily high insurance premiums, taxes, or through the added costs of products from cotton goods to coal, many feel that it is unfair to deny compensation to workers who suffer from conditions aggravated by exposure to industrial pollutants. ASH attorneys are therefore considering two alternatives: (1) requiring the tobacco companies to pay for these costs, or (2) requiring workers or those seeking government-supported health benefits who smoke to pay an additional amount in health insurance premiums to compensate for the added health costs or risks associated with their smoking.

ASH Testifies Before Congress on Black Lung

The tobacco industry should pay its fair share of the costs of black lung disease, and coal mining companies should be given financial incentive to reduce smoking among their employees, ASH recently testified before the House Ways and Means Committee's Subcommittee on Oversight.

The problem the subcommittee was investigating was what to do about the insolvency of the Black Lung Trust Fund, which is used to compensate coal miners who suffer disabling lung disease. At present, coal mining companies are required to make payments into the fund based upon the number of tons of coal mined, and the federal government has been financing the deficit of almost half a billion dollars a year out of general tax revenues.

ASH staff counsel Athena Mueller cited medical evidence that black lung is much more likely to occur among coal miners who are also smokers, and that only smoking miners seem to come down with the most serious form of the disease, which requires compensation. Therefore, she said, payments for allocation to the black lung fund should be made by both the coal and tobacco companies in proportion to the role each product plays in causing the disease. Failure to require the tobacco industry to pay its fair share not only burdens nonsmoking taxpayers who are forced to pay more for products that use coal, but it also inter-

The Wizard of Id

A PRECEDENT-SETTING CASE: NONSMOKERS' RIGHTS UPHELD IN COURT

A legal precedent was set when Donna Shimp obtained a court ruling granting her the right to work in an environment free from tobacco smoke. Mrs. Shimp, who is with the New Jersey Bell Telephone Company, found that she had a serious allergy to cigarette smoke. The following interview relates the incidents in Mrs. Shimp's long search for a way to keep on working. Many people gave their time to help her, including medical experts, the lung association, and a team of lawyers.

Editor: A judge in a New Jersey Superior Court recently granted you the right to work in an environment free from tobacco smoke.

Mrs. Shimp: Yes, the Honorable Philip A. Gruccio, J.S.C. made the ruling that in the office where I work there would be no burning of tobacco products at any time by anyone and that I would have the full protection of the court against any disciplinary action, harrassment, or anything else directly or indirectly related to the ruling.

Editor: Is this the first court decision of its kind?

Mrs. Shimp: As far as I know, it is.

Editor: What was behind it all? Were you campaigning to get your rights as a nonsmoker, or did tobacco smoke bother you physically?

Mrs. Shimp: I had a serious medical problem. Tobacco smoke made me nauseous, gave me big red blotches on my face, and probably caused three episodes of corneal erosion.

Editor: Where do you work?

Mrs. Shimp: I work for the New Jersey Bell Telephone Company as a service representative in the Millville Business Office.

Editor: Do customers who smoke come in to see you?

Mrs. Shimp: Yes, they do.

Editor: Sounds like a tough problem, if smoking makes you sick. Did you think of quitting your job and doing something else?

Mrs. Shimp: Yes, my husband wanted me to quit, but I needed to keep my job. One reason, to be honest, is that I knew that in March of this year I would have 15 years of service with the company. At 15 years they vest your pension—they give you a permanent right to it. I felt that if I were to leave, I would be throwing 14 years down the drain. All I thought at first was, "Let me just make it until March."

Editor: Then what happened?

Mrs. Shimp: I read a lot about the health effects of smoking. As I learned how harmful tobacco smoke is to everyone, I began to feel it was unfair to be forced to leave a job I really liked just because other people were smoking.

Editor: Why did you go to the courts?

Mrs. Shimp: I finally got to that point after I had tried everything else. I had tried asking my co-workers not to smoke. I tried going to the company medical department with my problem. I asked the help of the union. I also tried to locate a local or state health or environmental regulation that would apply.

Editor: What was the general response?

A PRECEDENT-SETTING CASE: NONSMOKERS' RIGHTS UPHELD IN COURT

Mrs. Shimp: Many officials of different organizations acknowledged the health hazard created by tobacco smoke and the justice of my request, but they would finally say, "Sorry, we can't do anything. There's no regulation that covers tobacco smoking in your circumstances."

Editor: When did the whole problem start?

Mrs. Shimp: About five years ago, but the correct diagnosis as to what was causing it wasn't made until this year. I finally got to the diagnosis through my eye problem. Something was causing the cornea of my eyes to erode.

Editor: Corneal erosion sounds serious. I suppose you went to an eye doctor.

Mrs. Shimp: Yes, I did. First my regular doctor and then three ophthalmologists tried to find out what was happening. The first eye doctor said, "Ask the Man upstairs. I don't know what's causing it." The second said that the corneal erosion was probably the result of an allergic condition, perhaps hay fever, but he made no effort or suggestion to explore further. Neither my private physician nor the ophthalmologists suggested that I go to an allergist at that time.

Editor: Then how did you begin to identify tobacco smoke as the probable cause?

Mrs. Shimp: One evening, I got acutely ill at a dinner party. About 40 people were in a room that wasn't well ventilated, and many people were smoking. I got so actively sick that I thought I had food poisoning.

Editor: So what did you do?

Mrs. Shimp: From this experience, I began to suspect

Mrs. Shimp is holding one of the "No Smoking" signs which are displayed in her company's medical departments. She says, "I was only asking them to spread this protection to other departments."

tobacco smoke as the cause of the problem. For days after that dinner party, even the smell of a burning cigarette at work would make me feel sick all over again.

Editor: Did you discuss the problem with your physician at that point?

Mrs. Shimp: Yes. He said, "You undoubtedly have a toxic reaction to tobacco smoke. The only thing I can tell you is stay away from it."

I said to him, "Do you really mean I ought to quit my job?" and he replied, "I can't be involved in changing your vocation. I'm telling you what the problem is, and you work it out."

Editor: Did you ever get a definitive diagnosis concerning your reaction to tobacco smoke?

Mrs. Shimp: Yes, I did. Allergist Richard F. Brams, M.D., of Wilmington, Delaware did a thorough evaluation for clinical allergies, including a study of my home and work environments. The diagnosis was respiratory allergies exacerbated by tobacco smoke, especially in poorly ventilated rooms. Apparently, I had lived for years with a few allergies with just a mild antihistamine for relief. Then somewhere along the line, I developed an allergy to tobacco smoke.

Editor: Did you ever smoke yourself?

Mrs. Shimp: Oh, yes. I used to be a heavy smoker. I smoked about three packs a day when I was in the brokerage business. Black coffee and cigarettes were my mainstays in that business.

But when I got married, my husband said, "It's me or the cigarettes." And, I must say, he almost lost. When people tell me cigarette smoking is not a drug addiction, I tell

them they are all wet. Some people are truly addicted to nicotine. I went through a terrible withdrawal period.

Editor: How long did it take you to quit?

Mrs. Shimp: I couldn't admit this for a long time, but I admit it now because I think it helps people to understand the hold that cigarettes can have on you. It took me almost two years to completely quit. Every now and then, I would buy a pack and sneak one smoke privately, just to try it again. It took me 12 years or more before I didn't desperately want a cigarette once in a while.

Editor: So you understand the problems other people have when you ask them not to smoke.

Mrs. Shimp: I've also seen women I've worked with—women who are really in very poor health with respiratory conditions and circulatory problems—try to quit smoking, and they just can't make it. I can empathize with the smoker who feels threatened. I think I can understand it better than someone who has never smoked.

Editor: Let's go back to your immediate problem when you discovered you were allergic to tobacco smoke: How did you handle the situation? You said you had to work.

Mrs. Shimp: At first, I was able to get around the problem by putting up a "No Smoking" sign in the office. It was a small office which had individual ventilating systems. I could use the exhaust mechanism, even in the winter, if I wanted to.

Editor: And then what happened?

Mrs. Shimp: I found that our business office was going to close. I had a choice of going to one or two other offices where a good percentage of the employees smoked. The man I ultimately went to work for said, "If you can't take the smoking, you'd better not come to my office."

So I said to him, "What do you suggest I do?"

He replied, "You'll have to decide. I'm letting you know now that the other people in the office are not going to quit smoking and I'm not going to ask them to."

Editor: So what was your decision?

Mrs. Shimp: I elected to keep on working. A couple of days before I was to go to the new office, my husband called my physician and said, "Can't you give her something to combat the nausea?" My physician reluctantly prescribed an anti-emetic.

Editor: Did that work?

Mrs. Shimp: When I felt terribly nauseated from the smoking in the office, I took the medicine, and it would enable me to last the day somehow, even though I still felt sick to my stomach.

Editor: Wasn't there any ventilation there?

Mrs. Shimp: None! There were no individual exhaust fans, and the central unit was not used because it created cold drafts. However, I came up with something that could help me. A friend of mine who is an industrial physician in the Delaware Valley suggested a respirator. I talked to the people at a mine safety appliance company and got an industrial mask.

Editor: Is this a mask that fits over your nose and mouth?

Mrs. Shimp: Yes, it does. Of course, my job is talking over the telephone, so the mask made that rather difficult.

Editor: Sounds like a scene from a novel.

Mrs. Shimp: I would say that was probably the worst two months I ever spent in my life, because I was sick every day. About the second week in the new office I had to go to an ophthalmologist because my eyes were so irritated.

"When I felt terribly nauseated from the smoking in the office, I took the medicine, and it would enable me to last the day somehow. That was probably the worst two months I ever spent in my life."

"I first went to the company representative responsible for formulating policy and explained my problem. They agreed that the problem was a very real one, but they said there was no law requiring them to do anything about it."

Fortunately, he had the good sense to send me to an allergist. As I said earlier, the allergist identified my problem as allergies aggravated by tobacco smoke.

Editor: What did the allergist tell you to do?

Mrs. Shimp: After another corneal episode, he told me not to go back to work. The Bell medical department's consultant concurred with his findings and also found an allergy to tobacco smoke, itself. At that point, the company put me on disability with full pay for three months.

Editor: Did your nausea, eye problems, and skin problems subside when you were off the job on disability?

Mrs. Shimp: In about a week, I was just fine. I had no problem at all.

Editor: Then what happened?

Mrs. Shimp: I kept thinking, "There must be somebody who can help me." I contacted any group I could think of who might have some information. The American Lung Association of Southern New Jersey was most helpful. I wanted to understand the situation as best I could. I even contacted the U.S. Surgeon General's office. I found that

there was excellent evidence about the health hazards of cigarette smoke, but there was nothing on what to do about it in the work environment.

Editor: Did your physician also give you some help at this point?

Mrs. Shimp: My allergist, Dr. Brams, was neither too busy nor afraid to get involved. He helped me by writing to my employer, and by filing a claim with the regional office of the Occupational Safety and Health Administration on my behalf, citing some of the medical reports I had accumulated. The very fact that he was willing to go to bat for my right to a healthy work environment—one that was smoke-free and also ventilated—gave me the strength to pursue this goal.

Dr. Brams did all these things without fee—and so did all the other doctors who later on came to my aid and supported his position.

Editor: Was it at that point that you went to the union?

Mrs. Shimp: Actually, I've always been a corporation-minded person, so I first went to the company representative responsible for formulating policy and explained my problem. They were all very receptive and agreed that the problem was a very real one, but they said there was no law requiring them to do anything about it.

Editor: So what was your next move?

Mrs. Shimp: I then went to the union with the same request and got the same answer. The union said it would represent my right to work but not at the expense of the other employees.

It was at that time that I first considered legal action as a very remote possibility. I honestly couldn't believe, until I finally went into the courtroom, that you would have to legislate or litigate common decency.

Editor: Did you talk to the other employees in the office?

Mrs. Shimp: I had talked to them, and they were sympathetic—as long as they didn't have to stop smoking. As union members, they knew they had the backing of the union in any right-to-smoke issue. The awareness of the safety and health people at the top hasn't filtered down to the field yet. At any state level, I did get good representation for improved ventilation but without any smoking restrictions.

Editor: Have people at New Jersey Bell had this privilege for many years?

Mrs. Shimp: There was no smoking on the job when I was hired 15 years ago. It was a condition of employment. Smoking on the job came into union contracts in many businesses about 10 or 12 years ago, and our company went along with the trend.

Editor: You said that at that point you were on disability.

Mrs. Shimp: Yes. The company was paying me to stay at home, without working, in a smoke-free environment. After three months, I went to half-pay and was told that I could be fired "to protect my health" if I didn't take a demotion.

Editor: What was a demotion supposed to accomplish?

Mrs. Shimp: It offered a convenient solution to the problem. According to company rules, telephone employees may not smoke at the switchboards or where there is switching equipment. If I had been demoted to telephone operator, I'd be working where no smoking is allowed as a matter of company policy.

Editor: Is there any special reason for a no-smoking rule near the equipment?

Mrs. Shimp: It's to protect the machinery from contamination and also from fire.

Editor: Did you accept the demotion?

Mrs. Shimp: No, I didn't. First of all, I had worked for many years as a service representative. I didn't think that a demotion and substantial pay loss was a fair solution to th problem. But equally important, I had come to understand that tobacco smoke is harmful to nonsmokers, especially to those of us who are sensitive to it. I said to myself, if this is true, why should the company allow smoking on the job? Why was the union continuing to go along with smoking on the job?

Editor: So, despite the obvious roadblocks, you were still looking for a way to continue at your regular job.

Mrs. Shimp: All along, I had a basic belief that there must be a way, somehow, to keep on working. Especially if smoking is injurious to your health. Justice is part of the great American dream.

Editor: Did you try some other routes before you got into legal action?

Mrs. Shimp: I kept thinking that there was some answer other than the courts. I went to the Clean Air Council, I went to the Environmental Protection Agency, I even went to the Occupational Safety and Health Administration (OSHA) in Washington. Almost everybody whom I pleaded my case to said, "Yes, you are right, but there's no law to say you are right." I finally concluded that the question would have to be brought to the courts. I didn't know how to do it, but I decided to give it a try.

Editor: Very quickly, tell us the end before we discuss the details: Just exactly what was the court decision?

Mrs. Shimp: I received a temporary restraining order stating that I was to be provided an atmosphere free of toxic and harmful substances.

Editor: What was the basis of the court decision?

Mrs. Shimp: The judge said he was weighing the right of the person who accepted the medical evidence on the hazards of tobacco smoking and chose not to smoke—versus the right of the person who chose to disregard the evidence and continued to smoke.

The judge said that, on the basis of the evidence he had before him, there was no question that he had to protect my health in the work environment.

Editor: What's next? Will the order stand?

Mrs. Shimp: No opposing affidavits have been filed, and my employer asked for a settlement conference, so the order will probably become a permanent injunction very soon.

Editor: How did you proceed with the development of the case? Did you employ a lawyer, or did one volunteer to help you?

Mrs. Shimp: At first, a friend who is a lawyer agreed to represent me in my right to work. I could sense the company attitude and the union attitude at the time and saw that I might need some help. The lawyer, Edward N. Adourian, Jr., wrote a letter of representation to both the company and the union, saying that he was interested in helping provide me with a healthy work environment and would be glad to cooperate in any way he could.

Editor: What happened then?

Mrs. Shimp: Mr. Adourian made some preliminary investigations and found that there were no precedents for the case. He felt I definitely had a case but pointed out that it would take a couple of years of research to prepare what he called a "landmark case." He equated it with the desegregation question in U.S. schools a few years ago.

Editor: So you hit another roadblock.

Mrs. Shimp: The lawyer said that the expense of the research would be tremendous, even though some other lawyers might be willing to cooperate with us as a matter of public interest.

Editor: By now, I've learned to ask you this: What did you do then?

Mrs. Shimp: I kept asking people about ways to help. One person would refer me to somebody else.

Finally, I located a professor of labor law at Rutgers University, Alfred W. Blumrosen. I found out later from

others that he is eminent in his field and very well respected nationally. He had done all the research for a case such as mine as a matter of academic interest. He said the premise he had developed could be applied very well to my particular case.

Editor: What was his premise?

Mrs. Shimp: That an employee has access to the courts for injunctive relief if his or her health is being harmed and if there are no clear laws to protect the employee. Professor Blumrosen said he would help me if I could get a team of lawyers together.

Editor: And did you get a team of lawyers to help you?

Mrs. Shimp: Yes, there were five altogether.

Editor: Did they work on the case on a volunteer basis?

Mrs. Shimp: Yes, they did it as lawyers interested in the precedent. Not one of them charged a fee or indicated in any way that he wanted payment.

Editor: Were they nonsmokers?

Mrs. Shimp: Only one was a nonsmokers' rights person. The other lawyers felt, as one of them said, that a human need was not being met and that if they had the knowledge to meet it, they would help me.

Editor: What kind of documentation did you have to come up with for the case?

Mrs. Shimp: Well, first of all, I obtained an affidavit from Dr. Brams concerning my medical susceptibility to cigarette smoke. I then obtained supporting affidavits from allergists Frank Rosen, M.D.—who had already written to Bell on my behalf—and Michael Diamond, M.D.

Those affidavits also included statements from experts concerning studies of persons exposed to tobacco smoke involuntarily and the effect of such exposure on those people, especially on those with allergies.

Editor: What other evidence did you need?

Mrs. Shimp: There were affidavits from experts in environmental health, such as Dr. Wilbert S. Aronow of the University of California and Dr. Susan M. Daum of the Mt. Sinai School of Medicine, New York City. There were also affidavits from experts in the field of smoking and health—people such as Dr. Luther Terry, who was U.S. Surgeon General when the first report, "Smoking and Health," was published, and also former U.S. Surgeon General Jesse L. Steinfeld. One important affidavit was from Dr. D. C. Bews, an occupational health expert and former medical director of Bell Canada.

Editor: Let's come up to the present. In your new office, do you still work as a service representative?

Mrs. Shimp with Professor Alfred W. Blumrosen of Rutgers University. Prof. Blumrosen had done the research for a case such as hers.

Mrs. Shimp: The job is the same. The telephone company policy states that employees should be flexible enough and the jobs standardized enough that they may be assigned to any office, as the work demands. We are often loaned to another office.

Editor: What happens when you are loaned to another office? Does the no-smoking order go with you?

Mrs. Shimp: The judge granted me the right to a smoke-free environment wherever I am assigned. This brought up some problems a short time ago. The company wanted to loan me to another office. They were going to put me in a little room where they said I'd be protected from smoke. I'd been there before, and it worked out all right, except when I went out into the main office or when someone came in with a cigarette.

Editor: Did you accept this temporary move?

Mrs. Shimp: I said I would work there if I had the same protection I had in my assigned office—but so far I have not been loaned.

Editor: Did the court decision also cover demotion to a lesser job? Can the company change your job status to

Mrs. Shimp worked for over a year digging up facts on matters such as the health hazards of smoking and also locating experts who could help her.

solve smoking conditions at work?

Mrs. Shimp: My job status cannot be changed. And my rate of pay can't be changed, either.

Editor: How is the matter working out for you now at work?

Mrs. Shimp: There's no smoking in the office. This means a 20-cent "No Smoking" sign, when you get right down to it. When my trial lawyer, Stuart B. Finifter of Atlantic City, N.J., asked the court to grant me the same protection that Bell gives to its equipment, I really got that protection.

Editor: Can the other employees smoke anywhere in the building where you work now?

Mrs. Shimp: The company has set up a smoking lounge in the basement, which can be used by smokers and any nonsmoking workers who choose to share it. Even though this may be in violation of the court order, I haven't complained as I do have the use of a separate lounge which is adjacent to the work area and rest room facilities . . . all within the "no smoking" part of the building.

Editor: How do you feel about smokers at work after your experience of getting ill from smoke and getting little cooperation from them?

Mrs. Shimp: I look upon them as people who happen to smoke. They don't have three heads. If I could have worked up a nice, healthy hatred for the people in my office who continued to smoke on the job, even though it was making me ill, my fight would have been easier. But I didn't feel that way then. Disappointed in them, maybe, but I didn't hate them.

Editor: How does the smoking lounge work out practically at work? Are the people in the office happy with the arrangement?

Mrs. Shimp: Because the company also grants extra "smoke breaks," this does create an extra burden for the nonsmoking workers, but things are working out fairly well. In some other offices, where there is a more impersonal relationship between employees, I could see this situation causing friction. Personally, I am so thankful to be able to work without being sick that I'm not going to complain at this point!

"There's now no smoking in the office where I work. The company grants extra 'smoke breaks', and this does cause an extra burden for nonsmoking workers. In some other offices, where there is a more impersonal relationship between employees, I could see this situation causing friction."

Editor: I understand that there are a number of people throughout the United States who, like you, get ill from tobacco smoke. The percentage is not high, but those people have a real problem. What would they have to do to win a court decision like yours, creating smoke-free working conditions for them?

Mrs. Shimp: I would recommend that they try talking with fellow employees, with the officials of the company, the union, and any local body that might assist them before they attempt to go the legal route. Sometimes you can solve the problem quite simply by turning up a fire regulation that stipulates no smoking in certain areas.

Editor: But suppose they fail, as you did, to get a regulation set up in their work place that prohibits smoking on the job. What then?

Mrs. Shimp: I suppose they would have to go essentially the same legal route that I did. They could benefit by my experience and save some steps.

Editor: Could they use the documents that you presented in court?

Mrs. Shimp: Yes, but they couldn't simply take the

documents, put a ribbon around them, and present them in court. However, I am advised that a lawyer could take the pleadings and rework them to fit his client and the laws of his state. Hundreds of letters have come in to me and to my lawyers requesting copies of these documents. We are putting all the material together in a handbook that will be available through the National Interagency Council on Smoking and Health in New York.

Editor: Could a lawyer cite your case as a precedent?

Mrs. Shimp: Yes. However, in order to cite that precedent, a lawyer would have to prove that his client had a medically proved allergy to cigarette smoke. A lawyer would have to obtain his own affidavits from the client's own doctor and specialists.

Editor: Would a lawyer have to obtain his own testimony from experts on smoking and health and from environmental experts as well?

"I agree that smoking is something that has been accepted, but times are changing. Before I learned the scientific facts about the matter, I used to be apologetic about asking people to stop smoking. But now, I think it's foolish to be apologetic about protecting your health."

Mrs. Shimp: That's a question for a lawyer, but as I understand it, that is true. However, the affidavits in my case could be used in several ways without obligating my expert witnesses to participate directly.

Editor: Looking back at the long and tortuous route that you trod, would you go through the same process again to obtain working conditions free from tobacco smoke?

Mrs. Shimp: Many people ask me that. I think I would because the matter is an important one. Time has dimmed some of the agony of the struggle, and I have learned how universal the problem is. I'm anything but alone in this situation. The volume of mail I receive attests to that!

Editor: Do you think that a person has much chance today of convincing people at work to quit smoking? Some people argue that smoking is such an entrenched social custom that it's difficult to change this habit in groups of people.

Mrs. Shimp: I agree that smoking is something that has been accepted, but times are changing. Before I learned scientific facts about the matter, I used to be apologetic about asking people to stop smoking. But now I think that it's foolish to be apologetic about protecting your health.

Editor: What about making people mad when you ask them to quit smoking?

Mrs. Shimp: You can ask them in a nice way to stop. You don't have to go around chopping people's heads off. However, I do think you have an obligation to be firm about it if you truly believe that cigarette smoking is harmful to your health.

Editor: Do you think that employees will comply if companies set up no-smoking regulations?

Mrs. Shimp: They will comply if the company rule is explained fairly and if it is enforced. A vigorous educational program is essential. I do think that some companies will have to provide smoking lounges for their employees if a good percentage of the employees smoke.

You have to remember that in retail merchandising, in heavy industry, and in places where people work on assembly lines, there almost invariably is a company rule against smoking, and people just accept it. Many millions of people don't smoke at work . . . and the number is growing. Every day I learn of small businesses and large companies that are taking measures to protect their nonsmoking employees.

Editor: Let me ask you this: If you had no specific allergy to tobacco smoke, would you go through the same battle to win your right to a smoke-free work place?

Mrs. Shimp: Knowing what I know now, I think I would. I have read most of the important scientific research on the effects of tobacco smoke on nonsmokers. In my opinion, and in many experts' opinion, there is good scientific evidence that smoking is harmful to nonsmokers.

Editor: What is your basic scientific concern about no smoking in the work place?

Mrs. Shimp: I am really concerned about the unexplored synergistic effect of the many toxic agents on our body systems in today's polluted environment. When "safe" levels have not been established, the only acceptable standard should be zero—especially when dealing with a nonessential toxic substance like tobacco smoke.

I won my battle because the harm to my system was immediate and could be documented. But I think all nonsmokers and agencies, such as the American Lung Association, that are working for environmental improvement should have the wholehearted support of the medical community in trying every means of attaining a smoke-free environment, especially at work.

DONNA M. SHIMP has been a service representative with the New Jersey Bell Company for 15 years. Before that, she was an assistant account executive with the investment firm, Merrill Lynch, Pierce, Fenner and Smith. Much of Mrs. Shimp's free time is now taken up in writing and consulting with unions and management concerning smoke-free work areas. She continues to receive letters about the court case.

SMITH v. WESTERN ELECTRIC COMPANY

Missouri Court of Appeals
Eastern Division

Decision reversing circuit court order which dismissed employee petition seeking injunction to prevent employer from exposing employee to tobacco smoke in workplace.

PAUL SMITH, Plaintiff-Appellant v. WESTERN ELECTRIC COMPANY, Defendant-Respondent, No. 44286, Sept. 14, 1982.

Morley Swingle, Cape Firardeau, Mo., for plaintiff-appellant.

Willam G. Ohlahausen, St. Louis, Mo., for defendant-respondent.

Before Dowd, Gunn, and Crandall, Judges.

PRIVATE SUIT

1. Working Conditions — Exposure to Tobacco Smoke — Employee's Allergic Reaction — Duty of Employer under State Law ►80.30

Employee's petition seeking to enjoin employer from exposing him to tobacco smoke in workplace and from altering his pay or employment conditions because of employee's allergic reaction to smoke states claim upon which relief can be granted under applicable state law, since it is well-settled in Missouri that employer owes duty to employee to use all reasonable care to provide reasonably safe workplace and to protect employee from avoidable perils; accordingly, order dismissing petition is reversed and case is remanded for further proceedings.

2. Employee Exposure to Tobacco Smoke — Allergic Reaction — State Court Jurisdiction over Claim ►80.30

Employee is not precluded by Occupational Safety and Health Act from seeking relief in state court in order to prevent employer from maintaining working conditions which expose employee to tobacco smoke and thus trigger his allergic reaction to smoke, because Act does not affect common law duty of employers regarding injuries, diseases or death of employees arising out of employment, and does not prevent state court from asserting jurisdiction over occupational safety and health issue for which no OSH Administration standards is in effect.

Full Text of Decision

DOWD, Judge:

Plaintiff appeals from an order dismissing his petition on the ground that it fails to state a claim upon which relief can be granted.

The petition seeks an injunction to prevent plaintiff's employer from exposing him to tobacco smoke in the workplace and from affecting his pay or employment conditions because of his medical reaction to tobacco smoke. The petition alleges that by allowing smoking in the work area, defendant permits its employees to be exposed to a health hazard and thereby breaches its duty to provide a safe place in which to work.

Plaintiff contends the trial court erred in dismissing his petition in that it invokes legal principles entitling him to relief and shows that injunctive relief is appropriate. Plaintiff further contends that federal law does not preempt state common law in this case.

In reviewing the dismissal of this petition for failure to state a claim, we grant the petition its broadest intendment and liberally construe its averments. *Paddock Forest Residents Ass'n v. Ladue Service Corp.*, 613 S.W.2d 474, 476 (Mo.App. 1981). We accept as true all factual allegations and their favorable inferences. *Nelson v. Wheeler Enterprises, Inc.*, 593 S.W.2d 646, 647 (Mo.App. 1980). If the averments thus viewed invoke principles of substantive law upon which relief can be granted to plaintiff, the petition is not subject to dismissal. *Paddock Forest Residents Ass'n*, 613 S.W.2d at 476. Any reasonable doubt with regard to the petition's sufficiency is resolved in favor of plaintiff. *Nelson*, 593 S.W.2d at 647.

The petition includes the following allegations. Plaintiff has been employed by defendant since 1950 and has worked in defendant's Missouri branch since 1967. He is a nonsmoker sharing an open office area with other employees, many of whom smoke tobacco products as they work. In 1975 plaintiff began to experience serious respiratory tract discomfort as a result of inhuling tobacco smoke in the workplace. A subsequent medical evaluation determined that plaintiff suffers a severe adverse reaction to tobacco smoke. His symptoms include sore throat, nausea, dizziness, headache, blackouts, loss of memory, difficulty in concentration, aches and pains in joints, sensitivity to noise and light, cold sweat, gagging, choking sensations, and lightheadedness. After a sufficient period

have become increasingly severe over the years, however. Doctors evaluating and treating plaintiff have advised him to avoid contact with tobacco smoke whenever possible.

The petition further alleges that plaintiff first complained to defendant about the tobacco smoke in the workplace in 1975. Defendant thereafter moved plaintiff to different locations within the plant, but no improvement resulted because each location contained significant amounts of tobacco smoke. In 1978 plaintiff was informed that he should no longer sumbit complaints about the smoke through defendant's anonymous complaint procedure since defendant would not process them. In response to recommendations of the National Institute for Occupational Safety and Health,[1] defendant adopted a smoking policy in April 1980. The declared policy was to protect the rights of both smokers and nonsmokers by providing accommodations for both groups and by making a reasonable effort to separate the groups in work areas. Because defendant has failed to implement its policy by making such a reasonable effort, improvement of the air in the workplace has not resulted.

According to the petition, in August 1980 plaintiff filed with defendant a Handicapped Declaration Statement that he was handicapped by his susceptibility to tobacco smoke. Refusing to segregate smokers or to limit smoking to non-work areas, defendant informed plaintiff he could either continue to work in the same location and wear a respirator or apply for a job in the computer room (where smoking is prohibited). The latter option would entail a pay decrease of about $500 per month. Defendant thereafter provided plaintiff with a respirator that has proven ineffective in protecting plaintiff from tobacco smoke.

The petition states that plaintiff has exhausted all avenues of relief through defendant; he has no adequate remedy at law; he is suffering and will continue to suffer irreparable physical injuries and financial losses unless defendant improves working conditions. The petition alleges that defendant is breaching its common law duty as an employer to provide plaintiff a safe place to work, and that defendant has available defendant's ability to protect its computer equipment from tobacco smoke. The petition further states that, although "second-hand smoke" is harmful to the health of all employees, defendant is permitting them to be exposed in the workplace to this health hazard which is neither related to nor a necessary by-product of defendant's business.

Construing these allegations favorably to plaintiff, we must determine whether they invoke principles of law entitling him to relief.

[1] It is well-settled in Missouri that an employer owes a duty to the employee to use all reasonable care to provide a reasonably safe workplace, *e.g., Todd v. Watson,* 501 S.W.2d 48, 50 (Mo. 1973); *Hightower v. Edwards,* 445 S.W.2d 273, 275 (Mo. banc 1969), and to protect the employee from avoidable perils. *Moles v. Kansas City Stock Yards Co. of Maine,* 434 S.W.2d 752, 755 (Mo.App. 1968). Whether the employer has fulfilled its duty depends upon the facts of each case. *Lathrop v. Rippee,* 432 S.W.2d 227, 231 (Mo. 1968). For example, in *McDaniel v. Kerr,* 258 S.W.2d 629 (Mo. banc 1953), the employer had failed to provide a safe workplace where the employee's inhalation of dust on the job caused damage requiring removal of his lung. In *DeMarco v. United States,* 204 F.Supp. 290 (E.D.N.Y. 1962), the court found a negligent failure to provide a safe working environment where the plaintiff was injured when he fainted and fell after complaining about gasoline fumes in an unventilated work area.

The allegations of the instant case, taken as true, show that the tobacco smoke of coworkers smoking in the work area is hazardous to the health of employees in general and plaintiff in particular. The allegations also show that defendant knows the tobacco smoke is harmful to plaintiff's health and that defendant has the authority, ability, and reasonable means to control smoking in areas requiring a smoke-free environment. Therefore, by failing to exercise its control and assume its responsibility to eliminate the hazardous condition caused by tobacco smoke, defendant has breached and is breaching its duty to provide a reasonably safe workplace. *See Shimp v. New Jersey Bell Telephone Co.,* 145 N.J. Super. 516, 368 A.2d 408(1976). As stated in *Thompson v. Kroeger,* 380 S.W.2d 339, 343-44 (Mo. 1964) (quoting *Gatzke v. Terminal Railroad Ass'n of St. Louis,* 321 S.W.2d 462, 466 (Mo. 1959)).

tions which a reasonably prudent employer would have taken in given circumstances, even though other employers may not have taken such commensurate precautions. What usually is done may be evidence of what ought to be done, but what ought to be done is fixed by a standard of reasonable prudence, whether it usually is complied with or not.

If plaintiff's petition establishes defendant's failure to provide a safe place for plaintiff to work, we must next consider whether injunctive relief would be an appropriate remedy. An injunction may issue "to prevent the doing of any legal wrong whatever, whenever in the opinion of the court an adequate remedy cannot be afforded by an action for damages." §526.030 RSMo 1978. Injunctive relief is unavailable unless irreparable harm is otherwise likely to result, *see City of Grandview v. Moore,* 481 S.W.2d 555, 558 (Mo.App. 1972), and plaintiff has no adequate remedy at law. *See State ex rel. Taylor v. Anderson,* 242 S.W.2d 66, 72 (Mo. 1951).

The petition alleges that plaintiff's continuing exposure to smoke in the workplace is increasingly deleterious to his health and is causing irreparable harm. Assuming the allegations and reasonable inferences therefrom to be true, we think it is fair to characterize deterioration of plaintiff's health as "irreparable" and as a harm for which money damages cannot adequately compensate. This is particularly true where the harm has not yet resulted in full-blown disease or injury. Money damages, even though inadequate, are the best possible remedy once physical damage is done, but they are certainly inadequate to compensate permanent injury which could have been prevented. Plaintiff should not be required to await the harm's fruition before he is entitled to seek an inadequate remedy. Moreover, the nature of plaintiff's unsafe work environment represents a recurrent risk of harm that would necessitate a multiplicity of lawsuits. Finally, the petition states that plaintiff has no adequate remedy at law and alleges facts indicating that prior to this action plaintiff unsuccessfully pursued relief, both through his employer's in-house channels and through administrative agencies. Viewing the petition favorably, as we must to determine its sufficiency, we find that injunction would be an appropriate remedy.

[2] Defendant contends the trial court lacks jurisdiction to provide relief, and therefore the petition fails to state a claim the subject matter of this case is p by the Occupational Safety and H (OSHA), 29 U.S.C. §§651-678 (1 Act specifically states, however, th not affect the common law regar juries, diseases, or death of emplo ing out of . . . employment." § The Act also declares that it does vent a state court from asserting tion over an occupational safety issue for which no OSHA standa fect. §667(a). We are unperso defendant's argument that §653(b only to the common law pert workers' compensation laws. In defendant has not directed our at any OSHA standard which would cover tobacco smoke. No such figured in the opinions of other co sidering OSHA and tobacco *Federal Employees for Non-S Rights v. United States,* 446 F.Sup OSHC 1407] (D.D.C. 1978), *aff* F.2d 310 [7 OSHC 1634] (D.C. Ci *denied,* 444 U.S. 926 (1979); *Shi* N.J. Super. 516, 368 A.2d 408. more, defendant conceded in oral a that a court may retain jurisdictio absence of an OSHA standard.

We conclude that plaintiff has claim upon which relief can be gra that the trial court therefore erro missing the petition. Plaintiff shou lowed the opportunity to pr allegations.

The judgment is reversed and r remanded.

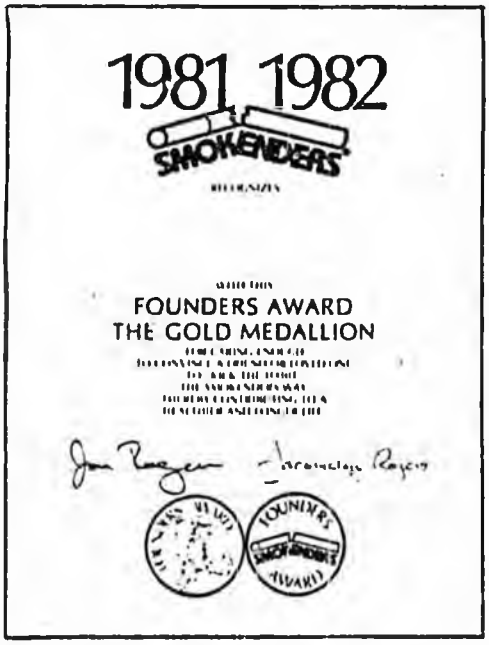
Wives Risk Lung Cancer From Husbands' Smoking

A recent 14-year study, performed at Tokyo's National Cancer Center Research Institute, found that nonsmoking wives of smoking husbands die of lung cancer at a rate double or more that of nonsmoking wives with nonsmoking husbands. The landmark study, published January 17, in the British Medical Journal, reports that the risk to nonsmoking wives was directly related to the amount of their husbands' smoking. These findings support mounting evidence that links "passive" or "second-hand" smoking with a variety of respiratory ailments.

The Japanese study, which followed 142,857 women and 122,261 men between 1965 and 1979, found that nonsmoking women who were regularly exposed to their husbands' smoking, showed risk levels ranging from ⅓ to ½ that of direct smoking. A total of 346 lung cancer deaths among women were reported during the 14 year survey, and 174 of these deaths were nonsmoking women married to smoking husbands.

Dr. Takeshi Hirayama, author of the study and chief epidemiologist at the National Cancer Research Institute in Tokyo, suggests the findings "appear to explain the long-standing riddle of why many women develop lung cancer although they themselves are nonsmokers".

The study found that the increased risk to women varied according to the amount of cigarettes smoked by the husband, and the living environment, urban or rural, also was a big factor.



Women whose husbands smoked 20 or more cigarettes a day were 2.08 times more likely to develop lung cancer. If the husbands smoked 20 or less cigarettes a day, the risk was still 1.61 times higher than for wives of nonsmokers.

In agricultural areas where air pollution was not influencing the study's findings, a risk level 4.6 times higher was observed among nonsmoking wives of farm workers 40 to 59 years of age who smoked two or more packs of cigarettes each day.

The study was originally undertaken to determine the effects on health of a large number of factors, including drinking, occupation and marital status. Results indicate, however, that smok-

New Smokenders Founders Medals to be Awarded Yearly

Each year hundreds of Smokenders graduates recommend the Program to their friends and loved ones. And happily enough, most of these referrals sign-up, complete the course and join the growing ranks of nonsmokers.

We feel that graduates deserve official recognition for helping their friends quit smoking, so we've established a series of yearly awards to be given to the sponsors of new Smokenders graduates.

If, in the course of a year, you refer just one new person, and he or she completes the program, we'll award you a Bronze Smokenders Founders Medal and a special certificate highlighting your achievement. If you recommend as many as five new graduates, you'll receive a beautiful, sterling silver plated Founders Medal and certificate. And for referring ten new graduates, you'll receive a stunning 14K gold plated Founders Medal and a framed certificate of merit commemorating your truly outstanding contribution to good health.

SURGEON GENERAL REPORTS DANGERS OF LOW-TAR CIGARETTES

In *The Changing Cigarette*, a 237-page report issued by Surgeon General Dr. Julius B. Richmond, federal health officials summarize recent scientific findings on low-tar, low-nicotine cigarettes. In brief, the report states that milder brands may offer "limited" reduction in lung cancer risks, but there is little evidence to indicate that they reduce the risks of heart disease, bronchitis, emphysema, complications of pregnancy and other disorders related to smoking.

The report warns of new health hazards from chemical additives used in cigarettes to enhance lost flavor due to reduced levels of tar and nicotine. Additives currently in use include substances such as shellac, caramel, eugenal and chemicals which can produce carcinogens when burned.

Last year the tobacco industry supplied the surgeon general with a list of about 1,500 cigarette additives but no specific brand-levels or formulas have been released to date. Dr. Richmond is continuing negotiations with the industry to obtain precise additive formulations for each brand. However, under current law, cigarette companies do not have to release this information, and until then, adequate testing is not possible.

In a compromise move, the Surgeon General has proposed that a government guarantee could preserve the confidentiality of such information. This approach has worked successfully in Great Britain, and American companies doing business there have conformed. However, Secretary of Health and Human Services, Patricia Roberts, stated that new legislation may be required to secure the necessary information.

When asked to comment, a Tobacco Institute spokesman called the report "markedly candid and more moderate in tone" than prior

An Invitation To All Our Friends

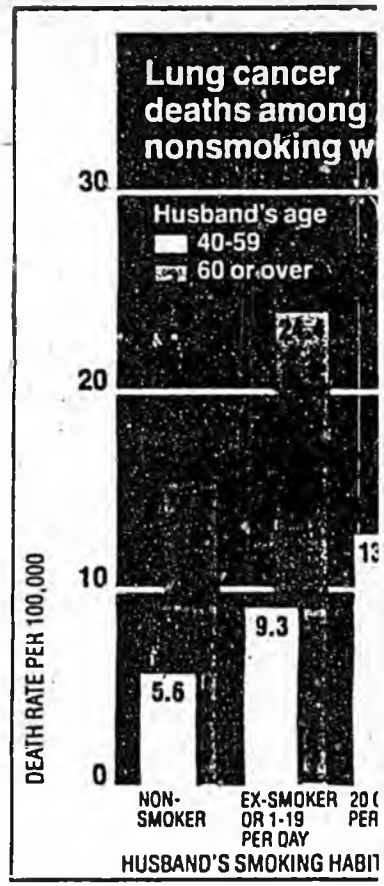
Dear Graduate:

Saying "hello" to you that first meeting was a pleasure. You came to us to quit smoking, and we were anxious to get to know you and help you.

During the weeks that followed, we all grew closer. We talked together, laughed together, and worked together. Together we shared the same goals and the same attitudes towards smoking. We helped you develop the motivation and gave you the tools you needed to stop smoking, and you did.

With **The Smokender**, a free newsletter, we have a way to stay in touch with you and share ideas, personal experiences, current events, and other items of general interest.

We invite you to read it, respond to it, and help us make it as interesting as we can together. This is our way of saying hello again and we would love to hear from you.



What would you like to see included in **The Smokender?** With your comments and contributions, we can make this the beginning of a long and lively new relationship.

Enjoy.

Sincerely,
THE SMOKENDERS STAFF

Airlines must seat non-smokers

Non-smokers travelling on U.S. airlines are now protected by a special regulation of the Civil Aeronautics Board. The rule requires airlines to provide a seat in the non-smoking section for any passenger who requests it. This holds true even if the section must be enlarged to accommodate everyone.

Foreign airlines also have non-smoking sections, but they are under no obligation to expand their non-smoking section.

Wives Risk *Continued from page 1*

ing is the only habit of husbands to affect the deaths of wives. The findings are so statistically significant that it "was not the result of chance", Dr. Hirayama said.

Surprisingly, the husbands smoking *did not* affect the risk of death from other types of cancer or heart attacks.

A noted British physician, who did pioneering work linking cigarette smoking and lung cancer, described Dr. Hirayama's study as "scientifically sound." He also stated that the correlation between smoking husbands and deaths from lung cancer in nonsmoking wives was higher than he had expected.

"The implication", he said, "is that cigarette smoking poses a hazard to anybody in public rooms if they are not well ventilated."

GRADUATES WELCOME

Just a reminder that as a S enders graduate, you are a welcome to attend any of ou venient seminars if you wou to reinforce your non-sm habit. Whether you would l offer a personal testimonial, a friend, or just visit, we a ways glad to see you.

By the way, if you have back to smoking again (it ca pen), you can enroll anytin an additional eight-week se for just ½ the regular rate.

If you prefer, take advant our Summer Rejoin Sale. T will be only $125.00 if you before Labor Day. To get and locations of seminars you, please refer to the en schedule.

FACTS ABOUT NONSMOKERS

More than 30 million Americans have kicked the cigarette habit. Millions more are trying. Among adults, only one in three still smokes. In the population as a whole, it's one in four. Even counting cigar and pipe smokers, nonsmokers are a clear majority.

Nonsmokers are no longer a silent majority, though. They mind if you smoke. And they're speaking up. They see tobacco smoke as a pollutant that defiles their air. And new research gives them ammunition to defend themselves. It shows that second-hand smoke can have harmful effects on nonsmokers.

OPEN BURNING

Tobacco smoke is a very complex mixture. There are hundreds of chemical compounds in burning tobacco.

Some of the most hazardous compounds are tar, nicotine, carbon monoxide, cadmium, nitrogen dioxide, ammonia, benzene, formaldehyde, and hydrogen sulphide. And dozens of others. Any one alone can assault the body and cause trouble. Together, they make smoking the menace it is.

Even when a smoker inhales, researchers have calculated that two-thirds of the smoke from the burning cigarette goes into the environment. The percentage of pollution from cigar and pipe smoke is even higher.

SIDESTREAM SMOKE

Every time anyone lights a cigarette or cigar or pipe, tobacco smoke enters the atmosphere from two sources. Most important for nonsmokers, there is *sidestream* smoke, which goes directly into the air from the burning end. Then, there is *mainstream* smoke, which the smoker pulls through the mouthpiece when he or she inhales or puffs. Nonsmokers are also exposed to mainstream smoke after the smoker exhales it.

A cigarette smoker inhales—and exhales—mainstream smoke eight or nine times with each cigarette for a total of about 24 seconds. But the cigarette burns for 12 minutes and pollutes the air continuously with sidestream smoke. Smokers can keep cigars and pipes burning for a much longer time. The pollution lingers long after.

Sidestream smoke—the smoke from the burning end—has higher concentrations of noxious compounds than the mainstream smoke inhaled by the smoker. Some studies show there is *twice* as much tar and nicotine in sidestream smoke compared to mainstream. And *three* times as much of a compound called 3-4 benzpyrene, which is suspected as a cancer-causing agent. *Five* times as much carbon monoxide, which robs the blood of oxygen. And 50 times as much ammonia.

There is also evidence that there is even more cadmium in sidestream smoke than in mainstream. Cadmium is now under investigation as one of the compounds in cigarette smoke that damages the air sacs of the lungs and causes emphysema.

Before the nonsmoker inhales secondhand smoke, however, some of the high concentrations of hazardous substances are diluted in the ambient air. The smoker, on the other hand, inhales both firsthand and secondhand smoke.

CARBON MONOXIDE

Carbon monoxide is a colorless, odorless gas created by incomplete combustion. Car exhaust puts it in the air. So does tobacco smoke.

While it is difficult to measure the amount of tar or cadmium in someone's lungs or body, it is relatively easy to measure the levels of carbon monoxide in the blood.

When you inhale carbon monoxide, the gas bumps oxygen molecules out of your red blood cells and forms a new compound called carboxyhemoglobin. As the amount of this compound increases in your blood, the body becomes starved for oxygen.

One study shows that after only thirty minutes in a smoke-filled room the carbon monoxide level in the nonsmoker's blood increases as well as the blood pressure and heart beat.

HAZARDOUS LEVELS

What levels of carbon monoxide are hazardous? In industry, the maximum concentrations of carbon monoxide in the air cannot average out to more than 50 p.p.m. (parts per million); and efforts are now underway to reduce the maximum. The Federal Air Quality Standards for the *outside air* limit concentrations to an average of 9 p.p.m.

Given this as a baseline, how much carbon monoxide do cigarettes send into the air?

Researchers have found that smoking seven cigarettes in one hour—even in a ventilated room—created carbon monoxide levels of 20 p.p.m. In the seat next to the smoker, the level shot up to 90 p.p.m., almost twice the maximum set for industry. Smoking ten cigarettes in an enclosed car also produced carbon monoxide levels up to 90 p.p.m. The carbon monoxide level in the blood of nonsmokers and smokers in the car *doubled*.

When nonsmokers were exposed to these levels, the carbon monoxide level in their blood not only doubled within the first hour, *but doubled again during the second hour.*

When nonsmokers leave a smoky environment, it takes hours for the carbon monoxide to leave the body. Unlike oxygen which is breathed in and then out again in minutes, carbon monoxide in the blood lasts for hours. After three or four hours, half of the excess carbon monoxide is still in the bloodstream.

EFFECTS OF THE GAS

Some studies indicate that with these levels of carbon monoxide in the blood, people—including drivers—cannot distinguish relative brightness, lose some ability to judge time intervals, and take longer to respond to taillights. They also show impaired performance on some psychomotor tests. These levels of carbon monoxide in the blood create physiologic stress in heart disease patients. The resultant lack of oxygen can also add distress for people who already have lung disease.

Animals exposed to carbon monoxide (levels from 50 to 100 p.p.m.) continuously for weeks showed damage to heart and brain.

OTHER COMPOUNDS

Not enough research has been done on effects of other compounds in tobacco smoke. For example, hydrogen cyanide is a poison that attacks respiratory enzymes. It is not found in ordinary air pollution. But the concentration in cigarette smoke itself is 1600 p.p.m. Long-term exposure to levels above 10 p.p.m. is considered dangerous.

Nitrogen dioxide is an acutely irritating gas that can damage the lungs. Levels of 5 p.p.m. in the air are considered dangerous. Cigarette smoke contains 250 p.p.m.

ANIMAL RESEARCH

Some researchers have exposed mice to second-hand smoke over a period of one or two years. A significant number of mice developed severe bronchitis. Rabbits exposed to smoke from 20 cigarettes per day for two to five years developed emphysema.

Dogs exposed to cigarette smoke ten times per week for one year suffered a breakdown in lung tissues. Rats exposed to second-hand smoke for 45 minutes a day for two to six months showed twice as many lung tumors as did a control group.

The exact parallel between animal and human exposure in smoke-filled rooms is hard to determine at this stage of research. But some implications are serious indeed.

SMOKE AT THE WORKPLACE

A study of nonsmokers exposed to tobacco smoke at work for many years showed a dysfunction in the small airways of the lungs of the nonsmokers. It is not yet clear whether abnormalities in the small airways precede the kind of changes that characterize chronic lung disease like emphysema. But very frequently the beginning changes of chronic lung diseases start in the small airways.

EFFECTS ON CHILDREN

Babies and young children breathe more rapidly than adults. Because of this higher breathing rate, they inhale more air—and more pollution—in comparison to their total

body weight. Some studies show youngsters inhale two to three times as much of a pollutant per unit of body weight compared to adults. And this assault happens when young lungs are growing and developing.

One major study discovered that in their first year, babies of parents who smoke at home have a much higher incidence of lung disease, specifically bronchitis and pneumonia, than babies with nonsmoking parents.

A study of the lung function of children—aged five to nine—showed an adverse reaction in the small airways of children who had smoking parents compared with those whose parents were nonsmokers.

Parents who smoke at home can aggravate symptoms in some children with asthma and even trigger asthma episodes. Millions of people, adults as well as children, are sensitive to tobacco smoke and suffer smoke-caused asthma episodes. Parents should limit their smoking to separate rooms away from these children or, better yet, should quit smoking altogether.

Even among nonasthmatic children, a team of researchers found that respiratory illnesses happened twice as often to young children whose parents smoked at home compared to those with nonsmoking parents.

In a study of 441 nonsmokers divided into two groups—those with a history of allergies and those without—70 percent of *both* groups suffered from eye irritations caused by smoke. Even among the nonallergic groups, 30 percent developed headaches and nasal discomfort, while 25 percent experienced cough.

SECONDHAND SMOKE AND LUNG CANCER

Some studies have found an increased risk of lung cancer in nonsmoking wives married to men who smoke. Although the studies are too few as yet to conclude a definite association between secondhand smoke and lung cancer, the findings have raised concern. Since there are cancer-causing agents in cigarette smoke, it is not unreasonable to expect that inhaling these agents firsthand or secondhand could cause disease. Exposure to tobacco smoke may be similar to exposure to radiation: there are no safe levels.

TOBACCO SMELLS

Contamination and odors are immediately created by such elements in tobacco smoke as ammonia and pyridine. Pyridine is a strong irritant that is produced when nicotine burns. The presence of a minute amount in the air produces distinctly unpleasant odors.

The contamination is so intense that when someone smokes in an air-conditioned environment, the air-conditioning demands can jump as much as 600 percent to control odor.

Another intriguing finding from air-conditioning research is that the human body attracts tobacco smoke. Burning tobacco smoke creates a high electrical potential, whereas the water-filled human body has a low one. The smoke in a room gravitates and clings to people in much the same way as iron filings are drawn to a magnet.

And the odors linger on. Chemicals in tobacco smoke called aldehydes and ketones supply the penetrating smell, while the tars hold them to your skin and your clothes. But the smoker is not sensitive to the smell because of the destructive effects of smoke on the inner lining of his or her nose.

THE RIGHT TO BREATHE CLEAN AIR

Nonsmokers have the right to breathe clean air, free from harmful and irritating tobacco smoke. This right supersedes the right to smoke when the two conflict.

THE RIGHT TO SPEAK OUT

Nonsmokers have the right to express—firmly but politely—their adverse reactions to tobacco smoke. They have the right to voice their objections when smokers light up.

Nonsmokers have the right to act through legislative channels, social pressures or any other legitimate means—as individuals, or in groups—to prevent or discourage smokers from polluting the atmosphere and to seek the restriction of smoking in public places.

- Let family, friends, co-workers and strangers know you mind if they smoke.
- Put stickers, buttons, and signs in your home, car, and office. Request seating in nonsmoking sections when you travel.
- Support legislation to restrict smoking or set up smoke-free areas in public places.
- Ask your doctor and dentist to restrict smoking in their waiting rooms and to establish no-smoking regulations in all health care facilities, including hospitals.
- Propose no-smoking resolutions at organization meetings. Encourage hotels and restaurants to establish no-smoking areas.
- Contact your lung association to discuss ways to protect nonsmokers at work.

Second-Hand Smoke

Are you a nonsmoker who is shy about defending yourself against inconsiderate smokers?

Or are you a smoker who doesn't realize the distress you inflict on nonsmokers?

Find out the effects of tobacco smoke on nonsmokers.

Take A Look At The Facts

asbestos exposure. Case histories were studied for smoking and drinking habits and occupation. In 14 of 156 available chest X-rays typical PP were found; a significantly higher incidence than expected in the region ($p < 0.001$), but in agreement with earlier studies, which are reviewed. It is suggested that all patients with laryngeal carcinoma should be questioned about exposure to asbestos, and that in patients occupationally exposed to asbestos, the occurrence of laryngeal carcinoma should be considered an occupational disease. It is concluded that exposure to asbestos in association with smoking gives rise to a higher incidence of laryngeal carcinoma. (Auth. Abs. Mod.)

81-1088. Hirayama, T. Non-Smoking Wives of Heavy Smokers Have a Higher Risk of Lung Cancer: A Study From Japan. *British Medical Journal* 282: 183-185, January 17, 1981.

A Japanese study of 91,540 nonsmoking wives aged 40 and above who were followed up for 14 years (1966-79) is described. Standardized mortality rates for lung cancer were assessed according to the smoking habits of their husbands. Wives of heavy smokers were found to have a higher risk of developing lung cancer and a dose-response relationship was observed. The relationship between the husband's smoking and the wife's risk of developing lung cancer showed a similar pattern when analyzed by age and occupation of the husband. The risk was particularly great in agricultural families when the husbands were aged 40-59 at enrollment. The husbands' smoking habit did not affect their wives' risk of dying from other diseases such as stomach cancer, cervical cancer, and ischemic heart disease. The risk of developing emphysema and asthma seemed to be higher in nonsmoking wives of heavy smokers, but the effect was not statistically significant. The husbands' drinking habit seemed to have no effect on any causes of death in their wives, including lung cancer. These results indicate the possible importance of passive or indirect smoking as one of the causal factors of lung cancer. They also appear to explain the longstanding riddle of why many women develop lung cancer although they themselves are nonsmokers. These results also cast doubt on the practice of assessing the relative risk of developing lung cancer in smokers by comparing them with nonsmokers. (Auth. Abs.)

81-1089. Kunze, M.; Vutuc, C. Threshold of Tar Exposure: Analysis of Smoking History of Male Lung Cancer Cases and Controls. In: Gori, G. B.; Bock, F. G. (Editors). *Banbury Report 3. A Safe Cigarette?* New York, Cold Spring Harbor Laboratory, March 12, 1980, pp. 29-36.

In the study described, individual tar exposure was quantified for a lifetime of smoking to determine a threshold below which the smoker is at a "tolerable risk" for lung cancer. The exposure figure would represent the sum of all the tar yields of all the cigarettes ever smoked by an individual. Over 700 male lung cancer patients and over 1,500 controls, in three subject samples, were evaluated in terms of neoplasm incidence, smoking history, and total tar exposure. It was found that the average tar exposure in tumor patients is significantly higher than that of the controls. In general, higher tar exposures correlated with higher risks of various types of cancer. The threshold for tolerable risk was determined to be around 500 exposure units (based on the calculation method used). This would roughly equate to consumption of one pack per day of a low-tar brand (less than 15 mg) for 20 years.

81-1090. Langenbach, R.; Malick, L.; Nesnow, S. Rat Bladder Cell-Mediated Mutagenesis of Chinese Hamster V79 Cells and Metabolism of Benzo(*a*)pyrene. *Journal of the National Cancer Institute* 66(5): 913-917, May 1981.

Primary rat bladder epithelial cells were cocultivated with Chinese hamster V79 cells in the presence of carcinogens, and the induction of 6-thioguanine resistance in the V79 cells was used as a marker of cell-mediated mutagenesis. The carcinogens dimethylnitrosamine, 7,12-dimethylbenz(*a*)anthracene, and benzo(*a*)pyrene (BP) were mutagenic to V79 cells in the presence of bladder cells but not in their absence. Analysis of BP metabolites formed by bladder cells indicated that 7,8-dihydro 7,8-dihydroxybenzo(*a*)pyrene, 9,10-dihydro-9,10-dihydroxybenzo(*a*)pyrene, benzo(*a*)pyrene-3,6-quinone, and 9-hydroxybenzo(*a*)pyrene were the major organic-soluble metabolites formed. Glucuronide and sulfate conjugates of BP metabolites were also produced by bladder cells. Mutagenesis data from the rat bladder system and previous data from rat liver and lung cell-mediated mutagenesis systems indicate that the cell-mediated mutagenesis approach may provide a useful approach for studying the organotropic effect of chemical carcinogens. Furthermore, the finding that rat bladder epithelium can metabolize some carcinogens offers new possibilities for the mechanism of initiation of bladder cancer. (Auth. Abs.)

81-1091. Miller, A. B. Epidemiology and Etiology of Lung Cancer. In: Hansen, H. H.; Rorth, M. (Editors). *Lung Cancer 1980.* Amsterdam, Excerpta Medica, International Congress Series 525, 1980, pp. 9-26.

Epidemiologic evidence compiled by the International Union Against Cancer and the International Agency For Research on Cancer, from a number of cancer registries throughout the world, clearly identifies the carcinogenic risk factors associated with cigarette smoking. Incidence of lung cancer data in males and females, derived from these studies and standardized to world population, shows that the highest and lowest incidence for men in Liverpool, United Kingdom, and Ibadan, Nigeria, respectively. For females, Maori, New Zealand, and Ibadan, Nigeria, present the highest and lowest figures. These risks are compounded by other environmental factors, such as asbestos, radiation, and other forms of air pollution, which frequently confuse the smoking issue. One of the more recent studies sponsored by the Tobacco Research Council in the United Kingdom, involving a comparison of mortality between different areas in the north of England while taking into account differences in smoking incidence, confirmed the overwhelming importance of cigarette smoking as a risk factor. Therefore, a

major reduction of lung cancer incidence and mortality will occur only when there is a substantial shift in population exposure to smoking. In Canada, a reduction in smoking in males gives rise to cautious optimism; however, in females this trend is not yet apparent. Smoking bans in public places along with a gradual change in the public's tolerance to cigarette smoke forecast a major impact in most technologically advanced countries with a resultant reduction in both incidence and mortality from lung cancer in both sexes.

81–1092. Milti, L.; Massei, V.; Sanguinetti, C. M.; Forastieri, L.; Pomifazi, F.; Frascione, P.; Vennarucci, L. S. I Tumori Broncopolmonari. [Bronchiopulmonary Tumors.] *Minerva Medica* 70(3):.217-230, January 21, 1979, Italian.

An examination was made of 259 subjects, 242 males and 17 females, with primitive pulmonary carcinoma. Of the male group, 75 percent were smokers—most smoking between 11-30 cigarettes per day—and 19 were former smokers (11 of whom had quit for more than 5 years). Among the items taken into consideration were the symptoms, age of the subjects, year of diagnosis, clinical prognosis, and TNMP models. It is noted that bronchiopulmonary cancer rates have been on the rise during the past 10 years, and that this is probably connected to the increase in cigarette consumption.

81–1093. Ohmori, T.; Mori, H.; Rivenson, A. A Study of Tobacco Carcinogenesis XX. Mastocytoma Induction in Mice by Cigarette Smoke Particulates ("Cigarette Tar"). *American Journal of Pathology* 102(3): 381-387, March 1981.

A significant incidence of cutaneous mastocytomas was observed in female mice of CAF/J and ARS-HA (ICR) strains upon long-term application of cigarette smoke condensate suspensions ("tar"). The mastocytomas were not detected in control groups treated with acetone, benzo(*a*)pyrene (BaP), tetradecanoyl pherbol acetate (TPA), nor in mice treated once with an initiator dose of 75 mg 7, 12-dimethylbenz(*a*)anthracene (DMBA). The skin mastocytomas were constantly accompanied by diffuse dermal mast cell infiltration (DDMI), which was also seen in the tumor-free skin of the "tar"-treated mice. These results indicate that mastocytomas were induced by agents present in the cigarette smoke condensate. DDMI might be a precursor of mastocytomas. (Auth. Abs.)

81–1094. Reif, A. E. Effect of Cigarette Smoking on Susceptibility to Lung Cancer. *Oncology* 38: 76-85, 1981.

It has been suggested that genetic predisposition to lung cancer is a more important factor than cigarette smoking, and that, therefore, one may smoke. Recently, this thesis has been defended strongly, but this literature survey indicates that the genetic susceptibility for development of lung cancer varies between individuals. Therefore, to conclude from this that one may smoke would be valid only if there was a close relationship between the genetic tendency to smoke cigarettes and the genetic tendency to develop lung cancer. The evidence that such a relationship does not exist is overwhelming. It is, therefore, valid to conclude that the large excess of deaths from lung cancer in cigarette smokers as compared to nonsmokers is a direct consequence of smoking cigarettes. To illustrate the effect of cigarette smoking on susceptibility to lung cancer, the distribution of susceptibilities to lung cancer in cigarette smokers and in nonsmokers has been derived. The shape of the susceptibility distribution is determined by the effects of all environmental carcinogens (both known and unknown) to which the population has been exposed, as well as by differences in genetic susceptibility between members of the population. The method described has general application. (Auth. Abs.)

81–1095. Rivedal, E.; Sanner, T. Potentiating Effect of Cigarette Smoke Extract on Morphological Transformation of Hamster Embryo Cells by Benzo[*a*]pyrene. *Cancer Letters* 10(3): 191-198, September 1980.

Morphological transformation in the hamster embryo cell bioassay was used to study the possibility that carcinogenicity of benzo(*a*)pyrene (BP) is affected by cigarette smoke extract and whether smoke extract would promote transformations initiated by BP. The transformation frequency increases with increasing concentrations of BP and smoke extract. In experiments with a combined treatment of BP and smoke extract, the transformation rates were higher than expected for all concentrations from experiments with the compounds tested separately. The greatest potentiating effect was found using 0.01 µg/ml BP and 1 µg/ml smoke extract. The transformation frequency obtained with this combination was 4.3 percent compared to 1.4 percent and zero, respectively, for the individual substances. In experiments where cells were treated sequentially with BP (0.05 µg/ml) for 4 days, followed by smoke extract (1 or 5 µg/ml) for the next 4 days, the transformation frequency was significantly higher than expected on the basis of the compounds tested separately. The demonstration of a synergistic effect between BP and cigarette smoke and the promotion-like effect of smoke extract on BP-initiated transformations of hamster embryo cells are of interest in relation to the higher frequency of lung cancer found in areas with high air pollution compared to rural areas. (Auth. Abs.)

81–1096. Ruffie, P.; Hirsch, A.; Marteau, D.; Dignon, J.; Chretien, J. Etude Etiologique et Histologique de 448 Cancers du Poumon. [Etiological and Histological Study of 448 Cases of Lung Cancer.] *Annales de Medecine Interne* 132(1): 12-15, 1981, French.

Distribution of histological types of lung cancer and correlation of cell types with sex, smoking habit, and asbestos exposure were studied over an 8-year period in 425 male and 23 female patients in a French hospital. The mean age of the patients was 63.2 years. The epidermoid cancer type was the most frequent both in the male (77.6 percent of all lung

RODALE PRESS

MEMORANDUM

TO: All Rodale Press Employees

FROM: Bob Rodale

SUBJECT: A uniform no-smoking policy

For a number of years, smoking has not been permitted in some Rodale Press buildings, and in certain office areas. Yet smoking has been allowed in the majority of our work areas.

Because of this policy confusion and recent rise in complaints about smoking, I feel that it's time we work toward a uniform no-smoking policy. Here are the reasons. Most important, the non-smokers among us feel very strongly that they have a right not to breathe second-hand smoke, which can be as dangerous to health as first-hand smoke, if you get enough of it. There are complaints not only about possible harm to health, but about inability to concentrate as well. Also very important to us are the many questions asked by visitors, who often include customers. They ask why a health-oriented company like Rodale Press permits smoking in its offices.

After considerable discussion, we have decided that January 1, 1983 will be the time when a no-smoking policy will become uniform throughout all our buildings, including not only work areas but rest rooms and eating areas as well.

Between now and then, we will offer a variety of programs to help those people who want to quit smoking. This will include additional Smokenders programs, special classes to help ex-smokers prevent weight gain and get started on a fitness plan, and booklets, posters, and meetings designed to help smokers break their habit. Information about these activities will appear regularly in What's Going on Here.

I feel that this is one of the most important steps that can be taken to improve the environment that we all live a large part of our lives in. I have never smoked, so I can't see this issue from the vantage point of someone who does. I do know this action will cause inconvenience for some people. But I hope we can work together to solve any problems and create a climate that will make it possible for smokers who wish to stop to do so.

GENERAL SERVICES ADMINISTRATION

Public Buildings Service

[41 CFR Part 101-20]

MANAGEMENT OF BUILDINGS AND GROUNDS

Smoking in GSA-Controlled Buildings and Facilities

AGENCY: Public Buildings Service, General Services Administration.

ACTION: Proposed rule.

SUMMARY: This regulation prohibits smoking in certain areas of buildings controlled by GSA. It has become necessary to regulate smoking in certain areas of Federal buildings because smoke in a confined area may be irritating and annoying to nonsmokers and may create a potential hazard to those suffering from heart and respiratory diseases or allergies. The intent of this regulation is to provide a reasonably smoke-free environment in certain areas for those working and visiting in GAS-controlled buildings.

DATE: Comments must be received on or before October 11, 1978.

ADDRESS: Comments should be addressed to the General Services Administration (PBOP), Washington, D.C. 20405.

FOR FURTHER INFORMATION CONTACT:

Mr. Donald Winegarden, Director, Operations Division, Office of Buildings Management, General Services Administration, Washington, D.C. 20405, 202-566-1563.

Subpart 101-20.1 Building Operations, Maintenance, Protection, and Alterations

Section 101-20.109-10 is revised to read as follows:

§ 101-20.109-10 Regulations of smoking.

Regulation for controlling smoking in GSA-controlled buildings and facilities are set forth below. Agencies are encouraged to develop additional guidelines for internal use and for taking appropriate administrative action when violations of these regulations occur.

(a) Smoking is prohibited in the following areas:

(1) *Auditoriums, classrooms, and conference rooms.* Buildings managers shall insure that signs and adequate receptacles for smoking refuse are placed outside the entrances to auditoriums, classrooms, and conference rooms.

(2) *Elevators.* "No smoking" signs shall be posted in elevators, and adequate receptacles shall be placed outside the entrances.

(3) *Shuttle vehicles.*

(4) *Hazardous areas.* Each agency shall post and enforce "no smoking" rules in any location under its jurisdiction which involves flammable liquids, flammable gases, or flammable vapors, or in all other locations where there is a collection of readily ignitible, combustible materials.

(b) Smoking is not permitted in libraries, except in those non-stack areas that are designated as "smoking" areas. These areas shall be established by the buildings manager in collaboration with the heads of the occupant agencies.

(c) An employee who occupies a private office is authorized to declare that office a "no smoking" area.

(d) "No smoking" areas shall be established in cafeterias. These areas shall be designated as "no smoking" areas by each building manager, in collaboration with the heads of the occupant agencies. The areas designated shall be based upon an estimate of the number of smoking and nonsmoking patrons served. This may be adjusted on the basis of local experience. The "no smoking" areas shall be identified by appropriate signs.

(e) The establishment of "no smoking" work areas in open space should be thoroughly investigated. Supervisors should plan work space in a manner so that employees who desire a "no smoking" area can be accommodated: *Provided,* That: (1) Efficiency of work units will not be impaired, (2) additional space will not be required, and (3) costly alterations to the space or procurement of additional office equipment will not be necessary. Agencies are responsible for insuring that "no smoking" areas are identified by appropriate signs. In establishing and continuing a smoking policy in work areas under their jurisdiction, supervisors should strive to maintain an equitable balance between the rights of nonsmokers and those of smokers.

(f) In medical care facilities such as medical clinics and health units, smoking is restricted to visitor waiting areas, staff lounges, private offices, and specially designated areas. Waiting areas shall be divided into areas designated as "smoking" and "no smoking" whenever possible.

(g) Agencies are responsible for providing adequate noncombustible ash trays or receptacles in locations where smoking is permitted.

(Sec. 205(c), 63 Stat. 390 (40 U.S.C. 486(c))

Dated: August 25, 1978.

JAMES B. SHEA, Jr.,
Commissioner,
Public Buildings Service.

TO: State Affairs, Resources & Judiciary Committees

Dear Committee Members:

We are both state office workers in the Department of Labor Building. The Air conditioning doesn't work and our superiors have repeatedly failed to address the problem of smoke in the air with reasonable accomodations to protect us from the effects of ambiant smoke inhalation. In the light of recent court decisions on the subject and in behalf of the approximately two thirds of state workers who don't smoke please consider your duty to your constituents and to the state workers and give your full support to passage of House Bill #84 "An Act Relating to Smoking in Public Places and Vehicles".

Thank you,
Roberta S Banko.

Feb. 14, 1983

TO: State affairs, Resources + Judiciary Committees

Dear Committee members,

I would appreciate your consideration of House Bill # 84 "an act Relating to Smoking in Public Places + Vehicles.

I am now in private business + do not allow smoking on the premises due to the fact that I quit working at the museum (Dept. of Ed.) to get away from smoke as I have a real allergy to cigarette smoke.

Sincerely,

Martha Stevens

February 23, 1983

Thank you for permitting me to make this presentation in favor of the passage of HB-84.

The Judiciary Committee will be interested in learning of two recent court decisions relating to one aspect of the proposed law as contained in HB-84, that of protecting the non-smoking employee in the workplace:

1. In the first decision (Vickers v. Veteran's Administration, U.S. District Court, Seattle, WA, August 31, 1982), the plaintiff was found by the Court to be protected as a "handicapped person" by provisions of the Rehabilitation Act of 1973 (29 U.S.C. §794). The plaintiff, Mr. Vickers, is an employee hypersensitive to tobacco smoke who brought suit for relief from the smokey office atmosphere in which he worked.

   The importance of this decision is the formal declaration by the court of the inclusion of persons hypersensitive to ambient tobacco smoke under the federal law assisting handicapped persons in the workplace.

2. In the second case (Parodi v. Merit Systems Protection Board, 690 F. 2d 731 (1982)), another employee, also hypersensitive to the tobacco smoke in her place of work, had been advised by her physician to retire, since her allergy made it impossible to work in the smokey office to which she had been assigned. The Ninth Circuit Court of Appeals declared that the employee suffers from an "environmental limitation" and has the right to disability retirement benefits, unless her employer can place her in a "safe," "smoke-free" environment in which she can perform her duties.

   One important fact about this case is that it was decided by the second highest court in our country. Another is the declaration of the plaintiff as having "environmental limitations;" the law has previously only spoken to assisting workers having physical limitations, such as vision problems, those confined to wheelchairs, and so forth.

   To me, the most interesting possible effect of this court decision is as follows: I believe it was the 1964 U.S. Surgeon General's report on smoking which provided the statistic that approximately six percent of the American public is allergic to tobacco smoke. Assuming that the Alaska population follows this norm, it may be that, among employees working for the State of Alaska alone, six hundred (6% of approximately 10,000 state employees) may now be eligible for disability retirement benefits if they cannot be placed into work environments free of smoke. The economics behind such a statistic are very interesting.

Numerous corporations in the United States, taking the above judicial decisions into consideration, have solved the problem by simply taking a poll of employees, and based upon statements of employees regarding their desire to work in or out of a smokey area, have revised floorplans

and work areas, installed improved air circulation systems, smoke-eaters, and so forth.

I strongly urge this Judiciary Committee to recommend passage of HB-84 which will assist in a voluntary implementation of provision of safe working conditions for workers in Alaska. To assist you, copies of the above-referenced decisions are attached for your review.

Thank you.

Marilyn Norton

court adjudicate," *id.*, he or she is not identified, nor is he or she shown to have authorized the Foundation to represent him or her in making such a showing. They simply are not here.

B. *The Legislator Plaintiffs.*

[2] As we have seen, these plaintiffs sue only in their official capacities as members of the Legislature. They do not assert independent claims as individuals. Thus, their specific claims are confined to those under Article IV, Section 4, and the Fifth and Tenth Amendments. But those are claims of the State of California, and there is no allegation that the legislator plaintiffs represent, much less that they have been authorized to represent the house of the legislature of which they are members, the legislature itself, or the State.

For all that appears, the State may not desire to assert the constitutional claims that they make, either because it does not believe that the claims have merit, or for other reasons. In California, the Attorney General is, "[s]ubject to the powers and duties of the Governor, ... the chief law officer of the State." Cal.Const., Art. 5, § 13. He "has charge, as attorney, of all legal matters in which the State is interested ..." (Cal. Government Code § 12511), and "... shall ... prosecute or defend all causes to which the State ... is a party...." (*Id.*, § 12512). For whatever reason, he is not here.

In *Mountain States Legal Foundation, supra*, the state was before the court, arguing against the petitioners' claims. Here, it is not present at all. That fact, however, does not, by some alchemy, transfer the state's claims to the plaintiffs, just because the plaintiffs want to assert them. Here again, *Mountain States* is directly in point. *See* 630 F.2d at 769-771.

If we assume that the allegation that "plaintiffs" are injured by the ban on construction of major sources of pollution is intended to include the plaintiff legislators, it is still insufficient to give them standing. The injury involved, "economic stagnation," or "severe economic dislocation," may or may not in fact affect any of them, or any of the Foundation's members, supporters, or contributors. It is just the kind of claimed injury the assertion of which is an attempt at having the court adjudicate "'abstract questions of wide public significance' which amount to 'generalized grievances, pervasively shared and most appropriately addressed in the representative branches.'" *Valley Forge College, supra*, —— U.S. at ——, 102 S.Ct. at 760, *quoting Warth v. Seldin*, 1974, 422 U.S. 490, 499-500, 95 S.Ct. 2197, 2205, 45 L.Ed.2d 343.

In No. 81-4442, the judgment is affirmed. In No. 81-7060, the petition is dismissed.

Irene C. PARODI, Petitioner,

v.

MERIT SYSTEMS PROTECTION BOARD and Office of Personnel Management, Respondents.

No. 80-7671.

United States Court of Appeals, Ninth Circuit.

Argued Feb. 10, 1982.

Submitted April 13, 1982.

Decided Oct. 21, 1982.

Federal employee was denied disability retirement benefits by the Merit Systems Protection Board, and she appealed. The Court of Appeals, Pregerson, Circuit Judge, held that: (1) the Court of Appeals had appellate jurisdiction to review decision, and (2) employee established prima facie case for entitlement to benefits; however, proceeding would be remanded since record was unclear as to whether suitable employment in a safe environment was available.

Reversed and remanded.

1. United States ⇐39(15)

Judicial review of voluntary disability determinations is available where there has been a substantial departure from important procedural rights, misconstruction of governing legislation, or some like error going to heart of administrative determination. 5 U.S.C.A. § 8347(c).

2. United States ⇐39(15)

Disability benefits proceeding in which federal employee claimed that Merit Systems Protection Board misconstrued governing legislation by not finding her "totally disabled" despite her inability to perform her work in her assigned work site was subject to judicial review. 5 U.S.C.A. § 8347(c).

3. United States ⇐39(15)

Party seeking to prove disability meets initial burden of proof by showing that employee is unable, due to disease or injury to perform useful and efficient service in specific position occupied at time proceedings for voluntary or involuntary retirement are instituted by either federal employer or government. 5 U.S.C. (1976 Ed.) § 8331(6).

4. United States ⇐39(15)

Under statute pertaining to disability of federal employees, it is not required that person have serious or permanent physical problem to qualify for disability benefits; law only requires person be unable to perform useful and efficient service because of disease or injury on job last occupied. 5 U.S.C. (1976 Ed.) § 8331(6).

5. United States ⇐39(15)

Statute governing disability of federal employees does not require applicant to prove inability to perform useful service under all circumstances. 5 U.S.C. (1976 Ed.) § 8331(6).

6. United States ⇐39(15)

Once applicant for voluntary disability retirement benefits demonstrates inability to perform useful and efficient service in last job occupied, burden shifts to government to show that appropriate substitute position is available and if government satisfies that burden and offers claimant suitable position, claimant is no longer disabled within meaning of statute but if government cannot find suitable position or refuses to offer one, claimant is then entitled to disability benefits. 5 U.S.C. (1976 Ed.) § 8331(6).

7. United States ⇐39(15)

Federal employee established prima facie case of entitlement to disability retirement benefits due to her inability to continue working in a smoke-filled environment; however, record was unclear as to whether suitable employment in a safe environment was available necessitating remand for further proceedings. 5 U.S.C. (1976 Ed.) § 8331(6).

Paul M. Dubrasich, Browne & Kahn, San Francisco, Cal., for petitioner.

William Kanter, argued, Russell L. Caplan, William Kanter, Washington, D. C., on brief, for respondents.

Appeal from the Merit Systems Protection Board.

Before CHOY, PREGERSON, and POOLE, Circuit Judges.

PREGERSON, Circuit Judge:

Appellant Irene C. Parodi, a federal employee, was transferred to an office in which many other employees smoked. She began experiencing pulmonary difficulties. On her doctor's advice, she took a leave of absence from work. She then applied for employment disability benefits, claiming her reaction to cigarette smoke rendered her disabled. Doctors who examined her on behalf of the government found that she had not suffered physical damage. They did conclude, however, that her hypersensitivity to cigarette smoke prevented her from working in a smoke-filled environment. Appellee Office of Personnel Management (OPM) ruled that her medical condition did not render Parodi disabled within the meaning of the governing statute and denied disability benefits. Appellee Merit

Systems Protection Board (MSPB) affirmed the denial.

Parodi appeals, claiming that appellees, in denying her disability benefits, misconstrued the statutory meaning of "disability." Appellees answer that this court has no jurisdiction to review this case, or, if this court has jurisdiction, that Parodi was not disabled under the applicable statute.

We conclude that this court has appellate jurisdiction to review appellees' decision and that Parodi was disabled. Accordingly, we reverse and remand for further proceedings.

BACKGROUND

Parodi worked for the Defense Logistics Agency for nearly twelve years. In July 1977, the agency transferred her to a new workplace, located in a room occupied by sixty to seventy people, many of whom smoked.

Immediately after the transfer, Parodi began missing work due to pulmonary complications which included continual phlegm production, chest pains, congestion, and difficulty breathing and speaking. A pulmonary specialist, Dr. Donald Ho, diagnosed her as suffering from "asthmatic bronchitis with hyper-irritable airways," and concluded her condition stemmed from her reaction to cigarette smoke. Dr. Ho recommended she take leave from work. She did so and her symptoms subsided. Dr. Ho then recommended she not return to work in a smoke-filled environment. Parodi continued her absence from work and, shortly thereafter, on June 26, 1979, she filed for disability retirement benefits.

Two doctors examined Parodi on behalf of the OPM. Dr. Charles Bass did not perform any objective tests but reported that Parodi did not suffer any short or long term adverse physical effects. Dr. Bass acknowledged that his opinion could change if he saw Parodi's chest x-rays and that Parodi's problem could require "personnel and environmental control." Dr. Robert Fallat, in examining Parodi, exposed her to cigarette smoke and within four minutes she suffered acute pulmonary problems including airway irritation, an increase in airway resistance, and a reduction in peak-flow rates. Dr. Fallat concluded that Parodi was hypersensitive to cigarette smoke, and recommended she "not return to employment in the same office where she previously experienced significant symptomatology." Dr. Fallat also stated that requiring Parodi to work in her previous job would endanger her health.

The OPM reviewed the medical evidence and, on September 27, 1979, concluded that Parodi was not totally disabled "within the meaning and intent of the Civil Service Retirement Regulations." Parodi appealed to the MSPB.

In its decision, the MSPB acknowledged the doctors' recommendation that Parodi not return to work in a smoke-filled environment and that her superior officer believed that she could not do her job due to pulmonary problems. The MSPB also recognized that Parodi "might reasonably be concerned with the probable risk to her future health from working in an environment where exposure to cigarette smoke presents a hazard to all employees, and particularly to herself because of her peculiar physical sensitivity." Despite these findings, the MSPB concluded that Parodi was not totally disabled and affirmed the OPM decision.

JURISDICTION

Parodi requests that this court review the MSPB's denial of her disability retirement claim. Our review of this denial is governed by several statutes. At the time Parodi filed her claim, the employee retirement statute provided that "[a]n administrative action or order affecting the rights or interests of an individual or of the United States under this subchapter [5 U.S.C. §§ 8331 et seq.] may be appealed to the Merit Systems Protection Board." 5 U.S.C. § 8347(d). Another statute provided that persons could appeal decisions of the MSPB to the United States Court of Claims or the United States Court of Appeals. 5 U.S.C. §§ 7703(a)(1) and (b)(1). Under section 7703, courts must set aside agency actions found to be "(1) arbitrary, capricious, an

abuse of discretion, or otherwise not in accordance with law; (2) obtained without procedures required by law, rule or regulation having been followed; or (3) unsupported by substantial evidence." 5 U.S.C. 7703(c). The retirement statute, 5 U.S.C. §§ 8331–48, also provided, however, that "[t]he Office [of Personnel Management] shall determine questions of disability and dependency arising under this subchapter. The decisions of the Office concerning these matters are final and conclusive and not subject to review." 5 U.S.C. § 8347(c).[1]

The question before us is whether this court may review the MSPB's denial of Parodi's claim, and if so, what standard of review should be applied. Parodi argues that this court should review the MSPB decision pursuant to the standard of review set forth in section 7703(c). Appellees contend that section 8347(c), in mandating that OPM decisions concerning disability and dependency "are final and conclusive and not subject to review," bars any judicial review of Parodi's claim.

With one exception, discussed below, courts have rejected both these positions. Courts have recognized that the "conventional 'substantial evidence'" standard of review—which Parodi seeks to apply—does not apply to disability determinations because section 8347(c) places a "special and unusual restriction on judicial examination," *Scroggins v. United States*, 397 F.2d 295, 297, 298 (Ct.Cl.), *cert. denied*, 393 U.S. 952, 89 S.Ct. 37[illegible], 21 L.Ed.2d 363 (1968).[2]

Courts, have also rejected the contention that section 8347(c) bars all judicial review of OPM disability determinations. That section specifically limits its effect to questions of "disability and dependency." Thus, courts have interpreted section 8347(c) as barring judicial review only of the evidentiary basis of determinations concerning disability and dependency. *See Scroggins*, 397 F.2d at 298, 299. Courts, however, have allowed judicial review in disability cases "where there has been a substantial departure from important procedural rights, a misconstruction of the governing legislation, or some like error 'going to the heart of the administrative determination.'" *Scroggins*, 397 F.2d at 297, *quoting Gaines v. United States*, 158 Ct.Cl. 497, 502, *cert. denied*, 371 U.S. 936, 83 S.Ct. 309, 9 L.Ed.2d 271 (1962). *See also Polos v. United States*, 621 F.2d 385, 391 n.9 (Ct.Cl.1980); *Fancher v. United States*, 588 F.2d 803, 806 (Ct.Cl. 1978); *Allen v. United States*, 571 F.2d 14, 17 (Ct.Cl.1978); *McFarland v. United States*, 517 F.2d 938, 942–43 (Ct.Cl.1975), *cert. denied*, 423 U.S. 1049, 96 S.Ct. 776, 46 L.Ed.2d 638 (1976); *McGlasson v. United States*, 397 F.2d 303, 307 (Ct.Cl.1968); *Smith v. Dulles*, 236 F.2d 739, 742 (D.C.Cir.), *cert. denied*, 352 U.S. 955, 77 S.Ct. 329, 1 L.Ed.2d 244 (1956); *Matricciana v. Hampton*, 416 F.Supp. 288, 289 (D.Md.1976); *Cantrell v. United States*, 240 F.Supp. 851, 853 (W.D.S.C.1965), *aff'd*, 356 F.2d 915 (4th Cir. 1966).[3]

Thus, under this so-called *Scroggins* rule, courts treat section 8347(c) as limiting, rather than barring, judicial review otherwise provided by section 7703(c). While the *Scroggins* standard of judicial review and the standard of review provided by section 7703(c) are similar—both allow courts to

1. Congress amended section 8347(c) in 1980 to provide for judicial review under 5 U.S.C. § 7703(c) in involuntary disability retirement cases where the employee was found disabled on the basis of his or her mental condition. Pub.L.No.96-500, 94 Stat. 2696 (1980), (codified at 5 U.S.C. 8347(d) (1981)). As the statute went into effect January 1, 1981 and Parodi's claim did not involve an involuntary claim on the basis of her mental condition, the amendment does not control her case. The significance of the amendment is discussed *infra*.

2. The statute was amended since *Scroggins*. The change—substituting the OPM for the Civil Service Commission in subsection 8347(c) and the MSPB for the Civil Service Commission in subsection 8[illegible](d)—was a technical amendment and does not affect the *Scroggins* doctrine. *See Ch[illegible] v. Office of Personnel Management*, MSPB No. DA 831609003 (May 28, 1981), slip op. [illegible]

3. Congress did not explain the purpose of section 8347(c). *See Matricciana v. Hampton*, 416 F.Supp. 288, 289 n.1 (D.Md.1976). (After an exhaustive search, counsel was unable to come up with an explanation of the purpose of section 8347(c) in the legislative history.)

overturn decisions based upon improper procedures or misconstruction of the law—the *Scroggins* standard of review is narrower. Courts reviewing agency decisions under section 7703(c) overturn decisions not supported by substantial evidence whereas, courts reviewing decisions controlled by section 8347(c), as construed by *Scroggins*, may not reexamine the evidentiary basis for an agency's disability determination.

This construction of section 8347(c), which limits rather than bars judicial review, is consistent with the presumption favoring judicial review of agency actions. "Only upon a showing of 'clear and convincing evidence' of a contrary legislative intent should the courts restrict access to judicial review." *Abbott Laboratories v. Gardner*, 387 U.S. 136, 141, 87 S.Ct. 1507, 1511, 18 L.Ed.2d 681 (1967), cited in *Dunlop v. Bachowski*, 421 U.S. 560, 567, 95 S.Ct. 1851, 1857–58, 44 L.Ed.2d 377 (1975). The language of section 8347(c) does not provide clear and convincing evidence of a congressional intent to bar all judicial review of disability determinations. The statute only evinces a congressional intent to bar judicial review of factual questions concerning disability and dependency.[4]

The Eighth Circuit recently became the first court to reject the Court of Claims' *Scroggins* rule by holding that courts lack jurisdiction to review voluntary—i.e., employee-initiated—disability retirement decisions. *Morgan v. Office of Personnel Management*, 675 F.2d 196 (8th Cir. 1982). The *Morgan* court asserted that the 1980 amendment to the disability statute, Pub. L.No. 96–500, 94 Stat. 2696 (December 1980), indicates that Congress recognized that section 8347(c) mandates a total bar on judicial review of voluntary disability decisions. The 1980 amendment, however, made involuntary—i.e., agency-initiated—disability retirement determinations based on an employee's mental condition subject to judicial review pursuant to the provisions of 5 U.S.C. § 7703, rather than the narrower provisions of section 8347(c).

According to *Morgan:*

> this amendment expressly providing for judicial review under § 7703 would have been redundant if § 8347(c) had already provided for judicial review under § 7703. The 1980 amendments are specific. Had Congress intended to provide for judicial review of *all* disability determinations and not just agency-initiated involuntary disability retirement determinations based in whole or in part upon mental condition, Congress could have so provided.

Morgan, 675 F.2d at 200 (emphasis original).

We disagree with the *Morgan* analysis. The argument that the 1980 amendment would have been redundant if section 8347(c) had provided for judicial review under section 7703 is irrelevant for the simple reason that section 8347(c), as construed by *Scroggins*, does not provide for review under section 7703. Rather, as noted above, *Scroggins* teaches that section 8347(c) limits the review provided by section 7703(c). The 1980 amendment gave courts power to review the facts underlying an MSPB decision involving an involuntary disability determination based on mental condition—a power courts do not possess, under *Scroggins*, when reviewing a MSPB decision involving a voluntary disability application. Thus, there is no conflict or redundancy between *Scroggins'* interpretation of section 8347(c) and the 1980 amendment. The amendment, rather than duplicating *Scroggins*, expands judicial review beyond that provided for by *Scroggins* for involuntary disability retirement determinations based on mental condition.

The *Morgan* court also misread the legislative reports accompanying the 1980 amendment. *Morgan* contends that the re-

4. Had Congress wished to preclude judicial review of both factual and legal questions, Congress could have so provided. *See* 38 U.S.C. § 211(a) as it read prior to its 1970 amendment. ("[D]ecisions of the Administrator on any question of law or fact concerning a claim for benefits or payments under any law administered by the Veterans' Administration shall be final and conclusive and no other official or any court of the United States shall have power or jurisdiction to review any such decision.")

ports refer to a bar on *all* judicial review. The House Report, however, in discussing the problem Congress intended the amendment to remedy, pointed to three cases that did not allow "judicial review" to show that the amendment was necessary. H.Rep.No. 1080, 96th Cong., 2d Sess. 4 (1980). All three cases—*Scroggins v. United States*, 397 F.2d 295 (Ct.Cl.), *cert. denied*, 393 U.S. 952, 89 S.Ct. 376, 21 L.Ed.2d 263 (1968), *McGlasson v. United States*, 397 F.2d 303 (Ct.Cl.1968), and *McFarland v. United States*, 517 F.2d 938 (Ct.Cl.1975)—held that under section 8347(c), courts could not review the factual findings that underlie an agency's disability and dependency determinations, but that limited judicial review, i.e., review under the *Scroggins* rule, is appropriate. Thus, the bar on judicial review referred to by the reports precludes only judicial review of factual findings.

The legislative history of the 1980 amendment also indicates that Congress amended the statute based, in part, on the OPM's representation that section 8347(c) already allowed limited judicial review of all disability proceedings. As *Morgan* notes, Congress passed the 1980 amendment to prevent involuntary disability retirement proceedings from being misused to force employees out of active service for reasons of mental competency. *Morgan*, 675 F.2d at 200. *See also* S.Rep.No.1004, 96th Cong., 2d Sess. 2, *reprinted in* 1980 Code Cong. & Ad.News 5986, 5987. At the time the initial House version of the amendment was passed, the OPM objected that the proposed standard of judicial review—*de novo* review of the evidence—was too broad. *See* letter of Alan K. Campbell, Director, OPM, May 14, 1980, H.R. 96-1080, at 8. The OPM, however, did not argue that judicial review was not otherwise available. In fact, the OPM took a position opposed to that which it now takes before this court by admitting that judicial review exists for all disability retirement decisions and that the *Scroggins* rule was appropriate for reviewing voluntary disability determinations. The Director of the OPM wrote Congress:

> We believe it is reasonable and proper to restrict *expanded* judicial review to involuntary disability retirements. An employee who voluntarily applies for disability retirement seeks to establish title to a benefit granted by law; the Office of Personnel Management is the administrative agency charged under the law with the managerial function of adjudicating disability retirement claims. *It is appropriate, therefore, that OPM decisions on voluntary applications be conclusive, reviewable only to determine whether there has been a substantial procedural error, a misconstruction of governing legislation, or some like error going to the heart of the administrative determination.*

H.R. 96-1080 at 8 (emphasis added).[5]

Thus, we disagree with the Eighth Circuit's conclusion that the 1980 amendment indicates that section 8347(c) forecloses all judicial review.[6] Rather, the history and language of the 1980 amendment indicate Congress merely wished to expand judicial review for involuntary disability retirement determinations based on an employee's mental condition, not that Congress believed the law barred all judicial review of disability determinations.

[1] Therefore, we decline to follow the *Morgan* decision and agree with the prior consistent judicial opinions that section 8347(c) does not bar all judicial review.[7]

5. A similar letter accompanies S.R. 96-1004, but is not reprinted in the Congressional & Administrative News. The letter may be found in the 1980 Senate Reports, on microfilm in the Library of the United States Court of Appeals for the Ninth Circuit.

6. "Although we look to the reasoning of other circuits and district courts for guidance, we are bound only by decisions rendered in this circuit." *Gunther v. County of Washington*, 623 F.2d 1303, 1319 (9th Cir. 1979), *aff'd*, 452 U.S. 161, 101 S.Ct. 2242, 68 L.Ed.2d 751 (1981).

7. Appellees also assert that the Supreme Court's decision in *United States v. Erika, Inc.*, —— U.S. ——, 102 S.Ct. 1650, 72 L.Ed.2d 12 (1982), precludes judicial review of voluntary disability decisions.

We adopt the *Scroggins* rule and hold that judicial review of voluntary disability determinations is available where there has been a substantial departure from important procedural rights, a misconstruction of the governing legislation, or some like error going to the heart of the administrative determination.

[2] Here, Parodi claims the agency misconstrued the governing legislation by not finding her "totally disabled" despite her inability to perform her work in her assigned worksite. This case, therefore, falls squarely within the *Scroggins* doctrine and is subject to judicial review.

DISABILITY

The parties do not dispute the essential facts of this case: Parodi worked in an environment containing cigarette smoke; due to her hypersensitivity to cigarette smoke, she could not work at her assigned worksite; further employment at her worksite would subject her to risk of permanent lung impairment; but she could work in an environment containing less cigarette smoke. Given these facts, the issue here is whether the OPM and MSPB erred in finding that Parodi was not "totally disabled."

[3] Under the governing legislation a person is totally disabled if unable to perform "useful and efficient service in the grade or class of position last occupied by the employee or Member because of disease or injury not due to vicious habits, intemperance, or willful misconduct on his part within five years before becoming so disabled." 5 U.S.C. § 8331(6).[8] Under this statute, the party seeking to prove disability meets its initial burden of proof by showing that the employee is unable, due to disease or injury, to perform useful and efficient service in the specific position occupied at the time proceedings for voluntary or involuntary retirement are instituted by either the employee or the government. *See Cerrano v. Fleishman*, 339 F.2d 929, 931 (2nd Cir. 1964), *cert. denied*, 382 U.S. 855, 86 S.Ct. 106, 15 L.Ed.2d 93 (1965).

Appellees do not dispute that Parodi, because of her disease,[9] is unable to perform the specific position she last occupied. Rather, appellees contend that Parodi is not disabled because she does not suffer any permanent or serious impairment, and because she would be able to work in an area with less cigarette smoke.[10]

the amounts of benefits payable under Part B of the Medicare Statute. Part A of the Medicare statute covers institutional health care costs such as hospital expenses. Part B provides supplemental benefits for certain medical expenses excluded from the Part A program. The Court held that the Court of Claims has no jurisdiction over Part B determinations.
Erika is not applicable to the instant case. While *Erika* dealt with the question of judicial review, the Court did not provide any general guidelines for determining whether a statute precludes judicial review. In fact, the Court specifically noted that judicial review was only foreclosed "[i]n the context of the [Medicare] statute's precisely drawn provisions." *Id.* 102 S.Ct. at 1654. The Medicare provisions are different from the retirement disability provisions at issue in this case. Further the Court noted that the Medicare statute's legislative history provides clear evidence of Congress' intent to limit judicial review of Part B decisions. *Id.* 102 S.Ct. at 1654–55. Appellees cannot point to any similar history for section 8347(c).

8. This definition was replaced in 1980. Act of Dec. 5, 1980, Pub.L.No.96–499, Title IV, § 403(b), 94 Stat. 2606. The new definition of disability provides in part:

> Any employee shall be considered to be disabled only if the employee is found by the Office of Personnel Management to be unable, because of disease or injury, to render useful and efficient service in the employee's position and is not qualified for reassignment, under procedures prescribed by the Office, to a vacant position which is in the agency at the same grade or level and in which the employee would be able to render useful and efficient service.

Id. § 403(a) (codified at 5 U.S.C. § 8337(a) (1981)). The new definition of "disabled" is not applicable to the present case because the amendments were not effective until 90 days after the effective date of the act, December 5, 1980. *Id.* § 403(c).

9. Parodi's disease is asthmatic bronchitis with hyper-irritable airways disease. Appellees do not assert her disease was caused by vicious habits, intemperance, or willful misconduct.

10. Parodi contends she would be unable to work in a location containing *any* cigarette

[4] Both contentions suffer the same flaw—they impose on claimants seeking disability benefits certain requirements beyond those imposed by section 8331(6). As to appellees' first contention, section 8331(6) does not require that a person have a serious or permanent physical problem to qualify for disability benefits.[11] The law only requires the person be unable to perform useful and efficient service, because of a disease or injury, in the job last occupied.

[5] Appellees' second contention—that Parodi is physically able to perform her job—is also irrelevant. Section 8331(6) does not require an applicant to prove an inability to perform useful service under all circumstances. While Parodi could perform her previously assigned job in an area with less smoke, as stated above, all she must show under section 8331(6) is an inability, due to an injury or disease, to perform the job she occupied at the time she applied for disability benefits. *Cerrano*, 339 F.2d at 931. She has done so.[12]

While Parodi's condition presents a prima facie case for disability benefits, we recognize that her claim is unusual. Most disability claims involve a physical or mental limitation that prevents a claimant from performing his or her job. Parodi has an environmental limitation. Unlike a person with a physical limitation, a person with an environmental limitation can physically perform the assigned work in a proper environment. Here, Parodi could perform the work assigned to her if she were placed in a smoke-free environment. Parodi cannot, however, perform her job due to its location in a smoke-filled office. She is as disabled for her job at her assigned worksite as she would be had she actually suffered permanent and severe chronic bronchitis or another physically disabling disease. She cannot perform her job, not due to choice or bad habits, but due to a disease which limits the environment in which she can work.

Section 8331(6) does not exclude environmental limitations from forming the basis of an employee's disability. Appellees have not cited any authority or justification for precluding victims of environmental limita-

smoke. The question whether she could work in a location containing less cigarette smoke or whether she requires total isolation from cigarette smoke is not relevant here as the government did not offer Parodi employment in any location containing less smoke than at her previous place of employment.

11. Section 8331(6) makes no reference to "severity" or "seriousness" of the injury or disease. Had Congress intended "seriousness" to be a prerequisite to recovering benefits, it could have explicitly required a showing of seriousness. The federal disability insurance benefits statute, for example, defines disability as:

> (i)nability to engage in any substantial gainful activity by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than twelve months.

42 U.S.C. § 423(d)(1)(A). This definition requires the claimant to prove a serious medical problem before receiving benefits. No such requirement exists under section 8331(6). Further, disability does not always involve a physical impairment. For example, in *Globe Union, Inc. v. Baker*, 310 A.2d 883 (Del.Super. 1973), *aff'd*, 317 A.2d 26 (Del.1974), the claimants worked in an environment of high lead concentration. When the lead level in their blood reached a certain point, they were transferred to less remunerative jobs in lead-free environments. They applied for and received partial disability benefits. The employer appealed claiming that disability requires physical incapacity as well as loss of wages. The court rejected this argument and affirmed the award. While this case involved the Delaware workers' compensation statute, the principle that a finding of disability does not require a physical impairment applies to this case.

12. Under similar disability statutes, courts have held that one's ability physically to perform a job does not necessarily render the person ineligible to receive disability benefits. For example, in *Diamond M. Drilling Co. v. Marshall*, 577 F.2d 1003 (5th Cir. 1978), the claimant suffered a heart attack on the job and filed for benefits under the Longshoreman's Compensation Act. The Benefits Review Board found him totally disabled. The employer appealed. The court, in affirming the award, noted that one can be disabled "when physically capable of performing certain work but otherwise unable to secure that particular kind of work." 577 F.2d at 1006.

tions from receiving disability benefits.[13] As noted above, to qualify for disability benefits applicants must demonstrate an inability, due to a disease or injury, to perform useful and efficient service at the last job occupied. The nature of the disease or injury, unless it involves vicious habits, intemperance, or willful misconduct, is irrelevant.

In sum, Parodi's lack of a serious or permanent medical incapacity and her ability to perform her job in another location are immaterial to the primary question concerning disability—whether she could perform the job she last occupied. She could not.

The finding that she could not perform the job she last occupied, however, does not conclusively decide this case. Under the facts presented here, Parodi would not be disabled if the government offered her suitable employment—employment at the same grade or position in a location appropriate for Parodi's physical condition—because if such employment were offered, Parodi would be able to perform useful and efficient service. We must decide who carries the burden of proving whether suitable employment is available to Parodi.

The only case discussing this issue is *Cerrano v. Fleishman*, 339 F.2d at 926. There, the Bureau of Customs involuntarily retired Cerrano. The administrative board found Cerrano disabled for "useful and efficient service" in his position. He claimed he was not disabled for service in other positions in the same grade or class. The Second Circuit held that the Civil Service Commission, before involuntarily retiring someone, need not "search the entire galaxy of Civil Service jobs, either in the same grade or the same class, to determine whether or not there was some such position between Alaska and Florida or Hawaii and Maine, which the appellant, in spite of his disability, could fill." *Id.* at 931. The court also suggested that an *employee* applying for voluntary disability benefits would not have to prove "he was unable to perform any of the jobs which for administrative convenience are put in the same grade or class and in which, at the time, there might be an opening." *Id.*

[6, 7] We agree that an employee should not have to prove the availability of an appropriate job. The government is in a better position than the claimant to provide evidence of the availability of suitable employment, particularly the availability of employment in a safe environment. Therefore, we hold that once an applicant for voluntary disability retirement benefits demonstrates an inability to perform useful and efficient service in the last job occupied, the burden shifts to the government to show that an appropriate substitute position is available.[14] If the government satisfies this burden and offers the claimant a suitable position, the claimant is no longer disabled within the meaning of section 8331(6). If, however, the government cannot find a suitable position or refuses to offer one, the claimant is then entitled to disability benefits. In the instant case, Parodi is willing and able to work if a position in the same grade or class located

13. Analogous areas of law provide that persons suffering from environmental limitations (generally referred to as non-exertional limitations) may be considered disabled. Social Security, for example, provides disability benefits where environmental restrictions result in an "inability to tolerate some physical feature(s) of work settings that occur in certain industries or types of work." 20 C.F.R. Subpart P, App. 2, Rule 2000.00(e). *See also Gagnon v. Secretary of Health, Education, and Welfare*, 666 F.2d 662 (1st Cir. 1981). Workers' Compensation cases have also recognized environmental limitations as disabling. *See generally* 2 A. Larson, *The Law of Workmen's Compensation*, § 57.61, (1981).

14. This test is similar to that employed in determining Social Security disability. When applying for Social Security disability, a claimant carries the initial burden of establishing that he is unable to perform his previous work. Once the claimant has made such a showing, the burden shifts to the Secretary of HEW to establish that there is other substantial gainful employment which the claimant can perform. *Hall v. Secretary of HEW*, 602 F.2d 1372, 1375 (9th Cir. 1979). The test we adopt is also similar to the test employed in connection with the Longshoremen's Compensation Act. *See Bumble Bee Seafoods v. Director, Office of Workers' Compensation Programs*, 629 F.2d 1327 (9th Cir. 1980).

in a safe environment is available. Therefore, unless Parodi's environmental limitation is accommodated within 60 days by an offer of suitable employment in a safe environment,[15] Parodi is eligible for disability benefits. For good cause shown to the district court, this period could be extended.

The record is not clear whether suitable employment in a safe environment is available. If it is, and if the government does not offer Parodi such employment, she is eligible for disability retirement benefits in an amount to be determined through regular proceedings.

This panel will retain jurisdiction over further proceedings in this appeal if any are necessary subsequent to remand.

REVERSED and REMANDED for further proceedings in accordance with the foregoing opinion.

Milton VENTURA, Plaintiff-Appellant,

v.

Hoyt C. CUPP, Superintendent, Oregon State Penitentiary, Defendant-Appellee.

No. 81-3598.

United States Court of Appeals, Ninth Circuit.

Argued and Submitted Aug. 5, 1982.

Decided Oct. 21, 1982.

Petitioner appealed from an order of the United States District Court for the District of Oregon, Robert C. Belloni, J., denying a petition for habeas corpus. The Court of Appeals held that although the failure to exhaust state remedies was suggested by the record, it was not possible to determine whether the failure to exhaust was properly excused in whole or in part or whether any state remedy still existed, and therefore, appeal from denial of petition for habeas corpus would be dismissed and cause would be remanded for determination of whether any state remedies remained available to petitioner, whether any previously available state remedies were not exhausted, and whether failure to have employed available state remedies was either a deliberate bypass or a situation in which there was no cause of the failure to have employed state remedies.

Dismissed and remanded.

1. Habeas Corpus ⇐45.3(1)

Requirement of exhaustion of state remedies may not be waived by state unless the interest of justice so requires.

2. Habeas Corpus ⇐113(13)

Although the failure to exhaust state remedies was suggested by the record, it was not possible to determine whether the failure to exhaust was properly excused in whole or in part or whether any state remedy still existed, and therefore, appeal from denial of petition for habeas corpus would be dismissed and the cause would be remanded for a determination of whether any state remedies remained available to petitioner, whether any previously available state remedies were not exhausted, and whether failure to have employed available state remedies was either a deliberate bypass or a situation in which there was no cause of the failure to have employed state remedies.

Hollis K. McMilan, Eugene, Or., for plaintiff-appellant.

Virginia L. Linder, Asst. Atty. Gen., Salem, Or., for defendant-appellee.

Appeal from the United States District Court for the District of Oregon.

15. In this case, the government could simply remove the environmental barriers or offer Parodi a job in an area containing less smoke.

Feb. 14, 1983

To: The Honorable Sponsors of HB No. 84

I would like to see passage of the above---especially as related to the "close work area". Many workers are exposed, to "smokers," who have allergy/respiratory problems and should be allowed to have a smoke-free work place.

Thank you.

Pat Ellsworth RN
Health Unit, Fed. Bldg.
Bx 378
Juneau, Alaska 99802

February 14, 1983

Dear Hearing Officer,

I support House Bill No. 84, which if enacted would prohibit smoking in public places and work area. As a nonsmoker, I am concerned about the injurious effects of secondary smoke to my health.

I believe my desire for a smoke free environment can be achieved, and that smokers may continue to smoke, by providing for designated smoking areas and segregating work areas into smoking and nonsmoking areas.

I am also concerned that the tobacco industry, by spending large amounts of money, may sway the apparent consensus of the group presenting testimony.

I hope that you will seek information from the interested public beyond the short sighted profit motive of the tobacco companies.

Sincerely,

Eugene E. Miller

HOUSE BILL 84 "SMOKING IN PUBLIC PLACES"

Traditionally, smokers have enjoyed the freedom to smoke when and where they choose. In recent years, research has shown that second hand smoke can have harmful effects on non-smokers. Non-smokers are no longer a silent majority, they mind if you smoke and are speaking up.

Tobacco smoke contains hazardous compounds; tar, nicotine, carbon monoxide, cadmium, nitrogen dioxide, ammonia, benzene, formaldehyde and hydrogen sulfide. Two-thirds of the smoke from the burning cigarette goes into the environment. The smoke from the burning end of the cigarette has the highest concentration of these pollutents.

Being in a room with smokers can significantly increase the carbon-monoxide levels in non-smokers. The half-life of carbon-monoxide is over 5 hours and with prolonged repeated exposure a non-smoker may have a carbon-monoxide level as high as someone that smokes. This carbon-monoxide has a higher affinity for hemoglobin in the blood than does oxygen and causes a decrease in the ability of the blood to transport oxygen thru out the body. This can lead to impaired performance and physiological stress to vital organs.

Persons exposed to second hand smoke experience an increase in the likelyhood of developing; broncitis, emphysema, lung cancer and persons with existing lung disease such as asthma who are sensitive to tobacco smoke are compromised.

Nonsmokers have the right to breath clean air, free from harmful and irritating tobacco smoke. I support House Bill 84 and encourage the legislature to take action on their behalf.

Sincerely,

Gary Dunne RRT

Gary Dunne RRT

COPY

To: All Members of the State Affairs, Resources & Judiciary Committee

From: Anna von Reitz, State Employee, Alaska Voter

Dear Committee Members,

I urge you to support and pass the proposed House Bill 84, "An Act Relating to Smoking in Public Places and Vehicles." The health hazards of smoking and of ambient smoke inhalation are well documented; the correlation between exposure to tobacco smoke and incidence of heart and lung diseases is too strong to ignore. In the best interests of public health, it is your responsibility to take action against this ubiquitous menace.

There are some special areas of concern that I urge you to consider with exceptional care -- those being the provisions to protect young children, the elderly and non-smoking members of the work force.

As you are probably well aware, the elderly and young children are especially susceptible to lung damage and impaired vascular performance, which is further complicated by exposure to ambient smoke. Non-smoking members of the work force deserve spicial consideration because their abstinence from smoking is a contributing factor toward greater productivity, lower insurance rates and lower work site maintenance costs.

A final urgent concern is for the establishment of an effective and comprehensive educational program for the general population concerning the dangers to public and personal health, and the very real social costs, that are associated with smoking and inhalation of ambient smoke.

Support House Bill 84!

Box 981
Juneau, Alaska 99802
February 9, 1983

The Honorable Mitchell F. Abood, Jr.
Chair. State Affairs Committee
Alaska State House of Representatives
Pouch V State Capitol B uilding
Juneau, Alaska 99811

Dear Mr. Abood:

Re: HB #84 SMOKING IN PUBLIC PLACES

I encourage you to work toward passing HB #84 out of your committee with a unanimous "Do Pass."

Medical studies show that exposure to tobacco smoking among healthy non-smokers significantly reduces small airway function. In people who are allergic to smoke, it can cause headaches, elevated blood pressure and heart rate, coughing and even asthma attacks. Prevent discrimination agains non smokers, by providing public places where they can do their grocery shopping etc, without being subjected to the passive act of smoking agains their own choosing.

I think people in general are considerate of others, when it is pointed out that their actions can harm others. This is demonstrated by the way people obey the no smoking signs in hospital rooms and in elevators.

HB # 84 can be used to let smokers know that non smokers have the right not to be subjected to their side smoke.

Sincerely,

Nina L. Brown R.N.

Juneau, Alaska
February 10, 1983

The Honorable Mitchell E. Abood, Jr.
Alaska State House of Representatives
Pouch "V" State Capitol Building
Juneau, Alaska 99811

Dear Sir:
RE: HB 84 Smoking in Public Places

As a respiratory Therapist in an acute care facility I see the ravages of smoking every day. Men and women who were once active and healthy now are reduced to no better than cripples by the self destructive act of smoking.

As Chairman of the State Affairs Committee, I encourage you to work toward passing this bill out of your committee with a unanimous "Do Pass." It will protect the non-smokers from the exposure to smoke in the air from smokers. Cigarette, cigar and pipe smoke does not heed "No Smoking Signs" it drifts as it pleases. Smoke assaults the lungs, sometimes only as unseen particles of all people, smokers and non smoker alike.

Smoking is an active habit done by conscious choosing, unfortunately non-smokers are subjected to the passive act of smoking against their own choosing. Passive smoking by non-smokers causes some people great distress, in the form of headache, nausea, itchy eyes and sore throats. In some cases it can trigger shortness of breath, elevated blood pressure and heart rate, coughing and even asthma attacks in some individuals. The worst result of passive smoking is the effect on infants and little children and the elderly who have minimal reserves to combat the ill effects.

Non Smokers deserve equal rights, provide them with public places where they will be free from passive smoking.

PLEASE SUPPORT H.B. #84 SMOKING IN PUBLIC PLACES.

Sincerely,

Sandra N. Gast

Representative Milo Fritz
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Milo:

As the Alaska Medical Director for Sohio Alaska Petroleum Company, I am personally committed to the preservation and maintenance of good health and safe working conditions.

The most serious preventable hazard to an individual's health is the danger from cigarette smoking and/or inhalation of second hand smoke.

I strongly encourage you to co-sponsor and support passage of House Bill 84.

It is indeed a matter of life and health versus sickness and infirmity.

Sincerely,

Robert W. Rigg, M.D.
Alaska Medical Director

Will see you next week -
Regards.

VI. LITIGATION

A. Private Actions to Prohibit or Restrict Smoking in Private Places of Work

1. Shimp v. N. J. Bell Telephone Co., 368 A 2d 408 (N.J. Sup. Ct. 1976):

In the single case in which a court has found an employee has a right to a smoke-free work environment, a New Jersey court prohibited smoking in all work areas of a company office. Alleging a severe allergic reaction to cigarette smoke, the plaintiff Shimp sued her employer to compel it to provide her a no-smoking work area. This case was not actively defended by N.J. Bell Telephone.

2. Mitchell v. Bell Telephone Co., C-4159-76 (N.J. Sup. Ct. 1978):

This was another case in which the plaintiff, an employee of the defendant and allegedly allergic to tobacco smoke, sought an injunction compelling the defendant to provide him with a smoke-free place of work. The court dismissed the case, in response to the defendant's motion which was based on preemption grounds. Mitchell, which was actively defended, was brought by the same attorney who represented Shimp and the dismissal was entered by the same judge.

3. Gordon v. Raven Systems and Research, Inc., 14092-79 (D.C. Sup. Ct. 1981):

Plaintiff sought reinstatement and damages from her former employer, alleging that she was fired when she insisted that she be provided with a smoke-free environment because of her allergy to tobacco smoke. The court dismissed the case, finding that defendant had no contractual or legal obligation to accede to plaintiff's demands. The court expressly declined to follow Shimp, discussed above, and observed that "neither statute, regulation, nor principles of common law required the Raven Corporation to furnish the plaintiff with the kind of smoke-free workplace she demanded."

4. Kensell v. State of Oklahoma et al., Civ. No. 81-786-T (W.D. Okla. 1982):

The plaintiff, an employee of the Oklahoma Department of Human Services, filed suit in U.S. District Court against his employer, the State of Oklahoma and numerous state officials and employees, contending, inter alia, that their refusal to provide him with a smoke-free workplace violated his rights under the First, Fifth, Ninth and Fourteenth Amendments. Citing FENSR and Gasper, discussed below, the court dismissed the plaintiff's suit, concluding that "[f]or the Constitution to be read to protect non-smokers from inhaling tobacco smoke would be to broaden the rights of the Constitution to limits heretofore unheard of." Like the court in Gasper, the Kensell court noted that the results sought by the plaintiff might better be accomplished through the legislative process.

5. Vickers v. Veterans Administration, No. (81-85V) (W.D. Wash., August 31, 1982):

A U.S. District Court in Washington State ruled that a federal employee who is hypersensitive to tobacco smoke is "handicapped" within the meaning of the Rehabilitation Act, 29 U.S.C.§794. The court, however, found that the supervisor's reasonable efforts in this case to accomodate the employee's handicap satisfied the Act's requirement that federal agencies not discriminate against handicapped persons. No damages were awarded to the plaintiff.

6. Smith v. Western Electric Company, No. 44286 (Mo. Ct. of Appeals, Sept. 14, 1982):

The Missouri Court of Appeals held that an employer's common law duty to provide a reasonably safe workplace might include an obligation to ensure a smoke-free environment for employees sensitive to burning tobacco. The court did not base its decision on any statute but rather on the "well-settled" law that employers must protect employees from avoidable perils. Western Electric had contended that the federal Occupational Safety & Health Act preempted any state action on this issue. This decision will allow plaintiff the opportunity to prove his allegation at a trial.

7. Parodi v. Merit Systems Protection Board, 80-7671 (9th Cir., Oct. 21, 1982):

The U.S. Court of Appeals for the 9th Circuit ruled a government employee with a hypersensitivity to cigarette smoke must be given a smoke-free office within 60 days or be granted disability payments. While acknowledging that most disability claims involve a physical or mental limitation, the court stated that an "environmental limitation",such as Parodi's hypersensitivity to smoke, may form the basis for an employee's disability.

8. Hentzel v. The Singer Co., (Calif. Ct. of Appeals, Dec. 20, 1982):

The California Court of Appeals found that an employee allegedly fired for insisting on a smoke-free workplace has the right to sue his former employer for damages. The decision, reversing a trial court's dismissal of the Henztel complaint, emphasized the need to protect employees who voiced dissatisfaction with allegedly hazardous working conditions.

B. Private Actions to Prohibit or Restrict Smoking in Public Places

1. Gasper v. Louisiana Stadium and Exposition District 418 F. Supp. 716 (E.D. La. 1976), aff'd, F.2d 897 (5th Cir. 1978), cert. denied, 439 U.S. 1079 (1979):

Plaintiffs sued to compel the authorities who manage the Louisiana Superdome to prohibit smoking in the Superdome during sporting and other public events. In support of this request, the plaintiffs claimed a constitutional right to a smoke-free environment, relying on the First Amendment (freedom of speech), Fifth and Fourth Amendments (due process right to life and liberty) and Ninth Amendment (which protects so-called unspecific but "fundamental" rights). The district court unequivocally rejected each of these claims. The court of appeals affirmed this decision in all respects, while noting that the legislature, as opposed to a court, would have broad power to regulate smoking in public places. The Supreme Court denied the plaintiff's petition for review of the lower courts' decisions.

2. Federal Employees for Non-Smokers Rights (FENSR) v. United States, 446 F. Supp. 181 (D.D.C. 1978), aff'd, 598 F. 2d 310 (D.C. Cir.), cert. denied, 444 U.S. 926 (1979).

Several anti-smoking organizations, whose members included federal employees, sought to compel the federal government to prohibit smoking in federal facilities except in designated smoking areas. Plaintiffs asserted a private right of action under the Occupational Safety and Health Act (OSHA), a deprivation of their First and Fifth Amendments rights (freedom of speech and right to due process) and a common law right to a smoke-free workplace. The district court, relying on the decision in Gasper, rejected the constitutional claims, held that OSHA implies no private cause of action and found that it had no jurisdiction to consider the common law claim advanced by the plaintiffs in support of their demands. The court of appeals affirmed the district court decision and the Supreme Court refused to review the case.

3. Church v. Brown, et. al., Civ. No.78-4073 (S.D. Ill. 1979):

The plaintiff, an employee of Scott Air Force Base, brought this action in U.S. District Court alleging that the commander of the base and the United States had a duty, under both the common law and OSHA, to provide him with a smoke-free working environment. Accepting "wholeheartedly" the analysis of the court in FENSR, the Church court found that it had no jurisdiction to consider the common law claim propounded by the plaintiff and rejected his OSHA claim, finding "that no private implied cause of action exists under OSHA..."

4. GASP v. Mecklenburg County, 256 S.E. 2d 477 (N.C. 1979):

An anti-smoking group sought an injunction forcing county authorities to prohibit smoking in all county public buildings and places of work, relying, like the plaintiffs in FENSR and Gasper, on an alleged constitutional right to a smoke-free environment. The North Carolina Court of Appeals, citing FENSR and Gasper, held that no such constitutional right exists and dismissed the plaintiff's suit.

VI. LITIGATION

C. Other Decisions

1. Stevens v. Employment Security Commission (Iowa, Nov. 1976):

An Iowa state court ruled eligible for unemployment benefits a woman whose health required that she accept a job only in a smoke-and-dust free environment. Suffering from asthma, the plaintiff quit her job because the cigarette smoke in her office allegedly aggravated her illness. Unable to find a job that met the conditions required by her health, she applied for unemployment benefits. The Employment Security Commission said her restrictions on possible employment had made her unavailable for work and ineligible for benefits. But a District Court in Iowa disagreed, saying her limitation was not so great as to to remove any possibility of employment. The court compared her situation to the cases where benefits were granted to persons limited to "light work".

2. Ellen L. Meyer v. C.P. Clare & Co., (Idaho Industrial Comm., Nov 1978):

Unemployment benefits were also granted to an Idaho worker who had quit because two cigar smokers were transferred into her work area. She could have been given a leave of absence until a suitable position opened, but no one told her of this option. According to the state industrial commission, her limited choice "would compel a reasonable person to leave her employment." Thus she had good cause for quitting and was eligible for benefits.

3. Alexandria Volunteer Fire Dept. v. City of Alexandria, (E.D. VA, Dec. 13, 1982):

A federal district court rejected a lawsuit by Alexandria volunteer firefighters which challenged a regulation requiring volunteer firefighters to meet city fire department standards, including no smoking. No violations of the due process or equal protection clauses were found in the requirement that the volunteers meet the same physical, mental and training standards that the professional firefighters must meet.

4. San Mateo County Fire Fighters, Local 2400 v. City of San Mateo, No. 268890 (Calif. Sup. Ct. Dec. 16, 1982):

Stating the city may have violated a state law that requires local officials to negotiate working conditions, a superior court temporarily barred the city of San Mateo from enforcing a no-smoking policy for rookie firefighters. Under the court order, the city may continue to require fire department applicants to sign the no-smoking pledge, however, it would be unenforceable unless the temporary injunction is overturned at trial.

STATE of ALASKA

MEMORANDUM

TO: [redacted]
Director

DATE: June 2, 1982

FILE NO:

Thru: [redacted]

TELEPHONE NO: [redacted]

FROM: Roberta Banko
[redacted]

SUBJECT: Cigarette Smoke

For some time we have noticed a severe problem with the amount of cigarette smoke in the air of [redacted]. As you know, the Surgeon General of the United States as well as many studies on the subject are linking the effects of passive smoking with lung cancer and other related diseases. Fellow workers have expressed concern about the health hazards, discomforts and inconvenience experienced as a result of the smoke in the air. Although some efforts have been made to improve the situation by moving workers' work stations around, installing large "smoke-eaters" and providing fans to recirculate the smoke, these efforts are not effective. As stated in the APEA contract (Article 3, Section 1 b, pp. 8-9) one of the purposes of our contract is "to promote fair and reasonable working conditions." These conditions should apply equally to all members.

We are confident that all reasonable efforts can be made to promote the welfare and champion the rights of non-smokers as well as those of smokers. [redacted] to move to a new building, we feel that now is the best time to address the problem and, if necessary, institute some regulations correcting the situation. The following are suggestions for dealing with the situation:

1. "NO SMOKING" in all areas except those designated and agreed upon by all workers as smoking areas.

2. All smokers who wish to smoke at their desks should provide, at their expense, desk-type "smoke-eaters".

3. Smokers should refrain from walking around others' work areas with lighted cigarettes.

4. Install more large, room-size "smoke-eaters" so that a modicum of efficiency might be achieved or otherwise provide for an air exchange or proper ventilation (this should be undertaken in addition to the above regulations.)

Additional information can be provided on the subject of the harmful effects of passive or "side-stream" smoking on health if you find it necessary in order to address this problem. We are looking forward to your reply and to working with you in solving this problem.

MEMORANDUM [redacted]

State of Alaska [redacted]

TO: Roberta Banko

DATE: June 8, 1982

FILE NO: [redacted]

TELEPHONE NO: [redacted]

FROM: [redacted] Director

SUBJECT: Smoking Prohibitions

This will acknowledge your memo of June 2, 1982, concerning "Cigarette Smoke" and set forth the policy of this Division with regard to restricting smoking.

It is the policy of this Division to adhere strictly to Alaska Statute 18.35.300 and Chapter 55 Alaska Administrative Code Section 18 AAC 55.010-AAC 55.060.

AS 18.35.300(3) states, "smoking is prohibited in a public school; or in a room, chamber, place of meeting or public assembly under the control of the state, or a department or agency of the state, while a public meeting held under auspices of the state, or a department of the state, is in progress". This section will be adhered to and all rooms accommodating public meetings will be posted as a no smoking area while the meeting is in progress.
AS 18.35.300(6) states, "smoking is prohibited in a place of business in which the owner, manager, proprietor, or other person who has control of the premises posts a sign conveying the message that smoking is prohibited by law". Although this section refers specifically to businesses it may be interpreted to mean state office buildings serving the public. In any case it is my decision to not exercise this questionable perogative and restrict smoking in all or any portion of office space housing the [redacted] Division. Chapter 55 Alaska Administrative Code Section 18 AAC 55.900(c)(3) states in part ". . . in a state office building "other person who has control" means a division director who has authority over the office or his designee". This places the responsibility and authority to restrict or not restrict smoking, for those areas not specifically restricted by the law, in this office. Therefore, no areas housing [redacted] staff will be restricted to smoking without my expressed approval.

Although this policy may seem harsh to those of you who wish to limit smoking, it is my belief that if we are to promote fair and reasonable working conditions for all employees, our policy concerning this subject should be no more or no less restrictive than the law.

The new office building to which we are moving does have an air cirulating system. Hopefully, this will help provide a work environment in which we can all achieve our goals in pleasant and comfortable surroundings. If specific problems with ventilation do occur, please inform this office through your supervisor.

Attached is a copy of the pertinent statute and Administrative Code for your perusal.

cc: Central Office Supervisors
Regional Managers

CHAPTER AND VERSE:

Public Smoking

I. THE ISSUE

Does other people's smoke cause disease in nonsmokers?

Is the presence of tobacco smoke in the atmosphere cause for alarm?

In the continuing national dialogue on the various issues raised by cigarette smoking, these questions have now come to the forefront.

It has been called the issue of "second hand smoke," "public" or "involuntary" smoking.

Unfortunately, as with most controversial scientific issues, there has been a great deal of misinformation and unsubstantiated allegations made about the effect of other people's smoke on nonsmokers.

Because of this misinformation, a majority of both smokers and nonsmokers have come to believe erroneously that second hand smoke has been shown to be harmful to the normal nonsmoker. This perception is apparently the underlying basis for widespread efforts to prohibit smoking in public places.

The fact is: other people's smoke has not been shown to cause disease in nonsmokers.

Because we believe that public policy should be debated and determined on the basis of proven facts, rather than false

perceptions, we have prepared this document summarizing what is known at this time on the question of second hand smoke.

II. WHAT ARE THE FACTS?

Numerous scientists, physicians, government officials and health experts have studied the effect of environmental smoke on nonsmokers. None of these studies has been able to prove that other people's smoke causes disease in nonsmokers.

- A joint study conducted in 1971 by the Federal Aviation Administration (FAA), the U. S. Department of Health, Education and Welfare (HEW) and the National Institute of Occupational Safety and Health (NIOSH) examined the health aspects of smoking on passenger aircraft. The report of this study stated: "...it is concluded that inhalation of the by-products from tobacco smoke generated as a result of passengers smoking aboard commercial aircraft does not represent a significant health hazard to non-smoking passengers." (1)

- In 1977, after studying a proposed rule on prohibiting airline pilots from smoking in the cockpit of commercial planes, the FAA stated: "...with respect to the alleged deleterious effects of carbon monoxide upon the performance of the smoking pilot, the FAA believes that the information presented is too inconclusive to warrant the issuance of the requested rule at this time." (2)

- The U.S. Interstate Commerce Commission (ICC), in a 1971 decision upholding the right to smoke on interstate buses, stated "We agree with the examiner's conclusions that petitioner has failed adequately to demonstrate the deleterious effects of

second-hand smoke upon the health of motorbus passengers." (3)

• In 1974, Dr. R. Rylander, the Swedish medical researcher, and other leading medical experts organized an international workshop, attended by scientists from all over the world, to consider the health consequences of atmospheric tobacco smoke. They concluded: "For the majority of the population the average exposure burden due to environmental tobacco smoke is probably much lower than that due to industrial air pollutants and in many cases also environmental air pollution or the lung burden due to dust clouds or other indoor air pollutants." (4)

• The Bavarian Academy of Industrial and Social Medicine sponsored a symposium on smoking in the workplace in 1977 in Munich, attended by eminent German scientists, lawyers and government leaders. In a closing statement, the symposium's chairman, Professor Doctor H. Valentin of the University of Erlangen-Nuremburg, said: "In conclusion, with regard to medical and legal facts of passive smoking at the work place, the following must be considered. Under our present day work place conditions, no clear and significant untoward health effects from passive smoking have been shown." (5)

• R.S.F. Schilling and a group of co-researchers, thinking that children of smoking parents might contract respiratory symptoms or disease due to their close proximity to smoking family members, determined exactly the opposite after a study.

In 1977, they reported in the American Journal of Epidemiology: "We have found no significant relation between parents' smoking and respiratory symptoms or lung function in their children." They added: "We conclude that exposure to low levels of smoke produced by cigarette smokers does not result in chronic respiratory symptoms or loss of lung function among children nor among adults." (6)

III. SUPPORTING OPINIONS

Others who have studied the effects of smoking on nonsmokers have confirmed these findings.

- Dr. D.M. Aviado, a Professor of Pharmacology at the University of Pennsylvania for almost 30 years, said in a statement before the Council of the District of Columbia Committee on Transportation and Environmental Affairs in 1976: "On the basis of existing scientific evidence, tobacco smoke constitutes no health hazard to nonsmokers in public places." (7)

- In a statement in 1977 before the New Jersey Public Health Council, Dr. Walter M. Booker, Emeritus Professor of Pharmacology of Howard University, said: "As a scientist, I am interested in actual data which demonstrate whether a nonsmoker absorbs tobacco smoke and, if so, whether the amount is sufficient to cause adverse physiological effects. The literature simply does not support the theory that a nonsmoker absorbs amounts which can cause harm." (8)

- Pathology Professor Dr. Edwin R. Fisher of the University of Pittsburgh, appearing before the same New Jersey group in 1977 said: "My careful review of the literature, confirming the conclusions based upon my own experimental data and the related work discussed above, reveals a lack of scientific information which would allow me to conclude that atmospheric tobacco smoke or its constituents represent a health hazard in nonsmokers." (9)

• Writing in the San Francisco Examiner in 1977, medical researcher Dr. C. H. Hine said: "The medical literature to date does not indicate any significant health risk to the nonsmoker from environmental tobacco smoke normally encountered in day-to-day situations." (10)

• Appearing before the New Jersey Public Health Council in 1977, Dr. Charles L. Waite, Retired Rear Admiral of the U. S. Navy Medical Service, Medical Director of The Tobacco Institute, and Fellow of the American College of Physicians, made the following statement: "In my opinion, there is no convincing evidence to support the hazards claimed by some to the effect that cigarette smoke threatens the health of the average well nonsmoker. On the basis of existing scientific evidence, I can only conclude that tobacco smoke constitutes no health hazard to nonsmokers in public places." (11)

• And, in 1977 Dr. W. Klosterkotter, of the Hospital of the University of Essen, W. Germany, said: "So far passive smoking has not proven to be health-hazardous in healthy adults. Thus an important condition for a legal smoking ban, e.g. at places of work, remains unfilled." (12)

Opponents Of Smoking Agree

Even the most avowed critics of smoking acknowledge that smoking has not been established as a cause of disease in nonsmokers.

Some of them include:

• The then U.S. Surgeon General, Jesse Steinfeld, who stated after issuing the 1972 Public Health Service Report on Smoking: "We cannot say with certainty that exposure to tobacco smoke is causing serious illness in nonsmokers..." (13)

• Dr. Jonathan Rhoads, Chairman of the National Cancer Advisory Board, said in 1975 that to his knowledge "it is not, in fact, actually harmful." (14)

• Dr. E. Cuyler Hammond of the American Cancer Society was reported to have said in 1974 that there "was no shred of evidence" that a nonsmoker can get cancer from "second hand" smoke and that there is a lot of evidence that he cannot... He added that to suggest passive smoking could cause cancer is dishonest, and that he would be prepared to testify as much in a court. (15)

• The "Expert Group" appointed by the British organization, Action on Smoking and Health (ASH), headed by Dr. Charles Fletcher of the British Royal College of Physicians, concluded in 1973 that: "There is no evidence that other people's smoke is dangerous to healthy nonsmokers..." (16)

• American Cancer Society official Lawrence Garfinkel said in 1976: "...(T)here is no evidence, however, that nonsmokers who are constantly exposed to cigarette smoke have a higher incidence of bronchial carcinoma." (17)

• Great Britain's Foreign Minister Dr. David Owen, while serving as Minister of Health in 1975 said: "No clear

evidence has yet been published to show that tobacco smoke is harmful to normally healthy nonsmokers or that a heavily tobacco-smoke laden atmosphere has other than a transient effect." (18)

- In a 1977 television appearance in Washington, D.C., on WTOP-TV (CBS) Dr. Gio Gori stated: "I would say that the evidence that we have today, scientific evidence, something that we can prove, or normal smoking conditions that you may have a couple of people smoking in a regular size room, the health effects connected with that are probably going to be minimal." (19)

- Three spokesmen for the Naylor Dana Institute for Disease Prevention of the American Health Foundation, including Dr. Ernst L. Wynder, concluded that: "Specifically, we know of no data suggesting that passive inhalation of cigarette smoke increases the risk of developing lung cancer." In addition, they reported: "On the basis of available epidemiological evidence, it appears that passive inhalation of tobacco smoke by nonsmokers or smokers does not increase their risk for chronic illnesses such as cancer of the respiratory tract, emphysema, or cardiovascular disease." (20)

IV. REFUTING FALSE CLAIMS

Although there is no convincing evidence to date to show that other people's cigarette smoke causes disease in nonsmokers, a number of false allegations bearing on this subject have been widely published. Some of the more common claims are listed below accompanied by the facts:

Claim: Smoking causes chronic degenerative diseases in nonsmokers.

Fact : There is no scientific basis for such claims. An American Cancer Society epidemiological study in 1976 found no evidence that nonsmokers constantly exposed to tobacco smoke have increased risk of lung cancer. (21)

Claim: Atmospheric tobacco smoke causes or contributes to the development of atherosclerosis (a disease characterized by inelasticity and thickening of arterial vessel walls) in nonsmokers, as a result of carbon monoxide.

Fact : Early studies conducted on animals chronically exposed to carbon monoxide and fed a high cholesterol diet compared with animals not so exposed showed that these animals had arterial changes which duplicated early atherosclerosis. (22)

However, the experimenter, P. Astrup, has recently admitted that he and others have been unable to reproduce his previous experiment and that his "present study suggests that applying the generally accepted criteria for intimal (membrane or lining of an organ) damage, no

direct toxic effect of CO can be demonstrated." Dr. Astrup added that "CO exposure is probably a very weak stimulus on the aortic wall, compared with hypercholesterolemia induced by cholesterol feeding." (23) In addition, the CO claim ignores observations in bridge and tunnel workers which showed that those persons, also chronically exposed to carbon monoxide, did not have any increased incidence of atherosclerosis. (24)

Claim: Parental smoking causes respiratory illness in children.

Fact : A group of researchers studied respiratory symptoms, diseases and lung function in 37. families with 816 children in three towns and "found no signficiant relation between parents' smoking and respiratory symptoms or lung function in their children." They concluded that "exposure to low levels of smoke produced by cigarette smokers does not result in chronic respiratory symptoms or loss of lung function among children nor among adults." (25)

Another recent clinical study confirms the same findings. The study determined that: "Smoking and nonsmoking parents have about the same proportion of children with respiratory symptoms. The number of cigarettes smoked by the parents has no influence on respiratory symptoms in their children..." (26)

Claim: Cigarette smoke causes respiratory allergies.

Fact : Claims about tobacco allergy stem primarily from the many studies in which extract from tobacco leaf has been tested and found to cause allergic response in people who are otherwise allergic. (27) However, these tobacco leaf extract studies do not resolve the issue, and despite the claims of one researcher, the work of others to date has not found any allergens in tobacco smoke. (28) Work is still being done in this area.

Claim: Asthmatics are believed to be particularly vulnerable to tobacco smoke.

Fact : A recent study failed to find any significant changes in the lung function of asthmatics who had been exposed to cigarette smoke for two hours in a small test chamber. (29)

VI. CARBON MONOXIDE AND OTHER ENVIRONMENTAL FACTORS

Some nonsmokers have expressed concern over the presence of tobacco smoke in the atmosphere.

Studies measuring tobacco smoke constituents in the atmosphere under realistic conditions have not found levels of carbon monoxide sufficiently high to justify such concern. The level set by the U.S. Occupational Safety and Health Administration (OSHA) as the limit for industrial exposure over an eight-hour period is 50 parts per million (ppm). The combined results of studies on the amount of carbon monoxide in the atmosphere from smoking indicate that, under realistic conditions, carbon monoxide in the atmosphere from smoking will rarely exceed 10 ppm. (30)

One exception was reported in a study of a sports arena which permitted smoking but was not air conditioned, causing the carbon monoxide level to reach 25 ppm, a level which was not considered to be hazardous. (31) Other exceptions were studies performed in taverns and nightclubs where carbon monoxide levels as high as 42 ppm were recorded. (32) However, these studies were conducted with an instrument that is known to exaggerate the level of carbon monoxide in the presence of alcohol vapors. (33)

Combined results of studies of COHb* levels in smokers and in nonsmokers exposed to tobacco smoke indicate that, under realistic smoking conditions, smokers will rarely experience COHb levels greater than ten percent and the levels in nonsmokers

* Carboxyhemoglobin, the combination formed by carbon monoxide and red blood pigment

usually will not exceed two to three percent. And, even these relatively low levels of COHb will drop within a few hours after the cessation of exposure to smoke. (34)

Some nonsmokers also complain about the alleged buildup of carbon monoxide in offices and other places where smoking is allowed. Yet, one recent study showed that the COHb levels of office workers were higher when they came to work than when they left at the end of the day, even though they were exposed to cigarette smoke throughout the day. (35) Clearly, the real concern should be for the outdoor levels of carbon monoxide from car exhaust and other sources to which nonsmokers are exposed on their way to work.

No one has ever established that the health of normal nonsmokers is adversely affected by even the small amount of carbon monoxide that might be in the atmosphere due to cigarette smoke. CO is a natural body constituent which is present in the blood without any exposure to CO in the atmosphere, and the body can and does eliminate CO by various means. Persons with COHb levels of 15 percent or less rarely even suffer any of the first symptoms of CO difficulties such as headaches and nausea. (36)

A claim frequently made about exposure to low levels of CO is that it affects certain performances, such as the ability to distinguish between short intervals of time or to solve mathematical problems. But there is still scientific disagreement about whether such performances are affected by COHb measurements in the neighborhood of ten percent or less. Some studies indicate that these levels of CO will affect such performance (37), while

other studies do not so indicate. (38) This area requires additional research.

It also has been alleged that persons with severely compromised cardiovascular systems are adversely affected by environmental tobacco smoke, especially carbon monoxide.

This belief stems largely from Aronow's studies of angina patients in which he used "pure" carbon monoxide, as well as tobacco smoke, to elevate their COHb levels. He found that a certain COHb level obtained by exposure to "pure" carbon monoxide caused certain changes in cardiac function, but that the same COHb level obtained from tobacco smoking did not result in such changes. (39) The reason for these differences in cardiovascular function are as yet unknown. Whatever the reasons for these findings, this study raises a substantial question about the relevancy of "pure" carbon monoxide type studies to the nonsmokers' situation. This is another area where further research is needed.

Studies of other tobacco smoke constituents indicate that smoke's contribution to atmospheric levels of these compounds is minimal. (40) Such studies are usually conducted as the result of a claim about the danger of exposure to some compound attributable to tobacco smoke. One such study of "volatile" organic compounds recently concluded that the amount of such compounds added to the atmosphere as a result of cigarette smoking is "insignificant." (41)

As to nicotine, research shows that low atmospheric levels result from cigarette smoke. (42) No scientist has suggested that

the minuscule amount of nicotine that might be absorbed by a nonsmoker has anything to do with the production of human disease. In fact, a recent study monitoring heart rates of nonsmokers exposed to cigarette smoke under laboratory conditions concluded that the amount of nicotine inhaled by nonsmokers under their rigorous test conditions was too small to alter heart rate. (43)

VI. THE ANNOYANCE FACTOR

All of the foregoing establishes, in our judgment, that there is no physiological basis for claiming that other people's smoke causes disease in the nonsmoker.

Despite that fact, it is clear that cigarette smoke does annoy some people. Tobacco smoke may "drift" into the eyes or nose of the nonsmoker who may be annoyed by the smell. In places that are poorly ventilated, high concentrations with other environmental impingements may cause eye or nasal irritation.

At least one scientist, Dr. Gary Huber, suggests that the odor of smoke components "may trigger emotional responses not yet well understood." (44) Support for this theory was found in a recent study in which college students were first characterized as to their attitudes concerning tobacco smoke and then were exposed to such smoke. (45) The heart rates of those who "disliked" smoke were much higher than those who were "indifferent" to smoke. There was no way to determine from the data whether initially the "dislike" group had a higher heart rate or whether the anticipation of sitting and inhaling the "disliked" cigarette smoke caused an increased heart rate.

Yet some studies suggest that the vast majority of smokers and nonsmokers are not usually annoyed by public smoking. For example, a recent U.S. survey conducted by Response Analysis in Princeton, N.J., found that when people were asked about the kinds of things that annoyed or irritated them in their everyday lives,

only about two percent of the annoyances mentioned were related to smoking. (46)

The American Express Company found little interest in nonsmoking travel tours (47), and a Seattle, Washington, restaurant reported that there were only seven requests for seating in the nonsmoking section during a three-month period when they served 30,000 customers. (48)

All of this suggests that the issue of other people's smoking really falls into the category of annoyances -- akin to other everyday annoyances, such as barking dogs, loud music, personal eating habits, etc.

Smoking is like any other habit or practice with the potential of annoying others. In our society, such annoyances are alleviated through the traditional rules of common courtesy. The "second hand" smoking problem addressed in this paper would surely begin to disappear if smokers were more sensitive to the feelings of nonsmokers and practiced simple rules of courtesy in dealing with the problem.

One fact is clear: Although atmospheric tobacco smoke may be annoying to some people, it has not been proven to cause disease in nonsmokers.

MEMORANDUM

TO; Rep. Bussell, Chairman, House Judiciary Comm.

TOPIC: Suggested Amendments, Deletions to HB 84 as per Committee Discussions at prior hearing, Feb. 23, 1983

FROM: Joe Brewer

Date: March 28, 1983

1st suggested amendment:

Page 3, line 19--

(d) A smoking section may not be designated under (a) of this section in an area or vehicle unless the area or vehicle [meets the minimum ventilation and air quality standards adopted by the Department of Enviromental Conservation.] is sufficiently well ventilated by natural or mechanical means.

2nd suggested amendment: (add authority)

Page 3, line 27--

"Smoking Prohibited by law"[.], per AS 18.35.300.

3rd suggested amendment: (deletion)

p. 4, delete entire Section 6, lines 4 through 10.

4th suggested amendment: (delete words) (Dist. Ct. has no injunctive powers; unless this Committee gives it such by this language in this limited area).

p. 4, line 12:

Sec. 18.35.346. INJUNCTIONS. The commissioner of environmental conservation or any affected party may institute an action in the [district court or the] superior court to enjoin repeated violations of AS 18.35.300- 18.35.360.

p. 2, memo on changes suggested for HB 84.

5th suggested change, or addition. (Statutory authority needed so act would not wind up in temporary acts and fail to be in permanent statutes

p. 4, line 21--

Sec. 9. AS 18.35 is amended by adding a new section to read:

Sec. 18.35.360. PUBLIC EDUCATION. The Commissioner of environmental conservation shall take appropriate measures to inform the public of their rights under this Act.

- -

(Note:

Then, the last section in the statute, as it exists now, AS 18.35.360, would have to be renumbered, as shown. I don't know if this should be included as an amendment or leave it up to the Revisor of Statutes. (?)

[Sec. 18.35.360] Sec. 18.35.365. Regulations. The Department of Environmental Conservation may adopt regulations to implement the provisions of AS 18.35.300 -- [18.35.350] 18.35.360.

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON

LANNY L. VICKERS, Plaintiff, vs. THE VETERANS ADMINISTRATION, et al., Defendants.	No. C81-85V MEMORANDUM DECISION

From the credible evidence presented at the trial of this cause, the Court now renders the following decision:

1. The issues before this Court are these:

(a) Does the plaintiff have a cause of action against his superior, David Radke, Chief of Supply Service at the Veterans Administration Medical Center in Seattle, Washington?

(b) Does the plaintiff have a cause of action against the Veterans Administration under the Rehabilitation Act of 1973, as amended, 29 U.S.C. § 794, for money damages or for equitable relief?

2. This is not an action to determine whether all government employees have a right to work in offices which are free from tobacco smoke. It is an action solely to determine whether this one plaintiff has the right to work in an

Copy to Clerk

57

environment wholly free from tobacco smoke.

3. Plaintiff is entitled to recover damages of and from David Radke only if plaintiff established by a preponderance of the evidence that David Radke, in his actions relative to plaintiff, violated a clearly-established statutory or constitutional right of plaintiff. Harlow v. Fitzgerald, 50 U.S.Law Week 4815, June 22, 1982.

4. From the evidence in this cause the Court is unable to find that David Radke did in fact at any time violate any clearly-established right of plaintiff. The complaint of plaintiff against David Radke must in consequence be dismissed with prejudice.

5. The question then remains as to whether plaintiff is entitled to any kind of relief against the Veterans Administration as a handicapped person under the Rehabilitation Act of 1973, as amended, 29 U.S.C. § 794. The Court ruled prior to trial that § 794 does permit a private right of action for damages or for equitable relief.

6. The Court finds that plaintiff is a handicapped person within the meaning of the term "handicapped person" as defined in 29 U.S.C. § 706(7)(B). That subsection provides that any person is a "handicapped" person within the contemplation of 29 U.S.C. § 794 if that person has a physical impairment which substantially limits one or more of his or her major life activities. It appears from the evidence in this cause that plaintiff is unusually sensitive to tobacco smoke and that this hypersensitivity does in fact limit at least one of his major life activities, that is, his capacity to work in an environment which is not completely smoke free.

7. The finding by the Court that plaintiff is a handicapped person within the meaning of the Act does not, however,

dispose of this matter. In order for the Court to find that plaintiff is entitled to recover money damages from the Veterans Administration or that plaintiff is entitled to some kind of equitable relief, the Court must find that the Veterans Administration discriminated against plaintiff by reason of his handicap.

8. 29 U.S.C. § 794 provides as follows:

> "No otherwise qualified handicapped individual in the United States, as defined in Section 706(7) of this title, shall, solely by reason of his handicap, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination...under any program or activity conducted by any Executive agency or by the United States Postal Service."

9. In his trial brief plaintiff asserts that because of plaintiff's complaints and this lawsuit, Mr. Radke has indicated resentment and anger toward plaintiff by means of non-verbal expressions of animosity towards plaintiff, by statements made to other employees about plaintiff and the smoking issue, and by efforts to limit work assignments to plaintiff and to prevent his promotion. The Court found no credible evidence in the record to sustain any one of these contentions.

10. The Court finds further no evidence in the record that plaintiff has in any way been discriminated against in terms of work assignments, pay or promotions by reason of his hypersensitivity to tobacco smoke, by reason of his complaining to his superiors about the presence of tobacco smoke in his work environment, or by the commencement of this action. Plaintiff has regularly received high performance ratings for his work and has been awarded at least three incentive awards, which have resulted in higher pay for him.

11. The Court is unable to find in the words of § 794 that

plaintiff has been, solely by reason of his handicap excluded from the participation in or denied the benefits of any program or activity conducted by the Veterans Administration.

12. Plaintiff asserts, however, that he has been discriminated against because of the failure of the Veterans Administration "to make reasonable accommodations to his physical handicap by providing a work environment that is free of tobacco smoke."

13. Plaintiff has failed to cite any authority from the decided cases to the effect that the Veterans Administration was under a duty to make "reasonable accommodations" to plaintiff's sensitivity to tobacco smoke. Assuming, but not deciding, that the Veterans Administration was under such a duty, the Court finds from the evidence that the Veterans Administration did make reasonable efforts to accommodate to plaintiff's handicap.

14. Plaintiff is employed in the Purchasing and Contracts Section of the Supply Service Department at the Veterans Administration Medical Center. The employees in that section have their desks in Room 105-C in Building 15. This building is a temporary one. It is contemplated that within two years all of the Supply Service employees will be moved out of that building and into new quarters in a building now under construction. Ten employees have their desks in Room 105-C. Some of them smoke; some do not. Room 105-C is relatively quite crowded as there are more desks and more employees in that room than the available space can comfortably accommodate. In that room are seven windows, which can be opened and closed, and one double door. This double door may be opened or "cracked" to admit fresh air. Two rather large circulating fans are located in this room.

15. Immediately adjacent to Room 105-C is Room 105-D in which are located those employees who are in the Personal Property Management Section of the Supply Service Department. There are eight employees in this section. Some of these employees smoke; some do not.

16. In February, 1979 the Deputy Administrator of the Veterans Administration at the direction of the Administrator promulgated a nationwide policy relative to smoking at the facilities of the Veterans Administration. One of the provisions of that policy was as follows:

> "In establishing and continuing a smoking policy in work areas under their jurisdiction, supervisors should strive to maintain an equitable balance between the rights of smokers and nonsmokers."

17. In February, 1980 the Director of the Veterans Administration Medical Center in Seattle promulgated a policy relative to smoking in the facility. That policy provided that smoking was to be permitted in office areas. By virtue of that promulgated policy employees were permitted to smoke in Rooms 105-C and 105-D.

18. From time to time plaintiff has made known to his superiors his sensitivity to tobacco smoke and has urged that action be taken by them to make it possible for him to work in a smoke-free environment.

19. In an effort to accommodate to plaintiff's handicap the following has been done by the Veterans Administration:

(a) After plaintiff's initial complaint the desks of smokers were physically separated in the office from the desks of the nonsmokers.

(b) Thereafter Mr. Radke sought and was able to secure a voluntary agreement by those who work in the same office as plaintiff (Room

105-C) not to smoke at any time in that room.

(c) Later, Mr. Radke sought and was able to secure a voluntary agreement by those who work in Room 105-D, the office adjacent to Room 105-C, that they would not smoke at any time in that room.

(d) Mr. Radke submitted a requisition for an exhaust system to be installed in Room 105-C in the hope that this system would remove whatever tobacco smoke might drift into Room 105-C from rooms where smoking was still permitted. This request was, however, turned down by the Engineering Department because its cost was considered to be excessive in light of the fact that Building 15 was only a temporary building and the employees in Supply Service were to be transferred from that building to a new building.

(e) Mr. Radke was able to have two vents installed in the ceiling of Room 105-C in an effort to withdraw from that room any tobacco smoke that might drift into it from other areas.

(f) Mr. Radke purchased at his own expense an air purifier in an effort to alleviate the effects of his smoking in his own private office, Room 105-B.

(g) Mr. Radke offered to have a partition constructed around plaintiff's desk. This partition would have extended from floor to ceiling and have a door.

(h) Plaintiff was given the opportunity to move

his desk farther away from the door leading from Room 105-C to 105-D and closer to a window.

(i) Plaintiff has been offered an outside maintenance job by defendant Veterans Administration.

20. The voluntary action by the smokers in Rooms 105-C and 105-D has significantly reduced the presence of tobacco smoke in plaintiff's work space in Room 105-C.

21. At the time plaintiff complained to his supervisor about the adverse effects of tobacco smoke upon his health, Mr. Radke was faced with the problem of trying to accommodate the desires of plaintiff with the desires of the smokers whose desks were in Rooms 105-C and 105-D. It appears from the testimony of plaintiff that some of those individuals were "heavy" or "very heavy" smokers. Under the national policy of the Veterans Administration he was under a duty to "strive to maintain an equitable balance between the rights of smokers and nonsmokers." In light of the policy promulgated by the Director of the Veterans Administration Medical Center in Seattle that smoking was to be permitted in offices, Mr. Radke could not have ordered that there be no smoking in Rooms 105-C and 105-D without running into the objection by the smokers in those rooms that they were permitted by the Director's policy to smoke at their desks and that Mr. Radke did not have the authority to override that policy. He was faced, too, with the problem that some of the employees in Room 105-C wanted to have the windows open; some insisted that they be closed. Some wanted the temperature of the room relatively high; some wanted it relatively low. These opposing attitudes made it, of course, difficult to arrive at a mutually satisfactory arrangement with respect to whether the windows would be open or closed.

22. The only tobacco smoke to which plaintiff is now

exposed is that which may at times drift into Room 105-C from Room 105-A or 105-B. This drifting in of smoke is not a constant phenomenon and, when it does occur, the smoke is normally not heavy in concentration. At the time of the voluntary commitments by the smokers in Rooms 105-C or 105-D, and as an accommodation to them in exchange for their agreeing not to smoke at their desks, Mr. Radke gave them permission to smoke in Room 105-A, the office of the Assistant Chief of Supply Service, or, when on business, to smoke in his own office, Room 105-B.

23. In light of all of the foregoing the Court finds that the Veterans Administration did make a reasonable effort to accommodate to plaintiff's handicap while at the same time attempting to accommodate to those who felt the need to smoke during working hours.

24. Plaintiff would like to have everyone in Supply Service be forbidden to smoke in order that he would not be exposed at any time to tobacco smoke. The Director of the Medical Center has not, however, banned smoking in any of the office spaces of the Center. The Veterans Administration has not adopted a policy against smoking in any of its offices. Congress has not enacted any legislation which forbids smoking in office working spaces in any of the office buildings owned by the United States.

25. Had Congress enacted legislation or the Veterans Administration adopted a policy or the Director of the Medical Center promulgated a directive forbidding the smoking of tobacco in any office space, this Court would readily enforce that ban. In the absence, however, of a statute or regulation forbidding the smoking of tobacco in government office spaces those Supply Service employees who smoke have certain rights

which must be balanced against the desire of plaintiff that his working environment be completely free of tobacco smoke. Until and unless Congress enacts a statute banning the smoking of tobacco in government offices or the Veterans Administration promulgates a policy against smoking in its offices, the desires of those employees who wish to smoke cannot be disregarded.

26. In order to minimize the effect of tobacco smoke upon himself, plaintiff must himself take action to avoid his exposure to tobacco smoke. It appears that plaintiff can at any time close the door which separates Room 105-C from 105-D and that this would have the effect of preventing the entrance into Room 105-C of any smoke which might drift out of Rooms 105-A or 105-B. Although it is somewhat of an inconvenience and perhaps a nuisance to close that door, it appears to the Court that plaintiff would choose to do that rather than to have himself exposed to the tobacco smoke to which he is sensitive. There is no prohibition against the closing of that door, and the Chief of the Purchasing and Contracts Section testified that it was immaterial to him whether that door was kept in a closed or an open position.

27. In addition the desk of plaintiff is located but one desk away from the door which separates Rooms 105-C and 105-D. Plaintiff was advised that he could move his desk farther away from that door and closer to a window if he desired to do so, but he has chosen to have his desk remain in its present position. The Court is of the opinion that moving his desk would undoubtedly reduce his exposure to smoke.

28. By reason of the foregoing the Court finds that plaintiff is not entitled to injunctive relief nor to damages as against defendant Veterans Administration.

29. This Memorandum Decision will be in lieu of formal findings of fact and conclusions of law.

The Clerk of this Court is instructed to send uncertified copies of this Memorandum Decision to all counsel of record and to prepare and enter a judgment reflecting this decision.

DATED this 31st day of August, 1982.

FOREWORD

This Standard was prepared under the auspices of the American Society of Heating, Refrigerating and Air-Conditioning Engineers. It may be used, in whole or in part, by any association or government agency with due credit to the American Society of Heating, Refrigerating and Air-Conditioning Engineers. Adherence is strictly on a voluntary basis and merely in the interest of obtaining uniform standards throughout the industry. Ratings published as conforming to this Standard must comply with the publication provisions stated herein.

ASHRAE INDUSTRIAL ADVERTISING POLICY ON STANDARDS

ASHRAE Standards are established to assist industry and the public by offering a uniform method of testing equipment for rating purposes, by suggesting safe practices in designing and installing such equipment, by providing proper definitions of this equipment and by providing other information which may serve to guide the industry. The creation of ASHRAE Standards is determined by the need for them; and conformance to them is completely voluntary.

In referring to this standard and in marking of equipment and in advertising, no claim shall be made, either stated or implied, that the product has been approved by ASHRAE.

The following form of statement should be used:

A representative product sample of the ..... model, has been tested in accordance with ASHRAE Standard 62-73.

STANDARDS FOR NATURAL AND MECHANICAL VENTILATION

SECTION 1.0 PURPOSE AND SCOPE

This standard* defines ventilation requirements for spaces intended for human occupancy and specifies minimum and recommended ventilation air quantities for the preservation of the occupants' health, safety, and well-being.

Good ventilation practice exists when clean ventilation air is provided in sufficient quantities to maintain the required oxygen, carbon dioxide, and other air quality levels in the space under consideration.

The standard does not specify the air quantities required for the control of temperature and humidity or the exhaust quantities required for source control of domestic or industrial wastes. The specifications are based on the current state of knowledge and acceptable practice related to air filtration, odor control and environmental physiology.

*Replaces the ventilation section of ASA Standard A53.1 dated May 23, 1946.

SECTION 2.0 DEFINITIONS (SEE FIG. 1)

2.1 AIR CLEANER: a device capable of removing airborne impurities such as dusts, gases, vapors, fumes and smokes.

2.2 AIR CONDITIONING: the process of treating air to meet the requirements of the conditioned space by controlling simultaneously its temperature, humidity, cleanliness, and distribution.

2.3 AIR, EXHAUST: air removed from a space and not reused.

2.4 AIR, OUTDOOR: air taken from outdoors and therefore not previously circulated through the system.

2.5 AIR, RECIRCULATED: return air again supplied to a space.

2.6 AIR, RETURN: air removed from a space and recirculated or exhausted.

2.7 AIR, SUPPLY: that air delivered to each or any space in the system, or the total delivered to all spaces in the system, which is used for ventilation, heating, cooling, humidification, dehumidification, distribution, etc.

2.8 AIR, VENTILATION: that portion of supply air which comes from outside (outdoors) plus any recirculated air that has been treated to maintain the desired quality of air within a designated space. (See Section 3.0).

2.9 EXFILTRATION: air flow outward through cracks and interstices, around windows and doors, and through floors and walls of a space or building.

2.10 INFILTRATION: the inward air leakage through cracks and interstices, around windows and doors, and through floors and walls of a space or building.

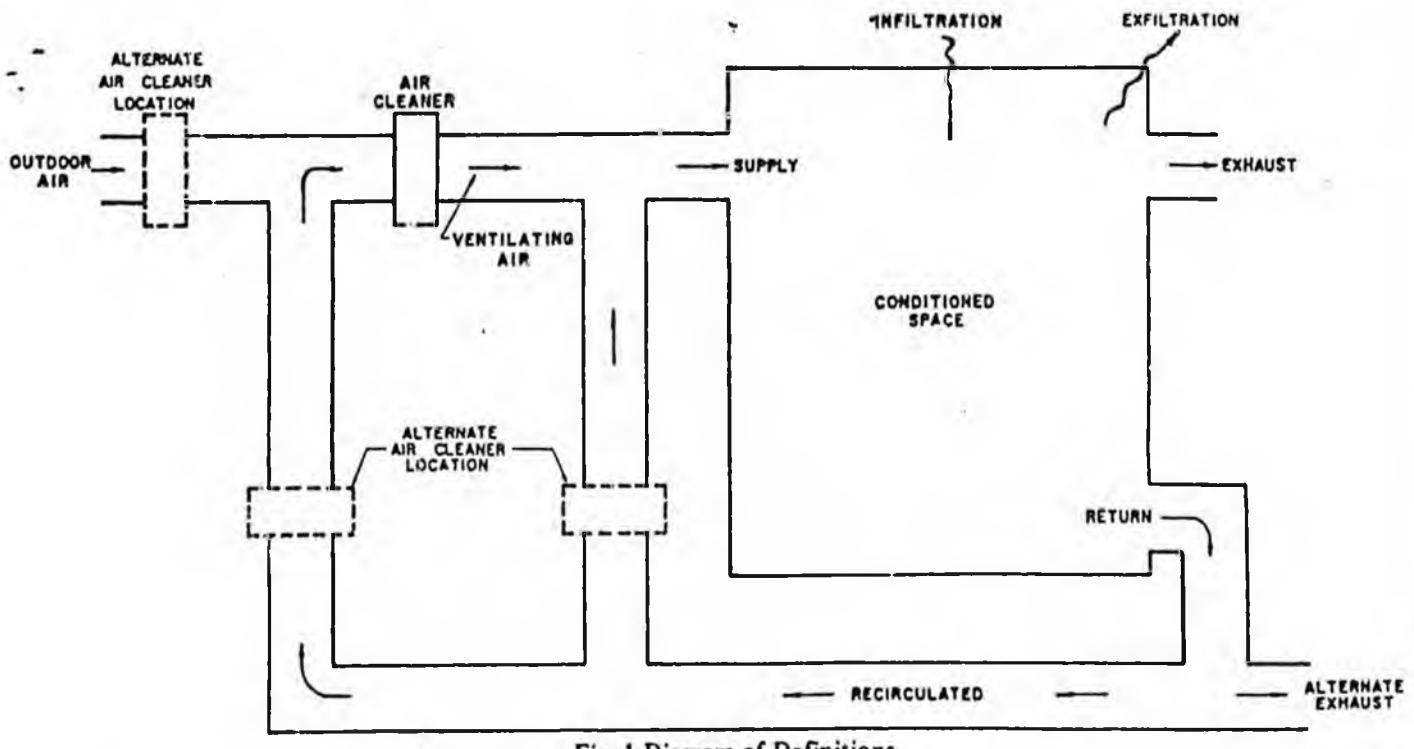

Fig. 1 Diagram of Definitions

2.11 MECHANICAL EXHAUST SYSTEM: a system for removing air from a room or space by mechanical means.

2.12 MECHANICAL SUPPLY SYSTEM: a system for forcing air into a room or space by mechanical means.

2.13 NATURAL VENTILATION: the movement of air into and out of a space through intentionally provided openings, such as windows and doors, or through non-powered ventilators.

2.14 VENTILATION: the process of supplying ventilation air to any space by natural or mechanical means. (Provision must be made for simultaneous removal of air from the space.)

SECTION 3.0. ACCEPTABLE VENTILATION AIR QUALITY (SEE BIBLIOGRAPHY)

3.1 TABLE I lists the maximum allowable pollutant concentrations in ventilation air commensurate with the ventilation requirements set forth in Section 6.0 of this Standard. In addition ventilation air shall conform to the limiting conditions given in Section 3.3.

3.2 OUTDOOR AIR shall be considered of that quality which meets or exceeds the criteria of Table I if one of the following conditions is met:

3.2.1 Monitoring Data of governmental pollution-control agencies such as the National Air Pollution Control Administration show that the air quality of the community in which the ventilation system is located meets the requirements of Table I;

3.2.2 The Community in which the ventilation system is located is similar in population, geographic and meteorological setting and industrial pattern to a community having acceptable air quality as determined in paragraph 3.2.1;

3.2.3 The Community in which the ventilation system is located has a population of less than 20,000 people, and no nearby substantial contamination source;

3.2.4 Air Monitoring, for three consecutive months, as required for inclusion in the NAPCA-SORAD System, shows that the air quality meets the requirements of Table I.

3.3 AIR shall be considered unacceptable for ventilation use in accordance with this standard if it contains any contaminant in a concentration greater than one-tenth the Threshold Limit Value (TLV) currently accepted by the American Conference of Governmental Industrial Hygienists. Where there is reasonable expectation that the air is unacceptable, as indicated above, sampling and analysis shall be carried out by qualified personnel in accordance with procedures and equipment acceptable to the American Conference of

Table I
Maximum Allowable Contaminant Concentrations
for Ventilation Air

Contaminant	Annual Average (Arithmetic Mean) $\mu g/m^3$	Short-Term Level (Not to be exceeded More than once a Year) $\mu g/m^3$	Averaging Period (hr)
Particulates	60*	150*	24
Sulfur Oxides	80	400	24
Carbon Monoxide	20,000	30,000	8
Photochemical Oxidant	100	500	1
Hydrocarbons (not including methane)	1,800	4,000	3
Nitrogen Oxides	200	500	24
Odor		Essentially Unobjectionable**	

*Federal criteria for U.S. by 1975.
**Judged unobjectionable by 60% of a panel of 10 untrained subjects.

The levels listed are met by ambient outdoor air in many major cities, or will be met by such outdoor air when passed through minimal air treatment systems (containing suitable combinations of heaters, coolers, humidifiers, etc., and including roughing particulate filters). Conformity of users' local air to these concentrations may be determined by reference to the Storage and Retrieval of Aerometric Data System (SORAD) of the National Air Pollution Control Administration, and by other means, as listed in Section 3.2.

Governmental Industrial Hygienists, the American Industrial Hygiene Association or the Occupational Health Section of the U.S. Public Health Service.

3.4 IF OUTDOOR AIR of the quality specified by Sections 3.1 and 3.3 is not available, filtration or other treatment devices shall be used to bring its quality to or above the minimum level defined by Sections 3.1 and 3.3.

3.5 ACCEPTABLE VENTILATION AIR may contain a mixture of suitably treated recirculated air and outdoor air such that the mixture meets or exceeds the quality limits stated in 3.1 and 3.3 (See Section 5.0).

SECTION 4.0. VENTILATING SYSTEMS– GENERAL REQUIREMENTS

4.1 VENTILATING SYSTEMS shall be provided with adequate openings for supply, return and exhaust air to obtain the required circulation.

4.2 OUTDOOR AIR INLETS shall be located to minimize or eliminate possible contamination.

4.3 EXHAUST DISCHARGES shall be located so that the air exhausted to the outside does not create a nuisance or contaminate outdoor air near outdoor air inlets.

4.4 VENTILATING SYSTEMS shall be designed and installed so that the air coming in contact with occupants is at a temperature, velocity and quality not to constitute a health hazard or discomfort.

4.5 VENTILATING DUCTS shall be constructed entirely of incombustible, nonporous materials. Their construction shall comply with the standards of air conditioning and ventilating systems of the National Fire Protective Association (Pamphlets NFPA No. 90A and NFPA No. 90B).

4.6 OCCUPIED SPACES shall be provided with means of supplying sufficient ventilation air for the maximum number of persons for which such spaces are designed.

4.7 THIS STANDARD assumes that contaminants from concentrated sources which can be a potential hazard or nuisance (heat, smoke, fumes, etc.) are collected as close as possible to the source by exhaust systems separate from the space ventilating system.

4.8 WHEN SPECIAL EXHAUSTS are used (as in the kitchen), consideration must be given to provide adequate supply air to the space to replace the exhaust air.

SECTION 5.0. RECIRCULATION

The requirements for ventilation quantities given in Section 6.0 are for 100% outdoor air when the outdoor air meets the specifications for air quality given in Section 3.0. Except for areas where recirculation is prohibited by other codes or standards having precedence, the outdoor air requirements may be reduced to 33% of the specified required ventilation air quantity if adequate temperature control is provided, in addition to filtering equipment, so that the maximum allowable concentration of particulates entering the space is less than that specified in Table I. If, in addition, high efficient adsorption or other odor and gas removal equipment is employed, so that the air entering the space has been purified to meet the requirements of Sections 3.1 and 3.3, the outdoor air requirement may be reduced to 15% of the specified required ventilation air quantity. *In no case shall the outdoor air quantity be less than 5 cfm per person.*

SECTION 6.0. VENTILATION REQUIREMENTS

The required air quantities are for outdoor air meeting the requirements of Section 3.0 or for a combination of acceptable outdoor air and recirculated air in accordance with Section 5.0. Minimum and recommended values are given to provide different quality levels in recognition of the need to provide choices of environmental performance for different classes of projects. In either case the designer is encouraged to use his experience and judgment in the application of this Standard as long as the minimum requirements are satisfied.

In many cases the required ventilation air quantities for spaces with positive exhaust systems, such as toilets, baths, lobbies, corridors, and kitchens, may be supplied from adjacent spaces. The sum of the ventilation requirements for the space and the adjacent space shall be provided.

	Estimated persons/ 1000 sq ft floor area. Use only when design occupancy is not known	Required ventilation air, cubic feet per minute per human occupant, (when the number is bracketed, refer to the notes).		Comments

6.3. INDUSTRIAL

Occupational safety laws in the various states usually regulate the ventilation requirements. Almost always, these are far in excess of the ventilation requirements for the occupants. The following list gives the requirements for the occupants only, assuming that the ventilation air is of a quality equal to or exceeding the limits listed in Section 3.0.

	Estimated persons/ 1000 sq ft floor area. Use only when design occupancy is not known	Required ventilation air, cubic feet per minute per human occupant, (when the number is bracketed, refer to the notes).		Comments

ASHRAE STANDARDS

ASHRAE Standards are updated on a five-year cycle; the date following the Standard number is the year of approval. The latest copies of ASHRAE Standards may be purchased from the ASHRAE Circulation Sales Department, 345 East 47th St., N.Y. 10017. Postage and handling: U.S. add $.35 for each individual copy, $2.00 for full set; foreign add $.65 for each individual copy, $3.00 for full set. Remittance required with order.

Standards approved by the American National Standards Institute are designated ANSI.

*26 Construction Drawings for ASHRAE STANDARD 52-76 describe how to apply the methods outlined in the Standard to the building of apparatus for testing air cleaning devices. The set $25.00. Postage: add $1.00 for U.S. and $2.00 for foreign.

Public smoking under fire

by Bill White 2-21-83
Times Juneau Bureau

Juneau — Anti-smokers lined up this week behind a bill that would ban cigarette, pipe, and cigar smoking in public places.

"Your bill can be a terrific benefit for the people of Alaska," said Dr. John Middaugh, state immunologist and official with the Alaska Public Health Association. "It endorses the concepts of health prevention and deterrence."

Middaugh's comments came from Anchorage during a statewide teleconference on the proposal, on which the House Judiciary Committee held two days of hearings.

Susan Scott, a state employee in Anchorage, asked, "Is it unreasonable to request not to have ashes in my cauliflower at the grocery store or to stand in a long line at Long's Drug store with a man puffing on a 6-inch-long cigar or to eat a tasty meal without smoking my neighbor's pipe?"

Current law says smoking in public places "may constitute" a nuisance. The public places listed include trains, buses, ferries, elevators, libraries, museums, lecture or concert halls, gymnasiums, public schools, state meeting rooms, restrooms and hospital hallways. Portions of those areas may be designated as smoking sections.

The proposed bill would declare smoking in those areas a nuisance and a public health hazard.

It also would expand the list of areas in which smoking would be banned. On the list would be taxicabs (unless the driver agrees), all indoor dens of recreation, mu-

See Smoke, page A-4

Smoke

(Continued from page A-1)

nicipal meeting halls, businesses (including retail stores), restaurants, banks, offices, factories and warehouses.

The bill would allow civil lawsuits "to recover for personal injuries sustained as a result of the violation." But committee members discussed deleting that language to prevent harassment suits.

Rep. Hugh Malone, D-Kenai, said one of the biggest problems with the current law is no one enforces it. "I'm inclined to focus on enforcement or forget the bill."

State regulations set fines at $10 to $25 for smokers violating the law and $50 to $100 for those who fail to display no-smoking signs. State Department of Environmental Conservation officials testified they could not recall anyone ever being fined.

Rep. Don Clocksin, D-Anchorage, agreed that enforcement seems to be the problem. Narrowing the law to make sure it is enforced is more important than broadening it if there is no enforcement, he said.

Leo Kaye, executive director of the Alaska Lung Association, said studies have shown second-hand smoke is a health hazard. He added that recent court decisions recognize the rights of employees to work in smoke-free environments.

And employers pay higher health insurance and sick pay costs because of workers who smoke, Kaye said.

Rep. Charlie Bussell, R-Anchorage, pegged the cost per 50 smokers at his electric company at $300,000 a year.

Representatives of the tobacco and retailing industries spoke against the proposal.

Rick Lauber, representing the tobacco industry, argued against testimony that second-hand smoke is harmful. "A vast majority of [illegible] show there's no health hazard from second-hand smoke."

State employees who have complained are covered under the current law, he added.

But one state worker, Roberta Banko, said non-smokers are "treated as troublemakers" if they complain about the "noxious fumes."

"There are a lot of things I can choose to do, but I cannot choose not to work," she said.

Banko, who works for the Department of Labor, said Friday she planned to file a complaint against Rep. Ramona Barnes, R-Anchorage, who smoked in apparent violation of the law, through one of the hearings on the bill.

Barnes said she was in the smoking section of the room. But there are no signs posted in the hearing room.

The Honorable Charlie Bussell
Chairman House Judiciary Committee
State Capitol
Pouch V
Juneau, Alaska 99811

Dear Mr. Chairman:

During the testimony last week on HB 84 there was mention of the White-Froeb Study. The conclusion of that report appeared to conflict with the vast array of eminent scientists who agree that no conclusive scientific evidence exists to support the claim that smoking affects the health of nonsmokers.

I am enclosing a reprint of the Congressional Record, "White-Froeb Study Discredited By Scientists", for your information.

Sincerely,

Rick Lauber

Richard B. Lauber

PROCEEDINGS AND DEBATES OF THE 97th CONGRESS, SECOND SESSION

Vol. 128 WASHINGTON, THURSDAY, DECEMBER 16, 1982 No. 149

House of Representatives

WHITE-FROEB STUDY DISCREDITED BY SCIENTISTS

HON. L. H. FOUNTAIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1982

Mr. FOUNTAIN. Mr. Speaker, after 30 years of service to the people of the Second District of North Carolina, I am about to retire from the U.S. House of Representatives. Before leaving I would like to submit, for the RECORD, an item dealing with an issue with which I and many others have long been interested; namely, the alleged effect of smoking on the health of the nonsmoker.

Mr. Speaker, let me briefly place the issue into its proper context. In 1978, the Subcommittee on Tobacco of the House Committee on Agriculture heard testimony from a vast array of eminent scientists and physicians on the issue of the effect of tobacco smoke on nonsmokers. Those individuals who testified generally agreed that no conclusive scientific evidence exists to support the claim that smoking affects the health of nonsmokers. In 1980, however, an article appeared in the New England Journal of Medicine by Drs. White and Feoeb entitled "Small Airways Dysfunction in Nonsmokers Chroncially Exposed to Tobacco Smoke," in which the authors concluded that smoking in the workplace adversely affects the lung function of nonsmokers. This conclusion appeared to conflict with the testimony presented to the Subcommittee on Tobacco.

Since its publication, the White-Froeb study has been used to support both regulatory and legislative activities in the United States. For example, the study was referred to in testimony before the Civil Aeronautics Board during its recent consideration of rules regarding smoking aboard commercial aircraft. The National Research Council report entitled "Indoor Pollutants" which was issued in 1981 under an EPA contract also relies on the study. Finally, the White-Froeb study has received widespread attention in both State and local legislative and policymaking bodies.

The White-Froeb study continues to play an important role in legislative considerations, despite the fact that the study itself has been heavily criticized by scientists and health practitioners. Most recently, at the 1982 joint meeting of the American Lung Association-American Thoracic Society, Dr. Michael D. Lebowitz, professor of internal medicine, college of medicine, University of Arizona and special consultant to the Subcommittee on Tobacco, presented reasons why, in his own words, "the results of this study cannot be used to demonstrate an effect of passive smoking on forced expiratory flows in adults exposed in the workplace." Dr. Lebowitz, a noted specialist in epidemiology and respiratory diseases, said that the basic problem with the White-Froeb study is that it is "improperly designed" and that "there are problems with the whole data set and with the conclusion." Dr. Lebowitz also expressed concern that the significance of the White-Froeb data appeared to depend upon their unexplained omission of data from 3,000 subjects originally included in the study.

Mr. Speaker, Dr. Lebowitz wrote a letter, dated July 10, 1981, to our colleague, Congressman CHARLES ROSE, Chairman of the Tobacco and Peanuts Subcommittee of the House Agriculture Committee, as a result of a personal interview which Chairman ROSE and Dr. Lebowitz had with Dr. White. With the personal consent of Chairman ROSE, I am inserting herewith Dr. Lebowitz's letter. It more fully explains the author's views regarding the White-Froeb study.

I also want to mention another evaluation of the White-Froeb study, one which was made by Dr. J. G. Gostomzyk, director of the department of health of the city of Augsburg, West Germany. After an extensive, detailed review of the White-Froeb study, Dr. Gostomzyk has concluded that the White-Froeb data were incompletely presented and did not satisfy the prerequisites for scientific credibility. In addition, Dr. Gostomzyk remarked that "Dr. White's methodology is not scientific but that of a lay person with convictions," and concluded that "we assume that Dr. White's study is an attempt at scientific validation of his credo and that he possibly is unaware of the inadequacy of this methodology." It is obvious that Dr. Gostomzyk is referring to Dr. White's outspoken antismoking activities in California, including Dr. White's endorsement of public smoking referendums which were, incidentally, twice rejected by the California voters.

Given these and other criticisms of the White-Froeb study, it would appear that the New England Journal of Medicine has, perhaps unwittingly, performed a disservice to its readership. It is extremely unfortunate that a study so fraught with methodological problems, as indicated through numerous criticisms by scientists in the United States and elsewhere, should have been published in such a reputable journal of medicine. The White-Froeb study should, therefore, not be relied upon by the Congress, Federal agencies, or other legislative or policymaking bodies when considering restrictions on smoking in public places.

THE UNIVERSITY OF ARIZONA,
COLLEGE OF MEDICINE,
Tucson, Ariz., July 10, 1981

Congressman CHARLES ROSE,
Chairman, Subcommittee on Tobacco and Peanuts, House of Representatives, Rayburn Building, Washington, D.C.

DEAR CONGRESSMAN ROSE: The following is a summary of my notes on our visit to Dr. James White at UC San Diego, as per our discussion. Unfortunately, despite the statement in the editorial of the New England Journal of Medicine (27 March 1980), Dr. White and his co-author did not "faultlessly demonstrate a reduction in measures of small airways of healthy non-smokers exposed to cigarette smoke in the work place". It is apparent from our visit and the article that there were various faults in the present study, which shall be discussed.

The problems with the research design are as follows:

The participants were not only volunteers, but generally had to pay for the physical fitness course; this is the reason most were white-collar. Employees in specific factories invited White to run the physical fitness course in their factories as well, which would also bias the population sample. Blue-collar workers were not distributed randomly. [It has to be assumed that volunteers in the physical fitness courses fall into unrepresentative categories: the highly motivated, with an interest in health and usually healthier, those who are worried about health and generally less healthy; the first group would include fewer smokers and the second group would include more smokers.]

The questionnaire utilized was not a vali-

dated one per se; test-retest comparisons were made only on the smoking questions and very small groups of subjects. The smoking information was not validated. There were no test-retest or validations on symptoms asked in the questionnaire. The questionnaire itself was derived by the investigator, and included some questions from standard questionnaires; this did not appear to include standard respiratory questions, and in fact various typical respiratory questions (such as phlegm) were not asked. The questionnaire did not include questions on attitude, but did include questions on activity levels and jobs (duration, type). The questionnaire did ask how many smokers were in their work area, room size, and nature of the air conditioning. It also included questions about residences in the last 20 years (zip codes), so that exposures away from work were assessed by residential location. A question was asked about smokers in the home. [Thus, the smoking information is not validated, but is probably relatively accurate. The information about exposure to passive smoking is only approximate, as is the information on other occupational exposures. Exposures to air pollutants or to unknown toxic gases in the working place is only approximate, and their effects underestimated.]

Dr. White presented a paper to the American College of Sports Medicine, the abstract for which in 1977 indicated there were 7,122 subjects enrolled between 1969 and 1977. However, in the New England Journal of Medicine article, he states that the base population analyzed is only 5,210 smokers and non-smokers enrolled between 1969 and 1979. Although he excluded all the ex-smokers, some whose zip codes were missing, his answers as to why the rest of the subjects were excluded were entirely unclear and tend to indicate potential bias in selection of subjects for consideration for analyses. It might be added that the 2,100 subjects analyzed in the NEJM article and those analyzed and presented in the Sports Medicine abstract appear to be the same as they yield exactly the same table of results (as determined from comparison of the table in the Sports Medicine manuscript and the NEJM table).

In addition to the sources of bias mentioned above, it is apparent that the non-smokers in clean work environments and those in smoking work environments have not only chosen not to smoke, but it is likely that those non-smokers working in smoking environments may be different for a variety of reasons from non-smokers working in clean environments. Furthermore, it is apparent that the non-smokers in non-smoking environments are quite different in that their lung function is "super normal" in comparison even with the Seventh Day Adventists (the source of the Morris prediction equations).

Dr. White did state that from the questionnaire and from the baseline tests that there were no significant differences in the three non-smoking/non-inhaling groups in terms of the amount of previous exercise or oxygen consumption, but he was unsure of the difference in percent of body fat. Smokers did have less body fat, were less in terms of having lower oxygen consumption, and had less activity. He says further that there were no differences between the groups in terms of childhood respiratory history (lower respiratory tract illnesses) from his submitted questionnaire information, but he did not ask about family history. He did not ask sufficiently about respiratory questionnaires to appropriately exclude groups on the bases of productive cough ("cough bronchitis"). He states that there were no differences in prevalence rates of questionnaire responses by zip codes; if so, this contradicts other evidence vis-a-vis the effects of air pollution in these areas. He was not able to assess other exposures such as those from hobbies, exposures to gas stoves, or transportation. In terms of passive smoking in the home, he excluded such passive smokers from the non-smoking and passive smoking groups, but not from any smoking groups. He was not able to provide any information about the distribution of characteristics in those eliminated from the original 7,000 or the 2,208 that qualified because of other questionnaire results.

With regards to the pulmonary function testing done by Dr. White, it must be first noted that the instrument used is not considered a satisfactory instrument in that it is non-linear (highly biased) at both high volumes and low volumes. [This has the effect of maximizing differences in that anyone with minor aberrations of total vital capacity or of flows at the end of the flow volume curve would have very different, that is, low, flows.] The comparisons that Dr. White did and reported on in his response letter in the NEJM (14 August 1980) would not in any way modify this opinion. Furthermore, Dr. White has the only pulmonary function technician and reader. Even though he was trained at the VA hospital and his techniques were evaluated by test—retest and by comparison to other readers, any biases inherent in Dr. White's thinking (see below) would affect the way he read the tests. Furthermore, he took the FEV$_1$ and flows off the same spirogram using an approximation technique published by Morris, et al., which is not an adequate or accurate representation of those measures. All of his tests were baseline tests done after two and a half hours in the classroom in the evening on those without acute respiratory illnesses (usually on a Monday or Tuesday evening); thus, there is probably little diurnal variation or pretest biases other than those experienced by the workers during their work day and in their activities prior to the classroom. Although it is difficult to judge the effects of these factors, they may have influenced the test results, especially in those with any significant exposures during the day.

The major problem with the pulmonary function test results as reported is that they are not age- and height-adjusted, since lung volumes and flow rates are associated with both of these factors. In other words, Dr. White used raw values of flows and volumes to do comparisons. He did this on the assumption that the mean age and height were similar for the different groups. This is a mistake, since the distributions for those ages and heights could have differed. Furthermore, his quoted figures for percent predicted are strictly for the average person, age 49, with an average height, and does not represent the group for which they are provided. In terms of these statistical analysis, he just chose the SNK package among many. There is no correlation coefficient per se. "Normality" was not an objective of this study, so he cannot state anything about the normality of the subjects studied, including those he considered to have significantly different results from the non-exposed non-smokers. He does not understand the difference between clinical meaningfulness and statistical significance. It is quite obvious that the majority of those in the passive smoking and in the non-inhaling group are quite normal and that very few would be consdered abnormal by any criteria.

In his reported results, he quotes as incorrect significance level of $p.<.005$, whereas the level provided by the technique is $p.<.05$. This is very different, given the number of comparisons made, and indicates that some of the results would not be significant if corrections were made for the number of comparisons. Furthermore, the data presented in Table 1 was used to recompute the SNK analysis by Mary C. Townsend, MPH (Department of Epidemiology, University of Pittsburgh). Those results differ from those published by Dr. White and are provided in the attachment. The most important of the differences is the finding that the passive smokers and light smokers differ for the male FEV 75-85 percent. Thus, the effect of passive smoking on non-smokers is still unconfirmed, despite Dr. White's unfailing conviction that it is confirmed.

Other minor points: In terms of the carbon monoxide sampling, although it is stated that it was randomized, it was really on only 40 smoking and 40 non-smoking situations chosen by chance but not by random selection. Dr. Froeb, the co-author with Dr. White, is a private practitioner in La Jolla and helped Dr. White in drafting the NEJM manuscript from the manuscript presented at the American College of Sport Medicine. It might be pointed out that San Diego is not strictly low in air pollution concentrations, nor uniformed throughout the area; this may bias some results. Dr. White performed the pulmonary function tests until "reproducible curves were obtained", but they do not necessarily follow the Intermountain, Snowbird, or ATS recommendations.

In reviewing Dr. White's response to the letter to the Editor in the NEJM (14 August 1980), it is quite clear that Dr. White did not satisfactorily answer all the questions raised, many of which are similar to those raised in this letter. It is questionable, from the discussion, whether Dr. White would pursue any further re-analysis of the data, nor necessarily could it be pursued. It is questionable, given the basic underlying problems in the research design, that re-analysis of the data would be worthwhile. On the other hand, given other results that contradict Dr. White's, including those now in press (such as Comstock et al., Johns Hopkins, presented at the Society for Epidemiological Research in June of 1981), it would be likely that a panel discussion of passive smoking might be valuable. I will be glad to furnish further discussion or help in that matter.

Sincerely,

MICHAEL D. LEBOWITZ, Ph. D.,
F.C.C.P.,
Professor of Internal Medicine

development programs are under way through sponsorship of the U.S. Department of Agriculture, National Science Foundation, Southwest Border Regional Commission, Four-Corners Regional Commission, and the state of California.

Germ plasm collections have been made from wild guayule plants in Mexico and Texas. Plantings have been established to test yields, to increase seed supplies, and to conduct plant breeding work. Test plots have been established to determine desirable planting and cultivation practices. Research is being conducted on the possibility of increasing rubber yield by treating guayule plants with plant growth regulators.

The recent development of a seed coating process to promote germination, and the development of selective herbicides, will make direct seeding in field plantations a possibility. Eliminating nursery or greenhouse propagation could produce considerable savings in production costs.

The only guayule yield figures now available are estimates developed during the ERP. During the life of the ERP the [illegible] per hectare, approximately 480 kg of guayule rubber per year. Kelly (*15*) obtained yields of approximately 860 kg per hectare per year from one test plot in California. Foster *et al.* (*16*) have outlined the state of the art of guayule technology and described present and projected world rubber market conditions and areas of the United States where conditions favor guayule cultivation.

Indoor Air Pollution, Tobacco Smoke, and Public Health

James L. Repace and Alfred H. Lowrey

Serious health effects from air pollution have led to federal standards for the regulation of outdoor exposure levels. However, Americans spend about 90 percent of their time indoors (*1*). Thus the levels of indoor air pollution are important in determining total exposure to air pollutants (*2–6*). Indeed, in a recent review article (*4*) it was concluded that indoor air pollution in public office buildings is of greater potential harm than the outdoor variety, and that these exposures may constitute a real threat to the health of many urban people. The U.S. Surgeon General asserted in his report on *Smoking and Health* that tobacco smoke can be a significant source of atmospheric pollution in enclosed areas (*7*). Some 53 million U.S. smokers consumed 615 billion cigarettes in 1978 (*8*). Thus it is apparent that indoor air pollution from tobacco smoke is pandemic.

In the presence of cigarette smoke, many normal nonsmokers experience eye and throat irritation, headache, rhinitis, and coughing; allergic persons report wheezing, sneezing, and nausea as well. Particularly acute symptoms may be found in infants, children, persons with cardiovascular or respiratory disease, and wearers of contact lenses (*7, 9*). Determining the extent of the exposure of nonsmokers to cigarette smoke is important because smoking is a cause of chronic obstructive pulmonary disease, cardiovascular disease, and lung cancer, and is associated with cancers in other parts of the body (*7*); because these diseases also occur in nonsmokers; and because the products of tobacco combustion have been detected in nonsmokers (*10*).

Although measurements of indoor carbon monoxide pollution from smoking are abundant (*7*), published reports of the exposure of the population to the particulate phase of ambient tobacco smoke are rare (*7, 11–13*). Furthermore, a comprehensive theory of the generation and removal mechanisms for tobacco particulates in naturally or mechanically ventilated habitable spaces has not been presented.

We therefore undertook a systematic study of the levels of respirable suspended particulates (RSP) in several common indoor environments in an attempt (i) to determine the relation of these levels to the aerosol from tobacco smoking, (ii) to understand the effect of ventilation on tobacco smoke concentra-

tions, and (iii) to develop a general model for estimating the range of the public's exposure. Our goal was to provide a quantitative basis for assessing the health hazards to nonsmokers posed by repeated exposure to tobacco combustion products.

Model Development

To relate the contribution of smoking to indoor RSP requires a model describing the behavior of the tobacco aerosol in indoor spaces. Bridge and Corn (*6*) found that a reduced form of an equation by Turk (*14*) reliably predicts carbon monoxide (CO) concentrations from tobacco smoke in ventilated spaces and so is of major value in assessing the possible hazards in occupied spaces (*11*). The equation is not valid, however, for a pollutant that is affected by physical decay due to adsorption on room surfaces. Penkala and DeOliviera (*15*) showed that decay of the tobacco aerosol in a well-mixed unventilated chamber is exponential.

We modify the Turk equation in differential form by adding a decay term to the removal rate and equating the rate of change of pollutant mass to the algebraic sum of the generation and removal rates.

Table 1. Recommended values of the mixing factor m. After Corn (*11*).

Configuration of air supply system	m
Perforated ceiling*	1/2
Trunk system with anemostats	1/3
Trunk system with diffusers	1/4
Natural draft and ceiling exhaust fans	1/6
Infiltration and natural draft	1/10

*This is the best standard condition.

The mixing factor is an empirical number that accounts for room-specific effects on pollutant transport. Pollutant removal is more rapid in a well-mixed atmosphere (where m is large) than in a poorly mixed, stable one (where m is small). Factors that affect m include type and placement of ventilation grills, ventilation flow rates, inhomogeneous pollutant distribution, barriers, circulation fans, and room traffic.

decay time, a time constant associated with the removal of a pollutant from a room through adsorption on surfaces and filtration; and m is the mixing factor, an empirically determined number (*16*) that modifies the ventilation time as τ_v/m, where $m \leq 1$ ($m = 1$ implies ideal mixing). Corn (*11*) suggested values of m for various ventilation systems (Table 1). We postulate that m also modifies the ideal decay time as τ_a/m. The pollution generation rate, in micrograms per minute, is given as $G = nC_0/t_b$, where n is the number of cigarettes being smoked at time t; C_0 is the total particulate matter (TPM) from both sidestream and exhaled mainstream smoke; and t_b is the duration of cigarette smoking.

Summary. An experimental and theoretical investigation is made into the range and nature of the exposure of the nonsmoking public to respirable suspended particulates from cigarette smoke. A model incorporating both physical and sociological parameters is shown to be useful in understanding particulate levels from cigarette smoke in indoor environments. Observed levels of particulates correlate with the predictions of the model. It is shown that nonsmokers are exposed to significant air pollution burdens from indoor smoking. An assessment of the public health policy implications of these burdens is presented.

The solution yields the density $A(t)$, in micrograms per cubic meter, of smoke in the room as a function of time:

$$A(t) = A_{eq}(1 - e^{-t/\tau}) \qquad (1)$$

where $A_{eq} = G\tau/V$ is the equilibrium concentration of the pollutant in the room, and where the time constant

$$\tau = \frac{\tau_a\tau_v}{m(\tau_a + \tau_v)} \qquad (2)$$

is the mean ventilation time, or the time for the smoke concentration to decrease to $1/e$ of its value (where e is the base of natural logarithms); V is the room volume in cubic meters; $\tau_v = V/Q$ is the ideal ventilation time, or the time required to replace a volume of air equal to the volume of the room by ventilation and infiltration; Q is the volume rate of ventilation and infiltration; τ_a is the ideal

If $\tau = \tau_v/m$) it becomes the reduced Turk equation of Bridge and Corn (*6*), with $m = 1$; and (ii) in the case of adsorption only (the unventilated room), $\tau = \tau_a/m$. Then, if the generation of smoke ceases at time t_b, prior to equilibrium, A will decay according to

$$A(t) = A_0 e^{-m(t-t_b)/\tau_a} \qquad (3)$$

where A_0 is a constant related to the equilibrium concentration by

$$A_0 = A_{eq}[e^{m t_b/\tau_a} - 1]$$

Equation 3 becomes the decay equation described by Penkala and DeOliviera ($t > t_b$, $m = 1$).

The modified Turk equation (Eq. 1) contains only measurable quantities, and thus in principle can be used to estimate the concentration of TPM or CO from tobacco smoke (or other indoor air pollutants), as a function of time, for any room for which the pollutant generation rate, volume, and mean ventilation time are known.

Controlled Experiments

Equation 2 shows that the mixing factor affects the time constant for decay as well as ventilation. Experiments under conditions of known ventilation were therefore necessary to assess the influence of mixing factors, decay time constants, and generation rates on the growth and decay of tobacco smoke particulates. To increase the usefulness of the experimental values determined for the mean ventilation time for the removal of tobacco smoke, we conducted these experiments in actual occupied spaces rather than in experimental chambers.

A piezobalance (TSI model 3500) (*17–19*) was used in sampling the aerosol. It collects respirable particulates (*20*) between 0.01 and 3.0 micrometers in diameter with near 100 percent efficiency (decreasing to 50 percent at 3.5 μm and to 10 percent at 4 μm). The sampling rate is 1 liter/min (*18*); the sampling time is variable. Factory-calibrated with welding smoke, the detecting crystal in the instrument used has a sensitivity of 5.74 $\mu g/min\text{-}m^3$ per hertz. The instrument underestimates the mass concentration of tobacco aerosol by about 15 percent compared to measurements made with low-volume filter sampling techniques. Readings can be affected by changes in humidity; the maximum expected error due to changes in relative humidity when sampling a hygroscopic aerosol (such as tobacco smoke) is given as $\pm$ 10 $\mu g/m^3$. The overall instrument error is about $\pm$ 10 percent compared with low-volume filter measurements of welding smoke (*19*). The aerosol from sidestream cigarette smoke (that portion emitted by the burning tip), an important component of many indoor aerosols, is lognormal, with 99 percent of the mass < 1 μm in aerodynamic diameter and with an initial mass median diameter (MMD) from 0.2 to 1.5 μm depending on dilution (*20, 21*). The relative particle sizes of fresh sidestream and mainstream smoke (the latter being that portion inhaled by the smoker) are about the same; for ex-

Table 2. Parameters for Eq. 1, as determined with experiments 1 to 3 (unventilated rooms).

haled mainstream smoke, particle size is estimated to be ~ 0.8 μm (MMD). Since the ambient cigarette smoke aerosol is reproducible and coagulates very slowly, it has been used as a test aerosol (*21*) and in evaluation of heating, air-conditioning, and ventilating systems (*22*). [The bulk of the ambient tobacco aerosol is probably due to cigarettes, since less than 15 percent of smokers smoke cigars or pipes (*23*).]

Unventilated Growth and Decay of Tobacco Smoke

Experiments were carried out to determine the usefulness of Eq. 3, which predicts a rapid decay for good mixing and a slow decay for poor mixing; and also to discover the limits of τ_a/m.

Experiments 1 and 2 were conducted in a wood-panelled den in a private residence. In the geometric center of the room (volume, 21.9 m³), a popular filter cigarette [containing 65 millimeters of tobacco and ranking 94th on the Federal Trade Commission (FTC) scale of tar and nicotine content (17 milligrams of tar and 1 milligram of nicotine) (*24*)] was ignited and allowed to smolder until 89 percent of its tobacco was consumed. During the first experiment, two box fans (51 centimeters in diameter) with antiparallel exhausts were used to ensure ideal mixing; each fan's exhaust, measured with a Velometer, was 55 m³/min. The growth and decay of the RSP were measured with the piezobalance. Experiment 2 was similar to experiment 1, except that the cigarette was extinguished after 75 percent of its tobacco was consumed and the circulating fans were not used, so that mixing was natural. The results of both experiments are plotted in Fig. 1, with the background levels of RSP subtracted. The data points generally represent 1-minute average values. The differences in mixing dramatically affect the slopes of the decay curves.

The theoretical curves shown in Fig. 1 were generated by fitting the data points from the decay curves to Eq. 3 with a regression analysis; A_0 and τ_a/m were determined and used to calculate the growth curves from Eq. 1, case (ii). The ratio of the slopes of the decay curves for ideal and natural mixing yields the mixing factor for the room. Table 2 gives the values obtained for the various parameters. The value of the mixing factor obtained is in good agreement with the expected value given in Table 1 for the case of infiltration and natural draft. The growth curve for the case of natural mixing (experiment 2) shows a poor fit initially because of the effect of the warm smoke rising to the ceiling and remaining

out of the detector's range for about 3 minutes. Experiment 3 demonstrated that Eq. 3 is valid under more general conditions, that is, when a cigarette is actually smoked.

We conclude that these experiments show that for the unventilated room, Eq. 3, the reduced form of Eq. 1, is useful in describing the growth and decay of cigarette smoke particulates.

Ventilated Growth and Equilibrium of Tobacco Smoke

An experiment was conducted in a ventilated conference room of a modern office building to test Eq. 1 in the case of removal of uniformly generated tobacco smoke by both decay and ventilation. The experiment involved measuring the growth of cigarette-generated RSP from background levels to near equilibrium. Analysis of the RSP-versus-time curve determines τ, the mean ventilation time, and C_T, the total RSP liberated from the combined sidestream and exhaled mainstream smoke.

The RSP detector was located in the geometric center of the 113-m³ room. Two fans with antiparallel exhausts were used to establish a vigorous circulation of 100 m³/min. The ideal ventilation time τ_a, calculated from the volumetric flow rates of the ventilation system, was 49.2 minutes for a complete change of air. Thirty-two cigarettes were smoked in 40 minutes by a relay of seven smokers, with an average of four persons smoking at any given time. When smoking their own brands, they averaged 9.8 minutes per cigarette; when smoking cigarettes supplied to them, they averaged 5.8 minutes per cigarette. All butts were collected and the amount of tobacco consumed was measured for each cigarette. The estimated mainstream TPM (M) (tar plus nicotine) generated by the 32 cigarettes was determined by weighting the TPM values for each cigarette (*24*) by the fraction of tobacco consumed, and adding the results to obtain M = 418 mg [TPM is emitted from cigarettes at a linear rate after the fourth puff (*25*)].

Figure 2 shows the growth against time of RSP from the cigarette smoke. The data points are corrected for background RSP levels and are 2-minute averages. A regression analysis using Eq. 1 yields A_{eq} = 1947 μg/m³ and τ = 14 minutes, with a coefficient of determination = .964 (from Eq. 2, τ_a = 19.5 minutes). Finally, C_T, or the total amount of RSP liberated in the room during the entire smoking period, 772 mg, is calculated by using Eq. 1; C_T/M = 1.85. This ratio represents a weighted average for six different brands of filter cigarettes that together commanded a 23 percent share of the market in 1976 (*26*).

From the goodness of fit of the theory to the data and from the observation of predicted interactive behavior among mixing, growth, and decay processes for RSP from cigarette smoke, it appears that all the room-specific factors affecting the removal of tobacco smoke (ventilation, decay, and mixing) can be combined into a single time constant τ, which can be determined for any room by regression analysis of the decay or growth-equilibrium curves, or by calculation from the equilibrium concentration if the smoke generation rate and room volume are known. The ratio of the slopes of the decay curves for ideal and natural mixing yields the mixing factor. We conclude that Eq. 1 is a useful tool for predicting the levels of tobacco smoke in both ventilated and unventilated occupied space.

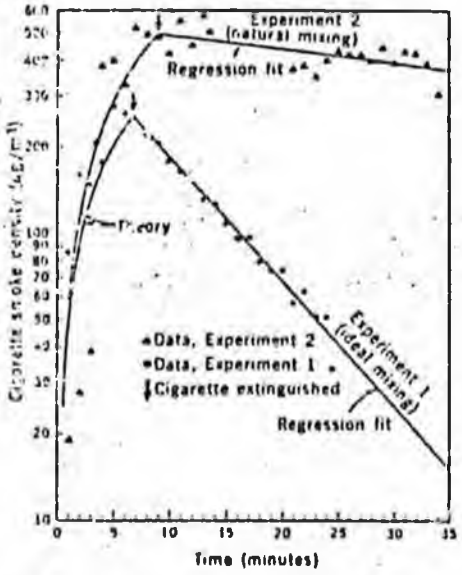

Fig. 1. Theoretical predictions versus experimental results for the growth and decay of RSP from a smoldering, average-tar cigarette in a 22-m³ unventilated room. The dramatic difference in the slopes of the decay curves reflects the difference in room air turbulence (mixing) for the otherwise similar experiments.

Field Survey of RSP

We now address the complex problem of surveying the levels of RSP indoors and determining what portion of this aerosol may be attributed to cigarette smoke by means of Eq. 1. The problem is complicated by differences in smoking rates, numbers of smokers, room volumes, effective ventilation rates, and the TPM values of various brands of cigarettes. The problem may be simplified by assuming that smoking is a random process when it occurs among large groups of people. It follows that cigarette smoke RSP values may be treated as equilibrium values; that all of the smokers may be treated as habitual smokers who smoke identical average-tar cigarettes in the same way at the same average rate, uniformly distributed over a 16-hour day. An average smoking rate r of two cigarettes per hour is calculated from the 1975 figures for the number of U.S. smokers and the U.S. domestic cigarette consumption (*8*). In 1978, the sales-weighted average mainstream TPM value M_a was 17.6 mg for all the cigarettes sold in the United States (*7*). The estimated emission rate C_0 (combined sidestream plus exhaled mainstream TPM) from a habitual smoker is given by $E = 1.85\,rM_a$ = 65 mg/hour, where 1.85, used for the ratio C_0/M_a, is taken from the conference room experiment. Physically observable in any field survey of smoking is n_s, the number of burning cigarettes (the number of "active" smokers); n_s can be related to the number of habitual smokers n_{hs} by considering that the average time for smoking a cigarette is 10 minutes (*2, 6*). This number and the previously calculated average smoking rate indicate that $n_{hs} = 3n_s$.

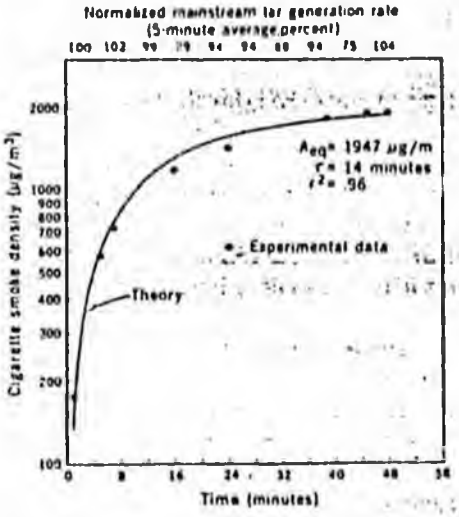

Fig. 2. Theoretical predictions versus experimental results for the attainment of equilibrium A_{eq} for the combined emission of sidestream and exhaled mainstream cigarette smoke from four chain smokers in a 113-m³ conference room with well-mixed ($n \sim 1$) ventilation in a modern office building. Under natural mixing conditions, about 11 habitual smokers would generate an equivalent equilibrated concentration of smoke. This many smokers would be expected in a group of 33 adults (well within the capacity of this 50-person conference room).

From the equilibrated form of E[illegible], we determine that

$$R = A_{eq} = 650 \frac{D_s}{C_a} \quad (4)$$

where R is the smoker-generated equilibrium RSP level in micrograms per cubic meter, D_s is the density of active smokers (number per 100 m³), and C_a is the effective rate for the removal of cigarette aerosol (air changes per hour), with $C_a = 60/\tau$.

The aerosol sampling described in this article was performed from late March through early June 1978 in the Washington, D.C., metropolitan area. The MMD (seasonal average) of the outdoor urban aerosol for Washington in 1970 was 0.5 μm, with 90 percent of the aerosol mass less than 3 μm in aerodynamic diameter and lognormally distributed (*27*).

It is important to note that all of the RSP measurements we report represent time-averaged values.

Factors other than tobacco smoke may contribute to indoor RSP. These include infiltration of outdoor RSP, cooking, dust raised by indoor traffic, and industry. By restricting the sampling to nonindustrial indoor locations where tobacco smoking is absent, the effect of the remaining variables may be assessed. Table 3 gives the RSP levels for several indoor spaces in which smoking did not take place: three restaurants, four private residences, an office building conference room, two libraries, and a church during services. The mean of these measurements is 40 μg/m³. In three instances, fans were mixing the air at a high rate and RSP levels were elevated, apparently because of dust entrainment. No correlation between the volumetric density of people (occupancy) and RSP is evident. Hemperly (*28*), in sampling RSP in Houston, found similar RSP levels in two schools, a library, and a museum—all nonsmoking areas.

Table 4 gives the results of RSP sampling in nonsmokers' automobiles traveling along two major commuter highways (Route 50 in Maryland and U.S. I-295 in Washington) during the rush hour. The samples were taken on different days and were measured in different vehicles. In all cases, the windows were slightly open and the ventilation fans were running. The mean of the data, 38 μg/m³, is not very different from the mean of the indoor readings, 40 μg/m³ (Table 3).

The impact of actual ventilation practice on ambient RSP levels from smoking was investigated at eight restaurants, three cocktail lounges, two bingo games, a dinner-dance, a bowling alley, a sports arena, and a hospital emergency waiting room. For contrast, one unventilated private residence was sampled during a cocktail party. With the exception of the hospital waiting room and the hotel bar, each space sampled represented the major part of the building and was subject to ventilation requirements specified by building codes. Sampling was generally performed well after opening time to ensure that an approximately steady-state level of smoking had been reached.

Table 4. Levels of RSP in nonsmokers' [illegible] during rush-hour traffic on a busy commuter highway in Washington, D.C., measured with the vehicles' windows slightly open and the ventilation fans running. Each car carried four persons and had a volume of 2 m³, so that the occupancy was equal to 200 persons per 100 m³.

Date	Time	Sampling time (min)	RSP level (μg/m³)

23 March	p.m.	35	20
24 March	a.m.	20	54
28 March	a.m.	26	49
31 March	a.m.	8	25
Mean ± standard error			38 ± 15

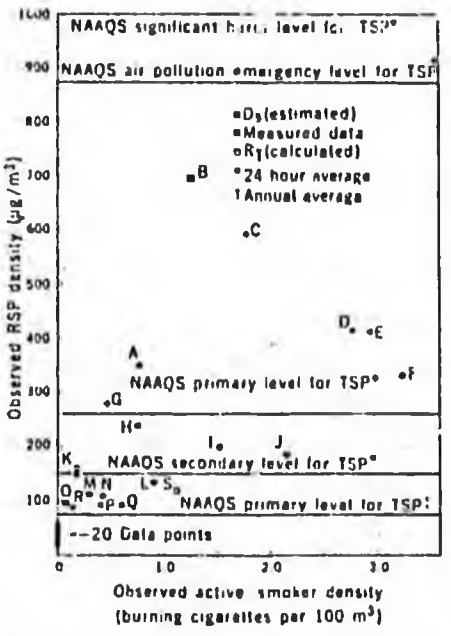

Fig. 3. Results of a field survey of short-term time-averaged levels of RSP in 38 enclosed spaces (see Tables 3, 4 and 5). Levels corresponding to federal standards for TSP are indicated for comparison only. The microenvironments include ten restaurants, three cocktail lounges, two bingo games, a dinner-dance hall, a bowling alley, a sports arena, two libraries, a church, a hospital waiting room, five vehicles, and five residences. The letters A through S correspond to those given in Table 5. The effective air change rates for microenvironments A and S are known from experiments to be C_a = 1.5 and 9.2, respectively.

The piezobalance and a stopwatch were used to take tabletop-level RSP samples for periods ranging from 10 to 50 minutes (mean, 20 minutes). The piezobalance was equilibrated in advance to avoid errors due to changes in temperature or humidity.

The room dimensions were estimated and the number of active smokers was sampled periodically throughout the measurement period and averaged. It was usually not possible to sample the premises when there was no smoking; in most cases, the RSP outside the premises was sampled for comparison. Table 5 gives the results of the measurements. Figure 3 shows the average density of active smokers (defined as the number of burning cigarettes per 100 m³) plotted against the total indoor RSP sampled. As a guide to whether a given datum is "high" or "low," the National Ambient Air Quality Standards (NAAQS) for total suspended particulates (TSP) are also shown. Since a specific averaging time is incorporated into these standards, violation of the standard is not demonstrated here. However, repeated exposure to such elevated levels can lead to "violations" of the annual standards, as will be shown later. Note that all the data for nonzero smoker density exceeded the level of the annual primary (health-related) NAAQS, whereas none of the data for zero smoker density exceeded this level. Further, the background RSP measured outside the smoking premises suggests that the source of these elevated levels was not the outdoor air. The mean and the standard deviation for the outdoor RSP are 46 ± 13 μg/m³, and in every case the outdoor level is less than the indoor. In certain cases, indoor controls are available. In bingo game 2, held in the nave of a church, the active smoker density was 0.47 per 100 m³, the occupancy was 3.6 persons per 100 m³, and the RSP density was 279 μg/m³ (Table 5). By contrast, during the tobacco smoke-free religious services, despite an occupancy of 7.0 persons per 100 m³, 30 burning votive candles, and several processions, the RSP density was 30 μg/m³. The elevated RSP levels in the bingo game clearly appear to be due to smoking. Similarly, measurements taken in the nonsmoking section of a sandwich restaurant showed considerably lower levels than in the smoking section, indicating that the contribution of smoking to RSP was much larger than the effect of cooking, even at the low cigarette densities shown (Table 5). Figure 3 shows that, in general, RSP levels increase with active smoker density, although there is

considerable scatter in the data. The question now is whether Eq. 1 is useful in explaining this scatter.

We hypothesize that the levels of RSP for finite D_s (Fig. 3) are due to near-equilibrium levels of cigarette smoke adding to much smaller background levels, and that the scatter in the RSP levels for fixed cigarette density is due primarily to differences in the mean ventilation time τ. Analyzing the background corrected data given in Table 5, we use Eq. 4 to calculate a range for C_a between 1.2 and 10.7 air changes per hour; C_a is used instead of τ to facilitate comparison with building code-specified ventilation rates. The range determined for C_a is consistent with two known values of C_a derived from the cocktail party and roadside restaurant experiments (Table 5).

The C_a for tobacco aerosol is affected by the rate of mechanical ventilation and infiltration, the rate of smoke adsorption, and mixing. The range of mechanical ventilation and infiltration can be calculated from tables of standards determined by the American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE) (29), the authority specified by the local building code (30). For each premise listed in Table 5, the recommended maximum number of outdoor air changes per hour (based on the estimated floor area, maximum occupancy, and volume) was calculated from the ASHRAE tables; a two-thirds recirculation of air (the maximum permitted by ASHRAE) was assumed. This yielded a range of 0.7 to 9.4 air changes per hour. Infiltration, resulting mainly from the opening of doors, was estimated from the actual occupancy during the sampling (29): we assumed a 100 percent turnover of occupants per hour. This was added to the calculated mechanical ventilation rates, giving a final estimated range of $1.3 \leq C_v \leq 13.4$ air changes per hour, where $C_v = 60/\tau_v$.

The practical range of physical decay from adsorption for cigarette aerosol can be computed from our experiments and the literature. Most establishments possess simple filters that are relatively ineffective at removing tobacco smoke (22). The shortest ideal decay time measured (in experiment 1) was equivalent to six air changes per hour (Table 2). By contrast, Penkala and DeOliviera (15) measured a mean life for tobacco smoke, under uniform mixing in a chamber with unreactive walls, equivalent to one air change per hour. These two extremes given an estimated range of $1 \leq C_d \leq 6$ air changes per hour for RSP from tobacco smoke, where $C_d = 60/\tau_d$.

The range of mixing m appropriate for the spaces listed in Table 5 is $1/4 \leq m \leq 1/2$, as determined from Table 1. By using Eq. 2, a theoretical range of mean air change rates, $1/2 \leq C_{aTh} \leq 10$ air changes per hour, is calculated from the estimated ranges for C_v, C_d, and m. This is consistent with the 1 to 11 air changes per hour determined with our model from the experimental results. In other words, the variations in the observed RSP density for fixed cigarette density can be phenomenologically ac-

Table 5. Field survey of indoor RSP sampled in the presence of smoking. Where the standard deviation is given, the value is an average of 2-minute samples; where it is not given, the sampling time is the averaging time.

counted for by ventilation, recirculation, infiltration, decay, mixing, and average smoking behavior. We conclude that the finite D_s RSP levels shown in Fig. 3 are indeed generated primarily by cigarette smoke and that this is consistent with the predictions of our model.

The Range of Public Exposure

We can now model the full range of exposure of the nonsmoking public to cigarette smoke. Equation 4 may be rewritten as

$$R = 25.6 \frac{P_s}{C_s} \qquad (5)$$

where P_s is the occupancy (persons per 1000 square feet). (The volumetric measure is implicit, assuming a 10-foot ceiling.) The P_s is three times the density of habitual smokers D_{hs} and nine times the density of active smokers D_s (*31*). A family of RSP curves is generated from Eq. 5 by varying C_s and P_s over their ranges. Representative samples of this family are plotted in Fig. 4. A lower limit for C_s of about one-half to one mean air change per hour has been determined experimentally and theoretically for removal of cigarette aerosol from private dwellings ventilated by infiltration and from commercial establishments whose mechanical ventilation is poor. A realistic upper bound for C_s may be obtained from the well-ventilated environment of the commercial airliner. A mechanical (design) ventilation rate of 15 to 20 air changes per hour with no recirculation is typical of the Boeing 707 (*32*). The best ideal decay rate measured in the experiments was six air changes per hour. Assuming a mixing factor of unity, we calculate an upper limit for C_s of 26 air changes per hour. The practical range for P_s is obtained from the ASHRAE (*29*), which specifies mechanical ventilation rates for typical average occupancies in various structures. For commercial structures, these densities (in persons per 1000 square feet) range from 10 for general office space to 70 for dining rooms to 150 for such places as stand-up bars, auditoriums, arenas, and commercial aircraft. The design ventilation rate C_v is typically determined from both the design occupancy and the intended use of the structure. For example, 15 to 25 cubic feet per minute per occupant is specified for general office space, 10 to 20 for dining rooms, and 30 to 40 for cocktail lounges. In 1975, *ASHRAE Standard 90-75*, "Energy conservation in new building design," decreased these rates by factors of one-half to one-third. *ASHRAE Standard 62-73* is currently being revised to specify higher rates of ventilation for premises in which smoking is permitted. How effective would increases in C_v be in lowering the levels of RSP from tobacco smoke? Equation 5 shows that such levels decrease only exponentially with increasing C_s. Furthermore, as Kalika *et al.* (*33*) observed, "the current practice of recirculation or reuse of air is largely dictated by the economics of heating and cooling, with little regard for changes in indoor air quality." That is, ventilation may be subject to arbitrary reduction by building management or by legislative or bureaucratic fiat; in many nonurbanized areas, it may not even be regulated by building codes (*34*).

Figure 4 illustrates the estimated range

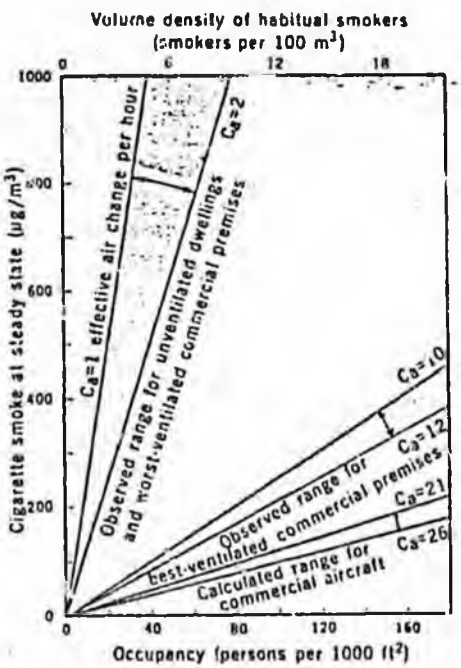

Fig. 4. Theoretical steady-state density of respirable particulates from environmental cigarette smoke in habitable indoor spaces, as related to the design occupancy P_s. On the average, one-third of adults are habitual smokers; for every three such smokers, we calculate that an average of one cigarette burns constantly throughout a 16-hour day. According to standard engineering criteria (*29*), occupancy and the type of microenvironment determine the design rate of mechanical ventilation C_v. The effective air change rate (C_s) for the removal of tobacco aerosol from room interiors is determined by C_v, by mixing, and by the rate of adsorption of tobacco particles on room surfaces. Generally C_v and hence C_s increase with P_s. [Typical P_s (in persons per 1000 square feet) ranges from 10 for office buildings to 70 for restaurants to 150 for bars, sports arenas, and aircraft (*29, 32*).] We estimate the practical range of C_s to be from 1 to 12 air changes per hour. It appears that over the combined practical ranges of P_s and C_s, repeated exposure to tobacco smoke can lead to annual RSP burdens that violate the primary annual NAAQS.

of exposure of the nonsmoking public to RSP from cigarette smoke. The actual dose of RSP is clearly a function of personal activity patterns; differences in respiration rate also affect the dose. Many different scenarios can be imagined. In the following, we express a range of RSP burdens from the cigarette aerosol relative to a typical RSP ambient background level. For an air shed (air quality control region) that is in compliance with the annual secondary (public welfare) NAAQS for TSP of 60 $\mu g/m^3$, the RSP fraction of the ambient aerosol is conservatively estimated at 50 $\mu g/m^3$ and is likely to be composed largely of combustion-produced sulfates (*35*). Since the particle size distributions of this fraction and the cigarette aerosol are both in the respirable range, we first compare them on a mass basis, without regard for differences in the chemical composition of each.

Let A, B, C, and D be nonsmokers who dwell in the same air shed and who breathe at the average rate of 20 m^3/day. All have different occupations and lifestyles that lead, as we shall see, to dramatically different RSP burdens.

Nonsmoker A is a mailman who walks a regular route and is able to live in a completely tobacco smoke-free environment. He is exposed only to the background ambient and therefore inhales 365 mg of RSP annually.

Nonsmoker B is an office worker who works a 40-hour week 50 weeks per year in a 40-m^3 office with two other persons, one of whom is a habitual smoker. Replacing D_s in Eq. 4 with $D_{hs}/3$, we find that B's mass RSP exposure is more than three times that of A (we calculate an expected C_s of 1.1 for office buildings).

Nonsmoker C is a musician who entertains in a popular, poorly ventilated nightclub 8 hours nightly, 5 nights per week, 50 weeks per year. The average P_s in the club is 100 persons per 1000 square feet (about 33 smokers). Further, C shares a 100-m^3 apartment with a roommate who is a chain smoker. C is exposed to the roommate's smoke 5 hours per day, 7 days per week, annually. By using Eqs. 4 and 5 and a C_s of one air change per hour, we find that C's mass RSP burden is more than 15 times that of A.

An alternative way of approaching the excess RSP exposure is in terms of cigarette equivalents. The cigarette with the least tar in the May 1978 FTC scale has 0.55 mg of TPM. In these terms, B's excess RSP burden is equivalent to 5 cigarettes per day and C's burden to 27 cigarettes per day. However, this may un-

derestimate the true impact, since many nonsmokers have greater sensitivity to smoke than smokers (*7*).

Nonsmoker D is a flight attendant who spends 40 hours per week, 50 weeks per year on board a commercial airliner with a C_a of 23 air changes per hour. The average P_a on the plane is 150 persons per 1000 square feet. D's RSP burden is nearly twice that of A. Even with one of the best ventilation systems in use, the high density of smokers causes a substantial increase in mass RSP inhaled by D.

The following three considerations may help to place these scenarios into perspective. First, an annual exposure 1.5 times that of A is sufficient to exceed the primary annual NAAQS; the exposure of D, B, and C to RSP all violate the standard by factors of 1.2, 2, and 10, respectively. Second, pulmonary clearance studies show that the half-life of inert respirable particles (2.8 μm in MMD) in the lungs of nonsmokers is ~ 70 days (*36*): residence of RSP in the lungs is prolonged. Third, in a series of pulmonary lavage studies on 400 nonrandomly selected volunteers (250 nonsmokers and 150 smokers) (*37*), two of the nonsmokers had tarry lavage fluids with pigmented pulmonary alveolar macrophages strikingly similar to those found in smokers. In these two volunteers, the levels of aryl hydrocarbon hydroxylase, an inducible carcinogen-detoxifying pulmonary enzyme, were intermediate in value between the levels found in smokers and most nonsmokers. These findings were attributed to the effects of exposure to tobacco smoke (*38*).

Health Policy Implications

There is good toxicologic evidence that elevated levels of particulates in outdoor air, perhaps in combination with other pollutants, cause illness and death during air pollution episodes (particulate levels in excess of 1000 $\mu g/m^3$ per 24 hours). There is much epidemiologic evidence, some of it conflicting, that lower levels of particulates, perhaps in combination with other pollutants, affect respiratory health adversely when exposure to them is sustained (*39*). (This evidence has been used to establish the thresholds for harm on which the primary annual NAAQS for TSP is based.) There is excellent toxicologic evidence that mainstream cigarette smoke causes chronic obstructive pulmonary disease (*7, 40*). Epidemiological evidence, some of it conflicting, indicates that exposure to tobacco smoke in the home affects respiratory health adversely (*7, 41*). Finally, there is excellent evidence that mainstream cigarette smoke causes cancer in many organs (*7*). Sidestream smoke is chemically identical to mainstream smoke, and typically is more concentrated (*2*). Coke-oven emissions, which chemically are similar to tobacco smoke, are associated with increased rates of many forms of cancer in coke-oven workers (*42*). Animal studies demonstrate that the particulate phase of tobacco smoke contains numerous potent carcinogens and tumor promoters, initiators, and accelerators (*7*). One of these, benzo[*a*]pyrene, was detected at a concentration of 40 parts per million in ambient tobacco smoke (*13*). Strong evidence supports a correlation between the magnitude of long-term exposure to carcinogens and the incidence of cancer (*43*). Therefore, given the efforts by public health authorities to eliminate involuntary public exposure to saccharin and the fire retardant Tris—which have, respectively, one-fifty-thousandth and one-tenth the experimental carcinogenic potency of benzo[*a*]pyrene alone (*44, 45*)—similar efforts to prevent involuntary exposure to ambient tobacco smoke (*46*) appear justified.

Conclusions

We have defined the probable range of exposure of the nonsmoking public to a common pathological aerosol, cigarette smoke. We showed, both experimentally and theoretically, that under the practical range of ventilation conditions and building occupation densities, the RSP levels generated by smokers overwhelm the effects of ventilation and inflict significant air pollution burdens on the public. Our observations show that levels of RSP in places where tobacco is smoked greatly exceed levels found in smoke-free environments, outdoors, and vehicles on busy commuter highways. Our experimental results are consistent with the large differences in 24-hour average RSP levels reported for smoking and nonsmoking homes in the Harvard Six-City Study (*47*), with a survey of short-term RSP levels in commercial and public buildings in Houston (*28*), and with other studies of tobacco-generated TSP (*7, 11-13*).

Attempts to reduce RSP levels from smoking by increasing the rate of mechanical ventilation or the efficiency of filtration yield exponentially diminishing returns for linear increases in ventilation energy (and cost). Moreover, efforts to conserve energy in buildings will decrease ventilation rates (*48*). Therefore, increased ventilation does not appear to be a solution to the problem. Indoor air is a resource whose quality should be maintained at a high level. Smoking indoors may be incompatible with this goal (*33, 49*).

Further research is necessary to define the integrated particulate exposure of various segments of the population; compliance with the NAAQS, as indicated by the establishment of outdoor TSP sampling stations, does not imply protection of the public from excessive RSP burdens. Repeated exposure to ambient cigarette smoke imposes air pollution burdens on nonsmokers that exceed the primary annual NAAQS. It appears that the RSP burdens from ambient tobacco smoke are so large that they must be incorporated explicitly in future epidemiological assessments (*50, 51*) of the relation between particulate levels and morbidity or mortality.

The Clean Air Act of 1970 and its amendments mandate the control of public exposure to outdoor TSP. However, little legislative attention has been devoted to the quality of indoor air—other than the passage of the Public Health Service Act of 1978, which provides for an ongoing study of the health costs of indoor air pollution. Clearly, indoor air pollution from tobacco smoke presents a serious risk to the health of nonsmokers. Since this risk is involuntary, it deserves as much attention as outdoor air pollution.

Note added in proof: A very recent epidemiological study concluded that long-term exposure to tobacco smoke, limited to the work environment only, is deleterious to the nonsmoker and significantly reduces small-airway function to the same extent as smoking one to ten cigarettes per day. This is consistent with scenario B (*52*). *ASHRAE Standard 62-73R*, a proposed standard for ventilation required for minimum acceptable indoor air quality, has been published (see *29*). Using data supplied in the standard, we calculate a C_a of ≤ 1.28 for office buildings where smoking is permitted.

31. Since about one-third of U.S. adults are smokers (*23*), in principle, one-ninth (11.1 percent) of every group of average adults will be smoking at any one time under most social conditions. The larger the group considered, the closer the actual number should be to 11.1 percent. Table 5 shows that, averaged over all data points for which the number of active smokers was five or more, this percentage was 11.2 ± 1.8. Averaged over all data points, the percentage was 8.8 ± 4.6.

Materials Science

On 23 May *Science* will publish an issue containing 20 articles devoted to Advanced Technology Materials. The issue will provide a sample of some of the more significant work being conducted in the major industrial research laboratories. The manuscripts have been prepared by leading industrial scientists who have delivered texts that are not only authoritative but also readable and interesting. Upper-division undergraduates, graduate students, and mature scientists will find the issue a valuable sample of applications of fundamental knowledge.

The topics covered include: New Polymers; Conductive Polymers; Multipolymer Systems; Fiber Reinforced Composite Materials; Heterogeneous Catalysts; Glassy Metals; High Strength Low Alloy Steels; Superconductors for High Current, High Fields; New Magnetic Alloys; High Temperature Ceramics; Gas Turbine Materials and Processes; Diamond Technology; New 3 5 Compounds and Alloys; Molecular Beam Epitaxy; New Methods of Processing Semiconductor Wafers; Materials in Relation to Display Technology; Photovoltaic Materials; Magnetic Bubble Materials; Josephson Device Materials; and Biomedical Materials.

Paying the piper

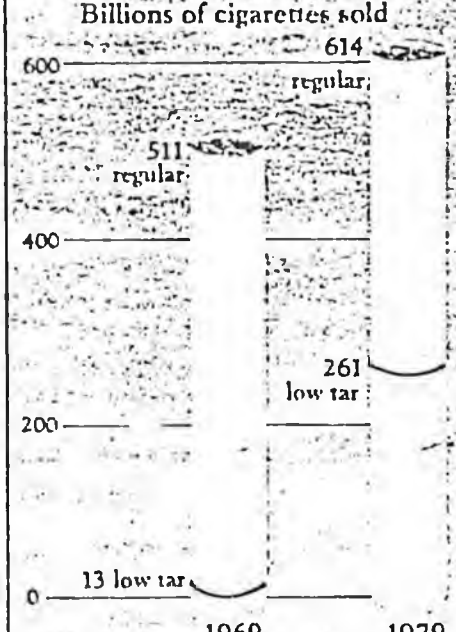
When experiments on animals turn up carcinogens in our favorite foods and everyday consumer items, some critics invariably dismiss the data as coming only from animals. The tobacco industry has, of necessity, taken the opposite tack; for years it has argued that the evidence incriminating cigarettes shows merely a "statistical association" because it comes from studies of human deaths, not animal experiments. By now, though, the evidence that cigarettes shorten life is overwhelming; the causal connection is as firmly established as any in medicine. "Indeed," writes John Cairns, a molecular biologist and expert on cancer, "in retrospect, it is almost as if Western societies had set out to conduct a vast and fairly well controlled experiment in carcinogenesis, bringing about several million deaths and using their own people as the experimental animals."

But the cancer connection, which was the most obvious and easiest to establish, is not the major cause of death in smokers. Rather, it is coronary heart disease. Second comes lung cancer. General deterioration of the lung tissue is third. After these three major causes, a variety of other diseases and cancers make a further contribution to the high death rate of smokers. Cancers of the larynx, mouth, esophagus, bladder, kidney, and pancreas are all more common in smokers than nonsmokers. So are ulcers of the stomach and intestine, which are more likely to be fatal in smokers.

Women who smoke during pregnancy run a significant risk that their babies will die before or at birth. The newborns are likely to weigh less, to arrive prematurely, and to be more susceptible to "sudden infant death."

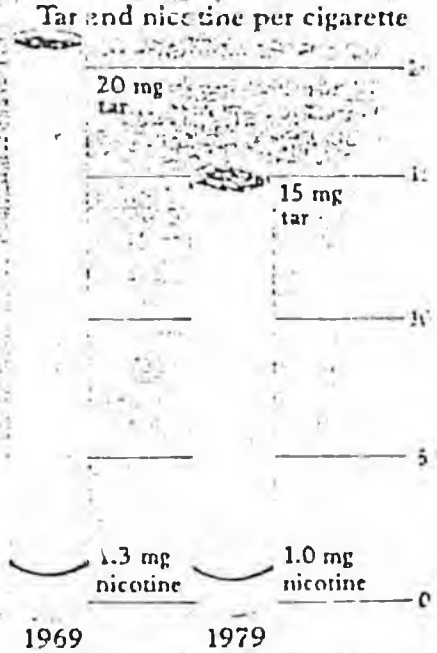
The risk of smoking is, in general, a 70 percent increase in the probability of dying at any age—100 percent for a two-pack smoker. As a rule of thumb, each cigarette knocks about five minutes off the smoker's life. For an average habit, that adds up to six or seven years (more for some, less for others). In the meantime, smokers lose more work days to illness than nonsmokers and spend more time in the hospital.

The ill effects of smoking are mostly, but not entirely, a consequence of the amount of inhaled smoke. Virtually all cigarette smokers inhale, even those who say they do not, and they continue to do so when they switch to pipes or cigars.



Cigarette smoke is loaded with poisons and carcinogens. The "tars," particles of organic matter, are largely responsible for causing cancer, or, perhaps, for promoting the growth of tumors started by other agents. Nicotine and carbon monoxide are thought to be the main cause of heart disease; there is debate about their relative importance.

In response to public worry about the health hazards of smoking, cigarette manufacturers over the last decade have progressively lowered the tar and nicotine content. These "lighter" brands appear to be effective in reducing rates of lung cancer. There may be a similar effect for heart disease, but the evidence is not as good. Smokers of low-tar cigarettes appear to get no protection from other respiratory illnesses.

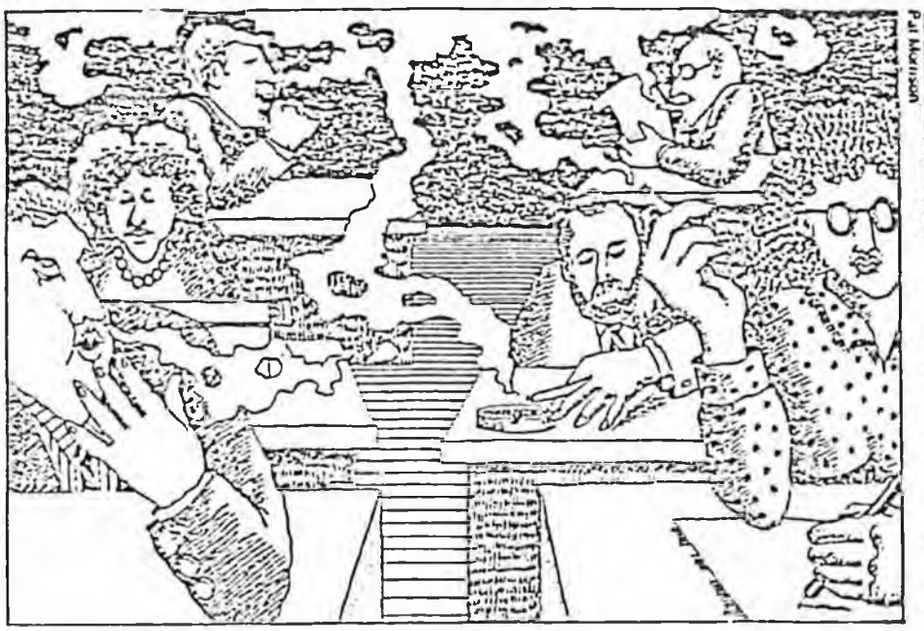


In order to elicit recommendations for his 1981 report on smoking, Surgeon General Julius B. Richmond recently called a conference to set research priorities for low-tar cigarettes. One area of concern was quickly established: The light cigarettes may pose a risk for pregnant women. Dr. Jesse Steinfeld, dean of the Medical College of Virginia in Richmond, speculates that the villain in low-tars may be carbon monoxide, since it "binds hemoglobin and may restrict the oxygen a baby needs from the mother's blood."

Carbon monoxide may turn out to be harmful to adults as well. In fact, questions abound on the safety of light cigarettes. We still do not know whether smokers who switch to low-tar cigarettes smoke more and inhale more deeply. If they do, those smokers are at least partly offsetting the presumed advantage of switching. Another question concerns whether the availability of these "safer" cigarettes has encouraged a large number of young people who otherwise would not have smoked to begin the habit. All in all, we are still far from knowing whether the low-tar, low-nicotine cigarettes will ultimately prove to be a Good Thing.

—*W. D.*

Low tar sales have soared in a decade.



Tar and nicotine content has dropped.

Smoke gets in your eyes . . . and lungs

SAN DIEGO—For years, nonsmokers have endured the tobacco fumes of the smoking public in restaurants, elevators, conference rooms, and the workplace—all the while worrying about the effects on their health. Now there is evidence to back up their fears: A study at the University of California at San Diego shows that the breathing ability of nonsmokers exposed to tobacco smoke on the job is measurably less than that of workers in smoke-free environments.

Researchers James White and Herman Froeb tested 2 100 men and women from the San Diego area by measuring the rates at which they could force air out of their lungs. On average, they found a ten percent lower exhalation rate among nonsmokers who had worked in smoked-filled offices more than 20 years. These so-called passive smokers displayed breathing rates comparable to those of persons who smoked up to ten cigarettes a day.

Paul Madison

There is no evidence as yet that passive smokers risk such illnesses as emphysema and cancer. But their reduced lung capacity does indicate that nonsmokers forced to breathe smoke at work suffer the same kind of damage to small airways deep inside the lungs as do smokers. That damage is in the form of mucous and scar tissue, which block the smooth flow of air and can inhibit the transfer of oxygen into the bloodstream. "This is permanent damage occurring in people who have chosen not to smoke," says White, who studiously avoids the smokers among his colleagues at the university.

Unrestricted smoking at work is permitted by nearly 75 percent of all employers in the United States. Dozens of lawsuits have been filed by nonsmokers and most have been settled out of court. John Banzhaf, executive director of Action on Smoking and Health, knows of only one case that came before a judge, who ruled in favor of the plaintiff. The judge reportedly was impressed by the fact that the plaintiff's company had banned smoking in a nearby computer room because the equipment malfunctioned when exposed to cigarette smoke. He ruled that if smoking could be curtailed for the sake of a machine, it could be curtailed for the sake of a human being.

through sponsorship of the U.S. Department of Agriculture, National Science Foundation, Southwest Border Regional Commission, Four-Corners Regional Commission, and the state of California.

Germplasm collections have been made from wild guayule plants in Mexico and Texas. Plantings have been established to test yields, to increase seed supplies, and to conduct plant breeding work. Test plots have been established to determine desirable planting and cultivating practices. Research is being conducted on the possibility of increasing rubber yield by treating guayule plants with plant growth regulators.

The recent development of a seed coating process to promote germination, and the development of selective herbicides, will make direct seeding in field plantations a possibility. Eliminating nursery or greenhouse propagation could produce considerable savings in production costs.

The only guayule yield figures now available are estimates developed during the ERP. During the life of the ERP the per hectare, approximately 480 kg of guayule rubber per year. Kelly (*15*) obtained yields of approximately 860 kg per hectare per year from one test plot in California. Foster *et al.* (*16*) have outlined the state of the art of guayule technology and described present and projected world rubber market conditions and areas of the United States where conditions favor guayule cultivation.

Indoor Air Pollution, Tobacco Smoke, and Public Health

James L. Repace and Alfred H. Lowrey

Serious health effects from air pollution have led to federal standards for the regulation of outdoor exposure levels. However, Americans spend about 90 percent of their time indoors (*1*). Thus the levels of indoor air pollution are important in determining total exposure to air pollutants (*2–6*). Indeed, in a recent review article (*4*) it was concluded that indoor air pollution in public office buildings is of greater potential harm than the outdoor variety, and that these exposures may constitute a real threat to the health of many urban people. The U.S. Surgeon General asserted in his report on *Smoking and Health* that tobacco smoke can be a significant source of atmospheric pollution in enclosed areas (*7*). Some 53 million U.S. smokers consumed 615 billion cigarettes in 1978 (*8*). Thus it is apparent that indoor air pollution from tobacco smoke is pandemic.

In the presence of cigarette smoke, many normal nonsmokers experience eye and throat irritation, headache, rhinitis, and coughing; allergic persons report wheezing, sneezing, and nausea as well. Particularly acute symptoms may be found in infants, children, persons with cardiovascular or respiratory disease, and wearers of contact lenses (*7, 9*). Determining the extent of the exposure of nonsmokers to cigarette smoke is important because smoking is a cause of chronic obstructive pulmonary disease, cardiovascular disease, and lung cancer, and is associated with cancers in other parts of the body (*7*); because these diseases also occur in nonsmokers; and because the products of tobacco combustion have been detected in nonsmokers (*10*).

Although measurements of indoor carbon monoxide pollution from smoking are abundant (*7*), published reports of the exposure of the population to the particulate phase of ambient tobacco smoke are rare (*7, 11–13*). Furthermore, a comprehensive theory of the generation and removal mechanisms for tobacco particulates in naturally or mechanically ventilated habitable spaces has not been presented.

We therefore undertook a systematic study of the levels of respirable suspended particulates (RSP) in several common indoor environments in an attempt (i) to determine the relation of these levels to the aerosol from tobacco smoking, (ii) to understand the effect of ventilation on tobacco smoke concentra-

for estimating the range of the public's exposure. Our goal was to provide a quantitative basis for assessing the health hazards to nonsmokers posed by repeated exposure to tobacco combustion products.

Model Development

To relate the contribution of smoking to indoor RSP requires a model describing the behavior of the tobacco aerosol in indoor spaces. Bridge and Corn (*6*) found that a reduced form of an equation by Turk (*14*) reliably predicts carbon monoxide (CO) concentrations from tobacco smoke in ventilated spaces and so is of major value in assessing the possible hazards in occupied spaces (*11*). The equation is not valid, however, for a pollutant that is affected by physical decay due to adsorption on room surfaces. Penkala and DeOliviera (*15*) showed that decay of the tobacco aerosol in a well-mixed unventilated chamber is exponential.

We modify the Turk equation in differential form by adding a decay term to the removal rate and equating the rate of change of pollutant mass to the algebraic sum of the generation and removal rates. The solution yields the density $A(t)$, in micrograms per cubic meter, of smoke in the room as a function of time:

$$A(t) = A_{eq}(1 - e^{-t/\tau}) \qquad (1)$$

where $A_{eq} = G\tau/V$ is the equilibrium concentration of the pollutant in the room, and where the time constant

$$\tau = \frac{\tau_a \tau_v}{m(\tau_a + \tau_v)} \qquad (2)$$

is the mean ventilation time, or the time for the smoke concentration to decrease to $1/e$ of its value (where e is the base of natural logarithms); V is the room volume in cubic meters; $\tau_v = V/Q$ is the ideal ventilation time, or the time required to replace a volume of air equal to the volume of the room by ventilation and infiltration; Q is the volume rate of ventilation and infiltration; τ_a is the ideal decay time, a time constant associated with the removal of a pollutant from a room through adsorption on surfaces and filtration; and m is the mixing factor, an empirically determined number (*16*) that modifies the ventilation time as τ_v/m, where $m \leq 1$ ($m = 1$ implies ideal mixing). Corn (*11*) suggested values of m for various ventilation systems (Table 1). We postulate that m also modifies the ideal decay time as τ_a/m. The pollution generation rate, in micrograms per minute, is given as $G = nC_0/t_b$, where n is the number of cigarettes being smoked at time t; C_0 is the total particulate matter (TPM) from both sidestream and exhaled mainstream smoke; and t_b is the duration of cigarette smoking.

Equation 1 has two special cases: (i) in the case of ventilation only ($\tau = \tau_v/m$) it becomes the reduced Turk equation of Bridge and Corn (*6*), with $m = 1$; and (ii) in the case of adsorption only (the unventilated room), $\tau = \tau_a/m$. Then, if the generation of smoke ceases at time t_b, prior to equilibrium, A will decay according to

$$A(t) = A_0 e^{-mt/\tau_a} \qquad (3)$$

where A_0 is a constant related to the equilibrium concentration by

$$A_0 = A_{eq}[e^{mt_b/\tau_a} - 1]$$

factor m, after Corn (*11*). The mixing factor is an empirical number that accounts for room-specific effects on pollutant transport. Pollutant removal is more rapid in a well-mixed atmosphere (where m is large) than in a poorly mixed, stable one (where m is small). Factors that affect m include type and placement of ventilation grills, ventilation flow rates, inhomogeneous pollutant distribution, barriers, circulation fans, and room traffic.

Infiltration and natural draft	1/10

*This is the best standard condition.

Summary. An experimental and theoretical investigation is made into the range and nature of the exposure of the nonsmoking public to respirable suspended particulates from cigarette smoke. A model incorporating both physical and sociological parameters is shown to be useful in understanding particulate levels from cigarette smoke in indoor environments. Observed levels of particulates correlate with the predictions of the model. It is shown that nonsmokers are exposed to significant air pollution burdens from indoor smoking. An assessment of the public health policy implications of these burdens is presented.

described by Penkala and DeOliviera (*15*) for $m = 1$.

The modified Turk equation (Eq. 1) contains only measurable quantities, and thus in principle can be used to estimate the concentration of TPM or CO from tobacco smoke (or other indoor air pollutants), as a function of time, for any room for which the pollutant generation rate, volume, and mean ventilation time are known.

Controlled Experiments

Equation 2 shows that the mixing factor affects the time constant for decay as well as ventilation. Experiments under conditions of known ventilation were therefore necessary to assess the influence of mixing factors, decay time constants, and generation rates on the growth and decay of tobacco smoke particulates. To increase the usefulness of the experimental values determined for the mean ventilation time for the removal of tobacco smoke, we conducted these experiments in actual occupied spaces rather than in experimental chambers.

A piezobalance (TSI model 3500) (*17–19*) was used in sampling the aerosol. It collects respirable particulates (*20*) between 0.01 and 3.0 micrometers in diameter with near 100 percent efficiency (decreasing to 50 percent at 3.5 μm and to 10 percent at 4 μm). The sampling rate is 1 liter/min (*18*); the sampling time is variable. Factory-calibrated with welding smoke, the detecting crystal in the instrument used has a sensitivity of 5.74 μg/min-m^3 per hertz. The instrument underestimates the mass concentration of tobacco aerosol by about 15 percent compared to measurements made with low-volume filter sampling techniques. Readings can be affected by changes in humidity; the maximum expected error due to changes in relative humidity when sampling a hygroscopic aerosol (such as tobacco smoke) is given as $\pm$ 10 μg/m^3. The overall instrument error is about $\pm$ 10 percent compared with low-volume filter measurements of welding smoke (*19*). The aerosol from sidestream cigarette smoke (that portion emitted by the burning tip), an important component of many indoor aerosols, is lognormal, with 99 percent of the mass < 1 μm in aerodynamic diameter and with an initial mass median diameter (MMD) from 0.2 to 1.5 μm depending on dilution (*20, 21*). The relative particle sizes of fresh sidestream and mainstream smoke (the latter being that portion inhaled by the smoker) are about the same; for ex-

Table 2. Parameters for Eq. 1, as determined with experiments 1 to 3 (unventilated rooms).

*Coefficient of determination for the decay curve. †The estimated amount of TPM liberated if the entire cigarette had been consumed, according to FTC protocol. The FTC mainstream TPM level for this cigarette is 16 mg (24). ‡V = 21.9 m^3. §V = 29 m^3.

haled mainstream smoke, particle size is estimated to be ~ 0.8 μm (MMD). Since the ambient cigarette smoke aerosol is reproducible and coagulates very slowly, it has been used as a test aerosol (*21*) and in evaluation of heating, air-conditioning, and ventilating systems (*22*). [The bulk of the ambient tobacco aerosol is probably due to cigarettes, since less than 15 percent of smokers smoke cigars or pipes (*23*).]

Unventilated Growth and Decay of Tobacco Smoke

Experiments were carried out to determine the usefulness of Eq. 3, which predicts a rapid decay for good mixing and a slow decay for poor mixing; and also to discover the limits of τ_a/m.

Experiments 1 and 2 were conducted in a wood-panelled den in a private residence. In the geometric center of the room (volume, 21.9 m^3), a popular filter cigarette [containing 65 millimeters of tobacco and ranking 94th on the Federal Trade Commission (FTC) scale of tar and nicotine content (17 milligrams of tar and 1 milligram of nicotine) (*24*)] was ignited and allowed to smolder until 89 percent of its tobacco was consumed. During the first experiment, two box fans (51 centimeters in diameter) with antiparallel exhausts were used to ensure ideal mixing; each fan's exhaust, measured with a Velometer, was 55 m^3/min. The growth and decay of the RSP were measured with the piezobalance. Experiment 2 was similar to experiment 1, except that the cigarette was extinguished after 75 percent of its tobacco was consumed and the circulating fans were not used, so that mixing was natural. The results of both experiments are plotted in Fig. 1, with the background levels of RSP subtracted. The data points generally represent 1-minute average values. The differences in mixing dramatically affect the slopes of the decay curves.

The theoretical curves shown in Fig. 1 were generated by fitting the data points from the decay curves to Eq. 3 with a regression analysis; A_0 and τ_a/m were determined and used to calculate the growth curves from Eq. 1, case (ii). The ratio of the slopes of the decay curves for ideal and natural mixing yields the mixing factor for the room. Table 2 gives the values obtained for the various parameters. The value of the mixing factor obtained is in good agreement with the expected value given in Table 1 for the case of infiltration and natural draft. The growth curve for the case of natural mixing (experiment 2) shows a poor fit initially because of the effect of the warm smoke rising to the ceiling and remaining

out of the detector's range for about 3 minutes. Experiment 3 demonstrated that Eq. 3 is valid under more general conditions, that is, when a cigarette is actually smoked.

We conclude that these experiments show that for the unventilated room, Eq. 3, the reduced form of Eq. 1, is useful in describing the growth and decay of cigarette smoke particulates.

Ventilated Growth and Equilibrium of Tobacco Smoke

An experiment was conducted in a ventilated conference room of a modern office building to test Eq. 1 in the case of removal of uniformly generated tobacco smoke by both decay and ventilation. The experiment involved measuring the growth of cigarette-generated RSP from background levels to near equilibrium. Analysis of the RSP-versus-time curve determines τ, the mean ventilation time, and C_T, the total RSP liberated from the combined sidestream and exhaled mainstream smoke.

The RSP detector was located in the geometric center of the 113-m³ room. Two fans with antiparallel exhausts were used to establish a vigorous circulation of 100 m³/min. The ideal ventilation time τ_v, calculated from the volumetric flow rates of the ventilation system, was 49.2 minutes for a complete change of air. Thirty-two cigarettes were smoked in 49 minutes by a relay of seven smokers, with an average of four persons smoking at any given time. When smoking their own brands, they averaged 9.8 minutes per cigarette; when smoking cigarettes supplied to them, they averaged 5.8 minutes per cigarette. All butts were collected and the amount of tobacco consumed was measured for each cigarette. The estimated mainstream TPM (M) (tar plus nicotine) generated by the 32 cigarettes was determined by weighting the TPM values for each cigarette (*24*) by the fraction of tobacco consumed, and adding the results to obtain M = 418 mg [TPM is emitted from cigarettes at a linear rate after the fourth puff (*25*)].

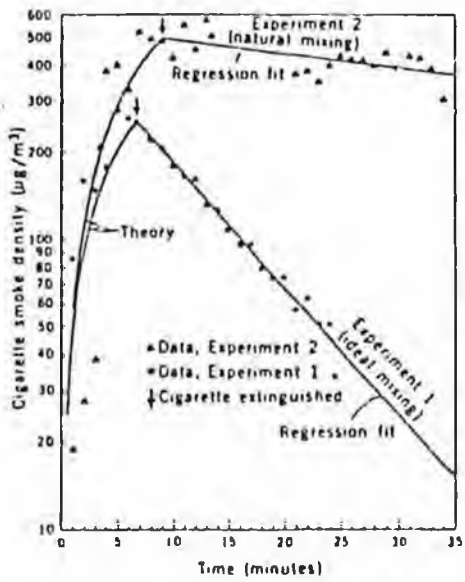

Fig. 1. Theoretical predictions versus experimental results for the growth and decay of RSP from a smoldering, average-tar cigarette in a 22-m³ unventilated room. The dramatic difference in the slopes of the decay curves reflects the difference in room air turbulence (mixing) for the otherwise similar experiments.

Figure 2 shows the growth against time of RSP from the cigarette smoke. The data points are corrected for background RSP levels and are 2-minute averages. A regression analysis using Eq. 1 yields A_{eq} = 1947 µg/m³ and τ = 14 minutes, with a coefficient of determination = .964 (from Eq. 2, τ_v = 19.5 minutes). Finally, C_T, or the total amount of RSP liberated in the room during the entire smoking period, 772 mg, is calculated by using Eq. 1; C_T/M = 1.85. This ratio represents a weighted average for six different brands of filter cigarettes that together commanded a 23 percent share of the market in 1976 (*26*).

From the goodness of fit of the theory to the data and from the observation of predicted interactive behavior among mixing, growth, and decay processes for RSP from cigarette smoke, it appears that all the room-specific factors affecting the removal of tobacco smoke (ventilation, decay, and mixing) can be combined into a single time constant τ, which can be determined for any room by regression analysis of the decay or growth-equilibrium curves, or by calculation from the equilibrium concentration if the smoke generation rate and room volume are known. The ratio of the slopes of the decay curves for ideal and natural mixing yields the mixing factor. We conclude that Eq. 1 is a useful tool for predicting the levels of tobacco smoke in both ventilated and unventilated occupied space.

Field Survey of RSP

We now address the complex problem of surveying the levels of RSP indoors and determining what portion of this aerosol may be attributed to cigarette smoke by means of Eq. 1. The problem is complicated by differences in smoking rates, numbers of smokers, room volumes, effective ventilation rates, and the TPM values of various brands of cigarettes. The problem may be simplified by assuming that smoking is a random process when it occurs among large groups of people. It follows that cigarette smoke RSP values may be treated as equilibrium values; that all of the smokers may be treated as habitual smokers who smoke identical average-tar cigarettes in the same way at the same average rate, uniformly distributed over a 16-hour day. An average smoking rate r of two cigarettes per hour is calculated from the 1975 figures for the number of U.S. smokers and the U.S. domestic cigarette consumption (*8*). In 1978, the sales-weighted average mainstream TPM value M_a was 17.6 mg for all the cigarettes sold in the United States (*7*). The estimated emission rate C_0 (combined sidestream plus exhaled mainstream TPM) from a habitual smoker is given by $E = 1.85\,rM_a$ = 65 mg/hour, where 1.85, used for the ratio C_0/M_a, is taken from the conference room experiment. Physically observable in any field survey of smoking is n_s, the number of burning cigarettes (the number of "active" smokers); n_s can be related to the number of habitual smokers n_{hs} by considering that the average time for smoking a cigarette is 10 minutes (*2*, *6*). This number and the previously calculated average smoking rate indicate that $n_{hs} = 3n_s$.

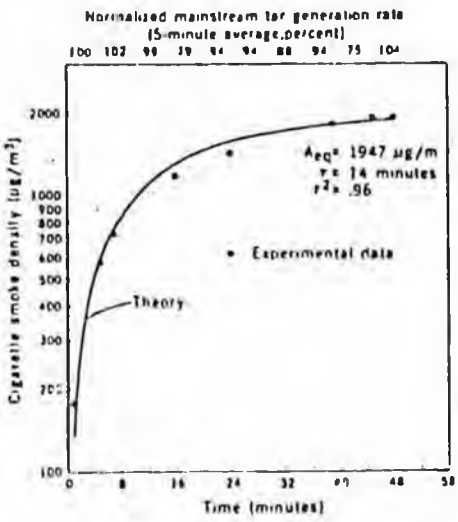

Fig. 2. Theoretical predictions versus experimental results for the attainment of equilibrium A_{eq} for the combined emission of sidestream and exhaled mainstream cigarette smoke from four chain smokers in a 113-m³ conference room with well-mixed ($m \sim 1$) ventilation in a modern office building. Under natural mixing conditions, about 11 habitual smokers would generate an equivalent equilibrated concentration of smoke. This many smokers would be expected in a group of 33 adults (well within the capacity of this 50-person conference room).

From the equilibrated form of Eq. 1, we determine that

$$R = A_{eq} = 650 \frac{D_s}{C_e} \quad (4)$$

where R is the smoker-generated equilibrium RSP level in micrograms per cubic meter, D_s is the density of active smokers (number per 100 m³), and C_e is the effective rate for the removal of cigarette aerosol (air changes per hour), with $C_e = 60/\tau$.

The aerosol sampling described in this article was performed from late March through early June 1978 in the Washington, D.C., metropolitan area. The MMD (seasonal average) of the outdoor urban aerosol for Washington in 1970 was 0.5 μm, with 90 percent of the aerosol mass less than 3 μm in aerodynamic diameter and lognormally distributed (27).

It is important to note that all of the RSP measurements we report represent time-averaged values.

Factors other than tobacco smoke may contribute to indoor RSP. These include infiltration of outdoor RSP, cooking, dust raised by indoor traffic, and industry. By restricting the sampling to nonindustrial indoor locations where tobacco smoking is absent, the effect of the remaining variables may be assessed. Table 3 gives the RSP levels for several indoor spaces in which smoking did not take place: three restaurants, four private residences, an office building conference room, two libraries, and a church during services. The mean of these measurements is 40 μg/m³. In three instances, fans were mixing the air at a high rate and RSP levels were elevated, apparently because of dust entrainment. No correlation between the volumetric density of people (occupancy) and RSP is evident. Hemperly (28), in sampling RSP in Houston, found similar RSP levels in two schools, a library, and a museum—all nonsmoking areas.

Table 4 gives the results of RSP sampling in nonsmokers' automobiles traveling along two major commuter highways (Route 50 in Maryland and U.S. I-295 in Washington) during the rush hour. The samples were taken on different days and were measured in different vehicles. In all cases, the windows were slightly open and the ventilation fans were running. The mean of the data, 38 μg/m³, is not very different from the mean of the indoor readings, 40 μg/m³ (Table 3).

The impact of actual ventilation practice on ambient RSP levels from smoking was investigated at eight restaurants, three cocktail lounges, two bingo games, a dinner-dance, a bowling alley, a sports arena, and a hospital emergency waiting room. For contrast, one unventilated private residence was sampled during a cocktail party. With the exception of the hospital waiting room and the hotel bar, each space sampled represented the major part of the building and was subject to ventilation requirements specified by building codes. Sampling was generally performed well after opening time to ensure that an approximately steady-state level of smoking had been reached.

Table 4. Levels of RSP in nonsmokers' cars during rush-hour traffic on a busy commuter highway in Washington, D.C., measured with the vehicles' windows slightly open and the ventilation fans running. Each car carried four persons and had a volume of 2 m³, so that the occupancy was equal to 200 persons per 100 m³.

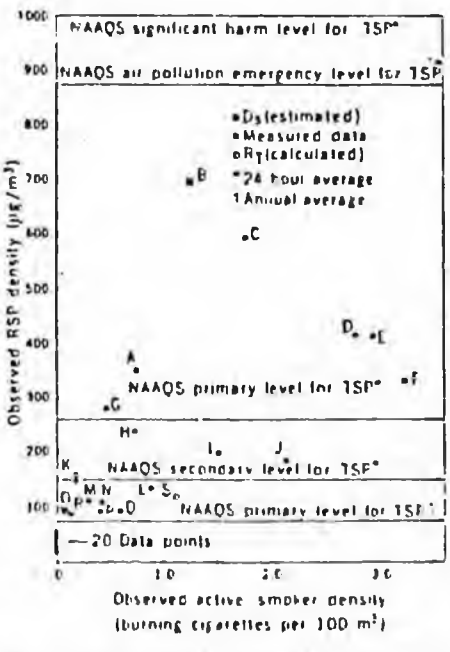

Fig. 3. Results of a field survey of short-term time-averaged levels of RSP in 38 enclosed spaces (see Tables 3, 4 and 5). Levels corresponding to federal standards for TSP are indicated for comparison only. The microenvironments include ten restaurants, three cocktail lounges, two bingo games, a dinner-dance hall, a bowling alley, a sports arena, two libraries, a church, a hospital waiting room, five vehicles, and five residences. The letters A through S correspond to those given in Table 5. The effective air change rates for microenvironments A and S are known from experiments to be C_e = 1.5 and 9.2, respectively.

The piezobalance and a stopwatch were used to take tabletop-level RSP samples for periods ranging from 10 to 50 minutes (mean, 20 minutes). The piezobalance was equilibrated in advance to avoid errors due to changes in temperature or humidity.

The room dimensions were estimated and the number of active smokers was sampled periodically throughout the measurement period and averaged. It was usually not possible to sample the premises when there was no smoking; in most cases, the RSP outside the premises was sampled for comparison. Table 5 gives the results of the measurements. Figure 3 shows the average density of active smokers (defined as the number of burning cigarettes per 100 m³) plotted against the total indoor RSP sampled. As a guide to whether a given datum is "high" or "low," the National Ambient Air Quality Standards (NAAQS) for total suspended particulates (TSP) are also shown. Since a specific averaging time is incorporated into these standards, violation of the standard is not demonstrated here. However, repeated exposure to such elevated levels can lead to "violation" of the annual standards, as will be shown later. Note that all the data for finite smoker density exceeded the level of the annual primary (health-related) NAAQS, whereas none of the data for zero smoker density exceeded this level. Further, the background RSP measured outside the smoking premises suggests that the source of these elevated levels was not the outdoor air. The mean and the standard deviation for the outdoor RSP are 46 ± 13 μg/m³, and in every case the outdoor level is less than the indoor. In certain cases, indoor controls are available. In bingo game 2, held in the nave of a church, the active smoker density was 0.47 per 100 m³, the occupancy was 3.6 persons per 100 m³, and the RSP density was 279 μg/m³ (Table 5). By contrast, during the tobacco smoke-free religious services, despite an occupancy of 7.0 persons per 100 m³, 30 burning votive candles, and several processions, the RSP density was 30 μg/m³. The elevated RSP levels in the bingo game clearly appear to be due to smoking. Similarly, measurements taken in the nonsmoking section of a sandwich restaurant showed considerably lower levels than in the smoking section, indicating that the contribution of smoking to RSP was much larger than the effect of cooking, even at the low cigarette densities shown (Table 5). Figure 3 shows that, in general, RSP levels increase with active smoker density, although there is

considerable scatter in the data. The question now is whether Eq. 1 is useful in explaining this scatter.

We hypothesize that the levels of RSP for finite D_s (Fig. 3) are due to near-equilibrium levels of cigarette smoke adding to much smaller background levels, and that the scatter in the RSP levels for fixed cigarette density is due primarily to differences in the mean ventilation time τ. Analyzing the background corrected data given in Table 5, we use Eq. 4 to calculate a range for C_s between 1.2 and 10.7 air changes per hour; C_s is used instead of τ to facilitate comparison with building code-specified ventilation rates. The range determined for C_s is consistent with two known values of C_s derived from the cocktail party and roadside restaurant experiments (Table 5).

The C_s for tobacco aerosol is affected by the rate of mechanical ventilation and infiltration, the rate of smoke adsorption, and mixing. The range of mechanical ventilation and infiltration can be calculated from tables of standards determined by the American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE) (*29*), the authority specified by the local building code (*30*). For each premise listed in Table 5, the recommended maximum number of outdoor air changes per hour (based on the estimated floor area, maximum occupancy, and volume) was calculated from the ASHRAE tables; a two-thirds recirculation of air (the maximum permitted by ASHRAE) was assumed. This yielded a range of 0.7 to 9.4 air changes per hour. Infiltration, resulting mainly from the opening of doors, was estimated from the actual occupancy during the sampling (*29*); we assumed a 100 percent turnover of occupants per hour. This was added to the calculated mechanical ventilation rates, giving a final estimated range of $1.3 \leq C_v \leq 13.4$ air changes per hour, where $C_v = 60/\tau_v$.

The practical range of physical decay from adsorption for cigarette aerosol can be computed from our experiments and the literature. Most establishments possess simple filters that are relatively ineffective at removing tobacco smoke (*22*). The shortest ideal decay time measured (in experiment 1) was equivalent to six air changes per hour (Table 2). By contrast, Penkala and DeOliviera (*15*) measured a mean life for tobacco smoke, under uniform mixing in a chamber with unreactive walls, equivalent to one air change per hour. These two extremes given an estimated range of $1 \leq C_d \leq 6$ air changes per hour for RSP from tobacco smoke, where $C_d = 60/\tau_d$.

The range of mixing m appropriate for the spaces listed in Table 5 is $1/4 \leq m \leq 1/2$, as determined from Table 1. By using Eq. 2, a theoretical range of mean air change rates, $1/2 \leq C_{aTh} \leq 10$ air changes per hour, is calculated from the estimated ranges for C_v, C_d, and m. This is consistent with the 1 to 11 air changes per hour determined with our model from the experimental results. In other words, the variations in the observed RSP density for fixed cigarette density can be phenomenologically ac-

Table 5. Field survey of indoor RSP sampled in the presence of smoking. Where the standard deviation is given, the value is an average of 2-minute samples; where it is not given, the sampling time is the averaging time.

infiltration, decay, mixing, and average smoking behavior. We conclude that the finite D_s RSP levels shown in Fig. 3 are indeed generated primarily by cigarette smoke and that this is consistent with the predictions of our model.

The Range of Public Exposure

We can now model the full range of exposure of the nonsmoking public to cigarette smoke. Equation 4 may be rewritten as

$$R = 25.6 \frac{P_s}{C_s} \quad (5)$$

where P_s is the occupancy (persons per 1000 square feet). (The volumetric measure is implicit, assuming a 10-foot ceiling.) The P_s is three times the density of habitual smokers D_{hs} and nine times the density of active smokers D_s (*31*). A family of RSP curves is generated from Eq. 5 by varying C_s and P_s over their ranges. Representative samples of this family are plotted in Fig. 4. A lower limit for C_s of about one-half to one mean air change per hour has been determined experimentally and theoretically for removal of cigarette aerosol from private dwellings ventilated by infiltration and from commercial establishments whose mechanical ventilation is poor. A realistic upper bound for C_s may be obtained from the well-ventilated environment of the commercial airliner. A mechanical (design) ventilation rate of 15 to 20 air changes per hour with no recirculation is typical of the Boeing 707 (*32*). The best ideal decay rate measured in the experiments was six air changes per hour. Assuming a mixing factor of unity, we calculate an upper limit for C_s of 26 air changes per hour. The practical range for P_s is obtained from the ASHRAE (*29*), which specifies mechanical ventilation rates for typical average occupancies in various structures. For commercial structures, these densities (in persons per 1000 square feet) range from 10 for general office space to 70 for dining rooms to 150 for such places as stand-up bars, auditoriums, arenas, and commercial aircraft. The design ventilation rate C_v is typically determined from both the design occupancy and the intended use of the structure. For example, 15 to 25 cubic feet per minute per occupant is specified for general office space, 10 to 20 for dining rooms, and 30 to 40 for cocktail lounges. In 1975, *ASHRAE Standard 90-75*, "Energy conservation in new building design," decreased these rates by factors of 2 to 3. The current *Standard 62-73* is currently being revised to specify higher rates of ventilation for premises in which smoking is permitted. How effective would increases in C_v be in lowering the levels of RSP from tobacco smoke? Equation 5 shows that such levels decrease only exponentially with increasing C_s. Furthermore, as Kalika *et al.* (*33*) observed, "the current practice of recirculation or reuse of air is largely dictated by the economics of heating and cooling, with little regard for changes in indoor air quality." That is, ventilation may be subject to arbitrary reduction by building management or by legislative or bureaucratic fiat; in many nonurbanized areas, it may not even be regulated by building codes (*34*).

Figure 4 illustrates the estimated range

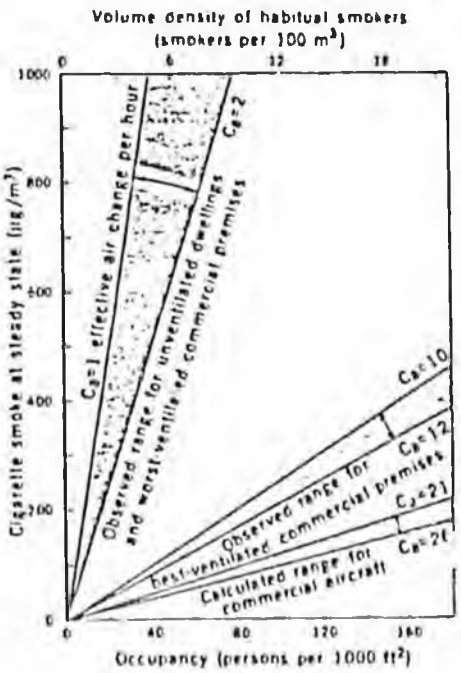

Fig. 4. Theoretical steady-state density of respirable particulates from environmental cigarette smoke in habitable indoor spaces, as related to the design occupancy P_s. On the average, one-third of adults are habitual smokers; for every three such smokers, we calculate that an average of one cigarette burns constantly throughout a 16-hour day. According to standard engineering criteria (*29*), occupancy and the type of microenvironment determine the design rate of mechanical ventilation C_v. The effective air change rate (C_s) for the removal of tobacco aerosol from room interiors is determined by C_v, by mixing, and by the rate of adsorption of tobacco particles on room surfaces. Generally C_v, and hence C_s, increase with P_s. (Typical P_s (in persons per 1000 square feet) ranges from 10 for office buildings to 70 for restaurants to 150 for bars, sports arenas, and aircraft (*29*, *32*).) We estimate the practical range of C_s to be from 1 to 12 air changes per hour. It appears that over the combined practical ranges of P_s and C_s, repeated exposure to tobacco smoke can lead to annual RSP burdens that violate the primary annual NAAQS.

RSP from cigarette smoke. The actual dose of RSP is clearly a function of personal activity patterns, differences in respiration rate also affect the dose. Many different scenarios can be imagined. In the following, we express a range of RSP burdens from the cigarette aerosol relative to a typical RSP ambient background level. For an air shed (air quality control region) that is in compliance with the annual secondary (public welfare) NAAQS for TSP of 60 $\mu g/m^3$, the RSP fraction of the ambient aerosol is conservatively estimated at 50 $\mu g/m^3$ and is likely to be composed largely of combustion-produced sulfates (*35*). Since the particle size distributions of this fraction and the cigarette aerosol are both in the respirable range, we first compare them on a mass basis, without regard for differences in the chemical composition of each.

Let A, B, C, and D be nonsmokers who dwell in the same air shed and who breathe at the average rate of 20 m^3/day. All have different occupations and lifestyles that lead, as we shall see, to dramatically different RSP burdens.

Nonsmoker A is a mailman who walks a regular route and is able to live in a completely tobacco smoke-free environment. He is exposed only to the background ambient and therefore inhales 365 mg of RSP annually.

Nonsmoker B is an office worker who works a 40-hour week 50 weeks per year in a 40-m^3 office with two other persons, one of whom is a habitual smoker. Replacing D_s in Eq. 4 with $D_{hs}/3$, we find that B's mass RSP exposure is more than three times that of A (we calculate an expected C_s of 1.1 for office buildings).

Nonsmoker C is a musician who entertains in a popular, poorly ventilated nightclub 8 hours nightly, 5 nights per week, 50 weeks per year. The average P_s in the club is 100 persons per 1000 square feet (about 33 smokers). Further, C shares a 100-m^3 apartment with a roommate who is a chain smoker. C is exposed to the roommate's smoke 5 hours per day, 7 days per week, annually. By using Eqs. 4 and 5 and a C_s of one air change per hour, we find that C's mass RSP burden is more than 15 times that of A.

An alternative way of approaching the excess RSP exposure is in terms of cigarette equivalents. The cigarette with the least tar in the May 1978 FTC scale has 0.55 mg of TPM. In these terms, B's excess RSP burden is equivalent to 5 cigarettes per day and C's burden to 27 cigarettes per day. However, this may un-

derestimate the true impact, since many nonsmokers have greater sensitivity to smoke than smokers (*7*).

Nonsmoker D is a flight attendant who spends 40 hours per week, 50 weeks per year on board a commercial airliner with a C_v of 23 air changes per hour. The average P_v on the plane is 150 persons per 1000 square feet. D's RSP burden is nearly twice that of A. Even with one of the best ventilation systems in use, the high density of smokers causes a substantial increase in mass RSP inhaled by D.

The following three considerations may help to place these scenarios into perspective. First, an annual exposure 1.5 times that of A is sufficient to exceed the primary annual NAAQS: the exposure of D, B, and C to RSP all violate the standard by factors of 1.2, 2, and 10, respectively. Second, pulmonary clearance studies show that the half-life of inert respirable particles (2.8 μm in MMD) in the lungs of nonsmokers is ~ 70 days (*36*): residence of RSP in the lungs is prolonged. Third, in a series of pulmonary lavage studies on 400 nonrandomly selected volunteers (250 nonsmokers and 150 smokers) (*37*), two of the nonsmokers had tarry lavage fluids with pigmented pulmonary alveolar macrophages strikingly similar to those found in smokers. In these two volunteers, the levels of aryl hydrocarbon hydroxylase, an inducible carcinogen-detoxifying pulmonary enzyme, were intermediate in value between the levels found in smokers and most nonsmokers. These findings were attributed to the effects of exposure to tobacco smoke (*38*).

Health Policy Implications

There is good toxicologic evidence that elevated levels of particulates in outdoor air, perhaps in combination with other pollutants, cause illness and death during air pollution episodes (particulate levels in excess of 1000 $\mu g/m^3$ per 24 hours). There is much epidemiologic evidence, some of it conflicting, that lower levels of particulates, perhaps in combination with other pollutants, affect respiratory health adversely when exposure to them is sustained (*39*). (This evidence has been used to establish the thresholds for harm on which the primary annual NAAQS for TSP is based.) There is excellent toxicologic evidence that mainstream cigarette smoke causes chronic obstructive pulmonary disease (*7*, *40*). Epidemiological evidence, some of it conflicting, indicates that exposure to tobacco smoke in the home affects respiratory health adversely (*7*, *41*). Finally, there is excellent evidence that mainstream cigarette smoke causes cancer in many organs (*7*). Sidestream smoke is chemically identical to mainstream smoke, and typically is more concentrated (*2*). Coke-oven emissions, which chemically are similar to tobacco smoke, are associated with increased rates of many forms of cancer in coke-oven workers (*42*). Animal studies demonstrate that the particulate phase of tobacco smoke contains numerous potent carcinogens and tumor promoters, initiators, and accelerators (*7*). One of these, benzo[*a*]pyrene, was detected at a concentration of 40 parts per million in ambient tobacco smoke (*13*). Strong evidence supports a correlation between the magnitude of long-term exposure to carcinogens and the incidence of cancer (*43*). Therefore, given the efforts by public health authorities to eliminate involuntary public exposure to saccharin and the fire retardant Tris—which have, respectively, one fifty-thousandth and one-tenth the experimental carcinogenic potency of benzo[*a*]pyrene alone (*44*, *45*)—similar efforts to prevent involuntary exposure to ambient tobacco smoke (*46*) appear justified.

Conclusions

We have defined the probable range of exposure of the nonsmoking public to a common pathological aerosol, cigarette smoke. We showed, both experimentally and theoretically, that under the practical range of ventilation conditions and building occupation densities, the RSP levels generated by smokers overwhelm the effects of ventilation and inflict significant air pollution burdens on the public. Our observations show that levels of RSP in places where tobacco is smoked greatly exceed levels found in smoke-free environments, outdoors, and vehicles on busy commuter highways. Our experimental results are consistent with the large differences in 24-hour average RSP levels reported for smoking and nonsmoking homes in the Harvard Six-City Study (*47*), with a survey of short-term RSP levels in commercial and public buildings in Houston (*28*), and with other studies of tobacco-generated TSP (*7*, *11*-*13*).

Attempts to reduce RSP levels from smoking by increasing the rate of mechanical ventilation or the efficiency of filtration yield exponentially diminishing returns for linear increases in ventilation energy (and cost). Moreover, efforts to conserve energy in buildings will decrease ventilation rates (*48*). Therefore, increased ventilation does not appear to be a solution to the problem. Indoor air is a resource whose quality should be maintained at a high level. Smoking indoors may be incompatible with this goal (*33*, *49*).

Further research is necessary to define the integrated particulate exposure of various segments of the population; compliance with the NAAQS, as indicated by the establishment of outdoor TSP sampling stations, does not imply protection of the public from excessive RSP burdens. Repeated exposure to ambient cigarette smoke imposes air pollution burdens on nonsmokers that exceed the primary annual NAAQS. It appears that the RSP burdens from ambient tobacco smoke are so large that they must be incorporated explicitly in future epidemiological assessments (*50*, *51*) of the relation between particulate levels and morbidity or mortality.

The Clean Air Act of 1970 and its amendments mandate the control of public exposure to outdoor TSP. However, little legislative attention has been devoted to the quality of indoor air—other than the passage of the Public Health Service Act of 1978, which provides for an ongoing study of the health costs of indoor air pollution. Clearly, indoor air pollution from tobacco smoke presents a serious risk to the health of nonsmokers. Since this risk is involuntary, it deserves as much attention as outdoor air pollution.

Note added in proof: A very recent epidemiological study concluded that long-term exposure to tobacco smoke, limited to the work environment only, is deleterious to the nonsmoker and significantly reduces small-airway function to the same extent as smoking one to ten cigarettes per day. This is consistent with scenario B (*52*). *ASHRAE Standard 62-73R*, a proposed standard for ventilation required for minimum acceptable indoor air quality, has been published (see *29*). Using data supplied in the standard, we calculate a C_v of ≤ 1.28 for office buildings where smoking is permitted.

31. Since about one-third of U.S. adults are smokers (*23*), in principle, one-ninth (11.1 percent) of every group of average adults will be smoking at any one time under most social conditions. The larger the group considered, the closer the actual number should be to 11.1 percent. Table 5 shows that, averaged over all data points for which the number of active smokers was five or more, this percentage was 11.2 ± 1.8. Averaged over all data points, the percentage was 8.8 ± 4.6.

Materials Science

On 23 May *Science* will publish an issue containing 20 articles devoted to Advanced Technology Materials. The issue will provide a sample of some of the more significant work being conducted in the major industrial research laboratories. The manuscripts have been prepared by leading industrial scientists who have delivered texts that are not only authoritative but also readable and interesting. Upper-division undergraduates, graduate students, and mature scientists will find the issue a valuable sample of applications of fundamental knowledge.

The topics covered include: New Polymers; Conductive Polymers; Multipolymer Systems; Fiber Reinforced Composite Materials; Heterogeneous Catalysts; Glassy Metals; High Strength Low Alloy Steels; Superconductors for High Current, High Fields; New Magnetic Alloys; High Temperature Ceramics; Gas Turbine Materials and Processes; Diamond Technology; New 3-5 Compounds and Alloys; Molecular Beam Epitaxy; New Methods of Processing Semiconductor Wafers; Materials in Relation to Display Technology; Photovoltaic Materials; Magnetic Bubble Materials; Josephson Device Materials; and Biomedical Materials.

Nonsmokers and Cigarette Smoke: A Modified Perception of Risk

The article by Repace and Lowrey (*1*) is an interesting and useful aid for evaluating the exposure levels of nonsmokers to cigarette smoke. The article, however, is flawed because it compares the levels to those of smokers of cigarettes delivering the lowest amount of tar of any brand on the market. This cigarette delivered 0.55 mg of tar in 1978 and accounted for less than 2 percent of the cigarettes consumed that year and for less than 3 percent of the cigarettes sold in 1979 (*2*). The exposure of various nonsmokers was found to be the equivalent of smoking 2 to 27 such cigarettes per day. Twenty years ago, smoking as few as ten cigarettes daily was hazardous (*3*). Hence, the article implies that the health of exposed nonsmokers is seriously jeopardized.

The consequences of smoking on health have not been measured for consumers of the brand yielding the lowest tar, but rather for all smokers. In 1977 the average tar yield of American cigarettes, based on sales, was about 16 mg (*4*). Thus, "nonsmoker B" was exposed to the equivalent of one-sixth of the average 1977 cigarette per day, "nonsmoker C" to one per day, and "nonsmoker D" to one-sixteenth. It might be more pertinent to consider the tar delivery of cigarettes that were smoked about 20 years ago. The average cigarette in 1959 delivered about 29 mg in ten puffs. Thus, the model nonsmokers then would have been exposed to the equivalent of one-third to five *puffs* per day.

To be sure, we do not know that any level of cigarette smoke is harmless. The model nonsmokers were exposed to levels exceeding the primary annual National Ambient Air Quality Standards. Small amounts of smoke are irritating to many nonsmokers and may physically impair some. Such effects by themselves are sufficient cause for concern about passive exposure to cigarette smoke. Risk of cancer and other diseases for which dose is important should not, however, be imputed from comparisons of nonsmokers with the least affected 2 percent of the smoking population.

Bock raises an important issue: How is the estimated range of exposure of nonsmokers to cigarette smoke translated into an increased risk of incurring the diseases of smoking? However, Bock both misinterprets our analysis and understates the risks. First, we did not derive an exposure-response relation between tobacco smoke and risk on the basis of low-tar cigarette equivalents inhaled by nonsmokers. Rather, we expressed the range of exposure in terms of such equivalents and confined our assessment of risk to the statement that such exposure represents a serious risk to the health of nonsmokers. We justified this not only by comparison with low-tar cigarettes, but also by references to outdoor air standards, pulmonary lavage experiments, coke-oven emissions, and carcinogenic potency. Second, we do not agree with Bock's assertion that comparisons with low-tar cigarettes are inappropriate because such cigarettes are smoked by the "least affected 2 percent of the smoking population." The latest report of the Surgeon General (*1*) advises that "there is no safe cigarette and no safe level of consumption" and that although lower yields of tar and nicotine reduce the risk of lung cancer and "to some extent improve the smoker's chance for longer life . . . it is not clear what reductions in risk may occur in the case of diseases other than lung cancer."

More to the point, Bock's comparisons of nonsmokers' exposures to those of inhaling smokers of high-tar cigarettes are misleading. As we have shown, the exposure of certain nonsmokers to tobacco smoke appears to be similar to the exposure of low-tar cigarette smokers. The cloud of pollution surrounding low-tar smokers appears to be not very different from the cloud surrounding high-tar smokers who are noninhalers. In fact, our low-tar cigarette produces sidestream emissions that are nearly 80 percent of those of the 1977 cigarette and nearly 40 percent of those of the 1959 cigarette (*2*). This is significant because a study begun in 1959 (*3*) has shown that 45- to 54-year-old male smokers who were noninhalers suffered a 41 percent higher mortality rate than male "nonsmokers" (*4*). A number of studies now indicate that carcinogenic, respiratory, and cardiovascular effects result from nonsmokers' exposure to indoor tobacco smoke (*5*).

sponding to the average reflectivity is 11 ± 4, a moderately high value for a dry planetary surface at radar frequencies. For other parts of Venus where the reflectivity approaches 0.4, K calculated by assuming negligible conductivity and loss rises to 20.

How can these relatively high reflectivities be explained? From Eq. 2 we see that both the real and imaginary parts of ϵ contribute to the reflectivity. It seems extremely unlikely that dielectric losses (L) of naturally occurring dry rocks could be large enough to dominate the reflection mechanism; they normally control only the attenuation with depth (*9*). For the conductivity, S, to be important in reflection, not only must it exceed about 0.1 mho/m at our radar's operating frequency, but the conductive region must extend over an area with dimensions comparable to a wavelength or larger. If such large areas of conductive surface exist, it would seem likely that, at least occasionally, reflectivities near unity would be encountered, since occurrence of the precise frequency-dependent threshold value of S necessary to yield reflectivities consistently between 0.3 and 0.4 seems highly fortuitous.

We are left, then, with the necessity for explaining how the real part, K, of the dielectric constant can be raised to values between 11 and 20. The most likely mechanism is the presence in the rock of conducting inclusions much smaller than the observing wavelength. Meteorites containing relatively large amounts of free iron-nickel mixtures and sulfides display values of K ranging up to 100 or more (*9*). Free metals seem unlikely and in any case could not exist for long in any part of the Venus surface exposed to the atmosphere; highly conducting metallic sulfides would also be unstable to atmospheric exposure (*11*). But if overturning of the first few centimeters of surface proceeds slowly enough, or if material is being steadily stripped off the surface and blown elsewhere, atmospherically unstable minerals could be maintained sufficiently near the surface to be effective in raising the dielectric constant.

Nozette and Lewis (*12*) suggested that chemical erosion takes place at high elevations on Venus, where winds are comparatively strong and atmospheric densities and temperatures relatively low. The fine-grained eroded material is subsequently delivered to lower elevations, where it is chemically modified and possibly compacted. In the process, the putative conducting inclusions are transformed into gases and nonconducting minerals. If the "original" Venus surface contained on the order of 15 percent free metal—or, more likely, pyrite (FeS_2), which has been postulated independent of radar observations to explain the observed atmospheric chemical composition (*11*)—the high values of reflectivity seen at high elevations could be readily explained. Pyrite is one of very few minerals with the necessary high conductivity, having values between 1 and 10^5 mho/m (*8*).

The model that emerges from this discussion requires that the surface of Venus in the vicinity of the highly reflecting regions contain a significant amount of conducting mineral as inclusions in the rock. From a consideration of the present lower atmospheric composition, this material is likely to be pyrite and may be widespread in the original crustal rock, lying in radar view only at higher elevations, where new surface is constantly being exposed. It is also possible that pyrite is preferentially produced in sulfur-rich volcanic material.

5. Errors in the estimates derived from the observational data are of two kinds: (i) a formal standard error resulting from the weighted-squares estimation, which is dependent both on the analytic form of the scattering model and on the fluctuation noise associated with the data. These standard errors vary, but for ρ and σ typically range between 10 and 30 percent of the estimated value of the associated parameter. As a large number of results for a geographic region are averaged, however, the uncertainty in the mean from this source rapidly diminishes until (ii) the residual systematic error comes to dominate. The systematic error reflects failure in the accuracy of the modeling and, for ρ, uncertainties in the radar system calibration. Many of the systematic effects are common to large groups of the observations and are difficult to estimate. We have, somewhat arbitrarily and, we hope, conservatively, placed our estimates of the upper limit to systematic uncertainty here at about 25 percent of the associated value. The errors on all the numerical results in this report reflect primarily the absolute systematic uncertainties; comparisons among our results may therefore carry more precision than is apparent, since the corresponding errors are largely systematic.

Cigarette Smoke Contains Anticoagulants Against Fibrin Aggregation and Factor XIIIa in Plasma

Abstract. *Gas-phase, water-soluble components of cigarette smoke cause delayed fibrin self-assembly and prevent fibrin cross-linking by inactivation of factor XIIIa (plasma transglutaminase). These anticoagulant properties of smoke are demonstrable in plasma, suggesting they play a role in the pathophysiology of smoking.*

There is little information on the effects of cigarette smoke on important biochemical interactions, though considerable information on its physiologic effects is available. Studies on interactions of cigarette smoke with certain proteins have provided biochemical evidence that specific functions of such proteins are inhibited (*1*, *2*) or augmented (*3*) by smoke components. In view of the shortened half-life of radioactively labeled fibrinogen in dogs exposed to cigarette smoke (*4*) and of the reported increase in fibrinogen in human smokers (*5*), we examined the possible effect of smoke on certain fibrinogen functions in vitro. We found that water-soluble smoke components include two types of anticoagulants: one is directed against fibrin self-assembly and the other inactivates factor XIIIa, thereby preventing cross-link formation (that is, stabilization) in fibrin clots.

Fibrinogen, a plasma glycoprotein, consists of three pairs of disulfide-bridged polypeptide chains termed Aα (molecular weight, ~ 70,000), Bβ (~ 60,000), and γ (~ 50,000). Cleavage by thrombin of arginyl-glycine peptide bonds at positions Aα16 and Bβ14 results in release of small polar peptides A and B from their respective chains: the resulting fibrin monomers polymerize noncovalently and form the fibrin gel.

0036-8075/82/0813-0642$01.00/0 Copyright © 1982 AAAS

factor XIIIa which catalyzes the formation of ε-(γ-glutamyl)lysine cross-links between adjacent fibrin molecules. Certain other proteins are also cross-linked in this way to fibrin, for example, fibronectin (*6*) and fast-reacting α_2-plasmin inhibitor (*7*).

In this work, the effect of cigarette smoke on fibrin aggregation was investigated by the use of water-soluble, gas-phase components of smoke, obtained (*8*) by bubbling the smoke produced from one cigarette through 3 ml of buffer or distilled water. This extract (SE) was incorporated in varying dilutions in the buffer to which fibrin monomer solution (in 0.25 percent acetic acid) was added in order to initiate fibrin aggregation, which was monitored turbidimetrically at 350 nm (*9*). A dose-dependent delay in fibrin aggregation was observed (Fig. 1A). Increasing the amount of smoke extract resulted in decreased absorbance of the clot (1:10 and 1:5 dilution) and (1:5 dilution) delayed the onset of fibrin aggregation. The decreased absorbance (indicating a less opaque or more transparent clot) remained undiminished for several hours. These effects were partly decreased in dialyzed smoke solutions and could not be corrected by incorporating calcium chloride (20 m*M*) in the buffer (not shown).

The fibrin aggregation inhibitor was also examined by use of two differing fibrin preparations with α chains lacking COOH-terminal segments. One fraction, termed I-6 and isolated from plasma, lacked approximately one-fifth of the native peptide from most of its α chains [that is, its α chains were of similar size (*10*)]. Another fraction, termed I-9D, was obtained from an 88 percent coagulable plasmic digest of fibrinogen and lacked longer segments, approximately two-thirds of the native peptide, from most of its α chains (*11*). Neither preparation displayed a delay in fibrin aggregation in the presence of smoke extract (Fig. 1, B and C). In addition, the clot absorbance of I-6 was decreased, suggesting that aggregation was partially inhibited or that this effect was distinct from that of the delay in fibrin aggregation (Fig. 1A). These results implied that the fibrin aggregation inhibitor required the presence of intact α chains to exert its effect. What is more, they suggested that the inhibitor interacted either directly with the α chains of fibrin or with another fibrin site which lost its capacity to interact with the inhibitor following conformational changes induced by the loss of intact α chains.

We also determined whether the Smoke extract consistently prolonged the thrombin clotting times of plasma (Fig. 1D), but this effect could be abolished by decreasing the amount of extract added. In related analyses the clotting times of isolated fibrinogen fractions were examined in plasma containing the extract. To fresh plasma that had been depleted of its fibrinogen by heat precipitation, band I fibrinogen and thrombin and determined clotting times. Consistent with the results on fibrin aggregation (Fig. 1A), the smoke extract prolonged clotting times in samples containing band I fibrinogen, and this defect was not corrected by the presence of calcium chloride (Fig. 1E). Samples containing fraction I-6 fibrinogen exhibited no

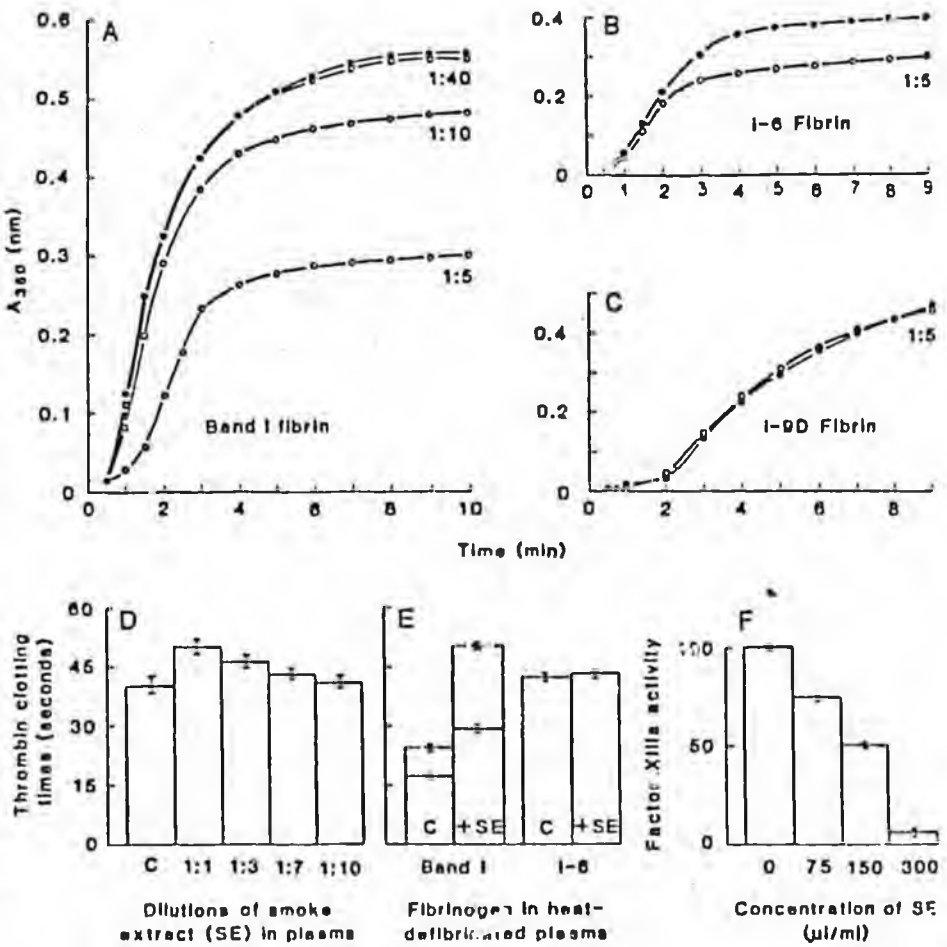

Fig. 1. Anticoagulant effects of smoke extract (*SE*) on fibrin and factor XIIIa. (A) Effect of different dilutions (open circles) on the time course of aggregation of (band I) fibrin which has intact α chains (*10*); closed circles indicate buffer control. After dilution of the fibrin solution with 20 volumes of buffer (0.025*M* tris-hydrochloride, *p*H 7.4, 0.135*M* NaCl) (*9*) containing SE, the final concentration of fibrin was 0.5 mg/ml. The *p*H remained constant during the experiments; in certain control experiments buffer containing SE alone or SE plus human albumin (0.5 mg/ml) in buffer was monitored for several hours and displayed no increase in absorbance (not shown). (B and C) Effect of SE on the aggregation of fibrin which lacks COOH-terminal segments from its α chains: fraction I-6 lacks approximately one-fifth (*10*) and fraction I-9D lacks approximately two-thirds (*11*) from their α chains. The final concentration was 0.4 mg/ml; the buffer was as in (A) and the SE dilution was 1:5. (D) The effects of SE on the clotting times of fresh human plasma (*9*). The height of each column reflects the mean and the brackets the range of at least three determinations in the presence of different dilutions of SE as shown; control plasma is designated *C*. Human thrombin (in 0.01*M* tris-hydrochloride, *p*H 7.4, and 0.15*M* sodium chloride) was added to citrated plasma (to 0.4 U/ml) and the clotting times were determined. (E) Histograms of clotting times for two differing fibrinogen preparations, showing that the inhibitory effect of SE on band I is not present when I-6 fibrinogen is clotted. The experiments were carried out in plasma that had previously been heat-treated (56°C, 10 minutes) to remove its own fibrinogen [which is heterogeneous (*10*)]. To this treated plasma, fibrinogen (either band I or I-6) was added (to 2 mg/ml) and clotting times were determined. Final thrombin concentration was 0.5 U/ml and SE dilution was 1:3 in all experiments (*C*, control). Columns with solid or interrupted lines indicate the presence and absence of calcium chloride (20 m*M*), respectively. (F) Effect of SE on the activity of isolated factor XIIIa, showing inhibition of [^{14}C]putrescine incorporation into casein. The conditions of the assay (*16*) as applied here were as follows: To 0.5 ml of 0.01*M* tris-acetate buffer, *p*H 7.4, containing calcium chloride (20 m*M*), dithiothreitol (5 m*M*), Hammerstein casein (1 percent), different concentrations of SE (as shown), and [^{14}C]putrescine (0.1 μCi/μmole), we added 5 μg of XIIIa. The mixture was incubated for 60 minutes at 37°C, and the reaction was stopped by adding 4 ml of 7 percent cold trichloroacetic acid. The precipitate was assayed by liquid scintillation (*16*).

change in their clotting times in the presence of the extract (Fig. 1E), again in agreement with the fibrin aggregation results. These findings indicated that smoke extract inhibits fibrin aggregation in the plasma environment. Moreover, the similarity of its dose-response whether plasma or isolated fibrin was used implied that competitive interaction between the smoke inhibitor and nonfibrinogen plasma proteins was minimal.

We then examined factor XIIIa–catalyzed fibrin cross-linking in the presence of the smoke extract. Fresh whole blood or plasma fibrin clots are cross-linked and therefore insoluble in 5*M* urea. When such clots were obtained in the presence of smoke extract (1:3 dilution) they were soluble in 5*M* urea (not shown). Similarly soluble were clots obtained from isolated fibrinogen and factor XIIIa in the presence of the extract. Cross-linking inhibition was also demonstrated by subjecting reduced fibrin samples to polyacrylamide gel electrophoresis in the presence of sodium dodecyl sulfate (*12*). In this analysis cross-linking can be shown by the characteristic depletion of α and γ chains and the concurrent appearance of more cathodal electrophoretic bands, termed α-polymers and γ-γ dimer, respectively (Fig. 2, gel 1). The presence of smoke extract resulted in a concentration-dependent inhibition of α-polymer and γ-γ dimer formation (Fig. 2, gels 2 and 3). Moreover, higher concentrations of the extract were required to inhibit the [more rapid (*13*)] formation of γ-γ dimer than that of α-polymers.

The possibility that this inhibitor was directed against (or binding to) fibrin cross-linking sites was examined. Non-cross-linked fibrin clots (*14*) exposed to smoke extract, followed by extensive washing and subsequent exposure to XIIIa, resulted in unimpaired fibrin cross-linking, indicating that the inhibitor did not bind to fibrin. In addition, dialysis removed the cross-linking inhibitor from the smoke extract (Fig. 2, gel 4), and its activity remained in freeze-dried samples.

Factor XIIIa–catalyzed incorporation of monodansyl cadaverine (fluorescence) (*15*) and of ^{14}C-labeled putrescine (*16*) into casein was used to assess the smoke inhibitor effect on XIIIa. These amines compete with the ε-amino group of peptide-bound lysine and prevent its cross-linking to peptide-bound γ-glutamine; thus measurement of casein-bound fluorescence or radioactivity serves to assay XIIIa by use of substrates other than fibrin. Both assays disclosed irreversible inhibition of XIIIa which depended on the concentration of smoke extract and required calcium chloride. Fig. 1F illustrates the results of the experiments with [^{14}C]putrescine. Direct inactivation of XIIIa was demonstrated after it was incubated with smoke extract. That is, the loss of XIIIa activity was proportional to the concentration of the smoke extract, and it could not be reversed by removal of the smoke inhibitor by dialysis or by gel filtration (G-25 Sephadex). By contrast, when the inactive zymogen (XIII) was subjected to the same treatment, it displayed no loss of activity following dialysis and activation to XIIIa.

Thus cigarette smoke contains two distinct coagulation inhibitors: one prolongs the clotting times of plasma by inducing delayed fibrin aggregation and requires the COOH-terminal region of fibrin α chains to exert its effect; the other inactivates XIIIa, preventing the cross-linking of fibrin polymers. By extension, this second smoke inhibitor may similarly affect other physiologically important proteins (*6*, *7*) also known to be cross-linked to fibrin by XIIIa.

We believe that these results permit speculation on potential pathophysiologic effects that may result from the exposure of lungs or other tissues to cigarette smoke. Diminished fibrin cross-linking could result in premature removal of fibrin, by proteolytic enzymes, thereby impairing the role of fibrin in initiating the provisional or temporary extracellular matrix during normal tissue repair. Besides protective fibrin-to-fibrin cross-links, other proteins [such as fibronectin (*6*) and α_2-plasmin inhibitor (*7*)] are cross-linked by XIIIa to fibrin, the latter conferring additional resistance to proteolysis (*7*). The presence of the smoke inhibitor is therefore likely to result in an initial wound matrix lacking the protective effect of such cross-links and consequently susceptible to early degradation. Blood complement abnormalities, suggesting ongoing low-grade inflammation in cigarette smokers (*17*), are consistent with this possibility, and the elevated fibrinogen levels (*5*) as well as the shortened half-life of radioactively labeled fibrogen (*4*) associated with smoking can be explained as a response to such an inflammatory process. What is more, that fibrin(ogen) degradation fragments induce a leukocyte-mediated increase in fibrinogen synthesis in cultured hepatocytes (*18*) is also consistent with this speculation.

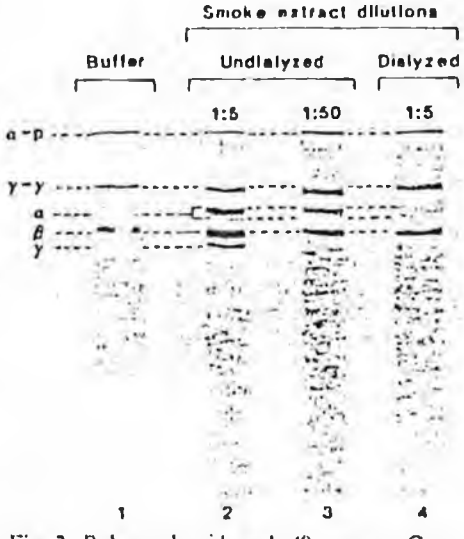

Fig. 2. Polyacrylamide gels (9 percent, Coomassie stained) of cross-linked fibrin clots (*9*) which had been washed and reduced prior to electrophoresis (*12*), showing non-cross-linked α-polymer (gels 2 and 3) and γ chains (gel 2) in clots obtained in the presence of smoke extract (SE). The absence of γ chains in gel 3 reflects the higher rate of γ-γ dimer (than α-polymer) formation (*13*) and indicates that the rate of XIIIa inactivation by the 1:50 SE dilution was lower than that of γ-γ dimer formation. The cross-linking mixture (*9*) contained dialyzed (gel 4) or undialyzed (gels 2 and 3) SE, isolated (band 1) fibrinogen, and factor XIII.

Metabolism of 2,4',5-Trichlorobiphenyl by the Mercapturic Acid Pathway

Abstract. *Carbon-14–labeled 2,4',5-trichlorobiphenyl was found to be metabolized by the mercapturic acid pathway to metabolites that are excreted in bile. About 57 percent of the carbon-14 was excreted in the bile; 30 to 35 percent was present as mercapturic acid pathway metabolites. Mercapturic acid was also isolated from the urine (0.3 percent of the dose).*

Although polychlorinated biphenyls (PCB's) have not been shown to be metabolized by the mercapturic acid pathway (MAP), there is evidence that the MAP may be involved. Biphenyl and 2,2',5,5'-tetrachlorobiphenyl are metabolized to dihydrodiols (*1*, *2*), and the NIH shift occurs in the metabolism of 4-chloro- and 4,4'-dichlorobiphenyl (*3*, *4*). Both of these metabolic routes usually indicate that an arene oxide precursor was formed, and compounds that form arene oxides are often metabolized in part by conjugation with glutathione, that is, by the MAP. Also, biphenyl is known to be metabolized by the MAP (*5*).

The most common indication that a xenobiotic was metabolized by the MAP is the isolation of the appropriate mercapturic acid from the excreta; however, this may also be indicated by formation of metabolites that contain metabolically introduced thiol, *S*-glucuronyl, methylthio, methylsulfinyl, or methylsulfonyl groups (*6–8*). Several chlorinated biphenyls were found to be excreted by mice as metabolites containing methylthio and methylsulfonyl groups (*9*), and chlorinated biphenyl methyl sulfones were also isolated from various tissues (*10–12*) and from milk from a lactating female (*13*). The radioactivity from intraperitoneally administered [^{35}S]cysteine was incorporated into 2,4',5-trichlorobiphenyl (triCB) methyl sulfones that accumulated in the lungs of mice given oral doses of triCB (*14*).

The evidence cited above indicated that some chlorinated biphenyls are metabolized by the MAP and that the common products of this pathway (the corresponding mercapturic acid and its precursors) are metabolized further before excretion. The mechanism was thought to be similar to that described for pentachlorothioanisole, where the biliary MAP metabolites were excreted mainly in the feces as bis-(methylthio)tetrachlorobenzene and nonextractable residues (*15*) and about 1 percent of the dose was present in the urine as *N*-acetyl-*S*-(methylthiotetrachlorophenyl)cysteine. The excretion of triCB methyl sulfide and methyl sulfone in feces from mice given triCB (*9*) prompted a search for MAP metabolites in bile from rats given ^{14}C-labeled triCB. In addition, triCB is a significant component of technical PCB containing 42 to 48 percent chlorine.

Bile collected from four bile duct–cannulated rats given single oral doses of ^{14}C-labeled triCB (*16*) (4 mg, 3.94 μCi per rat) contained 52.7 ± 19.2 percent of the dose after 48 hours, and 84 to 90 percent of the radioactivity was extracted from the bile (*17*). The radioactivity in the extract was separated into six fractions by reversed-phase high-performance liquid chromatography (HPLC) (*18*). The fractions were examined for possible MAP metabolites by converting the xenobiotic moieties to the corresponding triCB-*S*-acetates (*19*). Fractions 4 and 5, which contained 4.5 and 33.5 percent of the biliary ^{14}C, respectively, yielded significant quantities of triCB-*S*-acetates. Small quantities were obtained from fractions 1, 2, and 3. Two isomeric triCB-*S*-acetates were separated by gas chromatography (*20*) and found to have retention times and mass spectra identical with those of authentic triCB-3-*S*-acetate and triCB-4-*S*-acetate (*21*). After derivatization (*22*) of fraction 4, the derivatized triCB-*S*-cysteinylglycine and -cysteine conjugates were isolated by HPLC. After derivatization of fraction 5, the methyl ester of triCB-*S*-(*N*-acetyl)cysteine was isolated by HPLC. From the mass spectral data (*23*), structures were assigned to these derivatives and to the underivatized mercapturic acid as outlined in Fig. 1 (*21*).

About 30 to 35 percent of the radioactivity in the bile was present as MAP metabolites, showing that the MAP is a major metabolic pathway for this chlorinated biphenyl and that significant quantities of the metabolites are available for further metabolism by intestinal enzyme systems.

The fate of biliary triCB MAP metabolites in the intestine could not be deduced from the identities of the metabolites reported previously (*24*); therefore, the metabolic fate of ^{14}C-labeled triCB in

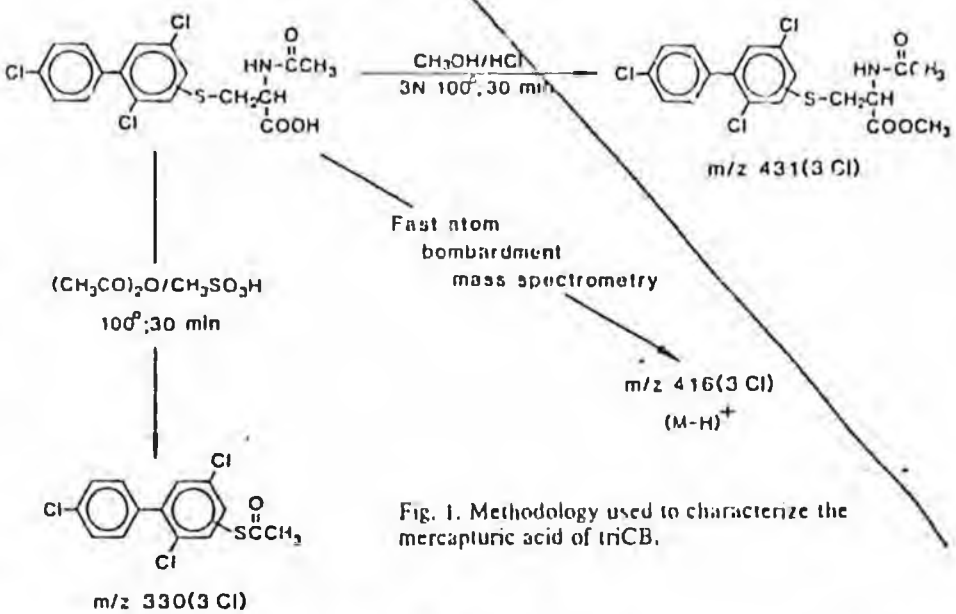

Fig. 1. Methodology used to characterize the mercapturic acid of triCB.

Non-smoker gets disability pay

The Associated Press

SAN FRANCISCO — A non-smoking federal worker transferred to an office with several smokers is entitled to about $20,000 in disability pay because she developed breathing difficulties, a federal appeals court ruled Thursday.

Irene Parodi cannot "perform her job due to its location in a smoke-filled office," the 9th U.S. Circuit Court of Appeals wrote in what the woman's lawyer called a landmark ruling.

"Unlike a person with a physical limitation, a person with an enviromental limitation can physically perform the assigned work in a proper environment," the court said.

"She is as disabled for her job at her assigned worksite as she would be had she actually suffered permanent and severe chronic bronchitis or another physically disabling disease," the court said.

The court said that unless Parodi is offered a job in a smoke-free office within 60 days, she will become eligible for disability retirement benefits of about $500 a month.

Mike Copies for Committee.

The Menace of Indoor Pollution

As we insulate, weatherstrip and seal our homes to conserve energy, we are also sealing in pollutants that are odorless, invisible and sometimes highly dangerous

By Lowell Ponte

On a brisk autumn day in 1979, James L. Repace, a policy analyst for the Environmental Protection Agency (EPA), used himself as a guinea pig. He carried a sophisticated air-monitoring device with him throughout the day—at home and at work. It was at his side as he drove through rush-hour traffic in smoggy Washington, D.C. Like him, it took in gusts of bus exhaust as he lugged it along city streets. To Repace's surprise, the monitor revealed that he suffered the most severe air pollution while waiting for his dinner to cook in his own kitchen.

Many scientists warn that pollution *inside* our homes and offices frequently reaches concentrations that would be illegal out-of-doors. Since the typical American spends 90 percent of each day indoors, pollution here is clearly a serious problem. And it is aggravated by the well-motivated efforts of energy-conscious consumers to insulate, weatherstrip and otherwise seal living areas to reduce fuel costs.

Unfortunately there have been few, if any, efforts on the part of either government or environmentalists to publicize the problem or to warn citizens of possible danger. The information presented here is published to acquaint readers with the facts so that they can take individual measures to reduce the risks.

Gas appliances. Most Americans live today in homes with fires burning night and day—the tiny blue pilot lights in furnaces, water heaters, clothes dryers, stoves and ovens fueled by natural gas. Gas burns far cleaner than the coal and wood stoves it replaced; it almost never pours visible smoke into homes. But where there's fire, there's smoke. Scientists are finding that some combustion products emitted by gas appliances may be more hazardous than we suspected.

Researchers at California's Lawrence Berkeley Laboratory measured the pollution output of gas stoves cooking at 350° F. and found that in kitchens with poor ventilation, the room's air could soon contain as much carbon-monoxide and nitrogen-dioxide gas as the Los Angeles sky on a smoggy day.

Carbon monoxide can be deadly. Just before last Halloween, a Los Angeles father turned on his home gas heater, apparently neglecting to check its vent. Days later he and his two daughters were found dead, asphyxiated by carbon monoxide. Each year in the United States, roughly 1700 people die in similar accidents.

When carbon monoxide enters our lungs, it binds to the red blood cells' hemoglobin 210 times more strongly than oxygen does. Thus even a small amount of carbon monoxide impairs our blood's ability to carry oxygen.

The EPA has set a standard of nine "parts per million" (ppm)—nine molecules of carbon monoxide mixed with every million molecules of air—as the maximum safe exposure to carbon monoxide during an eight-hour period. Victims of cardiovascular disease can suffer the pains of angina at this level. When carbon monoxide reaches 15 ppm, some subjects experience ominous changes in heart rhythm. At 30 ppm some will suffer distortions in vision and physical dexterity that impair driving.

Yet a study by the National Academy of Sciences reports that the air in home kitchens over short periods of up to one hour can reach up to 50 ppm carbon monoxide "as a result of ordinary use of a gas range, especially when the cooking utensils divert or quench the flame."

Gas flames also create oxides of nitrogen, including nitrous oxide (laughing gas) and nitrogen dioxide. The EPA's permissible annual pollution average for nitrogen dioxide in the air is only 0.05 ppm. At 0.1 ppm, it will cause breathing difficulties. At 0.5 ppm, this gas has been shown to lead to a greater susceptibility to disease in animals.

Some scientists suspect that nitrogen dioxide is the prime cause of increased respiratory illness among people in homes with gas stoves. Dr. Frank E. Speizer of Harvard University Medical School studied 8000 children, ages six to nine, half of whom lived in homes where parents cooked with gas and half where electricity was used. He found evidence that children from homes using gas stoves suffered up to 15 percent more respiratory illness than did the other group.

Kerosene heaters. In 1982 Americans bought more than 5 million portable heaters fueled by kerosene. Used to warm single rooms, the heaters vent the chemical by-products of their flame directly into the surrounding air. Test results published by *Consumer Reports* last October revealed that in a small room kerosene heaters put an average of 13 ppm of carbon monoxide into the air, and as much as 1.8 ppm of nitrogen dioxide (many times the EPA permissible level). A kerosene heater could also produce up to 12 ppm of sulfur dioxide in room

air—as much as 85 times the EPA health standard for outdoors. At even one ppm of sulfur dioxide, mild asthmatics can suffer breathing problems within 10 minutes, and at 5 ppm they can experience asthma attacks.

Home fireplaces. Many Americans have reverted to fireplaces for winter warmth. But fireplace chimneys are often poorly vented, and the fires built in them can raise carbon-monoxide levels in the home and produce exotic gases such as benzo[*a*]pyrene, a known cancer-causing chemical. Family members often toss into a fireplace anything that will burn, without knowing that the colored inks of the Sunday funnies, for example, can put a trace of arsenic vapor into the air. Other objects such as wood treated with preservatives can emit toxic fumes.

Insulation. In the 1970s more than half a million Americans fought the energy crunch by insulating their homes with urea-formaldehyde foam. Formaldehyde vapors in concentrations as high as 0.5 ppm or more have since been measured. At as little as 0.1 ppm of formaldehyde, some persons are hit by throat and upper-lung irritation, and at 0.25 ppm asthmatics and children face a serious health risk.

Fire-resistant asbestos, another widely used insulating material, is now recognized as a serious threat to health. Its fiber dust is easily inhaled into the lungs, where its crystals will cause development of fibrous tissue. Now banned in industry, fraying asbestos insulation continues to pollute the air in schools where an estimated three million American children attend classes. Replacing asbestos-backed vinyl tile floor covering can also be a hazard: if the tile is ripped up incorrectly, asbestos dust is released into the air.

Air-conditioning systems. These are sources of living air pollution—germs, fungi and amoeba. The bacterial infection that is known as Legionnaire's disease infected its victims in Philadelphia in 1976 and in other places since then by spawning in air-conditioning systems.

Air-conditioning systems and humidifiers often spread lung ailments through office buildings—especially modern, energy-efficient ones that have windows that can't be opened. These white-collar enclosures also absorb pollution from underground garages.

While factory workers have government agencies regulating pollution in their work place, most white-collar workers have not received such attention. Yet even photocopiers give off a common smog ingredient, ozone, along with other chemicals. Typically these machines are put in backroom offices with little ventilation.

Aerosol sprays. When we disperse insecticides indoors with spray cans, tiny droplets can remain in the air for a few hours, after which the chemicals will settle into the carpet and furniture. Each time an

infant crawls across a rug, subtle clouds of hazardous dust may waft up. Hair and deodorant sprays, oven cleaners and other aerosols also create clouds of chemicals that can be inhaled and ingested into the bloodstream.

Tobacco smoke. While smoking one cigarette, a person inhales more than 3600 different chemicals, including carbon monoxide, formaldehyde and nitrogen dioxide. Young children in homes of smokers suffer significantly higher rates of respiratory illness and receive hospital treatment more often than other children.

In offices where people smoke, scientists have measured levels of inhalable particles many times more concentrated than a factory would be allowed to put into the surrounding outside air in a 24-hour period. The heavy smoker also poses a special hazard in closed automobiles, where airspace is so limited that carbon-monoxide levels can quickly approach 35 ppm, an amount that could affect the driver's ability by distorting his hearing, perception and motor skill.

Radiation. The soil and common building materials such as granite, brick, cement and concrete can be naturally rich in radioactive radon and its by-products polonium 218, lead 214 and bismuth 214. Ironically these are the preferred construction materials for energy-efficient passive solar homes. What has alarmed scientists is that the houses act like closed jars, trapping natural radon gas and causing it to build up.

In Mount Airy, Md., the National Association of Homebuilders created a prototype for the ideal energy-efficient home of the future. Here the old-fashioned, drafty American house was replaced by a dwelling so airtight it exchanged air with the outdoors only about twice in 24 hours.

Trouble was, Mount Airy happens to have a concentration of radon gas, which was producing radioactivity inside the prototype at levels several times higher than might be found inside an ordinary home—levels eight times higher than those deemed safe by government guidelines.

In 1981 an editorial in the *Journal of the American Medical Association* called for "a temporary halt to our home-energy conservation programs" until we knew more about the risks of indoor air pollution. One of the facets needing study is how *mixtures* of pollutants can combine to become more dangerous. Those who smoke and are exposed simultaneously to either radiation or asbestos dust, for example, are apparently at greater risk than separate exposure could cause.

But just when we need to know more about synergistic effects and other unknown dangers, the federal government has cut by more than half its meager research budget for indoor pollution. Until more is known, it is simple prudence for individual Americans to take what-

ever steps they can to protect themselves from the already proven dangers. What can *you* do to reduce indoor pollution?

• Be alert when using a fireplace, kerosene heater or gas stove. A poorly adjusted gas stove can give off carbon monoxide at a greater rate than a properly adjusted one. One sign of a gas range needing adjustment: the tip of the flame is yellow instead of blue. Have a service man correct it.

Ideally you should vent stoves and ovens *outside*, preferably with an exhaust fan that switches on automatically whenever the appliance is in use. If you use a kerosene heater, set it inside your fireplace and let the chimney vent its combustion gases.

• Smokers should confine their air pollution to one room of the house and make sure the window is open. Better still, they shouldn't smoke inside at all.

• If there is a risk of radon gas in your area (a special threat in basements), consider sealing off any leaks or cracks in the foundation of your house. Basement drains are also a potential entry point.

• Consider using an "indoor-outdoor heat exchanger." These devices, which cost from $300 to $1000 and can be installed like a window air conditioner, use the heat from air that they pump *out* of your home to warm the fresh outdoor air that is simultaneously pumped in. They bring in fresh air on a cold winter day while conserving up to 70 percent of a home's costly heat. They can also be installed with filters to remove smoke and other pollutants.

Our home is our castle, but in trying to make it a perfect environment, we've filled it with some dangerous conveniences and made it a bit too snug to breathe in safely. Short of new gadgetry to clear inside air, good ventilation is the quickest remedy for indoor pollution.

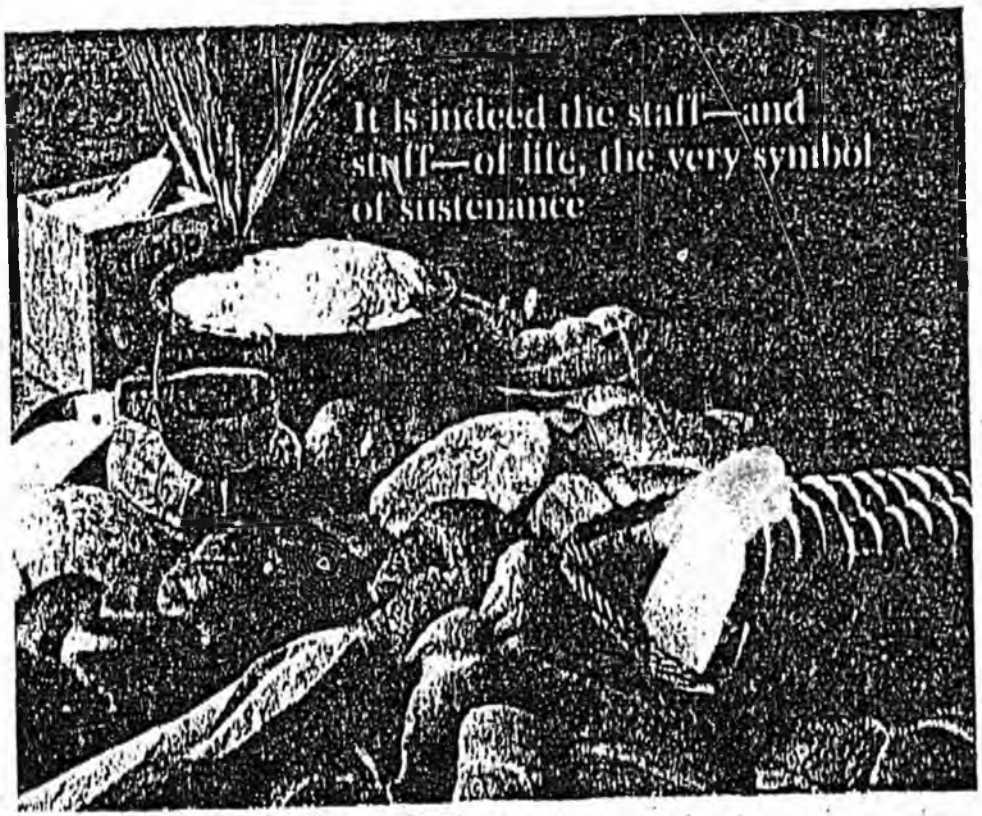
Flight Paths

At the Nashville airport I purchased a ticket to Dallas. The flight left from Gate 7, and I asked the ticket agent how to get there. "Take the escalator to the upper level and turn right," he said. "Gate seven is about halfway to Dallas."

—Contributed by Ronald Sanders



I was in an airport bar with a friend when we were approached by a slightly tipsy stranger. He asked my friend, who has an accent, where he was from. "Central America," my friend said.

"Really? So am I!" the man said in a booming voice.

"What part?" my friend asked.

"Kansas City."

Our Daily Bread

By Jack Denton Scott

The slightest whiff of baking bread starts taste buds blossoming. Its siren scent has even driven men to acts of madness: refused bread that he smelled baking in the little town of Byron, Mich., an enraged Indian launched one of the worst massacres in the state's history in 1827.

Like a country's flag, bread signals nationality at the world's tables: Mexico's tortilla; India's flat *chapati* and puffy *puri;* Scottish scones and oatcakes; England's light cottage loaves; Ireland's soda bread; the flat, pocketed Middle Eastern pita; America's corn bread.

And loaves appear in as many

Anti-smoking bill becomes hot issue

HB84

Times 3-18-83

Associated Press

Juneau — A representative who puffed on a cigarette during hearings regarding new smoking regulations apparently was not blowing smoke into the face of the law.

Rep. Ramona Barnes, R-Anchorage, says she was not violating the state's new smoking regulations during a recent House Judiciary Committee meeting, as was charged in a complaint filed by the Alaska Department of Environmental Conservation.

Roberta Banko of Juneau filed a complaint after seeing Barnes smoking during the committee hearing on a bill to prohibit smoking in a variety of public places. The bill being considered would increase the number of public places in which smoking is banned.

Barnes was cited for violating a year-old Alaska statute prohibiting smoking "in a room, chamber, place of meeting or public assembly under auspices of the state, or a department or agency of the state while public meeting held under the auspices of the state, or a department or agency of the state, is in progress." The penalty, if convicted, is $15.

The House majority leader said she was smoking in an approved smoking area. She also said that others were smoking during the meeting.

Barnes denied Banko's charge that she (Barnes) "was being very theatrical — obviously very arrogantly smoking in the meeting. It was apparent to everyone there that she was making a statement about her distain for the proceedings," said the woman, an active supporter of smoking regulations.

Barnes said, "I smoke all the time."

Banko said she was upset that Barnes was smoking in the same room as several people who had come to testify about how smoking aggravated their health problems.

Barnes said a smoke-eater was sitting next to her to prevent the smoke from bothering others.

HB 84

Smoke signals

IF ONE'S ACTIONS can be deemed a statement of that person's position on any given topic, Rep. Ramona Barnes can smoke to her heart's content at legislative committee hearings — and do so under constitutional immunity.

A Juneau woman filed a complaint with the Department of Environmental Affairs against Mrs. Barnes, accusing her of theatrically and arrogantly smoking a cigarette during a meeting of the House Judiciary Committee. At the time, the committee was considering a bill to ban smoking in public places.

BUT ALREADY on the books, as Roberta Banko protested in her complaint, is a year-old law that prohibits smoking "in a room, chamber, place of meeting or public assembly under auspices of the state, or a department or agency of the state while a public meeting held under the auspices of the state, or a department or agency of the state, is in progress."

Said the complaint by the Juneau woman, an active supporter of smoking regulations: "She was being very theatrical — obviously very arrogantly smoking in the meeting. It was apparent to everyone there that she was making a statement about her disdain for the proceedings."

AH, BUT there's the rub. By her own admission, Ms. Banko acknowledges that Rep. Barnes "was making a statement."

And the Alaska constitution specifically says: "Legislators may not be held to answer before any other tribunal for any statement made in the exercise of their legislative duties while the legislature is in session. Members attending, going to, or returning from legislative sessions are not subject to civil process and are privileged from arrest except for felony or breach of the peace."

For Rep. Barnes, apparently, politics still means a smoke-filled room now and then — notwithstanding any law to the contrary.

HB84

Smoking mad about lawsuits

He said. She said. They said. You said. And now I say I'm sick of the Alaska state government using my tax dollars for trivial lawsuits such as the one mentioned in your paper of March 15 regarding Rep. Ramona Barnes having a complaint filed against her by DEC for smoking in a ". . . room, chamber, place of meeting . . . under auspices of the state . . ."

How much is this nonsense going to cost the taxpayer? Wouldn't it have been simpler to ask her to please stop smoking rather than letting it slide so the state could secure solid "evidence" that she abused the law? Being as Juneau is all state government, why not just stop selling cigarettes altogether. That way there would be no chance of abusing the law.

With the ridiculousness that is going on in Juneau these days most of us are wonderng what is really being smoked!

— *Laura M. Schafer*

Letters

Smoking

Dear Editor:

House Bill 84 "An act relating to smoking in public places and vehicles," is not a bill just for the health conscious person who is into aerobic exercise, jogging, etc. It is more than a statement by the 2/3 population, which does not smoke, to the 1/3 that does, to give us a place to breathe smoke-free air. The bill: addresses the health hazards of second hand smoke, acknowledges the recent court decision concerning rights of nonsmokers, and takes note of the cost of smoking to the public.

It has been estimated the State of Alaska pays increased expenses for its smoking employees in excess of three million dollars annually. Alaska also pays workers compensation to people who lose work time because of smoke conditions making them too ill to work.

Some private industry is addressing the smoking problem now. IBM, 3M, and AT&T have set up separate areas for their nonsmoking employees. Some employers have set up separate areas because of court, decisions.

In 1976, a New Jersey court ruled against New Jersey Bell Telephone Co. stating that companies have a duty to give workers a smoke free work area if they want it. In August 1982, Lanny L. Vickers vs. the Veterans Administration, the United States District Court, Western District of Washington, ruled that a person who is physically sensitive to smoke qualifies as handicapped person as defined in 29 U.S.C. 706(7) (B). In October 1982, the United States Court of Appeals, ninth circuit, (Irene C. Parodi vs. Merit Protection Board) ruled a person is eligible for voluntary disability retirement benefits if that person is medically not able to perform the job because of sensitivity to smoke in the work place and the employer does not offer "... Suitable employment in a safe environment ..." Werner H. Peterke, a former Social Security administration worker, was awarded approximately $700 every two weeks in employee compensation payments on the grounds that he suffered from the smoke of fellow employees at work.

Medical research has linked ambient smoke to medical problems in nonsmokers. Children of parents who smoke are more prone to bronchial ailments. Nonsmoking wives of smokers have higher lung cancer rates than nonsmoking wives of nonsmokers.

House bill 84 represents an issue whose time has come. It has moved from arguments between smokers and nonsmokers to a bill before the legislature. It could very well go on to become law. If you have an interest, contact your legislator at Pouch V, Juneau, Alaska, 99811.

Anchorage Daily News photo illustration by Jim Lavrakas

Stickers like this are available from the Alaska Lung Association, and obstetrician Lydia Eastburn is always pleased when she can give one to a patient who's kicked the habit.

Pregnant smokers are 'smoking for two'

By GWEN BARCUS
Daily News reporter

☐ "Warning: The surgeon general has determined that cigarette smoking is dangerous to your health."

For the expectant mother that precautionary notice on every package of cigarettes is doubly important. When she smokes she is smoking for two.

Dr. Lydia Eastburn, an Anchorage obstetrician and gynecologist, says about 40 percent of the pregnant women she sees are smokers.

"When I'm seeing a new patient, one of my first questions is 'Do you smoke?' The next is 'How much?' "

If the answer to the first question is yes, Eastburn says she goes on to explain why now is the time to quit. About one-fifth of her patients heed her advice, and probably an equal number cut down on the number of cigarettes they smoke.

Eastburn is trying to increase those numbers. "I know most mothers want to do everything possible to assure their baby's health," she says. "There are some things over which they have no control, but stopping smoking is one thing they can do, and it's very important in the development of the fetus."

The pregnant woman who smokes increases the risk of having a miscarriage — smokers are almost twice as likely to miscarry as women who don't smoke, according to Peter Fried and Harry Oxorn in their book "Smoking for Two."

Eastburn says another risk is that the baby will die during pregnancy, and low birth weight also appears to be closely related to smoking during pregnancy.

Although there may be several reasons why some newborns are smaller than average, virtually all scientific studies on the subject show a clear relationship between cigarette smoking and lower infant birth weight. And, according to Eastburn, smaller babies mean smaller heads and smaller heads mean smaller brains. She is convinced that the incidence of learning disabilities is higher in babies of smokers.

There are some 200 chemicals in cigarettes, many of which are harmful even for the adult smoker. For the unformed developing life, dependent on its mother for the oxygen and nourishment it needs to develop properly, Eastburn says the results of smoking by the mother can be tragic.

"A couple of years ago I had a patient whose fetus was not growing at the proper

See Page F-3, SMOKING

pared to her husband, arriving in Palmer in 1936 to work as a surgery nurse at the Matanuska Valley Hospital. It was a "far cry from Chicago," where she had taught school, "but I fell in love with the country — and also with Walter. We were married in Seward in 1938."

Walter had gone to Palmer in 1935 while the Matanuska Colonists were enroute there. Following his graduation from Washington State College, now Washington State University, he was working for the Alaska Rural Rehabilitation corporation.

Elsie recalls their honeymoon prospecting trip to Lake Chalatna — with a friend of Walter's. She refers to the trip as "Three on a Honeymoon." They flew into the remote area with a dismantled river boat which they planned to reassemble on arrival. The river ran in a narrow bed between high bluffs and the two men pulled Elsie upstream from the top of the

The Rondy King and Queen Regent will celebrate their 45th anniversary this year, and except for a year spent Outside when Elsie's mother was ill, and time spent in New York while Walter was earning his master's degree at Hunter College, the two have lived in Alaska all that time.

During World War II, Walter served as paymaster and timekeeper with the Army Transport Service based in Seward. He spent 15 years as a teacher at Seward High School, and when the family moved to Anchorage in 1966, taught history in evening classes at the University of Alaska, Anchorage.

Prior to his retirement five years ago, he was Command Historian for the U.S. Army Alaska, and still pursues his interest in history, particularly Alaska history.

Work for Elsie has included teaching, nursing and administration, and

Anchorage Daily News/Paul Brown

Walter and Elsie Blue were chosen by the Pioneers of Alaska to be King and Queen Regent of the 1983 Fur Rendezvous.

13 years operating "The Blue Shop," a women's and children's clothing store in Seward. She served as administrative assistant at Seward General Hospital and was administrator of the Careage House and Ridgeview Manor, both former nursing homes in Anchorage. She retired in 1975, and devotes much of her time to the activities of The Pioneers of Alaska Auxiliary 4. Vitally interested in the welfare of Alaska's long-time residents, she serves as a member of the State of Alaska Pioneer Homes advisory board.

Virginia, their only child, was born in Seward, and now lives in New York City where she is a writer. She was an original member of the Anchorage Community Theater.

When asked what sort of vehicle they would like to ride in during the Rondy parade Feb. 19, Walter Blue replied, his blue eyes twinkling, "a garbage truck."

"Our entire life in Alaska has been like this," Elsie laughs. "There's never been a dull moment."

Smoking and pregnancy don't mix — for you or your baby

Continued from Page F-1

rate," the doctor recalls. "I felt sure it was because she was a heavy smoker. When she went into labor she was rushed to the hospital and in her nervousness smoked almost a package of cigarettes on the way. Her baby was born dead."

The most active and powerful ingredient in cigarette smoke is nicotine. The amount of nicotine in a single cigarette, if injected rather than inhaled, would paralyze the brain centers controlling the heart and breathing and cause rapid death. In the case of a pregnant smoker, her nicotine-constricted veins narrow the blood vessels that supply the fetus, thus decreasing the amount of oxygen and "food" it receives. In addition, nicotine actually crosses the placenta and directly affects the fetal cardiovascular system.

Frier and Oxorn say "for every cigarette smoked by the mother, the fetus gets the equivalent effects of two."

Eastburn says another danger for the pregnant smoker becomes evident if the baby has to be delivered by cesarian section. The procedure requires a general anaesthetic, which presents a risk to both mother and baby if the mother is a heavy smoker, especially if smoking continues right up to the time of birth.

It helps to stop smoking even a week before the baby is born, says Eastburn. And the new mother should work hard to maintain her resolve, she adds, because the "involuntary smoker" — anyone breathing the air around the smoker — is exposed to even more of tobacco's harmful constituents than the smoker. The smoke from the burning end of a cigarette has *twice* as much nicotine as the inhaled smoke, and *five* times as much carbon monoxide.

According to the Alaska Lung Association, babies in the first year of life have higher rates of pneumonia and bronchitis if their parents smoke at home. And children of smoking parents are twice as likely to smoke as children of non-smokers.

The Lung Association distributes an informational packet for the prospective mother who smokes, and Eastburn gives one to each of her smoking patients. (They are also available from the association at 406 G St., telephone 272-2332. A $1 donation is requested.) She files their charts in blue folders so they're easily distinguishable, and everytime she sees a "blue folder" patient she encourages her to quit.

Other than quitting "cold turkey," what can the smoking mother-to-be do to lessen the danger to her baby?

"If she has tried to quit and has failed, she should at least cut down to no more than 10 cigarettes a day," says the doctor. "If lighting up a cigarette is important to her, perhaps she could light up, take one puff, then throw the cigarette away."

But it would be even better, Eastburn says, if she could say what is printed on a sticker distributed by the lung association: "I quit because I love my baby."

SMOKING AND PREGNANCY

JONATHAN E. FIELDING, M.D., M.P.H.

In 1957 Simpson published her original finding that babies born to women who smoke during their pregnancy are on the average 200 g lighter than neonates born to nonsmokers.[1] More than 100 articles on this relation have led to general acceptance that, on the average, smokers' babies weigh 150 to 250 g less than nonsmokers' babies, and twice as many of the former weigh less than 2500 g. Differences in weight are in direct proportion to the number of cigarettes smoked and are independent of other infant and maternal factors known to influence birth weight.[2]

Further information may be obtained from Jonathan E. Fielding, M.D., Commissioner, 600 Washington St., Boston, MA 02111 ([617] 727-2700).

Until recently, however, it had been difficult to explain why observed perinatal mortality ratios (smokers to nonsmokers) varied from lows of 1.01 and 1.03 in sample sizes of 11,700 and 9800[3-5] to highs of 1.28 and 1.40 in respective sample sizes of 15,800* and 12,500,†[6,7] with an intermediate value of 1.12 in a sample of 19,000.[8]

A series of articles analyzing data from the Ontario Perinatal Mortality Study of all single births in 10 Ontario teaching hospitals during 1960-61 indicates progress in untying this Gordian knot.[2,9,10] The study of 51,490 births, including 701 fetal deaths and 655 early neonatal deaths, supplemented usual clinical records with interviews of mothers in the hospital, interviews with anesthetists and attending physicians and autopsy records.[11] Results relate perinatal mortality to social, demographic and physical maternal factors, prenatal care, histories of prior pregnancies, complications of pregnancy, details of anesthesia, delivery and hospital course and infant survival up to eight days. The interviews of mothers included questions on the maximum amount smoked during pregnancy, expressed as packages per day. The study found that perinatal mortality was 27 per cent higher in infants of smokers as a group than in those of nonsmokers. Risk, however, varied greatly according to other factors, including maternal height, weight before pregnancy, hospital pay status (public or private), birthplace, age, parity, previous pregnancy history and sex of the child. When simultaneous adjustments for these variables had been made, smoking less than one package per day increased perinatal mortality risk by 20 per cent versus 35 per cent for smoking more than one package per day.

Controlling for the same variables, the authors found that the increased risk of both in utero deaths and neonatal deaths is concentrated in the period of 20 to 28 weeks' gestation. Increased neonatal mortality rates seem to result from the increased risk of very early delivery rather than lower survival at a particular gestational age. The authors estimate that 30 per cent of the excess perinatal death associated with maternal smoking is due to increases of 25 and 24 per cent respectively in placenta praevia and abruptio placentae for those who smoke less than one package per day and of 92 and 68 per cent for heavier smokers. Other studies have also found an average increase of 28 to 48 per cent in these conditions for smokers.[12-15]

Crucial to an understanding of risk is the differential risk of smoking based on maternal characteristics. The Ontario study found that the excess perinatal death risks of less than 10 per cent were associated with low parity, young age and normal hemoglobin. By contrast, older mothers of higher parity who were of public pay status or who suffered from anemia (hemoglobin less than 11 g per deciliter) had in-

*For neonatal deaths only.

†Approximate.

creased perinatal mortality risks of 70 to 100 per cent when they were heavy smokers.[2,11] The characteristics other than smoking that are associated with differential risk may be important in reconciling the varying risks to smokers observed in the large-scale studies. Differences in population selected for study, as well as different methods of adjustments to match smokers and nonsmokers, appear to have contributed to the wide variation in perinatal mortality ratios for smokers vis-à-vis nonsmokers.[4] In addition to the growing evidence for adverse late outcomes of pregnancy, a recent article in the *Journal* provided convincing demonstration that pregnant smokers have a significantly increased risk of spontaneous abortion, 1.8 to 1.0, when compared to nonsmokers.[16] Not yet fully explored are the combined risks of smoking and alcohol ingestion, although there is no reason to believe that this combination yields fewer adverse effects than the sum of those two behaviors. Also unresolved is whether the effects of maternal smoking on fetal growth and development carry over into childhood.

Although the risks recently reported need confirmation by others, the growing evidence linking maternal smoking to increased perinatal mortality argues strongly for augmented attempts to apprise women of childbearing years of the potential risk of smoking in the outcome of pregnancy. The Surgeon General's 1973 report on the Health Consequences of Smoking estimated 4600 perinatal deaths in the United States annually as a result of maternal smoking.[17] Unfortunately, despite a drop from 52 to 39 in the percentage of men over 21 who smoke, the percentage of women of childbearing age who smoke is growing.[18] A careful cohort study of teen-age girls found that the proportion of regular smokers among girls 15 to 16 years of age had risen from 9.6 per cent in 1968 to 20.2 per cent in 1974, and among girls 17 to 18, an increase from 18.6 to 25.9 per cent in the same period.[19]

Although too little is known about what motivates smokers to stop, some evidence suggests that pregnant women may be particularly susceptible to educational and motivational technics aimed at cessation of smoking. Several studies indicate that most women are sufficiently concerned about the outcome of pregnancy to adhere to medical advice regarding helpful and harmful activities.[20-22] One survey showed that 62 per cent of young women smokers believed that smoking can harm an unborn child; most reported that they either had cut back (32 per cent) or had stopped smoking (35 per cent) during pregnancy.[23] The frequency of contact between pregnant women and health professionals provides an unusual opportunity for education about the dangers of smoking and positive reinforcement for reduction or elimination of this habit.

The Massachusetts Department of Public Health has made the following recommendations to help reduce smoking among pregnant women:

1. In the initial prenatal visit, physicians and nurses should include cigarette smoke in the usual list of drugs that are known to affect adversely the outcome of pregnancy and are to be avoided. Mention may be made that during pregnancy, when use of all pharmacologic agents is to be kept to a minimum, cigarette smoke, which contains over 1000 "drugs," is of special concern.

2. Pregnant women should be told that evidence to date suggests that they are at especially high risk for detrimental effects of smoking on the pregnancy if they have had a history of previous perinatal loss, bleeding or placental complications, if they are anemic or if they are in the older age group.[24]

3. Physicians should consider obtaining a carboxyhemoglobin or expired carbon monoxide level on every patient during the first prenatal visit. If this test is performed, the patient should be shown abnormal laboratory results and told that the high level, which poses a risk to the fetus, can be lowered to the normal range only by cessation of smoking.[25] The success of cessation efforts can be monitored by repeat testing at later prenatal visits. When levels remain elevated, physicians should reinforce their previous strong advice.

4. Any woman with bleeding at any time during pregnancy should be questioned closely on whether or not she smokes, and the dangers of smoking to the fetus re-emphasized.

5. Physicians should obtain a list of reputable local smoking cessation clinics and provide this information to pregnant patients who smoke, with the suggestion that these peer groups may help the patients stop smoking.

6. Health facilities and physician offices should not permit smoking in any areas where staff and patients come in contact. Prominent "No Smoking" signs should be displayed in all patient areas, and abstinence enforced.

7. Blue Cross and commercial insurers should consider inclusion of coverage for approved smoking cessation activities in all subscriber contracts. At a minimum, such activities for pregnant women should become a part of standard master medical coverage. Medicaid should also cover such programs. Insurers should develop reasonable criteria for vendors of these services that address cost, program content, personnel and standardized reporting on results. As an alternative, insurers could consider reinforcing information on the dangers of smoking generally by charging lower premiums to those individuals and families who would sign a certified affidavit that they are nonsmokers. (This approach has worked with life insurance.)

The Massachusetts Department of Public Health is recommending to the Federal Trade Commission that the warning on cigarette packages be revised to read as follows: "Cigarette smoking is hazardous to your health and can cause fatal cancer, heart disease and lung disease. Smoking during pregnancy increases the [illegible] risk of death of the un-

Abstract from Early Human Development

RANTAKALLIO, P., University of Oulu, Finland

"The effect of maternal smoking on birth weight and the subsequent health of the child." (Early Human Development 2/4: 371-82, 1978)

"The effect of maternal smoking during pregnancy on birth weight was studied in 12,068 births, the mothers in 1819 of which were regarded as smokers. The children of the smokers were compared with those of controls of similar age, parity, marital status and place of residence. Maternal smoking reduced birth weight in a dose-related manner. Birth weight was least affected among young, primiparous mothers who smoked only slightly, a difference which was, however, entirely caused by those mothers who stopped smoking for the last 3 mth of pregnancy, and this subgroup showed similar figures for postneonatal mortality and morbidity up to the age of 5 to those of their controls.

Postneonatal mortality was higher in the total group of the smokers than among their controls, the primiparous or young mothers not differing in this respect from the others. Morbidity up to the age of 5 was significantly higher ($P < 0.001$) among the children of the smokers, the children of the primiparas and young mothers being affected in a similar way to the others. The low birth weight infants of the smokers had a higher mean birth weight and lower perinatal mortality than the low birth weight infants of the controls, but morbidity up to age of 5 and postneonatal mortality were higher among the smokers in respect of both low birth weight infants and others."

Nicotine Addiction Is a Major Medical Problem: Why So Much Government Inertia?

Number 31 July 30, 1979

Readers of *Current Contents*® are probably familiar with my feelings about the smoking habit.[1,2] I particularly dislike being forced to suffer the choking pollution so casually created by most smokers. On the other hand, I'm especially appreciative of smokers who understand my concern. Many other non-smokers feel the same way. It doesn't make sense to us that smokers maintain their habit in obvious disregard of its dangers and costs. Nevertheless, this is not without an understanding that the smoker has a need which can at best be delayed only temporarily.

The dangers and costs attributed to smoking are legion. Smoking is linked to a number of diseases: cardiovascular disease; cancers of the throat, lung, mouth, pancreas, and urinary bladder; peptic ulcers; decreased fertility; and increased still-births and spontaneous abortions.

Society loses the most from the smoker's habit. A few years ago the National Institute of Drug Abuse (NIDA) published an important volume on smoking behavior research. In this work, on which I will draw heavily below, Bryan Luce and Stuart Schweitzer (UCLA School of Public Health) state that smoking results in a major drain of the nation's economic resources in both direct health care costs and the costs associated with lost earnings due to sickness and death.[3] The NIDA estimates that smoking-related illnesses cost the American public nearly $8 billion in 1975. Lost earnings resulting from smoking-related illnesses and deaths totalled nearly $18 billion. By comparison the $170 million cost of smoking-caused fire damage seems small. But the National Fire Prevention and Control Administration says that smoking-caused fires account for 47% of all fire-related deaths and injuries.[4]

Most smokers will agree that their habit is dangerous and costly. The majority of them *want* to quit but few are successful. A 1967 survey of adult and adolescent smoking habits in Britain indicated that 77% of current smokers want to stop.[5] However, only one in five stops permanently.

Many non-smokers find it especially ironic and annoying that smokers often dislike the habit. There is a common view that smokers are simply weak people with little will-power. This is a distorted view of a *significant medical problem*. Smoking is more than just a bad habit that is socially and physically unacceptable to non-smokers. Smoking is a *powerful physical addiction*. I agree with M.A.H. Russell, senior lecturer and honorary consultant psychiatrist at Maudsley Hospital Addiction Control Unit, UK, who asserts, "Cigarette-smoking is probably the most addictive and dependence-producing form of... self-administered gratification known to man."[6] Unfortunately the evidence is

growing that the statement is now equally applicable to women.

I cringe when I recall a recurring scene from my youth. A beautiful young woman, dressed as a cheerleader, would stand on the corner outside my high school giving away sample packets of cigarettes. Her supply was inexhaustible: she was never empty-handed. She and her colleagues were the predecessors of the drug-pushers who now pervade the educational establishment. Whether she realized it or not, she was pushing the powerful addictive drug called nicotine.

Unfortunately, most people do not acknowledge this *addictive* aspect of smoking. In fact, the 1964 Surgeon General's Report alleged that smoking is not an addiction because "there are no withdrawal symptoms, no tolerance is developed, and no anti-social behavior is elicited."[7]

Not surprisingly, the Tobacco Institute in Washington, DC, the chief lobbying group for the tobacco industry, also maintains that smoking is not an addiction. Ann Browder, assistant to the president of the Institute, explains: "If nicotine is addictive, we wonder why 30 million people have given up the habit since 1964. Cigarette smoking is not addicting, as opposed to being habituating, in that an individual who began smoking a pack or a pack and a half a day doesn't have to increase that consumption in order to satisfy the desire to smoke. Our stand is certainly that it is habituating but not addictive."[8]

The distinction the Tobacco Institute draws between habituation and addiction has been called artificial by the World Health Organization (WHO). In its reports, WHO has replaced both terms with a single term: drug dependence.[9] Since the 1964 Surgeon General's Report was issued, there has been convincing research to show that at least one component of tobacco, nicotine, is a dependence-producing drug, as defined by WHO: "a drug having the capacity to produce a state of psychic or physical dependence, or both."[7]

WHO defines drug dependence as "a state, psychic and sometimes physical, resulting from the interaction between a living organism and a drug, characterized by behavioral and other responses that always include a *compulsion* to take the drug on a continuous or periodic basis in order to experience its psychic effects, and sometimes to avoid the *discomfort of its absence* [withdraw]. *Tolerance* may or may not be present."[9]

Tolerance is indicated when the addict becomes accustomed to the initial effects of the drug. Also, it usually involves a physical change of some kind in the addict. In its third report on smoking and health, the Royal College of Physicians stated that nicotine fits the definition of tolerance: "When inhaling cigarette smoke for the first time most people have symptoms such as palpitations, dizziness, sweating, nausea and vomiting.... If they continue to smoke, they acquire a tolerance to nicotine, and over a period of two or three years the smoking pattern usually changes so as to allow a high intake of nicotine.... The metabolic type of tolerance also occurs, in that smokers metabolize nicotine more efficiently than do nonsmokers."[10]

Withdrawal symptoms are those "which follow sudden withholding of a drug to which a person has become addicted."[11] (p. 1483) The regular smoker feels withdrawal symptoms an hour or two after his last cigarette. Stanley Schachter, professor of psychology at Columbia University, observes, "Restrained smokers appear to be chronically more irascible, to nibble more, and to have poorer concentration than unrestrained smokers."[12] Russell adds, "Such [withdrawal] symptoms as depression, anxiety, restlessness [and] intense craving...have frequently been described.... More recently, objective physical withdrawal effects have been clearly demonstrated and include sleep disturbance, sweating, gastrointestinal changes, drop in pulse rate and blood pressure, disturbed time perception..., impaired performance at simulated driving...and EEG changes."[5]

Jerome Jaffe, professor of psychiatry at Columbia, points out that society is unwilling to recognize these withdrawal symptoms as signs of illness. Jaffe reported, "Even where severe withdrawal phenomena do occur...society generally has taken the view that such signs and symptoms are 'normal' and to be expected under the circumstances. While tremulousness following abrupt withdrawal of alcohol, or autonomic disturbances from withdrawal of opiates are equally to be expected under the circumstances, they are, for some reason, not regarded as equally 'normal under the circumstances' and are viewed as representing signs of illness."[13] In short, alcohol addiction is now viewed as an illness (it wasn't always) but smoking has not yet reached that stage in the public's perception of the problem.

Smokers are compelled to smoke to avoid the disagreeable symptoms of withdrawal. Compulsion is "an irresistible impulse to perform some act contrary to one's better judgment or will."[11] (p. 332) Not only did 77% of the British smokers surveyed in 1967 want to quit but they also gave good reasons for quitting.[5] Smoking causes physical harm and discomfort, is expensive, and is increasingly disapproved of by other people. Since only one in five of those surveyed quit permanently it is clear that the majority of smokers act against their will and better judgment. For them, cigarette smoking is a compulsion.

I can't avoid mentioning here a certain woman Ph.D. who makes frequent TV and public appearances on behalf of the Tobacco Institute. She is one of those one in five who smokes out of free will. She is well paid to convince smokers that they should cling to their habit in spite of the statistical evidence that smoking is disease related. None of those statistics applies to them, she says. My contempt for such misuses of science is difficult to express briefly. While it may not matter what she says to today's smokers who can't quit even if they want to, it does matter that she convinces individuals who haven't started smoking that they may be exempt from the laws of probability.

Like other addictive compulsions, cigarette smoking leads to antisocial behavior when the available supply is restricted. Gwenda Blair, writing in *Mother Jones*, claims: "Data from Germany after World War II indicates that even under conditions of extreme deprivation, and in situations where food rations were under 1,000 calories a day, smokers still bartered eats for smokes.... Smokers' need for cigarettes was so overwhelming that some also... prostituted themselves or stole other goods that could be traded for cigarettes."[14]

It should be obvious that cigarette smoking is not a minor vice. Nicotine, "the most powerful pharmacological agent in cigarette smoke,"[15] is in the same chemical family as the poison strychnine, the medicine quinine, the hallucinogen mescaline, and the addictive pain relievers cocaine, opium, morphine, codeine, and heroin. Russell suggests that nicotine is addictive because it stimulates the hypothalamus, which is considered to be the "pleasure center" in the brain. He states, "It is likely that the special feature of dependence-producing potential possessed by some psychoactive drugs [including nicotine] rests in their ability to either directly or indirectly influence the hypothalamic reward system."[5] He claims that stimulation of the hypothalamus is a more powerful reinforcer of behavior than hunger, thirst, and sex.[5]

Some researchers now believe that nicotine is the *most* powerful addictive drug. Russell also quotes a survey indicating that 85% of those who smoke

more than *one* cigarette develop a dependence on nicotine.[5] Thus, nicotine addiction is established even more quickly than heroin addiction.

Robert Dupont, former director of the NIDA, estimates that nearly 70% of people who ever smoked (and are still alive) still smoke on a regular basis.[14] He compares this to less than 15% of people who ever used heroin and are still alive and addicted. Once established, the smoking habit is harder to break than addiction to heroin. In fact, heroin addicts consider nicotine to be more "needed" than heroin. In 1974, 278 British opiate users were asked to list a number of drugs in subjective order of greatest personal need. They rated nicotine above heroin, methadone, amphetamine, barbiturates, LSD, cannabis, alcohol, and tea or coffee.[5] I'll have more to say about coffee in a future essay.

There are several reasons why nicotine is more addictive than other dependence-producing drugs. First, the beginning smoker inhales around 200 puffs of nicotine-rich smoke in his or her first pack of cigarettes. The heroin user starts off with only one or two shots a week. The pack-a-day smoker "shoots up" more than 50,000 nicotine puffs in a year! Behavioral psychologists agree that the strength of a habit increases with the frequency of its reinforcement.[5, 16] Nicotine forms the most addictive habit because it is reinforced most frequently.

A second factor affecting habit strength is the timing of reinforcement. After heroin enters the bloodstream through intravenous injection, it takes almost 14 seconds for it to reach the brain. Nicotine enters the bloodstream through the lungs—it takes only eight seconds for it to reach the brain and pay off its pharmacological rewards.[5] The Australian Council on Smoking and Health says this rapid absorption explains why nicotine is so much more dependence-producing than alcohol and other drugs.[16] I suppose when you are addicted, six seconds faster can seem like a vast improvement.

Third, cigarette smoking is a socially accepted habit. The Royal College of Physicians contrasts the role of cigarette smoking with alcohol and barbiturate use in society. "Most people who drink alcohol or take sleeping pills are able to do so in moderation or on special occasions and can tolerate periods without them. It is only a small minority who become alcoholics or addicts. Furthermore, dependence on alcohol or barbiturates usually occurs in settings of psychological or social difficulty. With cigarette smoking the situation is altogether different. The most stable and well-adjusted person will, if he smokes at all, almost inevitably become dependent on the habit."[10]

As any cigarette smoker will tell you, it is much harder to kick the habit than to acquire it. Since the 1950s, when public withdrawal clinics first opened in the Scandinavian countries, there have appeared almost as many smoke control programs as there are brands of cigarettes. Jerome Schwartz, chief of health care research at the California Department of Health, Sacramento, classifies the variety of smoke control programs into nine categories: individual counseling by health professionals; educational programs sponsored by schools or commercial groups; group control activities sponsored by volunteer associations, foundations, commercial groups, and health departments; medications used to help smokers overcome their habit and withdrawal symptoms; hypnosis; behavioral conditioning; self-control procedures; mass-media programs on the risks of smoking and ways to kick the habit; and community efforts to involve neighborhoods and cities in educational programs.[17]

Given the evidence for physical dependence on nicotine, you would think that smoke control programs concentrate on handling withdrawal problems. However, most do not. It is no coincidence that these smoke control programs show disappointingly low cure rates. Schwartz surveyed 123 smoking cessation programs and found that only one-fifth had success rates of 40% or better. Nearly one-half of the programs had success rates of 21% or *less*. This would seem to be the expected rate based on the British data. Only three of the programs in the survey claimed success rates higher than 70%.[17]

Edward Lichtenstein, professor of psychology at the University of Oregon, Eugene, admits that behavioral programs are generally unsuccessful because they ignore nicotine dependence as one of the more important clinical aspects of smoking behavior. He says, "Most social learning workers, including myself, consistently ignore the implications of a large body of research which suggests that nicotine is a primary reinforcer for smoking and that, at least for heavy smokers, there are internal or physiological stimuli that drive the smoking habit.... The challenge for social learning workers is to incorporate this information on physiological processes into treatment programs. At least, we should probably cease trying to persuade smokers that their habit is entirely or even largely under external stimulus control."[18] (Incidentally, a social learning worker is a psychologist who studies the situational and environmental factors influencing a person's behavior.)

The Five-Day Plan, organized by the Seven-Day Adventist Church, uses the educational and group approach. While it acknowledges nicotine as an addictive drug, the Plan encourages people to overcome their habit by changing their attitudes toward both themselves and cigarettes. V.E. Gardner, medical director of the Five-Day Plan at the Philadelphia Better Living Center, explains, "We strongly follow concepts of nicotine as an addictive drug with very definite withdrawal symptoms. The plan is designed to minimize these. The withdrawal symptoms clear up in less than one week if no cigarettes are used. We get together each day to support each other during the few days of withdrawal. During this time, focus is placed on changing attitudes—toward the cigarette and towards oneself. The cigarette must not be looked upon as a reward or its denial a deprivation. New health promoting behavior gives a new self image in which smoking is out of character. It is these changed attitudes that are of real help in preventing a return to smoking, for the psychological craving persists even after the physical withdrawal symptoms have cleared."[19]

Smokers in the Five-Day Plan attend five consecutive group-therapy sessions, each lasting one and one-half hours. Sessions include lectures, films, and discussions on the psychological aspects of the smoking habit and ways to overcome it. The Five-Day Plan also encourages physical fitness exercises, balanced diet, hot and cold showers, and abstention from tea, coffee, and alcohol. A series of monthly follow-up meetings is organized to make sure that those who have quit or cut down on their smoking continue to do so.

During the five days of treatment, between 70% and 100% of the participants stop smoking. But, Schwartz points out, "Follow-up reports indicate that recidivism is high.... In-residence treatment at the Seventh Day Adventist Church's facility in St. Helena, California, showed 35% cure rates a year afterward."[17] Data from ten Five-Day Plan programs in different parts of the world show cure rates ranging from 16% to 40% after periods ranging from six months to five years.[17] Again we find that only about one in five can break the habit. Evidently, the changes in attitude and self-image are less permanent than the persistent physiological craving for nicotine.

The Smokenders program uses a behavior modification approach to help

the smoker kick the habit. The program is designed with nicotine addiction in mind. Participants are given "assignments"—things to do which physically and psychologically recondition them for withdrawal. Lois Rafalko, vice president for program and training at the Smokenders headquarters in Phillipsburg, New Jersey, explains, "We do things to deal with the physiological withdrawal in advance. It happens gradually so that on the day when the member stops smoking he doesn't have the physical trauma of 'cold turkey.'"[20] Cold turkey is the abrupt cessation of drug intake, at which time the drug user begins to feel symptoms of withdrawal.

Participants in the Smokenders program attend eight weekly sessions, each lasting two hours. The first five sessions are smoking sessions—participants can smoke as much as they choose. But participants must stop smoking completely on the day after the fifth session. The last three sessions are reinforcing meetings that prepare reformed smokers to live without the habit. As long as people are not smoking they can return after the program ends for continued reinforcement.

The gradual and "painless" modification of smoking behavior makes the Smokenders program one of the more successful methods. Rafalko claims that 80-85% of those who complete the program are not smoking at all at the end of eight weeks. At the end of one year, 70% of those who quit smoking in the program are still not smoking. These data have not been confirmed by independent reviewers. Let's hope it is true.

Any program that tries to change smoking behavior faces a number of problems from the start. First, little has been done to identify tried and true smoke control techniques. Instead, researchers are influenced by currently popular ideas. Lichtenstein states, "The complexity of smoking permits a wide variety of social learning strategies and tactics to be applied. Unfortunately, choices often seem to depend on current fads or trends rather than flowing from a clinical and empirical analysis of smoking behavior itself."[18]

Also, behavioral smoke control programs must treat a large number of variables. Phoebus Tongas, chief psychologist at the Kaiser-Permanente Medical Center, says, "[Smoking] is under the control of such a great number and variety of discriminative stimuli and reinforcers that the task of eliminating it for long periods of time is immensely difficult as every research study has shown."[21] Lastly, the number of variables is multiplied by the number of individual smokers. John Pinney, director of Health, Education, and Welfare's Office of Smoking and Health, remarks, "If we've got 53 million smokers, we've got 53 million different kinds of smokers."[22]

Treating the cigarette habit as a physical addiction makes the problem of kicking the habit simpler. Instead of balancing hundreds of behavioral stimuli and reinforcers, the researcher can concentrate on the relatively few physiological motivations behind nicotine dependence. Pinney says, "If we can find some common denominators between [smokers]—biochemical or otherwise—then that will help."[22]

Schachter, suggests one such biochemical common denominator. He was interested in the smoker's claim that smoking is calming in stressful, anxious situations. Using a number of experimental subjects and strategies, Schachter found that "the smoker's mind is in the bladder."[12] Stress results in making the urine more acidic. When the urine is acidic nicotine is flushed out of the body. The smoker begins to feel withdrawal symptoms as the level of nicotine in the body decreases. "When the urine is alkaline, only one fourth as much nicotine is excreted as when the urine is acid; this is explained by the fact that nicotine base is reabsorbed from an alkaline urine."[12]

Psychologist James Fix at the University of Nebraska in Omaha thinks this biochemical fact can be practically applied to kick the smoking habit. Fix and co-workers divided a total of 42 subjects into three groups. One group took daily supplies of sodium bicarbonate, which decreases the acid content of the digestive system. Another group took vitamin C, which raises the acid content. The third group took a placebo.[23]

After five weeks, Fix reported "totally astonishing" results: "The bicarbonate group's average daily consumption dropped drastically to 0.14 cigarettes, while the vitamin C group and placebo groups went to 7.8 (up slightly from the fourth week); moreover, bicarbonate takers proved more likely to abstain from smoking for a 48-hour period."[22] Fix cautions that these results are preliminary, since many variables were not controlled in the experiment. However, they are encouraging enough to support the original idea that increased alkaline content makes the craving for nicotine less compelling.

There is good reason to be excited by Fix's advance in smoking control research. Any advance that does not depend upon a behavior modification program is bound to be valuable. It should encourage basic research scientists and others involved in clinical research because a cure for the disease is attainable. Whether we are coming closer to a cure is debatable. The Australian Council on Smoking and Health asserts, "An effective cure [for smoking] would rank with the discovery of penicillin in its effect on the health of mankind."[16] Russell adds, "The effective control of cigarette smoking is potentially the most important health measure that is likely to be open to us for the rest of this century."[5]

But it will not be enough to cure smokers of their addiction to nicotine. It is even more important to prevent people from getting hooked in the first place. This involves changing society's attitude toward the smoking habit. Recently, WHO's Expert Committee on Smoking Control recommended that "nonsmoking be regarded as 'normal social behavior' and [that] governments ...step' up antismoking legislation to establish that objective.... The purpose of smoking-control measures is not to punish the smoker but to encourage recognition of non-smoking as the norm."[24] Perhaps when the smoke clears a bit society may see the wisdom in this position.

Not only would it be illegal for cigarette companies to dispense samples to adolescents, but the government would be ready to discourage tobacco growing. One cannot ignore the economic significance of the cigarette industry. Cigarettes will be produced even if all forms of advertising and promotion are banned. Tobacco production will stop only when a better use for tobacco crop land is found. This is difficult to achieve because thousands of small farmers derive high income from a few acres of tobacco. The complicated nature of agricultural politics makes it doubtful that we would curtail tobacco farming to eliminate "the most lethal of all breathable pollutants."[16] Consider how difficult it has been to prevent production of the poppy plants needed to produce heroin.

The tobacco industry is well aware of society's changing attitude toward the cigarette habit and of the increasing restrictions on cigarette advertising and smoking in public places. As a result, it has turned to Third World countries in order to bolster declining sales. Blair points out that the Third World market is ripe for exploitation because it is "eager for symbols of Western affluence and still unencumbered by health and advertising regulations."[14]

Another recent article noted that the US government is helping the tobacco industry market cigarettes to the Third World at the same time it helps to alleviate malnutrition there. "Perhaps the most cynical foreign use of tobacco by the United States has been the inclusion of tobacco in the...'Food for Peace'

program of concessional agricultural sales to needy countries. This supposedly humanitarian aid program has been manipulated...to get rid of unwanted domestic tobacco surpluses, to introduce foreigners to US tobacco in hopes of nurturing a future commercial market, and to provide aid to politically favored governments."[25]

But the Third World countries are not as ignorant as the tobacco industry hopes. China, the world's leader in cigarette production, recently acknowledged the link between cigarette smoking and cancer. "The government's first anti-smoking effort is aimed at discouraging the young from taking up the habit.... The reason for the push may not be hard to find: the World Health Organization estimates that cancer is the leading cause of death in China."[4] In Egypt, where smoking has increased *tenfold* in the last two years, cigarette advertising has been banned from television and smoking has been restricted in theaters and on planes. Cairo's English-language newspaper, *The Gazette*, angrily observes, "The tobacco industry, like the arms industry, is looking increasingly to the vast Third World for what sensible people would call suckers with a death instinct."[4]

While the tobacco industry here and abroad will not be dissuaded from pushing nicotine in the Third World, the US government can be. Lest anyone be left with the impression that it is only the profit-minded capitalists who are guilty of indirect mass murder through smoking-induced disease, let me remind you that the smoking habit is equally tolerated, supported, and prevalent in the socialist countries. Clearly it is a problem that is not going to be solved by cliches.

It is also clear that the amount of research directed at a solution is pitifully small. The total research budget this fiscal year for the NIDA is $48 million; only $1.7 million of that is going into smoking research.[26] Not only should there be direct allocations to basic and applied research from tobacco revenues, there should also be allocations for prevention programs and treatments. Two bills, now in the Pennsylvania General Assembly, would allocate funds from the sales of cigarettes for such worthwhile programs. One would place a 1 cent per pack tax on cigarettes to be paid to the Pennsylvania Cancer Control and Research Fund.[27] The other would place a 1 cent per pack tax on cigarettes to be paid to the state's Department of Health for grants and low interest loans for the payment of cancer treatment.[28] Let us hope that these bills and others like them will be passed.

I do not deny that I feel strongly about this issue. My father and three of my best friends died of smoking-related diseases. Every one of them would have supported every effort, financial and otherwise, that would assure future generations would be spared the agony of emphysema and other smoking-induced diseases.

At the same time we need to recognize that the smoking problem is a very complicated issue. Simplistic formulas for resolving the complex issues involved are not enough. While I would never support legislation to outlaw cigarette production, there is not adequate moral justification for cigarette production merely because people want it. The tobacco industry has an obligation to help support research that will produce disease-free alternatives for future generations.

Juneau Empire - 4-5-83

In Defense of Smokers

By MICHAEL COHERN

During the last week I have been inundated by propaganda from anti-smoke lobbyists. I would like to tell you what has transpired to me during this last week that has me wondering why no one has looked at the other side of this one-sided debate.

Late last week as I sat having my morning coffee downtown, I heard two people discussing House Bill 84 (an amendment to existing law on smoking in public places, to include places of employment). I asked if they smoked. They most certainly did not. I asked if any of them drove a motor vehicle. One wouldn't answer, but the other told me she owned a '74 VW. I asked if it used oil. She said it smoked a little.

"Isn't this a little hypocritical?" I asked. "A car puts out more pollution and smoke in one hour than a smoker does in a month! Ever have an accident? How much property is damaged each year by drivers? How many 'innocent' people are hurt every year? Ever known anyone to die from an accident? These are typical complaints of non-smokers to smokers."

She suddenly she realized she was late for work, and promptly left.

The next morning, I heard a young man voice the opinion that smoking in public was terrible, as he had to smell it.

"Have you ever had to set next to a drunk? Does he smell better?" I asked him. "What about a woman who uses so much perfume she makes you choke at twenty feet? Ever smell someone who doesn't shower very often? What about sitting next to someone with bad breath?" He wasn't so nice. Instead of him leaving, he told me where to go.

A few days later, I met two ladies talking about the "foul air around people that smoke." One said she had "rights" to clean air. I told her foul air came with industry, cars, big cities and even refuse burning — as well as a tiny bit from cigarettes.

Rights? Doesn't everyone have rights? It was quoted (incorrectly) that only 40 to 45 percent of the population smoked. What is it that they are not saying? Only that this figure represents everyone, regardless of age. The true fact is well over 50 percent of the adult population smokes. The minors don't count, as they can't legally purchase cigarettes anyway. So why is the minority (of voting age) telling the majority what it can or cannot do? Doesn't the majority rule?

Smokers are already cornered, restricted, punished and regulated. Are non-smokers? Can non-smokers get a ticket for abstaining in certain public places? Are there smoking areas where non-smokers are not permitted? Do airlines save the majority (and the best) seats for smokers? Are non-smokers ridiculed for not smoking? Are non-smokers harassed and hounded to smoke by smokers? Do smokers get the best tables in restaurants segregating smokers from non-smokers? Can smokers

... It was at this point that I finally realized that they were no longer sitting next to, or even near me — they had moved!

Yesterday morning, again having my morning coffee - I was handed a petition for support of the anti-smoke HB 84. Ah-ha! In it, was the statement that smoking was harmful, increased employer costs (through higher costs for health, fire and life insurance, as well as worker compensation coverage.) The person that handed it to me must have already heard of me, though, because he didn't stay to debate the petition. A clear case of hit-and-run!

Now about the petition; someone hasn't done their homework, obviously. Anyone who ever smoked knows that it is far more dangerous to tell a smoker he can't smoke than to let him smoke! Who wants an angry smoker, suffering from withdrawal, to work with?

And who will pay all the lost man-hours a worker will have if he or she has to stop working to run to an obscure, hidden-away smoke room for 5 to 10 minutes every time he or she wants to smoke? What smoker can concentrate on their work properly when they are suffering physical as well as mental withdrawal? The costs for these lost minutes will far outweight any minor additional insurance costs.

Today, at lunch, I listened to a nurse describe her patients. (Not personal information, just general information.) I heard her say that more than 75 percent of the patients at her hospital do not smoke. Hmmm Perhaps people should smoke to lower overcrowding of our hospitals. Maybe non-smokers are the principal cause of exhorbitant hospital costs. (If they smoked, there wouldn't be as many in the hospitals.)

I don't really believe that last paragraph, but any honest person must admit, the statements are just as reasonable as most complaints non-smokers have against smokers. Come to think of it, if you check our hospital you will find the majority of ill patients is there because of auto accidents, alcohol-related diseases and accidents and infections. Very few patients are there from tobacco related problems.

What have I been saying? Listen to me, please. I firmly believe that we all should take a closer look at the other side of HB 84. Is this a minority trying to force a majority to do their will? Will this bill hurt more than it helps? Will it save Alaska money?

I believe each of us has some habit — eating too much, drinking, foul or abusive language, drugs, unmentionable sexual diversities, or any number of other problems. How would you like to be harassed because of yours?

I find it incredible that a society that accepts the murder of the unborn, the public drunkenness and many other far more serious problems should attack the personal rights of an individual to smoke.

Let's quit finding fault with others or their habits. Everone has a habit. What's yours? Cars? Alcohol? Drugs? Are these really safer than smoking? I think not.

Cigarettes are not the No. 1 preventable killer we've been led to believe. Cars are. Followed closely by alcohol. Then abortions. Then possibly tobacco. So should we ban the car? What about alcohol? (That was done once. Anyone remember prohibition? Increased crime, violence, even bloodshed. Did it help? Will prohibition of cigarettes produce the same effects? You bet!)

Perhaps we should ban obnoxious perfumes, outlandish cosmetics, people with bad breath, or maybe blue-eyed people with blue suits. Tax collectors are offensive — let's ban them! How about nasty teachers? Why not make cuss-rooms for all our foul-mouthed friends?

Or should we just stop to realize that the anti-smoke campaign is just as ridiculous as those already mentioned?

Honorable members of the Legislature, I ask that you re-evaluate this highly volatile topic. I ask for rejection of HB 84 in its attack on personal freedom. If you feel you cannot support this opinion, at least leave it up to the people, those who elected you. Let us decide.

Again I ask, let this be put before the people — or reject this willful destruction of personal freedom.

Every Alaskan concerned with the erosion of our personal human rights, should be upset with this House Bill 84, not just smokers. Today, it's smoking. What rights will be under attack tomorrow? If you feel this is an attack on your personal freedoms, contact your local representative and senator today. Let him know how you feel — today! Tomorrow may be too late. The address to write is:

Senator John Q. Public
Alaska Legislature

scope of the major issues that the participation teams are empowered to address. As the parties' statement of the terms of their Experimental Agreement puts it:

"Appropriate subjects, among others, which a Team might consider include: use of production facilities; quality of products and quality of the work environment; safety and environmental health; scheduling and reporting arrangements; absenteeism and overtime; incentive coverage and yield; job alignments; contracting out; and energy conservation and transportation pools."

St. John cautioned in his Arden House remarks that "the bottom line for the plan won't be determined for many years." He also said that a "crucial" element in the plan's success will be "effective problem solving through the better communications approach" of the teams.

An advantage of the stress on resolving these issues at the local plant level, he noted, is the flexibility of response this provides. The teams "will have the ability to deal with problems at the local level that may be unique or otherwise special to that particular department."

In the plan, the parties suggest that their experience in collective bargaining, although "successful" in many respects, has been disappointing in the resolution of "many problems . . . at the work site." These "are not readily subject to resolution under existing contractual programs and practices . . .," according to the parties.

They indicated that the joint team attack on such problems "is an essential ingredient in any effort to improve the effectiveness of the company's performance and to provide employees with a measure of involvement adding dignity and worth to their work life."

Study on Employer Anti-Smoking Programs

About 15 percent of the nation's businesses have programs to encourage and help workers stop smoking, according to a study prepared for the Department of Health and Welfare.

The study, which surveyed top-level management and medical officials in 3,000 U.S. firms, found that one-third of the companies are interested in developing or expanding smoking and health programs for workers.

Employer Cost

The National Interagency Council on Smoking and Health (NICSH), which conducted the survey, said cigarette smoking accounts for $5 billion to $8 billion in direct health care expenses and another $12 billion to $18 billion in indirect costs for lost productivity, wages and absenteeism.

A significant number of responding companies have policies that restrict or prohibit smoking in the workplace, said NICSH, a coalition of more than 30 public and private health groups concerned with reducing smoking.

"Most policies had been initiated by management, and policies were most frequently applied to blue-collar work areas, where smoking often poses a safety as well as a health hazard," NICSH said. According to the survey, 65 percent of the firms established those policies after release of the first Surgeon General's report in 1964.

Companies responding to the NICSH survey ranked smoking programs third among health education and promotion efforts, following high blood pressure and weight control programs. Larger firms are more likely to have smoking programs, NICSH said.

Most workplace smoking and health programs are operated in-house, with distribution of materials on how to stop smoking, physician counseling and other health professional counseling, the study found. Most firms use their own staff to administer the programs and support activities with existing medical resources rather than separate funds, the report said.

Of the companies interested in developing or expanding worker anti-smoking programs, more than 70 percent said they would like assistance. One-third of the companies responding to the survey said they are unsure at present whether they want to begin or expand worker health programs.

More information on anti-smoking efforts and copies of the survey are available from NICSH, 291 Broadway, Suite 1005, New York, N.Y. 10008, Tel. 212-227-4390.

ALASKA NETWORK ON DOMESTIC VIOLENCE AND SEXUAL ASSAULT

P.O. BOX 809
JUNEAU, ALASKA 99802
586-3650

POSITION PAPER
HB87: An Act prohibiting publication of the identity of persons charged with certain sexual offenses

The Alaska Network on Domestic Violence and Sexual Assault is a non-profit corporation composed of twenty-one programs statewide that provide domestic violence, sexual assault, and adult crisis intervention services to members of their respective communities. Network programs are funded in part through grants and contracts awarded by the Council on Domestic Violence and Sexual Assault.

The Network was established in 1978, and has as one of its primary focuses the elimination of domestic violence and sexual assault through provision of shelter, advocacy, and education/prevention services.

The Network supports the intent of HB87 to protect the privacy of the victim and reduce the potential for additional trauma.

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M January 3, 1983

SUBJECT: Publication of identity of certain sex offenders (Work Order #13-0213)

TO: Representative Robert H. Bettisworth

FROM: James H. Lear
Legislative Counsel JHL

You have requested this office to draft a bill that would withhold names of individuals from public access in the case of certain sexual offenses such as incest in an effort to protect the victim from adverse publicity.

Your request could be satisfied by closing the criminal proceedings and records surrounding those proceedings similar to the methods employed in children's proceedings (AS 47.10). However, such a statutory scheme would in all likelihood be found violative of the right of the accused to a public trial guaranteed by Article I, sec. 11 of the Alaska Constitution. Additionally, the due process clause of the 14th Amendment to the U.S. Constitution prohibits secret trials in criminal proceedings according to the Alaska Supreme Court decision in RLR v. State, 487 P.2d 27 (1971). It might also present some problems with respect to Article 1, sec. 5 of the Alaska Constitution and the First Amendment of the U.S. Constitution (freedom of speech).

Although the absolute closing of trial proceedings and surrounding records would not be constitutionally permissible, a good argument can be made in support of prohibiting the press from identifying the defendant in conjunction with prosecution of incest charges. One could assert that the state has a compelling interest in such a limited protection

of the victim without affecting the right of the accused to a public trial or the right of the press to otherwise monitor the criminal proceedings.

Accordingly, I have drafted a bill that would subject the news media to misdemeanor charges if they reveal the identity of such a criminal defendant and would impose the same penalty as that provided in AS 47.10.090(b) and (c) pertaining to publication of identity in conjunction with juvenile delinquent status.

I would be willing to elaborate upon the legal principles and court decisions that underly the above conclusions if you so desire. Please feel free to contact me at 465-2450.

HB

91

HB 91

"Vital statistics" refers to records of birth, death, fetal death, marriage, divorce, adoption and related data. With specific exceptions, vital statistics are not available for inspection.

The language of HB 91, taken from the 'Model State Vital Statistics Act' published by the Public Health Service, opens records to the public: birth records - 100 years after date of birth; and marriage, death, divorce, dissolution of marriage or annulment records - after 50 years.

Passage of HB 91 will make public approximately 33,000 of the 675,000 records held by the State Registrar of Vital Statistics. The bill addresses the concerns of geneological researchers. A zero fiscal note is attached to the bill. Committee of next referral is the Judiciary Committee.

February 24, 1983

House Health, Education and
Social Services Committee
Room 112, Capitol Building
Pouch V
Juneau, AK 99811

attn: Mr. Dave Palmer

Although I earnestly wish to testify in person on HB91, I am unable to postpone a trip on March 4th and, therefore, am submitting the following testimony in favor of the bill:

I am both a family and professional genealogist (Alaskan Records Research, Business License number BL000201); hold a BLA with history emphasis from the University of Alaska, Juneau; am a full-time student in the Master of Arts in Teaching program at Alaska Pacific University; am employed half-time at the UAJ library; tutor history, english, geography, and logic at UAJ; am Alumni Representative on the UAJ Assembly; have published a family history and am currently working (in my spare time) on an historical novel.

With this variety of efforts underway, you can understand why I have little time to spend writing back and forth to prospective clients to obtain the written permissions required before I can access vital statistics data as my client's personal representative.

As it stands now, individuals can obtain vital statistics on their own ancestors but professionals or those working on far distant lateral relatives may not easily do so. A business must be cost-effective. Repeated correspondence is not (unless I raised my fees to cover it, which would price me out of the market). Thus, I simply refer many inquiries to the office of Vital Statistics and so lose the fees I could obtain for doing the research myself.

Passage of this bill will help all who are searching for long-lost relatives who "went up north to the goldrush and were never heard of again."

Being the first of my family to reside in Alaska, I have no family interest in opening Alaska's records. However, I would personally like to see my state on a par with the rest of the country. After tracing several thousand of my own ancestors, lateral, and collateral relatives through most of the northern states and Ontario, and collecting hundreds of official documents dated from 1738 to 1978, I have never been refused a record because of access restrictions except hospital patient records. I feel that this bill is a step in the right direction but could go further. People researching in Alaska should meet with no more roadblocks than I have experienced in other states. I would like to see the time limits of 100 and 50 years reduced to about 30 years, if the purpose is genealogical research. The most persuasive argument against opening birth records is the problem of illegitimacy. Besides the fact that it no longer carries the stigma it once did, a professional genealogist couldn't care less what the records say, all he or she is interested in

is locating them for the client. The client or individual researcher is a member of the illegitimate child's family and thus has a personal interest in keeping the fact of illegitimacy within the family.

I feel a person's right to know about their own heritage outweighs any "right to privacy" of their ancestors and this includes a person's right to hire a researcher if unable or unwilling to travel to Juneau to do their own research. Therefore, I highly recommend passage of this bill, preferably with an amendment allowing disclosure to genealogists of those vital records not made public by AS 18.50.310(f).

Sincerely

Kit Stewart

Model State Vital Statistics Act (1977 Rec. Act.)

#291

The Model State Vital Statistics Act is a document designed to be used by state registrars of vital statistics and state legislators when considering revision of the vital statistics laws. The main objectives of the 1977 revision of the model act are (1) to incorporate current social customs and practices and current technology into the policies and procedures of the vital statistics system in the states, (2) to promote the uniformity of these policies and procedures to the end that all vital records will be readily acceptable in all places as prima facie evidence of the facts therein recorded, (3) to enhance the level of comparability of vital statistics data among the states, and (4) to minimize duplication within the vital statistics system and thereby achieve maximum administrative economy.

The historical philosophy of the vital statistics systems in the United States is that vital events be registered only in the state in which they occur. This concept is maintained in this revision of the model act. The jurisdiction of the state registrar extends only to boundaries of his state, and standards for registration may be set and enforced only for those events occurring within those boundaries. This is a very important concept in maintaining the validity of vital records in their use for legal purposes. If it is to be respected, the appropriate procedures for recording birth and death information for United States citizens born or dying in foreign countries and certification of birth information for aliens adopted by United States citizens must continue to be the responsibility of those federal agencies which retain jurisdiction over recording these events.

While this revision of the model act does not constitute an abrupt departure from earlier acts, there are several modifications that should be noted. The most significant change relates to the establishment of a centralized system for the collection, processing, registration, and certification of vital records in each state, whereby all vital events are reported directly to the State Office of Vital Statistics. However, the model act contains authorization for local offices to perform those functions the state registrar may direct, including the receipt and processing of vital records and the issuance of certified copies, when such offices can be shown to be an aid to efficient and effective operation of the system. The model act further provides for the options of allowing such local offices to work with records only for their designated geographic area or to be given access to the entire state file and allowing them to issue certified copies without regard to where the event occurred within the state. The important concept, however, is that these offices are part of the State Office of Vital Statistics and are under the direct control of the state registrar.

The recommendation for a change from a locally oriented vital statistics system to a centralized system is based on several considerations: (1) a centralized system produces more timely registration of the records, thereby improving the timeliness of all operations, including publication of statistical data as well as fulfillment of citizens' needs for vital records services; (2) it decreases duplication and cost since many activities presently performed at local vital records offices are repeated at the state office; (3) it reduces the opportunity for fraudulent use of certified copies because amendments to the records will be easier to control and certified copies will

...records of each [divorce, dissolution of marriage, or annulment] decree ...mitted during the preceding calendar month.

...(c) [Provision for a recording fee may be added here if desired.]]

Section 22. [*Amendment of Vital Records.*]

(a) A certificate or report registered under this act may be amended only in accordance with this act and regulations adopted by the state agency to protect the integrity and accuracy of vital records.

(b) A certificate or report that is amended under this section shall be marked "Amended," except as otherwise provided in this section. The date of amendment and a summary description of the evidence submitted in support of the amendment shall be endorsed on or made a part of the record. The state agency shall prescribe by regulation the conditions under which additions or minor corrections may be made to certificates or records within one year after the date of the event without the certificate or record being marked "Amended."

(c) Upon written request of both parents and receipt of a sworn acknowledgment of paternity signed by both parents of a child born out of wedlock, the state registrar shall amend the certificate of birth to show such paternity if paternity is not already shown on the certificate of birth. Such certificate shall not be marked "Amended."

(d) Upon receipt of a certified copy of an order of [court of competent jurisdiction] changing the name of a person born in this state and upon request of such person or his or her parents, guardian, or legal representative, the state registrar shall amend the certificate of birth to show the new name.

(e) Upon receipt of a certified copy of an order of [court of competent jurisdiction] indicating the sex of an individual born in this state has been changed by surgical procedure and that such individual's name has been changed, the certificate of birth of such individual shall be amended [as provided in Regulation 10.8(a)(5)] to reflect such changes.

(f) When an applicant does not submit the minimum documentation required in the regulations for amending a vital record or when the state registrar has reasonable cause to question the validity or adequacy of the applicant's sworn statements or the documentary evidence, and if the deficiencies are not corrected, the state registrar shall not amend the vital record and shall advise the applicant of the reason for this action and shall further advise the applicant of the right of appeal to [court of competent jurisdiction].

(g) When a certificate or report is amended under this section, the state registrar shall report the amendment to any other custodians of the record and their record shall be amended accordingly.

Section 23. [*Reproduction of Vital Records.*] To preserve vital records, the state registrar is authorized to prepare typewritten, photographic, electronic, or other reproductions of certificates or reports in the [Office of Vital Statistics]. Such reproductions when certified by the state registrar shall be accepted as the original records. The documents from which permanent reproductions have been made and verified may be disposed of as provided by regulation.

Section 24. [*Disclosure of Information from Vital Records.*]

(a) To protect the integrity of vital records, to ensure their proper use, and to ensure the efficient and proper administration of the system of vital statistics, it shall be unlawful for any person to permit inspection of, or to disclose information contained in vital records, or copy or issue a copy of all or part of any such record except as authorized by this act and by regulation or by order of [court of competent jurisdiction]. Regulations adopted under this section shall provide for adequate standards of security and confidentiality of vital records.

(b) The state agency may authorize by regulation the disclosure of information contained in vital records for research purposes.

(c) Appeals from decisions of custodians of vital records, as designated under authority of Section 6(b), who refuse to disclose information, or to permit inspection or copying of records as prescribed by this section and regulations issued hereunder, shall be made to the state registrar whose decisions shall be binding upon such custodians.

(d) When 100 years have elapsed after the date of birth, or 50 years have elapsed after the date of death, marriage, or [divorce, dissolution of marriage, or annulment], the records of these events in the custody of the state registrar shall become public records and information shall be made available in accordance with regulations which shall provide for the continued safekeeping of the records.

Section 25. [*Copies or Data from the System of Vital Statistics.*] In accordance with Section 24 and the regulations adopted pursuant thereto:

(1) The state registrar [and other custodian(s) of vital records authorized by the state registrar to issue certified copies] shall upon receipt of a written application issue a certified copy of a vital record in his or her custody or a part thereof to any applicant having a direct and tangible interest in the vital record. Each copy issued shall show the date of registration and copies issued from records marked "Delayed" or "Amended" shall be similarly marked and show the effective date. The documentary evidence used to establish a delayed certificate shall be shown on all copies issued. All forms and procedures used in the issuance of certified copies of vital records in the state shall be provided or approved by the state registrar.

(2) A certified copy of a vital record or any part thereof, issued in accordance with Section 25(1), shall be considered for all purposes the same as the original and shall be prima facie evidence of the facts stated

CSHB 94
Fiscal Note
Analysis

This bill would have a significant negative impact upon the Department of Law's efforts to prosecute violations of the state fish and game laws. It allows seizure of items used in violations of the law only if the seizure is necessary to preserve items of evidence or to prevent the removal of items from the judicial district in which the violation occurred. A defendant who disagrees with this judgment on the officer's part may be expected to seek repossession, and this would have to be litigated. The bill would require the commitment of additional attorney time to attend the hearings which must be held within seven days after charges are filed in order to extend a seizure. All items that the owner establishes are necessary to the owner's livelihood must be returned to the defendant unless the department proves to the court that these items are needed as evidence or they are likely to be removed from the judicial district. This is a change in criminal procedure which is not found in any other area of criminal law; it would significantly impair our ability to prosecute these cases. Also, because there is no floor limit on the value of items, the disposal of objects of even very low monetary value such as tackle boxes would have to be litigated.

The Department of Law is opposed to the bill in its present form. Under current law, items which are used in the violation of fish and game laws may be seized. This seizure is not merely to preserve the items as evidence, but is also a sanction for the commission of the offense, the prevention of the movement of items such as boats and airplanes out of the jurisdiction, or their transfer to an innocent purchaser. In the past, persons who are under investigation for, or who have been charged with offenses have deliberately transferred their interest in items to prevent seizure by the state.

Of significant concern is the provision requiring the return of seized items within seven days after the charges are filed. The state should continue to retain possession of seized items until the conclusion of the criminal case as the court may order forfeiture as part of the criminal sentence. A seven day period is much too short to enable the department to adequately prepare for court hearings in these cases. Many items used in fish and game violations are seized in extremely remote parts of the state; there may be no representative of the Department of Law in the area on a regular basis. Local enforcement officers have the authority to file charges and seize evidence or items in connection with these charges, but will have no attorney available to attend a court hearing within seven days.

This bill would significantly impair the Department of

Law's ability to successfully investigate and prosecute fish and game violations. In light of the tremendous value to the State of Alaska of our natural resources and wildlife population, it would be inadvisable to decrease the protection of resources by the liberalization of the laws designed to deter violations of the fish and game laws and to facilitate the apprehension of offenders.

FISCAL ANALYSIS CSHB 94 (Judiciary)

The impact of CSHB 94 (Judiciary) is expected to result in the addition of two Attorney III positions (SR22) and one Legal Secretary I position (SR10) at Anchorage.

The first year of the analysis will be FY 84 and costs have been calculated on a 10 month basis to account for the time required to establish new positions and the time it takes to get a new program underway. The costs beyond FY 84 are over a 12 month basis and include a 6% annual inflation factor.

1st Year (10 months)

	Atty III	Atty III	Leg Sec I	Total
Personal Services	47.5	47.5	23.4	118.4
Travel	5.0	5.0	-0-	10.0

JUSTIFICATION

This position is required to provide support for the two new attorney positions. This secretary will be responsible for the preparation of a large volume of court documents generated by the numerous court filings involving fish and wildlife seizures. The allocation of a single secretary to serve two full time attorneys is the minimum amount of support needed to meet the workload anticipated particularly in view of the long distance, or remote nature of many of the violations.

Revenue						

2. Source of funds to offset fiscal impact of bill:

No information provided

3. ASSUMPTIONS: This bill would have a significant negative impact upon the Department of Law's efforts to prosecute violations of the state fish and game laws. It allows seizure of items used in violations of the law only if the seizure is necessary to preserve items of evidence. A defendant who disagrees with this judgment on the officer's part may be expected to sue to regain possession, and this would have to be litigated. The bill would require the commitment of additional attorney time to attend the hearings which must be held within seven days after charges are filed in order to extend a seizure. All items, even those which are clearly evidentiary in nature, must be returned to the defendant unless the department obtains a court order allowing the police to keep it. This is a change in criminal procedure which is not found in any other area of criminal law; it would significantly impair our ability to prosecute these cases. In situations where there were multiple defendants, one defendant could request and obtain the return of his property, the other defendants could move to dismiss their charges because the state had not retained possession of the evidence.

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF PUBLIC SAFETY
OFFICE OF THE COMMISSIONER

POUCH N
JUNEAU, ALASKA 99811
PHONE:

March 30, 1983

465-4322

The Honorable Charlie Bussell
Alaska State Legislature
State Capitol
Pouch V
Juneau, Alaska 99811

Dear Representative Bussell:

The Department of Public Safety is opposed to CSHB94 (RES) as written in its present form. The Department expresses particular concern over the provision in this Bill allowing seized property to be returned seven days after charges for the violation has been filed in court. Under current law, items which are used in violation of fish and game laws may be seized and held until final disposition of the case or until the individual has posted a bond for return of the property. The purpose for seizing the property is not merely to preserve items as evidence, but is also a sanction for the commission of the offense, the prevention of the movement of items such as boats and airplanes out of the jurisdiction, or their transfer to an innocent purchaser. In the past, persons who are under investigation for, or who have been charged with, offenses, have deliberately transferred their interest in items to prevent seizure by the State. The Department feels that returning the property within seven days undermines the purpose for seizing the property as noted above. However, in light of the proposal to provide a time frame in which the seized property can be returned, the Department of Public Safety recommends amending the current language in CS HB 94 (RES) (page 2. line 2) and insert the following ". . . unless forfeited by the order of the court, shall be returned within 60 days or upon completion of litigation, whichever comes first, unless retention is approved by Court order." The Department feels that the 60 days limit would provide sufficient time to hold seized property and accomplish the purposes for seizure as discussed above.

Questions also arise as to what standards or reference will be acceptable or required in establishing to the courts if an item has an individual value of $2,500 or more. For example, a hunting rifle may be seized with an apparent value of $100; however, the same rifle may be worth no less than $3,000 to its owner because it is an heirloom.

12-L2LH

The Department of Public Safety's records indicate that of twenty-five (25) aircraft seized since 1977, twenty-four (24) were seized through the use of the seizure warrants issued by the courts. Eleven (11) of the twenty-five (25) aircraft were eventually forfeited to the State. Of these eleven (11) aircraft, eight (8) had been released back to the owners by posting bonds prior to their forfeiture by the courts.

Passage of this Bill, as written, would also have a significant negative impact on the Department of Law's efforts to prosecute violations of the State fish and game laws. Most of the rural bush communities are without any Assistant District Attorneys to provide immediate legal council to Fish & Wildlife Protection officers when needed.

The seizure of evidence or instrumentalities of a violation, and whether it can be used in any case against any defendant is presently regulated quite rigidly by the Constitution of the United States and by the Alaska Rules of Court concerning both criminal and civil procedures. In addition, policies on the seizure of evidence have been established by this Department and are followed by our officers.

As written, this Bill, if passed, would also be in conflict with AS 08.54.210(b) which refers to unlawful acts by big game guides. The conflict would be with a portion of the penalty provision which states "In addition to punishment for a felony, all guns, fishing tackle, boats, aircraft, automobiles or other vehicles, camping gear and other equipment and paraphernalia used in, or in aid of, guiding or transporting activity engaged in during the period of suspension or revocation shall (emphasis added) be confiscated by persons authorized to enforce this chapter."

It has been the priority of the Department of Public Safety to focus its enforcement efforts on violations involving the commercial exploitation of our State's resources. Considering the tremendous value to the State of Alaska of our natural resources and wildlife, the Department of Public Safety strongly believes that any amendments to AS 16.05.190 are not in the State's best interest at this time.

Sincerely,

Robert J. Sundberg
Commissioner

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF LAW

CRIMINAL DIVISION

POUCH KC – STATE CAPITOL
JUNEAU, ALASKA 99811
PHONE: (907) 465-3428

March 11, 1983

The Honorable John Ringstad, Chairman
House Resources Committee
Pouch V
Juneau, AK 99811

Dear Representative Ringstad:

I am writing in response to Mr. Dave Stancliff's letter to the chief prosecutor inviting comment on the expected impact of CSHB 94 upon the criminal division and the criminal justice system. After analysis of the bill and consultation with other criminal attorneys within the department, I have concluded that the proposed bill is likely to have a negative impact upon efforts to enforce fish and game laws.

Current law provides redress for a person whose property is seized as a result of an illegal search. AS 16.05.190 requires that property be seized under a "valid search", and Rule 37, Alaska Rules of Criminal Procedure, provides that a person who has been subject to an unlawful search and seizure may petition the court for the return of the property and the suppression of its use as evidence.

Although the current statutes do not specifically deal with notice and the right to a hearing to obtain the return of seized property, case law has established that the constitutional right to due process of law requires that the owner of seized property be given immediate notice of any seizure and the opportunity for meaningful hearing. See, for example, State v. Rice, 626 P.2d 104 (Alaska 1981) and F/V American Eagle v. State, 620 P.2d 657 (Alaska 1980).

The American Eagle case involved the seizure of a crab fishing vessel because of the violation of a regulation prohibiting the taking of crab out of season. The court there held that if the seized property was used by its owner in earning a livelihood, notice and an opportunity to contest the state's reasons for seizing the property must follow "within days, if not hours" of the seizure. 620 P.2d at 667. Fish and Wildlife Protection officers and attorneys are well aware of the due process requirements set out in the American Eagle and related cases, and provide immediate notice and an opportunity

to be heard when property is seized. Thus, a citizen who believes that his property was wrongfully taken, or who has compelling reasons which justify the return of the property, may petition the court for the immediate return of his property. This is commonly done, generally through the posting of a bond in lieu of the seized property.

As compared to the number of criminal actions filed for the violation of fish and game laws, the seizure of large items of property such as boats and airplanes is used infrequently, and generally for only the most serious violations. The vast majority of seizures of vessels are made pursuant to search and seizure warrants issued by neutral magistrates or judges following a determination of sufficient probable cause. Probably the most common situation in which large items of property are seized without warrants are airplanes seized when an officer observes a violation of a fish and game law such as "same day airborne." The conviction rate on these serious fish and game violations is quite high. Additionally, although the state may request the forfeiture of an item following criminal conviction, this motion is not always granted. Any arguments in mitigation which the defendant wishes to make as to why his property should not be forfeited can be made during his sentencing hearing.

The proposed amendments to AS 16.05.190 provide that all items, even minor ones such as guns or traps, may not be seized unless they are necessary as evidence of a violation. Often, of course, they will be needed as evidence. But the state may choose to seize items for other reasons besides use as evidence. For example, if the item has been seized it can not be used in violation of the law during the pendency of the case. The Alaska Supreme Court has recognized this as a valid consideration in seizure cases. See the American Eagle case cited above.

Another important consideration is the prevention of the transfer from the jurisdiction or sale to an innocent purchaser of property used in fish and game violations. Is is not uncommon for the owner of an airplane or vessel who discovers that he may have been observed violating the law to immediately remove the plane or boat from the jurisdiction. Planes which were the subject of an ongoing investigation have been sold to innocent purchasers within days of the alleged violation. AS 16.05.195(e) specifically provides that an item subsequently sold to an innocent purchaser in good faith may not be forfeited. Thus, if the violator manages to sell his plane, nets, vessel, etc. the state has no way to regain possession of that item for forfeiture as part of the criminal sentence.

Another important reason to seize items, other than to use them as evidence in prosecution, is the deterrence of others. As stated above, forfeiture of large items is generally sought in only most serious fish and game violations. Often these cases involve commercial guides who may violate the law regularly, and who have a commercial motive for their behavior. Only a substantial deterrent will discourage some potential offenders from taking chances and hoping that he will not be caught.

The committee substitute, which adds language requiring an individual item value of $2,500 or more on line 28 of the bill, is a significant improvement over the original version. Nonetheless, a person who owns a seized item worth over $2,500 will be able to litigate under CSHB 94, the validity of the decision of the person who seized the item that the seizure was necessary to preserve the item as evidence. This will require the state to attempt to prove the good faith of the person making the seizure, and to present the state's case in advance of the trial in order to convince the court that it is necessary to preserve the item as evidence. As discussed more fully below, this hearing may be held at a time when the state's case is in the early stages of development, when all possible evidence has not yet been obtained.

The proposed language on lines 2 through 4 of page 2 of the bill requires that seized property be returned within seven days after the charges are filed, unless an extension is approved by court order for cause shown. While the language does not explicitly require a hearing for this order, an appellate court will almost certainly interpret the language to require a full hearing on the merits. AS 16.05.190 applies to seizures made without a warrant. If no warrant has been issued, there has not yet been a determination by a neutral judge regarding the existence of probable cause. An ex parte presentation to the court by the state, either through testimony or an affidavit, of the reasons justifying the continued seizure of the item may well violate the due process cause, as an ex parte procedure would deny the defendant a right to be heard on the issue. The American Eagle case makes it clear that the defendant has a right to a hearing on his contention that the state should not continue to hold the seized item.

The proposed language appears to place the burden on the state to demonstrate "cause" in order to justify an extension of the seizure. Thus, the item is automatically returned to the defendant unless the state bears the burden of proof placed upon it. These hearings will ordinarily be taking place during the early stages of the state's case, when all available facts may not yet have been fully developed. Additionally, the standard for "cause" is unclear. Is the only "cause" allowable under the statute the fact that the item will be used as

evidence? Or, is a legitimate concern regarding the removal of the item from the court's jurisdiction or its sale to an innocent purchaser sufficient cause to justify the state's retention of the property? If the item's status as evidence is the only permissible reason to continue to hold the item, then the state would be required to release a boat or plane to an owner even if the owner intends to walk out of the courtroom and remove the item from the state.

Finally, the seven day period allowed before a court extension must be obtained is much too short. Many, if not most, seizures of large items used in fish and game violations are made in remote locations of the state. While the officers involved have the authority to file charges immediately, if appropriate, there may well be no prosecutor or assistant attorney general available locally to handle the hearing. Under the language of the statute as currently drawn, the defendant's property is returned to him automatically after seven days, perhaps even if weather precludes the arrival of a judge or district attorney within the seven day period. It should also be noted that, in a felony case, there may be no judicial officer available with a jurisdiction to hear the case. If a defendant has been indicted for the charges, then only a superior court judge has jurisdiction over the case. A local district court judge or a magistrate could not preside over the forfeiture hearing.

Regarding fiscal impact, a preliminary statement of fiscal impact is attached to this letter. Thank you for allowing the opportunity for comment on CSHB 49. Please contact my office if you have any questions.

Sincerely yours,

NORMAN C. GORSUCH

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M February 10, 1983

SUBJECT: Protection of confiscated property
(Work Order No. 13-0774)

TO: Susan Brody
Acting Director
House Research Agency

FROM: Edward H. Hein
Legislative Counsel

You have asked what legal protections exist in the constitution and the rules of court for owners of property seized in fish and game violation cases. Specifically, this question is asked in light of HB 94, which amends AS 16.05.190. Under that statute, paraphernalia used in violation of AS 16.05 or regulations of the Department of Fish and Game may be seized without a warrant under a valid search. The paraphernalia is subject to forfeiture by court order upon conviction. Otherwise, the paraphernalia must be returned to the owner after completion of the case and payment of any fine imposed.

Under both the federal and Alaska constitutions, no person may be deprived of property without due process of law. United States Constitution, Amendment XIV; Alaska Constitution, Article I, section 7. The Alaska Supreme Court has spelled out what due process requires in the context of a seizure of property used in a fish and game violation. In F/V American Eagle v. State, 620 P.2d 657 (Alaska 1980), the Court said"

> The standards of due process under the Alaska and federal constitutions require that a deprivation of property be accompanied by notice and opportunity for hearing at a meaningful time to minimize possible injury. Where property allegedly used in an illicit act is confiscated by government officials pending a forfeiture action, no notice or hearing is necessary prior to the seizure. However, when the seized

> property is used by its owner in earing a livelihood, notice and an unconditioned opportunity to contest the state's reasons for seizing the property must follow the seizure within days, if not hours, to satisfy due process guarantees even where the government interest in the seizure is urgent. (Citations omitted).

The Court also said that while an owner of property seized for a fish and game violation may have a right to obtain release of the property by posing an adequate bond, due process does not require that this be an absolute right. "To permit this," the Court said, "would frustrate one purpose of forfeitures, which is to prevent possible use of the property in further illicit acts." 620 P.2d at 668. The Court indicated, however, that if the property owner can prove he or she was unaware that the property was being used for an illegal purpose, was merely negligent in allowing such use, or had done all that could reasonably be expected to prevent such use, due process probably would require release of the property if adequate bond is posted.

The Court noted that the owners of the F/V American Eagle had raised "a substantial question whether the statutory scheme on its face affords adequate procedural due process". The Court did not decide that question, however, because it said the vessel owners were in fact afforded procedural due process. The seizure in that case was subject to a judicially approved warrant and the owners of the vessel were formally notified of the seizure in a timely manner. It is not clear, however, whether under different circumstances the Court might rule that AS 16.05.190 - 16.05.195 are unconstitutional.

The federal and Alaska constitutions also protect persons from unreasonable searches and seizures of their property. United States Constitution, Amendment IV; Alaska Constitution, Article I, section 14. The primary purpose of these provisions is to protect the privacy of individuals from unreasonable intrusion by the government.

Normally, a search and seizure requires a search warrant. Where the search and seizure is incident to a lawful arrest, a search warrant is not required. Such a search, however, must be limited to the discovery of weapons and evidence within the area of the arrestee's immediate control. A warrantless search of a vehicle used in a crime may be made if there is probable cause to believe that the vehicle

contains contraband or evidence, and exigent circumstances exist which prevent the vehicle from being seized or otherwise necessitates an immediate search.

AS 16.05.190 specifically requires that a seizure of property used in or in aid of a fish and game violation be pursuant to a valid search. Although the catchline of this section says "Seizure without warrant . . .", the text of the statute is not limited to warrantless searches. The search, with or without a warrant, must be "valid". In this regard the section adds nothing to the constitutional requirements that already exist.

Once property has been seized under AS 16.05.190, the owner has "an immediate and unqualified right to contest the state's justification for the seizure before a judge under Criminal Rule 37(c)". 620 P.2d at 667. Criminal rule 37(c) provides:

> (c) A person aggrieved by an unlawful search and seizure may move the court in the judicial district in which the property was seized or the court in which the property may be used for the return of the property and to suppress for use as evidence anything so obtained on the ground that the property was illegally seized.

I hope this adequately answers your question. If you have any further questions, feel free to contact me at your convenience.

MEMORANDUM

TO: Representative John Ringstad
Attn: David Stancliff

FROM: Susan Brody, Director

RE: Confiscation of Property in Fish and Game Violations
Research Request 83-66

David Stancliff of your staff asked us to identify the protections which currently exist for owners of property seized in fish and game violation cases. Specifically, we were asked to look at legal protections which exist in the State Constitution, the rules of court procedure, and the policies and procedures of the Department of Public Safety.

We asked Ed Hein of the Legal Services Division to assist us in researching this topic. He prepared the attached memorandum describing relevant provisions in both the federal and State constitutions and in the rules of court. In his memorandum, Mr. Hein discusses a 1980 Alaska Supreme Court case (F/V American Eagle v. State)[1] which directly addresses your concern. To supplement the information provided by Mr. Hein, we contacted Capt. Nutgrass with the Division of Fish and Wildlife Protection in the Department of Public Safety, Bart Rozell, the attorney who represented the owners of the American Eagle in the Supreme Court case mentioned above, and Assistant Attorney General John Gissberg.

Existing Procedures in Fish and Game Violation Cases

When property is seized in conjunction with a fish and game violation, it eventually must be returned to the owner unless forfeited by order of the court. However, the item need only be returned "after completion of the case and payment of the fine, if any" (AS 16.05.195).

When the seized property is used by its owner in earning a livelihood, such as a commercial fishing boat or airplane, the seizure may present a financial hardship for the owner. In these cases, the owner of the seized property has the right to petition the court for an earlier release of the property. However, if the court decides to release the property, the owner often is required to post an adequate bond or to obtain insurance. Property may only be released when it is not essential evidence to the case.

---

1 F/V American Eagle v. State, 620 P. 2d 657 (Alaska 1980)

As an example of this procedure, Capt. Nutgrass described a 1982 violation in which an airplane involved in an illegal hunting operation was seized under a search and seizure warrant obtained by the Division of Fish and Wildlife Protection. In that case, the owner's request for release of the plane was granted by the court, subject to a number of stipulations. These stipulations required the owner to return the aircraft to the State within a specified time period, required the plane to remain in the state, and specified that the owner must provide security either in the form of insurance or a bond for $17,000, the estimated value of the plane. In this case, the value of the property was estimated during an inspection by the division's chief mechanic. In some instances, an independent appraisal is also required.

John Gissberg, Assistant Attorney General, stated that many of these cases are settled out of court, especially when commercial fishing boats are involved. The settlement allows the owner to keep the boat on the fishing grounds; without settlement, the boat would be transported to a community such as Kodiak for appraisal and storage prior to a court hearing.

Bart Rozell, an attorney with the firm of Faulkner, Banfield, Doogan and Holmes, gave the example of a commercial crab boat seized on the fishing grounds in the Aleutians. The appraisal would have been conducted in Kodiak, thus removing the vessel from the fishing grounds at the height of the season and resulting in a substantial loss of income to the vessel owner. To avoid this income loss, Mr. Rozell emphasized that owners of vessels have no alternative but to settle out of court by pay ng a large fine.

The dollar amount required for an out-of-court settlement varies from case to case and is established by the Attorney General's Office in consultation with the Division of Fish and Wildlife Protection. Mr. Gissberg noted that they try to require an amount sufficient to discourage the illegal activity from occurring again in the future. He said that the amount is sometimes based on the dollar value of the illegal catch or on some percentage of the boat value. Capt. Nutgrass cited out-of-court settlements for seized crab boats which ranged from $100,000 to $350,000.

Constitutional Protections

As noted in the memorandum from Ed Hein, the Alaska Supreme Court's ruling in F/V Eagle v. State discusses the constitutional due process requirement as it pertains to fish and game violation seizures. The Court noted that the case had raised "a substantial question whether the statutory scheme on its face affords adequate procedural due process." Although it did not decide in the vessel owners' favor, the Court noted that:

> "...when the seized property is used by its owner in earning a livelihood, notice and an unconditional opportunity to contest the state's reasons for seizing the property must follow the seizure within days, if not hours, to satisfy due process guarantees even where the government interest in the seizure is urgent." (see attached memorandum)

Bart Rozell, the attorney who represented the owners of the American Eagle, believes that the existing State statute does not adequately protect the rights of owners of seized property. In his opinion, the right of the property owner to a prompt post-seizure hearing should be clearly specified in statute. John Gissberg agreed that establishing the right to a prompt hearing in statute would be an appropriate action in light of the American Eagle case. Both Mr. Rozell and Mr. Gissberg also mentioned the possibility of having the State conduct vessel appraisals at the site of the violation.

State v. Rice[2] is another State Supreme Court case which deals with the question of due process guarantees for owners of seized property; it specifically addresses the rights of innocent owners of seized property. The court ruled that Cessna Finance, an innocent holder of an interest in a seized airplane, had been "deprived of its constitutional rights to substantive due process through the failure of the statutory scheme ...to provide for remission of the interests of innocent non-negligent third parties in the forfeited item." Relevant sections of this decision are attached for your information.

As Mr. Rozell and Mr. Gissberg have dealt extensively with the issue of confiscated property in fish and game violations, you may wish to contact them directly for further information on this problem; Bart Rozell can be reached at 586-2210 and John Gissberg's can be reached through the A.G.'s office, 465-3600. In addition, both Ed Hein and I are available to answer any further questions.

[2] State of Alaska v. Wilder S. Rice and Cessna Finance Corporation, 626 P.2nd 104 (Alaska 1981).

conducting the search for property which is taken as a result of the search. The enumeration of specific things does not limit the meaning of words of a general nature. (§ 22 art I ch 94 SLA 1959)

This section is constitutional. 1959 Op. Att'y Gen., No. 15.

This section is tailored carefully to art. I, § 14, of the Alaska Constitution and is therefore valid. 1959 Op. Att'y Gen., No. 15.

There is no constitutional requirement that all searches be with warrant. 1961 Op. Att'y Gen., No. 19.

And reasonable searches may be made without warrant. 1961 Op. Att'y Gen., No. 19.

"Reasonable search". — A reasonable search is one made (a) upon probable cause that fruits of a crime or evidence relating to the crime will be found; (b) under circumstances which would make the securing of a warrant impracticable. 1961 Op. Att'y Gen., No. 19.

The mere observation of items which are in plain view or which are open and apparent, is not a search. Consequently, evidence based on such observations is admissible so long as the observing officer was legally in the position where the observations were made. Klockenbrink v. State, Sup. Ct. Op. No. 631 (File No. 1149), 472 P.2d 958 (1970).

A search may be made pursuant to a valid arrest, providing that the arrest is made prior to the search. 1961 Op. Att'y Gen., No. 19.

Requirement of written signed statement objectionable but valid. — The amendment requiring a written signed statement of the reason for the search is objectionable but valid. It is objectionable because it unnecessarily ties the hands of the field agents charged with enforcement of the fish and game laws, and is a provision which is quite uncommon, if not unique. 1959 Op. Att'y Gen., No. 15.

Such requirement will not validate an invalid search. — The statutory requirement that fish and game agents fill out a form stating the objects of search will not make an otherwise invalid search valid. 1961 Op. Att'y Gen., No. 19.

But it may invalidate an otherwise valid search if not complied with. 1961 Op. Att'y Gen., No. 15.

This section requires that notice be given to the person "in control" of crab pots. Nathanson v. State, Sup. Ct. Op. No. 1310 (File No. 2541), 554 P.2d 456 (1976).

Failure to notify owner of crab pots was not a violation of this section where officers of the Department of Fish and Game approached the crab pots to conduct a search to check the extent of compliance with a regulation providing that fishermen could place their crab pots in the water up to 72 hours prior to the opening of the season and the owner was not present, attending to his crab pots, since there being no "person in control of the property or object to be searched," the officers were unable to give him the required notice. Nathanson v. State, Sup. Ct. Op. No. 1310 (File No. 2541), 554 P.2d 456 (1976).

Notice required for search of vessel, building, etc. — The considerations leading to the conclusion that no notice was required for a search of crab pots would not apply to the search of a vessel, building or other effects in which the owner would have a reasonable expectation of privacy. Nathanson v. State, Sup. Ct. Op. No. 1310 (File No. 2541), 554 P.2d 456 (1976).

Area of vessel open to search. — In the case of a vessel, the limits of the area open to search probably include the entire vessel. 1961 Op. Att'y Gen., No. 19.

Sec. 16.05.190. Seizure without warrant and confiscation by court. Guns, traps, nets, fishing tackle, boats, aircraft, automobiles or other vehicles, sleds, and other paraphernalia used in or in aid of a violation of this chapter, or rule or regulation of the department may be seized under a valid search, and all fish and game, or parts of fish and game, or nests or eggs of birds, taken, transported, or possessed contrary to the provisions of this chapter, or rule or regulation of the department shall be seized by any person designated in § 150 of this chapter. Upon conviction of the offender or upon judgment of the court having jurisdiction that the item was taken, transported, or possessed in

violation of this chapter or rule or regulation of the department, all fish and game, or parts of them are forfeited to the state and shall be disposed of as directed by the court. If sold, the proceeds of the sale shall be transmitted to the proper state officer for deposit in the general fund. Guns, traps, nets, fishing tackle, boats, aircraft, or other vehicles, sleds, and other paraphernalia seized under the provisions of this chapter, or rule or regulation of the department, unless forfeited by order of the court, shall be returned, after completion of the case and payment of the fine, if any. (§ 23 art I ch 94 SLA 1959)

A seizure is a prerequisite to forfeiture under the provisions of this section. Rubino v. State, Sup. Ct. Op. No. 215 (File No. 395), 391 P.2d 946 (1964).

Forfeiture acts upon the thing itself. — In case of forfeiture, the decree of the court acts upon the thing itself and binds the interest of all the world, whether any party actually appears or not. If it is condemned, the title of the property is completely changed, and the new title acquired by the forfeiture travels with the thing in all its future progress. United States v. Pollastrine, 8 Alas. 104 (1929).

It divests titles and liens. — A forfeiture necessarily divests every existing right, whether of title or lien or other interest, in the thing forfeited. There is no reason why it should not extinguish the right of a lienholder equally with that of the owner. It binds the interests of all the world. United States v. Pollastrine, 8 Alas. 104 (1929).

Section distinguishes between mandatory and discretionary forfeiture. — This section distinguishes between mandatory forfeiture of contraband (fish, game, birds) upon conviction, and discretionary forfeiture of paraphernalia (guns, traps, aircraft, etc.). Graybill v. State, Sup. Ct. Op. No. 1234 (File No. 2386), 545 P.2d 629 (1976).

Not between criminal or civil forfeiture proceedings. — The distinction which the legislature sought to draw between contraband and paraphernalia is between mandatory and discretionary forfeiture, not between requiring criminal or civil forfeiture proceedings. Graybill v. State, Sup. Ct. Op. No. 1234 (File No. 2386), 545 P.2d 629 (1976).

Forfeitures, even when civil in form, are basically criminal in nature. Graybill v. State, Sup. Ct. Op. No. 1234 (File No. 2386), 545 P.2d 629 (1976).

"Order of the court" may refer to orders rendered following criminal conviction. — Since the "case" and "fine" referred to in this section concern criminal proceedings, it is reasonable to interpret an "order of the court" as likewise referring to orders rendered subsequent to a criminal conviction, as well as those following a separate civil action. Graybill v. State, Sup. Ct. Op. No. 1234 (File No. 2386), 545 P.2d 629 (1976).

Valid forfeiture where defendant convicted under AS 16.05.920. — Where defendant was convicted under AS 16.05.920, which makes certain acts unlawful, in order to effect a valid forfeiture of defendant's aircraft, it was not necessary for the state to institute a separate civil in rem proceeding against the aircraft. Graybill v. State, Sup. Ct. Op. No. 1234 (File No. 2386), 545 P.2d 629 (1976).

While forfeiture is a civil remedy unless otherwise provided by statute, this section, as it applied to a defendant who was convicted under AS 16.05.920, did so provide. Graybill v. State, Sup. Ct. Op. No. 1234 (File No. 2386), 545 P.2d 629 (1976).

For cases construing seizure and forfeiture under the provision of ACLA 1949, § 39-2-10, see United States v. One Fish Trap, 7 Alas. 215 (1924); United States v. The Pacific, 7 Alas. (1924); United States v. One Floating Fish Trap, 7 Alas. 334 (1925); The M. & M., 8 Alas. 17 (1928).

Cited in Wacek v. State, Sup. Ct. Op. No. 1108 (File No. 2166), 530 P.2d 751 (1975).

Sec. 16.05.195. Forfeiture of equipment. (a) Guns, traps, nets, fishing gear, vessels, aircraft, other motor vehicles, sleds, and other paraphernalia or gear used in or in aid of a violation of this title, or regulation promulgated under this title, and all fish and game or parts

be enacted to benefit the state. It is desired that the department participate in the federal aid programs on the same basis as other states. (§ 20 art I ch 94 SLA 1959)

Sec. 16.05.150. Enforcement authority. The following persons are peace officers of the state and they shall enforce this chapter:

(1) an employee of the department authorized by the commissioner;

(2) a police officer in the state;

(3) any other person authorized by the commissioner. (§ 21 art I ch 94 SLA 1959)

Enforcement of fish and game laws on military reservations. — Where the military does not assign sufficient personnel to enforce fish and game laws on military reservations, state game officials as well might enforce them, possibly by deputizing state game officials as federal marshals, since 10 U.S.C. 2671(c) makes violation of state fish and game laws a federal offense. 1964 Op. Att'y Gen., No. 2.

Since state fish and game laws operate on a federal military reservation, not only as federal law but also as state law, both the federal and state officers may enforce these laws. 1964 Op. Att'y Gen., No. 2.

State officers should have full access to military reservations in Alaska, subject to safety and military security requirements, to enforce laws and manage and harvest fish and game resources. 1964 Op. Att'y Gen., No. 2.

Sec. 16.05.160. Duty to arrest. Each person designated in § 150 of this chapter shall arrest a person violating this chapter, or any rule or regulation made under this chapter, in his presence or view, and shall take the person immediately for examination or trial before an officer or court of competent jurisdiction. (§ 21 art I ch 94 SLA 1959)

Cited in Schuster v. State, Sup. Ct. Op. No. 1305 (File No. 2911), 553 P.2d 925 (1976).

Sec. 16.05.170. Power to execute warrant. Each person designated in § 150 of this chapter may execute a warrant or other process issued by an officer or court of competent jurisdiction for the enforcement of this chapter, and may, with a search warrant, search any place at any time. The judge of a court having jurisdiction may, upon proper oath or affirmation showing probable cause, issue a warrant in all cases. (§ 21 art I ch 94 SLA 1959)

Sec. 16.05.180. Power to search without warrant. Each person designated in § 150 of this chapter may without a warrant search any thing or place if the search is reasonable or is not protected from searches and seizures without warrant within the meaning of § 14, art. I of the state constitution, which specifically enumerates "persons, houses and other property, papers and effects." However, before a search without warrant is made a signed written statement by the person making the search shall be submitted to the person in control of the property or object to be searched, stating the reason the search is being conducted. A written receipt shall be given by the person

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF PUBLIC SAFETY
OFFICE OF THE COMMISSIONER

POUCH N
JUNEAU, ALASKA 99811
PHONE:

March 4, 1983

Mr. Dave Stancliff
Professional Aide
House Committee on Resources
Pouch V
Juneau, AK 99811

Dear Mr. Stancliff:

In review of the Committee's substitute draft of CS HB 94 (Res) no fiscal or logistical impact is foreseen. The substitute draft would provide, in some cases, a more workable solution with the wording "within seven days after charges are filed with the court." We are not sure what standards or reference will be acceptable or required in establishing to the courts if an item has an individual value of $2,500.00 or more. An individual king or tanner crab pot could have an estimated value of $600.00; however, as the bill is worded on line 14, 15, and 16, a seizure of a pot could be argued as being unnecessary to preserve the pot as evidence of the crime. This would include an aircraft, vehicle or vessel exceeding the individual value of $2,500.00.

It could be logically argued in court that an aircraft seized during a major game violation was not necessary to preserve the aircraft as evidence of a crime. The officer could identify the aircraft by number, physical description and by taking photographs. This would preclude the seizure of items as instruments of the crime and by having the ability to bring that item before the court of jurisdiction.

We are still opposed to any amendments effecting AS 16.05.190 as it provides the necessary protection to the citizen as well as the State.

Sincerely,

Robert J. Sundberg
Commissioner

TESTIMONY ON HB 94

HOUSE RESOURCES COMMITTEE

March 11, 1983

Presented by Gregory F. Cook
Faulkner, Banfield, Doogan & Holmes
P.O. Box 1150
Juneau, Alaska 99802
(907) 586-2210

HB 94 seeks to amend existing law relating to seizure and forfeiture of items used in fish and game violations. The bill is a good start, but in my opinion, it needs significant amendments before it should be adopted.

Seizure and forfeiture of equipment used to commit violations of fish and game laws are critical enforcement tools. These tools are needed to conserve fishery and wildlife resources. At the same time, however, it is important for the State to recognize the rights of innocent owners. The bill as it now stands does not recognize these basic, constitutional rights known generally as "due process" requirements.

The Alaska Supreme Court and the United States Supreme Court have each addressed the need to protect the rights of innocent (and non-negligent) owners of property used by a "third person" for the commission of a crime. All persons must be presumed innocent until proven guilty. A seizure of nets, a vessel, or an airplane occurs <u>before</u> a trial showing guilt or

innocence. Due process of law guarantees the following rights to everybody whose equipment is seized under AS 16.05.190:

(1) judicial review of specific facts supporting the seizure before the seizure happens;

(2) reasonable notice to the owner that a seizure has occurred;

(3) the right of the owner to a prompt, meaningful, post-seizure judicial hearing;

(4) the right to petition for "remission" or "mitigation" of the seizure;

(5) the opportunity to post a bond and secure release of the item seized.

Seizures and forfeitures are complex areas of law. Drafting a bill that meets the requirements of the Alaska Constitution and the United States Constitution will require significant additional drafting work. I respectfully call the attention of the Resources Committee members to this fact, and suggest that the Judiciary Committee could be the proper forum to make those corrective amendments. I stand ready to assist both committees, and legislative counsel in this matter.

Thank you for your time and attention.

Respectfully submitted,

Gregory F. Cook
March 10, 1983

Alaska Sportfishing Association

3605 Arctic Blvd., Suite 800 • Anchorage, Alaska 99503

MAR 2 - 1983

February 28, 1983

Representative Dick Shultz
Co-Chairman, Natural Resources Committee
Pouch V
Juneau, AK 99811

Dear Representative Shultz:

The Alaska Sportsfishing Association urgently requests your support in denying confirmation to Governor Sheffield's appointees to the Board of Fisheries until such time as two, true sportsfishing representatives are appointed to the board. Please keep in mind that the Board of Fisheries meets on March 21, 1983, whether these appointees are confirmed or not. Sportsfishing and tourism for 19[illegible] and beyond will be affected by their decisions.

The appointments to the Board of Fisheries by Governor Sheffield has triggered a highly indignant response by sportsfishing enthusiasts throughout Alaska. The lobbying and pressures brought by commercial-fishing interests have decreased the representation to this critical body from three to what we now consider to be effectively zero.

The Board of Fisheries has the power to allocate fish above escapement requirements to the various fishing interests. We feel that the appointments, as they currently exist, are an absolute insult to the 100,000 licensed sportsfishermen in the Anchorage-bowl, and a serious threat to sportsfishing interests from the Matanuska Valley to Homer. The five sportsfishing associations in the Anchorage area asked for an appointment with Governor Sheffield while he was here. He did not even grant time to listen to our grievance.

We do not contend that the appointees are not highly respected and qualified people. We simply insist on true sportsfishermen being placed on the Board of Fisheries to represent sportsfishing and the highly valuable tourist industry when allocating fish resources.

We do question the ability of Mr. Paul Weller, the only appointee with sportsfishing inclinations, to fairly represent the sportsfishing side. The last time a sportsfishing representative was chosen from the Kenai-Soldotna area (Dr. Fair), who truly represented the sportsfishermen and acted on their behalf, was forced to resign after receiving threatening phone calls, attempted boycott of his business, chiding to his children at school, and malicious acts to his private property. Mr. Weller is backed by Lottie Ettelman, a long-time, setnet-fishing operator and commercial-fishing activist (in addition to being a top democarat in that area). In fairness to Mr. Weller, he was considerate enough to attend our general membership meeting on February 8, 1983, which displayed some interest in representing our cause, though there was a feeling he lacked knowledge of fishing issues (after four years of representation on the Kenai-Soldotna Advisory Committee).

In my earlier letter to Governor Sheffield before the appointments were made, we recommended Mr. William E. Moulton, Jr., and Ms. Toni Salmeier as two superbly-qualified individuals who have been highly involved in both the sportsfishing and tourist industry. Mr. Moulton is also a Fish and Wildlife graduate.

Additionally, your support in the speedy passage of House Bill 63 is requested. This bill would establish sportsfishing on an equal basis with subsistence fishing and would at least minimize the devisiveness of the priority subsistence issue.

These and many other actions are drawing keen interest by sportsfishers throughout Alaska. I assure you that we intend to track actions taken and to keep the public aware of the responsiveness of their legislators.

Sincerely,

Bob Hunter

Robert L. Hunter, President
Alaska Sportsfishing Association

CSHB 94 ANALYSIS

Section 1

Authorizes the seizure of items discovered under a valid search if the person making the search determines that the items in question should be held as evidence of a fish and game violation. Parts of fish or game nests or eggs of birds taken, transported, or possessed may also be seized.

Disposal of fish and game, or their parts that have been seized, is left up to the court if the person they have been seized from is convicted. If the court sees fit to sell the fish and game used as evidence proceeds shall, by way of the proper state officer, be deposited in the general fund.

Items seized having an individual value of $2500 or more cannot be held beyond 7 days after charges are filed in court for the associated violation, unless an extension is approved by court order for cause shown.

Policy Question

Should citizens who have had items valued at $2500 or more seized in an alleged fish and game violation be afforded the opportunity to have the court ascertain within 7 days after charges are filed whether or not the items seized should be held as evidence in the case.

Possible Considerations

1) Remedies that are now available without this proposed change in law.

2) Costs of implementing this law

3) Costs to citizens under present system, should they be found innocent

STATE OF ALASKA

DEPARTMENT OF LAW

CRIMINAL DIVISION

BILL SHEFFIELD, GOVERNOR

FOUCH KC – STATE CAPITOL
JUNEAU, ALASKA 99811
PHONE: (907) 465-3428

March 30, 1983

The Honorable Charlie Bussell, Chairman
House Judiciary Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Bussell:

I am writing on behalf of the Criminal Division of the Department of Law to comment on the expected impact upon the criminal division and the criminal justice system of a bill currently being considered by your committee: CSHB 94. After analysis of the bill and consultation with other criminal attorneys within the department, I have concluded that the proposed bill is likely to have a negative impact upon efforts to enforce fish and game laws.

Current law provides redress for a person whose property is seized as a result of an illegal search. AS 16.05.190 requires that property be seized under a "valid search", and Rule 37, Alaska Rules of Criminal Procedure, provides that a person who has been subject to an unlawful search and seizure may petition the court for the return of the property and the suppression of its use as evidence.

Although the current statutes do not specifically deal with notice and the right to a hearing to obtain the return of seized property, case law has established that the constitutional right to due process of law requires that the owner of seized property be given immediate notice of any seizure and the opportunity for meaningful hearing. See, for example, State v. Rice, 626 P.2d 104 (Alaska 1981) and F/V American Eagle v. State, 620 P.2d 657 (Alaska 1980).

The American Eagle case involved the seizure of a crab fishing vessel because of the violation of a regulation prohibiting the taking of crab out of season. The court there held that if the seized property was used by its owner in earning a livelihood, notice and an opportunity to contest the state's reasons for seizing the property must follow "within days, if not hours" of the seizure. 620 P.2d at 667. Fish and Wildlife Protection officers and attorneys are well aware of the due process requirements set out in the American Eagle and related cases, and provide immediate notice and an opportunity

to be heard when property is seized. Thus, a citizen who believes that his property was wrongfully taken, or who has compelling reasons which justify the return of the property, may petition the court for the immediate return of his property. This is commonly done, generally through the posting of a bond in lieu of the seized property.

As compared to the number of criminal actions filed for the violation of fish and game laws, the seizure of large items of property such as boats and airplanes is used infrequently, and generally for only the most serious violations. The vast majority of seizures of vessels are made pursuant to search and seizure warrants issued by neutral magistrates or judges following a determination of sufficient probable cause. Probably the most common situation in which large items of property are seized without warrants are airplanes seized when an officer observes a violation of a fish and game law such as "same day airborne." The conviction rate on these serious fish and game violations is quite high. Additionally, although the state may request the forfeiture of an item following criminal conviction, this motion is not always granted. Any arguments in mitigation which the defendant wishes to make as to why his property should not be forfeited can be made during his sentencing hearing.

The proposed amendments to AS 16.05.190 provide that all items, even minor ones such as guns or traps, may not be seized unless they are necessary as evidence of a violation. Often, of course, they will be needed as evidence. But the state may choose to seize items for other reasons besides use as evidence. For example, if the item has been seized it can not be used in violation of the law during the pendency of the case. The Alaska Supreme Court has recognized this as a valid consideration in seizure cases. See the American Eagle case cited above.

Another important consideration is the prevention of the transfer from the jurisdiction or sale to an innocent purchaser of property used in fish and game violations. It is not uncommon for the owner of an airplane or vessel who discovers that he may have been observed violating the law to immediately remove the plane or boat from the jurisdiction. Planes which were the subject of an ongoing investigation have been sold to innocent purchasers within days of the alleged violation. AS 16.05.195(e) specifically provides that an item subsequently sold to an innocent purchaser in good faith may not be forfeited. Thus, if the violator manages to sell his plane, nets, vessel, etc. the state has no way to regain possession of that item for forfeiture as part of the criminal sentence.

Another important reason to seize items, other than to use them as evidence in prosecution, is the deterrence of

others. As stated above, forfeiture of large items is generally sought in only most serious fish and game violations. Often these cases involve commercial guides who may violate the law regularly, and who have a commercial motive for their behavior. Only a substantial deterrent will discourage some potential offenders from taking chances and hoping that he will not be caught.

The committee substitute, which adds language requiring an individual item value of $2,5000 or more on line 28 of the bill, is a significant improvement over the original version. Nonetheless, a person who owns a seized item worth over $2,500 will be able to litigate, under CSHB 94, the validity of the decision of the person who seized the item that the seizure was necessary to preserve the item as evidence. This will require the state to attempt to prove the good faith of the person making the seizure, and to present the state's case in advance of the trial in order to convince the court that it is necessary to preserve the item as evidence. As discussed more fully below, this hearing may be held at a time when the state's case is in the early stages of development, when all possible evidence has not yet been obtained. Also, the bill does not explain how determination of an item's value is to be made. Should an item's value be based upon its purchase price? Replacement cost? Fair market value? If fair market value is the appropriate criterion, is it the market value at the place and time seized, or at the time of later disposal? If these questions are not resolved, they are likely to provoke future litigation on the issue.

The proposed language on lines 2 through 4 of page 2 of the bill requires that seized property be returned within seven days after the charges are filed, unless an extension is approved by court order for cause shown. While the language does not explicitly require a hearing for this order, an appellate court will almost certainly interpret the language to require a full hearing on the merits. As 16.05.190 applies to seizures made without a warrant. If no warrant has been issued, there has not yet been a determination by a neutral judge regarding the existence of probable cause. An ex parte presentation to the court by the state, either through testimony or an affidavit of the reasons justifying the continued seizure of the item would probably not provide the defendant sufficient due process of law, as an ex parte procedure would deny the defendant a right to be heard on parte procedure would deny the defendant a right to be heard on the issue. The American Eagle case makes it clear that the defendant has a right to a hearing on his contention that the state should not continue to hold the seized item.

The proposed language appears to place the burden on the state to demonstrate "cause" in order to justify an

extension of the seizure. Thus, the item is automatically returned to the defendant unless the state bears the burden of proof placed upon it. These hearings will ordinarily be taking place during the early stages of the state's case, when all available facts may not yet have been fully developed. additionally, the standard for "cause" is unclear. Is the only "cause" allowable under the statute the fact that the item will be used as evidence? Or, is a legitimate concern regarding the removal of the item from the court's jurisdiction or its sale to an innocent purchaser sufficient cause to justify the state's retention of the property? If the item's status as evidence is the only permissible reason to continue to hold the item, then the state would be required to release a boat or plane to an owner even if the owner intends to walk out of the courtroom and remove the item from the state.

Finally, the seven day period allowed before a court extension must be obtained is much too short. Many, if not most, seizures of large items used in fish and game violations are made in remote locations of the state. While the officers involved have the authority to file charges immediately, if appropriate, there may well be no prosecutor or assistant attorney general available locally to handle the hearing. Under the language of the statute as currently drawn, the defendant's property is returned to him automatically after seven days, perhaps even if weather precludes the arrival of a judge or district attorney within the seven day period. It should also be noted that, in a felony case, there may be no judicial officer available within a jurisdiction to hear the case. If a defendant has been indicted for the charges, then only a superior court judge has jurisdiction over the case. A local district court judge or a magistrate could not preside over the forfeiture hearing.

Thank you for allowing the opportunity for comment on CSHB 49. Please contact me if you have any questions.

Very truly yours,

b. Revenues:

Revenue								

2. Source of funds to offset fiscal impact of bill:

No information provided.

3. Assumptions:

The sponsor substitute for HB 100 sets and clarifies the felony levels for assaults upon peace officers and other emergency responders. As was noted in our original Statement of Fiscal Impact, approximately 50-100 criminal cases would be prosecuted as felonies rather than misdemeanors. Therefore, because of the increased likelihood of trials, increased length of trials, and more aggressive motion practice, additional attorney and other staff resources would be required.

4. Disclaimer:
This statement has not been reviewed by the OMB in the Office of the Governor. It therefore does not represent the final estimate of fiscal impact.

SUBJECT: Proposed Judiciary CS to SSHB 100

The Judiciary Committee Substitute to SSHB 100 is the result of excellent committee work and I fully support the proposed changes.

The amendments added to SSHB 100 in the House Judiciary CS provide more comprehensive legislation, covering all of the relevant Statutes. The Judiciary CS combines the positive aspects of both the Senate and House bills. I view these changes as an improvement on SSHB 100 and fully endorse the Judiciary Committee Substitute.

The increase in penalties and clarification of the law, in terms of the full range of emergency responders, is a much needed piece of legislation. I urge your committee to pass out CSSSHB 100.

Date: March 10, 1983
Subject: SS HB 100

You previously considered HB 100, and many questions and problems were brought to light at that time. Therefore, I had this sponsor substitute prepared. I believe this new legislation will answer your concerns, as well as addressing the concerns of our emergency responders, fire-fighters, and peace officers.

The sponsor substitute increases the penalty for an assault on an emergency responder by one degree. For example, if an assault upon a person would normally be considered a Class C felony, it would become a Class B felony if the assault were upon a peace officer, fire fighter, emergency technician, paramedic, ambulance attendant, or other emergency responder while in the performance of official duties.

My goal is to increase protection for emergency responders, while decreasing the number of assaults on them. These people are the protectors of our society. Endangering them and interfering with their efforts to protect our lives and property should be a more serious crime.

I believe that, if we make the public aware that these assaults will result in more severe penalties than would normally be dealt by our courts, we can curb these attacks. I urge your wholehearted support of SSHB 100.

ALASKA STATE FIREFIGHTERS ASSOCIATION

HOUSE JUDICIARY COMMITTEE

Hearing on House Bill No. 100 Relating to Assulting a Peace Officer, Fire Fighter, or Emergency Responder

February 14, 1983

Mr. Chairman:

My name is E. Robert Haag representing the Alaska State Firefighters Association and the Alaska Fire Chiefs Association.

We wish to speak in favor on the intent of House Bill No. 100 now before your Committee.

Our two Associations at their annual meetings last October 1983 passed a number of resolutions pertaining to the Fire Service. We did not make a resolution dealing with the specific subject in Hous Bill No. 100 for additional wordage to AS 11.41.220 (a). However, we do believe that the suggested additional sub paragraph (3) is important in that it defines responders.

We would suggest consideration of some wordage chane in lines 18 and 19. The suggested change is the same we made in the Senate Judiciary Committee hearing on Senate Bill No.24 on February 2, 1983.

Lines 18 and 19 revised to read "or other emergency responder, regardless of rank, functions or duties being performed".

House of Representatives

To: House Judiciary Committee
From: Representative Barbara Lacher
Date: February 14, 1983
Subject: Background: House Bill 100

I introduced HB 100 at the request of firefighters in my district. The intent of the bill is two-fold: to ensure that peace officers, firefighters, emergency medical technicians, and other emergency responders are recognized by the law as "persons", so that those assaulting emergency responders are successfully prosecuted; and to raise the penalty for assaulting emergency responders.

As I understand the problem, there was a court decision in which a judge ruled that emergency responders are not "people" in the eyes of the law. This bill defines emergency responders, and the penalty for assaulting one.

Further, there is apparently no middle ground in assigning penalties for assaulting emergency responders; the assault is termed either a misdemeanor or a Class B felony. Peace officers, firefighters, and other emergency responders would like a penalty that falls in between the two, for those times when physical injury is not "serious" as defined by statute (part of the criteria for the Class B felony), but when physical harm is caused to the responder that should be considered more serious than a misdemeanor.

Last Friday, the Senate Judiciary Committee heard teleconference testimony on SB 24, the companion bill to HB 100. Officer George Novacky, on behalf of the Anchorage Police Department, indicated in his testimony that 113 APD officers were assaulted in 1982. These officers missed a total of 253 work days in 1982 due to the injuries they received--approximately one work year lost because of assaults on officers.

In his testimony, Novacky also noted that there are restraints on what an officer can do when responding to a situation, but there are no such restraints on a person who assaults an officer. Raising the penalty for assaulting emergency responders may provide a deterrent to this type of behavior.

A total of ten people testified to the Senate Judiciary Committee. All but one of these people supported the companion bill. The one exception was Gayle Horetski, who spoke on behalf of the Department of Law; she felt that existing statutes adequately address the intent of the bill.

I have attached a list of the participants in Friday's Senate teleconference, as well as messages I have received in support of the bill.

If you have further questions, I will be happy to be of assistance.

RESOLUTION No. 82-I Amended

WHEREAS Alaska Statutes, Title 11, Section 11.46.400 states: A person commits the crime of arson in the first degree if, by starting a fire or causing an explosion, he intentionally damages protected property of another; or any property, whether his own or another's, and the act recklessly places another person in danger of physical injury or protected property of another in danger of damage, and

WHEREAS Alaska Statutes, Title 11, Section 11.81.900(39) states: "Person" means a natural person and, when appropriate, an organization, government, or governmental instrumentality, and

WHEREAS in the case of the State of Alaska v. Markland (4FA-S82-100 Cr.), the defendant was charged with arson in the first degree, and

WHEREAS in the case of the State of Alaska v. Markland Superior Court Judge Warren Taylor stated in the instructions to the jury that, "a fireman is not a person within the crime of first degree arson",

NOW, THEREFORE, BE IT RESOLVED BY THE ALASKA FIRE CHIEFS' ASSOCIATION as follows:

Section 1: That the Alaska Fire Chiefs' Association directs the Alaska Fire Chiefs' Association President to have the Alaska Statutes, Title 11 (Alaska Criminal Code) amended to read in Section 11.46.400,

A person commits the crime of arson in the first degree if, by starting a fire or causing an explosion, he intentionally damages protected property of another or any property, whether his own or another's, and the act recklessly places another person, including fire service personnel, police officers, and public employees, in danger of physical injury or protected property of another in danger of damage.

March 3, 1983

Representative Charlie Bussell
Pouch V
Juneau, Alaska 99811

Dear Representative Bussell:

The City Council of Delta Junction reviewed pending legislation at their March 1, 1983 meeting. They voted unanimously to endorse and provide their support on the following bills:

HB42 An Act relating to the determination of population for purposes of calculating amounts of state aid; and providing for an effective date.

HB100 An Act relating to an avalanche and fire weather forecasting system; and providing for an effective date.

HB119 An Act making a special appropriation for payment as a grant to the community of TOK for a rescue ambulance apparatus; and providing for an effective date.

HB136 An Act making an appropriation to the Department of Revenue for financial assistance to municipalities; and providing for an effective date.

HB153 An Act making a supplemental appropriation to the Department of Revenue for financial assistance to municipalities; and providing for an effective date.

HB162 An Act authorizing general law municipalities to limit the number of consecutive full terms certain municipal officials may serve.

HB172 An Act relating to municipal government; and providing for an effective date. (Title 29 rewrite).

House Bill 164 was also reviewed by the Council and they voted four to two against endorsing and supporting this legislation.

Sincerely,

Louis E. Heinbockel, Mayor
City of Delta Junction

a. Expenditures:

(Thousands of Dollars)

			FY 83	FY 84	FY 85	FY 86		
Capital								
Operating				129.5	144.3	153.0		
Total				129.5	144.3	153.0		

b. Revenues:

Revenue								

2. Source of funds to offset fiscal impact of bill:

No information provided.

3. Assumptions:

The sponsor substitute for HB 100 sets and clarifies the felony levels for assaults upon peace officers and other emergency responders. As was noted in our original Statement of Fiscal Impact, approximately 50-100 criminal cases would be prosecuted as felonies rather than misdemeanors. Therefore, because of the increased likelihood of trials, increased length of trials, and more aggressive motion practice, additional attorney and other staff resources would be required.

4. Disclaimer:
This statement has not been reviewed by the OMB in the Office of the Governor. It therefore does not represent the final estimate of fiscal impact.

POSITION PAPER/Department of Health & Social Services

POSITION PAPER

House Bill No. 103

"An Act establishing a Department of Corrections and transferring certain functions of the Department of Health and Social Services to the Department of Corrections; and providing for an effective date."

House Bill No. 103 adds a new chapter to Title 44 which establishes a Department of Corrections and gives the Department the responsibility to administer state programs including 1) state prisons and state prisoners; 2) probation and parole; 3) extraditions and detainers.

The bill changes the language in Titles 11, 12, 33, 41, 44, and 47 to reflect a Department of Corrections, rather than Department of Health and Social Services and/or Division of Adult Corrections. House Bill No. 103 excludes delinquent juveniles from the responsibilities of the new Department by omission of conforming amendments.

The Department of Health and Social Services supports the concept of House Bill No. 103 and recommends its passage. We do not view this bill as being in conflict of Executive Order 54 but, in fact, is supportive of the Governor's order.

Recommended by: Roger V. Endell

Roger V. Endell, Director
Division of Adult Corrections

MEMORANDUM

TO: Representative Mae Tischer

FROM: Jonathan Shood
Research Staff

RE: Texas Department of Corrections Education and Rehabilitation Programs
Research Request 83-18

Heidi Borson of your staff requested that we provide you with information pertaining to the educational and rehabilitation programs operated by the Texas Department of Corrections (TDC). We have contacted officials with the TDC and obtained the following information.

The Texas Department of Corrections' education and rehabilitation services can be divided into three main classes of programs. First, Texas operates programs which provide vocational, basic, and college education. Second, Texas has a work policy which requires employment for all inmates. Finally, Texas offers a number of treatment programs for inmates.

Education

The educational programs in the Texas Department of Corrections are administered by its Treatment Division. The programs include the Windham School System, the Division of Continuing Education, and the Apprenticeship and Training Program.

The Windham School System was established as an independent school district for Texas state prisoners by an act of the Texas State Legislature in 1969. The Windham School System is comprised of the adult basic and vocational education programs in the Department's twenty-three institutions. Windham is part of the TDC's Education Department; however, as a school district, the Windham School System is funded through the Texas Education Agency's State Minimum Foundation Program. Therefore, Windham does not compete for funds with other areas of corrections operations.

All twenty-three institutions in the Texas Correctional System have full competency-based education programs for grades K-12. Inmates can receive either a G.E.D. or a competency-based high school diploma.

In addition, each correctional unit has a vocational training program. In all, thirty different trades are taught in this program, although not every trade is taught at each institution.

According to Cheryl Moore, Assistant Director of Curriculum at Windham, the adult basic education program offers a diverse curriculum, which includes not only such basics as math, reading, communications, and science, but also music, art, dance, and physical education. The Windham School system is required to offer a wide range of courses to meet the Texas Education Agency's curriculum standards for school districts.

Inmates who score at a fifth-grade level or below on the Test of Adult Basic Education must participate in the basic education program until such time as they can score above the fifth-grade level on the test. After that, participation in the program is completely voluntary. Inmates can enter or leave the program at any time.

Inmates in the Texas prison system must work at some kind of a job within the system. According to Ms. Moore, participation in the education program does not excuse inmates from this obligation. Inmates typically attend school the equivalent of one day per week and work for four days per week.

The average daily count for the Windham School System is about 12,000 inmates. Ms. Moore stated that the system has a very high turnover rate, and considerably more inmates participate at some point during the year than is indicated by the daily average. The Texas correctional system as a whole has a population of approximately 34,000 inmates. The budget for the Windham School system was about $11,000,000 in FY 82.

College courses are available through the TDC Division of Continuing Education. The TDC contracts with community colleges and a few universities in Texas to have instructors come to the institution and teach courses. Associate, Bachelor of Arts, and Bachelor of Science degrees are available to inmates through this program.

However, not all of the institutions in the Texas correctional system offer college courses. Inmates in institutions without college programs who desire to take courses can request a transfer to an instituion that does offer college courses. But, because the prisons in the Texas system are classified by categories of inmate population, inmates

may not be eligible for transfer to some institutions. Furthermore, as the Texas correctional system has become more crowded, inmates may have to wait for substantial periods of time before space is available at another institution.

According to Ms. Moore, the Texas State Education Agency pays for the tuition of full-time community college students. The Department of Corrections pays for the first three credit hours of college for inmates, the inmates must pay for their next three credit hours, and the Texas Education Agency pays for any additional classes.

In addition to basic education and college, the Texas Department of Corrections also offers an apprenticeship program for inmates. The program is designed to meet the standards established by the Texas Labor Board, which certifies tradesmen. Inmates in this program receive some class work, but also practice their trade at the institution to which they are assigned. The kinds of trades available for apprenticeship are limited to those that are practiced at a particular institution. Trades currently available to inmates for apprenticeship include cooks, auto mechanics, butchers, and dental technicians.

Employment

Texas Department of Corrections officials frequently cited the strong emphasis the Department places on work ethic as a means of rehabilitation. As noted earlier, all Texas state prisoners are required to work. Prisoners are not paid for their labor, but receive "good time credits" for their work. Inmates may receive a maximum of two days credit for one day worked. The amount they receive is dependent upon the skill level of their employment and their behavior.

According to Charles Brown, Assistant Director of Public Affairs for the Department of Corrections, inmates entering the system begin by working at unskilled agricultural labor for a probationary period. If they demonstrate that they can adapt to the demands of regular work, they are given a job in one of the areas of corrections operation. These jobs may be in maintenance, food service, education, medical care, and many of the other operations of the Department. In addition, Texas operates a prison industry program which employs a substantial number of inmates. If inmates lack necessary skills to move straight into these positions, they are provided with on-the-job training.

It is generally agreed that Texas has the most comprehensive prison industry program in the nation. The state prison system manufactures

virtually all of its product needs, including the production of its own food, the spinning of its own cotton for clothing, and the manufacturing of shoes for its prisoners. The system has 63,000 acres of land to grow its corn and cotton and to raise its 16,000 head of cattle. The Texas program also has a number of specialized industries; e.g., microfilming and data processing of state agency records and refurbishing fire trucks and school buses.

Prior to 1979, state law prohibited the sale of prison-made products to any agency other than the Texas Department of Corrections. The statute has since been amended to allow goods to be sold to state and federal agencies and foreign governments on a contractural basis.

According to John Bradley, with the Texas Department of Corrections, the state prison system is able to realize substantially lower operating costs than most systems because of its extensive use of prison labor. Most bookkeeping in the plants, for example, is done with inmate labor. The system's 23 factories are managed with a supervision ratio of 9 inmates to 1 supervisor.

Treatment Programs

According to Charles Brown, the Texas Department of Corrections Treatment Division is the umbrella organization for several different types of services. The Windham School System, the Division of Continuing Education, health services, social services, and the chaplaincy program are all administered by the Treatment Division. This division is where those rehabilitative programs not related to inmate work are contained.

Mr. Brown stated that the Behavioral Medicine program offered a broad range of psychological treatment to fit the needs of the inmates. Programs include individual and group counseling, and medication. However, inmates who need very intensive mental health care are referred to the state mental hospital.

The Treatment Division also operates a pre-release program which assists inmates in obtaining employment, medical care and social services upon their release from prison. The Treatment Division also offers alcohol abuse treatment programs for inmates.

* * *

We hope we have provided a useful overview of the education and rehabilitatior programs provided to inmates of the Texas correctional system. If you have any questions, or should you want us to provide more detailed information on a particular program mentioned in this memorandum, please do not hesitate to contact us.

High Court Asked to Give Police 'Room for Mistakes'

By Fred Barbash
Washington Post Staff Writer

The Supreme Court was asked yesterday to give police "room for some mistakes" by relaxing the controversial "exclusionary rule," which bars illegally seized evidence from criminal trials.

Illinois Assistant Attorney General Paul R. Biebel Jr. asked the court to establish a "good faith" exception to the 69-year-old rule: illegal evidence would be allowed when authorities could show they did not know it was illegal.

The exclusionary rule has become a symbol for many conservatives who believe there is an imbalance in the criminal justice system that lets criminals off on technicalities. Legislation has been introduced in Congress to create a good-faith exception.

But many groups, including the American Bar Association, support the strict application of the exclusionary rule, saying that it is the only effective deterrent to police abuse in searches and seizures.

The debate over the rule's application is considered one of the most important criminal justice disputes to come before the court in the last 20 years.

The case began on May 3, 1978, when police in Bloomingdale, Ill., received an anonymous letter alleging that Susan and Lance Gates "make their living on selling drugs." The letter said that the couple had more than $100,000 worth of drugs in their basement and soon would be traveling to Florida to obtain more. Authorities verified the couple's address and, with the help of the Drug Enforcement Administration, located the couple in Florida, where they were placed under surveillance.

While the Gates were returning to Illinois, police obtained a search warrant for the couple's home and car. On May 7, when the couple returned home, police conducted the search and found 350 pounds of alleged marijuana in the trunk of their car and more in the house, along with weapons, ammunition and drug paraphernalia. The couple was indicted on drug charges.

But before their trial an Illinois judge, in a ruling subsequently affirmed by the state's supreme court, ruled that the search warrant had been invalid because it was based on an anonymous letter. Under the exclusionary rule, all the evidence seized from the couple's car and home was declared inadmissible at trial. Illinois appealed to the U.S. Supreme Court.

If the Supreme Court upholds the "good faith" exception to the rule sought yesterday, the evidence could be admitted because the police thought that they had a valid warrant.

"There is no evidence that the police acted in a willful, negligent way," Biebel told the justices. "Their action can only be characterized as thorough and professional . . . . This is clearly not the kind of police activity the exclusionary rule was meant to deter."

His argument was supported on behalf of the Reagan administration by Solicitor General Rex E. Lee.

"On the cost side," Lee said, "highly relevant and probative evidence" was excluded, damaging the "judicial integrity" of the legal process. "On the benefit side, it is difficult to see anything that would be deterred. The police obtained the warrant . . . . They did what they should have done."

No one argued yesterday that the police had done anything wrong. This is why criminal law experts viewed the case as the perfect test of the exclusionary rule, first enunciated by the court in 1914.

The problem, it was conceded, was with the magistrate who issued the warrant based on the anonymous letter. The Fourth Amendment to the Constitution says that "no warrants shall issue, but upon probable cause" for believing that they will produce evidence of a crime.

Justice Sandra D. O'Connor, whose vote is crucial for opponents of the exclusionary rule, asked how could the courts then deter "improper or even flagrant decisions by magistrates?"

"Under your view," she told Lee, "that would be perfectly all right."

"Not perfectly . . . ," Lee started to say before being interrupted by O'Connor.

"Perhaps there is a secondary motive [for the exclusionary rule]," she said. "Perhaps it's to make sure" that the government as a whole, and not just the police, "doesn't engage in misconduct."

Justice John Paul Stevens picked up the theme.

"How do you deter magistrates," he wanted to know. "Are you saying it's all right for magistrates to issue warrants on less than probable cause?"

The Gates' lawyer, James W. Reilley, also addressed this issue. Application of a good-faith exception in this case, he warned, "will immunize the warrant process" from review by courts. Reilley added that it would "establish a lesser standard for warrants" than the Constitution requires.

Reilley avoided the merits of the case almost entirely yesterday, while appealing to the Burger's court's sympathy for states' rights. He told the justices that the Illinois courts based their decision on state law and state court rulings and that the Supreme Court should not even be reviewing it.

While procedural, this argument has proven effective in other cases in attracting votes from conservatives.

Yesterday was the second time the court has heard *Illinois vs. Gates*. In the first oral argument, in October, the "good-faith" exception was not an issue. The court specifically asked to have the case reargued on that point. This was an unusual action that required five votes and signaled the likelihood of a favorable ruling from a majority of the justices.

Estelle says working with youth answer to rising prison population

By DAN HILL
Staff Writer

Texas Department of Corrections Director W.J. Estelle challenged a crowd gathered at the monthly Chamber of Commerce First Friday luncheon, to "do something" about the rising prison population, by working with young people in their own community to keep them out of the criminal justice system.

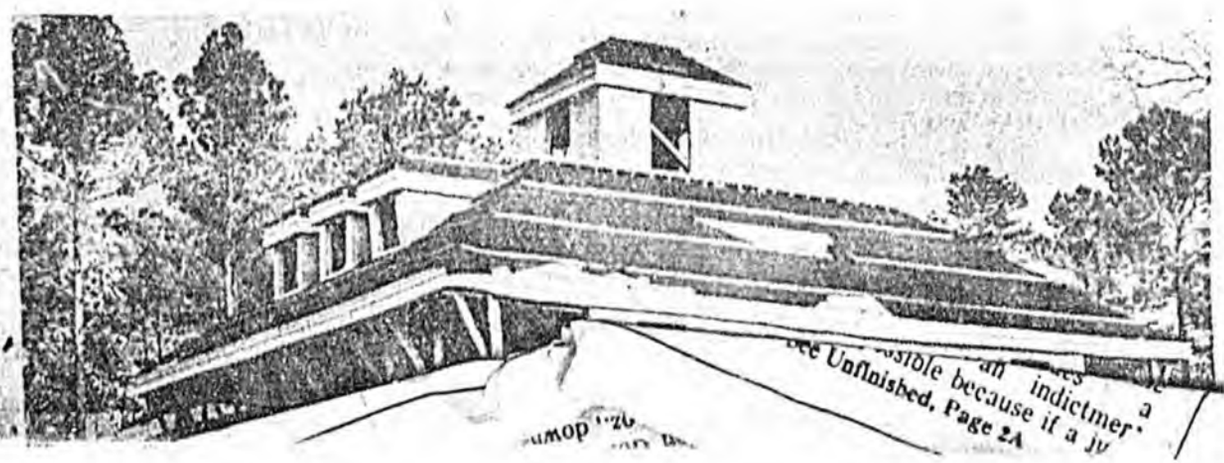
"We've all got to stop and re-evaluate our priorities," Estelle said. "They don't just turn 18 years old, and suddenly turn criminal, they grow up that way."

Estelle said it was every individual's responsibility to take care of the children in his own home and community, and take enough interest in them to let them know that there are alternatives to crime.

"You and I have taken that interest in our own children, most of us have anyway, but there are many others who have not, and that's why our prisons are full," Estelle said.

Estelle added that working on the problem of keeping individuals out of trouble is something that's going to take a lot of work.

"The real heroes in the criminal justice system are those who are spending their valuable time working with troubled youth, and even bigger heroes are those that totally get involved with our young people before they get in trouble, giving them something wholesome to do, to keep them out of trouble in the first place."



Estelle said that the time has come for action and for a commitment to the children and youth, and that it had to start on the neighborhood and community level.

"We've got to come to the understanding that we've got to solve the problem ourselves, and you can start by controlling what goes on within a one-mile radius of where you work and live," he said.

Estelle said that everyone understands that you have to pay taxes to have good schools, and he

abortion," Taylor said.

"Some people (in Planned Parenthood) are very well-meaning," Martin said, and do not know Planned Parenthood includes abortions in their counseling.

Taylor said Planned Parenthood does not actually perform abortions but provides "referral listings of places they can have it done."

The organization will recommend to the woman that she not have an abortion after the first trimester of pregnancy, Taylor said.

Planned Parenthood serves a need in Angelina County, Prince said. About 3,800 people in the county received services from it last year.

"We'll have to make a decision that is best for the majority. We can't satisfy everybody," he added.

Planned Parenthood in Lufkin will receive $2,500 from United Way this year, according to Prince, less than one percent of the $285,000 distributed by United Way in the county, That is about two percent of Planned Parenthood's total budget.

The Right to Life board is trying to incorporate for two reasons. Members want to become a tax-exempt charitable organization and to be more credible. "In the eyes of the public, you're more credible if you have an organization with structure," Martin said.

Right to Life also plans to form a political action committee. During elections the committee will publish a list of candidates and their positions on abortion, Martin said.

Eventually, the board would like to provide a counseling service for women on abortion alternatives. "If you take a stand against something, you have to provide viable options," Martin said.

Until then, they will work closely with Birthright, a national counseling service with an office in Nacogdoches.

Mrs. Karen Castillo, director of Birthright there, said the service provides counseling on alternatives such as adoption and maternity homes.

Birthright is not church-

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF PUBLIC SAFETY
OFFICE OF THE COMMISSIONER

POUCH N
JUNEAU, ALASKA 99811
PHONE: 465-4322

March 9, 1983

The Honorable Charlie Bussell
Chairman
House Judiciary Committee
Pouch V
Juneau, AK 99811

Dear Representative Bussell:

During your hearing last Friday on Cleary vs. Bierne, you asked Deputy Fire Marshal Gordon Brunton to clarify the fire protection requirements for correctional facilities with Mr. Roger Endell, Director, Division of Corrections.

State fire safety regulations require an automatic fire extinguishing system throughout a facility in which the personal liberties of the occupants are restrained. Mr. Brunton advises that either a water sprinkler system or an approved halon system is acceptable.

I hope this satisfies your concern. Mr. Brunton advised me that Mr. Endell is going to explore the feasibility of each system.

Sincerely,

Robert J. Sundberg
Commissioner

CRIME: punishment vs. prevention

Crime wins hands down as the political issue most likely to appear in every campaign. The anti-crime bandwagon is one nearly every candidate is ready to ride—waving slogans and solutions: capital punishment, tougher laws, stiffer penalties, more police, more jails, and more money.

Alaskan candidates were no exception this fall. They called for stronger anti-crime measures, although six new jails are in the works for Anchorage and the state's new criminal code is putting people behind bars at an extraordinary rate.

More jails and police may make the populace sleep a little sounder, but those who study crime, criminals and the justice system seem to agree that although these measures will cost a lot of money, they won't work.

"What we need to look at is alternatives to the use of law," said John Angell, director of Justice Center at the University of Alaska, Anchorage. "The only thing the law can do is administer retribution, and retribution doesn't seem very effective.

"We appear to be dealing with crime and corrections using the common sense of people who have not studied the problem, and the result is public policy that is not consistent with research findings on how to deal with the problem.

"The common sense solution to crime may be to build more prisons so you can lock more people up for longer periods of time, but it's the common sense of people who haven't studied the problem.

"Common sense, for example, tells you that conspicuous police patrols will control crime. It was tried and studied and it didn't change the incidence of crime," said Angell.

"We know that increasing the harshness of the criminal code will increase prison populations, but there has never been any research to show that tougher laws lead to a decrease in crime rates."

After Alaska's new criminal code was developed, modified by the legislature, and enacted in 1980, the prison population grew 28.3 percent in one year—the highest jump in the nation next to Mississippi's (28.8 percent).

"Alaska may soon be leading the pack in the proportion of its citizens behind bars, but that doesn't mean there will be less crime," Angell said.

Roger Endell, corrections specialist at the Justice Center, concurred. "Crime prevention strategy is the only strategy that makes sense in the light of what we now know.

"In Anchorage there are many calls for increasing the number of police officers: more police, more arrests, more people in the justice system, more people in jail. But we don't hear the question, *What do we get for all this?* Public policy should be newsworthy. We ought to be looking at the why.

"The policy decisions that are made are not always consistent with the recommendations of professionals and the best information we have on what is effective.

"Instead, society tends to fund projects and then, after the fact, try to evaluate the results. We need to design the evaluation into our justice projects. Funds should be provided to evaluate the effect of the public policy before it is put into effect.

"The legislature adopted a new criminal code that has resulted in the jailing of many more people, which is very costly, but it doesn't mean we now have a society. The probable impact of the code wasn't studied before it was adopted," said Endell.

Angell pointed out that justice-related policies are often formulated from recommendations of citizen's crime commissions that are popular in most cities and states.

"No one would think of appointing a citizen's committee of non-engineers to figure out how to get to the moon, and the problems associated with crime are infinitely more complex," he said.

"Unfortunately, people recognize the value of research for technology, but there seems to be no strong feeling that we should put money into research related to social problems. In the justice area, people are willing to spend money for things they can see, like police and jails, but not for understanding the problem.

"Politicians have made putting more police on the street a priority issue, although it's never been shown that this will cut crime. And there is no evidence that enacting the death penalty reduces violent crime. The homicide rate in North Carolina went up after the death penalty was imposed. It may be that the death penalty in some way legitimizes the violence by formalizing the punishment that will be inflicted."

The popular anti-crime measures often advocated in public will have no effect on that half of all criminal acts which are never reported to authorities. They are also unlikey to affect the "white collar" crimes committed by people of a higher socio-economic status than the majority of people who end up in jail.

"Punative laws have the largest impact with people who have something to loose—status, reputation, money—and there are many people who don't have these things," Endell said.

"We have to get away from the punishment model, because research clearly indicates that punishment has no effect on the crime rate."

If common sense and punishment don't work, how can we have a safer society?

The first step advocated at the Justice Center was meeting the need to obtain a clear picture of what crimes are being committed, where, when and by whom. The second was the urgent need to develop alternatives to the punishment model, and the third was to improve what happens to people who are put in jail.

"One thing we're aware of is the need for a statewide system for collecting adequate data," Angell said. "People talk about rising crime rates, but we really don't know if life in Alaska is more hazardous today. We need to improve our record keeping system. And because 50 percent of all crimes are unreported, we need to carry out vicitimization studies."

Rather than counting the number of known crimes, vicitimization studies are

designed to find out how many people have been the victim of a criminal act.

The major source of data used to measure the trend and distribution of crime in the state is the Uniform Crime Reporting (UCR) Program. Data is collected by law enforcement agencies as crimes are reported. Seven offense categories representing the most common local problems, are defined as Crime Index Offenses: murder, forcible rape, robbery and aggravated assault make up the violent crimes; burglary, larceny-theft and motor vehicle theft make up the property crimes. They are serious because of their nature and the frequency with which they occur.

The UCR program was established in 1930 by the International Association of Chiefs of Police to provide crime statistics through which the nature and scope of the nation's crime problem could be understood. The Federal Bureau of Investigation took over the responsibility of receiving, tabulating and publishing the crime statistics, which are voluntarily submitted by police agencies. They are published each year as *Crime in the United States*.

There are several problems with the UCR program, according to *Crime in Alaska*, the state report prepared by the Office of Justice Assistance of the state Department of Law.

"The population bases which are used in computing crime rates are sometimes only estimates. This is especially true in non-census years. Also, crime may be either undiscovered and therefore unreported, or, as recent victimization surveys have indicated, unreported even though discovered.

"Despite these problems, UCR statistics do represent the basis for public awareness of crime and are the major source for a statistical understanding of the national crime problem. It is more reasonable to improve the existing program than to scrap it in favor of a new collection system which might prove more fallible," the report states.

A basic measurement in crime statistics is the crime index rate, defined as the number of incidents per 100,000 inhabitants. Because it relates the incidence of crime to the total population, it provides a means of comparing current and historical data for the state and allows Alaskan statistics to be compared with nationwide data.

During 1981, the Crime Index rate for Alaska was 5,949 per 100,000 persons, which represented a one half percent increase over the 5,918 rate for 1980 and was slightly higher than the nationwide rate.

"It is important to understand how statistics are accumulated and what they represent," Endell said. In Alaska, the incidence of violent crime seems to be disproportionately high in smaller communities, but is underreported. Non-violent crimes, white-collar crimes and corporate crimes are also likely to be unknown.

It is important to realize that crime statistics can be manipulated by changing the way things are classified," Endell said. "In Oakland, there was a very high burglary rate, which included all parking meter break-ins. Removing parking meter break-ins from the burglary catagory resulted in a two-thirds drop in the burglary rate in one year."

Endell said that in another city, the crime statistics showed a large drop in the number of drug-related offenses in one year. A law enforcement official was called to Washington to be commended for this success in combating crime. However, it was actually caused by a money-saving cutback in the number of law enforcement agency clerks, which reduced the quality of record keeping and resulted in the apparent victory in the war against crime.

Endell described our current corrections system as an economic drain which has done little more than create warehouses of crime.

"One-half to two-thirds of the prison population is receiving far more custody than required, and the greater the degree of custody, the greater the cost," he said. "We need to look at alternative programs and facilities."

He said the concept of requiring offenders to make restitution for their crimes is a reasonable one that should be politically appealing.

"We could institute programs through which non-violent inmates earn their way out of prison by working at public service jobs, such as construction of public projects in rural areas; or through employment in prison industries. The state has an obligation to provide inmates with legitimate work opportunities for which a legitimate wage is paid."

Under a restitution program, a person found guilty of a crime would be evaluated in terms of the threat he or she posed to society, and an evaluation would be made of the monetary restitution appropriate for the crime committed.

The criminal code would include a provision under which the court could choose to order restitution and the inmate would be assigned to work through which he or she could earn an eventual release from custody.

"We need to shift our focus from catching and convicting criminals to preventing criminal behavior," Endell said. "But we also need to improve what we're doing in corrections. It's a question of whether a person comes out of jail better or more bitter."

Another development which may lead to more effective policies is the bio-environmental approach to understanding and control of criminal behavior. Bio-environmental criminology uses genetics, biochemistry, psychology and sociology to explore questions about the early detection of deviancy and the environmental aspects of crime.

"There is no one cure all for the problem of crime, but there is no magic in time-only punishment either," Endell said.

It may be impossible to have a society that is completely free of fear, but our justice system seems to hold much room for improvement in the effort to reduce both crime, and the fear of crime.

At the Justice Center, this kind of understanding and impact is the goal.

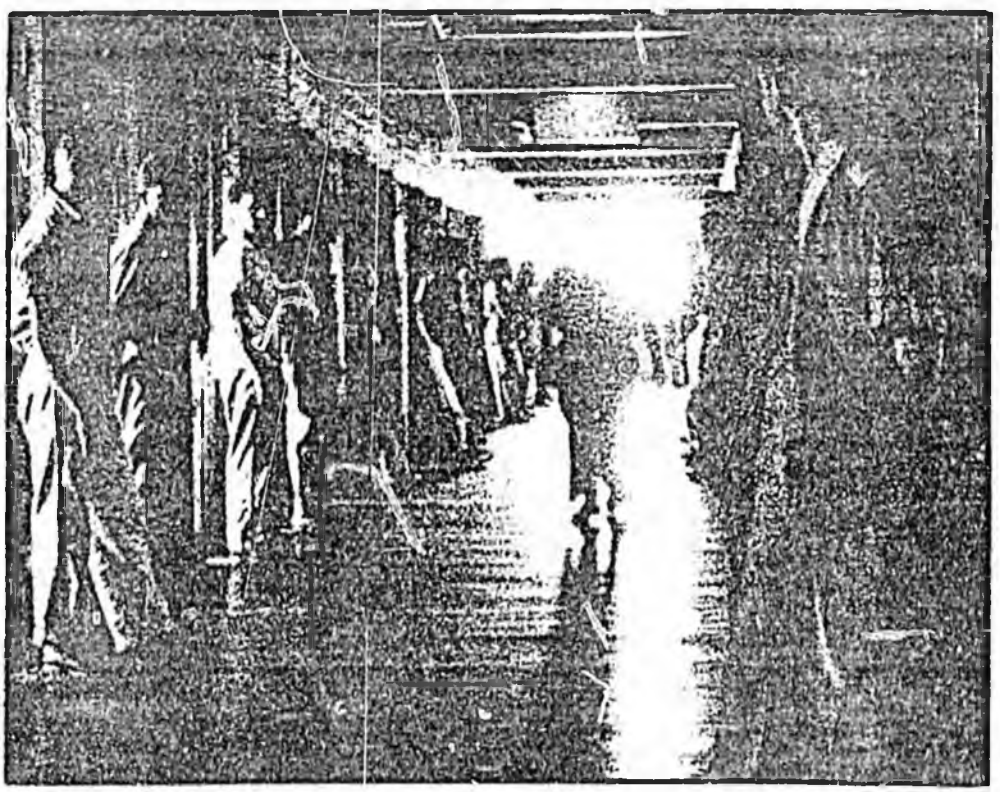
Overcrowding Forces States to Re-Examine Sentencing Philosophy

Keeping the Lid on Prisons

By David Rash
National Law Journal Staff Reporter



THE ENTHUSIASM of state lawmakers for a tougher response to crime is beginning to be tempered by the cold, hard fact that prison beds are a scarce commodity.

In a handful of states, the lack of space for prisoners has already caused legislators to change their minds about who should go to prison and how long they should stay there.

And, in some states, lawmakers are having these decisions made for them. At the end of last year, 31 states were under court order to reduce overcrowding and, in instances where a state has been slow to respond to judicial pressure, judges have even ordered the early release of prisoners.

Even in the states that are willing to bite the bullet and construct more prisons — and many are — the overcrowding problem is frequently so massive that the new supply of beds cannot keep up with the demand. In fact, a report prepared for the National Institute of Justice estimates that, at a cost of $32,000 to $40,000 per

and prisons that are horrendously overcrowded — and getting more so all the time — have begun to alter their thinking about who should be imprisoned, and for how long.

"What appears to be happening is that people who work in the [corrections] system are realizing that prisons are a scarce resource," said Deborah Jackson of Abt Associates, a consulting firm based in Cambridge, Mass., which is studying prison overcrowding for the National Institute of Justice, a federal agency. "It is very expensive to incarcerate people and very expensive to build prisons," she added. "Ten or 15 years ago, I don't think that was widely accepted."

"There are states where they are really beginning to look at what they are doing" with regard to incarceration policies, particularly "states that can't afford to keep on building [prisons]," echoed Gerald Kaufman, head of the Prison Overcrowding Project. The project, based in Philadelphia, is working with "decision-makers" in four states to develop strategies for controlling prison population size.

Ideally, taking into account the availability of prison beds may not be the best way to decide who goes to prison and how long they stay there, but it is a practical, rational approach to the overcrowding problem, said Diane Steelman of the National Council on Crime and Delinquency.

Those states that are giving serious consideration to overcrowding when setting criminal justice policies — and they are in the minority — have responded to the problem in a variety of ways.

A few of them are attacking the problem head-on, either by deciding to send fewer offenders to prison or by reducing their sentences. Others have decided to push prisoners out "the back door" — release them earlier

but it is a practical approach to the problem.

legislators have focused their attention on releasing prisoners sooner to relieve congestion. The state has adopted a systematic plan for the early parole of non-dangerous prisoners when the inmate population reaches capacity.

Not all states, however, have pulled back from the idea of "getting tough" on crime after considering the costs involved. In Pennsylvania, Gov. Richard Thornburgh simultaneously proposed mandatory minimum sentences and appropriation of $102 million for new prison construction. The legislature approved both plans.

Following is a closer look at what some of these states have done — or not done — because of prison overcrowding.

South Carolina

When South Carolina legislators proposed stiffer penalties for habitual criminal offenders, including a mandatory life sentence for anyone convicted of three property offenses, they gave minimal consideration to the effect longer prison terms would have on the state's miserably overcrowded prison system, which is currently at 140 percent of capacity.

But William D. Leeke, commissioner of the state Department of Corrections, made it impossible for the legislators to ignore the bill's potential impact. His staff developed data which demonstrated that, if employed to the maximum extent possible, the proposed longer sentences would create a demand for as many as 3,748 new prison beds by 1998.

Considering construction costs of $40,000 per bed and $5,000 in annual operating costs for each prisoner, the total bill through 1998 could be as much as $387.1 million, corrections officials estimated.

The legislators ultimately passed a property offenders — to receive prison sentences.

The emphasis on violent crimes made the guidelines "very easy to sell politically," said Ms. Knapp, and they were approved by the legislature in 1980.

Michigan

In 1978, Michigan voters approved a referendum abolishing the accumulation of "good time" — reduction of sentences for good behavior — for prisoners convicted of a felony. This measure, combined with the voters' rejection of a proposal to raise the state income tax to build more prisons, was a major contributor to prison overcrowding. That situation, in turn, led to passage of the Prison Overcrowding Emergency Powers Act.

The law, which took effect in January 1981, provides a mechanism for reducing the inmate population whenever it exceeds the state prison system's design capacity of 13,047 for 30 consecutive days.

When state prison officials inform the governor that this has occurred the governor "triggers" the emergency powers act and orders the officials to subtract 90 days from the minimum sentence of all inmates convicted of non-violent offenses.

This creates a pool of prisoners who are eligible for parole sooner than expected. But the prisoners' records are still scrutinized by the parole board, and only those who meet the board's qualifications are released.

The net effect is that prisoners who would have been paroled anyway are released up to 90 days ahead of time, said state corrections commission spokesman Calvin Goddard. "If you are not eligible for parole, you are not going to get out," he said. "That is the safeguard as far as the community is concerned."

that many plus an additional 500 to relieve present overcrowding, according to Mr. Miller.

Mr. Blumstein, a professor at Carnegie-Mellon University in Pittsburgh who once taught Mr. Miller, said Pennsylvania initially considered mandating minimum sentences for a broader range of offenses but decided that would be too expensive. "I think it would be irresponsible not to [make such calculations] at a time when prisons are overflowing," he said.

* * *

That, however, is precisely what most states have been doing. And Mr. Blumstein, along with many other corrections experts, believes that will continue to be the rule rather than the exception.

The prison overcrowding problem, according to these experts, should be prodding state officials into a fundamental rethinking of their criminal justice systems, but that is unlikely to happen.

At best, more states are going to adopt the "Michigan plan" for their own use, which will ease overcrowding without addressing the underlying causes. "We are going to see more and more relief valves," said Allen F. Breed, director of the National Institute of Corrections, a prison reform group based in Washington.

Mr. Breed also predicts a "rebirth of parole" in states that have abolished the practice or curbed it by instituting mandatory sentences. Most experts, however, expect the well-established trend toward tough, mandatory sentences to continue.

"The pressure on the states to continue as they are, because of the popularity of the political position [of being tough on crime] is enormous," Ms. Steelman said. "I think very often the pressure will be [on legislators] to say: 'This will cost a lot down the pike. We will get to that later.' "

Can Early Release Plans Keep the Lid on Prison?

Continued from page 1

new prison bed, between $8 billion and $10 billion in new prison construction is needed merely to meet the current demand for space in state and federal institutions.

And the space problem is getting worse. According to the latest federal Bureau of Justice Statistics data, the nation's prison population this year is growing at an annual rate of 14.3 percent, the biggest spurt ever. A major contributor to this population explosion, according to the bureau, is the abolishment of parole in four states, and the implementation in a number of states of mandatory and determinate sentencing laws.

These laws have generally been passed without an analysis of their impact on a state's prison population, according to corrections experts. Instead, legislators are merely pushing more people into state prisons — and making sure they stay there longer — without providing state corrections officials with the funding they need to absorb the flood of new arrivals.

The result, noted one prison reformer, has been "more and more bodies and less and less space."

A Change in Thinking

"Pushing tougher sentences can be viewed as the legislative version of the free lunch," said Alfred Blumstein, an expert in prison demographics and chairman of the Pennsylvania Commission on Crime and Delinquency.

Recently, however, some states faced with the twin problems of recession-induced fiscal restraints and prisons that are [illegible] than their sentences would normally permit.

State officials in some states have gone on record in favor of alternatives to incarceration.

Earlier this year, Georgia Gov. George Busbee wrote a letter to state judges asking them to consider alternatives to incarceration, such as victim restitution and "intensive probation," for non-violent offenders. And in Nevada, which claims the highest incarceration rate of any state, some legislators' support for alternatives was spurred by the State Department of Prisons' request for $70 million in new prison construction.

Similarly, in South Carolina, legislators decided against passing a tougher sentencing law after learning they would need to undertake an exorbitantly expensive prison construction program to accommodate the growth in inmate population that would result.

Utilizing a unique approach, Minnesota has altered its sentencing guidelines with an eye toward the available number of prison beds. The guidelines are designed to reduce the prison population slightly.

And in Michigan, where the state prison system has been found to be unconstitutionally overcrowded, the "watered-down version" of the bill earlier this year that has had little impact on the state prison population, according to state officials.

"We weren't arguing that the legislature shouldn't incarcerate [habitual offenders] for long periods of time," said Mr. Leeke. "Our argument was: where are you going to put these people? . . . Don't put an impossible burden on the corrections system until you know you can pay for it."

Minnesota

When the Minnesota legislature established a Sentencing Guidelines Commission in 1978, it asked the commission to take current "correctional resources" into consideration when developing new guidelines. The commission staff, interpreting this broadly, responded by proposing guidelines that were designed so that the average projected prison population would be 95 percent of capacity.

The result, according to Mr. Blumstein, is "a very good illustration of establishing a sentencing policy that tries to be responsible in terms of its impact."

The commission also sought to give less weight to an offender's past crime's than the earlier sentencing guidelines. Previously, property offenders with moderate criminal histories were likely to receive prison sentences, but first offenders, even if convicted of "a fairly serious crime," were rarely sent to prison, said Kay A. Knapp, commission director.

Consequently, the new guidelines call for a greater proportion of violent offenders — and a lesser number of

Taking into account the availability of prison beds may not be the best way to decide who goes to prison and how long they stay there, but it is

A "prison overcrowding emergency" has been declared three times since the law was passed, enabling the early release of about 2,300 inmates.

Four other states — Connecticut, Georgia, Iowa and New Jersey — have adopted similar laws, according to the National Institute of Corrections.

The so-called Michigan plan, said Ms. Steelman, "is terrific. I wish all these states would adopt it. What they have done is provide a rational and orderly way to deal with prison overcrowding."

Even when states have the money for prison construction, it takes four or five years to build a prison, she said. In the meantime, "the only logical way to deal with excess people is to let them out."

Pennsylvania

Governor Thornburgh, a former U.S. attorney in Pittsburgh, has earned a reputation for being tough on crime. So it was no surprise when he pushed the legislature to pass a tough new mandatory sentencing law that calls for a minimum of five years' imprisonment for those who are repeat violent offenders, those who commit violent crimes on public transportation and those who commit violent crimes with a firearm.

But, unlike most politicians, Mr. Thornburgh also asked for $102 million for new prison construction to handle the expanded inmate population the tougher sentences are expected to produce.

"We knew if we were going to put people away, we had to know where we were going to put them" said Harold D. Miller, an aide to the governor who helped develop the new corrections program. The state, estimating that the new sentencing laws will create a demand for a minimum of 1,880 new beds, has decided to build that many plus an additional 500 to

State given time to reduce jail crowding

ANCHORAGE (AP) — The state has been given more time to reduce the inmate population of the crowded Sixth Avenue jail.

Superior Court Judge Victor Carlson said Friday he is convinced "the executive branch of government, at its highest levels, is making an effort to deal with the problem."

Carlson cited recent legislative approval of a request from Gov. Jay Hammond to add 70 new prison guards to the state system.

Assistant Attorney General Mike Stark asked for additional time to complete the hiring and training of a staff for the recently renovated 45-bed wing at Post Six, known formerly as the Ridgeview Correctional Center.

The wing is to be used to handle the overflow from the Sixth Avenue facility where the population fluctuates between 120 and 150, although the design capacity of the jail is 100.

A pre-trial detention center is under construction on Post Road, just east of the downtown area, and is expected to be completed by December. Until then, prisoners awaiting trial will continue to be mixed with convicted prisoners.

Tim Stearns, an attorney for a group of inmates who sued the state in 1977 over jail conditions, objected to the 30-day extension granted by Carlson.

"If corrections had wished to comply with the court order, it would have been complied with by now," Stearns said. "I don't think a delay in moving the people from Sixth Avenue is going to help that institution or the other institutions."

While Carlson gave the state until March 15 to get the Sixth Avenue population down to 100, he ordered an April 12 court appearance to prove that the state has complied with a 1979 order mandating general improvements at the jail.

Among other things, prisoners complain about cold food, a lack of linens and toiletries, and having to sleep on the floor without mattresses.

Court upholds 'emergency aid doctrine'

Associated Press

The state Court of Appeals has ruled that police acting in response to an immediate life-saving emergency legally can enter a private home without permission and gather incriminating evidence without a warrant.

The court issued that decision Thursday in upholding the conviction of David Gallmeyer of Wrangell on a charge of being a felon in possession of a firearm.

Police were called to the Gallmeyer home on April 12, 1978, by his wife, Linda. She told them by telephone that her husband had pushed her out of the house after a fight, and she asked their help in getting her 15-month-old baby out of the house.

While officers were en route, Gallmeyer placed the baby on the porch. When they arrived, Mrs. Gallmeyer told them her husband was intoxicated and had several guns in the house.

One of the responding officers decided he should talk with Gallmeyer to make certain he was calm before any attempt was made to remove the baby.

The officer called to Gallmeyer, then entered the home without permission. Once inside, he saw that Gallmeyer had a gun stuck in the waistband of his trousers. He grabbed it, and Gallmeyer was charged with being in possession of a firearm while intoxicated.

Police subsequently discovered that Gallmeyer was a convicted felon, and he was charged with and convicted of being a felon in possession of a firearm.

In upholding the conviction, the Court of Appeals said the "emergency aid doctrine" justified the warrantless entry of the home because police held a reasonable belief that a life-threatening emergency existed.

Overcrowded Sixth Avenue Jail hits deadline today

By SHEILA TOOMEY
Daily News reporter

A court-ordered deadline for reduction of the population at the overcrowded Sixth Avenue Jail expires today and a Superior Court Judge is expected to rule this afternoon on a state request that the deadline be extended to March 15.

Dec. 17, Judge Victor Carlson found the state in contempt of a 1979 court order and gave corrections officials 60 days to reduce the number of prisoners at Sixth Avenue to no more than 100. The jail population Thursday was 140, but was expected to fall to the high 120's today due to scheduled releases, according to Superintendent Russ Moody. An additional 45 pre-trial prisoners are being houseing in a wing at Post Six (formerly Ridgeview(, he said.

Prisoner affadavits filed in Superior Court Thursday, in preparation for today's hearing, complain of inadequate sanitary facilities, a lack of towels and sheets and inmates being forced to sleep on the floor because of a bed shortage.

The Legislature approved the hiring of 70 new corrections officiers last week, according to Assistant Attorney General Mike Stark. The requested deadline extension will give the Division of Corrections enough time to hire and train the personnel needed to staff another 45 beds at Post Six by March 15, Stark said. Moddy plans to transfer inmates with low security classifications to the Post Six facility as soon as it is staffed, he said.

Today's hearing is the altest in a battle that began in 1977 when a group of prisoners filed suit against the state demanding that prison conditions be improved. In 1979, Judge James Singleton ordered seven pages worth of improvements including areas such as food, medical care, clothing, exercise, plumbing, bedding, censorship of outgoing mail and telephone access. "With the aparent exception of mail censorship, defendants continue to be in violation of the above provisions of (Judge Singleton's) order," charged lawyer Tim Stearns, who represents the inmates.

The Sixth Avenue Jail houses arrested men awaiting trail and some convicted felons awaiting sentencing. The building is old, with poor plumbing and a faulty heating system. It consists mostly of dormitories holding up to 32 prisoners each. "We are overcrowded and understaffed," Moody said Thursday. "All things considered, and by comparison to any other institution like ours, I think we're doing very good.

Stearns charged that most of the violations at sixth avenue ar enot directly related to overcrowding.

Anchorage Times

Court to study jail conditions

Overcrowding at Anchorage's Sixth Avenue jail is scheduled to come under court scrutiny again today when the state asks for more time to relieve the overcrowded conditions.

In December, Superior Court Judge Victor Carlson gave corrections officials 60 days to reduce number of prisoners at the jail to no more than 100. On Thursday, the jail population was about 140.

But state officials, who hired 70 new correctional officers last week, say they need an extension until March 15.

Carslon will hear arguments in the case this afternoon.

33 indictments of false native dental care

ANCHORAGE (AP) — A Delta Junction dentist has been indicted on 33 counts of fraud for allegedly cheating the government by submitting claims for care never provided natives in rural Alaska, U.S. Attorney Michael Spaan says.

The indictments against James Goodman, 32, were returned Wednesday.

According to Spaan, the dentist was under contract with the U.S. Public Health Service to provide the care.

Jail given another month to cut population

By SHEILA TOOMEY
Daily News reporter

State corrections officials won a one-month reprieve in Superior Court Friday when Judge Victor Carlson gave them until March 15 to reduce the prisoner population at the Sixth Avenue Jail to no more than 100 inmates.

Assistant Attorney General Mike Stark asked for the additional time to permit the hiring and training of guards for a new 45-bed wing at Post Six, formerly Ridgeview Correctional Center. The recently renovated wing is intended to house the overflow from the crowded Sixth Avenue Facility.

Noting recent legislative approval of a request from Gov Jay Hammond for 70 new prison guards, Carlson said he is convinced "the executive branch of government, at its highest levels, is making an effort to deal with the problem."

The inmate population at Sixth Avenue fluctuates between about 120 and 150 prisoners awaiting trials or sentencing. A new pre-trial jail is now under construction on Post Road, east of downtown. It is scheduled to open in December.

While he agreed to a 30-day extension, Carlson ordered the state to appear in court April 12 prepared to prove that it has complied with a 1979 court order mandating seven pages of general improvements in jail conditions. Carlson also ordered Sixth Avenue supervisor Russ Moody to report to him by Monday on the current availability of blankets, towels, sheets, toothbrushes and soap in the jail.

The judge instructed Moody to take the temperature of food served to inmates over the weekend in order to test inmate charges that jail food is usually served cold.

In December, Carlson gave the state until Feb. 19 to comply with the requirements of the 1979 court order.

Tim Stearns, an attorney representing a group of inmates who filed suit against the state in 1977, argued against any extension. "If corrections had wished to comply with the court order, it would have been complied with by now," Stearns said. "I don't think a delay in moving the people from Sixth Avenue is going to help that institution or the other institutions."

Stearns said he believes Moody's personal efforts to improve jail conditions are not being supported by his superiors. Affidavits from inmates, filed with the court Thursday, charge that prisoners often have to sleep on the floor without blankets or sheets. They also complain about the alleged lack of medical care and physical exercise.

Carlson agreed that he, too, was concerned about the possibly explosive situation in the overcrowded jail.

Assistant Attorney General Stalk called the complaints "a long recipe list," with some charges false, some exaggerated and some true."

Fairview halfway house approved

By LARRY CAMPBELL
Daily News reporter

Fairview residents turned out in force Monday night to argue against allowing a halfway house for recently discharged mental patients to be located in their neighborhood.

But the Anchorage Planning and Zoning Commission, by a 5-1 vote, approved a permit allowing the center to remain in operation.

Residents' comments — heavily weighted against what mental health experts call a "transitional living center" — came during a public hearing before the commission. The commission earlier had approved a permit for the facility, which has been operating in a limited capacity since November, but a technical gaff required the issue to be considered again.

Fairview Community Council officials and area residents said they feel the neighborhood's opinions were ignored. The hearing was held at the Fairview Community Center.

Gordon Glaser, president of the Fairview Community Council, told

See Back Page, FAIRVIEW

Fairview residents oppose halfway house, but permit is approved

Continued from Page A-1

commissioners the prior decision on the halfway house violated the neighborhood's sense of involvement with the planning and implementation of the project.

"Community involvement and fear in this community are linked," Glaser said.

Glaser emphasized the involvement of Fairview residents with other community programs such as S.T.A.R. (Stand Together Against Rape) and the AWAIC (Abused Women's Aide in Crisis) shelter. Both programs are located in the Fairview area.

"We are participating wholeheartedly in programs like these," Glaser said. But with the halfway house, "nobody seemed to bother to ask us."

Dr. Gary Vreeman, director of the Anchorage Community Mental Health Center, testified that the halfway house is needed, and that the Fairview area is an ideal location for the facility because it is located close to public transportation, shopping centers, recreational facilities and a Post Office.

Vreeman tried to allay fears expressed by some residents that the halfway house might bring patients with violent tendencies into the neighborhood.

"People with a mental illness are typically withdrawn," Vreeman said. "A center like this helps to make them feel they are not failures."

He said the center's screening procedures for accepting residents to the facility eliminates patients with histories of violence, sexual aberration or alcohol or drug abuse.

But most of the Fairview residents who spoke at the hearing were unconvinced.

"They never consulted us and we are bitterly against this halfway house," said Helen Mason, secretary of the community council. "This isn't a good place to be if you don't get community cooperation."

Mason also spoke of concerns felt by a number of residents that the Fairview area already was inundated with social service facilities, such as those mentioned by Glaser.

The halfway house was originally granted a permit in November to operate as a quasi-institutional facility designed to assist newly released mental patients from Alaska Psychiatric Institute and other mental institutions in re-entering society.

Residents receive basic training in housekeeping, cooking, shopping and other self-support skills. Eventually, halfway house residents who successfully complete the program will leave the center and live on their own.

Eight patients had already moved into the six-plex at 921 E. 10th Ave. when community residents appealed the commission's earlier permit approval. When it was learned that a malfunctioning tape recorder made it impossible to provide a verbatim transcript of the earlier proceeding, a new permit and hearing process was begun.

In the interim, the halfway house was prevented from accepting 10 more residents.

Overhaul of prisons advised

By HAL SPENCER
The Associated Press

JUNEAU — Gov. Bill Sheffield should create a separate department for Alaska's beleaguered prison system, build more jails including a maximum security prison and put prisoners to work, a task force said Monday.

The task force, headed by Roger Endell, a University of Alaska, Anchorage, professor, also recommended that the state launch alcohol and drug abuse programs in jails, keep a number of violent offenders in the Federal Bureau of Prisons system and close no existing correctional facilities, with the exception of the Anchorage Careage House, until replacement facilities are found.

The Careage House should be used as the Division of Corrections headquarters, the task force said.

The task force also recommended that jail construction be viewed as a high priority among all units of state government, that corrections be managed on a decentralized, regional basis and that corrections staff be well trained.

The recommendations were among 35 presented to the governor, who said the suggestions "will be highly valuable to the administration as we prepare the state budget and possible bills for introduction to the 1983 Legislature."

Sheffield appointed the panel in mid-December with instructions that it forge solutions to Alaska's growing corrections crisis — a crisis most evident in the state's overcrowded jails.

But Sheffield had no immediate reaction to the specific proposals, and his office said he would have none pending further study.

No cost figures were attached to the task force's recommendations. Independent work now being done by various state agencies will develop the potential costs of the recommendations, according to John Greely, Sheffield's deputy press secretary.

See Back Page, TASK

Task force recommends overhaul of state corrections system

Continued from Page A-1

"It is clear that there is a crisis in corrections," the task force said. "It is also clear that with sound, long-term and professional management, most of the current problems can and will be resolved."

The Division of Corrections, currently within the Department of Health and Social Services, should be elevated to cabinet-level status, the task force said.

Citing what it called a "crisis in correctional management," the panel said, "We have found unanimous agreement from virtually all persons interviewed, from all regions of the state, and from segments of the criminal justice system — police, courts, corrections, law — and from the citizen sector that departmental status is not only justified but necessary."

The task force said the department should be created in a "quick and clean" fashion through executive decree.

"The division has been managed by four different directors in the past six-year period," the panel said. "The most recent director as well as the current director were both hired by the previous administration to move the Division of Corrections toward a more stable management situation. Their task was made more difficult because of their lack of knowledge of the unique problems and potential advantages of Alaska corrections."

The Division of Corrections is currently headed by Robert Hatrak, who could not be reached for comment on the study Monday.

The panel also said a commissioner of corrections should be appointed as soon as possible. A deputy commissioner and four regional directors should be appointed by the commissioner, the task force said.

"In regard to the need for a maximum security facility in Alaska, the task force received clear and compelling testimony from state and local police, the court system" and others that the state needs such a facility.

The group also urged that "new site acquisitions, construction additions and building renovations be completed expeditiously as the highest priority through the channels of state government while minimizing both hindrances and costs."

The task force said the Department of Transportation and Public Facilities "should recognize prison construction as a high priority. Building supplies and prisoner labor should be used in building renovations and in the construction of non-secure buildings."

"The prisoner population should be put to work," the panel said.

The task force said corrections "must be given the resources to provide meaningful work opportunities for the offender population," listing as examples clearing land, rehabilitating streams and maintaining parks.

Recognizing that alcohol and drug abuse help to swell jail populations, the task force said the state, in cooperation with local governments, should provide prisoners with substance abuse programs. "There is a crucial need for a comprehensive approach to the problem of substance abuse," the panel said.

Staff Writer

Deciding there had been "adequate public dialogue" a state corrections official said he will recommend that the state sign an agreement with KILA Inc. to run a 56-bed halfway house near Ester.

Walt Jones, assistant director of corrections, made the announcement near the end of a KILA board of director's meeting which saw 42 Ester residents show up to express their concern over the facility. Although the halfway house has been occupied by 21 persons since Feb. 26 under an existing agreement with the state, a contract amendment has not yet been signed to take into account the expanded capacity.

Rep. Mike Davis, who listened to the meeting over a teleconference hookup, said he did not think a KILA board of directors meeting constituted an adequate public hearing.

He was surprised to learn that the facility has been occupied despite earlier objections by Ester residents.

Leaders of the Ester opposition meanwhile said they will continue to wage their fight against the halfway house. Mark Davis said this morning he's "almost positive" that residents will go to court.

"The people of Ester were denied due process."

Apologies notwithstanding, residents remained unsatisfied with the explanations of KILA board President John Link Thursday night. Explaining that he was out of town when the controversy surfaced, Link said, "From what I can reconstruct, I think we are all suffering from the disability of not knowing what's going on."

Link told the group that he never considered the halfway house part of Ester and he accepted blame for not talking with residents.

"We never for a minute thought the people of Ester would raise a fuss. Believe me, if we had, we would have been out at the community center. Whatever blame there is rests on my shoulders. You have our apology."

After presenting a brief history of KILA, w[illegible]h means "friendly spirit" in Inupi[illegible] Executive Director Frank Gold sat silently through most of the proceedings while Link and Jones were bombarded with questions.

Residents were told that security at the facility relies primarily on an

(See HOME, page 5)

HOME . . .

(Continued from page 1)

alarm system. Doors are wired to a central switchboard which lights if they are opened. Two teams of six supervisors each will work at the halfway house and at least two people will be awake at all times. The personnel will not, however, be responsible for restraining individuals. If someone leaves, state troopers will be called to apprehend them.

"Before we get excited about that, let me tell you the type of person lodged there is not the type who would go into a community, either Fairbanks or Ester and raise havoc," Link said.

Jones added that the prisoners are screened and only those posing the lowest risk possible will be considered.

"They have to show they can function in that environment. Everyone who is eligible doesn't go through a halfway house," Jones said.

Jones said that of 314 people who went through halfway houses during the past year, 265 completed the program successfully, that is, they didn't violate any rules which caused them to be sent back to jail.

Jones explained that those who fail the program usually commit infractions like drinking or returning late.

Armed with the contract between the state and KILA, residents asked who is ultimately responsible for the prisoners and any damage they might cause. A clause in the contract says the state is held harmless, but there was a difference of opinion whether that would hold up in court. Several members of the audience asked that the attorney general make a determination as to responsibility.

Link said during the meeting that KILA had spent $30,000 of its own funds getting the building opened. He indicated the mortgage came due Thursday and was now deliquent because the state contract hadn't been signed.

New prisons chief scraps Woronzof jail

By TOM KIZZIA
Daily News reporter

1/7/83

The new head of Alaska's prison system said Thursday he wants to set aside plans for a new prison at Point Woronzof and find a way to solve overcrowding problems without immediate construction of a new jail in Anchorage.

Roger Endell, a university professor and former Alaska corrections official, was named Thursday to replace Robert Hatrak as chief of corrections. A spokesman for Gov. Bill Sheffield said the change was made to bring "fresh ideas and fresh leaders" to the prison system.

The new approach was immediately evident. A plan outlined Thursday by Endell would do away with the proposed jail at Point Woronzof, west of Anchorage International Airport. Former Gov. Jay Hammond and Mayor Tony Knowles agreed last November to build a new prison there.

Endell's plan also would close the controversial Carriage House jail in the middle of a Tudor Road residential neighborhood. Endell said he wants to convert it to a Southcentral headquarters for corrections within weeks after he begins his job Monday.

As an alternative, Endell wants to purchase and remodel as jails existing facilities in the Matanuska-Susitna and Kenai Peninsula boroughs. He also wants to keep open the Ridgeview Correctional Center, which the Hammond administration had declared decrepit and wanted to close.

Endell said his plan would be a cheaper and quicker way to relieve overcrowding in Alaska's prisons. It also would do away with the long-standing problem of finding a new prison site in Anchorage.

The Point Woronzof site would require a lengthy permit process by the municipality and a costly extension of utilities, Endell said.

A likely alternative site appears to be a former missile base at Goose Bay, on the

Continued from Page A-1

north side of Knik Arm. Allen Korhonen, acting commissioner of the Department of Health and Social Services, said Thursday that corrections officials favored it as a site for a medium-security prison and planned to tour the base next week.

Other sites under discussion include the Wildwood Center in Kenai, a former radar base on Ohlson Mountain in Homer, and sites in Seward and Palmer.

Under the Hammond administration, corrections officials had argued that a medium-security prison was essential in Anchorage.

Medium-security prisons for 100 inmates at any two of the new locations possibly could be erected in a year, using modular materials, Endell said. These sites could also be used for maximum-security prisoners, according to Endell, who said the state may reconsider its earlier decision to build a single 300-bed prison for its biggest security risks.

Endell said he favored small regional facilities and said problems could develop if all the most difficult prisoners were housed together.

The need for minimum-security space in Anchorage can be met by keeping the Ridgeview and Third Avenue jails open, Endell said. The state had previously planned to close them after a new pretrial facility on Post Road opens sometime this spring.

Endell, who was head of a special Sheffield administration task force on corrections, is inheriting most of the same problems faced by Hatrak, who was on the job only nine months.

The task force report appeared to give more attention to concrete solutions to overcrowding than to rehabilitation programs. But it could be called only a moderate shift of emphasis from his predecessor's reliance on "community-based" programs such as halfway houses.

"He's a professional corrections administrator," Endell said of Hatrak, who was not criticized by name in the task force report. "A number of the problems in corrections he obviously inherited."

The task force was critical of the high turnover in corrections management. The next director, the task force said, should be someone already familiar with the state's jails.

The job description fits 42-year-old Endell well. A resident of the state for more than two decades, he served as assistant superintendent of the Juneau Correctional Center from 1971-73, the Third Avenue Jail in Anchorage from 1973-74, and the Eagle River Correctional Center from 1974-76.

He was most recently an associate professor of justice at the University of Alaska, Anchorage Justice Center. A Sheffield spokesman said Endell has written extensively about the penal systems in the Soviet Union and Finland.

The Endell task force recommended that corrections be removed from the Department of Health and Social Services and placed in a new Department of Corrections. Endell said Thursday he expected the new department would be created soon, with him as commissioner, but he was not sure whether it would be created by the legislature or by executive decree.

Let convicts do jobs for the city

Petty criminals may spend time behind a broom instead of behind bars under a promising state-municipal proposal that could spruce up the city while easing overcrowding in local jails. Still in the discussion stages, the proposal would put selected individuals convicted of misdemeanors to work sweeping bike trails, clearing roadside rubbish or even shelving library books instead of cooling their heels in already overcrowded jails.

Under the program, individuals convicted of such non-violent crimes as shoplifting, writing bad checks and littering could be assigned community service instead of jail time or a suspended sentence. Predetermined guidelines would screen out offenders inappropriate for the program, which could put up to 2,500 to work for the community at a cost of $150,000.

The local proposal dovetails appropriately with a report released Monday by the Governor's Task Force on Corrections. The report recommends community services opportunities as a method of acquiring eight-hour-a-day work habits and law-abiding skills. The report emphasizes the need for such programs now. We agree.

Although community service is not a new idea — the state Pretrail Intervention Program already coordinates community service projects with local non-profit agencies — the public works aspect of this proposal makes it especially attractive at a time of dwindling dollars and overcrowded prisons. It costs money to incarcerate a person; idle hours in overcrowded conditions do not make that money well spent.

Although a rough draft of the proposal is still a month off, we think this expanded local intervention program has merit — especially in light of the city's budget crunch and the state's jail crunch. If properly implemented, it's a program that could benefit the city — which is raising taxes to help fund basic capital projects maintenance — the jails, and even the petty offenders who could be channeled through the system in a productive, positive manner.

Welcome mat

NEW STATE JAILS and maybe a maximum security prison or two will be hot topics on the political scene during the coming legislative session. Let's hope the legislators will not overlook offers from communities that want this kind of business.

Seward, for one, has invited state officials to consider their port city as the site of a new jail or prison. For one thing, it would be good for the community's economy, bringing a new and steady payroll to town along with considerable construction dollars. For another, new detention facilities have to go *someplace*, and Seward would be fulfilling a civic duty by providing the site and the support required.

The Kenai Native Association has proposed converting the old Wildwood military station near Soldotna, which it now owns, into a minimum security prison. The Kenai Peninsula Borough gave it a strong endorsement and state officials, we're happy to say, apparently have responded favorably. Opposition, however, has surfaced in the form of an editorial in the Peninsula Clarion that took issue with Wildwood as a site. It said "putting a prison in the midst of a community is dubious public policy," and suggested better options should be available.

SEWARD AND KENAI are possibilities, obviously. And other smaller cities, looking for a steady addition to the local economic base, likewise might be receptive to the prospect of playing host to a state jail or prison.

But there still seems to be a lack of enthusiasm among those in the corrections system to give serious consideration to outlying areas.

The attention always seems to have been focused on Anchorage. Detention facilities here are more convenient for the lawyers, the judges, the convicts and the state employees in the system.

And if those are the primary criteria, it's no wonder there hasn't been much serious discussion of sites beyond the confines of urban and suburban Anchorage.

But with the stated interest from Seward and the Kenai Native Association, there is reason to think the prospect of finding new locations is not as gloom-and-doom as officials would have people believe.

IT HAS BEEN suggested that surplus pipeline camps be used and that's a worthy idea.

A former congressman from the East captured headlines earlier this year by proposing the use of an uninhabited Aleutian Island as a federal prison. That's not necessarily a hair-brained idea.

No matter what solution is found eventually, there's no doubt the problem will be a big ticket item for the new adminstration and the legislature to address. But it is not a problem that can't be solved — with enough thought (and probably a lot of dollars).

Oops

AN EDITORIAL in these columns the other day said nice things about Sen. Don Gilman's efforts to learn more about what's going on in Anchorage, since he now represents the south end of town even though he lives in Kenai.

The same opinion piece expressed the hope that Sen.-elect Paul Fischer of Kasilof, who represents the same district with Mr. Gilman, would follow suit.

Well, it turns out that Mr. Fischer was in attendance at the now-famous secret meeting this week when the municipality presented the mayor's $196-million "wish list" to area legislators.

The mix-up came because it was inaccurately reported that the Fischer who was present was Sen. Vic, not Sen. Paul. Whoever did the reporting got the two confused.

State may need to double space

3-4-83

Prisons said to be 'busting at seams'

By DAVID RAMSEUR
News-Miner Bureau

JUNEAU—Alaska may have to double its prison space to nearly 2,000 beds within four years at a cost of perhaps $130,000 a bed, if the state is to keep up with the skyrocketing number of persons convicted of crimes.

That's one of the findings of a newly released report by the research arm of the state House of Representatives.

The 60-page report says the state's prison population is expected to exceed 2,000 by 1987, compared to the current inmate population of nearly 1,300.

The current rate means that one out of every 400 Alaskans is in prison, which is significantly higher than the national average of one in every 600 persons.

Release of the report comes on the heels of considerable state activity on prison issues. Gov. Bill Sheffield recently proposed creating a separate state Department of Corrections.

His capital budget submitted to the Legislature calls for the construction of a new $45 million, 302-bed maximum security prison.

And lawmakers are considering a multitude of measures to tighten state criminal laws on everything from sexual assault to drunk driving. Many of those revisions will result in more inmates who would require additional prison space.

The House Research Agency report, authored by Betty Barton and Jon Sherwood, says the crime rate is partly responsible for the growing need for prisons.

In 1980, Alaska's crime rate was less than one percent lower than the national rate. In that year, Alaska ranked 14 among the states for its crime rate. Between 1980 and 1981, Alaska's violent crime rate—murder, assault, rape and robbery—increased 27 percent.

The report points to several reasons for that increase. Among them: an increase in the population of young adult males who are responsible for a large percentage of crime; poor economic conditions; and social problems such as alcohol abuse.

Other factors will affect a growing prison population in Alaska, says the study. One of the most important is a 1981 class action suit filed by an inmate which requires the state to relieve over-crowding and improve prison conditions.

The report outlines several courses state officials can take on corrections issues. Those include:

- Increasing prison bed space, which appears to be the most popular among the Sheffield administration and key legislators.
- Modifying state laws that determine who goes to prison and for how long.
- Strengthening prison management through reorganization.
- Improving communications and

(See PRISONS, page 5)

PRISONS . . .

(Continued from page 1)

decision-making in criminal justice agencies.

Some state officials, such as those in former Gov. Jay Hammond's think-tank agency, say building more prisons without looking at other problems is an incorrect solution to a skyrocketing prison population.

But "locking them up and throwing away the key" appears a popular notion with this Legislature and administration.

The report reaches no conclusions about the dilemma other than to suggest any answer will be costly.

"The rate of increase in prison populations—at least in the immediate future—is expected to grow," concludes the report.

"In light of this, it is becoming increasingly important that government become more efficient in its management of offender populations and its use of existing facilities."

More than $153 million is budgeted for this year for the administration of justice, an increase over 1982 of nearly 30 percent.

Sheffield has proposed an $83.9 million prison building program for next year which includes an 80-bed Fairbanks pre-trial facility and 32 additional beds for the youth wing in Fairbanks.

Prison staffing fortified

by Jeff Berliner 1/28/83
Times Writer

Fourteen new corrections staffers begin work at the Palmer prison today and 40 guards remain on mandatory overtime in the wake of two escapes last week.

An emergency situation continues at the prison, said superintendent Stanley Zaborac.

"Prison policies and procedures have been modified to limit the freedom of inmates to move from their living areas to other areas of the institution," Zaborac said today.

"Correctional officers are working 12-hour shifts and we're bringing people in on their days off," Zaborac said. Each guard is averaging one day of overtime per week, Zaborac said.

Zaborac has asked the legislature to declare the situation an emergency and approve a supplemental budget to pay for the 14 new staff members and overtime for the entire 54-person corrections staff.

Funding to complete a fence around the medium security wing of the prison also is in the request. One hundred of the prison's 242 inmates are in medium security. The minimum security section houses 142 prisoners. The prison is designed to hold 206 men.

Although all 14 people hired by Zaborac are termed temporary, he said he is seeking additional money to make them a permanent part of the staff.

The need for more staff is so critical, Zaborac said, that the new officers will receive an abbreviated training course: they'll complete 16 hours of classroom training today and then spend the weekend under the tutelage of experienced staff before being put on their own Monday.

Although the state of emergency continues at the prison, Zaborac said the facility is more secure than it has been in the past.

Five inmates escaped in two separate incidents. All five were recaptured and have been charged with escape.

Report on prisons deserves attention

No pricetag has been attached yet, but the ideas collected in a single report by a special task force on state prisons represent an apparent consensus on Alaska's corrections needs. Expect state policy to begin to coalesce around the major conclusions.

The major themes: construction of more jails and a maximum security prison; elevation of the Division of Corrections to department status; and creation of "meaningful work opportunities" for prisoners. Other important aims: establishing drug and alcohol abuse programs in Alaska prisons, decentralization and regionalization of prison administration, an end to persistent "crisis in correctional management," and greater stability at the head of the system.

There are weaknesses in the report -- chiefly the shorthanded consideration of alternatives to incarceration, in a state that imprisons more of its citizens than it can handle — but the conclusions and recommendations will be useful as Gov. Sheffield and the legislature begin coping with current stresses in the system. What's important about this effort is that it gives added currency to important ideas about prison management.

The most intriguing is the idea of putting prisoners to work — for both themselves and the society. Meaningful labor long has been the missing component in prisons whose stated aims included "rehabilitation." But rehabilitation is an elusive goal when enforced idleness — not to mention boredom, substance abuse, overcrowding and actual or potential violence — is the major fact of prison life. Assuming proper security safeguards can be arranged, prisoners put to work clearing land, rehabilitating streams or maintaining parks, to name a few tasks, could both spend their time usefully and repay their debt to society in a constructive way.

Substance abuse, too, deserves serious attention. It has become almost cliche for prison studies to point out the impact of alcohol and drug abuse on prison populations, and the overwhelming need for prisoners to cope with their compulsions before re-entering society. What the task force report accomplishes is to add that perspective to the public agenda — to encourage a response from the political system on what should be a mainstay of prison programs in Alaska.

In all, the task force has produced a useful report. The conclusions are neither startling nor revolutionary — but they deserve attention in Alaska's halls of power in the months and years to come.

March 26, 1983

ΨaΨ

Dear ΨsΨ:

Thank you for taking the time and effort to send a Public Opinion Message conveying your thoughts on HB 103.

As you know, this Bill passed from the House on a 40/0 vote as CSHB 103 Judiciary. A great deal of work by myself and the entire Judiciary staff resulted in the Bill as presently written.

It is my belief Roger Endell, with the oranization he is building, will be able to improve the operation of Adult Corrections to an acceptable level, as well as properly transfer Youth Corrections on July 1, 1983, as provided for in HB 103.

It is my further belief that the elevation of Youth Corrections to a Division status within the new Department of Corrections will enable that Division to continue its improvement, from the sad state of affairs it was in such a short time ago, joining properly to perform for the State its agency tasks in a manner and mode acceptable and desired by all.

Thank you again for taking the time to become involved with the Legislative process. Together we can make a differnce.

With best regards I remain,
Sincerely,

Representative Charlie Bussell
Chairman, Committee on Judiciary

Corrections director searches out site for prison

2/13/83

By RONNIE CHAPPELL
Daily News correspondent

☐ Native corporation optimistic state will pick Wildwood site. Story, Page B-2

KENAI — Corrections Director Roger Endell has crisscrossed the Kenai Peninsula since taking office earlier this year, making stops in Homer, Kenai and Seward. Next week, he returns to visit Nikiski.

The reason for all of this travel is simple. He's got 1,500 prisoners on his hands right now and there's space for only 900 in the state's existing prisons. He is looking for places to build new prisons, and he is looking for communities that want them.

According to Endell, there are two such communities on the Peninsula.

People in Seward are actively encouraging the state to build a new $40 million, 300-man maximum-security prison there. Endell said earlier this week that plans to develop a 220-man medium-security prison near Kenai have won the endorsement of the local City Council.

A decision on the maximum security prison — and where to put it — will be made by the legislature this year.

The state had planned to build the new facility near Palmer, but that changed late last year when the Seward City Council contacted the Division of Corrections.

Endell described Seward's business and government leadership as "outright enthusiastic" over the prospect of becoming the home of the state's first penitentiary. "They are in an excellent position to be a contender" for the prison, he said.

The medium-security prison would be developed at Wildwood, an old Air Force Base that is owned by the Kenai Native Association. The Native corporation has offered to lease a three-story, concrete barracks building, garage and gymnasium to the state.

Endell is enthusiastic about

See Page B-2, CORRECTIONS

Corrections director on a search for site for state prison

Continued from Page B-1

2/13/83

the Wildwood site. "It has the highest potential of any existing site" now being considered for use as a corrections facility, he said.

Once the state has completed its evaluation of the buildings offered by the Native corporation, Endell said he plans to move quickly to close negotiations on the acquisition.

"We're close to an agreement now," he said. "In the next couple of weeks we hope to sit down and finalize it."

According to Endell, the state is looking for a long-term lease with the option to purchase at a fixed price.

The Native corporation has offered to lease the state three buildings for 20 years for $600,000 a year. The corporation would like to retain title to the property, said corporation President George Miller, but is willing to consider a sale if the state insists.

The value of that transaction to the Native corporation could increase substantially in coming weeks as the state is now talking about acquring seven buildings instead of three, Miller said.

A movie theater, medical clinic, bowling alley and grocery store with ample cold storage space are all adjacent to the concrete barracks building that would form the heart of the new prison.

If the Native corporation and the state conclude an agreement later this month, the new prison could be up and running by early fall, Endell said.

A "nucleus staff" will be dispatched to Kenai immediately to oversee renovation of the physical plant, begin program development, establish contact with local businesses and begin the process of screening and hiring 40 to 70 new employees.

Endell estimated it will cost about $1 million to convert the old Air Force base into a prison. A sprinkler system will have to be installed in the barracks building. Wooden doors will be replaced with metal ones, and existing windows will be replaced with secure ones.

Control rooms and an electronic security system also will be installed.

The perimeter of the 10-acre prison will be surrounded by two security fences that are 20 feet apart. Both will be 18 feet high and topped with razor ribbon. An observation tower will be constructed on top of the three-story barracks building.

The proposed prison has not earned the support of everyone in the community. More than 250 Central Peninsula residents signed a petition opposing the Wildwood site.

In response to that opposition, the borough assembly rescinded a resolution endorsing the idea. In its place it enacted a measure calling on the Division of Corrections to hold public hearings on the Peninsula before reaching a final decision on the Wildwood site.

Endell said he is satisfying that request by meeting with city councils and chambers of commerce in Seward, Homer, Kenai and Nikiski.

Endell assures those he talks with the state will not locate a prison in a community where there is strong public oppostion, and he said he hasn't seen strong opposition on the Peninsula.

Assemblyman Kenn Stephens, who fought the prison, agrees opposition to the proposal has cooled.

"People have calmed down," Stephens said. "Folks aren't complaining on Soundoff (a radio call-in show broadcast by a Kenai radio station), and I haven't gotten any phone calls on it at all."

"The state's got its mind set, and people are resigned to the fact that there's going to be something there."

State prison chief urges legislators to create corrections department

By HAL SPENCER 1/21/83
The Associated Press

JUNEAU — The problems facing Alaska's prison system are firmly rooted in poor management — a situation that would change with creation of a corrections department, Roger Endell, state corrections chief, said Wednesday.

A corrections commissioner, who would oversee the department, could "pick up the phone and hire people, and more significantly, can pick up the phone and fire them," Endell told a joint meeting of the House and Senate health, education and social services committees.

Endell, whose corrections division is now within the Department of Health and Social Services, said that under the current situation, management officials, with the exception of the corrections director, are classified employees who cannot be easily dismissed.

The joint committee met to consider Gov. Bill Sheffield's Executive Order 54, which calls for creation of a corrections department. The move was recommended by a corrections task force, of which Endell was chairman.

The lawmakers deferred action, agreeing to meet in separate committees to take a closer look at the projected cost of the department.

Endell was able to provide only the "bottom-line" figures — about $250,000 for the rest of fiscal 1983, ending June 30, and almost $1 million for fiscal 1984.

"I can't believe it would be that high," said Sen. Rick Halford, R-Chugiak.

Endell said the department would have six management level employees and "support staff." The six would include a commissioner; two deputy commissioners working in Juneau and Anchorage respectively; and three regional directors overseeing correctional facilities in Southcentral, Southeast and the Bush respectively.

Endell urges prison industry

by Steve Rinehart 1/19/83
for The Times

Homer — Prison industry — everything from growing potatoes to building campsites — could help the corrections system pay its bills while teaching inmates better skills, said new state corrections chief Roger Endell.

While inmates can't be forced to earn their keep, he said, "my attitude is they will have to earn their privileges."

"I'm not advocating a return to the ball and chain," Endell said in a speech here this week. "It will be the inmates' choice. But those who chose not to work would be 'warehoused,' with space to sleep and little else."

Endell was in Homer to address the Homer Chamber of Commerce. Ohlson Mountain, a former military installation near Homer, is being considered as a site for a new medium-security prison.

Endell, who was appointed director of corrections by Gov. Bill Sheffield, said it has been his experience that most inmates prefer to work, gain some skills, and make some money.

Legally, inmates can be paid up to half the minimum wage, he continued, although they can also be charged for some services and forced to use a portion of their wages for family support.

Among suggestions Endell offered were that inmates do park and recreation work in remote locations. Trails, recreation cabins and fire pits could all be built by inmates.

There are many prison industries which would not compete with private enterprise, he said. For example, inmates could grow potatoes in the Palmer area since local growers can't meet consumer demand.

Currently, Endell said, the state contracts with a Canadian firm to do the laundry for the state ferry system. Juneau inmates could do the job as well and for less cost, he said.

As for the traditional prison industry — stamping license plates — Endell said he has been told there aren't enough vehicles in Alaska to make the business pay. However, he said, the state has sign-making equipment in storage, which could easily be put to use by prisoners making road and street signs for state and local governments.

Inmate labor could also be used to renovate prison sites, Endell said, thus lessening the high cost of needed improvements in the prison system.

Jail overcrowded — now

By CHRIS JARVIS 1/26/83
Empire Staff Reporter

Although Gov. Bill Sheffield has proposed a $81.8 million appropriation for construction of new jails, that doesn't help the overcrowding now being experienced at the Southeast Regional Correctional Institute at Lemon Creek.

Officials there are hoping a new maximum security wing now under construction will house prisoners by fall, easing some of the crowded conditions.

The rated capacity at Lemon Creek is 111 beds with 18 extra beds for those being held before arraignment and people serving weekend sentences. Monday night, however, 146 people were housed at Lemon Creek, jail Superintendent Bill Huston said today.

While no major disturbances have occurred at the jail because of the overcrowding, Huston said a series of "small things you just don't put your finger on" often lead to troubles.

"The emotional level increases when you have this many people being held against their will," he said.

"Some discipline problems crop up when you have a lot of bodies," he said. For an example he cited a prisoner turning over a table in the mess hall out of frustration caused by tensions from overcrowding.

With only 45,000 square feet of living space, problems are bound to happen, Huston said. Until the new 58-bed maximum security unit is opened and other facilities are built in the state, there is potential for problems.

The Lemon Creek construction project started this fall and should be ready for occupancy by the fall of 1983, Huston said.

Eventually, Huston would like to convert the 24 and 22 bed dormatories now at the jail into single and double bed cells.

When you have 24 people living together in the same room during a long period of time, problems and tensions often come to the surface, Huston said.

The jail also needs additional space for activities, Huston said. But until the need for beds is lessened, none of the existing living space will be eliminated, he said.

Another problem facing jail administrators is the inability to plan ahead, especially on weekends when bookings increase because of arrests made by Juneau Police and Alaska State Troopers.

Noting that troopers and police have the option to not jail people arrested for traffic and other offenses, Huston said he is unwilling to second guess their actions.

"It's easy to sit back and say how Roger Staubach should have thrown that ball, but it's different when you're out there," he said referring to decisions police and troopers must make in the field.

"They not only are responsible for public safety but for the safety of the person too," Huston said.

Because police and troopers seldom want to make crack downs public before carrying them out, and unlike the Lower 48 where short term prisoners are housed in city and county jails, Lemon Creek must house long term prisoners as well as make room for those prisoners arrested or there for weekends or awaiting trial.

y TOM KIZZIA
nd RONNIE CHAPPELL
aily News reporters

The state has proposed to onvert three surplus federal ites into medium-security risons in an attempt to elim-ate prison overcrowding by anuary.

In a plan ordered by Supe-ior Court Judge Douglas Ser-ahely as part of a settlement a class action lawsuit over rison conditions, Director of orrections Roger Endell also roposes to build a 250-bed rison from scratch at Point oronzof in Anchorage, as ell as a maximum-security rison at an undetermined" ocation.

The plan calls for the state o increase the number of misdemeanants diverted from jail to community programs, and proposes to increase the number of "soft beds" used primarily by offenders with chronic alcohol problems.

Endell said that Alaska currently has 1,445 inmates — 431 more than it has room for.

The state could move 220 inmates into a former military base at Wildwood near Kenai in six to nine months, the plan says. In addition, the state has proposed to convert a former missile base at Goose Bay on the north side of Knik Arm into a jail for 200 inmates by fall of 1984 and a federal communications site at Chiniak, 49 miles by road from Kodiak, into a jail for 130 to 150 inmates, perhaps in early 1984.

However, at a public hearing in Kenai Thursday night, Endell said that a final decision on whether to put a prison at Wildwood has not been made.

"It's a plan, that's all," he said, adding that the state has not yet negotiated an agreement with the owners of the base, Kenai Native Association.

Endell said the state would not develop the Wildwood site if residents oppose it. "If you don't want us here, we'll fold up our tents and go somewhere else," he told a crowd of about 150 attending the hearing.

About half of those testifying at the hearing opposed putting a prison at Wildwood. Petitions containing the names of 400 people in opposition were presented to Endell.

Others, however, testified in favor of the prison, and the Kenai Chamber of Commerce and Kenai Peninsula Fire Chiefs' Association gave Endell resolutions supporting it.

Endell said the Goose Bay site is owned by the federal government, while the other two sites are now in private hands.

With these three sites in hand, the plan would scrap plans to expand an $11.7 million pre-trial facility in Fairbanks and a $9 million pre-trial facility in Juneau.

The plan does not outline the costs of the three proposed prisons, but said they would result in "tremendous cost savings."

The legislature would have to approve $45 million to build a maximum-security prison for 300 to 400 prisoners. Sites under consideration are Palmer, Seward, Kenai and Haines.

The state would also have to come up with $35 million to build a new jail in Anchorage to hold sentenced prisoners waiting for a permanent assignment to prison. This new facility would allow the state to retire the existing Third Avenue and Sixth Avenue jails.

The state is seeking $5.6 million to finish a 50 to 80 bed Nome Regional Correctional Center, and plans to add a new 50-bed jail in Bethel with existing funds.

Endell said lack of funding from the legislature, plus "poor management practices" by previous administrations, has contributed to the overcrowding problem.

Endell said factors that have led to overcrowding include a stronger criminal code, fewer releases by the Board of Parole, tougher sentencing, and an increase in the number of police and prosecutors.

"Getting tough is admirable, but it is also tremendously expensive. It is now time to pay the bill," he said.

Remote prison sites

THE MENTION of putting state prisons in remote areas brings cries of horror from the lawyers, the courts — and the prisoners.

They are quick to say that prisoners need easy access to their lawyers and to the courtrooms. They also say the prisoners need to be close to law libraries, psychiatrists and counselors.

A re-orientation of that kind of thinking could be in order.

It's true that these services and various aids to prisoner welfare are mandated by the legislature and the courts.

But there's no reason why the lawyers and doctors and books and counselors can't be taken to the prisoners when they're needed, rather than having the prisoners themselves in the center of things.

Selecting prison sites for the convenience of the prisoners doesn't make much sense, particularly the long-term prisoners. This is especially true when it's so difficult to get residents of a community to accept a prison as a neighbor.

There are exceptions. Prisoners on trial or awaiting sentence or whose terms are measured in days, not months or years, for instance, really do need to be close to their lawyers and the courtrooms. But the ones with lengthy terms don't.

Alaska is a land of remote places. It should be easy to find sites for prisons.

Governor names Endell prisons chief

1/4/83

by Jeff Berliner
Times Writer

Director of Corrections Robert Hatrak resigned Wednesday at the request of Gov. Bill Sheffield, and was immediately replaced by University of Alaska professor Roger Endell.

Endell, 42, headed a Sheffield-appointed corrections task force that offered policy recommendations radically opposed to those followed by Hatrack.

Endell, a 22-year Alaska resident and a 1966 graduate of UA-Fairbanks, has been an associate professor of justice at the University of Alaska for six years. For six years before that, he served as an assistant superintendent at state prisons in Anchorage, Eagle River, and Juneau.

Hatrak's nine-month stint as prisons chief was marred by accusations of conflict of interest, charges that he had improperly let corrections contracts, and questions about his past.

While pison superintendent at New Jersey's Rahway State Prison, he was the object of a criminal investigation in New Jersey and later fired. Then, as Multnomah County (Ore.) correction director, a Portland grand jury recommended that he be fired from the job.

Endell said today that the Division of Corrections will steer state corrections in a different direction than it was going under Hatrak.

Endell will take over the helm Monday. His first task will be "getting the division reorganized and set up as a department, assuming the governor agrees it will go to department status," he said.

The task force headed by Endell recommended that the Division of Corrections be taken out of the Department of Health and Social Services and that it be elevated to department status run by a commissioner who answers to the governor.

Prisoners will be moved out of the controversial Careage House — the nursing home turned prison which caused a storm of protest from the mayor and neighbors of the Tudor and Lake Otis facility — and the building will be transformed into the state corrections headquarters, Endell said today.

The efforts of Hatrak and assistant attorney general Mike Stark to settle an inmate lawsuit will be dropped, Endell said, indicating he'll work with the new attorney general to fight the inmate's suit over prison conditions. That was another task force recommendation.

"Serious prison overcrowding has to receive the constant attention of the director," Endell said.

But Endell said he thinks the problem can be solved at a lot less expense than proposed by the Hammond administration, notably Hatrak and acting commissioner of health and social services Allen Korhonen.

Without naming a dollar

Endell

(Continued from page A-1)

amount, Endell said, "I'm hoping we can do it for less."

Endell said he has ideas for coming up with as many as 400 new prison beds without "building concrete structures from the ground up."

He said the "very serious problems facing corrections are solvable" but will require "cooperation between the judicial, legislative and executive branches."

The corrections system has "a lot of catching up to," Endell said, so that the state prison system can handle all the people being funneled into it by the courts and as a result of new laws passed by the Legislature.

The task force report showed "very clearly there were substantial problems in management," Endell said, noting that the report stopped short of singling out Hatrak by name.

Endell said he will meet with the prison superintendents at the outset and anticipates none of the in-fighting and management problems which marked Hatrak's tenure as prison chief.

The "crisis in correctional management" can be solved with "sound, long-term and professional management," Endell's task force wrote, noting that the department has had four directors in six years.

But Endell called his appointment as the fifth director "a positive sign," proving that qualified Alaskans are available (a reference to selecting the last two directors from out of state), and because he already has a good working relationship with corrections.

"I know most of the people. I know most of their strengths and weaknesses," he said.

Endell said there may be a shake-up within corrections as a result of task force recommendations to establish regional corrections centers in Fairbanks, Juneau and the Bush. Attrition, through retirements of superintendents, may also clear some positions.

Endell candidly acknowledged Hatrak's problems but called him "a professional."

"He's had some tough experiences," Endell said of Hatrak. "He tried to do an admirable job. He's had some difficulties. But when he was appointed, the man knew he might be out of a job with the change in administrations."

Hatrak said today he was not told why he was losing his job — only that "my resignation would be accepted."

Hatrak, 45, was given the news Wednesday by acting commissioner of health and social services Korhonen.

Calls to Korhonen were returned by the governor's office and Sheffield spokesman Pete Spivey said the change was prompted by the governor's "desire to change leaders."

"The division of corrections has obviously gone through a lot of turmoil and I assume Hatrak's part of it," Spivey said.

The main finding of the task force, Sprivey said, was that "the division has not had very much strong leadership."

Hatrak said he had no warning of the sudden change.

"The governor has the right and perogative to field his own team. And he's probably better off fielding his own team. I feel strongly about that. It's his choice."

Hatrak said corrections problems promise to be a big issue in the Legislature in the coming session and "corrections needs to go into this with as strong a position as possible."

Mr. Charlie Bussell
Pouch V
Juneau, AK 99811

Dear Mr. Bussell:

Alaska Foster Parent Association urges you to not pass HR 103 as written. We are opposed to the inclusion of juvenile corrections with adults under the New Department of Corrections for the following reasons:

1) With the many urgent tasks confronting a new Department of Corrections juveniles would be the last considered and be overlooked.

2) The philosophical treatment of juvenile offenders is and needs to continue to be different. Juvenile corrections is still ahome, family, and community oriented treatment and rehabilatative program rather than punitive.

3) Crimes of juvenile offenders are different from adult--
   a) mostly property crime status offenses,
   b) less successful and less finanical involvement,
   c) mostly non-violent, without weapons.

4) Juvenile offenders have a greater link with the Department of Health and Social Services than with adult corrections. They are often victims of child abuse, neglect and family breakdown. The biggest difference between juvenile delinquents and child in need of aid in foster homes is the delinquents have been caught! There must be strong coordination between those responsible to child in need of aid care and juvenile corrections as many move from one system to the other. When the new Department of Corrections is being set up we fear we will loose the treatment, the prevention like that now exist under the Department of Health and Social Services. There must be close coordination between juveniles in foster home placements and youth correctional facilities.

5) In many cases a juvenile under corrections is able to go into a foster home while still on probation. This not only saves the state a significant amount of money (over $100 per day per child) but is a more successful treatment mode. Division of Family and Youth Services has recently developed a specialized foster care program to provide more services and support to foster homes to enable more juveniles to be kept in foster homes rather than youth correctional facilities. Also, in rural Alaska you would have to duplicate services now carried under the Division of Family and Youth Services: i.e. new foster homes and therefore be more costly.

In closing we urge you to not include juvenile corrections under the new Department of Corrections but keep them under Department of Health and Social Services. One suggestion to counter the argument that juvenile offenders are just like adults is to strengthen the waiver laws to allow more serious juvenile offenders to be tried as adults.

If you need more information please do not hesitate to call or write the Alaska Foster Parent Association.

Sincerely,

Louiese Rodoni

Legislation would create separate state Department of Corrections

The Associated Press News 1/22/83

JUNEAU — Legislation to create a separate state Department of Corrections was introduced in the House by Rep. Milo Fritz, R-Anchor Point.

Gov. Bill Sheffield has proposed the same thing in an executive order. The corrections program is now administered by the state Division of Adult Corrections within the Department of Health and Social Services.

Fritz' bill, introduced Friday, would make the new cabinet-level department responsible for overseeing state prisons and prisoners, probation and parole, and extraditions detainers.

Sheffield submitted his executive order to the Legislature on the opening day of the 1983 session, and it would become law unless the Legislature acts on it within 60 days. Action on the Fritz bill means the Legislature would have its say on if and how the department is to be set up.

The Fritz measure was one of nine bills and resolutions filed in the House Friday. Other legislation introduced included:

- A bill (HB104) to provide compensation for victims of violent crimes, including injury or death. The limit would be $25,000, except in the case of the death of a victim with more than one dependent. Then the compensation could go to $40,000.
- A bill (HB105) requested by the governor to appropriate the capital and operating budgets as well as the Permanent Fund Dividend Program.
- A bill (HB107) to allow an adult person to have an attending physician withhold or withdraw life-sustaining procedures if death is imminent.
- A resolution (HCR12) requesting the governor to order a study of a canal between the Yukon and Kuskokwim rivers.

Sheffield wants to see corrections elevated

NEWS 1/18/83

From staff and wire reports

JUNEAU — The Alaska House Monday was asked by Gov. Bill Sheffield not to block an executive order creating a Department of Corrections.

If legislators do not take action within 60 days, the Division of Corrections, now part of the Department of Health and Social Services, will be upgraded to a cabinet-level department in state government.

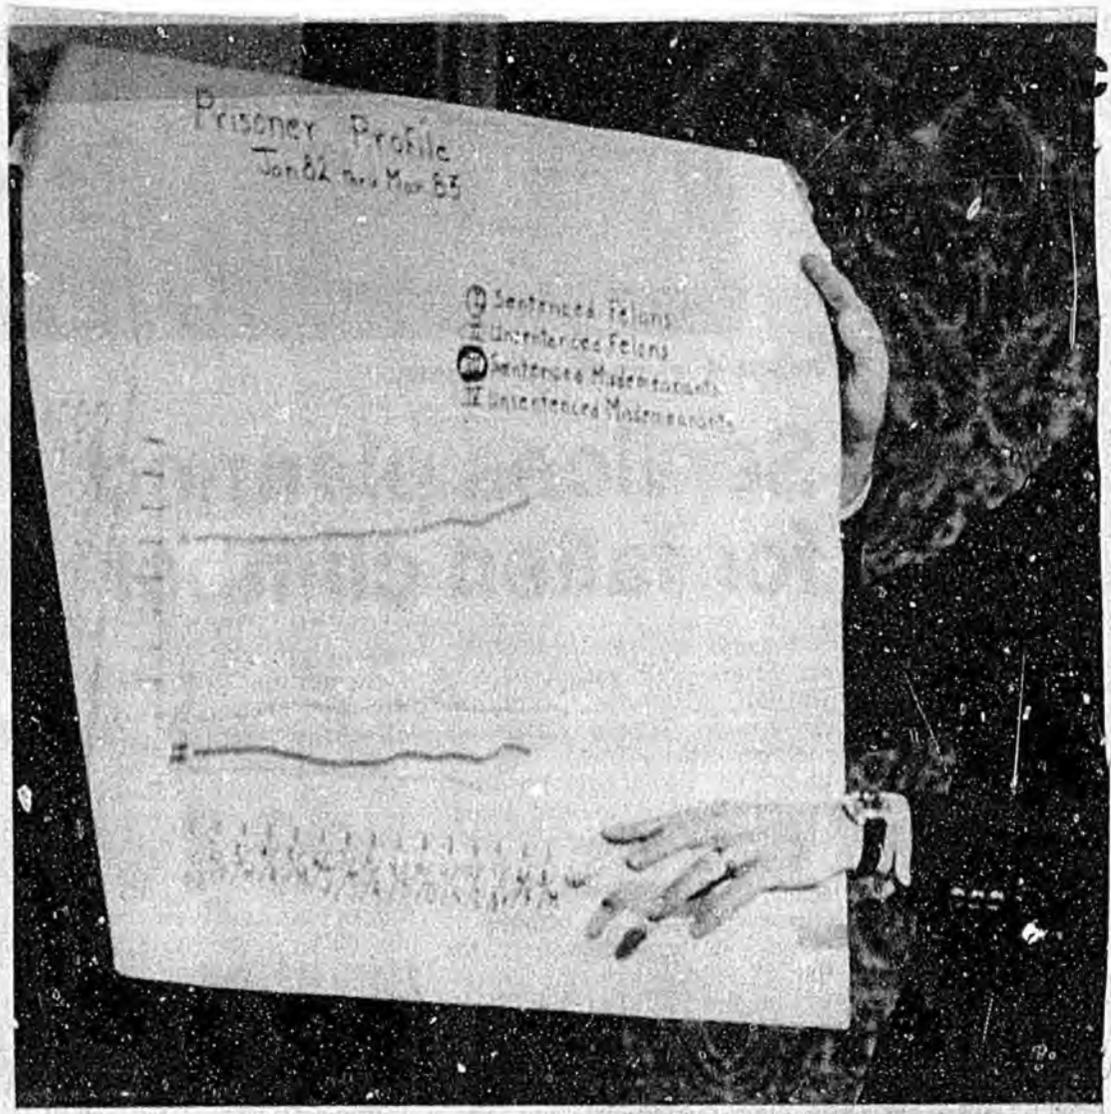
Kevin Bruce, Sheffield's special assistant for corrections, said the change is scheduled for April 1.

The governor's order issued Monday followed the recommendation of a task force studying Alaska's corrections system, said Pete Spivey, Sheffield's press secretary.

Some of the division's problems include overcrowding and mismanagement of some corrections programs, he said.

Sheffield had two choices on how to get the division more attention, Spivey said. He could have created a new department, the route he chose, or appointed a deputy commissioner solely for corrections.

Plans call for the new commissioner of corrections to be headquartered in Juneau. An assistant commissioner's office would be located in Anchorage, Bruce said.



The governor's assistant could not say for certain Monday that Roger Endell, who was appointed last week by Sheffield to head the division of corrections, would be the new commissioner.

"The governor didn't promise to make him the commissioner of corrections but he would be the most likely candidate," Bruce said.

The corrections budget for this year is $40 million.

The new department's proposed budget for fiscal year 1983-84 will be just under $41 million, Bruce said.

Solving Alaska's crowded jail problem will be expensive, the director of the state's division of corrections said Monday.

But Roger Endell said the state, if officials use good business sense, can both protect society and promote reform programs designed to make inmates productive, tax paying members of society.

In a speech to the Anchorage Chamber of Commerce, Endell discussed jails in economic terms, talking of costs, ratios of return for investments and economies of scale.

"We find it's very easy to pass a law to incarcerate offenders, but we're also finding it is very expensive to be tough on crime," Endell said. "There's no doubt that we have a crisis situation in crowding. One out of every 106 Alaskans is in some sort of incarceration now, including juveniles and adults."

As evidence for the cost of jailing criminals, Endell pointed to the $60 million operating budget and $100 million capital improvements budget he is requesting from the legislature for 1983.

While some of that money will be used to take care of current inmates, room also will have to be provided for the estimated 24 new inmates a month that enter the correctional system, he said.

House will review proposal to set up prison department

3-21-83
Times

by Bill White
Times Juneau Bureau

Juneau — House members today plan to debate a bill to set up the prison system in its own department, four days after lawmakers rejected a similar proposal offered by Gov. Bill Sheffield.

The House Finance Committee pushed the bill out this morning in a rush to get it to the full House today.

The 27 House majority members voted as a bloc last week in joint session with the Senate to reject Sheffield's proposal in the freshman governor's first major defeat.

But House Majority Leader Ramona Barnes, R-Anchorage, said after that vote she expected the House to pass the bill that would do almost the same thing as Sheffield's executive order.

Lawmakers and administration officials have been pushing for a separate prisons department as a means of dealing more directly with Alaska's inmate crunch. The state's prisons are holding about 400 more inmates than they were designed for.

The finance panel's action came over the objections of Sheffield administration officials. They favored the bill, except for a new provision inserted late last week by the Judiciary Committee.

John Pugh, deputy commissioner of health and social services, told the Finance panel members the new section would put juvenile delinquents under the new prisons department.

Sheffield opposes that action, and so does Roger Endell, who would head up the new department, Pugh said.

Instead, all except the most serious juvenile offenders should continue to be handled by the family services division of his department, he said.

Rep. Charlie Bussell, chairman of the Judiciary Committee, said his panel's version of the bill "will make a strong working department." The department will handle criminal suspects more efficiently and will save the state money if its jurisdiction includes juveniles, the Anchorage Republican said.

Michael Price, head of the family services division, said that when a youth commits a crime it is most often because of a failure within his family. "Ultimately it's the family that will deal with this youth."

Everyone is concerned about juvenile criminals, he added. "The question is what is the most effective way to deal with this problem."

If juvenile delinquents go under the new prisons department, about 220 staffers from the family services division will go with them. But about 240 social workers, who now also deal with offending youths and their families, will not be tranferred, Price said.

Juvenile crime has not been the problem newspaper reports have painted it to be, Price added.

In fact, for the last two years, the juvenile crime rate in Anchorage has stayed level despite a rapidly rising population, he said. In 1981, the last year for which there are figures, 6,120 youths were arrested. Of those, 2,047 committed crimes for which they wouldn't have been charged if they were adults, such as curfew and drinking violations, he said.

Only 60 of the 6,120 were arrested for crimes of violence, he said.

HB103
JR

Prisons department bill stalled in committee

The Associated Press

JUNEAU — The minority Democrats Monday delayed, at least for two days until the Alaska House meets again, passage of a bill to create a Department of Corrections.

The minority prevented the bill (HB103) from moving to the third reading — when it can be approved as law — by preventing the needed three-fourths vote. The vote was 11-25 against movement.

Democrats indicated they want a clear signal from Gov. Bill Sheffield's administration on whether the juvenile corrections should be moved immediately to the new department.

Creating the corrections department separate from the Department of Health and Social Services was the subject of an executive order turned down last week by the Legislature.

At one point, lawmakers said they had been told the administration would be satisfied with juvenile corrections in the new department. But that opinion was a personal one of Division of Corrections Director Roger Endell, according to an Endell letter read by Rep. Jim Duncan, D-Juneau.

Endell, Duncan said, now has taken the Sheffield administration position to delay the shift of juvenile corrections from the health and social services department.

But House Judiciary Chairman Charlie Bussell, R-Anchorage, said as late as Saturday Endell said he could live with the juvenile corrections coming into his department July 1, 1983.

It was when minority Democrats failed to get that date delayed a year that they came up with the parliamentary tactic to hold the bill over a day.

Clocksin and other Democrats fought for keeping juvenile corrections in DHSS so the new department could get itself operating with stability.

RE: HB 103 or CSHB 103(HESS)

Dear Chairman Bussell:

I am a Social Work student at the University of Alaska, Anchorage. I am following HB 103 regarding establishing a Department of Corrections as a part of a class on social welfare policies and issues.

I would like to know if this bill is scheduled for a hearing in the Judiciary Committe in the near future, when it will move from your committee and any other information that you may have concerning the status of this bill.

I am also interested to know if there is opposition to CSHB 103 and what position the opposition takes.

Your prompt attention to this matter will be sincerely appreciated. and it will assist me in preparing my report for my class.

Respectfully,

Patsy Turner

CSHB 15(Loans)am

Representative Barnes moved and asked unanimous consent that the roll call on the passage of the bill be considered the roll call on the effective date clause. There being no objection, it was so ordered.

Representative Uehling moved and asked unanimous consent that the House adopt the letter of intent on CSHB 15(Loans)am which appears on page 432 of the journal. There being no objection, it was so ordered.

A drafting error was noticed, and the following engrossing change was necessary for CSHB 15(Loans) am:

Page 2, line 2

After "life" insert "for the individual" and delete [FOR HIM].

Representative Malone gave notice of reconsideration of his vote on the letter of intent.

CSHB 15(Loans)am was referred to the Chief Clerk for engrossment.

HB 103

HOUSE BILL NO. 103 (establishing a Department of Corrections and transferring certain functions of the Department of Health and Social Services to the Department of Corrections; effective date) was read the second time with the Health, Education and Social Services Committee report (page 243 of the journal), the Judiciary Committee report (page 533 of the journal) and the Finance Committee report (page 571 of the journal).

Representative Barnes moved and asked unanimous consent that CSHB 103(Jud) (same title) be adopted in lieu of the original bill.

Representative Clocksin objected.

Representative Barnes moved and asked unanimous consent that the House recess until 4:30 p.m., March 21, 1983. There being no objection, the House recessed at 12:00 noon.

AFTER RECESS

The House was called back to order at 4:37 p.m.

A third roll call showed all members present except Representative Adams who had been previously excused from a call of the House today; and Representatives Goll and Malone.

HB 103

HOUSE BILL NO. 103 was again before the House in second reading at this time.

The question being: "Shall CSHB 103(Jud) be adopted in lieu of the original bill?" The roll was taken with the following result:

CSHB 103(JUD) MOTION

Yeas:	25	Abood, Barnes, Bettisworth, Bussell, Cato, Cowdery, Flood, Fritz, Fuller, Furnace, Grussendorf, Hayes, Herrmann, Hurlbert, Lacher, Lindauer, Liska, Martin, Miller,M.W., Pestinger, Phillips, Ringstad, Shultz, Tischer, Ward
Nays:	11	Clocksin, Davis, Duncan, Koponen, Larson, McBride, Miller,M.M., Szymanski, Vaska, Wendte, Zharoff
Excused:	1	Adams
Absent:	3	Goll, Malone, Uehling

And so, CSHB 103(Jud) was adopted.

CSHB 103(Jud)

Amendment No. 1 by Duncan, M. M. Miller, McBride and Davis:

Page 32, line 22

Delete "1983" and insert "1984".

HB 103, ESTABLISHING A DEPARTMENT OF CORRECTIONS

The proposal to change the division of corrections within the Department of Health and Social Services to departmental status is one that is supported by the Governor's office, correctional professionals, and the House HESS committee.

Elimination of the correctional crisis in this state is of primary concern to me, and I know that members of the Judiciary committee are keenly aware of the problems facing the correctional system. The overcrowding, the mismanagement, the poor conditions and lack of alternatives to incarceration, are all challenges that face us in the current legislative session. You have heard the briefing on the Cleary case and know that the problems are real and that cooperation between all branches of government will be necessary.

With proper administration, budgeting, and organization, the problems can be solved. Proper management is the beginning. The new Department of Corrections and a responsive management team will be the first step. By creating a Department, a commissioner and executive staff can be appointed who answer directly to the commissioner. The existing division of corrections has been plagued with inconsistent management within the division and within the Department of Health and Social Services. The division has placed a disproportionate load on several Department of Health and Social Services programs, and the goal of the division of corrections is not necessarily consistent with the

goals of the Department of Health and Social Services,which are oriented toward public health, public assistance, mental health, and family and youth services.

The proposal to create a new department, as presented to the HESS committee, is to retain 9 existing positions and transfer them to the new department. One existing position in corrections will be retained and ten new positions will be created. Mr. Endell and his staff can speak better to the fiscal and administrative makeup of the department, so I will leave that to him.

The issue of juvenile corrections was discussed by the committee. The consensus of the committee was that juvenile corrections should be included within the new department, but the transition should occur after the new department is established and has been able to correct some of the immediate problems at hand.

The lack of specific information regarding the department of corrections has been frustrating for those of us who must evaluate the proposal. However, in this instance, considering the scope of the problem and the urgency of the problem, I am willing to give the Governor the benefit of the doubt and trust his office to implement an effective corrections program.

MILO FRITZ

EO 54 - Sheffield
HB 103 - Fritz

"Creating a Department of Corrections"

"An Act establishing a Department of Corrections and transferring certain functions of the Department of Health and Social Services to the Department of Corrections; and providing for an effective date."

BACKGROUND INFORMATION:

Executive Order 54 establishes a Department of Corrections, replacing the Division of Corrections currently operating correctional institutions and programs under the Department of Health and Social Services. Adult penal institutions, the correctional industries program and probation and parole is proposed to be placed in the new department's jurisdiction. Juvenile corrections remain the responsibility of the Department of Health and Social Services. Responsibilities for the transportation of prisoners and mentally ill offenders are not addressed.

The "TASK FORCE ON CORRECTIONS STATUS REPORT" was submitted to Governor William Sheffield in December/January, 1982-1983. A summary document of the impact of those thirty four (34) recommendations relative to EO 54 and HB 103 is attached here. As of this date Corrections is reporting that they are currently complying with fifteen (15) of the recommendations; they have future plans to deal with eight (8) of them; eleven (11) of the recommendations they agree with but at the present time have no plans with compliance.

Staff requested "organizational development" information in order to compare staffing levels and requirements of three phases : (a) Pre-transitional Management Team; (b) Transitional Management Team; (c) Operational Department of Corrections.

Staff additionally requested fiscal information relative to previous administrative levels of function and organization within the Division of Corrections as a comparison with the proposed elevation to departmental status and the accompanying fiscal impact that it would address.

As additional support to EO 54. the Division of Corrections through the Department of Health and Social Services has submitted their position paper, attached here for review.

The Committee presently has copies of the "Population Managment Plan" which addresses some of the concerns and issues relative to the Executive Order and House Bill before them. Submission to the Committee of the "Mini Corrections Master Plan" has been requested and it appears as though that will be available some time on or about the fifteenth of the month of March, 1983.

Although the "TASK FORCE ON CORRECTIONS STATUS REPORT" addresses both the problem of juvenile corrections and the transportation of prisoners , these are questions that the committee still has to address to future testimonial before them.

IMPACT:

Sectional Analysis done by staff of HESS is attached.

FISCAL NOTE:

Attached

WITNESSES:

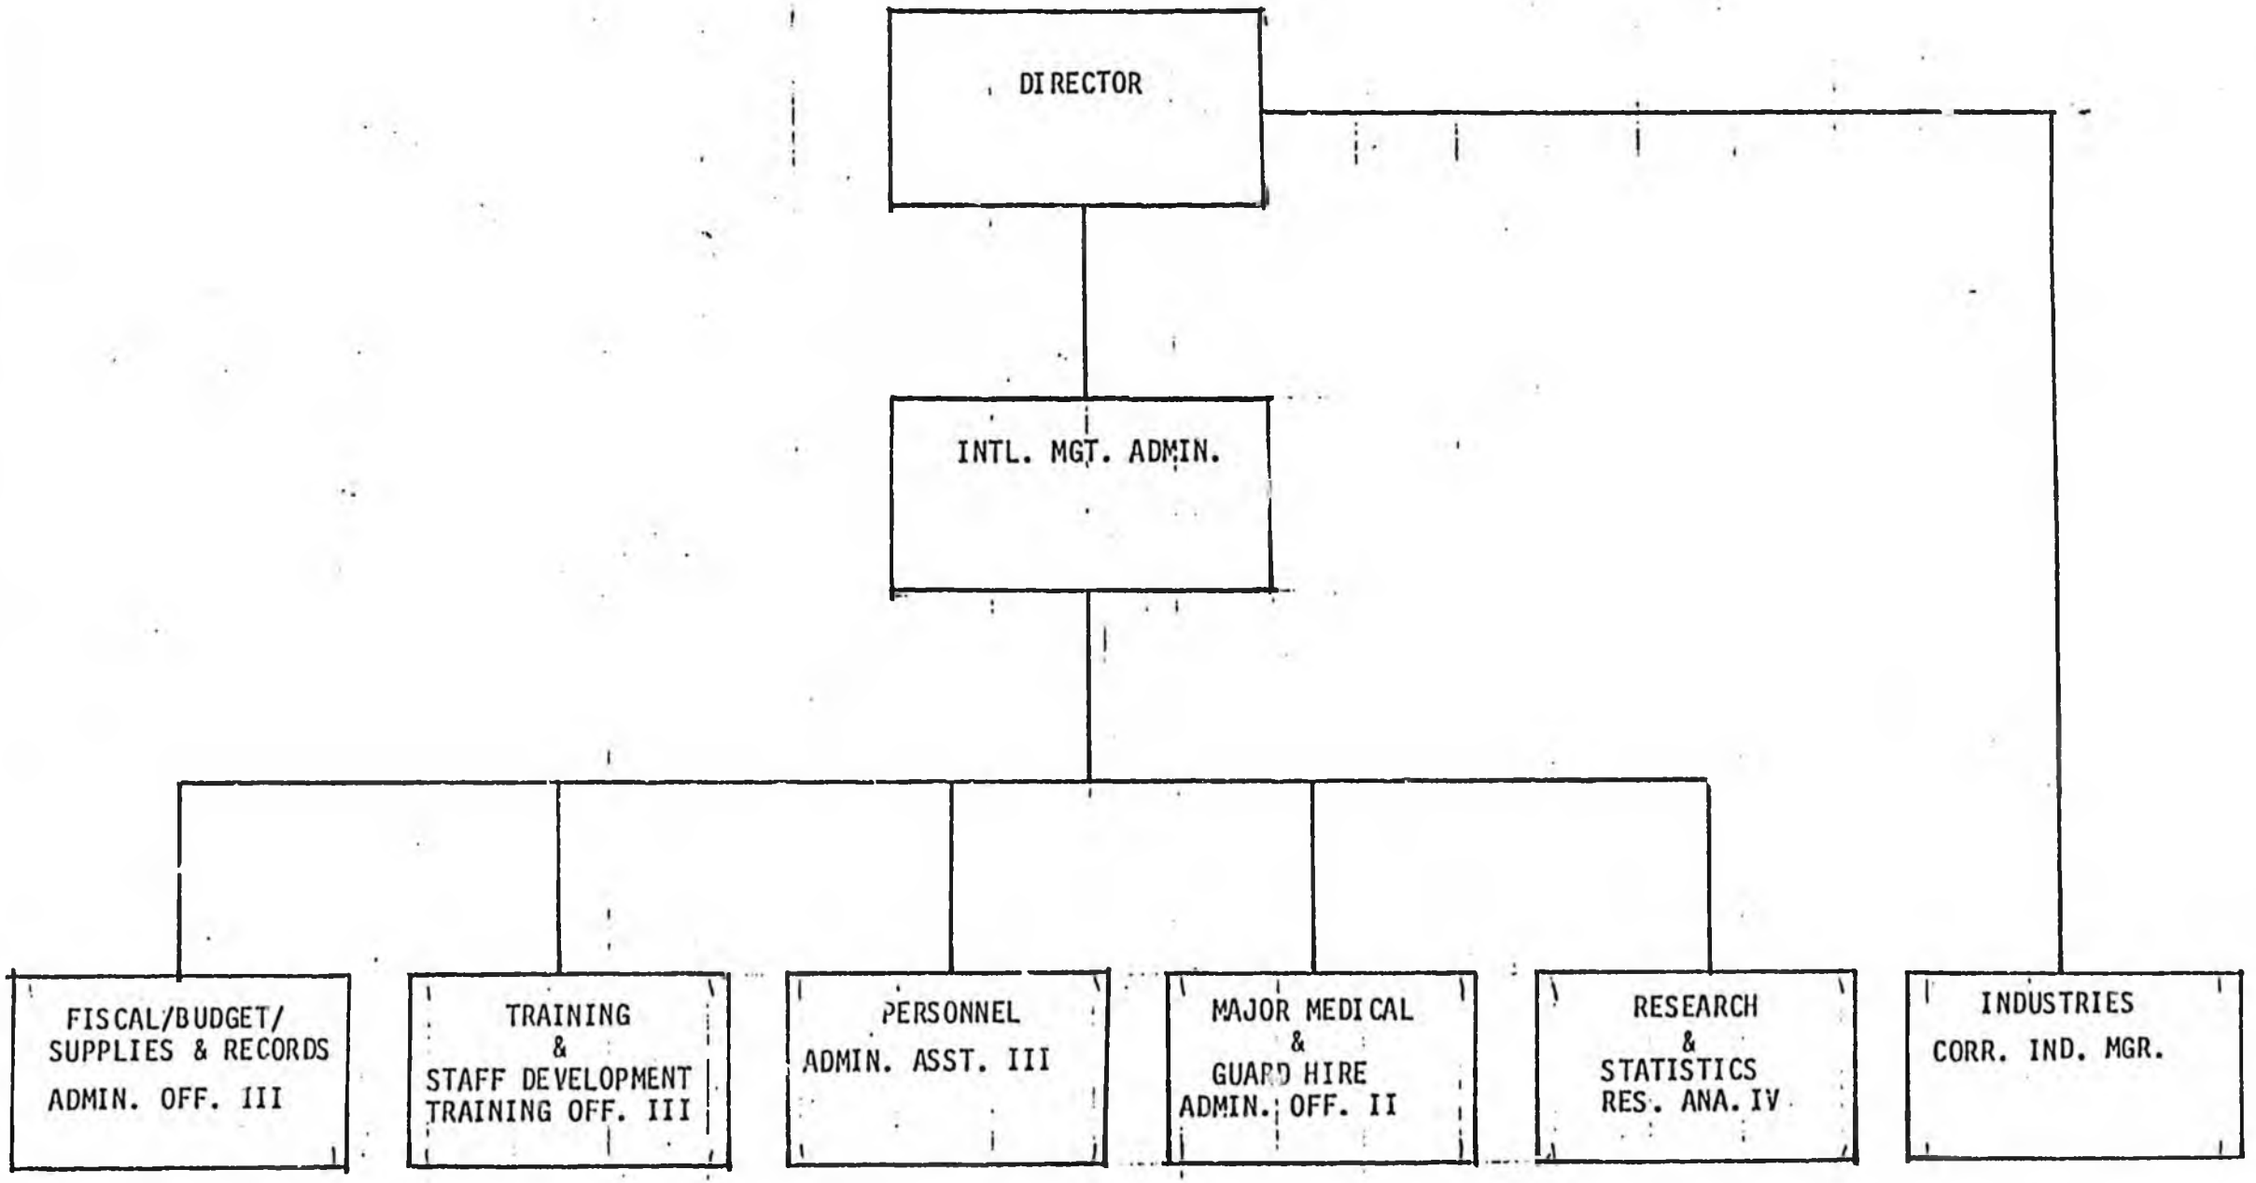
Roger Endell, Corrections

STATUS OF TASK FORCE RECOMMENDATIONS
DIVISION OF ADULT CORRECTIONS

A. COMPLY

NUMBER	TEXT
(1)	Except for the Anchorage Careage House, no correctional facilities should be closed until adequate new correctional space has been prepared.
(2)	The Careage House should be utilized as corrections' South-central Alaska headquarters and as a correctional training center.
(3)	The new Cook Inlet pre-trial facility should not be opened to inmate populations until the facility is ready for secure occupancy and the staff has been properly trained.
(6)	The continued use of Ridgeview should be re-evaluated for potential correctional use in light of economic costs and public benefits.
(8)	Mentally disturbed offenders should continue to be housed temporarily at the Alaska Psychiatric Hospital.
(11)	The state should move immediately to evaluate and obtain additional available sites for expansion of correctional operations in the Kenai and Matanuska-Susitna Boroughs.
(12)	Comprehensive correctional services regional centers should be constructed in both Nome and Bethel utilizing either "stick built" or prebuilt modular units or a combination of both.
(13)	All new correctional construction proposals should be evaluated in relationship to the need for increased bed capacity statewide.
(15)	Either a Matanuska-Susitna or Kenai Borough site should be developed and utilized to provide maximum security prison space.
(17)	A maximum security institution is needed to securely house a portion of the Alaska offender population.
(18)	The recently completed management plan for corrections should not be fully implemented.
(19)	The revised classification system should be implemented in concert with correctional reorganization and development.
(20)	Corrections should be managed on a decentralized regional basis.
(27)	The present partial settlement agreement efforts in the Cleary et al. case should be halted and reviewed immediately.
(34)	A systematic evaluation of approximately 150 parole eligible offenders should be conducted immediately.

B. FUTURE



NUMBER	TEXT
(4 & 5)	The Third Avenue and 6th & C correctional centers in Anchorage should be utilized to hold short term offenders and those incarcerated for alcohol related offenses.
(7)	Haland Mountain correctional center near Eagle River must be permitted to return to its original mission.
(9)	Sentenced adult female housing space at Meadow Creek (Eagle River) should be added as necessary with much less expensive architecture than past practice.
(14)	The state should continue to maintain a number of dangerously violent Alaska offenders within the Federal Bureau of Prisons' system.
(21)	All jail contracts should be managed by the Department of Corrections.
(31)	All youth correctional functions should be organized as a separate division within the Department of Corrections when reorganization is completed and functional.
(32)	The prisoner population of the State of Alaska should be put to work.

C. AGREE

NUMBER	TEXT
(10)	The type and methods of construction of the two institutions at Palmer should be copied elsewhere as needed in the State.
(16)	Correctional construction should be recognized as a high priority among all units of state government.
(22)	A well trained correctional staff is mandatory and critical to efficient management.
(23)	The Division of Corrections should be moved quickly and decisively in toto by immediate executive order to Departmental status.
(24)	A Commissioner of Corrections should be appointed by the Governor as soon as possible.
(25)	A cabinet level body should be directed to coordinate policy and law implementation for the effective administration of justice.
(26)	Management personnel of the agencies of justice (state and local) should coordinate the activities of these agencies at the local and regional level.
(28)	Municipalities should not be made responsible for the costs of pre-trial incarceration of offenders held on state criminal charges, but municipal-state coordination is essential.
(29)	The state should move immediately to address the law, policies and procedures with regard to public drunkenness and drunk driving.
(30)	The State Office of Alcoholism and Drug Abuse should provide comprehensive program services to correctional populations in cooperation with local municipalities.
(33)	Offender education and recreational programs should be made available to prison populations during the non-work hours of those prisoners.
(35)	Corrections should provide the opportunity to every offender the resources of a halfway house program for those about to be released -- corrections must correct.

POSITION PAPER/Department of Health & Social Services

POSITION PAPER

EXECUTIVE ORDER 54

Executive Order 54 would establish a Department of Corrections. Departmentalization of Corrections would (1) ensure that Corrections is in fact a full partner in the criminal justice system; (2) enable the needs and problems of Corrections to be routinely presented to the Governor; (3) enable the agency to actively and effectively support its budget request throughout the administrative and legislative process; (4) provide continual professional guidance based on sound correctional experience, training, and management expertise in correctional systems from top departmental administrators; and (5) streamline the organizational structure for more effective correctional management.

Within the Alaska criminal justice system, a Department of Corrections would exceed the Judicial Branch and Department of Law, both in number of employees and in size of budget. Corrections is exceeded in size only by the Department of Public Safety. All criminal justice system agencies, including the Division of Adult Corrections, are budgeted together in the Administration of Justice category for appropriations. Corrections is in practice and responsibility a full partner in the criminal justice system. However, Public Safety and the court system organization are such that administrative heads are selected due to a refined knowledge in their specialized fields. The Director of the Division of Adult Corrections possesses that expertise; however, those in the DHSS Commissioner's Office must advocate for a broad range of human services, including Corrections. For the benefit of the criminal justice system, the increasing complexity of corrections makes it important that top administrators be expert corrections practitioners; they should not have their attention segmented to the other human service needs.

While, generally, Corrections and other divisions would be likely to benefit from the result of this departmentalization, the effect of separation would not be entirely beneficial to components of Department of Health and Social Services. The dual constitutional mandate for protection of the public and rehabilitation of the offender makes it essential that a human service emphasis be included among the highest Corrections' goals and objectives. Since most of the State's social and human support services are available from agencies within the Department of Health and Social Services, there is some cause to continue Corrections as a component agency within this department. While needed Department of Corrections' services could be secured from Department of Health and Social Services' agencies by negotiated agreement, there is great value in providing these services within the departmental planning and policy development structure in order to most effectively integrate social and human support services within the State. Creation of a separate department would not entirely relieve other Department of Health and Social Services' divisions and agencies from Corrections' demands for services since the need will continue to exist and the demand will simply be made by a separate department rather than by another division within this same department.

In terms of administrative support, the creation of a Department of Corrections could be beneficial to both the criminal justice component of DHSS, as well as to the remaining divisions and offices of the Department. The

POSITION PAPER/Department of Health & Social Services

urgency and nature of Corrections' issues require an increasingly larger portion of the efforts and attention of top DHSS administrators. Not only are the other human service programs impacted by more top administrative time being directed to corrections' issues, but also by an increasing portion of the Department's fiscal resources being committed to address Corrections' urgent needs. It must be remembered that the basic human services programs are not incidental, but rather are vital programs impacting every Alaskan. It is not likely that the demands of Corrections will slow significantly in future years. Each new institution will require a large number of new employees and pending litigation offers the prospect for committing the state to continued policy and program development, extensive renovation of existing facilities, and the need for even more fiscal resources to support expanded operations.

The Department of Health and Social Services believes the creation of a Department of Corrections would allow increased focus on the critical problems inherent in the operation of programs for adult offenders, would increase the effectiveness of the criminal justice system as a whole, and would be generally beneficial to the operation of other offices and divisions within DHSS. The Department supports the approval of Executive Order 54.

SUBJECT: Department of Corrections
(HB 103)

TO: Representative Milo Fritz

FROM: LHA Linn H. Asper
Legislative Counsel

In preparing a Senate duplicate of HB 103 we have determined that an additional section should be added to your bill to delete a reference to the division of corrections that I missed when I prepared the draft of HB 103. This could be added in a committee substitute by the Health, Education and Social Services committee. The proposed addition is as follows:

Page 4, after line 1, insert a new section to read:

* Sec. 9. AS 33.15.010 is amended to read:

Sec. 33.15.010. STATE BOARD OF PAROLE. There is in the department a board of parole consisting of five members to be appointed by the governor, subject to confirmation by a majority of the members of the legislature in joint session. One of the members, who shall be chairman of the board, shall be a person with training or experience in the field of probation and parole, [AND THAT MEMBER MAY BE AN OFFICIAL OR EMPLOYEE OF THE DEPARTMENT] but that member may not be an official or employee of the department [DIVISION OF CORRECTIONS]. The term of each of the other four members of the board is four years and until a successor is appointed and qualified. Successors are appointed in the same manner as provided for the board members first appointed. A vacancy shall be filled for the unexpired term.

Renumber succeeding bill sections accordingly.

MEMORANDUM

March 7, 1983

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee

FROM: Mark K. Johnson
Staff Counsel, Rep. Flood

SUBJECT: Executive Order 54 and HB 103: Creating a Dept. of Corrections

---

As you may know, before coming to the legislature, I worked for the Department of Health & Social Services amd was directly involved in preparing the operating budget for the Division of Corrections. I continue to be in touch, on a personal level, with several members of the staff of that agency.

On at least two separate occasions, agency personnel have indicated to me that the fiscal note prepared in support of Executive Order 54 is inadequate and would not provide sufficient funds to cover the expenses of departmentalization.

Thus, funds for supply and personnel functions in the new department do not exist.

One area that might deserve the attention of the committee is the resources that are being given up by the Department of Health & Social Services in the administrative area. Corrections represents a major portion of the work load on the Division of Administrative Services and the Division of Management & Budget of the present department. Will the separation of Corrections result in transfers of appropriate personnel and funds?? The answer to this question is probably not. The creation of the new Department of Corrections is seen privately by some members of the Department of Health & Social Services as an opportunity to reduce their workload without related reductions in staff.

I would be pleased to discuss this matter further with you if you desire.

STATE OF ALASKA
PRELIMINARY STATEMENT OF FISCAL IMPACT 3-17-83

Bill No: CSHB 103 (Jud) Date on Bill:
Title: "An Act establishing a Department of Corrections . . ."
Sponsor: Reps. Fritz, Koponen, Furnace, Goll, and Davis
Requestor:

1. Estimated fiscal impacts on:

a. Expenditures:

(Thousands of Dollars)

			FY 83	FY 84	FY 85	FY 86		
Capital			-0-	-0-	-0-	-0-		
Operating			*	951.6	1008.7	1069.3		
Total			*	951.6	1008.7	1069.3		

b. Revenues:

Revenue								

2. Source of funds to offset fiscal impact of bill:

Funding source for FY 83 is add/delete in SB 158 submitted by the Governor.

3. Assumptions:

House Bill No. 103 will create the Department of Corrections necessitating the transfer of the Division of Corrections and Parole Board from the Department of Health & Social Services to the new department, creation of ten new positions, the reclassification of nine Division of Corrections positions and the transfer of 13 positions from the Department of Health & Social Services Division of Management and Budget and Administrative Services to the new Department.

Transfer of Juvenile Corrections will delete 220 employees and 11 million dollars from DHSS and add the same amount to the Department of Corrections. The additional cost for 4 positions may be necessary to cover the administrative and personnel responsibilities associated with the transfer of the 220 positions to the Department of Corrections.

4. Disclaimer:

104

STATE OF ALASKA
PRELIMINARY STATEMENT OF FISCAL IMPACT

Bill No: HB 104 Date on Bill: 1/21/83
Title: An Act relating to compens. for victims of violent crimes; eff. date
Sponsor: Clocksin, Koponen, Zharoff, Malone, Goll and Davis
Requestor: HOUSE JUDICIARY

1. Estimated fiscal impacts on:

a. Expenditures:

(Thousands of Dollars)

			FY 83	FY 84	FY 85	FY 86		
Capital								
Operating			120.4	333.6	351.1	362.1		
Total			120.4	333.6	351.1	362.1		

b. Revenues:

Revenue								

2. Source of funds to offset fiscal impact of bill:

Not indicated by sponsors of bill

3. Assumptions:

If the proposed legislation is enacted, it is anticipated there would be an increase of approximately 50 claims. It is estimated we would receive 40 assault claims (the statute covers only Assault I and II) of which we estimate 26 claims would receive compensation, and we would receive 10 death claims and 5 would be awarded, including 2 claims with one dependent per inciden and 3 claims with multiple dependents. There will be additional hearings as with the change in the statute, the Board will want to be certain the offender will not receive any of the compensation.

4. Disclaimer:
This statement has not been reviewed by the OMB in the Office of the Governor. It therefore does not represent the final estimate of fiscal impact.

ANALYSIS:

If the proposed legislation is enacted, it is anticipated there would be an increase of approximately 50 claims. It is estimated we would receive 40 assault claims (the statute covers only Assault I and II) of which we estimate 26 claims would receive compensation. The average award is $4500.00 per claim so 26 claims would total $117,000. It is estimated the program would receive 10 death claims and 5 would be awarded: 2 claims at one dependent per incident would be $50,000 and 3 claims for multiple dependents would be $120,000 for a total estimated grant money of $287,000.

Because there will be an increase of claims, it is determined it will be necessary to have one more board meeting at a cost of $1500.00. Because of the repeal of the statute it is anticpated there would be 8 hearings at $800 for travel per hearing. The reason for more hearings is because of the change in the statute, the Board will want to be certain the offender will not receive any of the compensation and because of circumstances in some cases, they may order a hearing prior to a final determination by the Board.

The current staff for the Violent Crimes Compensation Board consists of two persons. This change in the statute would necessitate the addition of a clerk typist (range 8) and associated costs, including equipment.

(continued)

Under contractual services, there would be a need for a terminal only for the IBM displaywriter at $3000.00 per year. There would be the cost of hearing officers' fees for 8 hearings at $700 per hearing and a total cost of $5600. Since this will be a major change in the statute, the public must be made aware through TV spots, radio and newspapers. Production of the TV spots will be a one time expense as will the radio spots. These spots should cost around $6500 plus another $1000 for public notices in newspapers around the state.

The costs are assumed to begin 3/1/83.

4A KEY NUMBER __ __ - __ __ - __ __ - __ __ - __ __

JUSTIFICATION

The number of claims received annually by the Violent Crimes Compensation Board has doubled since 1976 and is projected to double again during the two-year period ending 6/30/84. Yet the program has only the same two-person staff it had in 1973.

It is anticipated the change in the statute will increase the number of claims by 50. This increase, on top of the existing understaffing, will necessitate the addition of a clerk-typist and associated costs, including equipment.

Since this is a major change in the statute, all the applications, brochures and posters will have to be redone. The public must be made aware of the changes through TV, radio and newspapers, again much clerical work. There will be an increase in hearings, which must be transcribed verbatim.

The equipment costs include a desk, chair, file cabinet, table, calculator and transcriber.

FISCAL NOTE ANALYSIS
SS HB 104

Costs were derived for this fiscal note by taking the costs of the the relative exclusion repeal, and adding to that the additional costs for the OMVI inclusion. The OMVI provision would mean an additional 500 claims per year. The relative exclusion repeal would mean an additional 50 claims per year. Costs for FY 84 are as follows:

PERSONAL SERVICES

SS HB 104 would require a total of four new positions.

Relative Repeal			OMVI		
Clerk Typist III	Range 8	26.6	Clerk Typist III	Range 8	26.6
			Admin. Asst. I	Range 12	31.7
			Investigator II	Range 16	40.2
TOTAL FY 84 COSTS		26.6			98.5
TOTAL SS HB 104 FY 84		125.1			

TRAVEL

Relative Repeal		OMVI	
1 more Board meeting	1.5	6 more Board meetings	9.0
8 more hearings	6.4	30 more hearings	24.0
TOTAL FY 84 COSTS	7.9		33.0
TOTAL SS HB 104 FY 84	40.9		

CONTRACTUAL

Relative Repeal		OMVI	
8 hearing officer fees	5.6	30 hearing officer fees	21.0
telephone, copier, etc.	1.7	telephone, copier, etc.	6.5
1 displaywriter terminal	3.0	1 displaywriter terminal	3.0
		1 displaywriter printer	3.0
SUBTOTAL FY 84 COSTS	10.3		33.5

ADD $6500 for advertising, one time only expense, same amount needed for either version-

TOTAL FY 84 cost	16.8		33.5
TOTAL SS HB 104 FY 84	50.3		

COMMODITIES

Relative Repeal		OMVI	
		Office supplies	1.5
TOTAL SS HB 104		1.5	

EQUIPMENT

Relative Repeal		OMVI	
Office furniture and equipment for one new position	2.5	Office furn and equip for 3 new positions	7.5
TOTAL FY 84 COSTS	2.5		7.5
TOTAL SS HB 104 FY 84	10.0		

GRANTS

Relative Repeal		OMVI	
50 claims (see HB 104 breakdown)	287.0	500 claims @ 4.5	2250.0
TOTAL FY 84 COSTS	287.0		2250.0
TOTALS - Relative Repeal	340.8	OMVI	2537.0

FY 84 GRAND TOTAL $2764.8

Number of OMVI claims was derived by examining three recent years of fatal alcohol related Alaska traffic accident statistics, showing only 25% of those victims were not the drunk driver himself or his passengers. Highway Safety statistics show a total of about 5,000 alcohol related traffic accident injuries during the year 1980.

25% x 5,000 is 1,250. Insurance industry statistics indicate 40% of Alaska drivers are uninsured. 1,250 x 40% is 500. Average amount currently awarded per claim is about $4,500. Assuming about 500 eligible victims apply and there is a very small denial rate on OMVI claims due to their nature, $4,500 x 500 is $2,250,000.

Awards for relatives were derived by assuming a high denial rate due to the nature of many of these claims, with 26 assault claims awarded @ $4,500, totalling 117.0, plus 10 death claims totalling 170.0.

Note regarding contractual services:

The original fiscal note for HB 104 contained an error in addition of contractual costs. The costs shown for contractual on this fiscal note are correct.

JUSTIFICATION

This position is needed primarily to type verbatim transcripts of hearings. With a projected 38 hearings per year with this change in the statute, there would be a total of about 46 hearings per year. This is nearly one hearing per week, and each transcript is 30-75 pages, requiring two to four working days to complete. Other duties would include distribution of the Annual Report, updating the mailing list and handling inventory and supplies, as well as miscellaneous clerical work as needed.

4A KEY NUMBER ___ - ___ - ___ - ___ - ___

JUSTIFICATION

This position is needed to type correspondence on new claims. Presently, with about 13 claims received each month in FY 83 and at least five letters sent on each new claim, 65 letters a month are typed for new claims. With this change in the statute, the addition of 550 new claims per year would mean 230 more letters each month just for new claims. The position would also type about 108 followup letters per month on pending claims, and assemble about 60 new claims files each month. Other duties as assigned would include necessary routine clerical work, including photocopying the 2,100 copies of claims which would be necessary for the Board members.

JUSTIFICATION

This position is essential to ensure that all 700 claims each year would be thoroughly investigated prior to being presented to the Board for a decision. The Board would want to be sure that the offender did not benefit in cases where the victim is a relative, and to be sure all claims met eligibility requirements. It is particularly important, in light of the Board's history of underfunding, to conserve the Board's limited resources by eliminating cases of fraud or deception and ensuring that collateral sources are utilized whenever possible.

The position would conduct personal interviews with claimants, witnesses, police officers, district attorneys, doctors and others, as needed, to thoroughly investigate each of the 700 claims per year.

JUSTIFICATION

Primary duties of this position would be handling public requests, either by mail or telephone, for information about the program. It is estimated that the Violent Crimes Compensation Board receives four requests for information for every one claim filed, in other words, three of these requests never show up in the claims statistics, but may still require considerable time and effort expended in responding.

If we receive 700 claims during FY84, it is estimated we would receive at least 2,800 inquiries. This position would deal with those inquiries. Additional inquiries for information could be expected from programs and agencies in other states, as well as our own state legislature.

The position would also take over the handling of statistical research for budgeting forecasts and legislative requests, as the existing AA position would be primarily busy with claims followup, assisting the investigator, and preparing the budget.

Dear Representative Clocksin:

The Alaska State Hospital Association is pleased to offer our support for HB 107, An Act Relating to the Right for a Natural Death. This is a responsible approach to resolving a critical, ethical and legal medical problem.

A question does come to mind as to what would happen to a physician and/or a health facility when care is withheld pursuant to a "valid" declaration, but subsequent to death a discovery is made that a revocation existed.

We look forward to working with you on this measure.

Sincerely,

Dennis L. DeWitt
President

SUBJECT: HB 107 - An Act Relating to the Right of a Natural Death

I have attached a copy of an article which appeared in the Reader's Digest and a reader's request to "Dear Abby" for information on a living will. I believe this information will be helpful in your consideration of HB 107.

DC:JR:blg

Attachment

Dear Abby

By Abigail Van Buren

© 1981 by Universal Press Syndicate

DEAR ABBY: About 10 years ago you advertised the Living Will in your column, saying readers could send for it by sending a few dollars to the non-profit organization called Concern for Dying, 250 West 57th St., New York, N.Y. 10019.

Recently you advertised the Living Will and told readers they could get copies by writing to the Society for the Right to Die, 250 West 57th Street, New York, N.Y. 10019.

Did the Concern for Dying organization change its name?

CURIOUS IN DELAWARE

DEAR CURIOUS: No. Concern for Dying and the Society for the Right to Die are two separate organizations. They were formerly affiliated, but due to some internal differences they parted company. They both distribute the Living Will and are equally legitimate, but are constantly confused because they both maintain offices in the same building.

The only fundamental difference is that the Society for the Right to Die extends its function to trying to get the various state legislators to make "the right to die with dignity" part of the state law. It has been successful in many states.

"I Cried, but Not for Irma"

By Max Ferber

"I Cried, but Not for Irma"

Condensed from Los Angeles Times

Max Ferber

It was six months ago that Irma and I first drove to the hospital. The internist had been concerned about my wife's occasional spotting. The gynecologist, apprehensive about what his examination indicated, had suggested a hysterectomy.

Following the operation, the surgeon came up to me in the waiting room. After some preliminary words he said: "It's terminal cancer."

It's terminal cancer.

In something of a whisper, I asked, "How long does she have?"

"It's difficult to say. It could be six months to five years."

Now Irma is dead, after six months, at 75.

It was not over her sure death that I cried. It was for the ignominious way of her going: the degradation of the spirit that was once her, the flagellation of her body, the torture inflicted by medical ethics and by a society that values the flesh over the spirit.

Irma recovered from the operation. She came home after three weeks in the hospital. During her convalescence she was up and about. She was at the table for meals. We visited friends, attended the theater, dined out. The pills were effective: there was no pain.

Had there been a remission? Were the doctors only mortals who had guessed wrong? Were we witnessing a miracle?

Two months of hope, then began the journey to the other shore. Irma was tired. Tempting her to eat was futile. Sedation was needed on a regular schedule. In vigils through the night, we reacted to a gesture, kept adjusting her pillow. Terminal cancer: *Please let her not have pain.*

In time, the burden of caring became too great, even with family

---

Max Ferber is a Los Angeles businessman who earned his bachelor's degree in philosophy at the University of Chicago in 1922 and his master's in liberal arts at the University of Southern California in 1973.

Los Angeles Times (November 28, 1971). © 1971 by Los Angeles Times Co., Times Mirror Square, Los Angeles, Calif. 90053

members sharing the shifts. Exhaustion set in—physical, mental, emotional. The only alternative was the hospital. "There are to be no heroic measures," I said. "I just don't want her to have any pain."

They said that they understood, but it was not to be.

The first ten days in the hospital were a time for gratitude. The nurses were kind and compassionate. Medication was given as needed. Irma's position in bed was changed on schedule to prevent bed sores and to provide comfort. A tube hung from a bedside stand for intravenous feeding.

Irma was not aware of the world—but she was comfortable. There was no pain.

Each day, I watched, wondered—dulled to what was taking place but grateful to the nurses for their concern.

One morning of the third week, I entered the room and was startled. The intravenous tube had been removed from Irma's arm. Instead, she was being fed through a tube inserted in her nose.

She lay on her back in the bed, her hands tied to the rails. I asked why this had to be. "Because," the nurse said, "she was pulling out the tube."

Everyone was considerate. The nurses changed her position every two hours, retying her hands to the rails. They provided pillows to support her changed position. I saw her that evening on her side, tied down for immobility. Only her fingers twitched.

That night, at home in bed, I tried the various positions I had observed Irma take. I could hold each position for only 15 minutes, having to shift to relieve the tension, to release the straining of my muscles. *But it was all right. Irma's position was being changed every two hours. She had no pain.*

In the fifth week, a catheter was introduced to catch her urine. Now the chemicals that dripped through the tube inserted in her nose passed through her body and emptied efficiently into a pouch at the foot of her bed. In this way Irma was being kept alive. I paled at the sight.

The sixth week showed a change. Irma looked better: there was a flush in her cheeks. I wondered what this could mean.

"We pulled her through pneumonia by suctioning the mucus from her lungs," they said. "She is resting more easily now."

How thoughtful. The idea came to me: *Irma will make a good-looking corpse, thanks to medical science.*

Through it all I was led to believe—by comments, by shrugging shoulders—that it would be a matter of only two weeks. Always two weeks, by increments. At the end of three months, I was told Irma could no longer be kept in the hospital: she would have to be moved to a sanitarium.

That night I went to look over the

sanitarium they had chosen. I was disheartened. The place was dim; it seemed gloomy and desolate.

The next morning, as usual, I stopped at the hospital. Irma's room was empty. She had been moved to the sanitarium earlier than I had expected. I hurried there. In daylight it looked better than it had by night.

I found the room where Irma was imprisoned. Yes, that word was inescapable. She was receiving the same care and attention as in the hospital. Again the tube was inserted in her nose, again the catheter pouch hung at the foot of her bed, again her hands were tied to the bed rails.

Irma's squirming had caused her sheet to slip off, and she was lying nude. I covered her and kissed her forehead.

The nurses, again, were kind and compassionate. Sedation came on schedule. Irma was suffering no pain.

Another six weeks passed.

Then, at last, I was privileged to watch Irma being ferried across the River Styx. It had been a long journey, not because the river was wide —from where I stood, I had long since seen the opposite shrouded shore—but because the man-made current was almost irresistible. The force of public opinion, of medical and legal ethics, had run furiously, almost vengefully, resisting Irma's passage.

As I sat, patiently watching, I saw her finally reach the other shore and disappear into the mist of infinity. Her trials were over. It was Saturday, exactly 11 17 a.m. Society had claimed its last ounce of flesh, and after a while I could stop crying.

I left the sanitarium. As I drove away, a seething anger swept over me. It was a fetish, nothing less, for society to worship the flesh while it destroyed the spirit.

At any hospital, the dedication is heedlessly to prolong life. No, not just to prolong life but to do so by using ingenious devices that not only measure the semblance of life but also confirm that the machinery itself is functioning.

Why had Irma been subjected to degradation that made a mockery of living? What does society want, and in heaven's name, why?

The anger has not left me. It will consume me as long as I live. Why are those who value living so insensitive to dying? In memory of Irma —for all the Irmas of this world —I make a simple but heartfelt plea: let us rise, all of us, to defend the defenseless body against the machine.

POSITION PAPER/Department of Health & Social Services

POSITION PAPER

CS FOR HOUSE BILL 109 am
PAGE 1

"An act relating to persons 16 or 17 years of age who are charged with unclassified or Class A felonies; and amending the childrens waiver proceedings."

This Bill would make several changes in the manner of dealing with older juvenile offenders accused of serious or violent crimes. It would

1. Require the prosecution of 16 and 17 year old juveniles accused of unclassified or Class A felonies within the adult criminal system;

2. Change the standard for judicially waiving serious or repeat juvenile offenders who would not be subject to automatic exclusion from juvenile jurisdiction, and define factors which the court must consider in making waiver decisions; and

3. Define sentencing and confinement procedures for juveniles who are waived to adult jurisdiction.

AUTOMATIC WAIVER

Under the provisions of CS HB 109 the only method for dealing with juveniles 16 and 17 years of age who are accused of unclassified or Class A felonies would be through criminal proceedings under the adult jurisdiction of the Superior Court. Any such youth suspected by police of having committed an unclassified or Class A felony would be subject to arrest, prosecution, and pre-trial confinement in precisely the same way as would an adult.

Automatic or legislative waiver of the most serious juvenile offenders is an excellent concept that can help resolve one of the most difficult problems of the juvenile justice system. Dealing with older juveniles accused of the most violent crimes within the adult criminal system will allow more appropriate sanctions to be imposed by the court and will provide sufficient time for rehabilitative efforts to be effective.

However, the Department opposes the inclusion of Class A offenses within the category requiring automatic waiver. Inclusion of Class A offenses makes the category of automatically waiveable offenses too broad and would require the waiver of a number of juveniles who could be effectively controlled and rehabilitated within the juvenile justice system. Narrowing the category of automatically waiveable offenses to only unclassified felonies is preferable for several reasons: 1) it would be more economical and the fiscal impact of the bill would be reduced; 2) though serious in nature, Class A category offenses also include offenses which differ significantly from unclassified offenses

POSITION PAPER/Department of Health & Social Service

in the degree of actual violence or harm done to victims; 3) the strengthened judicial waiver mechanism would allow for adequate protection of the public by selectively identifying those juveniles accused of Class A felonies who should be dealt with in the adult criminal system. This selective identification would allow for differentiation among juveniles based on the actual seriousness of the offense and prior behavior of the youth rather than relying solely on the arbitrary classification of offenses. Those juveniles who did not present a danger to the public could be retained within the juvenile system. This flexibility would prevent the development of problems in the adult correctional system in attempting to integrate a group of young, unsophisticated, non-dangerous youth in adult corrections facilities where such youths could potentially fall prey to abuses by adult inmates.

JUDICIAL WAIVER STRENGTHENED

In addition to instituting an automatic waiver this Bill would strengthen the existing judicial waiver. The existing waiver mechanism would be strengthened by a change in the standard of proof necessary for making waiver determinations. In addition, the Bill defines nine specific factors which must be considered by the court in determining the likelihood of successfully rehabilitating a youth within the juvenile system.

This would be far superior to the existing judicial waiver and would provide better definition to the waiver process and guidance for the court in making waiver determinations. The less stringent standard of proof required for waiver would make waiver of juveniles easier to accomplish and would undoubtedly increase the willingness of prosecutors to attempt waivers. The court's ability to determine the weight to be given each of the nine factors it must consider and to make a waiver decision based on any one or a combination of the factors provides the court with a substantial degree of discretion and is also likely to make waivers far easier to accomplish.

SENTENCING OF WAIVED JUVENILES

Under the provisions of CS HB 109 as amended 16 and 17 year old juveniles automatically waived to adult jurisdiction would be sentenced within the adult system unless they were convicted of a lesser included offense that was not an unclassified or Class A felony. In such cases disposition would be within the juvenile system. This would justly deal with youths who, though charged with an automatically waiveable offense, are actually convicted of a lesser offense which would not have made

POSITION PAPER/Department of Health & Social Services

them eligible for automatic waiver. This would also provide adequate safeguards to preclude punitive or discriminatory overcharging by police or prosecutors in order to make certain juveniles subject to the more stringent sanctions of the adult system. This provision greatly strengthens the Bill and makes it far superior and more just than the original version.

Another provision of this Bill is very effective in dealing with the problem of differences in levels of maturity and sophistication of juveniles who would be subject to the automatic or judicial waiver. It would also allow for consideration of the differences in the specifics and seriousness of the offenses committed by those juveniles. This provision would require that, although juveniles waived to adult criminal jurisdiction would be sentenced as adult offenders and confined within the adult correctional system, they would not be subject to mandatory minimum or presumptive sentences upon a first felony conviction. This would maintain the integrity of the Bill in holding juvenile offenders accountable for their offenses, but allow the court adequate discretion to consider all pertinent facts in sentencing waived juveniles. Since exclusion from juvenile jurisdiction under the automatic waiver provision is based solely on the offense committed such discretion would be necessary. Studies show that all serious offenses are not the culmination of delinquent careers and that disparity in the sophistication and history of delinquent behavior among waived juveniles must be expected. Sentencing discretion such as is provided by this provision is necessary to justly address this disparity.

CONFINEMENT OF WAIVED JUVENILES

Under this Bill all juveniles subject to adult criminal jurisdiction under either the automatic or judicial waiver provisions would, if confined to custody following arrest, while awaiting trial or sentencing, or after sentencing, be confined in adult correctional facilities.

These provisions are straightforward but unfortunately do not provide sufficient procedural protections. Juveniles would be housed in adult facilities from the time of arrest. The decision about where juveniles should be housed would, then, essentially be made at the discretion of the arresting officer based on the crime the officer chose to allege. Youths would be subject to the unreviewed judgement of police officers and could be housed in adult facilities based on police officer error, punitive overcharging, or discrimination in alleging a more serious charge than would be indicated or could be proven from the facts.

POSITION PAPER/Department of Health & Social Services

These problems could be avoided and a more equitable and more certain system provided by requiring that juveniles be housed in juvenile facilities until procedural reviews had occurred. Such reviews would include a grand jury or preliminary hearing before the court, from which an indictment or finding of probable cause had been found to believe that the juvenile had committed an automatically waiveable offense. This would avoid the possibility that juveniles were charged with waiveable offenses simply to allow their incarceration in an adult facility.

EFFECTS OF THE BILL

With the suggested changes CS HB 109 would adequately address the problem of dealing with older, violent, serious, or repetitive juvenile offenders by holding them accountable in the same manner as adults. This would focus directly on the highly publicized problem which is the cause of much public misperception of juvenile crime and juvenile offenders. It would also allow the juvenile justice system to focus on those youths for whom the likelihood of rehabilitation is much greater.

The juvenile justice system could maintain the comprehensive approach to protecting the public and rehabilitating youths through diversion, intervention and services to strengthen families without the necessity of structuring programs, services, and facilities to deal with those older, violent juveniles who differ significantly from the vast majority of juvenile offenders.

The effect of CS HB 109 as amended would be to increase the number of juveniles subject to prosecution under the adult criminal statutes and to increase the liability of these juveniles to sanctions more severe, both in nature and duration than those to which they would have been liable under the juvenile code. With the suggested narrowing of the automatic waiver to include only those juveniles accused of unclassified felonies the Bill would appropriately focus the liability of adult prosecution on older, violent juvenile offenders and other juveniles who had committed specifically heinous crimes or who had records of repetitive delinquent behavior and either had not or would not be likely to be rehabilitated under the aegis of the juvenile justice system.

DHSS POSITION

The Department strongly supports the concepts embodied in CS HB 109. It is the Department's position that, though few in number, older youths accused of heinous or violent crimes require sanctions qualitatively and quantitatively different from those available under the jurisdiction of

POSITION PAPER/Department of Health & Social Services

the juvenile court. This Bill, with the suggested changes, would provide an effective and comprehensive approach to dealing with older serious, and repeat juvenile offenders. The charges suggested are merely refinements which provide necessary procedural protections to guard against abuses or human error. With the inclusion of suggested refinements the Bill would increase protection of the public and public confidence in the justice system while delaing justly and equitably with juvenile offenders.

IV. ANALYSIS

A. Assumptions

1. If CSHB 109 (Judiciary) am is implemented, there will be a requirement for 62.25 beds. The calculation for this follows:

Annual Frequency of Convictions	Presumptive Sentence	Est. Avg. Sent. for 16-17 Yr. Olds Convicted As An Adult	Actual Time to Serve w/Credit For Good Time
1 unclassified felony	20 Years	15 Years	11.25 x 1 = 11.25
5 Class A felonies (w/firearm)	7 Years	6 Years	4.5 x 4 = 18.0 Yrs. 1 probation
8 Class A felonies (w/o firearm)	5 Years	4 Years	3 x 8 = 18.0 Yrs. 2 probation
1 sexual assault 1st (w/firearm)	10 Years	7 Years	5.25 x 1 = 5.25 Yrs.
3 sexual assault 1st (w/o firearm)	8 Years	5 Years	3.75 x 2 = 7.5 Yrs. 1 probation
	Non-Presumptive		
2 Class B felonies	0-10 Years	2 Years	1.5 x 1 - 1.5 Yrs. 1 probation
2 Class C felonies	0-5 Years	1 Year	.75 x 1 = .75 Yrs. 1 probation
			Total 62.25 Man Years

2. Inflation of 6% for all expenditure object groups was assumed calculating subsequent fiscal years.

B. Program Summary

1. Positions

It is estimated that 23 positions will be required to provide security and supervision for the 62 additional bed spaces. The positions are:

1 - Correctional Officer III
20 - Correctional Officers II
2 - Probation Officers II

These positions would be needed July 1, 1985, the estimated opening date for the new beds.

2. Other Expenditures

a. Capital Expenditures: Because of the serious nature of the offenses, construction of maximum security beds were originally considered appropriate at $162,000 per bed. However, because of the age of the offenders, it is now assumed they will be placed in medium security beds, but separate from older inmates. The number of beds was also rounded to 62, at a cost of $146,000 per bed.

62 beds @ $146,000 per bed
62 x $146,000 = $9,052,000

b. Incremental cost will be incurred for 16 and 17-year-olds beginning in FY 1984. These costs include:

Contractual Services: Medical costs at $1800 per inmate year for 8 full time equivalent inmates. 8 x $1800 = $14,400
Commodities: Food, clothing, bedding, etc. for 8 full time equivalent inmates at $8.43 per day. 8 x $8.43 x 365 = $24,762
Grants: Inmate gratuities paid for work crew participants. Estimated need $2,500.

FY 1986 Costs - Adult Confinement

Personal Services	$ 985,200
Travel	6,400
Contractual Services	184,000
Commodities	187,000
Equipment	5,900
Inmate Gratuities	30,000
TOTAL	$1,398,500

D. Economic Impact:

Passage of this bill will have effect on the state budget, but little impact on the State's economy.

E. Impact on Local Governments:

Passage of this bill will not have impact on local government units.

House Judiciary Committee
Rep. Charles Bussell, Chair
Pouch V
Juneau, Alaska 99811

Dear Rep. Bussell & Members of the House Judiciary Committee:

I am writing to express my conc[illegible]out HB109 which is now before you. This legislation proposes ch[illegible] present state law relating to the court's jurisdiction over min[illegible]s who are charged with certain crimes. At present, AS 47.10.060 statutes provide that any minor, regardless of the crime he/she has committed, is dealt with by the juvenile court unless a hearing determines that the minor should be prosecuted as an adult. In that event, the court "waives" jurisdiction of the juvenile over to the adult courts. In my opinion, present statutes provide adequately for the protection of both the juvenile and society, and do not need to be changed.

In considering changes to AS 47.10.060 I would urge the committee to consider that -

1. No accurate data has been compiled of the actual incidence of juvenile waiver in Alaska nor of the commission of class A or unclassified felonies by juveniles.

2. Research into the effects of similar legislation in New York & Minnesota revealed that instead of increasing the incarceration of juveniles, conviction rates for serious juvenile crime proved to be lower and utilized more frequently than would have been the case in juvenile court.

3. The fiscal implications of this bill for an already over-burdened court and corrections system will be substantial.

4. If the concern is to clarify the use of the juvenile waiver or provide for longer sentences for juveniles convicted of serious crimes there are other, better ways to accomplish the goal than enacting "wholesale" legislation.

Section 2 of HB109 appears to be addressing the sponsors' concern that without legislation mandating the waiver of certain juveniles to adult court, the judge will not do so. Yet, the only actual criteria for the use of the waiver are -

1. age of the juvenile

2. probable causes to believe that the minor
   a. has committed an unclassified or Class A felony
   b. is a delinquent

The non-amenability to treatment provision is extremely difficult to assess and could become meaningless. If the legislature wishes to insure use of the waiver then adding additional specific criteria for its use is, in my opinion, a better way to accomplish the goal. For instance, I believe the court should be required to consider such things as; (1) the minor's past record of offenses, (2) mitigating circumstances, (3) harm to the victim(s), (4) use of a weapon etc.

Section 1 of HB109 is laudable in its intent to incarcerate a juvenile in a juvenile correctional facility even though an adult court would do the sentencing. The incidence of homosexual rape in correctional facilities is well know. I believe, however, that if the intention of HB109 is to incarcerate juveniles convicted of serious crimes longer than is presently possible, another approach is preferrable. Alaska Statutes presently provide that a juvenile can only be institutionalized for two years or until his/her 19th birthday unless the State petitions the court for a longer sentence and the juvenile agrees. In such a case the juvenile can be institutionalized until aged 21.

I would suggest that Title 47 might be amended to provide that where the juvenile is institutionalized as the result of having been found guilty of a Class A or unclassified felony that the State be given the power to petition for the extension of the juvenile's sentence <u>without</u> the concurrence by the juvenile if the State believes the juvenile needs additional treatment. Such a provision could serve to lengthen the availability of treatment without subjecting the young person to the adult correctional systems' dangers.

If the legislature believes that the present statutes need to be amended, then I suggest a more thoughtful and comprehensive approach. In 1975 and 1976 when reform of children's law was deemed necessary, the legislature established the Children's Code Task Force to review those statutes, study other State's laws and recommend coordinated and comprehensive revisions. I had the privilege to be a member of that Task Force and believe it to be a rational and progressive method of statute review which has obvious advantages over a piecemeal approach. I urge you to consider establishing a similar commission or task force to recommend needed statute changes to the legislature. The issues addressed in HB109, together with other issues legislators believe need attention, could be assigned to such a task force with requirements for a report to the Second Session of the 13th Alaska Legislature.

In closing, may I reiterate that the very small number of juveniles represented by this legislation and the adequacy of present statutes for dealing with these cases in my opinion make this legislation unnecessary.

Sincerely,

Cecilia Kleinkauf

Dear Ms. Kleinkauf:

Thank you for your letter of February 15th regarding HB 109; proposing changes in criminal prosecution of minors.

It may be that present statutes provide adequately in this regard as you assert. If this is true, however, then the interpretation and implementation of those statutes by the courts are woefully inadequate, in my opinion.

Regarding the appointment of a task force, I believe the need is urgent enough that we must take some immediate corrective action. The appointment of such a task force collection of data, hearings, etc. could go in ad infinitum Meanwhile, juveniles commit atrocious crimes and escape with little more than a "wrist tapping" sentence.

I do agree with you that this legislation in large measure is attempting to do what judges were either unwilling or unable to do in handling juveniles convicted of serious crimes under present statutes. I also agree that the provision of the current law that a juvenile cannot be imprisoned past age 19 unless the juvenile concurs is patently absurd, and must be changed. I cannot comprehend how supposedly intelligent people could have enacted such a law.

In large measure, I do agree with you on the need for special handling and understanding of juvenile criminals. However, those who commit heinous crimes must be removed

from society until it is reasonably certain they have been rehabilitated, or they have served a sufficiently long sentence to serve as a deterrent to themselves and others from such criminal activities.

Your comments are always welcome.

Sincerely,

Ramona

March 26, 1983

¥a¥

Dear ¥s¥:

Thank you for taking the time and effort to send a Public Opinion Message containing your thoughts on HB 109. HB 109 has had extensive hearing and Committee work in the House Judiciary Committee.

CSHB 109 passed from the Committee this past week and is now in the House Finance Committee. I'm enclosing a copy of the bill in it's present form and as you can see, it applies only to 16 and 17 year olds who have been charged with a class "A" or unclassified felony.

Any person so charged, in the opinion of the majority of the Committee and I dare say the majority of Alaska's people, believe that that person should be charged as an adult.

Any fears you may have about the bill affecting rehabilitation are invalid, as the bill does not address any form of reduction on that subject.

As the new Department of Corrections is formed, an correction activity will have one boss at least and the new department will be able to provide far greater, better managed and there by more sucessful rehabilitation services to all inmates.

Thank you again for letting me know your views and becoming involved with the Legislative process.

Best regards,

Representative Charlie Bussell
Chairman, Committee on Judiciary

Dear Ms. Apple and Ms. Unterseher:

One of the major concerns of the Thirteenth Legislature and the Majority Coalition continues to be reduction of crime and improvements to the justice system. In the pursuit of those goals, input from agencies such as yours and people with experience in the system is appreciated.

I have enclosed a copy of House Bill 109 which addresses some of the concerns of your letter of January 17. Your letter is being referred to the Judiciary Committee of the House for review and possible action.

As you follow the legislation introduced this session, please do not hesitate to contact me on issues that are of concern to you. Thank you for taking the time to advise me on these issues.

Very truly yours,

Joe L. Hayes
Speaker of the House

FAMILY CONNECTION

A counseling agency for youth and their families

204 E. 5th Ave., Suite 215, Anchorage, Alaska 99501 (907) 279-0551

JAN 19 1983

January 17, 1983

Representative Joe L. Hayes
Pouch V
Juneau, Alaska 99811

Dear Mr. Hayes:

As staff members of Family Connection, Inc., a non-profit family counseling agency, we would like to share and articulate some serious, but correctable difficulties we have observed within the State's juvenile justice system.

Family Connection has provided Family Therapy services to a variety of youth institutionalized at McLaughlin Youth Center for the past three years. We are contracted to join the treatment team for a particular youth by either McLaughlin staff or Juvenile Probation staff. We have worked primarily with youth and their families prior to release from McLaughlin. Our goal has been to facilitate a smooth transition for the youth back into the family and community and to reduce the rate of recidivism. We specifically look at how the family functions and the interactional process that produces delinquent behavior.

We have been impressed with the expertise and professionalism of both McLaughlin staff and Juvenile Probation staff. They work with dedication to treat, rehabilitate and return youth to the community. However, present legalities place great limitations on the expertise of these professionals.

We support the Waiver of Jurisdiction Statute, Section 47.10.060 of the Alaska Statutes. The waiver allows for a procedure that determines if a minor is amenable to treatment, and if so, the minor is sent to McLaughlin Youth Center for rehabilitation, rather than to the Adult Justice System. We believe that if there are indications that a youth is amenable to treatment, society is better served by providing treatment services along with punishment. Unfortunately, our experience has shown us that the waiver statute has been abused in two ways.

First, the waiver is not used enough. Clearly, there have been youth who should have been waived to adult status for committing atrocious, violent crimes. This sentiment has been expressed by many in the past year. Why isn't the waiver being used effectively? How could this process be changed to facilitate more frequent use?

Secondly, the present statute contains serious limitations that has made the members of the juvenile justice system appear ineffective. As an example, if a youth is amenable to treatment but after an intensive course of treament the youth is still unchanged and dangerous, according to State law the youth must still be released. There is no other recourse. This has been a difficult moral and ethical dilemma for professionals within the Juvenile Justice System. How can we ethically release a youth into the community knowing the youth is a danger to society.

Another problem involves the length of institutionalization. A youth cannot be held longer than two years or until their 19th birthday. We have observed a youth who committed a violent murder receive a sentence of less than one year. In this case the youth simply refused to participate in treatment. Therefore, he is not adequately treated or punished. Again, treatment staff are put in a bind by the court as they are given an impossible task to perform with no recourse to protect either the treatment process or the community.

The State of Alaska has done well in providing rehabilitation for youth, while at the same time protecting the safety of our people. However, there are serious handicaps in Alaska's Juvenile Law that we feel need immediate attention, particularly with the present climate of overreaction. We would be greatly discouraged to see the State lose the flexibility in our laws to rehabilitate and punish by giving way to oversimplified, reactionary solutions.

We hope this letter will initiate a process of change. We are willing to devote our time to this issue and would like your feedback as to where we might direct our energies. Also, we would like to know what the role of your office will take in initiating change.

MEMORANDUM

DATE: January 28, 1983

TO: ALL SPONSORS OF HB 109

FROM: Rep. Mike Szymanski

Attached is correspondence regarding the issue of legal age of majority. I am forwarding you this because a copy of your bill was included in the material sent to me by Family Connection.

I think they raise some valid points and I am a little concerned that HB 109 might result in inflexibility in the juvenile justice system. If I am reading Section 2 correctly, sub-paragraph (1) could result in every minor over the age of 16 being prosecuted as an adult.

As I noted in my return letter to Family Connection, I do not believe that all minors should be prosecuted as adults. My experience in working with delinquent youth has convinced me that positive redirection is possible with proper treatment.

I would appreciate hearing your views.

Anchorage, Alaska 99501

Dear Kathy and Rosemary:

Thank you for your letter of January 17 regarding the State juvenile justice system. It was very well written and informative.

I am aware that there are several bills in the making which will affect the age of majority regarding criminal prosecution. Most favor lowering the age to 16 for felonies. I am not sure that they are reactionary.

As you pointed out, current Alaska law has been abused as written. The waiver provision has not been used enough. I believe this has resulted in general public distrust of the entire juvenile justice system. It is unfortunate, but a fact. And as legislators we are responsive to the public will. WE ARE ??

But like you, I would also hate to see the State lose its ability to be flexible in cases involving misguided youth. I agree that society is best served if treatment can rehabilitate problem youth and reintegrate them into society as productive citizens.

The key, as you also pointed out, is to write laws that provide for both flexibility and sternness. There are some cases where the youth is not amenable to treatment and should be treated as an adult in order to protect society. A good law would deal justly with both situations.

I personally do not anticipate drafting any legislation on this subject this session. I am also not serving on any committees which will deal with the bills that have been introduced.

I am, however, very interested in youth rehabilitation and plan to follow the issue closely. Any information or suggestions you can provide me would be greatly appreciated. If you have specific recommendations on the proper design of a law, please forward them and I will discuss them with my fellow legislators.

Also, if you have not already done so, I would advance your concerns to all members of both the Senate and House Judiciary Committees. It is in Judiciary that the proposed bills will first be heard. Representatives Clocksin, Bussell, Liska, Hayes, Barnes, Malone and Wendte are serving on the House Judiciary Committee. I do not have a list of Senate members.

Thank you again for expressing your concerns. If you have any questions please contact me or my staff in Juneau at 465-4978.

Sincerely,

Mike Szymanski

LETTERS FROM THE PEOPLE

Suggestions for juvenile justice

As staff members of Family Connection, Inc., a non-profit family counseling agency, we would like to share and articulate some serious, but correctable difficulties we have observed within the state's juvenile justice system.

Family Connection has provided family therapy services to a variety of youth institutionalized at McLaughlin Youth Center for the past three years. We are contracted to join the treatment team for a particular youth by either McLaughlin staff or juvenile probation staff. We have worked primarily with youth and their families prior to release from McLaughlin. Our goal has been to facilitate a smooth transition for the youth back into the family and community and to reduce the rate of recidivism. We specifically look at how the family functions and the interactional process that produces delinquent behavior.

We have been impressed with the expertise and professionalism of both McLaughlin staff and juvenile probation staff. They work with dedication to treat, rehabilitate and return youth to their community. However, present legalities place great limitations on the expertise of these professionals.

We support the Waiver of Jurisdiction Statute, Section 47.10.060 of the Alaska Statutes. The waiver allows for a procedure that determines if a minor is amenable to treatment, and if so, the minor is sent to McLaughline Youth Center for rehabilitation, rather than to the adult justic system. We believe that if there are indications that a youth is amenable to treatment, society is better served by providing treatment services along with punishment.

Unfortunately, our experience has shown us that the waiver statute has been abused in two ways.

First, the waiver is not used enough. Clearly, there have been youths who should have been waived to adult status for committing atrocious, violent crimes. This sentiment has been expressed by many in the past year. Why isn't the waiver being used effectively? How could this process be changed to facilitate more frequent use?

Secondly, the present statute contains serious limitations that has made the members of the juvenile justice system appear ineffective. As an example, if a youth is amenable to treatment but after an intensive course of treatment the youth is still unchanged and dangerous, according to state law the youth still must be released. There is no other recourse. This has been a difficult moral and ethical dilemma for professionals within the juvenile justice system. How can we ethically release a youth into the community knowing the youth is a danger to society?

Another problem involves the length of institutionalization. A youth cannot be held longer than two years or until their 19th birthday. We have observed a youth who committed a violent murder receive a sentence of less than one year. In this case the youth simply refused to participate in treatment. Therefore, he is not adequately treated or punished. Again, treatment staff are put in a bind by the court as they are given an impossible task to perform, with no recourse to protect either the treatment process or the community.

The State of Alaska has done well in providing rehabilitation for youth, while at the same time protecting the safety of our people. However, there are serious handicaps in Alaska's juvenile law that we feel need immediate attention, particularly with the present climate of overreaction. We would be greatly discouraged to see the state lose the flexibility in our laws to rehabilitate and punish by giving way to oversimplified, reactionary solutions.

CSHB 109
Analysis

This bill provides that persons 16 or 17 years of age who are charged with unclassified or class A felonies will be prosecuted as adults. Unlike the original version of the bill, CSHB 109 (Jud.) makes the waiver of these persons from juvenile to adult court automatic; there is no need for a hearing in juvenile court prior to the waiver. The elimination of the need for these hearings will result in a major savings of prosecutor time and resources.

It is estimated that approximately 30-35 persons a year will be waived into adult court under this bill. This figure includes those persons who are now waived, in the judge's discretion, following a hearing on the person's "amenability to treatment." Considering this, and the fact that the district attorney's offices currently handle those few cases which actually proceed to trial in the juvenile system, it is estimated that the net impact of this bill will be approximately 20 additional felony cases a year statewide, a burden which can largely be absorbed into the current workload of the various district attorney's offices.

CSHB 109
Fiscal Analysis

The changes made in the bill, by the committee substitute, making the waiver from juvenile to adult court automatic, will decrease the resources needed from one full-time Attorney IV and a part-time Legal Secretary to just one part-time Attorney IV. For the purposes of this analysis, position costs are based on salary schedule A. The first year of funding (FY 84) is based on 10 months of expenses to account for the time it takes to establish a new position. Costs beyond FY 84 are on a 12 month basis and include a 6% annual inflation factor.

1st Year (10 months)

JUSTIFICATION

This part-time Attorney position will be needed to handle the estimated 20 additional felony cases that will occur as a result of the automatic waiver from juvenile to adult court if CSHB 109 becomes law. The Attorney IV, or full working level of Attorney will be required because those cases to be tried will be either Class A or unclassified felonies, which are the most serious criminal offenses.

HB109 file

Juvenile crime bill gets support

Times Staff
and Associated Press

Juneau — A bill that requires some juveniles accused of violent crimes to be tried as adults all but passed the House Friday on a 29-8 vote.

If the proposal doesn't come up for a second vote today, it will be sent automatically to the Senate.

The bill would let 16- and 17-year-old minors be tried as adults for the most serious felonies, called unclassified and class A felonies. They include murder, attempted murder, kidnapping, attempted kidnapping, rape, arson and possession of explosives with intent to commit murder or kidnapping.

Within hours after the House vote, the Senate Judiciary Committee took up a similar version of the bill.

But the Senate bill contains two major differences. It would limit the crimes for which a juvenile 16 or 17 years old must be prosecuted as an adult to unclassified felonies, the most serious violent crimes. And it would let a minor tried as an adult but convicted by a jury of a lesser charge to be handled by juvenile courts.

Both bills also would make it easier for prosecutors to get judges to send a juvenile charged with lesser felonies up to the adult courts for trial.

On the House floor, Rep. Don Clocksin, D-Anchorage, tried to amend the bill so that a minor tried as an adult but convicted of a lesser offense could be sentenced to treatment by the juvenile courts.

But bill sponsor Rep. Sam Pestinger, R-Anchorage, said his proposal gives the judge the choice of sentencing the minor to prison, probation or treatment.

Rep. Mike Miller, D-Juneau, said the bill would destroy the concept that a person is innocent until proven guilty. If a teen-ager is convicted of a lesser crime, the state shouldn't sentence him as an adult, he said.

Clocksin's amendment failed on a 20-17 vote.

Pestinger called his bill "practical crime prevention."

"It identifies the most serious crime, and applies our resources to the most serious crimes," he said.

But Clocksin said the bill doesn't prevent crime. It deals with how to handle teen-agers after they've been charged with a crime.

In the Senate Judiciary Committee, debate bogged down over what standard judges should apply when deciding whether to send a minor to the adult court.

The bill before them called for no waiver if there's a "substantial liklihood" the minor will commit no more crimes.

Sen. Bill Ray, D-Juneau, said if the juvenile has committed crimes in the past he's likely to commit more.

But Gail Horetski, an assistant attorney general, said murder and rape often are crimes of passion that are the first offenses committed by juveniles.

STATE OF ALASKA
PRELIMINARY STATEMENT OF FISCAL IMPACT

Bill No.: House Bill No. 109 Date on Bill: January 24, 1983
Title: "An Act relating to the criminal prosecution of minors."
Sponsor: Representatives Pestinger, Furnace, Uehling, Flood, Barnes, and Bussell
Requestor:

1. Estimated fiscal impacts on:

a. Expenditures:

(Thousands of Dollars)

			FY 83	FY 84	FY 85	FY 86		
Capital				15,714.0	-0-	-0-	-0-	-0-
Operating				-0-	-0-	3,389.7	3,563.0	3,776.7
Total				15,714.0	-0-	3,389.7	3,563.0	3,776.7

b. Revenues:

Revenue				-0-	-0-	-0-	-0-	-0-

2. Source of funds to offset fiscal impact of Bill:

Funding source not identified by Bill author.

3. Assumptions:

Available statistical data indicates there would be 31 juveniles arrested annually for unclassified or class A felonies. This would represent an increase of 28 in the number of juveniles subjected yearly to prosecution as adults. An average of 3 juveniles are waived from juvenile court jurisdiction each year under the existing judicial waiver mechanism. Of the additional 28 juveniles subjected to adult prosecution, 18 would be convicted and sentenced to imprisonment for periods of up to 20 years if adult prosecution and conviction rates are assumed. The first two years of the sentence would be served in a juvenile facility with up to 13 years served in an adult facility if it is assumed all offenders earn their maximum good time based on a formula of one day good time for three days served.

4. Disclaimer:
This statement has not been reviewed by the OMB in the Office of the Governor. It does not represent the policy of the Sheffield Administration or the final estimate of fiscal impact.

"An Act relating to criminal prosecution of minors."

COST ESTIMATES

A. Enactment of House Bill No. 109 will have a significant fiscal impact on the Department of Health and Social Services, both in juvenile and adult corrections. Since the new language would class individuals sixteen years and older as adults for unclassified and class A felonies, the time served by convicted sixteen and seventeen year-olds would increase substantially.

It is the estimate of the Department of Health and Social Services that ultimately an additional 97 beds will be needed to care for this group of individuals in a secure setting. Details of this estimate follow.

B. Youth Services Impact

1. FY 84 Capital Expenses: The construction of facilities to house 40 juveniles sentenced as adult prisoners is based upon the most recent available arrest data (1981).

2. This data shows that approximately 28 additional juveniles would annually be subject to prosecution under adult criminal statutes for unclassified and class A felony offenses. Assuming a conviction rate equal to the conviction rate for adult offenders similarly accused it might be expected that 18 juveniles would be convicted of such offenses annually and sentenced as adults under the provisions of House Bill No. 109.

Analysis of the arrest data yields expected frequency of convictions and sentences which would result in all juveniles sentenced as adults serving at least two years in the juvenile facility prior to transferring to an adult facility and two youths expected to serve their entire sentence of 3.75 years in a juvenile facility. Within two years 36 juveniles would then be serving adult sentences of at least two years in juvenile facilities. This population would stabilize after two years at approximately 38-40 because of the transfer of prisoners to adult facilities.

The FY 84 estimate is based upon 464 square feet for each of 40 maximum security cells; plus 1 station for each of the 2 detention units: one to accommodate 5 staff and 1 to accommodate 6 staff including the typist; and 1 common day room that can be utilized for meals, a rehabilitative program (counseling and education), and recreation. (No costs are included for a kitchen, as meals would be prepared in the existing facilities at McLaughlin and carried to the units.) It is also assumed that the Department's major study for

expansion would be revised to accommodate construction of the two units to connect with the existing building.

DOT/PF cost estimates for 464 square feet in a maximum security facility during the FY 85 construction season is $162.0. This includes design and planning costs which would begin in FY 84. The remaining funds would be carried over into FY 85 for construction and equipping the units.

$162.0 x 40 cells = $6,480.0

3. FY 86Operating Costs and Juvenile Expenses

June 30, 1985 would be the estimated completion date. Operating costs are estimated as follows:

100 Personal Services	$1,391.6
200 Travel	24.5
300 Contractual Services	119.0
400 Commodities	131.6
500 Equipment	22.6
700 Benefits to Individuals	109.4
	$1,798.7

The above estimates are based upon 30% of the related costs for the McLaughlin Youth Center's FY 84 Governor's Budget, with 6% added for FY 85 and FY 86.

Personal Services includes 1 Unit Leader, 3 Youth Counselor III's, 5 Youth Counselor II's, and 4 Youth Counselor I's for each unit. The staffing pattern is based on the necessity of operating the units as maximum security facilities. This level of security is required due to the high escape risk presented by those juveniles to be housed and upon the nature of the offenses for which they are sentenced. An Assistant Cook will serve in the existing kitchen, and a Clerk Typist III will provide all clerical support for both units.

Travel of staff to meetings, conferences, courses, and for transportation of new hires is included.

Contractual Services are estimated for the additional costs for communications, utilities, copier usage, equipment rental, inmate laundry, and fire, accident, and liability insurance.

Commodities include purchase of food, replacement of tableware, glassware, bedding, janitorial and cleaning supplies, and general office supplies.

Equipment items necessary for on-duty staff, closed circuit TV monitor of units and a camera for inmate ID are included.

Benefits to Individuals includes costs for medical and dental care, and a work program for 20 inmates.

C. Adult Confinement

It is assumed that no appreciable bed impact will be experienced by the Division of Adult Corrections until FY 1986. This is based on the assumption that the average age of offenders affected by this legislation will be 17 years, and that they will serve two years in a juvenile facility prior to transfer to an adult facility. This fiscal note identifies a need for 57 additional beds in an adult facility.

Based on arrest data indicating 28 additional persons 16 and 17 years of age being subject to adult prosecution annually for crimes in the unclassified or class A felony categories, and using conviction rates and average sentence lengths for adult offenders, the following is predicted:

1. Unclassified Felony

   One conviction per year with an average sentence of 15 years to serve (20 years less good time) will require 13 additional beds.

2. Sexual Assault I (Rape) With Gun, Dangerous Weapon, and/or Caused Serious Physical Injury

   One conviction per year with a sentence of 7.5 years to serve (10 years less good time) will require 5.5 beds.

3. Sexual Assault I (Rape) Without Weapon/Injury

   Three convictions per year with a sentence to serve of 6 years (8 years less good time) will require 12 beds.

4. Class A Felony With Gun

   Five convictions per year with a sentence to serve of 5.25 years (7 years less good time) will require 16.25 beds.

5. Class A Felony Without Gun

   Eight convictions per year and two sentenced so as to serve all time in a juvenile facility. Therefore, 6 individuals will serve an average of 1.75 years in an adult facility.

   $6 \times 1.75 = 10.5$ beds

6. Total beds required is 57 (rounded).

7. Cost Estimates

a. Capital Expenditures: Because of the serious nature of the offenses, construction of maximum security beds was considered appropriate at $162,000 per bed.

57 beds @ $162,000 per bed
57 x $162,000 = $9,234,000

b. Operating Expenditures: It is estimated that 23 positions will be required to provide security and support for these 57 beds: 1 Correctional Officer III, 20 Correctional Officer II's, and 2 Institutional Counselors. Costs for these positions will not occur until FY 1985, the anticipated opening data for the new beds.

FY 1986 Costs - Adult Confinement

Personal Services	$1,177,700
Travel	6,400
Contractual Services	184,000
Commodities	187,000
Equipment	5,900
Inmate Gratuities	30,000
TOTAL	$1,591,000

Inflation of 6% for all expenditure object groups was assumed calculating subsequent fiscal years.

POSITION PAPER

HOUSE BILL NO. 109
PAGE 1

"An Act relating to criminal prosecution of minors."

House Bill No. 109 would add additional provisions to AS 12.55 and AS 47.10 to accomplish two major purposes. The Act would: 1) alter and further define the process by which a determination is made to waive juvenile court jurisdiction over certain minors and subject them to prosecution as adults; and 2) define the type of facility in which minors who have been prosecuted and sentenced as adults are to serve their terms of imprisonment.

Section 2 of HB 109 would maintain the existing judicial waiver mechanism and mandate waiver of juveniles 16 years old or older upon a court finding of probable cause to believe they had committed an unclassified or class A felony. This Bill would embody in statute the presumption that older youths accused of serious violent crimes are responsible and should be held accountable for their acts as would adults similarly accused. The focus in dealing with such youth under the adult criminal code would be primarily upon retribution and deterrence rather than upon the equal balancing of the interests of the public and the youth under the juvenile code.

The effect of Section 2 of the Bill would be to increase the number of juveniles subject to prosecution under the adult criminal statutes and to increase the liability of such juveniles to sanctions more severe, both in nature and duration, than those to which they would have been liable under the juvenile code. Based on Calendar Year 1981 arrest data, it can be estimated that approximately 31 persons 16 and 17 years of age are arrested annually for crimes in the unclassified and Class A felony categories and would be, therefore, subject to prosecution as adults under the provisions of House Bill No. 109. This would represent an approximate increase of 28 in the number of juveniles prosecuted each year as adults.

The Department supports the conceptual basis for the alteration of AS 47.10.060 proposed in House Bill No. 109 - the presumption that older juvenile offenders accused of serious and violent crimes should be held accountable as adults. It is the Department's position that, though few in number, older youths accused of heinous violent crimes require sanctions qualitatively and quantitatively different from those available under the jurisdiction of the juvenile court. An additional provision is suggested, however, to protect the interests of those juveniles who, though accused of offenses which would require their waiver to adult jurisdiction, are ultimately acquitted or convicted only of lesser included offenses which would not mandate waiver of the juvenile. Such a provision could be added as AS 47.10.060(f) and be worded as follows:

> (f) Any person over whom jurisdiction is waived under (a)(1) of this section who is prosecuted as an adult but is acquitted or convicted of a lesser included offense which would not make him eligible for waiver under (a)(1) shall be subject to juvenile court

jurisdiction for disposition and for subsequent unlawful conduct other than that governed under (a)(1) or (a)(2).

In addition, the Department supports maintaining the existing judicial waiver allowing for adult prosecution of those persistent, repetitive juvenile offenders who have not or are unlikely to respond to treatment within the juvenile justice system. A discretionary waiver mechanism also allows for the prosecution as an adult for the rare juvenile below the age of 16 who has committed an egregious violent crime and is not amenable to rehabilitative treatment within the juvenile justice system.

Section 1 of House Bill No. 109 would provide statutory definition of the type of facility in which minors who have been sentenced as adults are to serve their terms of imprisonment. The Bill would add provisions to AS 12.55.015 to require that those juvenile defendants who had been prosecuted and convicted as adults would, if sentenced to a term of imprisonment, be confined in a juvenile correctional facility until reaching age 19, after which they would be transferred to an adult facility if more than one year remained on their terms of imprisonment. The Department opposes this provision.

It is expected that youth receiving substantial adult sentences for serious crimes would require a much greater level of security than would be provided in juvenile institutions. In addition, administrative prudence would also require that such youths be separated from other less sophisticated juveniles and be provided with rehabilitative programs differing markedly from those designed for younger juvenile offenders. Older youths convicted of serious, violent crimes would best be dealt with in a system designed to provide a continuum of security and rehabilitative program levels to address the range of maturity and sophistication of young adult offenders. Such a continuum could best be provided within the adult correctional system.

Housing juvenile offenders convicted as adults in juvenile facilities on an interim basis would tend to make rehabilitative programs within those facilities less effective. The interim nature of programs designed for juveniles sentenced as adult offenders would render the programs less effective and decrease the level of motivation of those offenders involved in them. In addition, the presence within a juvenile facility of a group of older, more sophisticated, violent offenders would be a disruptive influence on treatment programs for younger offenders. Finally, it is the position of the Department that the protection of sentenced juvenile offenders from abuse or exploitation by adult prisoners within the adult correctional framework would be best achieved administratively rather than through legislation such as Section 1 of HB 109. A classification system assessing each individual offender's characteristics and circumstances and assigning the offender to a facility and program which provides adequate security and appropriate rehabilitative programming is a more appropriate method of providing necessary protection and a decidedly more flexible mechanism for managing prisoner populations.

POSITION PAPER/Department of Health & Social Services

In summary, the Department is supportive of the concept of holding older juveniles accused of serious, violent crimes accountable within the adult criminal system. However, the Department suggests an additional provision which would preclude any inequities for those juveniles ultimately acquitted after prosecution in the adult system for waivable offenses or after having been convicted of lesser offenses which would not make them eligible for mandatory waiver. The Department opposes the provision requiring juveniles convicted and sentenced under the adult criminal statutes to be housed in juvenile facilities.

2. Source of funds to offset fiscal impact of bill:

No information provided.

3. Assumptions: This bill provides that juvenile offenders may be waived to adult court for criminal prosecution if the court finds after a hearing in juvenile court that the minor (1) has committed an unclassified or class A felony or (2) has committed any offense and is not amenable for treatment as a juvenile. It would require a hearing in every case where a waiver is sought, and this would require the commitment of additional prosecution resources. Based upon current statistics, it is estimated that approximately 30-40 hearings a year would be held. In addition, more attorney and staff resources would be required to prosecute as adults those juvenile offenders who are successfully waived.

STATE OF ALASKA
BILL SHEFFIELD, GOVERNOR
DEPARTMENT OF LAW
CRIMINAL DIVISION
POUCH KC – STATE CAPITOL
JUNEAU, ALASKA 99811
PHONE: (907) 465-3428

March 17, 1983

The Honorable Charlie Bussell, Chairman
House Judiciary Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Bussell:

In response to a request from Mr. Steve Cramer, I am sending you a copy of a bill drafted by the Department of Law regarding the "waiver" of juveniles charged with serious felony crimes from juvenile to adult court. The bill is provided for your use (if desired) as the basis of a committee substitute for HB 109, now before the House Judiciary Committee. I am also sending a copy of the bill to Senator Ray, Chairman of the Senate Judiciary Committee.

As you know, under the current law, minors accused of committing criminal offenses are handled in the children's court system unless they are "waived" into adult court after a hearing under AS 47.10.060 (i.e., when the special procedures required for minors are waived). Even for the most serious crimes, waiver under existing law is permitted only if the prosecution can prove to the court that the offender is "not amenable to treatment." If a minor charged with a serious offense has not previously come to the attention of the criminal justice authorities, and thus has never been "treated" under the children's criminal justice system, it is extremely difficult to prove that the minor would not be amenable to treatment, despite the heinous or brutal nature of the crime. If retained in the children's system, the offender must be released when he or she reaches the age of 20. Children's court jurisdiction cannot be extended beyond that point, regardless of an offender's lack of progress in treatment or his or her continuing to be a danger to the community.

The attached bill transfers jurisdiction over persons aged 16 and 17 who are accused of unclassified or class A felonies from the children's court to adult criminal court. The bill retains the children's court's ability to waive, in its discretion, in appropriate cases and after a full hearing, the children's proceedings for minors of any age who are charged with felony offenses. The standard for waiver is somewhat altered, however. Upon motion of the prosecutor, an offender charged with a felony will be transferred to adult court if the court finds that there is "no substantial likelihood"

3-07LH

that the person can be successfully rehabilitated under the jurisdiction of the children's court. The bill lists several factors which the court must consider when determining the likelihood of successful rehabilitation under the children's justice system.

If convicted of the original charge or of any lesser included offense, the defendant would be sentenced as an adult under the current AS 12.55. In order to allow the sentencing judge to consider all relevant factors, however, an offender under the age of 18 would not be subject to mandatory minimum or presumptive sentences on his or her first felony conviction. He or she would be subject to mandatory minimum and presumptive sentences for second or subsequent convictions.

If confined to custody while awaiting trial, or sentenced to a period of incarceration following conviction, the person will be committed to the custody of the Department of Health and Social Services for confinement in an adult facility. It is not considered appropriate to confine persons convicted of serious or brutal felonies to a children's facility, where they could have a detrimental influence upon other, less sophisticated young offenders.

Once a person is tried and sentenced as an adult, that person will be prosecuted as an adult for all subsequent criminal violations. This is to preclude the possibility that a person who has been convicted as an adult and has perhaps served a sentence in an adult facility could be confined in a children's facility following conviction for s subsequent, less serious offense. Again, it is not considered desirable to mingle these older, more sophisticated offenders with the general population found in children's facilities.

This letter is a brief summary of the more important aspects of the attached bill. I would be happy to answer any questions you might have about the bill, and to work with you or the committee staff on incorporating its provisions into HB 109.

Sincerely yours,

NORMAN C. GORSUCH

COMMENTARY AND SECTIONAL ANALYSIS
FOR THE PROPOSED 1983 AMENDMENTS TO ALASKA'S LAWS
RELATING TO SEXUAL ASSAULT AND SEXUAL ABUSE OF A MINOR

Section 1. AS 11.41.410, Sexual Assault in the First Degree.

This section repeals paragraphs (a)(3) and (4) of the Sexual Assault in the First Degree statute. These subsections are reclassified in section 3, below, as Sexual Abuse of a Minor in the First Degree.

Section 2. AS 11.41.420, Sexual Assault in the Second Degree.

This section accomplishes two things. It amends the current Sexual Assault in the Second Degree statute to define the crime as "sexual contact with another person without consent of that person." The amended language is consistent with that used in the Sexual Assault in the First Degree statute, which prohibits sexual penetration without consent. Under the current Sexual Assault in the Second Degree law the prosecutor must prove that the victim was "coerced" to submit to the sexual contact by the express or implied threat of imminent death, imminent physical injury, or imminent kidnapping. Technically, the defendant's use of force without any threats may not be sufficient to establish this crime; felony charges have been lost through a literal application of these terms.

The second change which this section makes is to raise the current class C felony offense of Sexual Assault in

the Third Degree, penetration with a person who is suffering from a mental defect or is incapacitated, to Sexual Assault in the Second Degree, a class B felony punishable by up to ten years in prison.

Section 3. AS 11.41.430, Sexual Abuse of a Minor In the First Degree.

This section creates a new classification of offense, Sexual Abuse of a Minor in the First Degree. The section prohibits sexual penetration with a person who is under the age of 13 and at least three years younger than the actor. It also prohibits sexual penetration with a person under 18 who is entrusted to the actor's care by authority of law or because the person is his son or daughter, including illegitimate or adopted children and stepchildren.

Basically, this provision covers conduct which is currently classified as Sexual Assault in the First Degree, but the language here adds the requirement of a three year age difference between the actor and the victim. This requirement is added to ensure that a child who engages in sexual play with another child of the same age level could not be charged with a felony. (Such behavior may in some circumstances be cause for parental concern, but it is not considered appropriate or useful to classify it as a crime.) Forcible sexual penetration of

any person, including a child, would continue to be punishable as Sexual Assault in the First Degree (AS 11.41.410), an unclassified felony.

The language in this section addresses a problem which has arisen under the present sexual assault laws by deleting the requirement that the actor be 16 years of age or older. The provisions of the law are thus made applicable to juvenile offenders. This is important; studies of adult sexual offenders indicate that many convicted offenders began to commit sexual assaults in their early teen years. Early identification and treatment of juvenile sexual offenders may ultimately decrease the number of adult offenders.

Sexual Abuse of a Minor in the First Degree is a class A felony offense. It carries a maximum sentence of up to 20 years in prison, and a presumptive term of five years upon conviction for a first offense.

Section 4. AS 11.41.435, Sexual Abuse of a Minor in the Second Degree.

This section creates a new classification of crime, Sexual Abuse of a Minor in the Second Degree. It includes the offenses found in the current Sexual Abuse of a Minor statute (AS 11.41.440), with the addition of the requirement that the

actor be at least three years older than the victim. This language exempts teenagers who have consensual sexual relations with other teens near their own age (a 17-year-old boy and his 15-year-old girlfriend, for example) from prosecution. As in Section 3, above, the amendment deletes the requirement that the actor be 16 years of age or older, thus making the statute applicable to juvenile offenders who assault children much younger than themselves--the babysitter/toddler situation, for example.

Paragraph 3 creates a new offense to address an omission in the current law. Under current law sexual contact by a parent or guardian with his own child is prohibited only if the child is under 13 (a class C felony) or under 16 (a class A misdemeanor). Since fondling of a child's genitals or breasts by a parent is a serious violation of the trust and authority relationships within a family, and is often the precursor of a more serious assault, this provision raises to the age of 17 those children who are protected under the law. This conduct is a class B felony offense, punishable by up to ten years in prison.

Section 5. AS 11.41.440, Sexual Abuse of a Minor in the Third Degree.

This section creates a new classification of offense entitled Sexual Abuse of a Minor in the Third Degree. Basically, this is the current Contributing to the Delinquency of a Minor statute raised from its present classification as an A misdemeanor to a class C felony offense. Class C felonies are punishable by up to five years in prison.

Section 6. AS 11.51.130(a)(4), Contributing to the Delinquency of a Minor.

Section 6 repeals the "sexual contact" paragraph of the present Contributing to the Delinquency of a Minor statute. The seriousness of this conduct has been increased in Section 5, above, to Sexual Abuse of a Minor in the Third Degree, a class C felony.

Section 7. AS 11.41.460, Indecent Exposure.

This section creates a new crime entitled Indecent Exposure, which is the intentional exposure of a person's genitals, buttock, anus or female breast to another person with reckless disregard for the offensive, insulting or frightening effect that the exposure that might have on the other person. Under current law this conduct is considered "Disorderly Conduct", a class B misdemeanor offense with a maximum penalty of ten days in jail. Some recent studies indicate that exposure

is sometimes the first step for sex offenders who later increase the seriousness of their conduct to sexual contact or penetration. The current law treats this behavior much too leniently. This section raises the classification of Indecent Exposure to an A misdemeanor level if the object of the exposure is a child under the age of 16. The offense remains a B misdemeanor if the witness to the exposure is an adult.

Section 8. AS 11.41.470, Definitions.

This section removes the requirement in the definition of "without consent" that an express or implied threat of death or kidnapping be "imminent". Threats to inflict harm of this magnitude are inherently coercive, and the prosecution should not have to prove exactly when the defendant intended to cause the death or kidnapping. A threatened physical injury must still be "imminent" to fit within the definition.

Section 9. AS 11.61.110(a)(7), Disorderly Conduct.

Section 9 repeals the current "exposure" paragraph of the Disorderly Conduct statute. This conduct is included in the Indecent Exposure provisions set out in section 7.

Section 10. AS 12.10.020, Specific Time Limitation.

This section creates an exception to the general five year statute of limitations (AS 12.10.010) to allow prosecution for a sexual offense against a child to be commenced within one year after the child reaches the age of 16, or reports the crime to a law enforcement officer, whichever occurs first. The period of limitation cannot be extended by more than ten years, however.

This change is necessary because sexual offenses against young children (especially intrafamilial abuse) are frequently not discovered until the child reaches sufficient maturity to realize the wrongfulness of the conduct and to identify those adults to whom the conduct may safely be reported. A child of 12, 13 or 14 will often report for the first time sexual abuse which has been occurring since he or she was 4 or 5 years old. While the most recent assaults may be prosecuted, these offenses may be classified as less serious than the earlier ones, because of the child's older age. In those situations where the sexual abuse has been a continuing course of conduct which spans several years of a child's life the trier of fact should be entitled to reach and consider all aspects of the adult's conduct.

COMMENTARY AND SECTIONAL ANALYSIS
FOR CSHB 117 (JUDICIARY)

Section 1. AS 11.41.420, Sexual Assault in the Second Degree.

This section does two things. It amends the current Sexual Assault in the Second Degree statute to define the crime as "sexual contact with another person without consent of that person." The amended language is consistent with that used in the Sexual Assault in the First Degree statute, which prohibits sexual penetration without consent. Under the current Sexual Assault in the Second Degree law the prosecutor must prove that the victim was "coerced" to submit to the sexual contact by the express or implied threat of imminent death, imminent physical injury, or imminent kidnapping. Technically, if a defendant physically forces a person to have sexual contact with him, rather than coercing the victim through the use of threats, the defendant has not committed Sexual Assault in the Second Degree. The amended language establishes that any sexual contact with a person without that person's consent is a class B felony.

The second change which this section makes is to raise the current class C felony offense of Sexual Assault in the Third Degree, penetration with a person who is suffering from a mental defect or is incapacitated, to Sexual Assault in the Second Degree, a class B felony (punishable by up to ten years in prison). The language describing the crime has not been altered.

Section 2. This section adds three new statutes to the Criminal Code, as described below.

AS 11.41.434, Sexual Abuse of a Minor In the First Degree.

This section creates a new classification of offense, Sexual Abuse of a Minor in the First Degree. The section prohibits a person 16 years of age or older from engaging in sexual penetration with a person who is under the age of 13. It also prohibits a person 18 years of age or older from engaging in sexual penetration with a person under 18 who is entrusted to the adult's care by authority of law or is his son or daughter, including illegitimate or adopted children and stepchildren.

Basically, this provision takes conduct which is currently labelled Sexual Assault in the First Degree (subsections (a)(3) and (a)(4) of present AS 11.41.410) and moves it to a new section entitled Sexual Abuse of a Minor in the First Degree. The conduct continues to be punishable as an unclassified felony, which carries a maximum sentence of up to 30 years

in prison and a presumptive term of eight years upon conviction for a first offense. Forcible sexual penetration of any person, including a child, would continue to be punishable as Sexual Assault in the First Degree, an unclassified felony.

AS 11.41.436, Sexual Abuse of a Minor in the Second Degree.

This section creates a new classification of crime, Sexual Abuse of a Minor in the Second Degree. It includes all three types of conduct now prohibited in the Sexual Abuse of a Minor statute (AS 11.41.440), but raises the classification of the crime from a C to a B felony level. In subsection (a)(1) the requirement that the defendant be at least four years older than the victim has been added. This language would exempt from prosecution those teenagers who have consensual sexual relations with other teens near their own age (a 17-year-old boy and his 15-year-old girlfriend, for example).

Paragraph 3 creates a new offense to address an omission in existing law. Under current law, sexual contact by a parent or guardian with his own child is a crime only if the child is under 13 (a class C felony) or under 16 (a class A misdemeanor). Fondling of a child's genitals or breasts by a parent is a serious violation of the trust and authority relationships within a family, and is often the precursor of a more serious assault. Existing law in this area is not sufficiently serious nor comprehensive. This provision extends the protection of the law to all children under age 18, and raises the classification of the conduct to a B felony level, punishable by up to ten years in prison.

AS 11.41.438, Sexual Abuse of a Minor in the Third Degree.

This section creates a new classification of offense entitled Sexual Abuse of a Minor in the Third Degree. Basically, this is the current Contributing to the Delinquency of a Minor statute (AS 11.51.130(a)(4)) raised from its present classification as an A misdemeanor to a class C felony level. Class C felonies are punishable by up to five years in prison.

The contributing statute now applies to defendants who are 19 years of age or older. The threshold age in this provision has been dropped to 16 to be consistent with the other sexual abuse provisions, but the requirement that there be at least a four year age difference between the defendant and the victim excludes consensual sexual contact between teenagers of approximately the same age.

Section 3. AS 11.41.440, Sexual Abuse of a Minor in the Fourth Degree.

This section creates a new provision to address a problem which has arisen under the present sexual assault laws. Virtually all of the statutes which deal with sexual offenses against children require that the actor be 16 years of age or older. Unfortunately, prosecutors and social workers have discovered numerous instances where an older child has sexually mistreated a much younger child, often while "babysitting" the younger child. This section prohibits all sexual contact or penetration between a child under 16 and another child who is three or more years younger, and makes such contact a class A misdemeanor.

The three year age difference requirement is included to ensure that a child who engages in sexual play with another child of approximately the same age may not be charged with a crime. Such behavior may, in some circumstances, be cause for parental concern, but it is not generally considered appropriate or useful to classify it as a crime. The purpose of making it a misdemeanor for a child to prey upon a much younger child is to establish the violation of a law which would allow intervention by the juvenile courts or social service workers. This intervention could be important; studies of adult sexual offenders indicate that many convicted offenders began to commit sexual assaults in their early teen years. Early identification and treatment of juvenile sexual offenders may ultimately decrease the number of adult offenders.

Section 4. AS 11.41.460, Indecent Exposure.

This section creates a new crime entitled Indecent Exposure, which is the intentional exposure of a person's genitals, buttock, anus or female breast to another person with reckless disregard for the offensive, insulting or frightening effect that the exposure that might have on the other person. Under current law this conduct is Disorderly Conduct, a class B misdemeanor offense with a maximum penalty of ten days in jail.

Some recent studies indicate that it is not uncommon for sex offenders to begin their assaultive behavior by exposing themselves to young children, and to gradually increase the seriousness of their conduct to sexual contact or penetration. Current law treats sexual exposure, especially to young children, much too leniently. This section raises the classification of Indecent Exposure to an A misdemeanor level (maximum sentence of one year) if the object of the exposure is a child under the age of 16. The offense remains a B misdemeanor (maximum sentence of 90 days in jail) if the witness to the exposure is an adult.

Section 5. AS 11.41.470, Definitions.

This section amends the definition of "without consent" to remove the requirement that the death or kidnapping with which the defendant threatens the victim be "imminent". Threats to inflict harm of this magnitude are inherently coercive, and the prosecution should not have to prove exactly when the defendant intended to cause the death or kidnapping. A threatened physical injury must still be "imminent" to fit within the definition.

Section 6. AS 12.10.020, Specific Time Limitation.

This section creates an exception to the general five year statute of limitations for prosecution for a crime (AS 12.10.010). If the five year limitation period has expired, this provision would allow prosecution for a sexual offense against a child to be commenced within one year after the child reaches the age of 16, or reports the crime to a law enforcement officer, whichever occurs first. In no case will the period of limitation be extended by more than five years, however.

This change is necessary because sexual offenses against young children (especially intrafamilial abuse) are frequently not discovered until the child reaches sufficient maturity to realize the wrongfulness of the conduct and to identify those adults to whom the conduct may safely be reported. A child of 12, 13 or 14 will often report for the first time sexual abuse which has been occurring since he or she was 4 or 5 years old. While the most recent assaults may be prosecuted, these offenses may be classified as less serious than the earlier ones, because of the child's older age. In those situations where the sexual abuse has been a continuing course of conduct which spans several years of a child's life the trier of fact should be entitled to reach and consider all aspects of the adult's conduct.

Section 7. AS 12.55.125(i), Sentences of Imprisonment for Felonies.

This section amends existing penalty provisions to conform to the change in the title of the offense described in new AS 11.41.434, Sexual Abuse of a Minor in the First Degree. Under current law this conduct is labelled Sexual Assault in the First Degree and is included in AS 11.41.410(a)(3) and (4).

Sections 8 and 9. AS 01.05.031(c), Use of Personal Pronouns.

In 1982 the legislature passed ch. 58, SLA 1982, which required the revisor of statutes to alter the language of statutes to avoid the use of personal pronouns denoting masculine or feminine gender. These changes are to be made both when new laws are enacted, and when the printed pamphlets of statutes are scheduled for reprinting. This directive, as it applies to the criminal code, is merely a matter of form, as all criminal laws, including those relating to sexual assault and sexual abuse of a minor, are "sex neutral." See AS 01.10.-050 and the Legislative Commentary to the Criminal Code.

In many criminal statutes, including some amended in this bill, the complete elimination of the use of personal pronouns cannot be accomplished without rewriting the statutes. This rewriting raises the potential for unintentional alteration of the meaning of a provision and a change in the way the law is interpreted by a court. There is a well established rule of statutory interpretation (called the "rule of lenity") which establishes that any ambiguity in a criminal statute must be construed against the state and in favor of the defendant. Criminal statutes are also subject to constitutional challenge of the statutory language is vague, or fails to give clear notice of what conduct is prohibited.

Because the elimination of personal pronouns accomplishes no substantive purpose (the code is already sex neutral), and may cause obscurity or ambiguity in the statutory language which could hamper the effective enforcement of the laws, sections 7 and 8 of the bill amend the law to allow the continued use of personal pronouns in Titles 11 and 12, the Criminal Law and Criminal Procedure Codes.

Section 10. AS 18.66.900(6), Definitions

This section amends the definition of "sexual assault" as used in the violent crimes compensation law to include the crime of Unlawful Exploitation of a Minor (making child pornography). It also deletes a reference to AS 11.51.-130(a)(4), which is repealed by this bill. The content of that statute has been included in the new AS 11.41.438.

Section 11. Repealed sections.

This section repeals those statutes whose content has been incorporated into the provisions discussed above.

An Act revising the laws relating to sexual abuse of a minor, sexual assault, and indecent exposure; and extending the time limitation for prosecution of sexual offenses; and amending AS 01.05.031 c and section 4 chapter 58 SLA 1982.

Change all age references to "three years"

SUBJECT: Single subject rule
(CSHB 117 (Judiciary))

TO: Representative Charlie Bussell
Chairman, House Judiciary Committee

FROM: James H. Lear
Legislative Counsel JHL

I have prepared the committee substitute to HB 117 as requested. In my opinion this committee substitute creates a probable violation of the single subject rule.

The single subject rule is contained in section 13, Article II, Constitution of the State of Alaska which provides:

> SECTION 13. Every bill shall be confined to one subject unless it is an appropriation bill or one codifying, revising, or rearranging existing laws. Bills for appropriations shall be confined to appropriations. The subject of each bill shall be expressed in the title. The enacting clause shall be: "Be it enacted by the Legislature of the State of Alaska."

The primary aim of the rule has been stated by our court to be restraint of the log-rolling process in the legislature and describes log-rolling as deliberately inserting in one bill several dissimilar or incongruous subjects in order to secure the necessary support for passage of the measure. Suber v. Alaska State Bond Committee, 414 P.2d 546 (1966).

The test which broadly stated:

> "Ultimately the decision in cases of this kind must be made on a basis of practicality and reasonableness. In determining whether a bill is confined to one subject we agree with the statement:

> 'All that is necessary is that the act should embrace some one general subject; and by this is meant, merely, that all matters treated of should fall under some one general idea, be so connected with or related to each other, either logically or in popular understanding, as to be parts of, or germane to, one general subject.'"

was adopted in Gellert v. State, 522 P.2d 1120 (Alaska 1974), and has been quoted in each subsequent case in point in Alaska with approval. It is therefore well settled that this broad language is the standard against which compliance with the single subject rule is to be tested.

I can see no relationship between sex crimes and the exception to sex-neutral pronouns in AS 11 and AS 12 which are logically or in popular understanding so connected or related to each other as to be part of one general subject.

This committee substitute also violates the provision in section 13 requiring the subject of each bill to be expressed in the title. The language in the committee substitute title merely cites the sections that pertain to sex-neutral pronouns. That alone is insufficient to state the subject under Alaska's constitutional guidelines.

Basically, these constitutional deficiencies would jeopardize prosecution of any crime set out in this bill because the enactment of the bill would be invalid.

MEMORANDUM

May 26, 1983

TO: Rep. Charlie Bussell, Chairman
House Judiciary Committee

FROM Rep. Sam Pestinger

RE: CSHB 117/ Jud
(Relative To Criminal Law and Procedure)

I request that the committee reconsider raising from "three" to "four" years, the age difference between the offender and the victim, required before criminal liability can be imposed upon the offender.

Using "three" years in place of "four" is concurrent with existing statutes where age disparity is addressed.

During the last legislature, a three year age difference was adopted regarding new drug laws. (A.S. 11.71.010(a) and A.S. 11.71.030(a)).

Current sexual assault statutes recognize this disparity in prosecution of a person over 16 who sexually assaults someone under 13 (A.S. 11.41.410(3)).

The three year age difference strongly condemns the actions of an older person who takes unfair advantage of the immaturity and vulnerability of children while at the same time not injecting criminal law in an area where parental guidance and moral and religious training is the more appropriate response.

CSHB 117 (Judiciary)
Fiscal Note
Analysis

This bill is a comprehensive revision of current law regarding sexual assault and sexual abuse of a minor. Current laws dealing with sexual offenses against children appear in several different areas of the criminal code. Depending upon the age of the child victim, current law authorizes vastly different penalties for essentially similar conduct on the part of the adult offender; some conduct which is extremely harmful to children is not covered at all.

Sexual offenses against children include many types of conduct. This bill groups all of this conduct in one area of the code, and labels most of it "Sexual Abuse of a Minor." The conduct is divided into four degrees of seriousness, and penalties appropriate to the classification of the crime are attached.

In most instances the penalties which may be imposed upon conviction for conduct constituting sexual abuse of a minor are raised. These increases in the possible penalties for offenders are needed to protect children from sexual abuse, and to punish and isolate offenders, but will not have any appreciable effect upon the costs of prosecution. Fiscal impact will occur only in those limited areas where a new crime is created to prohibit conduct which is not included under current law. It is estimated that the additional coverage in these limited areas will require an increase in prosecution resources equivalent to .5 of an attorney position.

Fiscal Analysis - CSHB 117 (Judiciary)

The impact of CSHB 117 is expected to result in the addition of one-half the time of an Attorney IV on a statewide basis. Actual placement of cumulative positions and costs can only be determined after the Legislature has acted and we know what bills and fiscal notes have been approved. For purposes of the analysis, salary schedule A has been used.

The first year of the analysis is FY 84 and costs have been calculated on a 10 month basis to account for the time required to establish new positions and the time it takes to get a new program underway. The costs after FY 84 are on a 12 month basis and include a 6% annual inflation factor.

1st Year (10 months)

	Atty IV (PPT)	Total
Personal Services	27.0	27.0
Travel	2.5	2.5
Contractual	4.0	4.0
Commod. - ongoing	.8	.8
Commod. - single time	2.0	2.0

JUSTIFICATION

Enactment of the revisions to the current law regarding sexual assault and sexual abuse of a minor, contained in this bill, will require the services of an Attorney IV, on a part time basis. The additional workload occurs in a few limited areas where a new crime is created to prohibit conduct that is not included under current law. Because sexual assault and abuse offenses are difficult to try, a skilled litigator, at the full working level of Attorney IV, will be required.

SENATE BILL No. _____

PAGE: 1 LINE: 18

Insert at the end of line 18: This limitation does not apply to commercial operations where the Civil Aeronautics Board or the Alaska Transportation Commission has issued certification or authorization.

MEMO to Committee
5/16/83
From Staff Counsel
HB 126--by Rep. Hurlburt

In the files are two House Research Agency reports, dated 1/28/82 and 2/10/82.

The first one contains copies of California statutes on the subject.

The sponsor suggests the following amendment: at end of line 18:

This limitation does not apply to commercial operations where the Civil Aeronautics Board or the Alaska Transportation Commission has issued certification or authorization.

This would mean that a pilot, flying a private plane and not a commercial operation, would not be liable--except for intoxication or gross negligence--when an individual asks for a lift as a guest on the private plane on a non-commercially scheduled flight.

5/16/83

HOUSE BILL 126

WHAT HOUSE BILL 126 WOULD DO WOULD BE TO DISALLOW THE RECOVERY OF DAMAGES TO A GUEST ABOARD AN AIRCRAFT RESULTING FROM AN ACCIDENT.

AS EVERYONE IS AWARE ALASKA HAS A HIGHER NUMBER OF PILOTS AND AIRCRAFT PER CAPITA THAN ANY STATE IN THE NATION. THE REASON FOR THIS IS BECAUSE OF THE VAST DISTANCE BETWEEN CONCENTRATIONS OF POPULATIONS AND MOST OF THEM ARE OFF OF THE ROAD SYSTEM, HENCE THE BEST WAY TO TRAVEL IS BY AIRCRAFT. ALSO AIRCRAFTS ARE POPULAR BECAUSE OF THEIR RECREATIONAL VALUE. IN A SITUATION AS WE HAVE IN ALASKA IT IS PRACTICAL THAT WE UTILIZE EVERY AVAILABLE SEAT. PILOTS IN GENERAL ARE OFTEN VERY HAPPY TO GIVE SOMEONE A RIDE IF THEY ARE BOTH GOING IN THE SAME DIRECTION AND THERE ARE SEATS AVAILABLE. THE PROBLEM IS THAT A PILOT TAKES THE RISKS OF BEING LIABLE FOR SUIT FOR STRICTLY DOING SOMEONE A FAVOR. THIS BILL IS INTENDED TO COVER THE PRIVATE AIRCRAFT OWNER, NOT THE COMMERCIAL OPERATOR.

THE RESULT OF THIS IS THAT PILOTS ARE OFTEN RELUCTANT TO GIVE RIDES BECAUSE OF THE LIABILITY AND A LOT OF SEAT MILES ARE LOST. HOPEFULLY THIS BILL WOULD REMEDY THIS.

MEMORANDUM

TO: Representative Terry Martin

FROM: David Teal
Research Staff

RE: Aircraft Accident Statistics
Research Request Number 82-21

As discussed with Mary Isaacs of your staff, some of the specific information you requested is not readily available. Following is a list of your specific requests with accompanying comments and the information which I am able to provide at this time. If you would like this agency to perform additional work, please call.

Air Taxi Accidents, Fatalities, and Injuries

Attachment A to this memorandum is a list of aviation accidents involving Alaskan air taxi operators. The list was obtained from the Federal Aviation Administration (FAA) and contains information on injuries and fatalities as well as other details of air taxi accidents. Eugene Morris, who provided the figures, says the FAA collects but does not compile records on injuries. The injury and fatality figures in attachment A have been compiled by hand, but the fatality count does not always agree with the fatality count compiled by the FAA. Also, some duplication was discovered on the list so it does not appear to be a reliable data source in its present form.

The fatality count on the list is 44 in 1978, 30 in 1979, 29 in 1980, and 19 in 1981. Judging from a comparison of these figures, which are generally less than the FAA fatality count presented in the following table, the injury count may be somewhat understated. Mr. Morris also warned that injury figures may be underreported because injuries are not required to be reported to the FAA. I have not attempted to adjust the count of injuries; I simply counted the number of injuries on attachment A and added the sums to the compiled information supplied by the FAA and presented in the following table.

Air Taxi Accidents in Alaska--1976 through 1981

Year	Accidents	% of Total Accidents	Fatal Accidents	% of Fatal Accidents	Fatalities	% of Total Fatalities	Injuries
1976	63	21	8	22	26	32	NA
1977	51	20	7	22	24	29	NA
1978	58	21	14	25	44	36	54
1979	64	28	12	36	34	52	27
1980	68	29	10	33	30	45	53
1981*	60	27	11	29	30	32	16

==========

The table shows that air taxi operators were involved in roughly one out of every four aviation accidents in Alaska during the past six years. Using fatal accidents as a guide, the data indicate that air taxi accidents tend to be more serious than other aviation accidents involving small aircraft. An average of three people died in each fatal air taxi crash while the average for other aviation was two deaths per fatal accident. Twenty-eight percent of fatal accidents from 1976 through 1981 involved air taxis.

Air Taxis Involved in Accidents

I assume you are interested only in operators that have had numerous accidents, not in a complete listing of all accidents. (Note, however, that attachment A lists all air taxi accidents from 1978 through 1981.) Operators that have had four or more accidents in four years include those listed below. The number of accidents may have little meaning when considered alone; accidents per hour flown would be a more relevant statistic. However, as noted in this memorandum, information on hours flown is not yet available.

Rush Air, Inc
Samuelson's Flying
Yute Air Alaska
Armstrong Air
Peninsula Airways
Aurora Air Service
Temsco Helicopters
Southeastern Skyways
Sea Airmotive
Western Yukon Air

Average Hours Flown by Air Taxis in Alaska

The Air Carriers Association estimated that air taxi pilots fly an average of 800 to 1000 hours per year, but could not provide information on the number of planes in operation. Hours flown by air taxis are reported to the Alaska Transportation Commission. The Commission is in the process of computerizing its records and will be unable to provide information for two months or more. Records for prior years have not been tabulated by the Commission.

Awards for Injuries and Deaths, Both Total and Per Incident and Premiums for Hull and Liability Insurance

A survey of insurance carriers would be required to separate:

a) awards for hull damage from liability (injury and death) awards;

b) awards for incidents involving air taxi operators from other awards for aviation accidents;

c) premiums for hull insurance from premiums for liability coverage; and

d) premiums collected for air taxi operations versus premiums for other types of aviation.

Although a survey might be difficult to complete within a time-frame acceptable to the Committee, this agency will attempt to gain further information if requested to do so. However, responses from insurance companies which were contacted in order to complete this memorandum were not encouraging. Russ Neville, from Brady and Associates (a major aviation insurance broker in Alaska), has done similar research in the past. He pointed out that there is no requirement to report a breakdown of awards or premiums and that insurance brokers are not risk bearers so have no interest in maintaining or providing a breakdown.

Mr. Neville estimated that his insurance company would require about three days of work to produce the information requested. Mr. Neville has also contacted London underwriters in his attempts to gain information, but was told to contact the local contract-holders. London would not provide a list of domestic contacts.

The Division of Insurance was able to provide some information on total awards granted for aviation accidents. This information is presented in the discussion below.

The following (full page) table reports total premiums collected and total losses paid by aviation insurance carriers operating in Alaska. As noted earlier, I was unable to separate premiums and awards related only to air taxis. The table includes premiums, losses, and accident statistics for all private aviation in Alaska from 1976 through 1980.

The table should be interpreted with caution. Because carriers are not required to report losses to the Division of Insurance, the loss figures in the table do not necessarily reflect all losses. There may also be some misleading information due to accident and payment of award for that accident occurring in different years.

Columns 1 and 2 show premium and loss data for admitted carriers--those who applied and subjected themselves to State regulation--and for non-admitted carriers such as Lloyds of London. Column 3 gives the loss ratio, which is defined as losses divided by premiums. The loss ratio shows that the higher premiums experienced in recent years are in response to increasing insurance losses by carriers.*

Columns 4 through 9 indicate the amount of awards (for both hull damage liability) per incident. The number of accidents show large variations from year to year with no clear trend visible. The awards per incident show a steady upward trend. From 1976 to 1980, the average award per accident increased by 182 percent, average award per fatal accident increased by 169 percent, and average award per fatality increased by 175 percent. Average awards in 1980 were roughly double the average awards in 1979. The data in the following table indicate that the primary cause of higher losses is the increase in average award per incident, not a greater number of accidents.

Workers Compensation Death Benefits

Attachment C is the wording of State law relating to death benefits through Workers Compensation. Because of exclusions for age and disability of beneficiaries, there is no fixed limit on the total amount of death benefits that can be collected. According to the Department of Labor, the average death benefit is roughly $104,000. Although there are complicating factors which are too technical for the purposes of

---

*Attachment B to this memorandum was provided by the Division of Insurance and shows that admitted carriers lost money (had a loss ratio greater than 1.00) insuring aviation from 1973 through 1978. Attachment B also shows all carriers selling aviation insurance from 1970 through 1980.

Aviation Accident Statistics--1976 through 1980
State of Alaska

Year		Premiums ($000)	Losses ($000)	Loss Ratio	Accidents	Loss per Accident	Fatal Accidents	Loss per Fatal Accident	Fatalities	Loss per Fatality

A represents admitted insurance carriers.

Source: House Research Agency 2/82

this memorandum, the maximum death benefit under normal conditions is $375,544 paid over a period of ten years.

Because the benefits are paid over a period of time, the benefit amount should be discounted to the present period if a comparison with a lump sum settlement is desired. The table below gives the present value of the flow of Workers Compensation death benefits at various rates of interest.

At current market interest rates, the present value of the maximum death benefit is roughly $200,000. Fewer than two percent of Alaskan workers earn enough to qualify for maximum benefits. The present value of the average death benefit (at a 12 percent interest rate) is about $60,000.

Present Value of $375,544 in Workers Compensation
Death Benefits at Various Rates of Discount

Interest Rate	Present Value
3 %	$332,922
6	296,924
9	266,360
12	240,278
15	217,902
18	198,609

nently and totally disabled. The death benefits payable to a widow or widower are not subject to reduction under (f) of this section after the widow or widower has attained the age of 52 years.

(h) In the event a deceased worker is survived by children of a former marriage not living with the surviving widow or widower, then those children shall receive the amount being paid under a decree of child support; the difference between this amount and the maximum benefit payable under this section shall be distributed pro rata to the remainder of those entitled.

(i) In the event the total amount of all benefits computed under (a)(2) of this section exceeds the maximum benefit provided in AS 23.30.175, the maximum benefit under AS 20.30.175 shall be prorated among entitled survivors. (§ 8 ch 193 SLA 1959; am § 1 ch 9 SLA 1962; am § 3 ch 99 SLA 1966; am § 1 ch 12 SLA 1968; am § 34 ch 32 SLA 1971; am § 1 ch 56 SLA 1974; am §§ 88, 89 ch 127 SLA 1974; am §§ 7—12 ch 83 SLA 1975; am §§ 5—8 ch 75 SLA 1977)

Cross references. — For construction of 1975 version of AS 23.30.175, see note to AS 23.30.175.

Effect of amendments. — The 1977 amendment rewrote paragraphs (2) and (3) of subsection (a), substituted "accordance with § 155 of this chapter" for "the same manner" and "provided in AS 23.30.175" for "temporary total disability compensation" in subsection (b), deleted "same" preceding "weekly maximum limitation" in subsection (b), rewrote subsection (e), and added subsections (f) through (i).

Legislative history reports. — For report on ch. 83, SLA 1975 (CSSB 146 am H), see 1975 Senate Journal, p. 1175.

NOTES TO DECISIONS

This section lays out the basic structure for death benefits. Wien Air Alaska v. Arant, Sup. Ct. Op. No. 1796 (File Nos. 3620, 3717), 592 P.2d 352 (1979).

Subsection (a) indicates the percentage of the deceased employee's wages which specified claimants receive. Wien Air Alaska v. Arant, Sup. Ct. Op. No. 1796 (File Nos. 3620, 3717), 592 P.2d 352 (1979).

Subsection (b) tells how to calculate the maximum limitation on death benefits. Wien Air Alaska v. Arant, Sup. Ct. Op. No. 1796 (File Nos. 3620, 3717), 592 P.2d 352 (1979).

AS 23.30.175 contains the maximum limitation on death benefits because of two things: its own language ("the weekly rate of compensation for disability or death") and by the cross-reference from subsection (b) of this section. Wien Air Alaska v. Arant, Sup. Ct. Op. No. 1796 (File Nos. 3620, 3717), 592 P.2d 352 (1979).

Determination of maximum limitation. — AS 23.30.175 determines the maximum limitation on death and disability payments by reference to increasing percentages of the state's average weekly wage. Wien Air Alaska v. Arant, Sup. Ct. Op. No. 1796 (File Nos. 3620, 3717), 592 P.2d 352 (1979).

Explanation for explicit language of section. — The explicit language of this section may be explained in part by the general policy of avoiding speculation in damage awards where causation is uncertain. In re Estate of Pushruk, Sup. Ct. Op. No. 1398 (File No. 2974), 562 P.2d 329 (1977).

Dependency is determined according to facts and circumstances existing at the time of death. In re Estate of Pushruk, Sup. Ct. Op. No. 1398 (File No. 2974), 562 P.2d 329 (1977).

The terms "married" and "widow" are defined by AS 23.30.265(15) and (21). Burgess Constr. Co. v. Lindley, Sup. Ct. Op. No. 853 (File No. 1705), 504 P.2d 1023 (1972).

Benefits granted to divorced wife. — See Burgess Constr. Co. v. Lindley, Sup.

(3) if the widow or widower remarries, she or he is entitled to be paid in one sum an amount equal to the compensation to which the widow or widower would otherwise be entitled in the two years commencing on the date of remarriage as full and final settlement of all sums due the widow or widower;

(4) if there is no widow or widower or child or children, then for the support of father, mother, grandchildren, brothers and sisters, if dependent upon the deceased at the time of injury, 35 per cent of the average weekly wage of the deceased to such beneficiaries, share and share alike, not to exceed $20,000 in the aggregate.

(b) In computing death benefits, the average weekly wage of the deceased shall be computed under AS 23.30.220 and shall be paid in accordance with AS 23.30.155 and subject to the weekly maximum limitation in the aggregate as provided in AS 23.30.175, but the total weekly compensation may not be less than $45 for a widow or widower nor less than $15 weekly to a child or $30 for children.

(c) All questions of dependency shall be determined as of the time of the injury, or death.

(d) Compensation under AS 23.30.005 — 23.30.270 to aliens not residents (or about to become nonresidents) of the United States or Canada is the same in amount as provided for residents, except that dependents in a foreign country are limited to widow or widower and child or children, or if there is no widow or widower and child or children, to surviving father or mother whom the employee has supported, either wholly or in part, for a period of one year before the date of injury. The board, at its option, or upon the application of the insurance carrier, may commute all future installments of compensation to be paid to an alien dependent who is not a resident of the United States or Canada by paying or causing to be paid to him one-half of the commuted amount of the future installments of compensation as determined by the board.

(e) Death benefits payable to a widow or widower in accordance with (a) of this section shall abate as that person ceases to be entitled and does not inure to persons subject to continued entitlement. In the event a child ceases to be entitled, that child's share shall inure to the benefit of the surviving spouse subject to adjustment as provided in (f) of this section.

(f) Except as provided in (g) of this section, the death benefit payable to a widow or widower shall

(1) five years following date of death of the deceased worker be reduced to $66^2/_3$ per cent of the benefit being then paid;

(2) eight years following date of death of the deceased worker be reduced to 50 per cent of the benefit being then paid;

(3) terminate 10 years following death of the deceased worker.

(g) The provisions of (f) of this section do not apply to a widow or widower who at the time of death of the deceased worker is perma-

determinant of earning capacity. Hewing v. Alaska Workmen's Comp. Bd., Sup. Ct. Op. No. 916 (File No. 1625), 512 P.2d 896 (1973).

Lack of motivation. — The fact that one who is physically disabled from manual labor and is unqualified in other types of work is not motivated to seek work, is not the equivalent of a physically competent person being unemployed due to lack of motivation. For lack of motivation to be significant, there must be a showing that work is available within the employee's capabilities. Hewing v. Peter Kiewit & Sons, Sup. Ct. Op. No. 1758 (File No. 3511), 586 P.2d 182 (1978).

The wording of subsection (a) is substantially identical with that of 33 U.S.C. § 908(h) of the Federal Longshoremen's and Harbor Workers' Compensation Act. Hewing v. Alaska Workmen's Comp. Bd., Sup. Ct. Op. No. 916 (File No. 1625), 512 P.2d 896 (1973).

"Other factors" under 33 U.S.C. § 908(h). — Courts have applied 33 U.S.C. § 908(h) to require compensation boards to consider the employee's age, education, industrial history, trainability, and availability of suitable work in the community as being "other factors" affecting earning capacity. Hewing v. Alaska Workmen's Comp. Bd., Sup. Ct. Op. No. 916 (File No. 1625), 512 P.2d 896 (1973).

When consideration of "other factors" ensures fair determination. — Consideration of "other factors" will ensure a fair determination of wage-earning capacity in those circumstances where the employee has no post-injury earnings or when the board determines that post-injury earnings do not accurately represent earning capacity. Hewing v. Alaska Workmen's Comp. Bd., Sup. Ct. Op. No. 916 (File No. 1625), 512 P.2d 896 (1973).

The Workmen's [now Workers'] Compensation Board erred in not considering factors including the fact that the post-injury income was from sales of junk and barbeque rather than from employment, the lack of breakdown between gross and net income, the difference in wage levels between the two time periods, and the state employment counselor's testimony as to lack of any suitable employment for claimant because of his work-related disabilities. Hewing v. Peter Kiewit & Sons, Sup. Ct. Op. No. 1758 (File No. 3511), 586 P.2d 182 (1978).

The board should have supported its ultimate finding of decrease in wage-earning capacity with subsidiary findings relating to the other factors and circumstances referred to in subsection (a), where claimant had no post-injury earnings and since the board implicitly rejected his total lack of earnings as fairly representing earning capacity. Hewing v. Alaska Workmen's Comp. Bd., Sup. Ct. Op. No. 916 (File No. 1625), 512 P.2d 896 (1973).

Sec. 23.30.215. Compensation for death. (a) If the injury causes death, the compensation is known as a death benefit and is payable in the following amounts to or for the benefit of the following persons:

(1) reasonable and necessary funeral expenses not exceeding $1,000;

(2) if there is a widow or widower or a child or children of the deceased, the following percentages of the average weekly wages of the deceased:

(A) $66^2/_3$ per cent for the widow or widower with no children;

(B) $33^1/_3$ per cent for the widow or widower with one child and $33^1/_3$ per cent for the child;

(C) 20 per cent for the widow or widower with two or more children and $46^2/_3$ per cent divided equally among the children;

(D) [deleted]

(E) $66^2/_3$ per cent for an only child when there is no widow or widower;

(F) [deleted]

(G) $66^2/_3$ per cent, divided equally, if there are two or more children and no widow or widower;

MEMORANDUM

TO: Representative Jack Fuller

FROM: David Teal
Research Staff

RE: Aircraft Liability Insurance
Research Request Number 81-195

Legal Services forwarded a request by your office to identify and evaluate options that would address a problem experienced by "Bush" air transport operators. The problem specified was financial hardship caused by high aircraft liability insurance rates.

Although aircraft operators in other states may make similar claims about insurance, Linn Asper (Legal Services) and Don Koch (Division of Insurance) are not aware of recent specific action taken by any State to reduce aircraft liability insurance rates.

The primary factors producing high aircraft liability insurance rates in Alaska are 1) high awards by the court system (roughly $450,000 per fatality) and 2) high aircraft accident rate (approximately five times the rate experienced in the rest of the country).

The options below are those identified by this agency as potential means of alleviating the problem of high insurance rates. The list is not exhaustive and does not evaluate all aspects of each option. Additional options will be forwarded to your office if such options come to the attention of agency staff.

HB634 would limit the amount of damages that could be awarded in legal action against a registered air carrier in Alaska. The bill appears to offer an effective means of reducing premiums via reduced awards. However, Linn Asper, Legislative Counsel, stated that the bill may violate the equal protection clause of the U.S. Constitution, in that there may be no justifiable reason to treat air carrier plaintiffs differently from all other plaintiffs. There are at least four options which might solve potential constitutional conflicts while retaining the desired effect of reducing premiums by reducing awards for damages.

- Place a limit on awards for all causes of wrongful death. This may remove objections based on equal protection, but would have effects outside the aviation industry. Due to decreased awards, aircraft liability insurance premiums would be likely to decline if this option were adopted.

- Model a statute after AS 9.65.135 (attachment A), which limits liability of ski area operators. Assumption of risk is an established principle of tort law. One could argue that when voluntarily participating in activities with recognized high inherent risk, the individual should assume a portion of the risk (or purchase personal insurance to cover that risk).

  Accident statistics clearly indicate that Alaska has roughly five times the aircraft accident rate experienced in the contiguous states. In acknowledgment of the high risk of flying in Alaska, the law could require that passengers relinquish rights to claim damages above a statutory limit.

  In Linn Asper's opinion, if accident statistics are acceptable to the Supreme Court as "reasonable, not arbitrary" justification for separate treatment of a group of potential plaintiffs, the equal protection clause may not be violated.

  A ceiling on awards for aircraft accidents might succeed in lowering premiums by allowing air carriers to decrease insurance coverage, but a ruling that the ceiling is unconstitutional could cause severe financial hardship to air carriers that might be responsible for damages awarded in excess of the ceiling.

- Model a statute after California law (attachment B), which places limits on liability of aircraft owners, but leaves an option for plaintiffs to claim damages above the established limits. Damages above the limits could be imposed for the sake of example or punishment. The California limits are dated 1953.

- Provide a fair and equitable exhange for the injured parties' right to sue. Constitutionally tested exchanges include no-fault auto insurance and workers' compensation. In both cases, the right to sue was exchanged for a "no proof required" payment of damages.

  A schedule of payments for injury or death will not necessarily reduce premiums. Although huge awards may be eliminated, proof of liability would no longer be required so that the number of awards and total amount of damages awarded may increase. This could put upward pressure on premiums. On the other hand, elimi-

nation of huge awards might decrease the average award and therefore tend to stabilize rates and draw more insurance carriers into the market. Increased competition among the insurance carriers may result in rate decreases.

A requirement that all aircraft carry minimum insurance coverage would expand the premium base and might reduce rates for air carriers, but such action may have the effect of reducing the number of pilots flying for pleasure. A relatively high proportion of private aircraft in Alaska are presently uninsured and some pilots may discontinue flying if insurance coverage were mandatory. Based on experience with mandatory automobile insurance, this option would be likely to incur high enforcement costs.

Reciprocal exchanges (groups which exchange contracts of insurance in order to spread risk) or other cooperative, mutual, or group insurance plans might reduce premiums somewhat via reductions in administrative costs and/or industry profits. These options are available under current law and would not require State involvement.

Other options require participation by the State. SB277 would establish a quasi-public corporation to provide aircraft insurance in the state. The bill received support from the aviation industry but the insurance industry strongly objected to the bill. Some criticism of the concepts in SB277 could be avoided if direct State participation were eliminated. That is, the State could stay out of the business of selling insurance to individual operators and instead act only through insurance companies. The State could act as reinsurer by establishing an "Excess Award Fund" which would reimburse insurance companies for individual claim payments in excess of some arbitrary amount. An alternative form of such a Fund might reimburse insurance carriers based on the ratio of total premium income to total losses over some arbitrary period of time.

State participation might bring the danger of inflated claims for damages due to knowledge of the existence of a deep pocket to provide funds. State participation in insurance awards also raises questions concerning potential sources for this type of financial backing. If aircraft owner/operators provide the funds--directly or through premiums--the fund may offer no great advantage. If the financial resources were provided by State revenues, premiums could be expected to decrease, but the State would then be subsidizing air transportation through the insurance industry.

Some argue that the only sure way of reducing insurance costs is to reduce the accident rate. Various safety programs have been proposed. Two steps that have been proposed are conducting pilot safety training and increasing the number of navigational aids.

If you desire to explore more fully any of the options discussed in this memorandum, please do not hesitate to contact us.

Attachments

parties temporarily without funds, subsection (b) of this section suggests that it is contemplated that such services typically are to be performed by a private agency. Granato v. Occhipinti, Sup. Ct. Op. No. 1962 (File No. 3756), 602 P.2d 442 (1979).

Performance of "other services" cannot be compelled. — There is no implied grant of power in subsection (a) or (c) of this section to compel the performance of "other services" by a state agency not wishing to perform them. Granato v. Occhipinti, Sup. Ct. Op. No. 1962 (File No. 3756), 602 P.2d 442 (1979).

The vague directive of this section that in a private custody dispute the court may order that "services be provided for the protection of the child" does not empower a court to command the aid of the department of health and social services in a private custody dispute. Granato v. Occhipinti, Sup. Ct. Op. No. 1962 (File No. 3756), 602 P.2d 442 (1979).

Distinctions between AS 47.10.020 and this section. — See Granato v. Occhipinti, Sup. Ct. Op. No. 1962 (File No. 3756), 602 P.2d 442 (1979).

Quoted in Chavre v. Chavre, Sup. Ct. Op. No. 1691 (File No. 3349), 598 P.2d 81 (1979).

Sec. 09.65.135. Limitations on claims arising from skiing. (a) A skier may not recover from a ski area operator for injury resulting from an inherent risk of skiing unless the injury occurred when the ski area operator was not providing the information required by (b) of this section.

(b) A ski area operator shall post trail signs at prominent locations within a ski area which shall include a list of the inherent risks of skiing and the limitation on liability of the ski area operator provided by this section.

(c) In this section

(1) "inherent risks of skiing" means the dangers or conditions which are an integral part of the sport of skiing, including, but not limited to,

(A) changing weather conditions;

(B) variations or steepness in terrain;

(C) snow or ice conditions;

(D) surface or subsurface conditions such as bare spots, forest growth, and rocks;

(E) collisions with lift towers, other structures, and their components unless the skier is on the lift;

(F) collisions with other skiers; and

(G) a skier's failure to ski within the limits of his own ability;

(2) "injury" means a personal injury or property damage or loss;

(3) "skier" means a person in a ski area engaged in the sport of skiing, sliding downhill on snow or ice on skis, a toboggan, a sled, a tube, a ski-bob, or other device for recreation in snow;

(4) "ski area" means all ski slopes, trails and other places under the control of a ski area operator and administered as a single enterprise in the state;

(5) "ski area operator" means the operator of a ski area. (§ 2 ch 80 SLA 1980)

§ 21002. Purpose of part

The purpose of this part is to further and protect the public interest in aeronautics and aeronautical progress by the following means:

(a) Encouraging the development of private flying and the general use of air transportation.

(b) Fostering and promoting safety in aeronautics.

(c) Effecting uniformity of the laws and regulations relating to aeronautics consistent with federal aeronautics laws and regulations.

(d) Granting to a state agency such powers and imposing upon it such duties that the State may properly perform its functions relative to aeronautics and effectively exercise its jurisdiction over persons and property, assist in the development of a state-wide system of airports, encourage the flow of private capital into aviation facilities, and cooperate with and assist political subdivisions and others engaged in aeronautics in the development and encouragement of aeronautics.

(e) Establishing only those regulations which are essential and clearly within the scope of the authority granted by the Legislature, in order that persons may engage in every phase of aeronautics with the least possible restriction consistent with the safety and the rights of others.

(f) Providing for cooperation with the federal authorities in the development of a national system of civil aviation and for coordination of the aeronautical activities of those authorities and the authorities of this State.

A temporary invasion of air space by aircraft over the land of another is privileged so long as it does not unreasonably interfere with persons or property on the land. Pacific Gas & Elec. Co. v Peterson (1969) 270 CA2d 434, 75 Cal Rptr 673.

§ 21404. Liability for death of passengers

Subject to Section 21406, the liability of the owner or pilot of an aircraft carrying passengers for injury or death to the passengers is determined by the rules of law applicable to torts on the land or waters of this state, arising out of similar relationships. Every owner of an aircraft is liable and responsible for death or injury to person or property resulting from a negligent or wrongful act or omission in the operation of the aircraft, in the business of the owner or otherwise, by any person using or operating the same with the permission, express or implied, of the owner.

Notes of Decisions

In action for death of one of two pilots in airplane crash, burden is on plaintiff to prove that decedent was not guest riding in plane without giving compensation for such ride or while engaged in joint enterprise with airman flying it, where it is not claimed that death resulted from intoxication or wilful misconduct of airman. Whittemore v Lockheed Aircraft Corp. (1944) 65 CA2d 737, 151 P2d 670.

Where president of construction company took prospective customer and his wife on flight in company owned plane over two ranches in which customer was interested and which would require construction work, and then crashed in attempting to land at third ranch where parties planned to do some hunting, evidence sustained finding that pilot was acting within scope of his employment by construction company at time of accident, it being common knowledge that businessmen often entertain customers and prospective customers for business reasons. Halbert v Berlinger (1954) 127 CA2d 6, 273 P2d 274.

In action for personal injuries in wrongful death arising when plane crashed in attempting landing at ranch, jury finding that pilot's negligence was proximate cause of accident was sustained by evidence that wind conditions were turbulent, that pilot was unable to locate ranch at first and then, on seeing landing strip, attempted sharp turn toward it, but plane did not have enough speed when turn was attempted, and that pilot should have circled strip before attempting a landing. Halbert v Berlinger (1954) 127 CA2d 6, 273 P2d 274.

Properly handled by competent pilot, airplane is not inherently dangerous instrument within rule imposing absolute liability on bailors in connection with ultrahazardous activities. Boyd v White (1954) 128 CA2d 641, 276 P2d 92.

Possibility that one who chartered plane was going to commit suicide would not give pilot such information as to put him on notice that one chartering plane would take it and attempt to fly it. Fresno Air Service v Wood (1965) 232 CA2d 801, 43 Cal Rptr 276.

At no time has either federal law or FAA Regulations invested the Federal Aviation Agency or its administrator with any authority to "deny" the owner of private property the right to perform construction work on his property, and to do so would be an outright violation of the concluding clause of U. S. Const., 5th Amend. Rader v Apple Valley Bldg. & Dev. Co. (1968) 261 CA2d 308, 68 Cal Rptr 108.

§ 21404.1. Same: Limitation of liability: Exemplary or punitive damages

(a) The liability of an owner, bailee of an owner, or personal representative of a decedent imposed by Section 21404 and not arising through the relationship of principal and agent or master and servant is limited to the amount of fifteen thousand dollars ($15,000) for the death of or injury to one person in any one accident and, subject to the limit as to one person, is limited to the amount of thirty thousand dollars ($30,000) for the death of or injury to more than one person in any one accident and is limited to the amount of five thousand dollars ($5,000) for damage to property of others in any one accident.

(b) An owner, bailee of an owner, or personal representative of a decedent is not liable under this section for damages imposed for the sake of example and by way of punishing the operator of the aircraft. Nothing in this subdivision makes an owner, bailee of an owner, or personal representative immune from lia-

bility for damages imposed for the sake of example and by way of punishing him for his own wrongful conduct.

Punitive damages

Death or injury to occupant of aeroplane from collision with another aircraft. 12 ALR2d 677.
Pre-flight inspection and maintenance of aircraft. 30 ALR2d 1172.

Notes of Decisions

In consolidated actions for damages for death resulting from collision of two airplanes which were under control of defendants and in which deceased persons had been riding as passengers, where no explanation of cause of collision was furnished by plaintiffs' evidence, which clearly left it doubtful as to whether ultimate cause of collision was negligence of defendants, it was proper to instruct jury as to doctrine of res ipsa loquitur. Parker v Granger (James), Inc. (1935) 4 C2d 668, 52 P2d 226, cert den 298 US 644, 80 L Ed 1375, 56 S Ct 958.

In action for damages for destruction of airplane rented to defendant, where there was

evidence that at time of accident pilot took off straight into wind and then made two turns so that wind was at his back and plane lost altitude rapidly, and expert testified that he made pilot errors in choosing short runway under conditions then present and in pulling ship off ground before it had flying speed, and plaintiff's president testified that if pilot had difficulty in climbing he should have landed in field straight ahead and that he discussed with pilot characteristics of plane and airport, there was substantial evidence precluding court from withdrawing issue of negligence from jury. United Air Services, Ltd. v Sampson (1938) 30 CA2d 135, 86 P2d 366.

Assuming that competent flying instructor knew his student to be incompetent, such fact is not enough to render owner, who rented airplane to instructor, knowing it was to be flown by student, liable for damages caused by airplane while flown by student, under rule that bailor who entrusts vehicle to person he knows to be incompetent is liable for bailee's negligent acts. Boyd v White (1954) 128 CA2d 641, 276 P2d 92.

§ 21406. Liability for personal injuries to or death of "guest" in aircraft

A guest riding in or upon any aircraft without giving compensation, or any other person, does not have any right of action for civil damages against the airman flying the aircraft or against any other person otherwise legally liable for the conduct of the airman, on account of personal injury to, or the death of, the guest during such ride, unless the plaintiff in the action establishes that the injury or death proximately resulted from the intoxication or wilful misconduct of the airman.

The liability of aircraft owners or operators for personal injury or death to guest passengers and the limitation thereof, is a matter between private parties. Such matters, unless they involve social concerns for which the state has provided some form of statutory protection, generally do not involve the Department of Law. Consequently, no fiscal impact will occur to the department's operations.

Sex offenders go to Jail

During December 1982, Superior Court Judge Charles R. Tunley held to his stated position that persons who commit sex crimes in his district will be sentenced to serve time in jail. As a result, nine men are greeting the new year from behind bars.

Gabriel J. Amuktoolik, 29 years, of Golovin was sentenced on December 13, 1982 to four years imprisonment for an attempted rape occurring in Golovin on August 22, 1982. Since it was his second felony he will not be eligible for parole. He was also sentenced to ten years for assaulting a second woman in Golovin with a knife by stabbing her while she slept.

Keith Anagick Sr., 50 years, of Unalakleet, was sentenced on December 16, 1982 to one year imprisonment with six months suspended, probation for two years for engaging in sexual contact with a young girl under sixteen years of age during 1979 and 1980. The incidents were discovered through the efforts of the Nome office of the Division of Family and Youth Services, and since the incidents had occurred within the past five years, criminal charges were filed.

William M. Otten, 24 years, of Stebbins, was sentenced to one year imprisonment with six months suspended, probation for two years for having sexual contact with a young girl under sixteen years of age in Stebbins during 1979. The judge found that Mr. Otten was one of the worst type offenders, since he had prior convictions involving assaults on children and women.

Jerome Trigg Jr., 44 years, of Nome, was sentenced on December 13, 1982 to eighteen months imprisonment with twelve months suspended, probation for the maximum possible period of five years. Mr. Trigg had been convicted of sexual assault in the third degree on a member of his family which had occurred on July 17, 1982.

Adam J. Raymond, 51 years, of Stebbins, was sentenced on December 16, 1982 to imprisonment for two years with one year suspended, probation for five years, for having committed an incestuous sexual assault on his daughter in Stebbins on July 9, 1982. Testimony at the sentencing revealed that Mr. Raymond had been engaging in sexual relations with his daughter for many years.

Donald Outwater, 43 years, of Nome, was sentenced on December 17, 1982 to four years imprisonment with two years suspended, probation for five years, for the offense of having sexual relations with his teenage daughter.

Melvin T. Apassingok, 26 years, of Gambell, was sentenced on December 21, 1982 to imprisonment for two years with one year suspended, probation for two years and a fine of $1,000 for having sexual intercourse with a fifteen-year-old girl in Gambell during January, 1982. The girl was baby-sitting for a relative when Mr. Apassingok, who was the V.P.S.O. at the time, entered the house and had sexual intercourse with her.

Tommy Amaktoolik, 29 years, of Golovin had his probation revoked because of three incidents of drinking alcohol in violation of conditions of his probation, and was sentenced to serve six months in jail. Mr. Amaktoolik had earlier been convicted of incest and received a two year suspended sentence. Since he would not stop drinking and was dangerous when he drank, the court sentenced him to serve time in jail.

Kenneth W. Dewey Jr., 21 years, of Koyuk, was sentenced on December 22, 1982 to eight years imprisonment with three years suspended for a rape occurring in Nome on May 18, 1982. Mr. Dewey was convicted by a jury after trial in Nome during September.

One goal of sentencing is to deter other persons from committing similar crimes. Deterance will take place as people come to realize that sex offenses will be reported, that reported sex offenses will be prosecuted, and that convicted sex offenders will go to jail.

Among the ancient Greeks it was considered good for the crops to plant a piece of year-old cake along with the seeds.

RLB

FROM: REP. RAMONA L. BARNES
HOUSE MAJORITY LEADER

DATE: March 18, 1983

The attached petitions bearing 383 signatures were forwarded to me by Society's League Against Molestation (SLAM). They advise that more are forthcoming.

They bring a message that we are hearing from all across the state ...that sexual abuse, particularly against children has completely gotten out of hand. I'm sure you agree that something must be done.

I would appreciate your comments on how we should proceed. It appears to me that the copy of the California statute previously provided the Judiciary Committee could readily be adopted. In that regard, the criminal records referred to (paragraph 3 of the petition text) would pertain to the records of sex crimes only.

Your consideration will be greatly appreciated.

RLB/rw

PETITION

WE, THE UNDERSIGNED ALASKAN VOTERS AND CITIZENS PETITION OUR LEGISLATORS TO ENACT LEGISLATION WHICH WOULD CHANGE SEXUAL ABUSE OF A MINOR FROM A CLASS C FELONY TO A CLASS B FELONY. AS A CLASS C FELONY, IT DOESN'T REQUIRE STIFF ENOUGH PENALTIES.

WE URGE THAT YOU TOUGHEN THE LAWS ON ENTICEMENT. THERE IS PRESENTLY NO LAW AGAINST SOLICITING A MINOR FOR SEXUAL FAVORS (AS LONG AS THERE IS NO BODY CONTACT), BE IT FOR PERSONAL OR COMMERCIAL INTENT. WE REQUEST THAT YOU PASS A STRONG LAW AGAINST THE SOLICITING OF MINORS FOR SEXUAL FAVORS BY ADULTS.

WE ALSO ASK THAT YOU PASS A BILL THAT AN EMPLOYER UPON REQUEST BE PROVIDED WITH THE CRIMINAL RECORDS OF ANYONE APPLYING FOR A POSITION WHERE THEY WOULD HAVE SUPERVISION OVER MINORS.

WE PETITION THAT OUR JUDGES BE DISCIPLINED WHEN THEY HAND DOWN UNREASONABLY LIGHT OR SUSPENDED SENTENCES IN CRIMINAL CASES WITHOUT JUSTIFICATION. WE BELIEVE ALASKAN JUDGES DEVIATE TOO MUCH FROM THE ALASKA CRIMINAL CODE.

WE URGENTLY PLEAD FOR PROMPT ACTION ON THESE PETITIONS BECAUSE CRIMES AGAINST OUR CHILDREN ARE OF EPIDEMIC PROPORTIONS AND CRIMINALS ARE GOING UNPUNISHED.

PETITION

WE, THE UNDERSIGNED ALASKAN VOTERS AND CITIZENS PETITION OUR LEGISLATORS TO ENACT LEGISLATION WHICH WOULD CHANGE SEXUAL ABUSE OF A MINOR FROM A CLASS C FELONY TO A CLASS B FELONY. AS A CLASS C FELONY, IT DOESN'T REQUIRE STIFF ENOUGH PENALTIES.

WE URGE THAT YOU TOUGHEN THE LAWS ON ENTICEMENT. THERE IS PRESENTLY NO LAW AGAINST SOLICITING A MINOR FOR SEXUAL FAVORS (AS LONG AS THERE IS NO BODY CONTACT), BE IT FOR PERSONAL OR COMMERCIAL INTENT. WE REQUEST THAT YOU PASS A STRONG LAW AGAINST THE SOLICITING OF MINORS FOR SEXUAL FAVORS BY ADULTS.

WE ALSO ASK THAT YOU PASS A BILL THAT AN EMPLOYER UPON REQUEST BE PROVIDED WITH THE CRIMINAL RECORDS OF ANYONE APPLYING FOR A POSITION WHERE THEY WOULD HAVE SUPERVISION OVER MINORS.

WE PETITION THAT OUR JUDGES BE DISCIPLINED WHEN THEY HAND DOWN UNREASONABLY LIGHT OR SUSPENDED SENTENCES IN CRIMINAL CASES WITHOUT JUSTIFICATION. WE BELIEVE ALASKAN JUDGES DEVIATE TOO MUCH FROM THE ALASKA CRIMINAL CODE.

WE URGENTLY PLEAD FOR PROMPT ACTION ON THESE PETITIONS BECAUSE CRIMES AGAINST OUR CHILDREN ARE OF EPIDEMIC PROPORTIONS AND CRIMINALS ARE GOING UNPUNISHED.

PETITION

WE, THE UNDERSIGNED ALASKAN VOTERS AND CITIZENS PETITION OUR LEGISLATORS TO ENACT LEGISLATION WHICH WOULD CHANGE SEXUAL ABUSE OF A MINOR FROM A CLASS C FELONY TO A CLASS B FELONY. AS A CLASS C FELONY, IT DOESN'T REQUIRE STIFF ENOUGH PENALTIES.

WE URGE THAT YOU TOUGHEN THE LAWS ON ENTICEMENT. THERE IS PRESENTLY NO LAW AGAINST SOLICITING A MINOR FOR SEXUAL FAVORS (AS LONG AS THERE IS NO BODY CONTACT), BE IT FOR PERSONAL OR COMMERCIAL INTENT. WE REQUEST THAT YOU PASS A STRONG LAW AGAINST THE SOLICITING OF MINORS FOR SEXUAL FAVORS BY ADULTS.

WE ALSO ASK THAT YOU PASS A BILL THAT AN EMPLOYER UPON REQUEST BE PROVIDED WITH THE CRIMINAL RECORDS OF ANYONE APPLYING FOR A POSITION WHERE THEY WOULD HAVE SUPERVISION OVER MINORS.

WE PETITION THAT OUR JUDGES BE DISCIPLINED WHEN THEY HAND DOWN UNREASONABLY LIGHT OR SUSPENDED SENTENCES IN CRIMINAL CASES WITHOUT JUSTIFICATION. WE BELIEVE ALASKAN JUDGES DEVIATE TOO MUCH FROM THE ALASKA CRIMINAL CODE.

WE URGENTLY PLEAD FOR PROMPT ACTION ON THESE PETITIONS BECAUSE CRIMES AGAINST OUR CHILDREN ARE OF EPIDEMIC PROPORTIONS AND CRIMINALS ARE GOING UNPUNISHED.

ALASKA NETWORK ON DOMESTIC
VIOLENCE AND SEXUAL ASSAULT

P.O. BOX 809

JUNEAU, ALASKA 99802
586-3650

POSITION PAPER
HB128: An Act raising the penalties for promoting child prostitution

The Alaska Network on Domestic Violence and Sexual Assault is a non-profit corporation composed of twenty-one programs statewide that provide domestic violence, sexual assault, and adult crisis intervention services to members of their respective communities. Network programs are funded in part through grants and contracts awarded by the Council on Domestic Violence and Sexual Assault.

The Network was established in 1978, and has as one of its primary focuses the elimination of domestic violence and sexual assault through provision of shelter, advocacy, and education/prevention services.

The Network supports the intent of HB128 in its efforts to discourage the perpetration of abusive behavior towards minors.

TO: House Judiciary Committee

FROM: Representative John Lindauer

RE: House Bill 128: "An Act raising the penalties for promoting child prostitution."

Child prostitution is a growing problem within the United States as well as within Alaska. Those who promote young people in prostitution commit a heinous crime and need to be punished to the fullest extent possible.

This bill raises the penalty for those who promote individuals under sixteen yeasrs of age. The minimum penalty would change from four to seven years with the maximum sentence going from ten to twenty years.

Attached are a group of articles detailing areas of concern within the national and local press.

THE LEGISLATURE OF THE STATE OF ALASKA
THIRTEENTH LEGISLATURE

FISCAL NOTE

I. Request

Bill/Resolution No. House Bill No. 128
Title "An Act raising the penalties for promoting child prostitution"
Requested by Rep. Kubina Date Req.

II. FISCAL DETAIL

Agency Affected Department of Corrections
Program Category Involved Institutions, Administration & Support
BRU, Program or Component(s) Involved Point Mackenzie
(Note: If more than one BRU is affected, separate fiscal notes will be prepared for each BRU.)

EXPENDITURES (Thousands of Dollars)

		FY 83	FY 84	FY 85	FY 86	FY 87	FY 88
100	PERSONAL SERVICES						
200	TRAVEL						
300	CONTRACTUAL						
400	COMMODITIES						
500	EQUIPMENT						
600	LAND & STRUCTURES

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

If enacted, House Bill No. 128 would raise the penalties for promoting child prostitution from a Class B felony to a Class A felony.

* No data is available to indicate the frequency of this crime, the number of arrests or convictions. Therefore, no estimate can be made as to the fiscal impact if this legislation enacted. Since statistical data is not available, it is assumed that this offense is rarely encountered and any potential fiscal impact would be minimal, particularly since the bill is only raising an existing crime to a classification with longer sentences.

STATE OF ALASKA
PRELIMINARY STATEMENT OF FISCAL IMPACT

Bill No: SB 128 Date on bill: 1/26/83
Title: An Act relating to penalties for promoting child prostitution
Sponsor: House Rules
Requestor:

1. Estimated fiscal impacts on:

Rodriquez may not get closed trial, judge says

by Jeff Berliner
Times Writer

Although a secret court hearing was held Monday, state superior court judge Victor Carlson said later in an interview that this does not mean Carlos "Chico" Rodriquez will have a closed trial.

Rodriquez, 46, is being held on a $1 million cash-only bail at the Sixth Avenue jail on 29 felonies related to an alleged juvenile pornography and prostitution ring run out of his house at 1302 W. 26th Ave.

Carlson ordered the courtroom cleared of spectators, the press and other attorneys when a hearing was held for Rodriquez Monday afternoon.

The so-called "in camera" hearing was requested by public defender Carmen Gutierrez. Behind closed doors, she explained to the judge why the state public defender agency — which represents all indigent defendants — could not represent Rodriquez.

Since the public defender agency represents some of the youths who were allegedly sexually abused by Rodriquez, Gutierrez said it was would be a conflict of interest for her agency to represent both Rodriquez and his accusers.

Twelve youths who testified against Rodriquez in grand jury proceedings are identified only by initials and age, and Monday's hearing was closed to keep their identities secret.

Although only names arose at Monday's hearing, the unidentified witnesses are expected to take the witness stand when Rodriquez goes to trial. Asked if these proceedings might also be closed on the same grounds, Carlson said no motions have yet been filed seeking a closed trial. He added that there is no precedent for it.

A U.S. Supreme Court decision in an Alaskan case ruled to keep its trial open when it found that the protection of a defendant rights (to face his accusers) are more important than the protections of witnesses' identities, Carlson said.

Meanwhile, Rodriquez — who was indicted Nov. 19, arrested in Miami, Fla. a few days later and returned to Alaska last Thursday — still has no lawyer.

In cases where the public defender agency has a conflict of interest with a client, the law firm of Drathman and Weidner is appointed. However, an attorney from that firm rerpresents another youth who testified against Rodriquez.

Carlson asked the firm of Lynch, Farney & Crosby to provide Rodriquez with a lawyer and tell the court today whether it would do so.

Rodriquez said he wants to hire a local private attorney to defend him but doesn't have the money.

B

odriquez denies sex charges

Norris Klemon of The Times

ico' Rodriquez is delivered to the courtroom for arraignment Friday

by Jeff Berliner
Times Writer

Wild sex parties involving "kids" were frequent at his house, Carlos "Chico" Rodriquez said Friday during a brief interview before his arraignment on charges that he operated a juvenile pornography and prostitution ring here.

But, Rodriquez asserted, he is innocent of the rape charges and said others may be involved.

Rodriquez, a small, neatly dressed, soft-spoken man, about 5-foot-8, and weighing about 150 pounds, sat quietly and intently through his first Alaskan court hearing since his arrest more than three months ago.

Rodriquez said he is eager to face his accusers. He said he is innocent, although 12 youths told a grand jury that Rodriquez had sexually abused them, induced them to rob for him, and forced them to perform in sex movies in exchange for drugs and money.

And, Rodriquez hinted, many of the alleged activities really did go on in his house and he may be prepared to place the blame on unnamed others. Rodriquez is charged with crimes that allegedly occured between 1978 and 1980.

Police have acknowledged that others are under investigation as part of a continuing probe of the juvenile pornography and prostitution operation they claim Rodriquez ran.

Among the 29 felonies lodged against him are rape, attempted rape, sexual abuse of a minor, promoting prostitution, unlawful exploitation of a minor, attempted lewd acts to children, contributing to the delinquency of a minor and lewd or lascivious acts toward children.

Rodriquez, 46, is being held at the Sixth Avenue jail on a $1 million cash-only bail.

After court, public defender Carmen Gutierrez told Rodriquez not to speak to anyone except his attorney because his "case is a very hot case."

Gutierrez said she would seek a court ruling Monday — when a trial date will be set — asking corrections officials to notify attorneys if anyone tries to contact Rodriquez.

"A lot of investigation will be necessary to adequately represent Mr. Rodriquez," Gutierrez told Superior Court Judge Ralph Moody. "There are a number of counts and they are very serious."

Rodriquez may not stand trial until summer, Gutierrez indicated. But Rodriquez told The Times he is eager to go to trial.

Rodriquez repeated many things he said in an earlier interview with The Times: that groups of young people gathered at his house to party and have sex and that he did not force the activities to occur nor did he force himself upon anybody.

He insisted that he was not always present at these parties and that others with keys may have hosted them in his absence.

Rodriquez was secretly indicted Nov. 19 and arrested several days later at his Miami, Fla., home.

Anchorage Times 3/13/83

Child sex abuse 'epidemic' hits home

by Jeff Berliner
Times Writer

"Catastrophic" is the term Anchorage Superior Court Judge Ralph Moody uses.

"Epidemic," proclaims assistant Attorney General Gayle Horestki.

Once something thought to occur in New York, Los Angeles and other big cities, it was something you read about in national magazines, something horrible but safely distant.

Now it's hit Anchorage.

Some say it's been here for a long time, but the community refused to admit it or recognize that it existed.

The sexual abuse of juveniles by adults. Alaskan adults sexually attacking Alaskan children.

"It's the grossest, most vicious (thing) you could possibly imagine," says Fairbanks District Court Judge Gerald Van Hoomissen.

"I don't want parents to get paranoid, but we're all vulnerable," says John Niethamer, executive director of the Boys Club of Alaska.

"Anchorage is a big city. We have it," says police chief Brian Porter of widespread sexual abuse of children by adults.

Be it a new problem or not, people in Anchorage are being bombarded by news of it — in the courts, in the press, in everyday life.

See Child, page A-4

THE UGLIEST CRIME

Sexual abuse of Alaska's children

Today The Times begins a multi-part series with an overview of the problem. On Monday, the victims speak out.

Child sexual abuse 'epidemic' hits Anchorage

Continued from page A-1

"The number of prosecutions has mushroomed," says assistant District Attorney Elizabeth Sheley.

"People ought to open their eyes," says Bonnie Schnell, the grand jury foreman who, with 17 other grand jurors, listened to 20 youngsters tearfully reveal their involvement in a pornography and prostitution ring run by adults. The grand jury returned a 29-count indictment against one of the men alleged to be a principal in that operation.

No longer just isolated incidents of a man raping a young girl or a boy being fondled by an adult, the past 12 months have brought case after case of multiple victims, mostly young teenage boys.

In one of the largest, police have evidence of a massive juvenile prostitution and pornography ring that involved at least 60 children, aged 12 to 16, mostly boys.

Many of the cases involve adults in positions of public trust: the former assistant director of the Boys Club stands accused of six separate incidents of molesting boys; a former foster parent and juvenile probation "pass partner" stands accused of eight acts of molesting boys; a rural school superintendent has been sentenced to eight years in jail for molesting boys; a bus driver has been sentenced to 23 years in jail for molesting boys; a former public safety officer has been jailed for molesting boys.

All typical citizens taking typical children and doing previously unmentionable things to them. It's illegal. And in increasing numbers, these adults are getting arrested.

The children most often preyed upon are runaways — many of them running away from the sexual abuse of an incestuous home life. They find that sex-for-sale may be the only way to make a living in the world where you're too young to get a job, you have no skills and you've dropped out of school.

Anchorage had 563 runaways in 1982, according to police reports, and another 325 juveniles are simply listed as "missing." The youths who do not return home often depend on selling their bodies for survival.

Chief Porter has three investigators working on cases of adults sexually molesting children. If he had more money, the chief says, he'd throw more investigators at the problem.

"We're flooding the court system," Sheley says. She works full-time doing nothing but prosecuting adults accused of molesting juveniles. Her collegue in the Anchorage district attorney's office, Paul Olson, spends half his time doing likewise; the rest of his time is spent on adult sexual assault cases.

Olson is preparing to prosecute Carlos "Chico" Rodriguez, indicted for 29 sex crimes against juveniles in what police describe as a child pornography and prostitution ring.

And because there are so many cases cropping up, Anchorage District Attorney Victor Krumm is considering adding a third prosecutor to the sex crimes unit he created just 2½ months ago.

Fifty cases are awaiting prosecution in Anchorage. Two or three new cases are referred to the Anchorage district attorney's office for prosecution every week. That's a 100 percent increase over last year, and more of this year's cases involve multi-

ple victims.

Judges in Anchorage are so sickened by the constant parade of sexual offenders, Sheley says, that prosecutors are winning long jail terms for convicted offenders. One judge — after two straight weeks of hearing juvenile sex abuse cases — opted to have a murder case come before him to get a break from the cases of adults molesting children.

Dr. Roland Summit, a psychiatrist from UCLA, speaking at a sexual abuse symposium in Fairbanks last year, estimated that 500 Alaskan juveniles at any given time are victims of sexual abuse.

Half the boys at McLaughlin Youth Center have been sexually abused, according to George Buhite, the center's clinical services administrator. Even more of the girls have had sexual encounters.

Odyssey House, the national organization leading the fight against child pornography and prostitution, has sent one of its nationally recognized experts, Glen Lambert, to Alaska to help advise McLaughlin counselors — to tell them what to look for, how to spot the problem, how to deal with it.

Lambert, of the Salt Lake City Odyssey House, said his first audience in Fairbanks expressed disbelief when he confronted them with figures on child sexual abuse in Alaska. Last month, when Lambert offered advice to McLaughlin counselors, he said no one questioned the problem's existence.

Incest victims frequently become involved in prostitution, even when they have run away from sexual abuse at home, reports Marguerite Lupori of Parents United, a local group organized to fight incest.

By age 16, one in five girls will be abused and one in 10 boys will have been molested, Lupori says, citing Division of Family and Youth Services figures.

There were 64 cases of sexual abuse reported to the Department of Health and Social Services in 1982, and 385 suspected cases.

Reporting of cases of adults sexually abusing children is up partly because tough new laws require certain professionals — doctors, nurses, social workers, teachers, youth counselors — to report them to the police or face 90 days in jail for not doing so.

Others are reporting the crimes, too: parents, the children themselves and their friends. The taboo against talking about sex — especially sexual abuse and homosexual abuse — is dropping away, leaving people more inclined to report incidents.

This change has been noticed by the police chief, prosecutors and others

"These cases were virtually not prosecuted until two years ago," Sheley says. People simply did not come forward.

Porter and two of his aides give much of the credit for the breakthrough to officer Eric "Frank" Feichtinger, who has won the confidence of sexually assaulted boys. And because they have talked to him, he has been able to gather evidence to bring to court.

Officials are bringing it out in the open, too. Gayle Horetski, who works out of the chief prosecutor's office in Juneau, has testified before legislative committees about the "epidemic." And last week she finished rewriting a package of laws to close loopholes through which she claims some sex offenders slip.

Lupori is working with Marroyce Hall of the Anchorage Crime Commission's juvenile committee to expose the local problem publicly and suggest solutions.

And STAR — Standing Together Against Rape — is proposing to make its educational campaign a permanent part of the public school curriculum — beginning in elementary school.

Anxious to help male and juvenile victims also, STAR reports a ninefold increase in reported sexual assaults against males the last two years. STAR also reports that 43 percent of victims of sexual assaults are youths 18 or younger.

At a recent sentencing, Horetski told the judge the problem has become "epidemic in our society," and the judge, Ralph Moody, handed down a 23-year jail sentence to a man convicted of 22 sex offenses against boys.

"We've got to let people know in this society that we won't stand for this kind of abuse," Moody said.

Adults who turn teen-agers and younger children into sex objects either for pleasure or pay are going to jail. Sheley reports that prosecutors here have a 99 percent conviction rate.

A package of new, tougher laws Horetski has given to the governor may make it even tougher on offenders.

Though the adults may end up behind bars, the children end up scarred, perhaps for life.

Monday: the victims talk.

Children Today September/October 1979

ADOLESCENT PROSTITUTION

by Michael Baizerman, Jacquelyn Thompson, Kimaka Stafford-White and "An Old, Young Friend"

Adolescent prostitution is a topic of public and professional concern in many areas throughout the nation. It has been receiving a great deal of attention in Minnesota, and particularly in the Twin Cities area of Minneapolis-St. Paul. We are aware of our area's notoriety as the home of many young girls who are now working as prostitutes in New York City, Chicago and California. We could not help but be aware of the "Minnesota Strip" in New York City after the news coverage given to efforts of two local policemen to bring home some of the young people involved in prostitution there.

We are concerned, too, that sophisticated pimps are coming into Minnesota from other cities. Compared to many states, Minnesota is rich and until recently it has been an untapped resource as far as organized crime is concerned.

In response, public hearings have been held at city and state levels, and groups have been formed by government agencies and youth workers to study the situation and recommend actions. Programs have begun and legislation has been introduced at the state level.[1] Training sessions have been held for youth workers at the University of Minnesota and elsewhere, and public meetings have been called to present issues to parents and young people.

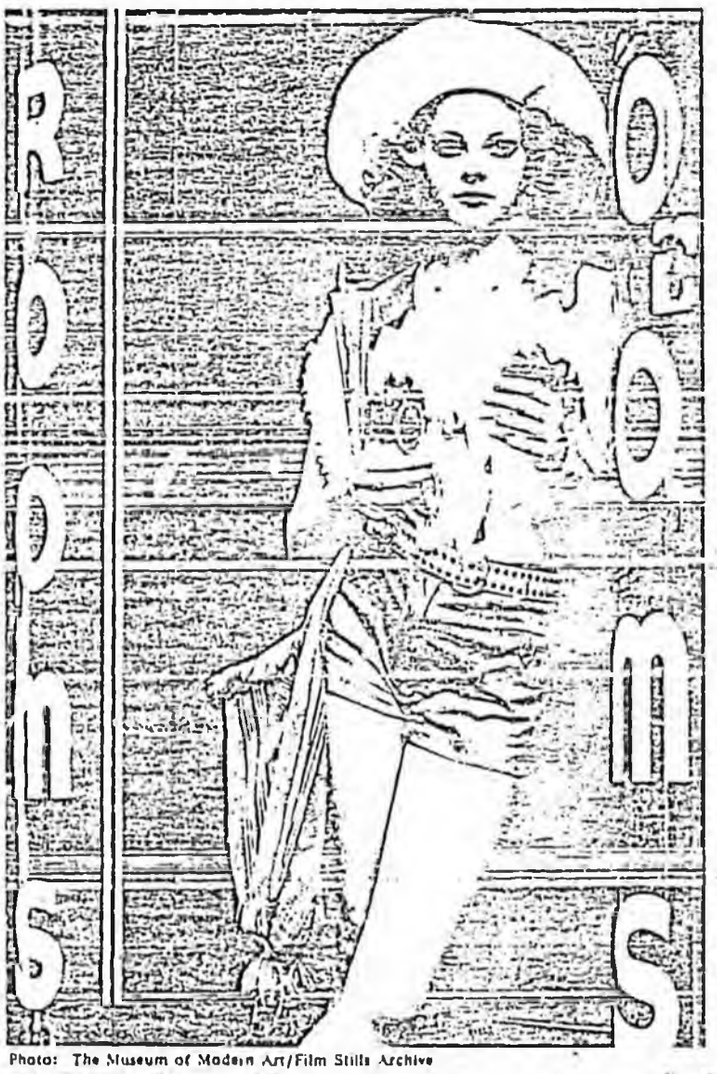

Photo: The Museum of Modern Art/Film Stills Archive

Jodie Foster as a runaway teenage prostitute in the recent film "Taxi Driver."

Michael Baizerman, Ph.D., is Associate Professor, Center for Youth Development and Research, and Associate Professor, Maternal and Child Health, University of Minnesota, Minneapolis. Jacquelyn Thompson and Kimaka Stafford-White are youth counselors with a Twin Cities youth agency. "An Old, Young Friend" is an 18-year-old woman with five year's experience in fee-for-service sex in Minneapolis-St. Paul and other cities.

Taken together, these activities have contributed to the Twin Cities becoming a center of inquiry and action on adolescent female prostitution. (Although there is certainly male prostitution in the Twin Cities area, it is apparently not as prevalent as it is in some other cities and not yet of the same public concern.)

Over a 3-year period, two of us have done direct fieldwork—casefinding, counseling and referral—with more than 300 young prostitutes in the Twin Cities area, including one of the coauthors of this article, "An Old, Young Friend." Most of these girls were native-born, from the Twin Cities or rural areas in the state, and about 70 percent had run away at some time. And, as part of a field study of the Center for Youth Development and Research at the University of Minnesota, three of us have interviewed the youth workers and some of these girls and their pimps. From them we have gathered observations and gained some understanding of the current phenomena of adolescent fee-for-service sex. This article is an introduction to our findings and observations.

A Brief History

Prostitution has been a fact of life in most of recorded history and children and youth have been sellers of sex for almost as long. Only since the early 1900s has youth been considered a separate stage of life; thus we can assume that many young people we now term youths were previously considered to be adults, whether they were involved in prostitution or in other, more conventional activities.

Prostitution by the young has been a form of slavery and of child labor. Young people worked as prostitutes to earn money for their families. Some of this activity was regulated by law—in England, for example, legislation set the minimum age for prostitution at 12 until 1874, at 13 in 1875 and at 16 in 1885.

Is the incidence of adolescent prostitution higher now than in the recent past? We don't know for sure, but we think that it is. We are also hearing more about it now. Some girls may become aware of prostitution as an "easy" way of earning money and decide to try it. Increased public awareness of adolescent fee-for-service sex often results in increased public pressure for police action, which in turn usually results in more arrests and prosecutions and, usually, "convictions." (These young people would be seen in juvenile court where there are hearings and depositions, not convictions.)

In addition, since young prostitutes work "the street" as opposed to working out of bars, hotels or parlors, they are more visible because they tend to congregate on the same streets.

Adolescent prostitution has also been linked to other contemporary youth problems: running away, physical and sexual abuse, incest and child pornography. Federal legislation passed last year, P.L. 95-225, is designed to protect children against sexual exploitation. It also extends the provisions of the Mann Act to apply to boys.

Prostitution in the Twin Cities

In the Twin Cities area, girls of all races are involved in prostitution; their ages range from 13 to 18. Some have a male pimp, others do not, and many make a transition from working independently to working for a pimp. As we have noted, most of the young prostitutes work "the street"—both actual city blocks and other specific locations, such as shopping malls and the areas around some bars and after-hours clubs. Most sex acts take place in cars, although some girls use apartments and, more rarely, motel and hotel rooms.

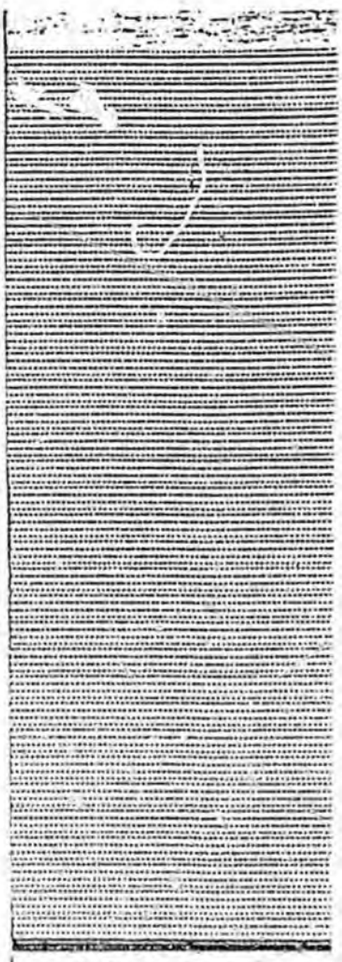
Many of the girls practice birth control: pills, followed by the IUD, are the two most popular forms. Since girls may begin using the pill at an early age, they may be at risk of resultant medical complications. Use of the IUD could lead, through violence during the sex act, to such serious problems as perforation of the cervix. Condoms seem to be used less as a pregnancy prophylactic than as a preventive for venereal disease.

Many girls do not know much about venereal disease, and what information they do have seems to be obtained from "the street." Some learn from experience that one consequence might be scar tissue on the fallopian tubes, which could prevent pregnancy. Generally, pimps take care of the medical and health expenses of their girls.

Many pimps working in neighborhoods and the metropolitan area do not use hard drugs and do not allow their girls to use them—hard drug use raises the risk of arrest and the cost of the pimp's operation. Hard drugs also compete with a pimp for the girl's dependency. This is not to say that many girls do not have a history of drug use or that some girls may not be intentionally introduced to drugs as a way to secure and control them. However, from what we have observed, this latter pattern is more characteristic of interstate than of local patterns.

All of the pimps are male and most of the younger ones are black. Those who live in the neighborhood where the girls work—"popcorn" or "bubblegum" pimps, or "players"—are about 17, 18 and 19 years old, while those who come from outside the state are usually older, having moved up the "career ladder" from neighborhood pimp to small businessman. Black pimps tend to work on the street while white pimps, usually older, are more likely to be involved with more formally organized action such as call girls, saunas and massage parlors.

In general, the younger pimps come from disadvantaged neighborhoods; they have relatively poor formal education, lack basic skills and have few opportunities to obtain legitimate work. As a result, they are likely to be frustrated, angry, resentful and unsure of themselves. They tend to use fear to control their girls and may attempt to hurt a girl or someone who tries to interfere with their operation. In our experience, however, many of these young men will move out of pimping if other possibilities are found. Those who stay in it do so partly because there are few work opportunities. We do not believe that most stay out of any great pathological or perverse need.



Older and more sophisticated pimps rarely use physical force on their women. Their method of control is psychological and emotional with the goal of having the girls become totally dependent upon them.

The local buyers or johns seem to be white men over 25 years of age, both married and single. We know that many have families of their own—and that some men ask for girls of their daughter's age.

Although a wide variety of sex acts are performed, most men seem to want oral sex or intercourse. The price varies according to the act and the time involved. For ordinary oral sex or intercourse, it is about $25. Other factors—whether the girl works for a pimp, the location of the pick-up, the nature of the sex act, and whether or not there is a big convention in town—also influence the cost.

Most of the action seems to take place from lunchtime to late afternoon, and then later in the evening. These afternoon times fit well within typical male working schedules and allow married men the opportunity to be home in the evening and still engage in—and protect—their activities.

Business hours are also determined by the girls' schedules. Since they may also be students in junior and senior high

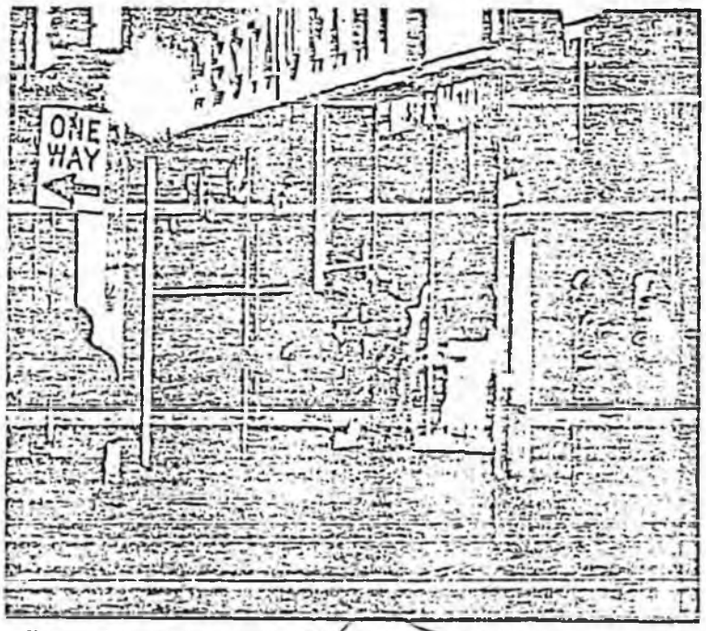
school, the girls may choose to work only after school. Afternoon hours are convenient for girls who live at home and work at prostitution part time, without parental knowledge.

Becoming A Teenage Prostitute

One pathway to prostitution is recruitment by a pimp. Why are some girls vulnerable to a pimp's advances? We believe that the risk of a girl being open to recruitment by a pimp increases with the following factors:

She may have a poor self-image. She is unattractive, possibly overweight and a "loner." She lacks knowledge of normal teenage boy-girl relationships, and she desires acceptance and attention. Aware of this, a pimp will take her to nice restaurants, buy her gifts and make her feel desirable.

She may be a runaway. Girls leave home for a variety of reasons, many of which reflect "healthy" or normal feelings of adolescens—the desire for adventure, to explore something new, to meet new people. Others, however, run away from problems, including physical and sexual abuse, family violence, other intrafamilial tensions and crises and problems with school, work or friends.



In our experience, it is the girl who runs away from abuse and/or family crises, who urgently wants and needs friendship, security and affection, who is most responsive to the solicitations of a pimp.

The need for money also makes a runaway—who is lonely, tired and hungry and has no place to go—vulnerable to such advances. Working for a pimp may seem to her to be a safe way to organize her work life—she sees him as offering protection against abuse and violence by the "trick," help with the police and the court and offering material and physical security.

To understand why and when these girls leave home is to understand a part of why they are vulnerable to a pimp. What is important here is not only the kind and severity of the incidents but the girl's experiences and understanding of these and her learned behaviors about being in her family. It is important to remember, however, that not all girls who run away from home respond to a pimp and go into prostitution.

Other girls who do not run away from home, but who experience similar personal and family problems, may also be vulnerable to a pimp's advances.

She may have friends in prostitution. She wants to be accepted by her peers, and she is impressed with the clothes, gifts and other material goods that a pimp provides.

She may be seeking . . . Some girls may be looking for a husband or a man to depend upon; others may seek material goods—expensive clothes, a big car, a luxurious apartment—which the pimp provides.

The girls described here usually do not know that they are being recruited for prostitution. In the first stage of the prostitution "career," a girl is picked out, or put at actual risk of "conversion," by others—other girls working for a pimp, a teenage boy who "fingers" or points her out to a pimp for money or status, or by others in the prostitution system. (In some cases, a girl may ask another prostitute to bring her into "the life.")

The pimp contacts the girl, begins dating her and, playing upon her normal interest in men and dating, works carefully to gain her love and trust—he gives her presents, takes her to parties and night spots and introduces her to sex with him. Because of her relative lack of normal girl-boy relationships—and, often, also because of less than ideal family relationships—she is responsive to him. Her friends are probably as impressed with the pimp as she is and most likely will encourage her to see him.

During this time the girl, if she is living at home, begins staying out late or even all night, and family arguments arise from her behavior. The pimp reassures her that he wants and needs to see her more often; he tells her that her parents are interfering with their happiness, that they don't understand their love.

At this point the girl's ties to home are severely stretched or broken, and she may run away to live with her pimp. He introduces her to his friends and his other women and she finds a new "family" with them. When he asks her to perform sex with others for a fee, she agrees. She continues to show her love by working.

We believe that the "love approach" used by many pimps is a newer pattern in prostitution. Formerly, prostitution seems to have been more straightforward—the girl knew that she was a prostitute. Several of the girls we have talked with say that they are working to make a better life for themselves and their future husband.

From this stage, several "career lines" may be pursued. The girl may be promoted to another level in the prostitution system—moving from working on the street to working indoors, moving to another city or working for a more professional or full-time pimp.

Another line may lead to a change in the girl's status. She becomes pregnant. She may want to become a mother, or she may use her pregnancy as a way of getting out of the life. She may also see pregnancy as a way to keep her man.

Finally, the girl, as "business material," may be "used up" due to hard work, illness, violence, lack of physical stamina and use of drugs.

Working Independently

What about the girl who begins selling sex on her own? How does she learn about this "career," and why does she choose to try prostitution?

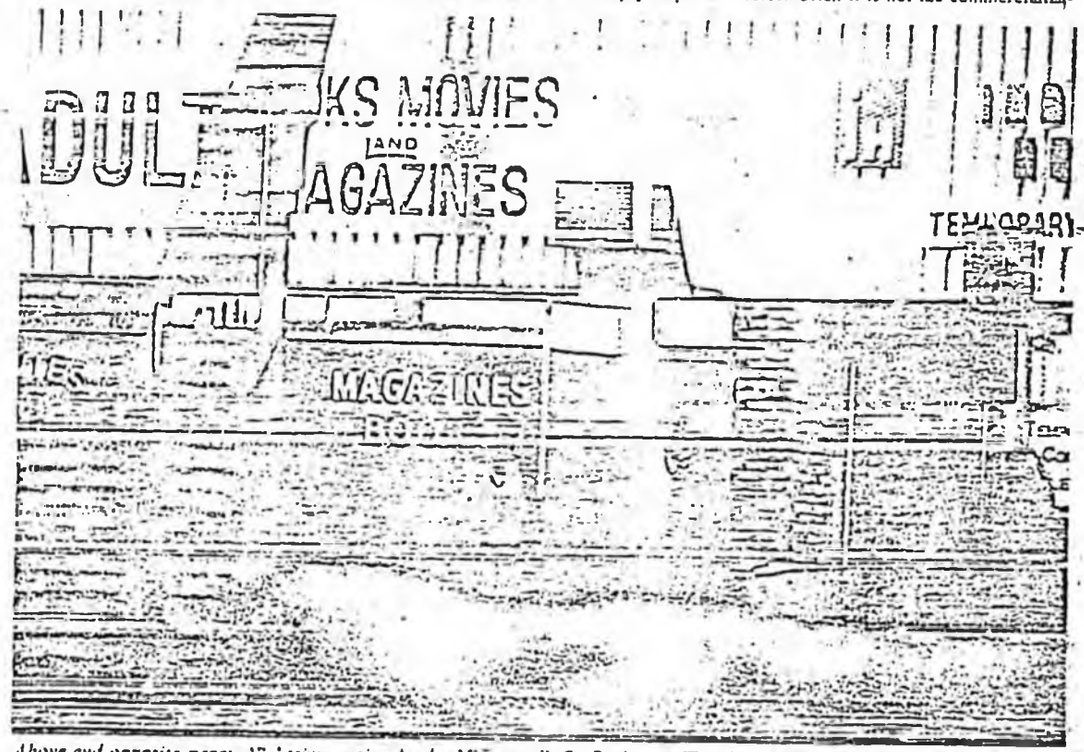
In our experience, most of the independent teenage prostitutes are poor, black and live in communities where they see other teenagers and women living at home and "working" as prostitutes. A girl is aware early of this social role and at some time may choose to try prostitution—and then decide to either stop or continue. Of course, most girls do not take this first step.

Within this perspective, the answer to why she decides to try prostitution is unique to each girl and could involve all of the personal, familial and situational factors described for girls who are recruited by pimps. However, the questions one would ask of a girl who began prostitution independently about why she chose to continue or take on a "manager" would be quite different from those one would ask of girls who were recruited by pimps.

Some girls simply need or want the money and think that prostitution provides an "easy" way of earning it. Because of the publicity given to runaways who engage in prostitution, this is a well-know pathway.

A girl who begins prostitution by working independently may "progress" to working for a pimp. Or, she may just experiment with prostitution for a short time and decide to stop. This is not an unusual pattern.

"Love" and Prostitution



Many adolescent prostitutes and youth workers believe that the main difference between many young prostitutes now and in the recent past is that the girls who now go into prostitution and stay in it do so because they are in love with their pimp.

We think that there is more to it than this, and believe it is useful to distinguish between using the word "love" to describe a total feeling and experience and using it to answer such questions as "Why did you get into prostitution?" and "Why do you stay in it?"

"Love" may be a good answer to these questions: it has the capability of changing the moral and/or psychopathological interpretation of a girl's status and behavior from something that is "bad" or "sick" to something only "sad" and "naive." "Love" is a culturally acceptable reason or explanation for feelings and behavior with which one may be uncomfortable, or which one may dislike or think will be unacceptable to others.

When asked to interpret what love means to them, young prostitutes have used such phrases as "feeling secure," "feeling cared for" and "being paid attention to." What we understand from these responses is that for some girls "prostitution" is not a reality. For them, what is real is that they are the pimp's "lady" or "woman"; this is what love means. (Girls in a "stable" compete with their "sisters" to be the pimp's "main woman" and work together to produce a good living for the pimp—and, thus, for themselves.)

It is precisely this reality which confounds many who seek to understand adolescent prostitution and which makes it so difficult to accept love as the answer to why young girls become prostitutes. Often it is not the commercializa-

Above and opposite page: Nighttime action in the Minneapolis-St. Paul area. The photographs were made from a special type of film used in police surveillance.

tion of sex which is at the root of our discomfort, nor is it the "immorality" of prostitution. Rather, it is the fraudulent manipulation of affection—the "con"—which outrages us. This is "puppy love" twisted and mauled for money and social status.

What Can Be Done?

To begin with a practical point, it should be noted that the involvement of some girls and young male pimps in fee-for-service sex is likely to continue. Efforts should be directed at controlling and keeping the phenomenon relatively small.

We see no simple or single way to control, reduce and/or prevent the phenomenon. No one social institution is solely responsible for action: police and courts alone are no more likely to achieve relative control and prevention than are education, counseling or "treatment." In most jurisdictions, no juvenile prostitution statutes exist. One could use petitions citing incorrigibility to hold the girls (the status offense group, or PINS) in detention homes until their cases are presented in juvenile court. However, in Minnesota, most of the depositions will not be to secure facilities, and the girl is able to return to the pimp.

A law enforcement approach directed toward the pimp will probably be futile. In our experience, attacks on the pimp only serve to bring the girl who loves him closer to him, and they simply move away or "go underground."

We have very little hope of discouraging pimping at the neighborhood level. Too many boys and men see the very few pimp "jobs" as the only ones open to them.

To arrest the buyers is an impossible task, given the size of a typical police force and the mobility of the pimps and girls. Laws focused on the buyer could be effective in raising the risk of going to a young prostitute, but it is likely that differential and selective enforcement of such laws would be seen. It may be easier to turn these men toward older prostitutes—assuming that their interest is in sex with a prostitute, not in sex with a teenager.

Regular customers can usually be spotted, since the girls stay in a relatively well-defined area. Reporters and photographers in the area and the threat of publicity could discourage some action. Community action could also be effective in keeping some men out of the area where young girls are working; however, this might be risky for those involved for some retaliation by pimps could be expected.

A better approach, we think, is to examine the pathways described earlier which lead to adolescent prostitution and to use the insights gained to design multiple ways of intervening. For example, in public meetings or in discussions in schools, community centers and social and youth agencies, adolescent girls could be informed about how pimps recruit, train and supervise girls. They should have opportunities to meet and learn from girls who have engaged in prostitution. Parents, too, should be involved in these meetings. Rather than using a "scare" approach, however, in our work we focus on the larger topics of dating and sexuality, making the point that dating is a normal adolescent activity, one which is fun and necessary to healthy development. Prostitution is presented as a distortion and manipulation of this normal activity. This approach could also be used in high risk neighborhoods and specifically with girls considered at high risk of becoming teenage prostitutes.

Also, the more parents and young people are aware of teenage prostitution and its patterns, the more likely it is that opposition to pimp activity in an area or school will develop.

Education, however, must be coupled with other approaches and actions. For girls who are already involved with a pimp, education is probably not effective. For very young prostitutes, those aged 12 to 15, a law enforcement approach may be the only viable way to achieve temporary separation of the girl from the pimp. However, we believe that many girls who are pulled away by police will try to return to their man.

For all young prostitutes, shelters must be available so that those who want to leave can do so at once, with the knowledge that they will be secure and protected from reprisals by pimps, parents or police. Shelters, or "safe houses," modeled after shelters for battered women, may be a home, a hotel room or part of a runaway house.[2] There girls have opportunities to talk about their experiences and to receive medical help and psychological and vocational counseling. Youth workers can spread the word "on the street" that options to leave do exist and will continue to be available. The girls must know that shelters can be used more than once, and that they will not have to pay—with money or with loss of self-respect—for going there. Getting this information to the girls and creating and sustaining such a service, however, are not simple tasks. In addition, there must be adequate protection—for both the girls and the workers—from retaliation by the pimp.

In the Twin Cities area, we are also making extensive use of street workers from youth agencies, who are available in the areas where the girls work to talk over feelings or problems, mediate crises with their families and pimps, and help them get to a safe house or obtain other assistance.

If all of these actions were undertaken simultaneously in a large city, it is likely that adolescent prostitution still would *not* disappear. Fewer young recruits might enter the life, but adolescent prostitution would probably continue on a lower level of activity and visibility. A community might be able to push out street prostitution, but it is much more difficult and dangerous to attack citywide, statewide and interstate organizations. To control these, Federal law enforcements powers are needed.

However, we do believe that effective action, in the form of public education, the provision of safe houses and the use of street workers, can be taken to reduce the number of young prostitutes. Clearly, there is no easy solution to adolescent prostitution, and we are only now beginning to address another problem: how to orient young girls, who may make as much as $200 a day in prostitution, toward a limited number of legitimate jobs in which they may be expected to earn, at best, a minimum wage. (Although girls working for a pimp turn their "earnings" over to him they receive, in return, support, lavish gifts and recognition from him.) And we must face the fact that there are few jobs for girls aged 12 to 16.

We emphasize that prostitution is, indeed, a dead-end job and provide vocational counseling and training to help them acquire skills for jobs which hold more promise for the future. ◻

---

[1] A metropolitan task force has recommended various legislation, including changes in laws which would increase time in prison for pimps and make it easier to convict them, and new legislation which would create service programs for the girls.

[2] In Minneapolis, for example, one shelter for young prostitutes and their children is funded by the Youth Development Bureau, ACYF, as part of the Minneapolis Bridge runaway project.

The Tragedy of Teenage Prostitution

by FATHER BRUCE RITTER with BOB WEINSTEIN

We must face the shocking facts, says a Catholic priest, and care enough to try to change them.

"I am not going to make it. I am going to die out there. The streets are going to kill me."

He was 17 years old. We'll call him Louis. He was talking to one of the co-authors of this article, the Reverend Bruce Ritter, a 52-year-old Franciscan priest. Two years ago, Father Ritter started Covenant House. It is a shelter for teenagers, most of them runaways, who roam the sinful streets around Times Square in midtown New York.

Wherever there are large numbers of runaways, teenage prostitution is a fact. The problem is already very bad—and getting worse—in cities such as New York, Los Angeles, Miami, and Houston. But it's not just a big-city problem. Those runaways come from almost every corner of the United States. Fleeing or kicked out of their homes, they come to the cities with dreams of glamor and fun.

The Federal Bureau of Investigation keeps statistics on runaways. Between 600,000 and one million young people run away from home every year, the FBI reports. Not all of these, of course, end up in prostitution. In fact, quite a few return home very soon. But almost all teenage prostitutes start out as runaways.

These teenage runaways cannot get honest work. They have not finished school. Rightly or wrongly, they don't want to go home. Or maybe they don't have a home, or parents, anymore. Or maybe their parents don't want them to come home.

Over the past 18 months, 8,000 homeless young people have come to Covenant House. There, they can get a good night's sleep, eat nourishing meals, and clean up. Perhaps most important of all, they can talk about their lives with the volunteers who work there. Like Louis, who fears "the streets are going to kill me," 60 percent of the young people who show up at Covenant House are involved in prostitution.

At 17, Louis has been a hustler for three years. He didn't finish school and can't write very well. He's an alcoholic. He drinks every day, he says, to try to forget what he has to do to survive. He is a naturally bright person who, maybe, could have led a more "normal" life. But his chances, now, of leading anything like a normal life are just about zero.

Teenage runaways head for cities — and ruined lives. Father Ritter fights to save them.

What do volunteer workers say to teenagers like Louis who come to Covenant House and similar shelters around the country? The volunteers have only one hope: to try to convince a teenager that he or she has other choices in life. Maybe (a volunteer may suggest) going back home is better than staying

---

Few things get Father Ritter to put aside his work for Covenant House—even for a little while. This article was one of them. We are grateful to Father Ritter and to his co-author, Bob Weinstein, a frequent contributor to this magazine.

Senior Scholastic 2/8/79

on the streets. But many of these teenagers just can't believe that they can change their lives, that they have any choices at all.

So, they go back on the streets. Hundreds of them have been held prisoner, tortured, raped. Some of them have been murdered. One 16-year-old girl—we'll call her Alice—was held prisoner for a week, after a pimp picked her up in New York's Port Authority Bus Terminal. Alice was drugged, raped repeatedly, but finally escaped. Her pimp found her again and told her he had to have her back. He said he owned her. Besides, Alice was worth thousands of dollars a month to him.

Police have identified about 1,000 pimps in just the New York City midtown area. Each one usually controls between two and four girls like Alice. The prostitute is the "property" of the pimp. Each girl is expected to bring the pimp a certain amount of money a day, usually around $200. She has to. If she doesn't, a brutal beating is about the best she can hope for.

Prostitution has been called a "victimless crime." That means a crime that doesn't hurt anybody. But that leaves out all the young people who are beaten, tortured, held prisoner. And what about those who are murdered? What about the ones who commit suicide out of hopelessness and desperation?

These are the victims. But who, really, are they? Here are some statistics from Covenant House. Fifty percent of the teenage prostitutes are black; 18 percent are Spanish-speaking; 25 percent are white. The rest are of mixed ethnic backgrounds. Seventy-five percent are boys. The median age of both boys and girls is about 17: Almost one-half of them are 17 or younger. Nineteen out of 20 come from one-parent families. If they come from two-parent families, there is almost always alcoholism in the family.

Seventy-five percent of teenage prostitutes are children of the poor. Most of them have suffered child abuse. They have either been thrown out or walked out of homes that have broken up, or homes where there seems to be no love or understanding left.

To an experienced pimp, these needs for attention and security are easy to spot—and easy to prey on. A lot of scared young girls, for example, want to believe that the smooth, expensively dressed young men who seem to fall for them really care. The rude awakening often comes when the girl is asked to prove her love by repaying the man for his generosity. She can repay him, he tells her, by selling her body and making money for them both. For her, it can seem like her only option.

Meanwhile, the "sex industry" is booming. And teenage prostitution and pornography, too, get bigger every day. Business has never been better. Why? There are probably just two answers. They are two of the seven deadly sins—greed and lust. There is big money in selling sex. Greed makes people go after that money. The money comes from other people who lust after children and teenagers. And, of course, the greedy ones want to make sure money keeps rolling in. They are for the most part linked to what we know as organized crime. They have a big stake in being deadly efficient—for them, sex is a $4-billion-dollar-a-year industry. □

Father Bruce Ritter— On Stopping Teenage Prostitution

Senior: With all you've seen—all the pain and suffering—do you think it's possible to end the problem?

Father Ritter: I do. It seems, though, that very few people really want to do anything.

Senior: Do what? You make it sound as if individuals—young individuals—can do something. But is that realistic? What have adults, politicians, the police been able to do?

Ritter: Very little. But I think that's because they've only given lip service to the problem. But they've made little effort to stop it. The problem grows worse every day. But young people can care. Caring is a good way to start. If their sister or brother or close friend were on a street corner, it wouldn't be so hard to care. Caring is the first step in accepting responsibility—for yourself and for others.

Senior: That sounds good. But it also sounds like a lot of other things people have said before about love and caring making things all right....

Ritter: Wait a minute. That's only a beginning. The caring makes people *act*. And that's what it takes to make them realize they have power.

Senior: What kind of power?

Ritter: The power to put people into office—and to take them out. Politicians respond to the people who write them—people who care, people who vote. Letters are a good way for your readers to start. And before long, they'll be voting. They can vote against the uncaring politicians and judges and the do-nothing district attorneys.

Senior: But statistics show that not many young people actually vote.

Ritter: I know! That's immoral and irresponsible. I hear young people say that their vote doesn't count. But they don't even try to find out if that's true. They may shake their heads over a problem like teenage prostitution, but they don't try to *do* anything.

Senior: But why should they *really* care—about a problem that seems so far away?

Ritter: I thought I already gave them some good reasons. But here's another. Some day, they will have children of their own. And they have to decide if they want those children growing up in a world where young people are bartered like sacks of potatoes. They can't afford to wait until then... until those children are teenagers and maybe thinking of running away. That will be too late. The problem can't be—won't be—stopped overnight. It's going to take time. And the time to start is *now*. □

Society November/December, 1979

grams for prevention and treatment. Their paper is the first to address adolescent abuse from the standpoint of a combination of factors, involving parents, children and social stresses, and is intended to guide future work on the subject.

Teen-Age Prostitutes

Adolescent prostitution has been receiving a great deal of attention in Minnesota, and particularly in the Twin Cities area of Minneapolis-St. Paul. The area is notorious as the home of many young girls who are now working as prostitutes in New York City, Chicago, and California; so notorious that one section of New York with numerous adolescent prostitutes has become known as the "Minnesota Strip."

Based on 3 years of direct fieldwork, Michael Baizerman, Jacquelyn Thompson, Kimaka Stafford-White, and "An Old, Young Friend"—an 18-year-old woman with five years' experience in prostitution—have written of this problem in *Children Today*.

In the Twin Cities area, girls of all races are involved in prostitution; their ages range from 13 to 18. Some have a male pimp, others do not, and many make a transition from working independently to working for a pimp. Generally speaking, most of the young prostitutes work "the street"—both actual city blocks and other specific locations, such as shopping malls and the areas around some bars and after-hours clubs. Most sex acts take place in cars, although some girls use apartments and, more rarely, motel and hotel rooms.

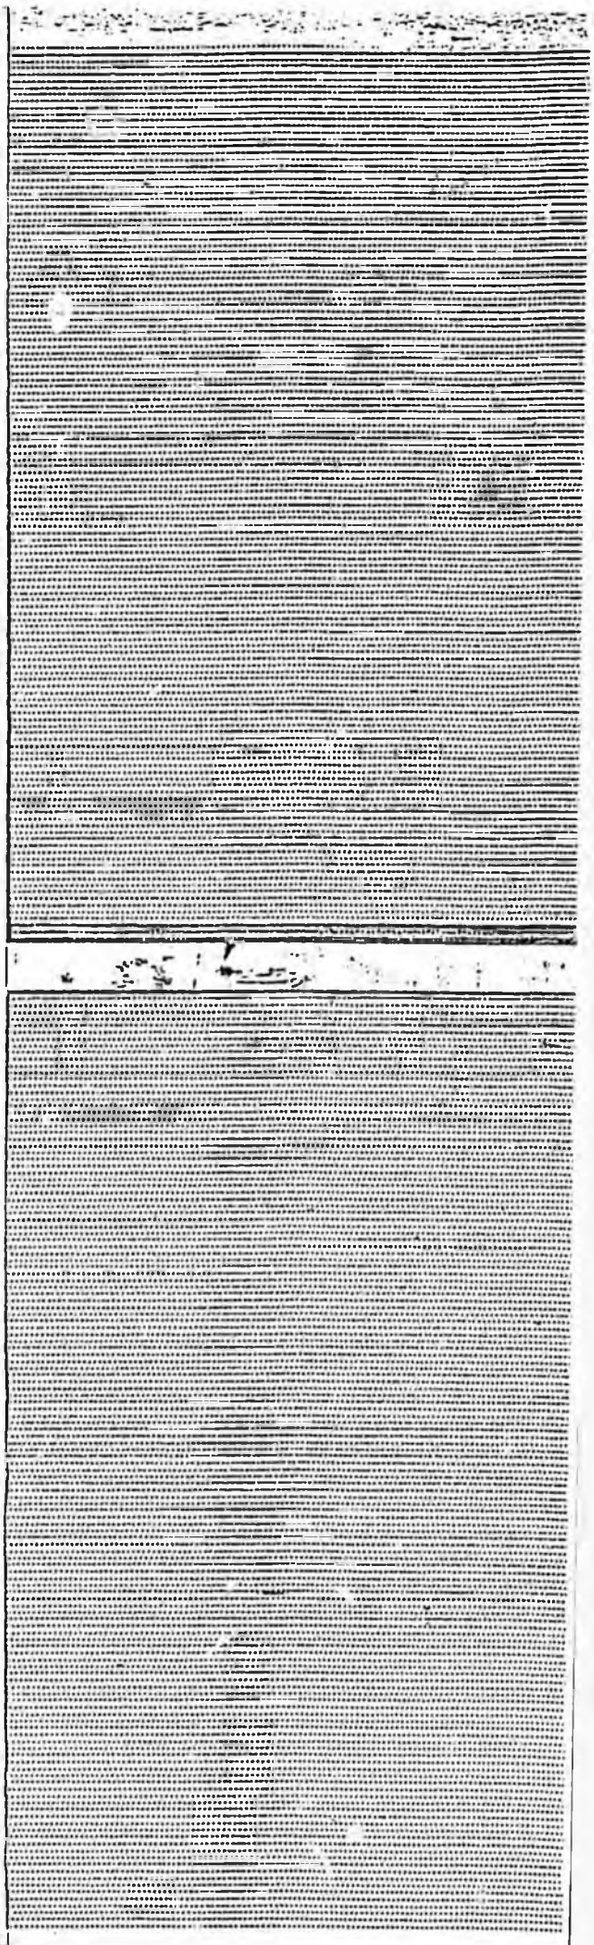
Many of the girls practice birth control; pills, followed by the IUD, are the two most popular forms. Since girls may begin using the pill at an early age, they may be at risk of resultant medical complications. Use of the IUD could lead, through violence during the sex act, to such serious problems as perforation of the cervix. Condoms seem to be used less as a pregnancy prophylactic than as a preventive for venereal disease.

Many girls do not know much about venereal disease, and what information they do have seems to be obtained from "the street." Some learn from experience that one consequence might be scar tissue on the fallopian tubes, which could prevent pregnancy. Generally, pimps take care of the medical and health expenses of their girls.

Many pimps working in neighborhoods and the metropolitan area do not use hard drugs and do not allow their girls to use them—hard drug use raises the risk of arrest and the cost of the pimp's operation. Hard drugs also compete with a pimp for the girl's dependency. This is not to say that many girls do not have a history of drug use or that some girls may not be intentionally introduced to drugs as a way to secure and control them. However, this latter pattern is more characteristic of interstate than of local patterns.

All of the pimps are male and most of the younger ones are black. Those who live in the neighborhood where the girls work—"popcorn" or "bubblegum" pimps, or "players"—are about 17, 18 and 19 years old, while those who come from outside the state are usually older, having moved up the "career ladder" from neighborhood pimp to small businessman. Black pimps tend to work on the street while white pimps, usually older, are more likely to be involved with more formally organized action such as call girls, saunas, and massage parlors.

In general, the younger pimps come from disadvantaged neighborhoods; they have relatively poor formal education, lack basic skills, and have few opportunities to obtain legitimate work. As a result, they are likely to be frustrated, angry, resentful, and unsure of themselves. They tend to use fear to control their girls and may attempt to hurt a girl or someone who tries to interfere with their operation. It is likely, however, that many of these young men will move out of pimping if other possibilities are found. Those who stay in it do so partly because there are few work opportunities. Most do not stay out of any great pathological or perverse need.



Older and more sophisticated pimps rarely use physical force on their women. Their method of control is psychological and emotional, with the goal of having the girls become totally dependent upon them.

The local buyers or Johns seem to be white men over 25 years of age, both married and single. We know that many have families of their own—and that some men ask for girls of their daughters' age.

Although a wide variety of sex acts are performed, most men seek to want oral sex or intercourse. The price varies according to the act and the time involved. For ordinary oral sex or intercourse, it is about $25. Other factors—whether the girl works for a pimp, the location of the pick-up, the nature of the sex act, and whether or not there is a big convention in town—also influence the cost.

Most of the action seems to take place from lunchtime to late afternoon, and then later in the evening. These afternoon times fit well within typical male working schedules and allow married men the opportunity to be home in the evening and still engage in—and protect—their activities.

Business hours are also determined by the girls' schedules. Since they may also be students in junior and senior high school, the girls may choose to work only after school. Afternoon hours are convenient for girls who live at home and work at prostitution part time, without parental knowledge.

Jury deliberates pimp case

By JULIE ANNE GOLD
Daily News reporter

The fate of Willie B. Bell, an Anchorage man accused of setting up three teenage girls in lives of prostitution, was being contemplated Wednesday night by a jury of six men and six women.

Closing arguments brought an end Wednesday to the eight-day trial in which three former teen-age prostitutes explained the ins and outs of working the streets of Anchorage to the jury.

Bell was arrested in May for allegedly forcing two of the girls, and attempting to induce the third, to engage in prostitution. He was also indicted on a fourth charge of illegally running a prostitution business.

If convicted, Bell, who has pleaded indecent to all the charges, could face up to 5 years in jail, according to the district attorney's office.

The case is the first time in many years the state has brought an alleged pimp to trial on felony charges, the district attorney's office said.

Prosecutor Martha Beckwith relied heavily Wednesday on the testimony of the three teenagers to prove the state's case against Bell.

Under oath the girls, ages 15, 16 and 17, pointed to the defendant — usually slouched in his chair — as their former pimp who often beat them and threaten to kill them for not making more money from "johns" or "dates."

Bell's lawyer, Peter Mysing, claimed Bell never agreed to be their pimp and that they were free to leave him any time, but decided live with him while they — on their own —engaged in prostitution.

Mysing acknowledged Bell on occasion drove the girls downtown, accepted money from them and slapped them during "domestic" quarrels. However, he denied his client ever "induced or forced" them to be prostitutes.

In order to convict Bell on first-degree pimping charges, the state must prove he intended cause or force the girls to engage in prostitution.

In an effort to discredit the girls' testimony, Mysing recounted Bell's testimony of driving one of the girls to the Big Timbers motel for a "date."

The room cost $37 and the girl received $20, Mysing said. Bell would have to be an "extremely bad pimp" if he had set up the meeting.

Beckwith defended the testimony of the girls. "She basically went through the wringer to come in and testify candidly," Beckwith said, defending the veracity of one of the girl's statements.

That girl admitted under cross-examination to being a prostitute and living with several men for a few months at a time before agreeing to live and work for Bell in January.

"Ladies and gentlemen, ask yourselves why Mr. Bell was involved with these young girls, these juveniles," Beckwith said. "Why did he give them rides" downtown, wait for them and pick them up.

"If it were not like men like Mr. Bell, perhaps juveniles would not run to the street. Bell performed a function on that street," Beckwith claimed.

If the jury reaches a verdict Wednesday, one court source said, the results would be sealed and not made public until this morning.

Pimp gets sentence of 3 years

By TERRY CARR
Daily News reporter

A 35-year-old father of five was sentenced to three years in prison Wednesday for running a prostitution ring of teen-age girls.

Willie B. Bell, who has been in jail since he was arrested on pimping charges in May, is the first person to be convicted and sentenced to prison under a 1969 law outlawing the promotion of prostitution among juveniles, prosecutors said.

Superior Court Judge Milton Souter said he added one year to Bell's sentence because of testimony Wednesday by another jail inmate, William Smith. Smith told the court Bell Wednesday morning threatened to harm him and his daughter unless Smith gave testimony favorable to Bell.

Bell denied making the threat.

Souter ordered Bell to prison despite pleas from defense attorney Peter Nysing, who called his client's offenses "a detour in his life" and said Bell was an "adoring father."

If Souter gave him probation, Bell told the judge, "you'll never see me in another courtroom for anything."

Souter called the crimes for which Bell was convicted in October a "dirty business."

"This sentence has to serve as a deterrent" to Bell and others engaged in prostitution, he said.

Souter also said he was influenced heavily by trial testimony and evidence that the Bell used violence and the threat of violence to control the girls in his prostitution ring.

Teen-agers who worked for Bell testified during the trial that Bell often beat them and threatened to kill them.

Souter said "the great majority of women would not engage in prostitution" unless threatened with violence, lured with the promise of narcotics, or by other means of persuasion.

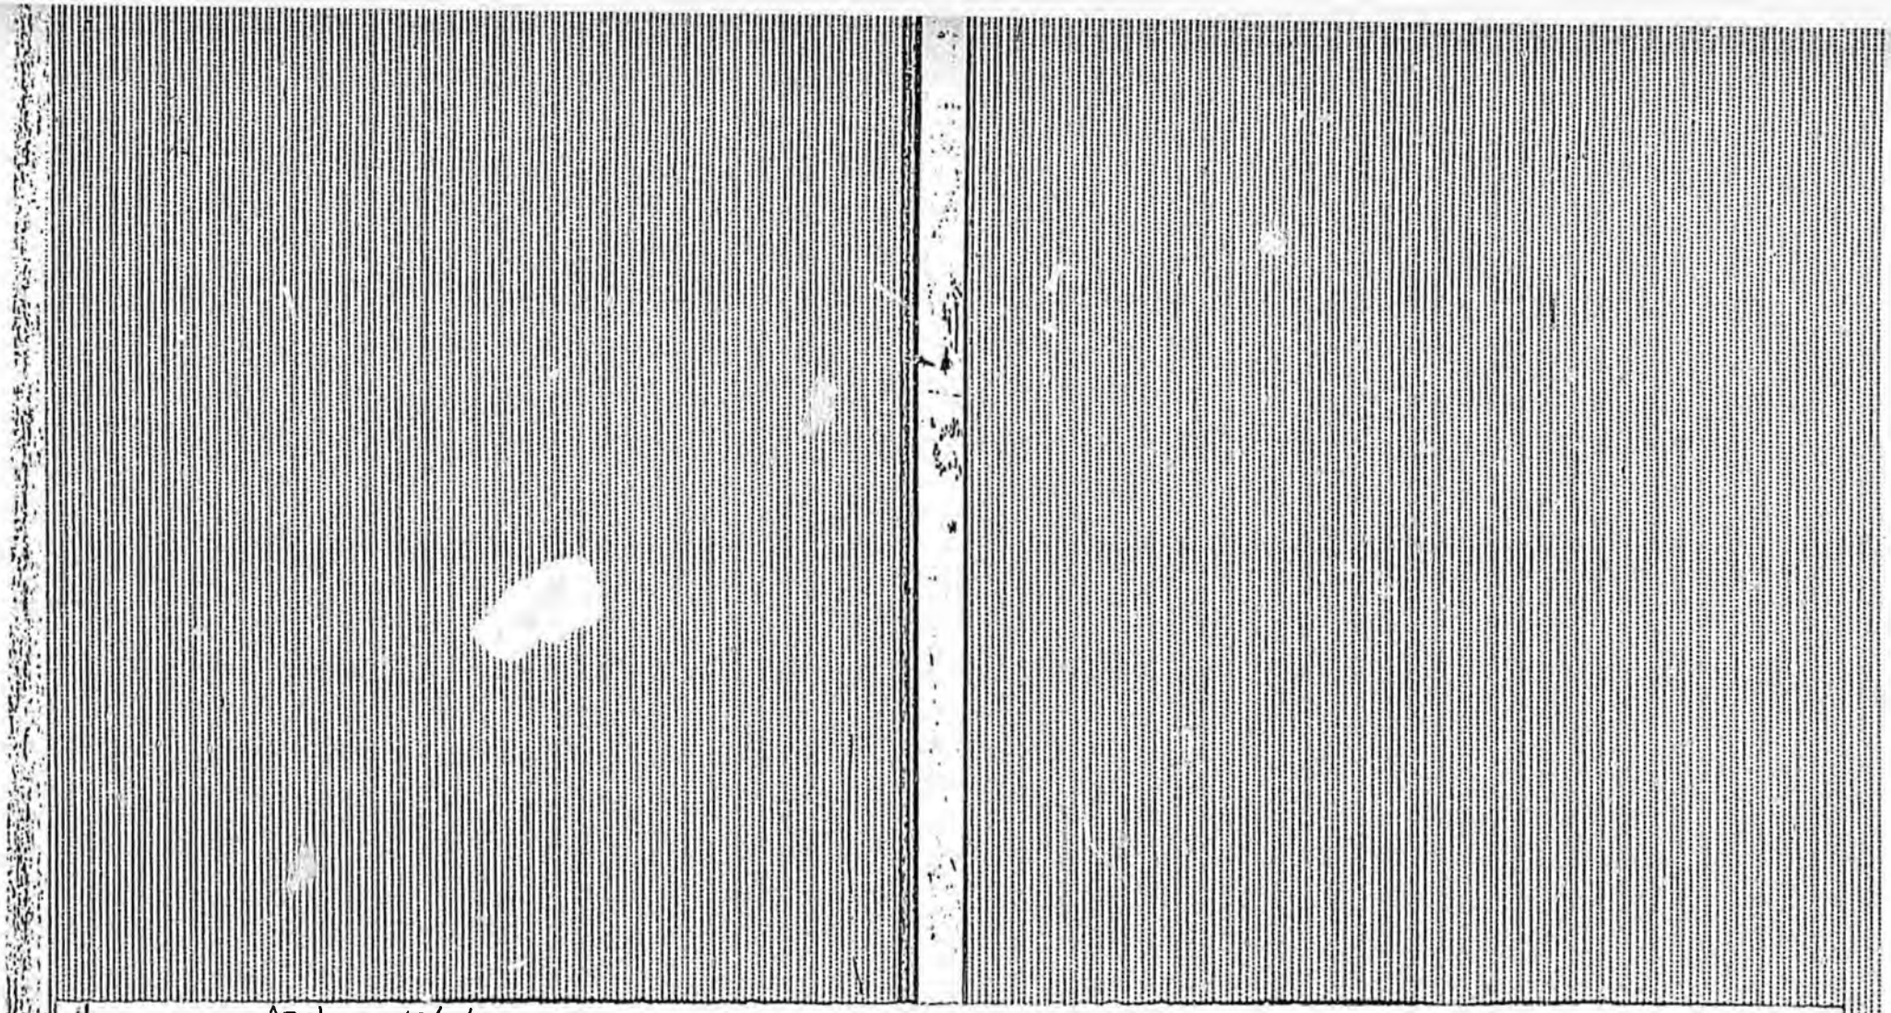
"Here, the powerful persuasion was threats of violence and, on at least one occasion, the use of violence," he said.

Bell, who sat silently throughout most of Wednesday's sentencing, spoke only to plead for probation and to contest the testimony of Smith, the inmate who claimed Bell had threatened him.

"I've been in jail," Bell said. "I learned my lesson in jail. I don't need to spend any more time in jail."

Smith, who was arrested here in December on an Arkansas theft charge, said he became friendly with Bell in jail. "You better get me out of this," Smith quoted Bell as telling him.

Smith, who at first refused to testify but relented under Souter's order, said Bell also threatened Smith's 14-year-old daughter unless Smith testified favorably.



Bell denied he threatened Smith or his daughter.

"All I told him was to come to court and testify and tell the truth," Bell said.

Souter, however, said he believed Smith and that he added a year to the sentence because of the threats.

"I think Mr. Bell needs to sit in jail and think about that. We're not going to tolerate that sort of behavior," Souter said.

Souter gave Bell credit for the 240 days he has already spent in jail. Bell will be eligible for parole after serving one-third of his sentence.

Willie Bell convicted in teen-ager prostitute case

By JULIE ANNE GOLD
Daily News reporter

Willie B. Bell, accused as a Fourth Avenue pimp, was convicted of inducing a 14-year-old girl into a life of prostitution by a Superior Court jury Thursday.

The 29-year-old Bell faces up to 10 years for the first-degree felony charge.

In a complex reading of six separate verdicts, the jury found Bell innocent of forcing two other girls, ages 15 and 16, into prostitution, but guilty of promoting them to become prostitutes.

These lesser, third-degree charges carry possible prison sentences of up to a year and 90 days.

Delivering its sixth verdict in the case, the jury found Bell guilty of managing and supervising a prostitution enterprise, other than in a place of prostitution. The felony offense holds a maximum sentence of five years in prison.

Bell, nervously looking around the nearly empty courtroom Thursday, buried his heads in his hands after the clerk read the first "guilty" verdict.

"We plan to appeal," said Peter Mysing, Bell's attorney.

"All three ladies' testimony was damaging against Bell," Mysing said. "The issue was who was the jury going to believe."

Even though Bell admitted taking money that he knew came from prostitution from the 16-year-old, according to Mysing, Bell never "caused" or "induced" the 14-year-old to become a prostitute.

However, the jury thought otherwise.

"There was definite evidence to support she was forced into prostitution," one juror said Thursday. "The photos showed she was beaten and bruised."

Prosecutor Martha Beckwith said the 14-year-old's testimony and a tape-recorded confrontation between Bell and the three girls probably were the most damaging evidence against Bell.

"He beat me real bad," a voice — identified by the state as belonging to the 14-year-old — said on the tape.

A series of color snapshots, passed from juror to juror, depicted the teen-ager with cuts and bruises on her face and arms.

However, the testimony of the older girls apparently did not convince the jury that Bell "forced" or "attempted to force" them into prostitution.

One of the girls, who admitted to being a prostitute before she met Bell, told the jury she was his lover for several months before his arrest.

"In her case, it was hard to tell what was a lovers' fight from a business fight," another juror said.

Another juror agreed, saying "there was just not enough evidence for a first-degree conviction" in connection with the two other girls.

But the jurors, gathered around Judge Milton Souter's third-floor jury room for the last time, all agreed there was plenty of evidence to convict Bell of the state's last charge — pimping for the three girls.

"The facts showed he drove them around" Fourth Avenue, one juror said, and "then waited and picked them up."

Mysing called this conviction a "surplus charge." The only way his client could be convicted of inducing the 14-year-old to become a prostitute, Mysing said Thursday, would be by pimping for her.

If Bell is sentenced to both charges the state will be guilty of double jeopardy, Mysing claimed.

Beckwith disagreed, saying she "was pleased" with the verdicts.

It was the first time "in at least four or five years" the state has successfully prosecuted someone for street pimping, she said.

Trick

(Continued from page A-1)

been a part of the prostitutes' migration pattern between Honolulu, Seattle, San Francisco and Los Angeles.

And for others, it is the promise of making a bundle during the Fur Rendezvous celebration that begins next weekend, and the military's Brim Frost maneuvers, that bring some 60,000 potential customers to Alaska to play war games in the Interior and see the sights of Anchorage afterward.

Tim Casper, a veteran on the vice squad, said the number of prostitutes on The Avenue rises and falls in a pattern. "It's something you can really count on," he said. "In January, they're all over, and they'll be that way until we put the pressure on them."

The "pressure" starts when the public outcry rises above a tolerant grumble. Until then, police are encouraged to spend the taxpayers' money going after the less visible crimes: robberies, rapes and burglaries.

But prostitution takes its toll on Anchorage's streets. Customers are rolled. Men are robbed by the women they willingly pay for, as the girls try to make more money for their "men."

Of the 23 murders that occurred in Anchorage in 1982, three of them were directly related to prostitution, police say. In two of the homicides, it was the hooker who killed. In the third, a pimp shot a girl's customer.

Caspar said 30 to 40 percent of all the robberies and at least 60 percent of the pickpocketing in Anchorage is related to prostitution and street people on Fourth Avenue.

"We could put a lot of man hours into trying to build a felony theft case against one guy, and get very poor results. Or we could use the same number of officers and drag a few of the prostitutes off the streets and clean it up for a while," he said.

"My theory is to arrest them on loitering charges, and enforce their (probation) restrictions. Let them know Anchorage isn't going to tolerate it. Maybe then they'll leave, and with them the pimps will go, and the crime will go, too."

Most of the women are charged with loitering for purposes of prostitution, a misdemeanor. Because state laws about prostitution are ambiguous, and because a woman will almost always say she works alone, men are seldom arrested, and rarely prosecuted.

In this business, men may pay the money, but the women pay the price.

Joanne Baker, 26, is six months pregnant. She was arrested for soliciting Sunday night. It was her second arrest for prostitution since coming to Anchorage from Miami last year.

There were no extra beds at the Sixth Avenue Jail Sunday night; she slept on the floor.

Looking haggard as she gazed through the plexiglass window in the vistor's room, Joanne scratched her stringy blonde hair. Her blue eyes were watery and her arms were speckled with small red blotches. She didn't want to talk, especially to a reporter.

She said she turned to selling her body after she couldn't find work as a bar maid. Asked about the weekend sweep, Joanne said, "Police, they told us it was because of Fur Rondy. That's why. That's why they're hitting on us."

And when she gets out on the streets again? "Well, we'll just move to a different area. There's always a different area to go to," she replied.

However, Joanne isn't sure how she is going to make bail. She appeared panicky. She says she has no pimp to fork out the $300. "I don't know how I'm going to get it. I don't know. I don't know. Maybe, I'll call a friend."

Joanne and 20 other women were arraigned Monday before District Court Judge John D. Mason. They sat in the courtroom chained together.

Most of them were given bail and a court date, with the provision that they no longer sell their wares in the downtown area between Third and Sixth, from D Street to Barrow.

But most of them will. And many will go to jail. For the second, third, even seventh and eighth times.

Scott Sidell, a municipal prosecutor, said he has seen the same faces and names over and over again. Their names and ages are usually phony. But those arrested are all too often teen-agers posing as adults. Girls, posing as women, selling off their childhood bit by bit in exchange for an allowance, or a home, for a man who says he loves them.

It's shortly before midnight and Veronica stood in the doorway of an adult book store. She pulled her rabbit fur coat tighter around her. Her eyes searched for a possible customer. But no one was around.

During a brief conversation, Veronica said she's not worried about the police clampdown on her livelihood. "We'll be trickling back out again. The cops do this a couple of times a year. No big deal."

Standing alone again later, she spotted a man wearing an Army fatigue jacket, walking slowly near the Elbow Room. She waited until he passed right in front of her before she said, "Hey, you want to party?"

Her breath formed a tiny white cloud as she spoke.

They walked quickly together, neither of them speaking.

Prostitutes' survival — old but tricky business

"Oh, the Sisters of Mercy, they are not departed or gone."
—Leonard Cohen

by Krys Holmes
and Ellis E. Conklin
Times Writers

Under the neon lights of the Scandanavian Club, Denise, a 22-year-old hooker, stood alone Monday night.

After a deep yawn, she lit up a cigarette, kicked the slush from her maroon leather boots and ambled down The Avenue.

Few people walked by her. And those who did didn't seem to notice. Denise is a Fourth Avenue fixture like the drunks and the hot chili at the Panhandle Cafe.

At $50 a crack and several "tricks" a night, Denise can make as much as $600 to $1,000 a week. All the money, however, goes to her pimp. And, as one police officer put it: "They all say they work alone, but there isn't one girl out there who doesn't have a pimp."

The pimp takes care of her room and board, clothing, and the modest accessories necessary to perform nightly in this ancient profession.

"Things are quiet now," she said. "They (police) made the big bust and there ain't nothing left for 'em, 'cept for me and couple of other girls.

"I think they want to get the streets clean for Fur Rondy," Denise said bitterly.

She quickened her pace, turned the corner at Fourth and Barrow, and decided she "don't want to talk no more."

There aren't many prostitutes talking right now. After a crackdown last weekend, most of them are scared. Others are in hiding "until the heat cools down." And many of them are still in jail dressed in blue jump suits, waiting for their pimps to post bail.

In the past 72 hours, Anchorage police, dressed in street clothes, have made 54 arrests for loitering and solicitation. Some of the women were collared as many as three times during the weekend. Chief Brian Porter said he can't remember seeing that much jail activity in several years here.

During the weekend, Porter said, the streets were thick with prostitutes, a competition among the women was fier Some actually tried to stop traffic or cli into cars, Porter said. A police officer wa ing down the street discovered a prostit with her "trick" having sex in the ma car. She got her $50 for the deal — and w arrested on the spot. One local woman s her husband was propositioned as th walked to a restaurant in the Sunshine Ma

There were no customers arrested, a not a single pimp.

Police say many of the women now wo ing the streets came from Canada, Haw and the West Coast. Some came for m money; some because Anchorage has it

from, JUNEAU EMPIRE 10/15/80

2 br. unfurnished and 1 br. furnished, in West Juneau. Carpeting, dishwasher, garbage disposal, off street parking. No pets or children. Mature adult preferred. 586

Q: AREN'T MAINTAINENCE COSTS HIGHER WHEN YOU RENT TO FAMILIES WITH CHILDREN?

A: ACCORDING TO A NEW YORK COMPANCY WHICH SUPPLIES THE INSURANCE INDUSTRY WITH NATIONWIDE STATISTICS ON DAMAGES, THERE IS NO EMPIRICAL DATA TO PROVE THAT THE PRESCENCE OF FAMILIES RESULTS IN GREATER DESTRUCTION TO PROPERTY.

Q: WOULDN'T A FAIR HOUSING LAW FORCE LANDLORDS TO OVERCROWD THEIR APARTMENTS?

A: NO. FAIR HOUSING LAWS ARE REASONABLE AND ARE NOT WRITTEN IN AN ARBITRARY MANNER. A LANDLORD WOULD NOT HAVE TO RENT A ONE BEDROOM APARTMENT TO A PARENT OR PARENTS WHO HAD THREE CHILDREN. OR, A PROJECT DESIGNED FOR THE ELDERLY OR HANDICAPPED WOULD NOT BE FORCED TO ACCEPT TENANTS WHO HAD CHILDREN. A FAIR HOUSING LAW WOULD BE REASONABLE AND GIVE EQUAL OPPORTUNITIES TO PARENTS AND INSURE THAT AN ADEQUATE SIZED APARTMENT WOULD NOT BE DENIED TO THEM BECAUSE OF PARENTHOOD.

Q: ISN'T THE SOLUTION TO BUILD MORE HOUSING?

A: THIS SOLUTION IGNORES THE FACT THAT OFTEN NEW BUILDINGS WILL NOT RENT TO FAMILIES WITH CHILDREN. ALSO, THERE IS NOTHING TO PREVENT EXISTING BUILDINGS TO ADOPT NEW RULES BANNING CHILDREN. IN THE LAST TWO MONTHS TWO APARTMENT BUILDINGS IN JUNEAU HAVE CHANGED THE RULES AND NOW EXCLUDE CHILDREN.

Q: DON'T INSURANCE COMPANIES CHARGE HIGHER RATES FOR BUILDINGS THAT ALLOW CHILDREN?

A: NO. PRUDENTIAL, SAFECO, AETNA, REPUBLIC, NORTHWESTERN, AND CONTINENTAL INSURANCE COMPANIES SAY THAT IT IS THE CONDITION OF THE BUILDING THAT DETERMINES THE RATES, NOT THE AGE OF THE TENANTS. (IT IS IMPORTANT TO NOTE THAT IF TENANT AGE WERE A FACTOR IN SETTING ACCIDENT LIABILITY RATES, THE HEAVIEST BURDEN MIGHT FALL ON THE ELDERLY).

Q: WOULDN'T FAIR HOUSING LAWS FORCE LANDLORDS TO ACCEPT CHILDREN IN BUILDINGS THAT ARE UNSAFE FOR THEM?

A: THIS ISSUE IS MISLEADING. ACCORDING TO OUR STATE AND LOCAL BUILDING CODES, ANY BUILDING WHICH IS UNSAFE FOR A CHILD IS ALSO UNSAFE FOR ADULTS. THE REAL SAFETY ISSUE IS THAT ANTI-CHILD RENTAL POLICIES FORCE MANY FAMILIES TO LIVE IN THE MOST DILAPIDATED, UNSAFE, AND OVERCROWDED HOUSING.

Q: ARE THERE FAIR HOUSING LAWS IN OTHER AREAS OF THE COUNTRY?

A: YES. LAWS TO PROTECT RENTERS WITH CHILDREN HAVE BEEN PASSED IN MANY AREAS THROUGHOUT THE UNITED STATES. ARIZONA, MICHIGAN, ILLINOIS, NEW JERSEY, NEW YORK, DELAWARE, CONNECTICUT, MINNESOTA, AND THE DISTRICT OF COLUMBIA HAVE PASSED FAIR HOUSING LAWS. NUMEROUS CITIES HAVE ENACTED LAWS THAT PROTECT FAMILIES AND CHILDREN, THEY INCLUDE SAN FRANCISCO, SPOKANE, LOS ANGELES, OAKLAND, AND SEATTLE.

Opening apartment doors closed to kids

By Randy Shipp

Boston

Anyone trying to find an apartment that accepts children will not be surprised by the conclusions of a recent US Housing and Urban Development survey. It shows that, nationwide, 26 percent of all rental units have "no children" policies, and many that do accept children have restrictions on the number, sex, or age of the youngsters.

These restrictions affect roughly 2 million families, says Elizabeth Roistacher, HUD's deputy assistant secretary for policy development and research.

The report adds that restrictive rental policies also may mean that families may be split up, with children being sent to live with other relatives, until parents can find some place for them to live, or doubling up with another family, leading to increased family tension.

"There is also a real feeling among people who are hit by this that society thinks there's something wrong in having children," Dr. Roistacher says. "Children react to this. They are hurt, they're parents are hurt. They're all really disturbed by the fact that children don't seem to be wanted."

The problem is growing worse. The number of rental units unavailable to families with children is rising. And with more apartment buildings switching to "no children" policies, and more one-bedroom rather than multi-bedroom units being built, it is likely to continue to rise.

In Massachusetts, state law prohibits such discrimination in dwellings with three or more units. Violations carry a fine of up to $1,000. Even so, discrimination against families with children is "the biggest problem right now for housing," according to a spokesman for the Massachusetts Commission Against Discrimination. Because of exemptions under the law, he says, very few rental units actually are affected.
