GAME AND TRAFFIC: REPORT OF HUNTING AND WILDLIFE MANAGEMENT COMMISSION
VILT OCH TRAFIK: BETAENKANDE AV JAKT- OCH VILTVAARDSBEREDNINGEN

Jordbruksdepartementet; Fack; Stockholm; Sweden; 0375-250X; 91-38-05660-7

Monograph; #SOU 1980:29; 80; 120p; Figs.; Tabs.; Swedish

There are no simple ways of solving the problem of accidents involving game. These proposals are only limited efforts which might contribute to reducing the risks. A somewhat increased hunting ought not to cause any greater risks for the fauna. In contrast to traffic safety demands, the aim should be to create one balanced elk stock in larger regions. Lower speed on the roads, especially where and when the accident risk is high, leads to fewer and less serious accidents. It can be done with speed limits and use of warning signs. Education (driving-school) and information (eg forwarding the police knowledge about temporary elk accumulations) can also help to decrease the number of accidents. To reduce the accident risk several actions in connection with the carriageway have been tried, for instance fences, land clearance and game mirrors. The game mirrors, however, have not proved to have any considerable efficiency. Biotope actions are seldom justified, at least not concerning elk. Light, sound and odour signals have not yet been used in any great degree. Tests have showed that odour signals have a high effect. (TRRL)

THE GAME ACCIDENT PROJECT (VIOL). FINAL REPORT, MAY 1980
VILTOLYCKSPROJEKTET (VIOL). SLUTRAPPORT MAJ 1980

National Swedish Road Administration; Fack S-10220; Stockholm 12; Sweden

Monograph; #TU 146; May 80; 117p; Figs.; Tabs.; Refs.; Apps.; Swedish

The number of police reported accidents with game and motor vehicles increased heavily in the 1960's. As a result the government assigned to the National Road Administration the task to carry out research and experimental work for the purpose of reducing the number of such accidents. The work has been going on between 1970 and 1979. Basic facts about game, traffic and accidents have been collected and analysed. The analyses have led to an estimation of game accident hazards under different conditions. Accident preventive measures have been thoroughly studied through practical experiments, statistical accident analyses and economic assessments. The investigation comprises elk, roe deer, fallow deer and red deer with the accent on elk. Game accidents have increased no less heavily in the 1970's and they are likely to constitute about 15% of the total number of road accidents. A number of measures are discussed, ie game fences, mirrors, improved visibility through clearing, big game signs, repellents, information to road users, reduction of the stock of game. Fences have an accident reducing effect of approx 80% whereas mirrors show no significant effect. Clearing is an expensive measure. Further research is necessary to establish the effect of signs. Repellents in the form of evil-smelling preparations seem to have some effect. (TRRL)

Final Rpt.; #FHWA-RD-79-143; Mar 80; 52p

FUNDING AGENCY:
FHWA Code E-0469

Vegetative ground cover under snowdrifts formed behind snowfences used along Interstate 80 to control blowing and drifting snow has not changed appreciably over a five-year period. Sagebrush (Artemisia tridentata) has decreased significantly under snowdrifts where deep drifts occurred every year and is being replaced by grasses and forbs. Mule deer (Odocoileus heminous) use machinery and box-type underpasses to cross under Interstate 80 when big game fencing 8 feet (2.44 m) high is constructed in place of the regular right-of-way fence. Deer-vehicle accidents were reduced over 90 percent, which is a large savings of deer life and vehicle damage. Only one pronghorn antelope (Antilocarpa americana), out of several hundred in the area, has been known to use the same underpasses. Elk (Cervus canadensis) have not had occasion to use the underpasses. Hunted mule deer and elk cross Forest roads most in areas where their feeding sites are adjacent to the road. Elk show a perference to stay over 0.1 mile (160 m) from streams when crossing roads, while deer are not so sensitive. Elk show a preference to stay a minimum of 0.25 mile (400 m) from traffic while deer prefer a minimum of 100 yards (91.m), and antelope use the habitat up to the right-of-way fence. All three species are more responsive to people walkering; elk prefer a distance of 0.5 mile (800 m), deer 200 yards (182 m) and antelope somewhere between the two distances, depending on habitat and experiences. The displacement reaction is definitely the most serious response. Camera systems using microwave sensors and lights are useful in recording animal activities at underpasses. (FHWA)

INVESTIGATION OF ELK ACCIDENTS IN THE COUNTY OF NORRBOTTEN, SWEDEN 1978
UNDERSOEKNING AV AELGOLYCKOR I NORRBOTTENS LAEN 1978

Pettersson, G
Svedberg, AA

Trafiksaekerhetsverket; Oevre Norra Distriktet; Luleaa; Sweden

Monograph; 79; 29p; 15 Fig.; 20 Tab.; Swedish

The study aims at obtaining answers to questions such as, when, where and how do elk accidents occur and who meets with them. It draws upon 294 police reports of elk accidents during 1978 in the province of Norrbotten. The drivers involved were asked to answer a questionnaire comprising the following variables: vehicle, light conditions, traffic conditions, lighting, when was the elk discerned, speed, road standard, surrounding terrain, knowledge, damage/injury, previous experience. The answers received were compiled in frequency and cross tables. The results show that the drivers, irrespective of speed, speed limit or knowledge of elk danger often did not see the elk before the collision, or saw it so late that he was unable to react. There was no over-representation of any age group or sex of driver. Accidents mainly occurred in darkness and at dawn. Surprisingly enough one fourth of the accidents occurred at places described by drivers as open field with good visibility. The author concludes that measures aimed at drivers to reduce the number of accidents have limited effect. Instead long-term measures must be taken to prevent elks from coming into conflict with road traffic. In the meantime the number of elks must be kept at a suitable level by shooting. (TRRL)

GAME FENCES. LOCATION, COSTS AND MANAGEMENT
VILTSTAENGSEL. PLACERING, KOSTNADER OCH DRIFT

National Swedish Road Administration; Fack S-10220; Stockholm 12; Sweden

Monograph; #TU 1979:1; 79; 26 p.; 4 Fig.; Swedish

This report is a summary of present knowledge concerning game fencing for traffic accident prevention. Costs of construction, operation and maintenance are studied together with how the fence can be adapted to prevailing terrain conditions and adjacent roads. Results from tests of special take-off mounds for elks that have wandered into fenced areas are also included in the report. Different types of fences are studied. Some results from the report: net fence is more costly to erect than electrified fence, but it has lower maintenance costs. A combination fence also has a maintenance cost lower than that for the electrified fence. The accident prevention effect of the net fence was studied with aid of accident statistics from the Stockholm region. It was found that a reduction of accidents by 70-80 percent is well within the reach of what can be obtained by game fencing. /TRRL/

USE OF ONE-WAY GATES BY MULE DEER

Reed, DF
Pojar, TM
Woodard, TN

Journal of Wildlife Management

V38 N1; Jan 74; pp 9-15

GATES DESIGNED TO ALLOW PASSAGE OF MULE DEER (ODOCOILEUS HEMINOUS) IN ONLY ONE DIRECTION WERE TESTED UNDER CONTROLLED AND FIELD CONDITIONS. TWO GATE TYPES HAD SIGNIFICANTLY DIFFERENT FREQUENCIES OF USE UNDER CONTROLLED CONDITIONS. EIGHT GATES OF THE TYPE DEEMED MOST EFFECTIVE WERE INSTALLED IN EIGHT-FOOT (2.44-M) FENCES ADJACENT TO INTERSTATE HIGHWAY 70 NEAR VAIL, COLORADO. A TOTAL OF 558 PASSAGES WERE RECORDED THROUGH THESE GATES DURING 1970-72 AND 96 PERCENT OF THESE WERE IN THE ONE-WAY DIRECTION FOR WHICH THE GATE WAS DESIGNED. BASED ON TRACK COUNTS, IT WAS ESTIMATED THESE GATES PERMITTED ABOUT 223 DEER TO ESCAPE THE IMMEDIATE HIGHWAY RIGHT-OF-WAY. /AUTHOR/

VILTOLYCKSPROJEKTET 2. LAEGESRAPPORT SEPT 1978

Almkvist, B
Andre, T
Ekelom, S
Aaberg, L
Rempler, S-A

National Swedish Road Administration; Fack S-10220; Stockholm 12; Sweden

Monograph; *Interarapport Nr 33; Sep 78; 16 p.; 3 Fig.; Swedish

An analysis of accidents involving moose and deer snows that 70% of all accidents occur in the summer, with peaks in June, and end of September and end of January. Almost 40% occur at dawn. On newly constructed roads, the number of accidents during the first year is about 2.5 times the normal; even after three years, the number of accidents is twice that normally expected. 50% of accidents occur where distance between road and forest is 5 M, and over 90% where distance is up to 20 M. On roads in open country less than 20% of accidents occur. Peaks involving moose are influenced by behaviour of the calves. Measures to counteract such accidents are (1) game fences; deer usually crawl underneath while moose jump over. Where fence consists of a mesh with single strands above, animals are often injured, and fences should therefore consist of mesh over full height. (2) game mirrors; these are used extensively, and an investigation of their efficacy is in progress. (3) clearance along roads; it appears that this is effective in reducing accidents. New measures are the use of visual or smell signals, and speed restrictions. Driver attitude is also significant. Further studies are planned. /TRRL/

TESTS WITH ELECTRICAL GAME PRESERVES DURING 1975-76
FOERSOEK MED VILT STAENGSEL TYP NITRO-NOBEL ELSTAENGSEL I D-LAEN AAR 1975-76

National Swedish Road Administration; Fack S-10220; Stockholm 12; Sweden

Intrm Rpt.; SNR 19; 77; 15 pp; 4 Fig.; 5 Tab.; 1 Phot.; Swedish

Electrical fences were tested as game preserves on roads in Sweden for 1.5 years. The purpose was: (1) to study different types of uprights and number of wires and their position, (2) to obtain a value of management safety, (3) to determine construction and management costs, and (4) to study the effect on animal accidents. Of the types tested a 180 cm high fence with 5 wires on pressure impregnated uprights of wood (space 6 M) has proved the best. The construction costs have been low. Mechanical wear and soiling from the road have created some problems. In particular the wire (a laminated band) has been damaged. There were no animal accidents after the erection of the fence. At present a new wire with an expected endurance of 5 to 7 years is being tested.

HIGHWAY FENCES AS VEHICLE-DEER COLLISION DETERRENTS

Bellis, ED
Graves, HB, III

Pennsylvania State University, University Park; Institute for Research on Land and Water Resources; University Park, Pennsylvania; 16802; 432-41 (3502)

Final Rpt.; #FHWA-PA-74-9; Jun 76; 26 pp

FT-Contract; CN-53029

A survey of highway fencing along Interstate 80 in Centre County showed that 7 1/2 foot, type 3-modified fence has little value as a vehicle-deer collision deterrent; many deer crawl under the fence to the planted right-of-way and abundance of gaps underneath provides for easy penetration. From December 1974 through March 1976 numbers and position of deer were observed from a vehicle driven along 6 miles of I-80 at night. Bimodal patterns of abundance were found, deer were most numerous in spring and fall; of 2577 deer sightings, 74.5% were on the highway side and 25.5% on the far side of the fence. Comparisons between a control area (north side of highway) where the fence was unmodified and test areas (south side) where gaps underneath were plugged and/or top five wires removed or repaired showed that the critical weakness in the fence is the underside but also that large numbers of deer cross a fully repaired fence. Only 6 deer were reported killed during the 16 months of study and no live deer were seen on the highway; these results, relative to previous findings beginning in 1967, strongly suggest that high traffic volume prevents deer from venturing onto the highway, thus reducing collisions.

MEMORANDUM

TO: House Transportation Committee Members

FROM: Representative Randy Phillips R.E.P.

DATE: January 24, 1984

RE: House Bill 493, "An Act making a special appropriation to the Department of Transportation and Public Facilities for preventive measures related to collisions between motor vehicles and moose on the Glenn Highway; and providing for an effective date."

While this bill will be before the House Transportation Committee tomorrow morning for hearing, I thought I would take this opportunity to provide each of you with some background information on the bill.

The area described in the bill (the Glenn Highway between Eagle River and Muldoon Road) is a high traffic area. With the exception of lights at major intersections (Eagle River Interchange, Highland Drive Interchange, the weigh station, Fort Richardson Interchange, Ship Creek, and Muldoon Road), this approximately ten mile stretch of road is dark during the winter months. The area is also the location of a rather large moose herd (some estimates of the herd go as high as 600 moose) and these animals cross the Glenn Highway with varying degrees of success. In an attempt to provide vehicle drivers with better safety, Representative Liska and I introduced House Bill 493 in order that funds might be appropriated for "preventive measures."

For your information, I am enclosing the following items:

a. House Bill 493

b. January 20, 1984 letter from Marge Founds to Rep. Cato

Star Route 2, Box 9302
Eagle River, AK 99577

20 January 1984

Rep. Bette Cato
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Rep. Cato:

I would like to express my support for House Bill No. 493. As a daily commuter on the Glenn Highway between Anchorage and Eagle River, I am concerned about traffic safety. As a wildlife biologist, I am also concerned about moose in the Anchorage area. I think the three million dollar appropriation to Department of Transportation for highway lighting is long overdue. Not only should it alleviate some moose/vehicle interactions, I believe it will significantly improve general traffic safety on the highway. Winter conditions make that highway very dangerous to drive at times, and lighting woudl certainly improve it.

I hope your committee fully supports this and any other measures that will benefit the thousands of daily commuters on that highway.

Sincerely,

Nancy Tankersley

Nancy Tankersley

cc: Randy Phillips

121 Foothill Drive
Eagle River, Alaska
694-2985

9 December 1982

Representative Randy Phillips
Box 142
Eagle River, Alaska 99577

Dear Sir:

I have written to you before and you seem to take a real interest in letters you receive. I thought maybe you could help on this one. I also wrote to Mayor Knowles, Editor of the Times, and the Commanding General of Fort Richardson.

I have been reading about all the car-moose accidents along Glenn Highway. Most of them have involved bodily injury. I have been hoping our family would not be involved in one of these accidents; however, we were involved in one. My husband could not see the moose until it was right in front of him. Then it was too late.

My question is....with all the statistics of accidents on the Glenn Highway, why can't lights be installed at the moose crossings? The lighting is available nearby, so why can't they extend the lights to cover these darkened areas. It is very evident there are three major crossings. One is between Ship Creek and the Powerplant, one between Ship Creek and Fort Richardson overpass, and the other is after the Fort Richardson overpass, from the curve where all the trees are in the median to just about the Weigh Station. The solution is not by hunting the animals. There will always be moose crossing there. Besides that, I really feel sorry for them. They are great animals and I hate to see them hurt or killed. It is the fact that since Glenn Highway is a 4-lane, people will always be driving too fast. It is just too dark to see anything jumping in your path. This is a very hazardous situation. I do not want to see people and animals continually getting wiped out on the highway. We <u>can</u> do something about it, but it takes someone to get the ball rolling.

I think it's about time to start saving lives with our tax money instead of building more bike paths and swimming pools. Build the other two later on, but get to saving lives first.

Thank you for your time. Also, when are you going to be writing more articles in the Star? I really enjoyed reading them.

Sincerely,

Marge Founds

Mrs. Marge Founds

Riley Snell
Regional Planner
Department of Transportation and Public Facilities
Pouch 6900
Anchorage, AK 99502

Dear Mr. Snell:

As you know, I have been contacted by some constituents concerning the moose-automobile accidents occuring along the Glenn Highway between Eagle River and Anchorage. These constituents have indicated that they feel that lighting along the Glenn Highway might help reduce these accidents.

Last year, John Bates' office (Juneau DOT/PF) supplied me with some figures on the cost of such proposed lighting. The information that Mr. Bates supplied is in my legislative files, which are packed and in the process of being shipped to Juneau for the legislative session. You may wish to contact Mr. Bates' office and request that he provide you with a copy of this information.

When I spoke with you, we discussed the possibility of including such a project in some future federal program. I would request that you submit this project for inclusion in future federal aid funding programs and the AMATS plan. Please keep me advised of any progress in this area.

If you have any questions, please do not hesitate to contact me.

Sincerely,

Randy Phillips
State Representative

May 16, 1983

The Honorable Randy Phillips
Representative
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Phillips:

Per your conversation with Michelle Michaud regarding moose-automobile accident prevention measures along the Glenn Highway, Alan Bennett, a biologist with the U.S. Army has indicated that illumination may reduce moose-auto accidents by 20% whereas fencing and underpasses could reduce these accidents by up to 70%. Since a higher reduction in accidents would occur with fencing and underpasses, this method will be considered first.

I have requested the Central Region's Design & Construction Division to investigate the possibility of using federal safety funds for the design portion of the project. They have indicated that the report should be completed in about two weeks. I will forward a copy of that report to you at that time.

In the meantime if I can be of further assistance please call.

Sincerely,

William R. Snell
Director

May 4, 1983

The Honorable Randy Phillips
Representative
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Phillips:

Sorry for the delay in responding to your request regarding protective/preventive measures along the Glenn Highway (Fort Richardson to Eagle River) to reduce the number of moose-auto accidents.

I requested the Department's Research Section in Fairbanks to do a literature search (attached) to determine various types of methods used in other states and countries to reduce moose-auto accidents. As you can see from the attached list of studies, many thousands of dollars have been spent researching the problem with some success.

A reflector device has been utilized along the Glenn Highway with little success. This has been mainly due to the fact that excess dust and winter snow covers the devices and maintenance of the reflectors has been insufficient as well as costly. Also note that studies directly related to roadway illumination did not tend to show a decrease in vehicle/wildlife accidents.

Herman Griese, a game biologist for the Department of Fish and Game (DF&G) in Anchorage, and Alan Bennett, a biologist for the U.S. Army indicated that the following would probably be the best solution for reducing the occurrence of moose related auto accidents along this section (Mile 132-140) of the highway.

1. Clear at least 35 feet on each side of the road bed. This allows both the driver to see the moose and the moose also does not walk directly onto the road from the trees.

   Mr. Griese mentioned that if 35 feet is cleared on each side of the road that this should occur after the buds have begun to open up around the middle or end of June. Also the brush would need to be cut back periodically (approximately every 3 years) to prevent prime "moose habitat" vegetation from growing back.

2. Install fencing and underpasses for the moose to travel from one side of the road to the other (the attached map shows where the fencing and underpasses should be placed).

3. Install lighting on the both sides of the highway to provide continuous illumination from Muldoon Road to Hiland Road.

Mr. Bennett indicated that 80% of the moose-auto accidents occur within two main areas. He also indicated that approximately 53 mooses were killed on this stretch of the highway last year. Mr. Griese said that ADF&G and the U.S. Army only have accident records in which the accident caused the death of the moose. Mr. Griese also pointed out that moose behave differently than deer, hence those measures used to reduce deer related auto accidents may not work where moose are involved.

Mr. Griese and Mr. Bennett have indicated that the moose herd in this area has remained relatively stable; however, travel along this section of the highway will continue to increase and without some type of prevention measures moose related auto accidents will most likely increase.

A cost estimate has been prepared to determine the costs for: 1) lighting (continuous illumination), 2) fencing and underpasses, and 3) clearing of road side. This cost estimate should give you some indication of the costs involved. The Department has not had time to fully analyze the possibilities of installing any of the above mentioned prevention measures.

In the interim, the Department's Central Region Maintenance & Operations Division will clear certain areas along the roadway pending availability of funds; however, a long-term solution will need to be funded, fully or partially by the Legislature.

Mr. Bennett has indicated that the U.S. Army would be willing to fund part of any project that the Department may construct. The Department is looking into possibly securing federal "safety" funds.

If I can be of further assistance to you regarding this matter please call.

Sincerely,

William R. Snell

Re: Glenn Highway Illumination

The Honorable Randy E. Phillips
Representative
~~S.R. Box 421~~ Box 142
Eagle River, Alaska 99577

Dear Representative Phillips:

Attached is the report you requested concerning moose/vehicle collision deterrents along the Glenn Highway. The report concludes that the most feasible method of decreasing these accidents is to provide continuous illumination on both sides of the Glenn Highway from Muldoon to the Artillery Road Interchange. The cost estimate for illumination is $2,784,000 which would provide one luminaire approximately every 275 feet along the outside lanes. We anticipate the annual operating and maintenance cost to be approximately $50,000.

The Department is required by law to design and construct this type of project according to the standards established by the American Association of State Highway and Traffic Officials (AASHTO). These standards have been developed to insure that highway improvements are uniform, safe, and effective. The 275 foot spacing has been determined to be the maximum spacing that will still provide adequate levels of light. If these standards are not followed, the State could be found liable in case of an accident.

The Department has determined that this project would be eligible for Federal Safety Program Funds. However, DOT&PF's Central Region, which includes most of Alaska south of Cantwell and west of Valdez, receives a maximum of $67,500 per year for this program. To use this money to fund this illumination project would require 42 years worth of Federal Safety Program allocations. No other source of funding has been identified.

We have evaluated this project against other projects considered in our FY'85 CIP. Because of our budget ceiling and the low rating of this project as compared to other identified transportation needs, this project is not included in our FY'85 CIP request.

This summer the Department cleared additional brush near the scale house. Last summer there was extensive brush cutting along the Anchorage outbound

lane and a recent inspection by our maintenance and operations personnel found that there was not enough new growth to justify additional clearing. There has been only limited clearing on the in-bound lane to Anchorage at the request of the Municipality of Anchorage because of the desire to maintain a buffer along the bike path.

Please contact me if I can answer any questions.

Sincerely,

William R. Snell
Director

bjf

Enclosure

MOOSE/VEHICLE COLLISION DETERRENTS: ANALYSIS AND RECOMMENDATIONS

PURPOSE

This report is a summary of the Department's efforts to identify and analyze alternative means of reducing moose/vehicle accidents on the Glenn Highway between Anchorage and Eagle River. The following paragraphs describe the nature of the problem, how the alternatives were identified and evaluated, and a recommended course of action.

INTRODUCTION

The corridor selected for construction of the Glenn Highway was chosen to take advantage of a relatively flat strip of land running between Anchorage and Eagle River. Unfortunately, this same strip of land is the traditional wintering area for up to 250 moose from Fort Richardson, the Ship Creek Valley, and nearby slopes of the Chugach Mountains. The result is a chronic problem of moose/vehicle accidents which has resulted in the death of 50-60 moose each year and annual vehicle damage of $40,000 along this 8 mile length of highway.

Each fall, as snow accumulates on the nearby slopes of the Chugach Mountains and in the Ship Creek Valley, moose begin an orderly and predictable migration down to the lowlands. Young stands of birch and willow adjacent to the highway provide optimum wintering habitat for moose. Seasonal movements of moose are not random, they correspond to the topography and location of prime wintering habitat. As a result, several "accident zones" exist where the highway bisects moose travel corridors. During the 10 year period between 1971 and 1981, 45% of the moose/vehicle accidents occurring between Anchorage and Eagle River happened between Miles 138.5 and 135.5. Between Miles 134 and 132, 35% occurred. These two areas directly correspond to the primary moose travel corridors and winter concentration areas.

Previous attempts to alleviate this problem have included the installation of reflectors designed to repel deer, the removal of brush from within the highway right-of-way, and the installation of moose crossing signs to warn motorists. None of these measures have proven to be significant in reducing the moose/vehicle accident problem. The volume of traffic on the Glenn Highway between Miles 132 and 140 in 1982 was 2.5 times greater than it was in 1972. Between 1981 and 1982, the traffic volume grew by 23%. Unless additional measures are taken, the moose/vehicle accident rate can be expected to increase.

METHODOLOGY

Material presented in this report was gathered from several sources. The Department of Transportation and Public Facilities' (DOT&PF) Highway Research Section conducted a literature search of the Highway Research Information Service (HRIS) in Washington, D.C. The resulcant compilation of studies represents hundreds of thousands of dollars spent researching the problem of collisions between animals and vehicles in the continental United States and foreign countries (see HRIS report attached). Additional material and assistance was contributed by the Alaska Department of Fish and Game, the United States Army, and DOT&PF's Maintenance and Operations Division.

FINDINGS

The following measures have been implemented in the field and were found to have little or no effect upon the rate of collisions between game animals and vehicles:

- Illuminated game crossing signs (motorists disregard sig unless game is physically present)
- Highway underpasses (game unwilling to enter underpasses)
- Conventional fencing (game penetrated fence at open gates, crawled under, or walked over on snow drifts; game that penetrated the fence became trapped in the highway right-of-way)
- Reflecting mirrors (no apparent effect on game; difficult to maintain)
- Brush removal adjacent to highway (besides being ineffective, it is expected that both the State Division of Parks and the Municipal Parks and Recreation Department would object to this treatment since it would decrease the attractiveness of the bike trail adjacent to the highway)

The following measures have been implemented in the field and were found to be effective in reducing the rate of collisions between vehicles and game animals:

- Electrified fences (high construction and maintenance costs, potential safety hazard to humans, any animal that succeeds in penetrating the fence becomes trapped within the highway right-of-way)
- Highway illumination (high construction and operation costs)
- Deliberately placed animal carcass on shoulder of road (offensive to the public)

RECOMMENDATION

From an examination of the findings above, it appears that the only feasible method of decreasing moose/vehicle collisions is to construct continuous illumination on both sides of the Glenn Highway from Muldoon to Eagle River. The estimated cost of this project is $2,784,000.

The Department has determined that this project would be eligible for Federal Safety Program Funds. However, DOT&PF's Central Region, which includes most of Alaska south of Cantwell and west of Valdez, receives a maximum of $67,500 per year for this program. To use this money to fund this illumination project would require 42 years worth of Federal Safety Program allocations. No other source of funding has been identified.

We have evaluated this project against other projects considered in our FY85 CIP. Because of our budget ceiling and the low rating of this project as compared to other identified transportation needs, this project is not included in our FY85 CIP request.

AVAILABILITY OF DOCUMENTS

When it is known by HRIS that full-text copies of documents are available from an organization other than the publishing agency, the name and address of the document distribution center are given in an availability statement below the abstract of the HRIS document record. When a document is ordered, the document title, author, and publisher should always be given.

Only publications of the Transportation Research Board are available from the Transportation Research Board. Articles and reports issued by other agencies are NOT available from TRB. They may be obtained from the publication source shown immediately following the name of the author on the document record or from the document distribution center identified by the availability statement that follows the abstract on the document record.

Reports emanating from research projects sponsored by the Federal Highway Administration and the Urban Mass Transportation Administration are normally available from the National Technical Information Service. If the abstract carries a document order number (PB or AD followed by six digits), the report is available from NTIS.

When no availability is specified, the user should consult an established transportation library.

A loan service for publications and a photocopy service for articles and papers are available at document delivery centers as explained on page vii.

A large number of documents are available from a few sources. The names, addresses, and telephone numbers of those sources are listed below under the abbreviation used for each.

LOAN AND PHOTOCOPY SERVICES

Loans of books and reports and photocopies of articles and conference papers referenced by the Highway Research Information Service can be obtained from three transportation libraries designated as TRISNET Centers. Two of them are Regional Centers:

Transportation Center Library
Northwestern University
Evanston, IL 60201
312-492-5273
TWX 910-231-0872

Institute of Transportation Studies Library
University of California
412 McLaughlin Hall
Berkeley, CA 94720
415-642-3604

and one is a Federal Center:

Headquarters Library
U.S. Department of Transportation
Washington, DC 20590
202-426-1792

The three centers are not HRIS depositories in that copies of all HRIS-referenced publications are not added to their collections automatically. Rather, each has a collection of transportation publications and all research reports, in microfiche or paper copy, that have been issued by the U.S. Department of Transportation and distributed through the National Technical Information Service.

The centers cannot supply reports of or information on research that is in progress. Information on research in progress can usually be obtained from the principal investigator at the contracting agency or the project monitor at the sponsoring agency.

Regional Centers

HRIS clients outside the U.S. Department of Transportation should first contact the Regional Center at Northwestern University or at the University of California, Berkeley. If the Regional Center contacted does not have the item, it will transfer the request to the other Regional Center or the Federal Center holding the item or to the best available source.

Northwestern University will accept requests for loans and photocopies by telephone, letter, or interlibrary loan form. The University of California will accept requests for photocopies by telephone or letter, but requires an interlibrary loan form for loan of books and reports.

Requests for publications by loan or photocopy should include either a copy of the entry in the HRIS publication or the following information:

1. TRIS accession number (six-digit number at top of printout);
2. Title;
3. Author, including individuals and organizations responsible for the publication (for example, James, John J., West Virginia Department of Highways); and
4. Publication data, including publisher, periodical title, conference, date, paging, series numbers (for example, Public Roads, Dec. 1976, pp. 116-120; or National Technical Information Service, PB 259 688).

The library responding to the request will lend books and reports for 2 weeks plus the estimated mailing time. Services are free if books or reports are mailed at the book rate. If the user requires priority mailing, the center will send an invoice for mailing costs. Charges for photocopies of articles and conference papers are 10 cents per page plus $1.00 per item for handling.

An invoice is sent with the requested document; the Regional Centers request that payment *not* be made in advance.

The Regional Centers attempt to respond to all requests within one week of receipt.

Federal Centers

HRIS clients inside the U.S. Department of Transportation should contact the Headquarters Library. The Headquarters Library will not lend materials to individuals outside of the department, but will accept interlibrary loan forms for five or fewer items from company, government, or university libraries.

Other Libraries

Many of the publications referenced by HRIS are available in local transportation libraries or through a public or state library. Each of these libraries will also prepare and process an interlibrary loan form on request.

FOREIGN LANGUAGE DOCUMENTS

Foreign language documents referenced by HRIS are generally recognizable through the foreign language title listing (after the translated title) in the document record. In *HRIS Abstracts* text language is indicated at the end of the abstract: in the current awareness service it appears with publication data information. It does not appear in the TRIS-on-line short-form printouts.

Documents published outside of the United States are usually written in the language of the country of origin and can be obtained from the publisher in that country. Documents published by the Organization for Economic Cooperation and Development (OECD) can be obtained at the following address:

OECD Publications Center
1750 Pennsylvania Avenue
Washington, DC 20006
Telephone 202-298-8755

Translations may be obtained through agencies listed in the yellow pages of the telephone book in metropolitan areas, through embassies in Washington, D.C., from language departments of universities, or from one of the translations centers listed below. Some of these, such as the National Translations Center, do not translate but maintain a registry of translations. Fees for translation services vary but in the Washington, D.C., area average about $10 per page for technical material.

International Translations Centre

IDENTIFICATION GUIDE FOR AN HRIS RECORD OF A PUBLISHED WORK

JOURNAL ARTICLE

Document Record Number
TRIS Accession Number
HRIS Subject Area Number — 32 385786

Title — EVALUATION FOR DURABILITY AND STRENGTH DEVELOPMENT OF A GROUND GRANULATED BLAST FURNACE SLAG

Authors — Regan, FJ; Atlantic Cement Company, Incorporated
Meusel, JW; Atlantic Cement Company, Incorporated

Publication Data — ASTM Cement, Concrete, and Aggregates; American Society for Testing and Materials; 1916 Race Street; Philadelphia, Pennsylvania; 19103

Document Data — VJ NI; 81; pp 40-52; 23 Fig.; 12 Tab.; 25 Ref.

Abstract — This paper covers the evaluation of a ground granulated blast furnace slag as a partial replacement for portland cement in mortars and concrete. The ground slag was evaluated for strength-producing properties as well as durability performance when used to replace 40 to 65% portland cement. This study shows that the ground slag when used to replace 40 to 65% portland cement did significantly improve strengths, sulfate resistance, and alkali aggregate reactivity. (Author)

Title — EVALUATION OF PAVEMENT SERVICEABILITY ON THE INTERSTATE SYSTEM IN OREGON

Authors — Miller, TC; Portland Cement Association

Publication Data — New Mexico University, Albuquerque; 810 Stanford Drive, NE; Albuquerque, New Mexico; 87131; PPC81

Document Data — 81; pp 208-211

Abstract — Measurements of present serviceability index (PSI) using a PCA Road Meter have been made on the 398-mile Interstate System in Oregon annually since 1972. The system has been broken down into sections based on the pavement structure and construction contract. Structural strip maps were prepared and the PSI ratings plotted on this map show the pavement performance trend for each section. The superior performance of some pavements has been documented and sections that will be in need of early rehabilitation identified. Analysis of PSI vs Age and PSI vs Heavy Truck Traffic has been made and compared with the M. R. Brown model equations for the concrete sections. The goal is to develop PSI trend curves and to predict when rehabilitation of the pavement will be required.

EFFECTIVENESS OF A LIGHTED, ANIMATED DEER CROSSING SIGN

Pojar, TM

Journal of Wildlife Management; Wildlife Society; Suite S-176, 3900 Wisconsin Avenue, NW; Washington, D.C.; 20016

V39 N1; Jan 75; pp 87-91

Two lighted, animated deer crossing signs were installed adjacent to State Highway 82 south of Glenwood Springs, Colorado, delineating a 1.61km (1-mile) segment of highway where deer-vehicle accidents frequently occurred. Crossings per kill ratios were nearly identical with the signs off (56.5:1) and with the signs on (56.9:1). When the motorist was presented with evidence that a danger existed (i.e., deer carcasses in emergency lane), the response was much greater than when they were merely warned (via the deer crossing sign) of a potential danger. With evidence of danger, the response was the same regardless of whether or not the warning signs were on. Motorists' response in the form of speed reduction and/or increased awareness was not sufficient to affect the crossings per kill ratio. Since these lighted, animated signs were not effective in reducing the number of deer-vehicle accidents, it seems reasonable to assume that conventional deer crossing signs are not effective either. However, in areas where deer-vehicle accidents are especially numerous, warning signs may be useful for public relations and liability reasons.

BEHAVIORAL RESPONSE OF MULE DEER TO A HIGHWAY UNDERPASS

Reed, DF
Woodward, TN
Pojar, TM

Journal of Wildlife Management; Wildlife Society; Suite S-176, 3900 Wisconsin Avenue, NW; Washington, D.C.; 20016

V39 N2; Apr 75; 00 361-367

A concrete box underpass 3.05 x 3.05 m (10 feet) and 30.48 m (100 feet) long under Interstate 70 in west central Colorado was monitored for deer use during four years following its completion in early 1970. A seasonal mean of 345.1 plus or minus 133.0 (50) mule deer (Odocoileus hemionus) passed through the structure when moving to or from their summer range. A video time-lapse surveillance system recorded behavioral responses during four migration periods, spring-summer and fall in 1972 and 1973. On the basis of video tape playback of 4.450 approaches and 1,739 entrances, deer displayed three basic overt responses: look-up, tail-up, and muzzle-to-ground. The frequency of the look-up response was indicative of the reluctance of the animals to go through a structure of this size and character. The underpass was successful in permitting about 61 percent of the local deer population to migrate safely under the highway. /Author/

ANALYSIS OF ROAD ACCIDENTS
UN ANALISIS DE LOS ACCIDENTES DE TRANSITO

Bandel, E
Yanez, J

Decimo Concurso de Trabajossobre Temas Viales; Ministerio de Obras Publicas; C/7 Numero 1175, La Plato; Buenos Aires; Argentina

N84; Conf Paper; Oct 68; pp 47-73; 16 Fig.; 12 Tab.; Spanish

400 accidents which occurred in buenos aires during 1967 and which represent 40% of the total number of accidents are analyzed in detail. The analysis is divided as follows: monthly, daily and hourly distribution of accidents and casualties, classification of accidents per types, main factors recurring in these accidents, and economic evaluation of the latter. It was found that the main causes of accidents were: the human factor (driver or pedestrian) which accounted for 84% of accidents; the road for 9% and the vehicle 7%. A more detailed study showed the following results: driver/pedestrian factor: excess speed (2%), carelessness (53%), drunkenness (3%), other causes 24%; road factor: wet road (43%), bad weather conditions (27%), bad road conditions (11%), bad visibility caused by vegetation or obstruction (8%), animals roaming on the road (7%), defective shoulders (3%), other causes (7%); vehicle factor: lighting defects (33%), defective brakes (19%), punctures (5%), other mechanical faults (9%). The number of the covering abstract is IRRD Abstract No. 100834.

Determine the environmental impacts and the interrelationships of major land use practices on the spectrum of habitats essential for optimum elk and other big game populations. Determine patterns of elk behavior and movements following harvest and activities related to increased human ingress, studies will be made of plant succession on harvested areas of various ages, silvicultural systems, and site conditions. The effects of increased numbers of people on the game populations will be evaluated. Also the behavioral characteristics of big game in the vicinity of road systems of various standards will be monitored through he use of radio telemetry and time lapse photography. Pre- and post-construction situations will be evaluated in conjunction with various practices to mitigate unfavorable effects of the road developments. Elk behavior in relation to timber harvest operations in South-central Wyoming was studied using telemetry, time-lapse photography and fecal and track counts. Elk preferred to be at least one-half mile from harvest and clean-up operations. Elk can be expected to move back to a harvest site within three weeks after humans leave. Traffic on Forest Systems roads has little effect on elk activity, especially beyond 300 yards. Resident populations of mule deer are living adjacent to the heavy traffic on I-80 near Laramie, Wyoming. In other areas deer migrate across I-80 to move from summer to winter ranges. Available underpasses are not being utilized and highway accidents are common. Pronghorn antelope are kept off I-80 where right-of-way fences are in good shape and snow has not drifted, creating a bridge for the antelope. Antelope are not using underpasses. I-80 acts as a barrier for elk although they are seen regularly within 300 yards.

DEER-CAR ACCIDENTS IN SOUTHERN MICHIGAN

Allen, RE; Michigan University, Ann Arbor
McCullough, DR; Michigan University, Ann Arbor

Journal of Wildlife Management; Wildlife Society; Suite S-176, 3900 Wisconsin Avenue, NW; Washington, D.C.; 20016

V40 N2; Apr 76; pp 317-325; Figs.; Tabs.; 20 Ref.

Collisions of cars with white-tailed deer (Odocoileus virginianus) were studied in southern Michigan in 1966 and 1967. Most of the 2,566 accidents studied occurred at dawn, dusk, or after dark with peaks at sunrise and 2 hours after sunset. Accidents were highest on weekends when evening traffic was greatest. A low seasonal peak in collisions occured in May and a high one in November. Sex ratio of the annual kill was predominately female, but it shifted in favor of males during seasonal peaks. Causes of the peaks seemed to be primarily rutting activities, with hunter disturbance and food of lesser importance. Accidents were related to habitat type approximately according to the prevalence of the type. Accidents were most common at speeds of 80-95 km/h (50-59 mph), and the deer was killed in 92 percent of the accidents. Human injuries occurred in less than 4 percent, and most resulted from secondary collisions.

HIGHWAY FENCES AS VEHICLE-DEER COLLISION DETERRENTS

Bellis, ED
Graves, HB, III

Pennsylvania State University, University Park; Institute for Research on Land and Water Resources; University Park, Pennsylvania; 16802; 432-41 (3502)

Final Rpt.; #FHWA-PA-74-9; Jun 76; 26 pp

FT-Contract; CN-53[illegible]9

A survey of highway fencing along Interstate 80 in Centre County showed that 7 1/2 foot, type 3-modified fence has little value as a vehicle-deer collision deterrent; many deer crawl under the fence to the planted right-of-way and abundance of gaps underneath provides for easy penetration. From December 1974 through March 1976 numbers and position of deer were observed from a vehicle driven along 6 miles of I-80 at night. Bimodal patterns of abundance were found, deer were most numerous in spring and fall; of 2577 deer sightings, 74.5% were on the highway side and 25.5% on the far side of the fence. Comparisons between a control area (north side of highway) where the fence was unmodified and test areas (south side) where gaps underneath were plugged and/or top five wires removed or repaired showed that the critical weakness in the fence is the underside but also that large numbers of deer cross a fully repaired fence. Only 6 deer were reported killed during the 16 months of study and no live deer were seen on the highway; these results, relative to previous findings beginning in 1967, strongly suggest that high traffic volume prevents deer from venturing onto the highway, thus reducing collisions.

FHWA Code E-0231

FT-Contract; CN-P.O. 3-1-1517

Pronghorn antelope, mule deer, and elk are affected by right-of-way fences and highway traffic. At least 153 antelope, 561 mule deer, and 10 elk have been killed through vehicle accidents along a 55-mile section of I-80 west of Laramie, Wyoming, during a 5.5-year period. Since antelope are reluctant to jump fences and use underpasses, I-80 is a barrier and the herds are managed accordingly. Antelope can be kept off the highway by maintaining good woven wire fences and preventing snow from drifting over the right-of-way fence. Mule deer jump right-of-way fences, but can be forced to use underpasses by using deer-proof fencing. Both resident and migratory mule deer are affected by roads and traffic. Proper management should provide safe deer crossings thus increasing the safety of the highway user. Since elk are large, they present a greater hazard to motorists, and should be discouraged from crossing highways by proper fencing and road location. New techniques using heart-rate telemetry shows great potential for use in further studies of animal behavior in relation to the ever increasing activities of man.

TESTS WITH ELECTRICAL GAME PRESERVES DURING 1975-76
FOERSOEK MED VILT STAENGSEL TYP NITRO-NOBEL ELSTAENGSEL I D-LAEN AAR 1975-76

National Swedish Road Administration; Fack S-10220; Stockholm 12; Sweden

Intrm Rpt.; #NR 19; 77; 15 pp; 4 Fig.; 5 Tab.; 1 Phot.; Swedish

Electrical fences were tested as game preserves on roads in Sweden for 1.5 years. The purpose was: (1) to study different types of uprights and number of wires and their position, (2) to obtain a value of management safety, (3) to determine construction and management costs, and (4) to study the effect on animal accidents. Of the types tested a 130 cm high fence with 5 wires on pressure impregnated uprights of wood (space 6 M) has proved the best. The construction costs have been low. Mechanical wear and soiling from the road have created some problems. In particular the wire (a laminated band) has been damaged. There were no animal accidents after the erection of the fence. At present a new wire with an expected endurance of 5 to 7 years is being tested.

FUNDING AGENCY:
FHWA Code E-0328

FT-Contract; CN-55108

To determine whether rear-view silhouette models of deer with raised tails would be effective in keeping deer off planted interstate highway rights-of-way, such models were tested in four experiments along Interstate 80 in Centre County, PA. Results of counts of deer in experimental and control areas obtained from a moving vehicle or examination of tracks through gaps under the fence revealed that the models were ineffective as deterrents to deer gaining access to the right-of-way. It is not recommended that they be used to reduce vehicle-deer collisions. /FHWA/

FUNDING AGENCY:
FHWA Code E-0331

FT-Contract; CN-1478

Deer vehicle accidents have been the cause of considerable property damage and the loss of biotic resources. This is especially the case in rural areas in mountainous terrain where nighttime driver visibility is poor. The purpose of this research was to determine if deer-vehicle accidents were affected by fixed highway illumination. This was done by comparing responses of motorists to deer on the highway and deer responses to the motorists, with and without fixed illumination. Estimated deer crossings per kill was 9.7 percent higher with the lights on compared to lights off. When a deer simulation was present under lighted conditions mean vehicle speeds decreased by 13.9 km (8.6 miles) per hour with brake lights observed on 50.6 percent of the approaching vehicles. The Roadway Lighting Committee (1972) recommends lighting standards based on mean horizontal illumination and illumination uniformity ratios for different roadway and area classifications. /FHWA/

THE ANIMAL ACCIDENT PROJECT. PART 2. SITUATION REPORT SEPTEMBER 1978
VILTOLYCKSPROJEKTET 2. LAEGESRAPPORT SEPT 1978

Almkvist, B
Andre, T
Ekblom, S
Aaberg, L
Rempler, S-A

National Swedish Road Administration; Pack S-10220; Stockholm 12; Sweden

Monograph; #Interarapport Nr 33; Sep 78; 16 p.; 3 Fig.; Swedish

An analysis of accidents involving moose and deer shows that 70% of all accidents occur in the summer, with peaks in June, and end of September and end of January. Almost 40% occur at dawn. On newly constructed roads, the number of accidents during the first year is about 2.5 times the normal; even after three years, the number of accidents is twice that normally expected. 50% of accidents occur where distance between road and forest is 5 M, and over 90% where distance is up to 20 M. On roads in open country less than 20% of accidents occur. Peaks involving moose are influenced by behaviour of the calves. Measures to counteract such accidents are (1) game fences; deer usually crawl underneath while moose jump over. Where fence consists of a mesh with single strands above, animals are often injured, and fences should therefore consist of mesh over full height. (2) game mirrors; these are used extensively, and an investigation of their efficacy is in progress. (3) clearance along roads; it appears that this is effective in reducing accidents. New measures are the use of visual or smell signals, and speed restrictions. Driver attitude is also significant. Further studies are planned. /TRRL/

DEER MORTALITY ON A MICHIGAN INTERSTATE HIGHWAY

Reilly, RE
Green, HE

Journal of Wildlife Management; Wildlife Society, Suite S-176; 3900 Wisconsin Avenue, NW; Washington, D.C.; 20016

V38 N1; Jan 74; pp 16-19

Yearly totals of white-tailed deer (Odocoileus virginianus) killed by automobiles in a northern white cedar (Thuja accidentalis) deer wintering area in Upper Michigan's Mackinac County were compiled for a 13-year period from 1960 through 1972. Mackinac Trail, a two-lane highway (formerly US 2), intersects approximately a five-mile stretch of this wintering area. In 1963, Interstate 75 was constructed roughly parallel to US 2 and about 0.25 mile east of it and thus also intersected the wintering area. In 1964, car-deer kills in the study area increased by approximately 500 percent over the average of the previous four years. This car-deer kill declined slightly through 1967, and has recently fluctuated about an average which is approximately twice that of the pre-Interstate yearly mortality figure. /Author/

GAME FENCES. LOCATION, COSTS AND MANAGEMENT
VILTSTAENGSEL. PLACERING, KOSTNADER OCH DRIFT

National Swedish Road Administration; Pack S-10220; Stockholm 12; Sweden

Monograph; #TU 1979:1; 79; 26 p.; 4 Fig.; Swedish

This report is a summary of present knowledge concerning game fencing for traffic accident prevention. Costs of construction, operation and maintenance are studied together with how the fence can be adapted to prevailing terrain conditions and adjacent roads. Results from tests of special take-off mounds for elks that have wandered into fenced areas are also included in the report. Different types of fences are studied. Some results from the report: net fence is more costly to erect than electrified fence, but it has lower maintenance costs. A combination fence also has a maintenance cost lower than that for the electrified fence. The accident prevention effect of the net fence was studied with aid of accident statistics from the Stockholm region. It was found that a reduction of accidents by 70-80 percent is well within the reach of what can be obtained by game fencing. /TRRL/

WHITE-TAILED DEER (ODOCOILEUS VIRGINIANUS) ON THE DEPARTMENT OF ENERGY'S OAK RIDGE RESERVATION: DATA ON ROAD-KILLED ANIMALS, 1969--1977

Story, JD
Kitchings, JT

Oak Ridge National Laboratory; Post Office Box X; Oak Ridge, Tennessee; 37830
Department of Energy; 1000 Independence Avenue, SW; Washington, D.C.; 20585

Jul 79; 36 p.

FT-Contract; CN-W-7405-ENG-26

During nine years (1969--1977), 126 white-tailed deer (Odocoileus virginianus) were killed by highway vehicles on the Department of Energy's Oak Ridge, Tennessee Reservation. Mortality was highest in the fall, and more males than females were killed among both fawns and adults. While traffic volume increased 8.2% annually, deer road-kills increased 43.8% annually. Increased road-kills were attributed primarily to an increase in the resident population.

INVESTIGATION OF ELK ACCIDENTS IN THE COUNTY OF NORRBOTTEN, SWEDEN 1978
UNDERSOEKNING AV AELGOLYCKOR I NORRBOTTENS LAEN 1978

Pettersson, S
Svedberg, AA

Trafiksaekerhetsverket; Oevre Norra Distriktet; Luleaa; Sweden

Monograph; 79; 29p; 15 Fig.; 20 Tab.; Swedish

The study aims at obtaining answers to questions such as, when, where and how do elk accidents occur and who meets with them. It draws upon 294 police reports of elk accidents during 1978 in the province of Norrbotten. The drivers involved were asked to answer a questionnaire comprising the following variables: vehicle, light conditions, traffic conditions, lighting, when was the elk discerned, speed, road standard, surrounding terrain, knowledge, damage/injury, previous experience. The answers received were compiled in frequency and cross tables. The results show that the drivers, irrespective of speed, speed limit or knowledge of elk danger often did not see the elk before the collision, or saw it so late that he was unable to react. There was no over-representation of any age group or sex of driver. Accidents mainly occurred in darkness and at dawn. Surprisingly enough one fourth of the accidents occurred at places described by drivers as open field with good visibility. The author concludes that measures aimed at drivers to reduce the number of accidents have limited effect. Instead long-term measures must be taken to prevent elks from coming into conflict with road traffic. In the meantime the number of elks must be kept at a suitable level by shooting. (TRRL)

FHWA Code -E-0469

Vegetative ground cover under snowdrifts formed behind snowfences used along Interstate 80 to control blowing and drifting snow has not changed appreciably over a five-year period. Sagebrush (Artemisia tridentata) has decreased significantly under snowdrifts where deep drifts occurred every year and is being replaced by grasses and forbs. Mule deer (Odocoileus heminous) use machinery and box-type underpasses to cross under Interstate 80 when big game fencing 8 feet (2.44 m) high is constructed in place of the regular right-of-way fence. Deer-vehicle accidents were reduced over 90 percent, which is a large savings of deer life and vehicle damage. Only one pronghorn antelope (Antilocarpa americana), out of several hundred in the area, has been known to use the same underpasses. Elk (Cervus canadensis) have not had occasion to use the underpasses. Hunted mule deer and elk cross Forest roads most in areas where their feeding sites are adjacent to the road. Elk show a perference to stay over 0.1 mile (160 m) from streams when crossing roads, while deer are not so sensitive. Elk show a preference to stay a minimum of 0.25 mile (400 m) from traffic while deer prefer a minimum of 100 yards (91.m), and antelope use the habitat up to the right-of-way fence. All three species are more responsive to people walkering; elk prefer a distance of 0.5 mile (800 m), deer 200 yards (182 m) and antelope somewhere between the two distances, depending on habitat and experiences. The displacement reaction is definitely the most serious response. Camera systems using microwave sensors and lights are useful in recording animal activities at underpasses. (FHWA)

FT-RPOR; CN-3(3)

The purpose of this study was to evaluate and test the effectiveness of methods, devices, or structures related to reducing the number of deer-vehicle accidents. Consistent with this purpose was the need to locate and examine potentially critical deer-vehicle accident areas and recommend methods or structures which could have reduced these accidents. In addition, the effects of the methods recommended and investigation of deer responses to various experimental structures was conducted.

THE GAME ACCIDENT PROJECT (VIOL). FINAL REPORT, MAY 1980
VILTOLYCKSPROJEKTET (VIOL). SLUTRAPPORT MAJ 1980

National Swedish Road Administration; Fack S-10220; Stockholm 12; Sweden

Monograph; #TU 146; May 80; 117p; Figs.; Tabs.; Refs.; Apps.; Swedish

The number of police reported accidents with game and motor vehicles increased heavily in the 1960's. As a result the government assigned to the National Road Administration the task to carry out research and experimental work for the purpose of reducing the number of such accidents. The work has been going on between 1970 and 1979. Basic facts about game, traffic and accidents have been collected and analysed. The analyses have led to an estimation of game accident hazards under different conditions. Accident preventive measures have been thoroughly studied through practical experiments, statistical accident analyses and economic assessments. The investigation comprises elk, roe deer, fallow deer and red deer with the accent on elk. Game accidents have increased no less heavily in the 1970's and they are likely to constitute about 15% of the total number of road accidents. A number of measures are discussed, ie game fences, mirrors, improved visibility through clearing, big game signs, repellents, information to road users, reduction of the stock of game. Fences have an accident reducing effect of approx 80% whereas mirrors show no significant effect. Clearing is an expensive measure. Further research is necessary to establish the effect of signs. Repellents in the form of evil-smelling preparations seem to have some effect. (TRRL)

GAME AND TRAFFIC: REPORT OF HUNTING AND WILDLIFE MANAGEMENT COMMISSION
VILT OCH TRAFIK: BETAENKANDE AV JAKT- OCH VILTVAARDSBEREDNINGEN

Jordbruksdepartementet; Fack; Stockholm; Sweden; 0375-250X; 91-38-05660-7

Monograph; *SOU 1980:29; 80; 120p; Figs.; Tabs.; Swedish

There are no simple ways of solving the problem of accidents involving game. These proposals are only limited efforts which might contribute to reducing the risks. A somewhat increased hunting ought not to cause any greater risks for the fauna. In contrast to traffic safety demands, the aim should be to create one balanced elk stock in larger regions. Lower speed on the roads, especially where and when the accident risk is high, leads to fewer and less serious accidents. It can be done with speed limits and use of warning signs. Education (driving-school) and information (ej forwarding the police knowledge about temporary elk accumulations) can also help to decrease the number of accidents. To reduce the accident risk several actions in connection with the carriageway have been tried, for instance fences, land clearance and game mirrors. The game mirrors, however, have not proved to have any considerable efficiency. Biotope actions are seldom justified, at least not concerning elk. Light, sound and odour signals have not yet been used in any great degree. Tests have showed that odour signals have a high effect. (TRRL)

ACCIDENTS BETWEEN WILD ANIMALS AND VEHICLES. THE BEHAVIOUR OF ROAD USERS, AND POSSIBILITIES OF CHANGING IT
VILTOLYCKOR. TRAFIKANTERS BETEENDE OCH MOEJLIGHETER ATT PAAVERKA DETTA

Swedish Transport Research Delegation; Wenner-Gren Center, Sveavaegen 166; S-11346 Stockholm: Sweden; 91-85562-27-0

Monograph; No. TFD 1980:3; 80; 47p; 9 Fig.; 10 Tab.; Phots.; Ref.; Swedish

This is the final report of a three year research project. The general purpose of the project has been to investigate the possibility of changing driver behaviour in order to reduce the risks of accidents between wild animals and vehicles. Only accidents involving moose and car drivers have been considered. Four different investigations have been carried out. The first two studies consist of analyses of survey data from drivers sampled from three Swedish counties. In the first study relations between the probability of a collision with moose and drivers' experiences with knowledge and attitudes about moose were explored. In the second study the problem was to investigate and compare circumstances in accidents and near-accidents and to relate the results to differences in driver behaviour. In the third study the relation between the attention distribution of drivers and their detection of moose dummies was studied experimentally. The effect of the wild animal crossing warning sign is investigated in the fourth and final study as manifested in drivers' detection of moose dummies. (TRRL)

TRAFFIC SAFETY EFFECT OF GUIDE POSTS
TRAFIKSAEKERHETSEFFEKTEN AV KANTSTOLPAR

National Swedish Road Administration; Pack S-10220; Stockholm 12; Sweden

Monograph; #Meddelande Tu 1980:7; 80; 26p; 3 Tab.; Swedish

The number of accidents on twenty road sections with guide posts provided with reflectors, was compared to the number on twenty control sections. The test started in January 1977 and has been in progress for somewhat more than two years. During this time 584 police reported accidents occurred on the stretches with guide posts and 615 on the control sections. After a correction of the numbers with regard to differences in vehicle kilometers, the increase of safety with guide posts, was calculated to three percent.a closer analysis of the accidents shows that the guide posts have little effect on accidents involving wild animals, while the effect on accidents involving one or several vehicles can be as high as 5-10 percent. Earlier, tests were done with reflectors on snow guide posts on almost the same road sections, but with a considerably higher effect. The causes of the different results are discussed in the report. WILDLIFE RESEARCH REPORT. PART ONE

Colorado Division of Wildlife; Fort Collins, Colorado

Jul 80; 178p

Methods, devices, or structures related to reducing the number of deer-vehicle accidents were evaluated or experimentally tested after obtaining preliminary data on study areas and methodology. These methods, devices, or structures were highway lighting, underpasses, overpasses, 2.44-m fences and one-way deer gates, and deer guards. During the highway lighting study, 84 deer-vehicle accidents occurred, 45 and 39 with lights off and on, respectively. Behavioral responses of deer to the Vail deer underpass did not change substantially over the 10 years (1970-1979) of study. Five deer guard prototypes were evaluated. Highway lighting, as tested in this study, did not result in significantly fewer accidents.

FUNDING AGENCY:
FHWA Code E-0458

FT-Contract; CN-A-9-34

The project was developed to determine the effectiveness of deer-crossing structures, deer-proof fence, and one-way deer gates in preventing deer-vehicle collisions on a section of highway which crosses a deer migration route. All information on this study was gathered by direct and indirect observation. It has been determined that the wide open type of deer crossing system is effective in providing deer a safe passage across the highway. It took three years before the major portion of the herd approached the crossings directly rather than moving to them along the fence. Until that time, every weak spot in the fence was challenged by the deer moving to the structures. Man was the major cause for openings in the crossing system during this study. The opening that accounted for the major portion of the deer killed during the study was a drive through gate, frequently left open by a local rancher. (FHWA)

FENCES FOR PROTECTION OF TRAFFIC AND DEER. SUMMARY

Lehtimaki, R

Central Organization for Traffic Safety, Finland; PL 239; 00120 Helsinki 12; Finland; 0355-6670; 951-9431-32-2

Monograph; No. 37/1981; Feb 81; 14p; 1 Fig.; 2 Tab.; 8 Ref.

The effect of 12 short wire-net fences built along the road network on deer accidents and on the movement of deer were studied by accident analysis and observation at the test fences. It was found the number of deer accidents decreases if fences are built, but only where the fences are located there was a corresponding increase in the number of accidents at both ends of the short wire-net fences studied. Thus the short wire net fences have no effect on the total number of deer accidents.

THE HUMAN FACTOR IN GAME-VEHICLE ACCIDENTS. A STUDY OF DRIVERS' INFORMATION ACQUISITION

Aaberg, L

Uppsala University, Sweden; P.O. Box 227; S-751 05 Uppsala; Sweden; 0586-8858; 91-554-1135-1

Monograph; #No. 6; 91; 130p; 17 Fig.; 15 Tab.; 2 Phot.; Refs.;

The problem of game-vehicle accidents is discussed in terms of driver's strategies for visual search in driving. To find possible measures for reducing the number of wildlife accidents, four studies were undertaken. Initially, two exploratory investigations were made: a survey of drivers' expectancies concerning moose in traffic and a study involving reports of accidents and near-accidents with moose. The results of these investigations give no evidence that drivers' experience, knowledge, or attitude concerning moose are related to wildlife accidents. Instead they suggest that the visual search patterns of drivers might explain some of the effects obtained. In a series of field experiments, drivers' ability to detect moose dummies was explored and in a final study the effectiveness of the game crossing sign was investigated experimentally. The results were interpreted as evidence that in rural driving, drivers normally scan the view ahead in a systematic and almost automatic way which is not effective for the task of detecting moose. Drivers can easily change their automatic scanning into a controlled search for animals but this search is demanding and can probably not be sustained for any length of time without feedback. (TRRL)

2. Federal Aviation Regulations (Highlighted language included in CS draft

3. Position Paper from the Department of Public Safety supporting CSHB 510 (Transportation)

4. Copy of Statute:
   August 1979 02.15.190-02.15.260
   October 1983 Supplemental 02.15.191-02.15.260

5. Letter from George Kobelynk, National Transportatior Safety Board, which provides information on definitions

Teleconference with George Kobelynk with committee today who will address CSHB 510 and briefly explain problems with present aeronautics statutes.

It has come to the attention of staff that the aeronautic statutes are in need of an overall clean-up. Staff request this to be done during the interim period.

CSHB 510 (Transportation) addresses the need for reporting and requesting investigation of aircraft accidents.

NATIONAL TRANSPORTATION SAFETY BOARD

PART 830—RULES PERTAINING TO THE NOTIFICATION AND REPORTING OF AIRCRAFT ACCIDENTS OR INCIDENTS AND OVERDUE AIRCRAFT, AND PRESERVATION OF AIRCRAFT WRECKAGE, MAIL, CARGO, AND RECORDS

Subpart A—General

Sec.
830.1 Applicability.
830.2 Definitions.

Subpart B—Initial Notification of Aircraft Accidents, Incidents, and Overdue Aircraft

Sec.
830.5 Immediate notification.
830.6 Information to be given in notification.

Subpart C—Preservation of Aircraft Wreckage, Mail, Cargo, and Records

830.10 Preservation of aircraft wreckage, mail, cargo, and records.

Subpart D—Reporting of Aircraft Accidents, Incidents, and Overdue Aircraft

830.15 Reports and statements to be filed.

AUTHORITY: Title VII, Federal Aviation Act of 1958, as amended, 72 Stat. 781, as amended by 78 Stat. 921 (49 U.S.C. 1441 et seq.), and the Independent Safety Board Act of 1974, Pub. L. 93-633, 88 Stat. 2166 (49 U.S.C. 1901 et seq.).

Subpart A—General

§ 830.1 Applicability.

This part contains rules pertaining to:

(a) Providing notice of, and reporting, aircraft accidents and incidents and certain other occurrences in the operation of aircraft when they involve civil aircraft of the United States wherever they occur, or foreign civil aircraft when such events occur in the United States, its territories or possessions.

(b) Preservation of aircraft wreckage, mail, cargo, and records involving all civil aircraft in the United States, its territories or possessions.

§ 830.2 Definitions.

As used in this part the following words or phrases are defined as follows:

"Aircraft accident" means an occurrence associated with the operation of an aircraft which takes place between the time any person boards the aircraft with the intention of flight until such time as all such persons have disembarked, and in which any person suffers death or serious injury as a result of being in or upon the aircraft or by direct contact with the aircraft or anything attached thereto, or in which the aircraft receives substantial damage.

"Fatal injury" means any injury which results in death within 7 days of the accident.

"Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

"Serious injury" means any injury which (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fractures of fingers, toes, or nose); (3) involves lacerations which cause severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

"Substantial damage":

(1) Except as provided in subparagraph (2) of this paragraph, substantial damage means damage or structural failure which adversely affects the structural strength, performance, or flight characteristics of the aircraft, and which would normally require major repair or replacement of the affected component.

(2) Engine failure, damage limited to an engine, bent fairings or cowling, dented skin, small punctured holes in the skin or fabric, ground damage to rotor or propeller blades, damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wingtips are not considered "substantial damage" for the purpose of this part.

Subpart B—Initial Notification of Aircraft Accidents, Incidents, and Overdue Aircraft

§ 830.5 Immediate notification.

The operator of an aircraft shall immediately, and by the most expeditious means available, notify the nearest National Transportation Safety Board (Board), Bureau of Aviation Safety field office [1] when:

(a) An aircraft accident or any of the following listed incidents occur:

(1) Flight control system malfunction or failure;

(2) Inability of any required flight crewmember to perform his normal flight duties as a result of injury or illness;

(3) Turbine engine rotor failures excluding compressor blades and turbine buckets;

(4) In-flight fire; or

(5) Aircraft collide in flight.

(b) An aircraft is overdue and is believed to have been involved in an accident.

§ 830.6 Information to be given in notification.

The notification required in § 830.5 shall contain the following information, if available:

(a) Type, nationality, and registration marks of the aircraft;

(b) Name of owner, and operator of the aircraft;

(c) Name of the pilot-in-command;

(d) Date and time of the accident;

(e) Last point of departure and point of intended landing of the aircraft;

(f) Position of the aircraft with reference to some easily defined geographical point;

(g) Number of persons aboard, number killed, and number seriously injured;

(h) Nature of the accident, the weather and the extent of damage to the aircraft, so far as is known; and

(i) A description of any explosives, radioactive materials, or other dangerous articles carried.

Subpart C—Preservation of Aircraft Wreckage, Mail, Cargo, and Records

§ 830.10 Preservation of aircraft wreckage, mail, cargo, and records.

(a) The operator of an aircraft is responsible for preserving to the extent possible any aircraft wreckage, cargo, and mail aboard the aircraft, and all records, including tapes of flight recorders and voice recorders, pertaining to the operation and maintenance of the aircraft and to the airmen involved in an accident or incident for which notification must be given until the Board takes custody thereof or a release is granted pursuant to § 831.17.

(b) Prior to the time the Board or its authorized representative takes custody of aircraft wreckage, mail, or cargo, such wreckage, mail, or cargo may not be disturbed or moved except to the extent necessary:

(1) To remove persons injured or trapped;

(2) To protect the wreckage from further damage; or

(3) To protect the public from injury.

(c) Where it is necessary to disturb or move aircraft wreckage, mail or cargo, sketches, descriptive notes, and photographs shall be made, if possible, of the accident locale including original position and condition of the wreckage and any significant impact marks.

(d) The operator of an aircraft involved in an accident or incident as defined in this part, shall retain all records and reports, including all internal documents and memoranda dealing with the accident or incident, until authorized by the Board to the contrary.

Subpart D—Reporting of Aircraft Accidents, Incidents, and Overdue Aircraft

§ 830.15 Reports and statements to be filed.

(a) *Reports.* The operator of an aircraft shall file a report as provided in paragraph (c) of this section on Board Form 6120.1 or Board Form 6120.2 [2] within 10 days after an accident, or after 7 days if an overdue aircraft is still missing. A report on an incident for which notification is required by § 830.5(a) shall be filed only as requested by an authorized representative of the Board.

(b) *Crewmember statement.* Each crewmember, if physically able at the time the report is submitted shall attach thereto a statement setting forth the facts, conditions, and circumstances relating to the accident or incident as they appear to him to the best of his knowledge and belief. If the crewmember is incapacitated, he shall submit the statement as soon as he is physically able.

(c) *Where to file the reports.* The operator of an aircraft shall file with the field office of the Board nearest the accident or incident any report required by this section.

[NOTE: The reporting and recordkeeping requirements contained herein have been approved by the Office of Management and Budget in accordance with the Federal Reports Act of 1942.]

[2] Forms are obtainable from the Board field offices (see footnote 1), the National Transportation Safety Board, Washington, D.C. 20594, and the Federal Aviation Administration, Flight Standards District Office.

[1] The National Transportation Safety Board field offices are listed under U.S. Government in the telephone directories in the following cities: Anchorage, Alaska; Chicago, Ill.; Denver, Colo.; Fort Worth, Tex.; Kansas City, Mo.; Los Angeles, Calif.; Miami, Fla.; New York, N.Y.; Oakland, Calif.; Seattle, Wash.; Washington, D.C.

"Air traffic clearance" means an authorization by air traffic control, for the purpose of preventing collision between known aircraft, for an aircraft to proceed under specified traffic conditions within controlled airspace.

"Air traffic control" means a service operated by appropriate authority to promote the safe, orderly, and expeditious flow of air traffic.

"Air transportation" means interstate, overseas, or foreign air transportation or the transportation of mail by aircraft.

"Alternate airport" means an airport at which an aircraft may land if a landing at the intended airport becomes inadvisable.

"Altitude engine" means a reciprocating aircraft engine having a rated takeoff power that is producible from sea level to an established higher altitude.

"Appliance" means any instrument, mechanism, equipment, part, apparatus, appurtenance, or accessory, including communications equipment, that is used or intended to be used in operating or controlling an aircraft in flight, is installed in or attached to the aircraft, and is not part of an airframe, engine, or propeller.

"Approved", unless used with reference to another person, means approved by the Administrator.

"Area navigation (RNAV)" means a method of navigation that permits aircraft operations on any desired course within the coverage of station-referenced navigation signals or within the limits of self-contained system capability.

"Area navigation low route" means an area navigation route within the airspace extending upward from 1,200 feet above the surface of the earth to, but not including, 18,000 feet MSL.

"Area navigation high route" means an area navigation route within the airspace extending upward from, and including, 18,000 feet MSL to flight level 450.

"Armed Forces" means the Army, Navy, Air Force, Marine Corps, and Coast Guard, including their regular and reserve components and members serving without component status.

"Autorotation" means a rotorcraft flight condition in which the lifting rotor is driven entirely by action of the air when the rotorcraft is in motion.

"Auxiliary rotor" means a rotor that serves either to counteract the effect of the main rotor torque on a rotorcraft or to maneuver the rotorcraft about one or more of its three principal axes.

"Balloon" means a lighter-than-air aircraft that is not engine driven.

"Brake horsepower" means the power delivered at the propeller shaft (main drive or main output) of an aircraft engine.

"Calibrated airspeed" means the indicated airspeed of an aircraft, corrected for position and instrument error. Calibrated airspeed is equal to true airspeed in standard atmosphere at sea level.

"Category":

(1) As used with respect to the certification, ratings, privileges, and limitations of airmen, means a broad classification of aircraft. Examples include: airplane; rotorcraft; glider; and lighter-than-air; and

(2) As used with respect to the certification of aircraft, means a grouping of aircraft based upon intended use or operating limitations. Examples include: transport, normal, utility, acrobatic, limited, restricted, and provisional.

"Category II operations", with respect to the operation of aircraft, means a straight-in ILS approach to the runway of an airport under a Category II ILS instrument approach procedure issued by the Administrator or other appropriate authority.

"Category III operations," with respect to the operation of aircraft, means an ILS approach to, and landing on, the runway of an airport using a Category III ILS instrument approach procedure issued by the Administrator or other appropriate authority.

"Ceiling" means the height above the earth's surface of the lowest layer of clouds or obscuring phenomena that is reported as "broken", "overcast", or "obscuration", and not classified as "thin" or "partial".

"Civil aircraft" means aircraft other than public aircraft.

"Class":

(1) As used with respect to the certification, ratings, privileges, and limitations of airmen, means a classification of aircraft within a category having similar operating characteristics. Examples include: single engine; multiengine; land; water; gyroplane; helicopter; airship; and free balloon; and

(2) As used with respect to the certification of aircraft, means a broad grouping of aircraft having similar characteristics of propulsion, flight, or landing. Examples include: airplane; rotorcraft; glider; balloon; landplane; and seaplane.

"Prohibited area" means designated airspace within which the flight of aircraft is prohibited.

"Propeller" means a device for propelling an aircraft that has blades on an engine-driven shaft and that, when rotated, produces by its action on the air, a thrust approximately perpendicular to its plane of rotation. It includes control components normally supplied by its manufacturer, but does not include main and auxiliary rotors or rotating airfoils of engines.

"Public aircraft" means aircraft used only in the service of a government, or a political subdivision. It does not include any government-owned aircraft engaged in carrying persons or property for commercial purposes.

"Rated maximum continuous augmented thrust", with respect to turbojet engine type certification, means the approved jet thrust that is developed statically or in flight, in standard atmosphere at a specified altitude, with fluid injection or with the burning of fuel in a separate combustion chamber, within the engine operating limitations established under Part 33 of this chapter, and approved for unrestricted periods of use.

"Rated maximum continuous power," with respect to reciprocating, turbopropeller, and turboshaft engines, means the approved brake horsepower that is developed statically or in flight, in standard atmosphere at a specified altitude, within the engine operating limitations established under Part 33, and approved for unrestricted periods of use.

"Rated maximum continuous thrust", with respect to turbojet engine type certification, means the approved jet thrust that is developed statically or in flight, in standard atmosphere at a specified altitude, without fluid injection and without the burning of fuel in a separate combustion chamber, within the engine operating limitations established under Part 33 of this chapter, and approved for unrestricted periods of use.

"Rated takeoff augmented thrust", with respect to turbojet engine type certification, means the approved jet thrust that is developed statically under standard sea level conditions, with fluid injection or with the burning of fuel in a separate combustion chamber, within the engine operating limitations established under Part 33 of this chapter, and limited in use to periods of not over 5 minutes for takeoff operation.

"Rated takeoff power", with respect to reciprocating, turbopropeller, and turboshaft engine type certification, means the approved brake horsepower that is developed statically under standard sea level conditions, within the engine operating limitations established under Part 33, and limited in use to periods of not over 5 minutes for takeoff operation.

"Rated takeoff thrust", with respect to turbojet engine type certification, means the approved jet thrust that is developed statically under standard sea level conditions, without fluid injection and without the burning of fuel in a separate combustion cham-

DEPARTMENT OF PUBLIC SAFETY

POSITION PAPER - PROPOSED CSHB 510 (TRSP)

Support

The Department of Public Safety supports passage of the CSHB 510 (TRSP) being proposed by the House Transportation Committee.

Currently there is no requirement for reporting state or municipally operated aircraft accidents. By enacting this legislation, the National Transportation Safety Board, at the Department's request, would investigate accidents involving state and local government operated aircraft.

By utilizing the experience and expertise provided by the NTSB in determining the cause of accidents and following up on their recommendations as to how to eliminate these causes, will be beneficial to the state by reducing the probability of aircraft accidents occurring in the future.

Robert J. Sundberg
Commissioner

Sec. 02.15.180. Financial assistance. The department may grant financial aid for aeronautical education or training to persons who receive educational or vocational assistance in the field of aeronautics under Public Law 550, 82nd Congress, upon the following terms and conditions.

(1) A person granted aid shall have been a legal resident of Alaska for at least one year immediately prior to his application for aid, and a resident of Alaska for not less than one year prior to his entry into the servic

(2) ... education or training for which the aid is given shall be taken in the state in a school or program approved by the department.

(3) The amount of aid granted to any person may not exceed the total amount received by the person as assistance for aeronautical education or training under Public Law 550, 82nd Congress.

(4) No aid may be granted to a person until the assistance to which the person is entitled for aeronautical education or training under Public Law 550, 82nd Congress, has been exhausted by the person.

(5) The aid shall be granted under the same terms and conditions as the assistance under Public Law 550, 82nd Congress.

(6) The department may not expend more than $25,000 a year from funds available to it to carry out the program of aid provided for by this section. (§ 11 B ch 123 SLA 1949; added by § 1 ch 128 SLA 1953)

Revisor's note. — Public Law 550, 82nd Congress, (Veteran's Readjustment Assistance Act of 1952, 66 Stat. 663, ch. 875, July 16, 1952) on which AS 02.15.180 relies was repealed by Public Law 85 — 857, September 2, 1958, 72 Stat. 1105, 1273. The current section of federal law covering veteran's education benefits derives from Public Law 550, 82nd Congress and may be found at Title 38 U.S.C. 1601—1669.

Article 6. General Provisions.

Section	Section
190. Information for public	230. Police powers vested
200. Public nature of department activities	240. Penalties
205. Approval required for airport construction	250. [Repealed]
210. No exclusive rights granted	260. Definitions
220. Enforcement of aeronautics laws	270. Short title

Sec. 02.15.190. Information for public. The department may collect, assemble and publish aeronautical data pertinent to the operation of aircraft within the state. This data is for the benefit of the aviation industry and the general public, and shall not duplicate data published by any other governmental agency. (§ 7 ch 123 SLA 1949)

Sec. 02.15.200. Public nature of department activities. The acquisition of lands or interests in land under this chapter, the planning, acquisition, establishment, construction, improvement, maintenance, equipment, and operation of airports and air navigation facilities, whether by the state separately or jointly with any person or

AUGUST 1979

municipality, and the exercise of any other powers herein granted to the department are public and governmental functions, exercised for a public purpose, and matters of public necessity. All lands and other property and privileges acquired and used by or on behalf of the state in the manner and for the purposes enumerated in this chapter are acquired and used for public and governmental purposes and as a matter of public necessity. (§ 8 A ch 123 SLA 1949)

Sec. 02.15.205. Approval required for airport construction. (a) No person may construct, reconstruct, relocate, or extend an airport, airstrip, or private air facility within two miles of a federal-aid highway or proposed federal-aid highway without first obtaining the written approval of the commissioner, as provided by regulation.

(b) The commissioner shall not approve the construction, reconstruction, relocation, or extension of an airport, airstrip, or private air facility if the construction would constitute a hazard to the traveling public or if the construction would otherwise not be in the public interest.

(c) The commissioner shall promulgate rules and regulations, to effectuate the purpose of this section, which are consistent with standards established by participating federal agencies. (§ 1 ch 90 SLA 1966; am Executive Order No. 39, § 11 (1977)).

Sec. 02.15.210. No exclusive rights granted. The department may not grant an exclusive right for the use of an airway, airport, or air navigation facility under its jurisdiction. This section does not prevent the making of contracts, leases and other arrangements pursuant to AS 02.15.060 — 02.15.100 and 02.15.120. (§ 8 B ch 123 SLA 1949)

Sec. 02.15.220. Enforcement of aeronautics laws. (a) The department and its officers and employees, and every state and municipal officer charged with the enforcement of state and municipal laws, shall enforce and assist in the enforcement of this chapter and of all rules, regulations and orders issued under it and any other state regulations or laws pertaining to the operation of aircraft.

(b) Any person mentioned in (a) of this section may inspect and examine, at reasonable hours, any aircraft, premises, and the buildings and other structures thereon, where airports, air navigation facilities, air schools, or other aeronautical activities are operated or conducted. (§ 13 ch 123 SLA 1949)

Sec. 02.15.230. Police powers vested. (a) The commissioner and those officers and employees of the department who the commissioner may designate have general police powers in aid of the enforcement of this chapter, and the regulations and orders issued under it and all other laws of the state relating to aeronautics.

(b) Upon bilateral agreement, the commissioner may designate individuals licensed under AS 18.65.400 — 18.65.490 and police officers employed by the state or its political subdivisions to be present during

the final passenger screening process before the boarding of each flight required to be in compliance with passenger screening regulations of the Federal Aviation Administration. Persons designated under this section, while performing their duties under that agreement, have the general police powers set out in (a) of this section. (§ 13 B ch 123 SLA 1949; am § 2 ch 6 SLA 1978)

Effect of amendment. — The 1978 amendment designated the provisions of this section as subsection (a), and in that subsection, substituted "department who" for "department which" and deleted "rules" preceding "regulations and orders." The amendment also added subsection (b).

Sec. 02.15.240. Penalties. (a) A person violating any of the provisions of this chapter, or any of the rules, regulations or orders made and issued under this chapter is guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $500, or by imprisonment of not more than 90 days, or by both.

(b) For a violation of any section of this chapter, in addition to or in lieu of the penalties provided by (a) of this section, or as a condition to the suspension of a sentence which may be imposed, the court may prohibit the violator from operating an aircraft within the state for a period it may determine but not more than one year. Violation of the prohibition of court may be treated as a separate offense under this section or as a contempt of court. Whenever a conviction is obtained, the prosecuting authority shall notify the department. (§ 12 ch 123 SLA 1949)

Sec. 02.15.250. Aeronautical fund.

Repealed by § 2 ch 14 SLA 1968.

Sec. 02.15.260. Definitions. In this chapter

(1) "aeronautics" means the science and art of flight including but not limited to transportation by aircraft; the operation, construction, repair or maintenance of aircraft power plants and accessories, including the repair, packing and maintenance of parachutes; the design, establishment, construction, extension, operation, improvement, repair, or maintenance of airports or other air navigation facilities; and instruction in flying or related ground subjects;

(2) "aircraft" means a contrivance used or designed for navigation of flight in the air;

(3) "airman" means an individual engaging as the person in command or as pilot, mechanic, or member of the crew, in the navigation of aircraft while under way; an individual directly in charge of the inspection, maintenance, overhauling or repair of aircraft, aircraft engines, propellers, or appliances; and an individual serving in the capacity of aircraft dispatcher, or air-traffic control-tower operator; or an individual employed by a manufacturer of aircraft, aircraft engines, propellers, or appliances to perform duties as inspector or mechanic in that connection;

or an individual performing inspection or mechanical duties in connection with aircraft owned or operated by him in the state of Alaska;

(4) "air navigation facility" means a facility used, available, or designed for use in aid of air navigation, including structures, mechanisms, lights, beacons, markers, communicating systems, or other instrumentalities or devices used or useful as an aid, or constituting an advantage or convenience to the safe taking-off, navigation and landing of aircraft, or the safe and efficient operation or maintenance of an airport, and any combination of any or all of the facilities;

(5) "airport" means an area of land or water which is used or intended for use for the landing and take-off of aircraft, and any appurtenant areas which are used or intended for use for airport buildings or other airport facilities or rights-of-way, together with airport buildings and facilities located thereon;

(6) "airport hazard" means a structure, object of natural growth, or use of land which obstructs the airspace required for the flight of aircraft in landing or taking off at an airport or is otherwise hazardous to the landing or taking off;

(7) "civil aircraft" means any aircraft other than a public aircraft;

(8) "commissioner" means the commissioner of the Department of Transportation and Public Facilities of the state;

(9) "department" means the Department of Transportation and Public Facilities;

(10) "municipality" means a home rule or general law municipal corporation and political subdivision, which is a first or second class borough or city, or a third class borough, incorporated under the laws of the state;

(11) "operation of aircraft" means the use, navigation or piloting of aircraft in the airspace over this state or upon an airport inside this state; "operate aircraft" means, to use, navigate or pilot aircraft in the airspace over this state or upon an airport inside this state;

(12) "public aircraft" means an aircraft used exclusively in the governmental service of the United States and the state government. (§ 1 ch 123 SLA 1949; am § 53 ch 127 SLA 1974; am Executive Order No. 39, § 11 (1977)).

Effect of amendment. — The 1978 amendment substituted references to the Department of Transportation and Public Facilities for references to the Department of Public Works in paragraphs (8) and (9).

Legislative history report. — For report on ch. 127, SLA 1974 (SCSHB 817 am S), see 1974 House Journal, p. 657.

Sec. 02.15.270. Short title. This chapter may be cited as the Alaska Aeronautics Act of 1949. (§ 17 ch 123 SLA 1949)

Revisor's note. — The words "of 1949" were added by the revision to differentiate this act from "The Alaska Aeronautics Act of 1937" which is found in AS 02.10.

exclusive use of the carrier's aircraft, air service of a continuing nature for a definite and limited number of persons; a contract carrier's air service is designed to meet the distinct air transportation needs of the individual customer; a contract carrier does not represent to the public at large expressly or by course of conduct that it furnishes transportation for compensation, hire, or lease;

(9) "dormancy" means failure of a person who holds a certificate of authority as an air taxi operator or a contract carrier to own or lease and operate aircraft in air commerce during the two quarters preceding an accusation by the commission;

(10) "supplemental base of operations" means the point together with the reasonable contiguous or closely related surrounding community or geographical area, from where, in addition to its "base of operations," the carrier also represents that it engages in air commerce. (§ 3 ch 161 SLA 1960; am § 2 ch 139 SLA 1966; am § 5 ch 147 SLA 1966; am §§ 11, 12 ch 146 SLA 1972; am § 17 ch 115 SLA 1980)

Effect of amendments. — The 1980 amendment deleted "of public convenience and necessity" following "a certificate" in paragraph (8).

Chapter 15. Alaska Aeronautics Act of 1949.

Article
2. State Airports (§ 02.15.091)
3. Airport Assistance (§ 02.15.140)
5. Aeronautics Training (§ 02.15.180)
6. General Provisions (§§ 02.15.210, 02.15.260)

Article 2. State Airports.

Section
91. Sale and delivery of in-bond merchandise at international airports

Sec. 02.15.091. Sale and delivery of in-bond merchandise at international airports. (a) As provided by (b) and (c) of this section, the department shall allow the sale and delivery of in-bond merchandise at an international airport only by an exclusive contract.

(b) While the exclusive contracts for the sale and delivery of in-bond merchandise at international airports that exist on June 15, 1982 are in effect, the department may not permit or confer a right on any other person to offer to sell, sell, or deliver in-bond merchandise at an international airport.

(c) After the exclusive contracts existing on June 15, 1982 are no longer in effect, the department shall enter into one exclusive contract and, on its expiration, additional successive exclusive contracts for the sale and delivery of in-bond merchandise at each international airport. Except under the existing and future exclusive contracts described in this section, the department may not permit or confer a right upon any

Oct. 1983
SUPPLEMENT

person to offer to sell, sell, or deliver in-bond merchandise at an international airport.

(d) The department shall offer the exclusive contracts required by this section only by competitive bid and shall award the contracts after considering the generation of maximum revenues for the International Airports Revenue Fund established by AS 37.15.430.

(e) The department shall actively supervise the operations under each exclusive contract for the sale and delivery of in-bond merchandise in order to ensure the effectiveness of the operations. To supervise contract operations under this section, the department shall develop and implement guidelines that provide for review of the reasonableness of price schedules, quality and assortment of merchandise, and customer service.

(f) Nothing in this section applies to deliveries of in-bond merchandise as cargo to airlines. (§ 2 ch 111 SLA 1982)

Cross references. — For legislative findings, see § 1, ch. 111, SLA 1982, in the 1982 Temporary and Special Acts and Resolves.

Effective dates. — Section 5, ch. 111, SLA 1982, makes the section effective June 15, 1982, in accordance with AS 01.10.070(c).

Editor's notes. — For legislative findings concerning AS 02.15.091 see Chapter 111 in the Temporary and Special Acts binder.

Article 3. Airport Assistance.

Section
140. State financial assistance

Sec. 02.15.140. State financial assistance. The department may grant or lend money, subject to the provisions of AS 02.15.060, 02.15.070 and 02.15.120, to any person or municipality or to municipalities acting jointly for project costs relating to the planning, acquisition, construction, improvement, maintenance, or operation of an airport owned or controlled or to be owned or controlled by the municipality or municipalities or person. Grants or loans may be furnished in connection with federal or other financial aid for the same purpose. (§ 9B ch 123 SLA 1949; am § 18 ch 168 SLA 1978; am § 1 ch 59 SLA 1982)

Effect of amendments. — The 1982 amendment, effective May 28, 1982, in the first sentence, inserted "or to municipalities" preceding "acting jointly," and inserted "municipalities or" preceding "person."

Article 5. Aeronautics Training.

Section
180. [Repealed]

Sec. 02.15.180. Financial assistance.

Repealed by § 1 ch 94 SLA 1980.

Editor's notes. — The repealed section derived from § 11B, ch. 123, SLA 1949; § 1, ch. 128, SLA 1953.

Article 6. General Provisions.

Section
210. No exclusive rights granted
260. Definitions

Sec. 02.15.210. No exclusive rights granted. The department may not grant an exclusive right for the use of an airway, airport, or air navigation facility under its jurisdiction. This section does not prevent the making of contracts, leases and other arrangements under AS 02.15.060 — 02.15.100 and 02.15.120, including exclusive contracts for the sale and delivery of in-bond merchandise described in AS 02.15.091. (§ 8B ch 123 SLA 1949; am § 3 ch 111 SLA 1982)

Effect of amendments. — The 1982 amendment, effective June 15, 1982, in the second sentence, substituted "under" for "pursuant to" and added the language beginning "including exclusive contracts for the sale" to the end

Sec. 02.15.260. Definitions. In this chapter

(1) "aeronautics" means the science and art of flight including but not limited to transportation by aircraft; the operation, construction, repair or maintenance of aircraft power plants and accessories, including the repair, packing and maintenance of parachutes; the design, establishment, construction, extension, operation, improvement, repair, or maintenance of airports or other air navigation facilities; and instruction in flying or related ground subjects;

(2) "aircraft" means a contrivance used or designed for navigation of flight in the air;

(3) "airman" means an individual engaging as the person in command or as pilot, mechanic, or member of the crew, in the navigation of aircraft while under way; an individual directly in charge of the inspection, maintenance, overhauling or repair of aircraft, aircraft engines, propellers, or appliances; and an individual serving in the capacity of aircraft dispatcher, or air-traffic control-tower operator; or an individual employed by a manufacturer of aircraft, aircraft engines, propellers, or appliances to perform duties as inspector or mechanic in that connection; or an individual performing inspection or mechanical duties in connection with aircraft owned or operated by him in the state of Alaska;

(4) "air navigation facility" means a facility used, available, or designed for use in aid of air navigation, including structures, mechanisms, lights, beacons, markers communicating systems, or other

Oct. '83
Supplemental

instrumentalities or devices used or useful as an aid, or constituting an advantage or convenience to the safe taking-off, navigation and landing of aircraft, or the safe and efficient operation or maintenance of an airport, and any combination of any or all of the facilities;

(5) "airport" means an area of land or water which is used or intended for use for the landing and take-off of aircraft, and any appurtenant areas which are used or intended for use for airport buildings or other airport facilities or rights-of-way, together with airport buildings and facilities located thereon;

(6) "airport hazard" means a structure, object of natural growth, or use of land which obstructs the airspace required for the flight of aircraft in landing or taking off at an airport or is otherwise hazardous to the landing or taking off;

(7) "civil aircraft" means any aircraft other than a public aircraft;

(8) "commissioner" means the commissioner of the Department of Transportation and Public Facilities of the state;

(9) "department" means the Department of Transportation and Public Facilities;

(10) "municipality" means a home rule or general law municipal corporation and political subdivision, which is a first or second class borough or city, or a third class borough, incorporated under the laws of the state;

(11) "operation of aircraft" means the use, navigation or piloting of aircraft in the airspace over this state or upon an airport inside this state; "operate aircraft" means, to use, navigate or pilot aircraft in the airspace over this state or upon an airport inside this state;

(12) "public aircraft" means an aircraft used exclusively in the governmental service of the United States and the state government;

(13) "cargo" means goods carried by an airline that are carried under an agreement between the shipper and the airline other than a passenger ticket, that are accepted, carried and handled separately from passenger baggage, and that are delivered to a location other than a baggage claim area; "cargo" does not include goods carried by an airline as baggage, whether belly-loaded or hand-carried and whether accompanied or unaccompanied by a passenger;

(14) "international airport" means an international airport owned and operated by the state. (§ 1 ch 123 SLA 1949; am § 53 ch 127 SLA 1974; am Executive Order No. 39, § 11 (1977); am § 4 ch 111 SLA 1982)

Effect of amendments. -- The 1982 amendment, effective June 15, 1982, added paragraphs (13) and (14).

March 1, 1984

Mark Hanley
% Terry Martin
Pouch V, Capitol Building
Juneau, Alaska 99811

Dear Mr. Hanley:

Pursuant to our telephone conversation you will find enclosed a list of the particular Federal Aviation Regulation Part Number and a brief description of each which does not apply to "public use" aircraft. Particular attention must be paid to Title 14 Code of Federal Regulations Part 1, which defines "civil aircraft" and "public aircraft".

The term "civil aircraft" is strategically used throughout the regulations which allows such aircraft to perform acts without repercussion from a federal viewpoint.

As you read through the brief descriptions you will realize the magnitude of the possible ramifications should these regulations be stretched to their ultimate definition.

Sincerely,

George Kobelnyk

encls

FAR Part Nos
Title 49, Part 830, 2 cys

61.3 Certificate requirements: A pilot certificate is not needed, nor an instrument rating; however, a medical certificate is required.

91.5 Para b,1. Preflight action - A public aircraft is not required to compute landing and takeoff distances.

Para b,2. Does not need other reliable information such as aircraft performance under expected values of airport elevation and runway slope, aircraft gross weight, and wind and temperature.

91.6 Category II and III Operations

Para a,1. Public aircraft does not need special authorizations to use category II or III operations.

91.7 Flight Crewmembers at Stations

Para b. Does not need to keep the shoulder harness fastened while at this duty station.

91.11 Liquor and Drugs

Para a. States civil aircraft which renders this entiere part useless for public aircraft. A pilot of a public aircraft may drink and fly with less than the required eight hours; may fly while intoxicated; may fly under the influence of any drugs; be prescribed by a doctor or self prescribed, and may carry intoxicated passengers indiscriminately.

91.12 Carriage of narcotic drugs, marijuana, and depressants or stimulant drug substances.

Para a. A public aircraft can carry the above listed substances indiscriminately without violating the FARs.

91.13 Dropping Objects.

A public aircraft should they desire can drop objects so as to create a hazard to persons or property and not be in violation of the FARs.

91.14 Use of Safety Belts

Para a, 1. Pilot-in-command does not need to ensure that each passenger was briefed on how to fasten and unfasten the seatbelt.

Para a. 2. Does not need to notify the passengers to fasten their seatbelts.

Para a, 3. Does not need to ensure that each person occupies a seat or berth with a seatblet secured about them.

91.21 Flight Instruction - Simulated Instrument Flight and Certain Flight Test.

Para a. Under this part a public aircraft does not need dual flight controls for flight instruction.

91.23 Fuel Requirements For Flight in IFR Conditions.

Para a. Public aircraft do not need the required 45 IFR fuel reserve.

91.25 VOR Equipment Check for IFR Operations.

Para a. Public aircraft are not required to perform a VOR operational check within the preceeding 30 days for a flight under IFR rules.

91.27 Civil Aircraft - Certifications Required For Public Aircraft None as the title of this Part implies.

91.29 Civil Aircraft Airworthiness

A public aircraft does not need to be in an airworthy condition as the title of this Part implies.

91.30 Inoperable Instrument And Equipment For Multi-engine Aircraft.

A public aircraft does not need an approved minimum equipment list.

91.31 Civil Aircraft Operating Limitations on Marking Requirements.

As the title implies, a public aircraft does not have to remain within the approved operating limitations or the marking requirements as outlined by the appropriate manuals.

91.32 Supplemental Oxygen

Under this part a public aircraft does not need oxygen.

91.33 Powered Civil Aircraft With Standard Category U.S. Airworthiness Certificates; Instrument and Equipment Requirements.

This entire section, as the title implies, vindicates all public aircraft from its requirements. Remember that in a previous part of this regulation, public aircraft do not need an airworthiness certificate to begin with.

91.34 Category II Manual

91.51 Altitude Alerting System or Device; Turbo-jet Powered Civil Airplanes.

Again a public turbo-jet powered airplane need not comply.

91.52 Emergency Locator Transmitters

Para a. A public aircraft does not need to carry an emergency locator beacon.

All of the above parts are an interpretation of paragraphs using the term "civil aircraft" as defined in FAR Part 1, Title 14.

DATE 01/13/84
CHAMBER HOUSE
TEXT HOUSE BILL NO. 512 by Hayes, Ringstad, Shultz, Abood, Fritz, Furnace, Cato, Fuller, Oehling, Bettisworth and Tischer, entitled:

"An Act establishing the Alaska Railroad Corporation to manage and operate the Alaska Railroad; and providing for an effective date."

was read the first time and referred to the Transportation and Finance Committees.

BILL HB0512
PAGE 03033
DATE 03/23/84
CHAMBER HOUSE
TEXT The Transportation Committee has had HOUSE BILL NO. 512 (establishing the Alaska Railroad Corporation to manage and operate the Alaska Railroad; effective date) under consideration, recommends it be replaced with COMMITTEE SUBSTITUTE FOR HOUSE BILL NO. 512 (Transportation) (same title) and reports it back as follows: Cato (Chairman), Abood, Herrmann, Bettisworth, M.W. Miller and Flood recommend do pass; McBride and Davis have no recommendation. A fiscal note was attached.
HB 512 was referred to the Finance Committee.
The fiscal note appears in House Journal Supplement No. 113.

TEXT The Finance Committee has had HOUSE BILL NO. 512 (establishing the Alaska Railroad Corporation to manage and operate the Alaska Railroad; effective date) under consideration, recommends it be replaced with COMMITTEE SUBSTITUTE FOR HOUSE BILL NO. 512 (Finance)(same title) and reports it back as follows: Fritz and Bettisworth recommend do pass; Adams (Chairman), Grussendorf, Hurlbert, Ward, Martin, Duncan and Lindauer have no recommendation; Zharoff signed do not pass; Furnace signed "Bad Bill". A new fiscal note was attached.
HB 512 was referred to the Rules Committee for placement on the calendar.
The new fiscal note appears in House Journal Supplement No. 138.

BILL	HB0512

CHAMBER	HOUSE
TEXT	Representative Barnes moved and asked unanimous consent that HOUSE BILL NO. 512 (establishing the Alaska Railroad Corporation to manage and operate the Alaska Railroad; effective date) and pending amendments be returned to the Rules Committee. Representative Clocksin objected and withdrew his objection. There being no further objection, HB 512 was taken from the calendar and returned to the Rules Committee.

AK Railroad Corporation (establishment)

HOUSE BILL NO. 512, by Reps. Hayes, Rivgstad, Shultz, Abood, Fritz, Furnace, Cato, Fuller, Uehling, Bettisworth and Tischer. See Senate Bill No. 352, page 17, identical.

Introduced January 13 and referred to Transportation, Finance.

Alaska Railroad Corp. (establishing)

SENATE BILL NO. 352, by Senators Kerttula, Faiks & Halford. Establishes the Alaska Railroad Corporation as a public corporation with a separate legal existence from the state. The corporation will operate and manage the Alaska Railroad after its eventual transfer to the state. Legislative "Findings & Purpose" state that it is in the best interests of the state to accept the railroad under the terms and conditions offered by the U.S. government. Cites Alaska's vast natural resource potential and the possibility of extending the Railroad into natural resource areas, thereby lowering freight costs and stimulating long-term economic growth.

Declares that it is in the best interests of Alaskans for the corporation to be created in such a way that "(A) [it] ... will be exclusively responsible for the management of the financial and legal obligations of the Alaska Railroad; (B) the corporation, and not the state, will constitute a common carrier subject to the jurisdiction of the United States Interstate Commerce Commission; (C) [it] ... will have the ability to raise capital by issuing obligations exempt from federal and state taxation; (D) [it] ... may carry out its responsibilities on a self-sustaining basis; (E) the best possible combination of types and levels of safe, efficient, and economical transportation can be provided that is necessary to meet the overall needs of the state, supported when necessary by state investment; (F) the railroad may be operated prudently and according to sound business management practices; and (G) borrowing by the corporation does not directly or indirectly endanger the state's own borrowing capacity."

Laws establishing the Corporation are added to AS 42 under new Ch. 40, "Alaska Railroad Corporation." Includes Art. 1, Establishment and Organization (Establishment of the Corporation, Board of Directors, Term of Office, Vacancies, Compensation and Expenses, Quorum and Notice of Meetings, Voting); Art. 2, Management (Executive Officers, Delegation); Art. 3, Administrative Provisions (Public Board Meetings, Minutes of Meetings, Rules, Public Disclosure of Information, Special Report, Annual Report, Annual Audit); Art. 4, Powers and Duties (General Powers, Long-Range Expansion and Capital Improvement Plans, Use of Corporation Assets); Art. 5, Rail Properties (Land, Classification, Acquisition, and Use of State Land for Railroad Purposes, Eminent Domain and Acquisition of Property and Materials, Other Assets); Art. 6, Financial Provisions (Limitation of Liability, Fidelity Bond, Insurance, Claims, Revenue, Appropriations, Bonds and Notes, Interim Receipts, Temporary Bonds, and Temporary Bond Anticipation Notes, Validity of Signatures, Independent Finance Advisor, Validity of Pledge, Remedies, Negotiable Instruments, Bonds and Notes Eligible for Investment, Refunding Bonds, Credit of the State Not Pledged, Officers Not Liable, Exemption from Taxation, Reversion of Assets); Art. 7, Personnel and Labor Relations (Personnel, Political Activities); Art. 8, General Provisions (Application of Existing Standards, Definitions, Short Title).

Effective immediately. Identical to HB 512, page 54.

AK Railroad Corporation (establishing)

HOUSE BILL NO. 512, (see page 54). Reported back to the House March 23 by Transportation recommending it be replaced with a Transportation substitute and that it do pass. Concurring: Cato (Chair), Abood, Herrmann, Bettisworth, M. W. Miller and Flood. Not concurring: McBride and Davis had no recommendation. To Finance.

The Transportation version of the bill was not available, due to errors in the bill. The substitute bill should be printed on Monday, March 26, according to a Committee aide.

The following is a staff analysis prepared by the Senate Transportation Committee on CS for Senate Bill No. 352 (Trsp), establishing the Alaska Railroad Corporation. Contains italicized references to the major differences between CSSB 352 (Trsp) and CSHB 512 (Trsp), offered last week.

Title

Includes a brief description of the main elements of the bill. The list of statutes the corporation is exempt from is also included in the title.

The statutes are:

AS 19 - Title 19 is the statute which sets out the duties of state agencies in regard to highways and ferries and related activities.

AS 23.40 - Chapter 40 deals with the relationship between state entities and labor organizations. But see Article 8 of this legislation for Personnel and Labor Relations provisions.

AS 30.15 - Chapter 15 is concerned with state participation in port facilities and development.

AS 35 - Title 35 sets out the duties and powers of the Department of Transportation and Public Facilities with regard to public facilities.

AS 37.05 - Chapter 05 is the Fiscal Procedures Act. For provisions in this legislation which replace similar provisions in the Fiscal Procedures Act see Section 1, 3(A) and (F); 42.40.100(1) and (8); 42.40.120(b)(4), (C)(11); 42.40.260; 42.40.270.

AS 37.07 - Chapter 07 contains the Executive Budget Act. For similar provisions in this legislation see 42.40.260; and 42.40.270 and 42.40.280.

AS 37.10.010 - 37.10.060 - Give the Department of Administration duties related to Public Funds.

AS 37.10.085 prohibits financial aid to corporations by state or political subdivisions.

AS 37.20 sets out a method for the state to receive federal property. Sec. 42.40.360; 42.40.420 and 42.40.440 for comparable provisions.

AS 37.25 is the miscellaneous provisions of the public finance title.

AS 38 - Title 38 is the Public Lands statute. For similar provisions see 42.40.350; 42.40.360; 42.40.370; 42.40.380; 42.40.390; 42.40.400; 42.40.410; 42.40.420 and 42.40.430.

AS 39 - Title 39 is the public officer and employees statute. See sections 112.40.020; 42.40.030; 42.40.040; (see also Sections 3,4,5, and 6); 42.40.050; 42.40.060 and Article 8 of this Act.

AS 44.62.040 - 44.62.320 - is the Administrative Procedures Act. But see 42.40.150; 42.40.160; 42.40.170; 42.40.180; (see also Section 8); 42.40.200; 42.40.210; 42.40.220 for similar provisions contained in this Act.

*Section 1 This is a statement of legislative findings and purpose. In (a) the legislature finds that the Alaska Railroad is an essential part of the state transportation network that may cease to be an option without state action. It also states that the railroad is necessary for long-term economic growth of the state and an essential part of the state transportation network. In (b) the purpose of the Act is stated to be the creation of an entity to operate and manage the railroad pending the transfer of the railroad to the private sector. That it will be responsible for the management of the financial and legal obligations of the railroad, will constitute a common carrier under the Interstate Commerce Commission, will have the ability to issue tax exempt obligations, carry out its responsibilities on a self-sustaining basis, and so that the best transportation can be provided supported by state investment when necessary, the railroad may be operated prudently, and borrowing by the corporation does not endanger the state's own borrowing capacity. It is also charged with protecting the railroad utility corridor.

*Section 2
Section 42.40.010

The Alaska Railroad is established as a public corporation within the Department of Commerce and Economic Development. However, Section 3 would remove the corporation from the Department of Commerce and Economic Development if the Constitutional Amendment passes.

Section 42.40.020
The corporation is run by a board with nine members including the Commissioner of Commerce and Economic Development, the Chief Executive Officer of the Corporation and one appointed member who is a representative of the corporation's organized labor. In addition, there are six public members who may not be state employees. One of the public members must have 10 years experience and one shall have been an executive official of a U.S. railroad. Except for the two public members just mentioned, all public members must be registered Alaskan voters. With the exception of the Commissioner of Commerce and Economic Development and the chief executive officer, the board shall be confirmed by the majority of the members of each house of the legislature in joint session.

However, see Section 4 where 42.40.020 is amended if the Constitutional Amendment passes. Under this amendment the Commissioner of Commerce and Economic Development is removed from the board and the board is increased to eight appointed members.

The House version, [CSHB 512(Trsp)], is slightly different in that it gives the governor more discretion in naming public members to the board. In the Senate Bill the two railroad experts are mandatory members but in the House version they are optional. In addition, the Senate Bill requires all members of the board, except for the railroad experts, to be registered voters but in the House Bill the two non-registered voters may be any two of the seven public members. The House Bill also differs slightly in its description of the work experience requirements of board members. It allows work experience if it relates to fields relevant to this but while the Senate Bill just requires five years of business experience. The Senate requirement is limited to business experience in Alaska while the House does not have a similar limitation.

Section 42.40.030 All members required to be confirmed by the Legislature serve for staggered five year terms and serve at the pleasure of the Governor. Section 10 sets up how the first board of directors will serve which results in staggered terms for members that follow.

However, see Section 6 and Section 7 which amend 42.40.030 if the Constitutional Amendment passes. Under these amendments a board member could be removed only for cause.

Section 42.40.040 A vacancy on the board is filled by the governor and the appointment must be confirmed by the legislature. Despite a vacancy the board may exercise its power if it has a quorum of members.

Section 42.40.050 An appointed member of the board received $250 for each day he is engaged in the performance of duties as a board members and partial day provisions may be established by the board. In addition, he is entitled to per diem and travel expenses.

The House Bill, [CSHB 512(Trsp)], provides for a $401 per day compensation rate.

Sec. 42.40.060 The board is to elect a chairman and vice-chairman from its membership and appoint a secretary.

Section 42.40.100 - The board is to manage the corporation according to the guidelines provided in this section. This corporation is to be generally self-sustaining, subject to the ICC consistent with the Transfer Act and provide safe, efficient and economical transportation. The board must apply to the legislature for appropriations if a service is provided which is not self-sustaining. In addition, the board is responsible for reviewing all land disposals so that future expansions of the railroad are not restricted.

The House Bill, [CSHB 512(Trsp)], does not include the provision requiring the corporation to apply for an appropriation if it provides a service which is not self sustaining.

Section 42.40.110 The board appoints the Chief Executive Officer of the corporation and fixes his compensation. The Chief Executive Officer of the corporation appoints executive officers. The salaries of the executive officers appointed by the Chief Executive Officer are subject to board approval.

The House Bill, [CSHB 512(Trsp)], requires that the board approve all executive officers appointed by the Chief Executive Officer.

Section 42.40.120 By rule the board delegates duties necessary for the management of daily affairs of the corporation to the Chief Executive Officer. Within 60 days after it is established, the board must delegate certain specified activities of the corporation. Some activities are delegated but require specific board approval for final action.

In addition to the delegated activities which require board approval found in the Senate version, the House Bill, [CSHB 512(Trsp)], requires specific board approval to begin capital projects with an estimated completion cost of $500,000 or an estimated completion time of more than one year.

Section 42.40.150 Meetings of the board are public with the exception of executive sessions. The board provides by rule how notice of the meetings shall be given. The board is required to keep minutes of the meetings.

In addition to the requirement that minutes be kept of the meetings the House Bill, [CSHB 512(Trsp)], requires that a certified copy of the public portion of the minutes of each meeting be sent to the governor and the legislature.

Section 42.40.160 A quorum is established as five and an affirmative action by the board also requires five votes. The board may confer and vote by teleconferencing but may not vote by proxy.

Section 42.40.170 Executive sessions are limited to matters listed and must be called by a majority vote. No action may be taken at an executive session and discussion must be limited to the topic of the motion or an auxiliary subject.

In the House Bill, [CSHB 512 (Trsp)], the list of subjects to be covered in an executive session is more general in nature than the list in the Senate Bill. In addition, the list is permissive rather than an exclusive list. There is no majority vote requirement to call an executive session nor is there a prohibition against taking action in an executive session. There is no restriction to discuss only the topic contained in the motion.

Section 42.40.180 The board is to adopt rules to carry out the purposes of this chapter. It is required to give public notice 15 days before it adopts, amends or repeals a rule. Public notice consists of publishing in at least three newspapers of statewide circulation and to persons requesting notice. Every interested party must be given one hour to testify and all relevant matter must be considered.

But see Section 8 which repeals the rule making procedure if the Constitutional Amendment passes. In its place, the new section would give all powers to adopt a rule making procedure to the board.

The House Bill [CSHB 512 (Trsp)], leaves the development of a procedure for providing notice and an opportunity to testify up to the board. It shall establish this procedure within 30 days after its first meeting. The board is also given the responsibility of developing an emergency rule making procedure but the 30 day rule does not apply to the development of this procedure.

Section 42.40.190 The board is required to set up a process for adopting emergency rules. Emergency rules are to be limited to situations where they are necessary for the orderly operation of the corporation's facilities or programs. The requirements of 42.40.180 need not be followed but within 10 days public notice is to be given of the action. Rules adopted under this section remain in effect for no more than 120 days unless the procedures of 42.40.180 are followed.

The House Bill, [CSHB 512(Trsp)], has no similar restrictions or requirements for emergency rules. In the preceding section, the board is given full authority to set up a procedure for adopting emergency rules but the question of what topics may be covered by the emergency rules is not addressed.

Section 42.40.200 Sets up a procedure for challenging a rule adopted under 42.40.180(a) and 42.40.190(a) but restricts the ability to declare a rule invalid for procedural deficiency.

The House Bill, [CSHB 512(Trsp)], has no similar provision.

Section 42.40.210 The board may, by resolution, adopt the existing rules without following the rule making procedure of 42.40.180.

The rules adopted by resolution may not be inconsistent with this chapter or other state law. The House Bill also contains a

provision whereby the substance of previous federal rules may be adopted however the operative effect of this provision is unclear.

Section 42.40.220 Records of the corporation are open to public inspection except the corporation may withhold certain matters from disclosure by rule if they are of a nonpublic, privileged, or proprietary nature.

The House Bill, [CSHB 512 (Trsp)], requires that the board must by rule identify the records as confidential before they are withheld from the public.

Special Note: The House Bill, [CSHB 512 (Trsp)], contains a provision on conflict of interest. No similar provision is contained in the Senate Bill. The conflict of interest section in the House Bill, 42.40.220, says a board member or executive officer may not participate in a decision of the corporation if he, or an immediate family member, has an interest unless their interest is remote. Interest and remote are defined and a procedure is set out for situations where the application of the section is not clear. In addition, the board shall adopt rules to further define conflict of interest and ethical rules 120 days after its first meeting.

Section 42.40.250 In addition to other powers authorized by law, the corporation may exercise certain specified general powers listed in this section.

In addition to slight drafting changes found in numbers (10), (11), (19) and (20) the House Bill, [CSHB 512 (Trsp)], contains two additional powers. Number (27) of the House Bill provides the power to own subsidiary companies or enter into agreements where part ownership or a similar interest in another corporation is part of the agreement. Number (28), of the House Bill seems to allow additional railroad activity which could technically be beyond the powers to extend the current railroad facility.

Special Note: The House Bill, [CSHB 512(Trsp)], contains a section requiring an oversight report to the governor and the legislature before certain action is taken (Sec. 42.40.280). The Senate Bill contains no similar provision.

Section 42.40.260 A report describing the operation and financial condition of the corporation during the preceding fiscal year of the railroad shall be distributed to the governor and the legislature within 90 days after the fiscal year ends.

The House Bill, [CSHB 512 (Trsp)], also includes a provision that the report may include suggestions for legislation relating to the structure, powers or duties of the corporation or to operate facilities of the corporation.

Section 42.40.270 The board shall have the records of the corporation audited annually. Corporation [illegible] be made available to an auditor appointed by the governor or to the legislative audit division.

In addition, the board is required to have an annual performance audit conducted by a recognized railroad management expert.

In the House Bill, [CSHB 512 (Trsp)], the performance audit is to be conducted by a qualified professional performance auditing firm rather than a railroad management expert as provided in the Senate Bill.

Section 42.40.280 The board must adopt a long-range program and capital improvement plan. The plan covers a five year period and must be updated annually. Copies of the updated plan are to be provided to the governor and the legislature by December 1 of each year.

The House Bill, [CSHB 512 (Trsp)], requires separate reports for each subject area. In addition, the board is required to consult with other state agencies when they develop the plans if another state agency is affected by their plans.

Section 42.40.320 The corporation may not issue stock, pay dividends, make private distributions of assets, make loans to board members or employees or engage in business for private benefit. The corporation may defend and indemnify a current or former employee, agent, or board member against costs incurred in connection with a civil or criminal action if the person acted in good faith on behalf of the corporation and within the scope of his official duties or powers. The corporation may purchase insurance to protect its employees, agents, and board members for actions arising out of the performance or failure of performances of duties for or employment with the corporation.

Section 42.40.350 Land acquired by the corporation is under the control of the corporation. Railroad rights-of-way or easements are railroad utility corridors. Land other than right-of-way or easements is rail land. Future railroad utility corridors must be at least 100 feet wide on both sides of the center line of the extended main or branch line, or may be less if adjoining land does not belong to the corporation. Portions of the utility corridor may be leased or rented for other transportation services if the use does not restrict other parallel uses of the utility corridor. The corporation may sell or lease rail land however, none of the railroad utility corridor may be sold.

The House Bill, [CSHB 512(Trsp)], requires legislative approval for sale of rail land.

Section 42.40.360 The board may nominate federal land for state selection for a railroad purpose. The Commissioner of Natural Resources would acquire the land through the federal land selection process.

In addition, the board may request any state land from the Department of Natural Resources. Upon receipt of the written request the Commissioner of the Department of Natural Resources must reserve the land in the railroad's name for 180 days.

Section 42.40.370 When the railroad requests state land under the preceding section the Commissioner has 90 days to reply in writing whether or no the request has been denied, denied in part or if the request has been granted. A conveyance under this section may be for less than fair market value and, absence a reservation to the contrary, vest full ownership of surface and subsurface rights. The land may be reconveyed back to the state if it is no longer necessary for the corporation's purposes.

The House Bill, [CSHB 512 (Trsp)], does not contain a provision allowing transfer to the corporation for less than fair market value.

Section 42.40.380 The corporation is authorized to relocate rail facilities to state land when an emergency exists. The Chief Executive Officer makes the determination that it is necessary to relocate for safe and adequate rail operations. After the relocation the corporation is required to notify the Department of Natural Resources.

The House Bill, [CSHB 512 (Trsp)], does not require an emergency condition, rather it says simply that a physical condition must require relocation. However, the House Bill requires concurrence of Department of Natural Resources before the move.

Section 42.40.390 The board may develop rules governing land used by a third party. The rules are to protect the common health, safety, and welfare of the public and may not be limited by leases, contracts or other transaction.

No comparable provisions in the House Bill.

Section 42.40.400 The corporation is authorized to exercise the power of eminent domain and declaration of taking.

Section 42.40.410 The corporation may vacate land acquired for railroad purposes by filing in the appropriate recording district.

Section 42.40.420 The corporation may acquire interests in federal land on its own behalf.

Section 42.40.430 The corporation may authorized municipal use of rail land. It may also authorize a walkway or trail on the utility corridor so long as parallel uses are not restricted. Before authorizing the use of either rail land or the utility corridor, the municipality must sign a hold harmless agreement and indemnify the corporation for any judgment against it for use related to the municipal use. When the corporation determines the use is inconsistent with expansion or replacement of railroad facilities the municipal use must be stopped.

The House Bill, [CSHB 512(Trsp)], allows the granting of a right-of-way on any rail property for use of a pedestrian walkway or trail. It does not contain a provision protecting parallel uses of the railroad corridor nor does it state who shall determine when the municipality shall vacate the right-of-way if it interferes with rail use.

Section 42.40.440 The corporation may acquire surplus property from either the federal government or the state.

Special Note: The House Bill contains a provision requiring compliance with state law if pesticides or herbicides are used by the corporation.

Section 42.40.500 A liability incurred by the corporation may be satisfied only from the assets of the corporation and no creditor has a right of action against the state.

Section 42.40.510 The corporation must obtain a fidelity bond for its board members and officers responsible for finances.

Section 42.40.520 The corporation is required to keep in force all manners of insurance to protect its assets, services, and employees from any potential liability. It may, however, provide for certain self-insurance retentions.

The corporation must provide public liability insurance under the House Bill. It is not authorized to self-insure.

Section 42.40.530 Revenue generated by or appropriated to the corporation shall be retained and used for railroad purposes by the corporation.

Section 42.40.540 With the concurrence of the governor, the corporation may request an appropriation from the legislature to assist it in carrying out its general powers and preparing long-range expansion and capital improvement plans.

Analysis, HB 512 & SB 352, (cont'd)

Section 42.49.600 The corporation may issue bonds and bond anticipation notes. The principal and interest are payable from corporation assets. The board shall by resolution establish the form and manner of execution of bonds or bond anticipation notes. They may be sold as determined by the board and shall mature at the time, not exceeding 50 years from their date, determined by the board. The proceeds from the bonds may not be used for any other purpose than that for which the instruments were originally issued. There is also a list of mandatory requirements that the instruments must comply with.

Special Note: The House Bill, [CSEB 512(Trep)], sections on bonds and notes is substantially different from the Senate version. However, the powers, duties and obligations, of the corporation in relation to its ability to raise money through bonding ostensibly remains the same.

Section 42.40.610 Bonds and notes issued by the corporation are negotiable instruments.

Section 42.40.620 Bonds and notes issued by the corporation are securities in which all public bodies of the state and other financial entities may invest funds.

Section 42.40.630 Payment of the principal or interest on bonds may be made from assets or revenue of the corporation regardless of the source.

Section 42.40.640 This section authorizes the board to enter into certain agreements with holders of the bonds or bond anticipation notes and provides for a general authority to enter into additional agreements in the absolute discretion of the board if an agreement will make bonds or notes more marketable.

Section 42.40.650 The corporation may issue interim receipts or temporary bonds or bond anticipation notes exchangeable for bonds or bond anticipation notes once they have been executed.

Section 42.40.660 The corporation may issue refunding bonds. They may be sold or exchanged for outstanding bonds and the proceeds applied to the purchase, redemption or payment of outstanding bonds.

Section 42.40.670 The board is required to retain a financial advisor independent of an underwriter who is negotiating with them for a bond sale.

Section 42.40.680 The signatures of corporation officers on bonds or notes are valid regardless of the officers' subsequent relationship to the corporation.

Section 42.40.690 The pledge of assets of the corporation to the payment of bonds or notes is valid [illegible] bonds are subject to the lien of the pledge without physical delivery or other act. The corporation is not prohibited from selling assets subject to a pledge.

Section 42.40.700 A holder of bonds or notes or a trustee may enforce all rights under this chapter, the trust agreement or resolution, or any other contract executed by the corporation relating to the bonds or notes and may compel the performance of duties of the corporation required by law or the trust agreement or resolution.

Section 42.40.710 The state is not liable for the debts of the corporation. Bonds and notes are payable solely from the revenue or assets of the corporation and are not a liability of the state or a pledge of the faith and credit of the state. Each bond and note issued by the corporation must contain a statement that the corporation is not obligated to pay it except from the revenue or assets pledged for it and neither the faith and credit nor the taxing power of the state is pledged to the payment of it.

Section 42.40.720 An officer, board member, or employee of the corporation is not subject to personal liability because of the execution or issuance of bonds or notes.

Section 42.40.750 Employees of the railroad are employees of the corporation and not of the state. Laws relating to public employees do not apply.

Section 42.40.760 The provisions of the Public Employee Relations Act do not apply. However, non-executive officials may organize and engage in collective bargaining.

Section 42.40.770 The board or the employees organization may request the Department of Administration to participate in their contract negotiations. Any labor agreement accepted by the two parties must have a grievance procedure which has binding arbitration as its last step.

The House Bill, [CSEB 512(Trep)], provides that the Department of Administration may participate in labor negotiations without stating at whose invitation or if in fact they need to be invited to participate. In addition, the corporation is required to confer with the Department of Administration before entering into labor negotiations.

Section 42.40.780 There is created a railroad labor relations agency made up of three members appointed by the governor. The agency shall perform the functions described in AS 23.40.090 - 23.40.190 which are the functions currently carried out by the state personnel board for all state employees.

It should be noted that the House Bill, [CSEB 512(Trep)], has spelled out the provision of AS 23.40.090 - 23.40.190 rather than cite them as the Senate Bill does. Those provisions can be found in the House Bill at; 42.40.760 which is cited as AS 23.40.230 in the Senate Bill; 42.40.780 which is cited as AS 23.40.100 in the Senate Bill; 42.40.780 which is cited as AS 23.40.110 in the Senate Bill; 42.40.770 which is cited as AS 23.40.120 in the Senate Bill; 42.40.780 which is cited as AS 23.40.130 in the Senate Bill; 42.40.790 which is cited as AS 23.40.140 in the Senate Bill; 42.40.800 which is cited as AS 23.40.150 in the Senate Bill; 42.40.810 which is cited as AS 23.40.160 in the Senate Bill; 42.40.820 which is cited as AS 23.40.170 in the Senate Bill; 42.40.830 which is cited as AS 23.40.180 in the Senate Bill; and 42.40.850 which is a slightly modified version of AS 23.40.130 cited in the Senate Bill. The difference between the Senate cite and 42.40.840 is that the railroad labor relations agency acts on its own to initially name the mediator while the Senate cite allows one of the parties to request a mediator. In addition, the House version requires that the mediator be mutually agreeable to both parties and shall be chosen from a list of seven qualified mediators/arbitrators knowledgeable in railway labor agreements. The Senate cite has no similar provision.

Section 42.40.790 Railroad employers have a full right to strike if a collective bargaining unit votes to do so by secret ballot. However, the parties may agree in writing to submit interpretation or application disputes to an arbitrator. Under this provision the railroad employees clearly fall under 23.40.200(a)(3) which are commonly referred to as "class 3" employees.

The House Bill has a substantial rewrite of this section. Basically the House has the employees somewhere between class 2 employees and class 3 employees (see AS 23.40.200). In the House version the employees are permitted to strike for a limited time and may be enjoined by a court of law at the request of the corporation. After being enjoined the dispute is automatically sent to binding arbitration. The arbitrator is the same person as was the original mediator chosen under 42.40.840.

Section 42.40.800 Prohibits use of corporation money, assets or property for political activity except lobbying on matters which directly affect the corporation. It provides for a $5000 penalty for violation of this section.

The House Bill, [CSEB 512(Trep)], has no similar provision.

Section 42.40.810 Prohibits requiring or coercing employees to undertake activities, or restrain from activities, except as directly related to the performance of their official duties.

The House Bill, [CSEB 512(Trep)] has no similar provision.

Special Note: In addition to the provision found in the Senate Bill, the House Bill contains two additional provisions; 42.40.870 and 42.40.880. 42.40.870 allows the deduction of union dues from an employee's wages, it should be noted that the power to make such an agreement exists under 42.40.760(b)(2) which is cited as AS 23.40.130 under the Senate Bill. 42.40.880 provides for a religious exemption from the payment of union dues.

Section 42.40.900 Claims involving activities of the railroad shall be brought against the corporation and not against the state. The corporation board members and employees have the same immunities from liability for claims against the corporation as do other state officers. Claims against the corporation must first go through an administrative appeal process to the Department of Administration before going to court action.

Section 42.40.910 The property of the corporation and its assets are exempt from taxes and special assessments of the state or a political subdivision of the state. Bonds and notes issued by the corporation are exempt from taxation except for inheritance, transfer, and estate taxes.

Section 42.40.920 The corporation is exempt from the jurisdiction of the Alaska Transportation Commission. In addition, it is exempt from the following statutes.

The statutes are:

AS 19 - Title 19 is the statute which sets out the duties of state agencies in regard to highways and ferries and related activities.

AS 23.40 - Chapter 40 deals with the relationship between state entities and labor organizations. But see Article 8 of this legislation for Personnel and Labor Relations provisions.

Analysis, HB 512 & SB 352, (cont'd)

AS 30.15 - Chapter 15 is concerned with state participation in port facilities and development.

AS 35 - Title 35 sets out the duties and powers of DOT&PF with regard to public facilities.

AS 37.05 - Chapter 05 is the Fiscal Procedures Act. For provisions in this legislation which replace similar provisions in the Fiscal Procedures Act see Section 1, 3(A) and (F); 42.40.100(1) and (8); 42.40.120(b)(4), (C)(11); 42.40.260; 42.40.270.

AS 37.07 - Chapter 07 contains the Executive Budget Act. For similar provisions in this legislation see 42.40.260; and 42.40.270 and 42.40.280.

AS 37.10.010 - 37.10.060 - Give the Department of Administration duties related to Public Funds.

AS 37.10.085 prohibits financial aid to corporations by state or political subdivisions.

AS 37.20 sets out a method for the state to receive federal property. Sec. 42.40.360; 42.40.420 and 42.40.440 for comparable provisions.

AS 37.25 is the miscellaneous provisions of the public finance title.

AS 38 - Title 38 is the Public Lands statute. For similar provisions see 42.40.350; 42.40.360; 42.40.370; 42.40.380; 42.40.390; 42.40.400; 42.40.410; 42.40.420 and 42.40.430.

AS 39 - Title 39 the public officer and employee statute. See sections 112.40.01 42.40.030; 42.40.040; (see also Sections 3,4,5, and 6); 42.40.050; 42.40.060 and Article 8 of this Act.

AS 44.62.040 - 44.62.300 - is the Administrative Procedures Act. But see 42.40.150; 42.40.160; 42.40.170; 42.40.180; (see also Section 8); 42.40.200, 42.40.210; 42.40.220 for similar provisions contained in this Act.

Section 42.40.930 If provisions of this Act conflict with the provisions of other law, the provisions of this Act prevail. Where possible, provisions of the Act shall be construed so that they do not conflict with the Alaska Railroad Transfer Act of 1982.

Section 42.40.940 The assets of the corporation revert to the state if it ceases to exist.

Section 42.40.980 Definitions of the chapter are provided.

The House Bill, [CSHB 512(Trans)], has a substantially different list of positions under executive officer.

Section 42.40.990 The short title of this chapter is the Alaska Railroad Corporation Act.

Section 3 Amends 42.40.010 by removing the corporation from the Department of Commerce and Economic Development if the Constitutional Amendment passes.

Section 4 Amends 42.40.020(a) if the Constitutional Amendment passes by removing the Commissioner of Commerce and Economic Development from the board and increases the appointed members of the board from seven to eight.

Section 5 Amends 42.40.020(e) by removing reference to the Commissioner of Commerce and Economic Development if the Constitutional Amendment passes.

Section 6 Amends 42.40.030 if the Constitutional Amendment passes by removing reference to the Commissioner of Commerce and Economic Development and by removing the ability of the governor to remove board members at his pleasure.

Section 7 Amends 42.40.030 if the Constitutional Amendment passes by adding a new section which would state specific reasons for which a governor may remove board members.

Section 8 Repeals 42.40.180 if the Constitutional Amendment passes and replaces it with a new section. The new section gives the board discretion in adopting a rule making process.

Section 9 The corporation must prepare a report on the long-term operations of the railroad that is due January 1, 1988. The report shall include recommendations on the transfer of railroad operations to the private sector.

Section 10 Members of the first board of directors serve terms that differ in length and will result in staggered terms for members that follow.

Section 11 Existing collective bargaining agreements are to be adopted by the corporation and remain in effect for two years. Within 180 days of the first meeting the board and the unions shall establish a procedure for renegotiating the existing collective bargaining agreements.

Section 12 Repeals 42.40.190 and 42.40.200 if the Constitutional Amendment passes.

Section 13 The effective date of Section 3-8 and 12 is the effective date of the Constitutional Amendment should it pass. Section 12 sections 1,2 and 9-11 take effect immediately.

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

OFFICE OF THE COMMISSIONER
Alaska Railroad Transfer Team

March 23, 1984

The Honorable Bette Cato
Chairman, House Transportation Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Cato:

Enclosed per your request is a fiscal note on the committee substitute for HB 512, an Act establishing the Alaska Railroad Corporation. Also enclosed is a detailed analysis with supporting documentation to explain its contents.

The estimates in this fiscal note are based on the results of the Alaska Railroad Transfer Team's Alaska Railroad Acquisition Assessment, released in December 1983. Although our "worst case" scenario has been used for these calculations, current indicators regarding uncertainty over potential traffic increases suggest this analysis for FY 85 is a more realistic forecast for determining actual fiscal impact.

Based on a request from the Senate Transportation Committee, the Transfer Team is re-assessing these estimates to develop a "best case" alternative for legislative consideration. This analysis will factor in the full impact of increased revenues from the export coal movement, SeaWay Express' entry into Seward, and additional special trains to meet the summer cruise ships at Whittier. This information will be provided to your committee as soon as it becomes available.

All estimates are presented in constant 1985 dollars and have been inflated from our original 1983 constant dollar estimates using an annual 6% inflation factor. The "general fund" line under the "funding component" is the projected annual shortfall to the State resulting from acquisition of the railroad. In FY 85, an overall appropriation of $15.8 million will be needed to cover the expected shortfall.

The figures in this note are basically the same as those presented to the Senate Transportation Committee for the CS for SB 352. Another $50,000 per year has been added to this note in response to the higher compensation levels for board members in Sec. 42.40.050, and the additional notice requirements in Sec. 42.40.090.

The FY 85 estimate is based on an assumption that actual transfer will occur somewhere between November and January of that fiscal year. Accordingly, most of the figures (e.g., revenues) are merely prorated for a seven month fiscal year ending in July 1985.

In addition, there are certain one-time, start-up expenditures directly attributable to the actual railroad transfer which causes the sizeable shortfall during FY 85. Included in this area are such items as $4.9 million for replacement of the railroad's working capital fund, $4.5 million for initiation of compliance with OSHA requirements and state and local building codes, and $2 million for specific transition expenses to be incurred by the new corporation in taking over the railroad.

Another $1.75 million of the 300 level contractual category is for the Alaska Railroad Transfer Team to perform its duties during FY 85. These funds are to support several one-time transition activities, most of which are already underway in this fiscal year. All other FY 85 fiscal impact to state agencies as a result of enacting this legislation has also been included in this submittal.

I trust this information helps to explain the highlights of the enclosed fiscal note. If you would like any additional assistance, please do not hesitate to contact me at 465-3900.

Sincerely,

Mark S. Hickey
State Railroad Coordinator

STATE OF ALASKA 1984 LEGISLATIVE SESSION

FISCAL NOTE

Bill/Resolution No.: HB 512
Title: Alaska Railroad Corporation Act of 1984

BILL ANALYSIS

Overview:

This fiscal note is based upon the results of the Alaska Railroad Team's Alaska Railroad Acquisition Assessment, released in December 1983. That document provides a comprehensive analysis of the major issues concerning acquisition of the Alaska Railroad (ARR). It includes a thorough assessment of the financial exposure to the State from ensuring continued rail operations in accordance with the requirements of the Alaska Railroad Transfer Act of 1982 (ARTA).

The estimates presented in this fiscal note are derived from the "worst case" scenario of future railroad activity. Current indicators such as the continued uncertainty over the export coal contracts suggest use of this analysis as the most realistic forecast for determining actual fiscal impact. Please note that the acquisition cost of $22.3 million for railroad purchase has been addressed in a separate fiscal note attached to the acquisition legislation.

While the data and forecasts used in both the Acquisition Assessment and this fiscal note reflect the input and work of the railroad and the United States Railway Association (USRA), the final estimates are based on independent analysis and downward adjustment by the Transfer Team. Our work includes such factors as removal of uncertain revenue increases, increased costs for compliance with state and local building codes, and additional adjustments for necessary capital rehabilitation.

This bill analysis is limited to providing explanations of the fiscal impact resulting from the proposed legislation. It should be noted that there exist policy conflicts between provisions of this legislation and the Sheffield Administration's Policy Statement of January 26, 1984.

Assumptions:

The FY 85 figures are based upon an assumption that actual railroad transfer will occur somewhere between November and January of that fiscal year. As a result, most of the estimates are merely prorated for a partial fiscal year ending in July 1985. However, there are certain one-time, start-up expenditures directly attributable to the actual railroad transfer which cause the sizeable shortfall during what is only a partial fiscal year.

Although a breakout of specific operating expenditures has been provided for FY 85 in order to provide the railroad operating entity a functioning program during its first year of operations, an actual budget structure has not been included to avoid prejudicing the new operating entity's prerogatives to formulate its own budget structure and subsequent submissions. Please note that the FY 85 submittal also contains the request for all funds needed by the Transfer Team and other state agencies to perform the duties resulting from passage of this legislation and acquisition of the railroad.

Although the current legislation places the Alaska Railroad within the Department of Commerce and Economic Development for purposes of the constitution, other sections of this bill anticipate moving it if a proposed constitutional amendment passes next November. Accordingly, this note does not address a specific "agency affected" to avoid a future conflict in this area.

Since the constitutional amendment cannot become effective until November if it passes, this note is predicated on an assumption that all funds for the corporation will be passed through by the respective line agency under which the corporation is located. Funds for all other state agencies will be passed on to the Transfer Team for further processing as appropriate.

Administrative costs incurred by the line agency under which the corporation is located should be minimal and will be covered as part of the corporation's overhead. Please note that all fiscal impact to state agencies resulting from this legislation have been coordinated by the Transfer Team and are reflected in this note.

All estimates are presented in constant 1985 dollars. An annual inflation factor of 6% has been used to convert the original 1983 constant dollar estimates in the Acquisition Assessment.

Operating Expenditures:

This estimate includes both general operating expenses and new expenditures resulting from the railroad transfer (i.e., additional costs due to potential loss of railroad gravel reserves under third-party claims). Included in the former category are costs for maintenance-of-way, maintenance of power and equipment, transportation services, communications, administration and overhead, marketing and real estate management. The latter category includes increased legal and overhead expenses, additional insurance and risk management contributions, fiscal impact to the Transfer Team and other state agencies because of railroad acquisition, and one-time, start-up costs for items such as the printing of new letterhead and the marking of personal property.

Although revenue is projected to increase during FY 87-89, costs during that period are not significantly larger than the first two years of operations due to the sizeable, one-time transfer related expenses immediately following transfer. These estimates are based on historical data provided by current railroad personnel and reflect anticipated operating expenditures needed to comply with the terms of ARTA.

Attachment A provides more details on the FY 85 submittal by object of expenditure. Some $4 million of this estimate is to cover immediate expenditures resulting from actual transfer of the railroad. This includes the following:

(1) $1.750 million for the Alaska Railroad Transfer Team to perform its duties as outlined in Attachment B;

(2) $2 million for specific one-time, start-up costs to be incurred by the new entity for items such as the marking and inventorying of personal property, the printing of new stationery and payment warrants, additional legal costs, and certain corporation expenditures for the new Board of Directors;

(3) $200,000 in funds to conduct a final pre-transfer audit to establish the accuracy of balance sheets and the identification of accounting problem areas; and

(4) $80,000 in additional fiscal impact to the Department of Administration to ensure preservation of railroad archival records and additional labor relations work not budgeted for in the Transfer Team's FY 85 budget memo.

Another component of the FY 85 submittal includes $270,000 in funds in direct response to the following requirements of the legislation:

(1) $200,000 to initiate the Special Report required in Section 9 on the feasibility of attracting private sector involvement in the railroad's operations;

(2) $35,000 to the Department of Natural Resources to respond to any state land request by the corporation under Section 42.40.360; and

(3) $35,000 to fund costs for the new railroad employees labor relations agency as provided in Section 42.40.780.

The remaining estimates in this area reflect the normal operating expenses by category for the part of FY 85 involving state operation of the railroad. These specific estimates have been prepared with the close cooperation of railroad administration and budgeting personnel. All expenditures for per diem and compensation of the Board of Directors have been included in the general estimates for the 100 and 200 categories.

Capital Expenditures:

The capital component of this fiscal note represents a combination of increaed capital costs resulting from transfer and prorated expenditures for ongoing railroad operations. The analysis contained in Chapters 4 and 5 of the Acquisition Assessment serve as the basis for both of these estimates.

In addition, the results from the State's independent engineering condition assessment have been used to project an increased level of expenditure minimally acceptable to begin reversing deterioration of the railroad's physical plant, including the initiation of a systematic plan for replacing aged rolling stock. It is important to understand that engineering condition alone cannot be the basis for a projected level of sustained capital expenditure, but must be tempered by national trade-offs between long-term plant condition and available revenues.

The capital estimate of $15.8 million includes a one-time expenditure of $4.9 million to replace the railroad's working capital fund. ARTA establishes a process where little, if any, money will be transferred from the ARR's Revolving Fund because of pre-transfer federal claims and contingent liabilities that must be paid by the fund. As a result, an amount equal to about one month's worth of operating expenses (which is similar

to working capital requirements for other railroads) is needed to fund and maintain adequate working capital for the railroad after transfer.

Another capital expenditure resulting from railroad transfer is the initiation of compliance with Occupational Safety and Health Act (OSHA) requirements and state and local building codes. Approximately $4.5 million per year has been set aside during the forecasted period to move toward compliance in these areas. Chapter 5.3 of the Acquisition Assessment provides more details regarding this requirement.

The remaining $6.4 million of this estimate covers general railroad capital needs, prorated for the period of state ownership during FY 85. An additional $7.85 million is projected for expenditure by the railroad for this program. Attachment C provides additional information regarding the capital improvement program to be performed during FY 85.

It should also be noted that based on a recent audit review of the ARR's financial statements, about $4 million per year of capital expenditures could just as easily be categorized as operating costs (primarily maintenance-of-way expenditures) if generally accepted accounting principles are applied to the railroad. However, no adjustments have been made with our estimates to avoid creating greater confusion by conflicting with existing railroad procedures prior to a general system overhaul by the corporation upon transfer.

Revenue:

This estimate on a prorated basis represents projected FY 85 revenues from its freight, passenger and real property rental activities. The FY 85 revenue figure is based on a projected commodity mix fairly similar to the last two years of railroad operations. Attachment D contains some additional information from the ARR's 1983 Draft Annual Report regarding FY 82 and FY 83 operations.

These projections are based on information from the railroad and USRA, which were then adjusted downward by the Transfer Team to remove 50% of the net cash from anticipated revenue increases in export coal, interline and pipe traffic. If either of these movements were in fact to materialize in a significant way, it could sizeably reduce the need for general fund assistance during FY 87-89. Likewise, any major downswing from our projections would probably result in the need for even larger general fund assistance during those years.

Funding Source:

The "Other Funds" appearing on the fiscal note are railroad revenues.

Positions:

ARTA basically mandates a two-year period of full protection of current salaries and benefits for all employees who choose to transfer. What happens following that period becomes a matter for contractual negotiation between management and employees.

The figures presented in this part of the fiscal note are the actual number of employees in each category as of March 1, 1984. No estimate can be made of the actual number of those choosing to transfer, although it is anticipated that most employees will do so. In the case of temporary employees, the first number on this line is the actual number today, while the second estimate reflects the average number of temporary hires used in the summer for major maintenance work.

Summary:

The estimates provided in the attached fiscal note are primarily based on the Transfer Team's assessment of the likely fiscal impacts from state acquisition of the Alaska Railroad. It is important to reiterate that the acquisition cost of $22.3 million has been addressed in a separate fiscal note attached to the acquisition legislation.

It is our view that the corporation's overall organization as currently envisioned in the proposed legislation will not have any appreciable impact immediately on the railroad's general financial condition. Beyond the increased cost for modifying the existing administrative and management systems during the first two or three years following state takeover, it is difficult to predict whether the proposed organizational arrangements in this legislation will generate cost efficiencies not enjoyed during federal ownership.

The philosophy in the current legislation is, to the extent possible, to foster a self-sustaining business orientation for railroad operations. This is consistent with the Transfer Team's analysis of the types of steps necessary to achieve a break-even position at some point during the first decade of state operations.

There is no specific mandate in this legislation for new extensions or any more services than those currently in existence. This should allow the railroad adequate time to reorganize and streamline its existing operations. In addition, although several specified planning responsibilities have been added to the railroad's duties, the long-term savings from performing these kinds of systematic assessments should more than compensate for any short-term costs resulting from performance of these efforts.

Attachment E is a ten year summary (FY 73-82) of the railroad financial operations during federal ownership. It should be noted that an additional $66.2 million dollars in congressional appropriations was provided during this period to cover passenger expenses and certain capital needs.

ATTACHMENT A

Operating Budget - FY85

In Thousands (000) of Dollars

This operating budget is prorated for FY 85 except for the impacts to state agencies depicted in the 300 level. All amounts shown are in 1985 dollars. These estimates represent the total prorated FY 85 operating budget for the railroad following state acquisition. Projected revenues from the railroad's operations will serve as the main source of funds for these expenditures, with limited assistance from general fund appropriations.

Category	Amount	Explanation
100 Personal Services	$24,350.0	This funding level is based upon current work force of 478 permanent full-time, 38 part-time and 64 temporary positions. Of this amount salary comprises $19,980 and benefits comprise $4,370. Also included in this estimate are the Board of Directors' compensation expenses.
200 Travel	300.0	This funding level is the estimate of travel funding needs, including the Board of Directors' travel expenses.
300 Contractual	4,100.0	This funding level includes coverage of the following areas: continuation of Transfer Team activities for FY 85 - $1,750.0 (see Attachment B); Transfer Financial Audit - $200.0; $200.0 for initiation of the Special Report required in Section 9 of the bill; Department of Administration - $80.0 for archives preservation and labor relations coordination; costs for the labor relations agency under Article 8 of the bill - $35.0; Department of Natural Resources - $35.0 for land designation activities under Article 5 of the bill. The remainder of these funds are for the railroad's general contractual needs resulting from capital improvement, operations and financial planning activities.

400 Supplies	5,200.0	This funding level is required for the day-to-day operations of the railroad, supporting all facets of operations from administration to maintenance of way.
500 Equipment	1,200.0	This item is the complement of the supply item also supporting day-to-day railroad operations.
700 Grants & Claims	1,500.0	This item provides for funds for the railroad's risk management expenses, payment of damage claims, workmen's compensation expenses and other money claims against the railroad. No grants are anticipated.
TOTAL:	37,350.0	

Attachment B
3/14/84

ALASKA RAILROAD TRANSFER PROJECT

FY 85 PROJECT BUDGET

The goal of the Alaska Railroad Transfer Team is to provide an orderly and informed decision-making process for possible transfer of the Alaska Railroad from federal ownership, thus ensuring continuation of essential rail services in Alaska. If a decision is reached to pursue state take-over of the railroad, then it is also the goal of the Alaska Railroad Transfer Team to organize and oversee a systematic transition from federal ownership.

This document discusses the major work components of the FY 85 budget submittal. The need to pursue some of these efforts is entirely contingent on a decision to acquire, while other work efforts are separate from that decision. Attachment A provides the FY 85 budget submittal as introduced by the Governor. Attachment B is the project budget for FY 84 and provides considerable detail regarding several work tasks, many of which are ongoing in 1985.

The following breakdown is structured on a component or agency basis, versus reiterating specific details regarding ongoing work tasks. As a result, some of this explanation should be read in conjunction with Attachment B in order to fully understand all of the scheduled work efforts.

Work Component #1 - Alaska Railroad Transfer Team Staff

As indicated in Attachment A, funding is needed to support four positions in the Office of the Commissioner, Department of Transportation and Public Facilities. These positions are as follows: a State Railroad Coordinator (Special Assistant II); a Planner IV; a Planner III; and a Correspondence Secretary III. These four individuals comprise the Transfer Team Staff with direct responsibility for performance and coordination of all team activities. This group reports directly to the Commissioner of DOT&PF in the performance of their duties. The following breakdown represents expenditures directly related to this area by object of expenditure.

Object of Expenditure	Description	Amount
Personal Services	4 Positions - DOT&PF	$195,100
Travel	4 Positions - DOT&PF	66,000
Contractual	Printing/limited Professsional Services	35,000
Supplies	Miscellaneous	8,000
	Total	$304,100

Work Component #2 - Department of Natural Resources Assistance

An existing Reimbursable Services Agreement with the Department of Natural Resources will be continued during FY 85. Work efforts covered by this assistance include ongoing support activity by the Division of Technical Services for conveyance documents and related title review work. Additional support by DNR will be provided for coordination with the Bureau of Land Management's cadastral survey work and assistance from the Division of Land and Water Management to implement the railroad transfer. The following breakdown by object of expenditure presents the needed funding for these services.

Object of Expenditure	Description	Amount
Personal Services	4 Positions - DNR	$191,900
Travel	4 Positions - DNR	20,000
Contractual	Miscellaneous Professional Services	30,000
Supplies	Miscellaneous	8,100
	Total	$250,000

Work Component #3 - Department of Labor Assistance

Specific assistance is still needed by the Department of Labor to perform an extensive survey of the railroad's physical facilities in relation to federal and state occupational safety and health laws, regulations and standards. Although this was scheduled for performance during FY 84, insufficient funding required postponement of this work effort until FY 85. Scheduled funds during FY 84 for this effort were diverted to cover additional labor relations work by the Department of Administration and the use of an Engineer-in-Training position to assist with the engineering condition assessment. The following breakdown provides an estimate for this activity by object of expenditure.

Object of Expenditure	Description	Amount
Personal Services	2 Full-time - DOL 2 part-time	$142,700
Travel	2 Full-time - DOL	7,300
Training	2 Full-time	5,200
Contractual	Miscellaneous Professional Services	39,800
Supplies	Miscellaneous	6,500
Equipment	Health Sampling Equipment/ Memory Typewriter	12,000
	Total	$213,500

Work Component #4 - Department of Administration Assistance

Activity in the area will consist of continuing work efforts initiated during FY 84 explained under task #6 of Attachment B. Particular attention must be paid to the analysis of the five collective bargaining agreements, which will support the full scale initiation of the two-year renegotiation process in conjunction with the new entity established to operate the railroad. Another important work effort will be to conduct an orderly transition from federal to state ownership for all personnel matters and ensure that all of the specified requirements from the federal transfer legislation are properly met by the new organization established to operate the railroad. Other efforts include assistance with insurance and risk management needs. The following breakdown by object of expenditure presents the necessary funding for this area.

Object of Expenditure	Description	Amount
Personal Services	1 Full-time Position	$105,000
	2 Part-time Positions	45,000
Travel	1 Full-time, 2 Part-time	[illegible]
Contractual	Liaison Assistance/ Miscellaneous Professional Services	105,000
Supplies	Miscellaneous	2,400
	Total	$257,400

Work Component #5 - Department of Law Assistance

Assistance from the Department of Law is needed for several tasks to be performed by existing AG staff and retained special counsel. Included are the following work efforts: (1) legal work pertaining to the 3(e) (ANCSA) claims against railroad property by native village corporations, including ongoing negotiation and staff work to support the State's position during the adjudication process; (2) legal assistance for the preparation of transfer documents and attention to related land conveyance problems; (3) resulting from the response to various court actions by third parties because the railroad transfer; (4) ongoing legal assistance with issues involving regulation by the Interstate Commerce Commission (ICC); and (5) support of efforts relating to personnel/ labor relation matters. The following breakdown by object of expenditure presents the needed funding for this area.

Object of Expenditure	Description	Amount
Personal Services	Staff Attorneys	$180,000
Travel	Staff Attorneys	20,000
Contractual	Wickwire Lewis	150,000
	David Walsh	75,000
	David Rogers	75,000
	Total	$500,000

Work Component #6 - ICC Rate Valuation/Capital Plan Activity

Work efforts under this component will consist of the following: (1) initiation of planning work necessary to file the appropriate valuation studies before the ICC for purposes of rate-making justification; and (2) performance of ongoing capital planning analysis. This second task will be a continuation of efforts performed under task #7 in Attachment B. It will be coordinated with the initiation of the ICC valuation studies to maximize generation of a data base useful to both efforts. Funding in this area is needed for contractual assistance, which will be directly managed by the Transfer Team Staff.

Object of Expenditure	Description	Amount
Contractual	Consulting Assistance	$225,000
	Total	$225,000

ALASKA RAILROAD TRANSFER PROJECT BUDGET

PROJECT BUDGET

The following depicts the project budget by work component and amount:

		Amount
(1)	Alaska Railroad Transfer Team Staff	$ 304,100
(2)	Department of Natural Resources Assistance	250,000
(3)	Department of Labor Assistance	213,500
(4)	Department of Administration Assistance	257,400
(5)	Department of Law Assistance	500,000
(6)	ICC Rate Valuation/Capital Plan Activity	225,000
	Project Total	$1,750,000

ATTACHMENT C

Capital Improvement Program - FY85

In Thousands (000) of Dollars

This CIP is prorated for FY 85. All amounts shown are in 1985 dollars. These estimates represent costs to the State, and are only part of the ARR's total capital budget. Revenues from the ARR for capital improvements will be added to State funding.

Item	Amount	
Working Capital Fund	$ 4,900	As with all businesses, the ARR will need working capital. It is estimated that one month's worth of operating expenses will be adequate working capital for the ARR.
OSHA/Code Compliance	$ 4,500	As a federal agency, the ARR has not been subject to many health, safety, and building code standards that would otherwise apply. These codes will apply upon transfer, and initial surveys conducted by the State have been used to determine necessary compliance levels. See Appendix C of the Alaska Railroad Acquisition Assessment for more details.
Other Capital Improvements	$ 6,400	These expenses represent the minimal expenditure necessary for the ARR to maintain current levels of service, while initiating efforts to reverse deterioration of physical plant condition. Component priorities have been selected using the findings of the State's independent condition assessment. As indicated in the attached supplement, most capital improvements are for track and roadbed, upgrade of certain cargo handling facilities, and motive power and equipment purchases.
TOTAL	$15,800	

Supplement to Item #3, Attachment C

Track & Roadbed - $6,185,000

Ties - Install 50,000 @ $42.00 ea.	= $2,100,000
Rail - Install 6 miles @ $350,000 ea.	= $2,100,000
Ballast - Install 85,000 yd^3 @ $14 yd^3	= $1,190,000
Other - (Turnouts, sledding, culverts, ditching)	= $ 795,000

Bridges - $883,000

Replace stringers, bents, and spans
Res[illegible] bearings, piles, and abuttments

Tunnels - $1,060,200

Line with multi-plate
Excavate rock fall areas

Docks - $706,800

Preliminary work to rebuild barge slip #1 at Whittier

Communications - $570,000

Complete microwave system
Remove pole lines
Acquire equipment

Motive Power & Equipment - $4,845,000

Locomotives	= $2,250,000
Upgrade Facilities	= $1,845,000
Equipment	= $ 750,000

Note: This totals $14.25 million and [illegible]s the ARR's overall FY 85 capital budget, of which $6.4 million is covered under this fiscal note.

FINANC

DRAFT

The following four financial statements (Tables VIII through XI) describe the financial situation (Note 1) of The Alaska Railroad.

TABLE VIII: STATEMENT OF INCOME
FISCAL YEARS 1982-83
(Thousand dollars)

CATEGORY	1983	1982
REVENUES (Note 2):		
Operating Revenues:		
Freight	$43,787	$47,877
Passenger	3,305	2,627
Other (Note 15)	5,305	4,941
Total Operating Revenues	52,397	55,445
Non-Operating Revenues (Note 16)	3,697	3,352
Total Revenues	$56,094	$58,797
EXPENSES (Note 3):		
Operating Expenses:		
Maintenance of Way & Structures (Note 4)	$9,859(1)	$8,554
Maintenance of Equipment	12,326	11,702
Transportation	19,551	18,685
Traffic Management	865	757
Incidental	4,529	4,152
General and Administration (Note 5)	5,863	5,128
Total Operating Expenses	52,993	48,978
Non-Operating Expense (Note 17)	277	258
Total Expenses	$53,270	$49,236
NET PROFIT (Surplus)	$2,824	$9,561
Add Depreciation included in Expenses	4,404	3,712
CASH FLOW (Gain)	$7,228	$13,273

Notes follow Table XI

(1) Includes $1.7 million which was part of Congressional Appropriation major maintenance and not included in FY 1982 expense.

Expense/Revenue Ratio	94.97%	83.74%

Notes follow Table XI

A modern wheel truing machine was installed in a newly constructed shop building in 1983.

NOTES TO FINANCIAL STATEMENTS

1. SUMMARY OF ACCOUNTING POLICIES

The Alaska Railroad uses the generally accepted principles, standards, and related requirements of governmental accounting as approved by the Comptroller General of the United States. Operations are conducted in a manner consistent with related commercial enterprises and, at the same time, in conformance with the requirements incumbent upon a Government agency.

As is the customary practice of the industry, the Railroad uses betterment and retirement accounting instead of depreciation accounting for roadbed and track. Under this method, prescribed by the Interstate Commerce Commission, the cost of replacing tracks and structures--less salvage recovered--is charged to the appropriate operating expense account and only the cost of betterments is capitalized. These capitalized items are not depreciated, but upon retirement of the tracks and structures, the entire capitalized amounts--less salvage recovered--are charged to expense.

The accounting system and related procedures disclose financial condition and operating results to provide full accountability of the Government's investment in the Railroad and to afford management the necessary data to carry out its responsibility in the most efficient and economical manner.

The Railroad is financed from a revolving fund.

2. REVENUES

Revenues from rail operations are included in income on an accrual basis upon the completion of service.

3. EXPENSES

Expenses are accrued or applied or both on a basis consistent with generally accepted accounting principles.

4. MAINTENANCE OF WAY AND STRUCTURES

Maintenance of way and structures include expenses incurred by engineering ($9,207,000) and communications ($652,000).

5. GENERAL AND ADMINISTRATION

General and administration accounts include expenses for headquarters and staff ($1,378,000) and the administration department ($4,485,000).

6. EXTRAORDINARY ITEMS

Extraordinary items include the loss on excess current inventories ($23,000), deferred outlays ($3,760,000), prior-year adjustments ($697,000), and costs associated with the transfer evaluation ($1,166,000).

7. DEPRECIATION

Depreciation is computed using the straightline method and is based on estimated service lives of depreciable properties, except for the railway track and structures, which are computed using the industry betterment method. Depreciation charges are determined by using the composite or group rates applicable to various classes of property.

The following is a list of depreciation charges in FY 1983:

	(Thousand dollars)
Mechanical - equipment	$2,807
Engineering - buildings and structures	892
Transportation - docks	438
Communications	170
Non-operating	66
Other	31
Total	$4,404

8. CASH

Cash refers to the fund balance with the U.S. Treasury, which is the net amount of cash receipts, e.g., revenues, proceeds from sales, and amounts of congressional appropriations, less disbursements.

9. TRUST AND DEPOSIT FUNDS

Trust and deposit funds include special deposits and other collections not covered by the revolving fund and cleared by disbursement or transfer, as appropriate. A contra account to this asset account is reflected in the liability section.

10. MATERIALS AND SUPPLIES

Inventories, consisting of replacement or repair parts for equipment and road property, construction materials, and fuel, are valued at average cost, including freight.

11. LAND

Land includes only property purchased by the Railroad from private owners and carried at acquisition cost. The Railroad owns over 38,000 acres withdrawn from the public domain at no cost; this land is not included in the financial records.

12. ADDITIONS AND BETTERMENTS IN PROGRESS

This is a control account for authorized capital projects during the period of construction or procurement. Upon completion of the capital project, the related costs are transferred into the appropriate fixed asset property account.

13. PROPRIETARY INTEREST OF THE U.S. GOVERNMENT

The proprietary interest shows the Federal Government's net interest in The Alaska Railroad. At the end of FY 1983, it is summarized as follows:

	(Thousand dollars)
Appropriation by Congress	$259,496
Allotments from other agencies, sales of lots, etc.	1,724
Property transferred or donated (not public domain)	19,903
Earthquake losses	(16,738)
Deficits from operations and capital losses to 6/30/54	(63,764)
Retained earnings (7/1/54 to 9/30/82)	(18,171)
FY 1983 operating results	2,824
Extraordinary Items (Note 6)	(5,646)
Total proprietary interest of the U.S. Government	$179,628

14. CONGRESSIONAL APPROPRIATIONS

Funds appropriated by Congress were obligated within the fiscal year, as shown below:

	(Million dollars)	
	FY 83	FY 82
Congressional appropriations received	$7.60	$6.16
Obligated during fiscal year	$7.60	$6.16
Amount unobligated at end of fiscal year	$0.00	$0.00

15. OTHER OPERATING REVENUES

Other operating revenues include those revenues that were neither freight nor passenger. Individual accounts exceeding $90,000 in FY 1983 were:

	(Thousand dollars)
Reimbursable services	$2,036
Sale of non-invested property	1,301
Reimbursements - real estate, utilities, and equipment	541
Whittier shuttle - vehicles	533
Wharfage and handling	148
Mail	145
Switching	116
Equipment rentals	90
All other	395
Total	$5,505

16. NON-OPERATING REVENUES

Non-operating revenues in FY 1983 were:

	(Thousand dollars)
Miscellaneous rentals	$3,466
Interest earned	144
All other	87
Total	$3,697

17. NON-OPERATING EXPENSES

Non-operating expenses in FY 1983 were:

	(Thousand dollars)
Buildings	$199
Depreciation	60
Equipment	10
All Other	2
Total	$277

At a re-enactment of the original golden spike ceremony Governor Sheffield wields the same maul used by President Harding in 1923.

DRAFT

FREIGHT

Table II shows freight revenue tons and freight revenue dollars by major classification of commodities for fiscal years 1983 and 1982. Total tonnage for fiscal year 1983 exceeded fiscal year 1982 by 34 percent. For the third consecutive year sand and gravel led all other commodities in percentage gains. The primary cause of the 60-percent escallation was a vigorous private and business construction year plus increases in public works projects in Anchorage. The drop in movements of iron and steel products from Seward to Fairbanks destined for the North Slope from its peak in 1982 accounted for the return of manufacturers and miscellaneous products to a lower level, but still above FY 1981.

TABLE II: FREIGHT TRAFFIC BY COMMODITY

COMMODITY	1983 FY	1982 FY	% CHANGE
REVENUE TONS CARRIED (000's)			
Sand and Gravel	4,397.7	2,753.8	+ 59.7
Coal	625.8	653.6	- 4.2
Petroleum, Oil, Lubricants	462.2	439.4	+ 5.2
Manufacturers and Misc.	323.1	449.9	- 28.2
TOFC/COFC (Piggyback)	98.0	122.4	- 19.9
Products of Forests	105.1	77.0	+ 36.5
Products of Agriculture	6.1	6.8	- 10.3
Total Tonnage	6,018.0	4,502.9	+ 33.7
REVENUE DOLLARS (000's)			
Sand & Gravel	6,647	4,556	+ 45.9
Coal	5,007	5,072	- 1.3
Petroleum, Oil, Lubricants	9,723	8,376	+ 16.1
Manufacturers and Misc.	15,704	22,512	- 30.2
TOFC/COFC (Piggyback)	3,625	4,915	- 26.2
Products of Forests	2,955	2,301	+ 28.4
Products of Agriculture	126	145	- 13.1
Total Revenue	43,787	47,877	- 8.5

PASSENGER

Aggressive and expanded advertising and marketing resulted in an overall increase of 21 percent in passenger ridership as shown in Table II. The marketing efforts included active promotion of tour packages which attracted, for the first time, nine cruise ships to stop at the Railroad's Port of Whittier, and provided over 14,000 of the special train riders.

TABLE III: PASSENGERS HANDLED

SERVICE	1983 FY	1982 FY	% CHANGE
Anchorage-Denali-Fairbanks	61,887	60,810	+ 1.8
Anchorage-Portage-Whittier (Shuttle)	117,740	95,449	+ 23.4
Specials	31,732	18,857	+ 68.3
Total Passengers Handled	211,359	175,116	+ 20.7

The number of vehicles carried on the Anchorage-Portage-Whittier (shuttle) service was 19,516, up 10 percent over FY 1982.

TARRIFS

The major rate adjustments made in FY 1983 are reflected in Table IV:

TABLE IV: FY 1983 TARIFF CHANGES

TYPE	DATE	% INCREASE
Interline	1-17-83	5
Intrastate:		
General Commodities	2-12-82	5
Gravel	4-19-83	3
Passenger:		
Anchorage - Fairbanks	1-01-83	10
Whittier Shuttle	7-01-83	10

Anchorage
CHAMBER of COMMERCE

Crossroads of | the Air World

Representative Bette Cato
State Capitol
Pouch V
Juneau, Alaska 99811

Dear Representative Cato,

For several years the Anchorage Chamber of Commerce has been closely following the transfer and operation issue of the Alaska Railroad. The Anchorage Chamber has expressed its support of a strong independent railroad which operates as a business entity.

We feel our objectives, and the citizens of the state, are best achieved through passage of HB 512. The major elements in this legislation which we support are as follows:

1. Specific reference under the legislative purpose of the eventual transfer of the railroad to the private sector.

2. The independent status of the Corporation as an entity of the State.

3. The strength of the Corporation Board of Directors identified by its powers and duties.

4. The establishment of the Executive Officers of the railroad to manage the day-to-day activities of the railroad.

5. We strongly support the Railroad Corporation right to hold and manage its lands including the right of eminent domain, and the right to request additional lands for railroad purposes.

6. We support the inclusion of the strong bonding authority of the Alaska Railroad Corporation.

7. We support the railroad generated revenues staying within the Corporation for future railroad purposes.

8. And finally, we support the Alaska Railroad employees being employees of the Corporation.

We would like to propose one addition to Article 4, Section 42.40.300 General Powers. We recommend that the Corporation be permitted to lease a portion or all of the operation of the railroad to a private entity. We feel this addition should be granted to the Corporation as an option to their management prerogatives and is within the overall intent of the proposed legislation.

We recommend your support of this legislation.

Sincerely,

Al Fleetwood, President
Anchorage Chamber of Commerce

QUESTIONS/CONCERNS OF COMMITTEE

Railroad Land

- Surface and subsurface rights -- gravel deposits
- Classification of lands by DNR -- who has power of eminent domain?
- Legal requirements/restraints for land disposal by Railroad
- Revenues from managing subsurface resource development
- Open dock facility in Seward

Constitutional Questions

- Dedication of funds
- Is is constitutional to set-up separate department or corporation-independent Railroad authority or state-owned
- Governor appointed Board of Directors with legislative confirmation-constitutional amendment
- Oversite for Railroad-Executive Budget Act, Admin Procedures Act, Fiscal Procedures Act--and, who administers

Miscellaneous

- Value of non-operating properties
- Ultimate liability for Railroad
- Bond rating-default by Railroad, Borrowing level from State-bond selling power-state's credit rating
- Do we want labor contracts as part of transfer bill-who is responsible for negotiation of collective bargaining agreements-state or corporation?
- Consistency in bill wording-as long as Railroad gets public money must get public oversite
- OSHA and FRA requirements-how do we want to handle them-waivers of compliance for the state
- ICC exemption for state
- Number of states that own Railroad and the type of authorities set-up

Honorable Bette Cato
Alaska State Legislature
Pouch V (MS 3100)
Juneau, Alaska 99811

Dear Representative Cato:

Attached to this letter are a few suggested amendments which we believe to be in the best interest of the State, the citizens, and various modes of the transportation industry in the State of Alaska.

We do not feel that our suggestions are so restrictive that the Alaska Railroad will not be able to carry on with an economical/operational program and keep the Alaska Railroad a viable institution. The Authority, composed of astute businessmen and a General Manager who knows how to operate and market his railroad as a free enterprise business, will succeed. After all, we are all working for our share of the Alaska freight "pie." The only difference is that the private sector pays taxes to City, State, and Federal Governments, and pays the commercial interest rate for his capital.

Trust these suggestions are accepted and reviewed in an unbiased manner.

Thank you for your consideration and taking the time to review. All we, in the private sector, are asking for is to be able to compete on an equal basis.

Sincerely,

Hal Schuyler

SENATE BILL NO. 352

Suggested amendments that should make for a better bill:

1. Page 2, Section 1, Line 17. Add: "and to apply for any Federal monies to which the State would be entitled, or may be available;" §605 of ARTA.

2. Page 2, Section 1, Line 21. Add the word "rail" between "economical" and "transportation" in the middle of the sentence.

3. Page 2, Section 1, Line 28. Add: Paragraph "(H) The Corporation will not use State investments, subsidy money, non-taxable property and chattles in considering the pricing of the property services of the railroad."

4. Page 7, Article 1, Section 42.40.110, Delegation, Line 7. Add: "(12) Applying for subsidies, grants and endowments available from Federal, State or Private entities."

5. Page 8, Article 3, Administrative Provisions, Line 19. Add: "This shall be a public document."

6. Article 8, General Provisions, Page 27, Line 26. Prior to "Where possible," add: "The Corporation shall comply with and be subject to, all provisions of the Antitrust Laws." If this sentence cannot be added, strike out "Where possible."

CITY OF OPPORTUNITY

February 21, 1984

The Honorable Bette M. Cato
Chairman
House Transportation Committee
State of Alaska
Pouch V
Juneau, Alaska 99811

Dear Representative Cato:

As a follow-up to the public hearing held by the Transportation Committee on Saturday, February 18, 1984 at the Borough Building, Soldotna, Alaska, please enter the following comments concerning House Bill No. 512, "An Act establishing the Alaska Railroad Corporation to manage and operate the Alaska Railroad; and providing for an effective date".

I, personally, am in favor of the transfer of the Alaska Railroad from the Federal Government to the State of Alaska for 23 million dollars. The plan to establish the Alaska Railroad Corporation to manage and operate the railroad is a good one, and similar plans have been used successfully many times.

The assets of the railroad in the Anchorage area alone far outweigh the purchase price.

Were the State of Alaska to consider continued economic activity and growth in minerals and agriculture, respectively, the acquisition of the railroad becomes a critical and essential first move. The mining and exportation of coal, and the production and transportation of barley may determine the economic health of at least three large regions of Alaska. One has to visualize the movement of gravel from areas of abundance to urban sections to appreciate the ability of a railroad to move freight cheaply and safely.

The acquisition of the railroad presents problems as well as benefits. The problems are not beyond resolution.

Mr. Tatsuya Ishikara, Managing Director, Market Survey, Japan Railway Technical Service Association, Tokyo, gave a fine report on the benefits of a railroad system at the International Conference on Alaska's Resources that was sponsored by the Resource Development Council for Alaska, Inc. and the State of Alaska. The conference was held February 15 -16, 1984.

This is not a burning issue on the west side of the Kenai Peninsula, but one feels that with not too much effort, a great amount of support for the railroad purchase could be located.

Sincerely,

Justin G. Maile

February 24, 1984

Representative Bette M. Cato
Pouch V
Juneau, Alaska 99811

Dear Representative Cato:

The Alaska Railroad is an important asset to the state and vital to the economy of Fairbanks. For this reason, the Greater Fairbanks Chamber of Commerce and particularly its Transportation Committee has devoted a great deal of attention to the details of the pending acquisition and proposed plans for operation. This has been reflected in our annual Interior Transportation Needs Report published for the past three years and substantial input provided at various public and private meetings.

We have carefully reviewed legislation pending for railroad management and operation. It is apparent that the authors of HB 512 and SB 352 wished to establish a state owned entity to manage the railroad that was as close to a private sector entity as possible given the transfer constraints. We highly support this philosophy and offer the following comments and suggestions to further strengthen this concept.

* We noted that the preamble of HB 512 and SB 352 contains the basic intent and powers of the legislation, but the intent and powers are not repeated in the body of proposed AS 42, Chapter 40. Would it not strengthen this intent by setting it in State Statute also?

* SB 352 and HB 512 offer the most attractive organization to operate the railroad within the state government. We believe it is preferable to have the railroad as an operating entity separate from the Department of Transportation and Public Facilities (DOTPF) or any other state department provided that DOTPF is substantially involved in railroad expansion efforts.

* All legislation is similar in that the governor appoints a board of directors to provide overall railroad direction; however, SB 10 establishes a stronger criteria for membership selection. The composition of the board will determine if the railroad is to be

operated successfully as a prudent state investment. For this reason, we believe it important to consider that the appointed board members will have a vastly different responsibility than most other state boards, commissions and advisory groups.

The board of directors for the railroad will direct a megacorporation which will be dependent upon the expertise of the directors for profit and growth. The talents and expertise of the board members will be utilized for profit and their obligations are similar to those of directors of corporations in the private sector. For these reasons, we believe their selection and remuneration should be similar. While SB 10 provides better criteria for board membership selection, neither bill addresses the question of remuneration adequately. We suggest that perhaps renumeration should be similar to that of a legislator. This could ensure the incentive necessary for full commitment by the board members.

* Neither bill ensures that Interior Alaska (or any other area) is represented on the board. This is of utmost importance to the position of the Chamber of Commerce. We are not prepared to endorse any legislation unless we are assured that Interior Alaska has proper representation on the board of directors.

* It is our interpretation that HB 512 (SB 352), as they are now written, would not allow railroad expansion into other modes of transportation other than contractual arrangements. We concur with this wording as long as the railroad remains in controlling state ownership.

* The most significant difference between SB 10 and HB 512 (SB 352) lies in state overview of railroad operations. This is an extremely sensitive issue. SB 10 provides a close overview by the administration and the legislature; while HB 512 reflects almost no overview. This lack of overview extends to other state assets made available to the railroad. It appears that the authors of SB 512 tried to incorporate mecnanisms to insure prompt and economically sensitive attention from other state agencies based upon frustrations experienced in the past when dealing with these agencies. While we are sympathetic to these frustrations, we do not believe it wise to attempt to cure ills of other state agencies through the "Department of Railroads." They should be addressed in a more direct manner. In our opinion departments within the state should not have their primary responsibility compromised by overriding authority from another department.

State land and funds used for railroad operation demand some overview, yet the railroad should not be subject to constant review and approval by the administration and/or legislature. We offer the following suggestions to deal with this sensitive issue:

1. A distinction be made between railroad operation and railroad expansion. Railroad operation would be defined as operating the railroad as received from the federal government, the initial operating budget as set by the legislature and future subsidies as requested by the governor and/or provided by the legislature. The board of directors should have complete authority over railroad operation. Subsequent subsidies would have automatic state overview since they would be at the discretion of the legislature. Land ownership, as received from the federal government, should be transferred to the railroad corporation in fee simple (both surface and subsurface rights). Bonding for the railroad operation (new equipment, upgrading track, etc.) would be limited to railroad revenue bonds and would not obligate any other state asset. Since these bonds would reflect only the railroad's financial strength, the board of directors should have complete authority to obtain such bonding.

2. Expansion or certain railroad services (such as passenger service) may be desirable for reasons other than profit motive, and the state may wish to provide services or extensions to guide and promote the state's development. State land, funding and/or bonding based upon other state assets will be necessary. A board with a profit mandate would be reluctant to embrace these measures if they would adversely affect the profitability of the railroad, and the state government should share in this responsibility and authority. Therefore, it is suggested that action requiring state assets (land, funding or bonding) receive close overview. State land used for railroad purposes should be surface rights only (excluding gravel and possibly coal extraction). Future rights-of-way should be by permit within a state-owned transportation corridor established for all modes and utilities.

The above described concept provides for complete board authority and responsibility for current railroad operation and profitability and limits liability to railroad assets. State overview would be assured when assets other than the railroad's were pledged and when expansion or services were deemed in the state's best overall interest even though adversely affecting the railroad's economy.

* Neither bill adequately addresses private ownership. One method which might be considered is that the railroad corporation create stock and schedule its sale to private investors at market value. Such a schedule must reflect the state's best interest and as a minimum include 51 percent ownership for ten years and perhaps longer to meet the federal criteria for continued operation. A sunset requirement for a percentage of state ownership might be

the best vehicle to use. If the legislature did not extend the minimum percent of state ownership at the end of any time increment, then an increased share of ownership would be made available to private investors.

We appreciate the opportunity to provide our thoughts and wish to continue our involvement in developing this legislation.

Sincerely,

Buki Wright

MEMORANDUM

TO: Senate Transportation Committee

FROM: Gross & Burke

RE: Organization of Public Corporation to Operate the Alaska Railroad

At your request, we have reviewed the drafts of SB 10 and SB 352, with a view toward determining the extent to which those bills create a valid legal structure to operate the Alaska Railroad after its proposed purchase. Initially, we were asked whether the legislature had the power to require that gubernatorial appointments to the governing authority[1/] of the railroad be confirmed by the legislature. Both SB 352 and SB 10 presently require confirmation of executive appointments. At a second committee hearing we were requested to advise you of the minimum number of executive branch controls which must be placed on any entity created by law to operate the railroad to insure that the entity would be a part of the executive branch and, therefore, constitutionally sound. We shall answer the questions in the order posed.

SB 10 and SB 352 both provide that appointments made by the Governor be confirmed by the legislature in joint session.

1/ SB 10 speaks of an "Authority" while SB 352 creates a similar organization but describes it as the "Railroad Corporation." Purely for the purposes of simplicity, we will refer to the basic organizational structure at issue here as an "Authority."

We assume that if a similar section remains in a bill, which passes the legislature, the Governor will probably choose to submit the names of his appointees for confirmation just as he submits his appointees to a host of other boards and commissions in state government. It is our opinion, however, that should an occasion arise when the Governor decides not to submit a name or names for confirmation, the legislature would have no legal right to insist he do so.

Our conclusion is based both on the words of the Alaska Constitution and a decision of the Alaska Supreme Court. The constitution provides in Art. III, sec. 25 that:

> The head of each principal department shall be a single executive unless otherwise provided by law. He shall be appointed by the Governor, subject to confirmation by a majority of the members of the legislature in joint session . . .

Sec. 26 of the same article states that:

> When a board or commission is at the head of a principal department or a regulatory or quasi-judicial agency, its members shall be appointed by the Governor subject to confirmation by a majority of the members of the legislature in joint session . . .

The wording of the constitution is clear on its face. The legislature may confirm the heads of all departments, whether they are single executive officers or a board. The legislature may also confirm boards or commissions which are "regulatory or quasi-judicial" agencies. A regulatory authority is, as it implies, one whose basic function is to regulate a particular public activity. The Fish and Game Board is a classic example of such a regulatory board. A quasi-judicial

agency is one in which individual rights are adjudicated. An example of such a board would be the Public Utilities Commission, where contested proceedings determine rates.

The Railroad Authority as established in SB 352 or SB 10 fits under none of these definitions. It is not at the head of a department[2/] nor is it a quasi-judicial or regulatory agency. Under the constitution, then, the legislature has no power to confirm executive appointments to the Authority, unless the legislature can add to the powers of confirmation which are granted in the constitution.

The legislature attempted to do just that in 1975 when it passed a statute authorizing confirmation of a whole list of lesser executive branch officials, including deputy commissioners and certain division directors. The Alaska Supreme Court held that the statute granting the legislature the additional confirmation power was unconstitutional. Bradner v. Hammond, 553 P.2d 1 (Ak. 1976) In the Supreme Court's view, the power to appoint to positions in the executive branch is a power reserved to the Governor under the doctrine of separation of power, except as the constitution permits the legislature to participate in the process through confirmation. If the constitution does not specifically

2/ We recognize that SB 352 provides, "The corporation shall be considered a principal department only for the purposes of Art. III, sec. 26, Constitution of the State of Alaska." (emphasis added) In our view, however, the courts would almost certainly view this purely nominal designation as one purely of form, since the bill does not actually establish a new department with the kinds of gubernatorial controls normally associated with a principal department of state government. This issue of gubernatorial controls is addressed in detail later in this memorandum.

authorize confirmation, there is no legal power to do so and the Governor's power of appointment can not be subjected to confirmation by the legislature. Put another way, the Bradner case holds that the constitution states the outer limits of legislative powers of confirmation; the legislature may not expand that power by statute. While neither SB 10 or SB 352, as presently structured, would withstand constitutional challenge on the issue of confirmation, there are options available to the legislature which would provide a valid legal basis for the confirmation of appointments. We will set these options out briefly for your consideration.

The first and most obvious manner for the legislature to obtain confirmation power is to pass a joint resolution placing before the voters a constitutional amendment that would specifically authorize the legislature to confirm appointments to the Railroad Authority. This amendment could be placed before the voters during this year's election. If the amendment passed, the first appointees of the Governor to the authority or commission would be constitutionally subject to confirmation; if it did not pass, the situation would remain as it is today -- confirmation if and when the Governor chooses to submit the names. We should note that following the Bradner case a constitutional amendment granting broad additional confirmation powers to the legislature was put before the voters and failed, but whether that would be the fate of a more narrowly drawn provision would be difficult to predict.

The second option to insure confirmation would be to create an entirely new department of state government, which would be headed by the Railroad Authority. The sole purpose that new department would be to the railroad. In such an instance, the Authority would be at the head of a department and under Art. III, sec. 26 of the Alaska Constitution, the members of the Authority, would be subject to confirmation. There are, however, certain serious problems which might result from this approach. One of the basic purposes of the present bills creating an independent public corporation or authority (located nominally within a department) is to permit the Railroad Authority to raise money for operations without involving the general credit of the state. If, however, the authority which manages the railroad is a full department of state government there is some real question about its ability to successfully perform this fundraising activity without the involvement of state credit. Art. IX, sec. 8 of the constitution provides that no state debt may be incurred unless (1) it is authorized by law; (2) is for capital improvements; and (3) is ratified by the voters. Sec. XI of the same article provides that the restrictions of sec. 8 do not apply to debts incurred through revenue bonds issued by public corporations or public enterprises of the state when the only security is the revenue of the enterprise or the corporation. Whether or not an entire department of state government can be made a "public corporation" or whether

or not the entire activity of a department of state government would qualify as a "public enterprise" are questions that have never been decided in this state by any court. While the committee can certainly receive advice from legal counsel as to the possible or probable outcome of litigation on these subjects, it would at best be an educated guess. The result might well be that in order to obtain confirmation powers the committee would create a department which, in the end, might be subject to the same bonding restrictions applicable to all other departments of state government. I gather there is no disagreement within the committee that such a result would be highly undesirable. We cannot recommend this method of insuring confirmation powers because the risks are simply to great -- the legislature would be in totally unchartered waters and the magnitude of the questions involved is simply to great to accept that degree of risk.

Having discussed the issue of confirmation, we now move to the second issue posed by the committee. Specifically, that question involves the extent to which a public corporation may be established independently of the authority of executive branch and yet be a part of that branch of government. Art. III, sec. 22 of our constitution requires that all agencies of state government and their respective functions shall be allocated within no more than 20 principal departments.

The only exceptions provided are for "regulatory, quasi-judicial, and temporary agencies." As we view the functions of the operation of the Railroad -- whatever form of entity is chosen -- those functions are not primarily "regulatory" or " quasi-judicial." Further, the railroad operation would not necessarily be "temporary." Although conceivably the railroad could be sold or leased at some point in the future to a private corporation, the existence of the operating entity could well be permanent.

We think it is clear that the Alaska Supreme Court would view the Railroad Authority as performing operational or executive functions and would, therefore, require that the Authority be either a separate principal department or located within one of the already established principal departments. We have already reviewed the problems that would be created if the Railroad Authority would be made the head of an entirely separate principal department. Therefore, we are left with the conclusion that the only other constitutionally sound option is to place the governing board or authority within an existing department of state government.

Simply stated, then, the legal issue you have asked reduces itself to this. On the one hand, the legislature seeks to create an "independent" authority -- one which has financial and political autonomy and is not subject to direct gubernatorial control. On the other hand, the constitution

requires that all executive or managerial functions be a part of the executive branch, which, in turn, is under the supervision and control of the Governor. What then are the limits -- how much gubernatorial control is required to make the "independent" authority a constitutionally valid part of state government?

The cases that the Alaska Supreme Court has reviewed concerning the requirements of Art. III, sec. 22 make it clear that more than mere nominal placement of an independent corporate entity within a department in the executive branch is required. For example, in De Armond v. Alaska State Development Corporation, 376 P.2d 717 (Alaska 1962), it was claimed that the legislation creating the Alaska State Development Corporation was unconstitutional because it sought to create an independent agency that was nominally within the Department of Commerce, but which the challengers claimed was not in actuality within that department. The Alaska Supreme Court rejected this contention and upheld the constitutionality of the Development Corporation. In doing so, the court enumerated a number of features contained in the enabling legislation for the corporation, which demonstrated sufficient ties with the Department of Commerce to justify the conclusion that the corporation was (at least for constitutional purposes) truly within the Department of Commerce.

The factors that the court cited were as follows:

(1) the Commissioner of Commerce had a permanent seat on the board of directors and thus had "considerable influence" on the board;

(2) the other six members of the board were appointed by the Governor, and served at his pleasure;

(3) the board was required to submit comprehensive annual reports to the Governor and legislature;

(4) the financial records were to be audited annually by the legislative auditor; and

(5) the state's bank examiner was required to examine the corporation's records each year.

Additionally, although the court did not make clear what significance this fact had, it noted that the corporation was "temporary" and could be dissolved by a majority vote of the board subject to legislative approval.

Four years later, the court reviewed a similar challenge to the constitutionality of the Alaska State Mortgage Association; i.e. that it was only a nominal rather than a legitimate part of the department of state government in which it had been placed. Walker v. Alaska State Mortgage Association, 416 P.2d 245 (Alaska 1966). The court, however, noted that the mortgage association legislation contained most of the same features which it had cited in De Armond to support its conclusion that the development corporation was properly established within a department of state government. Like

the development corporation in De Armond, the mortgage association members were appointed by the Governor and served at his pleasure. The commissioner of Commerce had a permanent seat on the board of the association. Additionally, the court noted that as further evidence of gubernatorial control, the mortgage association was required to submit detailed annual reports to the Governor and legislature, the financial records were subject to an annual legislative audit, and certified copies of the minutes of every meeting of the association were required to be sent to the Governor.

Neither of these decisions, unfortunately, provide any guidance on the question of the minimum number of factors that will be required in order to meet the constitutional requirements of executive supervision or control. In both cases, however, the court seemed to emphasize two factors over and above all the others. The first was that board members served at the pleasure of the Governor. The second was that the Commissioner of the department within which these independent entities were located served on the board and was a full voting member. These two features were emphasized by the court to demonstrate that the Governor exercised at least partial control over the activities of the board. The court, for instance, noted that while the commissioner was only a single member of a multi-member board his position as a cabinet member would give him

substantial influence. The court further emphasized that the Governor was in a position to exercise influence on an otherwise independent board through the fact if there were a real disagreement in policy, he could exert control over the board members through his ultimate power to reove them. The court, in Walker, cited with approval language from the Superior Court decision in the case to this effect:

> If the Governor is dissatisfied with the executive director in either his capacity as a member of the Alaska State Housing Authority or the Alaska State Mortgage Association, he can assert his authority over the board members to effect the director's removal, and should they disregard his wishes, his alternative is to appoint members to the board who will appoint an executive director satisfactory to the Governor.

Walker, at 250 n.19.

At the same time, the court recognized that there may be important and legitimate reasons for the legislature to insulate a board or authority from direct gubernatorial influence over particular decisions. In the courts words:

> It is true that the Commissioner of Commerce can not dictate the decisions of the Board. Nor can any other state official . . . . It is quite apparent that the legislature intended the board to be free from outside control in making decisions on particular loans.

De Armond, at 724 (emphasis added).

Nonetheless, it is clear from the decisions that there are limits to the degree of insulation that the court will

tolerate and still uphold the constitutionality of the placement of the independent corporation nominally within a department of state government.

Accordingly, it is our view that to insure constitutionality of this bill the legislature should, at an absolute minimum:

1. create an independent authority which is part of an enumerated department of state government;

2. provide that the board for the public corporation or authority be comprised of persons appointed by the Governor and who serve at his pleasure;[3/] and

3. that the commissioner of the department in which the authority is placed serve as a voting member of the board.

3/ There is a secondary, but perhaps no less important, reason why the appointees to the governing body of the railroad should serve at the Governor's pleasure. As a constitutional matter, there is a serious question as to whether any appointee of the executive branch with the exception of those who serve in regulatory or quasi-judicial positions can be subject to any other restrictions but that they serve at the Governor's pleasure. The U.S. Supreme Court has interpreted that under the federal constitution, if an office is "executive" in nature, legislative efforts to restrict the president's power to remove an official are invalid. Myers v. United States, 272 U.S. 178. That opinion has been modified slightly in Humphries Executor v. United States, 295 U.S. 602, as the court held that a member of the Federal Trade Commission could have his term set by Congress and be insulated from removal by the president, but the court was clear to limit its opinion to quasi-legislative or judicial agencies, i.e. those that were actually passing regulations or resolving legal disputes as their prime function. The Railroad Authority would fall in neither of these categories, but would be within a traditional executive agency structure.

We raise this issue because we can be reasonably sure that the content of this bill will be litigated in the courts, if there is any reasonable basis to do so. The appointment of commissioners to the Railroad Authority who serve at the Governor's pleasure would reduce the possibility of legal attack on yet another basis.

It would be advisable, as well, to include at least some of the kinds of provisions (such as the annual reports to the Governor and legislative audits) which the court in De Armond cited as significant, although these may not be essential. Beyond that, the legislature may, in our view, limit the application of acts such as the Executive Budget Act, Administrative Procedures Act and others which impact most executive branch agencies, but are not, in our view, critical to upholding the constitutionality of this public corporation structure.

Alaska Railroad Operating Entity
Sheffield Administration - Policy Statement

The Alaska Railroad is a fundamental link in Alaska's overall transportation system. Ensuring the continuation and development of this rail system as Alaska's transportation needs grow should be a major public policy objective in the years ahead.

Along with most Alaskans, I share this objective. I hope to see the Alaska Railroad provide the maximum benefit to our residents with minimum involvement by State government for regulatory oversight and public funding.

I support the development of the Alaska Railroad from its present status of a federally owned and operated agency to one which is funded and operated to the maximum extent possible by the private sector through a private company management contract or similar form of lease arrangement. I believe it will take a period of time to reach this goal. Consequently, it is important that any legislation provide adequate and specific provisions mandating that these alternatives be addressed.

It is important to keep in mind one essential fact: as long as the Alaska Railroad receives public funding, there must be comparable public oversight and accountability for its operation and management. If we accept anything less, we will be shirking our responsibility to all Alaskans to prudently and properly manage public funds.

I commend the members of our Legislature for the extensive interest they have demonstrated in the Alaska Railroad transfer issue. I know that many legislators have worked hard to develop acceptable transfer legislation which addresses a wide range of State policy concerns and interests over the past several years. Rather than introduce legislation of my own, I look forward to working with the legislation already in preparation provided that it is consistent with my following basic policy considerations:

(1) Railroad operations should be insulated from political interference but remain responsive to the public interest. The public entity selected should be one best able to accomplish this goal.

(2) The railroad entity should be constituted so that it has broad latitude in its operation and financing subject to public interest safeguards in existing state law, including the Executive Budget Act, Fiscal Procedures Act, and Administrative Procedures Act. I realize that certain sections of these laws may not be entirely applicable, and therefore limited exemptions may be necessary.

(3) All revenues generated by the railroad should only be expended for railroad and related purposes.

(4) The railroad should be able to incur bonded indebtedness to an extent consistent with its ability to repay the indebtedness from its own revenues.

(5) The railroad should hold title to the surface estate of all lands received in the purchase and enjoy access to subsurface material necessary for actual rail operations. Specific arrangements should be included to ensure consistency with general state land policies, and to provide that sale of real property cannot occur without the approval of the Department of Natural Resources.

(6) To minimize the State's exposure to railroad liabilities and to lower administrative costs, the railroad should take advantage of the economies of scale afforded by participation in the State's insurance and risk management plans. The Department of Administration should have primary responsibility for the negotiation of collective bargaining agreements with railroad employees.

(7) The railroad should prepare and implement operating and capital plans, and explore long-range expansion needs. No later than three years after acquisition, the railroad must prepare a report for the Governor and the Legislature recommending a method for obtaining private sector participation in railroad operations.

CITY OF SEWARD AND SEWARD CHAMBER OF COMMERCE JOINT
POSITION PAPER ON STATE ACQUISITION AND MANAGEMENT
OF THE ALASKA RAILROAD

As the community from which the Alaska Railroad had its beginning, Seward has been closely tied to the railroad for its lifeblood, for all of it's 80 year history. The acquisition and management of the railroad by the State of Alaska is of vital concern to the citizens of this community.

The present Alaska Railroad operation, despite some physical plant problems, is basically a sound operation. Clearly there is a need for plant improvements and it needs the ability to extend rail to the resource rich areas of our state. Any new proposal for management must seek to maintain those parts of the railroad that are operating effectively, and to cure, when possible, the liabilities of the present system. The City of Seward is concerned that without this analysis, the railroad could become less of a rail service. We should improve its physical plant, allow it to function under professional management. If this becomes the case, the City of Seward would fully support the railroad transfer even if a price has to be paid. We would not, however, support such a transfer if the rail system is not improved, and still requires a cash outlay by the State.

MANAGEMENT:

As an integral part of the State's long term economic development policy, the Alaska Railroad must be managed in such a way as to minimize the influences of political cycles resulting from our election process. It must be operated with the fiscal strength necessary to overcome the short term changes in government, inflation rates, commodity prices and operating cost.

It is our desire that any Authority created to manage the Alaska Railroad be as professional, efficient and aggressive as possible. We feel that the Authority should operate as similar as possible to private enterprise and if possible, should have the option of contracting for the operation of the railroad with a private company.

To achieve these goals, the Railroad Authority should not be a Department of the State government, but a separate entity. The Board should represent professionals in the business and service areas allied to railroad operations. The Board should be appointed by the governor, and serve terms of six years. The board members should delegate a significant percentage of the management of the railroad to the railroad's chief executive. The chief executive must be the best person available and possess railroad operating experience, and be compensated accordingly.

The Railroad Authority should have the ability to bond or otherwise obtain funds for upgrading and expansion. The railroad will initially require an investment underwritten by the State.

It is important that the revenues generated by the Alaska Railroad do not become part of the General Fund of the State of Alaska, but be put back into the Railroad's General Fund for operation of the railroad. Equally important is the need for all of the assets, including land to be in the control of the Railroad Authority, not under the Department of Natural Resources. As part of the

transfer agreement, the Federal Government must allow the State clear title to all Alaska Railroad lands. The Alaska Railroad Authority should also possess the right of eminent domain.

DEVELOPMENT OF ALASKA RESOURCES:

Because of Alaska's size of land area, small population centers, and frontier transportation infrastructure, Alaskans are particularly dependent upon the Alaska Railroad for the growth and development of interior resources.

The City of Seward feels the railroad should be expanded and utilized as the primary tool in developing the resources within the State of Alaska. Careful expansion of the railroad will improve the overall business climate in Alaska. We feel it is a legitimate use of State funds for for the State to use its railroad to assist in opening up the undeveloped areas of the state.

PORTS:

Most Alaskan ports are operated by local governments. Recognizing that, it is probable that with transfer of the railroad and its associated ports, the State will find itself competing with local ports. Every effort should be made, if possible to transfer railroad port operations to willing local governments.

IN SUMMARY, we stress that:

The Alaska Railroad be used to promote development and that the transfer and enabling legislation promote that philosophy.

In conjunction with railroad expansion, the impact of a long lead time necessary for railroad extension be recognized and shortened where possible.

Any State acquisition of the railroad be predicated upon the State's commitment to provide funding to upgrade the capital and rolling stock facilities of the existing system.

If the State acquires the Alaska Railroad, it should explore the option of contracting the railroad's operation to a qualified private contractor rather than running it as a State enterprise.

If a State Constitution change is necessary to accomplish the creation of an independent authority, we would support legislation to place the issue on the ballot.

Cook✓

AMENDMENT

Offered in the HOUSE By Miller

TO: HB 512

Page 16, after line 10, insert a new section to read:

"Sec. 42.40.460. MUNICIPAL RIGHT-OF-WAYS. Upon request of a municipality the corporation shall grant to the municipality a right-of-way in a railroad utility corridor or in land owned by the corporation to be used for a pedestrian walkway or trail. Before granting a right-of-way under this section the board may require the municipality to agree to hold the corporation harmless for any use made of the right-of-way and to execute the agreement in a form approved by the board."

RECOMMENDATIONS FOR THE ALASKA RAILROAD CORPORATION

1. The corporation should have full control over the surface and subsurface railroad lands.

   The purchase of the Alaska Railroad is often referred to as "a real estate deal" because of the value of land included in the transfer package.

   Some private leaseholders and municipal governments with railroad-owned waterfronts or city centers would like to see the land transferred to themselves. The corporation, as a matter of policy, should not sell revenue-producing property because it is in the interest of the entire state that the railroad hold these properties for its own needs.

2. The corporation and its union employees should cooperate in modernizing existing labor agreements during the two-year transitional period mandated in the federal transfer legislation.

   Particular attention should be given to any archaic work rules that inhibit efficiency. The goal should be to increase productivity rather than diminish compensation to employees.

   Efficient utilization of railroad employees is essential for a self-sufficient operation.

3. The corporation should not be mandated to propose or conduct feasibility studies for cross-country track extensions or sale of the railroad.

   Major rail extensions and sale issues are not operating issues. The mission of the railroad corporation should be closely focused on matters that affect economics and service to shippers and passengers on existing routes. Feasibility studies are expensive, require extensive staff time, and could drain the limited funds of the railroad.

   Extensions and sale proposals have broad policy implications that can best be considered by the executive and legislative branches of state government or private entities.

4. Passenger operations should be modified to take advantage of revenue opportunities and re-evaluate uneconomic services; a system should be devised to accurately identify passenger service costs.

   Just as land leasing by the railroad is projected to be profitable, passenger service will likely remain a loss operation if all related expenses and capital costs are considered. To control these costs, however, it is important to account for them accurately.

   Reliable cost information is crucial in considering service levels, pricing issues, and capital expenditure decisions.

5. The Board of Directors of the Alaska Railroad Corporation should consist of five to seven voting members representing the interest of the entire public; no board member should be appointed to represent a special interest.

   Directors should be chosen for their professional judgment rather than their representations of special interests or home town. Similarly, non-voting membership is inappropriate.

   Board members should be limited to two five-year terms of service and with staggered terms to mix continuity of experience with new ideas.

12/1/83

If the State elects to acquire the Alaska Railroad in accordance with the Alaska Railroad Transfer Act of 1982, it must compensate the United States for its fair market value. The Alaska Railroad Transfer Team has determined the valuation of $22,271,000 performed by the United States Railway Association should be accepted as reasonable.

In addition to the purchase price, the Transfer Team has identified the total liability to the State associated with acquisition of the railroad. Although there are a few unknowns still under investigation, we have determined that under a low-end or "best case" scenario, that approximately $23.5 million will be needed for additional "start-up costs" to cover the first years of operations. Under a high end or "worst case" scenario, the additional financial exposure to the State from ensuring continued rail operations for the next ten years may run as high as $47.9 million (in 1983 dollars).

The railroad is an important link in Alaska's transportation network, particularly for the surface movement of bulk commodities. Abandonment of rail service would, at the very least, result in costly impacts to the State's highway system.

The federal government has the authority to dispose of the railroad, and appears committed to doing so. There is no guarantee that service will be continued under another disposition. Nor is there any current evidence of a private sector interest willing to step in and guarantee continued rail services.

Acquisition ensures continuation of essential rail services, gives the State control over the railroad's operations, and preserves all future options regarding its final disposition. It also offers the State an opportunity to restructure the existing organization to obtain greater efficiencies and make the railroad more responsive to our goals.

For these reasons, the Sherrieb Administration has accepted the recommendation of the Transfer Team that the State should proceed with acquisition of the Alaska Railroad. Furthermore, additional discussion with the federal government over compensation terms has lead to the conclusion to seek a direct cash acquisition versus more complicated land trades or financing packages.

IN THE HOUSE BY THE TRANSPORTATION COMMITTEE

CS FOR HOUSE BILL NO. 543 (Transportation)

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act authorizing the acquisition of the Alaska Railroad; authorizing the governor to negotiate the transfer terms; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. ACCEPTANCE OF CERTIFICATION REQUIREMENTS OF ALASKA RAILROAD TRANSFER ACT OF 1982. The state accepts, for itself and any entity that might subsequently be created to operate the Alaska Railroad, the certification requirements under 45 U.S.C. 1201 - 1214 (Alaska Railroad Transfer Act of January 14, 1983). Accordingly, the state agrees to

(1) acquire the Alaska Railroad and accept all rail property of the Alaska Railroad under 45 U.S.C. 1203(a);

(2) operate the Alaska Railroad as a rail carrier in intrastate and interstate commerce;

(3) assume all rights, liabilities, and obligations of the Alaska Railroad existing on the date of transfer to the state, including leases, permits, licenses, contracts, agreements, claims, tariffs, accounts receivable, and accounts payable, except as otherwise provided by 45 U.S.C. 1201 - 1214;

(4) protect the employment interests of the employees of the Alaska Railroad during the two-year period commencing on the date of transfer, as required by 45 U.S.C. 1203(d)(3)(A) and 45 U.S.C. 1206;

(5) protect the employment interests of the officers of the Alaska Railroad as required by 45 U.S.C. 1203(d)(3)(E);

(6) allow representatives of the United States Secretary of

Transportation adequate access to employees and records of the Alaska Railroad when needed for the performance of functions related to the period of federal ownership; and

pay now, obligate that we will pay (7) compensate the United States at the value determined by the United States Railway Association under 45 U.S.C. 1204(d).

* Sec. 2. (a) The governor may enter into transfer agreements, compensation agreements, and any other related agreements with the United States Secretary of Transportation in order to secure certification by the secretary that the state has met the requirements of 45 U.S.C. 1203 and in order to secure the transfer of the Alaska Railroad to the state.

(b) Transfer of the Alaska Railroad shall not occur until after the effective date of an Act establishing or otherwise providing for an entity to operate the state-owned railroad.

* Sec. 3. DEFINITIONS. In this Act, unless the context clearly indicates otherwise,

(1) "Alaska Railroad" means the agency of the United States Government that is operated by the U.S. Department of Transportation as a rail carrier in Alaska under authority of 43 U.S.C. 975 - 975(g) (Alaska Railroad Act) and 49 U.S.C. 1655(i) (Department of Transportation Act) or, as the context requires, the railroad operated by that agency;

(2) "certification requirements" means the conditions under 45 U.S.C. 1203 that the United States Secretary of Transportation must certify as having been satisfied by the state before transfer of the Alaska Railroad to the State of Alaska may occur under 45 U.S.C. 1203(a);

(3) "compensate" means payment in full or by credit agreement with cash or pledged funds;

(4) "officers of the Alaska Railroad" means the employees occupying the following positions at the Alaska Railroad as of the day before the date of transfer to the state: general manager; assistant general

manager; assistant to the general manager; chief of administration; and chief counsel.

* Sec. 4. This Act takes effect immediately in accordance with AS 01.-10.070(c).

BILL SHEFFIELD
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

January 26, 1984

The Honorable Joe Hayes
Alaska State House of Representatives
Pouch V
Juneau, AK 99811

Dear Representative Hayes:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill that will authorize the state to acquire the Alaska Railroad. The bill is required so that the certification process mandated by the Alaska Railroad Transfer Act (ARTA; P.L. 97-468) can be effected. Once this certification process is completed, acquisition of the railroad can occur as soon as practicable.

The bill essentially says that the state agrees to meet the transfer conditions set out in the Transfer Act. A more detailed analysis of the bill follows:

Section 1 says that the state agrees to the transfer conditions set out in the Alaska Railroad Transfer Act. Specifically, these points of agreement are as follows:

1) The state agrees to acquire all the rail property of the railroad.

2) The state agrees to operate the railroad as a rail carrier in intrastate and interstate commerce.

3) The state agrees to assume all rights, liabilities, and obligations of the railroad that exist on the date of transfer.

4) The state agrees to protect the employment interests of the railroad employees as required by sec. 604(d)(3)(A)(i) -- (vii) and sec. 607 of ARTA.

5) The state agrees to protect the employment interests of the officers of the railroad as required by sec. 604(d)(3)(E) of ARTA.

6) The state agrees to allow the Secretary of Transportation access to employees and records of the Alaska Railroad.

7) The state agrees to compensate the United States at the appraisal value that was determined by the United States Railway Association.

Section 2 authorizes the governor to enter into the various transfer agreements that relate to the points listed above and that will be required in order to secure certification of compliance with the Transfer Act and thus to secure the transfer of the railroad.

Section 3 defines certain terms used in the bill.

Section 4 provides for an immediate effective date.

I urge your favorable action on this bill as soon as possible so that the transfer of the ownership of the Alaska Railroad to the state can become a reality.

Sincerely,

Bill Sheffield

If the State elects to acquire the Alaska Railroad in accordance with the Alaska Railroad Transfer Act of 1982, it must compensate the United States for its fair market value. The Alaska Railroad Transfer Team has determined the valuation of $22,271,000 performed by the United States Railway Association should be accepted as reasonable.

In addition to the purchase price, the Transfer Team has identified the total liability to the State associated with acquisition of the railroad. Although there are a few unknowns still under investigation, we have determined that under a low-end or "best case" scenario, that approximately $23.5 million will be needed for additional "start-up costs" to cover the first years of operations. Under a high end or "worst case" scenario, the additional financial exposure to the State from ensuring continued rail operations for the next ten years may run as high as $47.9 million (in 1983 dollars).

The railroad is an important link in Alaska's transportation network, particularly for the surface movement of bulk commodities. Abandonment of rail service would, at the very least, result in costly impacts to the State's highway system.

The federal government has the authority to dispose of the railroad, and appears committed to doing so. There is no guarantee that service will be continued under another disposition. Nor is there any current evidence of a private sector interest willing to step in and guarantee continued rail services.

Acquisition ensures continuation of essential rail services, gives the State control over the railroad's operations, and preserves all future options regarding its final disposition. It also offers the State an opportunity to restructure the existing organization to obtain greater efficiencies and make the railroad more responsive to our goals.

For these reasons, the Sherrieb Administration has accepted the recommendation of the Transfer Team that the State should proceed with acquisition of the Alaska Railroad. Furthermore, additional discussion with the federal government over compensation terms has lead to the conclusion to seek a direct cash acquisition versus more complicated land trades or financing packages.

MEMORANDUM

TO: Representative Bette Cato, Chair
House Transportation Committee

FROM: Representative Jim Duncan

DATE: February 23, 1984

RE: Ridesharing Program

I am writing this memo to urge you to schedule House Bill 601 for a hearing in your committee as soon as possible.

House Bill 601 represents the enabling legislation to allow Juneau to embark on a model ridesharing program, which, if successful, could be emulated in other Alaskan communities.

Informal ridesharing is currently occurring in Juneau to some extent; however for the impact to be seen in parking availability, much more needs to be done.

House Bill 601 is the first step in that direction. It would allow the State to purchase vans for van-pooling use. Van-pooling is a federally recognized program eligible for 100% federal funding if properly implemented. It would also allow ridesharing in state owned sedans.

Jeanne Erskine, a local ridesharing consultant has submitted a study which proposes purchase of several vans, enlisting and retaining reliable driver-coordinators and levying of user fees (ranging from $33 to $48 per month) appropriate to the actual cost incurred for each van pool. Each van would carry 9-11 passengers and be provided a reserved parking space in the State parking garage.

Experience has shown that in order to obtain maximum participation there must be a strong commitment by management to the program.

Representative Mike Miller has requested that DOT/PF perform a cost/benefit analysis to determine feasibility of the program.

I have asked Representative Bob Bettisworth to consider inserting $25,000 in DOA's budget to plan and implement the program.

This program has the potential for great success at small cost to the State. I would appreciate your personal attention to this matter.

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the Department of Transportation and Public Facilities for access road, signing, and illumination improvements for public schools in the Fairbanks North Star Borough; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $1,049,100 is appropriated from the general fund to the Department of Transportation and Public Facilities for access road, signing, and illumination improvements for the following public schools in the Fairbanks North Star Borough in the amounts listed:

Badger Road Elementary School	$ 15,000
Hutchison Career Center	3,100
New North Pole High School	600,000
Pearl Creek Elementary School	160,000
Two Rivers Elementary School	125,000
Weller Elementary School	111,000
West Valley High School	35,000

* Sec. 2. The appropriation made by this Act is for capital projects and is subject to AS 37.25.020.

* Sec. 3. This Act takes effect July 1, 1984.

Re: School Access Improvements

The Honorable Mike Davis
Alaska State House
Pouch V
Juneau, AK 99811

Dear Representative Davis:

Enclosed as requested of Mim Dixon is information on School Access Improvements in the Fairbanks North Star Borough area. The cost estimates given are as telephoned to you earlier.

The School District has identified several schools with road access problems. Most of the problems can be corrected by improved visibility of the roads to the schools and/or advance signing and illumination. The School District's top priority for improvements is the access to the new North Pole High School. Following is an explanation of the problems at each site and the costs for those improvements.

1. West Valley High

The principal access, which serves the student parking lot, is Geist Road, with a secondary access on Noatak Drive serving the faculty lot. These two access points are not connected. Since the student parking lot is off Geist, there tends to be significant delay in the morning and at noon for traffic attempting to leave the school grounds. School officials are concerned the students are taking too many chances trying to get in and out, especially during the short lunch period. In an attempt to correct this, the School District is studying the possibility of eliminating or making Geist a one-way entrance and connecting the parking lots to Noatak to make it the primary access. This would put existing traffic on a lower volume road that is then controlled by a traffic actuated signal at Geist Road. Les Riedlinger of the Fairbanks North Star Borough School District presented the District's Plans at the January 16 meeting of the West Valley Parent Advisory Committee.

The school district would like State assistance to complete the lot connection, provide advance signing advising of the turnoff, and illuminate the intersection at Geist to increase visibility.

Continuous illumination has been in place on Geist Road since it was widened. There is already one luminaire at the throat of the intersection which was installed by the school.

West Valley is well off the roadway and hidden from view, making the guide signs suitable. The total estimated cost is $35,000 (1985 dollars) broken out as follows:

Advance signing and illumination:	
Preliminary Engineering	$ 2,500
Construction (including 15% construction engineering)	10,250
SUBTOTAL	$ 12,750
Supplement to connect the two parking lots	22,250
TOTAL	$ 35,000

2. Hutchison

Two entrances to Hutchison Career Center near West Valley are from Geist Road. It does not have the problems that West Valley has but the school district feels advance signing is needed.

The estimated cost of advance signing is $3,100 (1985 dollars) broken out as follows:

Preliminary Engineering	$ 550
Construction (including 15% construction engineering)	2,550
TOTAL	$ 3,100

3. New North Pole High School

The entrance to the new school is planned to be the Old Richardson at Eighth Avenue. The intersection is at a right angle onto a very narrow 8th Avenue, making turns from one direction difficult and, for school buses, nearly impossible. The school district would like to see a turn lane with a flashing light and illumination. The cost estimate includes the illumination, flashing warning lights, a center left turn lane, and a right turn lane.

The total estimated cost is $600,000 broken out as follows:

Preliminary Engineering	$ 36,750
Right-of-Way	1,250
Construction (including 12% construction enginering)	562,000
TOTAL	$600,000

4. Pearl Creek

The entrance to Pearl Creek Elementary School is off Auburn Drive, which is on the State system. A line item appropriation of $225,000 from Chapter 10, SLA 83 was made for the Auburn Student Access project to provide a bike/pedestrian path along Auburn Drive from Farmers Loop to Herried Drive. The School District would like a separated footpath the entire distance. Because of existing property development immediately adjacent to the right of way, the first half of the project consists of a ten foot shoulder.

The second (northern) half could be a separated facility. The cost for the separated facility is estimated at $120,000 (1985 dollars), broken out as follows:

Preliminary Engineering	$ 10,000
Construction (including 12% construction engineering)	110,000
SUBTOTAL	$120,000

The necessary property is owned by the School District, so there should be no right-of-way costs.

In addition, the School District feels advance signing and illumination are needed.

Ilumination includes extending the parking lot lighting circuit to Auburn and one luminaire. The cost of operating and maintaining this light should be borne oy the school. The estimated cost for advance signing and illumination (in 1985 dollars) is $40,000 broken out as follows:

Preliminary Engineering	$ 4,000
Construction (including 15% construction engineering)	$ 36,000
SUBTOTAL	$ 40,000

Pearl Creek TOTAL $160,000

5. Weller

The entrance to Weller Elementary School is at approximately 1 mile Chena Hot Springs Road. The intersection is at the top of a rise in the road, which limits visibility. A new turn lane (eastbound), signing and flashing lights are to be installed as part of the $180,000 project funded in FY84. The School District has also suggested a westbound turn lane at the intersection. The estimated cost of this turn lane (1985 dollars) is $111,000 broken out as follows:

Preliminary Engineering	$ 9,000
Construction (including 15% construction engineering)	$102,000
TOTAL	$111,000

6. Two Rivers

The Two Rivers Elementary School is on Taurus Road, off 18.5 Mile Chena Hot Springs Road. The School District is proposing a chip seal at a cost of $125,000 for Taurus Road this year. In addition, they would like the State to provide illumination and advance signing.

Advance intersection warning signs with street name plaques and one luminaire have recently been installed by the State.

7. Salcha

With access at 38 Mile Richardson, the Salcha School is located on a slight rise and curve. The School District feels larger signs and illumination are needed. Standard school advance signs and one luminaire have been in place for many years. Although, larger signs are usually warranted only on expressways and freeways, we are looking into the possibility of a change in standards or else an exception for Salcha.

8. Badger Road

The access for Badger Road Elementary is either Bradway Road or Woll Road. The School District has suggested several improvements:

Badger/Bradway intersection - school zone signs (minimum), time controlled flashing caution lights (maximum). If warranted, this could be incorporated in the proposed Badger Road reconstruction project. Funding for $933,700 for the right of way and utilities phase of the project is included in the Department's FY85 capital budget request.

Bradway - illumination and a flashing yellow light

The school signs have already been installed by the State. The following estimate is for the cost of extending the lighting system to include one additional luminaire at the main driveway. Maintenance and operation cost of this luminaire should be borne by the school. The estimated cost of illumination is $15,000 (1985 dollars), broken out as follows:

Preliminary Engineering	$ 2,500
Construction (including 15% construction engineering)	12,500
TOTAL	$ 15,000

9. Tanana Junior High

Tanana is located off Trainor Gate Road and F Street. Some minor improvements the School District would like are a flood light and a permanent land bridge (driveway) to F Street.

Two newly constructed illumination systems, one at Trainor Gate Road and F Street, and one on F Street itself do give illumination for the school driveway. One luminaire is already centered on the driveway. The State designer of the intersection illumination and the City Engineer's office in charge of the newly constructed luminaires on F Street concur with each other that additional illumination is not needed. We will get back with the School District to try to resolve this.

An apparent problem in addressing school safety is that the Alaska Traffic Manual makes no specific provisions for these concerns and the DOT&PF is required to adhere to the Manual. Advance signing is normally installed only in rural areas where the school is some way off the main road. Flashing warning lights are generally installed only where there is an identified problem. We are looking internally into the advisability of either changing the manual or allowing more flexibility to make exceptions.

Sincerely,

William B. McMullen
Acting Deputy Commissioner

ASSUMPTIONS

The School District has identified several schools with road access problems. Most of the problems can be corrected by improved visibility of the roads to the schools and/or advance signing and illumination. The School District's top priority for improvements is the access to the new North Pole High School. Followig is an explanation of the problems at each site and the costs for those improvements.

1. West Valley High School

The principal access, which serves the student parking lot, is Geist Road, with a secondary access on Noatak Drive serving the faculty lot. These two access points are not connected. Since the student parking lot is off Geist, there tends to be significant delay in the morning and at noon for traffic attempting to leave the school grounds. School officials are concerned the students are taking too many chances trying to get in and out, especially during the short lunch period. In an attempt to correct this, the School District is studying the possibility of eliminating or making Geist a one-way entrance and connecting the parking lots to Noatak to make it the primary access. This would put existing traffic on a lower volume road that is then controlled by a traffic actuated signal at Geist Road. Les Riedlinger of the Fairbanks North Star Borough School District presented the District's Plans at the January 16 meeting of the West Valley Parent Advisory Committee.

The school district would like State assistance to complete the lot connection, provide advance signing advising of the turnoff, and illuminate the intersection at Geist to increase visibility.

Continuous illumination has been in place on Geist Road since it was widened. There is already one luminaire at the throat of the intersection which was installed by the school.

West Valley is well off the roadway and hidden from view, making the guide signs suitable.

2. Hutchison

Two entrances to Hutchison Career Center near West Valley are from Geist Road. It does not have the problems that West Valley has but the school district feels advance signing is needed.

3. North Pole High School

The entrance to the new school is planned to be the Old Richardson at Eighth Avenue. The intersection is at a right angle onto a very narrow 8th Avenue, making turns from one direction difficult and, for school buses, nearly impossible. The school district would like to see a turn lane with a flashing light and illumination. The cost estimate includes illumination, flashing warning lights, a center left turn lane, and a right turn lane.

4. Pearl Creek

The entrance to Pearl Creek Elementary School is off Auburn Drive, which is on the State system. A line item appropriation of $225,000 from Chapter 10, SLA 83 was made for the Auburn Study Access project to provide a bike/pedestrian path along Aubrun Drive from Farmers Loop to Herried Drive. The School District would like a separated footpath the entire distance. Because of existing property development immediately adjacent to the right of way, the first half of the project consists of a ten foot shoulder.

The second (northern) half could be a separated facility.

The necessary property is owned by the School District, so there should be no right of way costs.

In addition, the School District feels advance signing and illumination are needed.

Illumination includes extending the parking lot lighting circuit to Auburn and one luminaire. The cost of operating and maintaining this light should be borne by the school.

5. Weller

The entrance to Weller Elmentary School is approximately 1 mile Chena Hot Springs Road. The intersection is at the top of a rise in the road, which limits visibility. A new turn lane (eastbound), signing and flashing lights are to be installed as part of the $180,000 project funded in FY84. The School District has also suggested a westbound turn lane at the intersection.

6. Two Rivers

The Two Rivers Elementary School is on Taurus Road, off 18.5 Mile Chena Hot Springs Road. The School District is proposing a chip seal at a cost of $125,000 for Taurus Road this year. In addition, they would like the State to provide illumination and advance signing.

Advance intersection warning signs with street name plaques and one luminaire have recently been installed by the State.

7. Badger Road

The access for Badger Road Elementary is either Bradway Road or Woll Road. The School District has suggested several improvements:

Badger/Bradway intersection - school zone signs (minimum), time controlled flashing caution lights (maximum). If warranted, this could be incorporated in the proposed Badger Road reconstruction project. Funding for $933,700 for the right of way and utilities phase of the project is included in the Department's FY85 capital budget request.

Bradway - illumination and a flashing yellow light.

H.B. 622 (cont'd)

The school signs have already been installed by the State. Maintenance and operation costs of this luminaire should be borne by the school.

PROGRAM SUMMARY

Positions: No new positions would be created.

Other Expenditures:

West Valley

Advance signing and illumination:	
Prelminary Engineering	$ 2,500
Construction (including 15% construction engineering)	10,250
SUBTOTAL	$ 12,750
Supplement to connect the two parking lots	22,250
TOTAL	$ 35,000

Hutchison

Prelminary Engineering	$ 550
Construction (including 15% construction engineering)	2,550
TOTAL	$ 3,100

NEW NORTH POLE HIGH SCHOOL

The total cost estimated is $600,00 broken out as follows:

Prelminary Engineering	$ 36,750
Right of way	1,250
Construction (including 12% construction engineering)	562,000
TOTAL	$600,000

PEARL CREEK (Northern Half)

Prelminary Engineering	$ 10,000
Construction (including 12% construction engineering)	110,000
SUBTOTAL	$120,000

PEARL CREEK (Signing & Illumination)

Peliminary Engineering	$ 4,000
Construction (including 15% construction engineering)	36,000
SUBTOTAL	$ 40,000
PEARL CREEK TOTAL	$160,000

Weller

Preliminary Engineering	$ 9,000
Construction (including 15% construction engineering)	102,000
TOTAL	$ 111,000

Badger Road

Preliminary Engineering	$ 2,500
Construction (including 15% construction engineering)	12,500
TOTAL	$ 15,000

FUNDING: Estimates were provided by the Division of Highways, Design, Northern Region, DOT&PF, based on past experienc with similar projects.

SECTION COST ANALYSIS: See detailed project estimates under "other expenditures".

COMPUTATIONS: See project cost estimates under "other expenditures".

ECONOMIC IMPACT: These projects would not impact the State's economy.

IMPACT ON LOCAL GOVERNMENT: Although the school district would be responsible for maintenance and operations on some of these projects, cost would be minor, therefore it is felt that there would be no impact.

Dept. of Transportation & Public Facilities

Position Paper

BILL NO: HB 622

APPROVED: R. D. Knapp
Commissioner

TITLE: An Act making a special appropriation to the DOT&PF for access road, signing, and illumination improvements for public schools on the Fairbanks North Star Borough

DATE: April 2, 1984

State DOT&PF recognizes that safety for school children going to and coming from school is of the highest priority. The School District has identified several schools with road access problems. Most of the problems can be corrected by improved visibility of the roads to the schools and/or advance signing and illumination. All of these facilities are on State-maintained roadways. The State DOT&PF does not anticipate any difficulties completing projects to meet the identified needs.

ANALYSIS HB 660

1. Would increase the maintenance and operations budget for the Department.

2. Fiscal impact on new programs or activities: Unknown

3. Cost estimate prepared by Design and Construction based on data provided from project design; Departmental M&O standard costs based on $5,500 per lane mile (12 ft. widths -- approximately 2 miles)

4. This project would fund:

   a. Construction of a bridge over the Kenai River.

   b. Construct a road from bridge to Funny River Road (South) and from the bridge to Scout Lake Road (North).

   Cost estimate includes Design Completion (bridge design completion, materials work, and specifications update), ROW, Utilities, and Construction.

CHAIRMAN

BILL SHEFFIELD
GOVERNOR

HB 661

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

February 13, 1984

The Honorable Joe Hayes
Alaska House of Representatives
Pouch V
Juneau, AK 99811

Dear Representative Hayes:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill relating to toll bridges and highways. This bill addresses both the authority for construction and maintenance of the facilities and their funding through revenue bonding. The bill gives this authority to the Department of Transportation and Public Facilities and avoids unnecessary duplication of personnel in the administration of toll facilities. The language in the bill is based on language in AS 37.15.-410 -- 37.15.550, dealing with international airports revenue bonds.

The bill provides that the acquisition, construction, or equipping of toll facilities may be accomplished through the issuance of revenue bonds. It creates special funds for the accounting and management of proceeds of the bond sales and for the redemption or refunding of the bonds. It further allows the retention, in the toll facilities revenue fund created in AS 37.15.630, of money generated through toll collection. This money will then be used for payment of interest on the bonds and redemption as the bonds mature.

Money received from tolls collected and placed in the revenue fund is also made available for the purposes of paying for normal maintenance and operation of the toll facilities, replacement of the facilities, and other costs associated with the ownership of the facilities. The money would not be available for general appropriation by the legislature but would be protected for use for those purposes set out in AS 37.15.630. This does not violate the "dedicated funds" prohibition contained in art. IX, sec. 7, of the Alaska Constitution inasmuch as the funds are segregated for the purpose of guaranteeing payment of bonds and securing the collateral for the bonds.

This bill provides an opportunity to meet certain needs of the state's highway system in an era when general fund appropriations might not be possible for that important purpose. I urge your prompt consideration and action on this measure.

Sincerely,

Bill Sheffield
Governor

SOURCE OF FUNDS TO OFFSET FISCAL IMPACT OF BILL:

Costs of issuing revenue bonds will be recovered in the bond sale and liquidated from project revenues. There is, therefore, no fiscal impact from the bill. Fiscal impacts from specific projects will be considered if and when legislation is introduced to contribute capital or operating funds to the projects.

FISCAL NOTE BACKUP

TOLL FACILITIES FINANCING

(1) The bill will allow DOT&PF to sell revenue bonds to finance toll producing transportation facilities. Costs associated with the bond issues will be recovered with the issue and paid from revenues. Operating and other costs will also be paid from toll revenues. As a result, no net operating costs will accrue from the bill. Any legislated contributions to operating costs for specific facilities, should such contributions be required, would be the subject of separate legislation and the fiscal impact would be considered with such legislation.

(2) The bill seeks to construct capital facilities through the sale of revenue bonds. Any legislated contributions to capital, if required, would be the subject of separate legislation and the fiscal impact would be considered with such legislation.

(3) Facilities constructed under the bill will be revenue producing. The revenues will contribute to capital and operating costs as explained in notes (1) and (2) above.

(4) Federal Fund eligibility will be determined on a project by project basis.

(5) Employee costs and positions arising from facility operation will be paid from project revenues.

HB 661
Fiscal Note Analysis

$63,000,000 is the estimated annual debt service on the $500,000,000 revenue bonds authorized in HB 661. This debt service estimate assumes 20 year bonds at 11% interest to be conservative. Bonds may have longer maturities and higher or lower interest rates.

The source of funds for debt service would ordinarily be the toll facilities revenue fund. However until the first project is operating, there will be no revenues. Therefore, for FY 85 at least, the fund source would be the toll facilities construction fund.

(operation/ expenses)

tions for operating expenses of the legislature, and would allow the Executive Director of the Legislative Affairs Agency to pay those expenses through the Department of Administration by requisition. Funds would have to be disbursed on properly drawn vouchers signed by a certifying officer of the legislature appointed by the Executive Director. Duplicate copies of each voucher would have to be sent to the Department of Administration within 15 days after the end of each calendar month.

Redefines "state agency", "agency", "department" or similar terms under the Fiscal Procedures Act by stating that the term does not include the legislature.

Provides Act takes effect July 1, 1984.

State Bond Committee (members/ meetings/ duties/staff)

HOUSE BILL NO. 609, by Reps. Uehling, Hayes, Adams, Abood, Bettisworth, Fuller, Goll, Lindauer, Ringstad and Shultz. Under this bill the State Bond Committee would function within the Department of Revenue (currently functions independently), and adds to its membership the Commissioner of Community and Regional Affairs and a member of the board of directors of a public corporation which is an instrumentality of the state authorized to issue bonds. The board member would be appointed by and serve at the pleasure of the Governor. The Commissioner of Revenue would become the chairman of the State Bond Committee (currently the Commissioner of Commerce and Economic Development is the chair).

Would allow the committee to meet and transact business by electronic media if proper notice is given-states that 24 hours or more is adequate for a meeting of the committee at which the issuance of bonds is authorized), participants and members of the

HB 609. (cont'd)

public can hear and have the same rights to participate as if the meetings were conducted in person, and if copies of pertinent information is available.

Would require the committee to prepare and submit an annual report to the governor and legislature before January 31 of each year. ". . .The report must show (1) all outstanding debt of debt issuing entities of the state; (2) the anticipated impact on the finances and credit of the state, including the effect on long-term capacity and creditworthiness resulting from that debt; (3) which long-term debt is tax supported and which is supported only by revenues attributable to the project being financed by the debt; (4) all long-term lease obligations of the state; (5) the volume of short-term debt issued and retired during the year by debt issuing entities of the state; and (6) specific identification of each issue for which the state has pledged some form of indirect support for the debt including any moral obligation of the state to support the debt. . . ."

Also requires the committee to:

--require that true interest costs be the basis for determining the lowest bid on debt issued by debt issuing entities of the state;

--develop written informational guidelines concerning management of all debt by each debt issuing entity of the state, including recommended level of debt, structuring of debt offerings, and repayment schedule;

--require that a person who provides financial programming or marketing assistance in connection with the issuance of debt of debt issuing entities of the state shall be compensated for services on a determined fee basis that may not be based on the amount of the debt issued;

--require the debt issuing entities of the state to prepare and submit to the committee by January 15 of each year a calendar of all debt proposed to be issued showing the amount and type of the debt and the month in which issuance is proposed.

Would allow the State Bond Committee to appoint an executive director who may, with approval of the Committee, select and employ additional staff as necessary. Employees of the Committee would be in the partially exempt service under the State Personnel Act.

Provides Act takes effect immediately.

Construction Contractors (Board of Builders)

HOUSE BILL NO. 610, by Rep. Furnace. Would establish the Board of Builders under AS 08.18 (Construction Contractors). The Board would be responsible for requesting the Department of Commerce & Economic Development to investigate the practices of a contractor or a person who appears to be engaged in contracting. The Board would be responsible for holding disciplinary hearings, and if it finds that a person has violated state law or regulation,

SUBJECT: Legislators serving on the Alaska Toll Bridge and Causeway Authority

TO: Representative Bette Cato
Chairman, House Transportation Committee

FROM: Billy G. Berrier
Director
Division of Legal Services

You have asked whether legislators are constitutionally prohibited from serving on the Alaska Toll Bridge and Causeway Authority under HB 295. In my opinion they would be prohibited from so serving.

Two questions arise relating to the constitutionality of that provision. The first is whether the position is an office or position of profit which a legislator is prohibited from holding under section 5 of Article II of the Constitution of the State of Alaska. The second is whether the Authority exercises functions which are of such an executive nature that appointment would constitute a violation of the constitutional doctrine of separation of powers.

Section 5 of Article II reads:

> Section 5. No legislator may hold any other office or position of profit under the United States or the State. During the term for which elected and for one year thereafter, no legislator may be nominated, elected, or appointed to any other office or position of profit which has been created, or the salary or emoluments of which have been increased, while he was a member. This section shall not prevent any person from seeking or holding the office of governor, secretary of state, or member of Congress. This section shall not apply to employment by or election to a constitutional convention.

This provision has been considered by our Supreme Court in Begich v. Jefferson, 441 P.2d 27 (Alaska 1968) where the issue was whether legislators were prohibited from holding positions as school teachers under the State of Alaska while serving as legislators, and Warwick v. State ex rel Chance, 548 P.2d 384 (Alaska 1976) concerning the appointment as Commissioner of Administration when less than one year from the end of his term had elapsed.

The purpose of the prohibition was stated in Warwick to be:

> The terms of art. II, sec. 5 of the Alaska Constitution are clear and unambiguous. The purpose sought to be accomplished by that section is not merely to prevent an individual legislator from profiting by an action taken by him with bad motives, but to prevent all legislators from being influenced by either conscious or unconscious selfish motives.

Section 6 of Article III of the Constitution provides:

> Section 6. The governor shall not hold any other office or position of profit under the United States, the State, or its political subdivisions.

The Court in Begich examined the intended meaning of the term "position of profit" in context of similar prohibitions on the governor and the judiciary saying:

> "We have concluded that the trial court correctly determined that the provisions of article II, section 5 of the Alaska constitution are unambiguous. Upon a reading of the constitution as a whole, we deem it of paramount significance that the phrase 'position of profit,' in addition to restricting members of the legislature, has also been employed as a restriction upon members of the judicial council, justices of this court, superior court judges, and the chief executive officer of the State of Alaska. Use of the term 'position of profit' in these articles of Alaska's constitution illuminates the reach the framers of our constitution intended to impart to this term in article II, section 5. This usage, considered with the fact that the constitution itself provides only two exceptions to the scope of 'position of profit,' namely, Article II, section 5's proviso that the section itself be inapplicable 'to employment or

> election to a constitutional convention,' and article XII, section 3's provision that 'service in the armed forces of the United States or of the State is not an office or position of profit as the term is used in this constitution,' indicates to us that the framers intended to prohibit members of the legislature, judiciary, judicial council, and the state's chief executive officer from holding any other salaried non-temporary employment under the United States or the State of Alaska.
>
> * * *
>
> "Our study has convinced us that the framer's choice of 'position of profit' in the various sections of the constitution to which we have referred reflects their intent to adopt a term which was broad in scope. This same analysis results in the conclusion that the phrase 'position of profit' was intended to bar members of the legislature, justices of this court, superior court judges, members of the judicial council, and the governor of the State of Alaska from concurrently holding any other salaried, non-temporary employment under the State of Alaska."

In my opinion membership on the authority by legislators or the governor constitutes dual office holding prohibited by the constitution.

Although the doctrine of separation of powers does not explicitly appear in our constitution, our Court has consistently held the doctrine as applicable in Alaska (e.g., Public Defender Agency v. Super. Ct. 3rd Jud. Dist., 534 P.2d 947 (Alaska 1975); and Bradner v. Hammond, 553 P.2d 1 (Alaska 1976).

There is a substantial body of case law holding that legislators may not serve on bodies performing executive functions because of the doctrine of separation of powers. Our Court has held that appointment of executive officers is an executive function saying in Bradner v. Hammond, 553 P.2d 1 (Alaska 1976):

> Appellee [Hammond] contends that the appointment of executive officers is an executive function. We find appellee's contention most persuasive. In addition to vesting the executive power of the state in the

> governor, Section 16 of Article III provides that "[t]he governor shall be responsible for the faithful execution of the laws." In view of the responsibilities imposed by Section 16, and the authority granted by Section 1, the governor is necessarily clothed with the power to appoint subordinate executive officers to aid him in carrying out the laws of Alaska. Thus we conclude that the appointment of executive officers is an executive function; for without such a power, the responsibility for executing executive duties would be diffused and the goal of separation of branches of government, avoiding too great a concentration of power in one branch, would be defeated.

The United States Supreme Court dealt with the separation of powers question in Buckley v. Valeo, 424 U.S. 1 (1976) which concerned the regulations and the constitutional status of the Federal Election Campaign Act's regulation of federal election campaigns. Among the questions considered was the constitutionality of the appointment of the members of the Federal Election Commission. The committee consisted of six members, four of whom were appointed by Congress.

The Court examined the powers of the commission and found the commission, in addition to record keeping, disclosure and investigative functions, had extensive rule-making and adjudication powers. It also found the commission's enforcement power is "both direct and wide ranging."

The Court stated:

> Congress viewed these broad powers as essential to effective and impartial administration of the entire substantive framework of the Act. Yet each of these functions also represents the performance of a significant governmental duty exercised pursuant to a public law. While the President may not insist that such functions be delegated to an appointee of his removable at will, Humphrey's Executor v. United States, supra, none of them operates merely in aid of congressional authority to legislate or is sufficiently removed from the administration and enforcement of public law to allow it to be performed by the present Commission. These administrative functions may therefore be exercised only by persons who are "Officers of the Untied States".

The Court quoted from Myers v. United States, 272 U.S. 52 (1926). In that case the Court upheld the authority of the President to remove an officer he was initially authorized to appoint. The Court said:

> The vesting of the executive power in the President was essentially a grant of power to execute the laws. But the President alone and unaided could not execute the laws. He must execute them under a system of subordinate . . . As he is charged specifically to take care that they be faithfully executed, the reasonable implication, even in the absence of express words, was that as part of executive power he should select those who were to act for him under his direction in the execution of laws.

The Court held the appointment requirement to be a violation of the doctrine of separation of powers.

The test to determine whether appointment of legislators to serve on a commission is a violation of the doctrine of separation of powers is whether the powers of the commission are executive or judicial in nature. This requires in each case examination of the powers granted to the commission.

Very broad executive authority is granted under Sec. 44.57.111.

In my opinion legislators are clearly prohibited from serving as officers of the authority as contemplated by this bill under the separation of powers doctrine and both legislators and the governor are prohibited from serving under the respective dual office holding provisions of the constitution.

Toll Facility Revenue Bonds

HOUSE BILL NO. 661, by the Rules Committee by Request of the Governor. Relates to the acquisition, construction, equipping, and maintenance of toll facilities funded by revenue bonds. See accompanying letter from the Governor. Does not provide for an effective date (becomes law 90 days after Governor signs bill).

Introduced February 13 and referred to Transportation, Finance.

In his message transmitting the bill, Governor Sheffield stated:

> Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill relating to toll bridges and highways. This bill addresses both the authority for construction and maintenance of the facilities and their funding through revenue bonding. The bill gives this authority to the Department of Transportation and Public Facilities and avoids unnecessary duplication of personnel in the administration of toll facilities. The language in the bill is based on language in AS 37.15.-410 -- 37.15.550, dealing with international airports revenue bonds.
>
> The bill provides that the acquisition, construction, or equipping of toll facilities may be accomplished through the issuance of revenue bonds. It creates special funds for the accounting and management of proceeds of the bond sales and for the redemption or refunding of the bonds. It further allows the retention, in the toll facilities revenue fund created in AS 37.15.630, of money generated through toll collection. This money will then be used for payment of interest on the bonds and redemption as the bonds mature.
>
> Money received from tolls collected and placed in the revenue fund is also made available for the purposes of paying for normal maintenance and operation of the toll facilities, replacement of the facilities, and other costs associated with the ownership of the facilities. The money would not be available for general appropriation by the legislature but would be protected for use for those purposes set out in AS 37.15.630. This does not violate the "dedicated funds" prohibition contained in art. IX, sec. 7, of the Alaska Constitution inasmuch as the funds are segregated for the purpose of guaranteeing payment of bonds and securing the collateral for the bonds.
>
> This bill provides an opportunity to meet certain needs of the state's highway system in an era when general fund appropriations might not be possible for that important purpose. I urge your prompt consideration and action on this measure.

Parole of Offenders

HOUSE BILL NO. 662, by the Rules Committee by Request of the Governor. Relates to the parole of offenders. See accompanying letter from the Governor. Provides Act takes effect January 1, 1985.

Introduced February 13 and referred to the Judiciary, Finance.

In his message transmitting the bill, Governor Sheffield stated:

> Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill relating to the administration of parole. The bill updates the statutory authority for parole administration, clarifying apparently conflicting dictates of court decisions, and providing a higher degree of certainly in the parole process. Under the bill, existing AS 33.15, governing parole administration is repealed; re-organized and revised parole administration statutes are placed in new AS 33.16.

TO: Billy G. Berrier
Director
Legal Services

FROM: Representative Bette Cato
Chairman
House Transportation Committee

RE: Committee Substitute for House Bill 661

We have been told by the Department of Transportation that HB 661 is modeled after the revenue bond provisions of the Airport Revenue Fund. Please provide us with a comparison of the proposed program in HB 661 and the Internation Airports Revenue Funds (AS 37.15.410-.550).

We also would like to know if CSHB 661 language restricts the use of money to special projects or if under this bill the money is discretionary. If the funds are restricted, how are they restricted.

If the funds are discretionary, would you please provide language that would restrict the use of the money for special projects.

Thank you for your assistance on this matter.

IN THE HOUSE BY THE TRANSPORTATION COMMITTEE

CS FOR HOUSE BILL NO. 661 (Transportation)

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act authorizing the construction of the Knik Arm Crossing and relating to the acquisition, construction, equipping, and maintenance of toll facilities funded by revenue bonds and providing toll collection authority."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 37.15 is amended by adding new sections to read:

ARTICLE 4. TOLL FACILITIES REVENUE BONDS.

Sec. 37.15.610. BOND AUTHORIZATION. For the purpose of providing part or all of the money to be used, with or without any grants or other money that may become available, the issuance and sale of revenue bonds of the state in the total principal sum of not to exceed $500,000,000 is authorized to acquire, construct, equip, and install the additions, improvements, extensions, and facilities authorized in AS 37.15.720 and 37.15.730. The principal of and interest on these bonds are paid out of and secured by the gross revenues derived by the state from the ownership, use, and operation of the toll facilities, and out of any other revenue or money that the state legislature may provide exclusive of any state tax or license.

Sec. 37.15.620. CONSTRUCTION FUND. (a) The toll facilities construction fund is established for deposit of proceeds of the sale of the bonds authorized by AS 37.15.610 and any grant or other money that is legally provided for the same purposes for which the bonds are authorized except for any accrued interest paid on the bonds by the

purchaser. The money in the construction fund is used to pay the cost of acquiring, constructing, and equipping facilities authorized in AS 37.15.720 and 37.15.730 and costs incidental to those activities, including costs of the authorization, issuance, and sale of the bonds. To the extent allowed in the bond resolution, money in the construction fund may also be used for the payment of interest on the bonds during the time of actual construction, and for any additional time, not exceeding one year after construction is completed. Money in the construction fund may also be transferred to the bond redemption fund, as permitted by the bond resolution, to establish a reserve for the payment of the principal and interest on the bonds.

(b) The bond resolution may provide for the investment of money in the construction fund as the committee determines. The interest earned upon or any profit derived from the sale of the investment is deposited in the construction fund.

Sec. 37.15.630. REVENUE FUND. (a) The toll facilities revenue fund is established and shall be set apart from all other money of the state. The toll facilities revenue fund is a trust fund for the purposes under AS 37.15.610 - 37.15.760, where all revenue, fees, tolls, charges, and rentals are deposited that are derived by the state from the ownership, lease, use, and operation of the facilities authorized by AS 37.15.720 and 37.15.730. The revenue, fees, tolls, charges, and rentals may not include the proceeds of any state tax or license. The money in the revenue fund may only be used to

(1) pay or secure the payment of the principal of and interest on the toll facilities bonds and principal of and interest on any other revenue bonds issued by authorization of the legislature to provide money to acquire, construct, and equip facilities authorized by AS 37.15.720 and 37.15.730 and to be payable out of the revenue

fund;

(2) pay the normal and necessary costs of maintaining and operating the facilities acquired, constructed, or equipped under AS 37.15.610 - 37.15.760;

(3) pay the costs of renewals, replacements, and extraordinary repairs to facilities acquired, constructed, or equipped under AS 37.15.610 - 37.15.760;

(4) redeem before their fixed maturities any and all revenue bonds issued for the purpose of acquiring, constructing, and equipping facilities authorized by AS 37.15.720 and 37.15.730;

(5) provide money to acquire, construct, and equip necessary additions and improvements to facilities authorized by AS 37.15.720 and 37.15.730; and

(6) provide money to pay any and all other costs relating to the ownership, use, and operation of the facilities.

(b) The investment of money in the revenue fund may be made as the committee determines. The interest earned upon or any profits derived from the sale of an investment under this subsection shall be deposited in the revenue fund.

Sec. 37.15.640. BOND REDEMPTION FUND. The toll facilities revenue bond redemption fund is established for deposit in trust of money for paying and securing the payment of principal of and interest and redemption premium, if any, on bonds and is set apart from all other money of the state. The committee, on behalf of the state, shall obligate the state to set aside and pay into the bond redemption fund from the revenue fund an amount of money sufficient to pay the principal of and interest and redemption premium, if any, on the bonds as the payments become due and, if the committee considers it necessary, to set aside and maintain a reserve for this purpose. The bond

redemption fund is drawn upon for the purpose of paying the principal of and interest and redemption premium, if any, on the bonds, and the bonds do not constitute a general obligation of the state.

Sec. 37.15.650. BOND TERMS. (a) The toll facilities bonds are sold in the amounts or series and at the time as determined by the committee. Before selling a series of bonds, the committee shall give notice inviting sealed bids. If satisfactory bids are received, the bonds offered for sale are awarded to the highest responsible bidder. If the committee determines that a bid received is not satisfactory as to price or responsibility of the bidder, the committee may reject the bid received. Bonds, or a series of bonds, may not be sold if the effective interest rate over the life of the bonds exceeds 11 percent per year or that rate of interest that is 125 percent of the rate of the Bond Buyer Index of 20 Municipal Bond Average Yields for the week previous to the date of sale of the bonds, whichever is higher. Interest is payable annually or semiannually.

(b) The bonds mature at the time fixed by the committee. The bonds may be subject to redemption before their fixed maturities as determined by the committee and with the premium fixed by the committee, but a bond may not be subject to redemption before its fixed maturity date unless the right to redeem that bond is expressly mentioned on the face of the bond. The bonds

(1) may be in denominations determined by the committee;

(2) may be issued in coupon form or in fully registered form, and may be registrable as to principal or both principal and interest, all under regulations and conditions the committee provides;

(3) are payable as to principal and interest at the place determined by the committee;

(4) shall be signed on behalf of the state by the governor

and shall be attested to by the lieutenant governor, both of which signatures may be facsimile signatures, and each of the interest coupons attached to them shall be signed by the facsimile signatures of these officials;

(5) shall have the seal of the state impressed, printed, or lithographed on them; and

(6) shall be issued under and subject to the terms, conditions, and covenants, providing for the payment of the principal of and interest on the bonds and the other terms, conditions, covenants, and protective features safeguarding this payment and relating to the maintenance, operation, and improvement of the toll facilities as found necessary by the committee, which covenants may include a provision requiring the setting aside and maintenance of certain reserves to secure the payment of the principal and interest.

(c) If found reasonably necessary, the committee may select a trustee or trustees for the holders of the bonds or any series of the bonds, for the safeguarding and disbursement of any of the money in any of the funds created by AS 37.15.620, 37.15.630, and 37.15.640, or for the duties for authentication, delivery, and registration of the bonds as the committee may determine. The committee shall also fix the rights, duties, powers, and obligations of the trustee or trustees.

(d) In the committee's determination of all of the matters and questions relating to the issuance and sale of the bonds and the fixing of the maturities, terms, conditions, and covenants of the bonds as provided in (a) - (c) of this section, the decisions of the committee shall be those found to be reasonably necessary for the best interests of the state and its inhabitants, and those that will accomplish the most advantageous sale of the bonds, with due regard,

however, (1) to necessary or normal costs of maintenance and operation; (2) to renewals and replacements of and repairs to the toll facilities; (3) to all improvements to toll facilities and property of toll facilities owned, used, operated, or leased in connection with toll facilities; and (4) to the future growth and expansion of all of the facilities and the possibility of additional revenue bond financing for toll facilities purposes. A decision of the committee, as expressed in any bond resolution, is final when any bonds have been issued under the bond resolution.

(e) A bond resolution may provide that the bonds issued contain a recital that they are issued under AS 37.15.610 - 37.15.760, and any bonds containing this recital are conclusively considered to be valid and to have been issued in conformity with AS 37.15.610 - 37.15.760.

(f) The validity of the authorization and issuance of bonds is not affected by any proceeding for the acquisition or construction of the additions, improvements, or facilities for which the bonds have been issued or by any contract in connection with the acquisition or construction.

Sec. 37.15.660. BOND RESOLUTION. The committee is authorized and directed to adopt the bond resolution and prepare all other documents and proceedings necessary for the issuance, sale, and delivery of the bonds or any part or series of them. The bond resolution shall fix the principal amount, denomination, date, maturities, place or places of payment, rights of redemption, if any, terms, form, conditions, and covenants of the bonds or each series of them. The committee shall also determine and provide for the date and manner of sale of the bonds, and shall provide whether the notice of sale is to be published elsewhere in addition to the publication required by AS 37.15.650.

Sec. 37.15.670. ENFORCEMENT BY HOLDER. The holder of any bonds or the trustee for the holders of the bonds or any series of them, may, by appropriate proceedings in the courts of record of the state, compel the transfer, setting aside, and payment of money and the enforcement of all of the terms, conditions, and covenants as required and provided in AS 37.15.610 - 37.15.760 and in the bond resolution.

Sec. 37.15.680. AMOUNTS REQUIRED FOR PAYMENTS. The committee shall, before December 31 of each year, commencing with the year in which the bonds are issued, certify to the commissioner of revenue and the commissioner of transportation and public facilities the amounts required in the next ensuing calendar year by a bond resolution to be paid out of the revenue fund into the bond redemption fund and to be paid into and maintained in any reserve fund or account or any other fund or account created by a bond resolution. The committee shall also certify to the commissioners the last date upon which payments may be made.

Sec. 37.15.690. BOND NEGOTIABILITY. The bonds and the coupons attached to them are fully negotiable instruments under the laws of the state.

Sec. 37.15.700. REFUNDING. (a) The bonds or any part of them may be refunded at or before their maturity by the issuance of refunding revenue bonds of the state if in the opinion of the committee refunding is advantageous to and in the best interest of the state and its inhabitants.

(b) The issuance of refunding bonds need not be authorized by an act of the legislature, and the committee shall adopt the resolution and prepare all other documents and proceedings necessary for the issuance, exchange or sale, and delivery of the bonds. All provisions of AS 37.15.610 - 37.15.760 applicable to revenue bonds are applicable

to the refunding bonds and to the issuance, sale, or exchange of the bonds, except as otherwise provided in this section.

(c) Refunding bonds may be issued in a principal amount sufficient to provide money for the payment of all bonds to be refunded by them, and, in addition, for the payment of all expenses incident to the calling, retiring, or paying of the outstanding bonds, and the issuance of the refunding bonds. These expenses include the difference in amount between the par value of the refunding bonds and any amount less than par for which the refunding bonds are sold, any amount necessary to be made available for the payment of interest on the refunding bonds from the date of sale of them to the date of payment of the bonds to be refunded or to the date upon which the bonds to be refunded will be paid under the call of the bonds or agreement with the holders of them, and the premium, if any, necessary to be paid in order to call or retire the outstanding bonds and the interest accruing on the outstanding bonds to the date of the call or retirement.

Sec. 37.15.710. BONDS AS LEGAL INVESTMENTS. Toll facilities bonds are legal investments for all banks, trust companies, savings banks, savings and loan associations, and other persons carrying on a banking business, all insurance companies and other persons carrying on an insurance business, and all executors, administrators, trustees, and other fiduciaries. The bonds may be accepted as security for deposits of all money of the state and its political subdivisions.

Sec. 37.15.720. STATE TOLL FACILITIES. The state is authorized to acquire, construct, equip, and maintain toll bridges, highways, roads, crossings, and causeways found to be necessary by the commissioner of transportation and public facilities.

Sec. 37.15.730. KNIK ARM CROSSING. Notwithstanding the

provisions of AS 37.15.720 the first state toll facility to be constructed is the Knik Arm Crossing near Anchorage.

Sec. 37.15.740. TOLL FACILITY CHARGES. The commissioner of transportation and public facilities shall fix and collect the fees, charges, tolls, and rentals derived by the state from the ownership, lease, use, and operation of the facilities authorized by AS 37.15.720 and 37.15.730 and improvements of the facilities as will provide revenues sufficient to comply with all of the covenants of the bond resolution.

Sec. 37.15.750. STATUTORY CONSTRUCTION. AS 37.15.610 - 37.15.760 shall be liberally construed in order to carry out the purposes for which the provisions were enacted, and all existing laws in conflict with AS 37.15.610 - 37.15.760 are superseded as necessary to accomplish the purposes of AS 37.15.610 - 37.15.760.

Sec. 37.15.760. DEFINITIONS. In AS 37.15.610 - 37.15.760, unless the context requires otherwise

(1) "bond redemption fund" means the toll facilities revenue bond redemption fund created by AS 37.15.640, including any accounts that are created in that fund after the effective date of this Act;

(2) "bond resolution" means the resolution authorizing the issuance of bonds, adopted by the committee under AS 37.15.660;

(3) "bonds" means the toll facilities revenue bonds authorized by AS 37.15.610 - 37.15.760;

(4) "committee" means the state bond committee created by AS 37.15.110, or any other committee, body, department, or officer of the state that or who succeeds to the rights, powers, duties, and obligations of the state bond committee by act of the legislature;

(5) "construction fund" means the toll facilities

construction fund created by AS 37.15.620;

(6) "revenue fund" means the toll facilities revenue fund created by AS 37.15.630;

(7) "toll facilities" means highways, roads, bridges, crossings, and causeways upon which tolls, charges, rentals, or other user fees are placed by the commissioner of transportation and public facilities.

* Sec. 2. AS 19.05.040 is amended to read:

Sec. 19.05.040. POWERS OF DEPARTMENT. The department may

(1) acquire property;

(2) exercise the power of eminent domain;

(3) take immediate possession of real property, or any interest in it under a declaration of taking or by other lawful means;

(4) acquire rights-of-way for present or future use;

(5) control access to highways;

(6) regulate roadside development;

(7) preserve and maintain the scenic beauty along state highways;

(8) dispose of property acquired for highway purposes;

(9) accept and dispose of federal funds or property available for highway construction, maintenance, or equipment;

(10) enter into contracts or agreements relating to highways with the federal government, municipalities, a political subdivision, or with a foreign government, if the contract is approved by the federal government; [AND]

(11) establish, levy, and collect tolls, fees, charges, and rentals for the use of state roads, highways, bridges, crossings, and causeways; and

(12) exercise any other power necessary to carry out the

purpose of AS 19.05 - 19.25.

For Representative Hayes

Regarding CSHB 661...authorizing construction of Knik Arm Crossing and relating to acquisition, construction, equipping, and maintenance of toll facilities funded by revenue bonds and providing toll collection authority.

The language in the bill specifies that the Knik Arm Crossing is to be the first toll facility constructed with the proceeds of revenue bonds authorized. How does it preclude use of construction fund for other means of acquiring toll facilities or converting existing state roads, highways, bridges, causeways or crossings to toll facilities?

Does the language in this bill restrict the use of money to special projects or is the money discretionary?

If not restricted, what language could be used to do so?

We have been told that CSHB 661 is based on the international airport revenue bonds but the difference we wonder about is:

The maximum amount of airport bonds that can be sold is $62.8 million; the resolution authorizing the sale of airport bonds requires rentals, fees and other airport charges be set at a level sufficient to provide annual net revenues at least 30 percent higher than annual debt service requirements.

CSHB 661 authorizes sell of $500 million in revenue bonds and does not imply that the entire amount will be sold or would be used to construct the Knik Arm crossing.

Thus, the question being that what happens if there is a cash shortage throughout the life of the 20 year bond issue, which option will be taken to cover these cash shortages?

ROUGH ROUGH DRAFT

Anchorage Caucus - Knik Arm Crossing Presentation by John Olsen, DOT

Started off with a historical chronology and small amount of philosophy.

1972 study made of Knik Arm Crossing and proposed a bridge crossing that would cost about $120 million. It pays to remember that when start to talk about the other numbers that are bigger today, but in 1972, $120 million was a very, very large figure as the numbers are still today.

1984 is much of a narrower focused picture showing Anchorage with its current state of development. If you look and compare here, you will see that the Chugach Mountains on the East, the military reservation, reserved blocks of lands at the airport and other locations of the town, and what we know to be the zoning practices within various areas of the city, shows the city to be very nearly full.

A planning municipality study, show that within 3 years, 3000 acres of available land is diminished to about 300 or 400. So the northeast quadrant of the city is growing very rapidly, as we know other areas of the city to be growing.

From there we can see that there is alot to be said for the quality of life in Anchorage. As we grow, from the 1972 population to the now doubled from $120-130 to $250. In another 10 years, about the time the Knik Arm Crossing is going to be in use, we can see another 50% growth, about 380,000 people. That's a rather large land use imposed on the land everyone is already near full. So quality of life in Anchorage will be enhanced ...Knik Arm Crossing.

The Mat-Su Borough would also anticipate a ...they have their own interest and we're working with them to incorporate them in our studies.

Referred to map and pointed out that from Sheep's Creek Channel down to Tudor and out to Lake Otis, you can see the enormous amount of land that's available on the Mat-Su side of the Knik Arm. Too, recognize the central business district proximity to this new land and consider the type of development that would be occurring just on the other side - I believe it will be high value commercial development corresponding to the general population growth that's occurring in this town.

Last item of philosophy is you'll see in some of the right-of-way costs, engineering development cost that I'm showing you. Right-of-way costs now are very small. If we wait another 10 years alot of development will be developing, to put a bridge across at that time will still be expensive. (Remember in 1972 $120; 1984 something over $500 million, large numbers) The ROW costs and other ...costs of putting a project in would be quite high. Also if we wait there will, it takes along time to build a bridge like this, there will be continuous development, higher density in Anchorage, and I think that it would probably be harmful for the Anchorage area to wait for that high density and then sell, this area. It happened in an area I'm familiar with in L.A.; the L.A. - Orange County shift was not good generally to L.A. It would have happened a little bit more orderly as I think the finding would indicate

here, both areas have probably been alot better off. So that essentially sets the stage for what I want to work my flip charts.

The Legislative assignment that DOT received was to develop a highway crossing of Knik Arm with Connections to the Parks and Glenn Highways. Realize that this assignment includes both a bridge and highway; we're looking at quite a large number of miles of connecting roads to make access to the bridge, to make a functional utility. So we're looking at both a highway and bridge project.

We are well within the State of the Arts from an engineering stand point for building a bridge, but it is a .... of the art we do have to develop a design criteria for which to base our design on. We're going to be using some federal monies for the approach roads and for other reasons, producing an environmental assessment and impact statement; right-of-way studies and alot of ROW to identify and move on so that it's obtained timely way for the bridge, we want to accelerate and move this schedule as fast as we can. We have done location, selection and preliminary design and cost estimates. This in summary is our scope of work.

We address the scope of work in two ways with our department own resources and with consultant resources. The department is handling the contract administration and planning; planning being the ... to integrate the bridge within the Mat-Su planning area and the Anchorage planning area for the road connections primarily and for other reasons. Surveys, ROW's, the other things that the, where the rubber meets the road on developing a major capital project like this. I'm the Director of the Major Projects Management Division, this provides a single point, accountability, responsibility, authority for the project, that is my job. I have a full time project manager who works with me to lead the in-house and consultant resources.

Consultants, there are a number of them, each with their own speciality and purpose. Working under our project manager and myself, is a Prime PRoject Manager from Sverdrup and Parcel who has responsibility for design development on the bridge; EMPS, Tryck, Nyman and Hayes have the approach road responsibility; DeLeuw, Cather, & Co. have responsibility for environmental and transportation planning; Bill Kent & Co., I'll be getting to this in a little awhile, is the financial planner, will be working up an implementation plan, that's very important for the Legislature in the first quarter of next year. We plan to bring that plan to you. Harding Lawson doing alot of geotechnical work that will be completed this summer; and Biological work for the environmental studies and other reasons is Dames & Moore. A conventional day to day man power loading on the project will be about 25-30 people.

QUESTION: Were these contracts out for bidding?
ANSWER: Yes, they were

QUESTION: You referred earlier to legislative assignment, could you give us the reference in statutes I'd like to look up and read that assignment.
ANSWER: I don't have them, let me respond to you, I'll get back to you this afternoon with that.

We have a real good (pluralistic) decision development here. Many agencies influence the way this bridge is developed and its timing.

Some federal agencies, the state agencies, have if not the authority to kill the project, or not to give permits, some of them have that authority, many of them have a perrogative if they will to delay the project. It's our responsibility to try and keep with these agencies, and keep them moving on our schedule. We understand they have other work to do, but we try to like trying for them to accomplish their role, but we have a Steering Committee that has the most involved agencies, Municipality of Anchorage, Mat-Su Borough, Air Force, Army, Navy, Alaska Railroad participate on that Steering Committee. But I've only just written down a few of the acronyms for the various federal agencies that we are working with and the State agencies that appear also. Just by the number of people to keep communications open with when we need something from them, they know it and have time to respond.

We have completed several items of work, a scoping required by the environmental process, also part of the public participation involvement process; an economic feasibility report that shows the project to be quite economic. Economically valuable project. Corridor Alternative Analysis, is a report that I believe all of you have sent a copy of a final corridor alternatives analysis and the alignments definition which narrowed the corridors down from, I'm sure you've seen this octopus drawing; we're looking at essentially one road corridor two bridge corridors and we have those alignments refined. I might point out to you on the strip map, is a part of the alignment that they did in Anchorage, it heads out towards your left over Knik Arm in the downtown crossing alignment....beginning at Sheep Creek ... and ending out at the other side. The second alignment which is the Elmendorf Crossing which would run through Elmendorf Air Force Base. (Referred to a different strip map)

The work we have underway is conception of the design with a bridge, an environment impact assessment statement will be out in late May, and that I guess is important for you people to know that we will be back to give you a presentation on that. Geotechnical Investigations this summer; we don't want to do geotechnical investigations to far in advance of the alignment selection because we want to drill these very expensive holes where we expect the bridge to be located, so those will be done this summer, it's an expensive activity. Implementation planning is what we want to bring back you next session for how to finance and carry forward this project. Right-of-Way Evaluation is in process and we have some preliminary reading on that. Bid Documents for the Crossing will be prepared and we'll be ready to go to the street by the time I'm back here next year.

The budget from our original appropriation is $5.5 million. Our contracts with our consultant team is a total of about $4.5 million and our balance in January was $3 million. Balance in June will be about $1.9 million and through the summer as we drill the holes and get into the first quarter of next year, all of those funds will be consumed because we will produce what we were assigned to produce in the form of (business? bidding?) documents.

This year there was a Senate appropriation of $5 million for north and south approach roads and highway matching funds of $5 million also for a north and south approach roads. I'm sure many of you understand the (distirft) difference between the authority that we receive and expend this appropriation so I won't draw that distinction, I'll try to answer questions.

QUESTION: Once that environmental impact statement is released, (late in May) will you come back to us and give us an accelerated road project plan? Expound on it?

ANSWER: Yes

QUESTION: What I'm trying to do is step up the ....What I'm asking, is how much of a time line do you give us that information?

ANSWER: Let me speak to the schedule of the ...and I'll show you what we have to accomplish before the first quarter of next year.

CROSSING ALTERNATIVES are the downtown and Elmendorf project, they include several components, we've broken them into forms because of the very large expense, so that we can schedule and program these expenses or to mitigate the one time chance for them.

(Referring to map) On the downtown project the Seward Connector, the downtown crossing is the bridge from the intersection at almost the water's edge, will be the bridge crossing itself would be defined to begin and runs up to the Spruce interchange on the Mat-Su side. Then segment one of the Mat-Su connector goes ...up to Pt. McKenzie access road. Segment 2 runs from that point up to the Parks Hwy, again to decree our legislative assignment. The Elmendorf project has a Glenn connector which connected with the Glenn Hwy. The crossing which the is the bridge itself and identically the same approach road on the Mat-Su side of the arm.

The environmental impact statement clauses requires that we consider some no crossing alternatives, a no-action option is fundamental, we have to have it in there. It would be essentially continue to construct AMATS, Mat-Su, and DOT plans without the bridge. The transit option would be couple ....which is we certainly .....and a little capital option which would be essential to expand the existing highways as they run around Knik Arm.

QUESTION: The chart shows highway crossing in 1986-1990, what is the highway crossing?

ANSWER: That's the bridge.

QUESTION: Then Anchorage connector 2000-2001, that's

ANSWER: That is east-west viaduct if you will that runs over the Seward Highway, and I'll explain why that is shown in that schedule.

Let me explain right now, we want to identify what is the minimum cost to get a bridge crossing, highway crossing across the Knik Arm. Then, because the first year utilization won't be its ultimate utilization, how long can we defer the connecting road costs until there are needed. I think the key thing to know, is that by 1991 when we open the bridge, we'll certainly not know an awful lot better, what the demand will be for that Seward connector and we want to identify that decision that can be deferred so that they don't overwhelm the project cost.

An important consideration that the bridge crossing is the Alaska Railroad. In the final corridor alternatives analysis report we gave to you indicated the downtown alignment could not receive the railroad crossing causes....that was incorrect. The ...will make that correction.

Both crossings can receive a rail in combination with the highway. It will cost $50-100 million more to strengthen the bridge so that it would support a railroad crossing. That does not get you the crossing, that just gives you the bridge strong enough to install the railroad later on.

We are carrying along with this process, for the benefit of the legislature to make a determination, the conceptual design cost estimates, environmental assessment, right-of-way studies for a railroad crossing. The financing will be broken out. The concept of a separate bridge will be considered. I think that's because the points in decision timing. We are looking at the bridge or a rail crossing, maybe 15 years from now. $50-100 million expense now for a bridge that might be used 15-20 years from now is a substantial commitment of funds. We want to make sure that that's identified and broken out and analyzed very carefully.

QUESTION: Could you clarify strengthening the rail? Is that a decision that has to be made now? Or can the design be such that we can add the strengthen components at any time. In other words we have to spend the $100 million or whatever up-front? Or is that going to be the cost of the additional support which we can add 5 years from now or 10 years from now?

ANSWER: No, it's a decision that this is on the advise of our bridge engineers, it will have to be made when the bridge is released for bid. Consider for example that the bridge on the downtown alignment would probably run down the middle of the bridge. It would come up at a different grade from the highway approaches, more gradual slope and merge with the bridge, it needs to be in the middle, so the piers have to be set farther apart for the east and west traffic lane.

QUESTION: If I may then, when we make the financing plan we have to make that decision at that time with the finance; it's going to roll into the financing package at that time we'll have to make the railroad decision.

QUESTION: Could you provide us at a time that is convenient the cost of such a reinforcement now ....

ANSWER: Well, the railroad says gee we don't know, but we think 15-20 years from now is there input. We will know an awful lot more about the disposition of the railroad after this legislative session, conclusion of next year. We're working with the railroad to develop that. We want to bring to you much more facts then I can present right now. We're not completed with our work. We want to consider, because of the very large expense, the project as a separate project. It can be builts with this project. We want to make sure that we identify not add without clarifying clearly to you that $50-100 million more would be needed. We're going to show that on a different breakout.

QUESTION: There's been alot of legislation that we've had before that is providing for revenue bonds. And if I understand my revenue bonds, being different from general obligation bonds where the voters must vote, revenue bonds is something we have to deal with as the legislature. If we deal with revenue bonds this legislature and we have your toll bridge concept how does this impact your timing. We may want to pass in this legislature our authority and our bonding mechanism which would put the finances with the financial mechanism into place to do the project. Do you feel that you're sufficiently coordinated with that timing mechanism?

ANSWER: Yes, as a matter of fact, on the CSHB 661, it'll be beneficial to have that legislation pass this session, cause in our implementation we would be dealing with a known mechanism. We're not present to the legislature which I think could be best described as a menu. We're going to make a recommendation, maybe one or two recommendations on how best to finance this. But, it would be very nice to have known to us that we can't have the authority to sell revenue bonds ...toll collection capability.

Let me talk to that financing plan just a minute. The downtown crossing to get the highway across the arm connected into a road system properly, about $500 million; the Elmendorf is about $375 million. The Elmendorf crossing, that includes relocating military facilities on Elmendorf (refer to strip map) there's alot different things we have to dodge. The military has alot of secret missions, they're going to be coming back to us with what their relocation costs are, but it could be somewhat more; they could run this cost up considerably. But those are key numbers to keep in mind. About $550 million for downtown, $375 million for Elmendorf. That east-west viaduct is $100 million, that's why we've broken it out separately; it's not essential to the bridge to get into operation and be useful for some time before this bill.

QUESTION: Is the military prepared to give up the ROW across the land? How are we protected again cost overrun? What's our protection, are you talking hard money contract?

ANSWER: The military is not at this time prepared to give that ROW up. They want to do a study, they have their ...consultant on board to do that. The cost overrun protection. Well, when we complete our study and have our bidding documents we will have a conservative cost estimate, our engineers will be preparing that for us. We should be taking a look at the potential for sensitivity in some of those costs. I think

the best encouragement you would have there is if we had an estimate, put it out to bid, the bids will come back, and that bid is a construction bid and there are always ...contingency money, but it should be very close to what we get back to the bid.

Very quickly, and this gets, and I could spend quite a bit of time with this, but again our menu, to the legislature would involve several potential mechanisms. The revenue bonds, private design built finance concept, maybe the sell of some resource to raise money, that's a possibility. Line the local improvement district or portion of the bridge, state appropriation, or combination of these and other mechanisms.

Important chart shows the benefit and cost as they crew to the project. Conservative estimate requires an investment from the STate. Our toll revenues can essentially support a certain amount of borrowing. Federal funds are available for the connecting roads. This would speak to Senator Pestinger questions about why move these investments down later on, is essentially so we don't have just an enormous 3-5 year appropriation.

QUESTION: It looks to me like there's about 20,000 acres of land here that in all liklihood would be developed and I don't know if some of this is swamp (alot of it is pretty good) but 20,000 acres ...let's say that the depreciation in value of those 20,000 acres would pay the $10,000 an acre would that be fair? Is the day the bridge..more than it is now.

ANSWER: (Ward)The day the bridge is done it worths $10,000 more an acre, yes.

QUESTION: That's $200 million in net increase of the value of that property.

ANSWER: (Ward) That is one of his planning scenarios that will be presented to the Legislature next year, the land acquisition into the base which the, under the International Airport bonding mechanism, they can accept the land injection or money injection. So that is one of the scenarios that should be coming back in the menu that he is speaking. Where we will not use money we will land which is the same as money, but it will have a land base such as maybe mental health or the U of A does it at present time.

Very quickly responding to that, keep in mind that alot of that land was in STate ownership has been claimed by the Mat-Su Borough. The land status is owned by the Mat-Su borough, the value capture which is a term often used for that delta, value depreciation is also owned by Mat-Su because...the land. The State does own some land there, but not as much as you might think.

QUESTION: The ROW corridor that goes all the way up to Houston, that should have equal appreciation in...I'm sure there's alot of State land that's owned ...

ANSWER: That land is more of what we'll be looking at, we can't sell land the State doesn't own. But also, the real appreciation is remember the ....there is going to be on the land ...opposite the downtown development of Anchorage, I think we'll see a Twin City type development package and that will be very high value land. Much more.....

We have a number of activities that have to be completed and we can talk a little bit more in detail when I have a little more time about what those things are, but the conclusion is that we will need authority, probably funding from the Legislature and that's why we're targeting even though we're going to be done a little bit early. We're on schedule and we want to stay that way, but we want to work with the Legislature as we develop some of these ...the EIS, and various other things to be able to respond to questions, and this group is very important to that process, so that when we come back in the next legislative session, we will have some exchange of information, everybody will be reading off the same sheet of music, but we will then have a chance to communicate.

QUESTION: Last year the House passed a bill for the Knik Arm authority, and that was on the advise of the commissioner who said that, at least to the... the department felt no legislation...this has changed now.

ANSWER: The bill CSHB 661 would be our recommendation that that be passed, give DOT the authority to ...and use those tolls to make principal interest payments on revenue bonds.

QUESTION: So it's not the ..concept....

Ward: Speak towards HB 294 and HB 295 which passed the House. Last year speaking to Commissioner Casey and the House felt that we wanted to take this project out of the Department of Transportion and Public Facilities planning and put it into an authority. This apparently was too the Governor came and lobbies along with the Commissioner saying that they did not need legislation to build the Knik Arm Crossing, so these two bills sponsored by Speaker Hayes died in the Senate, or are still in the Senate.

House Bill 661 was introduced this year at the request of the Governor and by Mr. Olsen who has gone through and found that there does need to be some legislation, you can's build large things without the legislature approving them. We found a small oversight on HB 661 and we've corrected that a put a CS in and so that they forgot to put the word Knik Arm in there, that was an oversight and that has been taken care of. So the CS now reflects....I told the Governor about the oversight and he looked very astonished that it had fallen out through the cracks like that, so here I am carrying his water once again...it is in there now it's in the CS and it was an oversight and incidentally there is no objection from the Department of Transportation and Public Facilities for it being place in there. They wanted a framework one and we, some of the people involved, that there cold be a misunderstanding since the Gastineau Channel wanted a bridge too, we wanted to be sure that Knik got first, so that's why the CS reads the way it is.

Asked for Sub-committee for purpose of adopting a resolution to support the KNik Arm crossing for next week's agenda.

Made motion that form a subcommittee for the purpose of creating a resolution from the Anchorage Caucus for supporting the KNik ARm Crossing in conjunction with the legislation that's before us now as supporting the project.

Brief discussion

Sub-Committee Members: Representatives Lindauer, Liska, Ward; Senators Pettyjohn, Josephons, Halford

QUESTION: I don't quite understand, we have two concepts here the downtown bridge and an Elmendorf bridge, it appears to me the DOT feels the Elmendorf crossing is the best way to go. Has that decision been made.

ANSWER: I think the key to note is they're very different projects in the way that they approach Anchorage ...

QUESTION: But the decision has not yet been made.

ANSWER: We are carrying both alternative to the environmental impact statement process, the decision is made after that.

QUESTION: The downtown crossing requires no military lands ROW?

ANSWER: Yes,

Further questions/answers couldn't understand as several people talking at once.

We can not., we don't have enought information to eliminate the Elmendorf Crossing.....we have (not) completed our studies for officially rule on that....

Bussell: ...haven't spoken about the enterprise fund or this inclusion of land into the fund, the enterprise fund as you know holds the Anchorage Airport as well as the Fairbanks Airport and a great deal of State land is in involved in that enterprise fund. When they talk about adding land t the crossing fund, the thoughts were that that fund could be expanded and possibly renamed to include the crossing authority. By adding additional land to the enterprise, it then would be able to collect its own fees and tariffs much as the, same way the International Airport does right now. In conjunction with those other two sources, would become a viable source to sell its own bonds and build its own bridge and collect possibly its own accesses. Those of you who have talked to Mr. Olsen, incidentally, I'm awfully glad that MR. Olsen's on board, it's the first indication that I've had that the Dept. of Hwys is serious and it's going to respond to the legislature in building this bridge. Up until the time he came, I absolutely believe that all we got was rhetoric and run around at the continued expense for nothing. And I am very happy to see him here.

I think the enterprise fund, even though the DOT doesn't think its worth considering, I think it is definitely worth considering and probably the most viable way of getting that bridge built and having it control its own destiny and getting it done on time.

Brief thank yous, end of meeting.

Re: HB 661

HB 661 relating to revenue bonds for highway, road and bridge facilities is currently in your committee. This bill was introduced by the Governor. I also understand the administration supports the proposed substitute by the committee.

To give this bill an opportunity for passage by the Senate, it is imperative it be moved along quickly. I request that you move the bill from your committee as soon as possible.

Thanks.

DATE 02/13/84
CHAMBER HOUSE
TEXT HOUSE BILL NO. 661 by the Rules Committee by request of the Governor, entitled:

"An Act relating to the acquisition, construction, equipping, and maintenance of toll facilities funded by revenue bonds and providing toll collection authority."

was read the first time and referred to the Transportation and Finance Committees.

BILL HB0661
PAGE 02563
DATE 02/13/84
CHAMBER HOUSE
TEXT A fiscal note was attached which appears in House Journal Supplement No. 92. The Governor's transmittal letter dated February 13, 1984, appears below:

"Dear Representative Hayes:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill relating to toll bridges and highways. This bill addresses both the authority for construction and maintenance of the facilities and their funding through revenue bonding. The bill gives this authority to the Department of Transportation and Public Facilities and avoids unnecessary duplication of personnel in the administration of toll facilities. The language in the bill is based on language in AS 37.15.-410 -- 37.15.550, dealing with international airports revenue bonds.

The bill provides that the acquisition, construction, or equipping of toll facilities may be accomplished through the issuance of revenue bonds. It creates special funds for the accounting and management of proceeds of the bond sales and for the redemption or refunding of the bonds. It further allows the retention, in the toll facilities revenue fund created in AS 37.15.630, of money generated through toll collection. This money will then be used for payment of interest on the bonds and redemption as the bonds mature.

Money received from tolls collected and placed in the revenue fund is also made available for the purposes of paying for normal maintenance and operation of the toll facilities, replacement of the facilities, and other costs associated with the ownership of the facilities. The money would not be available for general appropriation by the legislature but would be protected for use for those purposes set out in AS 37.15.630. This does not violate the "dedicated funds" prohibition contained in art. IX, sec. 7, of the Alaska Constitution inasmuch as the funds are segregated for the purpose of guaranteeing payment of bonds and securing the collateral for the bonds.

This bill provides an opportunity to meet certain needs of the state's highway system in an era when general fund appropriations might not be possible for that important purpose. I urge your prompt consideration and action on this measure.
Sincerely,
/s/ Bill Sheffield
Bill Sheffield
Governor"

BILL HB0661

DATE 04/12/84
CHAMBER HOUSE
TEXT The Transportation Committee has had HOUSE BILL NO. 661 (relating to the acquisition, construction, equipping, and maintenance of toll facilities funded by revenue bonds and providing toll collection authority) under consideration, recommends it be replaced with COMMITTEE SUBSTITUTE FOR HOUSE BILL NO. 661 (Transportation):

"An Act authorizing the construction of the Knik Arm Crossing and relating to the acquisition, construction, equipping, and maintenance of toll facilities funded by revenue bonds and providing toll collection authority."

and reports it back as follows: M. W. Miller (Chairman), Abood, Szymanski and Bettisworth recommend do pass; McBride and Davis recommend do not pass; Flood has no recommendation.
A fiscal note was attached.
HB 661 was referred to the Finance Committee.

The fiscal note appears in House Journal Supplement No. 127.

Toll Facility Revenue Bonds

HOUSE BILL NO. 661, by the Rules Committee by Request of the Governor. Relates to the acquisition, construction, equipping, and maintenance of toll facilities funded by revenue bonds. See accompanying letter from the Governor. Does not provide for an effective date (becomes law 90 days after Governor signs bill).

Introduced February 13 and referred to Transportation, Finance.

In his message transmitting the bill, Governor Sheffield stated:

> Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill relating to toll bridges and highways. This bill addresses both the authority for construction and maintenance of the facilities and their funding through revenue bonding. The bill gives this authority to the Department of Transportation and Public Facilities and avoids unnecessary duplication of personnel in the administration of toll facilities. The language in the bill is based on language in AS 37.15.410 -- 37.15.550, dealing with international airports revenue bonds.
>
> The bill provides that the acquisition, construction, or equipping of toll facilities may be accomplished through the issuance of revenue bonds. It creates special funds for the accounting and management of proceeds of the bond sales and for the redemption or refunding of the bonds. It further allows the retention, in the toll facilities revenue fund created in AS 37.15.630, of money generated through toll collection. This money will then be used for payment of interest on the bonds and redemption as the bonds mature.
>
> Money received from tolls collected and placed in the revenue fund is also made available for the purposes of paying for normal maintenance and operation of the toll facilities, replacement of the facilities, and other costs associated with the ownership of the facilities. The money would not be available for general appropriation by the legislature but would be protected for use for those purposes set out in AS 37.15.630. This does not violate the "dedicated funds" prohibition contained in art. IX, sec. 7, of the Alaska Constitution inasmuch as the funds are segregated for the purpose of guaranteeing payment of bonds and securing the collateral for the bonds.
>
> This bill provides an opportunity to meet certain needs of the state's highway system in an era when general fund appropriations might not be possible for that important purpose. I urge your prompt consideration and action on this measure.

Toll Facility Revenue Bonds

HOUSE BILL NO. 661, (see page 372). Reported back to the House April 12 by Transportation recommending it be replaced with a substitute and as follows: M. W. Miller (Chair), Abood, Szymanski and Bettisworth recommend it do pass. McBride and Davis recommend do not pass. Flood has no recommendation. To Finance.

Transportation adds a new section that states: "Sec. 37.15.730. Knik Arm Crossing. Notwithstanding the provisions of AS 37.15.720 the first state toll facility to be constructed is the Knik Arm Crossing near Anchorage." (The provisions of sec. 720 authorize the state to " ... acquire, construct, equip and maintain toll bridges, highways, roads, crossings, and causeways found to necessary by the commissioner of transportation and public facilities."--"crossings" is added by this substitute.) Adds reference to section 730 throughout the bill.

Transportation cleans up language throughout the bill. "Crossings" is also added to the definition of "toll facilities" in the definition section of the bill.

SOURCE OF FUNDS TO OFFSET FISCAL IMPACT OF BILL:

Costs of issuing revenue bonds will be recovered in the bond sale and liquidated from project revenues. There is, therefore, no fiscal impact from the bill. Fiscal impacts from specific projects will be considered if and when legislation is introduced to contribute capital or operating funds to the projects.

FISCAL NOTE BACKUP

TOLL FACILITIES FINANCING

CS HB 661(Trsp)

(1) The bill will allow DOT&PF to sell revenue bonds to finance toll producing transportation facilities. The first project to be financed will be the Knik Arm Crossing near Anchorage. Costs associated with the bond issue will be recovered with the issue and paid from revenues. Operating and other costs will also be paid from toll revenues. As a result, no net operating costs will accrue from the bill. Any legislated contributions to operating costs for specific facilities, (such as Knik Arm Crossing) would be the subject of separate legislation and the fiscal impact would be considered with such legislation.

(2) The bill seeks to construct capital facilities through the sale of revenue bonds. Any legislated contributions to capital, if required, would be the subject of separate legislation and the fiscal impact would be considered with such legislation.

(3) Facilities constructed under the bill will be revenue producing. The revenues will contribute to capital and operating costs as explained in notes (1) and (2) above.

(4) Federal Fund eligibility will be determined on a project by project basis.

(5) Employee costs and positions arising from facility operation will be paid from project revenues.

$63,000,000 is the estimated annual debt service on the $500,000,000 revenue bonds authorized in CS HB 661. This debt service estimate assumes 20 year bonds at 11% interest to be conservative. Bonds may have longer maturities and higher or lower interest rates.

The source of funds for debt service would ordinarily be the toll facilities revenue fund. However, until the first project is operating, there will be no revenues. Therefore, for FY 85 at least, the fund source would be the toll facilities construction fund.

NOTE: The amounts requested in this fiscal note need only be appropriated if there is an appropriation enacted to construct toll facilities with bond proceeds. That is, the fiscal note solely for the authorization of $500,000,000 in bonds is actually zero.

MEMORANDUM

TO: Representative Bette Cato
Attention: Rhonda Cargill

FROM: David Teal
Legislative Analyst

RE: HB 661-Knik Arm Crossing
Research Request 84-080

You requested a brief analysis of HB 661, which authorizes the construction of the Knik Arm crossing. We offer the following comments on the draft committee substitute dated March 15, 1984.

Explanation of HB 661

The bill is a framework for the sale of revenue bonds for the purpose of constructing, acquiring, equiping and maintaining toll facilities such as bridges and highways. The emphasis (in the bill title) on the Knik Arm crossing is therefore somewhat misleading; the bill authorizes the sale of bonds for any toll facility "found to be necessary by the commissioner of transportation and public facilities." Note, however, that Sec. 37.15.730 specifies that the Knik Arm crossing will be the first toll facility to be constructed under the proposed law.[1]

As you may know, the State issues three types of bonds. Each of the three types is briefly described below.

General Obligation Bonds (G.O. Bonds) are backed by the full faith, credit and resources of the State. This means that annual debt

---

[1]The present language specifies that the Knik Arm crossing is to be the first toll facility constructed with the proceeds of the revenue bonds authorized by HB 661. The language does not preclude use of the construction fund for other means of acquiring toll facilities or for converting existing state roads, highways, bridges, causeways or crossings to toll facilities. Once a facility is designated as a toll facility, the tolls can be used to pay the cost of operating, maintaining, renewing, replacing and repairing the facility.

service requirements (that is, payment of both principal and interest) have the first claim on all revenues of the State. General Obligation Bonds must be authorized by legislation for capital improvements and be ratified by the voters of the state.

International Airport Revenue Bonds are special obligations of the State. They are payable from and secured by a first lien on gross operating revenues derived from operations of the Anchorage and Fairbanks International Airports. The resolution authorizing sale of the airport bonds requires that rentals, fees and other airport charges be set at a level sufficient to provide annual net revenues at least 30 percent higher than annual debt service requirements. In practice, the net revenue of the airports has been more than five times the amount required for debt service.

Agency Bonds are issued by a number of agencies that have a legal existence independent of the State. The Alaska Housing Finance Corporation is responsible for about 90 percent of bonded debt held by State agencies. Like revenue bonds, agency debt is self-liquidating. That is, principal and interest are payable from earnings derived from user charges.

HB 661 is nearly identical to current statutes related to revenue bonds for international airports (AS 37.15.410-.550). The maximum amount of airport bonds which can be sold is $62.8 million and the amount of airport revenue bonds outstanding on June 30, 1983 was $17.4 million. Similarly, the authorization to issue $500 million in revenue bonds for toll facilities does not mean that the entire amount will be sold and certainly does not imply that the entire amount would be used to construct the Knik Arm crossing.

Analysis of the Knik Arm Crossing

The following analysis of the Knik Arm crossing is based on information contained in a feasibility study of the project.[2] The analysis is highly simplified and is intended to emphasize issues and options rather than to project actual circumstances. The attached tables were prepared by the agency to aid the analysis. Table A shows projected revenues and debt service in a "no inflation" scenario. Table B assumes that tolls increase by five percent per year to offset inflation. The columns in the tables are discussed below.

---

[2]Knik Arm Crossing: Economic Feasibility, prepared for the Alaska Department of Transportation and Public Facilities by EMPS-Sverdrup, April 15, 1983.

- Crossings are based on the projections in the feasibility study. Note that the expected traffic in the first year of operation is equivalent to one vehicle every four seconds throughout the year. Projected traffic nearly doubles by 2030. Although these figures appear somewhat optimistic, I have no suggested alternative projections. Optimistic traffic counts will overstate revenue from tolls.

- Revenue is computed by multiplying annual traffic by the amount of the toll. Table A is a "no inflation" scenario and assumes that tolls remain at $2 per crossing throughout the life of the project. Table B shows higher revenues because tolls are assumed to increase by five percent per year, which is the rate of inflation used in the feasibility study.

- Debt Service is based on the following assumptions:

  1) Bonds are sold to finance only the crossing itself; the approaches and other requirements of the project are assumed to receive funding from other sources.

  2) The crossing is expected to cost $334.6 million, which is about 65 percent of the total cost of the project. All costs are in 1983 dollars.

  3) The bonds have a maturity of 20 years and carry an interest rate of 10.5 percent. Debt service is based on standard amortization schedules. If the bonds were sold at a lower interest rate, annual and total debt service costs would be lower. If the maturity were extended, annual debt service would be lower but total interest costs would be higher.

  4) The total amount of bonds sold to finance the crossing is 15 percent above the anticipated cost of the crossing. The 15 percent cushion is typical of revenue bond sales. The excess is used to cover the costs of the bond issue and to set up reserve accounts.

  5) The bonds are sold as required to meet the construction cost schedule on page III-5 of the feasibility study. Although this schedule of sales is unlikely to occur--interim financing is often used while a project is under construction and bonds are often sold as a large issue after a project is completed--it is used because it provides an approximation of interim financing requirements.

- Debt Service - Revenue is self-explanatory. The figures would change if either debt service or revenues were altered.

- Cumulative Cash Shortage is the cumulative amount by which debt service exceeds anticipated revenue from tolls. The amount does not include the costs of operating or maintaining the project.

The analysis shows that expected revenues from tolls exceeds cumulative debt service by the year 2030. However, there is a cash shortage throughout the life of the 20-year bond issue. Three options to cover the cash shortages are discussed below.

- The debt service can be capitalized, which means that more bonds are sold than are required to construct the crossing. The proceeds of the "excess bond" sale are then used to pay the difference between toll revenues and debt service on the bond package. If the revenue bonds are a tax free issue, the interest cost of the bonds is likely to be less than the interest that can be earned by investing the bond proceeds. Investing money at a higher interest rate than the cost of funds is called "arbitrage" and is generally discouraged by the Internal Revenue Service. In addition, bond purchasers might be wary of an issue which required capitalization of large portions of total debt service costs. Capitalization of interest could increase the interest rate on the bond issue, thereby raising the total cost of the project.

- The legislature could annually appropriate funds to pay debt service costs that exceeded annual revenue from the crossing. This situation would not be attractive to potential bond purchasers, especially because one legislature cannot bind future legislatures to a course of action.

- The bond issue could be reduced so that only a portion of the cost of the crossing is borrowed in the bond market. This would mean that all costs in excess of the bond proceeds would have to come from another source. The proposed Major Projects Fund is one potential source of funds for the crossing. Under current law, the capital budget is the most likely source of the funds necessary to reduce the level of bonding required to construct the crossing.

A reduced bond issue is the most likely scenario. John Olson, director of major projects for the Department of Transportation, expects that borrowing would be limited to about $200 million for a downtown crossing and to no more than $125 million if the access is through the Elmendorf Air Force Base. Debt service on a $200 million bond issue would be about $24 million per year under the assumptions listed earlier in this

memorandum. Debt service on $125 million would be about $15 million per year. The Department of Transportation expects toll revenues from the Elmendorf crossing to be sufficient to pay the debt service costs of a $125 million bond issue.

SOURCE OF FUNDS TO OFFSET FISCAL IMPACT OF BILL:

Costs of issuing revenue bonds will be recovered in the bond sale and liquidated from project revenues. There is, therefore, no fiscal impact from the bill. Fiscal impacts from specific projects will be considered if and when legislation is introduced to contribute capital or operating funds to the projects.

FISCAL NOTE BACKUP

TOLL FACILITIES FINANCING

(CS HB 661)

(1) The bill will allow DOT&PF to sell revenue bonds to finance toll producing transportation facilities. The first project to be financed will be the Knik Arm Crossing near Anchorage. Costs associated with the bond issues will be recovered with the issue and paid from revenues. Operating and other costs will also be paid from toll revenues. As a result, no net operating costs will accrue from the bill. Any legislated contributions to operating costs for specific facilities, (such as Knik Arm Crossing) would be the subject of separate legislation and the fiscal impact would be considered with such legislation.

(2) The bill seeks to construct capital facilities through the sale of revenue bonds. Any legislated contributions to capital, if required, would be the subject of separate legislation and the fiscal impact would be considered with such legislation.

(3) Facilities constructed under the bill will be revenue producing. The revenues will contribute to capital and operating costs as explained in notes (1) and (2) above.

(4) Federal Fund eligibility will be determined on a project by project basis.

(5) Employee costs and positions arising from facility operation will be paid from project revenues.

Re: CSHB 661 - April 12, 1984 Inquiry
From Representative Bette Cato,
House Transportation Committee

Honorable Joe Hayes
Speaker of the House
Pouch V
State Capitol
Juneau, Alaska 99811

Dear Representative Hayes:

In response to a request from Mr. Neil Phelps-Munson of your office, following are answers to questions raised in an April 12, 1984 letter from Representative Betty Cato on CSHB 661.

QUESTION - "The language in the bill specifies that the Knik Arm Crossing is to be the first toll facility constructed with the proceeds of revenue bonds authorized. How does it preclude use of construction fund for other means of acquiring toll facilities or converting existing State roads, highways, bridges, causeways or crossings to toll facilities."

ANSWER - There are three forms of protection against abuses of borrowing authority created by CSHB 661.

1. State Constitution - The constitution allows funds to be created (such as the construction fund, revenue fund and bond redemption funds in CSHB 661) to collect moneys associated with revenue bond payments. The constitution will not allow DOT&PF to charge tolls on a facility and pledge those funds to another facility. If DOT&PF collects tolls on any project for which revenue bonds have not been sold the money would go directly to the general fund. In fact, after the revenue bonds for the Knik Arm Crossing (or any other facility) are paid off, toll revenues will flow to the general fund.

2. Bond market requirements - The bond resolution and other representations associated with selling revenue bonds will assure bond buyers that funds obtained from the bond sale will only be used for the project identified in the offering. No way could any proceeds of a bond sale be used for another project. The "bond test" is probably the best assurance of realistic revenue forecasting and appropriate fund utilization that can be offered to the legislature.

3. Revenue constraints - Toll bridge or highway projects in Alaska characteristically have traffic volumes that are too low to recover even a portion of capital costs from toll revenues. At present the Knik Arm Crossing is the only project we can identify that can generate toll revenues sufficiently in excess of operation and maintenance costs to warrant sale of toll revenue bonds. Even so, action from the legislature will be needed next year to implement the project. We can foresee no Alaska bridge or highway project that will be so lucrative in toll revenue that the DOT&PF would be able to implement the project without discretionary review and support from the legislature.

QUESTION - "Does the language in this bill restrict the use of money for special projects or is the money discretionary? If not restricted, what language could be used to do so?"

ANSWER - The bill allows the sale of revenue bonds first for the Knik Arm Crossing, and then for other projects that can produce toll revenues sufficient to make debt service payments. There is no discretion to use the revenue bond money for anything but toll bridges and highways for which revenue bonds have been sold. Language in the CSHB 661, combined with the State constitution, bond market requirements, and revenue constraints for toll bridges and highways (as discussed above) are adequate restrictions to assure the legislature that the bill will be used in the manner intended by the legislature.

QUESTION - "We have been told that CSHB 661 is based on the international airport revenue bonds but the difference we wonder about is:

The maximum amount of airport bonds that can be sold is $62.8 million; the resolution authorizing the sale of airport bonds requires rentals, fees and other airport charges be set at a level sufficient to provide annual net revenues at least 30 percent higher than annual debt service requirements."

ANSWER - The bond market will require a revenue-to-debt service ratio of 1.2 to 1.5. Rather than fix this ratio in law, we would prefer to establish the ratio as a bond covenant in the offering along with other variables such as revenue forecast, debt retirement schedule, term of bonds, and reserve amounts. In other words, the revenue-to-debt service ratio should be set at the time of sale as part of the marketing mix offered to bond buyers.

QUESTION - "CSHB 661 authorizes sell of $500 million in revenue bonds and does not imply that the entire amount will be sold or would be used to construct the Knik Arm Crossing."

ANSWER - That is correct. At the present time it appears the project will support about $200 million in revenue bond borrowing. If interest rates are lower at the time of the sale we could borrow more. The balance of bond

authority remaining after the bond sale for the Knik Arm Crossing would be available for other projects under the framework legislation concept. Again, the authority to sell bonds for other projects will only be used if the project withstands a bond test, which means it must demonstrate sufficient toll revenues to repay the bonds.

The legislature is definitely not offering carte blanche to other toll bridge and highway projects. The legislature will continue to have funding discretion over every project even before it goes to a bond test. At the risk of being repetitious, this is primarily because toll bridges and highways in this State will not produce sufficient revenues to fully repay capital costs over annual operation and maintenance.

QUESTION - "Thus, the question being that what happens if there is a cash shortage throughout the life of the 20 year bond issue, which option will be taken to cover these cash shortages?"

ANSWER - As mentioned earlier, revenues will be programmed to exceed debt service by 20 to 50 percent. There will also be a reserve fund to hold a percentage of bond proceeds to pay debt service. If, however, revenue shortages begin to materialize, DOT&PF could act to increase revenues by toll enhancement (i.e. encourage additional user volume; raise tolls). If these precautions and remedies fail it would be necessary to seek state aid to avoid a default. The bonds are not a general obligation of the State so the legislature could decline to give aid. Not aiding a state bonded project would, of course, have an adverse effect on other state bond issues. The tendency for a state to "rescue" lenders from default on state bonds is often referred to as a "moral obligation" that attaches to all bond issues in the state. Revenue bonds issued by State authorities typically prescribe a procedure whereby the legislature will be notified of an impending shortage, in time for action to be taken. Adding this procedure serves to improve the bond rating.

Realize that there is considerable conservatism in a revenue bond issue to avoid the need for a rescue effort by the legislature. Bond holders demand this conservatism which also works to protect the state from failing revenue bonded facilities.

If you have further questions, please let me know.

Sincerely,

John B. Olson
Director
Major Projects Management

DOT&PF Position and Perspectives on CSHB 661

BACKGROUND

The original HB 661 was submitted to accomplish two purposes:

1. Provide DOT&PF the authority to sell revenue bonds to finance toll bridges and highways; and

2. Authorize DOT&PF to collect tolls on bridges and highways to make principal and interest payments on the revenue bonds.

The bill was introduced to provide a financing mechanism for the Knik Arm Crossing. A framework approach was taken on advice of the Attorney General's office, recognizing the State Constitution's requirements to avoid legislation specific to a location or region. We also wanted to preserve the option to recommend the mechanism for future revenue producing highway or bridge projects.

The bill is modeled after the revenue bond provisions of the Airport Revenue Fund. The model was used because it is known to the legislature, and has a good track record to present to bond underwriters and rating organizations.

DEPARTMENT POSITION ON CSHB 661

The DOT&PF continues to recommend a framework concept for bills like HB 661. However, we recognize the committee substitute to be a reasonable bill that addresses concerns expressed by legislators. We, therefore, support the committee substitute and recommend its passage.

APPLICATION TO KNIK ARM CROSSING

The bill provides a mechanism for applying the toll revenue stream expected from the Knik Arm Crossing to the construction of the facility. This mechanism will be considered, along with other financing approaches, in an implementation plan to be presented to the legislature next year. We expect the implementation plan will lead to the legislative direction needed to construct the crossing. No sales of revenue bonds or other related action will be taken before the next legislative session. DOT&PF staff will be working with legislators to exchange information prior to finalizing our recommendations and presenting the implementation package to the legislature.

APPLICATION TO OTHER PROJECTS

If the Knik Arm Crossing uses the revenue bond sales concept outlined in CSHB 661, the mechanism will be available for other projects. (The bill requires application to the Knik Arm Crossing before any other project.) Is should be recognized that bridge and highway projects that can generate revenues in excess of their operations and maintenance costs are quite unique in Alaska. To the extent such projects are identified in the future (we have none to suggest at this time) the legislature would play an active role in their development and financing.

Presented to the House Transportation Committee, April 5, 1984

March 16, 1984

Mr. Jack Allen, P.E.
Project Manager, Knik Arm Crossing
Sverdrup & Parcel and Associates, Inc.
430 C Street, Suite 200
Anchorage, AK 99511

Dear Mr. Allen:

On March 14, John Olson and I met with Mr. Gopinath, Vice President of Corporate Affairs, Calista Corporation and Mr. Denji, Vice President of Calista International Corporation.

Calista has been dealing with Mitsui Shipbuilding and Engineering regarding the Knik Arm Crossing. Mitsui has done some work on design for the bridge, and has talked to their partners at the Mitsui Bank. Calista offered to meet with us to discuss engineering and financing in more detail, and offered to have Mitsui people come over.

We explained some of the more important constraints in state financing or other state participation, and our timetable for the project, and we offered to meet with them to discuss financing. We did not encourage them to bring any engineers over from Japan, at least not yet. I will arrange a meeting with Calista regarding financing in the next few weeks -- probably during the week of March 26.

Calista seemed interested in getting the following messages to us:

1. Confidentiality of their work is important to them. They believe that they have an advantage in their ability to bring financing into a package deal, and they do not want their concept, or their own engineering, to be public information before the bid.

2. They want the full faith and credit of the state behind the financing.

3. They were interested in seeing the project go forward, whether they were involved in the construction or not.

Sincerely,

Steven A. Rieger
Vice President

SUBJECT: Knik Arm Crossing

Dear Mr. Olson:

It was a pleasure to have visited with you in your offices in Anchorage on February 21st. The time you spent with us in explaining the situation regarding the Knik Arm Crossing was very much appreciated.

As discussed in our meeting, Brown & Root is very interested in bidding the Engineering/Construction of the Knik Arm Crossing and has had three consortia approach us about possible financing of portions of this project.

During our discussions you indicated that it would be difficult for the Department of Transportation or the State to negotiate an unsolicited bid for the overall package. Therefore, we would like to prequalify for the work in the routine manner that you plan to use later this year. Brown & Root has been involved in several major water crossings in the United States and has the expertise and the equipment available, including derrick barges that might be required for some of the heavy lifts.

Thanks again for the time that you allowed us back in February. We are looking forward to working with you on this project as it develops.

Kind Regards,

Bill

John B. Olson

Director
Division of Major Projects Development
Dept. of Transportation &
Public Facilities

Dear Sir,

I would like to express my sincere gratitude for your warm hospitality rendered during my visit to your office on February 10,1984, sharing time from your busy schedule.

You were very kind and helpful in conducting my successful survey on future Alaska construction market prospective for our business activities. Our technical engineering Dept.has just begun reviewing the draft of tender documents regarding Nome Harbour Project furnished to me in anticipation of your invitation.

Meanwhile, I sincerely hope that we would be invited to the tenders for the Knit Arm Bridge Project and other various projects planned for the five years ahead according as you promised that our Corporation would be registered with prospective bidder list applicable for your esteemed State Government's projects.

We assure you of our best service to highest standard if an opportunity be given to us.
Wishing the ever-lasting prosperity of your esteemed Department.

Yours Sincerely,

SAMWHAN CORPORATION

Gentlemen,

Re : Knik Arm Crossing

We, NIPPON KOKAN K.K. (hereinafter called NKK), have the honour to express out keen interest in participating in the captioned project and to submit herewith our company brochures, experience record and technical documents in which you will find activities and performance of our company.

As you may see from the above documents, NKK is now ranked as the third largest steelmaker in the world and in terms of all around technical expertise, NKK holds an unrivaled position because it is simultaneously a world leader in three major industrial fields - Steelmaking, Heavy Industries and Shipbuilding - allowing it to supply a comprehensive range of products and services to you.

In the field of bridge construction, NKK has considerable experience about supply and erection of steel superstructure of various type of bridge and has enjoyed good reputation in our achievement abroad as well as domestic.

Furthermore NKK has remarkable speciality of steel structures for low temperature service and has executed structural steel works in your esteemed province, such as Kenai Bridge, Sagavaiktok River Croosing,

- Cont'd on Page 2 -

Alyeska Pipe Support Bridge, Gulkana Bridge and Pipe Support structures for Trans Alaska Pipeline Project, etc.

Judging from the foregoing, we are confident that NKK is capable enough in undertaking and proceeding this bridge construction project meeting with your expectation and requirements of price, engineering service, performance and quality.

We would highly appreciate it if you could invite us to the forthcoming qualification and tender and let us have a chance to work together with you toward successful construction of this bridge.

Thank you for your attention and we are looking forward to serving you in the near furtue.

Very truly yours,

T. Suganami

Dear Mr. Treadwell,

Mr. Norio Yamamoto of Mitsubishi Research Institute kindly forwarded to us your Economic Feasibility Report on the Knik Arm Crossing dated April 15, 1983 for our reference.

After a brief review, we have found the project interesting and wish to cooperate with you for the promotion of the project.

Accordingly, we appreciate it if you could let us know the area in which we shall be of assistance to you as a member of the Mitsubishi group which is the largest industrial groups in Japan. At the same time, it will be most helpful to us if you could provide us with a detailed financial plan for the project so that we shall be able to better analyze the project from the financial point of view.

It will be a great pleasure for us to exchange ideas with you how to promote the project and we wish to continue a dialogue on the development of the project. Please contact us at any time when you need our assistance.

Looking forward to hearing from you soon, and please give my best regards to Mr. Walter J. Hickel.

Very truly yours,

K. Nakamura

Dear John,

Enclosed is the letter I received from Mr. Kazuo Nakamura at the Mitsubishi Bank. Governor Hickel and I have had dinner with Mr. Nakamura twice before in Japan and he shares a strong interest in Alaska.

Either his bank, or some other part of the Mitsubitshi Group could be called upon to play a role in the Knik Arm Project. I'd keep chumming the waters by providing information his way so that they can respond when the time comes.

Congratulations on your appointment. We should be working together as time passes.

With best wishes,

Sincerely,

Mead Treadwell
Secretary

Mr. Richard S. Armstrong, P.E.
Director, Central Region
Design and Construction
State of Alaska
Dept. of Transportation and Public Facilities
4111 Aviation Avenue, Pouch 6900
Anchorage, Alaska 99502

Re: Knik Arm Crossing

Dear Mr. Armstrong:

Thank you for your letter of May 18 and the Economic Feasibility Report on the Knik Arm Crossing. We are strongly interested in financing, design, construction and operation of the toll bridge.

Based on our experience in similar projects in Greece and Kuwait, we imagine that a possible scenario may look as follows:

1. Project will be formulated by the State. Bridge design criteria will be set; evaluation criteria for prequalification and final contract award will be laid out; and the terms of the eventual contract between the State and Contractor will be spelled out.

2. State will prequalify bidders (typically consortia of banks, engineering consultants and general contractors) on their financial, engineering and management strengths.

3. The prequalified bidders will submit their final designs, construction schedules and operation plans. State will select a successful bidder according to the preset criteria.

(continued)

4. Contractor will construct, operate and maintain the toll bridge.

5. After a certain number of years, State will purchase the bridge from Contractor for a predetermined price, and take over the operational responsibilities.

It appears from your report that most work necessary for establishment of design criteria has already been done. You could easily prepare a final design with State's fund and let bidders bid for it. This approach will simplify your task of bid evaluation, but you may miss an opportunity to take advantage of bidders' design ingenuity and particular strengths in performing certain types of construction.

Simple and loosely written design criteria helped the Government of Kuwait to get an ingeniously designed bridge (Bubiyan Bridge) inexpensively while the same approach muddled everything in the case of Rion-Antirion Crossing in Greece. My personal preference for the Knik Arm Crossing is to have relatively tight design specifications--at the level of your Conceptual Details--and permit the bidders to design only the details and construction methods to suit their capabilities.

Even with tight design specifications, the task of bid evaluation will not be simple. The fundamental question is what variable should be used as the main determinant of the bid when the construction cost is not a visible factor. One possibility would be the "Sell-back Price" if it is allowed to be bid on. All others being equal (or meeting the minimum criteria), State could pick up the bidder who offers the lowest sell-back price for a given target year.

As a part of the Contract terms, we expect the State to stipulate the maximum tolls chargeable to each type of vehicle for each period of years. We also expect the State to guaranty the minimum revenue traffic, and subsidize the Contractor if the traffic volume does not reach it. It will be a formidable task to devise a subsidy formula that will satisfy both the State and the Contractor. However, it is essential that it will be spelled out before bidding.

(continued)

Finally, because of Alaska's proximity to Japan, we expect Japanese consortia, and perhaps some Koreans, to offer very competitive bid packages. We also work closely with Japanese companies. We therefore urge you to keep the competition open to all international bidders and eliminate any and all Buy-American and U.S.-Flag requirements and penalties from this project, except that the local labor should be used for construction and operation, and that the operating company should be an Alaskan corporation.

If you wish, we will be happy to provide more detailed input as a potential bidder. Please feel free to call me anytime for informal discussion.

We wish you a great success in this challenging project.

Sincerely,

Tito.

Y. Tito Sasaki

OFFICE OF THE COMMISSIONER

March 29, 1984

Re: DOT&PF Position and
Perspectives on CSHB 661

The Honorable Joe Hayes
Representative
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Hayes:

In response to a March 28, 1984 request from Mr. Neil Phelps-Munson of your office, following is a brief summary of the DOT&PF position and perspectives on CSHB 661. I have discussed this information with Commissioner Knapp to assure accurate presentation of our Department's position.

BACKGROUND

The original HB 661 was submitted to accomplish two purposes:

1. Provide DOT&PF the authority to sell revenue bonds to finance toll bridges and highways; and

2. Authorize DOT&PF to collect tolls on bridges and highways to make principal and interest payments on the revenue bonds.

The purpose of the bill was to provide a financing mechanism for the Knik Arm Crossing. A framework approach was taken on advice of the Attorney General, recognizing the State Constitution's requirements to avoid legislation specific to a location or region. We also wanted to preserve the option to recommend the mechanism for future revenue producing highway or bridge projects.

The bill is modeled after the revenue bond provisions of the Airport Revenue Fund. The model was used because it is known to the legislature, and has a good track record to present to bond underwriters and rating organizations.

DEPARTMENT POSITION ON CSHB 661

The DOT&PF continues to recommend a framework concept for bills like HB 661. However, we recognize the committee substitute to be a reasonable compromise recognizing concerns expressed by legislators. We, therefore, support the committee substitute and recommend its passage.

APPLICATION TO KNIK ARM CROSSING

The bill provides a mechanism for applying the toll revenue stream expected from the Knik Arm Crossing to the construction of the facility. This mechanism will be considered, along with other financing approaches, in an implementation plan to be presented to the legislature next year. We expect the implementation plan will lead to the legislative direction needed to construct the crossing. No sales of revenue bonds or other related action will be taken before the next legislative session. I and other DOT&PF staff will be working with legislators to exchange information prior to finalizing our recommendations and presenting the implementation package to the legislature.

APPLICATION TO OTHER PROJECTS

If the Knik Arm Crossing uses the revenue bond sales concept outlined in CSHB 661, the mechanism will be available for other projects. (The bill requires application to the Knik Arm Crossing before any other project.) It should be recognized that bridge and highway projects that can generate revenues in excess of their operation and maintenance costs are quite unique in Alaska. To the extent such projects are identified in the future (we have none to suggest at this time) the legislature would play an active role in their development and financing.

Please contact me if you have any questions regarding our position on CSHB 661 or the Knik Arm Crossing.

Sincerely,

FOR R. J. Knapp
Commissioner

H.B. 701
Analysis Attachment

Assumptions

Assume replacement of old road sign with new one identifying new road name and two new advance signs on the north and south ends of roads intersection. Signs would be erected by Maintenance & Operations forces.

Program Summary

Positions: No new positions would be required.

Other Expenditures: One new road sign at approximately $200.00
Two new advance signs at approximately $150.00 (each)
M&O forces time (based on 25% of equip. costs) = $125.00
Total cost (rounded to nearest $100.00) = $700.00

Funding: Would assumably come from general funds.

Section Cost Analysis: Explained under "other expenditures".

Computations: Explained under "other expenditures".

Economic Impact: None

Impact on Local Government: None

CHAIRMAN

BACKGROUND ON HOUSE BILL 701

RENAMING KLUTINA ROAD

THE KLUTINA ROAD HAD ITS BEGINNING IN THE FALL OF 1963 WHEN LEONARD BRENWICK AND OSCAR CRAIG WORKED TO CONSTRUCT AND MAINTAIN THIS ROAD AT THEIR OWN EXPENSE. THE ROAD FOLLOWS THE TRAIL USED BY THE MINERS OF 1898-99 IN TRAVELING FROM VALDEZ TO THE INTERIOR. ALONG THE EDGE OF THE ROAD ARE THE REMAINS OF CABINS USED BY THE MINERS WHEN THEY WERE FORCED TO WINTER THERE IN 1898.

LEONARD BRENWICK AND OSCAR CRAIG STARTED TO CONSTRUCT THIS PIONEER ROAD IN 1963 AND COMPLETED 12 MILES OF ITS 125 MILE LENGTH AT HIS OWN EXPENSE. PERMISSION FOR THIS PROJECT WAS GRANTED BY THE DEPARTMENT OF HIGHWAYS AND THE BUREAU OF LAND MANAGEMENT.

IN 1964 LEONARD BRENWICK WAS GIVEN A CONTRACT TO COMPLETE THE REMAINING 13 MILES. THIS CONTRACT AMOUNTED TO $6,440.00 AND IT IS INTERESTING TO NOTE THE DEMANDS OF THE CONTRACT. THE CONTRACT STATED THAT IF HE DID NOT COMPLETE THE PROJECT WITHIN THE ESTIMATED COST THEN HE WOULD BE OBLIGATED TO COMPLETE THE REMAINDER OF THE ROAD AT HIS OWN EXPENSE. LEONARD ACTUALLY MET AND COMPLETED THIS CONTRACT--AT HIS OWN EXPENSE BECAUSE EVEN IN THOSE EARLY DAYS THIS WAS NOT ENOUGH MONEY FOR THIS SIZE PROJECT. OSCAR CRAIG ACTED AS HIS OPERATOR-MECHANIC. NEITHER OF THESE MEN DREW ANY SALARY FOR THEIR EFFORTS.

IT IS ESTIMATED THERE ARE 5 to 10 THOUSAND VISITORS USING THIS ROAD FOR HUNTING, FISHING, SIGHT SEEING AND THE GATHERING OF HISTORIC INFORMATION. THIS ROAD ENCOMPASSES ONE OF THE BETTER SCENIC AREAS OF ALASKA AND ITS HISTORIC ATTRIBUTES ARE UNSURPASSED.

THERE IS A PETITION ON FILE SIGNED BY 60 MEMBERS OF THE COMMUNITY OF COPPER CENTER REQUESTING THE TITLE CHANGE. THE TOTAL POPULATION OF THIS COMMUNITY IS APPROXIMATELY 250 PEOPLE AND THERE WOULD HAVE BEEN MORE SIGNATURES OBTAINED BUT TIME DENIED AS WE WANTED TO GET THIS NAME CHANGE ACCOMPLISHED THIS YEAR AND THE PETITION HAD TO BE MAILED TO JUNEAU.

BOTH OF THESE MEN ARE NOW DECEASED BUT THIS ROAD REMAINS AS A MONUMENT TO THEIR COMMUNITY EFFORT.

HCR

2

how about "Alaska" in Title under committee substitute?

again, if it is not discriminatory to H but I think it will be challenged.

DRAFT

LETTER OF INTENT TO ACCOMPANY
HCR 2
HOUSE TRANSPORTATION COMMITTEE

It is the intent of the House Transportation Committee that the Department of Transportation and Public Facilities establish a procedure to define "space available basis".

The Committee intends the definition of "space available basis" in the context of this resolution to require passengers so traveling, be on stand-by until all paying passengers have been accommodate. Passengers would not be allowed to receive confirmed reservations unless they are paying passengers and would not be allowed reimbursement in the event that they purchased tickets and were later able to travel "space available".

THE LEGISLATURE OF THE STATE OF ALASKA
THIRTEENTH LEGISLATURE

FISCAL NOTE

I. REQUEST
Bill/Resolution No. HCR 2 - Re travel by senior citizens aboard vessels
Title of the state marine highway system.
Requested by Grussendorf & Fritz Date 1/17/83

II. FISCAL DETAIL
Agency Affected DOT/PF
Program Category Affected Transportation
BRU, Program, Or Subprogram(s) Affected Marine Highway Systems
(Note: If more than one budget component is affected, separate line-item amounts and funding for each component in the analysis section.)

EXPENDITURES (Thousands of Dollars)

	FY 83	FY 84	FY 85	FY 86	FY 87	FY 88
100 PERSONAL SERVICES						
200 TRAVEL						
300 CONTRACTUAL						
400 COMMODITIES						
500 EQUIPMENT						
600 LAND & STRUCTURES

33-001 (Rev. 12/82)

III. ANALYSIS

House Concurrent Resolution No. 2, references space available free passage for all senior citizens on an annual basis. It further specifies only the smaller "feeder class" vessels of the system. The exception would be the M/V TUSTUMENA but still one of the smaller vessels.

The Department of Transportation and Public Facilities is in the process of completing a "User Survey" of travelers on vessels of the system. The survey reveals that during the winter, (Sept. 15 through May 14) the majority (about 70%) of the passengers on the Marine Highway are Alaskans, of this group approximately 10% are traveling under the Senior Citizen Free Passage program. Therefore, the majority of beneficiaries of Senior Citizen Free Passage are Alaskans.

In the summer (May 16 through Sept. 30) the majority of the systems users (approximately 80%) as reflected in the survey, are from out of state. It would appear then that the beneficiaries of Senior Citizens Free Passage during this time would be from out of state and the state would be subsidizing this travel. Senior Citizens' groups are well organized on both local levels and nationally. We believe these groups would tend to fill the system vessels to the detriment of full fare paying passengers and would require an expansion of service to meet the needs of the older passengers.

Capacity loads are already experienced on the M/V BARTLETT during the summer on her Valdez to Whittier route. Increasing the number of travelers competing for this space, through free passage incentives, might well be counter productive. This also applies to the M/V CHILKAT and M/V TUSTUMENA on certain portions of their routes.

The "User Survey" information reflects that approximately 10% of the passengers on the Marine Highway would be eligible for Senior Citizen routes. Reducing passenger revenue by 10% for the summer months on the specified vessels would approximate the following estimates of reduced revenue.

Vessel	1982 Passenger Revenue 15 May - Oct. 1	10% of 1982 Passenger Revenue for Period
M/V AURORA	275,000	27,500
M/V LeCONTE	271,000	27,100
M/V CHILKAT	42,000	4,200
M/V BARTLETT	710,000	71,000
M/V TUSTUMENA	468,000	46,800

Free Senior Citizen passage for a full twelve months could approximate a loss of revenue of $175,000 each year.

Assuming a 50% discount was passed on the Senior Citizens for staterooms, for a full twelve months per year, the loss of additional revenue would approximate an additional $100,000.00. This estimate is founded using the same approach as the estimate on revenue loss on passage.

We believe there would be insurmountable administrative problems by the establishment of discounted stateroom tariffs for senior citizens. The main problem would be the establishment of priorities. Would these reduced fare senior citizens be allowed to make reservations for staterooms or would the staterooms be on a "space available basis?

We believe that senior citizens from out of state would again be the beneficiaries of such a program.

III. ANALYSIS - HCR 2

House Concurrent Resolution No. 2, references space available free passage for all senior citizens on an annual basis. It further specifies only the smaller "feeder class" vessels of the system. The exception would be the M/V TUSTUMENA but still one of the smaller vessels.

The Department of Transportation and Public Facilities is in the process of completing a "User Survey" of travelers on vessels of the system. The survey reveals that during the winter, (Sept. 15 through May 14) the majority (about 70%) of the passengers on the Marine Highway are Alaskans, of this group approximately 10% are traveling under the Senior Citizen Free Passage program. Therefore, the majority of beneficiaries of Senior Citizen Free Passage are Alaskans.

In the summer (May 16 through Sept. 30) the majority of the systems users (approximately 80%) as reflected in the survey, are from out of state. It would appear then that the beneficiaries of Senior Citizens Free Passage during this time would be from out of state and the state would be subsidizing this travel. Senior Citizens' groups are well organized on both local levels and nationally. We believe these groups would tend to fill the system vessels to the detriment of full fare paying passengers and would require an expansion of service to meet the needs of the older passengers.

Capacity loads are already experienced on the M/V BARTLETT during the summer on her Valdez to Whittier route. Increasing the number of travelers competing for this space, through free passage incentives, might well be counter productive. This also applies to the M/V CHILKAT and M/V TUSTUMENA on certain portions of their routes.

The "User Survey" information reflects that approximately 10% of the passengers on the Marine Highway would be eligible for Senior Citizen routes. Reducing passenger revenue by 10% for the summer months on the specified vessels would approximate the following estimates of reduced revenue.

Vessel	1982 Passenger Revenue 15 May - Oct. 1	10% of 1982 Passenger Revenue for Period
M/V AURORA	275,000	27,500
M/V LeCONTE	271,000	27,100
M/V CHILKAT	42,000	4,200
M/V BARTLETT	710,000	71,000
M/V TUSTUMENA	468,000	46,800

Free Senior Citizen passage for a full twelve months could approximate a loss of revenue of $175,000 each year.

HCR 2 (cont'd)

Assuming a 50% discount was passed on the Senior Citizens for staterooms, for a full twelve months per year, the loss of additional revenue would approximate an additional $100,000.00. This estimate is founded using the same approach as the estimate on revenue loss on passage.

We believe there would be insurmountable administrative problems by the establishment of discounted stateroom tariffs for senior citizens. The main problem would be the establishment of priorities. Would these reduced fare senior citizens be allowed to make reservations for staterooms or would the staterooms be on a "space available" basis?

We believe that senior citizens from out of state would again be the beneficiaries of such a program.

The figures outlined above are viewed as conservative losses because more senior tourists would change travel plans and travel on these vessels in Southeast Alaska instead of the larger vessels for short trips. We also believe that special rates on certain vessels would cause confusion among people not familiar with the various vessels and greatly increase the demand for expansion of free service to all vessels.

MEMORANDUM

TO: Governor Bill Sheffield
√Commissioner Casey

FROM: Representative John Lindauer

I deeply resent the inaccurate and misleading testimony presented by the Marine Highway officials at the HCR 4 hearing.

The complete lack of faith which those officials indicate they have in the ability of the Commissioner and the Governor suggests that either you or they should resign.

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

HCR 4 - Relating to expansion of ferry service.

The preamble of HCR No. 4 alludes to issues and concerns the Department of Transportation and Public Facilities has recently addressed. These overall objectives and sensitive public concerns were addressed in the "Southeast Alaska Transportation Study" by Wilber Smith and Associates, et al. As a major transportation link, MHS operations were addressed in depth. The study does not bear out an immediate requirement to expand ferry service nor did it identify any Alaskan communities needing or requesting ferry service that were not presently connected with a marine transportation link to a larger community or on to a road or highway connection.

In the third paragraph of the resolution there is an assumption that there are, "private companies and the governments of British Columbia and the State of Washington to provide ferry service to Ketchikan without subsidy by the State of Alaska:".

At the present time there are no known, privately owned, U.S. registered vessels, capable of R.O. and R.O. plus passenger capacity available to operate either to or from Ketchikan to other ports except those of the Alaska Marine Highway Systems. To our best knowledge the State of Washington does not presently own a vessel capable of "coastwise" service as certificated by the U.S. Coast Guard.

Canada does own two vessels that are adequate and would meet our needs for R.O. and R.O. cargo plus passengers. These vessels are now fully committed to B. C. Ferry routes between Vancouver, B. C. and Prince Rupert, B. C. Should the B. C. Ferry abandon their own commitments, some major problems would have to be addressed.

The basic disadvantage to ending the Alaska Marine Highway in Ketchikan is that Ketchikan is not where the people wish to go.

The primary destination of people traveling the Marine Highway south from Petersburg is not Ketchikan, it is Prince Rupert or Seattle where the highway network begins.

For northbound traffic, the primary destination is not Ketchikan, it is north of Ketchikan. Only some 25% of the traffic wishes to disembark in Ketchikan.

To force everyone off of one vessel at Ketchikan and onto another would be a considerable inconvenience to 75% of the travelers and an inefficient use of time as well as money.

If the vessels discharging traffic were not of a similar capacity to those receiving that traffic, there would be gross inefficiencies, i.e., the larger vessel would depart less than full and the smaller would leave people behind.

All unaccompanied vehicles, such as vans, trailers, new cars, etc. would require unnecessary handling at Ketchikan to move them from one vessel to another. This would be an added expense to the consumer as these costs would be passed along.

Another possible issue would be the State's liability to the U. S. Government

for past and present Federal Aid funds expended on the present fleet. The Alaska Marine Highway is just what the name implies, a highway. Stopping the marine highway at a point short of a connection with another highway would be parallel to building two-thirds of a highway between two population centers. Not much practical use to either.

At the present time the Ketchikan Maintenance Facility is in the second stage of its construction. Upon completion of this stage, Marine Highway Systems vessels should be able to moor along side and perform both voyage maintenance and emergency repairs not requiring drydocking. This facility will not be capable of full maintenance of vessels until funding is appropriated to complete the vessel lift mechanism and specialty shops that are necessary to make the facility functional as a total vessel maintenance operation.

The Division of Marine Highway Systems does to the extent possible under the law operate its vessels using Alaska-based crews.

ASSUMPTIONS

Since the inception of Marine Highway Systems, the Administrations and Legislators have directed the system to operate on a cost to revenue ratio of approximately two to one. Basic tariffs and routes have been tested against this philosophy. A demonstration of what this change would do to the system's revenue follows:

Assumptions - All of the systems' vessels would be operating approximately the same number of hours annually. Cost of Operations would not change. The same number of passengers and vehicles would be transported annually. The same basic traffic would be in effect.

	In Millions
Anticipated System Operational Cost - present operation	$60.0
Anticipated System Revenue - present operation	$31.4
Ratio 2 to 1 approximately.	
Adjusted System Operational Cost - Ketchikan Base	$60.0
Adjusted System Revenue - Ketchikan Base	$20.3
Ratio 3 to 1 approximately.	

To adjust the ratio back to the directed 2 to 1 ratio would require a substantial tariff increase.

One important issue would be clearing vehicles and passengers through either U. S. Customs or Canadian Customs. There are presently no facilities in Ketchikan for this operation. It probably would be necessary to expand the existing shore facility by approximately three times. There would be a need for an additional docking facility, a sterile area for customs checking as well as Customs offices. The details of such an operation would rest primarily with the Customs agencies.

If Customs issues were not addressed in Ketchikan they would have to be accomplished at the other end of the route at a cost to that operator.

RE: House Concurrent Resolution #4: "Relating to expansion of ferry service."

House Concurrent Resolution 4 asks the governor to direct the Commissioner of Transportation and Public Facilities to do three things to expand the amount of ferry service.

First, the resolution calls for the administration to integrate the schedules of the Alaska Marine Highway system with the schedules of ferry systems operated by public and private companies.

Second, the resolution calls for the southern terminus to be designated in an American or Canadian community which can provide adequate service to Ketchikan without subsidy from the State of Alaska.

Third, the resolution calls for the administration to repair and maintain Alaska's ferrys within Alaskan ports. The resolution also asks that there only be Alaskan-based crews.

CS FOR HOUSE CONCURRENT RESOLUTION NO. 10 (TRANSPORTATION)

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

Relating to access to Whittier, Alaska.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS there are a number of places along the railbed of the Alaska Railroad that are paved for temporary use by automobiles when snowslides cover the Seward Highway, making it impassable; and

WHEREAS a significant number of people seek access to and from Whittier, Alaska, and access is limited to service on the Alaska Railroad; and

WHEREAS the railroad service to and from Whittier is inadequate or inconvenient and a significant number of people would prefer to drive to and from Whittier;

WHEREAS highway development to Whittier would create greater recreational opportunities for Southcentral Alaska and provide access to beautiful Prince William Sound thereby adding another important tourism attraction base, along with future harbor facilities;

BE IT RESOLVED by the Alaska State Legislature that the Governor is respectfully requested to direct the Department of Transportation and Public Facilities to complete (before the convening of the second session of the Thirteenth Legislature) a preliminary design for one way traffic facilities through Whittier tunnels and, if needed, ventilation, lighting and other amenities such as traffic control systems; and provide the legislature with construction cost estimates and projected cost per passenger based on anticipated traffic volume.

ANCHORAGE 99502 (TELEX 25-185)

March 21, 1983

The Honorable Mitch Abood
Representative
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Abood:

The following is in response to your recent request regarding Whittier Access.

Attached are xerox copies of the section of the Executive Summary of the Whittier Transportation Options Study (WTOS) which outlines the Alternatives which were considered and the conclusions reached.

The WTOS included an effort to estimate demand for facilities which would increase access to Whittier as well as to assess the technical feasibility of such facilities. In that effort it was assumed that demand resulted from full development of Whittier according to the City comprehensive plan in existence at that time as well as an existing Shotgun Cove Road and Small Boat Harbor. Based on these assumptions and comments received from the public and other interested agencies, the demand to be expected was forecast. In consideration of the extensive technical analysis of the various options coupled with the demand forecast, Alternative 1A was recommended as a short-term solution and Alternative 1 was recommended as a medium to long-term solution. Now that time has provided perspective on the factors underlying the demand forecast, it is appropriate to update and further refine those underlying assumptions. Similarly, it is also an appropriate time to refine the engineering assumptions in light of any new technology which has become available in the interim.

Alternative 1A was developed as a short-term improvement to provide an increase in capacity and convenience until traffic increased significantly in response to full development of the Whittier area. Four trips between Portage and Whittier would be scheduled instead of the existing three. Minor track modifications would facilitate more efficient operations and reduce loading time. An additional two trips daily could be scheduled by basing the shuttle train in Whittier instead of Anchorage, for a total of six trips daily, and bus service would be provided between Portage and Anchorage. Selection of this alternative would not preclude selection of a different alternative at a future date.

Alternative 1A includes the following:

1) Ramp and track modifications and improvements and passenger stations at Whittier and Portage. These improvements would facilitate more efficient operations, at a cost of $854,000 (1983 dollars).

2) Additional rolling stock and equipment, at a total cost of $1,464,000 (1983 dollars).

3) If the Alternative 1A improvements are used for a longer period (10-20 years), significant tunnel repair work will be needed, at a total cost of about $10.0 million (1983 dollars). This work would also be required for any other rail-based alternative, including joint rail auto use of the tunnel and to facilitate continued use of the tunnel by the Alaska Railroad. Therefore, expenditures for tunnel improvements would not be "wasted" if an additional "long-term solution" alternative using the existing tunnel is implemented at a future date.

The Department will be looking at the feasibility of converting the existing railroad tunnel into a vehicular tunnel. This would allow an increase in access to Whittier and Prince William Sound. A study to determine the feasibility will begin this spring and there should be sufficient information available on such a proposal of paving the tunnel for vehicular travel by the next legislative session. Once this information is available, a copy will be sent to you.

If our office can be of further assistance please call.

Sincerely,

William R. Snell
Acting Deputy Commissioner
Central Region

IV. TRANSPORTATION ALTERNATIVES, COMPARISONS AND EVALUATION

This chapter describes options applicable to Whittier access and discusses them from several standpoints including feasibility, construction costs, operating costs, convenience of users, safety, short and long term benefits to users, land owners, developers, etc. The options are based on current railroad technology and highway vehicles in various combinations. It is presumed that any selected alternative will require soils investigations, title searches, Environmental Impact Statements and Federal, State and Municipal reviews and approvals prior to engineering, design and construction. These items therefore are not developed further in this section. This discussion is concluded by a summary matrix which compares the features of each alternative.

Null Alternative

This is the existing system and is included only for use as a basis for comparison with alternatives that would improve access to and from Whittier. Under this alternative, Whittier residents will continue to be relatively isolated and will continue to compete with visitor and ferry traffic in and out of Whittier. With the expansion of the Whittier small boat harbor doubling its capacity, increased congestion will occur. Access will continue to become more and more inconvenient under this alternative and the existing system and service level cannot meet the maximum demand. Furthermore, the limited access capacity will act as a constraint to future growth and development in Whittier.

Alternative No. 1 - Improved Auto/Passenger Shuttle Between Bear Valley and Whittier

This alternative is a significant upgrading of the existing shuttle access to Whittier. It would reduce both travel and turn around time by relocating the western terminal from Portage to new facilities in Bear Valley with a new road connecting to the Portage Glacier Visitor's Center access road. The shuttle train would be

based in Whittier rather than Anchorage. It also reduces the waiting time by providing additional regularly scheduled shuttles and extends the daily period of shuttle service. Initially, seven (7) shuttle trips each way over a 12-hour span would be provided with provisions to increase service to thirteen (13) trips each way over 16 hours when travel demand warrants.

The initial service level would have a total capacity of about 350 vehicles per day each direction and approximately 2,100 passengers. In the expanded service, this capacity would increase to approximately 590 vehicles and 3,900 passengers each way. This service would meet about 45% of peak day person trip demand. However, additional passenger coaches could be added to the shuttle train and total person trip demand could thus be met. Auto capacity cannot meet the potential summer maximum demand, however, winter capacity would be adequate.

Total capital cost including the Bear Valley access road, improved terminal facilities, tunnel improvements, new passenger cars, etc. would be approximately $20 million for the initial system and about $24 million for the expanded level of service. Annual operating and maintenance costs were estimated at $559,000 for initial service and just over $1 million for the expanded system.

Alternative 1 could be implemented relatively quickly and its selection would not preclude the future choice of another alternative. Convenience for Whittier residents is greatly improved without opening Whittier up to unlimited access and the potential congestion which would result. A gradual development of Whittier would be encouraged by this alternative. It would also open Bear Valley to recreational use and to more spectacular views of Portage Glacier. Alternative 1 would result in increased revenues and potential funding subsidies might exist for this alternative.

Alternative No. 1-A - Improved Auto/Passenger Shuttle Between Portage and Whittier

This alternative also consists of upgrading the existing shuttle access to Whittier but retains the existing Portage terminal point. It too reduces waiting time by providing additional regularly scheduled shuttles to provide four (4) trips initially with potential for expansion to six (6) and extends the daily period of shuttle service. The initial service level retains the rail connection to Anchorage but the expanded system calls for bus service on the Anchorage link. Because the distance is identical to the existing route, travel time is the same but by improving the auto loading procedure and adding one set of rail passenger and flat cars, turn around time can be reduced. This alternative has somewhat limited capacity and could not accommodate the full maximum demand levels. However, the initial service improvements would allow about a 33% increase in existing demand and, if expanded, could provide capacity for more than double the average demand experienced during 1979.

This alternative is also a logical first step in a phased development approach. Under any of the other alternatives, some period of time will be required for necessary design and construction before they can be placed in operation. That period could range from two to five years depending on which alternative was selected. Thus, this alternative could serve either as an interim improvement or as a longer term solution. In any event, it does not preclude a later decision to select one of the other options when the demand levels warrant such action.

This alternative is both the least costly and could be implemented in the shortest period of time. Total estimated capital cost for improved terminals, parking, equipment and tunnel improvements is $8.8 million with annual operating costs ranging from $504,000 to $546,000. This alternative would also have the least overall environmental impacts.

Alternative No. 2 - Improved Rail Passenger Service

This alternative includes the rail shuttle between Bear Valley and Whittier as in Alternative No. 1 but also provides direct passenger-rail service from Anchorage to and from Whittier. No loading, unloading, or rehandling of baggage or recreational gear, etc. is necessary along the line. Some persons would find this more attractive, as it provides fast, efficient and convenient service into Whittier. The existing rail/auto shuttle would still be necessary and would be improved by reducing the length of the rail running time by extending the road into Bear Valley.

Initial service on this alternative would provide four (4) shuttle trips each way plus three (3) round trips between Whittier and Anchorage. Expansion potential could increase service to eight (8) shuttle trips and four (4) round trips to Anchorage on the passenger rail.

System capacity would be similar to Alternative No. 1 in that maximum person trip demand could readily be met but auto ferry capacity would not meet the maximum potential demand at full Whittier development. Capital costs would be similar to those of Alternative No. 1 and were estimated at about $22 million initial and $26 million for the expanded service. Annual operating costs, however, would be about 50% greater than Alternative No. 1 being estimated at $793,000 initial and $1,500,000 for the expanded service.

Overall development and environmental impacts of this alternative are approximately the same as Alternative No. 1.

Alternative No. 3 - One-way Joint Use of Existing Tunnel

This alternative would provide direct auto access by utilizing the existing railroad tunnel through Maynard Mountain between Whittier and Bear Valley. Major tunnel improvements would be required to allow use by both rail and vehicular traffic. Improvements would include lighting, ventilation, widening in selected locations to permit turnouts for disabled cars, paving the tunnel floor for rubber tired vehicles, installation of traffic signals and barriers at

each portal, grouting and lining to eliminate water leakage and ice buildup in winter months, and track reconstruction.

This alternative would have adequate theoretical capacity to accommodate the maximum potential demand. However, delays during peak demand periods could be excessive due to long queues waiting for opposing traffic to clear the tunnel. In addition, disabled vehicles in the tunnel could cause further delays since the tunnel width is inadequate to allow for automobiles to pass. The possibility of a vehicle fire presents safety problems, again due to the inability to clear the tunnel. There are also unresolved institutional issues in this option, particularly acceptance of risk or liability by the State or railroad.

Capital cost for this alternative, estimated at $36.7 million, is higher than the various rail options but lower than other direct access options. The ventilation requirement is a major item in cost for this alternative. Since the existing tunnel does not have adequate height to allow installation of the required ventilation plenum, the tunnel would have to be enlarged, resulting in extensive rock excavation. Maintenance and operating costs have been estimated at $390,000 per year. Direct access would eliminate the rail shuttle fares but the possibility of tunnel use tolls could offset these user savings.

Alternative No. 4 - Two-way Joint Use of Widened Existing Tunnel

This alternative would provide direct access to Whittier by widening the existing railroad tunnel to permit adequate highway width for two auto traffic lanes with the rail line confined to one lane. Other improvements to the tunnel would include the same features as in Alternative No. 3.

Operationally, this alternative is much simpler than the single lane tunnel but signals would still be required at each end to control traffic when a train is approaching or in the tunnel. Safety issues are also reduced but potential conflicts still exist as do the liability issues. This alternative has adequate capacity to meet the maximum demand but some potential for delays exist when train movement would close the tunnel to auto use.

Maintenance of rail facilities during the extensive tunnel expansion work would also be difficult. Capital costs for this alternative have been estimated at $64.3 million with annual operating and maintenance costs of $440,000.

Alternative No. 5 - New Two-way Highway Tunnel

In this alternative, a new two-lane highway tunnel would be constructed just south of the existing rail tunnel. The new tunnel would be approximately two and one-half miles long, provide lighting, ventilation and emergency phones. As with all highway options, the roadway into Bear Valley would be required but the rail terminal facilities would not be constructed.

Operationally, this alternative presents no rail/auto conflicts and would function simply as a highway. This alternative would provide the highest level of service and reliability of all options considered, would meet maximum demand, and also eliminate the institutional problems associated with joint tunnel use. It would also be the most expensive with capital cost estimated at $68.3 million and $440,000 annual operating and maintenance cost.

Alternative No. 6 - Portage Pass Highway

This alternative would provide a two-lane highway from the existing Portage Glacier Visitor's Center into Bear Valley and along the face of Maynard Mountain passing the end of Portage Glacier and over Portage Pass. Several locations in the section on Maynard Mountain may require either snow sheds or a short tunnel to reduce probable avalanche problems in areas of major snow chutes.

From an operational standpoint, this option would function much as other mountain highways and would have adequate capacity to meet maximum demand volumes. However, heavy winter snows, icing conditions and avalanche dangers would present severe road hazards in the winter months and high winds through Portage Pass would be a year round problem, particularly for campers and trailers. There are also steep grades (up to 9%) required between Portage Pass and Whittier which make the roadway more hazardous, particularly in winter months.

There is also a high probability of the highway being closed for periods in the winter, particularly during adverse weather conditions. Since the rail shuttle operations would probably be terminated under this option, this could result in periods of almost total isolation for the residents in Whittier.

Total capital costs for this alternative have been estimated at $47.8 million with annual maintenance and operating cost of $270,000.

Summary of Environmental Issues

While no environmental impact studies were made to quantify the various impacts, an overall assessment was conducted. In general some impact would be associated with all options. However, Alternative No. 1-A would produce by far the least impact with only minor upgrading of the Portage terminal area and Whittier terminal involved. Whittier impacts associated with development pressure would also be less than with other options.

Alternatives No. 1 and No. 2 would have similar impact since essentially the same facilities would be developed in both options. The environmental impacts would relate primarily to the Bear Valley Access Road and new terminal facilities in Bear Valley. Development pressures in Whittier would be somewhat greater than with Alternative 1-A, however, they would be more gradual and easier to control than with any of the direct access options.

In the highway options, Alternatives No. 3, 4 and 5 would have approximately equal impacts as they all require development of the Bear Valley road and extensive tunnel construction activities. Development pressures in Whittier would be about equal also given the perception of direct auto access. However, the traffic problems would be greatest with Alternative No. 3 if maximum demand was reached due to the long lines of traffic waiting to use the tunnel. Direct access could also produce severe traffic problems in Whittier given the relatively small land area and limited opportunity to develop adequate circulation and parking systems.

The Portage Pass Highway, Alternative No. 6, has all of the impacts associated with the other direct access options plus a much greater environmental consequence because of the cut along Maynard Mountain and the road through the Pass. While this route would offer excellent vistas of the glacier, it would also be visible from the visitor's center and would detract from that visually aesthetic experience.

Table S-4 presents a comparison matrix summarizing the various features of each alternative.

Cost Effectiveness

In addition to the evaluation factors summarized in Table S-4, an assessment of the relative cost effectiveness of each alternative was accomplished. This analysis was based on the assumption that the maximum demand levels would be reached at some point in time. Capital costs were annualized at various discount rates and then added to annual operating cost. Total annual costs were then divided by annual person trips to determine a cost per trip. Annual person trips were determined on the basis of maximum demand for the direct access alternatives and at system capacity for the rail systems. Tabel S-5 shows the result of this analysis.

It should be noted that this analysis tends to favor the direct access alternatives since they reflect accommodation of the number of trips under the maximum demand projections while the rail options reflect only the system capacity described in the report. However, as noted in the report, it would be possible to meet person trip demand by adding more passenger cars to the rail options even though auto access would still be limited and therefore user convenience would be lower. If maximum demand were met by the rail systems, direct cost per trip would be substantially lower than for the auto access options. Similarly, the rail options are lower in direct cost at any comparable demand level. This is particularly important since volumes lower than the maximum would undoubtedly prevail for at least a number of years.

Revenue estimates were also made for the rail systems to provide a comparison of potential net public costs since that could bear

[1] Revenue per trip based on passenger only revenue as generated in 1979.

on financing feasibility. Revenue per person trip was estimated based on average per passenger (excluding vehicle revenue) during 1979. As shown in the table, when potential revenue is applied, the public cost would be completely covered for both Alternatives 1 and 1-A while being reduced significantly for Alternative No. 2. It would be possible to impose tolls in the direct access options as well and thereby reduce the public costs. However, that would eliminate one of the most significant benefits of those systems.

Summary of Funding Opportunities

The last step in evaluating the various options was to look at potential funding sources. While funding sources and mechanisms are obviously a policy issue, it was considered appropriate to look at possible existing sources, both Federal and State.

At the Federal level, the most likely sources were considered to be the Urban Mass Transit Administration (UMTA), Federal Highways (FHWA) and Federal Railway Administration (FRA). Of these, the UMTA funds were considered highly unlikely since most are applicable to communities over 50,000 population. That would mean funding would have to come through the Municipality of Anchorage where other transit programs are also under consideration. The UMTA Section 18 funds for rural area transit are relatively small and would be inadequate to cover this program.

FHWA funds are allocated to the State in a formula basis. Funds for the direct access options, particularly the new tunnel and Portage Pass Highway would undoubtedly come from the Federal-Aid Primary (FAP) monies. While the allocation of those funds is a policy issue, it did not appear proper to count on such funds for a project of this magnitude given the other highway programs with possible higher immediate demand levels.

At the state level, a current support program is operational on the Whittier shuttle as part of the Marine Highway System. In addition, HR 11737 permits the State to divert up to 5% of its annual FAP funding for capital improvement and operating

assistance on the rail service between Whittier and Portage. These funds could produce between $750,000 and $2.5 million annually depending on the allocation methods used. Again, whether these funds would be applicable to joint use options has not been determined.

FRA funds, Section 511, provide up to 100% financing for railroad rehabilitation and improvements primarily oriented to freight related programs. Given the condition of the existing tunnel and trackage, it would appear that participation in the rail alternatives (1, 1-A, or 2) could be a possibility since the improvements would also benefit freight operations. Whether such participation in the joint use options could be obtained is an institutional issue beyond the scope of this study.

In addition, there is the possibility that funding for this project could be obtained through the State Legislative process. This option is obviously a policy issue which would be addressed by the Legislature based on the merits of the specific project proposal and evaluated relative to other priorities statewide.

Based on the evaluation in this study, the most likely sources of funding have been concluded to be:

1. FHWA funding (FAP) through the 5% diversion.
2. FRA participation through loans or grants.
3. Special legislation.

VI. SUMMARY AND CONCLUSIONS

A. Summary

As in virtually every analysis of transportation alternatives, the findings and conclusions of this study represent some compromise and trade-offs between analysis factors. Such trade-offs and compromises are necessary since rarely is one alternative identified as being superior according to all criteria used in the comparison. Furthermore, the relative importance of the evaluation factors depends in some measure on the subjective judgment of the evaluator. This study has maintained an objective position while recognizing the current and potential future growth, development and resulting travel demand in the Whittier area.

Improved Whittier access has been an issue for several years and the subject of several prior studies. Basic findings from this study are not markedly different from those of the prior efforts, although conclusions may vary. Principal findings include the obvious fact that current access is inconvenient and often inadequate. In addition, vehicle access is relatively expensive compared to conventional highway travel.

The cost factor is particularly important to Whittier residents who require an automobile. The need for an auto by non-residents who enter Whittier is reduced because of the small size of the area and the convenient location of the rail terminal. Yet, for those persons wishing to use trailered boats on Prince William Sound, the cost becomes a significant factor and diminishes the desirability of the area. However, with increasing cost for gasoline, the rail shuttle may offer a least costly alternative when compared to other more distant locations which require additional fuel costs offsetting the shuttle fare.

For Whittier residents, one of the major inconveniences, relative to time and costs, is the fact that a person cannot leave and return the same day even during summer months. This situation is aggravated in the winter months because of the three-day per week service schedule. However, all of the alternatives eliminate or reduce this problem.

3. Conclusions

These considerations combined with the analysis conducted in this study lead to the following conclusions:

1. There is a definite need for improved access to Whittier.
2. Improved access can enhance the social and economic climate in Whittier by generating development which in turn will foster improvements to existing services and increase employment opportunities.
3. Expansion of the existing small boat harbor coupled with the relatively short distance to the major population center in Alaska will produce an immediate increase in travel demand. Other factors, such as increased recreation demand as the Anchorage population grows and expanding statewide tourism, will contribute to increased demand for access to Whittier and Prince William Sound in the future. The possibility also exists for increased demand associated with natural resource development and expanded port activity.
4. The existing Whittier - Valdez segment of the State Marine Highway System provides an attractive tourist resource, which possibly could be expanded in the future, and Whittier access is a vital link in that system.
5. Existing population levels in Whittier and the lack of visitor facilities combine to produce a relatively low demand at present.
6. The major highway access alternatives are very expensive and current demand levels do not warrant such costly investments.
7. The single lane joint-use tunnel Alternative No. 3 has many operational and inherent safety problems. In order to produce a reasonable degree of safety, ventilation,

and reliability, this alternative becomes nearly as expensive as the Portage Pass Highway.

8. Unresolved institutional issues, such as the ultimate acceptance of risk and liability by the State or the Alaska Railroad in a joint use operation, further contributes to the questionable feasibility of the joint use options, particularly in single-lane operations.

9. Any of the alternatives examined have adequate reserve capacity to accommodate significant growth in person trip demand. Furthermore, the rail based alternatives have exceptional flexibility to accept future increases by adding additional passenger coaches. The rail based alternatives are, however, somewhat limited in their ability to accommodate major growth in the number of automobiles transported.

10. Traffic congestion and parking problems in Whittier could become severe with the unlimited auto access alternatives and would produce significant increases in local costs for streets, parking facilities, police and security.

11. At maximum demand or capacity levels, the highway based alternatives show better cost effectiveness in terms of total annual capital and operating cost per trip. However, the revenues generated by fares in the rail based systems more than off-set the public sector costs for Alternatives 1 and 1-A. Furthermore, maximum demand levels identified will not occur immediately, and at demand levels under about 1.2 million person trips per year, the total cost per trip for Alternatives 1 and 1-A is less than any highway option even without considering revenue off-sets.

12. Only Alternative No. 1-A offers almost immediate access improvement. All others will require from three to five years to implement since engineering design, environmental studies, permit and review processes as well as construction are required. In addition, most costs associated with Alternative 1-A are applicable to Alternatives 1 and 2. Suggested improvements in the rail system under this alternative will benefit future rail operations even if one of the highway alternatives (except Number 3 and 4 which introduce auto/rail conflicts) is ultimately implemented.

13. Implementation of Alternative 1 or 1-A does not preclude access improvements in the future since all higher level alternatives require access to or through Bear Valley and the improvements to the existing rail tunnel will benefit all future rail operations.

C. Recommendation

Based on the analysis and evaluation conducted in this study, the potential funding options and the conclusions reached, this study recommends that Alternative 1-A be implemented as a first stage toward developing Alternative 1 when design and funding become available.

That action would provide some early improvement to relieve existing problems and would, with implementation of Alternative 1, provide adequate capacity for significant increase in demand in the future. A further significant advantage to this approach is that virtually all investment for capital improvement is fully applicable to a decision to implement one of the more expensive direct access alternatives in the event that future demand or other factors warrant such as major harbor expansion with attendant rail demand warrant a higher level facility or preclude use of the existing railroad tunnel.

consideration should be given to utilizing some funds through the 5% diversion of the State allocation of FAP funds for capital cost and operating assistance. The level of operating subsidy to reduce user cost is a policy issue to be decided at the Legislative level.

NIKISHKA CHAMBER OF COMMERCE

RESOLUTION 83-2

CREATE A 35 MILE SPEED ZONE PARALLELING THE NIKISHKA SHOPPING CENTER.

WHEREAS, the Nikishka Chamber of Commerce requests a lower speed zone from 55 mph to 35 mph; and

WHEREAS, this zone will be between Land Marine and the old Pines Bar; and

WHEREAS, this zone relates to mile 26 to mile 26.7 Spur Highway; and

WHEREAS, a crosswalk will be painted at mile 26.1 in front of the laundry building to the shopping center;

NOW THEREFORE, BE IT RESOLVED BY THE STATE DEPARTMENT OF TRANSPORTATION:

Section 1: That this proposal will insure the safety to the pedestrian who is doing business at this location.

ADOPTED BY THE NIKISHKA CHAMBER OF COMMERCE ON THIS 10th DAY OF February, 1983.

ATTEST:

Billy McCann, President

Dee Rappe, Secretary

CMA—An Alternative Road Deicer

The use of sodium chloride (common salt) and calcium chloride has raised controversy both in Alaska and nationwide. These materials can definitely reduce the hazard of wintertime driving but do so at tremendous expense. Pollution and corrosion damage attributable to chloride salts effectively boosts their real cost by a factor 10 to 15 when long term effects are considered. For example, sodium chloride presently selling in Fairbanks for about $125 per ton would be expected to generate long term damages in excess of $1,000. The regard for public safety which demands continued use of these readily available materials, has also fueled a search for something better. A safe and economically viable alternative may now be on the horizon.

National research aimed at providing improved road deicing compounds has identified Calcium Magnesium Acetate (CMA) as a potential substitute for calcium and sodium chloride. CMA is essentially made by dissolving crushed limestone into acetic acid. Its composition, $CaMg(CH_3CCOO)_4$, is characterized by a varying ratio of calcium (Ca) to magnesium (Mg) which depends upon the type of limestone used. The deicing power of CMA increases with increasing Mg content but is generally within the range of standard chloride salts. The real advantage in its use stems from its low damage potential. It is non-corrosive to most metals, even when compared to tap water. Toxicity is also low and the material decomposes into the three harmless components; carbon dioxide, water and limestone. Limestone residue would actually serve as a soil conditioner for unpaved areas bordering the roadway in sharp contrast to the ground poisoning effect of a chloride salt. Unfortunately, calcium and magnesium acetates can presently be obtained only in the very costly and purified form of laboratory reagents. Availability of CMA in a much less expensive industrial grade must proceed its use as a deicing agent.

A DOTPF funded research project was recently completed which examined the possibility of manufacturing low grade CMA within Alaska. A final report outlining this study was authored by M. J. Economides and R. D. Ostermann of the University of Alaska titled "Preliminary Design and Feasibility Study for a Calcium-Magnesium Acetate Unit." The authors discuss production of a "highway grade" saturated CMA solution on a small scale not exceeding 75 tons (dry weight) per day. CMA was shown to be economical at production levels above approximately 17 tons per day with predicted costs running $290—$590 per ton depending on production rate and the base price of acetic acid. For comparison calcium chloride costs almost $650 per ton F.O.B. Fairbanks.

The DOTPF is continuing to sponsor a program of CMA research along two different lines. One study involves a refinement of the manufacturing process and will result in the design of a CMA pilot plant. Another project is attempting to take advantage of CMA's ability to retain moisture in a soil mixture. The possibility exists that it can be used to replace calcium chloride as a dust controller and soil stabilizer for unpaved roads.

IV. Analysis

Calcium Magnesium Acetate (CMA) is a non-corrosive ice control agent which could replace the corrosive chloride salts currently in use. CMA may also be useful as a dust control agent. CMA can be produced locally from limestone and acetic acid. The objectives of the proposed research are to develop a process design (based on previous work) for the production of CMA, construct and operate a small scale pilot plant based on this design, and demonstrate, through road tests, the effectiveness of CMA as an ice and dust control agent. The evaluation of the process design would entail a complete economic investment analysis. The effectiveness of CMA as an ice and dust control agent would be done by comparison with salt. Work progress will be documented through quarterly progress reports, followed by a comprehensive field report including the process design.

The benefits to the State would be threefold: (1) a new industry employing 20-30 people would be created; (2) the high costs of salt corrosion currently borne by the public and the state and local government would be eliminated; and and (3) the"blight" caused by salt poisoning of plants along roadways would be reduced, resulting in a more attractive community.

Specifically the objectives of the demonstration are:

1. The development of a final process design for the production of CMA from acetic acid and native limestone. This design would also include a complete economic analysis of the process.

2. The successful operation of a pilot scale production facility, to demonstrate the validity of the process design.

3. The demonstration of the effectiveness of CMA as a road deicing agent in arctic conditions. This would entail a strip test to be conducted by the State DOT&PF.

4. The evaluation of CMA as a dust control agent for potential use on the Dalton highway.

5. The development of a method of application for CMA as a winterization treatment for sand storage piles.

6. The development of an optimal application method for CMA to insure maximum cost-effective use.

RESEARCH PROPOSAL

Process Plant Design and Test Application Program for Calcium Acetate as a Non-Corrosive De-icing and Dust Control Agent in Interior Alaska

EXECUTIVE SUMMARY

Calcium-Magnesium Acetate (CMA) is a non-corrosive, environmentally benign ice control agent which could be used to replace the corrosive chloride salts currently in use in Alaska. We also believe that CMA can be used to replace calcium chloride as a dust control agent. The adverse effects of salt on automobiles, bridge structures and plant life are well known. We have estimated tha damage to automobiles alone in Alaska may exceed $20,000,000 annually. An obvious incentive exists for the use of non-corrosive chemicals for ice control.

In previous work performed under contract to the Alaska State Department of Transportation, we have demonstrated that CMA can be produced locally through the dissolution of naturally occuring limestones in acetic acid. We have developed a preliminary process design and economic evaluation based on our work. We estimate that CMA could be produced in Alaska for $300-600/ton (salt equivalent), compared to $650/ton for calcium chloride delivered to Fairbanks. In view of the "corrosion costs" of chloride salts, CMA at $600/ton is a bargain.

The results of our previous work, are highly encouraging. We have developed kinetic data on the reaction of acetic acid with limestone, and have constructed a bench scale reactor in our laboratories to gather further design data. What remains to be done, is the completion of a full scale process design and the construction of a pilot plant facility. Furthermore, a road test of CMA as an ice control agent and dust control agent under arctic conditions should be conducted.

Research Objectives

We have identified the following objectives for the proposed project:

1. The development of a final process design for the production of CMA from acetic acid and native limestone. This design would also include a complete economic analysis of the process.

2. The successful operation of a pilot scale production facility, to demonstrate the validity of the process design.

3. The demonstration of the effectiveness of CMA as a road deicing agent in arctic conditions. This would entail a strip test to be conducted by the State D.O.T.

4. The evaluation of CMA as a dust control agent for potential use on the Dalton highway.

5. The development of an optimal application method for CMA to insure maximum cost-effective use.

Project Cost

The total cost of the proposed research would be $196,000, of which $67,000 would be salaries and benefits, $41,000 would be supplies and services (chemicals), and $36,000 would be equipment. The remaining $52,000 would be for university overhead.

WORK PLAN

Dr. Ostermann and Dr. Economides will use the results of previous kinetic studies and ongoing bench scale work to develop a process design for a full scale production facility. Both Dr. Ostermann and Dr. Economides have degrees in chemical engineering and experience in the process industry. It is well within their expertise to perform such a design. The design will include the selection of the optimal process scheme, and a complete economic analysis of the process. A flowsheet and equipment list will also be provided.

A pilot plant facility capable of producing 100 gal/day (8 hr. day) will be built based on the process scheme. This pilot plant will be operated to demonstrate the feasibility of the process, develop bulk kinetic data and other design data, and to produce CMA for road tests.

CMA produced in the pilot plant will be applied to a test strip or test intersection in the Fairbanks North Star Borough. This test will be conducted during the winter of 1983-84 by Alaska D.O.T. personnel. A truck equipped with a sand spreader and spray pump will be used since CMA is best applied in saturated solution. The performance of the CMA will be compared with that of salt.

Additional CMA will be used to evaluate its effectiveness as a dust control agent. The primary mechanism of dust control is moisture retention and partial agglomeration. CMA will be compared to calcium chloride using artificially prepared laboratory roadway samples which can be "aged" and observed for weight loss and ease of "dusting".

Sand is stored in large piles. If these piles are not winterized, they will freeze solid in the winter. Currently, salt crystals are added at 5-10 wt % to prevent freezing. It is proposed that CMA solution could be sprayed over the pile with the same effect. This hypothesis will be checked with a series of small scale tests involving several methods of application.

In conjunction with the road tests, several methods of application will be tried to determine the "best" application method.

Re: Ice Control Methods
and Materials

Mr. R. A. Bundy
P.O. Box 3-5000
Juneau, Alaska 99802

Dear Mr. Bundy:

This refers to your recent letter concerning ice control methods and materials used by this Department.

In Juneau we use three basic materials to control ice on the highways and increase traction when ice is present, namely (1) aggregate consisting of coarse sand and/or small rock chips, (2) sodium chloride crystals, and (3) calcium chloride in pellet form or mixed with water to form a brine solution. We only use the sodium chloride and calcium chloride on the high traffic volume highways, i.e., Egan Expressway and Loop Road where aggregates are ineffective because the high speed and high volume traffic literally blows it off the road. Aggregates, of course, do not melt ice already formed - the chemicals do. They also stop new ice formation through a wide temperature range.

Chemicals are superior to aggregates for ice control. We are, and will continue, to experiment with new materials that, hopefully, will be less corrosive, cost effective and still do the job the public expects. When we find something with those characteristics, I assure you that we will stop using the materials now in use.

Sincerely,

Robert W. Ward

Re: Calcium Magnesium Acetate (CMA)
Substitute for Salt on Highway
Icing

Mr. Tom Johnson
Senate Resource Committee
Pouch V
Juneau, Alaska 99811

Dear Mr. Johnson:

Per your request, the following is some information regarding efforts to find a substitute for the common salt that has attained widespread use in this country for deicing highways. There has been considerable research on the problem of corrosion associated with common salt and Calcium Magnesium Acetate (CMA) has been shown to be an effective substitute.

Our own research has not been directed toward further investigation of the deicing and environmental qualities of CMA because that information already exists. Rather our effort has been to study methods of producing CMA from industrial grade acetic acid and Alaskan limestone so that an economically feasible process can be developed to produce CMA here in Alaska. Many people feel that some substitute will have to be found to avoid the current widespread damage to vehicles and other equipment.

Dr. Michael Economides of the Petroleum Engineering Department of the University of Alaska is working on our study. A summary report of his work should be available in three months.

I have enclosed a page further describing the use of CMA for highway icing. I hope this information is of use to you. I will see that you get a copy of our report when it becomes available.

Sincerely,
Heinrich Springer
Director

Road deicing chemical called superior to salt

Iowa Department of Transportation researchers have developed a deicing material that is less corrosive than salt, effective at a lower temperature and is not harmful to the environment. If it proves out in tests this winter, the agency expects to patent the compound and convince a manufacturer in the state to produce it in large quantities.

The material, consisting of sand coated with calcium magnesium acetate, was developed last month by DOT's chief chemist, Wallace Rippie. So far the compound has been tremendously expensive to produce—$500 a ton compared with $30 a ton for salt, according to Charles Huisman, a DOT highway engineer who is heading the research. "But we are doing it now with a beaker and a mixer in a laboratory," he says. Huisman expects that commercial production will bring the cost down considerably.

The mixture does not corrode steel in pavements and structures. Huisman says that its use could double the life of bridge decks. In addition, it does not harm plants or pollute water, he says, and in fact is beneficial to soil. Also, indications are that the compound can be formulated to work at temperatures below 20° F, the lowest limit of salt's effectiveness.

One drawback is that it can cause concrete to spall slightly, says Huisman. "But we don't think it would be so detrimental as to preclude its use." □

ALTERNATE HIGHWAY DEICING CHEMICALS. EXECUTIVE SUMMARY

A search has been made for road deicing chemicals to replace sodium chloride (NaCl). The impetus for this search stems from the numerous drawbacks associated with the prevalent use of NaCl as a road deicer. All types of chemical compounds were reviewed. Selections were made on the basis of criteria such as water solubility and freezing point lowering, corrosion, toxicity, relative cost or cost potential, effect on soils and plants and water supplies, flammability, concrete compatibility, traction, friction, highway performance, etc. Information was sought first in the literature, then supplemented or verified in the laboratory as needed. Two candidate deicers were found to be as effective as sodium chloride. One, methanol, reacts almost immediately upon contact with snow and ice but is less persistent than NaCl. The other candidate, calcium magnesium acetate (CMA), acts at about the same rate as NaCl in the temperature range of common activity and shows about the same persistence. It gives rise to about the same decreases in coefficients of braking traction and skidding friction as NaCl. In strong contrast to NaCl, CMA is a corrosion inhibitor, is beneficial to most soils and has no potential for harming drinking supplies. The unpurified CMA derived from solid wastes, primarily cellulose, gives improved traction and reduces production costs. The methodology for CMA production, cost evaluated above, is unsophisticated 19th Century technology. Application of modern technology may further lower production costs. (FHWA)

and Materials

Honorable Bill Ray
Alaska State Senate
State Capitol
Pouch V
Juneau, Alaska 99811

Dear Senator Ray:

In reply to your April 5 inquiry, attached is a copy of my reply to Mr. R. A. Bundy regarding ice control methods and materials used in the Juneau area.

For your information, I have also attached copies of some recent articles regarding an alternative (Calcium Magnesium Acetate (CMA) for salt. Our own DOT&PF Research Section advises that their efforts are being directed to studying methods of producing CMA from industrial grade acetic acid and Alaska limestone so that an economically feasible process can be developed to produce CMA in Alaska. The Cantwell area is reported to have a large quantity of the raw materials for CMA. The University of Alaska is working on our study and a summary report of the work should be available in about three months.

Sincerely,

Robert W. Ward
Commissioner

Snow great for skiing but it's war for these crews

By SCOTT YATES
Staff Writer

With nearly 400 miles of road to plow in the Fairbanks area, the State Department of Transportation and the city's Public Works Garage shuddered under the load of snow dumped here Monday and Tuesday.

In addition to the DOT's 12 pieces of snow removal equipment, four private graders were hired for anywhere from $50 to $80 an hour to help punch open the roads. The city, which hasn't hired outside help since the wiler of 1970-71, was on the verge of employing private help itself when the snow stopped.

This week's heavy, wet snow presented special difficulties in a city accustomed to dry, light flakes that blow away in the backwash of passing vehicles.

"The wet snow we had the other day is the absolute worst," said John Horn, regional director of the DOT's Maintenance and Operations. He said it's heavier to push and it does not cast as well. When it does move, it's more likely to damage objects such as mailboxes along the road.

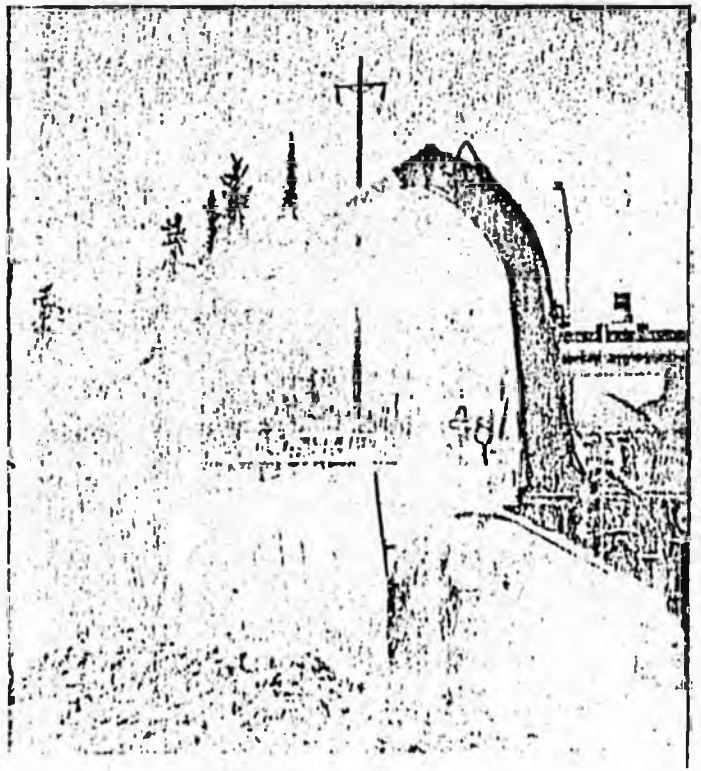
Speed is of the essence after a wet snowfall. Unless it is plowed early, Horn said, traffic can beat the snow down into an almost impenetrable snowpack.

Which roads get attention first are decided by DOT highway superintendents. Mostly, Horn said, it has to do with which roads have the most traffic.

Airport Way heads the priority list for the DOT, partly because it's a major city thoroughfare and partly because it's right outside the department's door. Other roads within that first category include the Richardson Highway to Eielson, the Steese to Fox and the Parks Highway halfway to Nenana.

College Road, Cushman Street, Illinois, University Avenue, Geist Road, Farmers Loop, the Davis Road area and Chena Hot Springs Road are included within the second priority listing.

Horn is quick to point out that Birch Hill Road, where he has a house, is among the 54 roads with the lowest priorities. "I can tell you I receive no special treatment," he said.



Bud Weber, assistant superintendent of the Public Works Garage, said after a snowfall, the first city roads to be plowed are the one-way streets downtown: Barnette, Lacey, Noble and Gaffney.

Upon completion, the graders are split into two teams, one on each side of the river. South Cushman, Cowles, Lathrop, 23rd and 17th avenues are among the secondary priorities for the city. The hospital entrance, the fire department stations and streets around local schools are all areas which are cleared early.

Some areas like Slaterville, Arctic Park or Island Homes are normally not plowed at all, Weber said. Plowing on the such narrow streets narrows them even more, Weber explained. "It's a question of putting up with a big windrow or fighting the snow on the street." Given the amount of snow that fell in the last storm, Weber decided on the latter.

Although the DOT has more miles to plow than the city (250 miles to 132 miles), Weber said the state agency has the advantage be-

(See SNOW, page 2)

FALL CLEANUP—A snowblower followed by a road scraper works on Trainor Gate Road Thursday afternoon, still cleaning up the snow dumped on the Fairbanks area earlier this week. Snowfall was as much as a foot in outlying hills. City and state road crews worked frantically to first open the roads, then to clear the snow. *(Staff photo by Joe Correia)*

SNOW . . .

(Continued from page 1)

cause of it has a night crew on duty. Weber is alerted to heavy snows by the police or other city employees who call him at home.

Monday morning he was awakened at 3 a.m. and went into the office to call out more crews.

Once the roads are punched open, "the first lick," Horn said, the real work begins. That includes smoothing off the snowpack and winging back the windrows.

Providing traction for vehicles on hills and at intersections usually begins after the snow has been plowed.

The state uses both salt and sand on the roads. Horn explained that salt is only effective at plus 23 degrees, so it is not used the majority of the winter.

He acknowleged the corrosive effects of salt, and said that DOT researchers are working on an alternative to the tender eating salt.

The city is also experimenting with non toxic chemicals which act as an anti freeze on the roadway. Those are only experiments, however, and Weber said the city mostly relies on spreading different sizes of gravel.

A checklist of icy spots are compiled each day for dispatching the city's two sanding trucks.

MEMORANDUM

State of Alaska
Department of Transportation & Public Facilities

TO: Lynn Harnisch
Staff Engineer
Planning and Programming
Interior Region

DATE: October 14, 1982

FILE NO:

TELEPHONE NO: 479-4231

FROM: Robert R. Venusti
Director
Planning and Programming
Interior Region

SUBJECT: Dalton Highway Evaluation

The current version of the region's FY-84 through FY-89 Transportation Improvement Program contains a fairly substantial annual allocation of State funds for improvements to the Dalton Highway. To maintain as much flexibility as possible in where and how the funds can be expended, the scope of work for each allocation in the TIP is for rehabilitation and resurfacing, with specific project termini to be identified as the funds become available.

Due to the continued high level of community and legislative interest in the Dalton Highway, and in keeping with our goal of incorporating the planning of capital improvements for the highway into our ongoing regional planning process, we should begin to evaluate a number of different options for programming something besides annual "maintenance" type projects for the highway. Hopefully the results of this effort will be an eventual shifting away from the tendency to treat the Dalton Highway as a politically unique entity, and an increased capability on our part to identify the need for and program specific catagories of projects (i.e. reconstruction, rehabilitation, surfacing, etc.) along the length of the facility.

I suggest the following as a starting point for options to be considered:

a) Rehabilitate the existing road to its original design standards - gravel surface.

b) Upgrade the road to current AASHTO standards - gravel surface.

c) Either a) or b), with:

   1) Crushed aggregate gravel surface
   2) Paved surface.

d) Either a) or b) with:

   1) Asphalt surface treatment
   2) Calcium chloride surface treatment.

All of the above options (or appropriate combinations thereof) should be compared on the basis of life-cycle costs. They should also be evaluated in the context of recommendations and information coming out of the

Western Arctic Alaska Transportation Study and the Interior Transportation Study, as well as whatever information is available pertinent to the proposed construction of the Northwest Alaska Gas Pipeline project. Updated traffic forecasts for the highway should consider expanded North Slope oil development, mineral and other resource development in or adjacent to the highway corridor, and increased tourist traffic.

Once we have attached cost figures to option a) through d) we should be in a position to make some basic policy decisions regarding investment strategies for capital improvements on the Dalton Highway. For purposes of this analysis we should include the unpaved portion of the Elliott Highway between Wickersham Dome and Livengood.

Please prepare a draft outline for this effort, including a proposed time schedule and budget, for my review by November 15. I would like to have the cost estimates for all options to be evaluated available by mid-February of 1983. The overall evaluations should be completed in time to be incorporated into the FY-85 CIP development (June of 1983). If you have any questions, please contact myself or Larry Soden.

Ms. Denise Zachery
c/o Representative Mike Miller
House Democrats Office
Pouch V
Juneau, AK 99811

Dear Ms. Zachery:

Enclosed for your information is a draft copy of the interim report on the second phase of this Department's study into the possible production of Calcium Magnesium Acetate (CMA) for use as a deicing agent on Alaskan roads.

We feel that it is an appropriate time to perform a demonstration project to test both the economics of commercial production of this chemical and its effectiveness in comparison with the salts commonly used to deice roads. The results of the research conducted to date by the Petroleum Engineering Department of the University of Alaska and our own lab tests have been encouraging.

Potential suppliers of both acetic acid and limestone, the two ingredients necessary to make CMA, have contacted the Department to indicate their interest in participating in a CMA demonstration.

A demonstration could be performed by the private sector in cooperation with DOT/PF personnel.

Sincerely,

John D. Horn
Acting Deputy Commissioner
Interior Region

INTRODUCTION

This project is a continuation of the previously funded "Preliminary Design and Feasibility Study for a Calcium-Magnesium Acetate Unit" (Reference Project F15631-CMA).

Calcium-Magnesium Acetate (CMA) exhibits excellent de-icing characteristics, yet is non-corrosive, and not harmful to plants. In our previous work, a process concept was developed for the production of CMA from native Alaskan limestone and acetic acid, based on laboratory scale reaction experiments. The next logical step in the development process was the construction and operation of a small scale pilot plant to gather specific process data necessary for a full-scale process design. That is the subject of the current project.

In addition to our design work, we undertook to produce about 500 gallons of CMA solution from a batch process based on our limited laboratory studies. This interim report gives a brief summary of our progress.

The next step in the development process will be the design, construction and operation of a demonstration plant to serve the dual purpose of proving the viability of the process, and to provide enough CMA for field tests. It should be noted that nowhere is CMA manufactured in bulk and, therefore, is unavailable in the amounts necessary for wide-scale testing. A

proposal has been submitted to the State of Alaska through the Fairbanks North Star Borough. Approval is pending.

It has recently been suggested that CMA may be useful as a dust-control agent as well as a de-icing agent, however, this has not presently been verified. We have designed a set of experiments to test the utility of CMA in dust control, but expect that a road test will be required for positive determination. Funds are currently being sought for this research.

BACKGROUND

Road and runway de-icing are serious problems in the northern latitudes. The problem is most pronounced in the coastal regions of Alaska where freeze-thaw cycles occur several times during the winter. Sodium chloride (salt) and calcium chloride have been used for many years as de-icing agents, however, these materials are highly corrosive to automobiles, airplanes and roadway bridge structures.

Recently, several salt-damaged bridge structures were replaced in Fairbanks at a cost of over $600,000. The cost of

salt-related damage to bridges in the Anchorage and Juneau areas where salt is used more frequently are correspondingly higher.

Furthermore, road salts are injurious to most forms of plant life. In the spring, a drive along heavily salted roadways in Anchorage reveals a virtual moonscape with dead or stunted plants. The success of ongoing roadway beautification projects in Anchorage and Fairbanks will be questionable with the continued use of road salts.

In a report entitled "Alternate Highway De-Icing Chemicals" published by the Bjorksten Research Laboratories, a mixture of calcium and magnesium acetate (CMA) was identified as an effective, non-corrosive, de-icing compound. In the solid form, CMA is a white powder resembling powdered sugar. It can be applied as a solid or in a saturated solution. The effective temperature range is about the same as common road salt. In contrast to salts, however, CMA is non-corrosive, not harmful to plant life, and has no potential to harm drinking water supplies.

In previous work at the University of Alaska, funded by the State Department of Transportation (DOT), we have demonstrated that CMA can be produced from limestone, water, and acetic acid. The preliminary report of our reaction studies has been presented in a previous report to the State DOT. This funding is of significance, since limestone is readily available in Alaska. Acetic acid must currently be "imported" from the "lower

48", but could be produced locally from refinery by-products if a market were available.

In simple terms, CMA is the reaction product of the dissolution of limestone in acetic acid and water.

$$CaCO_3 + 2CH_3COOH \rightarrow Ca(CH_2COOH)_2 + H_2O + CO_2$$

The dissolution process is slightly exothermic (gives off heat) and produces considerable amounts of CO_2. The resulting solution remains acedic, and must be neutralized with sodium or calcium hydroxide.

Limestone is composed of calcium and magnesium carbonates in varying amounts. Pure magnesium acetate, which could be produced from pure magnesium carbonate, is superior to calcium acetate. Dolomites contain relatively larger amounts of magnesium carbonte and can approach 50% in composition. Unfortunately, the benefits of a 50-50 mixture over pure calcium acetate are not very significant. Therefore, it is most appropriate to use readily available limestone regardless of the magnesium carbonate content.

PILOT PLANT STUDIES

Unfortunately, we have met with several delays in the construction and operation of our pilot plant unit. The reaction assembly is in place, but the necessary fume vents have not yet been installed. This delay is due to local construction backlogs and was beyond our control. However, it would appear that the fume hoods will be installed shortly and we can begin operation.

BATCH STUDIES

Due to the lack of availability of the pilot plant, we concentrated our efforts on the batch production of CMA for road tests. Numerous difficulties were encountered in the conduction of the reactions; many more than anticipated. However, after much experimentation, we have arrived at an acceptable process scheme. In this manner, the batch studies have fulfilled (at least qualitatively) part of the goal of the pilot plant studies.

BATCH PRODUCTION OF CMA

The procedure we settled on for CMA production is outlined below. It should be emphasized that this is by no means finalized; it is merely a procedure that works.

Our reactor for use in these experiments was a 55 gallon plastic drum equipped with a large agitator. In our initial studies, the agitator was replaced by a small circulating pump. This was found to be totally inadequate. A high degree of agitation is required to keep the carbonate particles suspended in the reacting liquid.

Foaming was another problem of critical severity. Unless the reaction was conducted at a moderately controlled rate, a very stable foam forms, necessitating removal.

MATERIALS:

20% (wt)	acetic acid (pure)
20%	limestone (crushed)
60%	water

PROCEDURE:

1. Mix the water and acid in the drum;
2. Introduce the limestone slowly to avoid foaming;
3. Stir for about 1 day;
4. Let stand (to settle) for several days;
5. Remove the liquid and place in a second drum;
6. Recycle the solid material settled from the drums;
7. Add NaOH solution (about 50-50% NaOH/water);
8. Continue to add NaOH solution until pH = 7 (It may be necessary to add water if a precipitate forms. This merely means that the solution is oversaturated with CMA);
9. CMA is ready to use..

DISCUSSION:

The neutralization reaction is difficult to control since NaAc forms a buffer solution. In practice, it may not be possible to obtain a pH of 7. A typical neutralization is plotted in Figure 1.

As can be seen in Figure 1, it was necessary to add water at points (1) and (2) to redissolve CMA which had precipitated out

of solution. With practice, the correct amount of water could initially be added to avoid this problem.

In general, it is undesirable to allow CMA to precipitate because it tends to form a gel-like solution which is difficult to stir and to redissolve. Selecting the right amount of water to add with the NaOH will depend on the limestone purity. Hence, it is possible to determine only an approximate range for application.

Figure 2 shows a plot of pH versus volume NaOH solution added. In this format, the added water correction does not appear and a more "normal" neutralization curve is obtained.

To further complicate neutralization, the reaction is not instantaneous. Figure 3 shows the response of pH with time following the additon of NaOH. About 5 minutes will elapse between the time of the NaOH addition and the final pH.

The reaction rate for this process can be monitored by measuring the CO_2 evolution. In general, the dissolution of 1 mole of $CaCO_3$ releases 1 mole of CO_2. Figure 4 shows a plot of reaction rate versus time measured in this manner. As is evident, the reaction rate declines rapidly, dropping over 3 orders of magnitude in the first several hours. Figure 5 shows a plot of cumulative CO_2 production versus time. It is evident that long reaction times on the order of several days are

required. This behavior is typical of batch reactions. The reaction time can be shortened by using continuous reaction equipment, which maintains concentrations in the first reaction range.

FOREWORD

Fundamental regard for winter time driving safety has resulted in an extensive and continuing application of NaCl and $CaCl_2$ de-icing salts to the road surface. The de-icing benefit of these materials is however, negatively offset by secondary costs due to metal corrosion and pollution effects. Literature sources place the total cost of salt usage at approximately 10-15 times that of the salt product itself. The public's objection to secondary costs such as rusty automobile fenders often provides a pungent criticism of roadway salting practices. In addition, corrosion of bridge reinforcing steel is a problem of great magnitude to the highway engineer.

National research into alternative de-icing compounds has led to recognition of Calcium Magnesium Acetate (CMA) as the most viable substitute for NaCl and $CaCl_2$. CMA provides an ice melting capability similar to chloride salts while raising little or no corrosion potential for most steel or aluminum vehicle components. Furthermore, CMA has been shown to be a safe, non-toxic substance with respect to animal and plant life.

CMA is fairly easily produced by the action of acetic acid on calcium carbonate (limestone) as indicated below:

$$CaCO_3 + 2CH_3COOH \rightarrow Ca(CH_2COOH) + H_2O + CO_2$$

Details of critical reaction parameters and a chemical process design are presented within this report.

The extremely high cost of CMA has prevented its use in all but limited testing situations. CMA is commercially available only in laboratory reagent grade as either the pure calcium or pure magnesium acetate. These products are intended for laboratory usage and are priced at many dollars per pound. This study was initiated to investigate production methods and economics associated with making a low grade of CMA from raw materials readily available to a potential Alaskan producer.

This report evaluates the small scale production (14 - 72 tons per day dry

weight equivalent) of a "highway grade" CMA solution. Findings indicate that CMA becomes economical at production levels of more than 17 tons per day. It was calculated that the cost of CMA would range between $290 and $590 per ton depending on rate of manufacture and the base price of acetic acid. These figures compare very favorably with the current cost of $CaCl_2$ used by the Alaska DOTPF of almost $650 per ton (F.O.B. Fairbanks), especially in view of secondary damage attributable to the chloride salt.

An interesting point is emphasized by the authors regarding potential economic ramifications of Alaskan CMA. It is reasonable to expect that petroleum derived, low grade, low cost acetic acid can be made available within Alaska as a result of oil related industry. Under this circumstance, with acetic acid costs possibly below $1.00 per gallon, larger scale production of CMA could become a significant Alaskan enterprise. It is further conceivable that Alaska could eventually become a major producer and exporter of low grade CMA to a national or international market.

As project manager I would recommend a course of action leading to manufacture and use of CMA as a de-icing agent in Alaska. In view of the promising nature of this report's findings, work is continuing with construction of a small "bench scale" pilot plant, a refining of the process design and field trials of experimentally produced CMA. An important first-trial of CMA will involve treatment of a roadway sand stock pile to prevent freezing.

Robert McHattie, P. E.
Senior Research Engineer
Alaska Department of Transportation
and Public Facilities

ABSTRACT

The adverse environmental effects and corrosion problems associated with the use of chloride salts as de-icing agents have prompted a search for alternative de-icing compounds. Calcium and Magnesium Acetates (CMA) exhibit excellent de-icing characteristics yet are not corrosive or harmful to the environment.

A viable process design for the production of CMA has been developed based on the results of a series of kinetic reaction experiments conducted at the University of Alaska. Acetic acid and native Alaskan limestones were used as the raw materials. An economic evaluation of the process indicates a selling price of less than $600/ton of solid CMA, based on the production of a saturated, aqueous CMA solution in small scale facilities (10,000 - 50,000 gallons/day). At the upper range of production rates studied (50,000 GPD) and for an acetic acid cost of $1.25/gallon, the calculated CMA price was $290/ton of solid. This represents a minimum price and is attractive when compared with the cost of other de-icing compounds.

The results of this cooperative project between the Petroleum Engineering Department at the University of Alaska, Fairbanks and the State D.O.T. are highly encouraging. With the use of native Alaskan limestone and acetic acid, the process economics point toward a high quality, competitively priced product. The environmental advantages of CMA over chloride salts and reduced secondary costs due to lower corrosion rates for vehicles and bridges indicate that CMA may become the premier de-icing agent.

INTRODUCTION

Road and airport runway de-icing are serious problems in the northern latitudes. Sodium and calcium chlorides have been used successfully for many years as de-icing agents. However, adverse environmental effects and corrosion problems associated with chloride salts have prompted a search for alternative, cost-effective, de-icing agents. (1,2,3,4)

A report entitled "Alternate Highway De-icing Chemicals" from the Bjorksten Research Laboratories, Inc. presented a review of the de-icing characteristics of various compounds. Two candidates were selected which proved economical, and more importantly, less corrosive than NaCℓ.

The first, methanol, was found to be "less persistent" due to its low flash point. The second, a mixture of calcium and magnesium acetate (CMA) was found to exhibit superior de-icing characteristics at a competative price. In contrast to NaCℓ, CMA is a corrosion inhibitor, is beneficial to most soils, and has no potential for harming drinking supplies. Hence, CMA does not exhibit many of the "extended costs" associated with the application of NaCℓ.

CMA can be produced by the simple dissolution of naturally occuring carbonates in acetic acid. These carbonates are readily available in the form of native limestones and dolomite. We have discovered that, for economic and technical reasons, the production of calcium acetate (CA) alone is prefered. This subject is dealt with in a later section of this report.

REACTION EXPERIMENTS

Calcium acetate is formed by the dissolution of calcium carbonate in an acetic acid solution. Water and carbon dioxide are byproducts. The stoichiometric equation is given below:

$$\underset{(100g.)}{CaCO_3} + \underset{(120g.)}{2CH_3COOH} \rightarrow \underset{(158g.)}{Ca(CH_2COOH)_2} + \underset{(18g.)}{H_2O} + \underset{(44g.)}{CO_2}$$

The reaction is slightly exothermic (ΔH_r^o = -4.6kcal/gmol.). The solubility limit of CaAc (calcium acetate) is 28% by weight. Hence, if a saturated solution of CaAc is desired, a simple material balance indicates a water requirement of 338 g. H_2O/100g $CaCO_3$.

A series of experiments was undertaken to define the process kinetics and ultimate degree of completion functions of the reaction temperature, reactant concentrations, and extent of particle size reduction for the calcium carbonate. Alaskan limestone delivered from a quarry near Livengood, Alaska, and laboratory acetic acid were used as reactants.

The reaction behavior of limestone and acetic acid is reported in Figure 1. The reactions were conducted in a simple stirred tank reactor. At a given residence time, there was no discernible difference between the various water to limestone ratios, as long as enough water was present to provide an unsaturated solution of calcium acetate at the conclusion of the reaction. This minimum ratio of 4 to 1 on a mass basis proved inhibiting at high acetic acid excess. This result is to be expected since the reaction is based on the dissociation of acetic acid. An insufficient amount of water results in inadequate dissociation of acetic acid.

Since various water to limestone ratios above 5:1 (for brevity not all results are plotted on Figure 1.) did not exhibit any discernible difference in the reaction completion rate, the entire subsequent set of experiments was done at a 5:1 weight ratio of water to limestone.

A significant conclusion can be drawn from the above. The quality of the acetic acid does not have to be highly refined. Industrial grade acetic acid (95% purity) which is significantly less expensive than reagent grade, can be

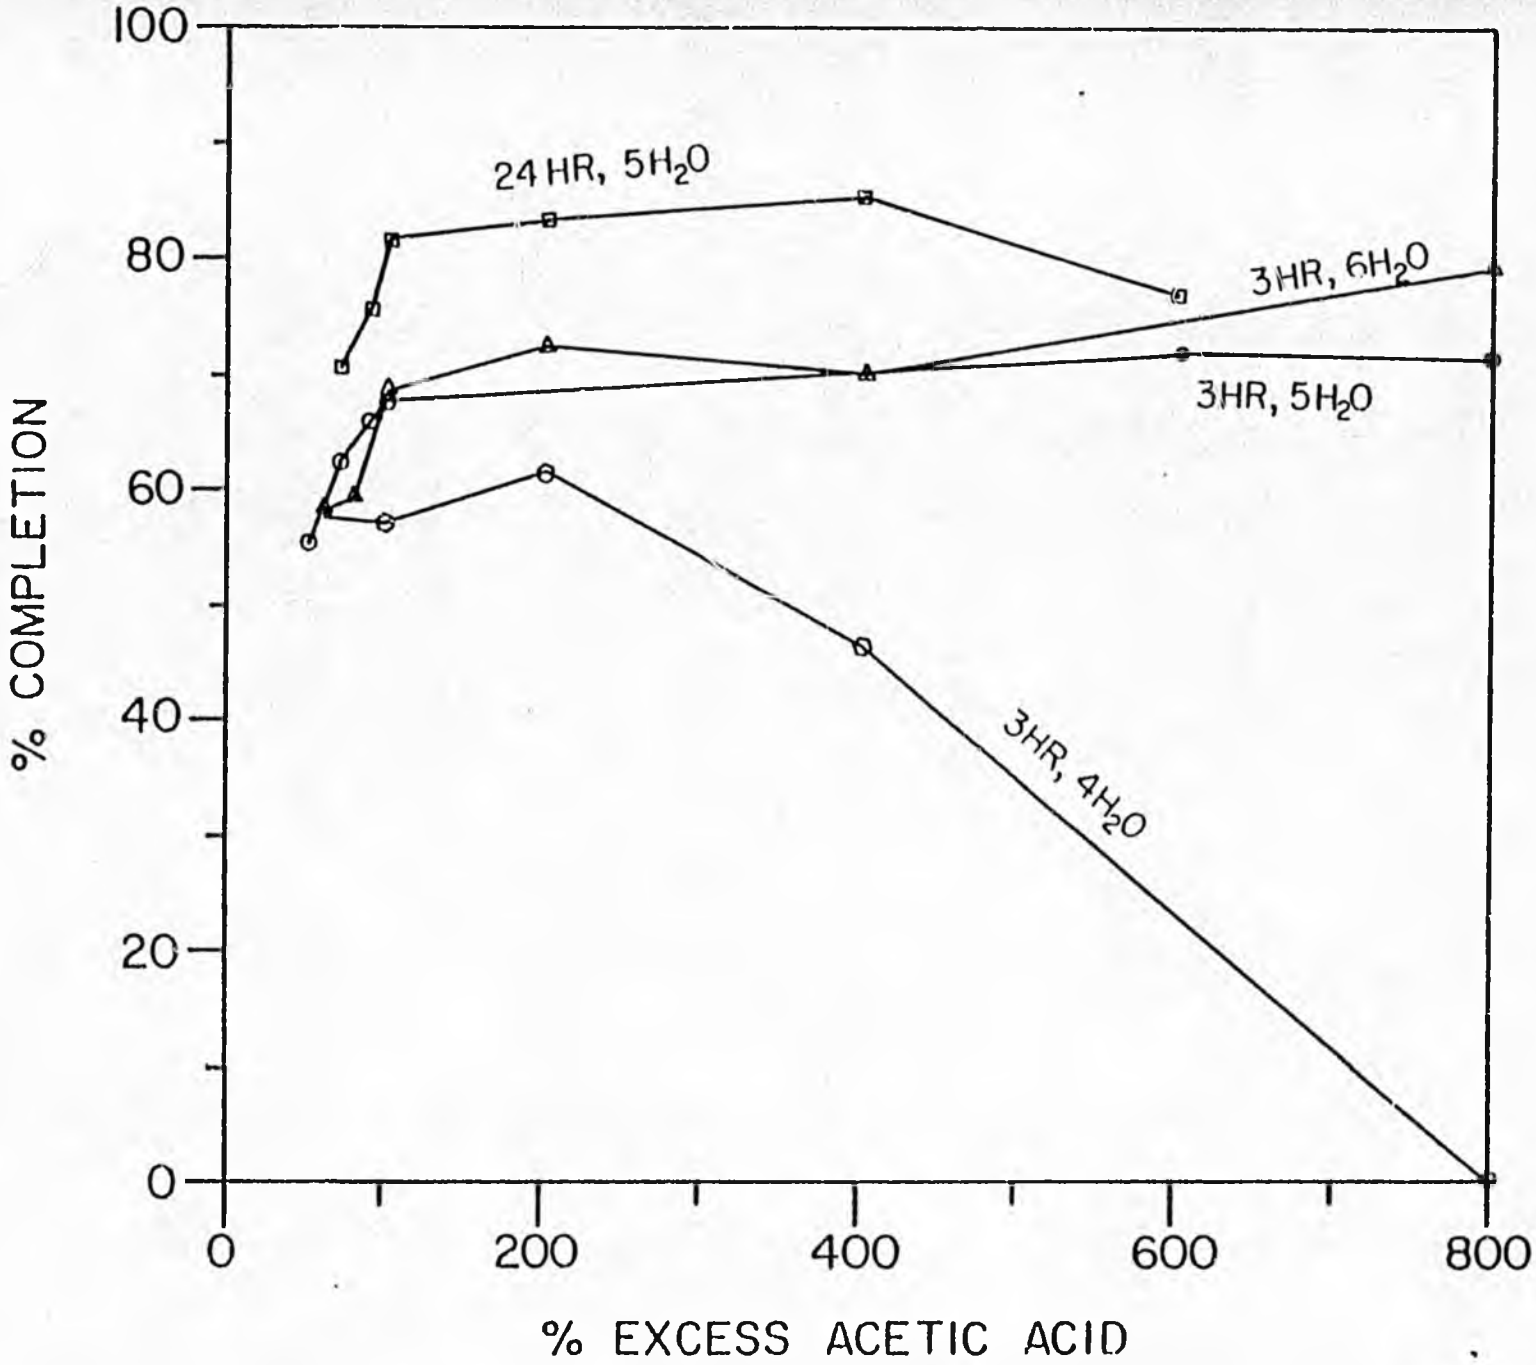

Figure 1. Reaction Behavior of Limestone and Acetic Acid: Percent Completion vs. Excess of Acid at Various Residence Times and Water Content.

used since it will have to be diluted to 50% in any event.

There is another major benefit out of the findings. Liquid phase oxidation (LPO) of waste cellulose (or methanol carbonylation) produce acid at about the optimal 50% concentration. Both methods of production could be implemented in Alaska. Especially attractive is the methanol carbonylation since several industrial concerns are contemplating methanol production in the state. The supply of carbonate for the acetate process seems assured. The state houses large deposits of limestone and dolomite.

Figures 2 through 5 present a comprehensive picture of the reaction results. The series of experiments were intended to gauge the effects of excess acid, reaction temperature and limestone particle sizes on the completion of the reaction. The results are for batch reactions with a three hour residence time.

The amount of excess acetic acid did not appear to affect the reaction completion significantly. Hence, acid consumption can be held at a manageable level.

Neutralization of acetic acid by NaOH can be considered. However, a further economic evaluation may point toward an associated acid recovery unit. An extraction step using an appropriate solvent, followed by a distillation step may be indicated.

The effect of the temperature is significant. An increase in the reaction temperature from room level of 20°C to 60°C results in an increase in the rate of completion of over 20%. A similar effect was observed in using more finely ground limestone. The "first" and "second" crushing that appear in Figures 2 through 5 refer to two consecutive outputs of a commercially available rock crusher. Both of the last two findings will have an effect on the economic optimization of the process. The beneficial effect on the completion rate must be balanced against the operating and energy costs. Finally, the residence time in the reactor appears significant. A 20% difference in the reaction completion was observed if a reaction time of 24 hours was used instead of 3 hours.

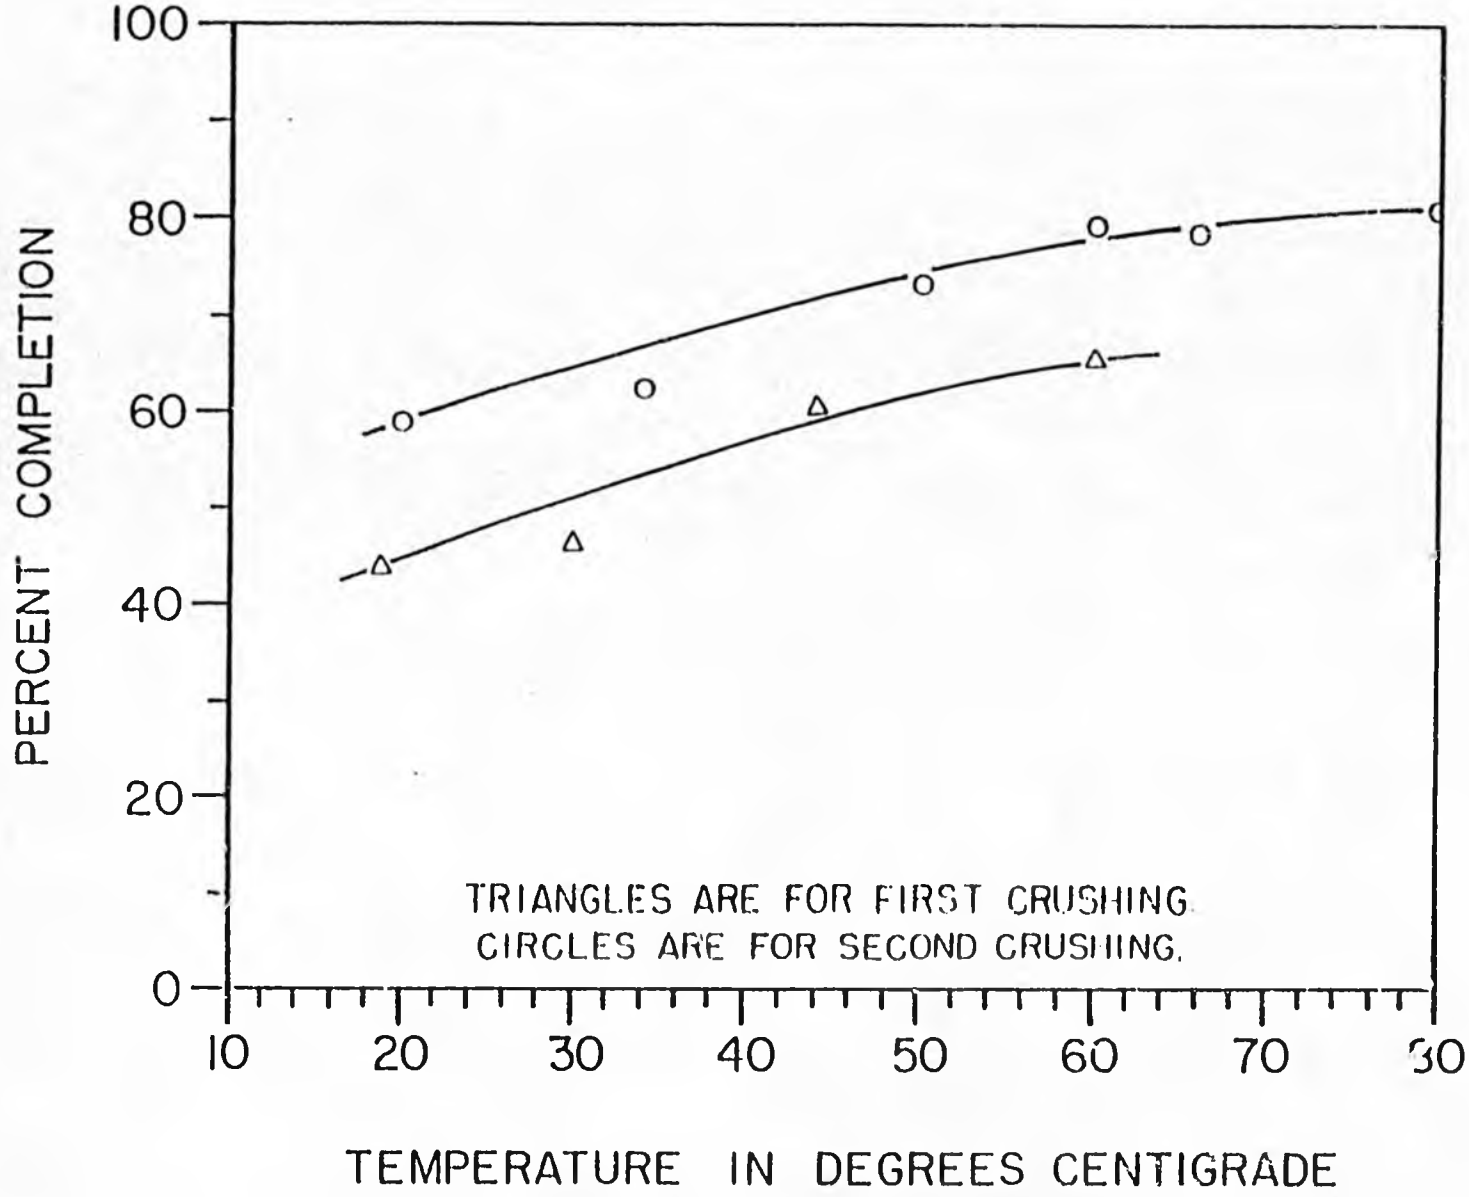

Figure 2. Reaction Performance for Limestone and 0% Excess Acetic Acid

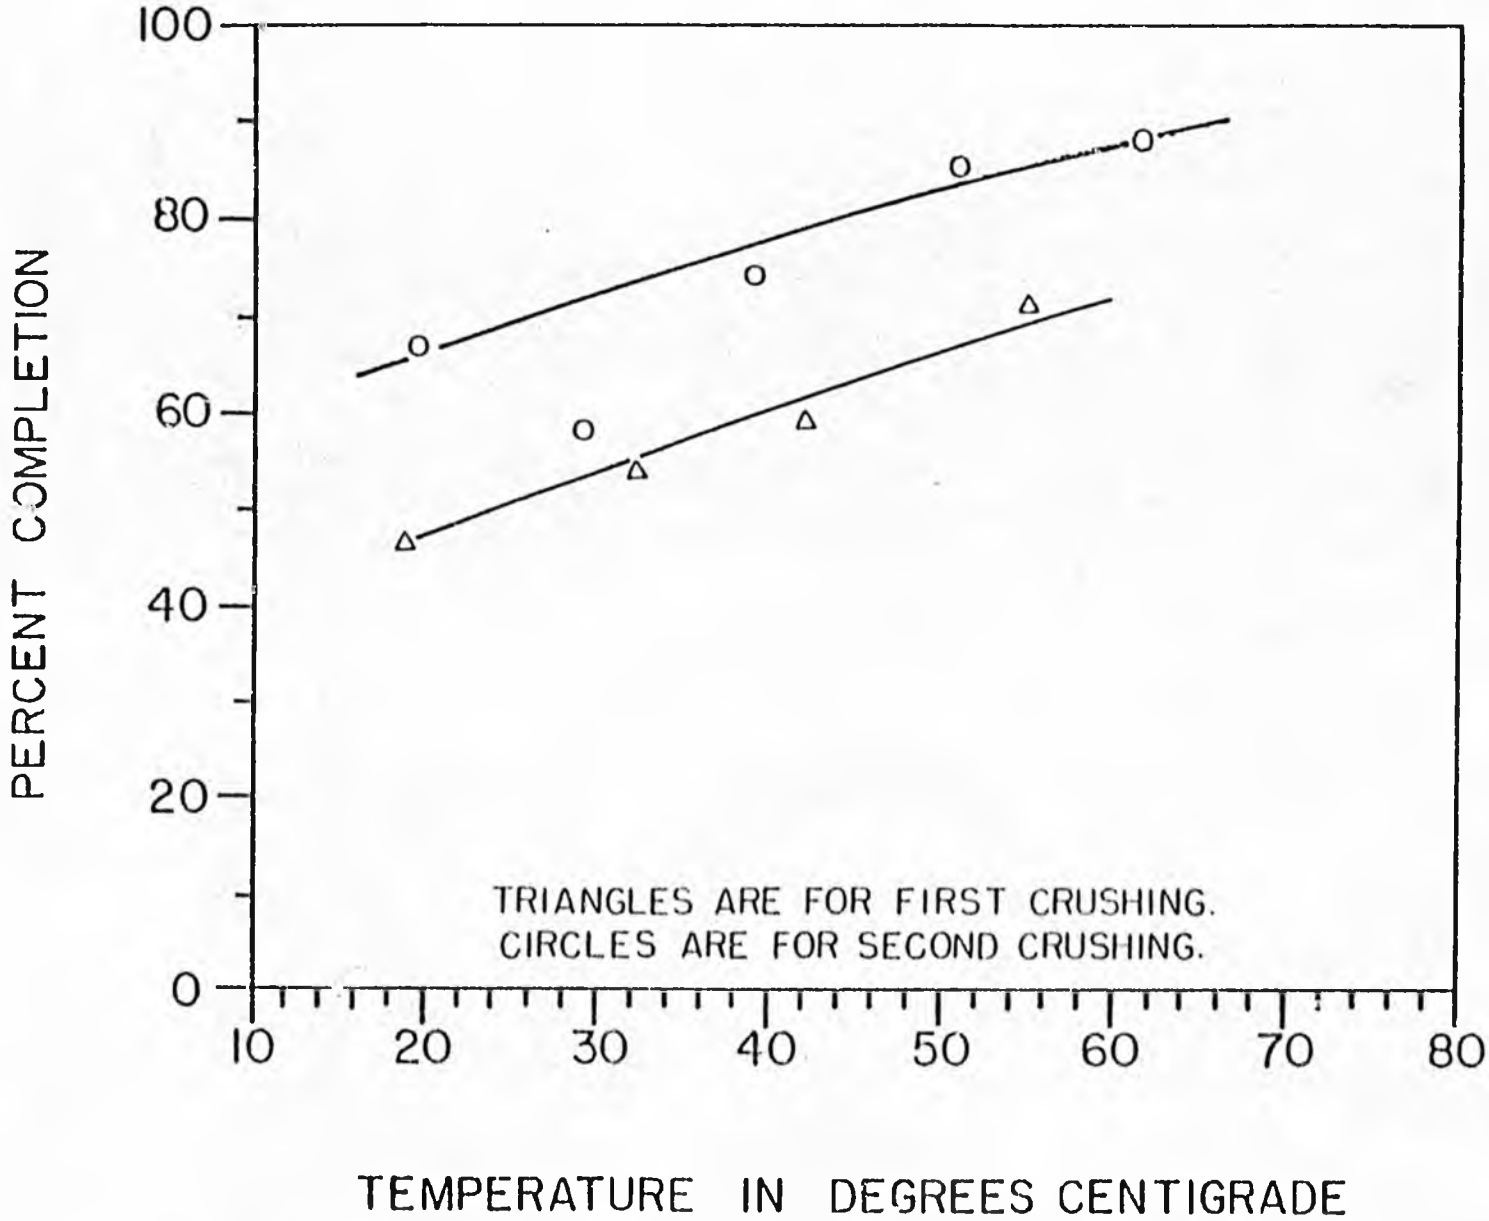

Figure 4. Reaction Performance for Limestone and 50% Excess Acetic Acid.

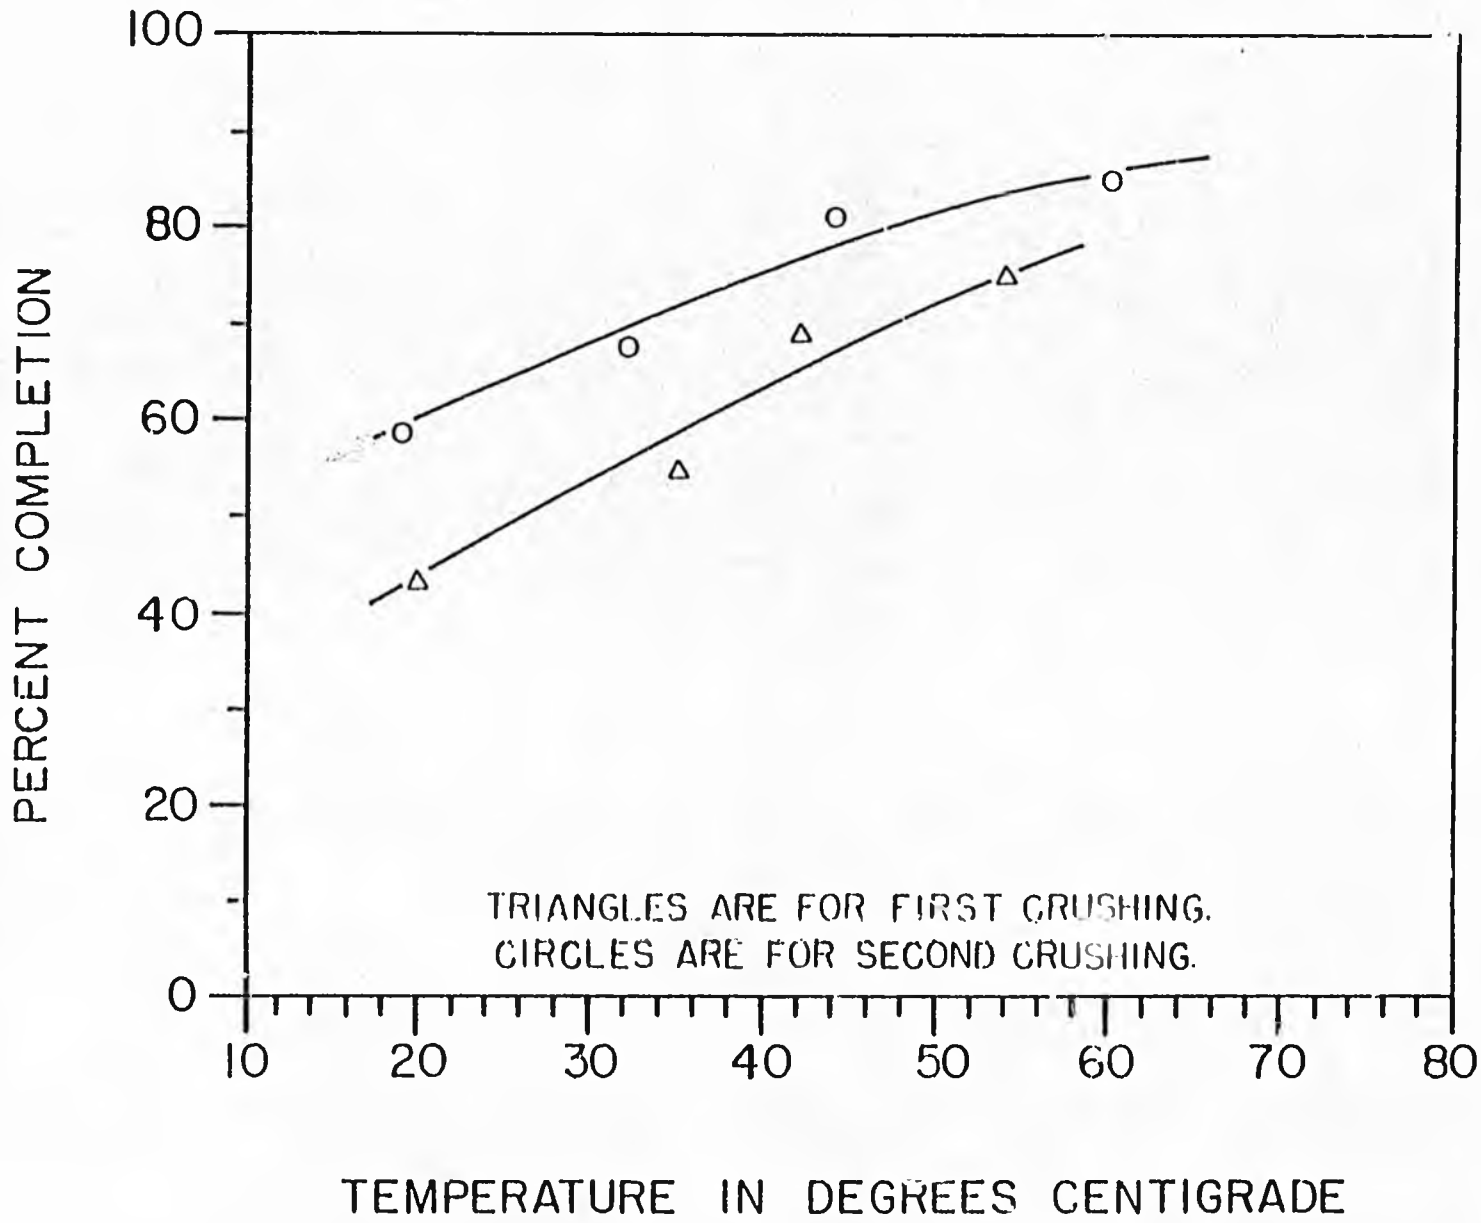

Figure 5. Reaction Performance for Limestone and 100% Excess Acetic Acid.

PROCESS DESIGN AND ECONOMICS

A rigorous economic analysis for a proposed process requires a detailed process design. However, an approximate analysis can be completed on the basis of a preliminary design. This is common practice in the industry.

For a simple reaction process such as that of production of CMA, capital costs do not contribute a very large proportion of the required selling price of the product. Rather, it is the operating cost and more specifically the raw materials costs which are controlling. At moderate capacities any errors or omissions in the plant capital cost estimation do not alter the selling price significantly. Thus, it is possible to obtain a reasonably reliable estimate of selling price with only a process design.

Figure 6 shows a block diagram of the preliminary process design envisioned for the CMA production. Raw limestone is first crushed in two stages to 1/8" to 1" diameter aggregate particles. The crushed limestone is then mixed with acetic acid and water in a continuous stirred tank reactor. The reactor is sized for a three hour mean residence time and is heated to 70°C by an external steam heating jacket. The reaction product, consisting of the mixture of unspent acetic acid and unreacted limestone and extraneous inert material is then passed through a filtration unit. In the filtration unit unreacted solids are removed and sent to a neutralizing settling pond where they are neutralized by addition of sodium hydroxide. The filtrate containing the product acetates is then sent to a neutralizer reactor where excess acetic acid is neutralized by the addition of sodium hydroxide. The resulting acetate solution is then checked for appropriate pH value and sent to liquid product storage tank. In an optional process addition, it would be possible to evaporate the liquid product to produce a solid calcium or magnesium acetate product.

The major process components are described below:

1. Crusher: Particle size was found to be a significant variable in the reaction efficiency. A two-stage crusher will be utilized to reduce the limestone to 1/8" to 1" diameter aggregate particles.

Crusher Price --- $14,000.00

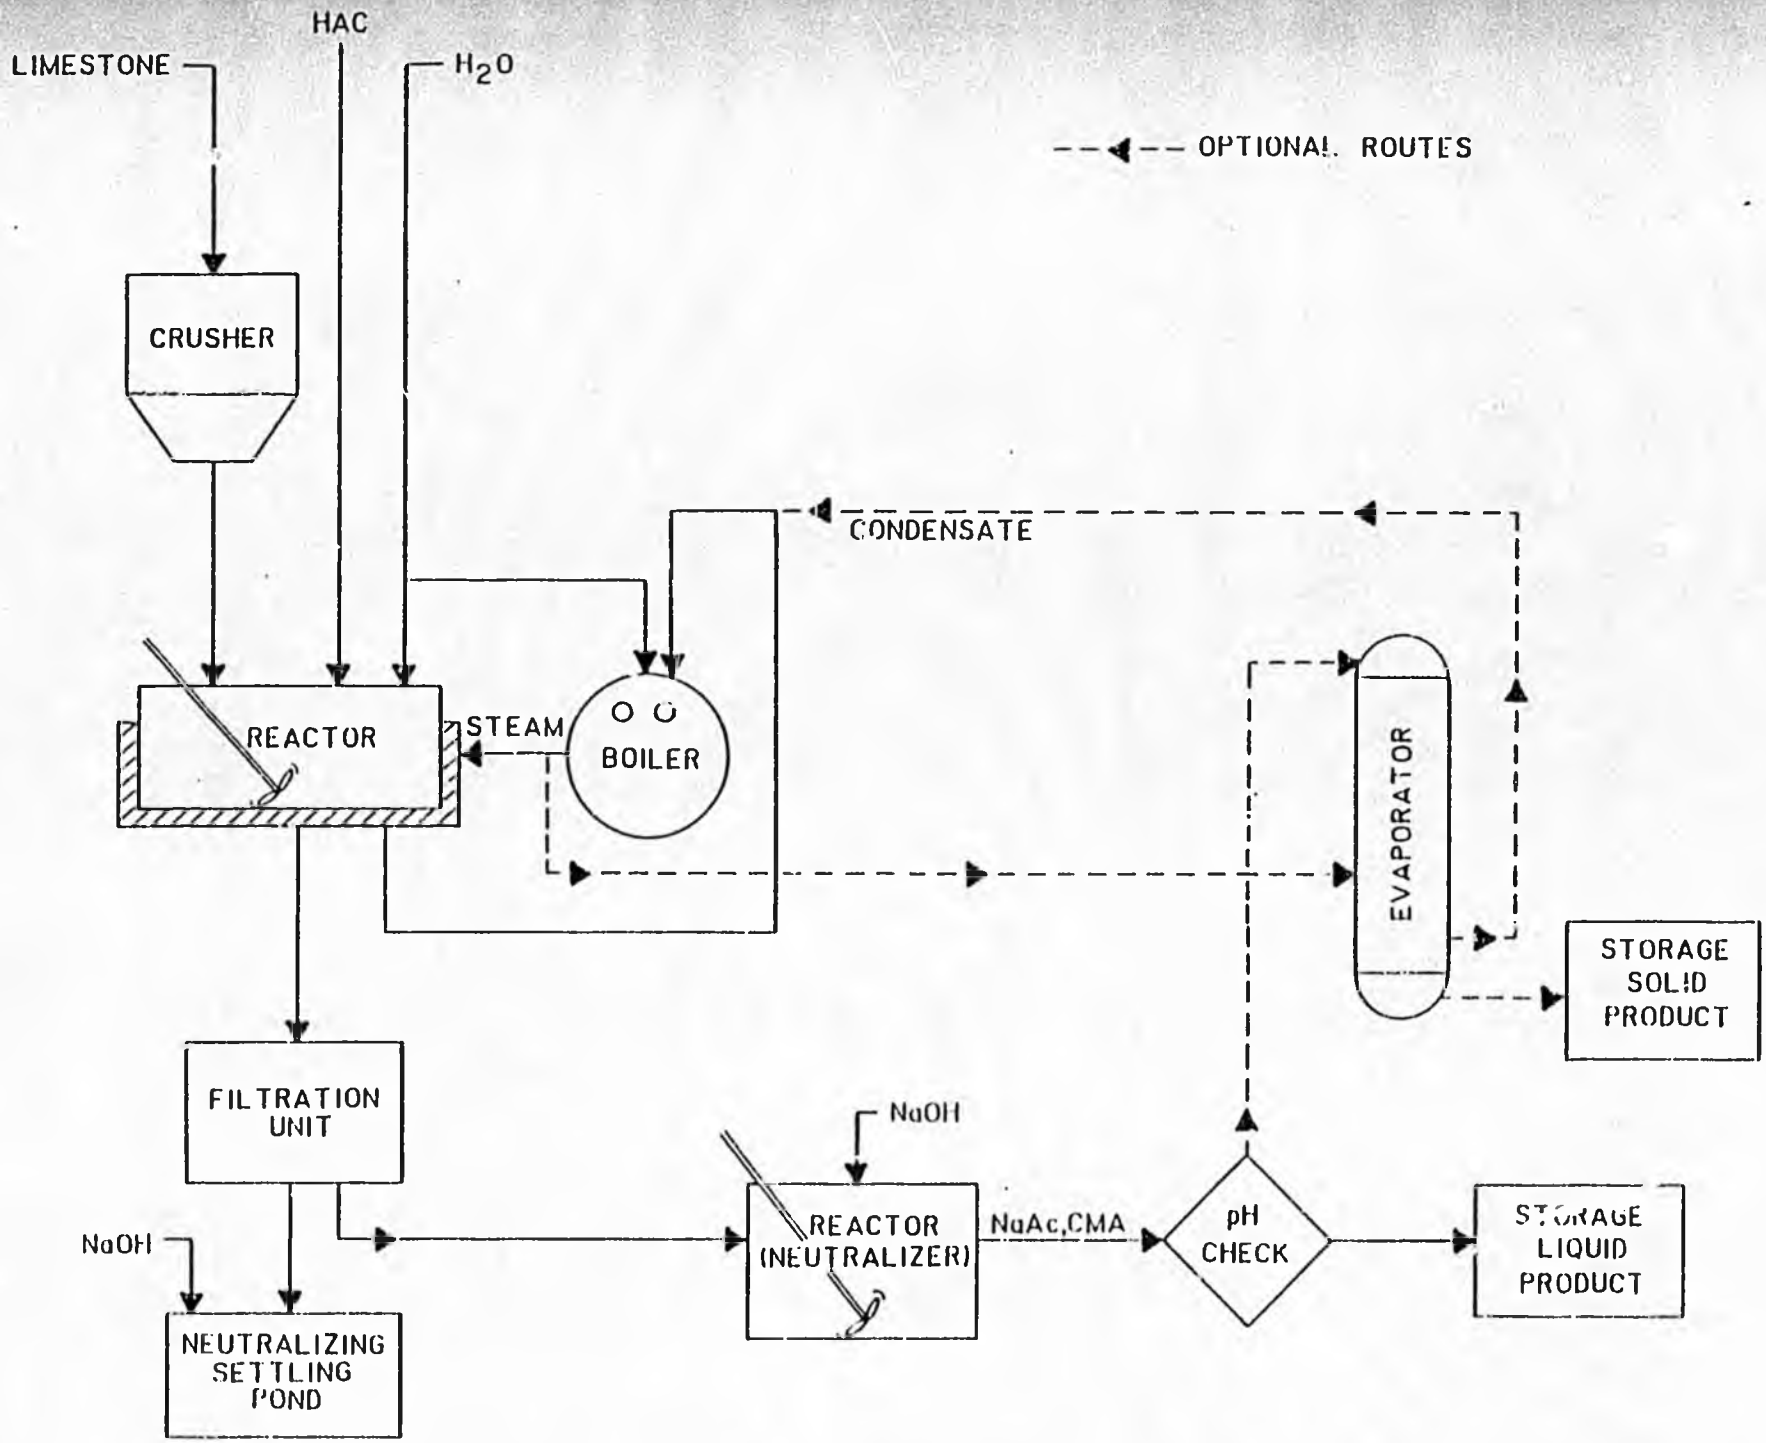

Figure 6. Block Diagram of Conceptual Process Design.

2. Reactors: Two 8,000 gallon reactors are required. The first reactor must be equipped with an external steam heating jacket. Since acetic acid is corrosive to mild carbon steel, the reactors must be constructed of 316 stainless steel.

Reactor Price --- $110,000.00

3. Boiler: A turnkey boiler package capable of producing 4,000 pounds per hour of 250 psig steam will be required for the reactor jacket heating and space heating. The packaged unit will include a boiler, feed water de-aereator, boiler feed pumps, chemical injection pumps, stack and shop assembly.

Boiler Cost --- $24,000.00

4. Vessel: A carbon steel storage tank capable of handling three days production (150,000 gallons) is included.

Vessel Cost --- $70,000.00

5. Filter Press: A 304 stainless steel horizontal-plate filter press is also included.

Filter Press Cost --- $28,000.00

6. Front End Loader: A front end loader with an 18 cu.ft. capacity is required.

Front End Loader Cost --- $27,000.00

A summary of the major capital equipment costs for the plant is listed in Table 1. In addition, a 10% contingency has been added on giving a total major capital cost of $300,000.00 for the CMA plant. It is common practice in capital cost estimating to use multipliers to estimate instrumentation, installation, piping, electrical, and indirect costs for the construction of chemical process plants. (5) Table 2 presents a summary of these additional costs for the CMA plant. This gives a total of $185,000.00 for the additional costs associated with

TABLE 1

MAJOR CAPITAL EQUIPMENT COSTS

CRUSHER	$ 14,000
REACTORS (2)	110,000
PACKAGED BOILER	24,000
STORAGE TANKS	70,000
FILTER PRESS	28,000
FRONT END LOADER	27,000
Subtotal	$273,000
10% Contingency	27,000
TOTAL MAJOR CAPITAL EQUIPMENT	$300,000

TABLE 2

ADDITIONAL PLANT COSTS

INSTRUMENTATION (6% of Major Capital Equipment (MCE))	$ 18,000
INSTALLATION (30% of MCE)	90,000
PIPING (7% of MCE)	21,000
ELECTRICAL (5% of MCE)	15,000
INDIRECT COSTS (15% of MCE)	45,000
Subtotal	$189,000
MCE	300,000
TOTAL CAPITAL INVESTMENT	$489,000
WORKING CAPITAL (10% of Capital Investment)	49,000
TOTAL INVESTMENT	$538,000

the CMA plant. When combined with the capital equipment estimate, this yields a capital cost estimate of $489,000.00. Working capital can be estimated roughly as 10% of the total investment. Inclusion of working capital results in a total plant cost of $538,000.00. This figure represents the total investment which must be recovered through the selling of the CMA product.

On the basis of the preceding design, we have completed an economic analysis of the proposed CMA plant. It should be emphasized that this analysis represents a best case senario, allowing for continuous operation, and minimal storage facilities. The required selling price of the CMA product can be calculated by the following equation:

$$P = \frac{CF - TD + A(1-T)}{G(1-T)}$$

where;

P = price of solution ($/gallon)

G = annual production rate (gallons)

D = annual depreciation (straight line method)

A = annual operating cost

T = tax rate (50%)

CF = cash flow using uniform series present worth value with ROR = 20% (rate of return)

This equation has been used to calculate the required selling price (dollars per gallon of solution) required as a function of the price of acetic acid and the production capacity of the plant. A detailed example of the derivation and use of this equation is presented in Appendix 1. Figure 7 shows the required selling price as a function of acetic acid cost for a 10,000 gallon per day plant and a 50,000 gallon per day plant. It is apparent that there is some economy of scale. However, the final plant size will most likely be dictated by market considerations. Finally, Figure 8 presents the selling price for CMA as a function of production rate alone given a fixed cost for acetic acid ($1.25/gallon). It is apparent that a minimum plant capacity of about 12,000 gallons per day is dictated by the economics. Little additional economy of scale is indicated above the production rate of 30,000 gallons per day. In Figures 7 and 8 the price of CMA has been reported in dollars per ton of solid in solution to allow comparison with current prices of sodium chloride and calcium chloride.

From an analysis of Figures 7 and 8 it is apparent that the cost of acetic

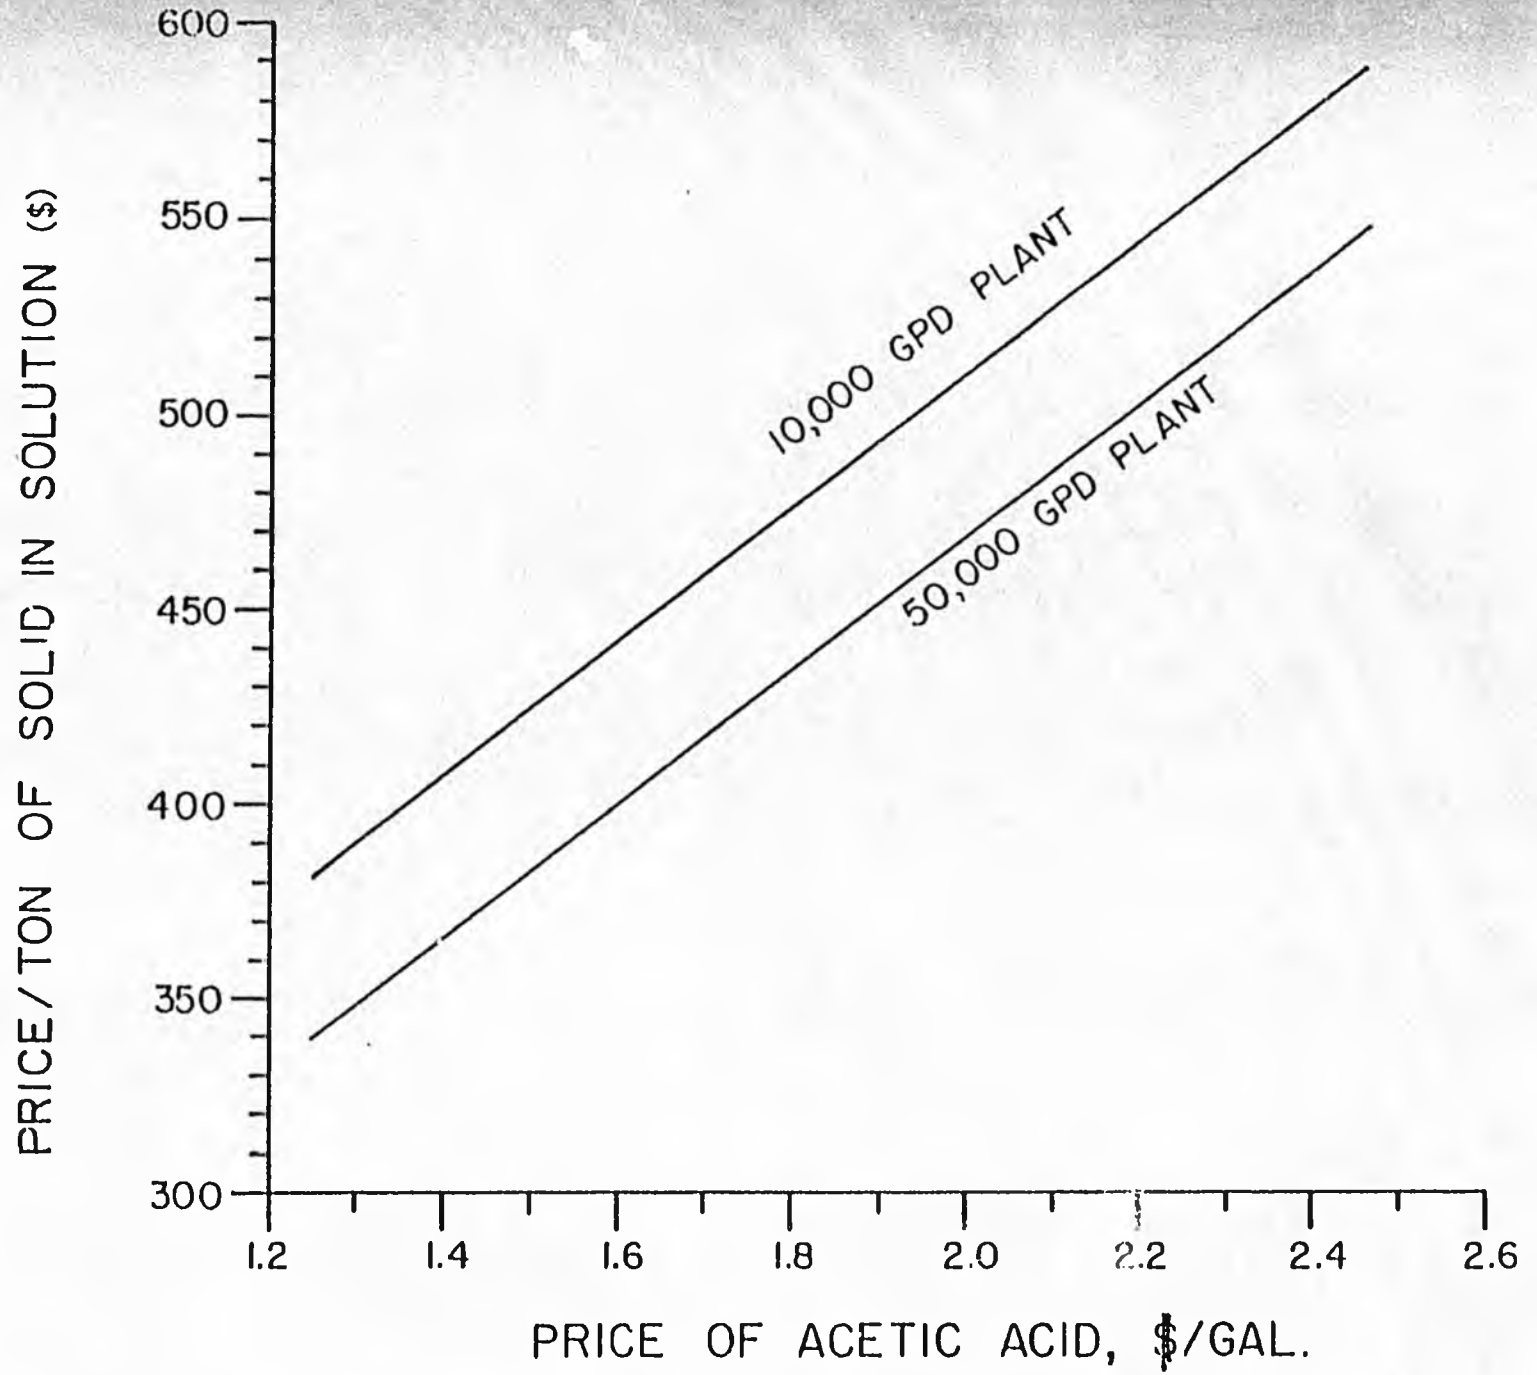

Figure 7. Required Selling Price of CMA for Various Acetic Acid Prices.

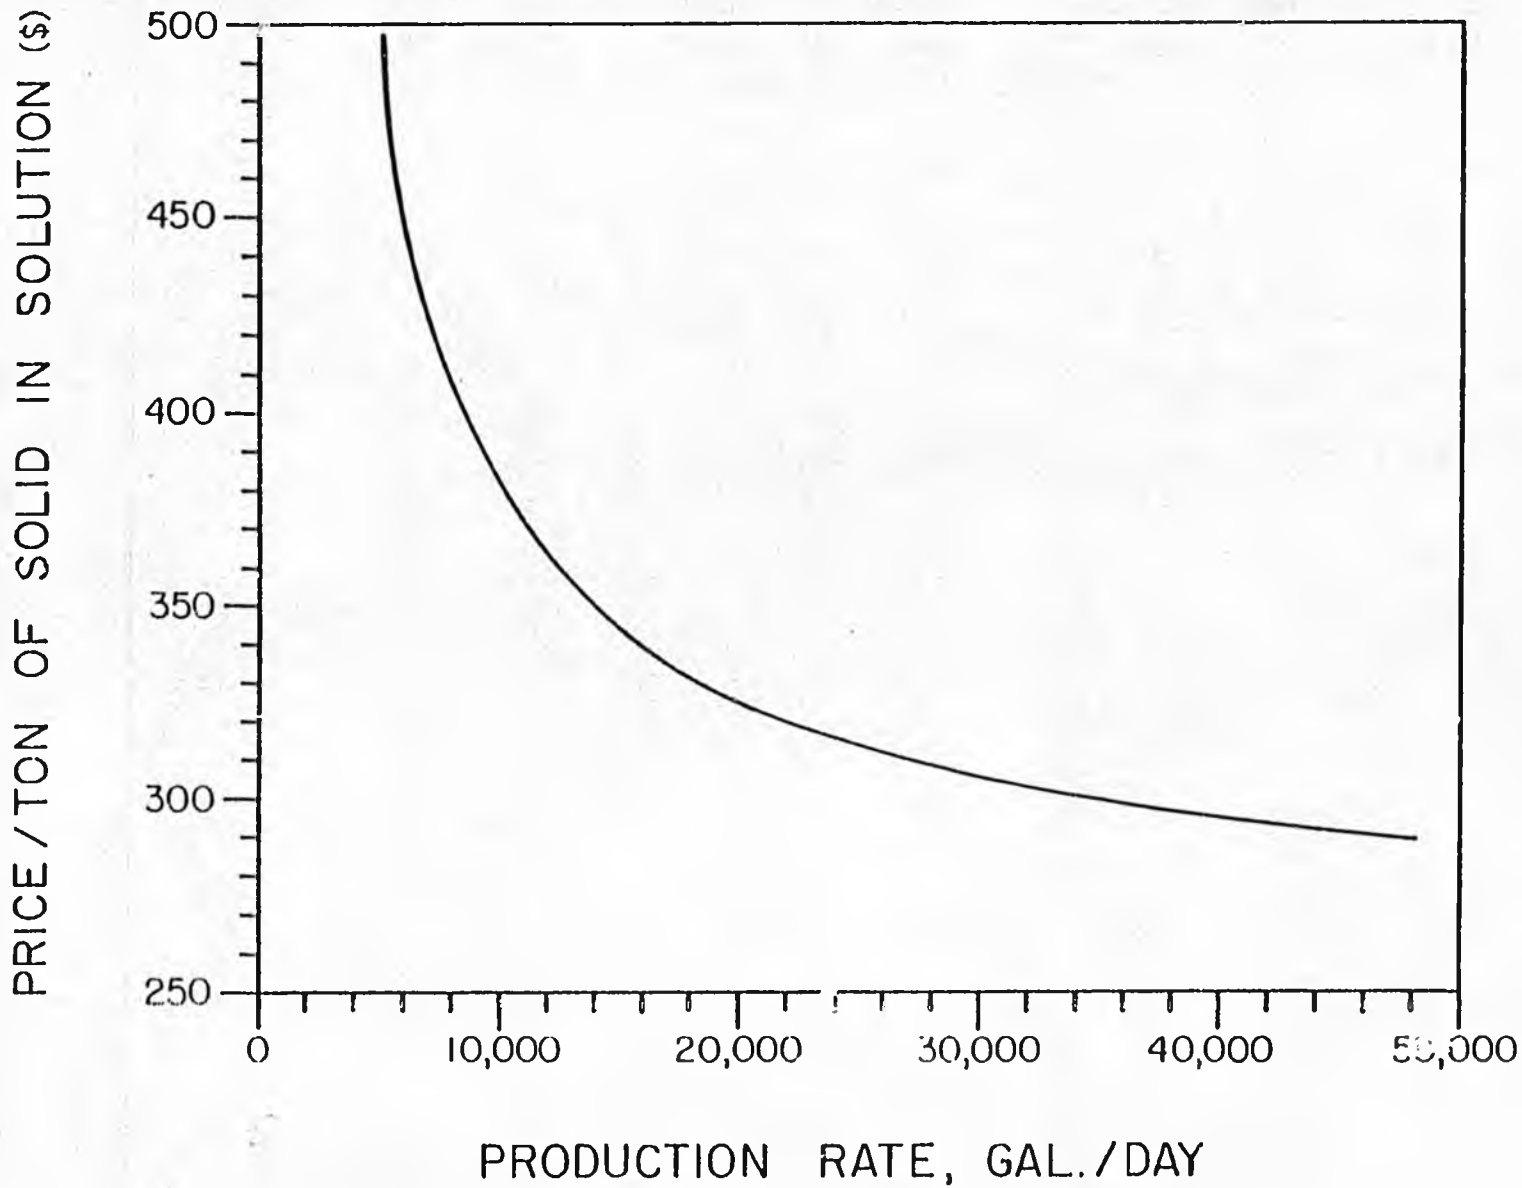

Figure 8. The Effect of Plant Size on the CMA Price. ($ 1.25/ gallon acid)

acid is the single most important factor in determining the selling price of the CMA product. If acetic acid must be shipped to Alaska from Texas, for example, at a cost of over $2.5 per gallon, the price of CMA will be in excess of $500 per ton of solid in solution. However, acetic acid is normally shipped and delivered in purities in excess of 90%. Since in our process acetic acid is diluted with water to roughly 50%, it does not make sense to pay an additional premium for high purity acetic acid. In fact, one of the major costs of producing acetic acid is in the purification stage taking the acid from 50% to purities in excess of 90%. Hence, if a local production facility for acetic acid were located in or near Alaska, it should be possible to purchase dilute acetic acid at a considerable savings, perhaps as low as $1 per gallon.

Even utilizing imported acetic acid, the price of $500 per ton of solid CMA may not be excessive. CMA is not corrosive as is calcium chloride and sodium chloride. Hence, there is an inherent cost advantage in using CMA as opposed to chloride salts. Therefore, while CMA may cost more in the initial stage of application, significant cost savings may be realized in the area of maintenance. In addition, since airports cannot use chloride salts, but rely on more expensive methanol or urea, CMA may have a particular advantage.

FREEZING AND EUTECTIC EXPERIMENTS

There were two objectives in this series of experiments: (1) Determination of eutectic diagrams for various solutions of salts; and (2) evaluation of the de-icing performance of the salts under varying atmospheric conditions.

The eutectic diagrams are the result of measurements gathered in the laboratory. A cold testing chamber was used to evaluate freezing properties over a wide spectrum of ambient temperatures (0°C to -75°C). A comprehensive laboratory study involved the use of different de-icing salts (CaAc, MgAc, NaCl and CMA) at different percentage solutions. The results seen in the accompanying figures represent the average readings gathered over three test runs. The ideal de-icing salt is obviously a concentrated solution (27% by wt.) of MgAc. At the lowest temperature tested (-75°C), the solution merely gelled.

Figure 9 contains the eutectic behavior of sodium chloride solutions. Our data agrees with published data. In the case of the acetates, a 28% solution of CaAc was the upper limit (saturation point) while a slightly lower concentration was the saturation limit for MgAc. Figures 10 and 11 contain the eutectic characteristics of CaAc and MgAc respectively. While CaAc did not prove more effective than NaCl, MgAc was decidedly more effective with a eutectic point depression of 75°C. Hence, a mixture of Calcium-Magnesium Acetate (CMA) with a high concentration of MgAc should be the most effective de-icer. A 25% solution of CMA with 70-80% MgAc would be sufficient for the most severe climatic conditions, as it is shown in Figure 12.

The findings of our freezing experiments, in addition to corroborating the de-icing performance of the acetate compounds, have also pointed out a major conclusion. Since the best dolomite deposits contain less than 50% magnesium carbonate, the limit of the CaAc/MgAc ratio is de facto determined.

A re-examination of the findings shown in Figure 12 lead to the observation that a 50% MgAc contribution in a CMA solution is not any more effective than a "pure" calcium acetate solution. For example, a 20% CMA solution containing 50% MgAc has a freezing point of -29°C (Figure 12) while a similar solution of CaAc has a freezing point of -26°C (Figure 10).

Dolomite with magnesium carbonate concentration of greater than 50% is not found in appreciable quantity in Alaska. Since the use of dolomite containing lower concentrations of magnesium carbonate results in a solution which is no more effective than calcium acetate derived from abundant limestones, and since

(23)

Figure 12. Eutectic Characteristics of Various Compositions of CMA Solutions.

dolomite is more expensive than limestone, it can be concluded that calcium acetate would be the most economic route for the process. To avoid confusion, we continue to use the nomenclature CMA throughout this report. However, it should be realized that we refer to a calcium acetate solution containing only small amounts of magnesium acetate.

APPENDIX 1

SAMPLE ECONOMIC CALCULATION

The working equation is:

$$P = \frac{CF - TD + A\,(1-T)}{G(1-T)} \qquad (1)$$

where:

P = price of solution ($/gallon)

G = annual production rate (gallons)

D = annual depreciation (straight line method)

A = annual operating cost

T = tax rate (50%)

CF = cash flow using uniform series present worth value with ROR = 20% (rate of return)

The variables in equation (1) can be evaluated:

G: 365 days x 50,000 GPD = 18.25×10^6 gallons

D: The depreciation is 1/10 of the capital investment (i.e., $53,800).

A: The operating costs can be divided into the costs of raw materials and the fixed costs such as labor, instrumentation and maintenance.

To calculate the costs of raw materials a stoichiometric balance of the general reaction is indicated:

$$CaCO_3 + 2CH_3COOH \longrightarrow Ca(OOCH_3C)_2 + H_2O + CO_2$$

In order to produce 50,000 gallons of solution per day there is a need for:

48 tons of $CaCO_3$ (at $60/ton)

12,700 gallons of Acetic Acid (at e.g. $2.00/gal.)

53,000 gallons of water (at $2.25/1000 gal)*

Then A = $10,800,000 which includes $10,400,000 for materials and $400,000 for fixed operating costs, instrumentation, labor and maintenance.

T: The tax rate taken at 50%

---

* Calculated using density of solution of 87.4 lbm/ft^3, 80% reaction completion, 97.14% pure Alaskan limestone, and a saturated acetate solution (25% calcium acetate, 75% water).

CF: Is the amount of money required to recover a capital investment using a certain rate of return. In this case a 20% ROR would require a uniform series present worth factor of .235.

Hence, CF = \$538,000 x .235 = \$129,000

Using equation (1) the price of solution is \$0.60/gal which can be converted to \$420/ton of solid in a saturated CMA solution (25%).

Derivation of Equation (1)

Equation (1) is essentially a simple rearrangement of the cash flow equation:

$$CF = \text{Net Income} - \text{Tax} \tag{2}$$

Where:

$$\text{Net Income} = PG - A \tag{3}$$

and

$$\text{Tax} = (PG-A_D)T \tag{4}$$

Combining Terms:

$$CF = (PG-A) - (PG-A-D)T \tag{5}$$

Rearranging

$$P = \frac{CF - TD + A(1-T)}{G(1-T)} \tag{6}$$

Cathodic Protection of Concrete Bridge Decks in Alaska

(Northern Engineer Article)

Matt Reckard

To be published in The Northern Engineer

Spring 03

Reinforced concrete is commonly used for bridge decks. In recent years an alarming increase in delamination and spalling of the concrete cover of these decks has been observed (see figure 1). This deterioration not only makes travel over these bridges rougher, but can eventually lead to structural damage to the bridge. A great deal of effort has been made to understand the causes of this damage and prevent it, since deck repairs or replacement is expensive.

The principal cause of the delamination and spalling of bridge deck concrete is galvanic corrosion of the reinforcing steel, although this was not widely recognized for many years.[1] One means of preventing this damage is to install cathodic protection systems on the bridge, which can stop this corrosion. (Move last sentence of other up to here)

Two of these systems have been recently installed in Alaska. The first was placed on the upper vehicle ramp at the Anchorage International Airport domestic terminal building; it began operating in December 1981. The second was installed on the Wendell Street Bridge in Fairbanks and began operating in October 1982. A third system is planned for the Cushman Street Bridge in Fairbanks; it is scheduled to be installed next summer.

The corrosion of rebar in bridge decks is similar to what occurs in many types of galvanic cells, such as the lead-acid automobile battery shown schematically in Figure 2. In a bridge deck, different parts of the reinforcing steel become anodic or cathodic (see Figure 3) due to differences in residual stresses and impurities in the steel, cracks, moisture content, and aeration of the concrete, and other factors.[2,3]

The concrete cover, which normally would protect steel from corrosion due to its alkalinity, becomes an effective eletrolyte when contaminated by chloride ions from de-icing salts used on the bridge. Corrosion products (principally rust) build up at the anodic areas of the rebars, and because they occupy a greater volume than the original steel, they exert pressure on the concrete, which eventually cracks. Thermal expansion, water freezing in the cracks, and other factors can then extend the cracking, separating the cover layer of concrete from the rest of the deck (delamination). The delaminated concrete can eventually spall off, leaving

the top mat of the reinforcing steel exposed.

This problem has grown worse in recent years due to the increased use of de-icing salts on highways and bridges. One means of preventing this damage would be to avoid the use of salts by substituting other materials such as sand, fly ash, or calcium magnesium acetate (CMA). Another means is to place an impermeable layer between the surface of the bridge deck and the reinforcing steel. In this way chloride penetration to the level of the steel is prevented or at least retarded, and the corrosion will not occur (or will progress much more slowly). Several methods have been used to retard or halt chloride penetration to the level of the rebars, such as the specification of dense, low-slump concrete, greater cover depth of concrete, polymer-modified concrete, or the application of waterproof membranes. Galvanized and epoxy-coated rebar has also been used. Some form of protection is required on all new concrete bridge decks built by the state of Alaska.

None of these methods will stop corrosion on existing chloride-contaminated decks, however. The removal and replacement of all contaminated concrete or the entire deck is possible, but very expensive. Short of this, the only method known that can completely halt ongoing corrosion is cathodic protection.

Cathodic protection has long been used for corrosion protection of buried and submerged structures such as pipelines, docks, and ships, and for the protection of elevated water and fuel tanks. Cathodic protection of bridge decks, however, is relatively new, and designs are still somewhat experimental.

The principle behind cathodic protection is to make all of the steel (or other material) to be protected cathodic with respect to another material placed in the electrolyte to which it is electrically connected. This can be done by connecting the steel to a less noble metal, such as zinc or magnesium. The less noble metal, thus ~~has~~ becomes the anode in a galvanic cell, and it, rather than the steel, corrodes (see Figure 4). This is known as "sacrificial-anode" cathodic protection. The anode material eventually corrodes completely and must be replaced.

Another method is to connect the steel to be protected to another material

placed in the electrolyte and force the steel to become cathodic by using an external power source. This is known as "impressed-current" cathodic protection (see Figure 5). Corrosion of the anode in such a system will be negligible if the correct choice of material is made, thus eliminating the need for anode replacement.

Impresssed-current systems have usually been chosen for use on bridge decks for two principal reasons. The first is that the amount of protection can be easily varied by altering the voltage and current from the power source. In a sacrificial-anode system, the voltage is determined by the relative oxidation potentials of the anode and cathode materials, and the current is determined by the amount and location of the anodic material; once such a system is built, neither can be changed. The second advantage of impressed-current systems is that the anodes do not need replacement. Since the anodes must be placed in the electrolyte (i.e. the bridge deck concrete) replacing them would be difficult and expensive.

Current flow between an anode and a cathode will be greatest where the electrical resistance between them is the least. Thus if an anode is placed very close to any one part of the steel to be protected, nearly all the current will flow to that part of the steel, rather than take longer, less conductive paths to more remote locations on the structure. The more remote parts may then receive insufficient current to protect them from corrosion. Moreover, the areas receiving large currents may be "over protected" which has been observed to weaken the bond between rebar and concrete. This may be due to an increase of sodium and potassium ions near the cathode (rebar) or because of the release of hydrogen there.[2,4] By moving the anode farther away from the structure, the distances between the anode and different parts of the structure will become more nearly equal and, if the electrolyte is homogeneous, so will the electrical resistance and current density.

On buried structures where the soil is the electrolyte, anodes can easily be placed at a location relatively far from the structure. It may be possible, for example, to completely protect a buried cylindrical tank by installing three anodes, 120^{θ} away from each other, around the tank and perhaps half the tank's diameter away from it. On a bridge deck, however, the concrete is the electrolyte, and the distance between the anodes and the cathodes (rebars) can never be more than a few inches.

use lower case letter "o".

One means of achieving even current densities over bridge decks is to place anodes in a highly conductive layer of coke breeze and asphalt placed over the entire deck. Care must be taken to ensure that the

conductive layer does not contact any bridge steel, short-circuiting the system. A wearing course of conventional paving material is needed since the coke breeze mixture is relatively weak.[2] Relatively even protection can be given to the top layers of rebar this way, although there is little protection of lower rebar. Chloride concentrations decrease with depth, however, so the lower rebar rarely if ever requires protection.

A disadvantage of this system is that the two overlay layers (typically 5" thick) greatly increase the dead load on the bridge. Another method of anode placement has been developed which requires less overlay thickness. In this method, a series of parallel grooves are cut in the bridge deck, and anodic wires are grouted into them. The anodes thenmselves are thus widely distributed over the deck, and the conductive layer is eliminated, although a wearing course is still required. The cathodic protection systems recently installed in Alaska have been of this type.

Repairs to these bridges were needed before the systems were installed; this work is shown in Figure 1, which illustrates the sericusness of the problem. Pitting found on corroded rebar is shown in Figure 6. All unsound concrete was removed, the remaining concrete was chipped away from any partially exposed rebar, and the concrete and exposed rebar were cleaned. The decks were then patched with latex-modified concrete.

After the deck repair, the cathodic protection systems could be installed. Anode wires for the systems are made of platinum coated niobium with copper cores. These were grouted in grooves cut in the deck with a mixture of coke breeze and polyvinyl ester resin. Figure 7 shows the Wendell Street Bridge after this was completed and before the final wearing course of concrete was placed.

Electric power to energize the system comes from a control box where AC line power is first transformed to the desired voltage and then rectified to DC. The positive terminal is connected to the anode wires via header cables imbedded in the deck; the negative terminal is connected to the reinforcing steel itself.

The amount of polarization (voltage) impressed on the reinforcing steel must be kept within a certain range. A minimum negative voltage of about 850 mV, compared to a copper-copper sulfate half cell, is desired to ensure protection of the steel; a maximum of (negative) 1100 mV is desired to avoid "overprotection".[4] Reference cells were imbedded in the decks in order to monitor the steel polarization; in the Wendell Street system these are made of molybdenum/molybdenum oxide while at the Anchorage Airport they are zinc. Automatic voltage control is provided by a microprocessor in the control box, which monitors the voltage readings on the reference cells and adjusts the current flow as needed. The amount of power required by the systems is quite small; the latter (Wendell Street Bridge) system is expected to stabilize at about 60 watts.[5]

These systems should stop corrosion of the reinforcing steel in these bridge decks, avoiding the need for further expensive deck repairs. Corrosion probes have been installed in the decks to enable detection of any further corrosion, should it occur. The performance of these systems is being monitored by the vendor, Norton Corrosion Ltd., Inc. of Woodinville, Washington. The data gathered should result in a better understanding of both the physical and economic effectiveness of these systems, and may lead to improved designs in the future. The Federal Highway Administration has estimated that the use of these systems may be able to save billions of dollars nationwide.[6]

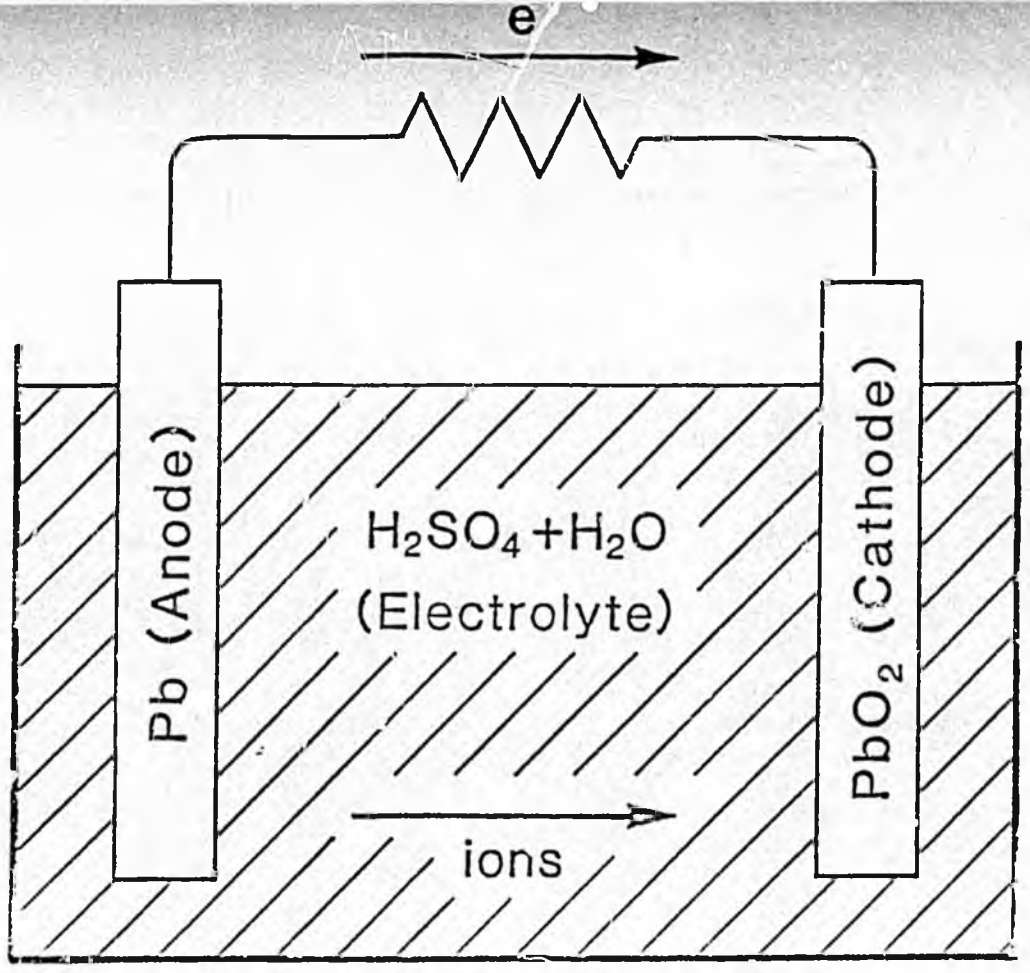

Figure 2: Lead-Acid Corrosion Cell

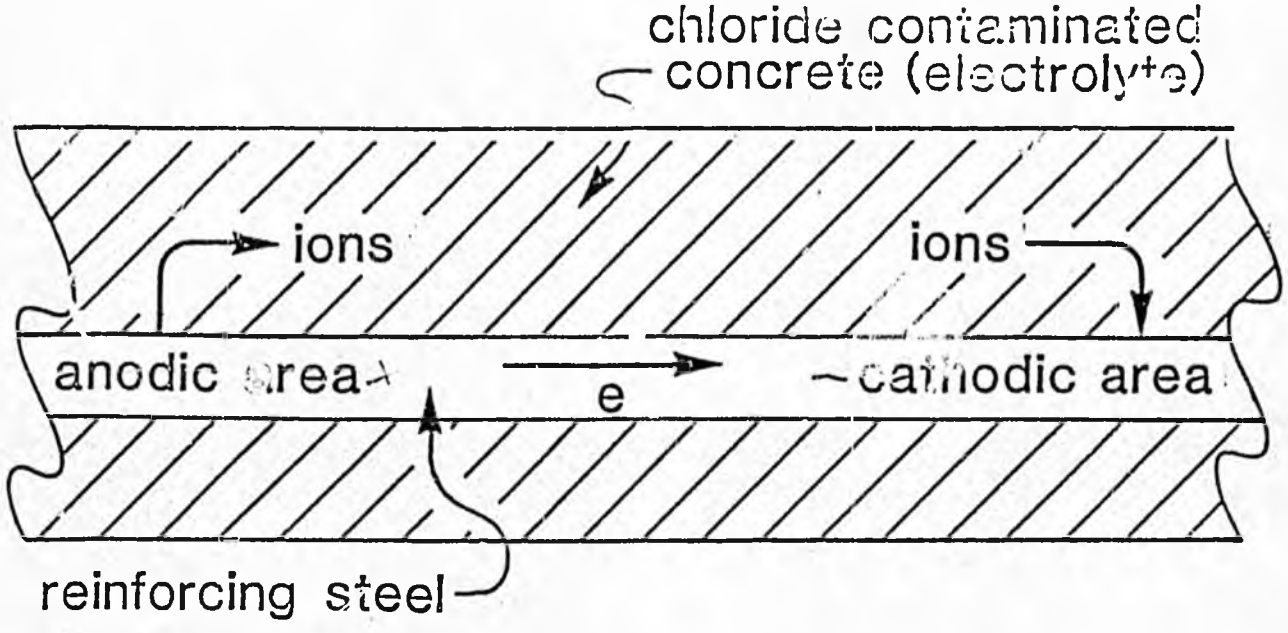

Figure 3: Bridge Deck Corrosion Cell

The use of cathodic protection grew rapidly with the development, in the mid-1930's, of a new source of direct current, known as the copper oxide rectifier. These earliest cathodic-protection applications were very successful; and it was apparent that the cathodic-protection method of corrosion control gave the following advantages:

1. When properly applied, corrosion is completely stopped.
2. The effectiveness of cathodic protection in arresting corrosion can be measured by a simple, nondestructive electrical measurement.
3. The cost of applying cathodic protection is a fraction of the replacement cost of the threatened structure, and cathodic protection is clearly the least expensive means of providing long-term, maintenance-free service life for metal structures in corrosive environments.

Shortly after the end of World War II, corrosion problems developed with large-diameter, prestressed-reinforced-concrete water pipelines in Europe, Israel, and North Africa (*13, 14, 15, 16*). During the 10-year period between 1945 and 1955, the use of cathodic protection to prevent such corrosion became widespread. Other cathodic-protection applications for steel in concrete include underground portions of concrete water-storage tanks, steel reinforcement and liner plate of concrete nuclear-reactor containment vessels, and concrete-coated piling; however, the use of cathodic protection in these applications has not reached major proportions.

How Cathodic Protection is Applied

The cathodic protection of metal is applied by causing a flow of current from any source to the metal (*5*). Two methods are generally used to transmit the protective current (*17, 18, 19*). In one, the threatened structure is made the cathode of an electrolytic corrosion cell with a more active metal as an anode. In the second, the threatened structure is made to react as a cathode by using an external power source.

Electrolytic-Cell Method (Sacrificial-Anode Systems)

To obtain cathodic protection by the electrolytic-cell method, a metal electrode that is anodic to the metal of the structure is connected to the structure by a metallic conductor and is placed in the electrolyte with the structure, as shown in Figure A-2. In this arrangement, the structure and the anode operate as a bimetallic corrosion cell. The anode electrode is sacrificed; thus, the name "sacrificial-anode system." In effect, the corrosion is transferred from the structure to the anode, which is expendable and may be easily replaced. The driving potential for the current is the natural potential difference between the metal of the structure and the anode. Some typical potential relationships are shown in the limited tabulation of the practical galvanic series of metals given as follows (*19*):

Metal	*Typical Potential, volts* [a]
Magnesium alloy (6% Al, 3% Zn, and 0.15% Mn)	−1.60
Zinc	−1.1
Aluminum alloy (5% Zn)	−1.05
Mild steel (rusted)	−0.2 to −0.5
Mild steel in concrete	−0.2
Copper	−0.2

[a] Typical potential normally observed in neutral soils and water, measured to the copper sulfate reference.

From this listing, it is obvious that the magnesium offers cathodic protection to any of the other metals listed whereas copper does not. In practice, alloys of magnesium, aluminum, and zinc are used as sacrificial anodes, although only magnesium and zinc are generally used for the cathodic protection of steel reinforcement in concrete.

External-Power Approach (Impressed-Current Systems)

The external-power approach to cathodic protection is shown in Figure A-3. This system operates in the same

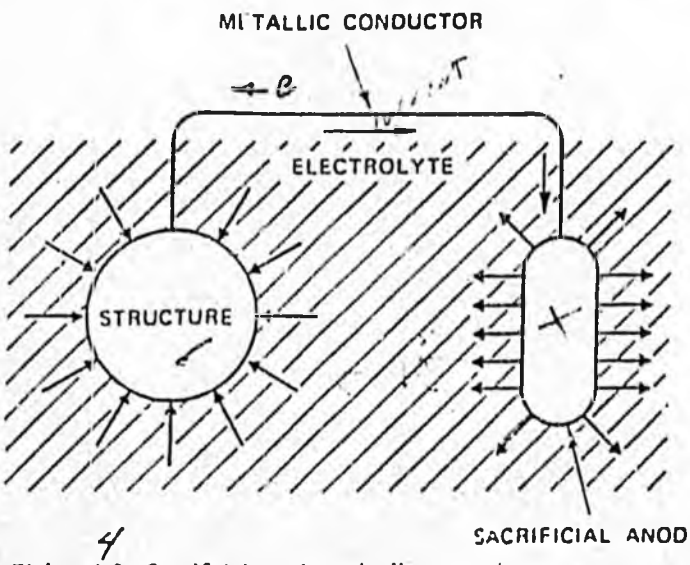

Figure A-2. Sacrificial-anode cathodic protection.

MAINE

By Dr. Dunn Maine

1/13/83

I. INTRODUCTION

We first learned about the CMA project at the TRB meeting in January 1980. We heard the presentation of the work by Dr Dunn, Dr. Stanley and Dr. Scheck. Due to budgetary restraints we only started actively pursuing the idea at the beginning of 1982 when our proposal for a CMA research project was approved.

It has been known that there are three processes to produce CMA.

(1) Quick lime reacting with acetic acid.

(2) Hydrated lime (Calcium Hydroxide and Magnesium Hydroxide) reacting with acetic acid.

(3) Limestone $CaCO_3$+$MgCO_3$ (Calcium Carbonate and Magnesium Carbonate) reacting with acetic acid.

Theoretically all three will do, but in reality (1) is better than (2) which is better than (3).

Since the beginning of our project, our emphasis has been:

(1) Use local resources and waste products.

(2) Use a method that requires a small amount of energy.

(3) Use the method that is most cost effective.

In our search for sources of resources and waste products, we found that Lime Products Corp. in Union, Maine had an interest in this project. They produce high magnesium limestone. They don't have the capability of producing either quick

lime or hydrated lime from limestone, since that production requires high temperatures. The limestone, coarse and fine are shown in Slides 1 and 2.

We also located some waste acetic acid from W. H. Shurtleff Co. The acetic acid had to be diluted before it can react with limestone. From the lab experiment we knew that the reaction will not be complete. That is, some limestone will be left over. But the leftover limestone can be used as abrasive agent, therefore we decided to use a coarse grade limestone.

Acetic acid is used at a 10% solution - another source is vinegar, and Maine is rich with apple orchards which could provide the juice to make vinegar.

II. SMALL SCALE TRIAL BATCH

June 24, 1982 mixed 10 lbs. of coarse dolomitic limestone with 10 gal. of 10% acetic acid in a small concrete mixer for 10 minutes.

This was repeated five times, the residue and liquid poured into a container for evaporation.

July 16, 1982 obtained 40 lb. of stone - CMA mixture. Slides 3 to 5

The final product is shown on Slide 6.

When this mixture is dissolved in water, the solids filtered out, the filtrate dried, a white powder as shown in Slide 7 remains.

III. LARGE SCALE TRIAL BATCHES

Slides 8 to 12

On July 30, 1982 the contractor mixed 100 gal. HAC (diluted due to false meter indication to 2%) with 4000 lbs. coarse limestone in a concrete mixer. The liquid and limestone residue were placed in a basin (40' x 10').

By the end of October, 1982, this "coarse" batch only contained few "puddles" of liquid pH = 6.5. The liquid was transferred to a drum, the "wet" solid was transferred to other drums (five-55 gal. drums) and stored. These will be dried and analyzed in the near future. The total weight of wet material is 3320 lbs.

Slides 13 to 17

On August 11, 1982, another mixture was made. It consisted of 200 gal. HAC (diluted to 10%, 2000 gal.) and 8000 lbs. fine limestone mixed in a concrete mixer, placed in a drying basin (20' x 10').

By the end of October, 1982, the solution began to congeal (Slide 18).

Slides 19 to 21

On November 30, 1982 the solution in the "fine" batch was transferred into four-55 gal. drums. At the same time quick lime was added and the mixture was stirred. The pH of the mixtures were between 11.5 and 12. The drums were then

transported to the Materials & Research Division in Bangor.

Slides 22 and 23

The pH of the above mixtures was further adjusted to 9 - 10 by the addition of acetic acid. The wet material was then dried in the oven to yield powdered CMA which contained a certain amount of unreacted limestone and some quick lime. The powdered material had a total weight of 1180 pounds.

During December the relative slipperiness of saturated solutions of CMA, Sodium Chloride, Calcium Chloride and Urea, and also with water were composed on both asphalt and concrete surfaces. This testing was conducted using a Bristish Portable Pendulm Tester in accordance with ASTM E-303. When tested on Bituminous Pavement, Sodium Chloride, CMA and Urea all gave comparable values, being about 90% of the frictional resistance shown by plain water on the pavement surface. On concrete however, the CMA frictional value was only 76% of the value for plain water, compared with the sodium chloride value of 87%, calcium chloride value of 66% and the Urea value of 93%.

Slide 24

On December 29, 500 lb. of the material was mixed with 3 $yd.^3$ of sand.

On January 6, 1983, we had a snowy day. We spread 45 lbs. of salt on one part of the driveway (50 ft. long) in the parking lot, and 45 lbs. of CMA mixture on another side (50 ft.),

with a 30 ft. stretch at the middle, without any deicing agent. Photographs were taken, but not developed yet.

The impression we had so far is:

1) Without tracking, CMA started to deice slower than NaCl. But after about an hour, it worked fairly well.

2) CMA is more persistent. Evidence: Next day when another layer of snow fell on the pavement, we could see that CMA is still effective.

3) Bad feature of CMA - Tracking into the building. When it dried, white residue appeared. This probably was due to extra lime in the mixture.

Future Plan

1) Corrosion test on various metals.

2) Ponding test on concrete slabs with rebars inside.

3) More field test.

By Michael J. Economides, Russell D. Ostermann and Bertrand Theuveny

The Production of Calcium Acetates As Alternative

INTRODUCTION

Road and airport runway de-icing are serious problems in the north. Sodium and calcium chlorides have been used successfully for many years as de-icing agents. Adverse environmental effects and corrosion problems associated with chloride salts have prompted a search for alternative, cost-effective, de-icing agents.[1-4]

A report entitled "Alternate Highway De-Icing Chemicals" from the Bjorksten Research Laboratories, Inc. (1981), reviewed the de-icing characteristics of various compounds. Two candidates were selected which proved economical, and more important, less corrosive than NaCl.

The first, methanol, was found to be "less persistent" due to its low flash point. The second, a mixture of calcium and magnesium acetate (CMA) was found to exhibit superior de-icing characteristics at a competitive price. In contrast to NaCl, CMA is a corrosion inhibitor, is beneficial to most soils, and has no potential for harming drinking supplies. Hence, CMA does not exhibit many of the "extended costs" associated with the application of NaCl.

CMA can be produced by the simple dissolution of naturally occurring carbonates in acetic acid. These carbonates are readily available in the form of native limestones and dolomite. We have discovered that, for economic and technical reasons, the production of calcium acetate (CA) alone is preferred. This subject is dealt with later in this article.

REACTION KINETICS RESULTS

Calcium acetate is formed by the dissolution of calcium carbonate in an acetic acid solution. Water and carbon dioxide are byproducts. The stoichiometric equation is:

$$\underset{(100\ g)}{CaCO_3} + \underset{(120\ g)}{2CH_3COOH} \rightarrow \underset{(158\ g)}{Ca(CH_3COO)_2} + \underset{(18\ g)}{H_2O} + \underset{(44\ g)}{CO_2}$$

The reaction is slightly exothermic (ΔH_r = -4.6 kcal/gmol). The solubility limit of CaAc (calcium acetate) is 28% by weight. Hence, if a saturated solution of CaAc is desired, a simple material balance indicates a water requirement of 338 g H_2O/100 g $CaCO_3$.

A series of experiments was undertaken to define the process kinetics and ultimate degree of completion as functions of the reaction temperature, reactant concentrations, and particle size for calcium carbonate. Alaskan limestone, delivered from a quarry near Livengood, Alaska, and acetic acid were used as reactants.

The reaction behavior of limestone and acetic acid is reported in Figure 1. Reactions were conducted in a simple stirred tank

reactor. For a given residence time, as long as enough water was present to provide an unsaturated solution of calcium acetate at the conclusion of the reaction, the water to limestone ratio did not influence the reaction results. However, this minimum ratio of 4 to 1 on a mass basis proved inhibiting at high acetic acid excess. This result is to be expected since the reaction is based on the dissociation of acetic acid. An insufficient amount of water results in inadequate dissociation of acetic acid.

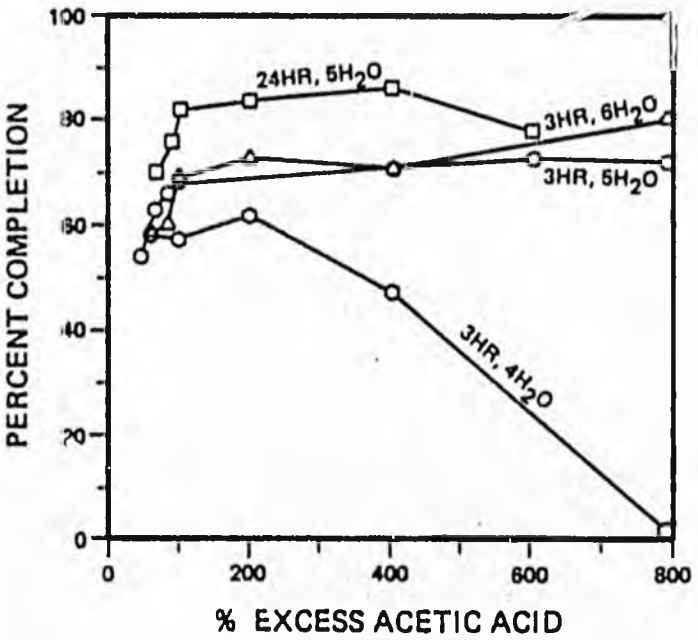

Figure 1. Reaction behavior of limestone and acetic acid: Percent completion vs. excess of acid at various residence times and with varying water content.

Since various water to limestone ratios above 5:1 did not exhibit any discernible difference in the reaction completion rate, the entire subsequent set of experiments was done at a 5:1 weight ratio of water to limestone (for brevity, not all results are plotted on Figure 1).

A significant conclusion can be drawn from the above: The acetic acid does not have to be highly refined. Industrial grade acetic acid (95% purity), which is substantially less expensive than reagent grade, can be used since it will have to be diluted to 50% in any event.

The use of 50% acetic acid may allow an additional cost savings. Liquid phase oxidation (LPO) and methanol carbonylation are common methods of acetic acid production which could be implemented in Alaska. Both of these processes produce acid at approximately a 50% concentration. One of the major factors in the cost of high-purity acetic acid is the cost of purification. Since the CMA process could make use of 50% acetic acid, the purification process and its cost could be eliminated.

Methanol carbonylation is especially attractive since several industrial concerns are contemplating methanol production in the state. The supply of carbonate for the acetate process seems assured; the state houses large deposits of limestone and dolomite.

Figures 2 through 5 present a comprehensive picture of the reaction results. The experiments were designed to gauge the effects of excess acid, reaction temperature and limestone particle sizes on the degree of completion of the reaction. The results are for batch reactions with a three hour residence time.

The amount of excess acetic acid did not augment the reaction completion significantly. Hence, acid consumption can be held at a manageable level.

Neutralization of acetic acid by NaOH can be considered. However, a further economic evaluation may point toward an

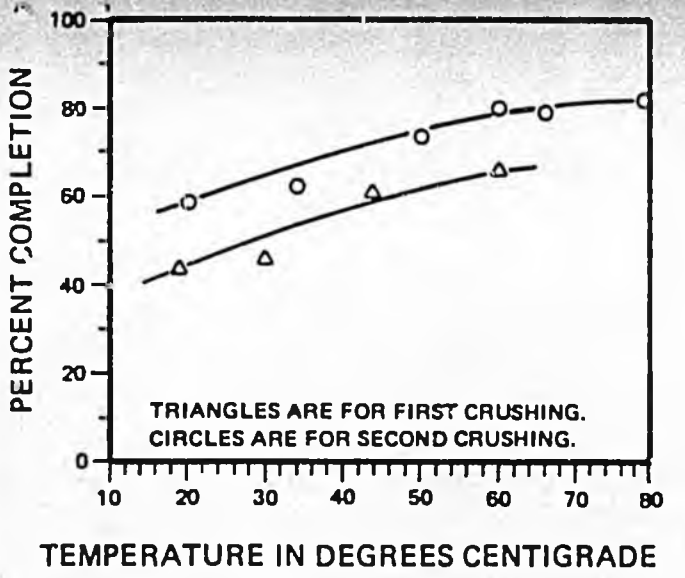

Figure 2. Reaction performance for limestone and no excess acetic acid.

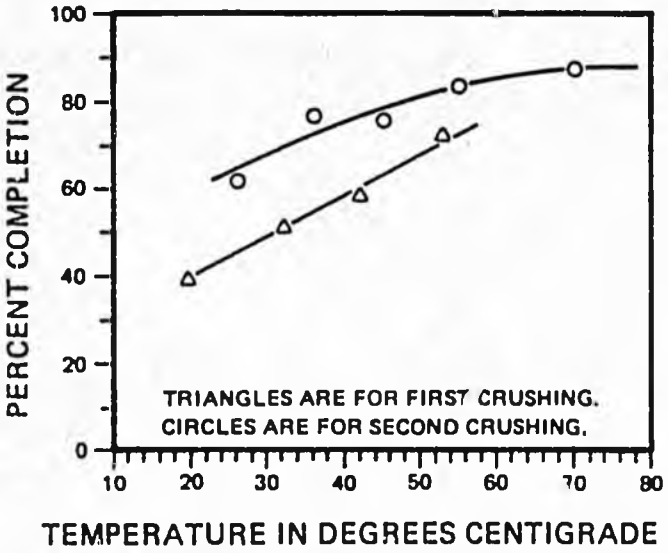

Figure 3. Reaction performance for limestone and 20% excess acetic acid.

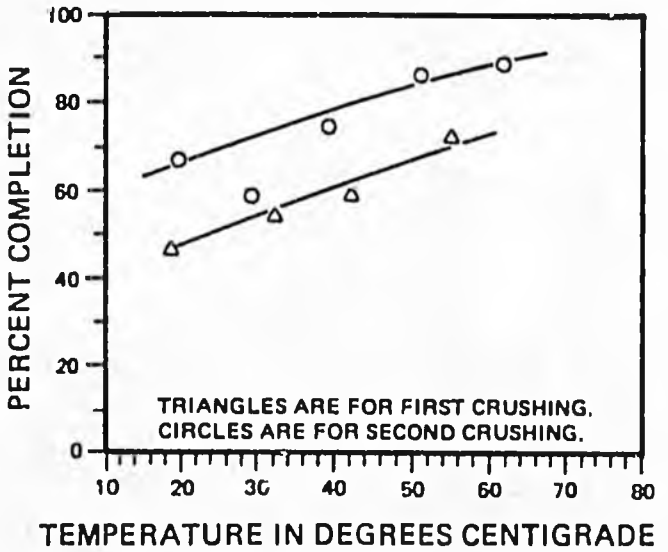

Figure 4. Reaction performance for limestone and 50% excess acetic acid.

associated acid recovery unit. An extraction step using an appropriate solvent, followed by a distillation step, would suffice.

The effect of temperature is significant. An increase in reaction temperature from 20°C to 60°C results in an increase in the completion of over 20%. A similar effect was observed with the use of more finely ground limestone. (The "first" and "second" crushing that appear in Figures 2 through 5 refer to two consecutive outputs of a commercially available rock crusher.) Both of the last two findings will have an effect on the economic optimization of the plant design. The beneficial effect on the completion must be balanced against operating and energy costs. Finally, the residence time in the reactor is significant. A 20% increase in the reaction completion was observed when a reaction time of 24 hours was used instead of three hours.

PROCESS DESIGN AND ECONOMICS

For a simple reaction process such as that producing CMA, capital costs do not contribute a large proportion of the required selling price of the product. Rather, it is the operating cost and, more specifically, the raw materials costs which are controlling. At moderate capacities any errors or omissions in the plant capital cost estimation do not alter the selling price significantly. Thus, it is possible to obtain a reasonably reliable estimate of selling price based on only a process design.

Figure 6 shows a block diagram of the preliminary process design envisioned for CMA production. Raw limestone is first crushed in two stages to particles of 1/8" to 1" diameter. The crushed limestone is then mixed with acetic acid and water in a continuously stirred tank reactor. The reactor is sized for a three-hour mean residence time and is heated to 70°C by an external steam-heating jacket. The reaction product, consisting of a mixture of unspent acetic acid, unreacted limestone and inert materials, is then passed through a filtration unit. In the

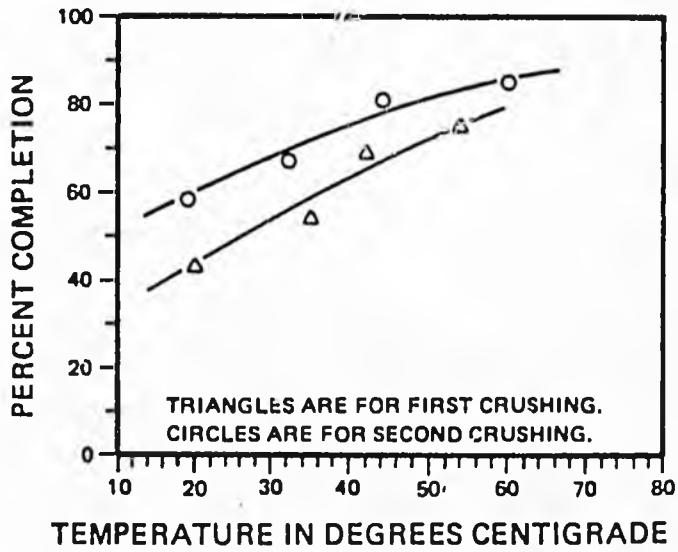

Figure 5. Reaction performance for limestone and 100% excess acetic acid.

filtration unit unreacted solids are removed and sent to a settling pond where they are neutralized by adding sodium hydroxide. The filtrate containing the product acetates is then sent to a neutralizer reactor where excess acetic acid is neutralized by the addition of sodium hydroxide. The resulting acetate solution is checked for appropriate pH value and sent to a liquid product storage tank. With an optional process addition, it would be possible to evaporate the liquid product to produce a solid calcium or magnesium acetate product.

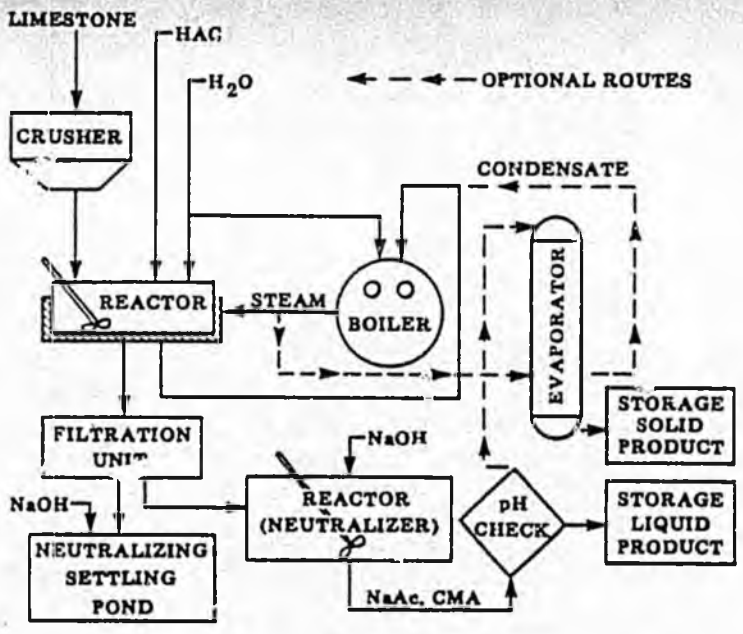

Figure 6. Block diagram of conceptual process design.

On the basis of this design, we have completed an economic analysis of the proposed CMA plant. It should be emphasized that this analysis represents a best-case scenario, with continuous plant operation and minimal storage facilities.

Figure 7 shows the required selling price as a function of acetic acid cost for a 10,000 gallon per day (GPD) plant and a 50,000 GPD plant. It is apparent that there is some economy of scale, but the final plant size will most likely be dictated by market considerations. Finally, Figure 8 presents the selling price for CMA as a function of production rate alone with a fixed cost for acetic acid (S1.25/ gallon). It is obvious that a minimum plant capacity of about 12,000 GPD is dictated by the economics. Little additional economy of scale is indicated above the production rate of 30,000 GPD. In these two figures, the price of CMA has been reported in dollars per ton of solid in solution to allow comparison with current prices of sodium chloride and calcium chloride.

Figures 7 and 8 indicate that the cost of acetic acid is the single most important factor in the selling price of CMA. If acetic acid must be shipped to Alaska from Texas, for example, at a cost of over S2.50 per gallon, the price of CMA will be more than S500 per ton of solid in solution. However, acetic acid is normally shipped and delivered in purities in excess of 90%. Since in our process acetic acid is diluted with water to roughly 50%, it does not make sense to pay an additional premium for high-purity acetic acid. In fact, one of the major costs of producing acetic acid is the purification stage taking the acid from 50% to purities of more than 90%. Hence, if a production facility for acetic acid were located in or near Alaska, it should be possible to purchase dilute acetic acid at a considerable savings, perhaps at a cost as low as S1 per gallon.

Even if imported acetic acid is used, the price of S500 per ton of solid CMA may not be excessive. CMA is not corrosive as are calcium and sodium chlorides, so there is an inherent cost advantage in using CMA as opposed to chloride salts. Therefore, while CMA may cost more in the initial stage of application, it may save a great deal in maintenance costs. In

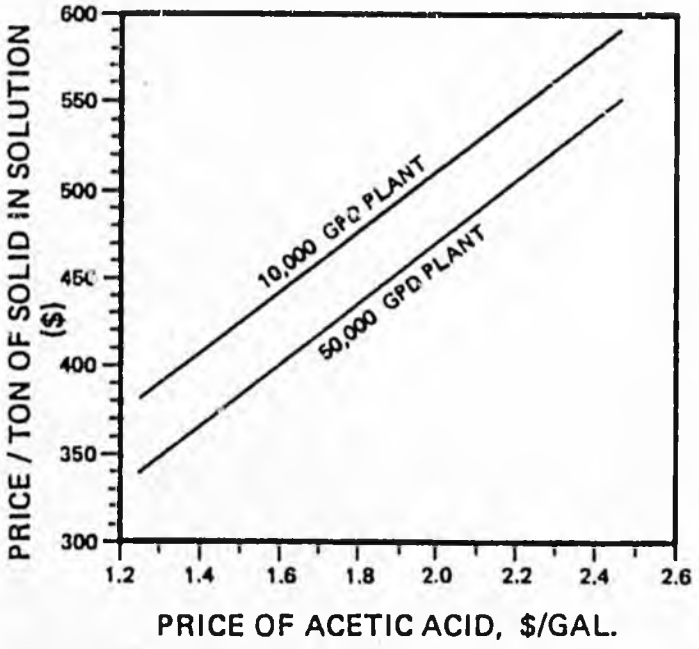

Figure 7. Required selling price of CMA for various acetic acid prices.

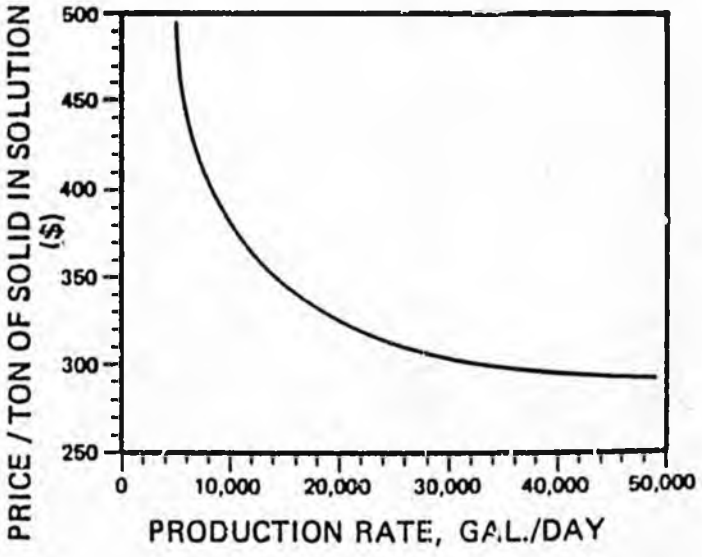

Figure 8. The effect of plant size on the CMA price (S1.25/ gallon acid).

addition, since airports cannot use chloride salts for runway de-icing, but must now rely on more expensive methanol or urea, CMA may have a particular cost advantage.

FREEZING AND EUTECTIC EXPERIMENTS

There are two objectives in this series of experiments: (1) determination of eutectic relationships for various solutions of salts; and (2) evaluation of the de-icing performance of the salts under varying atmospheric conditions.

The eutectic diagrams are the result of measurements gathered in the laboratory. A cold testing chamber was used to evaluate freezing properties over a wide range of ambient temperatures (0°C to -75°C). A comprehensive laboratory study involved the use of different de-icing salts (CaAc, MgAc, NaCl and CMA) at several concentrations. The results seen in the accompanying figures represent the average readings gathered over three test runs. The best de-icing agent is a concentrated solution (27% by weight) of MgAc. At the lowest temperature tested (-75°C), the solution gelled but did not freeze.

Figure 9 shows the eutectic behavior of sodium chloride solutions. The saturation point for NaCl is 26% by weight. Figures 10 and 11 show the eutectic characteristics of CaAc and MgAc respectively. The upper limit (saturation point) for CaAc was 28%, while that for MgAc was somewhat lower. While CaAc did not prove more effective than NaCl, MgAc was decidedly more effective, with a eutectic point depression of 75°C. Hence, a mixture of calcium-magnesium acetate (CMA) with a high concentration of MgAc should be the most effective de-icer. A 25% solution of CMA with 70–80% MgAc would be sufficient for the most severe climatic conditions, as is shown in Figure 12.

The findings of our freezing experiments, in addition to corroborating the de-icing performance of the acetate compounds, have also pointed out a major conclusion. Since the best dolomite deposits in the state contain less than 50% magnesium carbonate, the limit of the CaAc/MgAc ratio is *de facto* determined.

A re-examination of the findings shown in Figure 12 lead to the observation that a 50% MgAc/50% CaAc CMA solution is not any more effective than a pure calcium acetate solution. For example, a 20% CMA solution containing 50% MgAc has a freezing point of -29°C (Fig. 12) while a pure solution of CaAc has a freezing point of -26°C (Fig. 10).

Since the use of dolomite containing lower concentrations of magnesium carbonate results in a solution which is no more effective than calcium acetate derived from abundant limestones, and since dolomite is more expensive than limestone, it can be concluded that calcium acetate would be the most economic product for the process. To avoid confusion, we continue to use the nomenclature CMA throughout this article. However, it should be realized that we refer to a calcium acetate solution containing only small amounts of magnesium acetate.

A FUNDAMENTAL STUDY OF FREEZING POINT DEPRESSION IN AQUEOUS $Ca(O_2CCH_3)_2$ AND $Mg(O_2CCH_3)_2$ SOLUTION

The Debye-Hückel theory provides a satisfactory interpretation of freezing point depression in dilute aqueous solution. Brown and Prue[5], Christoffersen and Prue[6] and Prue *et al.*[7] have demonstrated the applicability of the Debye-Hückel theory in dilute solutions of sodium, potassium, magnesium and calcium ions with a variety of anions. While the thermodynamic properties of dilute aqueous solutions are well established, there is little in the literature for concentrated solutions. The above studies dealt with molarities of less than 0.1, far below the saturations contemplated in this work.

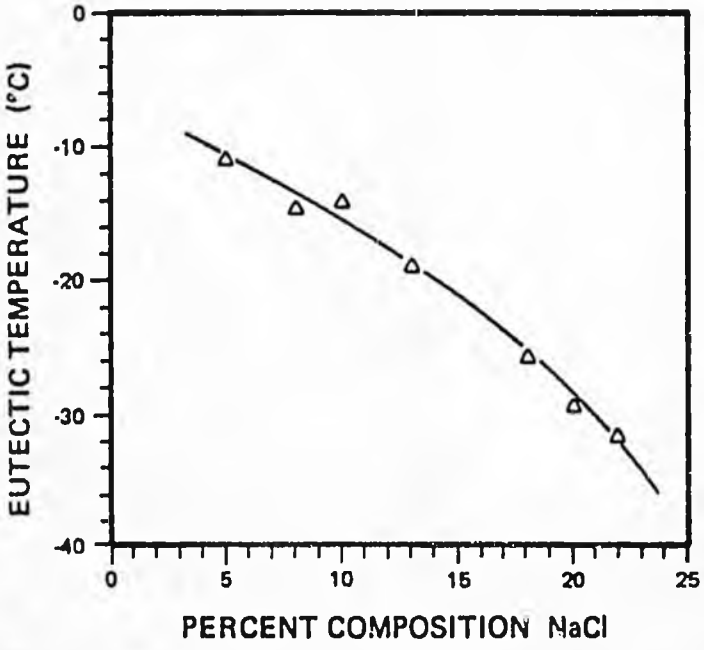

Figure 9. The freezing temperature of NaCl solutions as determined by experiment.

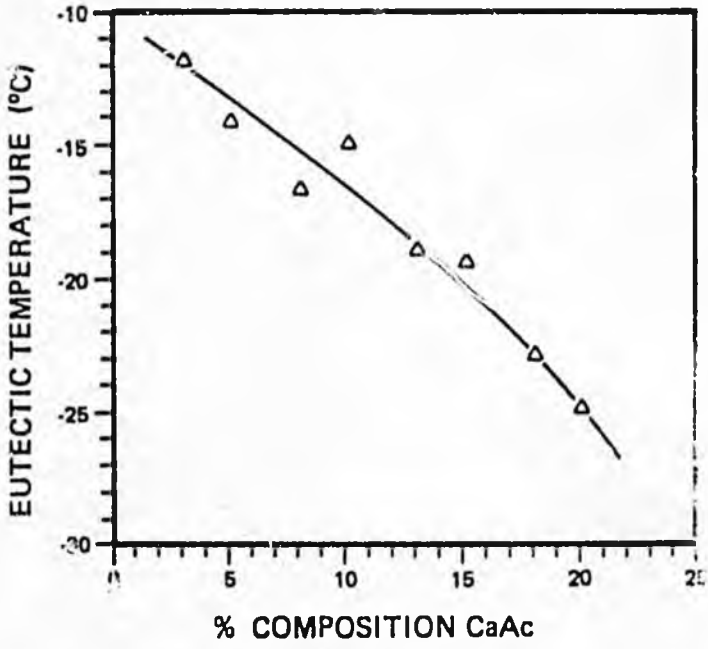

Figure 10. Eutectic diagram of CaAc solutions.

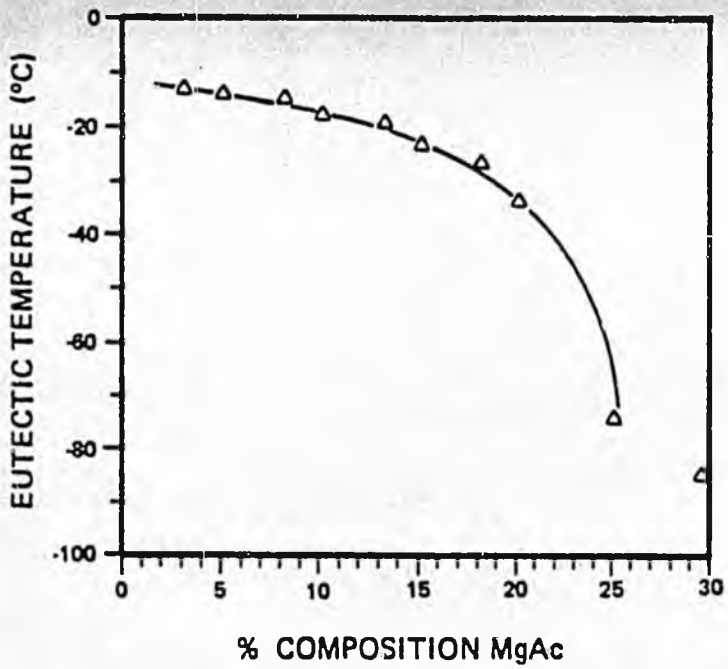

Figure 11. Eutectic diagram of MgAc solutions.

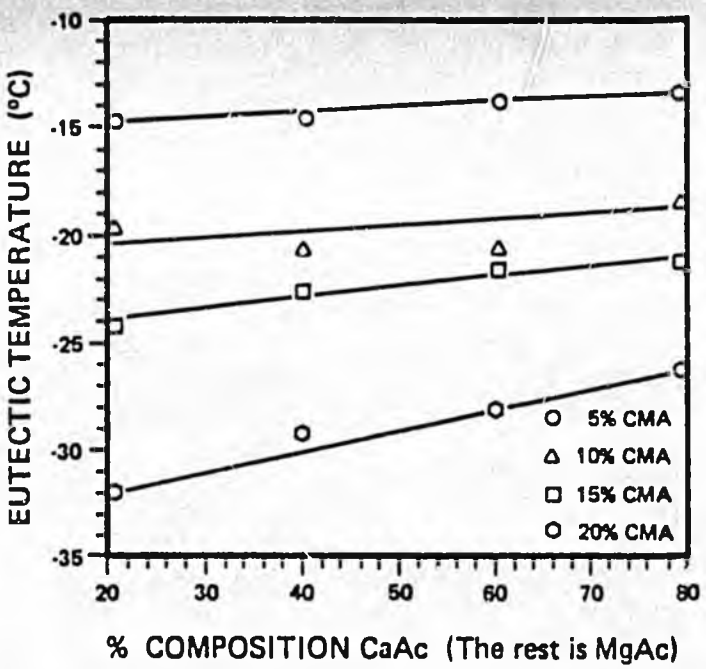

Figure 12. Eutectic characteristics of various compositions of CMA solutions.

At sufficiently high dilutions, the interactions between ions in solution are purely coulombic, and the osmotic and activity coefficients are determined by the charge type alone. At higher molalities, specific effects become marked and eventually become dominant. Various explanations of these phenomena have been offered in the context of activity coefficients.[8,9]

The freezing point depression ΔT_f can be obtained from the relationship:

$$\Delta T_f (1+b\Delta T_f) = \Sigma m\lambda\phi \qquad (1)$$

first introduced by Guggenheim and Prue,[10] where, for aqueous solutions, $b=4.8\times10^{-4}\ ^{\circ}K^{-1}$ and λ is the *cryoscopic* constant, equal to 1.860 °K/mole-kg. Σm is equal to 2m for symmetrical electrolytes (such as NaCl, $CuSO_4$ and NaO_2CCH_3) and 3m for asymmetrical electrolytes, such as $CaCl_2$, $Ca(O_2CCH_3)_2$ and $Mg(O_2CCH_3)_2$. The molality, m, is defined as the number of moles per 1000 g of solvent.

The *osmotic* coefficient, ϕ, is given by the equation:

$$\phi = 1 - \frac{1}{3}A|z_+z_-|I^{1/2}\sigma(I^{1/2}) \qquad (2)$$

where A is the Debye-Hückel constant (1.124 $kg^{1/2}mole^{-1/2}$), z_+ and z_- are the charge numbers of the ions, I is the ionic strength, and σ is a function describing the ionic interaction within a solution. Values of the function σ can be obtained from:

$$\sigma(y) = \frac{3}{y^3}\left(1+y-\frac{1}{1+y}-2\ln(1+y)\right) \qquad (3)$$

The ionic strength I is related to the ionic activity coefficient by:

$$-\log f_i = \frac{\alpha z_i^2\sqrt{I}}{1+\beta\gamma\sqrt{I}} \qquad (4)$$

where f_i is the activity coefficient, α and β are parameters varying with temperature and the dielectric constant, and γ is the ion-size parameter, or effective ionic radius.

The ionic strength can be estimated from the summation of the product molarity times ionic charge squared for all ionic species present in the solution, i.e.:

$$I = 0.5\,(c_1z_1^2 + c_2z_2^2 + \ldots + c_iz_i^2) \qquad (5)$$

We have taken this relationship one step further. Since c is the molarity, defined as number of moles per 1000 cc of solution, a simple relationship between molality and molarity can be written:

$$m_i\rho_{solution} = c_i \qquad (6)$$

Further, for a single electrolyte, we can write:

$$m_1z_1 = m_2z_2 \qquad (7)$$

as a necessary condition of neutrality, or

$$m_2 = \frac{m_1z_1}{z_2} \qquad (8)$$

Introduction of equations (6) and (8) in (5) for a single electrolyte yields:

$$I = m_1\rho_{solution}\left(\frac{z_1^2}{2} + \frac{z_1z_2}{2}\right) \qquad (9)$$

We label the expression within the parentheses the *Ionic Strength Indicator* (ISI) which is a characteristic parameter of single-electrolyte aqueous solutions. For two monovalent ions,

the value is equal to 1, for a monovalent/bivalent combination it is 3, and for two bivalent ions the ISI is equal to 4.

Example Calculation

Calculate the freezing point depression of a 28% (by weight) aqueous solution of NaCl.

The molality, m, can be obtained by dividing the weight of sodium chloride in 1000 g of solvent by the MW of NaCl.

$$m = \left(\frac{280 \times 1000}{720}\right) / 58.5 = 6.6$$

The ionic strength, I, can be calculated using $\rho = 1.323$ g/cc (the measured density of 28% NaCl solution) and ISI = 1.

$$I = 6.6 \times 1.323 \times 1 = 8.73 \text{ and } I^{1/2} = 2.95$$

Then, $\sigma(I^{1/2}) = .179$

The osmotic coefficient may then be evaluated:

$$\phi = 1 - \frac{1}{3} \times 1.124 \times (1 \times 1) \times 2.95 \times .179 = .802$$

and finally (ignoring $b\Delta T_f$)

$$\Delta T_f = 2 \times 6.6 \times 1.860 \times .802 = 21^{\circ}K \text{ or } ^{\circ}C$$

The predicted freezing point depression for a 28% NaCl solution is 21°C below the freezing point of water.

The Debye-Huckel theory has been applied to CMA solutions. Table 1 presents the predicted results. The theoretical freezing points lag behind the experimental by approximately 10°C. Apparently, certain special activity coefficients are in effect here. However, the slight differences observed among the experimental results of the freezing points of the three compounds were observed in the fundamental prediction as well, i.e., the order of de-icing effectiveness was MgAc, NaCl and CaAc. A combination of the Debye-Huckel theory and our experimental results can be extended to other similar salts in like concentration ranges to provide a good prediction of their de-icing characteristics.

CONCLUSIONS

This work resulted in a number of original findings. A reaction scheme involving acetic acid and native limestone has resulted in a good yield of calcium acetate. While dolomites were equally effective, the calcium-magnesium acetate mixture that was produced did not exhibit a better de-icing performance than that of calcium acetate. Hence, in view of the scope of this work, only the reaction of limestone ($CaCO_3$) with acetic acid can be considered as a viable means to produce an acetate de-icing agent.

A process design and economic evaluation was presented. The price of CMA varied from $590/ton for a 10,000 gallon per day plant at $2.50 per gallon of acetic acid, to $290/ton for a 50,000 gallon per day plant at $1.25 per gallon of acetic acid. These prices are within the ranges of prices for present de-icing compounds. The immense secondary costs associated with the use of chloride salts make the acetates even more attractive.

TABLE 1
Predicted Freezing Point Depression Using the Debye-Huckel Theory

NaCl		CaAc		MgAc	
% w	ΔT_f(°C)	% w	ΔT_f(°C)	% w	ΔT_f(°C)
0	0	0	0	0	0
5	2.9	5	2.8	5	3.1
10	6.1	10	5.8	10	6.4
15	9.7	15	9.2	15	10.2
20	13.8	20	13.2	20	14.7
25	18.5	25	17.8	25	19.9

Finally, the de-icing and eutectic characteristics of the acetates have been experimentally determined and fundamentally justified using the Debye-Hückel theory.

HIGH-SPEED GRAVEL ROADS

by Matthew Reckard

The Dalton Highway: not quite a high-speed gravel road — yet.

Alaskans seeking to improve the quality of their rural roads might do well to consider surfacing them with gravel instead of asphalt — especially in areas with extensive permafrost or muskeg. This ironic and seemingly backward idea results from the great difficulties which are encountered in trying to build and maintain a stable road embankment over poor foundation material. Without such stability, asphalt surfaces quickly become distorted, cracked and full of potholes. In severe cases, road crews may not be able to keep roads in a condition for safe high-speed travel, even with a great expenditure of time and money.

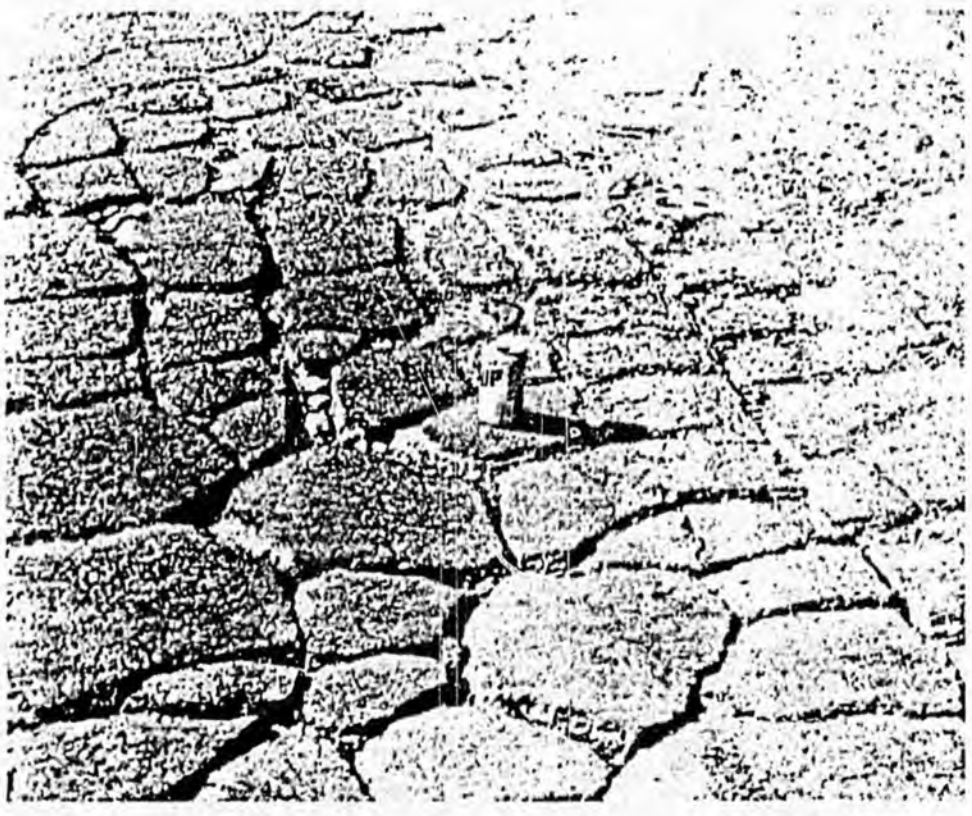
Gravel surfaces, of course, suffer from embankment instability too, but the resulting problems are sometimes less severe and are nearly always easier and cheaper to repair. Differential thaw settlement, for example, slowly but continuously creates humps and dips in roads. On a gravel surface, these distortions can be smoothed out as a part of the regular grading plan, sometimes with little or no extra effort. On a paved road there is no alternative but to put up with the humps and dips for as long as can be tolerated, then tear up the entire pavement, recondition the roadbed, and repave.

Technically feasible designs are possible which would provide stable roads over virtually any terrain. Permafrost areas, for example, could be spanned with continuous bridges supported on refrigerated pilings, similar to the above-ground sections of the Alyeska pipeline. Such a design might be practical for spanning small pockets of bad ground, but the cost would be astronomical if it were used for any significant

---

Matthew Reckard *is a research engineer with the Alaska Department of Transportation and Public Facilities, Research Section. A version of this paper was presented at the 33rd AAAS Alaska Science Conference in September 1982.*

distance. Over long stretches of unstable ground, then, gravel-surfaced roads are likely to be the most cost-effective means of providing high-speed travel.



Experience has shown that gravel-surfaced roads can provide adequate performance under difficult conditions. Surface roughness measurements made on the Alaska Highway in 1980 by the Research Section of the Department of Transportation and Public Facilities showed a smoother surface on the Canadian (gravel) side of the border than on the Alaska (paved) side. These measurements were made with a Mays Ride Meter over 39 miles of paved road and 62 miles of gravel-surfaced road. Average axle movements were 13% less on the gravel portion then on the paved sections. Perhaps more significantly, the incidence of large (>1") axle movements – which indicates severe dips or potholes – was several times as great on the paved sections.

REQUIREMENTS

Many gravel roads are in poor shape, of course, and to make them safe for high-speed travel is not an inexpensive task. The basic needs for location and dimensions of the road – including alignment, width of surface, and grades – are virtually identical to those for paved roads. Many older roads are narrow, winding and steep, and upgrading these would be expensive no matter what type of surfacing they have.

Gravel-surfaced roads require a greater "crown" (transverse slope) than paved roads to ensure good drainage of water from the surface. This not only reduces muddiness and rutting during rainy weather, but also reduces formation of potholes and "washboarding." A 4% crown is usually recommended for gravel surfaces whereas 2% is typical of paved roads.[1,2] This requirement has little or no effect on costs, but is sometimes overlooked in building and maintaining gravel roads. A good gravel road also needs a surface layer of hard, crushed gravel with sufficient fine material to act as a binder.[3] Such material compacts well and "sets up" into a hard, smooth surface. Many gravel roads have been surfaced with uncrushed material (which is cheaper) and have few silt- and clay-sized particles or "fines" (which is intended to limit frost heaving). The result is loose gravel on the surface, much more dust and poorer overall surface quality.

Pavement may be no panacea. Asphalt road surfaces in the north, like the cracked one shown here, often break up quickly. (All illustrations courtesy DOTPF.)

A major cost in maintaining high quality gravel roads is periodic surface treatment with a dust palliative. This is a wide group of materials which provide a weak cementing action to the gravel, thus promoting a hard, smooth surface with fewer potholes, less washboarding and reduced dust problems. Although this treatment is expensive, it may pay for itself by reducing the need for grading and the loss of surface gravel. The reduction in dust is almost mandatory if high-speed travel is to be made safely. Examples of dust palliatives include waste oil, calcium chloride, emulsified asphalt and lignins. They have been used rarely outside of urban areas in Alaska, although calcium chloride has been used widely in the Yukon (including the Alaska Highway). Calcium magnesium acetate (CMA) might also be an effective dust palliative, since like calcium chloride it is hygroscopic, but it has not been used for this purpose.

CONSTRUCTION COSTS

The most obvious difference between the costs of building gravel and paved roads is the cost of the asphalt pavement. On recent Alaskan rural highway projects, this amounts to roughly $75,000 per mile of two-lane road, including incidentals such as paint striping and mobilization. In some cases, however, other factors could result in even greater cost differences between gravel and paved roads.

One of these is the limitation on the amount of fines allowed near the surface of the embankment. Current Alaska design policy[4] places restrictions on fines as deep as 3½ feet below a paved surface in order to reduce frost heaving of the roadway. Thaw weakening of heaved embankments causes severe and permanent damage to asphalt pavements, justifying this policy for paved roads.[5] Damage to gravel-surfaced roads from thaw weakening, however, is limited to greater muddiness and rutting at breakup – a temporary and relatively inexpensive problem. Greater amounts of fines might therefore be tolerated in gravel-surfaced roads.

"Clean" gravel (free of fines) is often expensive since good sources are rare in many areas. Restrictions of fines content, then, often leads to greater material processing, longer haul distances, and difficulties in securing necessary permits (many

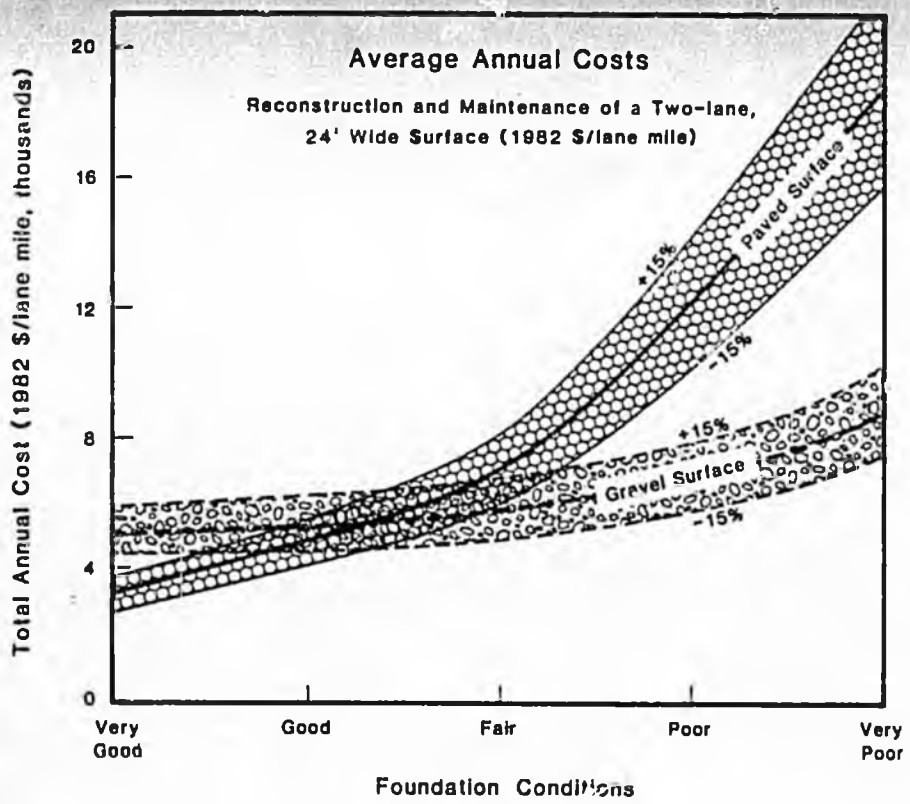


Figure 1. Estimated costs per year for well-maintained roadways.

"clean" gravels are river bottom deposits and mining them can cause environmental damage). Gravel suitable for unpaved roads may be much cheaper than that for paved roads (as much as $100,000 per mile of two-lane road, based on some recent contract unit prices).

Similar savings might result where roadways are cut through "dirty" material or even soft, degradable bedrock. For a paved road, excavations must be made to a level well below the final surface to remove these materials. This excavated material must then be replaced with clean gravel hauled from elsewhere. Much of this might be avoided if the road were unpaved, since the original material could be left in place.

Unusually thick road embankments are sometimes built in permafrost areas in order to insulate the original ground and protect it from thawing and settling. In some cases, manufactured insulation board has been placed beneath roadways. In such areas, gravel roads may be much cheaper to build than paved roadways since there is less need for these measures. This is because gravel surfaces stay cooler in summer than paved ones[6] (probably due to a combination of greater albedo and the cooling effect of greater evaporation of moisture from gravel surfaces). Since the surface stays cooler, less insulation is required to prevent thawing the underlying permafrost. The magnitude of the reduction depends upon the local climatic conditions (particularly the thawing index), but calculations utilizing the Modified Berggren Equation suggest that it is approximately equivalent to two feet of gravel in Interior Alaska and one foot on the North Slope. In Interior Alaska, this alone might result in saving $250,000 per mile for two-lane roadway.

MAINTENANCE COSTS

Maintenance of a high-quality road is not inexpensive even in the best of circumstances. Grading and treatment with dust palliatives must be performed regularly, and the cost of the latter is relatively high. In addition, the surfacing layer of gravel must be renewed every few years as grading and traffic wear it away. These expenses are higher where the foundation soils or the road embankment itself are of poor quality, but they are significant even if a road is built on bedrock.

In contrast, maintenance costs for paved roads are highly variable. If an embankment of material unsusceptible to frost is built on bedrock, it is likely that an asphalt pavement will have a long life with little need for patching or pothole filling. On poor roadbeds, the situation is drastically different. There have been numerous instances on highway construction projects over permafrost where pavement repairs have been necessary even before the entire project was completed.

Figure 1 illustrates the estimated cost of maintaining a paved road and a gravel-surfaced road in a condition adequate for high-speed (55 mph) travel as a function of the roadbed quality. The estimate assumes maintenance over the alignment for an indefinite period, and the cost of periodic repaving, regraveling and reconditioning are included in the averages. The "foundation quality" is meant to be a combination of both embankment and foundation soil conditions. Costs were estimated based on recent contract prices for various activities, on historical state maintenance costs and work levels, on current prices for asphalt, dust palliatives and other materials, and on interviews with state maintenance, design and construction personnel. Exact predictions of these costs cannot be expected, as is indicated by the range of costs shown in the graph. The estimate indicates that a paved surface is cheaper to maintain than a gravel one if the road foundation is very good and both types of surfaces are kept in good condition. As foundation quality deteriorates, however, this advantage disappears, and where foundation quality is very poor, gravel surfaces appear to be much cheaper.

Many sections of Alaska's highways, paved and unpaved, have not always been kept in a "high-speed" condition, and dust palliatives have rarely been used in rural areas. The cost estimates in Figure 1 therefore necessarily rely to some extent on theoretical instead of empirical data. The accuracy of the estimate – and in particular the exact crossover point between paved and unpaved surface costs – may thus be questioned. That such a crossover exists, however, seems clear.

It also seems clear that high quality gravel surfaces should be given serious consideration when plans for road improvements are formulated. Such surfaces might yield both better performance and lower costs in some areas, and the resulting experience would help to clarify the trade-offs between paved and unpaved roads.

A case in point which is of considerable current interest is the Dalton Highway. Much of this road passes over permafrost which provides a poor foundation. An asphalt pavement may deteriorate rapidly here, and many improvements are possible short of paving the road. Maintenance of a proper crown would by itself improve the road. The only good surfacing gravel ever placed on the road has been put there in the last year and a half; most of the road still has none. Virtually no dust palliatives have ever been used on the Dalton Highway; these could improve the surface further, reduce the need for grading, and reduce the loss of surfacing gravel as well as help to control dust problems.

A program to do all of the above would cost a considerable amount of money, but not nearly as much as a project to pave the road. It might also be more successful than an asphalt pavement on the long stretches of unstable ground the Dalton Highway crosses. On more stable parts of the road, on the other hand, paving may well be the most cost-effective means of improvement.

CONCLUSIONS

High-speed gravel roads merit serious consideration on Alaska's rural highways, particularly where poor foundation conditions – such as permafrost and muskeg – are encountered and in areas where clean gravels unsusceptible to frost are scarce. Asphalt pavements are likely to perform poorly in such areas and to have high construction and maintenance costs. Neither highway users, nor state highway personnel, nor taxpayers will be happy if, a few years after an expensive paving project, a road is as bad as or worse than it was before. Even some parts of Alaska's highways which are now paved might be improved by taking the "backward" step of giving them a high-quality gravel surface – and money could be saved in the process.

PUBLICATIONS

Note: Building in the North, the collection of classic Eb Rice articles, is being reissued with some minor revisions and updating by the School of Engineering here at the University of Alaska-Fairbanks. In keeping with Eb's wishes, profits – if any – from sales of his book will go toward furthering the cause of northern engineering education.

Important sidelight to the foregoing note: *The Northern Engineer* has very few copies left of the earlier printing of Building in the North. If you need the book, place your order with the *Office of the Dean, School of Engineering, University of Alaska, Fairbanks, AK 99701.* The new copies will be available sometime after the first of the year; price is not yet known, but given inflation over the intervening years, it is sure to be more than the previous $4.

• • • •

NOTED

Undergraduates studying civil engineering, geology or geological engineering are eligible to apply for a $1000 annual scholarship established at the University of Alaska by R&M Consultants. The scholarship is a memorial to the late Ralph Migliaccio, founder of R&M and the firm's president until his death.

Preference will be given to applicants demonstrating high scholastic ability, and financial need may be considered. The University of Alaska Foundation will administer the scholarship fund; scholarships will have a spring semester application deadline and will be awarded for the following fall semester. Forms and further information are available from *Dixie Brown, Executive Director, University Foundation, 113 Bunnell Building, University of Alaska, Fairbanks, AK 99701.*

The Alaska Academy of Engineering and Sciences is up and going. A newly released flyer states the academy is open to any individual with a professional interest in Alaska engineering and science. No discipline, group or geographic region within the state will dominate; potential members from academia, industry, government and the private sector are encouraged to join.

The overall purpose of the academy is given as "the advancement of engineering and scientific knowledge, practice, and public service through the encouragement of: (a) scientific research and discovery, (b) technological innovation, (c) discussion of engineering and scientific problems and issues, and (d) publication and discussion of technological and scientific information and knowledge."

Ambitious plans already exist for the group to fulfill its aims. The academy plans to hold a conference each spring; to

DEPARTMENT OF PUBLIC SAFETY

POSITION PAPER - HCR 44

Support

January 31, 1984

HCR 44 - "An act relating to requesting a speed zone on (the) Seward Highway."

Our initial indications reveal that the lowering of the speed limit on this portion of the Seward Highway would not be in the overall best interest of the public. However, since the resolution requests that Department of Transportation "investigate the possibility" of lowering the speed limit in this area, we concur that this would be a worthwhile effort.

State of Alaska
Pouch 6900
Anchorage, Alaska 99502

Dear Dave:

Just a short note to bring you up-to-date on the Bird/Indian public meeting the other night which covered a request they have made to establish a speed zone in their area.

Mr. Don Morefield of your staff did an outstanding job of presenting the technical aspects of the speed study but, unfortunately, it was very difficult for the people to understand why a zone is not warranted with the high rates of speed existing in this area.

While I understand from a technical perspective the highway is well designed to accommodate the 55+ mile per hour traffic, it does not appear to accommodate the evergrowing residential area in the Bird Creek community.

Enclosed is a copy of the draft speed zone resolution I anticipate introducing during the next legislative session, but before it is actually introduced, I would like to suggest possibly another meeting be scheduled with one of your Design/Construction representatives, Highway Safety Planning Agency and/or Municipality of Anchorage Public Safety official to discuss the establishment of the speed zone and any alternatives that may be possible.

It is my understanding from Mr. Morefield's presentation that the highway can more than accommodate the high speed traffic that is running on it now and that past statistics related to accidents and fatalities cannot be used toward the current speed zone request. I am a little concerned with the fact that we will have to have additional fatalities/automobile accidents before the safety conditions warrant a speed zone or other alternatives to be recognized by the department. This is unacceptable to me and I will not wait for more deaths to occur before pursuing the matter further.

Also enclosed for your information and consideration is a letter from Renee Wilson of Bird Creek which clearly sets forth the community concern.

Your suggestions and thoughts and a meeting with the community would be greatly appreciated.

Sincerely,

Mike Szymanski

Dear Pat and Council Members:

I would like to take this opportunity to formally thank all of you for having taken the time to meet with me on January 5. I was very pleased with both the turnout and the seriousness of the conversation. The meeting was informative and better prepared me to represent your interests here at the capitol.

Now that I've had a few weeks to nose around, I thought I would fill you in on what I found out on some of the projects we discussed. Before I left Anchorage, my staff and I attended a series of meetings with State and Municipal officials. Here is the word on the status of various projects:

1. Bike Path: I have been assured by Municipal and State officials that the bike path planning is on schedule and that the path will be completed this coming summer. I was also told that $250,000 was sufficient for the project. Please note enclosure from Department of Transportation which shows a breakdown on expenditures to date.

2. School Bus Stop Signs: I asked Dick Armstrong of DOT about the procedure for erecting signs and he informed me that the signs would be posted as soon as construction in the area is completed. He said that this is normal DOT procedure.

3. Bird House/No Passing Zone: Dick and his staff were not really aware that this was a problem, but agreed to study it. He said that if there was a history of accidents in the area, as you mentioned, he saw no problem with changing that section to no passing. One of his staff suggested that perhaps it had been designated for passing because of the relative lack of acceptable passing zones on the Turnagain Arm part of the highway.

They will most likely wait until construction is complete to make a decision. I'll pester them.

4. Speeding Problem Through Indian: DOT is aware of the problems and plans to monitor conditions once the highway is finished. Although federal regulations dictate 55 mph for interstate highways, Dick said that there can be exceptions and this may be one. It is a volatile issue with many groups opposing a rezoning. The final determination will be made after traffic and density studies are complete. Be assured that I'm with you and will fight for reduced speed.

5. Boat Ramp: DOT suggested that not only is a boat ramp probably not desirable, but that there are some technical problems as well. They suggested that while the ramp would benefit experienced Inlet boaters, it would also encourage foolhardy Cheechakos and would no doubt prove a burden to emergency rescue operations in the area. There are also some DOT restrictions on constructing off-ramps, etc., which preclude the construction of a ramp at that site.

6. Reflectors at Driveway Entrances: DOT does not erect reflectors as a rule. They could, but it would set an expensive precedent and would cost the State about ten times what a private individual can do it for. However, DOT has no restriction against individuals erecting reflectors themselves.

7. Ball Parks: Chip Dennerlein, Director of Public Services, and his executive staff met with me for over four hours. We discussed several South Anchorage issues, including your park. He said that there is no problem with constructing a simple playing field area which could be maintained locally. The Municipality of Anchorage is not averse to the use of the old dump site and are looking into the possibility of converting it. $250,000 is available in the 1984 CIP for an Indian Ballpark.

8. People Mover Service/Commuter Trains: The extension of bus service to the Turnagain Arm is already being studied. Apparently, ridership is the determining factor and, as yet, there are not sufficient numbers to warrant the cost. Express buses (twice a day) and/or contract bussing has also been considered. While the possibility of extending service to the Arm has been studied, in Chip's words, "it is probably still a few years away." The same is true for commuter train service.

I realize that the above is brief and does not represent everything we talked about on the 5th. I am still investigating some of the other projects we discussed (e.g.: airstrip, campsite) and will keep you informed of any progress. If any of you wish to discuss these

projects in more detail, or anything else, please don't hesitate in contacting me or my staff (Mark Higgins and Joan Metcalf) in Juneau at 465-4978. You can also write to me care of Pouch V, Juneau 99811.

Please don't be strangers, and count on hearing from me soon.

Kindest regards,

Mike Szymanski

TO: Representative Bette Cato
Chair, House Transportation Committee

FROM: Representative Mike Szymanski

SUBJECT: Scheduling of HCR 44, legislation requesting a speed zone on the Seward Highway.

I would like to request that HCR 44, legislation requesting a speed zone on the portion of the Seward Highway that passes through the community of Bird/Indian, be heard before the Transportation Committee.

Attached is back-up information which includes a petition from the residents of this community in support of the resolution and accident statistics for this portion of the highway over a seven year period.

Your attention to this request would be appreciated.

We, the undersigned, residents of Indian and of Bird Creek, Alaska - on Turnagain Arm - respectfully request your support in our appeal to the State's Department of Transportation to create a speed zone on that stretch of the Seward Highway that passes through our two communities. We feel that the above is a particularly dangerous (and well- traveled) piece of highway, one that by its very straightness and openess encourages motorists to drive at high speed through our rural, residential communities.

SS SB 165
Racing Events on Public Highways
Department Analysis

Presently AS 05.90.001 permits issuance by the Alaska Athletic Commission of permits to hold snow vehicle, automobile, and motorcycle racing events on State highways. Such a permit may be issued only with the concurrence of the Commissioners of Public Safety and Transportation and Public Facilities.

SS SB 165 proposes to amend AS 05.90.001 so as to allow issuance of such a permit for any racing event. While there is some evidence in SB 165 that the intent is to provide for bicycle racing, the language of SS SB 165 would allow for human foot races, animal races, "go-cart" races, and any other type of speed contest which could be staged upon a public right-of-way. The major impact of this proposal, if it were enacted, would be to increase the number of racing events allowable on the public ways. This increase in racing events would also increase the number of incidents wherein the traveling public would have less than full use of the public highway for normal transportation functions.

AS 19.05.030 sets forth the duties of the Department in terms of planning, programming, design, construction, maintenance and operation. The Alaska Supreme Court has further defined those duties as follows:

> "The duty to maintain a highway safe for travel includes ...a duty of warning the travelling public of any other condition which endangers travel...caused by...the act of third persons." (Racers)

17 AAC 20.020 permits the Department to close or restrict any highway for the protection of the public and requires traffic guidance and/or suitable detours be provided "...as soon as possible to minimize traffic delay."

The interaction of these requirements to provide a safe efficient public way for normal transportation operations is reasonable in light of the large public investment in highways and the need to maintain safe, efficient, transportation for the economic well being of the State.

Enactment of SS SB 165 would minimally increase the operations costs of the Department by increasing the number of times temporary warning and directional devices would be needed to safely and efficiently direct traffic through or around a section of highway where races were being held. The larger cost to the State is not readily quantifiable. These costs are those related to increased user cost associated with detours and

potential tort claims against the State in the event of damage or injury caused by restricting use of the section of highway.

As indicated previously, SS SB 165 increases the exposure by permitting more racing contests on State highways than are now permitted. The existing statutes already inhibit public use of the public ways for motor vehicle racing and further restriction of general public use of public ways does not appear to be in the best interest of the State. There are not too many organizations which are financially able to sponsor snow vehicle, automobile and/or motorcycle races so the demand for use of State highways for such racing is minimal. However, a number of organizations are capable of sponsoring human foot races, bicycle races, "go-cart" races, etc., which could lead to substantially increasing pressure to use State highways for racing participants and observers to the detriment of the traveling public.

We therefore recommend against enactment of SS SB 165. Further, considering the increasing demand being placed upon our transportation facilities we suggest that repeal of AS 05.90.001 may be appropriate.

Page 1, following line 14:

Delete all material and insert

"Sec. 2. AS 05.90.901(b) is repealed and reenacted to read:

(b) the Department of Public Safety may issue, and for cause cancel, permission to conduct a special racing event as provided in this section under terms and conditions and at times and places the department may determine. If an applicant's permission is refused or cancelled, the applicant may, upon application to the Department of Public Safety, have a hearing under the provisions of the Administrative Procedure Act (AS 44.62).

Senator Vic Fischer
Alaska State Legislature
Pouch V • Juneau, Alaska 99811 • (907) 465-4954

May 5, 1983

To: Representative Bette Cato, Chair
House Transportation Committee

From: Senator Vic Fischer

Re: SS SB 165

SS SB 165 is currently before the House Transportation Committee. Following is a brief history of the evolution of SB 165 along with other considerations addressed by this legislation.

* Current regulations (13 AAC 02.400 (h) forbid bicycle racing events on state highways unless they are permitted under AS 05.90.001.

* Apparently by oversite, AS 05.90.001, gives authority to issue permits for special racing events along state highways only to snow machines, automobiles, and motorcycles.

* SB 165 amended AS 05.90.001 to include bicycles.

* Prior to the first committee hearing on SB 165 it became apparent that simply including bicycles under AS 05.90.001 failed to address the inevitability that permits would be sought for racing events involving vehicles other than those authorized (foot races, bathtub races, roller skating races, etc.).

* SS SB 165 was introduced amending AS 05.90.001 so that permits can be issued for any special racing event of limited duration along state highways within limits set by provisions for public safety and compliance with federal laws.

* SS SB 165 was amended in the Rules committee and on the floor of the Senate to require the Department of Public Safety rather than the Athletic Commission to issue permits for special racing events. The Senate felt the troopers were a more appropriate agency to grant and administer permits. A requirement that permits only be issued with the concurrence of the Commissioner of DOTPF and provisions for hearings under the Administrative Procedures Act for persons denied permits were also deleted by floor amendment.

* The Senate clearly concurred that permits for special racing events along state highways should be made more available to the general public and that the process for obtaining those permits should be made easier.

Under current law, no state agency has clear authority to grant permission to conduct racing events along state highways except ones involving motorcycles, automobiles, and snowmachines.

In the absence of that authority, general statutes governing the use of highways apply. These statutes (AS 28.35.140) and regulations (13AAC 02.175(d)&(e)) specifically forbid pedestrians and others from obstructing traffic or being on or along a state highway. Without SB 165, footracers, cross-country skiers, dog-mushers, etc. cannot legally conduct racing events on or along state highways.

Particularly in Alaska, where transportation corridors are at a premium, the need for the public to occasionally use state highways for racing events is apparent. SB 165 is a vehicle for streamling the process of obtaining permits in a manner consistent with public safety.

Senator Vic Fischer
Alaska State Legislature
Pouch V • Juneau, Alaska 99811 • (907) 465-4954

May 3, 1983

Dan Casey, Commissioner
Department of Transportation
and Public Facilities
Pouch Z
Juneau, AK 99811

Dear Commissioner ~~Casey~~:

On April 26, 1983, I received a fiscal note and department position paper on SB 165--a bill relating to racing events along state highways. There are several things about the way the fiscal note was prepared, its timeliness, and the arguments offered to support the department's recommendation against the bill that I want to bring to your attention because they demonstrate why legislators sometimes become exasperated with agency actions and interactions. Specifically they are:

** The fiscal note (and presumably the position paper) was prepared on 4/12/83. It was not approved until 4/26/83 and not delivered until 4/27/83. During those two weeks SB 165 was on the Senate floor twice and referred back to the Rules Committee for five days. There was ample time to address the issues raised in the position paper, but the failure to submit it on a timely basis prevented the Senate from doing so. In fact, I received the fiscal note nearly a week <u>after</u> SB 165 passed the full Senate.

** SB 165 has a zero fiscal note. I have been unable to find out who originally requested a fiscal note from your Department on this bill. As best as I can determine, neither the State Affairs Committee, the Senate Transportation Committee, nor the Senate Rules Committee's records indicate that they requested it.

Personally, I question why a division would offer a late, and apparently unsolicited position paper on a bill which, as their own research indicated, would have minimal or no impact on their division.

** I truly resent what I refer to as the "Ferraris ok/no bicycle" argument used to justify the department's opposition to this bill. To support current law because it restricts the use of state highways for racing events to the "not too many organizations which are financially able to sponsor snow vehicle, automobile and/or

motorcycle races so the demand for use of state highways for such racing is minimal" is in my opinion a lazy, shallow, and callous argument.

I bring these points to your attention mainly in the hope that you can assure more timely and sensible responses by people in your department.

Best personal regards,

Senator Vic Fischer

SS SB 165
Racing Events on Public Highways
Department Analysis

Presently AS 05.90.001 permits issuance by the Alaska Athletic Commission of permits to hold snow vehicle, automobile, and motorcycle racing events on State highways. Such a permit may be issued only with the concurrence of the Commissioners of Public Safety and Transportation and Public Facilities.

SS SB 165 proposes to amend AS 05.90.001 so as to allow issuance of such a permit for any racing event. While there is some evidence in SB 165 that the intent is to provide for bicycle racing, the language of SS SB 165 would allow for human foot races, animal races, "go-cart" races, and any other type of speed contest which could be staged upon a public right-of-way. The major impact of this proposal, if it were enacted, would be to increase the number of racing events allowable on the public ways. This increase in racing events would also increase the number of incidents wherein the traveling public would have less than full use of the public highway for normal transportation functions.

AS 19.05.030 sets forth the duties of the Department in terms of planning, programming, design, construction, maintenance and operation. The Alaska Supreme Court has further defined those duties as follows:

> "The duty to maintain a highway safe for travel includes ...a duty of warning the travelling public of any other condition which endangers travel...caused by...the act of third persons." (Racers)

17 AAC 20.020 permits the Department to close or restrict any highway for the protection of the public and requires traffic guidance and/or suitable detours be provided "...as soon as possible to minimize traffic delay."

The interaction of these requirements to provide a safe efficient public way for normal transportation operations is reasonable in light of the large public investment in highways and the need to maintain safe, efficient, transportation for the economic well being of the State.

Enactment of SS SB 165 would minimally increase the operations costs of the Department by increasing the number of times temporary warning and directional devices would be needed to safely and efficiently direct traffic through or around a section of highway where races were being held. The larger cost to the State is not readily quantifiable. These costs are those related to increased user cost associated with detours and

potential tort claims against the State in the event of damage or injury caused by restricting use of the section of highway.

As indicated previously, SS SB 165 increases the exposure by permitting more racing contests on State highways than are now permitted. The existing statutes already inhibit public use of the public ways for motor vehicle racing and further restriction of general public use of public ways does not appear to be in the best interest of the State. There are not too many organizations which are financially able to sponsor snow vehicle, automobile and/or motorcycle races so the demand for use of State highways for such racing is minimal. However, a number of organizations are capable of sponsoring human foot races, bicycle races, "go-cart" races, etc., which could lead to substantially increasing pressure to use State highways for racing participants and observers to the detriment of the traveling public.

We therefore recommend against enactment of SS SB 165. Further, considering the increasing demand being placed upon our transportation facilities we suggest that repeal of AS 05.90.001 may be appropriate.

SB 165 SENATE JOURNAL - PAGE 339- 4 3/ 8/83

SENATE BILL NO. 165 by Senator Vic Fischer, entitled:

"An Act relating to bicycle racing on public highways."

was read the first time and referred to the Transportation Committee.

SPONSOR SUBSTITUTE FOR SENATE BILL NO. 165 appears on today's calendar.

SB 165 SENATE JOURNAL - PAGE 600- 1 4/ 6/83

(SPONSOR SUBSTITUTE FOR SENATE BILL NO. 165) (racing events on public highways) was read the second time.

Senator Ray moved and asked unanimous consent that SPONSOR SUBSTITUTE FOR SENATE BILL NO. 165 be considered engrossed, advanced to third reading and placed on final passage. Without objection, it was so ordered.

SPONSOR SUBSTITUTE FOR SENATE BILL NO. 165 was read the third time.

The question being: "Shall SPONSOR SUBSTITUTE FOR SENATE BILL NO. 165 (racing events on public highways) pass the Senate?" The roll was taken with the following result:

SS SB 165 3RD

Yeas:	15	Bennett, Elkason, Fahrenkamp, Faiks, Ferguson, Fischer Paul, Fischer Vic, Josephson, Kerttula, Moss, Mulcahy, Ray, Sackett, Sturgulewski, Ziegler
Nays:	5	Gilman, Halford, Kelly, Pettyjohn, Rodey

and so, SPONSOR SUBSTITUTE FOR SENATE BILL NO. 165 passed the Senate.

Senator Rodey gave notice of reconsideration on SPONSOR SUBSTITUTE FOR SENATE BILL NO. 165.

SB 165 SENATE JOURNAL - PAGE 625- 1 4/ 7/83

Senator Rodey requested that the reconsideration of (SPONSOR) (SUBSTITUTE FOR SENATE BILL NO. 165) (racing events on public highways) be taken up at this time.

SENATE BILLS IN THIRD READING

SPONSOR SUBSTITUTE FOR SENATE BILL NO. 165 was before the Senate on reconsideration.

Senator Rodey moved and asked unanimous consent that SPONSOR SUBSTITUTE FOR SENATE BILL NO. 165 be held one day. Without objection, it was so ordered.

Senator Vic Fischer moved and asked unanimous consent that (SPONSOR SUBSTITUTE FOR SENATE BILL NO. 165) (racing events on public highways) be returned to the Rules Committee. Without objection, it was so ordered.

ALASKA STATE LEGISLATURE
SENATE STATE AFFAIRS COMMITTEE
SENATOR VIC FISCHER, CHAIRMAN
POUCH V, JUNEAU 99811
(907) 465-4954

TO: Senator Pappy Moss, Chair
Senate Transportation Committee

FROM: Senator Vic Fischer

DATE: March 12, 1983

RE: Explanation of SB 165.

Senate Bill 165 amends AS 05.90.001 to include bicycles among vehicles authorized to seek permits for the athletic commission for racing events of limited duration on state highways.

AS 05.90.001 provides authority to grant special permits, consistent with federal law and regulations, for racing events on state highways involving snow vehicles, automobiles and motorcycles. AS 05.90.001 (b) specifically authorizes the athletic commission to grant those permits and sets out application procedures and methods to appeal denial of a permit from the commission.

Recently, bicycle enthusiasts have sought permits to conduct races along state highways for community fundraising events and other public purposes. Because AS 05.90.001 does not mention bicycles, the athletic commission cannot grant permits which they have no authority to consider.

AS 05.90.001 clearly establishes the legislatures intent to provide special authorization for "unconventional" use of state highways involving specified vehicles. It appears bicycles were left out as an oversite, rather than any intention on the part of the legislature to exclude them.

In order to provide authorization for bicycle events this summer, it is necessary to pass SB 165 as soon as possible. Your earliest consideration on this bill would be much appreciated.

cc: Senator Jalmar Kerttula

3-17-1983

Representative Terry Martin
State Capitol Building
Pouch V
Juneau, Alaska 99811

Re: Legislative efforts to develop a permitting procedure for bicycle races.

Dear Mr. Martin:

I am working on behalf of the bicycle racing community to help modify certain Alaska Statutes so that we may be able to develop a permitting procedure for bicycle racing.

Within the past few years an addition has been made to Title 13 of the Alaska Administrative Code which reads as follows:

> " (h) No bicycle race may be conducted upon a roadway, except as provided under AS 05.35. (In effect before 7/28/59; am 12/15/61, Reg. 3; am 8/10/66, Reg. 22; am 12/31/69, Reg. 31; am 6/28/79, Reg. 70)
>
> Authority: AS 28.05.011 "

However, Chapter 35 as referred to in the above quotation, through apparent oversight, neglects to mention " bicycles " within Sec. 05.35.010 and Sec. 05.35.020. In the most recent update of the Alaska Statutes AS 05.35 has been renumbered AS 05.90.001. A copy of the relevant part of Title 13 and the current wording of AS 05.90.001 is attached.

I have also included a letter I received from Senator Jay Kerttula, dated 2-28-1983, and a bill which Senator Vic Fisher introduced on our behalf, dated 3-8-1983. In the letter from Senator Kerttula he acknowledges that an oversight was made concerning bicycles when Title 13 was adopted. I had contacted Senator Kerttula in my initial request for legislative help. He forewarded our packet of information to the Senate State Affairs Committee, chaired by Senator Vic Fisher and to the Health, Education, and Social Services Committee, chaired by Senator Joe Josephson for their review. Within a matter of days Senator Vic Fisher had introduced the attached bill.

I have been in touch with aides of both Senators Vic Fischer and Joe Josephson. I have been told that if a similar bill were introduced on the House side, speedier legislative action might result. I am hoping you might be in a position to help us with this legislation. Our racing season gets underway in less than a month. Until the bill passes we have the support of law inforcement officials and the highway department as long as we do all we can to help expedite the legislative process. According to AS 05.90.001 we must obtain permission through a permitting procedure from the athletic commission with the concurrence of the commissioners of highways and public safety. I have contacted the latter two commissioners and their replies are attached. I have written a letter to commission chairman Bob Vogt of the athletic commission, but he will apparently be out of state until later this month. With regard to your efforts in working with Senator Joe Joesepnson to redefine the responsibilities of the athletic commission, we would certainly be in favor of any legislation which would help streamline our permitting process for bicycle racing.

Please contact me if you have any questions. I look foreward to hearing from you.

Sincerely,

Bjarne Holm

(b) No person may violate the provisions of secs. 385–420 of this chapter. The parent or guardian of a child may not authorize or knowingly permit a child to violate a provision of this chapter.

(c) When signs are erected indicating that no right, left or U-turn is permitted, no person operating a bicycle may disobey the direction of the sign unless first pulling to the extreme right or shoulder of the road, dismounting and making the turn as a pedestrian. (In effect before 7/28/59; am 12/15/61, Reg. 3; am 8/10/66, Reg. 22; am 12/31/69, Reg. 31; am 6/28/79, Reg. 70)

Authority: AS 28.05.011

13 AAC 02.390. TRAFFIC LAWS AND REGULATIONS APPLY TO PERSON RIDING BICYCLE. Repealed 6/28/79.

13 AAC 02.395. RIDING ON BICYCLES AND CERTAIN NONMOTORIZED CONVEYANCES. (a) Repealed 6/28/79.

(b) No person operating a bicycle upon a highway may carry a person other than the operator, unless the bicycle is equipped with a seat for the passenger, except that an adult rider may carry a child securely attached to his person in a backpack or sling.

(c) No person operating a bicycle or other nonmotorized conveyance may attach, hold on by hand or otherwise secure the bicycle or conveyance or himself to another vehicle so as to be towed or pulled.

(d) A person operating a bicycle upon a highway shall maintain control of the bicycle and shall at all times keep at least one hand upon the handlebars of the bicycle.

(e) No person may operate a unicycle, coaster, roller skates or a similar device on a roadway.

(f) This section does not apply upon a roadway closed to motorized vehicle traffic. (In effect before 7/28/59; am 12/15/61, Reg. 3; am 8/10/66, Reg. 22; am 12/31/69, Reg. 31; am 6/28/79, Reg. 70)

Authority: AS 28.05.011

13 AAC 02.400. RIDING BICYCLES ON ROADWAYS AND BICYCLE PATHS. (a) A person operating a bicycle upon a roadway shall ride as near to the right side of the roadway as practicable, and shall give way to the right as far as practicable to a motor vehicle proceeding in the same direction when the driver of the motor vehicle gives audible signal.

(b) Persons riding bicycles on a roadway may not ride more than two abreast except on paths or parts of roadways set aside for the exclusive use of bicycles. Persons riding bicycles two abreast may not impede traffic and, in a laned roadway, shall ride within the farthest right lane.

(c) When a shoulder of the highway is maintained in good condition, an operator of a bicycle shall use the shoulder of the roadway.

(d) A person operating a bicycle on a trail, path, sidewalk, or sidewalk area shall

(1) exercise care to avoid colliding with other persons or vehicles;

(2) give an audible signal before overtaking and passing a pedestrian; and

(3) yield the right-of-way to any pedestrian.

(e) Repealed 6/28/79.

(f) A person riding a bicycle intending to turn left shall, unless he dismounts and crosses as a pedestrian, comply with the provisions of sec. 200 of this chapter. The operator of a bicycle must give a signal by hand and arm continuously during the last 100 feet traveled unless the hand is needed in the control or operation of the bicycle. When stopped to await an opportunity to turn, a hand and arm signal must be given continuously by the operator.

(g) No person may ride a bicycle upon a sidewalk in a business district or where prohibited by an official traffic-control device.

(h) No bicycle race may be conducted upon a roadway, except as provided under AS 05.35. (In effect before 7/28/59; am 12/15/61, Reg. 3; am 8/10/66, Reg. 22; am 12/31/69, Reg. 31; am 6/28/79, Reg. 70)

Authority: AS 28.05.011

Sec. 05.30.100. Reporting of accidents. The operator of a snow vehicle involved in an accident resulting in injury to, or death of a person, or property damage other than to his snow vehicle the estimated amount of which is $100 or more, shall immediately, by the quickest means of communication, give notice of the accident to the nearest state trooper or city police officer. (§ 1 ch 182 SLA 1968)

Collateral references. — Accidents involving negligence in operation of snowmobile, skimobile, or similar vehicle. 42 ALR3d 1422.

Liability for injury or death allegedly caused by defect in snowmobile or other recreational-purpose vehicle. 81 ALR3d 394.

Sec. 05.30.110. Penalty. A person who violates a provision of this chapter or a regulation adopted under this chapter is guilty of a misdemeanor and, upon conviction, is punishable by a fine of not more than $100 for each offense. (§ 1 ch 182 SLA 1968)

Revisor's notes. — The word "adopted" was substituted for "promulgated" by the revisor of statutes pursuant to AS 01.05.031(b).

Cross references. — As to sentences for misdemeanors, see AS 12.55.135.

Sec. 05.30.120. Definition. In this chapter "snow vehicle" means a vehicle propelled by mechanical power, supported in part by skis, belts, cleats, or low pressure tires, and primarily designed to travel over ice or snow. (§ 1 ch 182 SLA 1968)

Revisor's notes. — A former paragraph defining "cowling" was transferred and redesignated as AS 05.30.040(b) by the revisor of statutes pursuant to AS 01.05.031(b).

Chapter 90. Miscellaneous Provisions.

Section
01. Racing events

Sec. 05.90.001. Racing events. (a) To the extent that it is consistent with federal law and regulations, snow vehicles, automobiles and motorcycles may be operated on state highways for special racing event of limited duration which are conducted according to (b) of this section.

(b) The athletic commission may issue, and for cause cancel, a permit to conduct a snow vehicle, automobile or motorcycle racing events as provided in this section under terms and conditions and at times and places the commission may determine. If the commission refuses to grant a permit to an applicant, or cancels a permit, the applicant or holder of the cancelled permit may, upon application, have a hearing under the provisions of the Administrative Procedure Act (AS 44.62). No permit may be issued by the commission for the use of

a state highway without the concurrence of the commissioner of highways and the commissioner of public safety. (§ 2 ch 192 SLA 1970; AS 05.35.010, 05.35.020)

Revisor's notes. — This section derives from AS 05.35.010 and AS 05.35.020 and was renumbered by the revisor of statutes under AS 01.05.031.

In renumbering the provisions comprising this section, the revisor designated the provisions of former AS 05.35.010 as subsection (a) and the provisions of former AS 05.35.020 as subsection (b), substituted "(b) of this section" for "a prearranged schedule under permit as provided for in AS 05.35.020" in subsection (a), and substituted "this section" for a reference to former AS 05.35.010 — 05.35.020 in the first sentence of subsection (b).

Collateral references. — 4 Am. Jur. 2d Amusements and Exhibitions §§ 28, 29-34, 46, 78.

Mr. Bjarne Holm
The Arctic Bicycle Club
P.O. Box 4-2442
Anchorage, AK. 99509

Dear Mr. Holm:

Thank you for your recent letter. It does appear that there has been an oversight made concerning bicycles when Title 13 of the Alaska Administrative Code was adopted. I have forwarded your letter and attached materials to the Senate State Affairs Committee, Chaired by Sen. Vic Fischer; and the Health, Education, and Social Services Committee, chaired by Sen. Joe Josephson for their review and possible action. You may also wish to contact them directly on this matter.

Thank you for contacting me. I hope this matter is corrected to your satisfaction, and your race is a success.

Sincerely,

Senator Jay Kerttula

February 8, 1983

Mr. Bjarne Holm
Arctic Bicycle Club
P.O. Box 4-2442
Anchorage, AK 99509

Dear Mr. Holm:

In response to your letter of January 11, 1983 as stipulated in Alaska Statutes Supplement Section 05.35.010, the Athletic Commission has the authority for initial issuance of permits for racing events. If the event occurs on the State highway, the concurrence of the Commissioner, Department of Public Safety must be obtained.

Since the permitting authority rests with the Athletic Commission, the basic requirements should be established by them. However, any vehicle, i.e. bicycle, operated on a State highway must conform to all general and any specific traffic regulations pertaining to that vehicle. Any Department of Transportation and Public Facilities restrictions or requirements would be in keeping with these Alaska Statutes or Administrative Code governing such activities. If these procedures are followed, there should be no problem in obtaining Department concurrence.

Thank you for the opportunity to comment on this matter of mutual concern.

Sincerely,

Daniel A. Casey
Commissioner

Mr. Bjarne Holm
Arctic Bicycle Club
P.O. Box 4-2442
Anchorage, AK 99509

Dear Mr. Holm:

It sounds as if you and your organization are in the midst of planning for an exciting year. Your first priority should be to ensure that the amendment to the wording of AS 05.90.001, to include bicycles, is accomplished. This will allow you to proceed legally for the proper authorization for the event.

Any future correspondence with reference to the request for authorization to conduct these events should be directed to the following address:

Alaska State Troopers
P.O. Box 6188 Annex
Anchorage, AK 99502
Attn: Director's Office

Your correspondence should include the scheduled date, time, proposed route, insurance coverage, and any other pertinent data. The Director's office will provide the originator of the correspondence with a form listing all the requirements and will be responsible for forwarding the required documents to this office for authorization.

To provide an idea of what this involves, a copy of this particular type of document is attached for your review. This involves snow machine racing so yours would be somewhat different.

As you can see from the enclosed document, approval must be obtained from the Commissioners of Athletics, Transportation and Public Facilities, and Public Safety. I can expedite the application once it is received by my office. However, I would recommend that you allow at least thirty (30) days from the date of application until the final authorization.

2LH

I do hope that I have been able to assist you in this matter, and if you have any further questions, I will be happy to discuss them with you.

Sincerely,

Robert J. Sundberg
Commissioner

Alaska State Troopers

Attachment: a/s

The (agency's name) _____ will sponsor this race, and as sponsors will have liability insurance coverage in effect at the time of the event for all participants in the amount of $_____.

This event, to be known as _____(name of race or contest) is scheduled to occur between _____, Alaska and _____, Alaska (route map attached) on the date of _____, 198____.

The sponsors will provide road guards, flagmen, signs, and barricades for any and all road crossings along the route of snowmachine travel.

All snowmachines will be properly registered in compliance with State statutes AS 05.30.020 through AS 05.30.080.

The crossings of all roads and bridges shall be at a maximum speed of 15 miles per hour.

All crossings will be so located as to provide adequate sight distance for motorists using the roadway.

At road crossings, all caution and safety signs intended to regulate traffic flow and insure maximum safety shall provide the follwoing information (BE PREPARED TO STOP, CW20-8, 36" by 36", located 1000 feet from each side of crossing point). Two flagmen with orange vests and stop-go paddles are provided, one for each direction of travel.

Sign stating flagman ahead, 500 feet, size CW20-7, 36" by 36", shall be located 500 feet each side of crossing point. These signs and placement shall conform to the Alaska Traffic Manual. If, at any time, either the Department of Transportation and Public Facilities or the Department of Public Safety feel that the race is endangering the traveling public, the race will be suspended.

No night (hours of darkness) crossings will be authorized.

No parking within 500 feet of any snowmachine crossing point.

The motor mushers will file a bond with the State for any necessary cleanup as a result of this race.

Other Special Requirements:

By signing below the applicant agrees to perform all the conditions of this permit and shall indemnify and save harmless the State, it's officers and employees from all liability, judgement, cost, expenses and claims growing out of damages or alleged damages, of any nature whatsoever to any person or property arising out of performance or nonperformance of the permit.

SB

184

561-4221

April 5, 1983

The concept that the transportation industry should be regulated by specific regulatory agencies dates back to the late 1880's in the United States. In Alaska the transportation industry has been regulated since statehood under AS 42.10--Alaska Motor Freight Carrier Act and AS 02.05--Alaska Air Commerce Act of 1960. Initially, regulation was under the Public Service Commission which was split in 1966 into the Alaska Transportation Commission and the Alaska Public Utilities Commission.

Generally, the reason for the regulation of transportation is that it falls within those certain occupations or services which because of their vital and essential interest to the public require a minimal guarantee that certain standards be met. The minimal standards are set through either licensing or registration covering such professions as medicine, law, teaching, barbering and services such as banking institutions, insurance companies, hospitals, taxi cabs, real estate agencies, and transportation. While there is a variety of reasons for the regulation of the individual profession or service, the central reason is that the consumer/public deserves a guarantee that the service received will not be harmful either physically or monetarily. There is a further link in that all such services will be performed efficiently and in most cases at non-discriminatory rates.

Under Alaskan law, the key areas of regulation of transportation are:

1. Entry of new competition (includes expansion of existing authority);
2. Rates for services;
3. Performance of service;
4. Safety of operation (primarily for trucking); and
5. Proof of adequate insurance.

The Commission administers its regulatory authority through various means, a majority of which are required by the statutes. The statutes provide that as a quasi-judicial agency the Commission has powers of subpoena and other processes necessary to conduct hearings, investigations and proceedings necessary to reach a final determination. The statute provides that all parties are assured of fair treatment legal due process and that rules of evidence will apply as well as providing for the appeal of any final administrative order to the Superior Court.

Specifically, the theory behind regulation of transportation is that a level of control is necessary to assure the availability of adequate, dependable and available transportation services for the movement of necessary supplies, materials, and people while at the same time providing the consumer with stable service at rates that foster sound economic conditions among the carriers. Further, the consumer is to be provided reasonable rates without undue discrimination or preference while protecting the carrier from unfair or destructive competitive practices.

Without regulation the possibility exists that destructive competition will occur due to the unlimited entry of carriers many of whom may not have adequate knowledge to use the correct equipment or routing for the task to be performed, to establish a system to prevent loss of cargo through misplacement or theft, or to employ competent employees.

If regulation did not exist, there would be no market protection for existing carriers. To many people this is the most offensive aspect of transportation regulation. However, the concept is based on the rationale that transportation companies should be granted a share of the market place that allows a reasonable return on the required investment. The carrier must have a wide range of equipment, personnel, and facilities that will not be fully utilized, but are necessary to meet the public demands for service. Therefore, as long as the authorized carriers maintain adequate equipment, facilities, and personnel to meet the public demands, then new entries should be limited since all that new entries will do is take existing businesses away from existing carriers thus denying them revenue necessary to provide full service.

It should be understood that a high degree of competition exists between the regulated carriers since rates are generally the same or very close for each type of commodity or trip. The carriers compete for customers by demonstrating service, reliability and efficiency in meeting the public demand. If a carrier does not perform for a shipper, there is someone else who will, or there is another mode of transportation. In the situation where a new entrant can prove that none of the existing carriers are performing or that shipping needs are not being met, then new entry is allowed.

In all cases it is the consumer that pays the shipping cost. There seems to be an overriding thought that regulation of transportation places the public in the position of subsidizing an archaic system. What regulation really does is to guarantee the public that a transportation system will exist to move people and commodities throughout an area at reasonable prices and with assurance of competent handling. The current movement toward deregulation is clearly showing a trend toward carriers, both air and motor, concentrating their efforts in high market areas for large shippers and ignoring equal service for small demand areas and small shippers.

Another function of regulation relates to the requirement to file rates for approval and for a carrier to abide by the posted rates. This function reduces the possibility of

either a shipper or a carrier controlling the price and assures that all shippers are treated equally. In the situation where a shipper dictates the price of transportation since it controls a large enough segment that a carrier allows the shipper to dictate its own price, other shippers not having a controlling segment will have to pay higher rates since the carrier is not receiving adequate compensation for the controlled moves. Thus, one shipper gets a lower rate and everyone else makes up for the difference.

Based on its statutory authority the Commission also has the authority to require all common and contract carriers to provide proof of adequate insurance necessary to protect the public. If a carrier does not have insurance on file, it cannot legally operate. The Commission also has authority to conduct safety inspections of all commercial motor vehicles over 4,000 pounds to assure vehicle and load safety. While the commercial vehicle safety program has previously been funded primarily through other agencies responsible for the operation of the weigh stations, as of March 12, 1983, the ATC again became the sole administrative agency responsible for commercial vehicle safety.

The Commission consists of 30 employees, including three Commissioners, two Hearings Examiners and a staff of 25 employees. Attached is a Staffing Chart. In the operating budget for FY 1984 the staff will be reduced by two positions, the Transportation Field Agent II located in Soldotna and the Accounting Technician I in Anchorage, in accordance with the 5% reduction mandated by the administration.

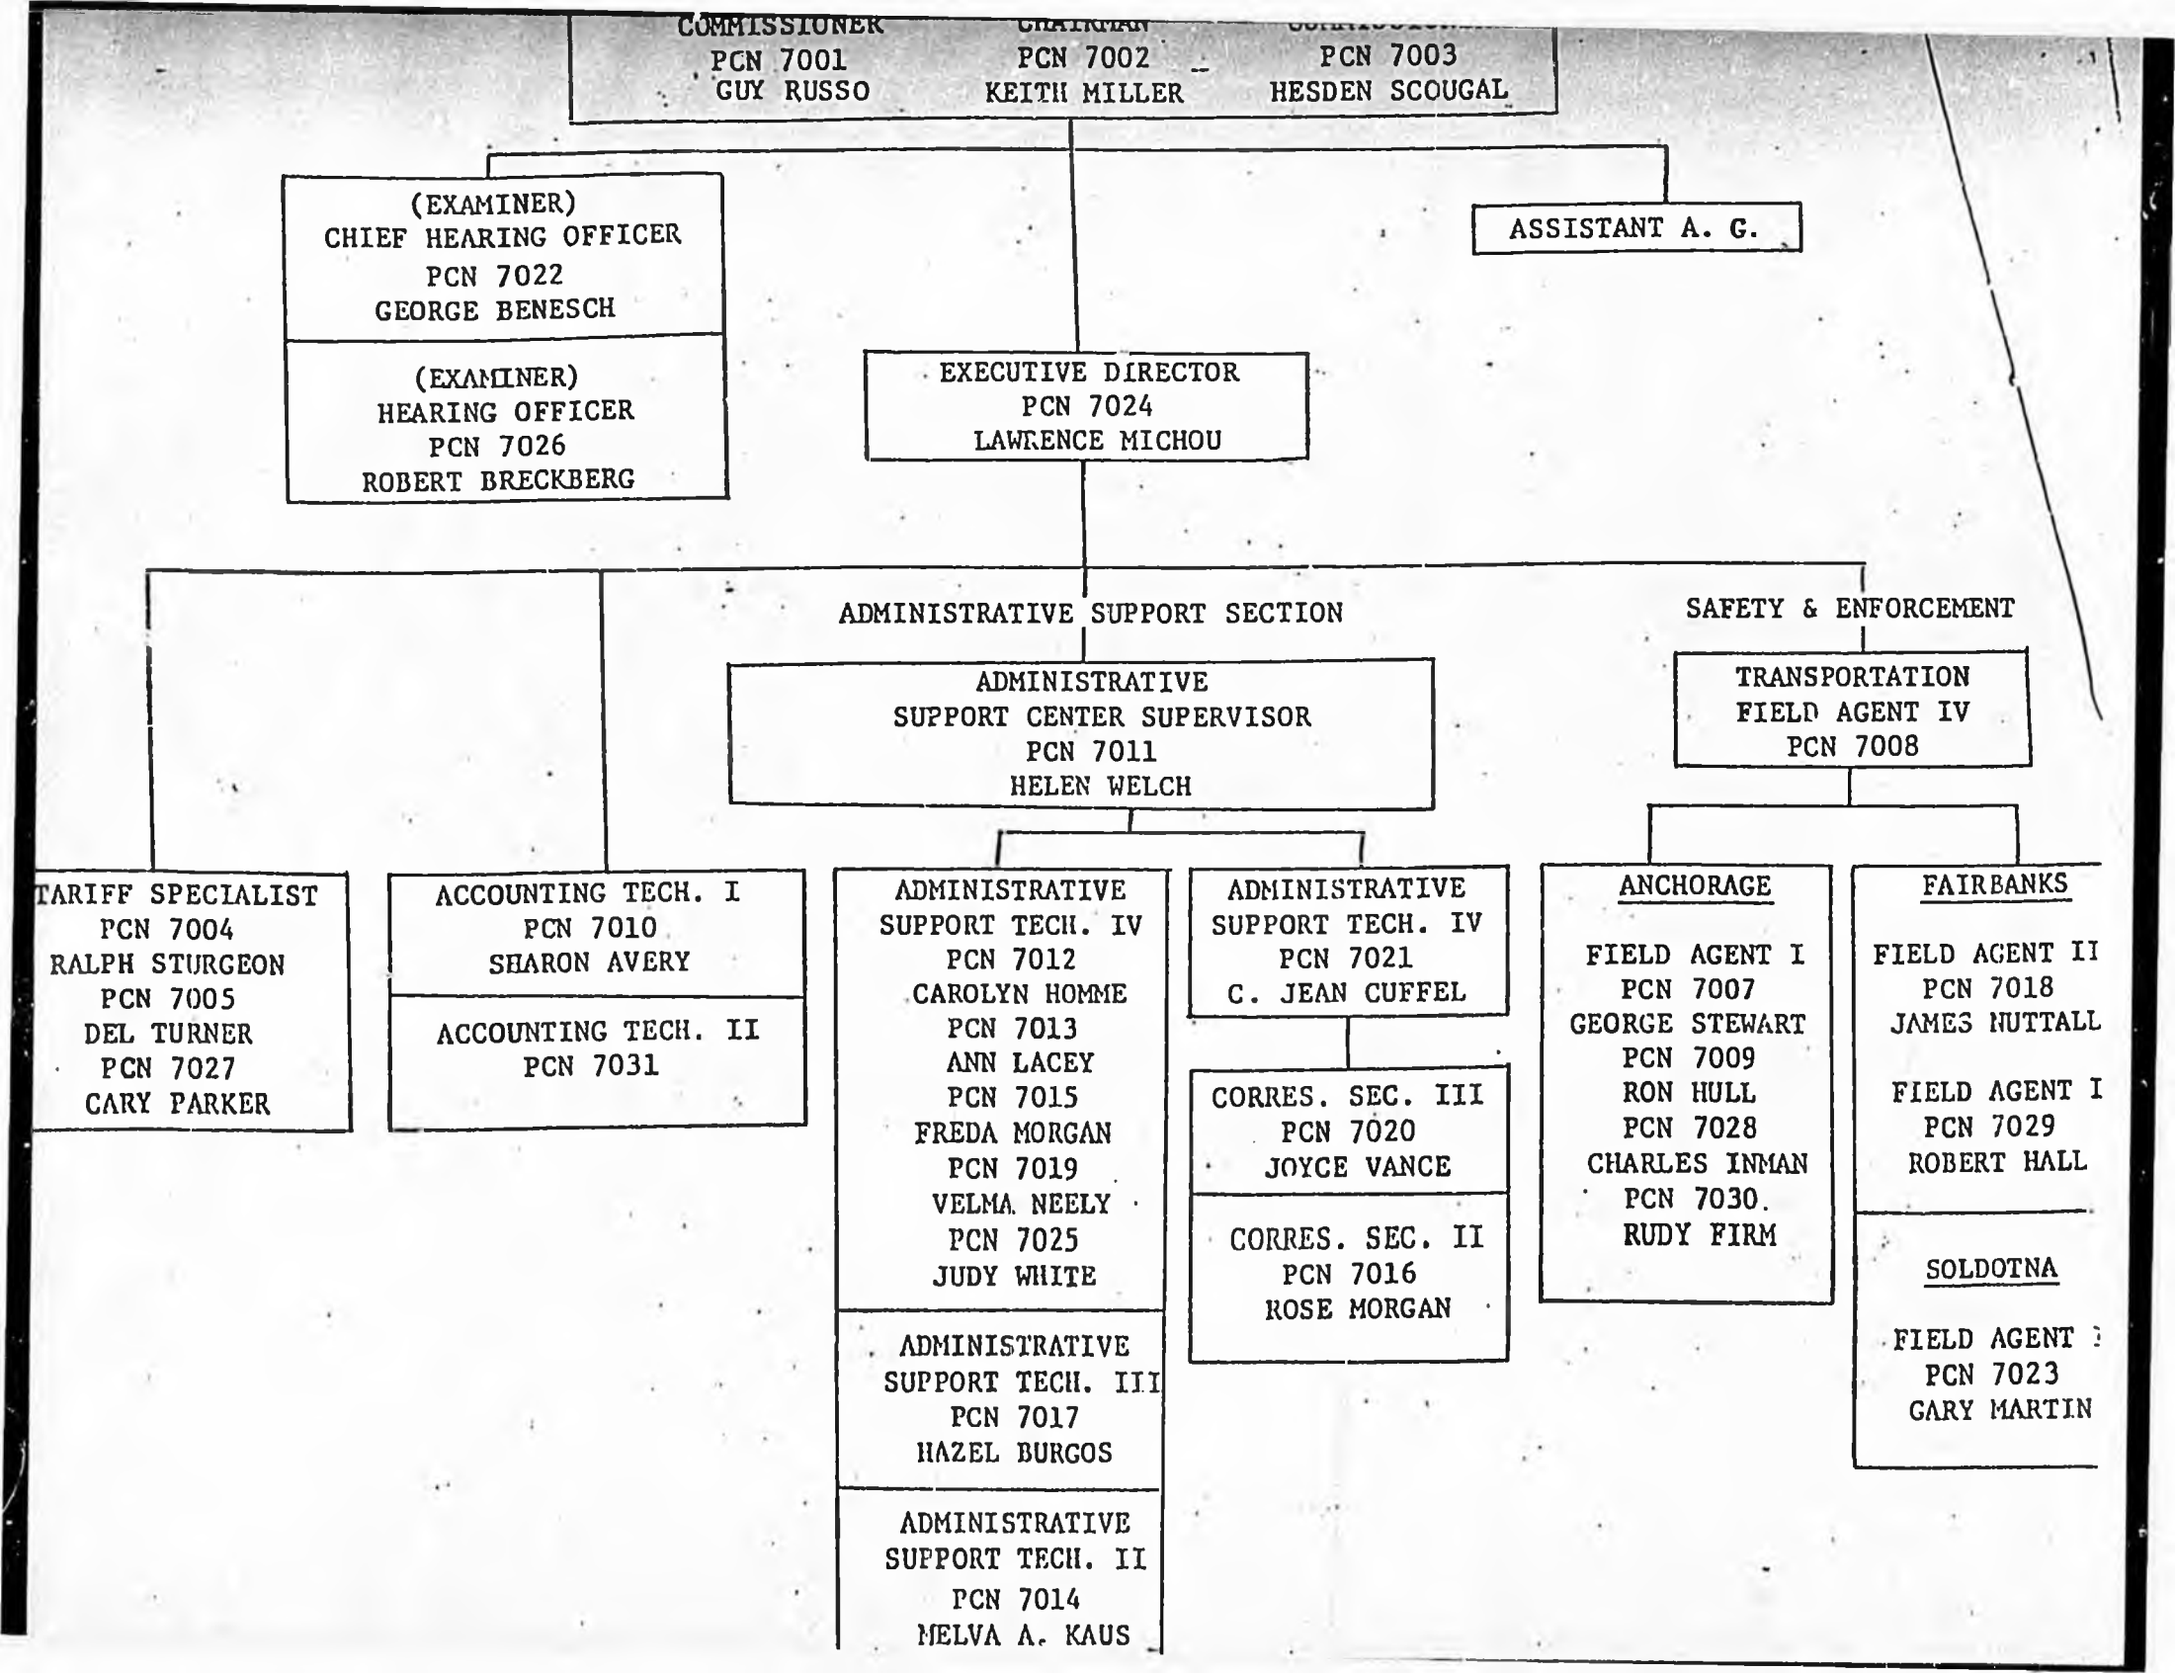
The functional responsibilities of the various employee classifications are:

Commissioners and Hearing Officers are responsible for the adjudicating proceedings. As quasi-judicial officials they are separate from the daily operations of the staff. The Commissioners set general policy guidelines that are implemented by the Executive Director.

Executive Director is responsible for the daily supervision of the staff and the implementation of Commission policy.

Tariff Staff is responsible for reviewing all applications filed with the ATC, review all rate filings, and assist the public by answering questions concerning the statutes and regulations. The staff will assist any applicant in completing any of the necessary forms or in the preparation of a tariff. The tariff staff may intervene at application or revocation hearings as well as opening investigations on rate matters.

Enforcement Staff is responsible for the actual field investigations necessary to prove a violation of the statutes or regulation. The field agents are responsible for initiating most accusations or complaints filed before the Commission for violations and assist the Assistant Attorney General who presents the case at hearings. The field agents also conduct the safety inspections and answer many inquiries from both carriers and non carriers concerning alleged illegal operations.



Administrative Support Staff handle the daily work flow and assist the other sections by providing clerical support. Unlike most clerical positions these employees are assigned specific tasks and are responsible for all of the work necessary to complete the processing of the document or bringing it to the attention of either the Tariff Specialist or the Field Agent if a violation is suspected.

ALASKA TRANSPORTATION COMMISSION

ACTIVITIES FOR CALENDAR YEAR 1982

ALASKA TRANSPORTATION COMMISSION

BILL SHEFFIELD, GOVERNOR

SUITE 778, FRONTIER BUILDING
3601 C STREET
ANCHORAGE, ALASKA 99503

PHONE: 561-4221

March 14, 1983

Senator Richard Eliason, Chairman
Labor and Commerce Committee
Senate
Pouch V
Juneau, AK 99811

Dear Senator Eliason:

Your staff has requested that the Alaska Transportation Commission respond to comments made in the Analysis of Public Need section of the April 1, 1982 Performance Review prepared by the Division of Legislative Audit.

The following statement appears in the introductory paragraph:

> "This analysis is not intended to be comprehensive in nature."

Then follows comments relating to nine specific statements. The comments are obviously slanted against the ATC and no effort is made to avoid unsupported generalities. There is no effort made to support the conclusion other than references back to the Recommendations.

Our specific comments for each of the nine areas are as follows:

I. The extent to which the board, commission, or programs has operated in the public interest.

The ATC believes that its operations are in the public interest. Efforts have been made to reduce the processing time of applications while still guaranteeing that all parties receive due process. While this effort may have not been obvious during the time frame covered by the audit, calendar year 1980-81, it was obvious in calendar year 1982 when processing time for non-protested applications averaged less than 90 days. This reduction has been made in spite of the fact that requested additional staff that was recommended in the 1978 audit were never approved in the operating budget.

There is no indication of how the public interest is to be better served by the recommended merger of the ATC and the APUC. It would appear that the public and the regulated industries would be better served by an adequately funded ATC rather than further diluting the economic regulation of transportation by combining it with the regulation of utilities.

The enforcement effort is being improved with a concentration of manpower in three general areas--authorized carrier compliance, elimination of unauthorized operations, and commercial vehicle safety. Again, this effort does not always generate obvious results since seven agents must supervise about 445 authorized motor carriers, 270 authorized air carriers, probably 1500 legitimate private carriers and probably, at any one time, about 50 active unauthorized carriers.

II. The extent to which the operation of the board, commission, or agency program has been inspired or enhanced by existing statutes, procedures and practices which it has adopted, and any other matters including budgetary resource and personnel matter.

The ATC concurs that it was necessary to promulgate revised regulations to assist in a more efficient processing of applications and enforcement action through the hearing stage. However, the length of time in promulgating the regulations did not impede the program as the existing regulations were adequate. It was simply an effort to clarify the procedures for the sake of all concerned. Since the revisions of the procedures covered some 28 pages of the Administrative Code, its is not surprising that it took several years for them to get through drafting into final print. Further, other proposed changes in the regulations have been tabled as the comments received at public hearings indicate they had the potential of causing more problems than improving the situations. It is our opinion that the ATC should have received a more positive comment for not implementing regulations that might have caused an economic hardship on the regulated industries without adequate staff justification.

Again we note that no comment was made concerning the attempts the ATC made to get additional staff as was recommended in the 1978 audit. Further, the fact the Commission recieved a budget reduction in fiscal year 1980 of $103,200 from its maintenance level is not mentioned. It is difficult to maintain a level of service and to improve service without adequate funding and positions.

III. The extent to which the board, commission or agency has recommended statutory changes which are generally of benefit to the public interest.

The Commission has recommended several items for legislative action and has testified on several others. It is difficult for a regulatory commission to recommend legislative changes as such changes have a tendency to either increase or decrease the level of regulation. The Commission is in a better position to advise the Executive and Legislative Branches of the State on the impact of proposed legislation on the industries and the Commission's ability to carry on its mandate.

IV. The extent to which the board, commission or agency has encouraged interested persons to report to it concerning the effect of its regulations and decisions on the effectiveness of service, economy of service, and availability of service which it has provided.

As stated in the audit report, the Commission conducts its business through the hearing process that is designed to guarantee all participants fair treatment and due process of law. Further, the Commission publishes its journal twice a month which is sent to local newspapers, libraries, radio and television stations. The journal contains notices as well as procedural matters that are designed to inform the public of the Commission's business.

V. The extent to which the board, commission or agency has encouraged public participation in the making of its regulations and decisions.

As stated in the audit report, the journal is designed to inform the public of the Commission actions. To further insure that all local participants that wish to take part in a proceeding, the Commission travels to the locality most convenient to the applicant or the respondent. While general public comment is not solicited at Commission proceedings, as such proceedings are quasi-judicial in nature and all parties must be assured of the right of cross-examination, time is allowed for public comment if requested by any party.

VI. The efficiency with which public inquiries or complaints regarding the acitivities of the board, commission or agency filed with it, with the department to which a board or commission is administratively assigned, or with the office of the ombudsman have been processed and resolved.

The response in the audit appears not to relate to the statement. The statement concerns inquiries or complaints of the Commission activities not how enforcement is doing in answering complaints about violation of the statutes or regulations. While we have agreed that the enforcement effort can be improved, this effort has no bearing on our willingness and performance in answering inquiries from the public. We answer as promptly as possible and seek to generally satisfy the public that the ATC is functioning within the law.

The statements concerning the Ombudsman's office are totally misleading. The Commission makes every effort to answer all correspondence from that office within the time frames indicated. Our records indicate that with very few exceptions the Ombudsman has not found the Commission in error. It appears to us that the 33 complaints should have been analyzed so a clear picture of the exact number of resolved and unresolved complaints could be established.

II. The extent to which a board or commission which regulate entry into an occupation or profession has presented qualified applicants to some of the public.

The Commission agrees that more analytical work might be performed on applications. However, this does not mean that the applicant is unqualified. It must be remembered that the regulated transportation industry is highly competitive that the as well as being at the mercy of changing economic condition. Therefore, the analytical evaluation of the application and projected services do not guarantee success, but only that the applicant meets entry standards.

VIII. The extent to which state personnel practices including affirmative active requirements, have been complied with by the board, commission or agency to its own activities and the area of activity or interest.

The Commission has made every effort to function within the state personnel systems, labor agreement and affirmative action program. To the best of our knowledge there have not been any problems in this area for several years.

IX. The extent to which statutory, regulatory, budgeting or other changes are necessary to enable the agency, board, or commission to better serve the interest of the public and to comply with the factors enumerated in this subsection.

The comments in the audit referring the reader to the "Findings and Recommendations" does not answer this statement. The recommended merger of the two Commissions even with the suggestion of a management study does not evaluate the need for statutory, regulatory or budgeting changes necessary for the ATC to conduct its business.

The ATC has requested new positions that would have assisted in the elimination of some of the problems enumerated in the audit and in fact recommended in the 1978 audit. Everyone realizes that any agency can only perform the tasks for which it is funded and must determine the priority of service based on the funds received. The ATC would like to expand its activities in the area of enconomic review of active carriers as well as determination of market needs for additional service, but neither the funds nor the positions have been approved.

In the area of enforcement, the ATC could obviously increase the number of illegal activities that are brought before the Commission for adjudication. But the increase requires more manpower as again priorities must be set between the three areas of enforcement--surveys and enforcement of authorized carriers, prevention of unauthorized carrier, and vehicle safety. As stated in our response to the audit, the Commission recognizes the need to streamline the processing of accusations and citations, but only so much can be done to improve without additional manpower. The enforcement of economic regulation is not a simple matter and requires many manhours of work to gather the evidence to prove a violation has occurred and to prove who committed the violation. It is easy to accuse, but it can be difficult to prove that the accused should have a civil penalty levied against him.

There is no doubt that the major question that should be before the Legislature is that of deregulation. There needs to be a decision as to what direction should be taken in the future as to the amount of economic regulation is needed or desired by both the public and the industry. While very few

states are completely deregulating, several have started looking at lessening regulation that is shown to be of little real value or unreasonably blocks entry or competition. The Commission and the Staff would be happy to assist the Legislature if it is determined that review of AS 42.10 and AS 02.05 is needed. There will always be a need to protect the public by requiring carriers to register, show a degree of fitness, provide proof of insurance, and to operate safe vehicles. However, the need to prove public convenience and necessity for entry, filing and justifying tariffs, and all the required filing of reports may not be as necessary as it was once thought to be.

If you need any additional information, please let me know and we wish to thank you for this opportunity to express our views.

Very truly yours,

Keith H. Miller

April 11, 1983

David Dye
Administrative Assistant
Senate State Affairs Committee
Pouch V
Juneau, AK 99811

Dear Mr. Dye:

During your discussion with our Executive Director of the Alaska Transportation Commission's role in commercial vehicle safety inspection, you requested that we provide you with a written summary of our proposed program.

The ATC has authority under both AS 42.07 and AS 42.10 to conduct safety inspections of all commercial vehicles in Alaska weighing over 4,000 pounds. The only vehicles that are exempt from inspection are buses and government vehicles. Under its statutory authority, the ATC has published administrative Code 3 AAC 62 which is in fact a safety manual. A copy is enclosed for your information.

The ATC's transportation field agents have conducted random safety inspections for years, but with the enforcement of the safety regulations at the weigh stations by first the Alaska State Police and then the Division of Measurement Standards, the ATC has not attempted to develop a comprehensive safety program. The weigh station program was part of a federally funded program that expired on March 11, 1983. With the completion of the federal program, the responsibility for the safety program has returned to the ATC, but without any funding to administer the program.

A commercial vehicle safety program normally covers three areas--the driver, the power unit and trailing equipment, and the load. The objective of such a program is to protect the public, the driver, and the cargo. Our program would continue the emphasis in all three areas as all three are important in a successful program. Actual safety inspection can and should be conducted in three locations--the terminal, at selected roadside points, and random roadside stops (usually based on obvious violations).

While there are many requirements that a commercial operator must meet for its equipment to pass with 100%, the Commercial Vehicle Safety Alliance has identified 11 as the critical points. A copy of that standard is also attached along with a handout used by the Alliance. Generally, the ATC expects to follow the CVSA standards in its inspection program.

Our proposal includes provisions for both voluntary and involuntary terminal or job site inspection, road site inspection, and random inspection. We expect to use the assistance of the Alaska State Police, local police and the weigh station personnel, in addition to our own staff. We would hope to incorporate a reporting system that would allow the central processing of all inspections in order to develop a good data base to develop statistical analysis necessary to identify problem carriers and/or vehicles.

The actual inspections can result in various classes of recommendations or citations, generally depending on the problem. The first category would be a "fix-it" which simply means something needs to be repaired, is not hazardous to the public, the driver, or cargo. If it is a violation that can be repaired on the s[illegible] a compliance report would not even be written. More se[illegible]s violations would also fall into the "fix-it" category, bu[illegible]he repairs would require verification of repair and possibly could result in a civil penalty. The third category would be more serious violations that require either repair or correction and a formal citation that requires a hearing, as staff would expect to prove a violation that would result in the levying of a civil penalty. The fourth category are deadlines--a vehicle will not be moved under its own power until corrected and a civil penalty would definitely be expected. A fifth category of violations would be primarily lodged against companies that have allowed the operation of vehicles that are found unsafe or who operate vehicles that have not been repaired as indicated.

The ability to cite both the operator and the carrier is a definite advantage of a safety program conducted by an agency with quasi judicial authority rather than a police agency. An agency such as the ATC can require both the driver and the carrier to answer for the violation while a police agency normally can only cite the operator. By making the carrier

assume its responsibilities for its vehicle, we can hopefully develop an awareness among carriers that its vehicles must remain in good repair, that loads be properly secured and protected and that only qualified drivers be employed. While the program should not be viewed as a revenue source, the ability to levy civil penalties of up to $1,000 is defnitely an incentive for a carrier to get into compliance.

The attached budget projection if funded would augment the ATC's staff to a level that would allow it to continue its enforcement functions in the area of economic regulation as well as to initiate a vehicle safety program. We would expect to use all the transportation agents in conducting the safety program as well as to assist in the economic regulation of transportation. With the additional staff, we would expect to log at least 4,000 actual vehicle inspections the first year as a minimum and with possibly as many as 6,000 as a maximum. The number of inspections will vary greatly depending on the completness of the inspection and the number of deficiencies found on the vehicles. Stated simply, the greater the number of violations, the more staff time necessary to conduct the inspection and the follow-up compliance inspection. We would expect that much of the quantify work and data collection can be done by existing staff. The more assistance that we receive from other agencies, the greater the number of vehicles that can be inspected.

The funds necessary to conduct the program would be as follows:

100 Account			
2 Transportation Field Agents - Range 16 - Anch.			
2 X 12 mo X 2463/mo			$59,112
2 Transportation Field Agents - Range 16 - Fairbanks			
2 X 12 mo X 2838/mo			68,112
1 Paralegal Assistant II, Range 16, Anch.			
1 X 12 mo X 2463/mo			29,556
1 Admin. Support Technician, Range 12, Fairbanks			
1 X 12 mo X 2218/mo			26,616
			$183,396
Benefits 183, 396 X .0613		11,243	
Variable Benefits 183, 396 X .1550		28,426	
Health Benefits 6 X 12 X 240 mo		17,280	56,949
		Total	100

240.3

200 Account:
To provide for per diem and air fares for inspection and hearings

100 days X 90 per day		13,500	
Estimated Air Fares		10,000	
	Total	200	23.5

300 Account:
Contractual Services
Equipment Rental - WCF

3 cars (class 108D)			
Rental .39/mi X 850m X 3 veh X 12 mo		11,934	
PAED Fees 173/mo X 12 mo X 3		6,228	
	Total Vehicles		18.2
Increased Data Processing for Statistical Support			15.0
Central Printing Charges - Booklets & Forms			5.0
	Total	300	38.2

400 Account
Commodities

Office Supplies and Protective Clothing			3.0
	Total	400	3.0

500 Equipment 1 Time Cost

3 Sedans (class 106D) with radios			
	3 X 10.0		30.0
6 Desks	6 X 427		2.6
6 Chairs	6 X 247		1.5
12 Side Chairs	12 X 98		1.2
1 Calculator			.2
1 Wang Terminal			3.4
	Total	500	40.1
	Total Budget		345.1

The second year of operation should be about 305.0 since all equipment costs are a one time expense.

Revenue is a bit difficult to project, but it would be expected that at least $25,000 in added revenue could be expected. If the voluntary aspect of both inspections and compliance is dropped, then revenue could be as much as $75,000 as all violation would result in a civil penalty.

The ATC will continue to perform some safety inspections as it is part of the economic regulation of transportation even if no additional funds are provided. However, without additional funds there is no way that a program can be developed and implemented and we will simply continue to catch violators as we find them without really determining patterns or concentrating on problem areas.

If you need any additional informa , please let us know.

Very truly yours,

Keith H. Miller

Office of the Governor

SENATE
LETTER OF INTENT
FOR
CSSB 134

During the scheduled hearings in which the Alaska Transportation Commission (A.T.C.) was discussed and reviewed, many problem areas were identified. The Performance Review of the Alaska Transportation Commission conducted by the Division of Legislative Audit, April 1, 1982, concluded that the functions of A.T.C. could be better performed if A.T.C. were to merge with the Alaska Public Utilities Commission.

However, several questions were raised which remain unanswered:

1) Is State involvement in the Essential Air Service Program required?

2) Does the State want to deregulate surface and air transportation within Alaska?

3) What method does the State wish to employ to assure the public that air and motor carriers have sufficient insurance coverage to protect the public's interest?

4) What is the role of the Alaska Transportation Commission in regard to a commercial vehicle safety program?

5) Would a citizen's board be an appropriate mechanism to perform the oversight functions which are currently the responsiblity of the Commissioners of the Alaska Transportation Commission.

6) Do the Alaska Transportation Commission's policies regarding light aircraft ensure that innovative competition which could be beneficial to the public is not eliminated?

With the passage of this legislation, it is the intent of the Senate Labor and Commerce Committee that the Office of Management and Budget conduct a thorough performance review of the functions of A.T.C. The review will include, but will not be limited to, the scope of areas previously outlined.

The Office of Management and Budget will report back to the Thirteenth Legislature within ten days after the second session convenes in 1984. The report shall outline the findings of the audit as well as specific actions to implement any changes recommended.

Adopted in the Senate, April 27, 1983.

SUPPLEMENTAL
SENATE LETTER OF INTENT
TO CSSB 184 (L&C)

In the interim it is the intent of the Senate that the Alaska Transportation Commission fulfill its statutory responsibility with concentration on protection of the public.

Adopted in the Senate, April 27, 1983.

3/8/83

SB 184 FISCAL NOTE ANALYSIS

The submitted FY '84 budget request for ATC follows:

Operating Expenditures	FY '83	FY '84
Personal Services	1,356.6	1,293.1
Travel	57.7	61.2
Contractual	182.5	192.2
Commodities	16.2	16.9
Equipment	1.2	-0-
	1,614.2	1,563.4
Capital Expenditures	Ø	Ø
Revenue	145.2	155.2

If the legislation fails to pass and ATC sunsets, there will continue to be a financial impact to the State for the administration of the State's share in the Essential Air Services Program and for verification of insurance registration. The reduced responsibilities would be reflected in the FY '85 budget request. In this case, the budget would be as follows:

Operating Expenditures	FY'83	FY '84	FY '85	FY '86	FY '87
Personal Services	1,356.6	1,293.1	69.6	73.8	78.2
Travel	57.7	61.2	Ø	Ø	Ø
Contractual	182.5	192.2	16.5	17.5	18.5
Commodities	16.2	16.9	2.0	2.1	2.2
Equipment	1.2	Ø	Ø	Ø	Ø
Total Operating	1,614.2	1,563.4	88.1	93.4	98.9
Capital Expenditures	Ø	Ø	Ø	Ø	Ø
Revenue	145.2	155.2	Ø	Ø	Ø
Positions (Full-Time)	30	28	2	2	2

Dr. Faiks

will join

you for Breakfast

at 7:30 AM

Barnard

Fiscal Note – a little over $3 million ($3,025.3) to get program started.

- Money cannot be used for new construction, must be used for old, existing subdivisions and municipalities must have a 5-year planning program and standards set for roads before the State will give the money

Intent of bill:

To set up a program that would work statewide to help people if they help themselves. If people put up 50% of money, there would then be a pool of money the municipality would get based on mileage & they then could apply to the State.

Offered: 3/16/84
Referred: Rules

Original sponsor: Faiks

IN THE SENATE BY THE FINANCE COMMITTEE

CS FOR SENATE BILL NO. 315 (Finance) am

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to road maintenance service areas; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 19.30 is amended by adding new sections to read:

ARTICLE 4. ROAD MAINTENANCE SERVICE AREAS.

Sec. 19.30.260. PURPOSE. The purpose of AS 19.30.260 - 19.30.320 is to facilitate funding for the upgrading, reconstruction, rehabilitation, or paving of existing subdivision roads within a road maintenance service area established under AS 29.63 or under a home rule charter. used to read "or unified municipality" but that's redundant as a unified mun. operates under home rule charter.

Sec. 19.30.270. ALLOCATION OF MONEY. (a) During each fiscal year each municipality shall receive money from the department that has been appropriated or otherwise designated for expenditure for road improvements within the municipality, based on the total road mileage in each road maintenance service area in the municipality. The amounts that are available shall be distributed pro rata among eligible municipalities.

(b) Money allocated to a municipality under this section shall be disbursed by the municipality for road maintenance service areas based on a first come, first served priority of road maintenance service area applications, subject to a 50 percent match by each road maintenance service area.

(c) Money allocated under this section shall be available for expenditure in the road maintenance service area for which the funds

are authorized for a period of five years after the end of the fiscal year for which the funds are authorized. Money allocated for a road maintenance service area that is unexpended and unobligated at the end of the five-year period shall be used for other road maintenance service areas in the same municipality in accordance with AS 19.30.260 - 19.30.320. If there are no other road maintenance service areas in the municipality for which the money can be used, the municipality shall remit the unexpended and unobligated money to the department and it shall lapse into the general fund.

(d) Fifty percent of the cost of construction in a road maintenance service area may be paid by road improvement district assessments.

Sec. 19.30.280. ELIGIBILITY. (a) After establishing a road maintenance service area under AS 29.63, or under a home rule charter, a municipality may apply to the department for a grant as money is available for road improvements, subject to regulations adopted by the department to carry out the provisions of AS 19.30.260 - 19.30.320. [The department shall require a municipality to submit a five-year plan for the upgrading, reconstructing, rehabilitating, or paving of maintenance service area roads for approval before October 1 of each fiscal year.] Required 5-yr. plan from municipality

(b) A municipality shall establish design standards for construction in a road maintenance service area. An application for a grant for improving an existing road under this section which is constructed after the effective date of this bill may not be granted by the department until the existing road meets the minimum design standards of the municipality. } Finance added this language

Sec. 19.30.290. ADMINISTRATION. (a) A contract entered into by a municipality for road construction within a road maintenance service

area for which funds allocated to the municipality under AS 19.30.-260 - 19.30.320 are used shall be awarded only on the basis of the lowest responsible bid by a bidder meeting established criteria of responsibility.

(b) Construction under AS 19.30.260 - 19.30.320 shall be administered by the municipality in which the road maintenance service area is located.

Sec. 19.30.300. MAINTENANCE. The road maintenance service area shall be responsible for maintaining roads constructed under AS 19.-30.260 - 19.30.320. The road maintenance service area may contract with a municipality for maintenance of the roads.

Sec. 19.30.310. REPORT. No later than October 1 of each year, a municipality that has received money under AS 19.30.270 shall submit a report to the department showing the use of the money by the municipality during the preceding 12 months. No later than December 1 of each year, the department shall prepare and submit to the governor a report showing the use of the money allocated under AS 19.30.270 during the preceding 12 months.

Sec. 19.30.320. DEFINITIONS. In AS 19.30.260 - 19.30.320

(1) "construction" or "road improvement" has the meaning given in AS 19.45.001 and includes utility and drainage costs but excludes financial costs, right-of-way costs, and new road construction;

(2) "department" means the Department of Transportation and Public Facilities;

(3) "municipality" means a municipality that has road construction or maintenance powers;

(4) "subdivision" has the meaning given in AS 40.15.190(2).

* Sec. 2. This Act takes effect July 1, 1984. → added in Finance

Dept. of Transportation & Public Facilities

Position Paper

BILL NO: CS SB 315

APPROVED: Dick Snyder

TITLE: "An Act Relating to Road Maintenance Service Areas; and Providing for an Effective Date."

DATE: April 2, 1984

The intent of this proposed legislation is to provide funds to municipalities for improvement of existing subdivision roads within newly created road service maintenance areas. Funds appropriated for this purpose would be made available subject to a 50% match by the road maintenance service areas desiring to improve their roads.

The Department supports this bill. It will provide a mechanism to upgrade a class of roads which are not eligible for such work under existing Department authority. Home owners in subdivisions that have already been built without adequate provisions for road construction and drainage will have the opportunity to upgrade them without having to bear the entire financial burden. Access to and from connecting roads on the State or local systems will be improved and this is a benefit to the general traveling public. The required five year plan for road maintenance service area roads should provide for logical orderly improvements.

In order to keep authorizations and reporting requirements under this bill on a calendar year basis or preferably a fiscal year basis, the Department would like to see the deadline dates in Section 19.30.310 revised accordingly.

MEMORANDUM

TO: Jan

FROM: Sandy

DATE: March 30, 1984

RE: MOA and DOT/PF Proposed Changes to SB 315

DOT/PF

1. Funds should be distribute on a needs basis rather than a first come, firs serve basis.

2. Page 1, line 27 should add "applicant" at the end. The current wording of each implies all road maintenance service areas are subject to a 50% match regardless of the location of the improvement.

3. Section 19.30.310 requires a report by December 1 of each year showing how the money was used during the preceding 12 months. This will be confusing for the municipalities that are not on the same fiscal year as the state.

Municipality of Anchorage

1. Funds should not be distributed on a first come, first serve basis, but rather on the highest priority needs.

2. Muni should have authority to reprogram money before the end of the 5 year period.

3. Grants should cover the full cost of the project with 50% being repaid through an assessment. Some areas have no way to front end the entire cost of the project.

4. Five year plan is difficult to do since the muni has no idea where the requests will come from if the funds are to be distributed on a first come first serve basis.

5. The bill requires the service area to maintain the road, but what happens when the service area sunsets after 3 years and the homeowners don't vote to continue it?

6. Construction costs should include ROW costs and new road construction. Some roads may require realignment thereby requiring row acquisition costs.

ANALYSIS - CS SB 315

I. This bill proposes to provide grant funds to municipalities for road improvements of existing subdivision roads that are within newly created road maintenance service areas. The State would provide half the funding and the road maintenance service area would provide the other half on a matching basis.

Under this bill it is assumed that the Department of Transportation and Public Facilities (DOT&PF) would be required to do the following things:

a) Administer grants to municipalities applying for the road maintenance service area funds;

b) Review annual submittal of a five-year plan for road improvements to these service area roads and analyze them for logic, completeness and conformance to established boundaries;

c) Establish regulations to carry out the grant process;

d) Review and approve design standards for service area roads;

e) Prepare an annual report to the Governor showing how the funding for the preceding twelve months was used.

We assumed that the task of developing regulations for the grant process is a one-time effort and would occur in FY 85 only. All other tasks were assumed to be an annual cost. All costs are general fund costs.

OPERATING COSTS

A. One-time cost of developing and implementing program guidelines, criteria and regulations:

1.	Personal Services - 486 hours @ 26 dollars/hr. (Range 19)	= 12,636
2.	Travel and Per Diem -	= 2,500
3.	Attorney General's office time on regulations (10 hours @ $80/hr.)	= 800
	Subtotal	15,936

B. Annual Costs

1. Review design standards:

Assume 20 sets of design standards @ $26/hr., 3 hrs. each = 1,560

2. Review of grant application costs

Assume 20 applications, 8 hours each @ $26/hr. = 4,160

3. Review of five-year programs:

Assume 20 programs, 5 hours each @ $26/hr. = 2,600

C. Prepare annual report:

1. 40 hours @ $26/hr. = 1,040

Subtotal $9,360

First year costs, $15,420
Continuing costs, 9,360/yr.

CAPITAL COSTS

A. Costs to upgrade, reconstruct, rehabilitate or pave existing eligible subdivision roads.

Estimated existing eligible mileage is 1500 miles. Estimate construction costs per mile, subdivision-type road, range from $75,000 to $300,000 depending on scope of work. For estimating purposes, we used $100,000 per mile.

1500 x $100,000 = $150,000,000 x 50% match = $75,000,000

Assuming 5 years for completion of initially eligible roads, capital costs per year would be 15 mill/yr.

COMMENTS ON CS SB 315

Page 1, line 14

It appears that the definition of "municipality" would preclude both the North Star Borough and the Kenai Borough from being eligible since they do not have road powers. This should be clarified.

Page 1, line 15

There is a discussion on allocation of funds. It is not clear who will be distributing the funds.

Page 1, line 19

It is suggested that the phrase "subject to a 50% match by each road service maintenance area" be deleted. If the phrase were added to section (b), line 22 it would clarify the intent.

Page _ line 18

We believe the municipality and not DOT&PF should be responsible for approving design standards. There could be legal ramifications with DOT&PF approving standards established by the municipality if problems occur.

Page 3, line 4

It is recommended that the reference to the "department" be deleted. Even though the language is permissive, we are not in a position to perform maintenance on geographically scattered off-system subdivision roads. The department is currently attempting to get out of local road maintenance and construction as a matter of policy. We also believe it would be cumersome and time-consuming to implement the process to receive revenue directly in the Regional maintenance budgets for services performed.

A rough estimate of the road miles eligible for funding under this bill was made. Depending on the interpretation of "municipality", the total mileage eligible under the bill as of right now could exceed 1900 miles. If a maintenance cost of $6,000 per mile is used, the total cost to the department could be several million dollars.

MEMORANDUM

TO: All Members
Senate Finance Committee

FROM: Senator Jan Faiks

RE: CSSB 315

DATE: February 10, 1984

At the Finance Committee meeting on February 7th on SB 315 several issues were raised. This memo is in response to those questions.

1. What is the average assessment of homes in the Hillside area?

Answer The average assessment of homes in South Anchorage, as well as areawide is $130,000.

2. What is the mil rate within the ARDSA (Anchorage Roads and Drainage Service Area)?

Answer In 1983 the mil rate was .6 in all of the ARDSA. In 1984 the mil rate is estimated to be 1.24.

3. What is the ratio of property taxes generated on homes versus taxes on businesses.

Answer Approximately 60% of property taxes come from residential dwellings and 40% from property taxes on businesses.

4. Some neighborhoods will not be able to afford even 50% of the cost of the improvements.

Answer The 50% match may be raised by an assessment on the entire service area or a mil rate levied on the houses on a particular street. The money may be accumulated over a five year period, so there would be an opportunity for a road maintenance service area to raise the money over an extended period of time.

5. What protections are in the bill to prevent new developers from applying for funding through this program?

Answer The purpose clause states that this funding is for existing subdivision roads. Also, the definition of

"construction" or "road improvement" says the funding is not for new construction.

6. How many miles of service roads are there in the various Senate districts.

Answer I have attached the pertinent pages from the FY 1983 State Revenue Sharing Entitlements for Municipalities. This will tell you how many miles of road in each borough or city received the $2500 per mile maintenance money. Please keep in mind that these figures are from FY 83 and the mileage has increased substantially in the past year.

STATE
of ALASKA

MEMORANDUM

TO: Sandy Stone
Senator Jan Faiks' Office

DATE: January 11, 1984

FILE NO:

TELEPHONE NO:

FROM: Doug Griffin, Local Gov't Specialist
Department of Community and
Regional Affairs
Division of Municipal and Regional Assistance

SUBJECT: Road Service Areas

Here is the information you requested on behalf of Senator Faiks regarding the number of road service areas within the State. This information assumes that the data provided to this Department by the municipalities is accurate.

Road Service Areas within Boroughs

Municipality of Anchorage	16
Bristol Bay Borough	1
Fairbanks North Star Borough	25
City and Borough of Juneau	8
Kenai Peninsula Borough	6
Ketchikan Gateway Borough	1
Kodiak Island Borough	2
Mat-Su Borough	9
North Slope Borough	0
City and Borough of Sitka	1
TOTAL	69
Road service Areas within Cities in the unorganized Borough	24
Road Service Areas Statewide	93

- Road Service Areas Statewide -

Alaska State Legislature

OFFICIAL BUSINESS

CHAIRMAN
RULES COMMITTEE

JAN FAIKS
POUCH V
CAPITOL BUILDING
JUNEAU, ALASKA 99811

Senate

MEMORANDUM

DATE: March 30, 1984

TO: Representative Bette Cato
Chair, House Transportation Committee

FROM: Senator Jan Faiks

RE: Senate Bill 315 (FIN)am S

Thank you for your prompt scheduling of Senate Bill 315 before the House Transportation Committee.

One of the reasons I decided to run for the state legislature two years ago was the horrendous condition of so many subdivision roads in South Anchorage. I found it hard to believe that nothing could be done about improving them other than a direct state appropriation to certain privileged roads. When I arrived in Juneau I discovered that the problem was not unique to Anchorage.

Last session I introduced SB 315 which would set up a statewide program to facilitate funding for existing subdivision roads. Under this bill the state will provide 50% of the costs of the improvements if the homeowners are willing to set up a road maintenance service area and assess themselves for the other 50% of the costs. Roads constructed under this program must be maintained by the service area and must meet minimum design standards established by the municipality.

Funding appropriated to this program will be distributed around the state on a pro rata basis among the eligible municipalities based on the total road mileage in each road maintenance service area. Money allocated to a municipality will be distributed on a first come, first serve basis within the municipality.

Since I feel this is one of my reasons for being in the Legislature, it is one of my top priorities. I have worked with the various Senate committees and it passed the Senate 17-1-1-1.

Please let me know if you have any questions or need any clarification.

Thank you.

ANALYSIS - CS SB 315

I. This bill proposes to provide grant funds to municipalities for road improvements of existing subdivision roads that are within newly created road maintenance service areas. The State would provide half the funding and the road maintenance service area would provide the other half on a matching basis.

Under this bill it is assumed that the Department of Transportation and Public Facilities (DOT&PF) would be required to do the following things:

a) Administer grants to municipalities applying for the road maintenance service area funds;

b) Review annual submittal of a five-year plan for road improvements to these service area roads and analyze them for logic, completeness and conformance to established boundaries;

c) Establish regulations to carry out the grant process;

d) Review and approve design standards for service area roads;

e) Prepare an annual report to the Governor showing how the funding for the preceding twelve months was used.

We assumed that the task of developing regulations for the grant process is a one-time effort and would occur in FY 85 only. All other tasks were assumed to be an annual cost. All costs are general fund costs.

OPERATING COSTS

A. One-time cost of developing and implementing program guidelines, criteria and regulations:

1.	Personal Services - 486 hours @ 26 dollars/hr. (Range 19)	= 12,636
2.	Travel and Per Diem -	= 2,500
3.	Attorney General's office time on regulations (10 hours @ $80/hr.)	= 800
	Subtotal	15,936

B. Annual Costs

1. Review design standards:

   Assume 20 sets of design standards @ $26/hr., 3 hrs. each = 1,560

2. Review of grant application costs

   Assume 20 applications, 8 hours each @ $26/hr. = 4,160

3. Review of five-year programs:

   Assume 20 programs, 5 hours each @ $26/hr. = 2,600

C. Prepare annual report:

1. 40 hours @ $26/hr. = 1,040

Subtotal $9,360

First year costs, $15,420
Continuing costs, 9,360/yr.

CAPITAL COSTS

A. Costs to upgrade, reconstruct, rehabilitate or pave existing eligible subdivision roads.

Estimated existing eligible mileage is 1500 miles. Estimate construction costs per mile, subdivision-type road, range from $75,000 to $300,000 depending on scope of work. For estimating purposes, we used $100,000 per mile.

1500 x $100,000 = $150,000,000 x 50% match = $75,000,000

Assuming 5 years for completion of initially eligible roads, capital costs per year would be 15 mill/yr.

COMMENTS ON CS SB 315

Page 1, line 14

It appears that the definition of "municipality" would preclude both the North Star Borough and the Kenai Borough from being eligible since they do not have road powers. This should be clarified.

Page 1, line 15

There is a discussion on allocation of funds. It is not clear who will be distributing the funds.

Page 1, line 19

It is suggested that the phrase "subject to a 50% match by each road service maintenance area" be deleted. If the phrase were added to section (b), line 22 it would clarify the intent.

Page 2, line 18

We believe the municipality and not DOT&PF should be responsible for approving design standards. There could be legal ramifications with DOT&PF approving standards established by the municipality if problems occur.

Page 3, line 4

It is recommended that the reference to the "department" be deleted. Even though the language is permissive, we are not in a position to perform maintenance on geographically scattered off-system subdivision roads. The department is currently attempting to get out of local road maintenance and construction as a matter of policy. We also believe it would be cumersome and time-consuming to implement the process to receive revenue directly in the Regional maintenance budgets for services performed.

A rough estimate of the road miles eligible for funding under this bill was made. Depending on the interpretation of "municipality", the total mileage eligible under the bill as of right now could exceed 1900 miles. If a maintenance cost of $6,000 per mile is used, the total cost to the department could be several million dollars.

ANALYSIS - CS SB 315

I. This bill proposes to provide grant funds to municipalities for road improvements of existing subdivision roads that are within newly created road maintenance service areas. The State would provide half the funding and the road maintenance service area would provide the other half on a matching basis.

Under this bill it is assumed that the Department of Transportation and Public Facilities (DOT&PF) would be required to do the following things:

a) Administer grants to municipalities applying for the road maintenance service area funds;

b) Review annual submittal of a five-year plan for road improvements to these service area roads and analyze them for logic, completeness and conformance to established boundaries;

c) Establish regulations to carry out the grant process;

d) Review and approve design standards for service area roads;

e) Prepare an annual report to the Governor showing how the funding for the preceding twelve months was used.

We assumed that the task of developing regulations for the grant process is a one-time effort and would occur in FY 85 only. All other tasks were assumed to be an annual cost. All costs are general fund costs.

A. One-time cost of developing and implementing program guidelines, criteria and regulations:

1. Personal Services:
   486 hours @ $26/hr. (range 19) =$12,636

2. Travel and Per Diem: = 2,500

3. Attorney General's office time on regulations
   (10 hours @ $80/hr.) = 800

   Subtotal $15,936

B. Annual Costs:

1. Review design standards:
   Assume 20 sets of design standards
   @ $26/hr., 3 hrs. each =$ 1,560

2. Review of grant application costs
   Assume 20 applicants, 8 hours each @ $26/hr. = 4,160

3. Review of five-year programs:
   Assume 20 programs, 8 hours each @ $26/hr. = 2,600

C. Prepare annual report:

1. 40 hours # $26/hr. =$ 1,040

Subtotal =$ 9,360

First year costs, $15,420
Continuing costs, 9,360/yr.

COMMENTS ON CS SB 315

Page 1, line 14

It appears that the definition of "municipality" would preclude both the North Star Borough and the Kenai Borough from being eligible since they do not have road powers. This should be clarified.

Page 1, line 15

There is a discussion of allocation of funds. It is not clear who will be distributing the funds.

Page 1, line 19

It is suggested that the phrase "subject to a 50% match by each road service maintenance area" be deleted. If the phrase were added to section (b), line 22 it would clarify the intent.

Page 2, line 18

We believe the municipality and not DOT&PF should be responsible for approving design standards. There could be legal ramifications with DOT&PF approving standards established by the municipality if problems occur.

Page 3, line 4

It is recommended that the reference to the "department" be deleted. Even though the language is permissive, we are not in a position to perform maintenance on geographically scattered off-system subdivision roads. The department is currently attempting to get out of local road maintenance and construction as a matter of policy. We also believe it would be cumbersome and time-consuming to implement the process to receive revenue directly in the Regional maintenance budgets for services performed.

A rought estimate of the road miles eligible for funding under this bill was made. Depending on the interpretation of "municipality", the total mileage eligible under the bill as of right now could exceed 1900 miles. If a maintenance cost of $6,000 per mile is used, the total cost to the department could be several million dollars.

STATE
of ALASKA

MEMORANDUM

TO: Sandy Stone
Senator Jan Faiks' Office

DATE: January 11, 1984

FILE NO:

TELEPHONE NO:

FROM: Doug Griffin, Local Gov't Specialist
Department of Community and
Regional Affairs
Division of Municipal and Regional Assistance

SUBJECT: Road Service Areas

Here is the information you requested on behalf of Senator Faiks regarding the number of road service areas within the State. This information assumes that the data provided to this Department by the municipalities is accurate.

Road Service Areas within Boroughs

Municipality of Anchorage	16
Bristol Bay Borough	1
Fairbanks North Star Borough	25
City and Borough of Juneau	3
Kenai Peninsula Borough	6
Ketchikan Gateway Borough	1
Kodiak Island Borough	2
Mat-Su Borough	9
North Slope Borough	0
City and Borough of Sitka	1
TOTAL	69
Road service Areas within Cities in the unorganized Borough	24
Road Service Areas Statewide	93

18th Total State

REPORT NO. 22

INTRODUCTION OF BILLS (Senate)

Road Improvement Districts

SENATE BILL NO. 315, by Senator Faiks. Provides for state grants to municipalities to "facilitate funding for the upgrading, reconstructing, rehabilitating, and paving of subdivision roads within a road improvement district established under AS 29.63 or under a charter of a home rule or unified municipality."

Each year a municipality would receive funds based on total road mileage in each road improvement district in that municipality, subject to a 50 percent match by each road improvement district. After establishing a road improvement district, a municipality could apply to the state for a grant as funds are available. The state could require a municipality to submit a yearly five-year plan for the upgrading, reconstructing, rehabilitating, and paving of improvement district roads. A municipality that receives funding would be required to make a yearly report showing the use of the money. Does not provide for an effective date (becomes law 90 days after the Governor's signature).

Introduced June 15 and referred to Transportation and Finance.

Interest Rates

SENATE BILL NO. 316, by the Labor & Commerce Committee. Amends laws governing maximum allowable interest rates in Alaska as follows:

--Amends AS 06.40.120(c) relating to the interest charged on premium financing agreements to allow a maximum of "two percent a month on that part of the balance of premiums due as does not exceed $10,000 and at a rate agreed by contract on the balance of premiums due exceeding $10,000." Currently the maximum rate is "the nominal rate of 15 percent plus an additional charge of $10 per premium finance agreement which need not be refunded upon cancellation or prepayment."

--Amends AS 09.55.440(a) relating to judgment interest to provide that a judgment include interest "at the rate of five percentage points above the annual rate charged member banks for advances by the 12th Federal Reserve District on the date of the judgment." Currently judgment interest is six percent a year.

--Amends AS 45.10.120(b) to increase maximum allowable interest charged on retail installment contracts. For balances of $10,000 or less rate would be 1-3/4%. For balances over $10,000, the interest rate would be agreed upon by contract (currently five-sixths of one percent on balances of $1,000 or less, and two-thirds of one percent on balances over $1,000).

--Amends AS 45.10.120(c) to increase maximum allowable interest

SB 311 (cont'd)

The State Affairs CS deletes: "Best known as the father of Alaska Statehood, Ernest Gruening fought to protect and wisely use Alaska's natural resources, while winning national acclaim as an ardent fighter for the rights of the individual and for efforts toward strengthening world peace." Remainder identical and would establish February 6 of each year as Ernest Gruening Day.

History: Introduced June 9, 1983 by Senator Vic Fischer and referred to State Affairs.

Road Improvement Districts

SENATE BILL NO. 315, (see page 941, 1983 report). Reported back to the Senate on January 18 by Transportation with the committee recommending it be replaced with a Transportation CS and a majority recommending do pass. Concurring: Moss (Chairman), Faiks and Gilman. To Finance.

The following is a summary of the bill, noting Transportation CS changes:

The original bill sought to facilitate funding for road maintenance of existing subdivision roads within a "road improvement district" established under AS 29.63 or under a local government charter. The Transportation CS changes wording to "road maintenance service area" throughout the bill to conform to terms used in AS 29.63.

Provides that each fiscal year eligible municipalities will receive state road improvement funds based on total road mileage in each "road maintenance service area" in the municipality, subject to a 50% match by each service area. CS adds: "The amounts which are available shall be distributed pro rata among eligible municipalities."

Changes provision which would have required municipalities to disburse funds based on a needs assessment. Transportation CS provides that money shall be disbursed on a first come, first service priority of applications.

Funds would be available for expenditure in a particular service area for a period of five years. After that, the money could be spent in other road maintenance service areas in the municipality, unless there are no other service areas, in which case the money would be returned to the state.

A municipality may apply to the state for road maintenance funds after it has established a road maintenance service area under AS 29.63, or under charter of home rule or unified municipality. The state may require the municipality to submit a five-year plan for the upgrading, reconstructing, rehabilitation, or paving of maintenance service area roads.

The municipality would be responsible for establishing design standards for construction in a road maintenance service area, and would administer construction of all projects. Requires that contracts entered into by a municipality for road projects funded

SB 315 (cont'd)

under this program be awarded only on the basis of the lowest responsible bid.

Maintenance of roads constructed under the program would be the responsibility of the road maintenance service area (responsibility of the municipality under the original version). A service area could contract with the state or with a local government for maintenance.

Municipalities receiving money must make an annual report to the state, by October 1, showing the use of the money during the preceding 12 months. The Dept. of Transportation and Public Facilities must, in turn, report to the Governor by December 1.

Definition of "construction or road improvement" includes utility and drainage costs but excludes financial costs, right-of-way costs, and new road construction.

History: Original bill was introduced June 15, 1983 by Senator Faiks and referred to Transportation and Finance.

Pacific Time Zone (changing statutory references)

SENATE BILL NO. 341, (see page 11). Reported back to the Senate on January 18 by State Affairs with the committee recommending it do pass. Concurring: Vic Fischer (Chairman), Ray, Rodey, Strugulewski and Kelly. To Judiciary.

Appropriation (supplemental) (operation of Legislature)

SENATE BILL NO. 348, (see page 16). Reported back to the Senate on January 19 by Finance with a majority of the committee recommending it be replaced with a CS and that it do pass. Concurring: Bennett (Co-Chmn.), Sackett, Vic Fischer, Ferguson, Faiks and Mulcahy. To Rules.

The Finance CS increases appropriation from $250,000 to $667,500, and lists the allocations as follows:

--Television coverage of Senate proceedings - $250,000
--Modular furniture for the pressroom - 42,500
--Senate Resources Committee for a lobbying effort to influence U.S. Senate action amending the Export Administration Act to all export of a limited amount of Alaska crude oil - 300,000
--operating expenses of the Senate Oil & Gas Committee - 75,000

Regulation of Religious Schools

SENATE BILL NO. 354, (see page 18). The five-day hearing notice rule was waived on January 16 so the bill could be heard in Judiciary. January 17 a Health, Education & Social Services referral was added. Reported back from Judiciary on January 19 with the committee recommending it be replaced with a CS and as follows: Ray (Chairman) and Ziegler signed "no recommendation"; Pettyjohn and Eliason signed "do pass." To Health, Education & Social Services.

SB 301 (cont'd)

designed to "enhance the furbearer population, increase the productivity of furbearer habitats, initiate useful furbearer research programs, and educate trappers consistent with the goal to provide for an optimum population of furbearers." The department could adopt regulations to administer the program. Legislative intent is that the appropriations made to the fund equal at least 50% of the fees collected for resident trapping licenses. The bill increases the resident trapping license fee (in AS 16.05.340(a)(3)(B)) from $3 to $10. Provides that money appropriated to the Furbearer Management Fund is for capitalization of a loan fund and does not lapse. Effective July 1, 1983.

The Resources CS makes the following changes:

--Updates the effective date from July 1, 1983 to January 1, 1985.

--Instead of creating a separate "Furbearer Management Fund" in the Dept. of Fish and Game, the Resources CS amends AS 16.05.130 (relating to uses of money received from the sale of sport fishing, hunting, and trapping licenses or permit fees) by adding: "Money accruing to the state from the sale of resident trapping licenses may only be used for furbearer management." Further directs the Department of Fish & Game to maintain a Furbearer Management Account within the Fish and Game Fund to separate accounting of receipt and expenditure of money from the sale of resident trapping licenses. Stipulates that "furbearer management shall be designed to enhance the furbearer population, increase the productivity of furbearer habitats, initiate useful furbearer research, and educate trappers consistent with the goal to provide for an optimum population of furbearers."

--Increases fee for resident hunting and trapping licenses from $15 to $22 (amends AS 16.05.340(a)(3)). Increases resident trapping license fee (AS 16.05.340(a)(4)) from $3 to $10. Increases resident hunting, trapping, and sportfishing license fee (AS 16.05.340(a)(6)) from $25 to $32.

Road Improvement Districts

SENATE BILL NO. 315, (see page 73). Reported back to the Senate on March 16 by Finance with the committee recommending it be replaced with a Finance CS and as follows: Bennett (Co-Chairman) and Faiks signed "do pass." Mulcahy and Josephson signed "no recommendation." To Rules.

The Finance CS makes the following changes to the Transportation CS:

--Makes effective date of July 1, 1984.

--Makes basic language clean-up, rearranging paragraphs and changing wording where necessary to improve clarity.

--Changes "under a charter of a home rule or unified municipality" to "under a home rule charter" throughout. Redundant--a unified municipality operates under a home rule charter.

--Municipalities would be required to submit a five-year plan for

SB 315 (cont'd)

the upgrading, reconstructing, rehabilitating, or paving of maintenance service area roads for approval before October 1 of each fiscal year. Under previous version, the five-year plan was not mandatory, but could be required by the Department of Transportation & Public Facilities.

--Rewrites (b) under section on eligibility to read: "A municipality shall [, SUBJECT TO APPROVAL OF THE DEPARTMENT,] establish design standards for construction in a road maintenance service area. An application for a grant for improving an existing road under this section may not be granted by the department until the existing road meets the minimum design standards of the municipality." (Bracketed material deleted from Transportation CS, underlined material added.)

Agric. Loan Act (amending)

SENATE BILL NO. 342, (see pages 11;244). Reported back to the Senate on March 13 by Finance with the committee recommending it be replaced with a Finance CS and the majority signing do pass. Concurring: Bennett (Co-Chairman), Sackett and Mulcahy. Ferguson and Vic Fischer signed "no recommendation." To Rules.

The Finance CS changes provision in Sec. 3 relating to extending the term of short term loans (see p. 245). Under Finance CS the term could only be extended for up to three years. Remainder identical to the Resources version.

Appropriation (supplemental) (Legislators' salaries)

SENATE BILL NO. 365, (see page 70). Reported back to the Senate on March 15 by Finance with the committee recommending do pass. Concurring: Bennett (Co-Chairman), Sackett, Vic Fischer, Mulcahy, Faiks and Josephson. To Rules.

Land Disposal & Management

SENATE BILL NO. 375, (see page 115). Reported back to the Senate on March 13 by Resources with the committee recommending it be replaced with a Resources CS and the majority signing "do pass." Concurring: Fahrenkamp (Chairman), Vic Fischer, Eliason and Ziegler. Mulcahy signed "no recommendation." To Finance.

The Resources CS includes several new sections. New sections 3, 17, 34, 40, 47, 65, 66, 72-75, and 77 amend various state land laws to reflect passage in 1983 of SB 41, which awarded the University of Alaska ownership and management of certain state lands. References to "university" land are deleted or appropriately amended, and provisions are added to AS 38.04 and 38.05 specifically stating that those laws do not apply to land owned by the Board of Regents of the University of Alaska.

Also contains provisions of SB 344/HB 455 relating to title defects in state lands. Those provisions would be effective immediately (rather than July 1, 1984, as is rest of bill) and are contained in Secs. 18, 34 and 41.

Further amends AS 38.05.050 to eliminate requirement that land disposals be held in a community "in which regular sessions of a

CS FOR SENATE BILL NO. 370 (Transportation) am

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act authorizing the acquisition of the Alaska Railroad; authorizing the governor to negotiate the transfer terms; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. ACCEPTANCE OF CERTIFICATION REQUIREMENTS OF ALASKA RAILROAD TRANSFER ACT OF 1982. The state accepts, for itself and any entity that might subsequently be created to operate the Alaska Railroad, the certification requirements under 45 U.S.C. 1201 - 1214 (Alaska Railroad Transfer Act of January 14, 1983). Accordingly, the state agrees to

(1) acquire the Alaska Railroad and accept all rail property of the Alaska Railroad under 45 U.S.C. 1203(a) ~~as described in the report of July 14, 1983, as amended, submitted to Congress and the legislature under 45 U.S.C. 1204(a);~~

(2) operate the Alaska Railroad as a rail carrier in intrastate and interstate commerce;

(3) assume all rights, liabilities, and obligations of the Alaska Railroad existing on the date of transfer to the state, including leases, permits, licenses, contracts, agreements, claims, tariffs, accounts receivable, and accounts payable, except as otherwise provided by 45 U.S.C. 1201 - 1214;

(4) protect the employment interests of the employees of the Alaska Railroad during the two-year period commencing on the date of transfer, as required by 45 U.S.C. 1203(d)(3)(A) and 45 U.S.C. 1206;

(5) protect the employment interests of the officers of the

Alaska Railroad as required by 45 U.S.C. 1203(d)(3)(E);

(6) allow representatives of the United States Secretary of Transportation adequate access to employees and records of the Alaska Railroad when needed for the performance of functions related to the period of federal ownership; and

(7) compensate the United States at the value determined by the United States Railway Association under 45 U.S.C. 1204(d).

* Sec. 2. (a) The governor may enter into transfer agreements, compensation agreements, and any other related agreements with the United States Secretary of Transportation in order to secure certification by the secretary that the state has met the requirements of 45 U.S.C. 1203 and in order to secure the transfer of the Alaska Railroad to the state of the rail properties of the Alaska Railroad as described in the report of July 14, 1983, as amended, submitted to Congress and the legislature under 45 U.S.C. 1204(a).

(b) Transfer of the Alaska Railroad shall not occur until after the effective date of an Act establishing or otherwise providing for an entity to operate the state-owned railroad.

* Sec. 3. DEFINITIONS. In this Act, unless the context clearly indicates otherwise,

(1) "Alaska Railroad" means the agency of the United States Government that is operated by the U.S. Department of Transportation as a rail carrier in Alaska under authority of 43 U.S.C. 975 - 975(g) (Alaska Railroad Act) and 49 U.S.C. 1655(i) (Department of Transportation Act) or, as the context requires, the railroad operated by that agency;

(2) "certification requirements" means the conditions under 45 U.S.C. 1203 that the United States Secretary of Transportation must certify as having been satisfied by the state before transfer of the Alaska Railroad to the State of Alaska may occur under 45 U.S.C. 1203(a);

(3) "compensate" means payment in full or by credit agreement with cash or pledged funds;

(4) "officers of the Alaska Railroad" means the employees occupying the following positions at the Alaska Railroad as of the day before the date of transfer to the state: general manager; assistant general manager; assistant to the general manager; chief of administration; and chief counsel.

* Sec. 4. This Act takes effect immediately in accordance with AS 01.-10.070(c).

BILL SHEFFIELD
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

January 24, 1984

The Honorable Jalmar Kerttula
President of the Senate
Pouch V
Juneau, AK 99811

Dear Senator Kerttula:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill that will authorize the state to acquire the Alaska Railroad. The bill is required so that the certification process mandated by the Alaska Railroad Transfer Act (ARTA; P.L. 97-468) can be effected. Once this certification process is completed, acquisition of the railroad can occur as soon as practicable.

The bill essentially says that the state agrees to meet the transfer conditions set out in the Transfer Act. A more detailed analysis of the bill follows:

Section 1 says that the state agrees to the transfer conditions set out in the Alaska Railroad Transfer Act. Specifically, these points of agreement are as follows:

1) The state agrees to acquire all the rail property of the railroad.

2) The state agrees to operate the railroad as a rail carrier in intrastate and interstate commerce.

3) The state agrees to assume all rights, liabilities, and obligations of the railroad that exist on the date of transfer.

4) The state agrees to protect the employment interests of the railroad employees as required by sec. 604(d)(3)(A)(i) -- (vii) and sec. 607 of ARTA.

5) The state agrees to protect the employment interests of the officers of the railroad as required by sec. 604(d)(3)(E) of ARTA.

6) The state agrees to allow the Secretary of Transportation access to employees and records of the Alaska Railroad.

7) The state agrees to compensat the United States at the appraisal value that was determined by the United States Railway Association.

Section 2 authorizes the governor to enter into the various transfer agreements that relate to the points listed above and that will be required in order to secure certification of compliance with the Transfer Act and thus to secure the transfer of the railroad.

Section 3 defines certain terms used in the bill.

Section 4 provides for an immediate effective date.

I urge your favorable action on this bill as soon as possible so that the transfer of the ownership of the Alaska Railroad to the state can become a reality.

Sincerely,

Bill Sheffield

Bill Sheffield
Governor

SENATE LETTER OF INTENT

CSSB 370(Trsp) am

It is the intent of the Legislature that the Department of Transportation and Public Facilities shall hold a public hearing in each of the communities affected along the proposed right-of-way corridor established under 16 U.S.C. 410hh (4)(b)-(e) known as the Western (Kobuk River) unit of the Gates of the Arctic National Park, before proceding with any proposed railroad into the Ambler Mining District.

ANALYSIS CSSB 389 - SECTION 1

1. Would increase the maintenance and operations budget for the Department.

2. Fiscal impact on new programs or activities: Unknown

3. Cost estimate prepared by Design and Construction based on data provided from project design; Departmental M&O standard costs based on $5,500 per lane mile (12 ft. widths -- approximately 2 miles)

4. This project would fund:

   a. Construction of a bridge over the Kenai River.

   b. Construct a road from bridge to Funny River Road (South) and from the bridge to Scout Lake Road (North).

   Cost estimate includes Design Completion (bridge design completion, materials work, and specifications update), ROW, Utilities, and Construction.

Analysis - CSSB 389 - Section 2

The cost estimate was provided by the DOT&PF Bridge Design Section, and would construct sheet pile abutments to protect the bridge between the village and the airport from storm damage.

DETAILS:

Sheet pile abutment and bank protection		$430,000
Backfile		45,000
Move existing bridge		20,000
Gabion Energy Dissapators		15,000
Mobilization		100,000
		$610,000
Preliminary engineering & construction		140,000
	TOTAL	$750,000

REPRESENTATIVE HUGH MALONE

APR 16 1984

April 16, 1984

TO: Representative Bette Cato
Chair - House Transportation Committee

FROM: Representative Hugh Malone

SUBJECT: SB 389

The Kenai River/Funny River Bridge project is one that has been identified by local and state authorities for over 20 years. It has been documented by community need and economic factors in attached pages from the Kenai Regional Transportation Study, published by DOT/Pf and jointly prepared by DOT/Pf, Kenai Peninsula Borough and the Cities of Soldotna, Kenai, Homer, Seward, Seldovia, etc.

Salient features are as follows:

1. Provide access to a large area on the southeast side of the Kenai River. Borough tax records show approximately 200 families with 576 persons in the area. Assess is currently in the 17-mile Funny River Road following the Kenai River from Soldotna.

   A large portion of Funny River Road passes through federal land of the Kenai Wildlife Refuge (formerly the Kenai National Moose Range). The road was constructed many years ago to minimum access standards and poses grave safety problems due to its narrow width and current high traffic levels. Accidents are frequent (see attached Peninsula Clarion article). School buses have a treacherous time in the severe weather conditions during winter and break up. Routing keeps children on the buses far longer than necessary.

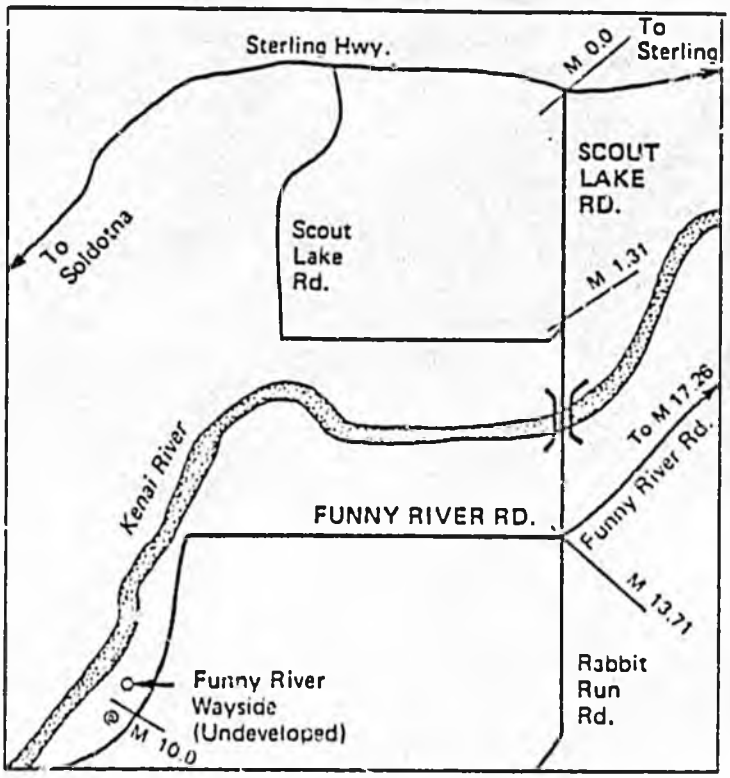
2. The Bridge project is far more cost effective and removes much of the need for upgrade and realignment of Funny River Road. The project cost is under $6 million while DOT/Pf's cost estimates of reconstructing for the 17 miles of the road run as high as $1 million per mile.

3. Provides faster and improved ambulance, fire and public safety access to families on the south side of Kenai River by allowing emergency vehicles to use the paved Sterling Highway and cross the Kenai River toward the end of Funny River Road. Residential fires are frequently terminal since heavy fire equipment makes very slow progress over the 17 miles of narrow, icy and potholed road.

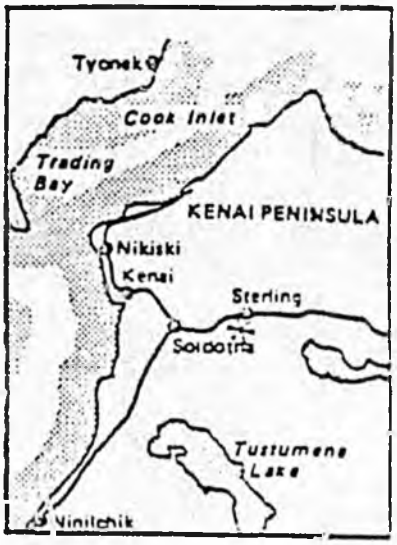
4. Provides access for residents of the southern side of Kenai River to:
   - Sterling Elementary School, grades K - 6.
   - Business area of Sterling.
   - Access to paved Sterling Highway for faster, safer travel either toward Anchorage or Soldotna.

5. Provides general public access to under-utilized state park lands on the southeast side of Kenai River, helping to solve access problem to the river and to disperse the immense fishing crowds over a wide variety of sites.

Actions on this Bridge/Road project are as follows:



1. 1980 - Appropriation for reconnaissance.
2. 1981 - Appropriation for design.
3. 1982 - Included in bond package which was vetoed by Governor.
4. Included in Sheffield 1983 Administrative Budget (DOT/Pf) which was submitted to legislature.



The bridge has identified as #14 on the Kenai Peninsula Transportation Plan. Since the development of that plan, 10 of the 14 projects have been completed, are under contract or adopted as municipal projects, moving this project up to number 4 on the priority list.

Thank you.

Project No. 14

FUNNY RIVER (SR 117300)/BRIDGE/SCOUT LAKE (SR 118700)

Capital Cost:

$ 8.4 million

Funny River: 1980 ADT =225

Scout Lake: 1980 ADT = 200

Existing Condition: Scout Lake Mile 0.0 (E. Jct. Sterling Hwy) to Mile 1.31 (Jct. improved road to river): Gravelled 22' surface, no shoulders. Funny River Mile 10 to Mile 17.26 (End of route): Gravelled 26' surface.

Proposed Physical Improvement: Phase I: Scout Lake (Sterling Hwy to Funny River Rd); Widen to 36', pave. Construct 26'-wide bridge, boat ramp and parking area next to bridge. Phase II: Funny River: Mile 13.71 to Mile 17.26: Widen to 36', pave. Phase III: Funny River: Mile 10 to Mile 13.71: Widen to 36', pave.

Project Alternatives: Improve Funny River Rd., Mile 0.0 (Jct. Sterling Hwy) to Mile 17.26 (End of route) to 28' rural paved standard.

Status: DOT/PF has completed Scout Lake Rd. and bridge design. Funding for project requested in DOT/PF's Central Region, FY 83 CIP.

Next Step Prior to Construction: Final design and permits for Funny River Rd., Mile 10 to Mile 17.26 and parking area.

Factors Affecting Development: Need parking area maintenance agreement with DNR-Div. of Parks

Relation to Other KRTS Projects: None

Cost - 5,672

*Projects are listed alphabitically and not order of priority

HIGH PRIORITY PROJECTS

The high priority project list consists of 1) ongoing, 2) current needs and 3) the higher ranked future projects. This list is shown in Table III-4, and detailed descriptions of each of these projects are included at the end of this chapter. In addition, the general location of each High Priority project is shown in Figure III-3.

The higher ranked projects were the subject of both quantitative and qualitative evaluations. While these evaluations provided valuable information on each project, the evaluations were not the sole criterion for placing or keeping a project on the high priority list. In fact, the Technical Advisory and Steering Committees made the final decisions on placements in the high priority group.

High Priority Project Descriptions

The following descriptions are intended to provide the information and data needed for DOT/PF's capital improvement programming (CIP) decisions. Thus, they represent a "resource" from which DOT/PF can select projects for its annual CIP submission to the Governor.

Each of the following projects are numbered to coincide with those shown earlier in Table III-4. Also the project names are those from the DOT/PF Coordinated Data System (CDS) log--when the popular name differs from the CDS designation, it is added to the CDS name and number.

Most of these roads have been recognized and scheduled for improvement by DOT/PF, by the Borough or by the cities. Thus, the traffic capacity/use analyses in the Phase II report served mainly to confirm their overloaded condition. Table II-3 identifies facilities below the minimal level of service for this project.

FUTURE NEEDS

Community Development Goals

During Phase II of the KRTS study, a large list of projects was proposed by the general public and elected and appointed officials during the initial round of public meetings. Many of these facilities are on-going or below minimal level of service facility projects which are included in Tables II-1 and II-2 above. The remaining projects included both regional and local projects on the state-maintained system. See Table II-4 for these community preferred projects which were presented in the Phase II report and repeated here. Note that Table II-4 still includes projects previously included in the On-going (Tables II-1 and II-2) and Facility Projects not meeting a minimal level of service (Table II-3).

Economic Development Requirements

Projects were identified for this category through the Phase II evaluation of regional economic development potentials. The primary criteria for inclusion on this list was a demonstrable potential for development that would warrant DOT/PF's attention at this time. See Table II-5 which was taken from the Phase II report and still includes projects listed in the On-going (Tables II-1 and II-2) and Facility Projects not meeting a minimal level of service (Table II-3).

Peninsula Clarion

THURSDAY, Feb. 16, 1984 Vol. 14, Issue 99 © The Peninsula Clarion/U.S.P.S. 438-410

Former chief Wisecarver dies in crash

Frank Wisecarver, the first fire chief for the city of Kenai, died Wednesday afternoon in a head-on collision on Funny River Road.

The collision also seriously injured a 19-year-old Soldotna man.

Wisecarver, 59, was the chief of the city's volunteer fire department in the mid-1960s and served as the first chief when the department converted to a paid force. He left the department in 1975.

The accident occured at Mile 11 Funny River Road at about 1 p.m.

According to an Alaska State Troopers report, Elmer (Roy) Bird of Soldotna was driving his car toward Soldotna on Funny River Road when his car apparently crossed the center line as it was coming around a curve. It struck Wisecarver's truck head-on.

Wisecarver was pronounced dead on arrival at Central Peninsula General Hospital. An Emergency Services medic said Bird suffered rib cage injuries, broken bones and possible internal injuries. He was taken to the hospital, where he is recovering in intensive care.

Kenai Fire Department Capt. Don Morgan remembered Wisecarver as "probably the best thing to happen to the Kenai Fire Department. He was highly respected by the guys he worked with, and was a personal friend, too."

Re: Kenai River Bridge Access Feasibility Design Project No. X-14615

Dear Governor Sheffield:

I'm sure by the enclosed petitions that you've determined that many residents of Alaska including our visitors want the Kenai River Bridge access to Funny River Road.

There are several reasons that necessitate the bridge being built immediately. Please consider the following priorities:

1. Alleviation of the crucial eviromental impact on the Lower Kenai River.
2. Allow feasible access for the emergency services of State Trooper assistance, fire and ambulance service.
3. Ending the necessity of driving a dusty or icy pothole ridden secondary highway system which presently has an average daily road count of 416 cars, established from a November 1981 road count.
4. Provide access for agricultural and further tourism development by cutting the time of travel to and from Anchorage by at least 2 hours.
5. Provide access for the development of the Nilnunga State Historic Park (42.47 acres) and the State Funny River Recreation area (218 acres) which also fronts the Kenai River.

The benefit list is endless in providing bridge access to this recreationa paradise that boasts the Kenai River, Browns Lake, Killey River, Funny River, public horse trail and abundant wildlife. Please give your support

Thank you for taking time out of your day to recognize a need of Alaskans.

Further petitions will be forthcoming.

Sincerely,

Patricia Ann Lazer,
Sales Associate
Specializing in Funny River
and Kenai River areas

Memorandum

To: Senator Pappy Moss
Chairman, Senate Transportation
Committee

From: Senator Don Gilman

The Kenai River/Funny River Bridge project is one that has been identified by local and state authorities for over 20 years. It has been documented by community need and economic factors in attached pages from the Kenai River Transportation Study, published by DOT/PF and jointly prepared by DOT/PF, Kenai Peninsula Borough and the Cities of Soldotna, Kenai, Homer, Seward, Seldovia, etc.

Salient features are as follow:

1. Provides access to a large area on the southeast side of the Kenai River. Borough tax records show approximately 200 families with 576 persons in the area. Access is currently on the 17-mile Funny River Road following the Kenai River from Soldotna.

   A large portion of Funny River Road passes through federal land of the Kenai Wildlife Refuge (formerly the Kenai National Moose Range). The road was constructed many years ago to minimum access standards and poses grave safety problems due to its narrow width and current high traffic levels. Accidents are frequent (see attached Peninsula Clarion article). School buses have a treacherous time in the severe weather conditions during winter and break up. Routing keeps children on the buses far longer than necessary.

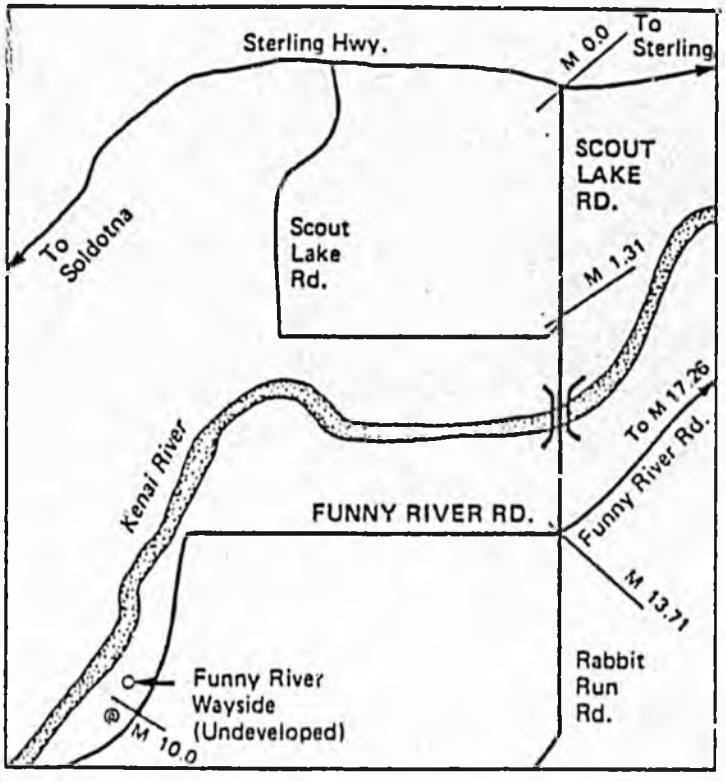
2. The bridge project is far more cost effective and removes much of the need for upgrade and realignment of Funny River Road. The project cost is under $6 million while DOT/PF's cost estimates of reconstructing for the 17 miles of the road run as high as $1 million per mile.

3. Provides faster and improved ambulance, fire and public safety access to families on the south side of Kenai River by allowing emergency vehicles to use the paved Sterling Highway and cross the Kenai River toward the end of Funny River Road. Residential fires are frequently terminal since heavy fire equipment makes very slow progress over the 17 miles of narrow, icy and potholed road.

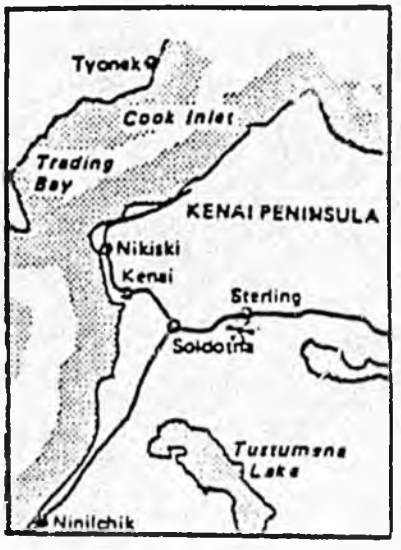
4. Provides access for residents of the southern side of Kenai River to:

    - Sterling Elementary School, grades K - 6.
    - Business area of Sterling.
    - Access to paved Sterling Highway for faster, safer travel either toward Anchorage or Soldotna.

5. Provides general public access to underutilized state park lands on the southeast side of Kenai River, helping to solve access problem to the river and to disperse the immense fishing crowds over a wide variety of sites.



Actions on this Bridge/Road project are as follows:



1. 1980 - Appropriation for reconnaissance.
2. 1981 - Appropriation for design.
3. 1982 - Included in bond package which was vetoed by Governor.
4. Included in Sheffield 1983 Administrative Budget (DOT/PF) which was submitted to legislature.

The Bridge was identified as #14 on the Kenai Peninsula Transportation Plan. Since the development of the plan, 10 of the 14 projects have been completed, are under contract or adopted as municipal projects, moving this project up to number 4 on the priority list.

High Priority Project Descriptions

The following descriptions are intended to provide the information and data needed for DOT/PF's capital improvement programming (CIP) decisions. Thus, they represent a "resource" from which DOT/PF can select projects for its annual CIP submission to the Governor.

Each of the following projects are numbered to coincide with those shown earlier in Table III-4. Also the project names are those from the DOT/PF Coordinated Data System (CDS) log--when the popular name differs from the CDS designation, it is added to the CDS name and number.

Most of these roads have been recognized and scheduled for improvement by DOT/PF, by the Borough or by the cities. Thus, the traffic capacity/use analyses in the Phase II report served mainly to confirm their overloaded condition. Table II-3 identifies facilities below the minimal level of service for this project.

FUTURE NEEDS

Community Development Goals

During Phase II of the KRTS study, a large list of projects was proposed by the general public and elected and appointed officials during the initial round of public meetings. Many of these facilities are on-going or below minimal level of service facility projects which are included in Tables II-1 and II-2 above. The remaining projects included both regional and local projects on the state-maintained system. See Table II-4 for these community preferred projects which were presented in the Phase II report and repeated here. Note that Table II-4 still includes projects previously included in the On-going (Tables II-1 and II-2) and Facility Projects not meeting a minimal level of service (Table II-3).

Economic Development Requirements

Projects were identified for this category through the Phase II evaluation of regional economic development potentials. The primary criteria for inclusion on this list was a demonstrable potential for development that would warrant DOT/PF's attention at this time. See Table II-5 which was taken from the Phase II report and still includes projects listed in the On-going (Tables II-1 and II-2) and Facility Projects not meeting a minimal level of service (Table II-3).

Former chief Wisecarver dies in crash

Frank Wisecarver, the first fire chief for the city of Kenai, died Wednesday afternoon in a head-on collision on Funny River Road.

The collision also seriously injured a 19-year-old Soldotna man.

Wisecarver, 59, was the chief of the city's volunteer fire department in the mid-1960s and served as the first chief when the department converted to a paid force. He left the department in 1975.

The accident occured at Mile 11 Funny River Road at about 1 p.m.

According to an Alaska State Troopers report, Elmer (Roy) Bird of Soldotna was driving his car toward Soldotna on Funny River Road when his car apparently crossed the center line as it was coming around a curve. It struck Wisecarver's truck head-on.

Wisecarver was pronounced dead on arrival at Central Peninsula General Hospital. An Emergency Services medic said Bird suffered rib cage injuries, broken bones and possible internal injuries. He was taken to the hospital, where he is recovering in intensive care.

Kenai Fire Department Capt. Don Morgan remembered Wisecarver as "probably the best thing to happen to the Kenai Fire Department. He was highly respected by the guys he worked with, and was a personal friend, too."

Re: Kenai River Bridge Access Feasibility Design Project No. X-14615

Dear Governor Sheffield:

I'm sure by the enclosed petitions that you've determined that many residents of Alaska including our visitors want the Kenai River Bridge access to Funny River Road.

There are several reasons that necessitate the bridge being built immediately. Please consider the following priorities:

1. Alleviation of the crucial eviromental impact on the Lower Kenai River.
2. Allow feasible access for the emergency services of State Trooper assistance, fire and ambulance service.
3. Ending the necessity of driving a dusty or icy pothole ridden secondary highway system which presently has an average daily road count of 416 cars, established from a November 1981 road count.
4. Provide access for agricultural and further tourism development by cutting the time of travel to and from Anchorage by at least 2 hours.
5. Provide access for the development of the Nilnunga State Historic Park (42.47 acres) and the State Funny River Recreation area (218 acres) which also fronts the Kenai River.

The benefit list is endless in providing bridge access to this recreationa paradise that boasts the Kenai River, Browns Lake, Killey River, Funny River, public horse trail and abundant wildlife. Please give your support

Thank you for taking time out of your day to recognize a need of Alaskans.

Further petitions will be forthcoming.

Sincerely,

Patricia Ann Lazer,
Sales Associate
Specializing in Funny River
and Kenai River areas

M. A. "DUSTY" RHOADS

3-31-84

Dear Rep. Cate

Pls, please the enclosed Mail-out letter, for post. date about the ~~Trump Bill~~ at this time. Hundreds of people have to drive up here, 1 hr round trip, for Supplies, Medicine, Mail, Come School & Dr appointments. Jenny & Rex (Campers & Wilderness both recently on various times during the winter.)

Do/Maintenance should instead they can be kept more efficient w/the bridge. But, then would the bridge then make to succeed our time efficiently.

But if Rex gave the bridge on under to bring the public to St Paul Island on the So/Side of the Kenai R. in order to Lease Jane Pitts Cottage on the No Side.

Could go on & on about the positive results (by the bridge) that they should be apparent. Pls, accept the fact of Hearing!

"THINK ALASKA, . . . SEE ALASKA, . . . Buy Alaska!"

Buy Alaska

M. A. "DUSTY" RHOADS

Dear Neighbor, March 7, 1984

The purpose of this letter is to make you aware of and ask your support for Senate Bill #389 & House Bill #660. These are bills sponsered by Sen. Gilman & Rep. Malone for $5.5 million to construct the Funny River Access Bridge near Sterling.

The site and right of ways have all been engineered, the Corps of Engineers Permit obtained and the bridge design is in final stages. If this legislature appropriates the funds the Dept. of Transportation can complete final design and begin Right of Way acquisition this fall and winter in order to 'go to bid' in early 1985 and begin construction that year.

Our Borough Mayor and Assembly are adding this project to the Capital Projects Priority List and pledging to support our representatives in Juneau for this funding.

Now it is up to us that live, work and/or own businesses or property in the Funny River/Sterling area. We must make our phone calls, write letters and send petitions to our Senators, Representatives and Governor expressing support and the need for this funding and project. Mail all notes and letters for the Governor to Pouch A, Juneau 99811, and Pouch V, Juneau 99811 for our Senators and Representatives.

Mayor Thompson has advised that the Legislative Affairs Office, located in the Cordova Bldg., Soldotna, 262-9364, can keep you up to date on the progress of the bill and suggested we make use of the weekly Teleconference, Thursday nights between 7:00-8:00PM, to speak directly with Juneau.

HPEA has indicated that there are approx. 200 meter services in the Funny River area so calculating a conservative 50 percent to be absentee owners from other areas such as Anchorage and using the average family of four as a factor, the Funny River population is approx. 20[illegible] more.

In closing, there are many obvious benefits for the residents of Funny River, the business community of Sterling and absentee property owners in the area. Again, I urge you to take a few moments and write a note to your congressmen. If we all will, the bridge won't be 'just talk', it will become reality.

Sincerely yours,

M.A. "Dusty" Rhoads

February 23, 1984

M. A. Rhoads
P.O. Box 4585
Soldotna, AK 99669

Dear Dusty:

Good luck in your efforts to secure funding for a bridge across the Kenai River in the Sterling area. Homer Electric Association very definitely is in support of this effort. There are approximately 198 electric meters in the Funny river area that are served by HEA. The feeder lines for this area cross the Kenai River near Sterling, in the event of an outage it sometimes means a trip out to Funny River to locate and correct the problem then a trip from Funny River through Soldotna to Sterling to actually restore the service. Our routine service work could be routed much more efficiently with the installation of this bridge.

Hope this information will be of some help.

Very truly yours,

Eugene R. Collins

IV. Analysis

The reconstruction of Petersville Road to a standard 28 foot wide gravel road was separated into two road segments for cost estimation purposes. The two road segments are:

1. MP 7 - 19
2. MP 19 - 36 (end of State maintenance)

The segment of the road for MP 0 - 7 is currently constructed to a 28 foot width.

The estimated costs of this project in FY'83 dollars are as follows:

	MP 7 - 19	MP 19 - 36	Total
Preliminary Engineering	$ 675,000	$ 1,309,000	$ 1,984,000
Right-of-Way	100,000	100,000	200,000
Construction	13,715,000	26,615,000	40,330,000
Total	$14,490,000	$28,024,000	$42,514,000

All costs are assumed to inflate at 10% per year over the development of the project.

The preliminary engineering is assumed to require 42 months and was allocated as follows:

	MP 7 - 19	MP 19 - 36	Total
FY'84	$250,000	$500,000	$750,000
FY'85	250,000	500,000	750,000
FY'86	250,000	500,000	750,000
FY'87	78,000	96,000	174,000

Right-of-way acquisition was assumed to be completed in FY'87 and was allocated as follows:

	MP 7 - 19	MP 19 - 36	Total
FY'87	$146.4	$146.4	$292.8

The construction phase was assumed to be completed during FY'87 and FY'88 and was allocated as follows:

	MP 7 - 19	MP 19 - 36	Total
FY'87	$12,000,000	$22,000,000	$34,000,000
FY'88	8,888,100	18,663,700	27,551,800

SCR 5: Background

Senator Kerttula sponsored SCR 5, requesting an upgrade of the Petersville road, in an effort to encourage the Department of Transporation and Public Facilities to improve the road. Petersville Road is a state maintained road that extends approximately 20 miles west from the Parks Highway near Talkeetna into an area just south of Denali National Park.

The Department of Natural Resources has conducted homesite, subdivision and agricultural land disposals in the area. In order for the owners of the property to have appropriate access to their land, the road should be improved.

At present, the road is in reasonable condition in the first 7 miles. However, it deteriorates rapidly and is in poor condition for the next 12 to 13 miles.

Attached are the minutes of the Senate Transportation Committee meeting of March 17 at which this resolution was considered. The discussions at this meeting appropriately capture the rationale of this resolution.

Also attached is a petition from property owners in the area served by the Petersville Road requesting that it be upgraded.

SCR

6

SCR 6: Background

SCR 6, sponsored by Senator Kerttula, requests the Department of Transportation and Public Facilities to assign a high priority to the upgrade of the Old Glenn Highway between the Knik River and the City of Palmer. Senator Kerttula also suggests that funds directed to the State of Alaska by the Federal Highway Administration be used for this upgrade. Proposed improvements would include straightening the road; purchase and readjustment of the right of way; planning and replacement of the bridge spanning the Matanuska River; and resurfacing the highway.

In the early 1970's the Knik River flooded and badly damaged the roadway. As a result of this flooding, the state constructed a dike that would protect the highway in the event of future flooding. However, the highway itself has not been paved or upgraded since the early 1960's and is in deplorable condition. Some 450 residents of the Matanuska-Susitna Borough who live along the Old Glenn have stated precisely this in a petition requesting its upgrade (attached).

Attached is a copy of the minutes of the Senate Transportation Committee hearing of March 17 at which SCR 6 was considered. Senator Kerttula's comments at this hearing are relevent to consideration of this bill.

IV. Analysis

The estimated costs of this project in FY'83 dollars are as follows:

Preliminary Engineering	$ 327,000
Right of Way Acquisition	111,000
Construction	6,813,000

All costs are assumed to inflate at 10% per year.

The preliminary engineering is assumed to require 42 months and was allocated as follows:

FY'84	$100,000
FY'85	100,000
FY'86	100,000
FY'87	104,700

The Right of Way acquisition was assumed to occur in FY'87 at a cost of $162,500.

The construction phase was assumed to last 2 years and was allocated as follows:

FY'87	$5,000,000
FY'88	5,472,400

The Old Glenn Highway is designated as a Federal-Aid Secondary route, however this analysis assumes that project funding would be from the State General Fund. If federal funding was used approximately 90% of the project costs would be eligible for federal funding. This analysis also assumes that replacement of the bridge across the Matanuska River is not included in the project.

WHEREAS THE OLD GLENN HIGHWAY FROM THE KNIK RIVER BRIDGE TO THE CITY OF PALMER IS IN AN UNSAFE, DEPLORABLE CONDITION FOR THE HEAVY TRAFFIC LOAD AND
WHEREAS THE POPULATION DENSITY IS INCREASING RAPIDLY IN THIS AREA,
WE THE UNDERSIGNED VOTERS OF THE MATANUSKA-SUSITNA BOROUGH HEREBY PETITION THE STATE OF ALASKA TO RECONSTRUCT THIS HIGHWAY TO SAFE MODERN STANDARDS FROM THE KNIK RIVER BRIDGE TO PALMER AS SOON AS POSSIBLE.

SCR

7

BACKGROUND INFORMATION: SB 6/SCR 7

SB 6 appropriates $39 million for extension of the four lane Parks/Glenn Highway across the Eklutna Flats. SCR 7 directs the Department of Transportation and Public Facilities to assign a high priority to the four lane extension and to utilize Federal Highway Administration matching funds for that purpose.

The Parks/Glenn Highway north out of Anchorage is one of the most heavily traveled roads in Alaska. It is the only road to travel north beyond Eklutna. The Matanuska-Susitna Borough is the most rapidly growing area of the state settled by persons who wish to live in the country but still commute to Anchorage for employment. In 1981, the average daily traffic on the highway at Mirror Lake was 8,456 each way, north and south. In 1983, the average daily traffic count was 13,664 - an increase of 61.6% over 1981 traffic figures.

The four lane highway that extends from Anchorage to Eklutna is able to handle this traffic pressure. However, significant problems arise when the four lanes are reduced to two as the Parks/Glenn crosses the Eklutna Flats to the Palmer-Wasilla "Y". The intersection of the four lane section of the highway with the present two lane funnels traffic. When road conditions are poor, during winter months, this is the scene of several accidents each year, primarily autos sliding off the road. At present this cannot be demonstrated statistically; however, anyone who travels between the Mat-Su Valley and Anchorage would be impressed with

this. Over 200 accidents ocurred from 1979 to 1983 in the two lane portion of the highway.

To further impact traffic movement on the Glenn Highway, the Eklutna Flats and the Knik and Matanuska River floodplains are prime moose habitats supporting large populations. These animals create a hazard to motorists which would be reduced somewhat if a four lane divided highway was constructed.

Attached is additional data on traffic counts and accident rates and types for the Glenn Highway provided by the Department of Public Safety.

Glenn Highway: Eklutna - Parks Highway Junction

Built In 1965-1966

Normal Traffic: 1981 ADT 7,400-8,000 no winter counts are available on this segment of the road. (ADT - AVERAGE DAILY TRAFFIC)

Variance between morning and evening:

Station		SB		NB		
Eklutna Bridge	AM	3133	(43%)	2236	(31%)	7/14/82
Eklutna Bridge	PM	4103	(57%)	4749	(69%)	7/14/82
Eklutna Bridge	day	7238		6975		7/14/82
Glenn - S. of Parks Hwy.	AM	2566	(42%)	1826	(30%)	7/14/82
"	PM	3481	(58%)	4190	(70%)	7/14/82
"	day	6047		6016		7/14/82

Both Ways

Old Glenn Junct.	AM	4306	35%	July (13-15), 1982
	PM	7697	65%	
	day	12157	100%	

Park Traffic: At scale house - no data available for subject segment.

State Fair - Friday 8/20/82
NB 16,021
SB 15,006

Labor Day - Saturday 9/4/82 (Scale house)
SB 16,715 (Into town) ANCHORAGE
NB 18,845

Time Road Closed:

one lane - 3 days last summer/repair of bridge
two lanes - 3 days - 3 years ago/repair R.R. crossing

No data available for road closures due to accicents.

Accicents: Should have accident data tomorrow.

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF PUBLIC SAFETY

POUCH N
JUNEAU, ALASKA 99811
PHONE: 465-4322

OFFICE OF THE COMMISSIONER

March 13, 19[illegible]

The Honorable Jalmar Kerttula
Senate President
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Senator Kerttula:

At the outset, please accept my apologies for the delay in responding to your letter of February 21, 1984 related to traffic accidents along the Glenn Highway between Anchorage and the Matanuska Valley. The statistical data you requested took longer to obtain and collate as a result of a printer run error.

Your concern was traffic information related to the Glenn Highway from Eklutna Flats, the termination of the four lane highway, to the junction of the Glenn and Parks Highways.

In order to provide some comparable basis, included in the traffic statistics are the number and type of accidents that occurred during the same periods for the area from Boniface intersection to Eklutna.

The statistical information contained in Attachment 1 reflects the total number of accidents, fatalities, injuries, and monetary figures of damages that occurred from 1977 through 1983 along the Glenn Highway between the two aforementioned areas.

Attachment 2 reflects the type of accident codes for those accidents reflected in Attachment 1 for the years 1982 and 1983. As a part of the attachment, also enclosed is a copy of the State of Alaska Police Accident Report Code Sheet, on which the lower right hand corner depicts the description of code numbers indicated.

Attachment 3 indicates the traffic count of vehicles that traveled past the scalehouse on the Glenn Highway for the years 1981 through 1983 as well as the traffic count at Mile 151.5 (Mirror Lake) for 1981 through 1983. It should be pointed out that the counts are average daily counts for

each year and reflect totality of the movement of traffic in both directions.

It is hoped that the information provided meets your needs. As I am sure you are aware, this Department does not collate accident statistic data other than fatalities. The information is collected and collated by the Department of Transportation and Public Facilities, the source from which the enclosed information was obtained.

Sincerely,

Robert J. Sundberg
Commissioner

Re: Glenn Highway Traffic
and Accident Data

The Honorable Jalmar Kerttula
Senate President
Alaska State Legislature
Pouch V
Juneau Alaska 99811

APR 1984

Dear Senator Kerttula:

Commissioner Knapp has requested that I respond to your request for traffic volume and accident data on the Glenn Highway between Eklutna and the Parks Highway.

Traffic Volume

The 20 year average historical traffic growth rate on this highway has been 3.5%. However, the traffic volume on this portion of the Glenn Highway has increased dramatically since 1980 to a 1983 average annual daily traffic of approximately 13,700 vehicles. This traffic volume changes mirror the population changes in the Matanuska - Susitna Borough and Anchorage. The following annual traffic volume percentage changes over the last few years indicate the volatile change in traffic volume over this highway:

Year	Approximate ADT at Mirror Lake	% Change
1983	13,700	27%
1982	10,800	29%
1981	8,400	12%
1980	7,500	-3%
1979	7,750	-2%
1978	7,900	

Compounding the impact of the traffic volume increases on the highway is the 80%/20% directional distribution of this traffic. The distribution places a heavy traffic load on the southbound lane in the morning and the northbound lane in the evening.

Level of Service

In 1983 the increased traffic volume on the existing two lane highway reduced the level of service (LOS) on this highway from "C" to "D". Level of Service "C" is

defined as stable flow while LOS "D" is defined as approaching unstable flow. If the traffic volume increases during 1984 at the rate of the previous 1982 and 1983 increase, the LOS on the existing highway may decrease to an "E" rating during 1984. Level of Service "E" is defined as unstable flow.

At the average 20 year historical growth rate of 3.5% assuming the current 80%/20% directional split, a four lane highway is expected to reach a LOS of "C" by 1998.

Accident Data

We currently have accident data through 1982. The accident statistics for the most recent three years follow:

SEGMENT ALONG GLENN HWY	YEAR	# OF ACCIDENTS	ACCIDENT RATE (per million vehicle miles)
Eklutna to Old Glenn Hwy	1980	13	2.47
	1981	5	0.84
	1982	10	1.49
Old Glenn Hwy to Parks Hwy	1980	18	1.20
	1981	22	1.27
	1982	43	2.13

Due to the traffic volume growth rate and the uneven directional distribution on this highway segment, we expect to initially widen this portion of the highway to four lanes and will incorporate provisions for its eventual expansion to a six lane highway.

We expect the project right-of-way acquisition, utility relocation and critical design elements of the project, such as bridge support structures, to be compatible with the eventual requirements for a six lane highway. Funding has been obligated to initiate preliminary engineering on this project.

If you have additional questions on this matter, please contact me.

Sincerely,

William R. Snell
Director

April 3, 1984

The Honorable Jalmar Kerttula
President of the Senate
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Senator Kerttula:

This letter is in response to your aide's request for traffic count information for the Farm Loop Road and the Old Glenn Highway in addition to the Department's plans for these roads.

Farm Loop Road has an average daily traffic (ADT) count of 180 vehicles. Due to the relatively low traffic volume, improvements to this road are considered a lower priority than for other collector roads with higher traffic volumes, such as Pittman Road and Clark-Wolverine Road. The Department has no current projects planned for Farm Loop Road.

The average ADT on the Old Glenn Highway between the Knik Bridge and Palmer varies from approximately 1000 ADT at the Knik Bridge to 6000 ADT at the junction with South Valley Way. The Department has begun the preliminary engineering and environmental analysis for reconstruction of this highway between the Knik River and Palmer.

The current schedule for this project is:

1.	Complete Draft Location Study Report	11/84
2.	Complete Draft Environmental Document	9/85
3.	Hold Location Public Hearing	10/85
4.	Final Location Study Report and Environmental Document	12/85
5.	Obtain Federal Location Approval	1/86

After obtaining federal location approval, additional funding tentatively estimated at $350,000 will need to be obligated by the Federal Highway Administration for the design of the project, including a materials analysis. This design work is estimated to require approximately 9 months of additional time. At this time, there is no construction funding authorization for the project.

Thank you for the opportunity to provide you this information. Please contact me if I can provide additional information.

Sincerely,

William R. Snell
Director

Dept. of Transportation & Public Facilities

Position Paper

BILL NO: SCR 9

TITLE: Requesting that the Farm Loop Road in the Mat-Su Borough be upgraded

APPROVED: R. J. Knapp
Commissioner

DATE: April 9, 1984

The Department of Transportation and Public Facilities (DOT&PF) would have no problem in upgrading the Farm Loop Road if the $2.53 million in funding was appropriated by the Legislature. Due to the relatively low traffic volume (average daily count of 180 vehicles), improvements to this road are considered by the DOT&PF to be a lower priority than for other collector roads in the Mat-Su Borough with higher traffic volumes such as Pittman Road and Clark-Wolverine Road.

For more information, contact Paula Ramsey at 465-3900

ANALYSIS FOR SCR 9

1. Analysis of the fiscal impact on existing programs.

   The DOT&PF could absorb the design and construction functions of this project without fiscal impact on existing programs.

2. Analysis of fiscal impact on new programs or activities.

   None

3. Analysis of how the figures in the fiscal note were delivered.

   An FY'83 cost estimate by our Design and Construction Division was updated to FY'85 figures. This would provide a paved, 28' wide road, 3 miles in length.

4. Additional information necessary to explain the fiscal note.

   There are no funds identified in association with SCR 9. Due to the relatively low traffic volume on this road, the DOT&PF considers improvements to this road a lower priority than for other collector roads in the area with higher traffic volumes.

SENATE CONCURRENT RESOLUTION # 9: JUSTIFICATION

SCR 9 was introduced in an effort to have the Farm Loop Road in the Matanuska Susitna Valley upgraded by the Department of Transportation and Public Facilities. Farm Loop Road is a state maintained road which is receiving increased traffic pressure due to settlement in the area over the past few years.

The road, one of the original Matanuska Valley Colony roads constructed in 1935, is one of the more scenic routes through the farming area of the Valley near Palmer. Tourist traffic on the road has increased because of the vistas of the mountains and historic farmsteads and cropland.

The Average Daily Traffic on the Farm Loop Road was 180 in 1981. This has increased by 28% to 249 in 1983. Improvements would include widening the road to 28 feet. At present the traffic on the road is two-way; however, in effect, the road is not wide enough to safely carry two-way traffic. The road would further be improved by adding to the sub-base.

The improvements would extend the length of the 2.9 mile road at a cost of $3,004,100 payable through fiscal year 1987.

DOT/PF Central Region Maintenance and Operations has assigned the upgrade a priority. If improvements are made, maintenance costs will be reduced.

SCR

20

December 21, 1983

Mr. Peter McDowell, Director
Office of Budget and Management
Pouch A
Juneau, Alaska 99811

Dear Mr. McDowell:

The Glen Alps Board of Supervisors has been working with Senator Jan Faiks on a project aimed at upgrading Upper DeArmoun Road, located on the upper Hillside within the Glen Alps Service area - a district that covers over ten miles of roads. Major upgrading of Upper DeArmoun from Hillside Drive to View Heights Drive, a one-mile stretch, has been established as the Glen Alps Board of Supervisor's number one capital improvement priority for 1984. Senator Faiks requested that we write you regarding this project.

This one-mile section has a very poor roadbed in addition to an inadequate drainage system. During the winter season, severe glaciation frequently develops along this route, causing considerable problems not only for residential traffic, but emergency vehicle and school bus traffic as well.

A rapid increase in residential traffic has developed in the area due to new home construction. Upper DeArmoun also handles a great deal of traffic heading directly to Chugach State Park. This route provides direct access to the Rabbit Creek Valley area of the park in which Rabbit Lake is situated.

At certain times of the year, park traffic exceeds residential traffic in this area. As a result, the road deteriorates faster and residents must bear the burden of additional road maintenance.

The most effective use of capital improvement funds would be for upgrading the roadbed as opposed to piece-meal capital improvement of a sub-standard road base. The existing roadbed is of extremely poor quality and the situation will only grow worse with increasing use of this route by park visitors and additional residential traffic in years to come.

According to municipal officials, approximately $875,000 would be necessary for the complete re-building of Upper DeArmoun and the elimination of severe glaciation problems. This figure does not include paving.
Although many residents prefer pavement, many would be satisfied with an upgrade to a high standard gravel surface.

We believe upgrading of this road is long overdue. Other Hillside roads providing access to the park have been paved. Several years ago Upper O'Malley was paved, two years ago Upper Huffman was upgraded and paved. The time has now come for upgrading of this route.

The Glen Alps Board of Supervisors urges the Municipality and State to act in such a manner that would expedite upgrading of Upper DeArmoun.

The Board of Supervisors decided Upgrading of Upper DeArmoun is more important at this time than upgrading of other roads in the area due to the reasons explained above. Perhaps the most extensive long-term project in the service area will be the complete or partial relocation of the road to Upper Glen Alps, Toilsome Hill Drive. Park traffic on this road is extremely heavy and sections of this route arevery steep and narrow.

Although no major work is expected on any relocation project for several years, our Board believes that various route alternatives should be addressed soon. We understand that Chugach State Park has been working on route alternatives, but the overall picture is clouded by right-of-way problems.

The relocation of this road could be one of the most extensive road projects undertaken on the Hillside since the upgrading of Rabbit Creek Road.

In the meantime, Upper DeArmoun is our most pressing needs. The first one-mile section targeted for upgrading has the highest residential traffic of any road in the service area. Traffic will continue to increase as new houses are built nd an increasing amount of Anchorage residents use the park for summer and winter recreational purposes.

The Glen Alps Board of Supervisors held a meeting in mid-October at the O'Malley Elementary School for residents of the service area to discuss road improvements in the area. Those in attendance were unanamously in favor of upgrading Upper DeArmoun. All but one person present favored paving. However, everyone said they would be satisfied with a major upgrading to a high standard gravel surface.

In addition, residents of the Glen Alps service area spoke out in favor of the upgrading of Upper DeArmoun at the Municipality of Anchorage Capital Improvement Projects meeting for the Hillside at Service High School October 25. Written testimony was also submitted at this meeting.

Outside of the $875,000 needed for improving Upper DeArmoun, additional funds are required for annual maintenance of other roads within the district. We have specific needs for improvements, too, such as additional fill, culverts and

and drainage work to Canyon Road and Toilsome Hill Drive. Such improvements include widening of certain steep and dangerous sections of these two roads and the installation of guard rails.

Please find enclosed a resolution adopted by the Board concerning our top priority and other information relating to upgrading of Upper DeArmoun.

Sincerely,

Glen Alps Board of Supervisors

RESOLUTION
OF THE
GLEN ALPS BOARD OF SUPERVISORS

WHEREAS, Upper DeArmoun Road is located within the Glen Alps Service Area, a district that covers over ten miles of roads on the upper Hillside.

WHEREAS, the first one-mile section of this road has a very poor roadbed in addition to an inadequate drainage system. During the winter season, severe glaciation frequently develops along this route, causing considerable problems not only for residential traffic, but emergency vehicle and school bus traffic as well.

WHEREAS, A rapid increase in residential traffic has developed in the area due to new home construction. Upper Armoun also handles a great deal of traffic heading ectly to Chugach State Park. This route provides direct access to the Rabbit Creek Valley area of the park in which Rabbit Lake is situated.

WHEREAS, at certain times of the year, park traffic exceeds residential traffic in this area. As a result, the road deteriorates faster and residents must bear the burden of additional road maintenance.

WHEREAS, the most effective use of capital improvement funds would be for upgrading the roadbed as opposed to piece-meal capital improvement of a sub-standard road base. The existing roadbed is of extremely poor quality and the situation will only grow worse with increasing use of this route by park visitors and additional residential traffic in years to come.

Glen Alps Resolution

WHEREAS, upgrading of this road is long overdue.

Other Hillside roads providing access to the park have been either paved or substantially upgraded. Several years ago Upper O'Malley was paved, two years ago Upper Huffman was upgraded and paved. The time has now come for upgrading of this route.

NOW THEREFORE BE IT RESOLVED, that major upgrading of Upper DeArmoun Road from Hillside Drive to View Heights Drive, a one-mile stretch, has been established as the Glen Alps Board of Supervisor's number one capital improvement priority for 1984. Such upgrading need not include paving.

BE IT FURTHER RESOLVED THAT the Municipality of Anchorage and the State of Alaska establish this route on the priority list for Hillside road improvements.

AND BE IT FURTHER RESOLVED THAT the Glen Alps Board of Supervisors urge the Municipality and State to act in such a manner that would expedite upgrading of Upper DeArmoun.

Dated: December 21, 1983

By Glen Alps Board of Supervisors

Judy Burtner

Judy Burtner,
Chairman

Glen Alps Service Area

Overview

The Glen Alps Service Area covers over ten miles of roads on the upper Hillside. The service area is divided into three main districts, Upper Glen Alps, Central and Canyon.

Upper Glen Alps is the Hillside's highest housing subdivision area at an elevation of approximately 2,400 feet. The area is situated at the base of Flattop Mountain and is above timberline. Access is provided by Toilsome Hill Road which branches off Upper Huffman. This steep gravel road extends 2.7 miles beyond the pavement of Upper Huffman to Chugach State Park and the housing area one-quarter mile beyond the park entrance. Winter is usually two months longer in this area and high winds cause special winter maintenance problems. Average snowfall is double that of Anchorage.

The Central district covers Jeannie, Michael and Ginami Roads as well as Spendlove Drive and View Heights Drive. These streets, with the exception of View Heights, are situated between Upper Huffman and Upper DeArmoun. Jeannie Road is the major route connecting Upper Huffman and Upper DeArmoun at a point three-quarters of a mile above Hillside Drive. Upper DeArmoun, east of Jeannie, is within the Central district. The three-quarter mile section of Upper DeArmoun west of Jeannie is likely to be annex into the Central district next month.

The Canyon district covers Canyon Road, an extension of Upper DeArmoun. This road leads deep into Rabbit Creek Valley and much of this route rises above timberline. High winds and heavy snow also cause special problems in the Canyon area.

The Glen Alps Service Area handles a great deal of park traffic. Two Chugach State Park access routes are in this area. Both Toilsome Hill Drive and Upper DeArmoun-Canyon Road provide direct access to the park. However, park officials do not recognize Upper DeArmoun-Canyon Road as a designated entrance, despite the ever-increasing use of this road for access into the Rabbit Creek Valley area of the park.

Frequently, park traffic far exceeds residential traffic in these areas. As a result, the roads deteriorate faster and residents must bear the burden of additional road maintenance.

Maintenance

Our general maintenance includes a contractor's budget and an intergovernmental budget. The contractor is Edmund Schuster of Upper Glen Alps. His contract has been extended to October 1, 1984. Originally the contractor was responsible for only snow removal, but now his duties have been expanded to include sanding, grading and thawing.

This summer some long-needed repairs were accomplished on some of our roads through a $50,000 state grant. Improvements basically consisted of replacing several culverts, other drainage improvements, additional gravel fill in low spots and improvement of Toilsome Hill Road near a dangerous switchback.

FUTURE IMPROVEMENTS

Major upgrading of Upper DeArmoun from Hillside Drive to View Heights Drive is our top priority for next year. This one-mile section of road has a very poor roadbed in addition to an inadequate drainage system. During the winter season, severe glaciation frequently develops along this route. Any major upgrading would first begin with the replacement of the original roadbed and the construction of drainage ditches.

$875,000 According to Municipal officials and the contractor, a ~~$500,000~~ appropriation would be necessary for the complete re-building of Upper DeArmoun and the elimination of severe glaciation problems. The board believes a major improvement of Upper DeArmoun is long overdue as traffic along this route is rapidly increasing due to new housing in the area and the increase use of this road for access to Chugach State Park.

Perhaps the most extensive long-term project in the service area will be the complete or partial relocation of the road to Upper Glen Alps. As mentioned earlier in this report, the only access to the Upper Glen Alps entrance of Chugach State Park is Toilsome Hill Road. Park traffic on this road is extremely heavy and the parking lot at the Chugach entrance often overfills with over two hundred cars. The road is extremely narrow and steep and accidents are frequent during the winter months.

Although no major work is expected on any relocation project for several years, our Board believes that various

route alternatives should be addressed soon. The relocation of this road could be one of the most extensive road projects undertaken on the Hillside since the upgrading of Rabbit creek Road.

Our Board has found the Municipal Street Maintenance Division helpful and responsive to our special road needs. We appreciate their assistance and willingness to work with us on various problems.

Glen Alps Board of Supervisors

Upper DeArmoun Upgrading
-Glen Alps Service Area-

Testimony Presented to
Municipality of Anchorage
Capital Improvement Projects Meeting
Service High School

October 25, 1983

The Glen Alps Board of Supervisors request that Upper DeArmoun Road be included on the Municipality of Anchorage priority list for Hillside road improvements.

Upper DeArmoun is located within the Glen Alps Service Area, a district that covers over ten miles of roads on the upper Hillside. Major upgrading of Upper DeArmoun from Hillside Drive to View Heights Drive, a one-mile stretch, has been established as the Glen Alps Board of Supervisor's number one capital improvement priority for 1984.

This one-mile section has a very poor roadbed in addition to an inadequate drainage system. During the winter season, severe glaciation frequently develops along this route, causing considerable problems not only for residential traffic, but emergency vehicle and school bus traffic as well.

A rapid increase in residential traffic has developed in the area due to new home construction. Upper DeArmoun also handles a great deal of traffic heading directly to Chugach State Park. This route provides direct access to the Rabbit Creek Valley area of the park in which Rabbit Lake is situated.

At certain times of the year, park traffic exceeds residential traffic in this area. As a result, the road deteriorates faster and residents must bear the burden of additional road maintenance.

The most effective use of capital improvement funds would be for upgrading the roadbed as opposed tc piece-meal capital improvement of a sub-standard road base. The existing roadbed is of extremely poor quality and the situation will only grow worse with increasing use of this route by park visitors and additional residential traffic in years to come.

According to Department of Transportation officials, approximately $850,000 would be necessary for the complete re-building of Upper DeArmoun and the elimination of severe glaciation problems. This figure does not include paving. Although many residents prefer pavement, many would be satisfied with an upgrade to a high standard gravel surface.

We believe upgrading of this road is long overdue. Other Hillside roads providing access to the park have been paved. Several years ago Upper O'Malley was paved, two years ago Upper Huffman was upgraded and paved. The time has now come for upgrading of this route.

The Glen Alps Board of Supervisors urge the Municipality to act in such a manner that would expedite upgrading of Upper DeArmoun.

Thank you.

IN THE SENATE BY THE TRANSPORTATION COMMITTEE

SENATE CONCURRENT RESOLUTION NO. 27 am

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

Relating to the designation of three sites for the application of high float emulsion asphalt.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS a substantial portion of the state's money is spent on the rehabilitation and rebuilding of our highways; and

WHEREAS the present road building techniques are extremely expensive and may not be the most cost effective method for northern climate highways; and

WHEREAS the Yukon Territory Department of Highways and Transportation has had success with a less expensive and more durable surfacing technique known as high float emulsion asphalt; and

WHEREAS the climate and highway demands of Alaska are very similar to the climate and highway demands of the Yukon Territory; and

WHEREAS there are highway surfaces in the Interior region, the Southcentral region, and the Southeast region that are in need of rehabilitation and could therefore be designated as test sites for an alternate surfacing technique;

BE IT RESOLVED by the Alaska State Legislature that the governor is respectfully requested to direct the commissioner of transportation and public facilities to designate a representative site in each of the Interior, the Southcentral and the Southeast regions to be used as a test application site for high float emulsion asphalt; and be it

FURTHER RESOLVED that the Department of Transportation and Public Facilities document the cost effectiveness of the test applications and

engineering and construction considerations

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES

P. O. BOX 1467
JUNEAU, ALASKA 99802

April 29, 1983

RE: Meeting with Yukon Territory Highway and Transportation Officials

FILE: 1302

Honorable Randy E. Phillips
Representative
Alaska State Legislature
Transportation Committee
Pouch V
Juneau, AK 99811

THROUGH: Fred Seeger, Deputy Commissioner

Dear Representative Phillips:

Attached for your information is a copy of the trip report by Department representatives who visited Yukon Territory highway officials on April 21 and April 22, 1983.

Although I was originally scheduled to make the trip, I was unable to go for medical reasons. I have talked to Mr. Larry Blackman in Whitehorse over the telephone several times. We have extended to him the courtesy of reciprocating information exchange trips whenever he sees the need. In fact, since the meeting in Whitehorse, Mr. Blackman has asked for copies of our truck size and weight statutes and regulations. Apparently, they intend to require the same limitations on the Canadian portion of the Klondike Highway from Whitehorse to Skagway that we do.

In regard to the High Float Emulsion Surface treatments that were investigated during the trip, I have also spoken to Mr. Tom Neunaber of the local Federal Highway Administration and Mr. Coley Wycoff of Chevron, USA.

Mr. Neunaber was one of the FHWA representative on the "Shakwak" project on which the Alaska Highway in Canada is being upgraded and surfaced. He has personal experience with High Float emulsion surface treatments that were done on the highway by contractor forces. He has a slide show which reveals many of the "tricks of the trade" in placing this material.

After viewing these slides as narrated by Mr. Neunaber, I am convinced that we could place this material successfully if we can utilize his experience and/or

that of Yukon Territory representatives to get the contractor started off right.

Mr. Wycoff is somewhat skeptical of our chances of success with this material. He stated that Chevron made High Float emulsion several years ago. This practice was discontinued because of the lack of success with it. He also cites several failures with it in British Columbia and claims that they have discontinued its use in favor of a cationic medium-set emulsion (CMS) which has given excellent results.

I think that one of the keys to success with High Float emulsion may be strict compliance to temperature and weather limitations and a knowledge of the "do's" and "don'ts" in placing the material. Another is experience, which is pointed out in the report.

My recommendation would be that we try two projects in different Regions with the High Float emulsion and a CMS emulsion for comparison. We are arranging to have Mr. Wycoff travel to Juneau and Fairbanks to discuss his product now.

As a final note, Mr. Neunaber's slides and the on-site inspection confirm the fact that many of the road sections in the Yukon where High Float emulsion was used have very shallow side ditches. Some are on the order of one foot or less. Our standards require a minimum of a three-foot ditch which would provide vastly improved drainage. Hardly anything is worse for a paved surface than water in the subgrade, so we should have some advantage in this respect.

Sincerely,

John J. Simpson, Acting Director
Standards and Technical Services Division

SUBJECT: Surface Treatments, Yukon Territory

Presented, herewith, are the observations made by the writers during their April 21 and 22 visit to Whitehorse, Yukon Territory, the purpose of which was to meet with officials of the Yukon Department of Highways and Transportation and discuss primarily their use of High Float Emulsion Asphalt with well graded aggregate on surface treatments.

A meeting was held in the office of the Department of Highways and Transportation at Whitehorse on the afternoon of April 21, 1983. Those in attendance were:

L.W. Blackman, P.E. Deputy Minister, Yukon Territory
Colin Farr, Director of Highways, Yukon Territory
Raymond Magnuson, Manager of Maintenance Branch, Yukon Territory
Ray Miller, Alaska Department of Transportation
Paul Misterek, Alaska Department of Transportation

The meeting was very cordial and discussion centered around Yukon Territory's use of High Float Emulsion Surface Treatments, typical projects where used, problems associated with and possible avoidance of same. A schedule was set up for the following day to visit typical projects where this type surface treatment has been used. Following is a summary of observations noted during the discussion and site visits:

I. DESCRIPTION OF PROCESS

High float (HF) is a medium setting anionic emulsion that has a quality imparted by the addition of certain chemicals that prevent the emulsion from breaking immediately on contact with the aggregate. The surface treatment reacts to surface rolling by allowing the emulsion to migrate within the aggregate. While the regular asphalts have a tendency to flow, or migrate, at 60° C (140° the high floats are designed to stay in place up to 70° C (160° F). As a result, the HF residues are less susceptible to changes in temperature and are harder in the summer and do not harden as much in the winter. The high content of petroleum solvent enables the HF

to penetrate through a heavy application of sand and gravel. Consequently, the final surface may be many stones thick while it provides the advantage of resisting flushing or bleeding better than a standard emulsion.

The fact that HF emulsions set up a slower rate can be a disadvantage when it is necessary to get the road back into service as soon as possible, such as in the case on major highways.

While HF asphalts are being used for the treatment of a large number of roads in areas of scattered populations with low traffic volumes, there is a general feeling within the industry that they are not adequate for Bituminous Surface Treatment's carrying high traffic volumes on major main roads.

II. TYPICAL USES BY YUKON TERRITORY

1. The process is used as an interim surfacing on new construction where the subgrade has been reconstructed to current standards

2. The application is used with minimal upgrading of the existing roadway where traffic volume does not warrant a higher level of surfacing, such as pavement. Generally a base course is placed prior to application of the surface treatment.

3. It is used as a substitution for other dust palliatives until reconstruction. The treatment is applied on the existing surface materials, which have been reshaped and re-compacted.

It should be noted that this application has not been placed over existing pavement, but this is being contemplated, using a smaller size (½ inch minus) aggregate.

III. COST ESTIMATES

During the 1982 season, Yukon Territory incurred costs of $22,500* (Canadian) for surface treatments with a twenty-six foot width. This includes costs for labor, equipment, and materials and utilizing their own forces. It does not include any base preparation costs.

During 1981, Public Works of Canada awarded contracts for work of this type. Costs were approximately 25 percent higher than those incurred using their own forces. This higher cost recognizes the risk factor, as well as the fact that the State forces worked continuously on the same type of work all season and gained a high degree of proficiency.

*Cost per mile in length

IV. DESIGN CONSIDERATIONS

1. Yukon Territory officials consider this treatment to have a five year life expectancy, although in low traffic problem areas over a good base, a longer use period is anticipated.

2. A four percent crown is recommended. Experience in Yukon Territory has shown that the texture of the surface slows drainage, and the greater crown is desirable, especially at near-freezing temperatures.

3. Yukon Territory does not use a prime coat, but officials there feel it would be beneficial, especially for maintaining a surface prior to application of the treatment.

4. Gradation of the surfacing aggregate used by Yukon Territory approximates our Base Course D-1 specification, and it is felt that this gradation could be used.

5. The surfacing aggregate should be slightly moist at the time of application. Specifications should require moisture content of two percent minimum to four percent maximum.

6. Only emulsified asphalt of grade HF-350S has been used by Yukon Territory. For initial projects, specifications should be developed using that grade of asphalt or a product very similar.

7. Weather limitations noted in the example specifications from Yukon Territory should be strictly enforced. Yukon Territory officials credit this with their high success rate. During adverse or marginal weather, the crew can be diverted to advance preparation activities such as aggregate stockpiling. A copy of the Canadian specifications are attached for your information.

8. Application rates found to be desirable are:

Asphalt	0.50 gal./sq. yd.
Aggregate	40 lb./sq. yd. max.

It has been found that too much aggregate can have an adverse effect on the product.

V. CONSTRUCTION TECHNIQUES

1. Experienced personnel are mandatory for a high degree of success. Mr. Blackman emphasized that he felt that surfacing treatment is 80 percent art and 20 percent science.

2. Adequate equipment is essential. Yukon Territory has new equipment with duplication to assure a continuous operation (i.e., two distributors, adequate trucks, etc.)

3. Specifications regarding traffic control and opening of the newly constructed roadway to traffic should be strictly observed.

Initially, Yukon Territory crews placed approximately two miles of 26 foot width surface treatment per day. As the techniques improved this increased to a maximum of approximately ten miles of 26 foot width under very good conditions.

VI. PERFORMANCE AND MAINTENANCE EVALUATION

1. During 1982, Yukon Territory incurred costs of $6000 per kilometer without the surfacing and $4000 per kilometer with the treatment for maintaining roadway sections.

2. Maintenance of the surface is critical. Small holes must be patched as they develop. Asphalt emulsion and chips can be used, but a cold mix is preferable for small areas and potholes.

3. The surface texture is rougher than normal pavement or a two coat surface treatment. At regular highway speeds, there is a noticeable increase in noise level and a somewhat rougher ride, however, not so much as to be objectionable. At reduced speeds, neither is noticeable.

Traffic tends to knead the aggregate and with time produces a tight compact surface.

4. Most of the surface treatments observed during this visit were relatively new in age, that is, less than five years old. Conditions varied from excellent to poor with poor subgrade and inadequate drainage most likely a contributing factor in those areas appearing less than acceptable. Again, as stated in the Design Considerations, this process is interim in nature and life expectancy is five years.

VII. SUMMARY

Yukon Territory will have projects under construction adjacent to the Alaska border on the Klondike and Alaska Highways. It is recommended that personnel of Alaska Department of Transportation involved in design, construction, and maintenance should be allowed to observe these projects. A copy of Yukon's surface treatment schedule is attached.

It is recommended that a project should be designed and constructed using this process in Alaska. The initial project should be monitored and necessary revisions made to project specifications prior to proceeding with additional contracts. The Interior Region has tentatively selected a road project; Southeast might consider its use on a small airport, possibly Haines or Skagway.

Yukon officials have expressed an interest in our adoption of this surfacing method and may be available to advise us during construction and it is recommended they be extended an invitation to participate.

Also, it should be noted that discussions with Chevron Asphalt Company (USA) have indicated that Anionic Emulsified Asphalt products are not now available nor have they been available for quite some time (± 15 years). Consequently, the HF350S may be difficult to obtain in the United States.

The visit, we believe, will prove very beneficial to both Yukon and Alaska as many items of mutual interest were discussed. The communication door is now open and a closer association between the two departments will provide both with the opportunity to exchange ideas in the field of highway design, construction and maintenance. Should you have any further questions regarding this process, please feel free to contact Mr. Misterek or Mr. Miller.

Director/Interior Region
Design & Construction

PART 1 - GENERAL

1.1 Description

.1 This section specifies requirements for applying sin application of emulsified asphalt and aggregate to a granular base in accordance with these specification

1.2 Related Work Specified Elsewhere

.1 Weight Scales: Section HC01155
.2 Aggregates - General: Section HC02225
.3 Granular Base: Section HC02229

1.3 Samples

.1 Submit to Engineer following material samples at lea 4 weeks prior to commencement of work:

.1 10 kg of aggregate

.2 Two 4 litres plastic containers of Asphalt Mater

1.4 Measurement for Payment

.1 Asphalt Surface Treatment Aggregate - Production, Hauling and Application: To be measured in tonnes of material incorporated into work.

.2 Asphalt Surface Treatment Aggregate - Hauling and Application: To be measured in tonnes of material incorporated into work.

.3 Asphalt Material: To be measured in litres at 15 deg. C., supply and delivery according to Prime Cost Sum (General Instructions, Section 01015, Article 13). Application will be paid for in litres separately under applicable Unit Price Item.

PART 2 - PRODUCTS

2.1 Materials

.1 Asphalt Material: To CGSB 16-GP-5M grade MF-350S. Transported, stored and handled in accordance with Asphalt Institute Publication CL-21.

.2 Aggregates:

.1 General Requirements: Crushed stone or gravel, clean, tough, durable fragements, free from an excess of flat, elongated, soft or disintegrate pieces and free from stone coated with dirt or other objectionable matter. Flat and elongated particles are those whose greatest dimension exceeds four times their least dimension

PART 2 - PRODUCTS CONT'D

2.1 Materials (Cont'd)

.2 Aggregates: (Cont'd)

.2 Physical Properties:

AGGREGATE GRADING

Sieve Size		% Passing by Ma
ASTM	METRIC EQUIVALENT	
3/4 inch	19.0 mm	100
1/2 inch	12.7 mm	65 - 90
3/8 inch	9.51 mm	55 - 80
No. 4	4.76 mm	35 - 55
No. 10	2.00 mm	15 - 35
No. 40	0.420 mm	5 - 20
No. 200	0.074 mm	0 - 5

.3 Los Angeles Abrasion AASHTO T96-70: Max. loss by mass 45%.

.4 Crushed fragments: Material reta on No. 4 (4.760 mm) sieve to have least 1 fractured face: percent by weight 60.

.5 Thin and elongated particles: max mass 5%.

PART 3 - EXECUTION

3.1 Equipment

.1 Pressure distributor:

.1 Distributor to be so designed, equipp maintained, and operated that asphalt material at even heat may be applied uniformly on variable widths of surfac to 5 m at readily determined and contr led rates from 0.3 to 5.5 litres per square metre, with uniform pressure, a

PART 3 - EXECUTION (CONT'D)

3.1 Equipment (Cont'd)

.1 Cont'd

.2 Capable of distributing asphalt material in a uniform spray without atomization at rate specified and at temperature require

.3 Equipped with a tachometer registering metres per minute visibly located enablin truck driver to maintain constant speed required for application at specified rat

.4 Pump equipped with a tachometer registeri litres per minute passing through nozzles and readily visible to operator. Pump to operate by a separate power unit indep endent of truck power unit. Have full circulating system that includes spray ba

.5 Equipped with an easily read, accurate an sensitive device which registers tempera- ture of liquid in reservoir. Equipped with heating system to bring emulsion to proper spray application temperature.

.2 Mechanical aggregate spreader: A self-propelled unit of approved design, supported t at least four wheels equipped with pneumatic tires on two axles. Aggregate spreader to be equipped with positive controls so that requir amount of material will be deposited uniform over full width of asphalt material.

.3 Rollers: Self-propelled pneumatic tired rolle weighing not less than 11 tonnes, equipped wit not less than seven wheels staggered back and front, and tires inflated to 415 kPa.

.4 Power Broom: Self-propelled pneumatic tired unit, capable of vertical and horizontal angular adjustment.

3.2 Preparation

.1 Grade granular base to specified grade and cross-section. Blade smooth, and compact. Remove foreign material as necessary immediately before asphalt binder is applied.

3.3 Application

.1 Apply treatment only when existing surface is slightly damp, when atmospheric temperature in shade is above 10 deg. C and rising or about 15 deg C if falling, and when weather is not foggy or rainy. Apply light spray application of water to surface before treatment when requested by Engineer.

.2 Schedule work to approval of Engineer. If directed, treat one lane at a time.

.3 Spread a protective covering of building paper or other acceptable material over width of surface, and for a sufficient distance back so that spraying nozzles are fully operative when surface to be treated is reached.

.4 Apply materials within following ranges. Engineer will direct quantities of asphalt material and aggregate to be supplied.

.1 Single Surface Treatment:

Asphalt binder, litres per square metre	2.77 to 3.75
Kg. of aggregate per square metre	~~34.0~~ 46.0 to ~~59.0~~

Note: 40 Kg/m² worked in very well. JA

.5 Apply liquid asphalt at spraying temperature specified in applicable CGSB standard for grade used and at rate specified per square metre using approved pressure distributor.

3.3 Application (Cont'd)

.6 Remove used protective covering and dispose of by acceptable means.

.7 Apply aggregate immediately following applicat of asphalt material. Apply no more aggregate than can be thoroughly incorporated into and absorbed by asphalt. Local areas of excess asphalt to be spread uniformly by hand or remo prior to aggregate application. Aggregate to be applied at a rate and manner that shall min mize the displacement of asphalt material.

.8 Rates of application of asphalt and aggregate will be adjusted by ngineer, if needed, durin course of work.

.9 Apply aggregate in such a manner that tires of apprved aggregate spreader at no time contact uncovered and newly applied asphalt material.

.10 Immediately after aggregate is spread, cover any deficient areas with additional material.

.11 Roll immediately after aggregate is spread, making at least 6 passes with pneumatic tired roller, until cover material is tied, or to approval of Engineer.

.12 After completing rolling, lightly broom or otherwise maintain as directed for a period of 4 days. Maintenance to include distribution o aggregate, to absorb free asphalt and to cover any areas deficient in aggregate material. Repair to satisfaction of Engineer areas of improper or deficient surface treatment produc

.13 Conduct maintenance in manner not to displace imbedded material. Sweep loose material from entire surface by rotary brooms at time determined by Engineer.

3.4 Traffic Control

.1 Direct traffic through project with warning signs, flaggersons and pilot truck in a manner that provides maximum safety for workman and least interruption of work.

.2 Keep traffic off freshly sprayed asphalt.

.3 If necessary to route traffic over new treatment, restrict speed to 10 km/h or less, until rolling is completed and asphalt has taken initial set.

.4 After initial set, restrict traffic to 40 km/h or less, until Engineer directs end of traffic control.

1983 - 84 B.S.T. SCHEDULE

PART ONE:

UNDERSTANDING ASPHALT EMULSIONS

CHAPTER I

INTRODUCTION

1.01 BASIC TYPES OF PAVING ASPHALTS

Virtually all asphalts used in the United States are products of the distillation of crude petroleum. Asphalt is produced in a variety of types and grades ranging from hard and brittle solids to almost water-thin liquids. Asphalt cement is the basis of all of these products. It can be made fluid for construction uses by heating, by adding a solvent, or by emulsifying it. When a petroleum solvent, such as naphtha or kerosene, is added to the base asphalt to make it fluid, the product is called a cutback. When asphalt is broken into minute particles and dispersed in water with an emulsifier it becomes an asphalt emulsion. The tiny droplets of asphalt remain uniformly suspended until the emulsion is used for its intended purpose.

When combined with a cutback, the asphalt is dissolved in the liquefying agent. In an emulsion, an electrochemical action keeps the particles in suspension in the liquid phase. When either type is used in the field, the liquefying agent evaporates. In the case of the emulsion, the remaining chemicals combine with the base asphalt to enhance its properties so it will perform its functions of cementing and waterproofing.

1.02 ASPHALT EMULSION IN THE PAST

The use of asphalt emulsions for road construction and maintenance is not new. Emulsions were first developed in the early 1900s. It was not until the 1920s, however, that emulsions, as we know them today, came into being. Their early use was confined largely to spray applications and use as a dust palliative. The growth in the use of asphalt emulsions was relatively slow. It was limited by the types available and a lack of knowledge as to how they should be used. Continuing development of new types and grades, coupled with improved construction equipment and practices, now gives a broad range of choices, with which virtually any roadway requirement can be met. Judicious selection and use can yield significant economic benefits.

Use records reveal a slow but steady increase in the amount of emulsions used between 1930 and the mid 1950s. Following World War II, traffic loads and volumes increased so much that roadway designers began to curtail the use of these materials. Instead, they specified high-type hot plant mixes requiring the use of asphalt cement. While the volume of asphalt cement used has shown a rapid increase since 1955, the combined use of other asphalt products has remained almost constant. But one interesting trend is worthy of note—there has been a steady rise in the volume of asphalt emulsions used.

The major uses of asphalt emulsion in the United States are:

— Surface treatments

— Patching and thin overlays

— Stabilization

— Slurry sealing

Asphalt emulsions also are used in base and surface course mixes.

In the past few years several factors have contributed to a nationwide interest in the use of asphalt emulsions, namely:

— The energy crisis of the early 1970s that prompted conservation measures by the Federal Energy Administration. Asphalt emulsion does not require a petroleum solvent to make it liquid. (However, some medium-setting grades contain limited amounts of solvent to enhance mixing qualities.) Also, asphalt emulsion can be used (in most cases) without additional heat. Both of these contribute to energy savings.

— Reduced atmospheric pollution. There are little or no hydrocarbon emissions from asphalt emulsions.

— The ability of certain types of asphalt emulsion to coat damp aggregate surfaces, which is another energy saving feature.

— Availability of a greater number of emulsion types, coupled with improved laboratory procedures, to satisfy design and construction requirements.

— Potential cost savings by the use of less fuel.

Two major environmental factors—energy conservation and atmospheric pollution—caused grave concern and a realization that some type of Federal action was needed. Our nation suddenly became aware that energy needs soon could exceed supply unless conservation laws were enacted promptly. In one of the early actions, the Federal Highway Administration issued FHWA Notices N5080.2 and N5080.5, respectively. These notices directed attention to fuel savings that can be realized by using asphalt emulsions instead of cutback asphalts. They estimated that a huge amount of petroleum solvents could be saved annually by such substitution. While the substitution was not mandatory, it was strongly suggested that it be considered. At that time at least 42 states were substituting, or allowing the substitution of, asphalt emulsions for other types of asphalts. It is probable that the number of agencies permitting this substitution has increased since that time.

1.03 LOOKING AHEAD

Despite conservation pressures, the demand for energy-related materials—especially asphalts — will remain. An American Association of State Highway and Transportation Officials (AASHTO) survey has revealed that the United States has about 3.8 million miles (6.1 million km) in the roadway network. The survey also showed that of the 1.8 million miles (2.9 million km) of paved highways, about 93 percent have asphalt paved surfaces. A 1977 survey made by the Federal Highway Administration estimated that 285,000 miles (459,000 km) of highways and streets needed resurfacing. Another 140,000 miles (225,000 km) needed widening, and almost 500,000 miles (805,000 km) required either reconstruction or widening. In addition, most of the remaining 2 million miles (3.2 million km) were in need of some type of improvement. Any attempt to meet these highway needs will require a large amount of energy-related paving materials.

The number of registered vehicles and number of licensed drivers have shown a sharp increase yearly for the past 30 years. Highway planners predict that by 1990 we will have 170 million vehicles on the highways. There will be 161 million licensed drivers—85 percent of everyone over 15 years of age. Thus the need for an extensive and well-maintained roadway network will remain high, and the demand for asphalt materials will remain correspondingly high. Yet, at the

same time, every attempt should be made toward energy conservation. The forecast, therefore, is for a sharp increase in the use of asphalt emulsions.

A clear understanding of the "why and how" of using asphalt emulsions offers a promise of reduced energy consumption and less atmospheric pollution. The proper use of these materials can result in high performance pavements and thrifty, but versatile, maintenance systems. This manual is directed toward those ends.

As an aid in understanding technical terms that may not be familiar, a glossary is provided as Appendix A.

CHAPTER II

THE CHEMISTRY OF ASPHALT EMULSIONS

A. GENERAL

2.01 EMULSIONS

There are many types of emulsion products that we use in our daily lives. Some of the more common are mayonnaise, paints, hair dyes [illegible]e cream. In each case, certain mechanical and chemical processes are involved that permit the combining of two or more materials that, under normal conditions, will not mix. An entire scientific field is devoted to the study of emulsification. You don't have to understand how an internal combustion engine works to operate an automobile. Neither do you have to understand complex emulsion chemistry to obtain high quality results with asphalt emulsion. The key is to select the right emulsion for the aggregate and construction system involved. Throughout this text when the term "emulsion" is used it is intended to mean "asphalt emulsion."

2.02 COMPOSITION OF ASPHALT EMULSIONS

An asphalt emulsion consists of three basic ingredients: asphalt, water, and an emulsifying agent. On some occasions the emulsifying agent may contain a stabilizer.

It is well known that water and asphalt will not mix, except under carefully controlled conditions using highly specialized equipment and chemical additives. The blending of asphalt cement and water is somewhat akin to an auto mechanic trying to wash grease from his hands with water only. It is not until a detergent or soapy agent of some type is used that grease can be successfully removed. The soap particles surround the globules of grease, break the surface tension that holds them, and allow them to be washed away. Some of the same physical and chemical principles apply in the formulation, production, and use of asphalt emulsion.

The object is to make a dispersion of the asphalt cement in water, stable enough for pumping, prolonged storage, and mixing. Furthermore, the emulsion should break down quickly after contact with aggregate in a mixer, or after spraying on the roadbed. Upon curing, the residual asphalt retains all of the adhesive, durability, and water-resistant properties of the asphalt cement from which it was produced.

2.03 CLASSIFICATION

Asphalt emulsions are divided into three categories: anionic, cationic, and nonionic. In practice, the first two types are ordinarily used in roadway construction and maintenance. Nonionics, however, may be more widely used as emulsion technology advances. The anionic and cationic classes refer to the electrical charges surrounding the asphalt particles. This identification system stems from one of the basic laws of electricity — like charges repel one another and unlike charges attract. When two poles (an anode and a cathode) are immersed in a liquid and an electric current is passed through, the anode becomes positively charged and the cathode becomes negatively charged. If a current is passed through an emulsion containing negatively charged particles of asphalt they will migrate to the anode. Hence, the emulsion is

referred to as anionic. Conversely, positively charged asphalt particles will move to the cathode and the emulsion is known as cationic. With nonionic emulsions, the asphalt particles are neutral and, therefore, do not migrate to either pole.

Emulsions are further classified on the basis of how quickly the asphalt will coalesce; i.e., revert to asphalt cement. The terms RS, MS, and SS have been adopted to simplify and standardize this classification. They are relative terms only and mean rapid-setting, medium-setting, and slow-setting. The tendency to coalesce is closely related to the mixing of an emulsion. An RS emulsion has little or no ability to mix with an aggregate, an MS emulsion is expected to mix with coarse but not fine aggregate, and an SS emulsion is designed to mix with fine aggregate.

The emulsions are further subdivided by a series of numbers related to viscosity of the emulsions and hardness of the base asphalt cements. The letter "C" in front of the emulsion type denotes cationic. The absence of the "C" denotes anionic or nonionic. For example, RS-1 is anionic or nonionic and CRS-1 is cationic.

Three grades of high-float medium-setting anionic emulsions, designated HFMS, have been added to standard ASTM specifications. These grades are used primarily in cold and hot plant mixes, coarse aggregate seal coats, and road mixes. High float emulsions have a specific quality that permits a thicker film coating without danger of runoff.

A quick-set type of emulsion (QS) has been developed for slurry seals. Its use is rapidly increasing as the unique quick-setting property solves one of the major problems associated with the use of slurry seals.

Standard specifications for quick-set emulsions are under development. Additionally, some emulsions are made with the water dispersed in asphalt, usually a cutback. As these so-called "inverted emulsions" are seldom used, they are not discussed at all.

2.04 SPECIFICATIONS

AASHTO and ASTM have developed standard specifications for the following grades of emulsions:

EMULSIFIED ASPHALT	CATIONIC EMULSIFIED ASPHALT
RS-1	CRS-1
RS-2	CRS-2
MS-1	—
MS-2	CMS-2
MS-2h	CMS-2h
HFMS-1	—
HFMS-2	—
HFMS-2h	—
SS-1	CSS-1
SS-1h	CSS-1h

The "h" that follows certain grades simply means that a harder base asphalt is used. The "HF" preceding some of the MS grades indicates high-float, as measured by the Float Test (AASHTO T 50 or ASTM D 139). High-float emulsions have a quality, imparted by the addition of certain chemicals, that permits a thicker asphalt film on the aggregate particles with minimum probability of drainage. Some user agencies specify an additional cationic sand-mixing grade designated CMS-2s, which contains more solvent than other cationic grades. All grades in this lengthy list of emulsions cannot be stocked by most producers. Communication and planning between user and producer helps facilitate service and supply of a given grade.

The specifications for emulsified asphalts (AASHTO M 140 and ASTM D 977) make no mention of a solvent in the emulsion. CRS- and CMS- cationic emulsion specifications (AASHTO M 208, ASTM D 2397), on the other hand, permit solvent but restrict the amount.

General guidelines for use as contained in "Standard Practice for Selection and Use of Emulsified Asphalts," ASTM D 3628, are given in Table V-1, Chapter V. Standard specifications for emulsified asphalts carry AASHTO Designations M 140 and M 208 and ASTM Designations D 977 and D 2397. For convenience, the basic requirements of these specifications are given in Tables II-1 and II-2.

2.05 VARIABLES AFFECTING ASPHALT EMULSION

There are many factors that affect the production, storage, use, and performance of an asphalt emulsion. It would be hard to single out any one as being most significant. But, among the variables having a significant effect are:

- Chemical properties of the base asphalt cement
- Hardness and quantity of the base asphalt cement
- Asphalt particle size in the emulsion
- Type and concentration of the emulsifying agent
- Manufacturing conditions such as temperatures, pressures, and shear
- The ionic charge on the emulsion particles
- The order of addition of the ingredients
- The type of equipment used in manufacturing the emulsion
- The property of the emulsifying agent
- The addition of chemical modifiers.

The above factors can be varied to suit the available aggregates or to suit construction conditions. It is always advisable to consult the emulsion supplier with respect to a particular asphalt-aggregate combination as there are few absolute rules that will work the same under all conditions. Therefore, making asphalt emulsions appears to be a combination of art and science.

An examination of the three main constituents—asphalt, water, and emulsifier—is essential to an understanding of why asphalt emulsions work as they do.

B. EMULSION INGREDIENTS

2.06 ASPHALT

Asphalt cement is the basic ingredient of asphalt emulsion and, in most cases, it makes up from 55 to 70 percent of the emulsion. Tables II-1 and II-2 show the asphalt content specified for various types of emulsions.

Because asphalt cement is such a complex material, only those properties that significantly affect emulsions are discussed. There is not an exact correlation, however, between the properties and the ease with which the asphalt can be emulsified. Although hardness of base asphalt cements may be varied as desired, most emulsions are made with asphalts in the 100—250 penetration range. On occasion, climatic conditions may dictate that a harder or softer base asphalt be used. In any case, compatibility of the emulsifying agent with the asphalt cement is essential for production of a stable emulsion.

Asphalt is a colloid composed of several fractions, the major ones being asphaltenes and maltenes. The colloidal make-up of the asphalt depends on the chemical nature and percentage of these fractions and their relationship to each other.

TABLE II-1 REQUIREMENTS AND TYPICAL APPLICATIONS FOR EMULSIFIED ASPHALT

[d] The demulsibility test shall be made within 30 days from date of shipment.

[e] These typical applications are for use only as a guide for selecting and using the emulsion for pavement construction and maintenance.

The asphaltenes are the dispersed phase in the asphalt whereas the maltenes are the continuous phase. The asphaltenes are thought to furnish hardness while the maltenes are believed to provide the adhesive and ductile properties of the asphalt. The maltenes present have an influence on the viscosity, or flow properties, of the asphalt. The complex interaction of the different fractions makes it almost impossible to predict accurately the behavior of an asphalt to be emulsified. For this reason, constant quality control is maintained on emulsion production to detect and correct any tendency of the asphalt to affect adversely the performance of the resulting emulsion.

Several systems of asphalt analysis are in use today to separate and evaluate the fractions. There is no absolute agreement among technologists as to how each fraction affects field performance. Nor is there total agreement about the ease with which an asphalt cement can be emulsified.

Each emulsion manufacturer has his own formulations and production techniques. They have been developed to achieve optimum results with the asphalt cement and emulsifying chemicals that he uses.

2.07 WATER

The second largest ingredient in an asphalt emulsion is water. Its contribution to the desired properties of the finished product cannot be minimized. Water wets and dissolves; it adheres to other substances; and, it moderates chemical reactions. These are all important factors that can be favorable to the production of a satisfactory emulsion. On the other hand, water may contain minerals or other matter that affect the production of stable asphalt emulsions.

Water found in nature may be unfit because of impurities, either in solution or colloidal suspension. Of particular concern is the presence of calcium and magnesium ions, which can affect the properties of the emulsion.

Water containing foreign matter should not be used in emulsion production. It may result in an imbalance of the emulsion components that can adversely affect performance or cause premature breaking.

In summary, water used to produce asphalt emulsions should be reasonably pure and free from foreign matter and should be considered an important item.

2.08 EMULSIFYING AGENTS

Properties of an asphalt emulsion depend greatly upon the chemical used as the emulsifier. That chemical is a surface-active agent, commonly called surfactant, that determines whether the emulsion will be classified as anionic, cationic, or nonionic. The emulsifier also keeps the asphalt droplets in stable suspension and permits breaking at the proper time. The surfactant changes the surface tension at the interface, i.e., the area of contact between the asphalt droplets and the water. A great many chemical emulsifiers are available. Each must be appraised for compatibility with the asphalt cement being used.

In the early days of asphalt emulsion production, such materials as ox-blood, clays, and soaps were used as emulsifying agents. As the demand for emulsions increased, new and more efficient emulsifying agents were found. Several chemical emulsifiers now are commercially available.

The most often used anionic emulsifiers are fatty acids, which are wood-product derivatives such as tall oils, rosins, and lignins. Anionic emulsifiers are saponified (turned into soap) by reacting with sodium hydroxide or potassium hydroxide.

Most cationic emulsifiers are fatty amines (diamines, imidazolines, amidoamines, to name three). The amines are converted into soap by reacting with acid, usually hydrochloric. Another type of emulsifying agent, fatty quarternary ammonium salts, is used to produce cationic

emulsions. They are water-soluble salts as produced and do not require the addition of acid to make them water-soluble. They are stable, effective cationic (positively charged) emulsifiers.

It is important to remember that the pH value of the asphalt emulsion is unrelated to its identification as cationic or anionic. Acidity or alkalinity does not determine the sign of the charge. This sign is determined only by the type of emulsifier.

see page 26 f.n.

Each manufacturer has his own procedure for using his agent in asphalt emulsion production. In most cases, the agent is combined with the water before introduction into the colloid mill. In other cases, however, it may be combined with the asphalt cement just before it goes into the colloid mill.

C. PRODUCING THE EMULSION

2.09 EMULSIFYING EQUIPMENT

Basic equipment to prepare an emulsion includes a high-speed, high-shear mechanical device (usually a colloid mill) to divide the asphalt into tiny droplets. Also needed are an emulsifier solution tank, heated asphalt tank, pumps, and flow-metering gauges. The colloid mill has a high-speed rotor that revolves at 1,000–6,000 rpm (17—100 Hz) with mill-clearance settings in the range of about 0.01 to 0.02 in. (0.25 to 0.50 mm). Such settings yield emulsions with asphalt droplet sizes smaller than the diameter of a human hair [about 0.001 to 0.005 in. (0.025 to 0.125 mm)]. There is a slight variation in mill clearance settings and, thus, asphalt droplet sizes depend upon the equipment used. Some emulsion mills have fixed clearances with no latitude for variation. Although simple mixers can be used to produce low viscosity cutback asphalt, normally they are not used to produce emulsions.

Separate pumps are used to meter asphalt and the emulsifier solution into the colloid mill. Because the emulsifier solution can be highly corrosive, it is necessary to use a pump made of corrosion resistant materials.

A schematic diagram of a typical asphalt emulsion manufacturing plant is shown in Figure II-1.

2.10 THE EMULSIFYING PROCESS

In the general method of emulsifying asphalts, concurrent streams of molten asphalt cement and treated water are directed by positive displacement pumps into the intake of the colloid mill. The asphalt and emulsifying water are subjected to intensive shear stresses as they pass through the colloid mill. The newly-formed emulsion may then be pumped through a heat exchanger. The excess heat is used to raise the temperature of the incoming emulsifying water just before it reaches the colloid mill. From the heat exchanger the emulsion is pumped into bulk storage tanks. These tanks sometimes are equipped with some type of stirring device to keep the product uniformly blended.

Heated asphalt cement the base of the asphalt emulsion, is fed into the colloid mill where it is divided into tiny droplets. At the same time, water containing the emulsifying agent is fed into the colloid mill. The asphalt, as it enters the colloid mill, is heated to ensure a low viscosity, and the water temperature is adjusted accordingly. These temperatures vary; they depend upon the emulsification traits of the asphalt cement and the compatibility between the asphalt and the emulsifying agent. Extremely high asphalt temperatures are not used because the temperature of the emulsion leaving the mill must be below the boiling point of water.

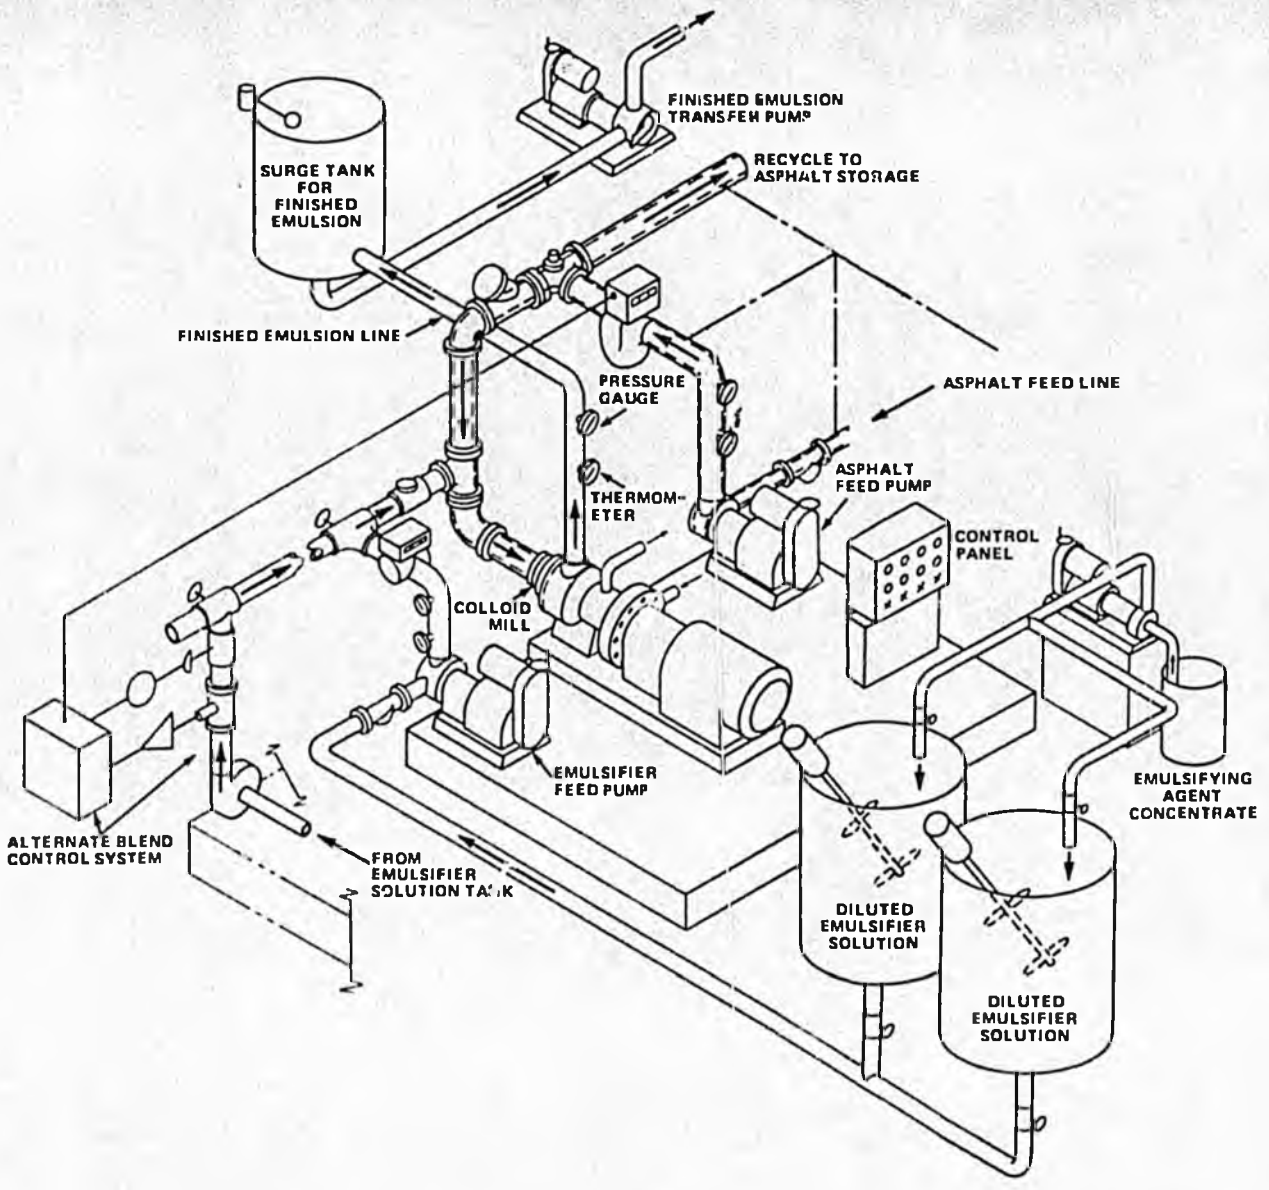

Figure II-1. Diagram of an asphalt emulsion manufacturing plant.

Courtesy Chemicolloid Laboratories, Inc.

The method of adding the emulsifier to the water varies according to the maker's procedure. Some emulsifiers, such as amines, must be mixed and reacted with an acid, such as hydrochloric, to attain water solubility. Others, such as fatty acids, must be mixed and reacted with an alkali, such as sodium hydroxide, to attain water solubility. Mixing is most typically done in a batch mixer. The emulsifier is introduced into warm water containing acid or alkali and agitated until completely dissolved.

Asphalt and emulsifier solution can be proportioned accurately. It can be done by monitoring the temperature of each phase and the mill discharge, or with meters. If the temperature regulation method of proportioning is used, the outlet temperature of the finished emulsion can be calculated from the temperatures of the various emulsion ingredients.

Asphalt particle size is a vital factor in making a stable emulsion. A microscopic photograph of a typical emulsion reveals the following average particle sizes:

Smaller than 0.001 mm (1μm)	28 percent
0.001–0.005 mm (1–5μm)	57 percent
0.005–0.010 mm (5–10μm)	15 percent

These microscopic-sized asphalt droplets are dispersed in water in the presence of the chemical surface-active emulsifier (surfactant). The surfactant causes a change in the surface tension at the contact area between the asphalt droplets and the surrounding water, and this permits the asphalt to remain in a suspended state. The particles, all having a similar electrical charge, repel each other, which also aids in their remaining in a suspended state. Figure II-2 is a photomicrograph showing the sizes and distribution of the asphalt particles.

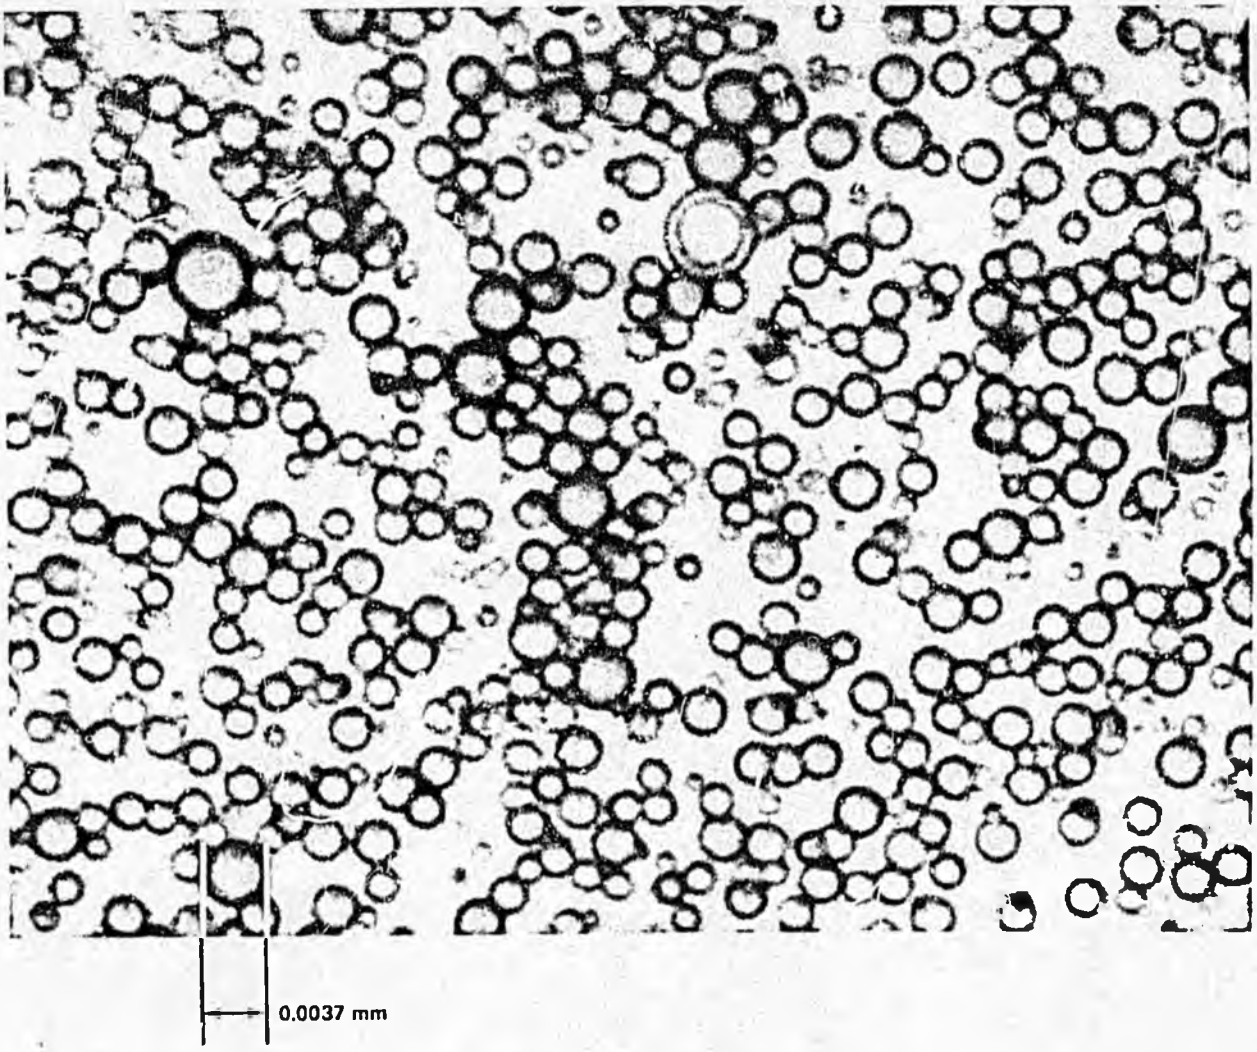

Figure II-2. Relative sizes and distribution of asphalt particles in an emulsion.

D. BREAKING AND CURING

2.11 BREAKING

If the asphalt emulsion is to perform its ultimate function of cementing and waterproofing, the asphalt must separate from the water phase. For surface treatments and seals, emulsions are formulated to break upon contact with a foreign substance such as aggregate or a pavement surface. The asphalt droplets coalesce and produce a continuous film of asphalt on the aggregate or pavement. For dense mixtures, more time is needed to allow for mixing and laydown. Therefore, emulsions used for mixtures are formulated for delayed breaking. Asphalt coalescence is commonly referred to as breaking, or setting. The rate at which the asphalt globules separate from the water phase is referred to as breaking or setting time. For example, a rapid-set emulsion will break within one to five minutes after being applied, whereas a medium- or slow-set material may take considerably longer.

The rate of breaking is controlled primarily by the specific type and concentration of the emulsifying agent used, as well as atmospheric conditions.

The fact that different aggregate types have different rates of absorption means that breaking is also related to the relative absorption characteristics of the aggregate used. Those with higher absorption rates tend to accelerate the breaking of the emulsion due to the more rapid removal of the emulsifying water.

In asphalt emulsion-aggregate mixtures, gradation and surface area of the aggregate also are significant factors in the rate of breaking. As the surface area changes, the breaking characteristic of the medium also changes because of the altered adsorption of the emulsifying agent by the aggregate. In order to achieve optimum results, it is necessary to control the sizing of the aggregate or to adjust the emulsion formulation to meet the specific requirements of the aggregate.

2.12 CURING

For paving uses, both anionic and cationic asphalt emulsions depend on the evaporation of water for development of their curing and adhesion characteristics. Water displacement can be fairly rapid under favorable weather conditions but high humidity, low temperatures, or rainfall soon after application can deter proper curing. Although surface and atmospheric conditions are less critical for cationic emulsions, these types still depend somewhat on weather conditions for optimum results. Perhaps the principal advantage of the cationics is their willingness to give up their water a little faster.

Traditional theory holds that anionic emulsions (with a negative charge on the asphalt droplets) perform best with aggregates having mostly positive surface charges—limestone and dolomite are examples. The theory also holds that cationic emulsions (with a positive charge on the asphalt droplets) perform best with aggregates having mostly negative surface charges—some examples are siliceous or granitic aggregates. Presently, there is not complete agreement on the subject of electrical charges on aggregate surfaces. Recent studies have challenged the traditional theories. The theories presented in this manual follow the line of traditional usage, which may change in the future.

When using either the anionic or cationic rapid-set emulsion the initial deposition of asphalt develops through an electrochemical phenomenon. But the main bond of strength between the asphalt film and the aggregates comes after the loss of emulsifying water. This water film can be

displaced by evaporation, pressure (rolling), or by absorption. In actual use, breaking is usually a function of the combination of these three factors.

Medium- and slow-set emulsions, being more heavily stabilized, depend less on the aggregate type although the same basic principles of electrical charges with respect to selection of emulsion type still apply. When the MS and SS grades are used for paving mixes, the use of slightly damp aggregates facilitates the mixing and coating process. The development of strength in the SS types depends mainly on dehydration and absorption with removal of water by either of these mechanisms breaking the emulsion. Solvent-free CMS and CSS emulsions require that the moisture on the aggregate be at or near optimum for proper mixing and coating.

Some types of emulsions contain slight amounts of petroleum solvent to aid in the mixing and coating process. While the solvent does not enter directly into the breaking mechanism, provisions must be made for the evaporation of the solvent in order for the mixture to be properly cured. Where multiple courses are to be placed, a successive course should not be applied until the water (and solvent, if applicable) has been removed from the preceding course.

2.13 FACTORS AFFECTING SETTING RATE

In general, some of the factors that affect setting rate of an asphalt emulsion are as follows:

1. The rate that water is absorbed by the aggregate. A rough-textured, porous aggregate speeds the setting time by absorbing water from the emulsion.
2. Moisture content of the aggregate prior to mixing.
3. Weather conditions—temperature, humidity, and wind velocity all have a bearing on rate of set.
4. Mechanical forces brought to bear by rolling and by traffic. Roller pressure, to a limited extent, forces the water from the materials.
5. Size distribution and mineral composition of aggregate. Fine aggregate mixes tend to break faster because they possess greater surface area than an equal weight of coarse aggregate. The mineral composition also affects the speed at which the asphalt emulsion breaks. There may be some type of chemical reaction between the emulsifier and the aggregate surface. Also, dirty aggregate or excessive fines may accelerate breaking and retard curing.
6. The type and amount of emulsifying agent used.
7. Intensity of charge on aggregate versus intensity of emulsifier charge, in combination with surface area, is a major setting-rate determinant.
8. Chemical coagulation. The emulsion becomes unstable because of a decreased water content.

The above factors must be considered in determining working time after the emulsion has been sprayed or mixed with the aggregate in the field.

CHAPTER III

STORING, HANDLING, AND SAMPLING ASPHALT EMULSIONS

3.01 GENERAL

The storage and handling of asphalt emulsions require precaution beyond that used for other types of asphalt materials. Improper handling or storage of the emulsion, or both, may cause premature breaking, thereby making it useless. The Asphalt Institute, in recognition of these necessary precautions, has issued a Construction Leaflet, *Storing and Handling of Emulsified Asphalts* (CL-21), outlining some of the safeguards that must be followed. Failure to follow even a single one of them may cause the material to be unsatisfactory at the time of use. Careful study of each item is therefore suggested. Sticking to these simple rules will save time and money by having the material ready for use when needed. The safeguards listed in the Asphalt Institute leaflet are repeated below to help those who have had little or no experience with asphalt emulsions. However, it is not intended to give the impression that asphalt emulsions are so delicate as to limit their field use. The use of almost any other material would have a long list of admonitions for the uninitiated.

3.02 STORING ASPHALT EMULSIONS

Emulsified asphalt, being a dispersion of fine droplets of asphalt cement in water, has both the advantages and disadvantages of the carrier medium, water. When storing emulsified asphalts:

DO store as you would fluid water—between 50° F (10° C) and 185° F (85° C), depending on the use.

DO use hot water as the heating medium for storage tanks with heating coils. Low pressure or waste steam also may be used, with temperature controlled on the coil surface to not more than 185° F (85° C).

DO store at the temperature specified for the particular grade. For spray applications, the emulsions are stored at higher temperatures than for mixing with aggregate. For example, the higher viscosity rapid-set spray grades are stored at 125° F to 185° F (50° C to 85° C) since they are usually applied in this temperature range. The lower viscosity grades are stored at lower temperatures. Table III-1 shows the normal storage temperature ranges. Store the mixing grades at the lower end of the temperature ranges as shown in Table III-1.

DO NOT permit the emulsified asphalt to be heated above 185° F (85° C). Elevated temperatures evaporate the water, resulting in an increase in viscosity and an asphalt layer in the tank. The materials can no longer be used as intended and it will be difficult to empty the tank.

DO NOT let the emulsion freeze. This breaks the emulsion, separating the asphalt from the water. The result will be two layers in the tank, neither suited for the intended use, and the tank will be difficult to clean.

DO NOT allow the temperature of the heating surface to exceed 205° F (96° C). This will cause premature breakdown of the emulsion on the heating surface.

DO NOT use forced air to agitate the emulsion. It may cause the emulsion to break.

TABLE III-1 STORAGE TEMPERATURES FOR EMULSIFIED ASPHALTS

Grade	Temperature, °F (°C)	
	Minimum	Maximum
RS-1	70° (20°)	140° (60°)
RS-2, CRS-1, CRS-2	125° (50°)	185° (85°)
SS-1, SS-1h, CSS-1, CSS-1h, MS-1, HFMS-1	50° (10°)	140° (60°)

3.03 STORAGE FACILITIES

For protection from freezing and best utilization of heat, storage tanks should be insulated. A skin of asphalt can form on the surface of emulsions when exposed to air. It is best, therefore, to use tall, vertical tanks as they expose the least amount of surface area to the air. Most fixed storage tanks are vertical but horizontal tanks are often used for short-term field storage. Skinning can be reduced by keeping horizontal tanks full to minimize the area exposed to air.

Side-entering propellers located about three feet (one metre) up from the tank bottom may be used to prevent surface skin formation. Large diameter, slow-turning propellers are best and should be used to roll the material over. Avoid overmixing. Secondly, tanks may be circulated top to bottom with a pump. Avoid over-pumping. In tanks not equipped with propellers, or a circulating system, a very light film of kerosene or oil on the surface can reduce skin formation. Emulsions that are rolled or circulated generally do not require a layer of kerosene or oil on the surface. Cathodic protection should be provided to avoid possible corrosion of tank walls and heating coils.

3.04 HANDLING EMULSIFIED ASPHALTS

DO when heating emulsified asphalt agitate it to eliminate or reduce skin formation.

DO protect pumps, valves, and lines from freezing in winter. Drain pumps or fill them with anti-freeze according to the manufacturer's recommendations.

DO blow out lines and leave drain plugs open when they are not in service.

DO use pumps with proper clearances for handling emulsified asphalt. Tightly fitting pumps can cause binding and seizing.

DO use a mild heating method to apply heat to the pump packing or casing to free a seized pump. Discourage the use of propane torches.

DO warm the pump to about 150° F (65° C) to ease start-up.

DO when a pump is to be out of service for even a short period of time, fill it with No. 1 fuel oil to ensure a free start-up.

DO when diluting grades of emulsified asphalt, check the compatibility of the water with the emulsion.

DO if possible, use warm water for diluting and always add the water slowly to the emulsion (not the emulsion to the water).

DO avoid repeated pumping and recycling, if possible, as the viscosity may drop and air may become entrained, causing the emulsion to be unstable.

DO guard against mixing different classes, types, and grades of emulsified asphalt in storage tanks, transports, and distributors. For example, if cationic and anionic emulsified asphalts are mixed, the blend will break and separate into water and coagulated asphalt that will be difficult to remove. Because it is hard to determine visually the difference between various emulsified asphalts, always make a trial blend of the newly-delivered emulsion and the stored emulsion before pumping off. Check the trial blend for compatibility.

DO place inlet pipes and return lines at the bottom of tanks to prevent foaming.

DO pump from the bottom of the tank to minimize contamination from skinning that may have formed.

DO remember that emulsions with the same grade designation can be very different chemically and in performance.

DO haul emulsion in truck transports with baffle plates to prevent sloshing.

DO mix by circulation, or otherwise, emulsions that have been in prolonged storage.

DO NOT use tight-fitting pumps for pumping emulsified asphalt; they may "freeze."

DO NOT apply severe heat to pump packing glands or pump casings. The pump may be damaged and the asphalt may become even harder.

DO NOT dilute rapid-setting grades of emulsified asphalt with water. Medium and slow setting grades may be diluted, but always add water slowly to the asphalt emulsion. Never add the asphalt emulsion to a tank of water when diluting.

DO NOT recirculate emulsified asphalts for too many cycles. They tend to lose viscosity when subjected to pumping. Also, air bubbles may become entrained which would render the emulsion unstable.

DO NOT load emulsified asphalt into storage tanks, tank cars, tank transports, or distributors containing remains of incompatible materials. See Tables III-2 and III-3.

TABLE III-2 GUIDE FOR CONDITION OF EMPTIED TANKS BEFORE LOADING EMULSIFIED ASPHALTS

	LAST PRODUCT IN TANK					
PRODUCT TO BE LOADED	Asphalt Cement (includes Industrial Asphalt)	Cutback Asphalt	Cationic Emulsion	Anionic Emulsion	Crude petroleum and residual fuel oils	Any product not listed above
Cationic Emulsion	Empty to no Measurable Quantity	Empty to no Measurable Quantity	OK to load	Empty to no Measurable Quantity	Empty to no Measurable Quantity	Tank must be cleaned
Anionic Emulsion	Empty to no Measurable Quantity	Empty to no Measurable Quantity	Empty to no Measurable Quantity	OK to load	Empty to no Measurable Quantity	Tank must be cleaned

NOTE: All tanks to be emptied to 0.5 percent or less of capacity. Pump section, unloading line, and all piping must be drained.

TABLE III-3 POSSIBLE CAUSES OF CONTAMINATION OF ASPHALT MATERIAL OR SAMPLES AND SUGGESTED PRECAUTIONS

HAULERS AND HAULING VEHICLES

Field observations and studies of test results have indicated that contamination of materials during transportation often occurs.

Possible Causes	*Precautions*
(a) Previous load not compatible with material being loaded.	Examine the log of loads hauled or check with the supplier to determine if previous material hauled is detrimental. If it is, make sure vehicle tanks, unloading lines, and pump are properly cleaned and drained before being presented for loading. Provide a ramp at the unloading point at the plant that will ensure complete drainage of vehicle tank while material is still fluid.
(b) Remains of diesel oil or solvents used for cleaning and flushing of tanks, lines, and pump.	When this is necessary, make sure all solvents are completely drained.
(c) Flushing of solvents into receiving storage tank or equipment tanks.	Do not allow even small amounts to flush into storage tank as entire contents may be contaminated

(Continued on next page)

TABLE III-3 (con't.)

MIX PLANT STORAGE TANK AND EQUIPMENT

Many investigations and test results point to mix plant storage tanks and associated equipment as the source of contamination.

Possible Causes	*Precautions*
(a) Previous material left over in tank when changing to another material	Any material allowed to remain must be compatible with new material; and the amount remaining in the tank must be insufficient to cause new material to become out-of-specification. If in doubt, check with your supplier. To be on the safe side, tank should be drained or cleaned prior to using tank for each different type or grade of asphalt. Be sure discharge line connects at low point of storage tank to ensure complete emptying when changing type or grades of asphalt or cleaning tank.
(b) Solvents used to flush hauling vehicle tank discharged into storage tank.	Observe unloading operations, caution driver about flushing cleaning materials into storage tank. If possible, provide place for hauler to discharge cleaning materials.
(c) Flushing of lines and pump between storage tank and hot-plant with solvents and then allowing this material to return to tank.	If necessary to flush lines and pump, suggest providing bypass valves and lines to prevent solvents from returning to tank. A better solution is to provide insulated, heated lines and pump, thereby eliminating the necessity of flushing.
(d) Cleaning of distributor tank, pump, spray bar, and nozzles with solvents.	Be sure all possible cleaning material is drained off or removed prior to loading. Do not take sample from nozzle until sufficient material has been discharged to guard against taking a contaminated sample.
(e) Dilutions from hot oil heating systems.	Check reservoir on hot oil heating system. If oil level is low, or oil has been added, check system for leakage into the asphalt supply.

NON-REPRESENTATIVE OR CONTAMINATED SAMPLE

Test results are greatly dependent upon proper sampling techniques. Extra care, on the part of the sampler, to obtain samples that are truly representative of the material being sampled will do much to eliminate the possibility of erroneous test results by reason of improper sampling. Make sure samples are taken only by those authorized persons who are trained in sampling procedures.

Possible Causes	*Precautions*
(a) Contaminated sampling device (commonly called a "sample thief").	If sampling device (of type described in AASHTO T 40 or ASTM D 140) is cleaned with diesel oil or solvent, make sure that it is thoroughly drained and then rinsed out several times with material being sampled prior to taking sample.
(b) Samples taken with sampling device from top of tank where, under certain conditions, contaminants can collect on the surface.	In taking a sample from the top of a tank lower sampling device below the extreme top before opening. Note: This sample may come from the top one-third of the tank.

(Continued on next page)

TABLE III-3 (Con't.)

Possible Causes	*Precautions*
(c) Contaminated sample container.	Use only new clean containers. Never wash or rinse a sample container with solvent. Glass or polyethylene containers should be used.
(d) Sample contaminated after taking.	**DO NOT** submerge container in solvent or even wipe outside of container with solvent-saturated rag. If necessary to clean spilled material from outside of container, use a clean dry rag. Make sure container lid is tightly sealed prior to storage or shipment. Ship to testing laboratory promptly.
(e) Samples taken from spigot in lines between storage tank and hot-plant.	If sampling spigot is in suction line between tank and pump, this necessitates stopping pump prior to taking sample. Samples thus taken are by gravity and only representative of material localized in the pipe area of the spigot. Rather, the spigot should be in lines between pump and return line discharge, thereby allowing slow withdrawal of material during circulation. **DO NOT** take sample while hauling vehicle is pumping into storage tank. **DO NOT** take sample without allowing sufficient time for circulation and thorough mixing of material. **DO** drain off sufficient material through spigot prior to taking sample to ensure removal of any contaminant lodged in spigot. **DO** take sample slowly during circulation to be more representative of material being used.
(f) Samples taken from unloading line of hauling vehicle.	Drain off sufficient material through spigot prior to taking sample to ensure removal of any contaminant lodged there. Sample should be taken after one-third and not more than two-thirds of the load has been removed. Take sample slowly to be sure it is representative of the material being used.

3.05 SAMPLING ASPHALT EMULSIONS

The purpose of any sampling method is to obtain samples that will show the true nature and condition of the material. The general procedure is described in the following articles. The standard procedure is detailed in "Standard Methods of Sampling Bituminous Materials," AASHTO T 40 or ASTM D 140.

3.06 SAMPLE CONTAINERS

(1) Containers for anionic emulsified asphalt samples shall be one-gallon wide-mouth jars or bottles made of glass or plastic.

(2) Containers for cationic emulsified asphalt samples shall be one-gallon wide-mouth jars or bottles made of plastic or wide-mouth plastic-lined cans with lined screw caps, or plastic-lined triple-seal friction-top cans.

(Bare metal cans are corroded by emulsified asphalts, particularly the cationic type. They also may cause the emulsion to break.)

3.07 SIZE OF SAMPLES

The size of samples shall correspond to the required sample containers.

3.08 SAMPLES

Whenever practicable, the emulsified asphalt shall be sampled at the point of manufacture or storage. If that is not practicable, samples shall be taken from the shipment immediately upon delivery. Three samples of the emulsified asphalt shall be taken. The samples shall be sent to the laboratory for testing as soon as possible.

3.09 SAMPLING PRECAUTIONS

(1) Sample containers shall be new. They shall not be washed or rinsed. If they contain evidence of solder flux or if they are not clean and dry they shall be discarded. Top and container shall fit together tightly.

(2) Care shall be taken to prevent the samples from becoming contaminated. The sample container shall not be submerged in solvent, nor shall it be wiped with a solvent saturated cloth. Any residual material on the outside of the container shall be wiped with a clean, dry cloth immediately after the container is sealed and removed from the sampling device.

(3) The sample shall not be transferred into another container.

(4) The filled sample container shall be tightly and positively sealed immediately after the sample is taken.

3.10 SAFETY PRECAUTIONS

(1) Safety precautions are mandatory at all times when handling asphalt materials. These safety precautions include, but are not limited to, the ones that follow.

(2) Gloves shall be worn and sleeves shall be rolled down and fastened over the gloves at the wrist while sampling and while sealing containers.

(3) Face shields should be worn while sampling.

(4) There shall be no smoking while sampling asphalts.

(5) The sampler shall stand on the windward side when taking the sample.

(6) During sealing and wiping the container shall be placed on a firm level surface to prevent splashing, dropping or spilling the material.

3.11 PROTECTION AND PRESERVATION OF SAMPLES

(1) Immediately after filling, sealing, and cleaning the sample containers shall be properly marked for identification with a wick marking pencil on the container itself, not on the lid. Linen tags also may be used for identification if they can be securely fastened to the container in such a manner as to ensure that they will not be lost in transit.

Linen tags shall not be attached to containers by using the lids to secure them.

(2) Samples of emulsions shall be packaged, labeled, and shipped in such a manner as to protect them from freezing.

(3) All samples should be packaged and shipped to the laboratory the same day they are taken. The containers, tightly sealed, should be packed in absorbent material, such as sawdust, excelsior, or vermiculite, to reduce the probability of damage during shipment.

(4) Each sample shall be identified with at least the following information:

(a) Shipper's name and bill of lading or loading slip number.

(b) Date sampled.

(c) Sampler's name.

(d) Product grade.

CHAPTER IV

EMULSIFIED ASPHALT TESTS

4.01 REASONS FOR TESTING ASPHALT EMULSIONS

Proper interpretation of laboratory test results can greatly aid in determining the traits of an asphalt emulsion. As advances in asphalt emulsion technology have been made through the years, corresponding advances in emulsion testing have evolved. Some of these tests are designed to measure performance qualities. Others deal mainly with the manufacturing process.

Laboratory tests are normally performed for one of four purposes:

1. To measure properties related to handling, storage, and field use.
2. To control the quality and uniformity of the product during manufacturing and use.
3. To provide reference procedures for specifications.
4. To predict or control field performance.

Table IV-1 is a useful summary of most of the tests.

A review of emulsion specifications used across the United States reveals a wide variety of requirements. Many are directly related to the emulsions produced by specific manufacturers. Because it is impracticable to discuss the multitude of requirements and test methods, this chapter is confined to the methods in AASHTO Test Method T 59 and ASTM Method D 244.

4.02 ASPHALT EMULSION TESTS

Asphalt emulsions are made by taking asphalt cement, and by special formulation, converting it to a liquid form. That makes the asphalt easy to apply, mix, or handle before it reverts to its original state. Test methods for evaluating properties of asphalt cement are well known. Among them are penetration, ductility, and solubility in trichloroethylene, tests that apply also to the residual asphalt in the emulsion after the water has evaporated. The primary purpose of this chapter is to consider the tests that apply to asphalt emulsion, rather than the base asphalt cement. The major emulsion tests are briefly discussed, with details of each test method presented in Appendix B. Most of the tests are standard procedures and are outlined in "Testing Emulsified Asphalts," AASHTO Method T 59 and ASTM Method of Test D 244.

4.03 RESIDUE BY DISTILLATION

The relative proportions of asphalt cement and water in the emulsion can be determined by a distillation test. Additional tests may be made on the asphalt cement residue when the emulsifed asphalt contains an oil distillate. A micro-distillation test or residue-by-evaporation test also can be performed to determine the amount of this material in the emulsion.

The distillation test procedure for asphalt emulsion is closely akin to that for cutback asphalt. The main difference is that an aluminum alloy still and ring burners are used instead of the glass flask and Bunsen Burner (note Figure IV-1). The equipment is designed to prevent trouble from

TABLE IV-1 SUMMARY OF EMULSION TESTS

Property	*Factor*	*Requirement*		*Test*
CONSTANCY	A) Uniformity	Product must have the same handling, mixing and setting characteristics from shipment to shipment.	*Residue:	Proportions of asphalt & water. (Indication of uniformity of manufacture.) Residue is measured by dehydrating the emulsion by evaporation or distillation.
	B) Storage Stability	Product must be capable of storage without excessive damage or change.	*Sieve:	Amount of oversize particles, shot and slugs retained on #20 mesh sieve.
			*Settlement: *Storage Stability:	Amount of settlement of asphalt particles in 5 days — one day for storage stability test. The difference in residue between top and bottom is measured.
			Freeze-Thaw:	Most emulsions are damaged by freezing.
CLASSIFICATION	A) Differentiate mixing grade product from rapid set types. (Select proper grade)		*Demulsibility:	Amount of coagulation on addition of a salt-calcium chloride with anionic emulsion; Aerosol OT with cationic emulsion.
	B) Differentiate cationic from anionic emulsions. (Prevent mixing of grades which could result in breakdown)		*Particle Charge Test:	Deposition of asphalt on an electrode.
			pH:	Cationics are acid with a pH of less than 7. Anionics are alkaline with a pH greater than 7. Water has a pH=7.
CONSTRUCTION CHARACTERISTICS	A) Handling	Product must be safe to handle and capable of being pumped and sprayed without breakdown or run-off.	*Consistency:	Emulsion viscosity.
			Pumping Stability:	No test in current specifications.
	B) Rate of Set	The product must break rapidly and hold aggregate under the action of traffic.	Dehydration:	Amount of water lost in 96 hours at 100°F.
				(Note: Improved test method for Rate of Set is needed.)
	C) Mixing Stability	The product must mix with water and aggregate without balling or breakdown. Once mixed, the mix must cure rapidly to an asphalt film.	*Cement Mixing:	Emulsion mixed with cement.
			*Stone Coating-Water Resistance:	Job (or reference) aggregate is mixed with the emulsion to determine coating and early rain resistance.
			Miscibility With Water:	Ability to mix with water without coagulation.
DURABILITY	A) Traffic Densification	Properly designed pavements must not bleed under repeated* load application by heavy traffic.	*Penetration: *Float Test: *Residue:	Consistency of base asphalt after laboratory distillation.
	B) Resistance to Stripping	Mixes must not strip when in prolonged contact with water.	Adhesion Test:	Made on job aggregate or a reference aggregate.
	C) Long-Term Service Life	Asphalt must remain flexible at cold temperatures and not deteriorate on long-term weathering in a pavement.	*Penetration & Ductility After Laboratory Distillation: Specification Tests On Original Asphalt:	
ASPHALT PURITY	A) Ensure Presence of Asphalt	Keep to a minimum the additives, emulsifiers and fillers used to emulsify the asphalt.	*Solubility Of The Asphalt After Laboratory Distillation:	

*Included in AASHTO T 59 and ASTM D 244

Courtesy Chevron U.S.A., Inc.

see page 11 for

foaming of the emulsified asphalt as it is being heated to a maximum of 500° F (260° C).

The usual test method, however, is not necessarily preferred for recovery of the asphaltic residue and for defining the properties of the asphalt base stock used in the emulsion. Properties of the asphalt base can be altered substantially by:

— Concentration of inorganic salts from the aqueous phase in the asphaltic residue.

— Concentration of emulsifying agents and stabilizers (if present) in the asphaltic residue. These materials frequently undergo thermal decomposition during the distillation test and the resulting degradation products may or may not be soluble in the asphalt. This alters the asphalt properties by increasing the percentage of insoluble matter, thus lowering ductility and increasing or decreasing the penetration and viscosity of the asphalt base.

Thermally-induced changes do not occur in actual usage because the applied emulsion is allowed to break either electrochemically or by evaporation of the water. In field use, the temperature of the system never approaches that observed in the distillation test. Therefore, the real purpose of the test—to determine accurately the amount of asphalt cement in the emulsion—is not always realized. Evaporation of the water at subatmospheric pressure and at lower temperatures (AASHTO T 59 or ASTM D 244) provides a more realistic means for defining the properties of the asphalt after it is cured on the pavement surface. Similar procedures are now recognized and used by many agencies and emulsified asphalt producers.

4.04 OIL DISTILLATE

The oil distillate, percent by volume of the original emulsion sample, is obtained from the amount of oil in the cylinder at the end of the test for residue by distillation.

4.05 RESIDUE BY EVAPORATION

This test is designed to measure the percentage of asphalt cement in the emulsion by evaporating the water. The residue derived from this procedure can be used for other tests but lower penetration and ductility than in the residue from distillation usually results.

4.06 PARTICLE CHARGE TEST

The particle charge test is made to identify cationic emulsions. It is performed by immersing a positive electrode (anode) and a negative electrode (cathode) into a sample emulsion and connecting them to a controlled direct-current electrical source, Figure IV-2. At the end of a specified period, the electrodes are observed to determine if the cathode has an appreciable layer of asphalt deposited on it. Most cationic asphalt emulsion particles will be attracted by the cathode.

4.07 VISCOSITY

Viscosity is defined as a fluid's resistance to flow. In the case of emulsified asphalts the Saybolt Furol viscosity test (Figure IV-3) is used as a measure of consistency. Results are reported in Saybolt Furol seconds. For convenience and for testing accuracy, two testing temperatures, which cover the normal working range, are used. These temperatures are 77° F (25° C) and 122° F (50° C).

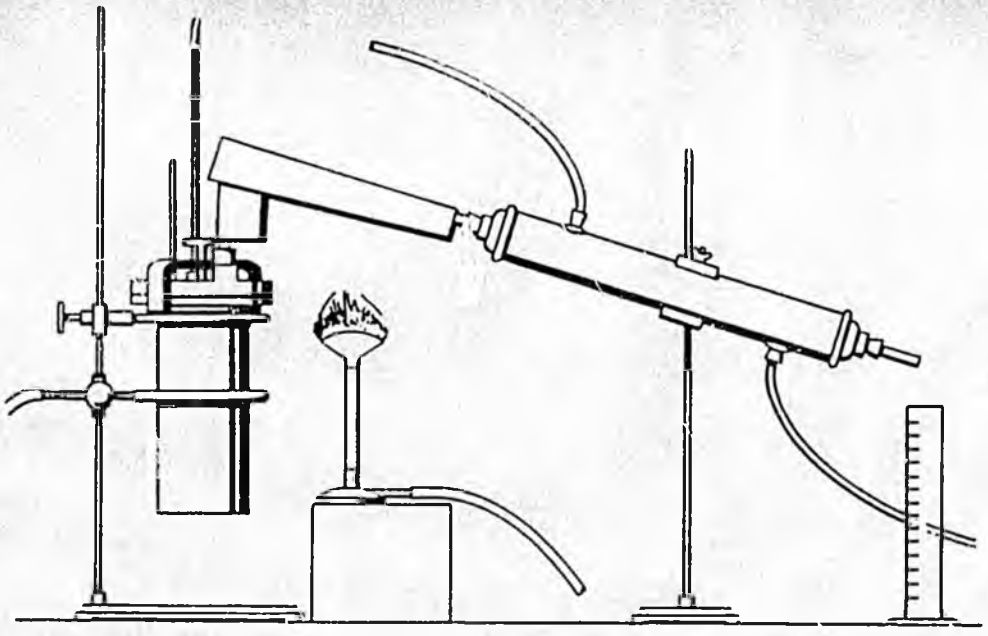

Figure IV-1. Distillation test for emulsified asphalts.

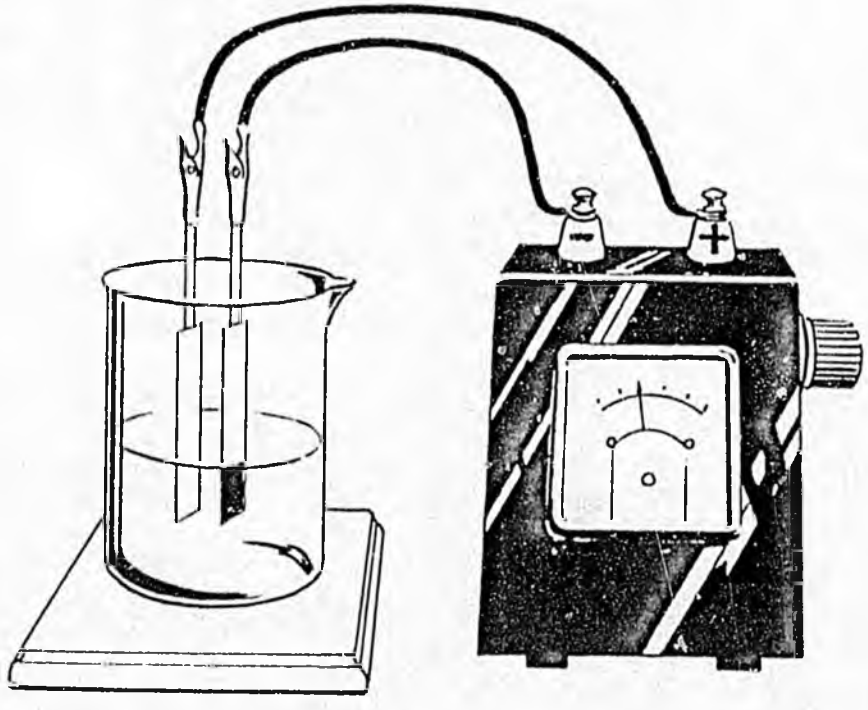

Figure IV-2. Particle charge test.

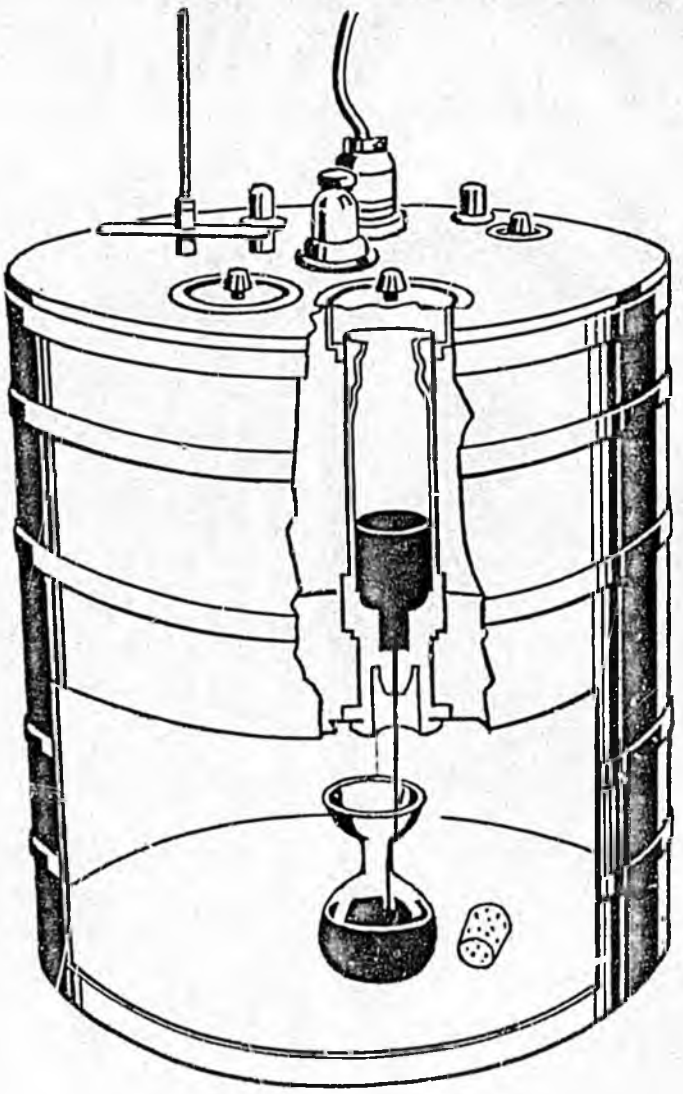

Figure IV-3.
Saybolt Furol viscosity test.

4.08 DEMULSIBILITY

The demulsibility test indicates the relative rate at which the colloidal asphalt globules in the rapid-setting type of emulsified asphalts will break when spread in thin films on soil or aggregate. Calcium chloride causes the minute asphalt globules present in these emulsified asphalts to coalesce. In the test, a solution of calcium chloride and water is thoroughly mixed with emulsified asphalt; then it is poured over a sieve to determine how much the asphalt globules coalesce.

In testing rapid-setting (RS) emulsions, a very weak solution of calcium chloride and water is employed. But, in testing cationic rapid-setting (CRS) emulsions, dioctyl sodium sulfosuccinate solution is used instead of calcium chloride. Specifications prescribe the concentration of the solution and the minimum amount of asphalt to be retained on the sieve. A high degree of "demulsibility" is required of this type of emulsified asphalt. It is expected to break almost immediately upon contact with the aggregate on which it is applied.

4.09 SETTLEMENT

The settlement test indicates the emulsion's stability in storage. It detects the tendency of asphalt globules to settle during storage. This test also serves as an indicator of quality even if the emulsion is not to be stored for a period of time. Failure of the settlement test indicates that something is wrong or out of balance in the emulsification process.

A prescribed volume of emulsion is allowed to stand in a graduated cylinder for a specified number of days (usually five). Small samples are then taken from the top and bottom parts. Each sample is placed in a beaker and weighed. The sample is then heated until all water evaporates; then the residue is weighed. The weights obtained are used to find the difference, if any, between the asphalt cement content in the upper and lower portions of the cylinder. This provides a measure of settlement.

When the asphalt emulsion is to be used promptly, most agencies will accept the storage stability test (one-day settlement), Article 4.14, in lieu of the settlement test.

4.10 CEMENT MIXING

The cement mixing test does the same for slow-setting (SS) emulsified asphalts as the demulsibility test for rapid-setting grades. The SS grades are used with fine materials and dusty aggregates. They are normally unaffected by calcium chloride solution as used in the demulsibility test.

In the cement mixing test, a sample of emulsified asphalt is mixed with finely-ground portland cement and the mixture washed over a 1.40 mm (No. 14) sieve. Specifications usually limit the amount of material that may be retained on the sieve.

The cement mixing reaction for cationic and noncationic emulsions is quite different. The cationic emulsion reacts to portland cement because of surface area; the noncationic, particularly the anionic type, reacts chemically with portland cement constituents, forming a water-insoluble salt.

4.11 SIEVE TEST

The sieve test complements the settlement test and has a somewhat similar purpose. It is used to find the amount of asphalt in the form of rather large globules that may not have been detected in the settlement test and could clog the spraying equipment. Such globules will not provide thin and uniform coatings of asphalt on the aggregate particles.

In the sieve test, a representative sample of emulsified asphalt is poured through a 850 μm (No. 20) sieve. For anionic emulsions, the sieve and retained asphalt are then rinsed with a mild sodium oleate solution and finally with distilled water. For cationic emulsions, distilled water only is used for rinsing. After rinsing, the sieve and asphalt are dried in an oven and the amount of retained asphalt determined by weighing.

4.12 MISCIBILITY WITH WATER

This test finds if medium-setting or slow-setting emulsions can be mixed with water. It is *not* applicable to rapid-setting asphalt emulsions. After adding and stirring distilled water, the emulsion sample is allowed to stand for two hours. It is then examined for any appreciable coagulation of the asphalt droplets in the emulsion.

The test is a quality measure in addition to indicating whether the emulsion is capable of mixing with, or being diluted with, water. Quite often there will be a deposit of heavy emulsion

in the bottom of the beaker. If the deposit in the beaker is minimal, it signifies that the emulsion is properly formulated and that the dispersed particles are in the desired size range.

4.13 COATING ABILITY AND WATER RESISTANCE

This test has a threefold purpose. It determines the ability of an asphalt emulsion to: (1) coat the aggregate thoroughly, (2) withstand mixing action while remaining as a film on the aggregates and (3) resist the washing action of water after completion of mixing. The test is primarily intended to identify medium-setting asphalt emulsions suitable for mixing with coarse-graded calcareous aggregates. Other aggregates may be used in the test if calcium carbonate is omitted throughout the method. This test is *not* adaptable to rapid-setting or slow-setting asphalt emulsions.

The job aggregate is coated with calcium carbonate dust and then mixed with the emulsified asphalt. About one-half of the mixture is then placed on absorbent paper for a visual inspection of the surface area of aggregate coated by the emulsified asphalt. The remainder of the mixture is sprayed with water and rinsed until the rinse water runs clear. This material is then placed on absorbent paper and inspected for coating.

Another sample of job aggregate is similarly coated with calcium carbonate dust. A given quantity of water is then mixed with the dust-coated aggregate. Emulsified asphalt is added and thoroughly mixed. Inspections are made as described above for the dry-coated aggregates.

4.14 STORAGE STABILITY

The storage stability test is used to determine the ability of an emulsified asphalt to remain as a uniform dispersion during storage. It is a measure of the permanence of the dispersion as related to time.

A measured representative sample is placed in each of two glass cylinders. They are stoppered and allowed to stand at laboratory temperature for 24 hours. A 50g sample from each cylinder is siphoned from the top. The samples are placed for a set time in an oven heated to a prescribed temperature. Then they are removed, allowed to cool, and weighed. After the top sample is removed, all but a small portion of the asphalt emulsion remaining in each cylinder is siphoned off. A 50g sample of the portion that is left is put through the same procedure as for the top samples.

The storage stability is expressed as the numerical difference between the average percentage of residue in the top samples and the bottom samples.

4.15 EXAMINATION OF RESIDUE

The same desirable characteristics in the base asphalt cement should show up in the residual asphalt after emulsification and coalescence. The most common tests run on the residue include penetration, solubility, ductility, float test, and specific gravity. These tests are described in detail in AASHTO Methods T 49, T 44, T 51, T 50, and T 228 (ASTM Methods D 5, D 2042, D 113, D 139 and D 70) respectively.

The penetration test is an empirical test of consistency. It has been carried over in some viscosity-based asphalt specifications to ensure that materials of an undesirably low penetration are precluded from use. This test measures the depth of penetration in units of 0.1 mm of a standard needle under a load of 100g for exactly five (5) seconds when the asphalt sample is at a temperature of 77°F (25°C). Lower test temperatures are sometimes checked when the asphalt is to be used in an area where very low temperatures are prevalent.

The solubility test is a measure of the "purity" of the asphalt cement. The portion of the asphalt cement that is soluble in specified solvents represents the active cementing constituents.

Only such inert matter as salts, free carbon, or nonorganic contaminants, such as clay or finely divided mineral matter, are insoluble. Solubility is determined by dissolving the asphalt cement in the solvent and separating the soluble and insoluble portions by filtering.

The ductility of an asphalt cement is its ability to be extended or pulled into a narrow thread. In many applications, it is an important characteristic of asphalt cements. The presence or absence of ductility, however, is usually of more significance than the actual degree of ductility. This test is made by molding a briquette of asphalt cement under standard conditions and dimensions. The asphalt briquette is then brought to a standard test temperature in a water bath. It is pulled at a specified rate of speed until the thread connecting the two ends breaks. The elongation, in centimeters, at which the thread of material breaks is designated as ductility.

The float test is performed on the residue from distillation of HFMS emulsified asphalts. The test is a measure of consistency of the material being examined.

In the test, illustrated in Figure IV-4, a plug of asphalt residue is solidified in a brass collar by cooling to 41°F (5°C). The collar is then screwed into the bottom of an aluminum float which is placed into a testing bath of water heated to 140°F (60°C). The time required for the water to break through the plug is determined. Values are limited by specifications for the HFMS emulsified asphalts (see Table II-1, Chapter II). The test is prescribed in AASHTO Method of Test T 50 and ASTM Method of Test D 139.

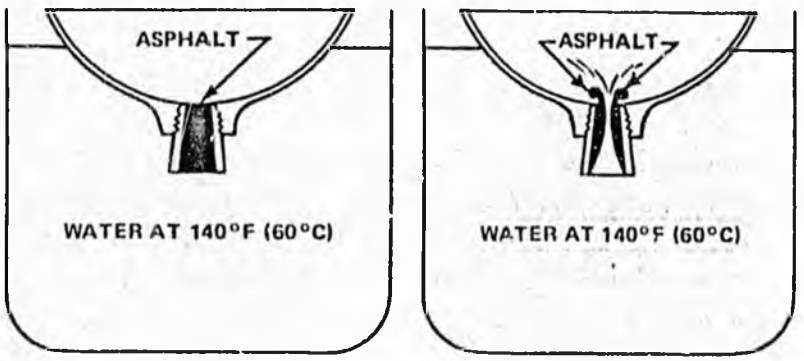

Figure IV-4. Float test.

4.16 CLASSIFICATION TEST FOR RAPID-SETTING CATIONIC ASPHALT EMULSIONS

This test identifies rapid-setting cationic asphalt emulsions by their failure to coat a specific Ottawa sand-portland cement (Type III) mixture. Following a 2½ minute mixing period, an estimate is made of the amount of uncoated and coated areas in the mixture. An excess of uncoated area over a coated area is considered as a passing rating for rapid-setting cationic emulsions.

4.17 FIELD COATING TEST

This test is used at the project site to determine:

- The ability of an asphalt emulsion to coat the job aggregate.
- The ability of the emulsion to withstand mixing.
- The water resistance of the emulsion-coated aggregate.

Measured amounts of the job aggregate and job emulsion are hand mixed. The ability of the emulsion to remain as a coating during a five-minute cycle is observed. The resistance of the coating to wash-off is determined by repeated filling with water and emptying a container of the

coated aggregate five times. The coating of the aggregate is visually rated as good, fair, or poor. A rating of good means that the aggregate is fully coated (except for pinholes and sharp edges). A rating of fair indicates an excess of coated over uncoated aggregate area. A rating of poor indicates an excess of uncoated aggregate over coated area.

4.18 WEIGHT PER GALLON

This test is used to determine the weight per gallon (litre) of asphalt emulsion. This unit weight is computed by finding the weight of an asphalt emulsion in a standard measure of known volume. Results are reported in pounds per gallon (kilograms per litre) to the nearest 0.01 lb (0.005 kg) at 77°F (25°C).

4.19 SPECIFIC GRAVITY

Finding the specific gravity of asphalt cement is not normally a specification item. It can be helpful, however, in making volume corrections at elevated temperatures and determining necessary quantities. Asphalt cements fall within a specific gravity range of about 1.0 to 1.05. This means that they weigh 1.0 to 1.05 times as much as the same volume of water under the same test conditions. The specific gravity is usually determined with a pycnometer.

4.20 SPECIAL TEST — ZETA POTENTIAL

The measurement of zeta potential is a relatively new test for evaluating asphalt emulsions and is not an AASHTO or ASTM test. It measures stability in a colloid system with a laboratory device known as a zeta meter. The zeta meter measures the speed of movement of individual asphalt droplets of an emulsion that is placed in an electrical field. This test has particular value in evaluating cationic emulsions. The level of zeta potential is a general indication of the setting characteristics of the emulsion.

PART TWO:

USING ASPHALT EMULSIONS

CHAPTER V

SELECTING THE RIGHT TYPE OF ASPHALT EMULSION

5.01 GENERAL

Asphalt emulsions can be used for almost any purpose for which cutback asphalts are used. Furthermore, they have a broader range of uses that include many not suited to cutbacks. That does not mean that they can be used indiscriminately. Successful performance of asphalt emulsions requires selecting the proper type for the intended use. Guidelines presented in this chapter should help select the specific grade and type of emulsion to be used.

5.02 CONSIDERATIONS FOR SELECTION

The first consideration in picking the right type of emulsion is the type of construction in which it will be used. Is it a seal coat or a plant mix (central or mixed-in-place)? Is it some type of surface application only? Is it for maintenance? Once this decision is made other project variables must then be considered. Some other factors that affect the selection are:

— Climatic conditions anticipated during construction: The selection of emulsion grade, design of mix or treatment, and construction equipment depend upon this factor.

— Aggregate type and availability.

— Construction equipment availability.

— Geographical location: hauling distance, and in some cases, water availability.

— Traffic control: can traffic be detoured?

— Environmental considerations.

While general guidelines can be given for selecting emulsions, laboratory testing is strongly recommended. There is no good substitute for a laboratory evaluation of the emulsion and the aggregate to be used. Different types and quantities of emulsion should be tried with the aggregate to find the best combination for the intended use. An experienced technician can determine the type and amount of emulsion to be used. He can also determine if additional water must be added, and the amount of time for breaking to occur.

5.03 GENERAL USES

Each grade of asphalt emulsion is designed for specific uses. They are described in general terms in the following paragraphs.

— *Rapid-Setting Emulsions:*
The rapid-setting grades are designed to react quickly with aggregate and revert from the emulsion state to asphalt. The RS grades produce a relatively heavy film. They are

used primarily for spray applications, such as aggregate (chip) seals, sand seals, surface treatments, and asphalt penetration macadam. The RS-2 and CRS-2 grades have high viscosities to prevent runoff.

— *Medium-Setting Emulsions:*

The medium-setting grades are designed for mixing with coarse aggregate. Because these grades do not break immediately upon contact with aggregate, mixes using them remain workable for a few minutes. They are used extensively in travel plants. The CMS grades have high viscosities to prevent runoff.

A newly standardized type of medium-setting asphalt emulsion, identified as high float, is anionic in nature. The major difference between this emulsion and the conventional medium-setting type is the high float characteristic, measured on the asphalt residue by the Float Test, AASHTO T 50 or ASTM D 139. It reportedly gives better aggregate coating and asphalt retention under extreme temperature conditions. While regular asphalts have a tendency to flow, or migrate, at about 140°F (60°C), the high float residues are designed to stay in place up to about 160°F (71°C). Therefore, high float residues are less susceptible to changes in temperature. They soften less in summer and do not harden as much in winter.

In 1977, the American Society for Testing and Materials standardized three types of high-float emulsions — HFMS-1, HFMS-2, and HFMS-2h. Their specifications are contained in ASTM D 977 (see Table II-1).

— *Slow-Setting Emulsions:*

The slow-setting grades are designed for maximum mixing stability. They are used with high fines content, dense-graded aggregates. The SS grades have long workability times to ensure good mixing with dense-graded aggregates. All slow-setting grades have low viscosities that can be further reduced by adding water. These grades, when diluted, can also be used for tack coats, fog seals, and dust palliatives. The SS type of emulsion depends entirely upon evaporation of the water for coalescence of the asphalt particles. If a faster setting rate is needed in mixtures, portland cement or hydrated lime can be added. The SS emulsions are generally used for dense-graded aggregate-emulsion bases, soil-asphalt stabilization, asphalt surface mixes, and slurry seals.

Table V-1 shows the general uses of standard emulsion types and grades.

5.04 ADHESIVE PROPERTIES

Success with any aggregate-emulsion combination depends greatly on the electrical surface charges of the asphalt droplets and the aggregate. The probability of good adhesion is diminished if the charges are similar. Conversely, the probability of good adhesion is greatly improved if the charges are different. The predominating charge on the aggregate surface determines whether anionic or cationic emulsion will produce the best results. The only way to be sure is to test in the laboratory.

5.05 GUIDELINES FOR SELECTION

In summary, success with any type of asphalt emulsion system is best ensured by adherence to each of the following steps:

1. Laboratory testing using the actual aggregate and emulsion that is to be used on the project.
2. Selection of grades in conformance with Table V-1 and Article 5.02. Table V-2 may be helpful also.
3. Strict adherence to the specifications and guides for usage.
4. Careful handling of the emulsion to prevent contamination, settlement of the asphalt droplets, or premature coalescence.
5. Consultation with the emulsion manufacturer's representative when special or unusual problems occur.

Asphalt emulsions as an alternative for use in paving and maintenance operations are now a reality. Following proper procedures will produce a system that should provide a high level of service.

TABLE V-1 GENERAL USES OF EMULSIFIED ASPHALT

ASTM D 3628

NOTE—Only those grades of emulsified asphalt in general use have been indicated herein. It is possible that under certain variations of aggregates, or climatic conditions, or both, additional selections might be appropriate. Where the use of emulsified asphalt for applications other than those listed in the table are contemplated, the emulsion supplier should be consulted.

Users of this standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility

TABLE V-2 EMULSIFIED ASPHALT SEAL COATS AND SURFACE TREATMENTS

System	*Description and Uses*	*Emulsified Asphalt*	*Construction Hints*
SAND SEAL	Restores uniform cover. In city street work, improves street sweeping, traffic line visibility. Enriches dry, weathered pavements; reduces raveling.	CRS-1 or RS-1	Spray-applied with sand cover. Roll with pneumatic roller. Avoid excess binder.
CHIP SEAL	Single most important low cost maintenance method. Produces an all-weather surface, renews weathered pavements, improves skid resistance, lane demarcation, seals pavement.	CRS-2 or RS-2	Spray-applied. Many types of textures available. Key to success: Coordinate construction, use hard, bulky grained, clean aggregate, and have properly calibrated spray equipment.
DOUBLE SEAL	Similar to chip seal except the second chip application uses a small sized stone. Durable, provides some leveling, available in a number of textures.	CRS-2 or RS-2	See Chip Seal.
TRIPLE SEAL	Three applications of binder and 3 sizes of chips are applied. Provides up to a 2 cm thick, flexible pavement. Levels as well as providing a seal, tough wearing surface.	CRS-2 or RS-2	Spray-applied in three lifts. Drag broom between lifts to provide leveling.
DRAG SEAL	Low cost method of improving the riding quality of rough pavements. A rain-resistant medium-set emulsified asphalt is applied followed by chips. The pavement is drag-broomed to level spots and depressions. A second application of binder followed by a choke aggregate or sand is applied.	CMS-2	The CMS-2 tolerates more mixing and drag-brooming than the rapid-set emulsions. Use a wetting agent in the steel wheel roller to reduce pickup.
SLURRY SEAL	Used in airport and city street maintenance where loose aggregate cannot be tolerated. Seals, fills minor depressions, provides an easy-to-sweep surface. Made with crushed aggregate mixed with quick-set emulsified asphalt. The liquid slurry is machine-applied with a sled-type box containing a rubber-edged strike-off blade.	QS* grades	Pretest the aggregate and emulsion mix to achieve desired workability, setting rate, and durability. Calibrate equipment prior to starting the project.
CAPE SEAL	Combines a single chip seal with a slurry seal. Provides the rough, knobby surface of a chip seal to reduce hydroplaning yet has a tough sand matrix for durability.	CRS-2 and QS* grades, SS-1, SS-1h, CSS-1, or CSS-1h	Apply a large aggregate single chip seal. Broom and apply slurry seal. Have the strike-off ride on the rock surface to form the matrix.
	Test track data indicate better studded tire damage resistance than a chip seal.		Avoid excess slurry as this destroys the knobby stone texture desired.

**Not Standardized*
